As the understanding of the Catholic educational situation, with its difficulties and possibilities, becomes clearer, the work of the association becomes every year more definite and more practical. The slow and gradual growth of the association has given it a form of organization well suited to the development of the educational principles of Catholic educators have a good understanding of the problems they must solve, among which are the problem of secondary education, and the problem of curriculum. Of more importance, even, than the thoroughness of educational work is the defence of the general interests of Catholic education, and the vindication of the principles on which it is based. The secular system of education is based largely on the theory that man is born for the State and that he derives his rights from the State. The socialist would have the State assume all the burden of the domain of learning and of industry, and there are many secular educators who would fain see the monopoly of education lodged in the power of the State. The Catholic system is based on the right of the parent, the right of the child, and a reasonable individualism. The resolutions of the Cincinnati convention insisted on the right of the parent in the matter of education, and the association exists for the purpose of maintaining the right of the parent and the principle of liberty of education. The Catholic Educational Association is an expression of the unity of principle that unites all Catholics in one general body.

The officers of the association are a president general, several vice-presidents general, a secretary general, treasurer general, and an executive board. The association includes the college, school, and seminary departments. The affairs of the association are managed by the executive board. Each department is represented in this board by its president and two other members elected by the department. Each department regulates its own affairs, and each may organize sections for the more special work in which its members are interested. In the Parish School Department, there is a Superintendents' Section and a Deaf Mute Section. A local meeting for the teachers is organized at every convention through the Parish School Department.

In the constitution the aims of the association are stated as follows: "The object of this association shall be to keep in the minds of the people the necessity of religious instruction and training as the basis of morality and sound education; and to promote the principles and safeguard the interests of Catholic education. It shall, in the interest of the general interests of Catholic education, to encourage the spirit of co-operation and mutual helpfulness among Catholic educators, to promote by study, conference, and discussion the thoroughness of Catholic educational work in the United States; to help the cause of Catholic education by public and private communication of such matter as shall further these ends."

According to the report of the secretary general
Education of the Blind.—Although the education of the blind as a class dates back no further than the year 1784, historians and statisticians generally admit that the affliction which it tends to relieve was no less prevalent before than it has been since that date. Indeed, so far from having increased, blindness appears to have in a marked degree decreased during the last half century.

General Statistics of Blindness.—An exact statement of the number of blind persons in all parts of the inhabited earth is of course impossible. The estimates which publicists have formed upon the basis of careful and also the estimates derived from the statements of travellers, give the ratio of blind persons to the whole population in Asia 1 to 500; in Africa 1 to 300; in Europe 1 to 1094 (the ratio for seventeen countries of the last-named division being, approximately: England, 1 to 1235; Scotland, 1 to 1115; Ireland, 1 to 870; France, 1 to 1194; Germany, 1 to 1136; European Russia, 1 to 534; Austria, 1 to 1234; Hungary, 1 to 952; Italy, 1 to 1074; Spain, 1 to 835; Denmark, 1 to 1248; Sweden, 1 to 1262; Norway, 1 to 795; Finland, 1 to 689; Belgium, 1 to 1229; Switzerland, 1 to 1232; Bulgaria, 1 to 321). For the rest great geographical divisions no data are available for even a fairly satisfactory approximation. (See below Blindness in the United States.) Consistently with the foregoing ratios, and with such conjectures as may be hazarded for America, Australasia, etc., it may be estimated that the number of blind persons now living in all parts of the world is not far short of 2,500,000.

A careful study of the figures shows that blindness prevails most in tropical, and least in temperate, regions; more in the Eastern than in the Western Hemisphere; more in the interior than in the seacoast; and in the United States, among the States, the number of blind persons varies with the character of the soil and climate, the black and colored populations being at the rate of 1 in 773, and the white at the rate of 1 in 1178. In 1890, the ratio was 1 to 1242. The number of blind persons in the United States originally returned by the enumerators of the Federal Census Bureau, 1900, was 101,123; by subsequent correspondence with individuals, this number was reduced to 64,763; but the special report on "The Blind and the Deaf" states that this should be considered only as a minimum. The very large number put forth by the compilers of the Vest figure brackets, and possibly over 100,000. Of the minimum 64,763 reported in the Census, 57-2 per cent were males, 42-8 per cent females; about 13 per cent were under, and about 87 per cent over, twenty years of age. Of the juvenile 13 per cent (50,058), those entirely or partially blind before the age of two years numbered 8106.

Causes and Effects.—In a careful study of the causes of blindness Cohn of Breslau estimates that among 1000 blind there are only 220 absolutely unavoidable cases, 449 possibly avoidable, and 320 (or nearly one-third) absolutely avoidable. Blindness may result from accident, surgical operation, and various other diseases. One of the most frequent causes of blindness in the civilized world is ophthalmia neonatorum, or inflammation of the eyes of the new-born; trachoma, often called "granular linds," and glaucoma, and atrophy of the optic nerve. Blindness from ophthalmia of the new-born is so widespread that, according to Magnus, out of 2528 cases of total blindness in Germany, 10-88 per cent were due to this cause. Among the blind under the age of twenty the proportion is as high as 30 per cent. In the United States, between 6000 and 7000 persons have thus become blind. Thanks to improved sanitary conditions in homes, to more intelligent care on the part of midwives and nurses, and to more skilful medical treatment, ophthalmia in certain countries appears as a cause of blindness in only seven per cent of the total number of cases, as against respectively 11 and 2 per cent in Europe and Asia.

The function of sight can, to a certain extent, be replaced by the use of the other senses. Stimulated by necessity and trained by education, touch, hearing, and smell take the place of vision. Having no sight no one can ever construct in his mind a clear mental conception of such objects and remaining senses all the more effectually. As for the exercise of their mental faculties, although wanting some of the means by which various impressions are received, and attention is aroused, the blind are as capable of reflection and reason as other human beings, while, owing to their condition, they are more frequently forced to close mental application. That blindness does not necessarily render its subjects intellectually inferior, may also be inferred from the number of famous persons who were blind from childhood. For example, Mozart, who composed his greatest works with little difficulty produced, long enough and important enough to show how erroneous is the idea that the physical darkness of the blind is necessarily associated with intellectual darkness.

History of Education of the Blind.—That no attempt was made in ancient times to instruct the blind, or in any way to cultivate their intelligence, was mainly due to the prevalent error as to their mental capacities. The same error, generally speaking, produced the same unfortunate result in Christian civilization. The blindness of the New Testament is a symbol of the eighteenth and nineteenth centuries. On the other hand, the Church, from the earliest ages, at least made provision for their corporal needs, while here and there attempts were made to teach them various handicrafts. Among the most noted of the hospices for the poor and afflicted which began to appear in all parts of Christendom, almost as soon as persecution ceased, was that established in the fourth century by Saint Basil at Cæsarea, where special provision was made for the blind, and guides were supplied for them. In the fifth century, Limnæus, a hermit of Syria, founded an institution for the blind, and devoted himself to teaching them the blind of the surrounding country, whom he taught, among other things, to sing the praises of God. Two centuries later, towards the year 630, a refuge exclusively for the blind, such as was called in the Middle Ages a typlicomium, was founded at Jerusalem.

In the West, the Church was animated with similar charity. Early in the seventh century, St. Bertrand, Bishop of Le Mans, founded a hospice for the blind at Pontcuit, in the north-west of France. In the eleventh century, Hugues, the bishop of Paris, expiating his sins, founded the number of institutions among them four hospices for the blind and other infirm persons at Persan, Berenti, Rouen, Bayeux, and Caen respectively. Towards 1290, St. Louis, King of France, established at Paris the Hospice des Quinze-Vingts, where he housed and instructed three hundred blind
persons. The inmates of the hospice, after the ex-
ample of the students and the craftsmen of the day,
formed among themselves a distinct brotherhood, to
whom the saintly king gave special statutes and privi-
leges. It is noteworthy that, in spite of the changes of
government, the "Hospice des Quinze-Vingts" has
survived to this day. A similar institution, though
less extensive, was established and endowed at Char-
tres by King John the Good in 1380. Provision was
made for 120 blind persons. For various reasons,
however, the number of inmates dwindled till, in 1397,
according to Dufay, there were but ten. A hospice
for the blind is said to have been erected (1305) at
Bruges, in Flanders, by Robert de Béthune, in grati-
tude for the courage displayed by the inhabitants in
rebellion (1300) an invasion of Philip the Fair. A
similar foundation was made at Ghent by Peter Van
der Leyen about 1370. Brotherhoods of the blind
were formed, particularly at Chartres, Caen, Châlons,
Meaux, Pau, Memming, Frankfurt, and Hull. That
the inmates of these institutions received other suit-
able instruction besides that in the Catechism and in
trades there can be no doubt. So desultory, however,
were these attempts to give the blind a modicum of
education, and so inadequate were the means em-
ployed, that the problem of their special education
remained unsolved. One had as yet no conception
of providing a permanent literature for them.
As early as the sixteenth century attempts were made
to devise special processes, but these attempts, so far
as we know, met with very little success.
Among others, Girolamo Cardano (1501-1576), an
Italian mathematician, had pointed out a way of teach-
ing the blind to read and write by the sense of touch.
They were to trace with a steel bodkin or stylus the
outline of each of the letters of the alphabet, engraved
on metal, until they could distinguish the letters by
the sense of touch. If Cardano, however,"failed to suggest
how to write on a straight line with uniformity of space
between the lines. In 1575 Rampassetto produced at Rome prints in in-
taglio from letters carved in wood. His invention was
dedicated to St. Charles Borromeo. In 1588, under
Philip II, to whom he dedicated his invention, Fran-
cesco Lucas, at Madrid, engraved letters in wood for
the instruction of the blind; but the letters being sunk in
the wood, the outlines could not as readily be fol-
lowed with the finger-tips. In 1640, Pierre Moreau,
a notable one of his hand, had of available letters case for the use
of the blind, but for lack of means was unable to follow up his undertaking.
In his work, "Deliciae mathematicae et physicae", published at Nuremberg in 1651,
George Harsdörfier describes how the blind can re-
cognize by name and imitate letters engraved in wax.
Padre Francesco Lana-Terzi, the same Italian Jesuit who anticipated by more than a
century the system of lip-reading for deaf mutes, also
suggested, as an improvement on Cardano's invention
for the blind, a guide consisting of a series of wires and
strings arranged in parallel lines at equal distances
from one another, to secure straight writing and uni-
formity of space between the lines. Besides this,
Lana-Terzi describes, in his "Prodromo", an invention
of his own, by which the blind may be taught to cor-
respond with each other by a secret code. We have
looked in vain in works of reference for any descrip-
tion of this cryptographic device. It is so simple that
it can be learned in a few hours. Instead of compel-
ling a blind person to learn how to form all the letters
of the alphabet, the three methods pointed out by Lana-
Terzi depend only on a tacit knowledge of the
letters, familiarity with their positions in their respec-
tive sections, and a little skill; (1) to insert one, two,
or three dots within a square or parts of a square or
right angles turned in four different directions; or (2)
to prefix a letter Romana, or to Philipian, period, or
interrogation mark any one of the first four numerals,
or (3) merely to form these numerals. The letters
of the alphabet with the lines enclosing them, Lana-
Terzi suggests, should be in relief rather than in in-
taglio, raised letters being far more distinguishable
to the sense of touch than letters sunk in a plane
surface. The following diagrams will make the matter
clear.
First (Lana-Terzi) Method.—Suppose the blind cor-
respondent wishes to send the cipher message, Son
prigionie (I am a prisoner), he will turn to his tablet,
and ascertain by touch that the letter s is the second
of those enclosed within the lines forming the figure.
He will trace this figure with a pencil, and, to
indicate that it is the second letter in the above figure,
he will write, in the first, either above, or below, or within it,
two dots, thus: The message in full is as follows:
Second Method.—The letters of the alphabet are em-
bossed on a wooden or metallic tablet and distributed in
any order whatever into five or more sections, which
are indicated by lines in relief. Each section is dis-
tinguished from the others by one of the five principal
punctuation marks, formed, like the letters, in relief.
The position of each letter in its own section is indi-
cated by one of the first four numerals according to the
order in the section. Thus, the message, Il re è morto
(the king is dead), would be written as follows:—
Third Method.—Instead of designating by punctua-
tion marks the different sections into which the letters
are distributed, they may be indicated by numerals,
thus:—
By this method the blind person would have to
learn how to form only the first five numerals. Thus
the above message, Il re è morto, according to this
method, would be written as follows:—
the first numeral indicating the position of the letter
in the section, and the second numeral the section it-
self.
To enable the correspondent to make out for
himself the answer to his message or communication,
Lana-Terzi proposes the following plan: 1. Let each of the
correspondents have a table or long strip of wood
on which are engraved or embossed the letters of the alphabet arranged in serial order at equal distances from each other, as in the diagram here given.

Suppose now that a person who is not blind should wish to send to his blind friend this message: *Il nemioci ti trama idae* (the enemy is trying to ensnare you). Let him take a piece of thread or twine, apply the end of it to the extreme point of the tablet, extend the thread over the space from a to the letter i of the message and make a knot at that point; for the second letter, apply this first knot to point a, extend the thread over the space from a to the letter f, make, as before, a knot at that point, and so on for the rest of the letters. It will readily be understood how the blind person, to whom the roll of knotted thread or twine is sent, can make out the communication by applying the various thread lengths over the distances indicated by the knots, and thus discover each letter of the alphabet. The blind correspondent, in his turn, can easily send by this same method whatever communication he wishes.

A few years after the publication of Lana-Tersi’s “Prodromo”, Jacques Bernoulli, being at Geneva in 1676, taught Elizabeth Waldkirch to read by a method not unlike that of Cardano. The young lady made such progress that after four years she was able to correspond with her friends in German, French, and Latin, all of which she spoke fluently at the age of fifteen. She knew almost all the Bible by heart, was familiar with philosophy, and was an accomplished musician.

About the year 1711 the first known attempt was made to construct a tactile ciphering-tablet or apparatus by which all the operations of arithmetic might be performed and recorded. This was the work of Nicholas Saunderson, who became blind when one year old. So distinguished was this blind mathematician that he was appointed Lucasian Professor of Mathematics in the University of Cambridge. The Abbé Claude-François Deschamps (1745-91), in his treatise on the education of the deaf and dumb, is said to have also sketched the outlines of the art of teaching the blind to read and write. Diderot in his “Leçons sur les aveugles”, which appeared in London in 1749, and for which he was condemned to prison, mentions his interview with Lenôtre, better known as “The Blind Maker of Pauzais”. Among other remarkable things related of him is the teaching of his son, though not blind, to read by means of raised letters. Between 1772 and 1784 we read of the earliest attempt to make maps in relief for the blind. This invention is ascribed to K. Weissenburg, of Mannheim, who was partially blind at two years of age, and totally at fifteen. Whether any of the credit is due to Weissenburg’s teacher, Christian Niesen, cannot be ascertained.

Though Diderot was among the first to call special attention to the condition and wants of the blind, and to make known generally through his famous letter, yet neither he, nor Leibniz, nor Reid, nor Condillac, nor any of the Encyclopedists went beyond abstract psychological speculation. None of them proposed any measure of practical utility or relief nor devised any plans for the instruction and training of sightless persons.

The modern era in the history of education of the blind opened in 1784—nearly three centuries after the desultory and apparently ineffectual attempts of Cardano and others—when Valentin Haüy (1745-1822) set himself the task of *l’Éducation du Volontaire*; and in doing so he devoted himself to the education of deaf-mutes. It was in June, 1784, that Haüy met, in one of the churches of Paris, a young mendicant named Lesueur, who had been blind from his birth. Having already spent many years in studying the income which he was supposed to earn by begging. Before long the number of Haüy’s pupils increased to twelve, then to double that number, and finally to fifty. His school was at first a day-school, to which children of both sexes were admitted. When Haüy, in 1786, exhibited the attainments of twenty-four of his best pupils at Versailles, Louis XVI and his court were in raptures at the wonderful novelty of children without sight reading, writing, ciphering, doing handicraft work, and playing orchestral music. So great was the interest which this and similar exhibitions aroused, and so generous the patronage of the king and the public which they secured for his school, that Haüy soon had sufficient means to board his pupils. From the very beginning the institution had the triple character of orphanage, school, and academy of music; and to this day these three departments have been maintained with such a record for efficiency that the institution founded by Haüy has served as the model for most of the many others in both hemispheres. But true intellectual culture for the blind dates only from the day when reading by touch was made possible. To Haüy is due the credit of having provided a system of tactile printing and a permanent literature for the blind. In the light of a century’s progress and of better systems of printing and writing invented since his day, the shortcomings of Haüy’s print in relief may lessen the value of his invention, but, in fairness to his memory, it must be remembered that Haüy alone succeeded in making practical for the blind as a class what others before him had merely foreshadowed, or had successfully applied only in individual instances. In spite, therefore, of the derogatory claims made by two or three writers, and notwithstanding that he himself admitted having seen a letter printed by Theresa von Paradis from type made for her by von Kempelen, the fact remains that no one before Had had ever tried seriously to make printing available for the blind; to no one before had the idea occurred of printing books for the blind, or of establishing libraries of literature printed in relief. The movement originated by Haüy has resulted in the establishment of countries of institutions of learning and industrial training schools for the blind. Before the close of the eighteenth century, a period of only sixteen years, four such institutions had sprung up in Great Britain, viz., in Liverpool (1791), in Edinburgh (1789), and in Bristol (1789), and in London (1790). Other countries were not slow in following the example. The following table shows what the leading countries of Europe and America have done for their blind during the nineteenth century:

Contemporary Education of the Blind.—General Principles.—In nearly all the countries to which reference is made in the foregoing tables, the schools for the blind maintain three distinct departments: a literary department, a department of music, and an industrial department. The rank of these institutions is higher or lower from an educational point of view according as more or less prominence is given to literature and music as compared with industrial or manual training. In the leading schools the literary department embraces kindergarten, primary, secondary, and, in a few instances, collegiate education; the department of music embraces primary, secondary, and collegiate education, and the industrial department embraces the teaching of handicrafts, varying in kind according to age, sex, and country. The courses of study in the literary department are generally the same as those pursued in the public high schools of the respective countries. The work in the department of music varies from instruction in the mere elements of music to thoroughly organized courses of study and highly specialized instruction in the science and art of music. In the industrial department the chief trades are: in the male department, piano-tuning, bookbinding, carpet-making, basket-making, broom-making, mattress-making, chair-caning, hammer-work, and upholstery; in the female department, basket-making, knitting, hand- and machine-sewing, crocheting, fancy work of various kinds. In the experimental stages of education, there was a tendency in almost all the schools for the blind to make the industrial department the most prominent feature. The lack of books, of adequate educational appliances, and of definite methods, the comparative ease in teaching some one or other of the simpler trades, the want of technical experience on the part of instructors, the dependence upon manual occupations and mechanical arts for self-support, the readiness to be swayed by the utilitarian principle of training the blind for the active duties and occupations opening the way to self-maintenance and independence—these and other similar considerations were strong arguments in favour of industrial training, to the neglect and detriment of the prime and essential work of education. Of late years, however, a marked change has been wrought in the ideas pursued in the education of the blind. Owing to the increase of general intelligence, on the one hand, and the steady decrease in value of manual labour, on the other hand, educators of the blind have come to realize that it is not technical skill, or ability to work successfully at one or more of the common trades, which alone forms a complete scheme of education that will release the blind from the bondage of dependence, uplift them as a class, and raise them to a level of usefulness and independence. In consequence of the extensive employment of machinery in almost every department of human activity, there has sprung up among educators of the blind a growing conviction that the only field in which the sightless can hope in the future to compete successfully with the seeing is a field of thought where the intellect can have free play and where blindness will be no hindrance to advancement and success. The blind need, therefore, at least as good an education as the seeing. The question as to whether they are capable and entitled to such an education has not been settled in the same manner in all countries. In many of the European countries the argument has been advanced that, as a class, the blind must necessarily remain at the foot of the social scale, forever dependent upon the more fortunate classes, and that what is done for them is rather in the spirit of charity than as of strict obligation. In the United States the education of the blind rests entirely on the impulse that is generated in the people, and the methods of instruction have proved the possibility of imparting to the normal blind child practically the same education as to other children, it is generally acknowledged that the blind, as a class, have a right to that part of the commonwealth which is designed for the benefit of all the educational blessings which are provided for every child in the commonwealth; and since this education cannot for obvious reasons be given them in the common schools, special provision should be made for their education in distinct institutions, public or private.

Systems of Embossed Print.—Three centuries and a half elapsed after the invention of printing before any attempt to make printing available for the blind as a class was successful. Whatever information and inspiration may have been drawn by the ingenious inventor from special previous devices, he was well aware of the credit of having first made reading by touch possible must be accorded to Valentin Haüy (see above). The first book embossed by Haüy for the use of the blind was, according to Guadet, his "Essai sur l'éducation des aveugles" (1786). This book was translated into German by Michel, and into English, in 1795, by the blind poet Blacklock. The style of type adopted by Haüy was the French script, resembling the legal manuscripts of the time. The capital and small letters were respectively fourteen and seven points, weighing a half million pounds for a book of 111 pages, printed on one side only, two pages being gummed together back to back, to preserve the relief. The pages were embossed from metal type by the blind children of Haüy's school under the direction of Cloziers, the court printer. While this invention won distinguished praise for Haüy, he himself, when his achievements were compared to those of the Abbé de l'Epée, modestly protested, "I only fit spectacles, while he bestows a soul." From 1806, the time of Haüy's departure for St. Petersburg, to 1848, when line-print was superseded by point-print, the type used at the Institution des Jeunes Aveugles at Paris, varied between the French script, the Italic, and Roman capitals.

Embosed Printing in England.—Printing for the blind had been used in France for forty-three years, in Austria for eighteen, in Prussia for twenty-six, before it was used in England; Haüy's system of printing, it is claimed, was introduced into England by Sir Charles Lowther, to whom it was suggested by a copy of one of the books printed at the Institution des Jeunes Aveugles, and purchased by him for his blind son, his name being himself blind. In 1826, James Gall, of Edinburgh, who had seen specimens of books embossed at the Paris institution, set himself to improve the alphabet, by making it more perceptible to the touch. In 1827 he printed a small book in an angular modification of the common alphabet. This was the first English book printed for the blind in England, and naturally great interest was excited when it was found that the blind could read it easily with their finger-tips. Between 1828 and 1838 no fewer than 20 styles of embossed printing were brought out in Great Britain. Of these, however, only six obtained recognition: those of Haüy, Gall, Fry-Alston, Lucas, Frere, and Moon. Haüy's script was adopted by Sir Charles Lowther in his publication, in 1834, of the Gospel of St. Matthew. Though Gall modified the common characters of the alphabet to make them more easily distinguishable by touch, he did not believe that arbitrary characters would ever be universally adopted, maintaining that these should be legible to both blind and seeing. Besides two or three booklets prepared by Gall, he offered, in 1851, for the Glasgow Institution for the Blind, of which he was principal. In 1852 the Scottish Society for the Blind adopted a system under which the best system to produce cheapness and tangibility in connection with an alphabet suited alike to the fingers of the blind and to the eyes of the seeing. Nineteen
different alphabets, seventeen of which were of a purely arbitrary character, were submitted to the society between 9 January, 1832, and 24 October, 1833. After much deliberation and a series of rigid tests, the medal was awarded (after Dr. Fry’s death) to Alston, 31 May, 1837. From the award made to Dr. Fry’s alphabet, the Scottish Society of Arts evidently shared the idea of Hairy and of other advocates of the Roman letter that in the education of the blind everything should be done to establish a bond of vital unity between them and the seeing and to lessen the isolation which arbitrary systems of print would only increase. As Alston’s type was rather small and not very legible, his system did not stand the test of time. Lucas invented a stenographic system formed of arbitrary characters and of numerous contractions. In this system the Gospel of St. John and the Acts of the Apostles were printed in 1837 and 1838 respectively. Frere devised a phonetic system which he himself describes as a “scientific representation of speech.” It consists of 34 characters indicating each of the simple sounds in speech. Frere was the first to introduce (1839) the “return lines,” in which the reading is alternately from left to right and from right to left, and the letters themselves are reversed in the lines from right to left. He also devised an ingenious system of embossing from stereotype plates; which in systems were different forms of the upper or lower case or of both upper and lower case, of the Roman letters. Owing to the size of the letters, the books embossed in other parts of Europe were much bulkier than those of like content in France or in England. For a long time after the introduction of the Braille system into Germany, line-print was retained, even where Braille was adopted. It was not until 1870 that interest began to be aroused in regard to uniformity of embossed printing, in consequence, no doubt, of the movement inaugurated in England by the British and Foreign Blind Association in favour of Braille.

Embosed Printing in the United States.—From 1832, when the first school for the blind was opened in the United States, to 1860, when Dr. Pollack introduced Braille in the Missouri school (there being then as many as twenty-one institutions for the blind in this country), two systems of printing were in vogue. The first was that of Dr. Howe, the head of the Boston school for the blind, and the second that of Mr. Friedlander, the principal of the Philadelphia school. Dr. Howe’s system was the angular lower-case Roman and Mr. Friedlander’s system the Roman capitals of the Fry-Alston type. In 1862 Dr. Howe published several books in the Boston letter; Mr. Friedlander’s Roman capital was not adopted in Philadelphia until 1837. From an educational as well as from an eco-

![Image of six principal systems of embossed type]

vention was, at the time, the greatest improvement in embossing since the days of Hairy. The larger part of the Old and portions of the New Testament were printed in Frere’s system. Dr. Moon of Brighton, whose system is used more than any other by the adult blind, at least in England, devised, towards 1845, an alphabet formed of more or less arbitrary characters, which either resemble or suggest a resemblance to the Roman letters which they represent. He also adopted, with a number of slight alterations, Frere’s “return lines” and his method of stereotyping. The first book in Moon’s system appeared in 1847. The printing of the Bible was begun in 1848 and completed in 1858. Moon’s books, though easy to read owing to their large type, are very bulky and expensive; 56 volumes are required for the Protestant edition of the Bible, which omits a number of books contained in the Catholic edition. The chief defect of the Moon system is that it is not a writable system and that it lacks a musical notation. It is useful chiefly for adults whose finger-touch has been dulled by age or manual labour.

Embosed Printing in Continental Europe.—Between 1809, when embossed printing, of which he claimed to be the inventor, was begun by Klein, the founder of the first school for the blind at Vienna, and 1841, when Knie, principal of the institution for the blind at Breslau, introduced the Braille system into Germany, three styles of embossed printing, known as the Stachel-, Press-, and Punktierter Typendruck (the needle-, line-, and punctured print) had been used in Germany, Austria, Holland, Switzerland, and Denmark. These

![Image of embossed type examples]

nomical point of view, it is a matter of regret that, for the lack of concerted action between the principals of the Boston and the Philadelphia schools, two systems of print should have been imposed at the very outset on the country. From 1837 to 1853 the two systems flourished in their respective spheres without any agitation regarding uniformity of type. In 1851 the Boston line-print was given the preference over all other embossed systems at the London exhibition of industries of all nations. This award, made twenty-six years after the appearance of Braille in France and one year after the adoption of the new system by the Paris institution for the blind, shows how deeply rooted was the theory prevailing since Hairy, that the adoption of any system not resembling in form and appearance the letters in common use would be prejudicial to the best interests of the blind by furthering their segregation from the seeing. A comparison between the leading systems of line-letter print which obtained recognition in France, England, and the United States shows that Hairy’s system gave 365 letters on 50 square inches of surface; Gall’s, 526; Alston’s, 891; Friedlander’s (from 1833 to 1834), 290, and 858 after 1836; Howe’s, 702 and by a further improvement, it is claimed, 1067 letters.

Braille.—In spite of the perfection to which some of the line-letter systems had been brought as regards compactness, a careful study of the functions and limitations of the sense of touch showed that the Roman systems, which lacked the quality of strong appeal to that sense (known as tangibility), could be of no edu-
national value. Besides this, they were practically unwritable, and they provided no adequate means of musical notation. Fortunately, when the various line types were found deficient, and a strong protest by the intelligent blind in Europe and in the United States was raised against them, a new system was discovered, which possessed all the requisites which were lacking in the line-letter prints. This new system is known as Braille. Its invention by Louis Braille, a blind pupil of the Institution des Jeunes Aveugles of Paris, marked a new epoch in the history of the education of the blind. The original idea of a point-print was devised by Louis Braille from Barbier, who suggested a combination of points arranged in a rectangle—twelve points in two vertical columns of six each. The most conspicuous, though not most radical, defect was the large and unwieldy size of the signs, which could not be covered with the finger. Another drawback was the great waste of space. As the cell, or rectangle, was of fixed size, if a letter was represented by a point in one corner, all the rest of the space was left blank. This was observed by Braille, who reduced Barbier’s rectangle one-half; thus he limited the number of the points to six instead of twelve. The six points in Braille are arranged in two vertical rows of three each. By the omission of one or more of the points sixty-three distinct signs are formed, to represent the entire alphabet, accents, Abbé numerals, marks of punctuation, word- and part-word signs, as well as a system of algebraic and musical notation. Of these sixty-three characters, ten are called fundamental signs, and form the basis of all the rest by the addition of one point in some part or other of the “cell” either to the fundamental signs or to the series formed from them. The chief advantages of the Braille system are: (1) its simplicity and easy acquisition; (2) its “tangibility”, or efficiency in impressing the sense of touch, enabling the blind not only to read but also to write; (3) its adaptability to both the writing and printing of a system of musical notation.

In spite, however, of its evident advantages, many years went by before the new system obtained recognition, even in countries where, for lack of “tangibility” in the existing systems, the use of books in the classroom had been almost unknown. It is quite possible that the slowness and reluctance in the adoption of Braille were due to the fact that institutions for the blind had been so widely separated in dates of origin and inability that the need of unity of action and community of interest was but slowly realized. In many cases, prejudice, petty jealousy, and obstinate attachment to theories long since proved false, account for the unyielding attitude towards improved methods, which has often stood in the way of true and uniform progress in the education of the blind. From the day when the system was finally adopted in the schools of France, England, Germany, the United States, and other countries, the Braille has undergone various modifications; hence a variety of Braille systems, which have caused even greater confusion than the diversity of the earlier Roman styles of embossed literature. As late as 22 April, 1902, in an address made at the conference held at Westminster on matters relating to the blind, Mr. William H. Illingworth, head-master of the Royal Blind Asylum and School, West Craigmiller, Edinburgh, spoke as follows regarding the diversity of Braille alphabets and the desirability of a uniform system: “Out of a chaos, born of conflicting opinions and petty jealousies, combined with an almost incredible amount of apathy, indifference and indecision such as exists in the Braille world, it would be impossible by any means short of a miracle to create or to formulate such a scheme...” We hear often and are treated to examples of “English as she is spoke”, but I venture to think that for variety and specimens of the grotesque, this pales into insignificance before ‘Braille as she is wrote’. Though the time may be quite ripe for a serious attempt being made to improve the existing state of matters, it will require years of patient thought and interchange of opinion, absolute singleness of purpose and charitable, sympathetic self-abnegation to devise a perfectly uniform and practical system, and make the Braille—if that system be the best system—as perfect and simple as possible and as worthy to be the tangible exponent of the most powerful and universally spoken language of modern times.”

New York Point (see cut).—The claim to being, in the words of the writer quoted above, a system “as perfect and simple as possible and as worthy to be the tangible exponent” of the English language can justly be made for the punctographic system known as New York Point, or the Wait system, unquestionably the most perfect form which the idea suggested by Barbier and rescued from oblivion by Louis Braille has as yet attained. This system is a genuine American product, the outcome of years of patient thought, of indefatigable labour, and of absolute singleness of purpose. To Mr. William B. Wait, for upwards of forty-three years at the head of the leading institution for the blind in the United States, is due the credit of the origination, development, construction, and application of the literary, musical, and mathematical codes of the New York Point System. The genesis of this new punctographic system is the result of a desire on the part of Mr. Wait to improve the Braille by remodeling it, on principles of compactness and economy of time and space. Careful study, however, of the structure and application of Braille led to the conclusion
that the vertical position of Braille signs, allotting a fixed and unvarying space to all signs alike, was defective in more than one important respect. Owing to the number of only six possible single signs, it was inadequate to the requirements of music, if not to those of literature and mathematics as well; it was also found to be much more bulky, and hence more costly, than the Boston-Line, which, in the absence of any other system, was then taken as a standard. To remedy these structural defects, by increasing the number of signs, and reducing the bulk and cost of books to the lowest possible minimum, only one course was left open. A different mode of sign structure was devised, employing two points instead of three (vertical and extending to the base forms in three, four, or five points horizontally. By this method the new sign-structure of New York Point yields 120 single, and 20 compound, signs against the 63 single signs to which the Braille is limited, and thus answers all the requirements of literature, music, and mathematics. Besides, even apart from the application of the principle of recurrence in the structure of the New York Point—a principle that was not applied in the original Braille—all the advantages of simplicity, economy of space and (in writing) of time, as well as of convenience of the whole system, as has been demonstrated by the most rigid tests. Thus, in printing a font of 500 letters in each system on a perfectly uniform scale, the letter-, word-, and line-spaces being the same in each system, any Braille writer (trained in the base forms and non-contraction or punctuation marks) requires 51.75 per cent more space than the New York Point. The space required by punctuation marks in Braille is 20 per cent greater than in the New York Point. The excess of labour in the writing of Braille is twenty-seven per cent greater than in New York Point. In the writing of punctuation marks there is a slight excess of labour on the side of New York Point. However, the use of punctuation marks does not materially affect the question, as they form only about 24 of the whole bulk of composition. Another advantage of the New York Point over Braille is its having true capitals. In Braille the practice is to place before words requiring capitals a sign identical with the period, and to begin the word with the usual small letter. This requires two dots per capital, or sixty per cent more area than the New York Point. New York Point, which was made up to the sixth or seventh century no distinction was made in Europe, and none is made to this day in the Oriental alphabets, between capitals and small letters; (the latter, in fact, were evolved from the former). Those who understand what is called "good use", the advantage of possessing true capitals, instead of shams ones, is not inconsiderable. Furthermore, the gliding of the finger over the point-signs in both one direction, the lateral, is, on physiological grounds, an important advantage which the New York Point has over Braille system, where the finger has to move first in the longitudinal and then in the lateral direction.

Methods of Writing.—The invention of the New York Point marked an epoch in the history of the education of the blind; yet, had facilities not been supplied for writing and printing it, the new system would have failed to make its mark as an educational force. Fortunately, however, such appliances were provided by Mr. Wm. Wait in 1894, and consist of a desk-tablet, a pocket-tablet, the kleidograph for paper writing, and the catograph for printing. The kleidograph and stereograph have done wonders in facilitating the education of the blind. The former, designed for the purpose of writing literature, music, and mathematics in tactile form, is invaluable from the speed and efficiency of thought; the latter, for the reason that what is written by it can at once be read by the blind writer without removing or reversing the paper, as must be done when the tablet is used. At least eighty per cent of the time required for writing music is saved, and sixty per cent for literary work. The stereograph, designed to emboss both sides of zinc or brass plates ready for use in printing. By its means a composer can prepare twice or thrice as much matter in a given time as by the movable type; besides, the matter comes from the composer himself, and is stereotyped and ready for the press. The cost of the complete plate is reduced by more than one-half. The further application of the interlining process, and of printing on both sides of the sheet at one impression from the plates embossed by Mr. Wait's stereograph, will reduce the cost of books still further, and effect a saving, in metal, in paper, and in binding, of nearly 50 per cent.

The many appliances devised since the days of Valentin Hauty, particularly in France, England, and Germany, to enable the blind to write, may be grouped under three classes. First, the "hand-guides" are designed merely to help the blind to write in straight lines and at equal distances. For correspondence with the seeing, an ordinary pen or, more generally, a lead pencil is used, and the letters are written from left to right, the filling in being done by the usual method. Ordinary letters have to be formed with a blunt stylus from right to left and reversed on paper which is underlaid with some soft material, as felt or blotting-paper, to bring out the written matter in relief on the reverse side. The second class of apparatus consists of ordinary letters to be used at a right angle. Valentin Hauty devised a simple method of penil writing by placing the paper upon a frame in the inferior of which were stretched parallel cords of catgut; between these cords it was an easy matter to write in straight lines and to make the letters of uniform size. Another ingenious way of producing tactile writing was, at the suggestion and request of Hauty, devised by Adet and Hassenfratz in 1783. It was to trace the letters in a bold hand with a glutinous ink, over which sand was spread, so as to form, when it adhered to the letters, a rough sort of relief, or "tangible" writing. Various other fluids were devised for embossed writing, by Challan and Rousseau in 1821, by C. L. Müller in 1823, by Freissat in 1856, by Riesmer in 1867, and finally by the Abbé Vitali of Milan, in 1893. The use of these various coloured fluids produces a writing which is at once "tangible" to the blind and visible to the seeing.

Among the more elaborate appliances for writing in straight, parallel, equidistant lines, may be mentioned the tablets of Genéreville (1807) and of Bruno, the typical opposite method requiring the finger to move in straight lines and to make the letters of uniform size, but also to mechanically assist the hand in the formation of the letters and in tracing them at the same distance from each other. These appliances may be divided into line-cell and point-cell frames, according as the ordinary line-letter alphabet or the point system is used in writing. Of the line-cell frames or tablets, the best known are those devised by the Rev. Joseph Engelmann of Lins (1825), James Gall of Edinburgh, Mercier-Capette, Hebbold, Dr. Llorens of Barcelona, by C. E. Guelderg of Copenhagen (1858), Goubert, and front seating three of Milan, Martens of Naples, Moon of Brighton, England, Kempe of Graves, Holland, Ballu, Brother Iasidore of Woluwe-Saint-Lambert, Belgium, and Mlle Mulot of Angers, France. Mlle Mulot's stylographic frame enables the blind to correspond not only in writing, but also in the seeing just as readily and satisfactorily. Of the numerous print-cell writing-frames or tablets de-
Among the earliest attempts to construct a tangible device for the more abstract relations of arithmetic and algebra is that of the great mathematician, Nicholas Saunderson. Since his day a great many different ciphering boards, or tablets, have been constructed. One of the best is Taylor's octagonal board with square pins and octagonal holes. On one end of the pin one of the edges is raised into a prominent ridge, and on the other end there is a similar ridge divided in the middle by a deep notch. The holes in the board are star-shaped, with eight points. The pin can be placed in eight different positions, and by reversing it, with the notched end uppermost, in eight more; this gives ten signs for the Arabic numerals and six for the ordinary algebraic signs. For pure algebra another pin is needed, differing from that used in arithmetic. This gives sixteen additional signs, which are quite sufficient. It is essential for a good arithmetic board that the same pin should represent every character; otherwise time is lost in selecting the required character and in distributing the type at the end of each operation. In the United States a board is used with square holes, and two kinds of type are required to give even the Arabic numbers.

Music.—Since the days of Hauty, music has always been considered as one of the most potent factors in the education of the blind, offering them advantages which they can derive from no other source. Though a fair percentage of the blind attain to a high degree of musical skill, and find for themselves positions of responsibility and importance, yet, contrary to the general belief, no larger proportion of persons with exceptional musical talent is found among the blind than in any other class. The common idea that the blind are taught music by ear is erroneous; it arises partly from the assumption that those who are sightless must of course possess an abnormally acute sense of hearing, and partly from the fact that so many persons are unawares that a tactile musical notation exists. Since 1784 there have, in fact, been almost as many such systems as systems of embossed reading. Besides the common musical notation in relief, used by Valentine Hauty, by W. Taylor of York, and Alexander of Glasgow, special systems were devised by Frere, Lucas, and Moon in England; by Guadet, Rousseau, and the Abbé Goupil, in France; by Klein, Krähmer, Oehlwein, and Warschauser, in Germany; by Petzelt in Austria; by D. Pedro Llorens in Spain; and by M. Mahony in the United States. In most of these systems the common letters in relief were used to express the notes and their values, the octave, finger, repeat, and time signs, etc. All of the above systems, however, with the exception of the common musical notation in relief, have long since been entirely superseded by the Braille and the New York Point systems of musical notation. Soon after Louis Braille had devised the literary code he adapted his punctographic system to musical notation. An outline of the New York Point musical notation was first presented in 1872, and the first edition of the notation was printed in the same year. In 1878 it received the unanimous approbation of the American Association of Instructors of the Blind, and it was adopted a few years later.
in most of the institutions for the blind in the United States. As to the comparative merits of the two systems, it is claimed that the Braille notation is inferior in completeness and clearness of expression. The notation of music requires not less than 140 signs. The New York system, extending to four or five points horizontally, yields 120 single and 20 compound signs, while the Braille system admits of but 63 single signs.

\[ \text{Example of Tactile Musical Notation} \]

and requires a uniform space for each. Ambiguity is the consequence of this inadequate number of signs, the same sign being made to represent two different things of the same species, as, for example, a whole note and a sixteenth, a half-note and a thirty-second.

Industrial Training.—From the very beginning of systematic education of the blind down to the last decade, industrial training has always occupied a decidedly prominent place in the curriculum. Too often, particularly in the earlier days, the essential work of education was subordinated to conditions created and demands made by the industries. Instead of being used as a means of education, the teaching of trades was made the chief aim and end. The success of certain pupils in careers from which they seemed necessarily excluded naturally gave rise to somewhat extravagant hopes of the possibilities of industrial education. Hence, perhaps, arose the prevalent notion and expectation that schools for the blind should graduate young men and women so equipped that each and all would be self-supporting and able to earn as much, or nearly as much, as persons of equal natural ability with the sense of sight. The fact, however, is that only a small proportion of the blind in Europe and America are wholly self-supporting. According to the United States Census of 1900, of 62,456 blind persons, ten years of age and upwards, only 12,506, or about 20 per cent, were reported as regularly engaged in remunerative occupations. The percentage of the general population so employed was upwards of 50. As most institutions for the blind, particularly in the United States, are open to all blind children of average intelligence, the heterogeneous character of the membership of such schools must lower the standard of efficiency. Another factor which has been noted is that the longer a pupil remains in school the more he remains a dependent. Education is much slower and more difficult with only four senses than with five; it would, therefore, be unreasonable to expect better results of the schools for the blind than are expected of the public schools for normal children, in which special training neither takes place nor is needed. The teaching of skilled trades, it must also be remembered, properly belongs to a stage of education later than the primary, and it should not be allowed to trespass upon the legitimate work of the schools. As their educational admissions are made, so the industrial feature tends to become dominant and unavoidably imparts an element of commercialism to the school. Both adults and younger pupils become disposed to lay more stress on shop work than on mental exercises and discipline. In consequence, the finished pupils lack those general qualities which are necessary to begin business in the trades they have learned, and still more to successfully compete against sight and machinery. The long, trying, and costly experience of the leading schools in the United States has, moreover, proved that the teaching of trades or industries during the school period confers no lasting good upon the pupils and is void of even such results as the sense of self-reliance and desire to become self-supporting which, it was believed, were being promoted. For these reasons the industrial experiment is gradually being abandoned in order to save the institutions for that strictly educational work for which they were established. If trades, then, are to be taught the blind, and industries to be carried on by them, the technical training should, as in the case of seeing pupils, be taken up on leaving the school, and the instruction should form part of the primary or secondary course of studies and in a location altogether removed from the school proper.

Manual Training.—Instead of the teaching of the ordinary trades, which, owing to the radical change in industrial conditions, can no longer be carried on by the blind at a financial profit, a system of regular and thorough training of the hands, the senses, and the muscles has been generally introduced in the leading American institutions for the blind. The various forms of solid work, of work in clay, paper, and card-board, and especially, until recently, simple wood-carving, etc., are the processes of manual training most commonly employed in the general education of the blind.

Physical Training.—Educators of both blind and seeing pupils are in entire accord as to the great importance of physical training. The blind, for obvious reasons, are peculiarly in need of healthful, systematic exercise. Observation and statistics show that their health and strength are far below the normal standard. Hence, before there is any hope of obtaining satisfactory educational results, all the general physiological defects, such as deformities in the muscular system, unsightly movements, unnatural timidity, awkwardness in walking, etc., must be corrected as far as possible. In view of these facts, physical training forms an integral part of the regular curriculum of the schools for the blind.

Libraries for the Blind.—It is almost impossible for those who enjoy the use of sight to realize what a boon reading is for those who live in perpetual darkness. Outside of their early education, for those who have been blessed with it, there is nothing in the life of the blind so stimulating, so broadening, and so comforting as good books. In no country have more efforts been made to supply the blind with books and to solve the problem of their circulation than in the United States. In no country has such a liberal government provision been made for the education of the blind through the
publication of books as was made by the United States Government, when by an act of Congress (3 March, 1879) the sum of $250,000 was set apart as a perpetual fund, the interest of which ($10,000) is expended each year in printing and distributing suitable books among the blind. On the subject of the blind, and especially of the education and instruction of this class of people, there has been shown by Mr. William Wade in his interesting monograph, "The Blind-Deaf!" For this excellent publication, and still more for his widespread and munificent charity to the blind-deaf, and particularly to the deaf and dumb, the name of Mr. Wade's deserveth to be forever enshrined in the hearts of this doubly and trebly afflicted class. The knowledge by the public that the education of the blind-deaf is by no means the difficult task commonly believed, and the further knowledge of the number of those who have been educated and of their advanced position in mental attainments, will do much, it is contended by the author of the monograph, to advance the interests and the happiness of the blind-deaf. In the early education of the blind-deaf, we are told by Mr. Dora Donald, there are three distinct periods. In the first the pupil receives impressions from the material world. The mind of a blind-deaf child does not differ from that of a normal child; given the same opportunity, it will develop in the same way. Whilst the normal child can see by the eyes, the blind-deaf child, with the world must be brought to the blind-deaf child and imparted by the teacher through the sense of touch. During the second period the child is taught to give utterance to his conceptions. This may be done either through the sign language, the manual alphabet of the deaf, or through one of the systems of raised print for the blind, if articulated speech cannot be taught the child. The third and by far the most difficult step is that of procuring mental images from the printed page. If the child has been thoroughly trained in the habits of personal inspection, the teacher may be taught to express freely the results of such investigation by means of the manual alphabet and to record them in print, he will eventually be able to reverse the process and to build about him an imaginary existence that will cause the printed page to teem with life and to glow with the charm of actual existence. At this stage of the child's education, he may enter either a school for the deaf, a school for the blind, or the common school for normal children. Supplied with the necessary apparatus and accompanied by a specially trained teacher who will follow him, he may obtain through sight and hearing, he may be taught by the same methods used for normal children, ever keeping in mind this one point of difference—touch must take the place of sight and hearing; the manual alphabet or embossed page being substituted for speech.

The Blind-Deaf. According to the special reports of the United States Census Office for 1900, of the 64,763 persons reported as blind, 2772, or nearly 43 per 1000, were found to be also deaf. The age of the occurrence of these two defects cannot be stated exactly, except for those blind and deaf from birth, of whom there are 70. Between birth and five years of age are 64; between five and nine, 54; between ten and fourteen, 37; between fifteen and nineteen, 24. That the public, and even professional educators, entertain incorrect opinions of this class of people, this mistaken opinion has been shown by Mr. William Wade in his interesting monograph, "The Blind-Deaf!" For this excellent publication, and still more for his widespread and munificent charity to the blind-deaf, and particularly to the deaf and dumb, the name of Mr. Wade's deserveth to be forever enshrined in the hearts of this doubly and trebly afflicted class. The knowledge by the public that the education of the blind-deaf is by no means the difficult task commonly believed, and the further knowledge of the number of those who have been educated and of their advanced position in mental attainments, will do much, it is contended by the author of the monograph, to advance the interests and the happiness of the blind-deaf. In the early education of the blind-deaf, we are told by Mr. Dora Donald, there are three distinct periods. In the first the pupil receives impressions from the material world. Education of the Defa and Dumb.—Education essentially includes the process of encouraging, strengthening, and guiding the faculties, whether of mind or body, so as to make them fit and ready instruments for the work they have to do; and, where the
need exists, it must include, moreover, the awakening for the first time into activity and usefulness of some faculty which, but for the awakening, might remain forever dormant. As regards intellectual development, the deaf individual is the most handicapped of the afflicted class. The term "deaf and dumb", so frequently applied to classes of individuals who neither hear nor speak, is becoming obsolete among the educators of the deaf, as it implies a radical defect in both the auditory and the vocal organismo. Persons who are born deaf, or who lose their hearing at a very early age, are unable to speak, although their vocal organs may be present. The deaf, by not being deprived of hearing, they are unable to imitate the sounds which constitute speech. To correct the error involved in the term dumb, it is customary to speak of human beings who do not hear and speak as deaf-mutes, a term which implies that they are silent, but not necessarily incapable of speaking. Brute animals that are deaf, are deaf and dumb; the little child, before it has learned to speak, is mute, but not dumb. There are found individuals who can hear, but cannot speak. To such may be applied the term dumb, inasmuch as either deafness or speech or are unwilling to speak and are lacking in intelligence. Such children are generally found to be more or less idiotic. On account of the great progress made, especially during the last century, in the education of the deaf, by what is called "oral education", the term deaf is also omitted when speaking of matters pertaining to that class formerly designated as "deaf and dumb". Institutions for them are named preferably "Schools for the Deaf", and in the literature of the subject they are spoken of simply as the "deaf", e.g. "The Angelus of the Deaf", etc. Here it is well to remark, that there is a strong and growing objection among the deaf and their educators to calling their institutions asylums—a term which classifies them with unfortunate needing relief and protection, like the insane. In fact, Webster, under the word "Asylum", classes the deaf and dumb with the insane. Efforts are consequently being made to place such institutions under the control of educational rather than of charity boards.

History.—That there were deaf persons in the remote past is evident from the fact that the causes of deafness, such as disease, were as prevalent then as now. Before the Christian Era, their condition was deplorable. By many they were considered as under the curse of heaven; they were called monsters and evil doers; as soon as they were born, they were lifted into the air, sprinkled with holy water, and then left to die. Lucretius, the Roman poet, voices the received opinion that they could not be educated:

> To instruct the deaf, no art can ever reach,
> No care improve them, and no wisdom teach.

Greeks and Roman poets and philosophers classified them with defective, and the Justinian Code abridged their civil rights. In the family they were considered a disgrace, or were looked upon as a useless burden and kept in isolation. It is a bright page in the New Testament which narrates the kindness of our Divine Lord, as they are equal in the eyes of the law and dumb. After His example, the Church has extended its charity to this afflicted class, and has led the way in opening up for them other channels of thought in place of the hearing faculty. The statement made in literature connected with the education of the deaf, that the real history of deaf-mute instruction must be considered as dating from the Reformation, is the old fallacy of post hoc ergo propter hoc. The fact is, that not a few of the more famous educators of the deaf received their first lessons from those who preceded the Reformation or were not influenced by its errors, but undertook the instruction of deaf-mutes for the sole purpose of imparting religious instruction. No Catholic theologian maintained that the adult deaf and dumb from birth are beyond the pale of salvation, because "Faith cometh by hearing" (Rom., x, 17). The assertion is often made, without references being given, that St. Augustine held such an opinion. Although the great doctor may have held the opinion of his time, that the deaf could not be educated, he certainly did not exclude them from the possibility of hearing those who teach them. The pagans to whom the Gospel had not yet been preached.

That the deaf are very much handicapped, even in our time, as regards religious instruction, so necessary for the preservation of faith and morals, must be admitted. Many deaf-mutes born of Catholic parents have lost their hearing. Their family and their churches are not provided with educational facilities. Moreover, they are deprived of the usual Sunday instructions and sermons. There are in the United States few priests engaged in ministering to their spiritual welfare, and such as have taken up this apostolate are not at leisure to devote their whole energy to the work. On the other hand, Protestant ministers travel through the length and breadth of the land and in their monthly itineraries assemble the deaf for religious services. There can be no doubt that from the dawn of Christianity the deaf enlisted the sympathy and aid of religious leaders and missionaries, who, by various ingenious devices suited to the occasion, taught them the essential truths of faith; but history has left meagre records of their good work. According to Venerable Bede, St. John of Beverley was the first to make an effort to teach the deaf. He was led to this effort by making the sign of the cross over him; and Bede himself, in his "De Loquela per gestum digitorum", describes a manual alphabet. Rudolph Agricola, the distinguished humanist (1445-1485), states that he saw a deaf and dumb man who was able to converse with others by writing (De inventione dialectica, III, xvi). Ponce de Leon (1520-1584), a Spanish Benedictine monk, undertook the education of several deaf-mutes, as is related in the accounts of his work discovered among the archives at Oña. He relates that he taught pupils who were deaf and dumb from birth to speak, to read, to write, and to keep accounts, to repeat prayers and to confess orally. He first taught his pupils to write the names of objects and then to articulate. A contemporary writer, Francesco Valles, says that Ponce de Leon's method proved that, although we learn first to speak and then to write, the reverse order answers the same purpose for the deaf. It is highly probable that he was led to undertake the instruction of the deaf and dumb by the principle announced by Girolamo Cardano (1501-1576), a friend of St. Charles Borromeo, who said that the deaf who were sickly were improved by means of speech, and speech with thought, but written characters may be connected together without the intervention of sounds. The deaf can hear by reading, and speak by writing. About fifty years later, Juan Pablo Bonet, a Spanish priest, published a treatise titled, "Reduction de las Letras y arte para enseañar hablar los Mudos" (Madrid, 1620). He made use of a manual alphabet, invented a system of visible signs representing to the sight the sounds of words, and gave a description of the position of the vocal organs in the pronunciation of speech. His work contains many valuable suggestions useful to modern teachers of articulation and lip-reading.

St. Francis de Sales, having on his missionary journeys met a deaf-mute, took him into his service and succeeded in establishing connection with him by signs, and prepared him for confession and Holy Communion. The celebrated Jesuit naturalist and physician, L. T. Erra (1613-1657), in his "Prodromo dell' Arte Maestra", considers the education of the deaf, which, according to him, consists in their "first learning to perceive the different tone of the organs of speech in the formation of sounds, and then imitating them; and recognizing speech in others by lip-reading. To that end they should first utter each sound separately, read it on the lips of another, then join them in words;
next they should be taught the meaning of these words by being shown the objects signified, and gradually be made acquainted with the meaning of those which relate to the functions of the senses, the arts, the understanding and the will" (Arnold). Lorenzo Hervas y Paaduro (1753–1808), a celebrated Spanish philologist and missionary in America, took an active interest in the education of the deaf in Rome and published a learned work in two volumes entitled "Escuela Española de Sordo-mudos, o Arte Para Enseñarse a Escrir y Hablar el Idioma Español" (Madrid, 1793). The work consists of two parts: the first dealing with the deaf in the political, physical, philosophical, and theological aspects of the subject and the linguistic questions it gives rise to; the second is a history of their education up to that time, which is the first complete account written; the third explains the practical method of teaching idiomatic language by writing; the fourth that of teaching speech; and the fifth is on the instruction of the deaf in metaphysical ideas and in moral and religious knowledge" (Arnold).

Among other writers in the interest of the education of the deaf was Jean Baptiste Heinicke (1725–1782) and Reinhold (1745–1804); Deusing (d. 1666), who in his writings recommends writing, signs, and, on occasion, lip-reading as the helpful instruments in the education of the deaf; William Holder (1619–1685), and his contemporary, John Wallis (1616–1706); George Dalarno (1691–1758), who was a professor in England and wrote in 1661, "Ars Signorum" and, in 1690, "Dissertatio de Auditis" (or "Deaf and Dumb Man's Tutor"), and devised a double-handed alphabet; Baron Von Helmont (1616–1689); John Conrad Amman (1669–1724), a native of Schaffhausen, Switzerland, who published (1700) "Dissertatio de Loquela" in which are described the means by which the deaf and dumb from birth may acquire speech.

Although Germany cannot claim originality in the field of the education of the deaf and dumb, several works published in other countries were translated into German, and their teachings put in practice. Among the earliest to take up this work were Kner (1704), Raphel (1673–1740), Lassius (1738), and Arnoldi (1777). The first public institution for the deaf in Germany was established at Danzig in 1790, the great advocate of the oral method of instruction, which has generally been followed in German schools for the deaf. To Friedrich Morita Hill (1803–1874), regarded as one of the greatest teachers of the deaf is due the distinctively called the "Gymnasium Syring," which has found a large critic, J. Haidek of the Breslau Institution for the Deaf, in a work entitled "Der Taubstumme und seine Sprache". Jacob Rodrigues Pereire (1715–1780), a Portuguese Jew, gave an exhibition of his skill in teaching the deaf before the Academy of Science in Paris. "His efforts were confined to a privileged few, and, from this circumstance, as well as keeping his methods secret, his work, unlike de l'Épeé's, had no lasting effect upon the deaf as a class" (Arnold). Abbé Desclamps, of Orleans, and his assistant Fortune to the education of the deaf-mutes and, in his instructions, relied chiefly on reading and writing together with speech and lip-reading.

Up to the middle of the eighteenth century, it was believed that speech was indispensable to thought. The practical utility of pantomime had not been fully shown before the days of Abbé Charles-Michel de l'Épeé (1712–1789), the father of the sign-language and founder of the first school for the deaf. The deplorable condition of the two deaf-mutes whom he chanced to meet on one of his missionary errands excised his compassion and awakened, in his zeal for their religious instruction. He discovered others of the same class, especially among the poor, and to these he devoted his time and fortune. In his first attempt to teach his silent pupils he tried the method of picture signs, used by Père Vanin before him; but, finding this method unsatisfactory, he tried the articulation method, which he found discouragingly slow. Noticing, as every instructor of the deaf has noticed, that deaf-mute children, even before having received instruction from anyone, will, at play and at other times, communicate with each other in pantomime and make use of certain natural gestures indicative of objects, their quality and action, he came upon the idea of using a sign-language as the means of instruction. Since words are conventional signs of our ideas, why could not conventional gestures be signs of ideas? He concluded that the natural language of signs, which the deaf-mutes themselves invent, would be of great service in their instruction. He accordingly made himself familiar with the few signs already in use and added others more or less arbitrary. He opened a school for deaf-mutes in Paris, about 1760, which soon won international fame. De l'Épeé died in 1789, leaving as his successor the Abbé Sicard, who made important improvements in the system of de l'Épeé. At about the same time a school for the deaf was opened at Dusseldorf by Heinicke (1725–1782) and Reinhold (1745–1804), who were influential in the education of the deaf in Europe. The success of these schools prompted other schools and countries to establish similar ones under the direction of persons trained by de l'Épeé, Heinicke, or their disciples. In Italy the first school for the deaf was established in 1784 at Rome, by the Abbate Silvestri, a disciple of de l'Épeé. Among other Italian educators must be mentioned Tommaso Fendola (1800–1883) and his brilliant associate, Enrico Marchio; Abbate Balestra and Abbate Giulio Tarra (1832–1889), who acted as president at the Milan International Congress in 1880 and saw his most cherished ideas regarding oral teaching practically approved by the resolutions that were adopted, and which hastened the progress of oral teaching, especially in France.

Francis Green, a native of Boston, 1742, whose son was a deaf-mute, was the earliest advocate of deaf-mute education in America. In his "Vox Oculis Subject," published in London, 1783, he describes the method by which a child may be taught to speak. In about 1812, John Braidwood, Jr., a grandson of the founder of the Edinburgh school, attempted to establish schools in Virginia, New York, and Baltimore, but failed. "The immediate effects," says the "History of American Schools for the Deaf" (1, 10), "was to hinder and delay the opening of the first permanent school; for the members of his family in Great Britain, who controlled the monopoly of deaf-mute instruction in America, placed obstacles in the way of Dr. Gallaudet, when he sought to acquire the art of instruction in the mother country. An exceptionally large number of deaf-mutes having been found in the State of Connecticut by Dr. M. F. Cogswell, whose daughter was deaf, a corporation of several gentlemen was enlisted for the purpose of establishing a school at Hartford, under the care of Dr. Thomas Hopkins Gallaudet. For the purpose of mastering the art of instructing the deaf, Dr. Gallaudet sailed for England; but the exorbitant and humiliating terms imposed by the Braidwood-Watson family, which held the monopoly of the art, repelled him. Happening to meet Abbé Sicard, who with his pupils was visiting London, he accepted an invitation to visit the school in Paris. Here he received every assistance. The abbé gave him several hours of instruction every week and generously allowed Laurent Clerc, one of his distinguished pupils and valuable associates, to accompany him on his return to America. Seemingly the friendship between Dr. Gallaudet and Laurent Clerc, it is stipulated (article 11): "He [Laurent Clerc] is not to be called upon to teach anything contrary to the Roman Catholic religion"; and in his letter to Bishop Cheve-
rus of Boston, Abbé Sicard writes: “The extreme desire to procure for the unfortunate deaf-mutes of the country in which you dwell, and fulfill so well the mission of the Holy Apostles, the happiness of knowing our holy religion, which would be a proof of human strength. I send to the United States the best taught of my pupils, a deaf-mute whom my art has restored to society and religion. He goes fully resolved to live and be faithful to the principles of the Catholic religion which I have taught him.” Notwithstanding the kind solicitude of his beloved master, Laurent Clerc, like so many other deaf-mutes deprived of constant religious instruction, in his surroundings weakened in the Faith and apostatized.

The kindness of Abbé Sicard only served to lay the foundation of Protestant propaganda which, ever since the opening of the Hartford School founded by Dr. Gallaudet, has controlled the education of the deaf in America. This Hartford School, now known as the American Asylum, was opened 15 April, 1817, under the superintendency of the Rev. Dr. Gallaudet, whose two sons, the Rev. T. Gallaudet and E. M. Gallaudet, have been active in the cause of deaf-mute education.

The latter was the founder of the Columbia Institution for the Deaf and Dumb at Washington, D. C., which was opened 13 June, 1857. Later on, in 1864, it became a national school for the deaf under the name of the National Deaf-Mute College. Connected with the college is a normal department for the training of teachers for the deaf. A course of studies leading up to entrance into the National Deaf-Mute Colleges may be found in the “American Annals of the Deaf” for November, 1907. As regards higher education and normal-school practice, opportunities are also afforded by the Catholic deaf-mute schools in the State of New York.

When the Abbé de l'Épée originated the method of signs, many of his contemporaries, such as the Abbé Deschamps, refused to be associated with the new school, and between him and Samuel Heinicke of Leipzig, the great upholder of the speech method, there was carried on a spirited controversy, which has continued ever since, among the educators of the deaf. Professor E. A. Fay, in the “American Annals of the Deaf”, gives the following classification and definition of the methods used in the schools for the deaf:

1. The Manual Method:—Signs, the manual alphabet, and the signs used in the instruction of the pupils, and the principal objects aimed at are mental development, and facility in the comprehension and use of written language. The degree of relative importance given to these three means varies in different schools; but it is a difference only in degree.

2. The Manual Alphabet Method:—The manual alphabet method and writing are the chief means used in the instruction of the pupils, and the principal objects aimed at are mental development, and facility in the comprehensiveness and use of written language. Speech and speech-reading are taught to all of the pupils in one of the schools (the Western New York Institution) recorded as following this method.

3. The Oral Method:—Speech and speech-reading, together with writing, are made the chief means of instruction, and facility in speech and speech-reading, as well as mental development and written language, is aimed at. There is a difference in different schools in the extent to which the use of natural signs is allowed in the early part of the course, and also in the prominence given to writing and speech-reading in the course of instruction; but they are differences only in degree, and the end aimed at is the same in all.

4. The Auricular Method:—The hearing of semi-deaf pupils is utilized and developed to the greatest possible extent, with or without the aid of artificial appliances; the education is carried on chiefly through the use of speech and hearing, together with writing. The aim of the method is to graduate its pupils as hard-of-hearing speaking people instead of deaf-mutes.

(5) The Combined System:—Speech and speech-reading are regarded as very important, but mental development and the acquisition of language are regarded as still more important. It is believed that, in many cases, mental development and the acquisition of language can be best promoted by the manual or the oral-manual alphabet method, and so far as circumstances permit, such method is chosen for each pupil as seems best adapted for his individual case. Speech and speech-reading are taught where the measure of success seems likely to justify the labor expended, and, in most of the schools, some of the pupils are taught wholly or chiefly by the oral method or by the auricular method.

Some educators of the deaf employ the method of visible speech, which is a species of phonetic writing symbolizing the movements of the vocal organs in the production of speech. There is also a phonetic manual in which the several positions of the hand not only represent various speech sounds, but also indicate concisely the way in which the represented sound is physiologically or mechanically produced (see Loomis, “Phonetic Manual”, Rochester. New York, 1891). Whipple, in his “Phonetic Manual”, endeavours to depict the positions taken by the visible organs, the teeth, lips, tongue, and palate, in the production of sound.

It is beyond the scope of this article to discuss the merits of the various methods in use. A teacher of the deaf cannot lose sight of the fact that in the term deaf, or deaf-mute, there are included at least four subclasses, namely, the semi-mutes, who have lost their hearing after they had acquired more or less perfectly the use of language; the congenitally deaf, who retain some power of hearing, but yet cannot attend with profit schools for hearing children; the congenitally deaf, possessing some ability to perceive sound; and the totally deaf from birth, who are unable to perceive sound. A teacher of hearing children may take for granted if the class is properly graded, that all his pupils are on the same plane; but a teacher of the deaf, whose pupils may be only four or five number, may have before him, even in the lowest grade, as many different kinds of deaf children as he finds in the class for hearing children, and he must instruct and educate. Considering that the deaf child is very much handicapped, and that the period of its school-days are limited, it is reasonable to suppose that a good teacher will take advantage of every latent power possessed by the child for educational development. In word, he must not confine his method to the child and not endeavour to adapt the child to the method. It would certainly be a mistake to use the purely oral method for all deaf-mutes without discrimination and without considering the capacity, eyesight, and other matters of the child.

AIDS TO EDUCATION OF THE DEAF.—For the purpose of diffusing knowledge relative to the education of the deaf, there has been established, through the benefactions of Dr. Alexander Graham Bell, the Volta Bureau, Washington, D. C. Here are collected items of interest in the educational work for the deaf. Under John Hitz, its first superintendent, it received international development. In this way it has been possible to compile and diffuse international statistical information concerning institutions and work for the deaf throughout the world. Its publications are distributed gratuitously or by exchange. Among the publications of the Volta Bureau is an historical account of all the schools for the deaf in the United States, in three volumes, edited by Dr. E. A. Fay. As an incentive to the educational work for the deaf, and as a token of the aid of the deaf to the cause of deaf-mutes, there are about thirty-two periodical publications in
Europe and more than sixty in America dealing with questions concerning the deaf. The oldest among the latter, "The American Annals of the Deaf", edited by Dr. Fay, is still published, which is the organ of the combined system of instruction. For the diffusion of the oral method there was founded, in 1889, at Philadelphia, a special periodical, "The Association Review", published by the "American Association to Promote the Teaching of Speech to the Deaf". The profession of educational work for the deaf must be numbered the meetings, congresses, and conferences of superintendents and teachers of the deaf, and of the deaf themselves. The oldest organization of the kind is the "Convention of American Instructors of the Deaf", which met for the first time in New York in 1836, and for the sixteenth time in 1901, at the Le Couteux, St. Mary's Institution for the Improved Instruction of Deaf Mutes, Buffalo, as the guest of the Sisters of St. Joseph.

There are also annual meetings of the "Association to Promote the Teaching of Speech to the Deaf"; meetings of principals and of the Department of Special Education of the National Association of American Teachers. At the invitation of the Right Rev. D. J. O'Connor, the first abbot of the institute, in 1899, they met in July, 1907, at Milwaukee, simultaneously with the Catholic Educational Association, and organized the Catholic Deaf-Mute Conference. The conference is a powerful factor in enlisting the cooperation of bishops, priests, and laymen in ameliorating the educational condition of the Catholic deaf. The deaf themselves, also, at stated times, hold State and national conventions. Such meetings are carried on in the sign language, which, because visible to a large audience, is best adapted for public addresses, sermons, etc. Whenever at these meetings the deaf touch upon educational topics, they take occasion to manifest their strong protest against pure oralm in the schools, and their unequivocal adherence to the sign-language and the combined system of education. In the United States deaf-mutes are entitled to a share in the school fund, and special boarding and day schools are provided for them. Most of the institutions are controlled by trustees appointed by the State. The term of instruction is from seven to twenty years.

ACTUAL CONDITIONS.—According to the subjoined statistics, compiled from the "American Annals of the Deaf" for 1907, there are 80 public State schools, 60 public day-schools, and 17 denominational and private schools in the United States, having an attendance of 11,686 pupils — 6317 boys and 5369 girls — 1552 instructors — 471 men and 1081 women. Out of the total number of 138 schools for the deaf, there are 13 Catholic schools with the following enrolment: St. Joseph's School for the Deaf, Oakland, California, 39; Epiphany School for the Deaf, Chicago, Illinois, 72; Institute of the Holy Rosary, Chincasa, Louisiana, 37; St. Francis Xavier's School, Baltimore, Maryland, 33; Boston School for the Deaf, Randolph, Massachusetts, 93; Mater Boni Consilii School, St. Louis, Missouri, 40; St. Joseph's School, Longwood, Missouri, 20; Notre Dame School, Cincinnati, Ohio, 12; St. John's Institute, St. Francis, Wisconsin, 71; St. Joseph's Schools, 3, New York City, 417; Le Couteux, St. Mary's School, Buffalo, New York, 176 — making in all, of the schools 2,620 in all. It will be noticed that, in the four Catholic schools for the deaf in the State of New York, which has a deaf population of about 10,000, there are 593 children cared for; and that, in nine schools scattered throughout the remaining part of the United States, there is a deaf population eight times as great as that of the State of New York, only 409 are provided for. If all the States were as generous as New York in caring for its deaf children, there should be, if adequate facilities were provided, 4744 children in Catholic schools for the deaf outside of the State of New York.

With the exception of the New York institutions for the deaf, the other Catholic institutions are almost entirely dependent upon the charity of religious sisterhoods. Pupils of all denominations are admitted, the only requirements for admission being a sound mind and good morals. Good work has been done by these devoted sisters for Church and State, and their graduates are respected and self-supporting citizens; but, as they carry on their schools with little support from without, the number of pupils is necessarily small. The pupils are for the most part girls, and, because there is no male community in the United States, as there is in Canada and Europe, to take charge of the deaf-mute boys, these are obliged, with very few exceptions, to attend State or public day-schools.

The celebrated school for the deaf at Cabra, near Dublin, Ireland, has two departments. The St. Joseph's School for boys is under the care of Christian Brothers, and the St. Mary's School for girls is in charge of Dominican nuns. It was established in the year 1846 by Archbishop Murray of Dublin. The pupils of the two institutions — 250 boys and 263 girls — 170 instructors, receive an industrial training suited to the age and capacity of the children, and so necessary for the deaf, forms an important part in the educational system of the school.

The institutions for the deaf in the United States, during the last decade, show a marked increase in the number of day-schools. This is due to the strong influence of the defenders of the oral method, who, for their purpose, consider such schools superior to boarding-schools. The conscientious duty of Catholic parents to withdraw their afflicted children from State boarding-schools that have proved so dangerous to faith, has also influenced the establishment of day-schools. Until about 1870, the schools for the deaf established in the United States were almost entirely boarding-schools.

DEAF-BLIND.—There are some individuals who are not only deaf but also blind, and not a few who are deaf, mutely and blind. Without the use of the alphabet, and unable to write, many of these have been educated in the education of this afflicted class during the last half-century, as is evidenced in the case of Laura Bridgeman, taught by Dr. Howe; Helen A. Keller, educated by Miss Annie Sullivan; Clarence Seddy, poet and author, taught by Sister Dorothea of the Le Couteux; St. Mary's Institution, Buffalo, New York, and Lottie Sullivan, educated by Mrs. G. W. Voids of the Colorado School, and instructed for her first Holy Communion by the Sisters of St. Joseph in St. Louis. About forty more remarkable cases are known in the United States and Canada (see "American Annals of the Deaf", June, 1909). It is evident that a teacher of this class must be strong in the power of inventing means for the attaining of results, and of utilizing the unimpaird faculties as indirect ways of communication between the imprisoned soul and the outer world. Usually the deaf-blind are taught the alphabet, and made to understand that objects have names, and that by these names, recognized in raised print or by spelling on the fingers, objects can be designated. So delicate is their sense of touch that, like John-glen, they can, by feeling the movements of the vocal organs in the producing of speech, be taught to speak and even to read the speech of others.
MANUAL ALPHABETS.—Venerable Bede (op. cit.) describes finger alphabets. Monks under rigid rules of silence often made use of them. Rosellius, a Florentine monk, in his “Thesaurus Artificiosæ Memorie” (1579), figures three one-hand alphabets which, with minor differences, were used by Bonet and Hervás y Panduro. The first alphabet used in teaching spoken and written language to the deaf was the Spanish one-hand alphabet of Rosellius. “The happy thought of this adaptation”, says J. C. Gordon, “is attributed to the pious and learned monk Pedro Ponce de León” (1520–1554). The two-handed alphabet, used in Great Britain, was in use centuries ago among the school-boys of Spain, France, and England. Manual alphabets have nothing to do with “signs” or the “sign-language”. They constitute a manner of writing language by spelling words on the fingers. As a means of intercourse with the deaf, they are preferable to writing on paper, being more convenient and rapid.

For the sake of promoting the welfare of thousands of deaf persons, it is recommended to hearing persons to master this art, which is easily acquired.

STATISTICS.—According to the United States Special Census Report for 1900, there are in Continental United States 89,287 persons with seriously impaired powers of hearing. Of these 2772 are blind-deaf, 37,426 are totally and 51,861 partially deaf; 51,871 became deaf under the age of 20 and 37,416 in adult life; 46,915 are males and 32,372 females; 84,961 are white, and 4926 coloured.

There are on an average 1175 deaf to the 1,000,000 population in Continental United States. Considering that there are in this territory probably 15,000—

Reports received from fifty-three State schools in the United States, having an aggregate attendance of 10,124 pupils, show the values of the grounds and buildings to be $13,370,576; expenditure for grounds and buildings, $605,027; expenditure for salaries and other expenses, $2,556,450, making a total expenditure of $3,161,486, or $312 average cost per capita.

Reports from forty-three public day-schools show expenditures for salaries and other expenses to be $96,014 for 788 pupils, or an average cost per capita of $122. Reports from three denominational and private schools show an aggregate expenditure of $20,649 for 135 pupils, that is to say, an average cost per capita
Edward III, King of England (1312-77), eldest son of Edward II and Isabella, daughter of Philip IV of France; b. at Windsor Castle, 13 Nov., 1312; d. at Sheen, 21 June, 1377. He succeeded to the throne in his fifteenth year through the deposition of his father in January, 1327, Edward II being forced to agree to his own deposition, as the son refused to accept the crown without his father's consent. His marriage to Philippa, daughter of the Count of Hainault, took place at York, 24 January, 1328. In person Edward was robust and athletic; he was fond of hunting, hawking, and all knightly pastimes, especially war. Ambition seems the most prominent point in his character, and his life characterised throughout by selfishness and extravagance, was spoilt in later years by indulgence in senseless pleasures. As a knight, though he won great renown by his wars, he seems to have cared nothing to maintain the royal prerogatives nor to follow any policy which would benefit his people.

For the first four years of his reign all power was in the hands of the queen-mother and Mortimer, and not till their overthrow in November, 1331, can Edward be said to have begun to rule. His first warlike experience was glorious. In 1327 the Scots, led by Robert Bruce, bent on recovering their independence, invaded the North of England. Edward marched to meet them; but, as quick and active were the Scots that Edward marched from York to Durham without gaining any definite news of their position, and, when he tried to cut them off and force them to fight, was completely outmanoeuvred by them. The "Shameful Day" of Northampton, 1328, by which Scotland's independence was again recognised, was one of the causes which brought about the downfall of Mortimer and Isabella. Edward renewed his struggle with Scotland in 1333, supporting Edward Balioi in an attempt on the Scottish throne. He defeated the Scots under Sir Archibald Douglas at Halidon Hill, and set Balioi on the throne. But the Scots quickly expelled Balioi, and, though Edward restored him, the quarrel with France prevented Edward from continuing the struggle. Further contests with Scotland during the Crewe campaign, when David Bruce, after securing his rightful place as king, took advantage of Edward's absence in France to invade England, only to be defeated and captured at Neville's Cross, October, 1346. David remained a prisoner for eleven years, but the Scottish raids continued. In 1355 the Scots took Berwick; Edward retook it in the following year, but, though he ravaged the Lothians in the campaign known as "Burnt Candlemas," he was unable to bring the Scots to terms. When David was released, in 1357, and found himself unable to pay the accumulated ransom, he gave up the struggle, and declared the Scottish throne. But David died, in 1371, and left Edward in a position which prevented him from prosecuting his claims or interfering with Scotland's independence.

Partly caused by the war with Scotland in 1333 and 1334 was the great war between England and France known as the Hundred Years War. The Scots had been helped by money from Philip VI of France, and Edward's anger at this was increased through the presence at his court of a French exile, Robert of Arbrissel, who did all in his power to stir up a still further war with the English and the French kings. Edward and Philip had been rival claimants for the French throne in 1328, and after Philip had been chosen king there was much dispute over the homage owed by Edward for his French fiefs. Philip, too, was anxious to be king over all France, a claim which involved the annexation of Guienne and Gascony, the parts still held by England. Thus personal and national rivalry combined to cause war. Edward's personal share in the war which lasted from 1339 to 1360 was a distinguished one. The first campaigns, however, were more remarkable for the concessions won by Parliament out of the king's needs than for successes in battle. By the end of 1339 he had agreed not to take a tallage of any kind without the consent of Parliament; and in 1341, to obtain further supplies, he submitted to his accounts being audited by a board chosen in Parliament, and promised not to choose ministers without the consent of his council. But, having received the money, Edward shamefully broke his promises, saying that he had "dispersed the people to avoid greater enmity." The campaign of 1340 is notable for the naval victory at Sluys over a fleet of five hundred French ships which attempted to prevent his landing; and this, taken with his victory off Winchelsea, in 1350, over the Spanish fleet, goes some way towards justifying his claim to be regarded as a great captain.

The next campaign in which Edward took an important part was that of 1346. The Earl of Derby had been appointed to command in Gascony, and in 1346 Edward was about to lead an army to help him, when he was persuaded to attack, instead, the unprotected northern part of France. Landing near Cherbourg, he marched through Normandy, doing as much mischief as he could, and advanced almost to Paris. Then, crossing the Seine, he retreated towards Calais, pursued closely by Philip; and at Crécy, 24 August, he won a complete victory over the French force. Continuing to Calais, he began a lengthy siege which ended in the surrender of the town, August, 1347. Truces frequently signed after this were as frequently broken till open war broke out again in 1355. Edward himself had small part in the warfare which followed till 1356. In the campaign of 1356 when the French marched to Reims, he concluded a treaty with the regent of France at Brétigny, 8 May, 1360, by which all the ancient province of Aquitaine with Calais, Guines, and Pontlieue was ceded to him, and he renounced his claim to the French crown and to all French possessions except Brittany. This period between 1347 and 1355 was remarkable for the Black Death, a plague which in
England swept off about half the people. Decrease in population caused increase in labourers' wages. And in 1360 the king attempted to deal with the difficulty by proclaiming that labourers must work for the same wages as before the plague, under penalty fixed by statute. (See Gasquet, The Black Death, p. 391, London, 1908.)

Ecclesiastically, Edward's reign was marked by some legislation directed against the pope. The difficulties were caused partly by the heavy taxation levied by the pope on the clergy, and partly by the appointment of foreigners to English benefices by the pope; while the irritation of Englishmen at these grievances was increased by the pope's residence at Avignon, under the influence of the French king. In 1351 the Statute of Provisors was passed. The king had, in 1344, complained to the pope against reservations and provisions by which English benefices were given to foreigners, and the rights of patrons were defeated; and this proving ineffectual, the statute now made all who procured papal provisions for benefices liable to fine and imprisonment. But the statute can hardly have benefited patrons, for preferences filled by provisions were declared forfeit to the Crown for that time. In 1353, by the Statute of Premunire, all subjects of the king were forbidden to plead in a foreign court in matters which the King's Court could decide, and in 1365 the papal courts were expressly included under this. Urban V in 1366 demanded the annual tribute promised by King John, which was then thirty-three years in arrear; but, on Parliament refusing to pay, nothing more was heard of the claim.

The last years of Edward's reign were a time of failure and disappointment. In France he had lost, by 1374, all possessions but Calais, Bordeaux, and Bayonne; at sea the English were badly beaten by the Spanish fleet in 1372; the king himself after the death of his wife, in 1369, was completely under the influence of Alice Perrers; the court became more extravagant than before, and ministers were suspected of corruption. The Commons, supported by the Prince of Wales and William of Wykeham, attacked some of these evils in the "Good Parliament" of 1376. Lord Latimer, the king's chamberlain, and Richard Lyons, his financial agent, were impeached and imprisoned; and though Edward sent a message begging Parliament to deal gently with Alice Perrers for the sake of his love and his honour, she was banished from court. But the death of the Black Prince immediately afterwards was a great blow to the Commons. John of Gaunt was able, on Parliament's dismissal, to recall the impeached ministers, and by Edward's wish Alice Perrers returned. The struggle between the anti-ecclesiastical party, led by John of Gaunt, in alliance with John Wyolfe, and the clergy, led by William of Wykeham, is scarcely connected with Edward personally, except in so far as this and other evils were due to Edward's neglect of the affairs of his kingdom. Discontent and conflicts at home, and failure abroad brought his reign to a close. He died deserted by all except one priest who attended him out of compassion. He was buried in Westminster Abbey.

**Thomas Williams**

Edward the Confessor, Saint, King of England. b. in 1003; d. 5 January, 1066. He was the son of Ethelred II and Emma, daughter of Duke Richard of
Normandy, being thus half-brother to King Edmund Ironside, Ethelred's son by his first wife, and to King Hardicanute, Emma's son by her second marriage with Canute. When hardly ten years old he was sent with his brother Alfred into Normandy to be brought up at the court of the duke his uncle, the Danes having found them most agreeable. The best years of his life in exile, the crown having been settled by Canute, with Emma's consent, upon his own offspring by her. Early misfortune thus taught Edward the folly of ambition, and he grew up in innocence, delighting chiefly in assisting at Mass and the church service, which he observed with religiousness, whilst not disliking the pleasures of the chase, or recreations suited to his station. Upon Canute's death in 1035 his illegitimate son, Harold, seized the throne, Hardicanute being then in Denmark, and Edward and his brother Alfred were persuaded to make an attempt to gain the crown, which resulted in the cruel death of Alfred who had fallen into Harold's hands, whilst Edward was obliged to return to Normandy. On Hardicanute's sudden death in 1042, Edward was called by acclamation to the throne at the age of about four and spent his days in innocence. The Danish settlers owing to his gentle saintly character. His reign was one of almost unbroken peace, the threatened invasion of Canute's son, Sweyn of Norway, being averted by the opportune attack on him of Sweyn of Denmark; and the intelligent policy adopted by the ambition of Earl Godwin and his sons being settled without bloodshed by Edward's own gentleness and prudence. He undertook no wars except to repel an inroad of the Welsh, and to assist Malcolm of Scotland against Macbeth, the usurper of his throne. Being devoid of personal ambition, Edward's one aim was the welfare of his people. He remitted the odious "Danegetl" which had needlessly continued to be levied; and though profuse in alms to the poor and for religious purposes, he made his own royal patrimony suffice without imposing taxes. Such was the contentment caused by "the good St. Edward's laws", that their enactment was repeatedly demanded by later generations, when they felt themselves oppressed.

Yielding to the entreaty of his nobles, he accepted as his consort the virtuous Editha, Earl Godwin's daughter. Having, however, made a vow of chastity, he first required her agreement to live with him only as a sister. As he could not leave his kingdom without injury to his people, the making of a pilgrimage to St. Peter's was his half-sister's wish. In the procession commuted by the pope into the rebuilding of Westminster of St. Peter's abbey, the dedication of which took place but a week before his death, and in which he was buried. St. Edward was the first King of England to touch for the "king's evil", many sufferers from which disease were cured by him. He was canonized by Alexander III in 1181. His feast is kept on the 13th of October, his incorrupt body having been solemnly translated on that day in 1163 by St. Thomas of Canterbury in the presence of King Henry II.

Edward the Martyr, Saint, King of England, son to Edgar the Peaceful, and uncle to St. Edward the Confessor; b. about 962; d. 18 March, 978. His accession to the throne on his father's death, in 975, was contested by a party headed by his stepmother, Queen Elfrida, who was bent on securing the crown for her own son Ethelred, then aged seven, in which she eventually was successful. Edward's claim, however, was supported by St. Dunstan and the clergy and by most of the nobles; and having been acknowledged by the Witan, he was crowned by St. Dunstan. Though only thirteen, the young king had already given promise of high sanctity, and during his brief reign of three years and a half won the affection of his people by his many virtues. His stepmother, who still cherished her cherished treacherous designs, continued to work about his death. Whilst hunting in Dorsetshire he happened (18 March, 979) to call at Corfe Castle where she lived. There, whilst drinking on horseback a glass of mead offered him at the castle gate, he was stabbed by an assassin in the bowels. He rode away, but soon fell from his horse, and being dragged by the stirrup was flung into a deep morass, where his body was revealed by a pillar of light. He was buried first at Wareham, whence three years later, his body, having been found entire, was translated to Shaftebury Abbey by St. Dunstan and Earl Alfgere of Mercia, who in Edgar's lifetime had been one of his chief opponents. Many miracles are said to have been obtained through his intercession. Elfrida, struck with repentance for her crimes, built the two monasteries of Wherwell and Ambrosbury, in the first of which she lay in state. The spoliation of St. Edward's end, joined to the fact that the party opposed to him had been that of the irredeemable, whilst he himself had ever acted as a defender of the Church, obtained for him the title of Martyr. Therefore his name is found in all the old calendars on 18 March, also in the Roman Martyrology.

G. E. PHILLIPS.

Edwin (Edun), Saint, the first Christian King of Northumbria, b. about 585, son of Ælla, King of Deira, the southern division of Northumbria; d. 12 October, 633. Upon Ælla's death in 588, the sovereignty over both divisions of Northumbria was usurped by Ethelric of Bernicia, and retained at his death by his son Ethelfrid. Edwin, Ælla's infant son, being compelled until his thirtieth year to wander from one friendly prince to another, in continual danger from Ethelfrid's attempts upon his life. Thus when he was residing with King Redwald of East Anglia, Ethelfrid repeatedly endeavoured to bribe the latter to destroy him. Finally, however, Redwald's refusal to aid him set his heart on the river Idle, in which Ethelfrid himself was slain, and Edwin was invited to the throne of Northumbria. On the death of his first wife, Edwin, in 625, asked for the hand of Ethelburga, sister to Eadbald, the Christian King of Kent, expressing his own readiness to embrace Christianity, if upon examination he should find it superior to his own religion. Ethelburga was accompanied to Northumbria by St. Paulinus, one of St. Augustine's fellow missionaries, who thus became the first bishop of York. By Edwin the Saxons were Baptized. York in 627, and thenceforth showed himself most zealous for the conversion of his people. In instance of this, Venerable Bede tells how, at their royal villa of Ye- verin in Northumberland, the king and queen entertained Paulinus for five weeks, whilst he was occupied from morning to night in instructing and baptizing the crowds that flocked to him. By Edwin's persuasion, moreover, Eorpwald, King of East Anglia, son of his old friend Redwald, was led to become a Christian. In token of his authority over the other kings as Bretwald, Edwin used to wear the tufa (a tuft of feathers on a spear, a military ensign of Roman origin) borne publicly before him, and he received tribute from the Welsh princes. Under him the law was so respected, that it became, as the Venerable Bede attests, a proverb that "a woman might travel
through the island with a babe at her breast without fear of insult. St. Edwin was slain on 12 October, 633, in repelling an attack made on him by Penda, the pagan King of Mercia, who, together with the Welsh prince Cadwallon (a Christian only in name), had invaded his dominion. Perishing thus in conflict with the enemies of the Faith, he was regarded as a martyr and as such was allowed by Gregory XIII to be depicted in the English College church at Rome. His head was taken to St. Peter's church at Yverton, and the bones he had begun. His body was conveyed to Whithby. Churches are said to have been dedicated to him at London and at Breve in Somerset.

Edwy (or Eadwig), King of the English, eldest son of Edmund and St. Ælfthryth, b. about 940; d. 959. Though but fifteen years old at the death of his father, he was immediately chosen king, and was crowned at Kingston in January, 956. Too young, almost, to know his own mind, and surrounded by counsellors who pandered to all that was worst in him, his reign was of short duration. Despite the exhortations of Archbishop Æthelwald and Archbishop Odo, both of whom fell under his displeasure, he put imposition after imposition upon his subjects. His relatives were removed from court, honest thanes were dispossessed of their lands and inheritances, and his grandmother Eadgifu, who, by her piety and dignity, endeared herself to the entire nation, was deprived of all her possessions.

At length, in 957, the Mercians and Northumbrians, who felt his course most keenly, rose against him. Edgar, Edwy's younger brother, withdrew from the court with Archbishop Æthelwald and put himself at the head of the insurgents. Edwy advanced to meet him but was defeated at Gloucester and compelled to flee for his life. Unwilling to prolong a civil war, the men of Kent and Wessex assented to a general meeting of the thanes from North and South to arrange for peace. It was decided that the country should be divided in half at the Thames, and that each brother should rule over a part. To Edwy was allotted the southern portion, and to Edgar the northern. Taunted prudence by his reverses, Edwy governed his portion from that time forward with commendable justice and moderation, but died, prematurely, in 959.

His relations with St. Dunstan were not the happiest, and constitute the chief interest of Edwy's career. His opposition to the saint dated from the refusal of the latter to countenance his relations with Ethelfige, by some presumed to be his foster mother, and her daughter. Seeing that he was in disfavour, Dunstan withdrew for a time to his cloister, but the anger of the king, kept alive by Ethelfige, followed him into that sanctuary. The monks were incited to revolt, the church was plundered. Dunstan fled and, though hotly pursued, managed to escape to the Continent, where he remained until after Edwy's death. Osbern's story to the effect that Edwy engaged in a general persecution of the monks may, however, be safely rejected, as the revolt against him was not concerned with the dispute between the regulars and seculars which began only after Edwy's death. On the other hand, Edwy's dislike for Dunstan may have helped to impede the saint's monastic reforms.

Edwy, a Bishop of Thrussington, b. near Towyn, Ireland, 1734; d. near Towyn, Ireland, 1798. He belonged to a family owning large estates in the County Galway. In the eighteenth century they were reduced in power and wealth. The tide began to turn, however, when a small grant of land was made by the Vicar General of Galway for an Irish Catholic to receive Catholic education at home; nor do we know where young Egan received his early education. Neither is it certain at what age he went to France to be trained for the priesthood. This training he received at the College of Bordeaux, founded by Irish exiles and endowed by Anne of Austria in the seventeenth century. After his ordination he returned to Ireland and laboured in the ministry for some years till, in 1785, he was appointed Bishop of Achonry. Two years later he became Archbishop of Tuam. Acclimatized during his whole life in Ireland to the least toleration of his religion, he joyfully welcomed the Catholic Relief Act of 1783, and hastened to express his gratitude to George III. When Maynooth College was founded in 1785, he was named one of its trustees. One of his last public acts was to sign an address to the Irish vicarage, Lord Camden, condemning the revolutionary associations then in Ireland. In this address George III was described as "the best of kings," and the Irish Parliament as "our noblest legislators." It was a language used to such a king and of such a parliament.

Egan, Michael, first Bishop of Philadelphia, U. S. A., b. in Ireland, most probably in Galway, in 1761; d. at Philadelphia, 22 July, 1814. Entering the Order of St. Francis he was rapidly advanced to important offices. In his twenty-sixth year he was appointed Guardian of St. Isidore's, the house of the Irish Franciscans, at Rome, and held this position for three years, when he was transferred to Ireland. After labouring for several years as a missionary in his native land, he responded to an earnest appeal of the Catholics of Lancaster, Pennsylvania, and went to the United States. Though lacking the constitution demanded by the pastoral duties of that pioneer age, and suffering often from sickness, Father Egan's priestly zeal and eloquence in the pulpit gained universal recognition, and, in April, 1803, he was appointed by Bishop Carroll guardian of the pastor of Philadelphia. On 8 April, 1808, Pope Pius VII erected this city into an episcopal see, with Michael Egan as first bishop. Archbishop Carroll describes him to the Roman authorities as "a man of about fifty who seems endowed with all the qualities to discharge with perfection all the functions of the episcopate except that he lacks robust health, greater experience and a greater degree of firmness in his disposition. He is a learned, modest, humble priest who maintains the spirit of his Order in his whole conduct." Owing to the Napoleonic troubles, the local Bulls did not reach America until the year 1810. On 28 Oct. Bishop Egan was consecrated by Archbishop Carroll in St. Peter's church, Baltimore. His brief episcopate was embittered and his health shattered by the uncontrollable behaviour of the lay trustees of St. Mary's church, which he had chosen for his cathedral. These trustees, who were tainted with the irreligious notions of the times, without any legal right, and contrary to the canons of the Church, claimed the privilege of erecting and despoiling their pastors and of adjusting their affairs. The un-Catholic church of the "holy laymen" and the clergy are their hired servants" disturbed the peace, retarded the progress, and threatened the existence of the Catholic religion in Pennsylvania during two episcopates. Bishop Egan's troubles, on the other hand, were aggravated by the enmity of two Irish priests whom he had admitted to the diocese, James Harold and his better-known nephew, William.
Thus for the first time he had united the whole English race under one overlordship, in this way substantially justifying the title King of England, though the idea of territorial kingship had not at that time come into being. Nor was he actually king of all the subject tribes, for the lesser-kingdoms still ruled, though the people were under him as Bretwalda. Thus he restored Wig- 
laf to the throne of Mercia and made his own son Ethelwulf King of the Kentishmen. In his own Kingdom of Wessex he developed the shire system, carefully regulating the relations of the ealdorman and the bishop to the king. He also organised the fyrd, or militia. His ecclesiastical policy was very favourable to the Church, and at the Council of Kingston, in 839, he gave the archbishop assurances of friendship and certain privileges which considerably strengthened the pri- 
alistic see. In 831 he forced the North Welsh (the people of Wales) to accept his overlordship, but three years later he had to defend his realm from Scandina- 
vian pirates who were invading Sheppey. He beat them off, but they returned in 835 and defeated him at Clarmouth in Devonshire. In 857 he again had to meet a great fleet of Northmen, which was finally broken 
by an insurrection of the West Welsh. He, however, won a great victory over the allies at Hengestdune, on the borders of Cornwall, after which he remained at peace till his death.

The Chronicle of the Anglo-Saxon chronicle is often two, and sometimes three, years out with regard to the events of his reign. His coins, which are rare, though specimens from nineteen different mints are known, bear his name and the title Rex, the additions Anglia, "of", or "in", and sometimes "Emerging Wessex, Mercia, and

EDWIN BURTON.

Egbert, Archbishop of Trier, d. 8 or 9 December, 993. He belonged to the family of the Counts of Hol- 
al. His paternal County Trier, and his mother, Adelheid, sent him to be educated in the Abbey of Eg- 
mont, located within their dominions. Egbert is first mentioned in history as head of the imperial chancery, then under Archbishop Willigis of Mainz. Docu-
ments of 976 and 977 record him as holding this office. In 977 he was made Archbishop of Trier, which see was vacated by the death of Theodoric. Here he re-

Egbert (EGBERT or EGEBRYTH), frequently though incorrectly called "First King of England", d. 839. He styled himself in 828 "Romanus, i.e. "Overlord of East Anglia," a title used by Offa fifty years before; in 830 he described himself as "King of the West Saxons and Kentishmen," and in 833 he describes himself as "King of the West Saxons." He came of the royal race descended from Ine of Wessex and, owing to his pretensions to power, was exiled by the joint action of Beorhtric of Wessex and Offa of Mercia. The date and duration of his exile are unknown, but he returned in 802 and was chosen King of the West Saxons. In 815 he ravaged Cornwall and conquered the West Welsh who dwelt there. They rebelled in 825, when he again defeated them just in time to repel a Mercian in- 
vasion at the battle of Ellandune. Shortly after- wards, he died, and a little later his son, Egbert, as king and East Anglia submitted to his overlordship. War with Mercia again broke out, and ended in Egbert driving out Wiglaf and receiving the submission of that kingdom. In 829 he attacked Northumbria, but the Northumbrians met him at Dore and recognised him as overlord.
Egbert was an intimate friend of Otto II, and with Willigis of Mains exerted a wholesome influence over the emperor, whom he accompanied on his journey to Italy in 983. After Otto's death he stood at first to Henry the Wrangler (Zänker), but soon went over to Otto III and his mother Theophano. Other evidence of the religious renaissance in the Diocese of Trier is found in the admirable works of ecclesiastical art inspired by Egbert and executed mostly in Trier itself. Amongst those who perceived his qualities was the famous "Codex Egberti", a book of Gospels written at Reichenau and richly adorned with miniatures, now preserved in the city library of Trier; the "Paschalegium Egberti", written in 861 and now in the chapter library of Cividale (Italy), to which it was donated by St. Elizabeth of Thuringia (also called the "Codex Gertrudianus", after the Russian Grand Duchess Gertrude, who became its possessor in 1085); the "Codex Epistularum", which contains also the Four Gospels and is kept in the Gothic library; likewise several Sacramentaries, the "Lettibuch" (Registrum of St. Gregory the Great (696-704), etc. The arts of the goldsmith and of the worker in enamel were particularly well cultivated at Trier. Among valuable specimens still extant are: at Trier a golden chalice, and Limburg a fine reliquary box adorned with richly adorned head of the so-called St. Peter's Staff, once a part of the relics of the Trier cathedral, now in the sacristy of the Franciscan church at Limburg. Egbert was buried in the chapel of St. Andrew, but afterwards the cathedral.

**J. P. Kirsch.**

Egbert, Archbishop of York, England, son of Eata, brother of the Northumbrian King Eadbald and cousin of King Ceolwulf, to whom the Venerable Bede dedicated his history; date of birth unknown; d. 19 November, 786. He received his early education in a monastery, and then went to Rome with his brother Ecgred, where he was ordained a deacon. Ecgred died in Rome and Egbert immediately returned to Northumbria. On the resignation of the Bishopric of York by Wilfrid II in 732, King Ceolwulf appointed Egbert his successor. In the year 840 Ecgred, the son of this accession Bede wrote a long letter to him advising him to give much time to study and prayer, to ordain more priests for the administration of the sacraments, and to translate the Creed and the Lord's Prayer into the Saxon tongue. He also urged him to strive to obtain the subdivision of minstrels from the North in order that episcopal visitations might be more frequently made. He called his attention to many disorders that were prevalent and particularly urged him to secure the pallium for himself. Acting upon this advice Egbert, on 20 June 733, was consecrated Bishop of York (Cassian, LXXXIX, 411 sq.) and thus became the second Archbishop of York, that title having been lost to the Church of York ever since Paulinus had fled into Kent more than a century before. During all those years no one had sought for the restoration of that lost dignity, and this neglect was afterwards used as a strong argument in favour of the precedence of Canterbury, when the well-known controversy arose between the two sees. The restoration of the pallium to Egbert increased his power and authority over the Northern bishops, who thus became his subjects in North; and his power was still more strengthened in 738 when his brother Eadbert succeeded to the throne of Northumbria.

Egbert was thus placed in a position which enabled him to carry out many reforms, and in the performance of these he proved himself a strict disciplinarian; but though stern when correction and rebuke were justly deserved, he was remarkable for his sweetness and gentleness. His pupil Alcuin frequently speaks of his piety and energy and always refers to him in terms of the deepest affection. "He is said to have been the first prelate who perceived the necessity of giving great attention to the education of the clergy in the North. He paid great attention to the services and music of his church, introducing the observance of the Hours. He was also a benefactor to the fabric of the minster, bestowing upon his cathedral the choicest work of the jeweller and the goldsmith, and giving to its figures curtains of silk of foreign workmanship. He was, in all probability, the first introducer of the parochial system into the North." (Fasti Ebor.). One of his greatest works, perhaps, was the foundation of the famous School of York and its celebrated library, the remnants of which have been examined with great care by Mr. North. He afterwards succeeded him as archbishop, gave lessons in grammar and in the arts and sciences to the illustrious Alcuin, who, being a disciple of St. Peter's Staff, once a part of the relics of the Trier cathedral, now in the sacristy of the Franciscan church at Limburg. Egbert was buried in the chapel of St. Andrew, but afterwards the cathedral.

**J. P. Kirsch.**

Egbert, Archbishop of York, England, son of Eata, brother of the Northumbrian King Eadbald and cousin of King Ceolwulf, to whom the Venerable Bede dedicated his history; date of birth unknown; d. 19 November, 786. He received his early education in a monastery, and then went to Rome with his brother Ecgred, where he was ordained a deacon. Ecgred died in Rome and Egbert immediately returned to Northumbria. He received his early education in a monastery, and then went to Rome with his brother Ecgred, where he was ordained a deacon. Ecgred died in Rome and Egbert immediately returned to Northumbria. On the resignation of the Bishopric of York by Wilfrid II in 732, King Ceolwulf appointed Egbert his successor. In the year 840 Ecgred, the son of this accession Bede wrote a long letter to him advising him to give much time to study and prayer, to ordain more priests for the administration of the sacraments, and to translate the Creed and the Lord's Prayer into the Saxon tongue. He also urged him to strive to obtain the subdivision of minstrels from the North in order that episcopal visitations might be more frequently made. He called his attention to many disorders that were prevalent and particularly urged him to secure the pallium for himself. Acting upon this advice Egbert, on 20 June 733, was consecrated Bishop of York (Cassian, LXXXIX, 411 sq.) and thus became the second Archbishop of York, that title having been lost to the Church of York ever since Paulinus had fled into Kent more than a century before. During all those years no one had sought for the restoration of that lost dignity, and this neglect was afterwards used as a strong argument in favour of the precedence of Canterbury, when the well-known controversy arose between the two sees. The restoration of the pallium to Egbert increased his power and authority over the Northern bishops, who thus became his subjects in North; and his power was still more strengthened in 738 when his brother Eadbert succeeded to the throne of Northumbria.

Egbert was thus placed in a position which enabled him to carry out many reforms, and in the performance of these he proved himself a strict disciplinarian; but though stern when correction and rebuke were justly deserved, he was remarkable for his sweetness and gentleness. His pupil Alcuin frequently speaks of his piety and energy and always refers to him in terms of the deepest affection. "He is said to have been the first prelate who perceived the necessity of giving great attention to the services and music of his church, introducing the observance of the Hours. He was also a benefactor to the fabric of the minster, bestowing upon his cathedral the choicest work of the jeweller and the goldsmith, and giving to its figures curtains of silk of foreign workmanship. He was, in all probability, the first introducer of the parochial system into the North." (Fasti Ebor.). One of his greatest works, perhaps, was the foundation of the famous School of York and its celebrated library, the remnants of which have been examined with great care by Mr. North. He afterwards succeeded him as archbishop, gave lessons in grammar and in the arts and sciences to the illustrious Alcuin, who, being a disciple of St. Peter's Staff, once a part of the relics of the Trier cathedral, now in the sacristy of the Franciscan church at Limburg. Egbert was buried in the chapel of St. Andrew, but afterwards the cathedral.
group of workmen was taught a part of the work, but no one was permitted to see the whole process. The United States Government refused to adopt von Egloffstein's method of engraving, and the company abandoned the project. The common method of engraving now is by means of ruled glass screens and photography. Glass screens ruled with wavy lines, such as von Egloffstein adopted in 1861, are also being used (1909). Von Egloffstein, as a member of the United States engineering department, later performed valuable services for the Government in the submarine work at Rock Island, Illinois, and in the blasting operations at Hell Gate in New York Harbour.

S. H. Horgan.

Egmont, Lamoral, Count of, Prince of Gaëvre, b. at the Château de La Hamaide, in Hainault, 18 Nov., 1522; beheaded at Brussels, 5 June, 1568. He was a descendant of one of the oldest families of the Low Countries; his patrimonial castle, near the abbey of the same name, was on the coast of the North Sea, about three miles west of Alkmaar, in Holland. In 1538 he went to Spain with his elder brother, Charles, and took part in the expedition to Algiers in 1541, in which Charles was injured. Charles died the following year. Lamoral succeeded to the title and estates, which, beside those of Holland, comprised the principalty of Gaëvre, seven or eight baronies, and a number of dignitaries. When, in 1544, he married Sabina, Duchess of Bavaria and Countess Palatine of the Rhine, the emperor and the King of the Romans assisted at his wedding. Egmont distinguished himself in various campaigns during the reign of Charles V, who, when he was only twenty-six years of age, invested him with the Order of the Golden Fleece, and appointed him to several confidential missions such as sending him to England to seek the hand of Queen Mary for Philip II. His principal titles to military glory are two battles which he won against the French: the battle of St.-Quentin, which was fought through his vehement persuasion (1557), and that of Gravelines, the honour of which is due to him exclusively. As a reward for his services he was nominated by Philip II, in 1559, stadtholder of the province of Flanders, and a member of the Council of State for the Low Countries.

But these honours did not satisfy Egmont. Though handsome, brave, rich, generous, and popular, still he viewed with jealousy the prominence given Cardinal Granvella, who was in the confidence of the king. He entered a vigorous protest against the proceedings of this minister and clamoured for his removal, going so far as to refuse to sit in the Council of State if Granvella were allowed to remain. His hatred of the king's favourite led him into the plots of William of Orange against the Spanish Government. Later, when religious troubles broke out in Flanders, it was evident
that he did not rise to the occasion; he granted the sectarians concessions emphatically disapproved of by the king and assumed a quite equivocal attitude in the matter of the iconoclasts. It is true that he alleged, in excuse, that there were no troops at his disposal and that he was therefore restrained. One other fact he had to take part in the plots against the Government, and when the Duke of Alva arrived in the Netherlands, he would not follow the Prince of Orange into exile, saying that his was a clear conscience. This attitude cost him his life. With the Count of Horn he was arrested by the orders of the duke and condemned to death, despite his appeal to the privilege of the Golden Fleece. Both were declared guilty of high treason by the Conseil des Troubles, a court established by the Duke of Alva, and which was his avowed instrument. The two friends were beheaded amid universal grief. Egmont met his death with dignity and Christian resignation; he protested to the last moment his devotion to his religion and his king, and to the latter's compassion recommended his wife, who, through the confiscation of his property, was left penniless, and his care of his family. Egmont had been imprudent, but was guilty of no crime. His death was thenceforth one of the principal grievances of the Low Countries against the Spanish Government.

GODFREY KIRK.

Egoism (Lat. ego, I, self), the designation given to those ethical systems which hold self-love to be the source of all rational action and the determinant of moral conduct. In a broad use of the term any system might be called egoistic which makes any good of the ego the end and means. Modern literature, however, has been appropriated by usage to those systems which make happiness, pleasure, or personal advantage the sole end of conduct. In one form or another and with various modifications, the principle pervades the theories of the Cyrenaics, Epicureans, Utilitarians, and Evolutionary Schools; and, slightly disguised, it lurks at the bottom of utilitarian altruism. Its typical expression is to be found in Hobbes and Mandeville, while Jeremy Bentham, combining it with the other cognate principle, that pleasure and pain are the only objects of human desire, gives it in its most complete character as egoistic hedonism. Two of Bentham's statements, when taken together, set forth concisely the egoistic doctrine: "Pleasure is itself a good, nay, setting aside immunity from pain, the only good. Pain is in itself an evil, and indeed without exception, the only evil; or else the words good and evil, have no meaning." (Principles of Morals and Legislation, chap. ix.) "The search after motives is one of the prominent causes of man's bewildement in the investigation of the question of morals. But this is a pursuit in every moment employed is a moment wasted. All motives are absolutely good, no man has ever had, can, or could have a motive different from the pursuit of pleasure or shunning of pain." (Deontology, vol. I, p. 126.) The undisputed fact that men do experience sentiments of benevolence and perform disinterested actions offers an obvious difficulty to the egoist. Hobbes seeks to evade it by resolving altruistic impulses into personal hopes and fears. Later hedonists, reverting to the principle of the association of ideas, contend that virtue, which at first is pursued only for the pleasure it brings, comes later on, through a confusion of means and end, to be pursued for its own sake. Innumerable analyses have shown that pleasure and pain are not measurable, and still less commensurable. The scheme devised by Bentham for estimating the quantity of different pleasures by considering their various dimensions—intensity, duration, nearness, certainty, purity (freedom from pain), fruitfulness—is commonly regarded as a piece of absurdity.

This fundamental postulate of egoistic hedonism is, therefore, considerably changed. One characteristic vice of the system lies in its primary principle that self-interest is the only motive of human action. This doctrine reduces all virtue to mere selfish calculation, it outrages our liveliest moral feelings by resolving the highest and noblest impulses into a base result of personal advantage. To say that man is incapable of acting from any motive other than self-interest is to degrade human nature. Mankind at large understands very clearly that self-interest is one thing and virtue quite another; that self-sacrifice and his own devoted do exist, and are not vice and immorality; that a worthy action challenges our approbation in proportion to the disinterestedness of the agent. Let it become known that the hero of what we at first considered a brilliant act of self-sacrifice had after all no other motive than to obtain some advantage for himself, and that principle is a very different matter. As Lecky says: "No Epicurean could show before a popular audience that the one end of his life was the pursuit of his own happiness without an outburst of indignation and contempt, no man could conscientiously maintain men so conducted as moral; while I, as a reasoner, self-sacrifice is the only rational and indeed possible motive of action—the deliberate object of all his undertakings without his character becoming despicable and degraded." (European Morals, vol. I, p. 35.) Besides, if the egoistic impulse is made the sole and unapproachable motive of action, it is idle to speak of obligation and duty. Nor can the hedonist, consistently with his theory, claim that he safeguards the pre-eminent value of virtue by recognizing the happiness derivable from it to be the highest form of pleasure. Even this kind of pleasure, while another does not, then evidently there must be some essential difference, unaccounted for in the egoistic and hedonistic theories, between right and wrong conduct, in virtue of which they produce contrary results of happiness and pain for the agent. But moral judgments are not resolvable into estimates of self-interest; and if we commit ourselves to classify conduct purely by the advantages, in terms of the pleasure and pain, to be reaped from it, we shall be forced to apprehend as virtuous actions which the reasoner finds villainous, and vice versa. To say that God is to reach that highest good which consists in realizing the moral perfection of his nature. This good is to be sought for its own sake chiefly, and in its train follows happiness as, if the expression may be permitted, an automatic consequence. Hence in pursuing the moral good, I am implicitly pursuing my own happiness. This self-realization is not egoism: for egoism makes self the centre, the beginning and the end of action. On the other hand, the virtuous man subordinates himself to the moral good, which in the last analysis is identified with God. In this sense, as Aristotle points out, the good man may be said to be self-lover. "For he gives to himself what is most honourable, and the greatest goods, and gratifies the authoritative part of himself, and obeys it in everything. Therefore, he must be a self-lover. after a dif-
EGYPT

EGWIN

EGYPT.

EGWIN, Saint, third Bishop of Worcester; date of birth unknown; d. (according to Mabillon) 20 December, 720, though his death may have occurred three years earlier. His fame as founder of the great Abbey of Evesham no doubt tended to the growth of legends which, though mainly founded on facts, render it difficult to reconcile all the details with those of the ascetic life of the first half of the 8th century. It appears that in 692, or a little later, upon the death of Offor, second Bishop of Worcester, Egwin, a prince of the Mercian blood royal, who had retired from the world and sought only the seclusion of religious life, was forced by popular acclamation to assume the episcopal see. His biographers say that king, clergy, and commonly all united in demanding his elevation; but the popularity which forced on him this reluctant assumption of the episcopal functions was soon wrecked by his apostolic zeal in their discharge.

The Anglo-Saxon population of the then young diocese had had less than a century in which to become accustomed to the restraints of Christian morality; they as yet hardly appreciated the sanctity of Christian marriage, and the struggle of the English Bene- dictines for the chastity of the monad had only fairly begun. At the same time large sections of England were more or less permanently occupied by pagans closely allied in blood to the Anglo-Saxon Christians. Egwin displayed undaunted zeal in his efforts to evangelize the heathen and no one can wonder at his zeal, for the limits of the region assigned to him were no small ones. He was, as a wise man, a tower of solace and comfort to his subjects in the valley of the Severn.

Egwin undertook a pilgrimage to seek veneration from the Roman Pontiff himself. According to a legend, he prepared for his journey by locking shackles on his feet, and throwing the key into the River Avon. While he prayed before the tomb of the Apostles, at Rome, one of his servants brought him this very key—found in the maw of a fish that had just been caught in the Tiber. Egwin then released himself from his self-imposed bonds and straightway obtained from the pope an authoritative release from the load of oboquy which his enemies had striven to fasten upon him.

It was after Egwin's triumphant return from this pilgrimage that he was allowed to visit Evesham. Perhaps the tale of a miraculous vision by which the Blessed Virgin had signified her will that a new sanctuary should be dedicated to her. Egwin himself went to the spot pointed out by the shepherd (Eoves ham, or "dewelling") and to him was told the way of the new edifice. King Ethelred granted him the land therewithon about which the famous abbey was founded. As to the precise date of the founda-

tion, although the monastic tradition of later generations set it in 714, recent research points to some year between 708 and 709. But in any rate, it was in the year 709 that Egwin made his second pilgrimage to Rome, this time in the company of Coenred, the successor of Ethelred, and Offa, King of the East Saxons, and it was on this occasion that Pope Constantine granted him the extraordinary privileges by which the Abbey of Evesham was distinguished. One of the last important acts of his episcopate was his participation in the first great Council of Clovesho.

In the 4th year of the reign of his Abbey (London, 1604), BUTLER, Lives of the Saints, I., 490.

JAMES J. FOX.

EGYPT.—This subject will be treated under the following main divisions: I. GENERAL DESCRIPTION; II. ANCIENT EGYPTIAN HISTORY; III. ANCIENT EGYPTIAN RELIGION; IV. LITERARY MONUMENTS OF ANCIENT EGYPT; V. THE COPTIC CHURCH; VI. COPTIC LITERATURE; VII. COPTO-ARABIC LITERATURE.

I. GENERAL DESCRIPTION.—The name Egypt properly applies only to the region lying from the Nile from the Mediterranean, 31° 35' N. latitude, to the First Cataract, at Assuan (Syene), 24° 5' 30" N. latitude, a stretch of about 680 miles by rail. However, from remote antiquity, as now, Egypt held sway over Nubia, reaching at least as far as Napata (Gebel Barkal), 18° 30' N. latitude, which, under the Eighteenth dynasty, was the southernmost city of the empire—another stretch of about 590 miles by rail.

Distances by water are somewhat greater owing to the winding course of the river. From Napata the Nile continues for a while in the south-west direction which it follows from Abu-Hamed, but soon assumes its ordinary sinuous course to the north, describing two great principal curves—one to the west down to Wadi Halfa, just below the second cataract, Soleb being the westernmost point, and then another to the east as far as Assiut (Lykopolis), Assuan forming its apex, or easternmost point. As far as Edfu (Appollinopolis Magna) the valley is rather narrow, rarely as much as two to three miles wide. Indeed "the Nile advances clear up to the river brink" (Badeker, Egypt, 1908, p. 376). The general aspect of the Nubian desert is that of a comparatively low table-land, stony in the north, studded with sandy hills in the south. At Assiut the valley widens out and becomes wider still in the neighbourhood of Esnah (Latopolis). At Luxor (part of Thebes) it again narrows for a few miles, but after that it maintains a respectable breadth, averaging between twelve and fifteen miles. Now it is again widened out by the Persian Gulf and Arabian deserts, between which the valley extends.

The range to the left is somewhat farther from the river, so that most of the towns are built on the western bank.

Near Girghaw (Abydos) begins the Bahir-Yosef, Joseph's Canal. It was formerly a branch of the Nile; it runs parallel to the main stream at a distance of from 5 to 6 miles along the left bank, and empties.
into the Fayûm (name of Arainae). One hundred and ten miles above Memphis the Libyan mountains bend to the north-west, and then, facing north-east, they draw nearer again to the Nile, thus surrounding a large extent of territory, which of old was known as Te-She, or Lakeland, from the great inland lake frequently mentioned and described by the Greek travellers and geographers under the name of Lake Meris. It is still called Fayûm, from the Coptic πτωμ, "the sea". This lake once occupied almost the entire basin of the Fayûm, but within the historical period its circumference does not seem to have exceeded 140 miles. It lay 73 feet above the sea level, and was very deep, as shown by its last vestige, the Birket-el-Kurdn, which lies 144 feet below the same level (Baedeker, op. cit., p. 186 sq.).

A little before reaching Cairo, the Nile flows along the rocky and sandy plateau on which the three best-known pyramids stand. There, too, the two ranges of Arabian and Libyan mountains, which above this point run for many miles close to the river, turn sharply aside in the direction of the north-east and north-west, thus forming a triangle with the Mediterranean shore. The immense alluvial plain thus encompassed was called by the Greeks the Delta, owing to its likeness to the fourth letter of their alphabet (Δ). As soon as the river enters this plain its waters divide into several streams, which separately wind their way to the sea and make it a garden of incredible fertility. In ancient times there were seven of these branches, five natural and two artificial. Only two are now of importance for navigation, the Damietta (Tamiathis) and the Rosetta branches, both named from the towns near which they discharge into the sea. It is to be remarked that, as a natural result of the incessant struggle between sea and land, the outline of the Delta is even now somewhat indefinite, and was probably much more so in the remote past. The shore is always partly covered with lagoons which move from one place to another. The most extensive of these are now, from east to west, Lake Menzaleh between the ancient Ostium Phatniticum and Ostium Pelusiacum, name of Desert of Soste, for its Coptic monasteries, four of which exist to this day.

Geology.—The low Nubian table-land through which the Nile meanders consists of a red sandstone, belonging to the upper cretaceous formation. It has furnished the Egyptians with an excellent building stone which they have exploited from remote antiquity, especially at Gebel Sililah (Silsilis), 26 miles south of Edfu, where the sandstone beds, in sharp contrast with their former low level, rise in steep banks overhanging the river, thus offering unusual facilities for quarrying and transporting the stone. Near Edfu the sandstone is replaced by the nummulitic limestones (Eocene) of the Tertiary period, which form the bulk of the Libyan Desert and of a considerable portion of the Arabian Desert as well. The Libyan Desert is a level, or almost level, table-land, averaging 1000 feet above the sea. On the east it is fringed with craggy cliffs overhanging the valley, while its outward border, running almost to the north-west, offers here and there deep bays in which lie the oases of Kharga and Dakhleh (Great Oasis), Farafreh (Trinthis Oasis), and Siweh (Jupiter Ammon). The oasis of Bahryeh (Small Oasis), north-east of Farafreh, lies, on the contrary, in a depression entirely surrounded by the higher plateau. The Fayûm, in fact, is nothing but such an oasis on a larger scale. The plateau itself is waterless and practically without vegetation. Its strata are gently inclined to the
north-west, so that the highest level is in the south, near Luxor, where the oldest (lower Eocene) strata spread eastward at an acute angle. The cliffs take the place of the cliffs, undoubtedly for the same reason as in the Arabian Desert (see below).

East of the Nile the limestone formation originally presented much the same appearance as in the Libyan counterpart. This appearance, however, was changed by the (6000 to 7000 feet) range of crystalline rocks (grain, gneiss, diorite, porphyry, etc.) which sprang up along the Red Sea, lifting and tilting both the limestone formation and the sandstone beds (which extend farther north on the eastern than on the western side of the Nile, and are entirely wanting west of it). The valleys. Some of these run north and south, but most of them slope down to the Nile. The Wādī Hammāmbāt (the Rehenu Valley of the Egyptians) runs almost straight across the desert from Keft (Coptos) on the Nile in the direction of Koseir (Leucos Limēn of the Greeks) on the Red Sea. In spite of this the Arabian Desert still preserves its general appearance of a tableland. The open plains, of course, are almost devoid of vegetation, but numerous plants can be seen in the valley after rain, and they thrive in the sheltered ravines and spring fed wādīs. The limestone forms a spur of the eruptive range just mentioned runs in a western direction to the Nile, extending clear across the bed of the river and thus occasioning the so-called first cataract.

The formation of the present Valley of the Nile, in Egypt proper, dates from the Pliocene times, when it first appeared as a fiord into which the water of the Mediterranean Sea flowed at least as far as Kenêh (Caenopolis) and perhaps even as far as Eeneh (in the older Miocene times, the valley did not exist at all, the Arabian and Libyan Deserts forming one continuous table-land). Intimately connected with the formation of the valley are the sands and loams occurring to the south of the pyramids of Gizeh, as is shown by numerous Pliocene fossils they contain (Baedeker, Egypt, p. 1). The silicified wood which abounds in the district of Moğhara, west of Wādī Natrūn (see above), belongs to the Miocene times, as do also the marine limestones of the Plateau of Cyrenaica, north of the Oasis of Swēh, on the eastern edge of the Arabian Desert and on the shore of the Gulf of Suez. The so-called petrified forest near Cairo consists of very fine-grained limestones and micaceous shales, fossiliferous. The larger species are extinct, but the smaller are still in evidence. The rocks are rich in fossils of the Miocene age (Baedeker, loc. cit.). Deposits of alabaster are to be found in the neighbourhood of El ‘Amarna, where the alabaster quarries of Hetnub were worked by the Egyptians from the time of the Fourth Dynasty. The cultivated plains of the Delta and the Nile valley consist of recent alluvial deposits, ranging from fine sand to the finest silt laid down by the water of the annual inundation. Under these lie coarser yellowish sands and gravels of Pleistocene age, which here and there reach the surface in the Delta as islands of sandy waste among the rich cultivation of the surrounding country" (Baedeker, Egypt, p. xliv).

Gold-bearing quartz and iron ore are plentiful in the eruptive range of the eastern desert both in Nubia and in Egypt, and gold mines were exploited during the Roman period. The working of iron ore have been found (Breasted, "History of the Ancient Egyptians", 122, 142, 154, 155).

Plants and Agriculture.—Since the remotest antiquity Egypt has been famous for its fertility. The black soil, really a gift of the Nile, annually enriched by a fresh layer each year, makes it an ideal place for ploughing. Hence the primitive character of the agricultural implements—the plough, in particular, which is precisely the same now as it was 6000 years ago, a pole to which is fastened a piece of wood bent at an acute angle, with a three-pronged piece of iron. There is no trace of large forests similar to our own having ever covered the valley proper of the Nile in quaternary times, much less the Libyan and Arabian ranges, but the Delta still has, and may have had in the past, large groves of palm trees. So far as we can judge from the paintings of the early tombs, the whole cultivable land was laid out in fields, orchards, or gardens. The fields gave rich crops of wheat, barley, millet (Sorghum vulgare), flax, lentils, peas, and beans. The orchards were stocked with various kinds of fruit trees, the pomegranate, and the olive were common; oleanders, roses, carnations, and geraniums were, as they still are, the principal decorative plants. In the kitchen gardens grew cabbages, cucumbers, melons, leeks, onions, and garlic, which the Ileretian (Leucos limēn), the oldest fruit that was less than the excellent fish (Num., xi, 5) and the fat fleshpots (Ex., xvi, 3) of the land of bondage. Reeds of various kinds grew abundantly in the marshes in Lower Egypt especially; the most important reed was the papyrus; its stalks served to make boats (Is., xviii, 2), ropes, sandals, clothes, and baskets. It was in such a basket that Moses was put by his mother and exposed in the flags by the river brink (Ex., ii, 3). But it was especially as a writing material that the papyrus became famous. Its large, fibrous stalks, and the first stripped of their bark, were sliced lengthwise. Two layers of such slices were disposed at right angles on one another and fastened with a sort of glue under some pressure, and the sheet of paper was ready for use as soon as it dried. When written upon, the sheet was rolled up with the writing inside, and the title of contents was then added on the back end of it. In ancient Egypt the tuft of papyrus was the coat of arms or symbol of the Northern Kingdom. This reed, so common in Egypt up to the first centuries of our era, has now completely disappeared from that country, very likely on account of the high tax which the Roman emperors imposed on its cultivation. It exists still, however, on the upper course of the Nile, and, according to Bruce, the Abyssinians still make boats of its stalks. Among the many other aquatic plants must be mentioned the lotus, a water-lily, of which two species, the Common Lotus (Nymphaea lotus) and the Marsh Lotus (N. lutea), with blue flowers, and the Calla mystica (Nymphea lotus), with white blossoms, are often found figured on Egyptian monuments, particularly on columns. The flower of the lotus was the emblem of Upper Egypt, as the tuft of papyrus was of Lower Egypt.

The inundation of the Nile is of the utmost importance to Egypt; it is an exaggeration to say that but for its annual recurrence the rich valley would soon become a desert similar to those of Libya and Arabia. The overflow is due principally to the torrents of rain that fall almost uninterruptedly in Abyssinia during the four months of summer and swell the Blue Nile (Aṣūt), which discharges into the Nile proper, or White Nile, at Khartum. The rise of the Nile begins in Egypt about three days before the full moon, and reaches its maximum height on the 10th and 20th of June; but the inundation does not begin until fully two months later. It reaches its maximum height about the autumnal equinox when it begins gradually to subside until the vernal equinox, so that the whole process of inundation lasts about nine months. The height of the water varies in different places, decreasing as the area covered by the inundation increases. The mean diffe
ence between the highest and lowest stages of the river is 21 feet at Khartum, 20 feet at Wadi Halfa, 23 feet at Assuan, 22 feet at Assiut, and 22 feet at Minieh. Below the last-named point controlling works on the river are practically non-existent. The greatest depth of the lake (Baedeker, Egypt, p. xlvii.) At Cairo to-day the average rise is 16 feet. Some twenty-five years ago it used to be 25 feet at Cairo, 24 feet at Rosetta. When stated generally the height of the inundation must be understood as the height of the kilometre on the island of Rodah, near Cairo (close by the ancient Babylon). Formerly a rise of 18 to 20 feet was poor, 20 to 24 insufficient, 24 to 27 good, 27 and above too much. For seven years, a. H. 457-464 (A. D. 1065-1072) the inundation failed altogether. The long duration of the overflow is a fact that the Nile is controlled by artificial means without which it would undoubtedly prove as detrimental as it is beneficial. The only part left to nature is the process of infiltration which is due to the pressure of the water on the banks and is favoured by the porous nature of the soil, also by the fact that the subsoil, like the surface of the valley, gently slopes down to the mountains. It is only when this natural process is completed that the river is ready to overflow its banks, and then begins man's work. The sluices of the canals are opened, and the water is conducted first to the higher, then to the nearer banks, for in its general configuration the soil to be submerged, as the subsoil, is convex—not concave, as in the case of ordinary rivers. This is brought about by building earth dykes across the canals and the fields; the dykes are removed when the preceding tract has been sufficiently irrigated. The reverse is done when the river begins to fall, and the waters are kept in the remote parts of the valley as high as possible above the level of the river and thus are let out slowly so as to cause inundation for the low-water months, March to June. This process, however, is not always possible, either because the inundation is insufficient or because the canals and sluices are not kept in good condition. The felaheen (tilers of the soil) then have to raise the water from the river, the canals, or the numerous wells fed by natural infiltration so as to water their fields.

Two machines chiefly are used for this purpose: the saykeh and the shaddo. The saykeh consists of two cog-wheels, turning at right angles to one another. The iron chain, which carries the water, is divided into sections to which are attached leather, wooden, or clay buckets. As the wheels turn the buckets are dipped in the water and filled, when they are lifted and emptied into a channel which carries the water to the fields. These machines are worked by oxen and the name is derived from the Arabic word for ox. The other machine is worked by men and by camels in Nubia. The shaddo is a roughly made pair of gigantic scales in which the traps are placed by a bucket at one end and a stone on the other, the stone being a little more than the weight of the bucket and water filled. A man stands on the bank and, pulling on the rope to which the bucket is attached, submerges the latter, then letting go, the weight of the stone lifts the bucket out, when it can be emptied into the proper channel. In the Lower Delta, where the level of the water in the canals remains nearly the same, they use a wooden wheel called tbatul, which raises the water by means of numerous compartments in the hollow felloes. Such methods, however, while absorbing all the energies of the population for most of the year, are far from exhausting the irrigation power supplied by the Nile during the first ten weeks of the year, which account for about 903,000 acres of land now lying in Egypt. Up to 1862, Egypt (Baedeker, Egypt, p. 365). In addition to these giant waterworks, the number and capacity of the canals have been considerably increased, thus allowing the inundation waters to reach farther on the outskirts of the desert; to this, probably, is due the fact that the average level of high waters is lower than it used to be—25 feet at Assuan instead of 40, although for the region below Minieh this change is also to be explained by the manipulation of the controlling waterworks. A good example is the chief waterworks of the Nile.

II. ANCIENT EGYPTIAN HISTORY.—Chronology.—The ancient Egyptians practically had only one kind of year: a vague year consisting of 12 months, each of 30 days, and 5 supplementary days which were intercalated between the 30th day of the last month of the year just elapsed and the first day of the first month of the following year. Morally, however, they did not belong to the year: the Egyptians always said that the "annual" or "five days to be found thereon". The five extra days were sacred to Osiris, Horus, Set, Isis, and Nepthys. They were days of bad omen. The year was divided into three periods, or seasons, of four months each: the season corresponding to the month of Egypt in Echot, or Echet), the sowing-time (Projet), and the harvest.
In ancient times months had no special names, they were simply designated by ordinal numbers in each season, as "the first month of the inundation" and so on. Each month (as also each year) had a name, perhaps one of the divinities whose feast occurred during that month, and the patron, it seems, varied according to time and locality. At a rather late period the names of those patrons passed over to the months themselves, hence the names transmitted to us by the classical writers (see table below). Each month was divided into three decades (the Egyptians do not seem to have ever used, or even known, the week of seven days); each day into 24 hours, 12 hours of actual day time and 12 hours of night time. The hours of day and night, consequently, were not always of the same length. The sixth hour of night corresponded to midnight, and the sixth hour of day to noon. There were further subdivisions of time, but their relation to the hour is unknown. The day most likely began with the first day-time hour; some, however, think it began with the first hour of night.

The year began with the first day of Thoth (Inundation I) which, of course, was supposed to coincide with the first rise of the river. The first of Thoth was also supposed to lie in the heliacal rising of Sirius, which was called New Year's Day and celebrated as such each year with a great festival. Isis, typified by Sirius, her star, was believed to bring with the inundation a promise of plenty for the new year; this takes us back into the first centuries of the fifth millennium, when the summer solstice, which precedes by a few days only the inundation, actually coincided with the heliacal rising of Sirius. We know, besides, from the classical writers that the latter phenomenon occurred on the 19th or 20th of July (according to the Julian Calendar), which points to Memphis as the home of the Egyptian Calendar. The Egyptians, however, must have perceived in course of time (if they had not foreseen it) that their calendar of 365 days would not, as they evidently believed at first, bring back the seasons every year at their respective natural times. Their year being about one-fourth of a day shorter than the Sirius year, on the fourth anniversary of its adoption, it had retrograded a whole day on the heliacal rising of Sirius; 496 years later, the retrogression was of about 120 days, so that the day following then the new year did not come then at a time when in fact the harvest was only beginning; and so on until, after 1461 revolutions of the civil year and 1460 only of Sirius, the first of Thoth fell again on the same day as the heliacal rising of that star. This period of 1460 Sirius years (1461 Egyptian years) received later the name of SOTHIC period from ZOETH, a Greek form of SOPDET, the Egyptian name of Sirius. Long before the end of the first SOthic period it was found necessary to consider the first of Thoth as a New Year's Day also, the civil New Year's Day. As early as the Fourth Dynasty we find the two New Year's Days recorded side by side in the tombs.

The people, who, as usual, were guided by the appearances, the calendar was steady while Sirius and the natural seasons were moving around it. Consequently Sirius's New Year's Day—which seems to be all they knew or ever cared to know of the Sirius year—was a movable feast, the date of which was to be announced every year. The fact that they estimated its precession on the calendar at six hours exactly, which was not correct except in 3231 B. C. (see E. Meyer, op. cit., 89), could not show that the date was not obtained from astronomical observation, but in a mechanical way on the supposition that every four years it would fall one day later, this rule having been ascertained astronomically once for all, and considered as correct (E. Meyer, op. cit., 89).

The cycle of the SOthic periods has been established in different ways by various scholars, with slight variations in the years of beginning of the several periods (see Ginzel, "Handbuch der mathematischen und technischen Chronologie," I, 187 sq.). According to E. Meyer (op. cit., 28), a new SOthic period began—

10 July, A. D. 140—141
10 July, 1321—20 B. C.
10 July, 2781—80 B. C.
10 July, 4241—40 B. C.

These dates have been adopted by Breasted in his chronology (Ancient Records of Egypt, I, sec. 44), which we shall follow in the chronological arrangement of the Egyptian dynasties (see below).

We have no evidence of the Egyptians having ever become aware of the differences in the seasons of the year and the solar year, which accounts for the shifting of the summer solstice and, consequently, of the beginning of the inundation from 25 July, in 4336 B. C., to 21 June, in 139 A. D. (see Ginzel, op. cit., 190). This divergence, however, was too slow, and amounted to so little, even in the course of several centuries, that the Egyptian astronomers might well have overlooked, or at least ignored, it with regard to the calendar. It is still more remarkable that, after noting the retrogression of their vague year, they should not have recognized it any more when the Egyptian astronomers were also priests and, as such, custodians of the religious side of the calendar, which in their eyes could not have been the less important. The simple insertion of an intercalary day would have been sufficient when the two years agreed, but that happened rarely; and the need of a reform was not felt by the contemporary generation. When that need was most acute, as in the middle of a SOthic period, the intercalation was not enough; the reform, to be satisfactory, would have demanded the bringing back of the seasons to their right times (at least in the measure allowed by the shifting of the summer solstice), which could not be done without passing over several months and days (cf. the Gregorian Reform), and consequently almost as many feasts or popular festivals. Indeed, in Ptolemaic times, when, prompted by pressing political-religious reasons, the priests finally undertook a reform, they were satisfied with the insertion of a sixth epagomenal day every four years. This fixed year, known as the Canopic or Tanitic year, began on 22 October, 235 B. C. (Julian), the first day of Thoth (New Year's Day), which was held to be no new year, but with scant favour and was abandoned under Ptolemy IV (Philopator) in honour of whose predecessor, Ptolemy III, the decree had been issued. A second attempt on the same limited scale, and probably in the same spirit of flattery, was made in the early years of Augustus, in connection with the establishment of the era of Alexandria. The Egyptian year was then brought into harmony with the fixed Julian year, inasmuch as it received every four years an intercalary day. That day was inserted after the sixth epagomenal, preceding the Julian intercalary year. The first of Thoth, however, remained where it was when the reform overtook it, viz., on 29 August, except after an intercalary year, when it fell on 30 August. The first year with an intercalary day, it seems, was 23 B. C. (see Ginzel, op. cit., I, 224—28). This fixed year, which is still in use in the Coptic Church, was first adopted by the Greek and Roman portions of the population, while the Egyptians proper for several centuries clung still to the old vague year.

As we have seen in the beginning of this section, the whole arrangement of the Egyptian calendar and its relation to the astronomical and climatic phenomena of chief importance to the ancient Egyptians indicate that it must have been established at a time when one of the heliacal risings of Sirius coincided with the beginning of the inundation, which takes place shortly (according to the Coptic Calendar three days) after the summer solstice. This point clearly to the begin
ning of that Sothic period the first year of which fell on 19 July, 4241 B.C., when the summer solstice was on 25 July, and the inundation on 6 August. At the beginning of the preceding period, 19 July, 2781 B.C., the summer solstice had already retrograded to 13 July, so that the inundation (16 July) preceded the heliacal rising of Sirius, while at the beginning of the following period, 19 July, 5701 B.C., the summer solstice was due only on 8 August (omitting the use of the slip days; the slip year of 360 plus 5 days) are mentioned in the so-called Pyramid Texte, which are far older than the Fifth and Sixth Dynasties, although they occur for the first time on the monuments of these dynasties (E. Meyer, op. cit., 40; Breasted, "Ancient Records of Egypt", i, 30). The date of the heliacal rising of Sirius varies according to the latitude from which it is observed. The fact that most of the classical writers and the Egyptian documents fix that date at 19 July shows that the Egyptians observed it from the 30th degree of N. latitude, which is about the latitude of the ancient cities of the Southern Delta as the home of the Egyptian year, probably Memphis or Heliopolis (E. Meyer, op. cit., 41; Ginzel, op. cit., 1, 186; Breasted, op. cit., 1, sec. 45).

The following table exhibits the seasons and the 12 months of the Egyptian year with their Greek names (still in use with slight changes of orthography in the Coptic Calendar) and their respective dates of beginning according to the Julian Calendar, when I Thoth, fell on the day of the heliacal rising of Sirius, i.e. at the opening of Sothic period.

The Five Epagomene days... 14 July

Although the Egyptians kept track of the Sirius year, in so far as its beginning was the official New Year's day, they do not seem to have made use of it for chronological purposes. The same must be said of other methods of reckoning the year which may have been in use among some classes of the population, as, for instance, the natural year based on the recurrence of the natural seasons. It is not uncommon to find that the Egyptian vague year of 365 days was preceded by a round year of 360 days, and that the former was obtained by adding 5 days to the latter. Arguments in favour of that view are few and not convincing. A year of 360 plus 5 days near the middle of the interval (cf. Ginzel, op. cit., 69; E. Meyer, op. cit., 10). It is more likely that, even before the arrangement of 360 plus 5 days, the Egyptian year (originally a lunar year) had become luni-solar, and increased to 365 days, either as a fixed number for every year by means of intercalary days distributed over the whole year (as in the Julian year), or as an average number in a series of years by process of embolism (as for instance in the Hebrew year). Finally it was decided to adopt the far simpler and more rational arrangement of 12 months, each month being made up of 30 days, and the contribution of the days was changed, not their number. This rescript of the calendar found expression at a very early period, if not at the time when it took place, in the following fable preserved by Plutarch (De Iside et Osiride, xii), but undoubtedly very ancient, as we may judge from the fact that the divinities mentioned in it belonged to the earliest stages of the Egyptian Pantheon. Rhea (Egyptian Na'th) having had secret intercourse with Cronus (Gebe), Hëtos (Hes) cast a spell upon her to prevent her from bringing forth a son. The sun god forthwith called the wet nurse (Thoth), who loved her, played dice with the Moon and won from her the 73d part (not 60th as Maasper, "Histoire ancienne", p. 87; nor 70th as E. Meyer, op. cit., p. 9; nor 72d, as Ginzel, op. cit., p. 171) of her courses (literally lights, ἀσκεῖς), which he added to the coming one, which afterwards became the 73d part of the Egyptian year. This was 6 days, or 6 months. Thus Nâ brought forth her children (Osiris, Horus, Set, Isis, and Nephthys).

The ancient Egyptians never had eras in the usual sense of the word, i.e. epochs from which all successive years are counted regardless of political or other changes in the life of the nation. Instead of eras, during the first five dynasties, they used to name each civil year from some great political or religious event (a usage which had its parallel in Babylonia), as "the Year of the Smiting of the Trogodytes", "the Year of the Conquest of Nubia", "the Year of the Defeat of Lower Egypt", "the Year of the Worship of Horus"; or from some fiscal process recurring periodically, as "the Year of [or after] the Second Occurrence of the Census of all Cattle, Gold", etc., which was often abridged into "the Year of the Census", or, still more briefly, "the Year of the Second Occurrence". The census having become annual, each year of any given reign came to be identified as the year of the first (or whatever might be the proper ordinal) census of that reign, a usage which remained (remaining) 600 years. During the Sixth and Seventh Dynasties each reign, the Egyptian Dynasty, on the, the years were always numbered from the first of the current reign, and the second year of the reign was supposed to begin with the first day of the following Thoth I. The next following the date of the king's accession. The absence of eras in ancient Egypt is all the more remarkable as there were several periods which could easily have been utilized for that purpose, the Sothic period especially. (On other periods—Phoenix, Aps, etc.—mentioned by the classical writers, but not found in Egyptian monuments, are also on the so-called Great and Small Years and the supposed Nubti Era, see Ginzel, op. cit., i, sec. 38 and 45.)

In later times several eras were created or adopted in Egypt, the principal of which was the Era of Alexander (30 B.C.), which was adopted by the Romans and was officially fixed at 30 (or 31) August of the first year of Augustus (Julian, 30 B.C.), although, as we have seen, it did not acquire its intercalary character until 26, or even 23, B.C., so that its first years were ordinary Egyptian years (see Ginzel, op. cit., i, pp. 224-28). The Philipps, or Macedonian, Era (more generally known as the Era of Alexander) was introduced into Egypt in the third century B.C.
after the death of Alexander the Great (323 B.C.). Up to Ptolemy Philadelphia (285-47 B.C.), Egyptian monuments were dated according to the old Egyptian system, but after that time the Macedonian dates are generally found together with the Egyptian. Macedonian dating was gradually superseded by the use of the fixed years, yet it is found, sporadically at least, as late as the second century after Christ (Ginsel, op. cit., I, p. 232). The Philippi era begins on I Thoth, 425 (12 Nov., 324 B.C., Julian style) of the Era of Nabonassar; like the latter it is based on a vague year on the same pattern, months' names included, as the old Egyptian year and those of Nabonassar begin at noon, 26 February, 747 B.C. (Julian style). It is the basis of the famous Canon of Ptolemy. It was used in Egypt especially for astronomical purposes, and it met with great favour with the chronicographers on account of the certainty of its starting-point and its well-established accuracy. The reduction of Nabonassar's years into the corresponding usual Christian reckoning is rather complicated and requires the use of special tables (see Ginsel, op. cit., I, p. 143 sqq.).

Only a very small portion of the colossal mass of inscriptions found in Egypt has any bearing on, or can be of any assistance in, chronological questions. The astronomical knowledge of the ancient Egyptians does not seem to have gone very far, and, as everyone knows, accurate astronomical observations rightly recorded in connection with the corresponding local chronology of ancient times. It is remarkable that the Egyptian Claudius Ptolemy (second century after Christ) took from the Babylonians and the Greeks all the observations of eclipses he ever used and started his canon (see above) with Babylonian, not with Egyptian, kings. Evidently he held no records of sun observations made in Egypt. Yet, for religious reasons, the Egyptians noted the occurrences of the heliacal risings of Sirius on the various dates of their movable calendar. A few have reached us, and have been of no small assistance in astronomically determining, within four years at least, some of the most important epochs of Egyptian history. The Egyptians also recorded the coincidence of new moons with the days of their calendar. Such data in themselves have no chronological value, but in conjunction with data obtained from the same positions on the calendar every nineteen years, taken, however, in conjunction with other data, they can help us to determine more precisely the chronology of some events (Breasted, op. cit., I, sec. 46). Moreover, ancient Egypt has bequeathed to us a curious example of the use of a very old calendar. The nomina regum, the names of the kings of Egypt, are connected with the calendar, as is proved by the great number of them (eighty-three) that appear on the Rosetta stone. The character of the names and their connection with the calendar make it possible to establish the date of a given event in the calendar.

(1) The calendars of religious feasts (Calendar of Dendera (Tentyria), Edfu, Eehe, all three of which belong to the late period, Calendar of Papyrus Saller I4) are especially interesting because they illustrate the nature of the Egyptian year (see Ginsel, op. cit., I, p. 200 sqq.).

(2) The lists of selected royal names comprise: the so-called Tables of Sakkara, Nineteenth Dynasty, forty-seven names beginning with the sixth of the First Dynasty; Karmak (part of Thebes), Eighteenth Dynasty, sixty-two names, unfortunately chronologically arranged; Abydos, Nineteenth Dynasty, seventy-six names beginning with Mene. (3) Two chronological compilations known as the Turin Papyrus, Nineteenth Dynasty, and the Palermo Stone, Fifth Dynasty, from the places where they are now preserved. Unfortunately, the first of these last two monuments is broken into many fragments and otherwise mutilated, while the second is but a fragment of a much larger stone. These two documents (cf. E. Meyer, op. cit., pp. 105-205, and Breasted, op. cit., I, pp. 51 sqq.) are, though fragmentary, of the greatest importance for the chronology of the predynastic and the predynastic times. The Turin Papyrus contains, besides the names of the kings chronologically arranged in groups or dynasties, the durations both of the individual reigns and of the various dynasties or groups of dynasties, in years, months, and days. On the Palermo Stone each year of a reign is entered separately and is often accompanied with short historical notices. All these documents combined furnish the chronological frame for the vast amount of historical matter contained in thousands of mural inscriptions and stele collections and worked out with almost incredible patience by several generations of Egyptologists during the last hundred years.

Of secondary importance are the data furnished by the Greek and Latin writers. Still we must mention here the Archontes (Aristarchus) of the Egyptian priest Manetho of Sebennytus, third century b.c. Of this work we have: (a) Some fragments which, preserved by Josephus (Contra Apion., I, xiv, xx, xx), were used by Eusebius in his "Preparatio Evangelica" and the first book of his "Chronicon"; (b) an epitome which has reached us in two recensions: one of these recensions (the better of the two) was used by Julius Africanus, and the other by Eusebius in his respective chronicles; both have been preserved by Georgius Syncellus (first century). Synesius, Bishop of Cyrene (fourth century) and Hierocles Chorographus (fifth century) have also a Latin translation by St. Jerome and an Armenian version of the Eusebian recension, while fragments of the recension of Julius Africanus are to be found in the so-called "Excerpta Barbara." Judging from that epitome, the work of Manetho was divided into thirty dynasties, in each of which contained the reigns of the gods and demi-gods (omitted in the African recension) and eleven dynasties of human kings; the second, eight dynasties of such kings; the third, twelve (the last one added after Manetho's death). Besides a few short notices, the epitome contains nothing but names and figures showing the duration of each reign and each dynasty. Those figures are summed up at the end of each book. In the shape it has reached us Manetho's work is of comparatively little assistance, on account of its chronology, which seems to be hopelessly mixed up, besides being grossly exaggerated; and it must be used with the greatest caution. (For further details on Manetho and his work see the preface of C. Müller in the Didot edition of the second volume of "Fragmenta Historiorum," and E. Meyer, op. cit., pp. 60-69.) In the next place should be mentioned a list of so-called Theban kings handed down by Eratosthenes of Cyrene (third century B.C.) and preserved by Syncellus. It seems to be a translation of some Egyptian royal list similar to the Table of Varnak [see C. Müller, "Die Farnakes" (third century B.C.), and Dioscorus Siculus, Bithyni (first century B.C.)], and it appears essentially identical, except for a few significant differences, with the present generation of Egyptologists, of the German school especially, who have at last succeeded in placing the chronology of ancient Egypt on a firm basis. The following chronological table up to the Twenty-sixth Dynasty is condensed from the excellent work of Professor J. B. Charny, "Ancient Records of Egypt," I, pp. 40-47. The other dynasties up to the Thirtieth are taken from Professor G. Steindorff's "Outline of the History of Egypt" in Baedeker's...
“Egypt” (8th ed., 1908), with the exception of the year 408, the last of the Twenty-seventh Dynasty and first of the Twenty-eighth, which we copy from Maspéro, “Guide to the Cairo Museum” ( Cairo, 1903), p. 3:

378-341 b. c.
Thirtieth Dynasty

Dates marked with an asterisk in the above table are astronomically computed and correct within three years, while the date 525 is attested by the Canon of Ptolemy. Several dates besides, within the period of the Eighteenth Dynasty and the initial date of Shebasts, second king of the Twenty-fifth Dynasty, are also astronomically determined. The dagger sign (*) indicates that the numerical difference between the two following dates is the minimum of duration allowed by the monuments for the corresponding dynasties. The double dagger (**) indicates a date adjusted generally to the mean of duration. This is the case only for the period from the Thirteenth to the Seventeenth Dynasties. What this period may lose some day will be the gain of the nine following dynasties, but the extreme dates, 1788 and 663, will not be affected. The duration of 283 years for the Ninth and Tenth Dynasties, indicated by the two extreme dates 2445-2160, is estimated, in round numbers, based on an average of 16 years for each of their 18 kings. The uncertainty which attaches to that period affects the dates of all the preceding dynasties, which, consequently, may some day have to be shifted as much as a century either way.

GHelpers, Handbuch der mathematischen und technischen Chronologie: I. Zeitrechnung der Babylonier, Ägypter, Mohamen, Perser, etc. (Leipzig, 1906)—pp. 234 sqq. contains a complete bibliography of Egyptian chronology—Lemm, Zwei Hauptprobleme der altorientalischen Chronologie (Berlin, 1898); Meyer, Ägyptische Chronologie (publication of the Ber. Akad., 1904); Niebuhr, Die Chronologie der Griechen Insulare, Egyptens, Babylonier und Assyriens (Leipzig, 1896); also chapters in works cited in bibliography at end of next section, especially in Borchardt, Ancient Records, and Petrie, Illustrated History of Egypt, I.

Ethnology.—Scholars are at variance as to the origin of the Egyptians. Some, chiefly philologists, suppose that the Egyptians of historical times had come from Western Asia either directly, through the Isthmus of Susa, or, as most will have it, through the Straits of Bab-el-Mandeb and Ethiopia. Others, principally naturalists, think they came from, or at least through, Libya, while others still place the original home of the Egyptians in Central Africa. The first hypothesis is now the most commonly received. Several considerations tend to make it plausible, among which is the fact that wheat and barley, which have been found in the most ancient tombs dating from before the First Dynasty, are originally indigenous to Asia, as well as linen, wine, and the produce of other cultivated plants which are represented among the funeral offerings in the tombs of the earliest dynasties. And the same can be said of the two sacred trees of the Egyptian pantheon, the sycamore and the pomegranate. Finally, the fact that the ancestor of the domesticated Egyptian ass had its home in the wildnesses south of Egypt would show that the Asiatic invaders or settlers came through Egypt: This theory tallies with the Biblical narrative, Gen., x, 6, which makes the ancestor of the Egyptians, under the ethnic name of Misraim, the brother of Cush the Ethiopian, of Phut (e. g. Punt, the Perib of the Latin), and Canaan, all three of whom certainly had their origin in Asia. What seems more certain is that the Egyptians of historical times belong to the same stock as the Libyans and other races, some of which were absorbed, while others were totally or partly driven away by them. Five at least of these are given by Herodotus (Gen. 13, 14) under ethnic names as sons of Misraim: i. e. Ludim (according to Maspéro, “Histoire Ancienne des peuples de l’Orient”, Paris, 1908, p. 16, the Rotu or Romu of the hieroglyphics, i. e. the Egyptians proper), Laebim (the Libyans), Neophichem (the inhabitants of No-Phichem, or Mesophi), Pithom (the inhabitants of the To-rei, i. e. Upper Egypt), Anamim (the Andes, who, in prehistoric times, founded On of the North, or Heliopolis, and On of the South, or Hermonthis).

Predynastic History.—At all events, in the predynastic times, when the light of history begins to dawn on Egypt, various races which at different periods had settled in Egypt, had been blended under the moulding influence of the climate of their new home, and turned into a new race, well characterized and easily distinguishable from other races, Asian, European, or African—the Egyptian race. Naturally, a difference of occupation created a certain variety of types within that race. While the tiller of the soil was short and thick-set, the men of the higher classes were tall and more slender, but all were broad-shouldered, erect, spare, flat-footed. The head is rather large, the forehead square and rather low, the nose short and fleshy, the lips thick, but not turned up, the mouth rather large, with an undefined expression of instinctive sadness. This type perpetuated itself through thirty or forty centuries of revolutions, invasions, or pacific immigrations and survives to this day in the peasant class, the fellahen, who form the bulk of the population and the sinews of the national strength. All agree that, even before the Egyptian race had attained that remarkable degree of ethnological permanence, Egypt, from a merely pastoral region, had become an agricultural country, as a result of the immigration (or invasion) of Asiatic tribes, for, before the dawn of historical times, they had learned to grow wheat and barley, using the plough in their cultivation. Next came the political organization of the country. It was subdivided into a number of small independent States, which became the nomes of pharaonic times, each with its own laws and religion. In course of time some of these States were merged in one another until they formed two large principalities, the Northern Kingdom (To-Meh) and the Southern Kingdom (To-Resi), an arrangement which must have lasted some time, for when the final degree of centralization was
reached, and the two countries united under one rule, the king took the title of "Lord of Both Lands"; or "King of Upper and Lower Egypt" (never "King of Kimit", i.e. of Egypt), and often wore a double crown consisting of the white crown of the South and the red of the North. The United Kingdom were formed by the union of the lotus and the papyrus, the emblems of the two countries.

The capital of the Northern Kingdom was Buto, under the protection of the serpent goddess of the same name (now Tell el-Far'īn, 20 miles south-west from Rosetta). Nebheb (the modern el-Kâb, a few miles north of Edfu) was the capital of the Southern Kingdom; the vulture-goddess, Nebkhatet, was its protecting deity. But at both capitals the hawk-god, Horus, was worshipped as the distinctive patron-deity of both kings. That ancient population of Egypt, referred to in later texts as the "Horus-worshippers", have recently emerged from the mythical obscurity to which their kings had been relegated before the days of Manetho, who knows them as the "shades", i.e. the defied ancestors.

The Palermo Stone has revealed to us the names of six or seven rulers of the Northern Kingdom; and in Upper Egypt, thousands of sepulchres (none of the kings, unfortunately) have recently been excavated. The bodies, unembalmed, lie side by side, in what is called the "chamber of the dead". The tombs, covered by Step-pyramids, jars, where remain of food, drink, and ointment can still be discerned, with toilet utensils, flint weapons, and clay models of various objects which the deceased might need in the life hereafter—boats especially, to cross the waters that surround the Elysian Fields. From those early times date, as to the essentials of concept and expression, the Pyramid Texts alluded to in a former section of this article. We have seen, under Chronology, that the institution of the calendar dates from predynastic times (c. 4241 B.C.), and that the data for the Middle Kingdom, probably at Memph or at On (Heliopolis). The computations necessary for that calendar show clearly that we must trace to predynastic times the hieroglyphic system of writing which we find fully developed in the royal tombs of the first two dynasties (Breasted, "Ancient History of the Egyptians", pp. 35-39).

Dynastic History.—Since Manetho of Sebennytus (see above) has been customary to arrange the long series of kings who ruled over ancient Egypt, from the beginning of the dynasties down to the time of Alexander the Great, in thirty dynasties, each of which corresponds, or as a rule, seems to correspond, to a break in the succession of legitimate rulers, resulting from internal dissensions or military reverses, the latter almost invariably leading to an invasion and, eventually, the estabishment of a foreign dynasty. Manetho's claim, that his history was compiled from lists of royal ancestry and original documents, is fairly borne out by the monuments—the so-called Tables (royal lists) of Sakkarah, Abydos, Karmak, and especially the famous, but much mutilated, Turin Papyrus and Palermo Stone, as well as annals of individual kings recorded on the walls of temples, tombs, etc.

These thirty dynasties are very unevenly known to us; of a good many we know next to nothing. This is in particular the case for the Seventh and Eighth dynasties (Memphites), the Ninth and Tenth (Heracleopolitans), the Eleventh (Theban—contemporary with the Tenth), the Thirteenth (Theban) and the Fourteenth (Xoite—in part simultaneous), the Fifteenth, and Sixteenth (Hyksos), and the Seventeenth Dynasty (never more than the eighth or sixth). Other dynasties are known to us by their monuments, especially their tombs, which are often extremely rich in information as to the institutions, arts, manners, and customs of Egypt during the lifetime of their occupants, but almost totally devoid of historical evidence proper. Such is the case, for instance, for the first five dynasties, of which all we can say is that they must have ruled successively over the whole land of Egypt and that their kings must have been conquerors as well as builders. We know little or nothing of the peoples they battled with, or can even detect the methods by which the United Kingdom were formed or the rise and fall of the several dynasties. Evidently, in some cases the lack of information on some periods, which must have been very momentous ones in the political life of ancient Egypt, should be attributed to the disappearance of monuments of an historico-character, or to the fact that such monuments have not yet been discovered; it is very likely, however, that in many cases no historical evidence was ever handed down to posterity. In Egypt, as in Assyria and Babylonia, it was not customary for kings to place their defeats on record, nor did the chieftain or the soldier of fortune who after a period of internal dissensions succeeded in establishing himself as the founder of a new dynasty, care to take posterity into his confidence as to his origin and previous political career. Manetho, who, as a rule, does not seem to have been much better informed than we are, resorts in such cases to traditions, strongly tinted with legend, which were in the keeping of the priests and belonged, very likely, to the same stock as most of those related by Herodotus on matters that could not fall under his ken. Such traditions were confirmed by the monuments, or at any rate purified of their legendary elements by comparison with them, must of course be kept in abeyance. For the present the royal names are almost all that we can regard as certain for several of the dynasties. Such is the case for the first two dynasties, which until about A. D. 1888 were considered by most scholars as entirely mythical. Their tombs, however, have since been discovered at Aüm el-Qa‘ib, near Abydos, in the territory of the ancient Thīris (Thinis), and the names of Menes, Zer, Usaphis, etc., have been identified with Memph or with On. A good many other kings of Manetho's list cannot be identified with the owners of the tombs discovered, owing to the fact that, while Manetho gives only the proper names of the kings, the monuments contained, as a rule, nothing but their Horus names (Maḥerā, loc. cit.; Breasted, "History of Ancient Egyptians", 40 sq.). Monuments of these kings have been discovered in Upper Egypt and at Sakkarah, which shows that they must have ruled over the whole land of Egypt. The various articles found in these single royal tombs are impressive; but civilization seems to be somewhat inferior to that of the immediately following dynasties. Religion in general, and the funerary ritual in particular, were already fixed, and the hieroglyphic system of writing had reached its last stage of alphabetic development (Maḥerā, loc. cit.; Breasted, "History of Ancient Egyptians", 40 sq.).

The history of Egypt can be divided into two large periods, the first of which comprises the first seventeen and the second the other thirteen dynasties. In current literature Dynasties Thirteen to Twenty are often variously referred to as the Old Kingdom (ancien empire), Dynasties Twelve to Seventeen as the Middle Kingdom (monjum empire), Dynasties Eighteen to Twenty as the Empire (nouvel empire). The simpler division which we propose here seems to us more rational.

First Period: First to Seventeenth Dynasty.—During this period Egypt and the Asiatic empires never, so far as we know, came into contact, except possibly in a pacific and commercial way; their empires, in fact, were to a certain extent in competition with the Babylonian and Chaldean kings, like Sargon I (third millennium b. c.), may have occasionally extended their raids as far as the Mediterranean Sea, but it does not seem that they ever established their rule in a permanent way. They were fully occupied with the war waged among themselves, or with the Elamites.
who for centuries contended with Babylonia and Chaldea for supremacy in Western Asia. On their side the kings of Egypt had to secure their own borders (principally the desert) and the neighboring tribes, a necessity which led, among many centuries of warfare, to the conquest of Nubia. As early as the reign of Pepi I (Sixth Dynasty) Nubia had been brought under control so far as to receive Egyptian colonies. Under the kings of the Twelfth Dynasty, Nubia was organized into an Egyptian province. The Libyans, also, and the tribes situated between the Nile and the Red Sea had to be repeatedly repelled or conquered. The brief records of such punitive expeditions, which appear on the Palermo Stone, attribute them to dates as early as the first two dynasties. Extensive commercial relations were maintained with the Syrian coast (with the King Snefru, of the Third Dynasty, sent a fleet to procure cedar logs from Mount Lebanon), with the Upper Nile districts, with Arabia to the south, and with the Somali coast (Punt, Pdomi) to the east. Roads were built for this commerce between Coptos and different points on the Red Sea. The chief of these roads led through Wadi Hammamat (Rekans or Rekens Valley), the rich quarries of which were operated by the Egyptians from the time of the Fifth Dynasty; it furnished the niger, or Thebatous, tapris, a hard dark stone which was used for statues and coffins. In Asia proper the pharaohs of that time sought no extension of territory, with the exception of a few points in the Peninsula of Sinai, where, as early as the First Dynasty, but especially since the time of Snefru, they operated mines of copper and turquoise. As a rule on the north-west border they kept on the defensive against the raids of the nomadic tribes established in the Syrian desert and in the mountainous bedouins, always ready for plunder. On that side the frontier was protected by a wall across the Wadi Tumilat and a line of forts extending from the Nile to the Red Sea. Occasionally the Egyptians resorted to counter-attacks on the Syrian territory, as in the case of the Amus and Hirusaitus under Pepi I, but, the punishment inflicted, they invariably returned to their line of defence.

The seat of government during that first period was several times shifted from one city to another. Menes, before the union of the two kingdoms, very likely resided at This, in his native nome of Abydos, in Upper Egypt. Having succeeded in bringing Lower Egypt under his rule, he appropriately selected Memphis for the capital of the new kingdom, as being more central. During the Nineteenth and Twentieth Dynasties, Hecateopolis, only a short distance south of Memphis, became the official seat of government, for no special known reason—perhaps simply because the pharaohs of the reigning dynasties had originally been natives and princes of these nome. They were opposed by the princes of Thebes (Eleventh Dynasty) who finally (Twelfth Dynasty) succeeded in overthrowing them and selected their own city as capital.

This radical change had the advantage of bringing Nubia within closer range, and it may have contributed substantially to the conquest of that province; but it weakened the northern border, which was now too far from the centre of political life.

The pharaohs of the Thirteenth Dynasty (most of whom were called Setek-hotep or Nofir-hotep), without abandoning Thebes, seem to have paid more attention than their predecessors to the cities of the Delta, where—at Tanis in particular—they occasionally resided, and it was from Xois (Sakha), a city of Lower Egypt, that the next following (Fourteenth) dynasty arose. It seems that the kings of that dynasty never succeeded in establishing a firm and lasting government. Their rapid succession on the throne and the famous invasion of the Hyksos which Manetho registers at that time, point to internal dis-sensions and a condition of affairs verging on anarchy. "At this time there came to us a king Timoeos by name. Under this king, God, why I do not know, sent an adverse wind to us, and against all likelihood from the parts of the East people of ignoble race, coming unexpectedly, invaded the country and conquered it easily and without battle." This testimony contains contradictory elements. It is difficult to imagine how an invasion could result in a conquest unless it took place gradually and consequently not "unexpectedly". The most probable interpretation of Manetho's words seems to be: that the invaders came in peaceful quest of new homes, and not all in one body, though in comparatively large numbers at a time; that they first settled, with their flocks, in the rich pasture lands of the Delta, then, little by little, adapted themselves to the political life of the country, some succeeding in occupying important situations in the army or in the administration; that finally one of them, favoured by the rivalries of competitors for the vacant throne, seized the reins of government and was recognised as king not only by the men of his own race, but also by quite a considerable part of the natives.

The identity of the Hyksos has been the subject of long discussions. Some, with De Cara, think they were the same as the Hittites, others (Baedeker, "Egypt", p. lxxix) see in them simple Syrian bedouins. The opinion which seems most probable and best agrees with the tradition preserved by Manetho, identifies them with the large Canaanitic family once settled in Lower Chaldea, along the Persian Gulf and the Arabian coast. According to Professor Mapêro (op. cit., 194 sq.), it was the invasion of the lower Euphrates by the Elamites under Rudurnakhunte (2285 a. C.) that forced this family to migrate to the West in search of a new home. The seafaring tribes settled along the eastern shore of the Mediterranean.
Ses to which they gave their name (Phoenicians, Φοινίκαι, Phoinikai; Egyptian Puni, Funi; Bible, אֲדֹנָי, Adoni, Adoni), turned eastward into the mountainous districts of Palestine (Canaan proper), where they resumed their nomadic life, and gradually developed into an agricultural race. Others, finally, shepherds also, probably prevented from taking a northern direction by the powerful and well-organized nation of the Hittites, turned westward to Egypt, where they settled as explained above. Manetho assigns to them three dynasties, the Fifteenth, Sixteenth, and Seventeenth, of which only the Sixteenth held sway over all Egypt. During the Fifteenth Dynasty the princes of the stock of the Shepherds kings reigned as hereditary petty monarchs and founded a certain independence. They regained it under the Third Hyksos Dynasty, with which they share the honour of being recognized as the Seventeenth Dynasty. The last of them, Amosis, after a war of six years, finally succeeded in driving the intruders out of Egypt, pursuing the remnant of their army as far as Sharhuna (perhaps Sharukhen, Jos., xiv, 6) in Southern Syria, where the last battle was fought and won by the Egyptians. From the monuments we know the names of at least four of the Hyksos kings, three of whom were Array kings, and the fourth Kha from bearing the names of the last has been found under a wall of the palace of Qeonsos in Crete, and a lion in Bagdad. Their capital seems to have been Avaris on the north-eastern border of the Delta. Some think that their rule extended over Palestine and Southern Syria, which would explain the location of their capital. The usage of carrying on official correspondence with the local princes of Syria and Palestine in the Babylonian language and script possibly dates from the period of the Hyksos. Few of the monuments of the Hyksos have been preserved, enough of them, however, to show us that as a rule the Shepherd kings conformed to the ancient culture of Egypt, adopting its language, art, religion (cf. however, Maspero, op. cit., 203), and political institutions. But they oppressed their Egyptian subjects, and posteriorly held their memory in abomination. It is in the Hyksos period that we must place the arrival of the Israelites in Egypt. The migration of the Tarchites from Ur in Chaldea may have coincided with, or at all events was posterior to, that of the great Canaanite families. Although of different stock, the two families had long been thrown together in their former common home and spoke the same language; and this may partly explain the favour which the children of Israel found at the hands of an Egyptian ruler, being of Canaanite origin or of the stock of Semites (Gen. xiv). "The son of a Pharaoh who evidently belonged to the Hyksos time give his name as Jacob-her or possibly Jacob-El, and it is not impossible", remarks Professor Breasted, "that some chief of the Jacob-tribes of Israel for a time gained the leadership in this obscure age" (Hist. of Anc. Egypt, 181).

Second Period: Eighteenth to Thirtieth Dynasty.

The second period is chiefly characterized by the Asiatic victories of the pharaohs with which it opens, and by the repeated invasions of Egyptian territory by Asiatic powers, which was the reaction of those victories. During the first period Egypt could be great at home, with its natural borders along the Nile valley; every page of her history is her own. During the second period her greatness is in proportion to the absence of foreign control, almost every page of her history belongs to the history of the world.

The first ambition of the kings of the Eighteenth Dynasty, inaugurated by Ahmosis (1550-1537 B. C.), was to recover the former domains against the Libyans, who had regained their power under the Deluge, as well as to prevent all idea of confusion preceding the expulsion of the Hyksos, and, against the Nubians, who had availed themselves of the same opportunity to shake off the yoke of Egyptian domination. The first point was achieved by Amenhotep I (1537-1527 B. C.), and his reign was a period of peace and consolidation. The next point was achieved by his son Amenhotep II (1527-1508 B. C.), whose reign lasted from 1537 to 1501 B. C. Not satisfied with recovering and reorganizing the ancient province of Nubia, Thothmes I pushed more than 400 miles farther south to Napata, below the Fourth Cataract, where the southern frontier of Egypt remained fixed for the next eight hundred years or so. Both Amenhotep I and Thothmes I, and perhaps Ahmosis, too, had already undertaken the conquest of Syria. But it was reserved for Thothmes III (1501-1447 B. C.) to complete it and to organize the conquered territory as a permanent dependency of Egypt. The circumstances were favourable. Both Assyria and Babylonia were in decline, and the powerful Hittites were restricted within their own borders beyond the Cilician Gates in Asia Minor. Nevertheless, the great confederation of the Causanitic cities (perhaps to be identified with the Hyksos), backed by the Phoenician cities, the State, or States, of Naharin (from the Mediterranean to the bend of the Euphrates), and the Aryan kingdom of Mitanni (between the Euphrates and the Belic), was not an enemy to be despised, and it cost Thothmes III four campaigns to achieve a permanent victory. The Kings of Assyria and Babylonia, and even the Hittites, sent presents which Thothmes took for tribute; but he does not seem to have invaded their territories; he probably never crossed the Belic nor the Cilician Gates, which mark the limits of the greatest extent of Egyptian control in Asia. The whole region conquered was organized as a simple tributary territory under the supervision of a governor general backed by Egyptian garrisons in the chief cities. The local rulers were otherwise left unmolested except in case of rebellion, when the punishment was prompt and severe in the extreme. Their sons were educated in Egypt, and were generally appointed to succeed them at their death. The administration of this territory, which included also the island of Cyprus, and was, like Nubia, the source of immense wealth to Egypt, gave rise to a considerable correspondence between susers and vassals. On the part of the latter it was written on clay tablets in the Babylonian language and characters—at that time the official language and characters of Western Asia. From that correspondence (so-called Tell-Amarna tablets) we learn that under Amenhotep IV (1375-1358 B. C.) the vigilance of the Egyptian court had considerably relaxed; the local dynasties were constantly and vainly asking for Egyptian troops against the encroachments of the Cades, and the Habiru. This perhaps marks the decline of the dynasty from a complete loss of the Asiatic territory conquered by Thothmes III.

The Eighteenth Dynasty was an era of great international prosperity. With the single exception of Amenhotep III, who allowed himself to be drawn into a scheme to reform the Egyptian religion, all its kings were wise and just rulers. They were also great builders, and devoted their vast resources in men—chiefly captives taken in war—in gold, and silver, derived from tribute, to the erection of magnificent temples and temple-like mortuary temples, all of which they richly endowed. The reform attempted by Amenhotep IV in proclaiming Aton (an old form of Re, or Ra, the sun-god of Heliopolis) the sole god, and in enforcing his worship at the expense of others, particularly for the Pharaohs, was not successful, as Pharaohs of Thebes claimed precedence over the others. He ordered the word god, as applied to the other deities, to be chiselled out wherever it could be found on the temples and other monuments. He changed his own name to Akheaton, "Spirit of Aton", in honor of the new god, for the Pharaohs, and the temple at Thebes was called Gem-Aton. Lastly, he changed his residence from Thebes to Akhetaton, "Horizon of Aton" (now
El 'Amarna', a city which he founded in a like spirit, and he also founded two other cities of the same name, each with a Gem-Aton temple, one in Nubia, at the foot of the Third Cataract (where it was discovered in 1907 by Professor Breasted), and another in Syria, the site of which is still unknown. This reform was violently opposed by the established priesthood, and the land was soon thrown into a state of general confusion verging on anarchy. The temples and cities dedicated to Aton were destroyed and abandoned soon after the royal reformer's death.

Harmhab (1350–1315 B.C.), the founder of the Nineteenth Dynasty, was principally engaged in bringing the land out of the confusion into which it had fallen during the last years of the preceding dynasty, and restoring the temples of the ancient gods to their former splendour. Seti I (1312–1292) attempted to recover the Asiatic provinces lost by Ramses. Thirteen years later the Hittite king visited Egypt on the occasion of the marriage of his eldest daughter with the pharaoh. Diplomatic unions of that kind had already taken place during the preceding dynasty. The treaty was faithfully observed by both parties, at least until the second year of Memneph (1225–1223), the son and successor of Ramses II, when the Hittites seem to have taken part in an invasion of the Delta by the Libyans and various peoples of the northern Mediterranean, their allies.

Neither this, however, nor the disaffection which at the same time was rampant among his Asiatic vassals, spurred Memneph to new conquests. The Hittite war of Ramses II, it seems, had completely exhausted the military enterprise of Egypt. Her armies from that time keep to the defensive. Memneph was satisfied to bring back Palestine to submission and defeat and drive out the Libyans—among whom the Tehenu tribe was prominent apparently because they were settled on the Egyptian border—and their allies, the Sherden (Sardinians), the Shekelesh (Sicilians), the Elwesh (Achasans), and the Lycaons. But even these were considered great achievements, and the people sang:

The Kings are overthrown, saying: "Salam!"
Not one holds up his head among the nine nations of the bow.
Wasted is Tehenu,
The Hittite land is pacified,
Plundered is the Canaan, with every evil,
Carried off is Askalon,
Seized upon is Gezer,
Yenoam is made as a thing not existing,
Israel is desolated, her seed is not.
Palestine has become a [defenceless] widow for Egypt. All lands are united, they are pacified,
Every one that is turbulent is bound by King Memneph.
(Breasted, op. cit., 330; "Ancient Records of Egypt", III, 603 sqq.) The situation at home was no brighter, and it became worse under Memneph's successors, Amenmesses, Memneph-Siptah, and Seti II, until complete anarchy prevailed. Thrusting aside a host of lesser daring pretenders, a Syrian named Iru (or Yuru), who held a prominent position as head of one of the nomes, seized the power and for five years ruled the land in tyranny and violence. (Breasted, "Ancient Records of Egypt", IV, § 398.) Thus ended the Nineteenth Dynasty.

Of Seti I (1200–1195 B.C.), the founder of the following dynasty, we know little except that he was a strong man who succeeded in restoring order. His son, Ramses III (1198–1167), was confronted by very much the same situation as Memneph some twenty-five years before, only a great deal more serious. The land of the Libyans defeated by Memneph was only the vanguard of a far more dreadfully army of invasion. This was now approaching. It was followed at close range by motley hordes of immigrants from the islands and the northern shores of the Mediterranean, and the peoples of the sea", as the Egyptians called and Besides those already mentioned we find now the Palestine (Philistines) and the Denyen (Danaoi). Some of the invaders were coming by sea, along the coast, others by land. Ramses III showed himself equal to the occasion. Having defeated a first contingent who had already landed in the Delta and joined the Libyans, he sent a strong fleet to check the advance of the main body of the invaders' ships and hastened by land, with his army, to Syria, where he expected to find the enemy. Both the land and the naval battles were fought on the same day, for Ramses, having routed the land forces of the enemy, was in time to co-operate with the Egyptian fleet in defeating that of the invaders. This brilliant campaign stayed the advance of the immigrants who now came straggling along, settling here and there as vassals of
Egypt, in Syria and in Palestine, where, later, one of their tribes, the Peleest, or Philistines, offered a stubborn resistance to the invasion of the Hebrews. On the other hand the great Hittite confederation had been very much weakened, if not entirely dissipated, as a result of the invasion. Ramses III had to repel another invasion of the Libyans, impelled this time by the Meshweh (the Maxxes of Herodotus), and shortly after he found it necessary to appear again with his army in Northern Palestine, where rebellion had broken out among some of his vassals. The boundary remained, probably, where it was under the Eighteenth Dynasty, including the whole course of the River Leontes (or Litany) and possibly a small portion of the upper Orontes, excluding Kadesh. Ramses III had no further trouble with his Asiatic vassals.

With the successors of Ramses III, nine weak pharaohs of the same name (Rameses IV-XII), national decay set in. Egypt entirely loses her prestige abroad, particularly in Asia, where Assyria is expanding under Tiglath-Pileser I; at home everything is confusion. Priests, officials, and mercenaries, whose wealth and prerogatives have been steadily growing at the expense of both pharaoh and his people, now fight among themselves for the controlling political influence, the pharaoh being reduced to a mere puppet. Such a state of disorganization prevails everywhere that, in the necropolis of Thebes, in sight of the temple of Amon, where the high-priest is so powerful, the tombs of the pharaohs are desecrated and plundered by a gang of robbers, and the royal mummies despoiled of all their most costly ornaments.

At some period during the Nineteenth Dynasty the pharaohs had their capital at Tanis (Sûn-el-Hagar) in the Delta, Thebes remaining the religious capital of the empire. There Ramses XII resided when a local noble, Nesubenebed, seized the power (1113 B.C.) and established himself as king over the Delta. The weak pharaoh retired to Thebes, where he was soon overshadowed by Hrihor, the high-priest of Amon, who, when Ramses XII died as ingloriously as he had lived, was finally proclaimed supreme ruler of Egypt by an oracle of Khouou followed by the approval of Amon (1090). Hrihor's rule, in fact, never extended over Lower Egypt, and his independence was not even suspected by Manetho who, after Ramses XII, introduces the Twenty-first Dynasty, with Nesubenebed as its founder. The division between the two countries was to continue, save for short intervals, for about four hundred and fifty years. Thebes, however, rarely during that time enjoyed complete independence, and still more rarely ruled over the whole country. Her relations to the Delta were usually those of a vassal to a suzerain. Her influence was particularly felt in Asia, where her descendants of Hrihor seem to have retired at an early period, eventually founding an independent kingdom at Napata. Confusion and disorder still prevailed all over the land. To save them from further desecration, the royal mummies had to be concealed in an old, and probably unused, tomb of Amenhotep I, near the temple of Deir el-Bahri, where they remained hidden until they were rifled some thirty-five years ago by the Arabs. Most of them are now at the Museum of Cairo. The capital of this dynasty was at Tanis. Its last king, Psibkhenen II, may be the pharaoh mentioned in III Kings, xi, 18; xii, 1; ix, 16 (see below). Assyria was then on the decline and we can best represent to ourselves David and Solomon as at least nominal vassals of Egypt.

Sheshonk (945-924), founder of the Twenty-second Dynasty, was a powerful mercenary prince, or chief of hired troops, of Heracleopolis, where his ancestors, of Libyan origin, had settled early in the Twenty-first Dynasty. In 946 B.C. he proclaimed himself king, establishing his residence at Bubastis, in the Delta. Sheshonk seems to have been an ambitious and energetic ruler. He certainly led a successful campaign in Palestine, perhaps the same mentioned in III Kings, xiv, 25 (cf. II Paralip., xii, 2 sqq.), where it is said that he came to Jerusalem in the fifth year of Roboam, and took away the treasures of the house of the Lord, although Jerusalem is not among the one hundred and fifty-six Palestinian cities recorded in his inscription. In Solomon's time Sheshonk had given hospitality to Jeroboam (III Kings, xi, 40). According to Professor Breasted (Ancient Egyptians, 362), Sheshonk is also to be identified with the pharaoh who gave his daughter as a wife to Solomon (III Kings, iii, 1) and later on conquered Gezer and turned it over to his daughter, Solomon's wife, as a dowry (III Kings, xiv, 16) while Professor Maspero (Hist. Anc., 416) refers to these episodes and that of Hadad (III Kings, xi, 14 sqq.) to Psibkhenen II, the last king of the Twenty-first Dynasty. During the following reigns of this dynasty history records nothing but endless civil wars between the two principalities of Thebes and Heracleopolis, and feuds between the mercenary lords of the Delta. On the other hand, Assyria was more powerful than ever. Shalmaneser defeated, at Karkar on the Orontes, a Syrian
coalition to which one of Sheshonk's successors—probably Takelot II—had contributed one thousand men from the Assyrian or Egyptian influence in Palestine must have dwindled to nothing.

One of the Delta lords, Pedibast, at the death of Sheshonk IV, the last king of the Twenty-second Dynasty, succeeded in establishing a new dynasty, which Manetho places at Tanis, although Pedibast was of Putashkori origin. But neither he himself nor his successors could control the situation. Under his successor, Osorkon III, a dynasty of Sais, Tefnakhte undertook to supplant him and the many other dynasties, several of whom were claiming the title and preserving their independence. He was probably one of those who became the founder of a new dynasty, his father, probably, having died before Osorkon. Sorely had he reigned six years when Shabaka, Piankhi's brother, invaded Egypt in his turn, and so firmly did he intrench himself there that he became the founder of the twenty-fifth, or Ethiopian, Dynasty. Unfortunately for him and his successors, Assyria, having absorbed all the principal states of Syria and Palestine, and holding the others well under control, was now threatening to invade the territory of Egypt. Shabaka, alive to the danger, formed an alliance with Philistia, Juda, Moab, Edom, and Tyre, against Sennacherib, and sent to Syria an army under the command of his nephew Taharka (cf. IV Kings, xix, 9, where Taharka is called King of Ethiopia). The allies were completely defeated, and Sennacherib was bequeathing Jerusalem, which alone, so far, with Tyre, had resisted him, when, to use the words of the Bible, "an angel of the Lord came, and slew in the camp of the Assyrians a hundred and eighty-five thousand. And when he arose early in the morning, he saw all the bodies of the dead. And Sennacherib king of the Assyrians departing, went away, and he returned and abode in Ninive" (IV Kings, xix, 35, 36). But the power of Assyria was not broken for all that, although Taharka, who was now reigning, might have believed it when, twenty-seven years afterwards, another, even more formidable enemy, which repulse he made great display on the pedestal of a statue of his, drawing on the list left by Ramess II of Asiatic captured cities to swell his own victory. In 670 the Assyrians appeared again, more formidable than ever, defeated Taharka, captured Memphis, and withdrew after having organized at least Lower Egypt into an Assyrian dependency. Among the princes who hastened to do homage to the King of Assyria the first place is given to Necho of Sais, a descendant of Tefnakhte through Bochoris. Taharka had fled to the south, where he raised fresh troops, and marched on Lower Egypt hoping to recover the lost provinces, but with no other result than to bring back the Assyrians, who routed him again and pursued him almost as far as Thebes (668 B.C.). The reigning family of the Delta, who had sided with him, were sent to Nineveh in chains. Necho was one of them, but he knew how to ingratiate himself with Assurbanipal, who restored him to his Kingdom of Sais. Tanutamon, having succeeded his father Taharka (663 B.C.), undertook in his turn the recovery of Lower Egypt, but with little success. This time Assurbanipal, the army pursued the enemy to Thebes, whereby was scandal and plundered.

Psamtik, son of Necho, took advantage of the struggle in which his protector, Assurbanipal, had now become involved with Babylonia to free himself from the Assyrian or Egyptian influence, impressing practically all of the mercenary lords and local dynasties, repaired the long-neglected irrigation system, and gave a strong impulse to commerce. The Twenty-sixth Dynasty, which he introduced, was, as a whole, a period of restoration and great internal prosperity. It was also a period of renaissance in art, and with Psamtik III. Psamtik does not seem to have made much use of the army, but Necho and his successors could not refrain from interfering with the affairs of Asia. The temptation was great. During the long reign of Psamtik I Assyria had been constantly declining. In 609 he was succeeded by his son Necho, an three years later, Nevech was finally captured, and Assyria had come to an end forever. Necho thought this a favourable chance to recover the old Asiatic possessions of Egypt, and marched on Carchemish (cf. II Paralip., xxxvi, 20). He advanced, and was defeated by the forces of Josa, Josiahs, who foolishly persisted in disputing his passage, was routed and mortally wounded (II Paralip., xxxvi, 22). This incident brought Necho to Jerusalem, where he deposed Josiah, the successor of Josias, and put in his place his father Elisham, changing his name to Jotham. As for Josiah, he took him to Egypt (II Paralip., xxxvi, 1-4; cf. IV Kings, xxiii, 29-34). Hearing of Necho's conquest, Nabopolassar, to whom that country had fallen in the division of Assyria's possessions, sent his son Nebuchadnessar (Babchudesnower) to check his advance. Necho was so completely defeated at Carchemish (605 B.C.) that he did not dare to make another stand, and retreated to Egypt; "And the king of Egypt came not again any more out of his own country: for the king of Babylon had taken all that had belonged to the king of Egypt, from the river of Egypt, unto the river Euphrates" (IV Kings, xxiv, 7). Apries (688-669 B.C.), Necho's second successor, was not more fortunate in a similar attempt. Zedekiah had sent to him for assistance against Nebuchadnessar (Esch., xvii, 15), but Apries was at last retired without fruit. (Jas., xxvii, 33). Josias, as he was defeated (Josephus, Antiq. Jud., X, vii, 33), and Jerusalem was captured, and her temple destroyed (587 B.C.). When, however, the remnant of the Jews fled to Egypt, taking Jeremiah with them, Apries received them with favor; and he fortified the three-precedent cities of the Delta, at Memphis, and in Upper Egypt (Jer., xii, 17-18; xiv, 1.).—Such, very likely, was the origin of the Jewish colony established in the island of Elephantine "before Cambyses", as related in the Jusdeo-Aramaic papryi recently discovered there (see below, under Twenty-seven Dynasty). Later, probably after Tyre had finally surrendered to the Chaldeans (574), Apries successfully carried out a naval expedition against Phoenicia (Masp., Hist. anc., 639; Breasted, Hist. of the Anc. Egypt., 649, places that expedition in 587 B.C.).

The reverses of Necho and Apries in Asia did not affect the prosperity of Egypt during the reign of these two pharaohs, any more than did the rivalry of one of his officials, Amais, whom Apries had sent to repress a mutiny of the Egyptian native troops, and who was proclaimed king by them. Apries and Amais resigned together for some time, and when, a conflict having arisen between the two, Apries was defeated and slain, Amais gave him an honourable burial. Strange to say, Amais, who had been the champion of the native elements as against the Greeks, must not far more than any of his predecessors. He founded for them the city of Naukratis, in the Delta, as a home and market, and they soon made it the most impos-
tart commercial centre of Egypt. The foreign policy of Amasis, as a rule, was one of prudence; his only conspicuous war (against Cypriotes) began in the days of Thothmes III. Egypt had often exercised suzerainty. He made, however, one fatal mistake: he joined the abortive league formed by Croesus, King of Lydia, against Cyrus, and, although he afterwards carefully avoided crossing the path of the Persian conqueror, the latter's son, Cambyses, taking the will for the deed, did not fail to reassert his past inclinations.

Cambyses invaded Egypt in 525 n. c., shortly after Psamtik III had succeeded his father. The pharaoh was put to death under cruel circumstances, the town of Sais came master, Croesus, burned the temple of Amon, and a Persian governor was appointed. Otherwise Cambyses did all he could to conciliate his Egyptian subjects. He assumed the traditional pharaonic titles and ceremonial, and caused himself to be initiated in the mysteries of the goddess Neith. He made good the damages sustained by the temples during the conquest, led an unsuccessful expedition against the oases of the Libyan desert, and was not much happier in a campaign against the independent Kingdom of Na-pata. Embittered by these reverses, he departed, in later years, from conciliatory policy, committed sacrilegious acts which exasperated the people against him. Darius I (521–486) completed the canal begun by Necho between the Nile and the Red Sea. He reopened the road from Keft (Coptos) to the Persian galleys and, by landing at Sais, conferred the prosperity and security of Egypt. In his reorganization of the Persian Empire, which he divided into a number of governments under a central administration, Egypt, with Cyrene, Barca, and Lower Nubia, formed the sixth government, or satrapy. This, however, affected only the garrisoned cities and their respective territories. Elsewhere the old feudal organization was left untouched, and from time to time the local princes availed themselves of their semi-independence to rebel.

After the battle of Marathon (487) the Egyptians revolted and expelled the Persians. But in the following year Achemenides, who had just been appointed satrap by his brother Xerxes I (486–465), brought them back to submission. Of a far more serious character was the insurrection which broke out in 465 under Artaxerxes I (465–424), and which was quelled until its leader, Inaros (of the house of Psamtik), aided by the Athenians, had routed two successive Persian armies (454). Under Darius II the power of the Persians began to decline. The weakness of their government was the cause of the insurrection of the Jews, the Socraits, in 439. The Judeo-Aramaic papyri recently discovered at Elephantine. From these documents we learn that, while the provincial governor was absent, the commander of the garrison of Syene had been bribed by the Egyptian priests of Chnum (Chnûm) to plunder and destroy the temples of the Jewish colony of Elephantine. The culprits, it seems, were put to death by the Persian authorities, yet, when the victims applied for a permission to rebuild their temple, their request was granted only on the condition that they should not in future offer up bloody sacrifices—a concession, evidently, to the priests of Chnûb, who probably objected to the slaughtering of the ram, an animal sacred to their god. The little colony, we may well suppose, did not long enjoy its curtailed privileges: it very probably succumbed to Egyptian fanaticism during the Persian wars which followed. The new religious view that we find in this chaos we shall concentrate on two chief points: (a) the Egyptian Pantheon, corresponding to the term God; and (b) the Future Life, as best representing the term Man.

(a) The Egyptian Pantheon.—By this word we understand such gods as were officially worshipped in one or more of the various nomes, or in the country at large. We exclude, therefore, the multitude of...
demons or spirits which animated almost everything man came in contact with—stones, plants, animals—and the lesser deities which presided over every stage of human life—birth, naming, etc. The worship they received was of an entirely local and private nature, and we know almost nothing of it.

Each nome had its own chief deity or divine lord, male or female, apparently inherited from the ancient tribes. With each deity an animal, as a rule, but sometimes a tree or mineral, was associated. Thus Osiris of Busiris was associated with a pillar, or the trunk of a tree; Hathor of Denderah, with a sycamore; Osiris of Mendes, with a goat; Set of Tanis, with an ass; Buto of the city of the same name, with a serpent; Bast of Bubastis, with a cat; Atum, or Tum, of Heliopolis, with a serpent, a lion, or possibly, later, the bull Mnevis; Ptah of Memphis, with the bull Apis; Sokar, in the Fayum and at Ombo (Kôm Ombo), with a crocodile; Anubis of Assiût, with a jackal; Ament, and Chons; in Memphis the group of Ptah, Sekhmet, and Nefertum; etc. Sometimes the triad consisted of one god and two goddesses, as at Elephantine, or even of three male deities. Those groups were probably first obtained by the fusion of several religious centres into one, the number three being suggested by the human family (fathers, triad Osiris, Isis, and Horus, of the Osiris cycle. In some cases the second element was a mere grammatical duplicate of the first, as Ament, wife of Amen (Amon), and was considered as one with it; it was then natural to identify her with his parents, and so arose the concept of one god in three forms. There was in this a germ of monotheism. It is doubtful, however, whether it would ever have developed beyond the limits of henotheism but for the solar religion which seems to have sprung into existence towards the dawn of the dynastic times, very likely under the influence of the school of Heliopolis. But before we turn to this new phase of the Egyptian religion, we must consider another aspect of the ancient gods which may have furnished the first basis of unification of the various local worships.

The Gods of the Dead.—Gods, being fancied like men, were, like them, subject to death, the great leveller. Each community had the mummy of its god. But in the case of gods, as in that of men, death was not the cessation of all life. With the assistance of magical deities, the dead god was simply transplanted to another world, where he was still the god of the departed who had been his devotees on earth. Hence two forms of the same god, frequently under two different names which eventually led to the conception of distinct gods of the dead. Such were Chent-Ament, the first of the Westerners (the dead) at Abydos, Sokar (or Seker), probably a form of Ptah, at Memphis. Sometimes, however, the god of the dead retained the name he had before, as Anubis at Assiût, Khonu at Thebes, and Osiris, wherever he began to be known as such.

Legend of Osiris.—Each of these gods had his own legend. Osiris was the last god who reigned upon the earth, and he was a wise and good king. But his brother Set was a wicked god and killed Osiris, cutting his body into fragments, which he scattered all over the land. Isis, sister and wife of Osiris, collected the fragments, put them together, and embalmed them, with the assistance of her son Horus, Anubis (here, perhaps, a substitute for Set, who does not seem to have been originally conceived as his brother's slayer), and Nephthys, Set's wife. A magical art, revives her husband who becomes king of the dead, while Horus defeats Set and reigns on the earth in his father's place. According to another version, Qeb, father of Osiris, and Set put an end to the strife by dividing the land between the two competitors, giving the South to Horus and the North to Set.

Sicreal and Elemental Gods.—It is generally conceded that some of the local gods had a sidereal or elemental character. Horus, of Edfu and el-Kâb (Hil- thyaspis), and Anber, of This, represented one or other of the elements or aspects of the earth. Thoth of Hermopolis and Khnum of Thbes were lunar gods. Min, of Akhmim (Chermnis) and Coptos, represented the cultivable land and Set, of Ombo (near Nakadeh), the desert. Hapi was the Nile, Hathor the vault of heaven. In some cases this sidereal or elemental aspect of the local gods may be primitive, especially among the tribes of Asiatic origin; but in other cases it may be of later date and due to the influence of the solar religion of Re, which, as we have already said, came into prominence, if not into existence, during the early dynastic dynastic times.

Solar Gods, Re or Ra.—That Re was such a local god representing the sun, is generally taken for granted although by no means proven. We cannot assign him to any locality not furnished with another
god of its own. We never find him, like the vast ma-
majority of the local gods, associated with a sacred ani-
mal, nor is he ever represented with a human figure,
except as a substitute for Atum, or as identified with
Horus or some other god. His only representative
among men was the king himself, who at some time
in his monuments appears as his son. Finally, it is dif-
ticult to understand how the kings of the southern
kingdom, after having extended their rule to the north,
should have given up their own patron god, Horus, for
a local deity of the conquered land. It looks as if the
worship of Re had been retained in some form, after
the reunion of the two lands, and possibly for political
reasons. At all events, the solar religion soon became
very popular, and it may be said that to the end it re-
mained the state religion of Egypt. Re, like the other
gods, had his legend—or rather myth—excogitated by
the theological school of Heliopolis in connexion with
the cosmogonic system of the same school. He had
created the world and was king over the earth. In
course of time the mortals rebelled against him be-
cause he was too old, whereupon he ordered their
descent to the western hemisphere; and some accounts
state that 7000 jars of human blood he was satisfied and
decided to spare men. Tired of living among them, he
took his flight to heaven, where, standing in his
sacred bark, he sailed on the celestial ocean. The
fixed stars were encouraged by the gods to give
parts of pilot, steersman, and oarsmen. Re rises in
the east, conquers the old foe (darkness), spreads
light, life, wealth, and joy on all sides, and receives
everywhere the applause of gods and men; but now
he comes to the western horizon, where, beholding
Abydos, through an enormous crevice, the celestial
waters rush down to the lower hemisphere. The
sacred bark follows the eternal river and, unrestrained,
god passes slowly through the kingdom of night,
conquering his foes, saluting his faithful worshippers,
only the stars in front, white like the moon, light up
the southern hemisphere, as bright, as vivifying, as beautiful as
ever. Soon each phase of the sun's course received a
special name and gradually developed into a distinct
god; thus we find Harpochrate (Horus's Child) repre-
seating morning sun; Atum, the evening sun; Re, the
noon sun; while Harmakhuti (Horus on the two hori-
sones—Harmachis, supposed to be represented by the
great Sphinx) is both the rising and the setting sun.

Cosmogony and Enneads.—Different cosmogonic
systems were excogitated at a very early date (some of
them go back to the name of almost forgotten deities
in the various theological schools, principally by the School
of Heliopolis. Unfortunately, none of these systems
seem to have been handed down in the primitive form.
According to one of the versions of the Heliopolitan
cosmogony, the principle of all things is the god Nûm,
the primordial ocean, in which Atum, the god of light,
bayed hidden and alone until he decided to create the
world. He begat all by himself Shu, the atmosphere,
and Tefnut, the dew. In their turn Shu and Tefnut
begat Qeb, the earth, and Nût, the vault of heaven.
These two were bickering, and on this mortal occasion
Nûm, when Shu, stealing between them, raised Nût on
high. The world was formed, and the sun could begin
its daily course across the heavens. Qeb and Nût be-

gat Osiris, the cultivable land and the Nile united in
one concept, Set the desert, and the two sisters Isis and
Nephthys. To this first ennead, of which Tûm (lat-
er supplanted by Re) appears as the head, two
others were added, the first of which began with
Horus, as son of Osiris and Isis. The three enneads
constituted as many dynasties of gods, or demi-gods,
who reigned on the earth in predynastic times. We
have seen above that the third of these dynasties,
called "the shades" (Âunu) by Manetho, represents the
dynastic kings mentioned on the Palermo Stone.
The Heliopolitan Ennead became very popu-
lar, and every religious centre was now ambitious to
have a similar one, the same gods and order being gen-
erally retained, except that the local deity invariably
appeared at the head of the combination.

It has long been customary to assert that in Egypt
human life was compared to the course of the sun, and
that Osiris was not the sun god but a terrestrial

tic sunbeam appears as his son. It is more correct, however, to say, with Professor
Maspéro (Revue de l'histoire des religions (1887), XV,
307 sq.), that the course of the sun was compared to
that of human life. Osiris is not a sun that has set,
but the sun that has set is an Osiris; this is so true
that when the sun reappears on the eastern horizon for
the reunion of the two lands, he is represented as the youth, Horus, son of Osiris.

The great prominence given to Re and Osiris by the
Heliopolitan School of theology not only raised the
Egyptian belief to a higher plane, but brought about a
certain unification of it—a consolidation, so to speak,
of the local worshipers. Naturally, the local gods
retained their original external appearance, but they
were now clothed with the attributes of the new
Heliopolitan deity, Re, and were slowly identified
with him. Every god became new a sun-god under
the name of Osiris, and that the Heliopolitan god was added to the name of the local god, as
Sobek-Re, Chnum-Re, Ammon-Re. It was a step

towards monotheism, or at any rate towards a na-
tional henotheism. This tendency must have been
influenced by the appearance of new religious systems
of the Persian and Greek influence, and may have
been encouraged by the political than of religious rulers of the nation.
There could be no perfect and lasting political unity as long as the various names retained their individual
gods.

It is significant that in the only two periods when
the pharaohs seem to have had absolute political
control of Egypt—viz. from the Fourth to the Fifth and
from the Eighteenth to the Twentieth Dynasty—
the systems of Re, in the former period, and his
Theban form, Ammon-Re, in the latter period, come clearly to
prevail. The historical background. These, however, though they were no
more than tolerated, seemed to constitute a menace to
political unity. The effort of Amenhotep IV to intro-
duce the cult of his only god, Aton (see above, in Dynastic
History; Second Period), was perhaps not prompted
exclusively by a religious ideal, as is generally be-
lieved. A similar attempt in favour of Re and his
ennead was perhaps made by the Memphite kings.
From Khafre, second king of the fourth dynasty,
to the end of the sixth dynasty, the word Re is a part
of the titles of the kings, and the monuments show that during that period numerous
temples were erected to the chief of the Heliopolitan
Ennead in the neighbouring nomes. Such encroach-
ments of the official religion on the local forms of
worship may have caused the disturbances which
marked the passage from the fifth to the sixth dy-
nasty and the end of the latter. That such disturb-
ances were not of a merely natural politics is clear in
the light of the well-known facts that the royal tombs
and the temples of that period were violated and pil-
aged, and that the criminal activities of several kings, those of Khafre in particular,
were found, shattered into fragments, at the bottom of a pit near these pyramids. Evidently, those devotees
"sons of Re" were not in the odour of sanctity with
some of the Egyptian priests, and the imputation of
impiedad brought against them, as recorded by Her-
dotus (II, 127, 128; cf. Diodorus Siculus, I, 14), may
not have been quite as baseless as is assumed by some
modern scholars (Maspéro, Histoire Ancienne, pp. 76
sq.).

If the foregoing sketch of the Egyptian religion is
somewhat obscure, or even produces a self-con-
tradictory effect, this may perhaps be attributed to the
fact that the extremely remote periods considered
(merely, in fact, prehistoric) are known to us from
monuments of later date, where they are reflected in
superimposed outlines, comparable to a series of pictures of one person at different stages of life, and in different attitudes and garbs, taken successively on the same photographic plate. The Egyptians were a most conservative people; like other peoples, they were open to new religious concepts, and accepted them, but they never got rid of the older ones, no matter how much the older might conflict with the newer. However, if the writer is not mistaken, two prominent features of their religion are sufficiently clear: first, animal fetishism from beginning to end in a more or less mitigated form; secondly, superposition, during the early Memphite dynasties, of the sun-worship, the sun being considered not as creator, but as organizer of the world, from an eternally pre-exist-

ing matter, perhaps the forerunner of the demiurge of the Alexandrine School.

(b) The Future Life.—As early as the predynastic times the Egyptians believed that man was survived in death by a certain principle of life corresponding to our soul. The nature of this principle, and the conditions on which its survival depended, are illustrated by the monuments of the early dynasties. It was called the *ka* of the departed, and was imagined as a counterpart of the body it had animated, being of the same sex, remaining throughout its existence of the same age as at the time of death, and having the same needs and wants as the departed had in his lifetime. It endured as long as the body, hence the paramount importance the Egyptians attached to the preservation of the bodies of their dead. They generally buried them in ordinary graves, but always in the dry sand of the desert, where moisture could not affect them; among the higher classes, to whom the privilege of being embalmed was at first restricted, the mummy was sealed in a stone coffin and deposited in a carefully concealed rock-excavation over which a tomb was built. Hence, also, the presence in the tombs of lifelike statues of the deceased to which the *ka* might cling, should the mummy happen to meet destruction. But the *ka* could also die of hunger or thirst, and for this reason food and drink were left with the body at the time of the burial, fresh supplies being deposited from time to time on the top of the grave, or at the entrance of the tomb. The *ka*, or "double," as this word is generally interpreted, is confined to the grave or tomb, often called "the house of the *ka*". There near the body, it now lives alone in darkness as once, in union with the body, it lived in the sunny world. Toilet articles, weapons against possible enemies, amulets against serpents, are also left in the tomb, together with magic texts and a magic wand which enable it to make use of these necessities.

Along with the *ka*, the earliest texts mention other surviving principles of a less material nature, the *ba* and the *khā*. Like the *ka*, the *ba* resides in the body during man's life, but after death it is free to wander where it pleases. It was conceived as a bird, and is often represented as such, with a human head. The *khā* is luminous; it is a spark of the divine intelligence. According to some Egyptologists, it is a mere transformation which the *ba* undergoes when, in the hereafter, it is found to have been pure and just during lifetime; it is then admitted to the society of the gods; according to others, it is a distinct element residing in the body. Simultaneously with the concepts of the *ba* and the *khā*, the Egyptians developed the concept of a common abode for the departed souls, not unlike the Hades of the Greeks. But their views varied very much, both as to the location of that Hades and as to its nature. It is very likely that, originally, every god of the dead had a Hades of his own; but these gods were gradually either identified with Osiris or brought into his circle as secondary infernal deities, the various local concepts of the region of the dead were ultimately merged into the Osirian concept. According to Professor Maspero, the kingdom of Osiris was first thought to be located in one of the islands of the Northern Delta, whither cultivation had not yet extended. But when the sun in its course through the night had become identified with Osiris, the realm of the dead was shifted to the region traversed by the sun during the night, wherever that region might be, whether under the earth, as more commonly accepted, or in the far west, in the desert, on the same plane with the world of the living, or in the north-eastern heavens beyond the great sea that surrounds the earth.

As the location, so does the nature of the Osirian Hades seem to have varied with the different schools; and here, unfortunately, as in the case of the Egyptian pantheon, the monuments exhibit different views superimposed on one another. We seem, however, to discern two tendencies which might be called the "pure Osiris" and the "Re-Osiris" traditions. According to the former tradition the aspiration of all the departed is to be identified with Osiris, and live with him in his kingdom of the Eau, or Yalu, fields—such a paradise as the Egyptian peasant could fancy. There ploughing and reaping are carried on as upon the earth; there is no need with hardly any labour, and the land is so well irrigated by the many branches of another Nile that wheat grows seven ells. All men are equal; all have to answer the call for work without distinction of former rank. Kings and Kings' men were spares that light burden by having *sekhetis* (resemblances) placed with them in their tombs. These *sekhetis* were small statuettes with a magic text which enabled them to impersonate the deceased and answer the call for him.

To procure the admission of the deceased into this realm of happiness his family and friends had to perform over him the same rites as were performed over Osiris by Isis, Nephthys, Horus, and Anubis. Those rites consisted mostly of magical formulae and incantations. The mumification of the body was considered an important condition, as Osiris was supposed to have been mumified. It seems, also, that in the beginning at least, the Osirian doctrine demanded a certain dismemberment of the body previous to all further rites, as the body of Osiris had been dismem-
bored by Set. Possibly, also, this took place in the pre-
dynastic times, when the bodies of the dead appear to
have been intentionally dismembered and then put-to-
gether again for burial (Chantepie de la Saussaye, op.
cit., I, 216). At all events Diodoros narrates that the
survivors who made the journey from the bony rem-
ains to the removal of the viscera had to take to
flight immediately after having accomplished his duty,
while the mob pretended to drive him away with
stones (Diodorus Siculius, I, 91), as though he imper-
sanctified. This custom, however, of dismembering
bodies may be older than the Osirian doctrine, and
may explain it rather than be explained from it
(Chantepie de la Saussaye, op. cit., I, 220).
When all the rites had been duly performed the deceased
was pronounced Osiris so-and-so—he had been identi-
fied with the god Osiris. He could now proceed to the
edge of the great river beyond which are the Euru
fields. Turn-face, the ferryman, would carry him
across, unless the four sons of Horus would bring him
a craft to float over, or the hawk of Horus, or the ibis
of Thoth, would conduct and transport him on its
pinions to his destination. Such were, during the
Memphite dynasties, the conditions on which the de-
serted soul obtained eternal felicity; they were based
on ritual rather than on moral purity. It seems,
however, that already at that time some texts show that
the deceased was expected to be “restored in his
Religion, free of certain sins. In any case, under the twelfth
dynasty the deceased was regularly tried before being
allowed to pass across the waters. He is represented
appearing before Osiris, surrounded by forty-two
judges. His heart is weighed on scales by Horus and
Anubis, over against a feather, a symbol of justice,
while Thoth registers the result of the operation.
In the meantime the deceased recites a catalogue of
forty-two sins (so-called “negative confession”) of
which he is innocent. Between the scales and Osiris
there is what seems to be a female hippopotamus,
appearing ready to devour the guilty souls; but there
was no great danger of falling into her jaws, as the
embalmers had been careful to remove the heart and
replace it by a stone scarab inscribed with a magical
spell which prevented the heart from testifying against
the deceased.
The concept of retribution implied by the
judgment very likely originated with the School
of Abydos [see Maspero, “Revue de l’histoire des
religions” (1887), XV, 308 sqq.].
According to another tradition, which is repre-
sented in the second text of the Pyramid Texts, the
dead is ultimately identified not with Osiris himself,
but with Re identified with Osiris and his son
Horus. His destination is the bark of Re on the
eastern horizon, whither he is transported by the same
ferryman Turn-face. Once on the sacred bark, the
dead may bid defiance to all dangers and enemies,
he enjoys absolute and perfect felicity, leaves the
kingdom of Re-Osiris, and follows Re-Horus across the
heavens into the region of the living gods. The same
concept was resumed by the Theban School. A document
of that period, written in two books due to the Theban Ammon-Re
School of theology, the “Book of what there is in the
Duat” (Hades) and the “Book of the Gates”. In
both compositions the course of Re in the region of
darkness is divided into twelve sections corresponding
to the twelve hours of night, but in the latter book
each section is separated by a gate guarded by gigantic
serpents. Some of these sections are presided over
by the old gods of the dead, Sokar and Osiris, with
their faithful subjects. The principle of retribution of
the dead is identical with a retribution which
we now meet clearly expressed for the first time.
While the innocent soul, after a series of transforma-
tions, reaches at last, on the extreme limit of the
lower world, the bark of Re, where it joins the happy
crowd of the gods, the criminal one is submitted to
various tortures and finally annihilated (see, however,
below under IV).
IV. LITERARY MONUMENTS OF ANCIENT EGYPT.—
The earliest specimens of Egyptian literature are the
so-called Pyramid Texts engraved on the walls
of the halls and temples of the pharaohs of the 5th
(Fifth Dynasty) and 6th (Sixth Dynasty) Dynasties.
They represent two ancient rituals of the dead, the older of which, as
is generally conceded, antedates the dynastic times.
The texts corresponding to this one are mostly incanta-
tions and magic prayers supposed to protect the
deceased against serpents and scorpions, hunger and
thirst, and old age. The gods are made to transmit
to the deceased the offerings deposited in the tomb;
may, these offerings are so placed in his power that he
positively eats and digests them, thus assimilating
their strength and other desirable qualities. In these
last two features Professor Maspero sees an indication
that although the concept of the ba had already
been superposed on that of the ka, when that ritual
first came into existence, yet anthropophagical sacri-
cifices, if no longer in use, were still fresh in the memory of the Egyptians.
This high, probably predynastic, antiquity is confirmed by peculiarities of language
and orthography, which in more than one case seem to have puzzled the copyists of the Fifth and
Sixth Dynasties. In the latter, “Re” is pronounced as “Religion”, “Religious” in “Re
religion”, XII (1885), pp. 125 sqq.).
The other ritual represented in the Pyramid Texts is the Book of
Funerals, known already in several recensions and published
by Professor E. Schiaparelli (Il libro de’ funerali degli Antichi Egiziani, Rome, 1881–2).
It is supposed to be the repetition of the rites by which Isis
and Horus had animated the mummy of Osiris with the life he had as god of the dead. The principal
ceremony consisted in the opening of the mouth and eyes of the mummy, so that the deceased, in his second life,
could enjoy the mortuary offerings and guide and ex-
press himself in the next world. For the details of this exceedingly interesting ritual we refer the reader
to the excellent analysis of Professor Maspero in the
“Revue de l’histoire des religions” [XV (1887), 158 sqq.].
These two books were very popular with the Egyptians down to the end of the Ptolemaic times,
especially the second one, which is profusely illus-
trated in the tomb of Seti I.
The Book of the Dead.—Next in antiquity comes the
Book of the Dead, the most widely known monument
of Egyptian literature. Numerous copies are to be found in all the principal museums of Europe. It
may be best described as a general illustrated guide-
book of the departed soul in Amenti (the Region of the
West). There, whatever his belief as to the survival
of man in the hereafter, or the location and nature of the
region of the dead, the deceased found what he had
to do to be admitted, what ordeals he would have to
undergo before reaching his destination, what spirits
and genii he would have to propitiate, and how to
come out of all this victorious. Broadly speaking, the
book can be divided into three parts: (1) “The
Book of the Going Out by Daytime” (cc. i–xvi), a title gener-
ally, though wrongly, extended to the whole book; (2)
Chapters xxvii–cxxvii: fitting the deceased for admission
(xviii–cxl) to the kingdom of Osiris, his itinerary there-
to, whether by water or overland (cxl–cxii, cxxvii–cxii), and his settlement therein (cxi–cx), without further
formality than conciliating the ferryman or the guar-
dian genii with certain incantations and magical
prayers recited with the right intonation; in case the
deceased believed in retribution, before gaining
admission he had to repent of the sins committed in
Justice, there to be tried by Osiris (cxiii–cxvi); (3)
Chapter cxxv to the end: practically another guide-
book for the special profit of the followers of the School
of Abydos. It begins with the trial, after which it
goes over pretty much the same ground as the com-
mon guide, with variations peculiar to the doctrine of the school. For further details see the masterly review by Maspéro of Naville's edition of the Book of the Dead during the Eighteenth to Twentieth Dynasties, in "Revue de l'histoire des religions", XV (1887), pp. 203-315. The most important chapters, from a theological point of view, are the first fifteen of the Book of the Dead. The trial seems to have been a sevenfold process. The disinterested, concordant summary of what the deceased was supposed to know on the nature of the gods with whom he was to identify himself, and the one hundred and twenty-fifth, where, along with the disclaimer of forty-two offences, we find also an enumeration of several good works, as feeding the hungry, clothing the naked, making offerings to the dead, and sacrificing to the gods. The Book of the Dead naturally received many additions in the course of centuries, as new concepts evolved from the older ones. It would not be correct, however, to conclude that all the chapters not to be found in the older copies are of recent date. Comparison between various copies of known dates shows that, as a rule, they were mere abstractions from the standard copies preserved by the corporations of embalmers. The one copy that has been dated, as a rule, ordered during his lifetime a copy to be prepared according to his own belief and means. The fact that certain chapters, like lxiv, were assigned by the manuscripts to what seems to us remote dates, such as the reign of King Khufu (Cheops), of the fourth dynasty. Egyptology, however, does not prove that these chapters were thought to be older than the others; the reverse is more likely to be the correct view. The bulk of the chapters were believed by the Egyptians to antedate the human dynastic times, and, as Professor Maspéro remarks, the discovery of the Pyramid Texts, to which the Book of the Dead is closely related, shows that this idea was not altogether futile (op. cit., XV, 299). The Book of the Dead contains several passages in common with the ritual of the dead represented by the Pyramid Texts, and its first fifteen chapters were likewise read at burials, but otherwise it constitutes a distinct type. The Book of the Dead occurs in two recensions: the Theban (Eighteenth to Twentieth Dynasty) and the Saitic (Twenty-sixth Dynasty). The latter, which, naturally, is the longer (165 chapters), was published by Lepsius (Das Totenbuch der Aegypter, Leipzig, 1842), from a Turin papyrus. The first two translations of the Book of the Dead by Birch (in Bunsen, "Egypt's Place in Universal History", V, pp. 339-333) and Pierré (Le Livre des Morts des Anciens Égyptiens, Paris, 1849), based on the manuscript of Naville published a critical edition of the Theban recension, "Das ägyptische Totenbuch der XVIII. bis XX. Dynastie", Berlin, 1886. In 1901 Dr. E. A. W. Budge published a translation of that same recension, but augmented with a considerable number of chapters (in all, 160) from new Theban manuscripts and 16 chapters from the Saitic recension (The Book of the Dead, London, 1901). For further bibliographical details see Budge, "The Papyrus of Ani" (London, 1896), 371 sqq.).

... Other books similar in scope to the Book of the Dead, and often substituted for it in tombs, are: (1) "The Book of the Respirations communicated by Isis to her brother Osiris to restore a new life to his soul and body and renew all his limbs, so that he may reach the horizon with his father Re, and his soul may rise to the heavens in the disk of the moon, and his body shine in the stars of Orion on the bosom of Nut; in order that this may also happen to the Osiris N." This book has so far been found only with the mummies of the priests and dignitaries of Amun-Hermes. Not only may the allusion to the formula and acts by means of which the resurrection is effected, but also the treatment of the life after death (tr. by P. J. Horkruck in "Records of the Past", IV, 119 sqq.). A variation of this book under the title of "Another Chapter of Coming Forth by Day, in order not to let him [the deceased] absorb impurities in the necropolis, but to let him drink truth, eat truth, accomplish all transformations he may please, to restore a new life" etc. (as above) was published by Wiedemann, "Hieratische Texte aus den Grabungen der Necropolen zu Theben. Zweiter Teil" (Leipzig, 1895), the "The Lamentations of Isis and Nephthys" (tr. by Horrack, op. cit., II, 117 sqq.). (3) "The Book of the Glorification of Osiris", a variation of the preceding, published by Pierré from a Louvre papyrus. (4) The "Book of the Manaccordement", published by Bergmann, "Das Buch vom Durchwandel der Ewigkeit" in "Sitzungsber. d. K.K. Ak. d. Wiss. in Wien", 1877.

Mythological Compositions.—A different group of funeral books is represented by certain mythological compositions. They consist principally of figures relating to the various diurnal and nocturnal phases of the sun, accompanied with explanatory legends. The oldest of such compositions can be assigned to the Eighteenth Dynasty, and refers to both the daily and the nocturnal journeys of the solar bark. The two are combined in one picture in two sections. In later times the nocturnal aspect of the sun prevails, and the composition becomes more and more funereal in character and scope, until the diurnal solar symbols disappear almost entirely (see Devéria, "Catalogue" etc., pp. 16). Since then, the figures are borrowed from the Book of the Dead.

... Closely related to these mythological compositions is the Book of what there is in the Dust" (or Lower Hemisphere, as commonly, though perhaps wrongly, understood. See below, under Astronomy). It consists of a hieroglyphic text with numerous mythological or symbolic illustrations describing the nocturnal navigation of the sun (represented as the ram-headed god Chnum) on the river Uernes (cf. the Osphed of the Greeks) during the twelve hours of night, through as many halls. To each hall corresponds one of the successive modifications through which every being was supposed to be brought back from death to a new life. Such modifications are effected by the deities in charge of the various halls, who, in addition, contribute, either by towing or in some other mysterious way, to the progress of the solar bark on the Uernes, typifying that of the regeneration. However, this process of regeneration is not accomplished in Chnum himself but in the god Sokari, who plays the part of the dead sun. The sun's reappearance, as is seen in the book of Naville, appears as a mere figurative, or rather an onlooker. All those who take part in the action seem to be permanently settled in the Dust, with no other apparent purpose than to play their own parts on the passage of the solar bark. This is the case even with the damned, who, when the time of retribution comes at the end of the tenth, and during the eleventh, hour, impersonate the enemies of Osiris, and for the time being are submitted to atrocious tortures and even annihilated. Whether one is justified, as generally granted, in seeing in this last point a proof that the Egyptians as a people believed in eternal retribution, does not appear quite certain if we consider the highly mystical character of that book, the understanding of which was the privilege of a few initiated. For further details see the introduction to and the analysis of that book by Devéria ("Catalogue" etc., pp. 15-39. See also Jéquier, "Livre de ce qu'il y a dans l'Hadès", Paris, 1894).

Ritual of the Embalming.—To close the above remarks on the funeral literature we must mention the Ritual of the Embalming, published by Maspéro (Notes et Extraits des Manuscrits etc., t. XIV, Paris, 1882).

Liturgies.—The religion of the living, if we may so express ourselves, is far from being as largely repre-
sented in Egyptian literature as that of the dead. Yet we have a few important works such as the ritual, or rather the liturgy, of Osiris in his temple at Abidos, of which an illustrated edition has been preserved on the walls of that temple (published in the Legend of the Ritual of the dead Osirian, '1902), and the liturgy of the Amon-worship contained in a Berlin papyrus (O. v. Lemb, Ritualbuch des Amundites, 1882). The Litany of the Sun has been translated by Naville, in "Records of the Past", VIII, 103 sq., under the title of the Legend of the Ritual of the dead Osirian, to which we have already alluded (op. cit., VI, 103 sq.) and several hymns to Osiris (op. cit., New Series, IV, 17 sq.), the Nile (op. cit., New Series, III, 46 sq.), and Amon-Re (in Maspero, "Histoire ancienne", pp. 130-139). Grammar of the Amun-Religion, Paris, 1875; cf. Bierm in "Zeitschrift für ägyptische Sprache", 1877, and Brugsch, "Religion u. Mythologie der alten Aegypter", Leipzig, 1888, pp. 690 sq.). From the point of view of composition and style these hymns are the most remarkable literary products of ancient Egypt, as they are the most striking specimens of the monothelistic tendencies which developed under the Eighteenth-Twentieth Dynasties as a result of the political supremacy of Thebes. Not less noteworthy are the hymns composed by Amenophis III himself in his good old age (1400). As a specimen published by Breasted, "History of the Ancient Egyptians", pp. 273 sqq.

Moral.—Several Egyptian literary compositions of a moral nature have reached us. The two oldest are attributed to Kagemme, vizier of King Snefru, and Pthsotep, vizier and chief judge under King Iseus, but last one of the fifth dynasty. Both compositions, preserved in a manuscript of the Twelfth Dynasty, consist of apophthegms and proverbs of a rather positive and practical nature, as "A slight failure of courage may make a man useless or a docile son shall be happy on account of his obedience; he shall grow old and get favour!" or "If you are a wise man, fix your house pleasantly, love your wife, do not quarrel with her, give her food and jewels, because this makes her comely, give her perfumes and pleasures during your life. She is a treasure which must be worthy of its owner."

Under the Twelfth Dynasty we have the teaching of Amenemhet I, where the old king warns his son and successor, Userkaf, against placing too much confidence in an Egyptian mind, and 'out in the world' with his son Khonsu-Hopetep, exemplifying his teaching from his own experience (translated in "Records of the Past", II, p. 9 sq.). Of a much higher order and wider scope are the consuls that Ay, a scribe of the Nineteenth Dynasty, gives to his son Khonsu-Hopetep: "Let thine eye observe the deeds of God; it is he that strikes whatsoever is stricken. Piety to the gods is the highest virtue!"; "It is I who gave thee to thy mother, but It is she that bore thee and while she was carrying thee she suffered many pains. When the time of her deliverance thou wert born and she carried thee like the veriest yoke, her rap in thy mouth, for three years. Thou didst grow, and thy filthiness never so far disgraced her as to make her cry out: 'O! what am I doing? Thou wert sent to school. She was anxious about thee every day, bringing thee meat and drink from home. Thou didst take a house and she gave thee like thine own, but never forget the pains of childhood thou didst cost to thy mother; give her not cause to complain of thee, lest perchance she lift up her hands to the divinity, and give her to hear her will!" Keep this in mind and treat her with kindness and reverence. Even as the most aged die thou also shalt lie down among them. There is no exception; even for him whose life is without blame, the same lot awaits him as well. Thy death-messenger will come to thee too, to carry thee away. Discourses will avail thee nothing, for he is coming, yes, he is ready even now. Do not begin to say: 'I am still but a child, I whom thou taket off.' Thou knowest not how thou shalt die. Death comes to the suckling babe; yes, to him who is yet in the womb, as well as to the old, old man. And I, tell thee the truth, I witnessed a huge ponder in thy heart before acting. In them thou shalt find happiness and all evil shall be put far from thee" (tr. of Chabas, "L'Egyptologie", Paris, 1876-8).

History.—Egyptian historical literature is somewhat illustrated from what we have said of the sources of chronology (see above, II, good section "Chronology"). In sharp contrast with the aridity which generally characterizes such documents, the so-called prose-poem of Pentaur stands alone so far. Pentaur is the name of the copyist, not of the author, as was long believed. Its object is an episode of the campaign of Ramses II against the Hittites. When taken by surprise he, with only the household troops and a few officers who happened to be there, bravely charged the van of the enemy who were in pursuit of his defeated army, and so brilliantly successful was he that the rout was turned into a victory. The work displays a good deal of literary skill and is the nearest approach to an epic to be found in Egyptian literature (Breasted, "Hist. of the Anc. Egyptians", 320; cf. Maspero, "Hist. Anc.", 272 sq.). Not less remarkable, perhaps, and a good example of style are: (1) the long autobiography of Uni, under three successive kings (Teti II, Pepi I, and Mernere) of the sixth dynasty, the longest funerary inscription and the most important historical document of that time (Breasted, "Anc. Rec. of Egypt", I, 154 sq.); (2) the famous stele of Phankhi (see above, II, under "Dynastic History; Second Period") which Professor Breasted calls the clearest and most rational account of a military expedition which has survived from ancient Egypt (Hist. of the Anc. Egyptians, 370); (3) the great Papyrus Edfu, in which we find the history of their kings; but from one end of the country to the other the waters of the Nile reflected temples and mortuary chapels without number, on the walls of which the achievements of the pharaohs were spread in gorgeous inscriptions and reliefs. That was all the history they needed. It furnished them with historical outlines which their fertile imaginations filled out with stories or tales after their own taste, tales in the style of the "Arabian Nights", where animals and mummies spoke like ordinary folks, as for instance in the tale of "The Two Brothers", from the Nineteenth Dynasty (Records of the Past, II, 137 sqq.), and the story of Satni-Khâmoûs from Ptolemaic times (op. cit., IV, 131 sq.). In "The Doomed Prince", Twentieth Dynasty (op. cit., II, 153 sq.), men fly like birds; in "The Shipwrecked", Twelfth Dynasty (translated, with all the others, in Maspero, "Les contes populaires de l'Egypte ancienne", 3d ed., Paris, 1905), the hero is shipwrecked on the Island of the Ka (one of the popular concepts of the Land of the Dead), where a gigantic serpent addresses him with a human voice and tells him to kill his own mother. In "The Daughter of the Prince of Bakhtan", Twelfth Dynasty, the prince's younger daughter is delivered from a demon or spirit by the statue of the god Khonsu for which he had sent to Thebes. Sometimes, however, the action remains within the limits of the natural order, and the interest consists in some extraordinary
change of fortune, as in the case of Sinuhit, Twelfth Dynasty, or in some clever stratagem, as in ‘How Thoth Captured Joppa’. Twelfth Dynasty, and in the story of the Prince of the Royal House of Ramses II, the son of Seti I. The dramatis persona of such tales and stories are often persons of royal blood, the pharaoh himself not infrequently playing the principal part; and the names which they bear, as a rule, are real historic names, so that in some cases it is not clear, at first sight, whether one has to deal with history or with fiction. More frequently, however, the names have been selected at random, sometimes from proper names, sometimes from the praenomina, or even from popular nicknames. Moreover, chronology, as is usual in popular fiction, is grossly disregarded. In the story of ‘Sati Khamon’, for instance, Menepthah, instead of appearing as the brother of the hero, is alluded to as a remote predecessor of Ramses II (Usirmark of the tale, a praenomen of Ramses II in his youth). This literature of historic fiction was evidently very popular in Egypt at all times and in all classes of society. That it was chiefly from this source that Herodotus collected most of his notices concerning the ancient kings of Egypt is evident from the chronic confusion and the great mixture of names, praenomina, and nicknames which he presents. In his work on the King List Libnani tells us all-important details and points the very interesting introduction of Prof. Maspéro to his ‘Contes populaires de l’ancienne Egypte’ (3rd ed., Paris, 1905).

Astronomy.—We have no special treatise on astronomy, but we have a story of a book form in the contents of some monuments, however, the temples and tombs especially, give us a fair idea of their astronomical knowledge. On the whole, their notions were rather elementary. They knew the zodiac and the principal constellations, and had special names for Orion (Sothis) and Sirius (Sopdet), the former being sacred to Osiris and the latter to Isis, and for the thirty-six deities which presided over the thirty-six decades of the year. They had compiled tables of the risings and settings of a great many, if not all, of the stars visible to the naked eye. They knew the difference between fixed stars and planets, and the apparently retrograde motion of Mars at certain periods of the year had not escaped their attention. Beyond this they knew probably little or nothing (see Ginzel, ‘Handbuch der mathematischen u. technischen Chronologie,’ I, 153). We are told by Thothmes III, subsidiary text of the tomb of Amenemhet, that the Egyptians used what they knew of astronomy for the division of time and its computation. They fancied the earth round and flat, surrounded with mountains beyond which flowed a large river which they called Usir. Thothmonat, the cardinal point of the mountains rose higher and supported the celestial vaults, which they imagined as solid, although transparent. Over this vault flowed the celestial waters on which the sun, and the moon, and the stars floated in barks. The sun at the end of every day went out through the western mountains and sailed on the Ureus first northward, then southward to the mountain of the east, where he entered our world again through a large gate. Egyptian mythology saw in the celestial vault an immense cow (Hathor), or a woman, the goddess Nbt, whom Shu (the atmosphere) had separated from her husband Qeb, or Sib (the earth), and who brought forth the sun every morning, and swallowed it every evening (Maspéro in ‘Revue de l’histoire des religions,’ XV, 209 sq.). The many representations of the celestial vault and the inner world through the gate of the lids of sarcophagi are purely mythological (op. cit., I, 151).

Mathematics.—Our earliest Egyptian treatise on mathematics is the Rhind Papyrus of the British Museum [ed. Eisenlohr, Ein mathematisches Handbuch der alten Aegypter, 1877]. L. Robson, in Journal de la Soc. Math. de France, VI (1878), 130 sqq.; it dates back to the Nineteenth Dynasty. It contains (a) several theorems of plane geometry with rules for measuring solids; (b) a manual of the calculator on a purely arithmetical basis, not algebraic. (Rodet in Journal Asiatique, 1881, X, VIII, 399 sqq.). The numerical system was decimal, and contained figures for one and for each power of ten; these figures were repeated as many times as contained in the number to be expressed. With the exception of two-thirteenth, the only fractions used were ones, each with one sign which were having 1 as numerator.

Astrology.—Among the documents belonging to this science the most important is a fragmentary astrological calendar (British Museum) written during the Nineteenth Dynasty. It contains a list of the things which is is to be known, especially the names of the months which it is necessary to know each day of the year. The reason why such a day was fas or nefas was ordinarily taken from some mythological tradition. The Greeks and Romans were not ignorant of this science, but the name ‘Egyptian days’ (dieis Egyptian), by which they designated it, shows clearly that they borrowed it from Egypt.

Medicine.—The Museum of Berlin preserves a copy of an Egyptian treatise on medicine, said to have been completed by, or at least under, kings of the First and Second-Dynasties. There is besides, in the University Library at Berlin, another all-important treatise as the Ebers Papyrus containing a copy (Eighteenth Dynasty) of another treatise attributed to King Cheops of the Fourth Dynasty. From these two documents and others of less importance we may infer what the Egyptians knew of human physiology and medicine, as, for religious reasons, they were not allowed to study anatomy. Practical medicine on the other hand, was so far developed among them that the Egyptian physicians were those most highly esteemed by the Greeks and Romans. The names given to diseases are not very clear, but the description of symptoms is often sufficiently detailed to enable a physician to identify them. Pharmaceutical science was still more advanced. Four kinds of remedies are to be found in the recipes: ointments, potions, plasters, ointments; they were usually taken from herbs, sometimes from minerals (as sulphate of copper, salt, niter, memphitic stone); the raw flesh, blood (fresh or dried up), hair, and horn of animals were also used, especially to reduce inflammations. The elements of such remedies were first mashed, boiled, and strained, then rapidly diluted, or, to be more accurate, made more digestible and even human urine. But the Egyptians believed that not all diseases were of natural origin; some were caused by evil spirits which obsessed the patients.

For Egyptian Art see Temple.
(a corruption of Gr. Ἀγαβήτας). The Arab conquerors thus designated the old inhabitants of Egypt (the majority of whom were negroes) in contradistinction both to themselves and to the Melchites of Greek origin and language who were still in communion with the Catholic Church, but have since drifted within the orbit of the so-called Orthodox, i.e. schismatic Greek, Church. A general article on the Coptic Church will be found under ALEXANDRIA, THE CHURCH OF. Special features of importance are treated under the titles ALEXANDRIA, COUNCILS OF; Gnosticism; Monasticism; Persecution; SACRAMENTS; Versions of the Bible. See also ATHANASIUS; Cyril of Alexandria; DIONYSIUS THE ELDER; THEOPHILUS PATRIARCH OF ALEXANDRIA; CLEMENT OF ALEXANDRIA; ORIGEN; DIOSCORUS; MILCHITES; MISSIONS. In the present article we shall treat in particular of the origin and constitution of the Coptic Church, especially the question of its episcopate, to the Council of Nicaea (325). We shall close with a short sketch of the present condition of both the Jacobite and the Uniat branches of the Coptic Church, chiefly from the point of view of their organisation.

1. Early Christianity in Egypt. The Ebionites, who have no direct evidence of a Christian community existing in Egypt until from the Council of Alexandria (A.D. 215-220) when it had already spread over the land. What we know of the Church of Egypt before that time is exclusively through inferences or unconfirmed traditions preserved in the extent, indeed, of the New Testament may imply the existence of Christianity in Egypt during the second century from the fact that under Trajan a Greek version of the "Gospel according to the Hebrews" was being circulated there (Duosehes, Histoire Ancienne de l'Eglise, i, 26). We know that this Gospel was the book of the Judaeo-Christians. Its very name points to the existence at the same date of another Christian community, recruited from among the Gentiles. This, presumably, followed another Gospel which Clement of Alexandria calls "the Gospel according to the Egyptians". (On the Gospel of the Egyptians, see Harnack, Chronologie der alchristlichen Literatur, I, 1, pp. 612-22; on the Gospel of the Hebrews, ibid., pp. 631-49.) This writer quotes it along with the "Gospel according to the Hebrews". However, he clearly distinguishes both from the other Gospels which shows that these two apocrypha were then mere relics of the past, or at least were old enough to be entitled to some consideration in spite of their uncanonical character. Some writers, as Bardenhewer (Geschichte der alchristlichen Literatur, I, 1, pp. 463-5) hold that the Egyptians" owed its name to its diffusion among the Egyptians throughout the land, in contradistinction to some other Gospel, canonical or uncanonical, in use in Alexandria. In this case we might conclude further, the existence of a third Christian community, consisting of native Egyptians, as it is difficult to suppose that two Hellenistic communities would have used different Gospels. But we have no evidence of a native Church having existed at as early a period as suggested by the elimination of the Gospel of the Egyptians from the canon at the time of Clement of Alexandria.

Again, organized Christianity at an early date in Egypt is, indirectly at least, attested by the activity of the Gnostic schools in that country in the third and fourth decades of the second century. Eusebius is authority that "Basilius the heresiarch", founder of one of these schools, came into prominence in the year 134. Other Egyptian founders of such schools, Valentinus and Carcoprates, belong to the same period. Valentinus had already moved to Rome in 140, under the pontificate of St. Pius. (Clement, Hist. Rom., III, iv, 3), after having preached his doctrines in Egypt, his native country. As Duosehes (op. cit., I, 301) well remarks, one cannot believe that these heretical manifestations represent all the Alexandrian Christianity. These souls presciently because they are nothing but schisms, suppose a Church, "the Great Church", as Celsus calls it; such aberrations, presciently because labelled with their authors' names, testify to the existence of the orthodox tradition in the country where they originated. This tradition, from which heresies of such a power of diffusion could circulate themselves without putting its very existence in jeopardy, must have been endowed with a vitality which cannot be accounted for without at least half a century of normal growth and an organization under the guidance of a well-recognized Church bishop. We may, therefore, safely conclude that as early as the middle decades of the first century there were in Alexandria, and probably in the neighbouring nomes, or provinces, Christian communities consisting principally of Hellenistic Jews and of those pious men (φιλόλογοι των γυναικών) who had embraced the tenets and practices of Judaism without becoming regular proselytes. These communities must have had some numerical importance, for on the one hand the Jews were exceedingly numerous (over one million) in Egypt, and particularly in Alexandria, which constituted two-fifths of the whole population; and on the other hand the philosophical eclecticism that generally prevailed in Alexandria at that time co-operated in favour of Christian ideas with the great doctrinal tolerance then obtaining throughout Judaism, which was not, it seems, the time that one might think like Philo or like Akiba, believe in the resurrection of the flesh or its final annihilation, expect the Messiah or ridicule that hope, philosophize like Ecclesiastes or like the Wisdom of Solomon (op. cit., I, 122). Along with this Judaising Church, whose hopes and expectations were centred in Jerusalem and the Temple, who accepted Christianity and yet continued to observe the Law, there was another Church, decidedly Gentile—we might say, Christian—in its character and aspirations, as well as in its practices. It is difficult to surmise what the relations of those two Churches to one another were in their details. It is very probable that the destruction of Jerusalem and the Temple by Titus, by putting an end to the hopes of many among the judaising Church, brought them over to the side of Christianity, and that the Church thus gained rapidly in numbers and prestige and soon became the only orthodox Christian Church.

2. Chronology of Early Episcopate.—Eusebius, both in his "Chronicle" and his "Ecclesiastical History" (cf. Harnack, "Chronologie der alchristlichen Literatur", I, 1, pp. 469-70) speaks of the pontificate of ten bishops supposed to have occupied in succession the See of Alexandria prior to the accession of Demetrius (185-9). Those names he takes from the now lost "Chronography" of Julius Africanus, who visited Egypt in the early part of the third century. They are as follows: Anianus, 22 years; Abilius, 13; Cerdo, 11; Primus, 12; Justus, 11; Eumenes, 13; Marcus, 10; Celadion, 14; Agrippinus, 12; Julianus, 10. Dates are also given, each bishop being entered under the year of reign of the Roman Emperor in which his accession took place. Thus Anianus is entered under the eighth year of Nero (A.D. 62-3). It seems certain, however, that these synchronistic indications do not belong to the list as found by Julius Africanus, but were computed by himself, from Demetrius down, on the years of pontificate of the several bishops. The same writer (Harnack, "Chronologie", I, 1, p. 706) is authority for another tradition preserved also by Eusebius, to the effect that Christianity was first introduced in Egypt by St. Mark the Evangelist in the third year of Claudius (A.D. 45), only one year after St. Peter established his church in Rome, and one year before Evodius had been raised to the See of Antioch. He preached there his Gospel and founded Churches in Alexandria. Little is added by

ordained by priests, and St. Athanasius is supposed to have been that archbishop. Now, as it is a well-known fact that St. Athanasius was consecrated by bishop Hermogenes in the last century, and was contemporary with many of the Arians used to spread against him. If this interpretation be true, the Lausiac text proves nothing for the nature of the early Alexandrian episcopate. But it seems highly improbable that the Arians should have dared to assert what everyone in Egypt in the last century by the most careful research, must have known to be false. In fact the Lausiac text is susceptible of a more plausible interpretation, to wit, that the episcopal character of the Archbishop of Alexandria was to be traced to simple presbyters, within the Antiochian Church, before the second council, which had been transmitted from the very beginning through an uninterrupted line of bishops. In this case the Lausiac would be the oldest witness of the tradition transmitted by Jerome, Severus, and Eutychius, for Pamphilus finished in the first half of the fifth century (Diet. Chist. Biog., s. v.), or even as early as the latter half of the fourth century, if Charles Gore is right in his argument that Rufinus visited that holy hermit in 375 (Journal of Theological Studies, III, 280). Moreover, that the bishops of Alexandria were originally Christian bishops; that the text and not the meaning of the presbyters is, indirectly at least, confirmed by another tradition for which Eutychius is authority, to wit, that, till Demetrius there was no other bishop in Egypt than the Bishop of Alexandria. This was denied by Sellier (Hist. Chron. Paul. Alex., vol. i, 109) and others, but we shall see in the following section that their reasons are not conclusive (cf. Harnack, "Miss. u. Ausbreitung", 2d ed., II, 133, n. 3). The tradition that the early Bishops of Alexandria were elected and appointed by a college of presbyters, is therefore, if not certain, at least highly probable. On the other hand it seems almost certain that that custom came to an end much earlier than Eutychius, or even Jerome, would have it. Significant is the fact that they disagree on the terminus ad quem; still more significant that Severus of Antioch is silent on that point. Besides, several passages of the works of Origene and Clement of Alexandria can hardly be understood without supposing that the mode of episcopal election and ordination was then the same as throughout the rest of the Christian world (see Cabrol in his "Dictionnaire de la chrét.", s. v. Alexandrie: Election du Patriarche). We may not dismiss the question without recalling the use which Presbyters, since Selden, have made of that tradition to uphold their views on the early organization of the Church, and to say that this college of presbyters, after all, on the gratuitous assumption (to put it as mildly as possible) that the presbyters who used to elect the Bishop of Alexandria, were priests as understood in the new current meaning of this word. Such is not the tradition; according to Eutychius himself, Severus authorizes the privilege of patriarchal election was vested not in the priests in general, but in a college of twelve priests on whom that power had been conferred by St. Mark. They were in that sense an episcopal college. Later on, when it became necessary to establish resident bishops in the provinces, the appointees may have been selected from the college of presbyters, while still retaining their former quality of members of the episcopal college. So that, little by little, the power of patriarchal election passed into the hands of regular bishops. The college in the election of the Bishop of Alexandria would be of a natural; which would explain the incontinuity of the witnesses of the tradition as to the time when the old order of things disappeared. Eutychius may have been influenced in his statement by the fourth Nicene canon. As for St. Jerome, he has made S. Demetrius, bishop of Alexandria, the first presbyter of Hermas and Dionysius. He may have been aware of the other tradition handed down by Eutychius, to the effect that those two patriarchs were the first to ordain bishops since St. Mark (see below). The Episcopate in the Provinces.—Delegated Bishops or Itinerant Bishops.—We have said that according to an ancient tradition handed down by Eutychius, the Bishop of Alexandria was for a long time the only bishop in Egypt. Eutychius's words are as follows: "From Annianus, who was appointed Patriarch of Alexandria by Mark the Evangelist, until Demetrius, Patriarch of Alexandria (and he was the eleventh patriarch of Alexandria), there was no bishop in the province [see — provinces — see below] of Egypt [Arabic, Min], and the patriarchs his predecessors had appointed no bishop. On the death of Demetrius, patriar he appointed three bishops, and he is the first Patriarch of Alexandria who set the bishops over provinces. And when he died Heraclius was made Patriarch of Alexandria, and he appointed twenty bishops" (translated from the edition of L. Chelkho, in "Corp. Script. Chr. Orient.": Script. Arabici, ser. III, tom. VI, I, p. 96). It has been objected against this tradition that the Emperor Hadrian, writing to Servianus on the religious conditions of Egypt (Vopiscus, "Vita Saturnini", 5), speaks of a "Patriarch of the church", not of a bishop. It is considered as a forgery of the third century (cf. Harnack, "Mission u. Ausbreitung des Christentums", 2d ed., II, 133, n. 3), and even if it were genuine it would be necessary to know exactly what Hadrian meant by the word bishop; we shall see that it could be used in a sense rather different from the current meaning. A stronger objection is taken from the "Lives of the Patriarchs of Alexandria" by Severus of Ashmunein, where we read that three of the early patriarchs—Cerd, Celadion, and Julian—were elected by bishops as well as by the people. It is far from certain, however, that the word bishop in these three cases has its ordinary meaning. In the case of Cerdio the text reads: "When the priests and the bishops, who were representing the patriarch in the towns, heard of his death they were grieved, and they all went to Alexandria and, having taken counsel with the orthodox people, etc. It seems evident that these "bishops" were nothing but delegated bishops acting in virtue of a special and temporary, not an ordinary and permanent, delegation of powers as ordinary bishops (see below); but in this case delegation of course was not understood as in the ordinary sense. They were not bishops in the ordinary canonical sense of the word. In Celadion's case the text says: "The bishops who were in Alexandria in those days"—i.e. probably, who were stationed there, resided there, which certainly cannot be understood of ordinary bishops, such as whose see had been in their respective dioceses. There was room for but one such bishop in Alexandria. Still clearer is the passage concerning Julian. "A party of bishops from the synod assembled with the people of Alexandria", etc. Why was that synod, evidently not a council which happened to be in session, for in that case all certainly would have taken part in the election. Besides, if Celadion's predecessor had called a synod or council, Severus, or the author from whom he borrowed the passage biography, would not have failed to swell it with this important fact. There seems to be no other solution than to see in that synod a body of presbyters or delegated bishops who were habitually in residence in Alexandria, but some of whom, being on the mission, were not able to take part in it. These, then, had a special right of election.早年 Bishop of Alexandria, a body of men who could be called bishops, and yet had no ordinary jurisdiction, as is evidenced, first, by the express statement in Cerdio's case and, secondly, by the fact that they usually resided in Alexandria, as stated or implied in the other two cases. Therefore presbyters of Eutychius must have been; so that.
those three passages, far from contradicting Eutychus's testimony, rather confirm it. We find, however, a more direct confirmation of Eutychus's statements in another, so far equally misinterpreted, passage of Severus. In the biography of Julian, the immediate predecessor of Demetrius, we read: "After this bishop there were three remaining in Alexandria, which Eutychus did not mention always there, but he used to go out secretly and organize the hierarchy [yautiwm kakanat, literally "ordain clergy"], as St. Mark the Evangelist had done." The same remark is to be found in the "Chronicon Orientale" of Peter Ibn Rakhib, with the variation, "there were three remaining in Alexandria"; and we find the omission of the last words "as St. Mark." etc. We know that the words yautiwm kakanat have been so far rendered "ordinationes sacerdotum faciebant" (Renaudot, Hist. Patr. Alexandr., p. 10), "ordained priests" (Evetts, "Hist. of the Patriarchs of the Coptic Church of Alexandria," in Grafini-Nau's "Patrologia Orientalis," I, 154). There is no doubt, however, that the word kakanat (plur. of khdin) as a rule stands for bishops and deacons as well as for priests. That it really is so in this case is made clear from a comparison of these versions with the same episode in the life of St. Mark. The author of the second biography in Severus's work says that the Evangelist, seeing that the people of Alexandria were plotting against his life, went out from their city (secretly, adds Severus, cf. Josephus, Antiq., II, vi, 356) and returned to the Pentapolis, where he remained two years, appointing bishops, priests, and deacons in all its provinces. The Melchite Martyrology of Alexandria, under 25 April, says that St. Mark went from Alexandria to Barca (Pentapolis) and beautified the churches of Christ, "instituting bishops and the rest of the clergy (kakanat) of that country". (It is evident that in the mind of the author of the latter passage kakanat, on the one hand, and "bishops, priests, and deacons", on the other, are interchangeable.) Finally, in the "Chronicon Orientale", where the same episode of St. Mark's life is related, we find simply: "appointing clergy (kakanat) for them", without special mention of the bishops. And the argument will appear all the more convincing if we notice that the remark of Julian's biography must have had in view the labours of St. Mark in the Pentapolis, when he added as St. Mark the Evangelist had done" for neither the Oriental nor any other sources record a further instance of ordinations performed by St. Mark outside of Alexandria.

Before we dismiss this interesting passage of Julian's biography, let us call attention to another detail of it. The patriarch is styled simply the Bishop of Alexandria, which shows that the source from which the remark was borrowed must belong to a time when the expressions archbishop and patriarch had not yet come into use. It may, therefore, be considered as absolutely certain that, according to all the Oriental sources, there was from the times of St. Mark to Julian's death only one diocese in the whole territory of Egypt proper, namely, the Diocese of Alexandria, and only the Bishop of Alexandria was a bishop. The bishop was assisted by a college of presbyters. These were bishops to all intents and purposes, excepting jurisdiction, which they had by delegation only. If Eutychus calls them presbyters, it is because he found that word in the source he was using, possibly the very same in which the author of Julian's biography found the word bishop used to designate the patriarch. In the "Lives of the Patriarchs" by Severus of Ashmunein, they are called bishops, in agreement with the current use of the time when those biographies were first written down. On so much the Oriental sources agree, and substantially they confirm the traditions preserved by St. Jerome and Severus of Antioch. They disagree as to the number of presbyters created by St. Mark; Makri, who probably copied Eutychus, gives the same number (twelve) and does not speak of deacons. Severus's second biography of St. Mark, Al-Makh, and the "Chronicon Orientale" say three presbyters and seven deacons. According to Severus of Nesteraw, St. Mark ordained priests the sons of Anianus, who were but few, and eleven deacons. It is impossible to tell by these sources how many of Alexandria had during the first two centuries of our era, there is hardly any doubt that the number of communities, as well as the area over which they were scattered, very much exceeded the proportions of an ordinary diocese of the primitive Church. Christianity, says Clement of Alexandria (Strom., VI, xviii, 167), has spread evry elros el kwnys el trwo trsm, i.e. whole houses and families have embraced the faith, which has found adherents in all classes of society. And this statement is borne out by Eusebius (Hist. Eccl., VI, 1), who says that in the year 202, during the time of Septimius Severus, he was sent to Alexandria, for trial avt Alwvnov el Yotklhav avd1메. It would seem that under ordinary circumstances there must have been a call for an ordinary resident bishop at least in each of the three great regions of Egypt, the Thebaid (Upper Egypt), Tholetai (Upper Egypt), and Arsinoe (the Fayum).

But in Egypt, as elsewhere, the Church in its infancy naturally copied the political organization of the country, and Egypt, in that respect, was entirely different from the rest of the Roman Empire. Rome, rather Augustus, in taking possession of Egypt as his personal spoil, took in almost bodily the old political organisation created by the Pharaohs and developed and strengthened by the Ptolemies, simply replacing the king by a prefect in whom, as his representative, all authority, judicial and military, was vested. That organization was characterized by the total absence of municipal institutions; no organized cities, as in the rest of the Roman Empire, no magistrates elected by a senate and governing in its name. The country was divided, as of old, into nomes, each of which was administered by a strategos (formerly, nomarch) under the prefect, though occasionally two nomes were temporarily united under one strategos, or one nome was divided between two strategos. The strategos appointed all subaltern officials throughout the nome, subject to the prefect's approval from the Senate or the Emperor, and not permitted to elect their own magistrates. The situation was probably the same in other cities which at a still later period secured the privilege of a senate. For convenience' sake the Ptolemies had grouped the nomes of Upper Egypt into one province, governed by an epistrategos; the Romans at first did the same for the nomes of Middle Egypt (including the Armanotic nome, the modern Fayum) and the Delta, or Lower Egypt. But this and other later arrangements of the nomes into provinces never affected the political organization of the country. The epistrategos was the usual delegate for many of the powers nominally exercised by the prefect. They appointed the strategos and other local officials, subject to confirmation by the prefect. In a general way they acted as intermedi-
Egypt

The existence of metropolitanis (in the canonical sense of the word) in the Church of Egypt is a matter of considerable doubt (see Harnack, op. cit., II, 150, note 3, where reference is made to Schwaerts, "Athanasia", i, in "Nachricht. d. K. Gesecschaft d. Wiss. zu Göttingen" 1904, p. 169, and Leclercq, "Thalhing u. kirchliche Hierarchie", pp. 100 sqq., 116 sqq.). If some bishops (which is very likely; see Hefele, "Consiliengeschichte", i, pp. 391, 392) bore that title, they could not have differed from the ordinary Egyptian bishops in their relations to the Bishop of Alexandria. It is a well-known fact that the Bishop of Alexandria was wont to ordain not only his metropolitanis, as did the other patriarchis, but also their suffragans, with the sole proviso that their election should have been sanctioned by their respective bishops (see Hefele, "Athanasia", i, pp. 391, 392). The episcopis, writing of Meletius, whom he calls episcopis (Hefele, ix, ii, iii), by which he means really metropolitanis (Hefele, ibid.), says: "Ille quidem ceteris /Egypti episcopis antecedens, secundum a Petro [Alexandrino] dignitatem, locum occupans. Sed additum sed ejus tamen subiectus est ad ipsum de rebus eclesiastici referens," [The heid, being pre-eminent over all the other bishops of Egypt, held the position next in dignity to that of Peter (of Alexandria), as being his helper, yet subject to him and dependent on him in ecclesiastical affairs]. In what concerns Meletianism St. Epiphanius is not to be implicitly trusted. In this case, however, his testimony is probably correct; his words depict just such a condition of affairs as we should naturally expect from the general analogy of the church-organization with the civil government. The existence of the epistategeroi and the nature of their relations to the prefect of Egypt might well have suggested the appointment of metropolitanis with just as limited an independence of the Bishop of Alexandria as St. Epiphanius attributes to Meletius.

Prelate State of the Coptic Church. — The Jacobite Church has thirteen dioceses in Egypt; Cairo under the Patriarch of Alexandria, with 23 churches and 35 priests; Alexandria, with a metropolitanis, 24 churches, 12 priests, and Menuthe, 48 churches, 60 priests; the three churches of Dakakei, Sharkeis, and Gharbi, 70 churches, 95 priests; Gize and the Fayum, 25 churches, 40 priests; Beni-Suef, 24 churches, 70 priests; Minieh, 40 churches, 90 priests; Sanabbi, 32 churches, 55 priests; Manalfi, 28 churches, 55 priests; Assiut (metropolitan see), 25 churches, 66 priests; Abuteig (metropolitan see), 45 churches, 105 priests; Akhmim and Girgeh (metropolitan see), 50 churches, 101 priests; Keneh, 24 churches, 48 priests; Luxor and Emeih (metropolitan see), 24 churches, 48 priests.

By way of summary it may be remarked that the Jacobite Coptic Church has 1 patriarchis, 6 metropolitanis, 6 bishops, 856 priests, 449 churches, and about 600,000 souls. There are in addition, outside of Egypt, a metropolitanis in Jerusalem, a bishop with a see in Nubia, and two bishops in Abyssinia. Some ten years ago the abbots of the monasteries of Moharrak (province of Assiut), St. Anthony, St. Paul (both in the Arabian Desert), and Baramus (in the desert of Nitra) were raised to the dignity of bishops.

There are three categories of schools. (a) Church schools, under the patriarch (conservative): 1 ecclesiastical college, 50 pupils; 6 boys' schools, 1100 pupils;
2 girls' schools, 350 pupils. (b) Tewfik schools, under the society of the same name (rather liberal and in opposition to the patriarch): 1 boys' school, 290 pupils; 1 girls' school, 214 pupils; 5 boys' schools, 300 pupils; 1 girls' school, 5 pupils. In all 2235 pupils attend these Jacobite schools.

The Uniat Church.—The Catholic, or Uniat, branch of the Coptic Church dates from 1741, when Benedict XIV, seeing that the patriarch and majority of the bishops could not be depended on to effectuate union with Rome, granted to Amba Athanasius, Coptic Bishop of Jerusalem, jurisdiction over all Christians of the Coptic Rite in Egypt and elsewhere. Athanasius continued to reside in Jerusalem, whence he ministered to the church in Egypt through his vicar-general, Petrus Marcellus. During his administration flourished Raphael Tuki, a native of Girgeh and an alumnus of the Urban (Propaganda) College at Rome. After a few years of fruitful labours in his native land he was recalled to Rome (where he received the title of Bishop of Arisinoe) to superintend the printing of the Coptic liturgical books (Missal, 1746; Psalter, 1749; Breviary, 1750; Pontificale, 1761; Ritual, 1763; Theotokia, 1764). Athanasius was succeeded (1781) by John Faragji as Vicar Apostolic of the Coptic Nation, with 24 bishops and 60 Bishops of Hypostoles; but he never received episcopal consecration, there being no Catholic bishop of the Coptic Rite to perform it. The same can be said of his successor Matthew Righet, appointed in 1788, and made Bishop of Uthina in 1815; he died in 1822, and was succeeded by Maximus Joesd, also made Bishop of Uthina in 1824, and a few months later Patriarch of Alexandria, by decree of Leo XII, who, at the request of the Khedive Mehmet Ali, had decided to restore the Catholic Patriarchate of Alexandria. That decree, however, never went into effect, owing, apparently, to the opposition of Abbaham Cашо, then at Rome, where he had been consecrated Archbishop of Memphis by the pope himself. Maximus died in 1833. His successor was Theodore Abū-Karim, made Bishop of Atia in 1832, and appointed Delegate and Visitor Apostolic of Abyssinia in 1840. He died in 1854, and was succeeded in 1856 by Athanasius Khūsam, Bishop of Maron, who in turn succeeded in 1856 by Agapitus Behai, Bishop of Cariopolis, representative of his nation at the Vatican Council in 1869-79. Owing to regrettably bad health, this bishop, more lame, thinner, and pious than tactful, was recalled to Rome in or soon after, 1878, and did not return to Egypt until 1887, forty days before his death. During his absence, and after his death, the Church was administered by an Apostolic visitor, Monsignor Anthony Monis El-Lakhrissi, with the title of primate vicar Apostolic. His successor was also a simple Apostolic visitor and governed the Uniat Copts until 1895, when the Patriarchate of Alexandria was restored by Leo XIII (Litter. Apost. “Christi Domini”) with a bishop, Cyril Mousa, as Apostolic administrator, and two suffragans sees, Hormopolis (residence of Minieh) and Thebes (residence at Tantah), which were entrusted respectively to Bishops Maximus Sedfousi and Ignatius Berat, both consecrated in 1896. In 1899 Bishop Cyril Mousa was promoted to the title and rank of Patriarch of Alexandria, with residence at Cairo, taking the name of Cyril II; he resigned in 1908, and Bishop Sedfousi was named administrator. The Uniat Coptic Diocese of Alexandria counts (Lower Egypt and Cairo) 2500 souls, 4 churches or chapels, 7 convenes, 13 schools, 3 hospitals for boys (under the Christian Brothers). In the Diocese of Hermopolis (Middle Egypt) there are 2500 Catholics, 10 priests (4 married), 7 churches or chapels, 15 schools, 9 hospitals for boys, with residence at Cairo, taking the name of Cyril II, and, in the Diocese of Thebes (part of Upper Egypt) has 15,250 souls, 31 priests (15 married), 35 churches or chapels, 18 stations, 1 theological seminary (for all three dioceses), with 17 pupils, 21 schools for boys, with 240 pupils, and 5 seminaries for girls. In addition to the above-mentioned clergy and institutions, there are several houses of Latin religious (both men and women) whose members minister to the Church of the Copts.

Original Sources.—ZÄTHERN, tr., Chronicon de Joanne tou Megas, protosynegmatistou tôn Theotokon (Athens, 1891); Bibliothèque Nationale, XXIV, 125-605, 1883 (for the period beginning with Diocleitan); A. KRAINZ, La Bibliothèque apostolique, extrait de Joseph (Paris, 1879); SEVERUS, BISHOP OF ABU-DAYMAH, History of the Patriarchate of the Coptic Church of Alexandria: 25.150 (Lateran, 1947); BURCHER. The Church and Christianity in Egypt (Oxford, 1884); BUTLER, The Story of the Church of Egypt (London, 1897); FOWLER, Christian Egypt, Past, Present, and Future (3d ed., London, 1902).

VI. Coptic Literature, the literature of Christian Egypt, at first written in the Coptic language, and later translated into, or written outright in, Arabic. That literature is almost exclusively religious, or rather (with the exception of the Coptic writings and a few magical texts) ecclesiastical, either as to its contents (Bible, lectionaries, martyrologies, etc.) or as to its purpose (grammars and vocabularies composed with reference to the ecclesiastical books). Thus defined, however, Coptic literature is by no means the equivalent of literature of the Egyptian Church, as this would include as well the Greek writings of the Fathers of the Church, and other Greek monuments of Egyptian origin. They will be found under the headings of their respective authors; see for instance ALEXANDER; ATHANASIUS; CLEMENT OF ALA- BE, 2) and (piets de cimemé, 1) THEOPHILUS, PATRIARCH OF ALEXANDRIA, ETC.

The Coptic Language is an offshoot of the Egyptian, or rather that very same language in the various popular forms it had evolved when Egypt as a whole became Christian (third and fourth centuries), and it continued to be used in several dialects: the Sahidic (formerly called Theban), or dialect of Upper Egypt

EGYPT 356
Scripture and Apocrypha.—Greek being the original language of the Church of Egypt, the first Coptic literary productions were naturally translations from the Greek. The first important translation was that of the Bible into the several dialects spoken by the various native Egyptian communities. For these see VERSIONS OF THE BIBLE. The Apocrypha were also translated and widely diffused, judging from the many fragments of manuscripts, especially in Sahidic, which have reached us. Such translations, however, unlike the versions of the Bible, are from being faithful. The native imagination of the translators invariably leads them to amplify and embellish the Greek original. Among the Apocrypha of the Coptic Church must be mentioned the "Testament of Abraham, Isaac and Jacob," in Bohairic, published by Prof. I. Guidi in the "Rendiconti della Reale Accademia dei Lincei," 18 March, 1900: "Il testo coperto del Testamento d’Abramo," and 22 Apr., 1900: "Il Testamento d’Isacco e il Testamento di Giacobbe (testo Coperto)," then three Apocalypses of late Jewish origin: one anonymous (in Akhmimic) and the other two attributed to Elias (Akhmimic and Sahidic) and Sophonias (Sahidic). They have been published by G. Steinmörder in Gebhardt and Harnack’s "Texte und Zeiten zwischen christlichen Literatur," N. S., II, "Die Apokalypsen des Elias: Eine unbekannte Apokalypse und Bruchstück der Sophonias-Apokalypse" (text and translation, Leipzig, 1899). Part of the same texts had already been published and translated by Bouriant, "Les Papyrus d’Ahmu’re" in "Mémoires publiés par les membres de la Mission Archéologique Française au Caire," I (1881-4), pp. 261 sqq. and by Stern, "Die koptische Apokalypse des Sophonis" in "Zeitschrift für ägyptische Sprache," etc., XXIV (1886), pp. 115 sqq. There also a Sahidic Apocalypse of Moses is published by G. Schmidt and Harnack ("Sitzungsberichte d. Kgl. Preuss. Akad. d. Wiss.," 1891, p. 1045) and one in Sahidic, too, of the Fourth Book of Esdras, published by Leipoldt and Violet ("Ein sakdisches Bruchstück d. vierten Buchs von Esdras," in "Texte u. Untersuchungen," N. S. XI, I b.).

The New Testament class is of course much more largely represented. Several apocryphal writings of the Gospel class have been published by F. Robinson, "Coptic Apocryphal Gospels, Translations together with the texts of some of them," etc., Cambridge, 1896 (Texts and Studies, IV, 2). The chief documents reproduced in this work are the "Life of the Virgin" (Sahidic), the "Falling Asleep of Mary" (Bohairic and Sahidic), and the "Death of St. Joseph." The "Life of St. Mary" is somewhat similar to the "Protevangelium Jacobi." The "Falling Asleep of Mary" exists also in Greek, Latin, Syriac, and Arabic, and the Coptic texts may serve to throw light on the relations of these various versions and on the origin of the only other known text of the "Death of St. Joseph" is an Arabic one, more closely related to the Bohairic than to the Sahidic text. There is also among the papyri preserved at Turin a Sahidic version of the "Acta Pilati" published by Fr. Rossi, "I Papiro Coptici del Museo Egizio di Torino" (2 vols., Turin, 1887-8), I, fasc. I, "Il Vangelo di Nicodemo." Some Sahidic fragments published by Jacoby ("Ein neues Evangelium fragment," Strasbourg, 1900), and assigned by him to the Gospel of the Egyptians, are thought by Zahn to belong to the Gospel of the Twelve "Neue kirchliche Zeitschrift, XI (1900), pp. 361-70." To the Gospel of the Twelve Revillout assigns not only the Strasbourg fragments and several of those published both by himself ("Apocryphes coputes du Nouveau Testament, Textes," Paris, 1876) and Guidi (see below), but also a number of more or less distinct texts which he publishes and translates. Other Paris fragments Revillout thinks belong to the Gospel of Bartholomew (Les Apocryphes coputes; I, Les Evangelies des douze Apotres et de S. Barthlemeu," in Grufpin-Naud, "Patrologia Orientalis," XI, 1, Paris 1900) and fourtenth before the publication of Revillout appeared, the Paris texts had been published by Lacaun, who found them to belong to five different codices corresponding to as many different writings all referring to the ministry or Passion and Resurrection of Christ. One would be the Gospel of Barlaam and another the Apocrypha of the same Apostle ("Fragmente d’Apocryphes de la Bibliothèque Nationale" in "Mémoires de la Mission française d’archéologie orientale," Cairo, 1904). According to Leipoldt we have the first evidence of a Coptic manuscript of the "Testament of Abraham, Isaac and Jacob" in a Sahidic folio published by him [Zeitschrift für Neustamentliche Wissenschaft, VI (1905), pp. 106, 107].

The apocryphal legends of the Apostles are still more numerous in the Coptic literature, where they constitute a group quite distinct and proper to Egypt, which seems to be their original home, although in vast majority translated from Greek originals into the Sahidic dialect. They were always popular, and long before Coptic ceased to be universally understood, these stories with the same time both of ancient and of religious interests, were translated into Arabic and then from Arabic into Ethiopic. Among the principal are the Preachings of St. James, son of Zebedee, St. Andrew, St. Philip, Sta. Andrew and Paul, and Sts. Andrew and
Bartholomew; the Martyrdoms of St. James, son of Zebedee; St. James the Less, St. Peter, St. Paul; also the life by the Pseudo-Prochoros and the mevdo\vsios of St. John and a Martyrdom of St. Simon (different from the documents generally known under the name of "The Martyrologium of that Advent", of which short fragments only have been preserved in Coptic). The texts of all these have been published by Professor I. Guidi in his "Frammenti Copti" (Rendiconti della Reale Accademia dei Lincei, III and IV, 1905-06, and I Alcune pergamento Siracuse [Rendiconti della R. Acc. dei Lincei, Classe di Scienze morali, storiche e filologiche, II, fasc. 7, 1893]), and the translations in the same author's "Gli atti apostolici degli Apostoli" (Giornale della Società Asiatica Italiana, vol. II, pp. 1-66, 1888), and in his "Di alcune pergamenae Siracuse" (ibid., 1893) and in the so-called "Acta Pauli et Thecle". Both of these documents have been published, translated into German, and thoroughly discussed by C. Schmidt ("Die alten Petrusakten", etc. in Texte u. Unters. N. S. IX (1905); "Acta Pauli" Leipzig, 1904, 2 vols. (vol. 1, photographic reproduction of the Coptic text); 2nd ed. (without photographic plates), Leipzig, 1905, 1 vol.).

Pathology.—Ante-Nicene Fathers.—But few Coptic translations from the Ante-Nicene Fathers have been preserved. As Dr. Leipoldt justly remarks, when the nation of Egypt began to emerge from the dark ages of its literature, the literary productions of the early Church had lost much of their interest. We have, however, two fragments of the letters of Ignatius of Antioch, published by Pitra (Analy. sacrae, 236 sqq.) and Lightfoot (Apost. Fathers, II, III, London, 1869, 277 sqq.) and several of the "Shepherd" of Hermas, published by Leipoldt (Sitzungsberichte der K. Gesellschaft d. Wissensch. in Berlin, 1903, pp. 261-88), and Delaporte (Revue de l' Orient Chrétien, X (1905), pp. 424-33; XI (1906), pp. 31-41), and what is more, two papyrus codices in the British Museum (one, in the Library, and another, in theStrasbourg of the seventh or eighth century, both containing the first epistle of Clement to the Corinthians under its primitive title (Epistle to the Romans). The Berlin codex, which is almost complete, has just been published, with a German translation and an exhaustive commentary, by C. Schmidt (Der 1. Clemensbrief in altkoptischer Ueberlieferung untersucht u. herausgegeben, Leipzig, 1908). Extracts from the commentaries of Hippolytus of Rome, Ireneaus, and Clement of Alexandria are to be found in the Coptic translation of the Bocchus collection (Göttingen, 1888). It is probably that this manuscript was translated from a Greek codex, and consequently it does not show that the writings of those Fathers existed independently in the Coptic literature. Clement of Alexandria, in any case, and also Origen, were considered as heretics, which would explain their absence from the repertory of the Coptic Church.

Post-Nicene Fathers.—The homilies, sermons, etc., of the Greek Fathers, from the Council of Nice (A.D. 325) on to the end of the 5th century, of Chalcedon were well represented in the Coptic literature, as we may judge from what has come down to us in the various dialects. In Bohairic we have over forty complete homilies or sermons of St. John Chrysostom, several of St. Cyril of Alexandria, St. Gregory Nazianzen, Theophylus of Alexandria, and St. Ephraem the Syrian, while in Sahidic we find a few complete writings and a very large number of fragments, some quite considerable, of the homiletical works of the same Fathers and of many others, like St. Athanasius, St. Cyril of Jerusalem, St. Jamblichus of Cyprus, Amphiphilus of Iconium, Severinus of Gabala, Cyril of Jerusalem, Eusebios of Cesarea, and the pseudo-Dionysius the Areopagite. Librius of Rome and St. Ephraem are also represented by several fragments of sermons. We need not say that these writings are not mere repetitions of those we already know they can in no case be held up as models of translation.

The Bohairic part of this great mass of literature is still almost entirely unedited, we might say unexplored. Two sermons of St. Ephraem have been published, one, on the adulterous woman of the Gospel, by Guidi (Besarione, Ann. VII, vol. IV, Rome, 1903), the other (fragment) on the Transfiguration by Budge (Proceedings of the Soc. of Bibl. Archeology, IX, 1887, pp. 317 sqq.). Budge published also a large fragment of an encomium on Elijah the Tishbite attributed to St. John Chrysostom (Transactions of the Soc. Bibl. Arch., IX, 1893, pp. 355 ff.), and Amélineau, a sermon of St. Cyril of Alexandria on death ("Monumenta pour servir à l'Histoire du Christianisme en Egypte aux IVe et Vene siècles—Mémoires publiés par les Membres de la Mission archéologique de France en Egypte"). As for the Sahidic portion, two homilies of St. John Chrysostom, of doubtful genuineness if not altogether spurious, and all the homiletical fragments of the Turin museum, were published and translated into Italian by Fr. Rossel in his "Papioli Coptici del Museo d'Egipto di Torino" (2 vols., Turin, 1887-92), and quite a number of fragments, often unidentified, were published in the catalogues of the various collections of Coptic manuscripts, principally in the catalogue of the Borgia collection by Zöger. ("Catalogus codicum Copticorum..." in fine, 1879, is the only such catalogue that Latin translations generally accompany the texts).

Post-Chalcedon Fathers.—Only a few of these had the honour of a place in Coptic literature. The separation of the Church of Egypt from the Catholic world was complete after the deposition of her patriarch Dionysius (A.D. 451) and the Council of the Bysantine Court to bring back Egypt to unity by forcing orthodox pontiffs on her and by other means of coercion, the native Egyptians stubbornly refused their allegiance to the "intruders", and from that time on would have nothing to do with the Greek world, the very name of which became an abomination to them. The chief exception was in favour of the works of Severus, the expelled Monophysite Patriarch of Antioch, who had taken refuge and died in Egypt. We have a complete encomium of his on St. Michael, in Bohairic. Several homilies of St. Michael the Archangel: Three Encomia (London, 1884), several fragments of homilies in Sahidic, and a letter in Bohairic to the Deaconess Anastasia (cf. Wright, "Catalogue of Syriac manuscripts in the British Museum", No. DCCCL, 10). We may
also mention here a panegyric of St. George, Martyr, by Theodosius, Monophysite. Bishop of Jerusalem (d. after 453), published and translated into English by E. A. Wallis Budge, The Martyrdom and Miracles of St. George the Panegyric (The Monophysite Church in the East, series 2, London, 1888). The constant political agitation in which the Monophysite successors of Dioscorus were involved accounts probably for the almost complete absence of their works from Coptic literature in general, and in particular from this section. The only known Monophysite sources are a sermon on the Assumption of the Virgin (already mentioned among the Apocrypha) and an encomium on St. Michael by Theodosius (the latter published by Budge, "Three Encomiums", mentioned above), both in Bohairic. Hardly any attention is paid to the latter, several important fragments of homilies on the Gospels of St. Matthew and St. Luke, also in Sahidic. (See Martyrs; Monasticism.)

Church Discipline.—Among the various early collections of Apostolic precepts and church regulations, which the Copts incorporated from the Greek into their native literature, we shall mention:

(1) The Didache.—It is true that up to the present this document is not known to be extant in Coptic except in so far as chapters iv–xiv of the Apostolic Constitution, "the earliest known Constitution in the Kontakion" (cf. J. F. Heering, in "Texte u. Untersuchungen", XXI, 1, 1905), and the fragments of the first four chapters of the Didache as revealed to us by Bryennios. Towards the end of the last century, however, the first part of the Didache (chapters i–x, the so-called "Duse Via") was discovered imbedded in Senthé's Arabie life published by Amélineau ("Monuments pour servir à l'histoire de l'Egypte chrétienne aux IVe et V e siècles. Vie de Schnouidi", pp. 289 sqq., in "Mémoires publiés par les membres de la Mission archéologique française au Caire", IV, Paris, 1883); and although that insertion is in Arabic, like the rest of the text, it is clear that it is an original Coptic work, and there can be no doubt that it also, was translated from a Coptic original. For further detail see Iselin and Heuser, who were first to make the discovery ("Eine bisher unbekannte Version des ersten Teiles der Apostellehre" in "Texte u. Untersuchungen", XVII, 1, 1906), and U. Benigmi, who, three years later, quite independently from Iselin and Heuser, had reached the same conclusions (Didache Coptica: "Duorum virum recensione Coptica monastica per arabicam versionem superest, 2 ed., Rome, 1899 (Reprint from "Bibliotheca", 1889)).

(2) The so-called Apostolic Church Ordinance, consisting of thirty canons, and extant both in Bohairic and in Sahidic. The former text was published and translated into English by H. Tattam (The Apostolical Constitutions or Canons of the Apostles, London, 1848, pp. 1–30), and re-translated into Greek by P. Botticher (later P. de Lagarde) in Chr. C. Bunsen's "Analecta Ante-Nicenn." (London, 1864, II, 451–460); the latter text was edited, without translation, both by F. de Lagarde, in his "Egyptiaca" (Göttingen, 1853, pp. 229–249), and by Bunsen, in "Les Canons Apostoliques de Clément de Rome; traduction en dialecte thébain d‘après un manuscrit de la bibliothèque du Patriarche Jacobite du Caire" [in "Recueil de travaux relatifs à la philologie et à l'archéologie égyptienne et assyrienne", V (1854), pp. 202–203].

(3) The Egyptian Church Ordinance, consisting of thirty-two canons and extant, likewise, both in Bohairic and in Sahidic. The Bohairic was published and translated into English by H. Tattam (op. cit., pp. 31–92), and re-translated into Greek by P. Botticher ("L'ordre des Canons d'Égypte", pp. 451–477). The Sahidic was published by de Lagarde, "Egyptiaca" (pp. 248–266, can. 31–62) and Bouriant (op. et loc. cit., pp. 206–216). A translation into German by G. Stein- dorff, from the edition of de Lagarde, is found in Achelis, "Die Kanones Hippolyti" (Leipzig, 1891, in "Texte u. Untersuchungen", series 2, 2, 1894).

(4) An epitomized recension of sections 1–46 of the Eighth Book of the Apostolic Constitutions; also both in Bohairic (published and translated into English by H. Tattam, op. cit., pp. 93–172) and in Sahidic (published by de Lagarde, "Egyptiaca", pp. 266–268, canons 63–78, and Bouriant, op. cit., VI, pp. 97–109; examined and translated into German from the Lagarde edition, by Leopoldt, "Sahidische Auszüge", etc., in "Texte u. Untersuchungen", new series, I b, Leipzig, 1894). According to Leopoldt (op. cit., pp. 6–9), this abstract, in which the liturgical sections are either curtailed or entirely omitted, has much in common with the "Constitutiones per Hippolytum" not only in the choice of the selection, as already shown by Achelis, but also in point of style; the Coptic document is beyond doubt a Sahidic translation of the above Bohairic and Sahidic texts, there is a fragment (de Lagarde, can. 72–78, 24) of another Sahidic text which, according to Leopoldt (who first published it and translated it into German, op. cit.), belongs to an older recension. The text published by de Lagarde and Bouriant is derived from an older recension, with corrections from the Greek Apostolic Constitutions as they were when the "Constitutiones per Hippolytum" were taken from them. On this theory of Leopoldt's, however, see Funk, "Das achte Buch der apostoli- schen Konstitutionen in der Kontaktenpflanzung" in "Theologische Quartalschrift", 1904, pp. 429–447.

The above three documents, (2), (3), (4), form one collection of 78 canons, under the following title: "These are the Canons of our Holy Fathers the Apostles of Our Lord Jesus Christ, which they established in the Churches". As a whole they are known, since de Lagarde's edition, as "Canones Ecclesiasticit". The Bohairic manuscript (Berlin, or. 4° 519) used by Tattam was translated, and the Sahidic one (library of the Jacobite Church at Jerusalem) together with the Greek versions were printed on the manuscript (British Museum or. 1320 dated A. n. 1005) reproduced by de Lagarde. Bouriant's edition is faulty. A complete edition of the Canones Ecclesiasticit and Canons of the Apostles (see below, with the Ethiopic and Arabic parallel texts), and an English translation, is due to G. Horner (The Statutes of the Apostles or Canones Ecclesiasticit, London, 1904). The author gives variant readings from several manuscripts for each version, and in a long introduction he examines the mutual relationships of the various texts.

(5) Canones Apostolorum.—A recension of Book VIII, 47, of the Apostolic Constitutions entitled: "The Canons of the Church which the Apostles gave through Clément [Clement]". These canons are usually called Canones Apostolorum, with de Lagarde, by whom a Sahidic recension was first published (op. cit., pp. 201–238; preserved also by Bouriant, op. cit., VI, pp. 109–115). This recension contains 71 canons. A Bohairic recension of 85 canons, as in the Greek, was published and translated into English by H. Tattam (op. cit., pp. 172–180). The text was published also by de Lagarde along with the Sahidic text (op. et loc. cit.).

(6) Canones Hippolyti.—A Sahidic fragment of the Paris collection (B. N. Copte 129 14 ff. 71–78) contains a series of canons under the title of "Canones of the Church which Hippolytus, Bishop of Rome, wrote". So far as the present writer knows, those
canons have not yet been the object of a critical study; nor does it seem that they were ever published.

(7) The Canons of Athanasius, or rather the Coptic writing which underlies the Sahidic collection of 107 canons bearing that name, are undoubtedly one of the oldest collections of church regulations and very likely rightly attributed by the tradition to St. Athanasius of Alexandria, and, in that case, perhaps to be identified with the "Commandments of Christ" which the Bishop of Jérusalem, Euthymius, attributes to the Father of the Church and the "Canons of Apa Athanasius" mentioned in the catalogue of the library of a Theban monastery, which catalogue dates from about A.D. 600. The Sahidic text, unfortunately not complete, was published and translated (along with the Arabic text by Riedel) from a British Museum papyrus (sixth or seventh century) and two fragments of a manuscript on parchment (tenth century) preserved in the Borgia Collection (Naples) and the Rainier collection (Vienna), in Riedel and Crum's "Canons of Athanasius of Alexandria", London, 1904. To this work we are indebted for the information contained in this brief notice. Although this interesting document is a pure Egyptian production, there is but little doubt that it was originally written in Greek.

(8) The fragments of St. Benedict's papyrus broken into many hopelessly disconnected fragments, which Fr. Rossi published and translated although he could not determine to what writing they belonged (I Papiri Copii del Museo Egeo di Torino. II, IV, 1904), of late those fragments were identified by Crum as a manuscript of St. Basil's "Pro Betticis". In the collections of the Society of Biblical Archaeology, XXXVI (1904), pp. 81-92.

History.—Among the historical productions of Coptic literature, none of which can be highly commended, we shall mention:

(1) An Ecclesiastical History in twelve books, extending from a period we cannot determine, to the re-establishment of Timothy Eulurus as patriarch of Egypt. If we suppose that in this, as often in similar works, the author continued his narrative until his own times, it would seem almost certain that he wrote it in Greek. At all events the prominence given to the affairs of the Church of Alexandria shows him an Egyptian, as from his tone it is clear that he professed Monophysitism. Like so many other Coptic literature, this Ecclesiastical History reached us in the shape of fragments only. They are all in Sahidic, and once belonged to two different copies of the same work, or perhaps to two copies of two works very similar in scope and method. Both copies (or works) contain a number of passages translated (more frequently paraphrased, sometimes abridged) from the "Ecclesiastical History" of Eusebius. On the other side the Coptic work was heavily laid under contribution by Severus of Ashmunen in his "History of the Patriarchs of Alexandria". Some of the fragments were published by Zoega in "Cat. Codicum Copticorum", with a Latin translation, some by O. V. Lamm, "Koptische Fragmente aus Patriarchen geschichte Alexandriens" ("Memoires de l'Acad. Imp. de S. Petersb. ", VII, 366, XXVI, 11, St. Petersburg, 1888; and "Bulletin de l'Acad. Imp. de S. Petersb. ", Vol, p. 297, with notes with German translation; the others by Crum, "Eusebius and Coptic Church Historians" in "Proceedings of the Soc. of Bibl. Archaeology", XXIV, 1902, with English translation).

(2) Acts and Canons of the Council of Nicaea, preserved in Sahidic fragments in the Turin and Borgo collections. They have been published, translated into French, and discussed at length by E. Revillout, "Le Concile de Nicée d'après les textes coptes et les diverses collections canoniqques, 1, textes, traductions et notices; Bibliographie, 2, 1888-1894" (Journal Asiatique, 1875-76); vol. II, "Dissertation critique (suite et fin)", Paris, 1899. The author believes in the genuineness of this collection; see, however, the two excellent reviews of Vol. II by Batifol (Revue de l'histoire des religions, XII, 1900, pp. 242-342) and Rinaud (Bibliograph Le R. Coptique, 1898, p. 35-38).

(3) The Acts of the Council of Ephesus, of which we have considerable fragments of a Sahidic text in the Borgia and Paris collections. The fragments of the former collection were published by Zoega, "Cata logus Codicum Copticorum", and those of the latter collection by Bouriant, "Les actes du concile d'Ephese: texte copte traduit et traduit" ("Memoires de la Mission archeologique francaise au Caire", VIII, Paris, 1892). The Paris fragments have also been translated into German and thoroughly discussed by Kranz, with the help of C. Schmidt, "Koptische Acten zum Ephesinischen Konsul vom Jahre 431" (Texte u. Untersuchungen, new series, XI, 1, Leipzig, 1904). Kranz thinks that this recension is the work of an Egyptian and, in substance, a good copy of the recension preserved in the Paris fragments. These fragments contain, however, additional information not entirely devoid of historical value.

(4) The so-called "Memoirs of Dionysius", a Monophysite counterpart of the Acts of the Council of Chalcedon. It is in the shape of a Bohairic panegyric of Macarius, Bishop of Thébou, delivered by Dionysius during his exile at Gangres in presence of the Persian delegates who had come to announce to him the death of Macarius. The publication of that curious document with French translation and commentary was begun by Revillout under the title of "Récits de Dionysius" (Revue Egyptologique, I, pp. 187-189, and II, 25-25, Paris, 1880, 1882), published and translated into French by É. Amélineau, "Monuments pour servir" (Memoires de la mission archeologique francaise au Caire, 1882, pp. 92-124). Against Revillout, Amélineau asserts the spuriousness of these acts. Almost immediately after the latter's publication, Krall published and translated some Sahidic fragments which exhibited a better recension of the same document, and show that the Bohairic version is a translation of a Sahidic text, itself derived from the Sahidic. In disagreement with Amélineau, Krall thinks it more probable that the "Memoirs of Dionysius were originally written in Greek, and sees no reason to doubt their genuineness ("Koptische Beitraege zur egyptischen Kirchengeschichte", in "Mittheilungen aus der Sammlung der Par., 4. Germanische Forscher, 1907", p. 67, Vienna, 1888). In 1903 Crum published copies by A. des Rivières of ten leaves of a papyrus codex, once a part of the Gangre collection, now lost. Three of those leaves belonged to the panegyric of Macarius, while the others were part of a life of Dionysius, in which a Syrian recension was published by Nau ("Histoire de Dionysius, patriarche d'Alexandrie ecrit par son disciple Theophaste" in "Journal Asiatique", Serie X, t. I, pp. 108, 241-310). Nau thinks that the Syrian and Coptic recensions of the life are independent of each other, which points to a Greek original for that document and probably also for the panegyric (Notes sur quelques fragments coptes relatifs a Dionysius, ibid., t. II, pp. 181-4).

(5) A dependence in Bohairic between Peter Mongus, Patriarch of Alexandria, and Acacius, Patriarch of Constantinople. It includes the Henoticen which Zeno issued at the suggestion of Acacius. It was published in a French translation by E. Revillout, "Le premier schisme de Constantinople" (Revue des questions historiques, XXI, 1897, Paris, pp. 83-134), and by Amélineau, "Lettres de Pierre Monge et
The Euchologium was edited by Raphael Tuki in three books under both Coptic and Arabic titles, which we translate as follows: (1) "Book of the three Anaphoras, namely, those of St. Basil, St. Gregory the Theologian, and St. Basil, with the Euchologion of Pseudo-Clement, Rome, Propaganda, 1736, pp. 282, 389—Contents: Evening Incense, and Morning Incense with the proprium tempora thereo; Mass, including the three Anaphoras; Prayers Before and After Meals, Blessing of the Water, and the Ordo Revocationis Calices; (2) "Book containing all the holy prayers", ibid., 1761—2, 2 vols.—Contents: I, Ordinations, Blessing of Religious Habit, Enthronization of Bishops, Consecration of myron (Holy Chrism) and Churches (676 pages); II, Consecration of Altars and Sacred Vessels, Blessing of Church Vestments, Sacred Pictures, Relics, Consecration of Churches (if rebuilt) and Baptismal Fonts; Blessing of the Books used for the Heikeli (Holy of holies); Reconciliation of the same if replaced because decayed or if desecrated; Special Services for the Epiphany, Maundy Thursday, Pentecost, the Feast of St. Peter and St. Paul; Reconciliation of persons guilty of apostasy and other special crimes; Blessing of the Oil, Water, and Loaf for one bitten by a mad dog, etc., etc. (515 pages). (3) "Book of the Service of the Holy Mysteries, Funerals of the Dead, Canticles, and one vespers, Saturday of the Fifth Week of Easter, 1878". A further book (of the work of the same described hereunder, is printed here for convenience). The three books just described are generally referred to as "Missale Copto-Arabice", "Pontificale Copto-Arabice", and "Rituale Copto-Arabice", although the designations do not appear on the title pages nor elsewhere in the books. Neither does the name of the editor (Tuki) appear.

The Missale has been edited anew with a slightly different arrangement, both in Coptic and Arabic, under the title: "Euchologium of the Alexandria Church", Cairo, Catholic Press of St. Mark, Eka of the Martyrs 1614 (A. D. 1888). Another Egyptian edition (Jacobiti?) of the Missale (Cairo, 1887) is mentioned by Brightman (Liturgies Eastern and Western, I. p. lxvii), and a Jacobite "genuine" edition of the "Euchologium (complete?) from manuscript sources", (Cairo, 1902), by Crum (Realencyklopädie für protestantische Theologie, 3d edition, XII, p. 810). The Missal edited by Tuki does not differ from the oldest manuscript of the Vatican Library (thirteenth cent.), except that the Missal of Dionysius, St. Basil, and Jacobus Baradas have been expunged from the diphtychs, and that of the pope added to them, the mention of Chalcedon introduced after that of Ephesus, and the Filioque inserted in the Creed. As for his Pontifical and Ritual, they certainly contain every Pontifical and Ritual common to the eastern Church of good codices. Naturally the latter vary both in the arrangement and in the selection of prayers according to their origin and date of compilation. Tuki's Ordo Communis, and St. Basil's Anaphora, with rubrics of the Latin only, were edited by J. A. Asenciani, "Missale Alexandrinum", pars II, pp. 1-90, in "Codex Liturgicus", VII (Rome, 1754). John, Marquess of Bute, published also an edition of the Morning Incense, Ordo Communis (from Tuki's text with some additions), and St. Basil's Anaphora (from Tuki's!). The Coptic Morning Service for the Lord's Day (London, 1882), pp. 35 sqq. (See Brightman, op. cit.

There has been no complete translation. The Ordo Communis and the three Anaphoras have been translated into (1) Latin, (a) from an Arabic (Vienna?) manuscript by W. Pertz, "Liberius"; (b) from the Coptic manuscript, Gregori Theologi, Cyrilii Alexandrini ex Arabico versione" (Vienna, 1604—reprinted in "Magna Bibliotheca Patrum", Paris, 1654, t. VI); (2) from a Paris Coptic manuscript by Renaudot, "Liturgiarum Orientalium Collectio" (2 vols., Paris, Frankfort, 1847); (3) from an Arabic, (a) from an old manuscript, "Original Documents of the Coptic Church", V, the
Divine Ἐγγέλισμα" (London, 1875); (b) from a manuscript now in the library of Lord Crawford, by Rodwell, "The Liturgies of St. Basil, St. Gregory, and St. Cyril from a Coptic manuscript of the thirteenth century" (London, 1870). The Ordo Communionis and St. Basil's Anaphora in Latin, by Assemani, from Tuki's Arabicae edition, edited by R. Tuki, "History of the Eastern Church" (London, 1850), introduction, pp. 381 sqq., 382 sqq. The Ordo Communionis and St. Cyril's Anaphora (from Bodleian manuscripts of the thirteenth and fourteenth centuries), by Brightman (op. cit., pp. 144–158). Matthew of Kaniska, Ordo Communionis, probably enough to reconstruct that book entirely (one fragment published by Giorgi, "Fragmentum Evangelii St. Joannis" etc., Rome, 1789, a very large number of fragments of the Katameros, lectionaries, and not a few hymns (some of them popular rather than liturgical) which of late have aroused the interest of students of Coptic poetry [see Junker, "Koptische Poesie des 10. Jahrhunderts" in "Orient Christianus" (1906), VI, pp. 319–410; with literature on the subject complete and up-to-date]. The fragments in question are of the office as performed in the monasteries or even in the churches where a numerous clergy is in attendance.

Katameros (Gr. Κατάμερος, Arab. كتامروص) contains the portions of the Psalms, Acts, Catholic Epistles, and the Gospels, which are read at the canonical Hours and Mass. It is divided into three volumes: (I) from Thoth to Mechir; (II) from the beginning of Lent to Pentecost inclusive; (III) from Pachon to the Epagomenae days which the Coptic called the "little month" or in Arabic, the "forgotten days". The Katameros for the two weeks from Palm Sunday to Easter Sunday has been published under the Coptic and Arabic title of "Book of the Holy Pasch according to the rite of the Alexandrine Church" (Catholic Press of St. Mark, Cairo, 1890). This portion of the Katameros contains numerous lessons from the Old Testament (see VERSIONS OF THE BIBLE). Its arrangement is attributed to Gabriel Ibn Tureik, seventieth patriarch (d. 1145). Mai (Scriptorium veterum novae collectio, IV, Rome, 1831, pp. 15–34) gives a table of the Gospels for feasts and fasts and for Saturdays, Sundays, Wednesdays, and Fridays of the year. Malan (Original Documents of the Coptic Church, IV, London, 1874) gives the Sunday Gospels and versicles for Vespers, Matins, and Mass for the year. De Lagarde tabulated all the lessons and Psalms in his edition of the Coptic Psalter (St. Paul's Press, Cairo, 1893). In the "little month", also those for Lent and the Ninevites' fast, for the Sundays of Easter, the daily and the principal feasts (Abhandlungen d. histor.-philol. Klasse d. Kgl. Gesellschaft d. Wiss. zu Göttingen, XXIV, 1879).

The Psalmodia. This is a collection of poetical compositions in honour of Our Lord and the Blessed Virgin, the saints and the angels, sung during the various services, especially at Vespers, Matins, and Prime. They form two distinct systems, one of which, called Theotokia, is most elaborate, and, as its name indicates, it is closely connected with the Greek. The other, the Doxologia, extends to all saints. A compendium of this book has been published by Tuki, under the Coptic and Arabic title "Book of the Theotokia and Katataxis of the month of Cholac" (Rome, 1746), 344 pp. The subject of an interesting article by Mallet, "Les Théotokiaux et le doxologia de la Sainte Vierge dans le rite copte" in "Revue de l'Orient Chrétienn" (1904), IX, pp. 17–31.

The Antiphonarium (Arab. Ἀντιφώναριον, Dījmart), a collection of anthems in honour of the saints. The composition or the arrangement of this book is attributed to Gabriel Ibn Tureik. (See MONASTICISM.)

Of the Sahidic recension (or recensions) of the Egyptian Liturgy we have fragments from the various books, which books seem to have been the same as in the Bohairic recension. The most interesting of these reliefs belong to the Liturgy proper or Mass, to the Anaphoras principally. Of these the Churches of Upper Egypt apparently had a large number, for we have portions of those of St. Cyril, St. Gregory, St. Matthew, St. James, St. John of Bostra, and of several others named, from Resafa, translated by Giorgi (Lat. tr.), and translated by Giorgi (Lat. tr.), and by Hyvernat (Lat. tr. only). For the titles of the publications and further information on nature of fragment published, see Brightman, "Liturgyes Eastern and Western" (Oxford, 1860), I, pp. xvii–xxx. There are also a large number of the Didascaliai, probably enough to reconstruct that book entirely (one fragment published by Giorgi), "Fragmentum Evangelii St. Joannis" etc., Rome, 1789, a very large number of fragments of the Katameros, lectionaries, and not a few hymns (some of them popular rather than liturgical) which of late have aroused the interest of students of Coptic poetry [see Junker, "Koptische Poesie des 10. Jahrhunderts" in "Orient Christianus" (1906), VI, pp. 319–410; with literature on the subject complete and up-to-date]. The fragments in question are of the office as performed in the monasteries or even in the churches where a numerous clergy is in attendance.

The Coptic Literature.—Long before Coptic became extinct as a spoken idiom it had ceased to be a literary language. The change seems to have taken place about the tenth century. The old Coptic literature continued for some centuries to be copied for the benefit of a few, but at the same time the work of translating it into Arabic was being carried on on a large scale and must have been completed early in the thirteenth century, at the latest. John of Semenu, who about 1240 composed a Coptic lexicon of the liturgical language, is highly praised by one of his successors, Abu l-Ishāq Ibn al-Asadī, for having realized the uselessness of composing, as used to be done before, dictionaries extending to the whole literature. This remark would hardly be intelligible if the translating of the non-liturgical part of Coptic literature had not then been completed, much less if it had not yet begun. Those early translations include not only the works already reviewed in the preceding section of this article, but a good many more now lost in the Copto Arabic or translated anew from the Greek or Latin. The Syriac and Ethiopic is a storehouse of information and the number of Nestorian works, expurgated when necessary. But the glory of the Copto-Arabic literature lies in its original writings. We have already mentioned (see above, V) the three historians of the Coptic Church, Severus of Asmunein, Eutychius, and Al-Makn. The authors of new Canons are: Christodoulos, sixty-sixth patriarch, 1047–77; Cyril II, sixty-seventh patriarch, 1078–92; Macarius, sixtyninth patriarch, 1103–29; Gabriel Ibn Tureik, seventieth patriarch, 1131–47; Cyril III Ibn Labaq, seventieth patriarch, 1227–57. The number of codices of the Coptic liturgy are of the metropolitan of Damietta, twelfth century.—Collectors of Canons: Abu Solīh Ibn Bānā, eleventh cent., Macarius, fourteenth cent. (if not to be identified with the Simeon Ibn Macraṭ, mentioned by Abu l-Barakāt).—Compilers of Note—Canons: Michael of Damietta, Abu l-Barakāt, twelfth century; Abu l-Ishāq Ibn al-Asadī, thirteenth cent., etc. (see Riedel, "Die Kirchenrechtssachen des Patriarchen Alexandrien", Leipzig, 1900).—Hagiographers are represented by Peter, Bishop of Melit, twelfth and thirteenth cent., credited by Abu l-Barakāt with the compilation of the Sinakāt on the Martyrology, and Michael, also Bishop of Melit, fifteenth cent., to whom the same book is also attributed (probably because he revised and completed the work of his predecessor).—Severus of Ashmunein, Peter of Melit,
Abū Ḥabib Ibn al-ʿAsāʾil and his brother Abū ʿAbd Allāh Ibn al-ʿAsāʾil are the chief representatives of theology, as Severus of Antioch and Abū ʿAbd Allāh Ibn al-ʿAsāʾil, thirteenth cent., are of Scriptural studies, and John Abu Zakaria Ibn Saba and Gabriel V., eighteenth century (17th cent.); cf. treatise "Gauharat an-nafisah" (Precious Gem) has been published (Cairo, 1902). For the grammarians and lexicographers, several of whom have already been mentioned in one connexion or another, see the recent little work of A. Maillon, S.J., "L'École de savants Egyptiens au moyen âge" in "Mélanges de la faculté Orientale de l'université Saint Joseph", I, pp. 109-131, II, pp. 213-264. There remains to mention the great ecclesiastical encyclopaedia of the Coptic Church, the "Lampp of Darkness and Illumination of the Church Service" of Shams al-Ḥiẓāl Abū ʿBarrākāt Ibn Kibīr (1723-1833). This quadrilingual work sums up, so to speak, the four centuries of literary activity we have just reviewed. (See Riedel, op. cit., pp. 15-80.)

Abū ʿAṣūr, Recherches sur la langue et la littérature de l'Égypte (Paris, 1918); ERNANZIN, Essai de bibliographie Copte (Paris, 1906); Littérature et civilisation de l'Égypte du Moyen Âge, New Ser. XXX (1890); STERN, "Koptische Sprache in Eich und Gruiner XXIII; BENJAMIN, kopisch, Coptische Grammatiken (Rome, 1900) for the second half of the 19th cent.; CRUM, in "Handbuch XXX"; CRUM, in Archaeological Report of Egypt Exploration Fund, every year from 1885; LEHOFERT, Gesch. der koptischen Lit. in Liebnitz (Berlin, 1913); ZERZES, Catalogus Codicum Coptorium, manuscriptorum qui in bibliothecis Germanicis (Heine, 1913); BAUMANN, "Koptisches Textbuch" (Bibliotheca Romanica orientalis (Bologna, 1785); CRUM, Catalogue of the Coptic British Museum (1895); PLATY-BÉBÉAUX, Manuscrits Coptes du Musée d'Antiquités des Pays-Bas (Leiden, 1902).

Egyptian Church Ordinance, an early Christian collection of thirty-one canons regulating ordinations, the liturgy, and other main features of church life. It is called Egyptian because it first became known to the Western world in languages connected with Egypt. In 1777 the Dominican Wandelstyn gave a brief account of these canons, which were found in the "Synodo" or "what may be called the Ethiopic Corpus Juris". In 1821 Ludolf published a fragment of this Ethiopic collection and added a Latin translation. In 1859 a further fragment, i.e. the end of the ordination prayer for deacons, was published in German by Franz Xaver von Funk. In 1848 H. Tattam published all the canons in Bohairic (Lower Egyptian) with English translation. In 1853 Lagarde published a Latin-Arabic version (Upper Egyptian) from an excellent manuscript of A.D. 1006. This text was translated into German by G. Steindorff and this translation was published by H. Achselin (Harnack, "Texte und Untersuchungen", VI, 4). In 1900 E. Hauler discovered a very ancient Latin translation in a manuscript of the fifth or sixth century. This translation is of great value because it apparently is slavishly literal, and it contains the liturgical prayers, which are omitted in the Bohairic and Sahidic. The original text, though not yet found, was doubtlessly Greek.

The Egyptian Church Ordinance is never found by itself, but is part of the Pseudo-Clementine Legal Hexa- or Octateuch in the form in which it was current in Egypt. In Hauler's Latin "Fragmenta Veronensi" (Leipzig, 1900) the order is: Didascalia, Apostolic Church Order, Egyptian Church Order, Book VIII of the Apost. Constit.; in the Syrian Octateuch, "The Testament of the Lord", Apostolic Church Order, "On Ordinations" (by Hippolytus), Book VIII of the Apostolic Constitutions, Apostolic Canons; in the Egyptian Heptateuch, Apostolic Church Order, Egyptian Church Order (or Ordinances), Book VII of the Apost. Constit. Apostolic Canons. The Egyptian Church Order is one of a chain of parallel and interdependent documents, viz. (1) The Canons of Hippolytus, (2) the "Canones per Hippolytum", (3) "The Testament of the Lord", (4) Book VIII of the Apost. Constit. For some time much research has been fought between two eminent men as to the relation between these documents. Document No. 3, "The Testament of the Lord" only came into consideration after its discovery and publication by Rahm in 1899. H. Achselin strenuously maintained that the "Canones per Hippolytum" and the "Testament of the Lord" were composed respectively by a Jew and a Christian and were written early in the third century; on it, according to him, the other documents depend, the Eighth Book of the Apostolic Constitutions being the latest development. Von Funk maintained the same order of documents as Achselin, only he supposed that the Canons of Hippolytus, the Testament of the Lord and the Canones per Hippolytum, preceded the other documents, beginning with Book VIII of the Apostolic Constitutions, and ending with the "Canones per Hippolytum".

Gradually, however, Funk's thesis seems to be receiving almost universal acceptance, namely that Book VIII of the Apostolic Constitutions was written about 400, and the other documents are modifications and developments of the same, the Egyptian Church Order in particular having arisen in Monophysite Egyptian circles between the years 400 and 500.

COPPER and MACLEAN, The Testament of the Lord (Edinburgh, 1901); WOODWORTH, History of the Egyptian Church, Op. cit. (1902); ABU-ARBALI, Erinnerungen (1888); COOK, A Description of the Monastery of St. Sebas (1883) for further bibliographical information see the bibliographies in BASTARD, History of the Ancient Egyptians, 445 sqq., and BARBER, op. cit. The most complete history of Egypt is: HILY, The Literature of Egypt and the Sudan (London, 1888).

H. HYVERNAT.

Egyptians, Gospel according to the. See Aposthyl.
first of his larger works, the novel “Ahnung und Gegenwart”, was written partly at home, in Lubowits, where he spent several years after the completion of his studies, partly in Vienna, where he had gone to qualify himself for the Austrian civil service; his friendly relations with Fr. Schlegel and his adopted son, the painter Veit, kept awake the poet’s romantic enthusiasm.

In 1813, when Prussia and Austria were preparing for the War of Liberation, Eichendorff abandoned his poetry, his professional studies, and his preparation for the civil service, and joined the famous volunteers of Lützow at Breslau. Again, in 1815, when Napoleon had returned from Elba, he followed the call to arms, although he had just married (Oct., 1814) Luise von larisch, and entered Paris with the conquerors. It was only in 1816 that the chivalric baron left the army and entered the Prussian civil service as a lawyer at Breslau. The next three years passed in quiet seclusion; their principal literary production is the story “Das Marmorbild”. He received his first appointment in 1820 on the Catholic board of education at Danzig; there he took a lively interest in the restoration of the Marienburg, a house of the Teutonic Order; later (1844) he wrote his history at the request of the Government. His tragedy “Der letzte Held von Marienburg” was suggested by this circumstance. At the same time appeared his most popular production, “Aus dem Leben eines Taugenichts”. In the year 1831 he was called to Berlin as councillor in the ministry of public worship. In this high office he found many opportunities to be useful to the Church; but he also met with difficulties under a Government which did not shrink from imprisoning the Archbishop of Cologne, Clemens August. When Eichendorff, who was a stanch Catholic, was asked to defend the measures of the Government in public, he asked for his dismissal, which, however, was not granted till 1844. The succeeding years were passed mostly in Berlin, where the poet was occupied more with literary and historical than with poetical work; after the death of his wife (1855) he lived with his family at Neisse. Two years later, having finished his swan-song, the epic “Lucius”, he was almost entirely preserved. His last years were spent in solitude, and in the heart of the people, are his simple but heartfelt songs. Many of them have become Volkslieder (popular songs) in the truest sense of the word: almost all are fitted for singing owing to their spirit and their melodious language. There is hardly another German poet who has found so many composers for his songs. The great lyrical talent which made Eichendorff the master of the short story (“Aus dem Leben eines Taugenichts”, “Das Marmorbild”, “Schloss Düränder”), was prejudicial to the novel “Ahnung und Gegenwart”, and to the longer story “Dichter und ihre Geisseln”, inasmuch as the action is neglected for discursive discussions. Lack of compression and action has also been censured in the two dramas, “Esselin von Romano”, and “Der letzte Held von Marienburg”. Still, “Esselin”, the tragedy of a consuming pride ruined through the very abuse of its gigantic strength, no less than “Der letzte Held”, in which Plauen falls on account of his excessive magnificence, is an extraordinary tribute to the dramatic talent of the poet. His best comedy “Die Freier” has been found very well adapted to the stage. In his later years Eichendorff devoted his genius more to the history of literature. His history of the poetical literature of German (Kempken, 1807), especially the description of romanticism, outlined as it is by one of its best representatives, is of lasting value, also the sketch of the German novel in the eighteenth century. His solid character and his strong religious faith raise “the champion of romanticism” far above his fellow poets. Not only did his genius never lead him away from the duties which religion and custom imposed upon him, but he also knew how to distinguish between poetical ideal and reality, and to avoid the underlying want of truth to which the earlier romanticism had succumbed.

Eichstätt (Eystadtum), Diocese of (Eystettensis or Aystettensis), in Bavaria, lies north of the Danube, and is suffragan to Bamberg. The diocese was founded by St. Boniface, who consecrated his nephew St. Willibald (born 700 of an Anglo-Saxon royal family) first as abbot and regional bishop (741), and then (745) circumscribed and organized the diocese. Willibald called to his aid his brother Wunibald, who, together with St. Boniface, had been active on the German mission of Thuringia, and also his sister St. Walburga, who conducted for the Church in Heidenheim on the Hahnenkamm, where the saintly pair laboured most effectively, and found their resting-place (Wunibald d. 761, Walburga d. 779). Willibald, well known for his knowledge of the Christian Orient and as a pilgrim to Palestine, founded in Eichstätt a flourishing school over which he presided as magister. He died in 781. The unbroken series of his successors down to the present time (1909) counts seventy-five names. Bishop Erchenbald (882–912) of the Carolingian line laid the foundation for the secular power of the see. Gradually this increased progressively through the inheritance of the Counts of Hirschberg (extinct in 1305), under Bishop Johann von Dirpheim (1305–1306), who was also chancellor of Emperor Albrecht I. Like other German princes, the bishops of Eichstätt acquired sovereignty (under Bishop Hartwig in 1220), and after various struggles became, from the fourteenth century, independent rulers over a territory which at one time comprised 437 square miles with 56,000 subjects. In the “secularization” of 1803 these domains were made over to Bavaria. There were many illustrious benefactors of the See of Eichstätt. Bishop Reginald (965–989) was admired as a poet, musician, scholar, and orator. Bishop Heribert (1022–1042) was a patron of the cathedral school. Gundekar II (1057–1075) rebuilt the cathedral, composed the “Pontifical”, in which the lives of his predecessors, the “Vita Pontificum Eystettensium”, and many other subjects, especially liturgical, are treated. This work, still preserved in the original (Codex M), is of great value for the history of the diocese. Gundekar is venerated as a saint. His predecessor was Gundolph I (1051–1057), the championship friend of Henry III. Hildebrand, afterwards Gregory VII, did not rest until this emperor allowed the reluctant Gebhard to assume the papal dignity. He was the first pope whom in a long time the clergy and people of Rome had chosen freely. As Victor II (1055–
EICHSTÄTT

365

EICHSTÄTT

1037) he was friendly to reforms, an extremely energetic man, and saintly in his life. Had he lived longer he would have taken rank among the greatest of the popes; he died in 1057 at the age of thirty-nine.

Bishop Eberhard I (1099–1112), Ulrich II (1112–
1123), Gebhard II (1125–1134), and Otto (1182–1195) vigorously inaugurated reforms that were perfected and conformed in the diocesan synod of 1186. A similar activity was displayed by Bishops Henry IV (1246–1290), Reimbold (1279–1297), and Philipp von Rathmasenhagen (1306–1322). The last-named was a prolific writer, patron of the cathedral school, and by means of his clergy and people to a higher level. Gebhard (1335) built the Wilibaldsburg, provided for the material welfare of the clergy, and protected them against the attacks of laity, nobility, and princes (Constitutio Bercholdsana). On all sides we meet with evidence of his regulating and stimulating zeal (Synodal statutes of 1354).

The Western Schism left its traces on the diocese. Bishop Johann III von Eich (1440–1464), a saintly man, did all in his power to efface them. He reformed the monasteries, organized the instruction of the clergy, and, besides, administered vigorously the property of the Church, and attracted to Eichstätt a number of scholars (among them the Humanist Albert of Eyb). Having been, before his election, chancellor of the emperor and his representatives, it is not surprising that he should strive to raise the State on diplomatic missions of great importance.

Thus, he represented the emperor in the congress of princes which Pius II called at Mantua. His friend and successor, Wilhelm von Reichenau (1464–
1486), the tutor of Maximilian I, was a statesman, diplomat, and patron of the fine arts, but also a bishop who walked in the footsteps of his predecessor and left after him the memory of a brilliant administration. In 1480 he made a visitation of the whole diocese. The original records of this visitation, the oldest thus far known, are still extant, and give us an interesting picture of religious life in the Middle Ages, in which, however, there are not lacking deep shadows. His successors, the cultured Gabriel von Eyb (1496–1535) and the noble Moritz von Hutten (1535–1552), were men who fully understood the critical situation and set themselves against the most invincible of heretical tenets, but they could not prevent the imperial cities of Nuremberg and Weissenburg, the margraves of Ansbach and the palgravses of the Rhine, from annexing a large part of the territory of the diocese in order to restore the margrave, Schmallgrat, to his rights, and from forcing the people to apostatize. Bishop Moritz gathered about him men of ability (Vitus von Ammerbach, Coelheus), and convoked (1548) a diocesan synodo

was for years imperial plenipotentiary at the diets and eminent as a diplomat.

The eighteenth century brought peace and prosperity, and many a magnificent structure in city and dioceses rose under the gifted princes-bishops of those days (residence and garden, the fountains called Marienbrunnen and Willibaldbrunnen, castle of Bireschberg's monastery of Notre-Dame). Bishop Raymund Anton, Count of Strassoldo (1757–1781), prepared for his clergy the well-known "Instructio Pastoralis", a book of pastoral direction, which in its latest (fifth) edition (Freiburg im Breisgau, 1902) is even yet much admired. The "secularization" of 1802 robbed them of their bishop's property and secular authority, but the diocese remained and was reorganized by the Bull of circumscription of 1821. Cardinal Karl August von Reisch (Bishop of Eichstätt, 1835–1846) renewed its ecclesiastical and religious life, opened the seminary for boys (1838) and the lyceum (1844), with a philosophical and a theological faculty, and in union with Joseph Ernst (d. 1869), president (Rege
da) of the latter institution, breathed into it the true spirit of the Church, a spirit which since then has never failed. Bishop Georg von Cetti (1847–
1890) and his successor, the present bishop (1867–1905), faithfully continued and completed the work begun by Reisch. The conditions of the diocese are as well regulated as is possible; its people are solidly grounded in the Faith, while the learning, life, and labours of the clergy are considered exemplary throughout Germany.

The diocese is rich in monuments of ecclesiastical architecture and art. The Gothic cathedral exhibits many excellent works of art from the fourteenth to the eighteenth century; especially noteworthy is its mar
tourarium. The Gothic church of Our Lady in Ingol
dstadt and the conventual churches of Kast (Roman
esque) and Freystadt (Renaissance) are important monuments. Among ecclesiastical artists may be mentioned: Hans Paur (fifteenth century), Hans Pflü
gschmitzer (fifteenth century), Loy Hering (sixteenth century), Gabriel de Gabriélius (seventeenth-eighteenth century), Ignaz Breitenauer (eighteenth century). In the Middle Ages Eichstätt possessed a flourishing cathedral school dating from the time of St. Willibald. Mostly with ecclesiastical funds and through the zeal of Wilhelm von Reichenau (the Huntington Collection) the diocese was founded in 1472. Many of its professors became famous. Among its theologians are Johann Eok, P. Canisius, Gregory of Valencia, Salmeron, Jacob Gretser; among its canonists: Reifenstuel, Pflü
gschmitzer, Schmalgrat, der Textor, Zella, Schirrmann, Kreitmayer, Ad. Ikstalt; among its philosophers, scientists, and mathematicians: Johann Reuchlin, Conrad Celtes, Christoph Scheiner, Caspar Siccioppius, Philipp and Petrus Apian, Fuchs Leonhard, and others. Early in the nineteenth century the universi
ty was transferred to Landshut, thence to Munich.

The most important monastery of the diocese in olden times was the Benedictine abbey founded by St. Willibald in 740 and out of which grew the diocese. At the end of the tenth century it became the cathedral chapter with secular canons. Heidenheim was at first a double monastery, founded by St. Willibald; it was changed (800) to a chapter of canons; later it be

came again a Benedictine monastery. Before the change the monks moved to Herriden and erected there, under Abbot Dietker and through the benevo
cence of Charlemagne, a new church, which was changed to a chapter of canons in 888 and secularised in 1804. The nuns moved from Heidenheim to Mon
eheim, taking with them some of the relics of St. Wal
burga, which were lost in the "secularization" of the sixteenth century (St. Walburgis. The Diocesan museum" in Eichstätt (founded 870) was endowed in 1035 by Count Leodegar and reorganized by Bishop Herbert.

It is yet flourishing despite its temporary secularis-
tion (1802-1835), and possesses some relics of St. Walburga. Kastel in the Upper Palatinate, took 1098 (Benedictines from the Cluniaean congregation), took a prominent part in the reforms of the twelfth century; it was secularized in 1556, and in 1536, during the Counter-Reformation, its domains were transferred to the Duke of Bavaria, after the suppression of the Jesuits (1773) to the Knights of Malta; in 1806 it was secularized once more. Plainstetten (Benedictines, founded 1129) was also secularized in 1802. Heilsbronn (Cistercians, founded 1132), also seizes for ecclesiastical reform, was secularized in 1550 at the will of the margraves of Ansbach. Reubrof (Augustinian canons, founded 1159 through the powerful help of Frederick Barbarossa) was the home of Prior Kilian Leib (1471-1552), linguist and historian; the abbey was secularized in 1802. Bergen (Benedictine nuns, founded 976) was suppressed in 1552 by the Protestant princes of Neuburg; its estates passed later into the hands of the Jesuits, who used them to found the seminary and gymnasium in Neuburg on the Danube (1864). The "Schottenkloster zum heiligen Kreuz" (The Convent of the Holy Cross) was secularized in 1514 at the instigation of 1410 in Eichstätt, passed over to the Capuchins in 1623, lived through the "secularization" of the early nineteenth century, and is still flourishing. In the thirteenth century arose the monasteries of Engerthal (suppressed in 1556), as a less important part of the abbey, Secundinum (Cistercian nuns), secularized in 1556, after the recatholicization of the Upper Palatinate given to the Salesian nuns of Amberg and Munich, and again secularized in 1802; Gnadenfeld in Ingolstadt (Franciscan nuns, founded 1276), still flourishing. In the twelfth century were founded: Gnadenfeld (Brigittines), Mariaentrach near Rebsdorf (Augustinian nuns), Königshofen, Marienburg near Abenberg, all of which disappeared during the last secularization (1802-1806). Eichstätt had still other monasteries in the Middle Ages: thus the Dominicans had a monastery in the city (founded 1279, secularized in 1802); the Carmelites in Weissenburg, the Franciscans in Ingolstadt (1275). From the seventeenth century the Jesuits had flourishing colleges in Eichstätt and Ingolstadt, the Capuchins in Eichstätt and Wemding (1669). The Teutonic Knights had a flourishing commandery in Ellingen which was secularized in 1802.

At present (1909) the diocesan numbers one monastery of the Benedictines (Plainstetten), four of the Franciscans (Ingolstadt, Dietfurt, Berching, Freystadt), two of the Dominican friars, and two of the Capuchins (St. Walburg and Gnadenfeld), and about forty-six houses of female congregations, among them the flourishing institute of the English Ladies in Eichstätt. The seminary, restored by Reiseck, was enlarged in 1844 by the addition of a philosophico-theological academy (lyceum), and under eminent scholars has attained a high degree of prosperity and scientific fame. (Professors: Johann Pruner, d. 1907; G. Suttner, d. 1888; Franz Morgott, d. 1900; Valentin Thalhofer, d. 1891; Alb. Stöckl, d. 1896; Th. Herrenreuther, d. 1895; Mich. Lefflad, d. 1900.) Since about 1808 bishops of the United States have been sending students to the Lyceum for training in philosophy and theology. During the nineteenth century the Diocese of Eichstätt also contributed several prominent men to the Church in the United States, among them Archbishop Michael Heins of Milwaukee. Foundations of Benedictine nuns were also made in the United States from the convent of St. Walburga. In 1908 the diocese had about 155,000 Catholics, 206 parishes, 93 benefices, 79 assistantships, 373 secular and 39 regular priests.

The sources of the diocesan history were compiled by Sitt or, Bibliotheca Eystett. diocesan. (Eichstätt, 1866-67); originally found in Leonhard, Leben der Bischofe von Eichstätt (Eichstätt, 1875—), which goes (1909) as far as 1506 and is being continued. Much material is published in the Pastoralblatt, the organ of the diocese (Eichstätt, 1854—)

Earlier accounts of the diocesan history are: Greuter, Geschichte der Diözese Eichstätt (Eichstätt, 1784); Eichstätt, Geschichte der Diözese Eichstätt (Eichstätt, 1842); Sittor, Die Seminare in Eichstätt (Eichstätt, 1839); Sittor, Die Weihbischöfe und Bischofs- Seminaris Eichstätt (Eichstätt, 1888); Herber, Geschichte der Weihbischöfe und Bischöfe von Eichstätt (Eichstätt, 1892); Schwertner, Geschichte der Weihbischöfe und Bischöfe von Eichstätt (Eichstätt, 1894); Roméro, Geschichte der Weihbischöfe und Bischöfe von Eichstätt (Eichstätt, 1897); Gruener, Der Maler Ried und seine Schüler (Berlin, 1908). There are many modern monographs and articles in which are treated the diocese, e.g., Maier, Ley Puring von Thurnhofer, Adelhausen und Nurnberg (Nuremberg, 1884); Knaus, Geschichte der über die Stadt Eichstätt (Eichstätt, 1891); Eichstätt, Geschichte der Diözese Eichstätt (Eichstätt, 1894); Eichstätt, Geschalf der Fürstbischofs von Eichstätt (Eichstätt, 1892); Suttner, Geschichte der Diözese Eichstätt, a. v. Eichstätt.

JOSEPH HOLLECK.

Einhain, Saint, Abbot and Bishop of Rosme-Trien (Ireland), probably in the sixth century. He came of the royal race of Munster, and was brother of two other abbots, who, as Prototypes, were held in high esteem by the clergy. Though by birth a monk, he was called the "first and only bishop" of his country, because of the religious life little is known. When he became abbot of the monastery of Rosme-Trien, in succession to its founder, St. Abban, he had been apparently connected with one of the religious houses of the south of Ireland, and of Nuremberg, a brother of mixed race, whom he loved and followed the man of God from his own country of Munster". The Rosme-Trien lies in South Leinster on the bank of the River Barrow, and is distant only eight miles, by water, from the confines of Munster, at the point where the Suir and Barrow meet, and in confluence enter the Atlantic. Although the Abbey of Rosme-Trien was founded by St. Abban, it is said to have been colonized by St. Eimhin, and from the number of religious and students belonging to the south of Ireland who dwelt there the place came to be called "Ros-meis" or "the house of the men of Meisi". St. Eimhin is said by some to have been the author of the life of St. Patrick, called the "Vita Tripartita" (ed. Whitley Stokes in R.S.), originally published by Father John Colgan, O.S.F. It contains a greater variety of details concerning the mission of the Apostles of Ireland than any other of the lives extant. St. Eimhin was famous for many great and miracles. The date of his death has not been recorded; however competent authorities assign it to the earlier half of the sixth century. After St. Eimhin's death, it is said, his consecrated cell (called "St. Patrick's cell") was placed there, and was at one time as a saving relic down to the fourteenth century, oaths and promises made upon it being deemed inviolable. Among the MSS. of the library of the Royal Irish Academy, Dublin, is a prose tract entitled "Caine Eminne" (i.e. the tribute or role of Eimine), also a poem of several stanzas relating to the saint's bell. St. Eimhin is given in the Irish calendars on 22 December.

COLGAN, Acta SS. Hibernia (Louys, 1843); Book of Ballyshe, Von St. Abban, LANDIS, Ecclesiastical History of Ireland (Dublin, 1829); Life of St. Molúga (Goffinet); O'CUIN, Lecture on the MSS. of Ancient Irish History (Dublin, 1869).

J. B. CULLEN.

Einhain (less correctly EHINDHAIN), historian, born c. 770 in the district watered by the River Main in the eastern part of the Frankish Empire; d. 14 March, 840, at Seligenstadt. His earliest training he received at the monastery of Fulda, where he showed such unusual mental powers that Abbot Baugulf sent him to the court of Charlemagne. He was trained first at the Palace School, where he was fortunate enough to count among his masters the great Alcuin, who bears witness to his remarkable talent in mathematics and architecture, and also to the fact that, in spite of his unattractive person, he was among the emperor's most trusted advisers. Charlamagne gave
Einhard charge of his great public buildings, e.g. the construction of the Aachen cathedral and the palaces of Aachen and Ingelheim, for which reason he was known in court circles as Beselee, after the builder of the tabernacle (Ex., xxii). Charlemagne also availed himself of Einhard's tact and prudence to send him on various diplomatic missions. Thus, in 802 he placed in his hands the negotiations for the exchange of distinguished Saxon hostages, and in 806 he was dispatched to Rome to obtain papal approbation for the partition of the empire, which the emperor had just decided upon.

During the reign of Louis the Pious he retained his position of trust, and proved a faithful counsellor to Louis's son, Lothair. Unsuccessful, however, in his attempts to settle the contests for the crown which had been stirred up by Empress Judith, and unable to bring about a lasting reconciliation between Louis and his sons, Einhard, in 830, withdrew to Mühleheim (Mainz) on the Main, which he had been granted as early as 815, together with other estates, as a mark of imperial favour. He transferred thither the relics of St. Peter, and the foundation, which had been established on the site of the old palace of the Empire, thereby helping in the foundation of the cathedral church.

At the death of his wife, Emma (or Imma), sister of Bishop Bernhard of Worms (not daughter of Charlemagne), he spent the rest of his life as abbot. It is not certain whether he was ordained priest. His epitaph was written by Rabanus Maurus.

The most important of Einhard's works is the "Vita Caroli Magni" (in "Mon. Germ. Hist.: Script."). II; printed separately, 4th ed., Hanover, 1880; also in Jaffé, "Bibliotheca rerum germanicarum" IV; Germ. tr. by Abel, 3rd ed., Berlin, 1893, in "Geschichts- schreiber der deutschen Vorzeit". This, the best biography of the whole period of the Middle Ages, written in close imitation of Suetonius, particularly his "Vita Augusti", shows the emperor from the standpoint of the most intimate personal acquaintance with all sides of his character, and with a genuine attempt at truth of portrayal. The diction is in general elegant, though not polished. The annals of the Carolingian Empire, which have been handed down as Einhard's (ed. Kurz, 1885), have not the present form, older materials worked over. Those for the years between 796 and 820 may date back to Einhard. In addition, we have from his hand the "Translatio et Miracula SS. Marcellini et Petri" (Mon. Germ. Hist.: Script. XV), containing descriptions of the reliquaries of the two saints. The seventy-one letters, written by Einhard between 825 and 830 (ed. Jaffé, "Bibliotheca", Berlin, 1887, IV) in a clear, simple style, constitute an important source for the history of Louis the Pious. A collective edition of Einhard's works was published by Teulet (Paris, 1840–43), with French translation.

KURZ, Einhard (Berlin, 1880); WATTEBAECH. Deutschland Geschichtequellen, I, n. v.; Glaisher, tr. Life of Charlemagne (London, 1877).

PATRICK SCHLAGER.

Einsiedeln, Abbey of, a Benedictine monastery in the Canton of Schwyz, Switzerland, dedicated to Our Lady of the Hermits, that title being derived from the circumstances of its foundation, from which the name Einsiedeln is also said to have originated. St. Meinrad, of the family of the Counts of Hoch- zollern, was educated at the abbey school of Reichena u, an island in Lake Constance, under his kinsmen Abbots Hatto and Erlebald, where he became a monk and was ordained. After some years at Reichena u, and the dependent priory of Bollingen, on Lake Zürich, he embraced an eremitical life and established his hermitage on the slopes of Mt. Etzel, taking with him a wonder-working statue of Our Lady which had been given him by the Abbess Hildegarde of Zürich. He died in 801 at the hands of robbers who coveted the treasures offered at the shrine by devout pilgrims, but during the next eighty years the place was never without one or more hermits emulating St. Meinrad's example. One of them, named Eberhard, previously Provost of Strasburg, erected a monastery and church there, of which he became first abbot. The church was miraculously consecrated, so the legend runs, in 948, by Christ Himself assisted by the Four Evangelists, St. Peter, and St. Gregory the Great. This event was investigated and confirmed by Pope Leo VIII and subsequently ratified by many of his successors, the last ratification being by Pius VI in 1793, who confirmed the acts of all his predecessors. In 965 Gregory, the third Abbot of Einsiedeln, was made a prince of the empire by Otto I, and his successors continued to enjoy the same dignity up to the cession of the empire in the beginning of the nineteenth century. In 1274 the abbey, with its dependencies, was created an independent principality by Rudolf of Hapsburg, over which the abbot exercised temporal as well as spiritual jurisdiction. It continued independent until the French Revolution. The abbey is now what is termed nullius dioecesis, the abbot having quasi-episcopal authority over ten parishes served by the monks and comprising nearly twenty thousand souls. For the learning and piety of its monks Einsiedeln has been famous for a thousand years, and many saints and scholars have lived within its walls. The study of letters, printing, and music have greatly flourished there, and the abbey has contributed largely to the glory of the Benedictine Order. It is true that discipline declined somewhat in the fifteenth century and the rule became relaxed, but Ludovicus II, a monk of St. Gall who was Abbot of Einsiedeln 1526–44, succeeded in restoring the stricter observance. In the sixteenth century the religious disturbances caused by the spread of the Protestant Reformation in Switzerland were a source of trouble for some time. Zwingli himself was at Einsiedeln for a while, and used the opportunity for protesting against the famous pilgrimages, but the storm passed over and the abbey was left in peace. Abbot Augustine I (1600–29) was the leader of the movement which resulted in the erection of the Swiss Congregation of the Order of St. Benedict in 1602, and he also did much for the establishment of unrivalled observance in the abbey and for the promotion of a high standard of scholarship and learning amongst his monks.

The pilgrimages, just mentioned, which have never ceased since the days of St. Meinrad, have tended to make Einsiedeln the rival even of Rome, Loreto, and Compostela, and constitute one of the features for which the abbey is chiefly celebrated. The pilgrim number from 150,000 to 200,000 annually, from all parts of Catholic Europe. The miraculous status of Our Lady, originally set up by St. Meinrad, and later
enthroned in the little chapel erected by Eberhard, is the object of their devotion. This chapel stands within the great abbey church, in much the same way as the Holy House at Loreto, encased in marbles and precious woodwork, elaborately decorated, though it has been so often restored, rebuilt, and adorned with the offerings of pilgrims, that it may be doubted whether much of the original sanctuary still remains. The fourteenth of September and the thirteenth of October are the chief pilgrimage days, the former being the anniversary of the miraculous consecration of Eberhard's basilica, and the latter that of the translation of St. Meinrad's relics from Reichenauf to Einsiedeln in 1039. The millenary of St. Meinrad was kept there with great splendour in 1881. The great church has been many times rebuilt, the last time by Abbot Maurus between the years 1794 and 1719, and one of its chief treasures now is a magnificent corona presented by Napoleon III when he made a pilgrimage there in 1865. The library, which dates from 946, contains nearly fifty thousand volumes and many priceless MSS. The work of the monks is divided chiefly between prayer, the confessional, and study. At pilgrimage times the number of confessions heard is very large. The community numbers about one hundred priests and forty lay brothers, and attached to the abbey are a seminary and a college for about two hundred and sixty boys, both of which are taught by the monks, who also direct six convents of nuns. In 1854 a colony was sent to America from Einsiedeln to work amongst the native Indian tribes. From St. Meinrad's Abbey, Indians, which was the first settlement, daughter-houses were founded, and these in 1881 were formed into the Swiss-American Congregation, which comprised (in 1908) seven monasteries and nearly four hundred religious. Dom Thomas Bossart, the fifty-third Abbot of Einsiedeln and formerly dean of the monastery, was elected in 1905.

EIS, Frederick. See MARQUETTE, Diocese of.

Eisengrein, Martin, a learned Catholic theologian and polemical writer, b. of Protestant parents at Stuttgart, 28 December, 1535; d. at Ingolstadt, 4 May, 1578. He studied the humanities at the Latin school of Stuttgart, and the liberal arts and philosophy at the University of Tübingen. To please his father, who was burgomaster of Stuttgart, Eisengrein matriculated as student of jurisprudence at the University of Ingolstadt, 25 May, 1553, but before a year had passed he was at the University of Vienna, where he took the degree of Master of Arts in May, 1554. During the tolerant rule of Ferdinand I, Eisengrein, though still a Protestant, became in 1555 professor of oratory and, two years later, of physics at the University of Vienna, a Catholic institution. Though his Catholic surroundings and especially his frequent intercourse with the Jesuits of Vienna may have had great influence in bringing about his acceptance of the Catholic Faith, still his conversion was one of conviction, as is apparent from his numerous controversial writings and his scrupulous solicitude for the integrity of Catholic Faith and morals at the University of Ingolstadt. His conversion took place about 1558. In 1559 he received a canonry at St. Stephen's in Vienna, and a year later he was ordained priest. In 1562 he went to the University of Ingolstadt whither he had been invited by the superintendent of the university, Frederick Staphylus. He was appointed pastor of the church of St. Maurice, which was incorporated with the university, and in April of the same year he was elected rector of the university. Besides being professor, he devoted much of his time to the study of theology and, after receiving the degree of licentiate in this science on 11 No-

EINSIEDELN, SWITZERLAND

Galicia Christiana (Paris, 1781). V; Album Benedictinum (St. Vincent’s, Pennsylvania, 1880); MIONE, Dict. des Ab-
vember, 1563, he began to teach it in January, 1564. Duke Albert V of Bavaria chose him as councillor, appointed him provost of the collegiate church of Moosburg, and shortly afterwards, of the collegiate church of the Imperial castle of Passau. In 1563 and 1564 he took part in the politico-religious conferences at the imperial court of Vienna; in 1566 Duke Albert sent him to Pope Pius V to advocate the appointment of Prince Ernest as Prince-Bishop of Freising, and in 1568-9 he was imperial court chaplain at Vienna. In 1570 he was appointed superintendent of the University of Ingolstadt, and henceforth he turned his whole attention to the advancement of the university. Just this thing shows the friction between the lay professors and the Jesuits, which dated from the time when the latter began to hold professorial chairs at the university in 1556, threatened to become serious. In 1568 Einsingen and Peter Canisius had peacefully settled certain differences between the two factions, but when in 1571 Duke Albert decided to put the paedagogium and the philosophical course into the hands of the Jesuits, the other professors loudly protested. By his tact Einsingen succeeded in temporarily reconciling the non-Jesuit professors to the new arrangement. Nevertheless, at the beginning of 1572, in order to put an end to these quarrels, the Jesuits transferred the Paedagogium and philosophical course to Munich in 1573. It seems that the Jesuits were indispensable to the University of Ingolstadt, for two years later they were urgently requested by the university to return, and in 1576 they again went to Ingolstadt. In the settlement of the differences between the Jesuit and non-Jesuit professors, Einsingen always had the welfare of the university at heart. He publicly acknowledged the great efficiency of the Jesuits as educators in an oration which he delivered before the professors and students of the university on 19 February, 1571, and he was pleased to see their influence gradually increase at Ingolstadt. There were indeed, some differences between Einsingen and the Jesuits in 1572, but the estrangement was only temporary, as is apparent from the fact that he bequested 100 florins to the Jesuit library. The greatest service which Einsingen rendered the University of Ingolstadt was his organization of its library. It was owing to his efforts that the valuable privy library, which he surprised with 100 florins by Thaddaeus Eck, chancellor of Duke Albert, and Rudolph Clenek, professor of theology at Ingolstadt, were added to the university library. Einsingen's activities were not confined to the university. By numerous counter-oversal sermons, some of which are masterpieces of oratory, he contributed not a little to the suppression of Lutheranism in Bavaria. Many of his sermons were published separately and collectively in German and Latin during his lifetime. Some have been edited by Brisch in "Die kath. Kanzelredner Deutschlands" (Schaffhausen, 1867-70), 1, 434-545. He is also the author of a frequently reprinted history of the shrine of the Blessed Virgin at Allötting (Ingolstadt, 1571) and a few other works of minor importance.

**MICHAEL OTT.**

Eithne, SAINt, styled "daughter of Battle", with her sister Sodbelin, are commemorated in the Irish calendars under 20 March. They were daughters of Aedh, son of Colman, King of Connacht, who died about the middle of the sixth century. The designation "daughters of Battle" usually coupled with their names would seem not to refer to any title of their father, but might be more correctly interpreted as the "children of Divine or ardent love". This interpretation is further strengthened and accentuated by a vision, accorded the twelfth century in which it is related that Christ in the form of an infant rested in their arms. In one of the legends contained in the "Acts" of St. Moling, Bishop of Ferns, it is told that Eithne and her sister were visited by this venerable saint on a day called "Maurice's Thech-Ingen-Boithe", or the "House of the daughters of Baite" lay near Swords, in the present Barony of Nethercros, County Dublin. This saint is also venerated at Killnais, the former name of a townland in the same locality.

**J. B. CULLEN.**

Eithne, SAINt, styled "of the golden hair", is commemorated in the Irish martyrologies under the 11th of January. She was daughter of Leoghaire, Ard-Righ, or Hy-Sovereign of Ireland at the time of St. Patrick as a St. Maurice in the court of Turlough (433). According to the prevailing custom of those days the children of kings and princes were frequently placed, at an early age, in charge of the family of some of the chieftains who coveted the honour of guardianship of the royal offspring. Hence it is assumed that Eithne and her younger sister were fostered close to Cruachan Magh Ai, the dwelling-place, or royal residence, of the Gaelic kings of Connaught. However the brief story of the saint's life centres in the one scene, which took place beside the brook of Cleebrach, County Roscommon, and is described in the "Acts" of the national apostle of Ireland.

On his way to the royal abode, during his mission to the western provinces, it is told that St. Patrick and his disciples camped one evening close to the well of Cleebrach. On the following day the clerics rose at dawn to chant the Divine Office, and prepare for the mystic sacrifice. It would appear that the two royal princesses were accustomed to visit the same fountain in the early morn, and on this occasion their companions were the company who were in possession of the place. They were not, however, dismayed, and Eithne, the elder of the sisters, accosted Patrick and his companions, asking who they were and whence they came. Wherupon the apostle said:"It was for you to confess your faith in our true God than ask about our race." Then, at their request, St. Patrick unfolded to them the doctrines of Christianity, which, under the influence of Divine grace, they accepted with heart and soul. Having baptized them, the saint placed on their brows the veil of virginity.

Then, it is related, Eithne and her sister asked "to see the face of Christ, the Son of the true God", but Patrick said:"You cannot see the face of Christ unless you taste death, and receive the Sacrifice." Wherupon they besought him to give them the Sacrifice that they might see their Spouse, the Son of God. So, by the brink of the fountain, the Sacrifice was offered, and having received their First Communion, Eithne and her sister, in an ecstasy of rapture, swooned in the grave and during the nine months of mourning were ended both were laid side by side, close by the scene of their death, where afterwards a church was raised over the grave.

**J. B. CULLEN.**
Ekkehard, name of five monks of the (Swiss) Abbey of St. Gall from the tenth to the thirteenth century.

(1) Ekkehard I (Majus, "the Elder"), d. 14 Jan., 973. He was of noble birth, of the Jönchewyl family in Jura, and was educated there and in the monastery of St. Gall; after joining the Benedictine Order, he was appointed director of the inner school there. Later, under Abbot Kralo, who trusted him implicitly, he was elected dean of the monastery, and for a while directed all the affairs of the abbey. Ekkehard made a pilgrimage to Rome, where he was retained for a time by Pope John XII, who presented him with various relics of St. John the Baptist. After Kralo's death Ekkehard refused the abbatial succession, because of lameness resulting from a fractured leg. However, he directed the choice of Burckard, son of Count Ulrich of Buchhorn, who governed St. Gall with the advice and co-operation of Ekkehard. The latter erected a hospice in front of the monastery for the sick and strangers, and was in many other ways a model of charity. He was also distinguished as a poet, and wrote a Latin epic "Waltairius", basing his version on an original German text. He dedicated this poem to Bishop Erkanbald of Strasburg (965–991). It describes the elevation of Walter of Aquisgrain with the Burgundian princess Hildegundis, friend and later wife of Charlemagne, and the battle of Wagensein between Val and the followers of Gunther and Hagen (ed. Pusser, Berlin, 1873). He also composed various ecclesiastical hymns and sequences, e.g. in honour of the Blessed Trinity, St. John the Baptist, St. Benedict, St. Columbanus, St. Stephen (Meyer, "Philologische Bemerkungen zum Waltairius" in "Abhandl. der bayr. Akad. d. Wissenschaften", Munich, 1873; Streczer, "Ekkehard und Virgil" in "Zeitschrift f. deutsches Alterthum", 1898, XLII, 339–369).

(2) Ekkehard II (Palatinus, "the Courtier"), d. 23 April, 990. He and Ekkehard III were nephews of the preceding, who educated also at St. Gall his other nephews, Notker the physician and Burckard, later abbot of the monastery. Ekkehard II was taught by his uncle and the monk Geraldus, and was later a teacher in the monastery school. A number of his pupils joined the order; others became bishops. According to the "Casus Sancti Galli" he was later to Hohentwiel, the seat of the Duchy Hadwig of Swabia, Ekkehard II. The abbess was occasionally to visit St. Gall, and eventually (973) asked for and obtained the services of Ekkehard as her tutor in the reading of the Latin classics. Nevertheless, he continued to render great services to his monastery, especially on the occasion of the differences between St. Gall and Reichens (Abbot Roodmann); in many other ways also he proved himself useful to the monks by the influence he had obtained as tutor of the duchess. Ekkehard was also prominent at the imperial court of Otto I. Later he became provost of the cathedral of Mainz, where he died 23 April, 990. He was buried in the church of St. Alban, outside the city gates. He was the author of various ecclesiastical hymns, known as sequences, all of which are lost, except one in honour of St. Desiderius.

(3) Ekkehard III, also a nephew of Ekkehard I and a cousin of the preceding. He shared the educational advantages of his cousin and, at his invitation, accompanied him to Hohentwiel to superintend and direct the studies of the local clergy. On his return to St. Gall he was made dean of the abbey, and is reported to have held office for thirty years. He died early in the eleventh century.

(4) Ekkehard IV.—According to the testimony in his "Chronicle" (especially in view of his statement that he had heard from eyewitnesses of the great conflict of 957), Ekkehard IV. was the subject of his birth, usually placed about 980; he died 21 Oct., but the year of his death is unknown (1037–1067). The same "Chronicle" indicates Alsace as his birthplace, though we do not know with certainty either the place of his birth, or his family origin. His boyhood was spent at St. Gall where he had for tutor Notker Labeo the Younger, the most celebrated scholar of his time. From him Ekkehard acquired a profound knowledge of the Latin and Greek classics; he also studied mathematics, astronomy, and music, and was acknowledged while living as a scholar of note even outside the monastery. After the death of Notker Labeo (1022) Ekkehard was called to Mainz by Archbishop Aribio, where he became director and teacher in the cathedral school, and held both offices until the death of his patron (1031), distinguishing himself as head of the school; indeed, he was noted as a successful teacher and promoter of learning. A treatise on the "Jube me, Domine, benedicere" inscriptions, and benediction prayers remain as evidences of his literary activity. Emperor Conrad II, when at Ingelheim near Mainz, distinguished him by marks of personal favour (Easter, 1030). Shortly after his return to St. Gall Abbot Tietbald died (1034) and Norbert of Stavelot, who introduced the reforms of Cluny, was elected to succeed him. A dissension, therefore, arose among the monks, the seniors being dissatisfied with the new reforms. Ekkehard, meanwhile, began the famous "Casus S. Galli", begun by Ratpert and continued to Abbot Salomon (883), and carried it on from that date to Notker (972). This work is a most important document for the contemporary history of St. Gall (ed. von Arx in "Mon. Germ. Historie: Scrip- tores II", Hanover, 1829; ed. Meyer von Knonau in "St. Gallische Geschichtsquellen" in "Mitteil. sur vaterland. Geschichte" (new series, no. 5 and 6, St. Gall, 1877); it is also the main source of our knowledge concerning the Ekkehards. The "Casus" is mostly a compilation of anecdotes and traditions concerning distinguished monks. They contain, however, many historical errors and misrepresentations, and the Latin diction is often barbarous. Nevertheless, owing to the excellence and simplicity of the narrative, they are a valuable source of contemporaneous history, especially of its culture. The second important literary work of Ekkehard is his "Liber Benedictionum". It comprises metrical inscriptions for the walls of the Mainz cathedral, and benedictions (also in verse) for use in choir-service and at meals, as also poems in honour of the abbots, partly from his own pen and partly by Notker Labeo. In poetical merit these works are inferior enough; nevertheless they betray a very fair knowledge of Latin. The glosses from his pen, both on his own manuscripts and others belonging to the abbey, main as proof of his lifelong zeal in pursuit of knowledge. He was also skilled in music, especially ecclesiastical music, always diligently and successfully cultivated at St. Gall.

(5) Ekkehard V (Minufius), d. about 1220. He is the last of the St. Gall Ekkehards, and flourished towards the end of the twelfth, and the beginning of the thirteenth, century. No particulars are known concerning his life, and tradition is silent as to his origin, the year of his birth and of his death. He was dean of the abbey in the reign of Innocent III. About 1214 he wrote a life of St. Notker Balbulous, a learned monk of St. Gall, who lived towards the end of the eleventh, and the beginning of the tenth, century (Acta SS., April 1, 579), from which work we gather that its author was versed in ecclesiastical music.

J. P. KIRCH.
Eckehard of Aura (Uranberg), Benedictine monk and chronicler, b. about 1050; d. after 1125. Very little is known of his life. About 1101 he went on a pilgrimage to the Holy Land, and in 1106 took part in the Council of Guastalla. Apparently he belonged at first to the monastery of St. Michael at Bamberg, and later (1106 or 1112) was asked to the monastery of Aura, founded by Bishop Otto of Bamberg, on the Franconian Saale, near Kissingen, Bavaria; this monastery followed the Rule of Hirsau. The "Chronicon universale," called after his name, is the chief source for the history of Germany during the years 1080-1125. In its present form it is divided into five books: the first contains ancient history from the Creation to the founding of the building of the city of Rome; the second extends to the birth of Christ; the third reaches the time of Charlemagne; the fourth goes to the opening of the reign of Emperor Henry V; the fifth contains an account of the reign of this ruler. No other medieval general chronicle covers so much ground: in the manuscripts now extant it is evidently not the work of one man but represents rather a fusion of various recensions and continuations. Breslau, in his acute investigation of the subject (Neues Archiv für ältere deutsche Geschichtskunde, VI), traces these changes, for the most part, to Frutolf, prior of St. Michael's (d. 17 Feb., 1103). It is now believed that Eckehard simply rewrote the greater part of the chronicle, and that his original contribution is the account of the reign of Emperor Henry V. The chronicle, taken as a whole, is a very skillful compendium which shows in the selection and arrangement of the matter a sound understanding and mastery of the material at hand. The language is good and simple, and the presentation clear and well summarised. Continuations were written by various chroniclers, among whom may be mentioned Conrad of Lichtenau and Albert of Stade. Eckehard's chronicle has been published several times (Mon. germ. hist., script., VI, 13-265; Migne, P.L., cliv, 459-1060). A German translation was issued by Pfluger (Leipzig, 1893), as vol. I of the series "Geschichtszeichner der deutschen Vorzeit".

Patricius Schlegel.

Elba, a titular see of Asia Minor. Elisa, said to have been founded by Menestheus, was situated at a distance of twelve stadia from the mouth of the Caicus, one hundred and twenty stadia from Pergamus. It appears in history about 450 B.C., at the time of the Athenian naval league. It belonged to Alexander, then to the kings of Pergamus, and was the port of the latter. In 190 B.C. it was besieged by Antiochus of Syria, in 156 by Prusias, who ravaged all the country. It was partly destroyed in a. d. 90 by an earthquake. In its Roman period it struck coins. As a suffragan of Ephesus Elisa is mentioned by most "Notitiae episcopatum" as late as the twelfth or the thirteenth century. We know only three of its bishops: Iulias in 451, Olbianus in 787, Theodorus in the twelfth century (Lequien, Or. christ., I, 616). In the tenth century the town of Mount Latros, was born there (Analecta Bollandiana, XI, 1-74, 136-182). The city must have been destroyed either by the Mongols or by the Turks. The ruins stand about three kilometres south of Kilisse Kayer in the Vilayet of Smyrna. The Greek Church also gives the title of Elisa to auxiliar bishops.

S. Petrédès.
landed on the island, 4 May, 1814, but left it on 26 February, 1815; during his short administration Napoleon did much for the benefit of the island, especially in the improvement of the roads. The Congress of Vienna, in 1815, restored the island to Tuscany, with which it was finally incorporated into the united Kingdom of Italy.

GREGOR REINHOLD.

ELIESAITES (or HELESAITES), a sect of Gnostioc Ebionites, whose religion was a wild medley of heathen superstitions and Christian doctrines with Judaism. Hippolytus (Philosophumena, IX, 13-17) tells us that under Callistus (217-222) a cunning individual called Alciabades, a native of Apamea in Syria, came to Rome, bringing a book which he said had been received from Parthia by a just man named Eliesa, but which is not Ebionite, 1 Eliesa; Methodius, Eliesa, and Origen, (Eliesa). The contents of the book had been revealed by an angel ninety-six miles high, sixteen miles broad, and twenty-four across the shoulders, which were four miles long and thirty-three miles wide by two miles deep. This was the Son of God, and He was accompanied by His Sister, the Holy Ghost, of the same dimensions. Alciabades announced that a new remission of sins had been proclaimed in the third year of Trajan (a. D. 100), and he described a baptism which should impart this forgiveness even to the grossest sinners. Harnack makes him say “was proclaimed” instead of “has been proclaimed” (as if εὐφροσύνη and not εὐφράξαντα), and thus infers that a special year of remission is spoken of as past once for all—the Alciabadesans have no reason for inventing this, so that Hilgenfeld was right in holding that Eliesaasi really lived under Trajan, as Epiphanus supposed. If we put aside this blunder of Harnack’s (and also his earlier odd conjecture that the remission in the third year of Trajan meant that the first two books of the Pastor of Hermas were published in that year), we see that the remission offered is by the new baptism. Hippolytus represents this doctrine as an improvement invented by Alciabades on the lax teaching of his enemy Callistus; perhaps it was seriously—it is most likely ironical—but he seems to regard Alciabades as the author of the book. Origen, writing somewhat later (c. 216-9), says the heresy was quite new; he seems to have met with Alciabades, though he does not give his name. There is no reason why we should dissent from these contemporary witnesses, and we must place the first appearance of the book of Eliesaasi c. 220. A century and a half later, St. Epiphanius found it in use among the Sambassans, descendents of the earlier Eliesaisses, and also among the Basaeans, and numerous the other Gnostic communities. En-hedim, an Arabic writer, c. 957, found a sect of Sabeans in the desert who counted Elchassiach as their founder (Chowlsohn, Die Seabier, 1866, I, 112; II, 543, cited by Salmon).

According to Hippolytus the teaching of Alciabades was borrowed from various heresies. He taught circumsicion, that Christ was a man like others, that he had many times been born on earth of a virgin, that he devoted himself to astrology, magic, and incantations. For all sins of impurity, even against nature, the second baptism is enjoined “in the name of the great and most high God and in the name of His Son the great King”, with an adjuration of the seven witnesses written in the book, sky, water, the holy spirits, the Angels of prayer, oil, salt, and earth. One who has been bitten by a mad dog is to run to the nearest water and jump in with all his clothes on, using the foregoing formula, and promising the seven witnesses that he will abstain from sin. The same treatment—forty days consecutively of baptism in cold water—is recommended for consumption and for the possessed. Elder Ebionites of Epiphanus practised this treatment. That account tells us that mention was made in the book of Elchassiach’s brother, Texai, and that the heresiarch was a Jew of the time of Trajan. Two of his descendents, two sisters, Marthus and Martha, lived till the days of Epiphanus. They were denounced as great liars, and to such of their feet and their spittle were used to cure diseases. This suggests that Elchassiach was not a fictitious personage. He was presumably a primitive leader of an Ebionite community, to whom Alciabades ascribed his own book. We learn further from Epiphanus that the book condemned virginity and continence, and made marriage obligatory. It permitted the worship of idols to escape persecution, provided the act was merely an external one, disowned in the heart. Prayer was to be made not to the East, but always towards Jerusalem, was “remains” his own book. It has a denial that it had been offered by the patriarchs or under the Law. The Prophets as well as the Apostles were rejected, and of course St. Paul and all his writings. It had been customary to find Eliesaite doctrine under “Recognition” and “Recognitions”, especially in the former. On the groundlessness of this see CLEMENTINES.

HIPPOLYTUS, Philosophumena, IX, 13-17; X, 26; ORIGEN, Contra Celsum, XVI, 38; Macrobius, Sat. II, 13; EPHESIUS, Hist. XIX and LIII, also XXX, 3, 17, 18; THEODOTUS has simply used EPHESIUS. JOHN CHAPMAN.

ELDER, George, educator, b. 11 August, 1793, in Kentucky, U. S. A.; d. 28 Sept., 1838, at Bardstown. His parents, James Elder and Ann Richards (a convert), natives of Maryland, emigrated shortly after their marriage to Hardin’s Creek, in the present Marion County, Kentucky, where George, the second of their seven children was born. The Elders enjoyed a moderate competency and were full of zeal for their Catholic Faith. George’s early education devolved mainly upon his father, to take, as he did, the Scriptures and thoroughly acquainted with the teaching of the Church, which he frequently defended in discussion and explained to converts who were preparing for baptism. George Elder imbibed a love for serious study, and in his sixteenth year he entered Mount St. Mary’s College, Emmitsburg, Maryland, to pursue classical studies. Here he became the friend of William Byrne (q. v.), afterwards founder of St. Mary’s College, Kentucky. Both studied theology in St. Mary’s Seminary, Baltimore, and were ordained priests by Bishop Hughes at Bardstown, 18 Sep., 1820. In addition to the duties of an assistant at the cathedral there, Father Elder was entrusted by Bishop Flaget with the founding of a high-grade school or college for lay students. This was, at first, a day school and was taught in the basement of the theological seminary (erected in 1818). A separate building was erected in 1820-23. The college was then one of the largest and best appointed educational structures in the entire West. The arrival, in 1825, of fifty southern students was the beginning of the extensive patronage the college received from the Southern States, notably Louisiana and Mississippi, and which continued down to the Civil War. In 1827 the Rev. Ignatius A. Reynolds (afterwards Bishop of Charleston) was appointed president and Father Elder was given charge of the congregation of St. Plus, in Scott
County. Dr. Reynolds was transferred in 1830 to pastoral work, and Father Elder again became president, a position which he held until his death. He frequently did duty in the cathedral and was one of the editors of the Louisville "Catholic Advocate" newspaper (founded in 1826), to which he contributed a series of well-written articles on the education of children and the obligations of parents in such matters. "Letters to Brother Jonathan", half satirical, half controversial, were also the product of his pen. His sense of justice forced him, in spite of his charitable amicability, to prosecute a bigoted preacher, Nathan L. Rice, for libelling, after the manner of "Maria Monk", a worthy Kentucky priest, then absent in Europe. Father Elder's last illness was brought on by over-exertion and fatigue at the burning down (25 Jan., 1838) of the main college building.

Elder, William Henry, third Bishop of Natchez, Mississippi, U. S. A., and second Archbishop of Cincinnati, b. in Baltimore, Maryland, 22 March, 1818; d. in Cincinnati, 31 Oct., 1904. His father, Basil Elder, was a descendant of William Elder, who had emigrated from England to America, in colonial times; his mother, Eliza Stock (Snowden) Elder. In 1831 he entered Mt. St. Mary's College, Emmitsburg, Maryland, and then presided over by the Rev. John Baptist Purcell, who afterwards became the second Bishop of Baltimore and later the first Archbishop of Cincinnati. In 1842 he went to Rome, to complete his theological studies at the College of the Propaganda, where he received the degree of Doctor of Divinity. He was ordained priest in Rome, 29 March, 1846. Returning to Maryland, he became professor at Emmitsburg, which position he held until he was appointed Bishop of Natchez, for which he was consecrated in the cathedral of Baltimore, by Archbishop Kenrick, 3 May, 1857. In 1864 he was brought into prominence by his refusal to obey the order of the Federal troops at Natchez, to have certain prayers for the President of the United States recited publicly in the churches of his diocese. He was arrested, tried, and convicted; but the decision of the military court was reversed at Washington. His devotion to his people during the yellow-fever epidemic of 1878 won universal commendation. On 30 January, 1880, he was made titular Bishop of Avara and transferred to Cincinnati, as coadjutor with the right of succession to Archbishop Purcell he succeeded 4 July, 1883. Great financial difficulties clouded the last years of Archbishop Purcell's life and made the task of his successor a trying one. But the reopening of the theological seminary, Mt. St. Mary's of the West, the founding of St. Gregory's Preparatory Seminary, the enlarging of St. Joseph's Orphan Asylum, besides the building of numerous other religious institutions, show how well Archbishop Elder overcame these difficulties. (See CINCINNATI.)

ELEAZAR (Heb. יְהוּאֵר, God's help)—I. Elizabeth, daughter of Aminadab and sister of Nahash, born to Abra, Abiu, Eleazar, and Ithamar (Ex. vi. 23), all of whom, with their father, "were anointed . . . and consecrated, to do the functions of priesthood" (Num. iii, 2–3; Lev. vii, 1–13). As Abra and Abiu were killed without honor, they offered strange fire before the Lord (Lev. x. 1–7; I Par. xxii, 1–3), "Eleazar and Ithamar performed the priestly office in the presence of Aaron" (Num. iii, 4). Thus entitled to succeed his father in the office of high-priest, Eleazar . . . took a wife of the daughters of Phuleit", and so became the father of Phinees (Ex. vi, 25). Prince of the princes of the Levites "that watch for the guard of the sanctuary" (Num. iii, 32), directing the sons of Caath when wrapping up "the sanctuary and the vessels thereof at the removing of the camp" (Num. xiv. 15–16). As the Levites were selected as the suitable official, "to whose charge pertaineth the oil to dress the lamps, and the sweet incense, and the sacrifice . . . and the oil of unCTION, and whatsoever pertaineth to the service of the tabernacle, and of all the vessels that are in the sanctuary" (Num. iv, 16). At the very moment when his brothers were burning "by fire coming out from the Lord", Eleazar, though deeply affected by mental anguish, obeyed the order of Moses, and completed their unfinished sacrifice (Lev. x. 1–20). After the terrible punishment inflicted on the daring unawares, Core, Eleazar, and Ithamar was brought more effectually to the high-priest, Eleazar, complying with orders, beat into plates the still smoking censers used by these unfortunate rebels, and for a sign and a memorial, fastened this metal to the altar (Num. xvi, 1–40). Appointed to preside over the immolation of the red cow (Num. xix, 1–10), Eleazar next appears, clothed with the vesture of Aaron, and exercising the office of high-priest (Num. xx, 22–29). Hence it is that we find Eleazar associated with Moses, in numbering the children of Israel after the death of the forty-year-old Jonathan (Num. xxvi, 1–4), in settling the inheritance case presented by the daughters of Salphad (Num. xxvii, 1–3), in distributing the spoils taken from the Madianites (Num. xxxi, 1–54), and, finally, in considering the request of Ruben and Gad for land east of the Jordan (Num. xxxii, 1–6). As the successor of Moses, is presented by the Jewish lawyer himself (Num. xxvii, 12–23). On the list of those appointed to divide among the Israelites the lands west of the Jordan, the very first name is that of Eleazar (Num. xxvi, xxiv, 16–19; Josh. xiv, 1–2; xix, 51), who was buried "in Gabbath, that belonged to Phinees his son, who was given him in mount Ephraim" (Josh. xxiv, 33). If we except the period from Helt to Solomon, during which the descendants of Ithamar exercised the office of high-priest (I Kings, ii, 30–36; III Kings, ii, 26–27), those holding this most sacred calling, down to the time of the Machabees, belonged to the family of Eleazar (Ex. vi, 25).

II. Eleazar, surnamed Abaron, was the fourth son of Mathathias (I Mach., ii, 1–5). With some probability, he is identified with the Eedras who before the battle with Nicander read the holy Book to the armed warriors (II Mach., vii, 22–24). In the engagement at Bethzacharam, he displayed marvellous courage in attacking and killing the elephant, on which "it seemed to him that the king [Antiochus Eupator] was". Crushed to death beneath its dying elephant, Eleazar "exposed himself to deliver his people..."
to get himself an everlasting name". (I Mach., vi, 17-46.)

III. Eleazar, a scribe and doctor of the law, though ninety years of age, bravely preferred to die a martyr's death than to pollute his holy life by violating the law which forbade to the Israelites the use of swine's flesh. His friends, "moved with wicked pity", were willing to substitute lawful flesh, that Eleazar, feigning to have eaten the forbidden meat, might be delivered from death. But, considering "the dignity of his age", and the tremendous honours of his grey head", Eleazar spurned this well-meant proposal, which if accepted, though securing his deliverance from punishment, might scandalize many young persons, and could not deliver from the hand of the Almighty. He was beheaded in rage the regard and sympathy of his friends, the holy man bravely endured his cruel torture, probably at Antioch, during the reign of Antiochus IV Epiphanes. (II Mach., vi, 18-31; I Mach., i, 57-63.)

Elect denotes in general one chosen or taken by preference from among two or more; as a theological term, it refers to "choosing, the object of special Divine favour, as set apart for eternal life". In order to determine the meaning of the word more accurately, we shall have to study its usage both in the Old Testament and the New.

The Old Testament applies the term elect, or chosen, only to the Israelites in so far as they are called to be the people of God, or are faithful to their Divine call. The idea of such an election is common in the Book of Deuteronomy and in Is., x-lxi. In Ps. civ, 6 and 43, and cv, 5, the chosen ones are the Hebrew people; in Ps. cvv, 9 and 33, they are the repentant Israelites, as few in number "as if a grain be found in a cluster" (ibid., 8); in Tob., xiii, 10, they are the Israelites remaining faithful during their captivity; in Wisd., iii, 9, and iv, 15, they are God's true servants; in Ecclus., xxiv, 4, 13, and xlv, 2, these servants of God belong to the chosen people.

II. THE NEW TESTAMENT transfers (excepting perhaps in Acte, xiii, 17) the meaning of the term from its connexion with the people of Israel to the members of the Church, whether Christ, either militant on earth or triumphant in heaven. Thus I Pet., i, 1, speaks of the elect among the "stranglers dispersed" through the various parts of the world; I Pet., ii, 9, represents them as "a chosen generation, a kingly priesthood, a holy nation, a people called from darkness into God's marvellous light. St. Paul, too, speaks of the elect (Rom., viii, 33) and describes the five degrees of their election: they are foreknown, predestined, called, justified, and glorified (loc. cit., 29, 30). He returns to the idea again and again: II Thess., ii, 12 sq; Col., iii, 12; Tit., i, 1, 2; II Tim., ii, 10. St. John gives the title of elect to those who fight on the side of the Lamb against the powers of darkness (Apoc., xvii, 14). According to St. Luke (xvii, 7), God hears the cries of his elect for vengeance; according to the first two Evangelists he will shorten the last days for the sake of the elect (Matt., xxiv, 22, 24, 31; Mark, xiii, 20, 22, 27).

If it be asked why the name elect was given to the members of the Church Militant, we may assign a double reason: first, they were freely chosen by God's goodness (Rom., x, 5-7, 28); secondly, they must stand in the foreground of the Church and triumph in heaven. (Sphes., iv, 17). In the sentence "many are called, but few are chosen", the latter expression renders a word in the Greek and Latin text which is elsewhere translated by elect (Matt., xx, 16; xxii, 14). It is agreed on all sides that the term refers to members of the Church Triumphal, but there is no doubt as to whether a refers to mere membership, or to a more exalted degree. This distinction is important; if the word implies mere membership in the Church Triumphant, then the chosen ones, or those who will be saved, are few, and the non-members in the Church Triumphant are many; if the word denotes a special degree of glory, then few will attain this rank, and many will fail to do so, though many are called to it. The sentence "many are called, but few chosen" does not, therefore, settle the question as to the relative number of the elect and the lost; the regions are divided on this point, and while Christ in the Gospels urges the importance of saving one's soul (Luke, xiii, 23, 24), he alternately so strengthens our hope and exalts our fear as not to leave us any solid ground for either presumption or despair.

A. J. MAAS.

Elect (Lat. electio, from eligere, to choose from):

—This subject will be treated under the following heads: I. Juridical Concept; II. Electors; III. Persons Eligible; IV. The Act of Electing: Forms and Methods; V. After Election; VI. Elections Now in Use.

I. JURIDICAL CONCEPT.—In its broadest sense election means a choice among many persons, things, or sides to be taken. In the stricter juridical sense it means the choice of one person among many, for a definite charge or function. If we confine ourselves to ecclesiastical law, canonical election, in a broad sense, would be any designation of a person to an ecclesiastical charge or function; thus understood it includes various modes: postulation, presentation, nomination, and collation. In the narrower sense, election is the canonical appointment, by legitimate electors, of a fit person to an ecclesiastical office. Its effect is to confer on the person thus elected an actual right to the benefice or charge, independently of the confirmation or collation ulteriorly necessary. Hence it is easily distinguished from the aforesaid modes that only in a broad sense can be termed election.

(a) Postulation differs canonically from election, not as regards the electors, but as regards the person elected, this not being an impediment from which the superior is asked to dispense him. For instance, if in an episcopal election the electors designate the bishop of another see, or a priest under thirty years of age, or one of doubtful or disreputable life, his election is free from such a person, and the ecclesiastical superior would be in no wise bound to recognize such action; hence the electors are then said to postulate their candidate, this postulation being a matter of favour (gratia), not of justice. (b) Presentation, on the contrary, differs from election not in respect to the person elected but to the electors; it is the exercise of the right of patronage, and the patron may be a layman, whereas the electors to ecclesiastical dignities must be clerics. In both cases the right of the candidate is the same (ius ad rem), whether he has or has not the canonical confirmation, presentation by a patron leads to canonical institution by a competent prelate. Moreover, when the right of patronage belongs to a moral body, e. g. a chapter or an entire congregation, presentation may have to follow along the lines of election. Though frequently called election, the designation of bishops and beneficed clergy by the civil authority in virtue of concordats is in reality presentation, and results in canonical institution. (c) Correctly speaking, nomination is the canonical act by which the electors propose several fit persons to the free choice of the superior. The role of electors in nomination is
ELECTION

the same as in election properly so called; as election, however, can fall only on one person, so nomination cannot confer on several a real right to a benefice, rather, the right may be so acquiesced in, as not to include third persons, though none of them possesses the pia ad rem (c. Quod sicut, xxviii, De elect., lib. I, tit. vii). (d) Recommendation is the name applied to the designation of one or several fit persons made to the superi-
or by certain members of the episcopal or clerical clergy in view of sees to be vacated (see Busson, p. 148). It differs from election and nomination in that the bishop or members of the clergy do not act as electors; hence the persons designated do not acquire any real right, but the Holy See remaining perfectly free to make a choice outside of the proposed. (e) Stil further, removal from election is simple request, or petition, by which the clergy or people of a diocese beg the pope to grant them the prelate they desire. The authors of this petition, not being properly qualified, as in the case of recommendation, to make known their appreciation of the candidate, it is needless to say the latter acquires no right whatsoever from the fact of this request. (f) Finally, free collation is the choice of the person by the superior who confers canonical institution; it is the method most in use for appointment to inferior benefi-
ces, and the provision for the unencumbered episcopal see apart from some well-known exceptions. Evi-
dently, where free collation obtains, election, properly so called, is excluded.

II. ELECTORS.—Electors are those who are called by ecclesiastical law or statute to constitute an electoral college, i. e. to designate the person of their choice, and who have the qualifications required for the exercise of their right to vote. The law appoints competent electors for each kind of election: cardinals for the election of a pope; the cathedral chapter for the election of a bishop or a vicar capitis; and the various chapters of their order, etc. for the election of regular prelates. In general, election belongs, strictly speaking, to the college, i. e. the body, of which the person elected will become the superior or prelate; if this college have a legal existence, like a cathedral chapter, it can exercise its right as long as it exists, even if reduced to a single member, though, of course, such a one could not elect himself. Electors called upon to give a prelate to the Church must be ecclesiastics. Hence laymen are excluded from all participa-
tion therein, their mere presence being considered only as accessory, but none having a vote in it, nor the right of election, but only if made by them exclusively (c. iii, h. 2, t.), but even if they only co-operate with ecclesiastics, every custom to the contrary notwithstanding. Ecclesiastics alone, and those only who compose the college or community to be prelatured with, must elect. The ecclesiastics are properly and exclusively in the cathedral chapter, all of whose canons, and they alone, are episcopal electors. Other ecclesiastics have no right to associate with the chapter in the election of a bishop, unless (a) they are in full possession of this right and it is proved by long prescription, or (b) have, by a special privilege, or (c) can show a right resultant from the foundation of the chapter or the church in question. To exercise their right, the electors, whoever they may be, must be full members of the body to which they belong, and must, moreover, be in a condition to perform a legal, human act. Hence natural law excludes the demented and those who have not reached the age of puberty; ecclesiastical law debar (1) canons who have not attained full membership in the chapter, i. e. who are not yet deacons (Council of Trent, Sess. XXII, c. iv, De elect., lib. I, tit. vi, De elect., etc. electi potestate; and in VI). Since an election is held to appoint to a church or an ecclesiastical charge or office that is vacant, it is obvious that the first condition requisite for an election is precisely the vacancy of said church, charge, or office, in consequence of death, transfer, resignation, or deposition; any election made with a view to filling an office not yet vacant is a canonical offence. When an election becomes necessary, the pope can invoke the electoral assembly in some specified place, and for a certain day within the legal time-limit. The
place is ordinarily the vacant church or, if it be question of an election in a chapter, wherever the deliberations are held except in the case of a college in which the common ecclesiastical law is three months, after the lapse of which the election devolves upon the immediate superior (c. xiii, h. t.). In an electoral college, the duty of convoking the members belongs to the superior or president; in a chapter this would be the highest dignitary. He must issue an effective summons, for which no special form is prescribed, to all the electors without exception, whether present in the locality or absent, unless, however, they be too far away. The distance considered as constituting a lapse of time in which the vote is null by absence is very uncertain; it should be more narrowly interpreted to-day than in the thirteenth century. It is unnecessary to convocate electors publicly known to be incompetent to exercise their electoral right, e.g. canons excommunicated by name or not yet subdeacons. So binding is this conviction that if even one elector be not summoned he can, in all justice, enter a complaint against the election, though the latter is not ipso facto null by reason of such absence. Such an election will stand provided the unsummoned elector abides by the choice of his colleagues and refrains from voting. As no one is bound to use a right, common law does not oblige an elector to attend the assembly and take part in the voting; the absent are not taken into consideration. As a general rule the absent cannot be represented or voted for by proxy, unless, according to the chapter "Qua propter", "Actus pro actis" (see above), the electors are at a great distance and can prove a legitimate hindrance. Moreover, they can choose as proxy only a member of the assembly, but they can commission him to vote either for a particular person or for whomsoever he himself may deem most worthy.

On the appointed day the president opens the electoral assembly. Though the common law requires no preliminary solemnities, such are frequently imposed by special statute, e.g. the Mass of the Holy Ghost, which should be attended by all the assembled electors and those not prevented from assisting; also the recital of certain prayers. Moreover, the electors are often obliged previously to promise under oath that they will conscientiously vote for the most worthy. However, apart from such oath, their obligation is much less strict and not binding.

In the case of cardinals, there is no particular mode of election, provided the method is not contrary to established usage. In the case of the college of cardinals, the number of ballots is determined as indicated above, and the votes must be secret. In the case of the college of bishops, the votes are public.

The Lateran Council, (1215) admits only three modes of election: the normal or regular method by ballot, and two extraordinary methods, namely, by quasi-inspiration. Recourse to lots is especially prohibited; nevertheless, the Sacred Congregation of the Council (Romana, Electionis, 2 May, 1857) ratified an election where the chapter, equally divided between two candidates in other respects fit, had drawn lots; just about as was done for the Apsidae election of St. Matthias. As to the two exceptional methods: (1) Election by quasi-inspiration takes place when the electors greet the name of a candidate with enthusiasm and acclamation, in which event the vote of a ballot is only valid in absence of the candidate in advance, and the candidate in question is proclaimed elected. However, modern custom in this matter differs from ancient habits, and it is wiser, even in the case of such apparent unanimity, to proceed by ballot. (2) Compromise occurs when all the electors confide the election to one or several specified persons, either members of the collegiate college or strangers, and ratify in advance the choice made by such arbitrator or arbitrators. Formerly this exceptional method was often resorted to, either to terminate long and fruitless discussions. As no one is bound to use a right, common law does not oblige an elector to attend the assembly and take part in the voting; the absent are not taken into consideration. As a general rule the absent cannot be represented or voted for by proxy, unless, according to the chapter "Qua propter", "Actus pro actis" (see above), the electors are at a great distance and can prove a legitimate hindrance. Moreover, they can choose as proxy only a member of the assembly, but they can commission him to vote either for a particular person or for whomsoever he himself may deem most worthy.

Moreover, the electors are often obliged previously to promise under oath that they will conscientiously vote for the most worthy. However, apart from such oath, their obligation is much less strict and not binding. These peculiarities over, the electoral assembly proceeds, if necessary, to verify the credentials of certain electors, e.g. those who act as delegates, as happens in the general chapters of religious congregations. Then follows the discussion of the merits (huius modi) of the candidates. The actual votes have previously made known their candidacy, though they may do so. The electors, nevertheless, have all freedom to propose and sustain the candidacies of their choice. Frank and fair discussion of the merits of candidates, far from being forbidden, is perfectly conformable to the law, because it tends to enlighten the electors; indeed, some maintain that an election made without such a discussion would be null or could be annulled (Matthuci, in Ferraris, "Bibliotheca", s. v. "Elecito", art. iv, n. 5). It is more accurate to say that the election would be vitiated if the presiding officer were to oppose this discussion for the purpose of influencing votes. However, though the law strictly prohibits cabals and secret negotiations in the interest of certain candidates, the line between illicit manoeuvring and permissible negotiating is in practice not always easily recognizable. [See the Constitution "Ecclesiastum" of Innocent XII (22 Sept., 1695), on the elections of regulars (in Ferraris, art. iii, no. 26), also the regulations that govern a conclave (q.v.).]

According to this method the scrutineers silently collect the ballots of the electors present; when occasion requires it, certain members are delegated to collect the votes of sick electors beneath the same roof (e.g. at a conclave or at one of the regular chapters) or even in the city (for cathedral chapters), if the statutes so prescribe. This accomplished, the scrutineers count the number of ballots collected, and if, as should be, they tally with the number of electors, the same officers proceed to declare the result. Each ballot is in turn opened, and one of the scrutineers proclaims the name inscribed thereon, then passes it to the second scrutineer for registration, while the third, or secretary, adds up the total number of votes obtained by each candidate. As a general rule, election is assured to the candidate who obtains the majority of votes, i.e., an absolute, or merely a relative, majority; however, certain statutes require, e.g., a majority in two-thirds. When the electors are odd in number, a gain of one vote ensures the majority; if the number be...
even, it requires two votes. In calculating the majori-
ty, neither absent electors nor blank ballots are
taken into account; whoever casts a blank vote is
held to be innocent, knowing it to be vacated by
him, are deprived for that time of the right to vote and
are suspended for three years from the benefits they
hold in the vacant church in question. Finally, the
election wherein the prescribed form has not been ob-
served must be annulled. In all of these cases the
right to elect bishops devolves upon the Holy See
(Boniface VIII, c. xvii, h. t., in VI*); the only case in
which it devolves upon the immediate superior is
when the election has not been made within the pre-
scribed time-limit.

If, on the contrary, the election meets with no oppo-
sition the first duty of the presiding officer of the elec-
torial college is to notify the person elected that choice
is made of his person. If he be present, e. g. in the
elections of regulars, the notification takes place im-
mmediately; if he be absent, the decree of election must
be forwarded to him within eight days, barring legiti-
mate hindrance. On his side, the person elected is
allowed a month within which to make known his ac-
cceptance or refusal, the month dating from the time
of receiving the decree of election or the permission of the
Holy See to elect. If he refuse, the electors, after he
has refused the honour conferred upon him, the
electoral college is summoned to proceed with a new
election, under the same conditions as the first time
and within a month. If he accepts, it is his right as
cell as his duty to demand from the superior the confir-
mation of his election within the paraemperal limit of
three months (c. vi, h. t., in VI*); but if, without
legal hindrance, he allows this time to pass un-
used, the election has lapsed. From the moment of
his acceptance, the person elected acquires a real,
though still incomplete, right to the benefice or charge,
the jus ad rem to be completed and transformed into
full right (jus in re) by the confirmation of the election;
it is his privilege to exact this confirmation from the
superior, just as it is the latter's duty to give it, except
in the event of unworthiness, of which fact the supe-
rior remains judge. However, until the person elected
has received this confirmation, he cannot take advan-
tage of his still incomplete right to interfere in any
way whatever in the administration of his benefice, the
punishment being the invalidity of all administra-
tion, even if made and presented to the ecclesiastic
office itself. The ecclesiastical legislation on this point
is very severe, but it concerns episcopal sees only.
In
the
At
the
Second
Council
of
Lyons,
in
1274
(c.
Avari-
tie, v. h. t., in VI*), elected persons were forbidden,
under penalty of deprivation of their dignity, to med-
dle in the administration of their benefice by assuming
the title of administrator, procurator, or the like. A
little later, Boniface VIII (Extrav., Injunctae, i, h. t.)
established the rule still in force for entering on pos-
session of major benefices and episcopal sees, accord-
ingly to which the person elected must not be received
unless he present to the provisional administrators the
Apostolic Letters of his election, promotion, and
confirmation. The Council of Trent having estab-
lished the vicar capitular as provisional administrator
only on condition that it was necessary to prohibit elected persons from entering on
the administration of their future dioceses in the ca-
pacity of vicars capitular. This was done by Pius IX in the constitution "Romanus Pontifex" (28 August, 1865), which redefined and renewed the system of Boniface VIII. In this constitution the pope declares that the law "Avaritia" of the aforesaid Council of Lyons applies not only to bishops elected by chapters, but also to candidates named and presented by heads of states in virtue of concordate. He rules that such chapters cannot reserve to them the pope and not revoke their appointment. He also forbids them to designate as such persons nominated by the civil power, or otherwise elected to a vacant church. Offences against this law are severely punished; chapters are specially reserved to the pope and by privation of the revenues of their benefices for those dignitaries and canons who turn over the administration of their church to a person elected or nominated. The same penalties are pronounced against said elected or nominated persons, and against all who give them aid, counsel, or countenance. Moreover, the person elected or nominated forfeits all acquired right to the benefice, while all acts performed during his illegitimate administration are declared invalid.

We may now return to the confirmation of the election according to the law of the Decretals. It belonged to the immediate superior. It was his duty to extinguish all opposition by summoning the elected person to defend himself. Even if there were no opposition, the superior had to summon him by a general edict posted on the door of the vacant church, all who might possibly dispute the election to appear within a fixed period; all this under penalty of the nullity of subsequent confirmation (c. xvi, h. t., in VP). The superior had to examine carefully both the election and the qualifications of the candidate, in order to satisfy himself that everything was conformable to law; if his investigation proved favourable he gave the requisite confirmation whereby the elected person became definitively prelate of his church and received full jurisdiction. While the law did not bind the superior to any strict time-limit for the granting of confirmation, it authorized the elected person to complain if the delay were excessive. All this legislation, especially elaborated for episcopal elections, is now no longer applicable to them; however, it is still in force for inferior benefices, e. g. canonsries, when they are conferred by way of election.

VI. Elections Now in Use.—Electors, as the choice made by a college of its future prelate, is verified first of all in the designation of a pope by the college of cardinals. The election of chapters is still, theoretically, the common rule, but the general resolution formulated in the second rule of the Apostolic Chancery has suppressed in practice the application of this law; episcopal elections, in the strict sense of the word, occur now in only a small number of sees (see Bishop). Finally, the prelates of regulars are normally appointed by election; the same is true of abbesses. (See the Council of Trent, Sess. XXV, c. vi, De regul.) The common ecclesiastical law provides for no other elections. There are, however, other ecclesiastical elections that do not concern real prelates. Religious communities of men and women under simple vows proceed by election in the choice of superiors, superiors general, assistants general, and usually the members of the general councils. In cathedral churches it is by election that, on occasion of the vacancy of a see, the chapter appoints the vicar capitular (Council of Trent, Sess. XXIV, c. xvi, De ref.). It is also according to the canonical form of election that colleges, especially chapters, proceed in appointing persons, e. g., to dignities and canonnries, which are stipulated to one person. On the other hand, the inferior benefices to which the chapter has a right to nominate or present; again in the appointment of delegates on seminary commissions (Council of Trent, Sess. XXIII, c. xviii, De ref.), or in bestowing on some of its members various capitular offices, or making other such endowments. The same is true of other ecclesiastical groups, e. g., the chapters of collegiate churches, etc., also of confinements and other associations recognized by ecclesiastical authority. In the latter cases, however, there is no election in the strict canonical sense of the term.

Eleutherus (Eleutheros), Saint, Pope (c. 174-189). The Liber Pontificalis says that he was a native of Nicopolis, Greece. From his contemporary Hegesippus we learn that he was deacon of the Roman Church under Pope Anicetus (c. 154-164), and evidently consecrated as St. Peter's successor. He died when the condition of Christians under Marcus Aurelius was distressing in various parts of the empire, the persecution in Rome itself does not seem to have been violent. De Rossi, it is true, dates the martyrdom of St. Eleutherus in 189, but the Acts of the Apostles of this date, however, is by no means certain. During the reign of Commodus (180-192) the Christians enjoyed a practically unbroken peace, although the martyrdom of St. Appolinus at Rome took place at this time (180-185). The Montanist movement, that originated in Asia Minor, and was conducted in its way to Rome and Gaul in the second half of the second century, more particularly about the reign of Eleutherus; its peculiar nature made it difficult to take from the outset a decisive stand against it (see MONTANISM). During the violent persecution at Lyons, in 177, local confessors wrote from their prison concerning the new movement to the Asiatic and Phrygian brethren, also to Pope Eleutherus. The bearer of their letter to the pope was the presbyter Irenaeus, soon afterwards bishop of Lyons. It appears from statements of Eusebius concerning these letters that the faithful of Lyons, though opposed to the Montanist movement, advocated forbearance and pleaded for the preservation of ecclesiastical unity.

Just when the Roman Church took its definite stand against this new and not certainly known, it would seem from Tertullian's account (Adv. Praxeas, 1) that a Roman bishop did at one time address to the Montanists some conciliatory letters, but these letters, says Tertullian, were recalled. He probably refers to Pope Eleutherus, who long hesitated, but, after a conscientious and thorough study of the situation, is supposed to have declared against the Montanists. At Rome heretical Gnostics and Marcionites continued to propagate their false teachings. The "Liber Pontificalis," ascribed to Pope Eleutherus, mentions a decree that no kind of food should be despised by Christians (Et hoc iterum firmavit ut nulla esset Christianis repudiat aretur, maxime fidelissim, quod Deus creatit, quae tamen rationalis et humane est). Possibly he did issue such an edict against the Gnostics and Montanists; it is also possible that on his own responsibility the writer of the "Liber Pontificalis" attributed to this pope a similar decree current about the year 500. The same writer is responsible for a curious and interesting assertion concerning the early missionary activity of the Roman Church; indeed, the "Liber Pontificalis" contains no other statement equally remarkable. Pope Eleutherus, says this writer, received from Lucius, a British king, a letter in which the latter declared that by his heathen wishes to become a Chris-
tian (He acceptit epistula a Lucio Britannio rege, ut Christianus efficeretur per ejus mandatum). Whence the author of the first part of the "Liber Pontificalis" declares himself, it is impossible to say. Historically speaking, the fact is quite improbable, and is rejected by all recent critics.

As at the end of the second century the Roman administration was so securely established in Britain, there could no longer have been in the island any real native kings. That some tribal chief, known as king, should have applied to the Roman bishop for instruction in the Christian faith seems improbable enough at that period. The unsupported assertion of the "Liber Pontificalis", a compilation of papal biographies of the top canon, cannot antedate the first quarter of the sixth century, is not a sufficient basis for the acceptance of this statement. By some it is considered a story intended to demonstrate the Roman origin of the British Church, and consequently the latter's natural subjection to Rome. To make this clearer they locate the origin of the legend in the course of the seventh century, during the dissensions between the primitive British Church and the Anglo-Saxon Church recently established from Rome. But for this hypothesis all proof is lacking. Of the "Liber Pontificalis" was compiled long before these dissensions, most probably (Duchesne) by a Roman cleric in the reign of Pope Boniface II (530-532), or (Waists and Mommsen) early in the seventh century. Moreover, during the entire conflict that centred around the peculiar customs of the Early British Church no reference is ever made to this alleged King Lucius. Saint Bede is the first English writer (673-735) to mention the story repeatedly (Hist. Eccl., I, V; V, 24, De temporum ratione, 864), and he took it, not from native sources, but from the "Liber Pontificalis". Harnack suggests a more plausible theory (Sitzungsberichte der Berliner Akademie, 1904, I, 906-916). In the document, he holds, from which the compiler of the "Liber Pontificalis" drew his information the name found was not "Britannus", but Brito. Now this is the name (Birtha-Britium) of the fortress of Ecesa. The king in question is, therefore, Lucius Elizius Septinimius Megus Abgar IX, of Ecesa, a Christian king, as is well known. The original of the "Liber Pontificalis", in this hypothesis, had nothing to do with the name of this king. The reference was to the king of Abgar IX, Ecesa. But the compiler of the "Liber Pontificalis" changed Brito to Britonian, and in this way made a British king of the Syrian Lucius.

The ninth-century "Historia Brittonum" sees in Lucius the translation of the Celt, Leuer Mac (Great Light), says that the envoys of Lucius were Pagan and Wervan, and tells us that with this king all the other island kings (reguli Britanniae) were baptised (Hist. Brittonum, xvii). Thirteenth-century chronicles add the legend of "Liber Lenda". For example, (ed. Ruse, 264), makes known the names of Elfan and Medwy, the envoys sent by Lucius to the pope, and transposes the king's dominions to Wales. An echo of this legend penetrated even to Switzerland. In a homely prayer at Chur and preserved in an eighth- or ninth-century manuscript, St. Timothy is represented as an apostle of Gaul, whence he came to Britain and baptised there a king named Lucius, who became a missionary, went to Gaul, and finally settled at Chur, where he preached the gospel with great success. In this way Lucius, the early missionary of the British Church, is supposed to have become the legendary British king of the "Liber Pontificalis". The latter work is authority for the statement that Eleutherus died 24 May, and was buried on the Vatican Hill (in Vaticano) near the body of St. Peter. His feast is celebrated 26 May.

J. P. KIRCH.

Eleutherus (Fr. ELEUTHEREE), Saint, Bishop of Tournaí at the beginning of the sixth century. Historically there is very little known about St. Eleutherus, but he was without doubt the first Bishop of Tournaí. Theodore, whom some give as his immediate predecessor, was appointed by the Franks to the see of Tournaí, and was placed by mistake on the episcopal list of Tournaí, or simply a missionary who ministered to the Christians scattered throughout the small Frankish Kingdom of Tournaí. Before he became bishop, Eleutherus lived at court with his friend Medardus, who predicted that he would attain the dignity of a count and also be elevated to the episcopate. After Clovis, King of the Franks, had been converted to Christianity, in 496, with more than 3000 of his subjects, bishops took part in the royal councils. St. Remigius, Bishop of Rheims, organized the church in Northern Gaul, and it is more than likely that St. Eleutherus was named Bishop of Tournaí at this time.

The saint's biography in its present form was really an invention of Henri of Tournaí in the twelfth century. According to this, Eleutherus was born at Tournaí towards the end of the reign of Childeric, the father of Clovis, of a Christian family descended from Irenaus, who had been baptized by St. Platus. In his father's name was Tereus, and his mother's Blenda. Persuasion by the tribe in 511 obliged the Christians to flee from Tournaí and take refuge in the village of Blandinium. The conversion of Clovis, however, enabled the small community to reassemble and build at Blandinium a church, which was dedicated to St. Peter. Theodore was made Bishop of Tournaí, and Eleutherus succeeded him. Consulted by Pope Hormidas as to the best means of eradicating the heresy which threatened nascent Christianity, Eleutherus convened a synod and publically confounded the heretics. They vowed vengeance, and as their plot was on foot, one day, they fell on him and, after beating him unmercifully, left him for dead. He recovered, however, but his days were numbered. On his death-bed (529) he confided his flock to his lifelong friend, St. Medardus.

The motif underlying this biography, which was written by Canon Henri (1141), was to prove the antiquity of the Church of Tournaí, which from the end of the eleventh century had been trying to free itself from the jurisdiction of the bishops of Noyon. The sermons on the Trinity, Nativity, and the canon of the Annunciation (Bibliotheca Patrum, vol. XV), sometimes attributed to St. Eleutherus, are also of a more than doubtful authenticity. His cult, however, is well established; there is record of a recovery of his relics during the episcopate of Hedilo in 897 or 898, and a translation of them by Bishop Baudoin in 1064 or 1065, and another in 1247. Relics of this saint were also preserved in the monastery of St. Martin at Tournaí, and in the cathedral at Bruges. His feast is given in martyrologies on 20 or 21 July, but is usually celebrated on the former date. The translation of his relics is commemorated 25 August.

ELEUTHEROPOLIS

van der Esseel, etude critique et historique sur les Vites des Mérovingiens de l'ancienne Rome (Louvain, 1907), 304-97.

L. van der Esseel.

Eleutheropolis, a titular see in Palestina Prima. The former one of this city seems to have been Beth Gabra, "the house of the strong men", which later became Beth Djibrin, "the house of Gabriel". Vespasian slaughtered almost all its inhabitants, according to Josephus, De Bell., Jud., IV., vii, 1, where its name is written Betaros. In A. d. 200 Septimius Severus journey to enigmatically visited Eleutheropolis, and it soon became one of the most important cities of Judea. Its special era, which figures on its coins and in many inscriptions, began 1 Jan., A.D. 200. (See Echoes d'Orient, 1903, 310 sq.; 1904, 215 sq.) Its first known bishop is Macrinus (325); five others are mentioned in the fourth and two in the sixth century (Lequien, Or. Christ., III, 631). In 393, during the episcopate of Zebennus, the relics of the Prophets Habakuk and Micah were found at Cella and Tell Zazzariya near Eleutheropolis (Soson, H. E., VII, xxii). At Eleutheropolis was born St. Ephraimus, the celebrated bishop of Salamis in Cyprus; at Ad in the neighborhood he established a monastery which is often mentioned in the polemics of St. Jerome with Rufinus and John, Bishop of Jerusalem. The city was an important Christian center at least till the coming of the Arabs. The latter beheaded (638) at Eleutheropolis fifty soldiers of the garrison of Gaza who had refused to apostatize. They were buried in a church built in their honour. (See Anal. Bolland., 1904, 238 sq.; and Echoes d'Orient, 1905, 40 sq.) The city was destroyed by the Muslims in 796 in the civil wars. The Crusaders erected there a fortress, in 1134, under Fulco of Anjou; the Knights of St. John, to whom it was committed, restored at this time the beautiful Byzantine church at Sandahanna. The citadel was taken in 1157 by Saladin, conquered in 1191 by Richard Lion Heart, destroyed in 1264 by Sultan Bibars, and rebuilt in 1551 by the Turks. Today Beth Djibrin is a village with about 1000 Mussulman inhabitants, on the road from Jerusalem to Gaza, in a fertile and very healthy region. The medieval fortress still stands, about 180 feet square; there are also remains of the walls, ruins of a cloister, and of a medieval church. In the neighbourhood are remarkable grotoes, which filled St. Jerome with wonderment. Some of these grotoes were used in early Christiantime as places of worship; others bear Arabic inscriptions.

S. VAILHE.

Elevation, The.—What we now know as par excellence the Elevation of the Mass is a rite of comparatively recent introduction. The Oriental liturgies, and notably the Byzantine, have indeed a showing of the consecrated Host to the people, with the words "Holy things to the holy", but this should rather be regarded as the counterpart of our "Ecce Agnus Dei" and as a preliminary to the Communion. Again, in the West, the lifting of the Host at the words "omnis honor et gloria", immediately before the Pater Noster, has taken place ever since the ninth century or earlier. This may very probably be looked upon as originally an invitation to adore when the great consecratory prayer of the Mass is recited, and not as a Pater Noster (see Cabrol in "Dict. d'Archeologie", I, 1558) has been brought to a conclusion. But the showing of the Sacred Host (and still more of the Chalice) to the people after the utterance of the words of Institution, has been on many occasions not shown earlier than the close of the twelfth century. Eudes de Sully, Bishop of Paris from 1196 to 1205, seems to have been the first to direct in his episcopal statutes that after the consecratory words the Host should be shown to the people so that they might be partaking of it.

There has, however, been a good deal of confusion upon this point in the minds of some early liturgists, owing to the practice which prevailed of lifting from the altar and holding it in the hands above the chalice while consecrating it. Some degree of lifting, at the words "accepta es...tus as venerabiles manus suas", was unavoidable, and many priests carried it so far that liturgical commentators spoke of their act as "elevare hostiam" (cf. Migne, P. L., CLXXII, 370, and CLXXI, 1186), but a careful examination of the evidence shows that this was quite a different thing from showing the Host to the people. Moreover, the motive of this latter showing has generally been misconceived. It has often been held to be a protest against the heresy of Berengarius; but Berengarius died a century before, and the statements of writers at the beginning of the thirteenth century make the whole development plain. The great centre of intellectual life at that period was Paris, and we learn that at Paris a curious theological view was then being defended by such eminent scholars as Procopius and the professors Peter Cantor, that transubstantiation of the bread only took place when the priest at Mass had pronounced the words of consecration over both bread and wine (see, e.g., Giralduz Cabrenesis, Works, II, 124; Cessarius of Heisterbach, "Dialogus", IX, 1, 77, and Dei Miraculae Miraculorum, De Euchar.).

To quote the words of Peter of Poitiers: "dicit quidam... quod non facta est transubstantiatio panis in corpus donec sacerdos sussurrat miraculum. Hic est sanguis" (Migne, P. L., CCXI, 1245; Pope Innocent III., De sacro altari mysterio... IT), 42, uses very similar language). This view, as may readily be understood, aroused considerable opposition, and notably on the part of Bishop Eudes de Sully and Stephen Langton, afterwards Archbishop of Canterbury and cardinal. It seems clear that the theologians of this party, by way of protest against the teaching of Peter Cantor, adopted the custom of adoring the Host immediately after the words "Hoc est enim corpus meum" were spoken, and by a natural transition they encouraged the practice of showing it to the people for this purpose. Since these developments can be easily followed in the procedural decrees of France, England, and other countries during the thirteenth century. We find mention of a little bell of warning in the earlier years of that century, and before the end of the same century it was enjoined in many dioceses of the Continent and in England that one of the chimes of the clock should be struck at the moment of the Elevation, in order that those at work in the fields might kneel down and adore. It will be readily understood from the above explanation that there was not the same motive at first for insisting on the elevation of the Chalice as well as the Host. No one at that period doubted that by the time the words of Institution had been spoken over the wine, transubstantiation had been effected in both species. We find accordingly that the elevation of the Chalice was introduced much more slowly. It was not adopted at St. Alban's Abbey until 1442, and we may say that it is not practised by the Carthusians even to this day. The elevation of the Host at Mass seems to have brought in its train a great idea of the special merit and virtue of looking upon the Body of Christ. Promises of an extravagant kind circulated freely among the people describing the privileges of him who had seen his Maker at Mass. Sudden death could not befall him. He was secure from hunger, infection, the danger of fire, etc. As a result, an extraordinary desire developed to see the Host when elevated at Mass, and this led to a variety of abuses which were deplored by preachers and satirists. On the other hand, the same devout instinct undoubtedly fostered the introduction of processions of the Blessed Sacrament and
the practice of our familiar Exposition and Benedicition (qq.v.).

All the usual authorities upon the liturgic history of the Mass agree in assigning this object to the Mass, which I submit to be the important point as to the teaching of the Paris theologian of the twelfth century. See Thurston, The Elevation in The Table of Festivals, 18 Nov. 1884. For a full account of this and similar facts, see from Giorgi, De Liturgiâ Rom. Pont. (Rome, 1747); Du Bellay, The Academy of Rhetoric at Paris; les ceremonies de Messe (Paris, 1726); Gehr, Das heilige Messopfer (St. Louis, 1892); Thulhofer, Liturgik (Freiburg, 1883). H. D. Panabaker in Camb., Tracts, 1893, 4; Modest; see further the bibliography of the article Canon of the Mass.

Hertbert Thurston.

ELEVEN THOUSAND VIRGINS, THE. See USBUL, SAINT.

Elyhuyar de Suvia, Fausto de, a distinguished mineralogist and chemist, b. at Logroño, Castle, 11 Oct., 1755; d. 6 Feb., 1833. He was professor in the School of Mines, Vergara, Biscay, from 1781 to 1785. His most celebrated work is the isolation of tungsten. Associated with his brother, Juan José, in 1783, two years after Scheele and Bergman had announced the probable existence of this metal, he isolated it, reducing it by carbon. At the present day tungsten steel, a high speed steel and self-hardening steel, is revolutionizing the machinist's art. This work of Elyhuyar is of particular interest. He named the metal Wolfram, a name which it still retains in the German language; the name, tungsten, meaning heavy stone, is generally used in other tongues. The Académie des Sciences of Paris, on 8 March, 1784, received notice of this discovery. Elyhuyar then spent three years in travelling, for the purpose of study, through Central Europe and went to Mexico, then called New Spain. Here he had general superintendence of the mining of the Royal Schools of Mines in 1792. Driven away by the Revolution, he returned to Spain, where he was appointed general director of mines and was busy reorganizing his department when he was seized with a fit of apoplexy and died. His works are numerous; he wrote, in the theory of amalgamation, a system for the reduction of silver from its ore which received great development in Mexico. In 1818 he published memoirs on the mintage of coins. He was also the author of memoirs on the state of the mines of New Spain (now Mexico) and on the exploitation of the Spanish mines. At Madrid, in 1823, he published a work on the influence of mineralogy in agriculture and chemistry.

Biographies in Dictionnaire Laruelle, La Grande Encyclopédie, and other works. His name is written as Elyhuyar in Warten, Dictionnaire de chimie; Warten, Dictionary of Chemistry; Montaigu, Chémie.

O'Connor Sloane.

Elías (Heb. 'Elahu, "Yahweh is God"; A.V., Elijah), the loftiest and most wonderful prophet of the D.T. What we know of his public life is sketched in a few popular narratives enshrined, for the most part, in the Third (Heb., First) Book of Kings. These narratives, which bear the stamp of an almost contemporary, very likely took shape in Northern Israel, and are full of the most graphic and interesting details. Every part of the prophet's life therein narrated bears out the description of the writer of Ecclesiasticus: He was "a fire, and his word burnt like a torch," (xiv, 1). The names called for such a prophet. Under the useful influence of his Tyrian wife Jezebel, Ahab, though perhaps not intending to forsook altogether Yahweh's worship, had nevertheless erected in Samaria a temple to the Tyrian Baal (III K., xvi, 32) and introduced a multitude of foreign priests (xviii 19); doubtless he had occasionally offered sacrifices to the pagan deity, and, of most of all, had followed a bloody persecution of the prophets of Yahweh.

Of Elias's origin nothing is known, except that he was a Thebite; whether from Thibae of Nephtali (Tob., 1, 2, Gr.) or from Thebost of Galaad, as our texts have, is not absolutely certain, although most scholars, on the authority of the Septuagint and of Josephus, prefer the latter opinion. Some Jewish legends, echoed in a few Christian writings, assert moreover that Elias was of priestly descent; but there is no other warrant for the statement than the fact that he offered sacrifice. His whole manner of life resembles somewhat that of the Nazirite, and in his time of his corpore age. His skin garment and leather girdle (IV K., 1, 8), his swift foot (III K., xviii, 46), his habit of dwelling in the clefts of the torrents (xvii, 3) or in the caves of the mountains (xix, 8), of sleeping under a rock for security (xix, 2), betrays the true son of the desert. He appears abruptly on the scene of history to announce to Achab that Yahweh had determined to avenge the apostasy of Israel and her king by bringing a long drought upon the land. His message delivered, the prophet vanished as suddenly as he had appeared, and, guided by the spirit of Yahweh, betook himself by the brook Carith, to the east of the Jordan, and the ravens (some critics would translate, however improbable the rendering, "Arabs" or "merchants") "brought him bread and flesh in the morning, and bread and flesh in the evening, and he drank of the torrent" (xvii, 6).

After the brook had dried up, Elias, under Divine direction, crossed over to Sarepta, within the Tyrian dominion. There he was hospitably received by a poor widow whose son had a little meal (12); her charity he rewarded by increasing her store of meal and oil all the while the drought and famine prevailed, and later on by restoring her child to life (14–24). For three years there fell no rain or dew in Israel, and the land was utterly barren. Meanwhile Ahab had made fruitless efforts and sequested the country in search of Elias. At length the latter resolved to confront the king once more, and, suddenly appearing before Abidias, bade him summon his master (xviii, 7, seq.). When they met, Ahab bitterly upbraided the prophet as the cause of the misfortune of Israel. But the prophet flung back the charge: "I have not troubled Israel, but thou and thy father's house, who have forsaken the commandments of the Lord, and have followed Baalim" (xviii, 18). Taking advantage of the discomfited spirits of the silenced king, Elias bade him summon the prophets of Baal to Mount Carmel, for a decisive contest between their god and Yahweh. The ordeal took place before a great concourse of people (see CARMEL, MOUNT) whom Elias, in the most forcible terms, presses to choose: "How long do you stagger between two gods? If Yahweh be God, follow him; but if Baal, then follow him" (xviii, 21). He then commanded the heathen prophets to invoke their deity; he himself would "call on the name of his Lord"; and the God who would answer by fire, "let him be God" (24). An altar had been erected by the Baal-shaphers and the victim laid upon it; but their cries, their wild dances and mad self-mutilations all the day long availed nothing: "there was no voice heard, nor did any answer, nor regard them as they prayed" (29). Elias, having removed the ruins of Baal's altar, a newly made altar, prepared thereon his sacrifice; then, when it was time to offer the evening oblation, as he was praying earnestly, "the fire of the Lord fell, and consumed the holocaust, and the wood, and the stones, and the dust, and licked up the water that was in the trench" (38). The issue was fought and won. The people, maudified by the success, fell at Elias's command on the pagan prophets and slew them at the brook Cison. That same evening the drought ceased with a heavy downpour of rain, in the midst of which the strange prophet ran before Achab. Elias remained three days and nights. Elias's triumph was short. The anger of Jezebel, who had sworn to take his life (xix, 2), compelled him to flee without delay, and take his refuge beyond the desert of Juda, in the sanctuary of Mount Horeb. There, in the wilds of the sacred mountain, broken-
ELIAS

spirit, he poured out his complaint before the Lord, who strengthened him by a revelation and restored his faith. Three commands are laid upon him: to anoint Hazael to be king of Syria, Jehu to be king of Israel, and Elisha to be his own successor. At once Elisha sets out to accomplish this new burden. On his way to Hazael, Elisha meets Eli, the priest, in the act of throwing his mantle over him, makes him his faithful disciple and inseparable companion, to whom the completion of his task will be entrusted. The treacherous murder of Naboth was the occasion for a new reappearance of Elisha at Jezreel, where he vindicated the rights of the people and of social order, and to announce to Ahab his impending doom. Ahab’s house shall fall. In the place where the dogs licked the blood of Naboth will the dogs lick the king’s blood; they shall eat Jesa- bel in Jezreel; their whole posterity shall perish and their bodies be given to the fowls of the air (xxi, 20-26). Conscience-stricken, Ahab quailed before the man of God, and in view of his penance the threatened ruin of his house was delayed. The next time we hear of Elisha, it is in connexion with Ochosias, Ahab’s son and successor. Elisha, En Esra, the scribe, in a vision, this prince sent messengers to the shrine of Beel- sebub, god of Accaron, to inquire whether he should recover. They were intercepted by the prophet, who sent them back to their master with the intimation that his injuries would prove fatal. Several bands of men set to work to capture Elisha; but these were burned by fire from heaven; finally the man of God appeared in person before Ochosias to confirm his threatening message. Jorjam, King of Judah, who had indulged in Baal-worship, received from Elisha a letter warning him that all his house would be smitten by a plague, and that he himself was doomed to an early death.

According to IV K., iii, Elisha’s career ended before the death of Joseph. This statement is difficult but not impossible—to harmonize with the preceding narrative. However this may be, Elisha vanished still more mysteriously than he had appeared. Like Enoch, in Hebrew, he was "translated," so that he should not taste death. As he was conversing with his spiritual son Eliseus on the hills of Moab, "a fiery chariot and fiery horses part ed them both asunder, and Elisha went up by a whirlwind into heaven" (IV K., ii, 11), and all the efforts to find him made by the sceptic sons of the prophets disbelieving Eliseus’s recital, availed nothing. The memory of Elisha has ever remained living in the minds of men—first devoted to the prophecies of Malachias, God preserved the prophet alive to entrust him, at the end of time, with a glorious mission (iv, 5-6); at the New Testament period, this mission was believed to precede immediately the Messianic Advent (Matt., xvii, 10, 12; Mark, ix, 11); according to some Christian commentators, it would consist in converting the Jews (St. Jer., iv, 5-6); the rabbis, finally; affirm that its object will be to give the explanations and answers hitherto kept back by them. Mach., ii, 55, exalts Eliseus’s seal for the Law, and Benzinger refers his Achism to the late or post-apocalyptic character of his actions and the description of his future mission (Exclus., xlviii, 1-12). Elisha is still in the N. T. the personification of the servant of God (Matt., xvi, 14; Luke, i, 17; ix, 8; John, i, 21). No wonder, therefore, that with Moses he appeared at Jesus’ side on the day of the Transfiguration.

Nor do we find only in the sacred literature and the commentaries thereof evidences of the conspicuous place Eliseus won for himself in the minds of after-gens. To this day the name of Jehel Bar Elises, usually given by modern Arabs to Mount Carmel, perpetuates the memory of the man of God. Various places on the mountain: Elies’s grotto; El-Khad, the supposed school of the prophets; El-Muhraka, the traditional spot of Eliseus’s sacrifice; Tell el-Kassis, or Mound of the priests—where he is said to have slain the priests of Baal—are still in great veneration both among the Christians of all denominations and among the Moslems. Every year the Druses assemble at El-Muhraka to hold a festival and offer a sacrifice in honour of Eliseus. All Moslems have the prophet in great veneration; no Moslem is permitted to swear an oath made in the name of Eliseus. Not only among them, but to some extent also among the Jews and Christians, many legendary tales are associated with the prophet’s memory. The Carmelites monks long cherished the belief that their order could be traced back in unbroken succession to Eliseus whom they hailed as their founder. Vigorously opposed by the Bollandists, especially by Papenbroeck, their claim was no less vigorously upheld by the Carmelites of Flanders, until Pope Innocent XII, in 1688, deemed it advisable to silence both contending parties. They are nowHonoured by both the Greek and Latin Churches on 20 July.

The old stichometric lists and ancient ecclesiastical writers (Const. Apoc., vi, 16; Origen, Comm., iv, 22, xxviii, 9; Eusebius, Epiph., Hier, xii, 4) mention an apocryphal "Apocalypse of Eliseus," citations from which are said to be found in I Cor., ii, 9, and Eph., v. 14. Lost to view since the early Christian centuries, this work was partly recovered in a Coptic translation found (1893) by Maspero in a monastery of Upper Egypt, and partly so far as concerns Elisha has since been also discovered. What we possess now of this Apocalypse—and it seems that we have by far the greater part of it—was published in 1899 by G. Steindorf; the passages cited in I Cor., ii, 9, and Eph., v. 14, do not appear there; the Apocalypse, on the other hand, has a striking analogy with the Jewish "Sopher Elisa."

STEINDORF, Die Apokalypse des Elisha, eine unbekannte Apo- kalypse und Ne admon der Sepher Yeshiim, 1899; SMITH, The Prophets of Israel (London, 1888); MIGNON, Las Prophéties d’Israël (Paris, 1892); Clemen, Die Wunderbe- richte über Elia und Elisha in den Stilistein der Religiösen (Giessen, 1877).

CHARLES L. SOUAY.

ELIAS, APOCALYPSE OF. See ELIAS; EGYPT, VI.

Coptic Literature.

Elias of Cortona, Minister General of the Friars Minor, b., it is said, at Bevila near Assisi, c. 1180; d. at Cortona, 22 April, 1253. In the writings of Eliseus that have come down to us he styles himself "Brother Elisha, Sinner," and his contemporaries without exception call him simply "Brother Elisha." The name of a nature which was first spread in the Egyptian century; in Franciscan compilations like the "Chronicae XXXIV generalium" and the "Libri Conformitatim" Eliseus is described as Hilias de Assisio, whereas the name of Cortona does not appear in connection with his before the seventeenth century. It is clear in any event that Eliseus did not belong to the noble family of Coppa as some have asserted. From Salimbene, who knew Eliseus well, we learn that his family name was Bonusbaro or Bonbarone, that his father was from the neighbourhood of Bologna, and his mother from Assisi. After serving as a soldier, Eliseus worked at his father’s trade of mattress-making and also taught the children of Assisi to read the Psalter. Later on, according to Eccleston, Eliseus was a scribe, or oratry, at Bologna, where no doubt he applied himself to study. But he was not a cleric and never became a priest. Eliseus appears to have been one of the earliest companions of St. Francis of Assisi. The time and place of his joining the saint are uncertain; it may have been at Cortona in 1211, as Wadding says. Certain it is, however, that he held a place of prominence among the brethren of the new order. After a short sojourn, as it seems, in Tuscany, Eliseus was sent in 1217 as head of a band of missionaries to Palestine, and two years later he became the first provincial of the then extensive province of Syria. It was in this
capacity that he received Caesar of Speyer into the order. Although we are ignorant of the nature or extent of Elias's work in the East, it would seem that the toll of death impressed upon him. In 1220–21 Elias returned to Italy with St. Francis, who showed further confidence in him by naming him to succeed Peter of Cataneo (d. 10 March, 1221) as vicar-general of the order. Elias had held this office for five years when Francis died (3 Oct., 1226), and he then became charged with the responsibilities of the moment and the provisional government of the Friars Minor. After announcing the death of Francis and the fact of the Stigmata to the order in a beautiful letter, and superintending the temporary burial of the saint at San Giorgio, Elias at once began to lay plans for the erection of a great basilica at Assisi, to enshrine the remains of the Poverello. To this end he obtained a donation, with the authority of the pope, of the so-called Collis Inferni at the western extremity of the town, and proceeded to collect money in various ways to meet the expenses of the building. Elias thus alienated the zealots in the order, who felt entirely with St. Francis upon the question of poverty, so that at the chapter held in May, 1227, Elias was rejected in spite of his prominence, and Giovanni Parini, a native of Spain, was elected second general of the order.

Thereafter Elias devoted all his energies to raising the basilica in honour of St. Francis. The first stone was laid 17 July, 1228, the day following the saint's repose at the work advanced with such incredible speed that the lower church was finished within twenty-two months. It was consecrated 25 May, 1230, the hurried, secret, and still unexplained translation of St. Francis's body thither from San Giorgio planned by Elias having taken place a few days previously, before the general and other friars assembled for the purpose were present. Soon after this, though there is some difference of opinion as to the exact date, Elias attempted, as it seems by a kind of coup de main, to depose Parenti and seize the government of the order by force, but the attempt failed. He thereupon retired to a distant hermitage, where we are told he allowed his beard and hair to grow, wore the vilest habit, and to all appearances led a most penurious life. However this may be, Elias was afterwards elected to succeed Parenti as general at the chapter in 1232, the temporary chronicle expresses it; and he continued to govern the Friars Minor for nearly seven years. During that period the order was passing through one of the crises of its earlier development. It is well known (p. 329) that thereupon convocation of St. Francis a division had shown itself in the ranks of the friars, some being for relaxing the rigour of the rule, especially as regards the observance of poverty, and others for adhering to its literal strictness. The enmity of the Elias, after his election as general helped to widen this breach and fan the flames of discord in the order. In arbitrary fashion he refused to convene a chapter or to visit any of the provinces, but sent in his place "visitors", who acted as tax collectors—for Elias's chief need was money to complete the church and convert St. Francis—thus not only violating the rule himself, but causing others to do so also. In many other respects Elias abused his authority, receiving unworthy subjects into the order and confining the most important offices to ignorant lay brothers, and when several of the early and most venerable companions of Francis withstood his merciless methods, they were dealt with as mutineers, some being scourged, others exiled or imprisoned. Elias's manner of life made his despotism more intolerable. It seems to have been that of a powerful baron rather than of a mendicant friar. We do not know that he gathered about him a household of great splendour, including secular lackies, dressed in the gayest livery, that he kept "a most excellent cook" for his exclusive use, that he fared sumptuously, wore splendid garments, and made his journeys to different courts on fine packhorses with rich trappings. Because of these excesses, which threatened the complete destruction of the rule, the opposition to Elias became widespread. It was organized by Aymon of Faversham, who, in conjunction with other provincials from the North, determined to have him removed, and appeared to Gregory IX. Elias excommunicated the appellants and sought to prevent their reception by the pope. But Gregory received them and, in spite of Elias, summoned a chapter at Rome. Elias resisted to the utmost and strove to browbeat his accusers, but Gregory called upon him to resign. He refused to do so, and was thereupon deposed by the pope, the English provincial, Albert of Pisa, being elected general in his stead. This was in 1239.

After his deposition, Elias, who still kept the titles of Custos of the Assisi basilica and Master of the Works, seems to have buried himself anew for a time at the task of completing the church and convent of St. Francesco, but subsequently retired to Cortona.

Refusing to obey either the general or the pope, Elias now openly transferred his allegiance to Frederick II, and we read of him in 1240 with the emperor's army, riding on a magnificent charger at the siege of Faenza and at that of Ravenna. Some two years before this Elias had been sent by Gregory IX as an ambassador to Frederick. He now became the supporter of the excommunicated emperor in his strife with Rome and was himself excommunicated by Gregory. It is said that Elias afterwards wrote a letter to the pope explaining his conduct and seeking pardon, and that this letter was found in the tunic of Albert of Pisa after the latter's death. Aymon of Faversham, who had been the principal opponent of Elias, and who was elected general in succession to Albert, having died in 1244, a chapter was convoked in presence of Elias. Elias was summoned by Innocent IV to attend it, but he failed to appear. Some say that the papal mandate never reached him. Be this as it may, Elias was excommunicated anew and expelled from the order. The news of his disgrace spread quickly "to the great scandal of the Church", and the very children might be heard singing in the streets:

"Hor attorna fratti' Helya
Ke pres' ha la mala via'"

a couplet which means the friars at every turn, so that the very name of Elias became hateful to them. It was about this time that Elias was sent by Frederick II on an important diplomatic mission to Constantinople and Cyprus. When not employed by the emperor, Elias resided at Cortona with a few friars who had remained faithful to him. He dwelt for a time in a private house there, still known as the casa di frate Elias, but in January, 1245, the people of Cortona, for whom he had obtained sundry privileges in the past, presented him with a piece of ground called the Bogno della Ripina, and helped him to erect thereon the splendid church and convent dedicated to St. Francis.

Soon after Blessed Giovanni da Parma became gen-
eral in 1247, he sent Fra Gerardo da Modena to Cortona to beg Elias to submit, promising that he would be treated with the utmost clemency. But Elias, who seems to have been habitual heretic, refused to have anything to do with the pope and on the other hand have been unwilling to renounce the favour of Frederick II, declined. During Passiontide, 1253, the lonely old man,—for Elias had lost his protector by Frederick's death in 1250,—fell seriously ill. We learn from the sworn testimony of several witnesses that Bencio, Archpriest of Cortona, recognizing at once the gravity of Elias's condition and the reality of his repentance, absolved him on Holy Saturday, 19 April; that two days later Elias received the Sacrament from the hands of Fra Diamante, but that he could not be anointed, since, Cortona being then under interdict, no holy oil was to be found. On Easter Tuesday Elias died, reconciled indeed with the Church, but outside the order. He was buried at Cortona in the church he had built, which two years later—his followers having returned to obedience—passed into the hands of the order. But Elias's bones were not suffered to rest at S. Francesco, for a later guardian dug them up and flung them out.

The task perhaps the most difficult character to estimate in all Franciscan history. In the first place it is wellnigh impossible, with the documents at our disposal, to obtain even a clear idea of his chequered career. There is no contemporary life of Elias, and, with the exception of Celano's "Vita Prima", which is said to have been written under the influence of Elias, none of the early biographies of St. Francis make any allusion to him. In the second place, considerable bias has to be reckoned with in what is recorded of Elias in later works, especially in the writings of the Zelanti, which are often coloured less by historical considerations than by party spirit. Many stories have gathered around the life of Elias which are largely inventions. Yet these fictions have been indiscriminately reproduced by subsequent writers, with the result that Elias has come to be depicted by too many modern biographers of St. Francis as a traitor to his master's interests, as a mere tool of the Curia in transforming the order and destroying the manner of life intended by the Poverello. But if some have branded Elias as another Judas, others, going to the opposite extreme, have not hesitated to call him the St. Paul of St. Francis. Laying undue stress on some words of St. Antoninus, they have sought to exculpate Elias altogether, to justify his conduct at all hazards, even where it is wholly unjustifiable; they would fain make him appear as a second founder of the order whose greatness was mainly due. It is just because so few have written calmly about Elias that it becomes additionally difficult to form a just estimate of the real motives which guided him. He has been too much abused and too much extolled. Between the two extremes it seems necessary, if we would judge with fairness, to distinguish two periods in the life of Elias, namely, before the death of St. Francis and after it. In spite of the account of Elias's early pride and frowardness given by the "Floretta"—which may be set aside as a picturesque slander introduced for artistic effect—there is nothing to show that Elias was other than a good religious during the lifetime of St. Francis, else it is hard to understand how the latter could have entrusted him with so much responsibility, and how he could have rejected the special death-bed blessing of the Poverello. On the other hand that Elias really loved St. Francis there can be no doubt, and so far as we have means of ascertaining there never was any breach between them. At the same time it would be difficult to imagine two characters more widely different than the St. Francis and St. Elias, and his monograph is therefore a "document", but its objective value is greatly spoilt by the author's apparent anxiety to read a gospel of his own into the annals of the Franciscan history. These biographies to some of the original authorities from which they are known that Elias is described in "Legenda Prima B. Francisci, ed. ALemoni (Rome, 1806), p. 230 and passim; Chronicu jurand., ed. I, 18 sqq.; Boccalini, "Annales Gregoriani," tom. ii, 248; etc.; Chronicu jurand., ed. i, 1878, 15 sqq.; Salimbene, "Chronicu in Mon. ELIA

Elia of Jerusalem, d. 518, one of the two Catholic bishops (with Flavian of Antioch) who resisted the attempt of the Emperor Anastasius I (491–518) to abolish the Council of Chalcedon (451). Anastasius spent the greater part of his reign in a vain attempt to impose Monophysitism on his subjects. Unlike his predecessors, who favoured Monophysitism merely as a political expedient whereby to conciliate Egypt and the great number of Monophysites in Syria, Anastasius carried on his propaganda apparently from religious conviction. His chief adviser, Marinus, a Syrian, was also a convinced Monophysite. At first the emperor tried to arrange a compromise. The population of Constantinople and nearly all the eastern provinces were too Chalcedonian for an open attack on that council to be safe. Macedonius II, Patriarch of Constantinople (469–511), submitted so far as to sign Zeno's Henotikon (482), but refused to condone the heretical council. The emperor consequently approved of a policy of compromise. The Acacian schism (484–519) still continued during the reign of Anastasius, but the emperor and his patriarch made advances to the Roman See—advances that came to nothing, since the pope always insisted on the removal of the names of former schismatics from the Byzantine diptychs. Gradually Anastasius went over completely to the Monophysites. Severus of Sapore, Xenaios of Tahal in Persia, and a great crowd of Syrian and Egyptian Monophysite monks overcame Fashion and changed their convictions and to break openly with the Dypophysites. In the emperor's chapel the Trisagion was sung with the famous Monophysite addition ("who was crucified for us"). Macedonius of Constantinople was deposed (511), and an open Monophysite, Timothy I (511–518), took his place. Timothy began a fierce persecution of Catholics. Then the Government summoned a synod at Sidon in 512 that was to condemn the Council of Chalcedon. It was chiefly Elia of Jerusalem who prevented this result.

Elia was a man who had been educated in a monastery in Egypt. In 457 he was driven out by the Monophysite Patriarch of Alexandria, Timothy the Cat, and then came to Palestine and founded a laura at Jericho. Anastasius of Jerusalem ordained him, and the emperor ordered him to depose a synod that should condemn the Council of Chalcedon. Instead, Elia sent the emperor a Catholic profession that his enemies seem to have falsified on the way. Evagrius says: "He when he had written sent it to the Emperor by the hands of Dioscorus' followers" (Monophysite). "And the profession that they then showed contained an anathema against those who speak of two natures in Christ. But the Bishop of Jerusalem, saying that it had been tampered with, sent another without that anathema. Nor is this surprising. For they often corrupted works of the holy Fathers" (H. E., III, xxxi).

The Synod of Sidon in 512 was to condemn Chalcedon and depose Elia and Flavian. But they succeeded in persuading the Fathers to do neither (Labbe, Conc. IV, 1414). The Monophysites went on accusing these two of Nestorianism, and Anastasius deposed them, in spite of the protest of Elia's legate, Sabas. Flavian was deposed first and Severus, an open Monophysite, was intruded in his place. With this person Elia and the monks of Palestine would have no communion, and Elia departed for Jerusalem and offered Elia his choice of signing a Monophysite formula or being deposed. Elia refused to sign and was banished to Aila on the Red Sea (513). His monks remained faithful to him to the end.

Elia of Jerusalem was the founder of many monasteries in his patriarchate. The common presentation of him as a compromiser is unjust. He was steadfastly Catholic throughout and protested against any concurrence in a heretical formula brought to the emperor in his name. The Syrian Uniat Church keeps his feast, with St. Flavian of Antioch, on 18 Feb. (Nilles, Kalend. Man., I, 471). These two are named in the Roman Martyrology on 4 July.

ADRIAN FORTEZUC

Elie de Beaumont, Jean-Baptiste-Armand-Louis Léonc, geologist, b. at Canon (Dép. Calvados), near Caen, France, 25 Sept., 1788; d. at Canon, 21 Sept., 1874. He made the acquaintance of the Bishop of Bayeux, who encouraged him to become a geologist. After his ordination he joined the Séminaire Henri IV in Paris, and after successfully completing the course at the École Polytechnique devoted himself in 1819 to mineralogy at the École des Mines. His professor of geology, Brochant de Villiers, in 1822, chose him and his fellow-student Dufrenoy as companions on a tour to England, to study the mines of the country and to become acquainted with the British methods of geological surveying. After their return, Elie de Beaumont published a series of papers in conjunction with Dufrenoy in the Annales des Mines, which in 1836 were reissued, with additional contributions by Beaumont, and published under the title "Voyage métallurgique en Angleterre", 2 vols. (Paris, 1837–39). In 1826 the two young geologists began the preparation of a geological map of France. This great work, carried on, first under the direction of de Villiers and afterwards independently, required eighteen years for its completion. Its publication was an event of much importance in the development of geology in France and established the reputation of its authors. Later and more complete editions were afterwards issued by Elie de Beaumont alone and his work is the special geological survey until his death.

In 1827 he was elected professor of geology at the École des Mines and in 1832 was appointed to the same chair in the Collège de France. In 1833 he became Chief Engineer of Mines and some years later succeeded de Villiers as General Inspector of Mines. He received many honours during his long career in recognition of his scientific achievements. He was admitted to the Académie des Sciences in 1835 and succeeded Arago in 1853 as its perpetual secretary. He served as President of the Geological Society of France and in 1861 became Vice-President of the Conseil Général des Mines. He was made a Senator of France in 1852 and during the Second Empire a Grand Officer of the Legion of Honour.

His fame extended throughout Europe. His extensive field observations, in connection with his surveys and his epoch-making work on the age and origin of mountain systems, constitute his chief contributions to geology. A paper published by him, as early as 1829, in the Annales of the Academy, may be regarded as the starting-point of modern views on mountain structure. His observations and theories on the subject are developed in detail in his "Notice sur les systèmes des montagnes", 3 vols. (1852). Elie de Beaumont was a man of ardent faith and great integrity of life. In his official positions he was
...) nonpous pour son faîtes et consideration por ses collegues. He was also the author of "Observations sur les differantes formes dans le systeme des Voages", Paris, 1829; "Memoires pour servir à une description géologique de la France" (with Dufrénoy), 4 vols., Paris, 1830-38; "Recherches sur quelques-unes des révolutions de la surface du globe", Paris, 1834; "Explications de la carte géologique de la France", Paris, Part I, 1841; Part II-IV, 1849-73 (with Dufrénoy).

This article is on H. M. Brock.

ELIGIUS (Fr. Eloi), Saint; Bishop of Noyon-Tournai, b. at Chaptelat near Limoges, France, c. 590, of Roman parents, Eucherius and Terridna; d. at Noyon, 1 December, 660. His father, recognizing unusual talent in his son, sent him to the noted goldsmith Abbo, master of the mint at Limoges. Later Eligius went to Neustria, where he worked under Babo, the royal treasurer, on whose recommendation Clotaire II commissioned him to make a throne of gold adorned with precious stones. His honesty in this so pleased the king that he appointed him master of the mint at Neustria and took him into his household. After the death of CLOTAR II (629), Dagobert appointed his father's friend his chief councillor. The fame of Eligius spread rapidly, and ambassadors first paid their respects to him before going to the king. His success in inducing the Breton King, Judalind, to submit to Frankish authority (636-37) increased his influence. Eligius took advantage of this to obtain aims for the poor and to ransom Roman, Gallic, Breton, Saxony, and Moorish captives, who were arriving daily at Marseilles. He founded several monasteries, and with the king's support he served as a bishop to twenty villages to take down the names of malefactors who had been executed, and give them decent burial. Eligius was a source of edification at court, where he and his friend Dado (Audoenus) lived according to the Irish monastic rule, introduced into Gaul by St. Columbanus. Eligius introduced this rule, either entirely or in part, into the monastery of Solignac which he founded in 632, and into the convent at Paris where three hundred virgins were under the guidance of the Abbess Aurea. He also built the basilica of St. Paul, and the present church of St. Martial of Visc. He erected several fine churches in honour of the relics of St. Martin of Tours the national saint of the Franks, and St. Denis, who was chosen patron saint by the king. On the death of Dagobert (639), Queen Nanthilde took over government, and Eligius and Dado left the court and entered the priesthood. On the death of Acaarius, Bishop of Noyon-Tournai, 13 May, 640, Eligius was made his successor with the unanimous approbation of clergy and people. The inhabitants of his diocese were pagans for the most part. He undertook the conversion of the Flemings, Antwerpians, Frisians, Suevi, and the barbarian tribes along the coast. In 654 he approved the famous privilege granted to the Abbey of Saint-Denis, Paris, exempting it from the jurisdiction of the ordinary. In his own episcopal city of Noyon he built and endowed a monastery for virgins. After the finding of the body of St. Quentin, Bishop Eligius erected in his honour a church to which was joined a monastery under the Irish rule. He also discovered the bodies of St. Piatius and companions, and in 654 removed the remains of St. Pursey, the celebrated Irish missionary (d. 650). Eligius was buried at Noyon. There is in existence a sermon written by Eligius, in which he combates the pagan practices of his time, a homily on the last judgment, also a letter written in 645, in which he begs for the prayers of Bishop Desiderius of Cahors. The fourteen other homilies attributed to him are of doubtful authenticity. His homilies have been edited by Krusch in "Mon. Germ. Hist." (loc. cit., infra).

St. Eligius is particularly honoured in Flanders, in the province of Antwerp, and at Tournai, Courtlai of Ghent, Béthune (with Dufrénoy). His relics were the object of special veneration, and were often transferred to other resting-places, thus in 881, 1066, 1137, 1255, and 1306. He is the patron of goldsmiths, blacksmiths, and all workers in metal. Calption have also put themselves under his protectio.
friends, the newly chosen Prophet "followed Elia, and ministered to him". (III Kings, xix, 8-21.) He went with his master from Galgal to Bethel, to Jericho, and thence to the eastern side of the Jordan, the waters of which were dried by the mantle, to permit both to pass on dry ground. Eliseus then beheld Elia in a fiery chariot taken up by a whirlwind into heaven. By means of the mantle let fall from Elia, Eliseus miraculously recrossed the Jordan, and so from the prophets at Jericho the recognition of "the spirit of Elia hath vested upon Eliseus". (IV Kings, ii, 1-15.) He won the gratitude of the people of Jericho for healing with salt its barren ground and its waters. Eliseus also knew how to strike with salutary fear the herdsmen of the calf in Bethel, for forty-two wagons, no doubt led by some to mock the Prophet, on being cursed in the name of the Lord, were torn by "two bears out of the forest". (IV Kings, ii, 19-24.) Before he settled in Samaria, the Prophet passed some time on Mount Carmel (IV Kings, ii, 25). When the armies of Juda, and Israel, and Edom, then allied against Moab, the Moabites, v. 23-25), were defeated by drought in the Idumean desert, Eliseus consented to intervene. His double prediction regarding relief from drought and victory over the Moabites was fulfilled on the following morning. (IV Kings, iii, 4-5.)

That Eliseus inherited the wonder-working power of Elia is shown throughout the whole course of his life. To relieve the widow imported by a hard creditor, Eliseus so multiplied a little oil as to enable her, not only to pay her indebtedness, but to provide for her family needs (IV Kings, iv, 1-7). To reward the rich lady of Sunam for her hospitality, he obtained for her from God, at first the birth of a son, and subsequently the resurrection of her child (IV Kings, iv, 8-37). To nourish the sons of the prophets pressed by famine, he provided them with good porridge made from poisonous gourds (IV Kings, iv, 38-41). By the cure of Naaman, who was afflicted with leprosy, Eliseus, little impressed by the possessions of the Syrian general, whilst willing to free King Jarom from his perplexity, principally intended to show "that there is a prophet in Israel". Naaman, at first reluctant, obeyed the Prophet, and washed seven times in the Jordan. Finding his flesh "restored like the flesh of a little child", the general was so impressed by this evidence of God's power, and by the display of God's love in addition to his divine healing, that he brought conviction that "there is no other God in all the earth, but only in Israel". (IV Kings, v, 1-19.) It is to this Christ referred when He said: "And there were many lepers in Israel in the time of Eliseus the prophet: and none of them was cleansed, but Naaman the Syrian" (Luke, iv, 27). In punishing the avarice of his servant Gilead (IV Kings, v, 20-27), in saving "not once nor twice" King Jerahmeel from the ambushes planned by Benhadad (IV Kings, vi, 9-12), in ordering the soldiers to shut the door against the messenger of Zabulon (IV Kings, vi, 13-23), in vividly representing with a strange blindness the soldiers of the Syrian king (IV Kings, vi, 13-23), in making the iron yoke to revive from embarrasment a son of a prophet (IV Kings, vi, 1-7), in confidently predicting the sudden decay of the kingdom and the consequent cessation of the famines (IV Kings, vii, 1-20), in unmasking the adversary of Israel (IV Kings, viii, 7-16), Eliseus preserved the Divinely appointed Prophet of the true God, whose knowledge and power he was familiar with to the order given to Elia (III Kings, xix, 15), a son of one of the prophets to Jehu King of Israel, and to commission the house of Achab (IV Kings, ix, 1-10).

In Retziah, pierced by an arrow from Jehu's enemy Benhadad and of Jesheol, the slaughter of the horses of the king, proved how faithfully executed was the Divine command (IV Kings, ix, 11-x, 30). After predicting to Joas his victory over the Syrians at Aphec, as well as other subsequent victories, ever bold before kings, ever kindly towards the lowly, "Eliseus died, and they loked him" (IV Kings, xii, 14-20). The veracity of his predictions is illustrated by the citation of a dead man (IV Kings, xiii, 20-21). "In his life he did great wonders, and in death he wrought miracles" (Ecclesi., xlviii, 15).

DANIEL P. DUFFY.

Eliezer. See ELSIERS.

Elia, a famous Armenian historian of the fifth century, place and date of birth unknown, d. 480. Some identify him with Elasb, Bishop of Amaduni, who took part in the Synod of Artasat (449). According to a different and more common tradition, he had been in his younger days a companion, as soldier of Arden, general of Persia, as renowned as a leader of the Iranian army, in the war of religious independence (449-461) against the Persian King, Yezdigird II. Later he became a hermit and retired to the mountains, south of Lake Van, where he died. All ancient authorities speak of it as a "vartaberd", a "shrine", and his chief work is the "History of Vartan and of the wars of the Armenians [written] at the request of David the Mamigonian", in which he recounts the heroic struggle of the Armenians in union with the Iberians and the Albanians, for their common faith, against the Persians (449-461). It is considered one of the masterpieces of ancient Armenian literature and is almost entirely free from Greek words and expressions. A good edition of it was published at Venice (1826) by the Mechetarists of San Lasaro. One of the manuscripts on which is founded the best copy of another manuscript dated 616. The text of that edition was further improved in subsequent editions at the same place (1828, 1838, 1859, and 1864). Among other editions of value may be mentioned those of Theodosia (Crimica, 1861), and of Jerusalem, 1865. There is an English, but unfinished, translation by C. F. Neumann (London, 1830); one in Italian by G. Cappelletti (Venice, 1840); and one in French by V. Langlois in his "Collection des Historiens anciens et modernes de l'Arménie" (Paris, 1869), II, 177 sqq. That this work is a "historical" biography of Eliezer himself in his introductory remarks, all the editions contain an eighth chapter referring to the so-called Leonian martyrs (454) and others. The genuineness of that chapter has been called in question. It has been also remarked that in all manuscripts the fifth chapter is missing, while in the editions the original sixth chapter is cut in two so as to make up for the missing chapter. On the first point see Langlois, op. cit., II, p. 190; on the second see C. F. Neumann, Versuch einer Geschichte der armenischen Literature, nach den Werken der Mechetaristen in der Werksbe- arbeitet (Leipzig, 1836), pp. 64 sqq. See also Terminus, "Die armenische Kirche in ihren Beziehungen zu der syrischen Kirche" (Leipzig, 1904), p. 37. Elasb is also the author of a commentary on Joshua and Judges, an explanation of the Our Father, a letter to the Armenian monks, etc., all found in the Venice editions of the "History of Vartan".

H. HYVERNAT.

Elisabeth (God is a oath—Ex., vi, 22), Zachary's wife and John the Baptist's mother, was "of the daughters of Aaron" (Luke, i, 5), and, at the same time, Mary's kinswoman (Luke, i, 36), although what their actual relationship was, is unknown. St.
Hippolytus (in Nisph. Call., Hist. Eccles., II, iii) explains that Sobe and Anna their mothers were sisters, and that Sobe had married a "son of Levi". Whether this indication, probably gathered from some apocryphal writings, and later on adopted by the compilers of the Great Menologium, is correct, cannot be ascertained. Elizabeth like Zachary, was "just before God, walking in all the commandments and justifications of the Lord without blame" (Luke, i, 6). She had been deprived, however, of the blessings of motherhood at an advanced age, a son was promised her by the Angel Gabriel (Luke, i, 8–20). When, five months later, Elizabeth was visited in her home by the Virgin Mary, not only was her son sanctified in her womb, but she herself was enlightened from on high to salute her cousin as "the mother of my Lord" (Luke, i, 43). According to some modern critics, we should almost attribute to her the canticle "Magnificat". After the birth and circumcision of John the Baptist, the Gospels do not mention Elizabeth any more. Her feast is celebrated on 8 September by the Greeks, and 5 November in the Latin Church.

CHARLES L. SOUVAY

Elizabeth, Sisters of Santa, generally styled "Grey Nuns". They sprang from an association of young ladies established by Dorothea Klara Wolff, in connexion with the sisters, Mathilde and Maria Merkert, and Franziska Werner, 1842, in Neisse (Prussia), to tend in their own homes, without compensation, helpless sick persons who could not or would not be received into the hospitals. The members purposed to support the needy through the labour of their own hands. Without adhering any definite rule, they led a community life and wore a common dress, a brown woollen habit with a grey bonnet. For this reason they were soon called by the people the "Grey Nuns". As their work was soon recognised and praised everywhere the members continually applied for admission, their spiritual advisers sought to give the association some sort of religious organization. They endeavoured, wherever possible, to affiliate it with already established confraternities having similar purposes. But their foremost desire was to educate the members for the care of the sick in hospitals. Great difficulties arose, and the attempt failed, principally through the resistance of the foundresses, who did not wish to abandon their original plan of itinerant nursing. Thus the association which had justified such bright hopes was dissolved, and many of the newly admitted members joined the Sisters of St. Charles Borromeo, while the foundresses left the novitiate which they had already entered. Klara Wolff and Mathilde Merkert died shortly after, in the service of charity. The other sisters of Ossau their work during 1861 was suspended and placed under the especial patronage of St. Elizabeth. They speedily gained the sympathy of the sick of all classes and creeds, and also that of the physicians. New candidates applied for admission, and the sisters were soon able to extend the sphere of their activity beyond Ossau. Of especial importance was the foundation made at Breslau, where the work of the sisters came under the direct observation of the episcopal authorities. Soon after, 4 Sept., 1859, Prince-Bishop Heinrich Förster was prevailed upon by the favourable reports and testimonial letters to grant the association ecclesiastical approbation. As such recognition presupposed the establishment of a solid religious organization, a novitiate was established according to the statutes submitted. In the following year the twenty-four eldest sisters made the three religious vows. State recognition, with the grant of a corporate charter, was obtained by the confirmation of 25 May, 1864, under the title, "Catholic Charitable Institute of St. Elizabeth", through the mediation of Prince Frederick William, subsequent Emperor of Germany, who had observed the unflinching activity of the sisters on the battle-fields of Denmark. The approbation of the Holy See was granted for the confraternity of 26 Jan., 1871, and for its constitution of 26 April, 1898. The congregation has spread to Norway, Sweden, and Italy, and has (1908), dependent on the mother-house at Breslau, 350 filial houses, with 2565 sisters and about 100 postulants.

Elizabethans. See THIRD ORDER OF ST. FRANCIS.

Elizabeth Associations (Elisabethenvereine), charitable associations of women in Germany which aim at the love of Christ to minister to the bodily and spiritual sufferings of the sick poor and of neglected children. On 10 December, 1842, eight ladies of Munich formed a society, of which the Princesse Leopoldine von Löwenstein was the head, for the purpose of visiting and aiding the sick poor in their homes. In 1851 it was made a religious congregation to which many indulgences were granted by the Holy Father. In order to carry on better the visiting of the sick the first branch or conference of the association was founded in 1870. According to its statutes the members are divided into two classes: associate members,
or those who aid the organization by means of annual contributions, and active members, who, besides contributing of their means, also visit the sick, poor and perform other duties, as those of administration, at the direction of the president of the society. The branches are merely means of carrying on the affairs of the main society, which are closely affiliated, but they are not branches of administration.

The Elizabeth Association of Munich, according to the financial report covering the year 1907, had 157 active and 3886 associate members; the receipts were 129,558.00 marks (332,339.76), and disbursements, 123,422.77 marks ($30,655.69). During the year 1907 644 children were placed in the care of the Association; 266 were in asylums and nurseries, and 18 old people were provided for in asylums and infirmaries.

Other Elizabeth Associations, although with some differences of organization, were formed on the model of that of Munich at Barmen and Düsseldorf in 1848, etc. These societies are now found chiefly in the following sections of Germany: Bavaria, 38 societies, 24 of these being in the Palatinate; Diocese of Cologne, 110 societies with 1200 members, about 7000 contributors, and a total income of nearly 150,000 marks; Diocese of Bamberg, 120 societies with over 16,000 members and contributors, and an income of 176,000 marks; families assisted 3000. There are also Elizabeth Associations in the Dioceses of Freiburg, Münster, Trier, Limburg, and Saxony; in the Diocese of Breslau, instead of Elizabeth Associations, there are about 130 women's conferences of the Society of St. Vincent de Paul. In Germany the Elizabeth Associations number altogether some 550 branches or conferences which aid annually 10,000 to 12,000 families.

Ms. history of the Elizabeth Association of Munich; by-laws, annual and financial reports of the different associations, minutes, etc.; Geschichte der Elisabeth von Trien (Cologne, 1890); Regeln und Gebote des Vereines der Mutter Elisabeth für die Diözesen Fuldeborn (Fuldeborn, 1890); short sketch of the associations in Pflatter, Die Heilige Elisabeth von Thuringen (München-Gladbach, 1907); statistics in Roese, Kirch. Handbuch, 1897-80 (Freiburg in Baden, 1895-1905).

GREGOR REINHOLD.

Elizabeth of Hungary, Saint, also called Saint Anna of Thuringia; b. in Hungary, probably at Pressburg, 1207; d. at Marburg, Hesse, 17 November (not 19 November), 1231. She was a daughter of King Andrew II of Hungary (1205-35) and his wife Gertrude, a member of the family of the Counts of Andechs-Heran; Elizabeth's brother succeeded his father as Andrew III. Shortly after the death of her mother, Gertrude, was St. Hedwig, wife of Duke Heinrich I, the Bearded, of Silésia, while another saint, St. Elizabeth (Isabel) of Portugal (d. 1336), the wife of the tyrannical King Dinis of that country, was her great-niece. In 1211 a small embassy was sent by Landgrave Hermann I of Thuringia to Hungary to arrange, as was customary in that age, a marriage between her eldest son Hermann and Elizabeth, who was then four years old. This plan of a marriage was the result of political considerations and was intended to be the beginning of an alliance between Hungary and Thuringia. The political schemes of the time it was sought to form against the German Emperor Otto IV, a member of the house of Guelph, who had quarrelled with the Church. Not long after this the little girl was taken to the Thuringian court to be brought up with her future husband and, in the course of time, to be betrothed to him. The court of Thuringia was at this period famous for its magnificence. Its centre was the stately castle of the Wartburg, splendidly placed on a hill in the Thuringian Forest near Eisenach, where the Landgrave Hermann lived surrounded by poets and minnesingers, to whom he was a generous patron. Notwithstanding the turbulence and purely secular life of the court and the pomp of her surround-

inge, the little girl grew up in a very religious child with an evident inclination to prayer and pious observances. These religious impulses were undoubtedly strengthened by the sorrowful experiences of her life. In 1213 Elizabeth's mother, Gertrude, was murdered by Hungarian nobles, probably out of hatred of the Germans. On 31 December, 1216, the marriage of Elizabeth and Hermann, whom Elizabeth was to marry, died; after this she was betrothed to Ludwig, the second son. It was probably in these years that Elizabeth had to suffer the hostility of the more frivolous members of the Thuringian court, to whom the contemplative and pious little child was not at all remarkable. She must have soon come to her protection against any ill-treatment. The legend that arose later is incorrect in making Elizabeth's mother-in-law, the Landgravine Sophia, a member of the reigning family of Bavaria, the leader of this court party. On the contrary, Sophia was a very religious and charitable woman and a kindly mother to the little Elizabeth. The political plans of the old Landgrave Hermann involved him in great difficulties and reverses; he was excommunicated, lost his mind towards the end of his life, and died, 22 April, 1219, under these circumstances. He was succeeded by his son Ludwig IV, who, in 1221, was also made regent of Meissen and the East Mark. The same year (1221) Ludwig and Elizabeth were married, the groom being twenty-one years old and the bride fourteen years old. Their marriage was a happy and exemplary one, and the couple were devotedly attached to each other. Ludwig proved himself worthy of his wife. He gave her protection to her acts of charity, penances, and her vigil and often held Elizabeth's hands as she knelt praying at night beside his bed. He was also a capable ruler and brave soldier. The Germans call him St. Ludwig, an appellation given to him as one of the best men of his age and the pious husband of St. Elizabeth. They had three children: Hermann II (1222-41), who died young; Sophia (1224-84), who married Henry II, Duke of Brabant, and was the ancestress of the Landgraves of Hesse, as in the war of the Thuringian succession she won Hesse for her son Heinrich I, called the Child; Gertrude (1227-97), Elizabeth's third child, was born several weeks after the death of her father; in after-life she became abbess of the convent of Aldenhaur near Wetzlar.

Shortly after their marriage Elizabeth and Ludwig made a journey to Hungary; Ludwig was often after this employed by the Emperor Frederick II, to whom he was much attached. In the absence of her father, Gertrude, was St. Hedwig, wife of Duke Heinrich I, the Bearded, of Silésia, while another saint, St. Elizabeth (Isabel) of Portugal (d. 1336), the wife of the tyrannical King Dinis of that country, was her great-niece. In 1211 a small embassy was sent by Landgrave Hermann I of Thuringia to Hungary to arrange, as was customary in that age, a marriage between her eldest son Hermann and Elizabeth, who was then four years old. This plan of a marriage was the result of political considerations and was intended to be the beginning of an alliance between Hungary and Thuringia. The political schemes of the time it was sought to form against the German Emperor Otto IV, a member of the house of Guelph, who had quarrelled with the Church. Not long after this the little girl was taken to the Thuringian court to be brought up with her future husband and, in the course of time, to be betrothed to him. The court of Thuringia was at this period famous for its magnificence. Its centre was the stately castle of the Wartburg, splendidly placed on a hill in the Thuringian Forest near Eisenach, where the Landgrave Hermann lived surrounded by poets and minnesingers, to whom he was a generous patron. Notwithstanding the turbulence and purely secular life of the court and the pomp of her surround-

The fact that in 1221 the followers of St. Francis of Assisi (d. 1226) made their first permanent settlement in Germany was one of great importance in the later
career of Elisabeth. Brother Rodger, one of the first Germans whom the provincial for Germany, Cassius of Speier, received into the order, was for a time the spiritual instructor of Elisabeth at the Warburg; in his teachings he unfolded to her the ideals of St. Francis, and these strongly appealed to her. With the exception of the short period spent in the monastery in Eisenach; Brother Rodger, as his fellow-companion in the order, Jordanus, reports, instructed Elisabeth, to observe, according to her state of life, chastity, humility, patience, the exercise of prayer, and charity. Her position as abbess prevented the attainment of the other ideal of St. Francis, voluntary and complete poverty. Various remarks of Elisabeth to her female attendants make it clear how ardently she desired the life of poverty. After a while the post-humous Brother Rodger had filled was assumed by Master Conrad of Marburg, who belonged to no order, but was a somewhat rough and very severe man. He was well known as a preacher of the crusade and also as an inquisitor or judge in cases of heresy. On account of the latter activity he has been more severely judged than is just; at the present day, however, the estimate of him is a fairer one. Pope Gregory IX, who wrote at times to Elisabeth, recommended her herself to the God-fearing preacher. Conrad treated Elisabeth with inexorable severity, even using corporal corrections of corporal mortification of the soul, by the road of self-mortification to sanctity, and after her death was very active in her canonization. Although he forbade her to follow St. Francis in complete poverty as a beggar, yet, on the other hand, by the command to keep her dower she was enabled to perform works of charity and tenderness.

Up to 1888 it was believed, on account of the testimony of one of Elisabeth's servants in the process of canonization, that Elisabeth was driven from the Warburg in the winter of 1226-7 by her brother-in-law, Heinrich Raspe, who acted as regent for her son, then only five years old. About 1888 various investigators (Börner, Mielke, Wenck, E. Michael, etc.) asserted that Elisabeth left the Warburg voluntarily, only the compulsion being a moral one. She was not at the castle to follow Conrad's command to eat only food obtained in a way that was certainly right and proper. Lately, however, Huyckens (1907) tried to prove that Elisabeth was driven from the castle at Marburg in Hesse, which was hers by dower right. Conrad, to the latter's chagrin, summoned the Franciscans to sing on the night of her expulsion would have been sung in the Franciscan monastery at Marburg. Accompanied by two female attendants, Elisabeth left the castle that stands on a height commanding Marburg. The next day her children were brought to her, but they were soon taken elsewhere to be cared for. Elisabeth's aunt, Matilda, Abbess of the Benedictine nunnery of Kittingen near Würzburg, took charge of the unfortunate landgravine and sent her to her niece Eckbert, Bishop of Bamberg. The bishop, however, on marrying and marrying for her, although during the lifetime of her husband Elisabeth had made a vow of continence in case of his death; the same vow had also been taken by her attendants. While Elizabeth was maintaining her position against her uncle the remains of her husband were brought to Bamberg by his faithful followers who had carried them from Italy. Weeping bitterly, she buried the body in the family vault of the landgraves of Thuringia in the monastery of Reinhardbrun. With the aid of Conrad she now received the dowry due her by these marks; of this sum she divided five hundred marks in one day among the poor.

On Good Friday, 1228, in the Franciscan house at Eisenach Elizabeth formally renounced the world; then going to Master Conrad at Marburg, she and her maids received from him the dress of the Third Order of St. Francis, thus being among the first tertiaries of Germany. In the summer of 1228 she built the Franciscan hospital at Marburg and on its completion devoted herself entirely to the care of the sick, especially to those afflicted with the most loathsome diseases. Conrad of the Warburg at this time was a prolific writer, and his spiritual renunciations, while at the same time he even took from Elisabeth her devoted domestics. Constant in her devotion to God, Elisabeth's strength was consumed by her charitable labours, and she passed away at the age of 37. In the year of her bust time when life to most human beings is just opening. Very soon after the death of Elisabeth miracles began to be worked at her grave in the church of the hospital, especially miracles of healing. Master Conrad showed great zeal in advancing the process of canonization. By papal command three examinations were held of those who had been healed: namely, in August, 1232, January, 1233, and January, 1235. Before the process reached its end, however, Conrad was murdered, 30 July, 1233. But the Teutonic Knights in 1233 founded a house at Marburg, and in November, 1234, Conrad, Landgrave of Thuringia, the brother-in-law of Elisabeth, entered the order. At Pentecost (28 May) of the year 1235, the solemn ceremony of canonization of the "greatest woman of the German Middle Ages" was celebrated by Gregory IX Perugia. The corner-stone of the beautiful Gothic church of St. Elisabeth was laid at Marburg; on 1 May, 1236, Emperor Frederick II attended the taking-up of the body of the saint; in 1249 the remains were placed in the choir of the church of St. Elisabeth, which was not consecrated until 1283. Pilgrimages to the grave soon increased to such importance that at times they could be compared to those to the shrine of Santiago de Compostela. In 1250 Philip of the Mosen, Landgrave of Hesse, who had become a Protestant, put an end to the pilgrimages by unjustifiable interference with the church that belonged to the Teutonic Order and by forcibly removing the relics and all that was sacred to Elisabeth. Nevertheless, the entire German people still honoured the "Dear St. Elisabeth" as she is called; in 1907 a new impulse was given to her veneration in Germany and Austria by the celebration of the seven hundredth anniversary of her birth. St. Elisabeth is generally represented as a princess graciously giving herself up to the duties of piety and charity, and occasionally taking the veil; in the latter case she is portrayed either alone or as surprised by her husband, who, according to a legend, which is, however, related of other saints as well, met her unexpectedly as she went secretly on an errand of mercy, and, so the story runs, the bread she was trying to conceal was suddenly turned into roses.

The original materials for the life of St. Elisabeth are to be found in the letters sent by CONRAD OF MARBURG to Pope Gregory IX (1229) and in the testimony of her four female attendants (Lobelius de dictis suavior annullarum) taken by the third papal commission (January, 1233). The best edition of the testimony is to be found in Hutterus, Quellenbericht für die Geschichte der hl. Elisabeth, Landgräfin von Thüringen (Marburg, 1898, 110-40); in CXXX-150 of the annals of the Hessen, published in Historisches Jahrbuch der Görrse Society (Munich, 1907), XXVII, 499-528, 729-845; previously the Lobelius, ed. in Compendium in Hierarchiam sive verares ecclesiasticas liber I and II (Leipzig, 1870), 30, II, 2007-34; Epitola Conradi in Hutterus, Quellen- sammlung, 130-39, and in Wenzel, Geschichte der deutschen Landes- und Städtegeschichte des Bundeskrafts (Leipzig, 1870), 31-63, in the Publicaciones de los prezantos Españoles (XV, 1890-91, 1892). The Teutonic Order, as formerly recorded in ALLENDORF, Geschichte der deutschen Orden zu Köln, edited by Cöln, 1563, 259 sqq. For bibliography of these and other works see DGG (1228, 1233, 1235), 119-20, 120-14; Hs. ARENS, Die Vater Conradi, ed. O. Cöl, (1296), ed. in Annalen des historischen Instituts in Kitzingen, 1-2, 1-5, 1887, 545. For the last part of the history of the Teutonic Order the biography of St. Elisabeth was greatly influenced by DE BRY's Apologia, Vita S. Elisabeth (written 1298-1297), published in Cöl, 1563, 259 sqq. For further information see the works of W. G. Stasen, Historia Thuringia, I-III (2nd Ed. 1899), 1899-1903, in the Acta of the process of canonisation see Hutterus, Quellen- sammlung, 110-40, 114-15, 117-39, 120-14, 122-68, 128-68. For the life of St. Elizabeth the biography of St. Elisabeth was greatly influenced by DE BRY's Apologia, Vita S. Elisabeth (written 1298-1297), published in CJOLTS, Antwerpia, 81-187, 127, 153, 155. For other.
Elizabeth of Portugal, Saint, Queen (sometimes known as The Pacemaker), b. in 1271; d. in 1366. She was named after her great-aunt, the first Elizabeth of Hungary, but is known in Portuguese history by the Spanish form of that name, Isabel. The daughter of Pedro III, King of Aragon, and Constantia, grandchild of Emperor Frederick II, she was educated very piecely, and led a life of strict regularity and self-control from her childhood; she said the full Divine Office daily, fasted and did other penances, and gave up amusements. Elizabeth was married very early to Diniz (Denis), King of Portugal, a poet, and known as Ré Leme. She was in her own word "the king's queen"; from his hard work in his country's service. His morals were, however, extremely bad, and the court to which his young wife was brought consequently most corrupt. Nevertheless, Elizabeth quietly pursued the regular religious practices of her maidenhood, whilst doing her best to work on the bad habits by gentle remonstrance and extraordinary forbearance. She was devoted to the poor and sick, and gave every moment she could spare to helping them, even pressing her court ladies into their service. Naturally, such a life was a reproach to many around her, and caused ill will in some quarters. A popular story is told of how her husband's jealousy was roused by an evil-speaking page; of how she condemned the queen's supposed guilt as accipite to a cruel death; and was finally convinced of her innocence by the strange accidental substitution of her accuser for the intended victim.

Diniz does not appear to have reformed in morals till late in life, when we are told that the saint won him to repentance by her prayers and unfailing sweetness. They had two children, a daughter Constanza and a son Diniz, the latter being a king. So greatly did the favours shown to the king's illegitimate sons that he rebelled, and in 1322 war was declared between him and his father. St. Elizabeth, however, rode in person between the opposing armies, and so reconciled her husband and son. He died in 1325, his son succeeding him as Afonso IV.

Elizabeth was canonized at the convent of Poor Clares which she had founded at Coimbra, where she took the Franciscan Tertiary habit, wishing to devote the rest of her life to the poor and sick in obscurity. But she was called forth to act once more as a peacemaker. In 1366 Afonso V marched his army against the King of Castile, with whom he had married his daughter Maria, and who had neglected and ill-treated her. In spite of age and weakness, the holy queen dowager insisted on hurrying to Estremoz, where the two kings' armies were drawn up. She again stopped the fighting and caused the terms of peace to be negotiated, which brought on her final illness; and as soon as her mission was fulfilled she died of a fever, full of heavenly joy, and exhorting her son to the love of holiness and peace. St. Elizabeth was buried at Coimbra, and miracles followed her death. She was venerated by Urban VIII in 1625, and her feast is kept on 8 July.

Elizabeth of Schonau, Saint, b. about 1129; d. 18 June, 1165—Feast 18 June. She was born of an obscure family, entered the double-monastery of Schonau in Nassau at the age of twelve, received the Benedictine habit, made her profession in 1147, and in 1157 was made superior of the nuns under the Abbess Hildegunst, in which she remained till 1165. When her writings were published the name of saint was added. She was never formally canonised, but in 1584 her name was entered in the Roman Martyrology and has remained there.

Given to works of piety from her youth, much afflicted with bodily and mental suffering, a zealous observer of the Rule of St. Benedict and of the regulations of her convent, and devoted to practices of mortification, Elizabeth was favoured, from 1152, with ecstasies and visions of various kinds. These generally occurred on Sundays and Holy Days at Mass or Divine Office or after hearing or reading the lives of saints. Christ, His Blessed Mother, an angel, or the special saint of the day would appear to her and instruct her; or she would see quite realistic representations of the Passion, Stigmata, and Ascension, or other scenes from the Old and New Testaments. What she saw and heard she put down on wax tablets. Her abbess, Hildegunst, told her to relate these things to her brother Egbert (Eckebert), then priest at the church of Bonn. At first she hesitated, being绸 bed or both to come forward as a deceiver; but she obeyed. Egbert received the tablets and Elizabeth supplemented what she had written by oral explanations. Egbert (who became a monk of Schonau in 1155 and succeeded Hildegunst as second abbot) put everything in writing, later arranged the material at leisure, and then published all under his sister's name.

Thus came into existence (1) three books of "Visions". Of these the first is written in language very simple and in unaffected style, so that it may easily pass as the work of Elizabeth. The other two are more elaborate and replete with theological terminology, so that they show more of the work of Egbert than of Elizabeth.

(2) "Liber viarum Dei". This seems to be an imitation of the "Scivias" (scire was Domini) of St. Hildegard of Bingen, her friend and correspondent. It contains such profane and worldly matter that it was deleted by his successor, and as a result all copies in a later society, to be in a clergy and laity, to the married and unmarried. Here the influence of Egbert is very plain. She utters prophetic threats of judgment against priests who are unfaithful shepherds of the flock of Christ, against the vices of the monks, the apperations of poverty and self-denial, against the vices of the laity, and against bishops and superiors deficient in their duty; she urges all to combat earnestly the heresy of the Cathari; she declares Victor IV, the antipope supported by Frederick against Alexander III, as the one chosen of God. All of this appears in Egbert's own writings.

(3) The revelation on the martyrdom of St. Ursula and her companions. This is full of fantastic exaggerations and anachronisms, but has become the foundation of the subsequent Ursula legend, which has received great divine in regard to her revelations. The Church has never passed sentence upon them nor even examined them. Elizabeth herself was convinced of their supernatural character, as she states in a letter to Hildegarde; her brother held the same opinion; Thimius considers them genuine; Eusebius Amort (De revelationibus visionibus et apparitionibus privatis regum tute, etc., Augsburg, 1744) holds them to be nothing more than what Elizabeth's own imagination could produce, or illusions of the devil, since in some things they disagree with her other revelations (Abh., SS., Oct., IX, 81). A complete edition of her writings was made by F. w. E. Roth (Brünn, 1884); translations appeared in Italian (Venice, 1859), French (Tournai, 1864), and in Icelandic (1226-1254).

Ellwangen

Ellwangen Abbey, the earliest Benedictine monastery established in the Duchy of Württemberg, situated in the Diocese of Augsburg about thirty miles north-east of the town of Stuttgart. Hariofus, Bishop of Langres, was the founder, and the date of foundation was about 764, though there are a few authorities who think it was 761. A great dispute arose in the abbey as to whether it became a royal abbey, a privilege which seems to have been conferred in 1011 by the Emperor Henry II, and afterwards confirmed by the Emperor Charles IV, in 1347. Some authorities date the granting of this privilege as late as 1555. This cannot be correct, for it is known that the superior of Ellwangen took his seat in the Diet among the princes of the country in 1500. The Benedictine occupation of the abbey came to an end in the first half of the fifteenth century. In 1460 it was changed into a college of secular canons. Other revelations (1788, 1808, 1813) had many men of renown connected with it: the Abbots Lindolf and Erfan, whom Mabillon speaks of as famous authors; Abbot Gebhard began to write the life of St. Osebius but died before completing it.

Francis Mersham.

Ellis, Philip Michael, first Vicar Apostolic of the Western District of England, born at Segni, Italy, b. in 1682; d. 16 Nov. 1726. He was the son of the Rev. John Ellis, Rector of Waddesdon, Buckinghamshire, a descendant of the Ellis family of Kiddall Hall, Yorkshire, and Susannah Welbore. Of six brothers, John, the eldest, became Under-Secretary of State for William II; his brother, a Protestant, was Secretary of State to James II in exile; Philip became a Benedictine monk and Catholic bishop; Welbore became Protestant Bishop of Kildare and afterwards of Meath, Ireland; Samuel was Marshal of King's Bench; and Charles an Anglican clergyman. Philip, while still a Westminster schoolboy, was converted to the Catholic Faith, and when eighteen years old went to St. Gregory's, Douai, where he was professed, taking the name of Michael in religion (30 Nov. 1670). After ordination he returned in 1682 to Segni as subdeacon, but in 1683 he was sent to Rome as one of the royal chaplains. In 1688 he was appointed Vicar Apostolic of the newly created Western District and was consecrated by Mgr. d'Adda, the papal nuncio (5 May). At the revolution in 1688 he was imprisoned, and in 1708 he was made a充terium and afterwards to Rome. In 1709 he was named assistant prelate at the pontifical throne; and in Rome his knowledge of English affairs made him so useful that his repeated petitions for leave to return to his vicariate were refused. In 1704 he resigned the vicariate and in 1708 was made a Benedictine of Segni, being enthroned on 28 Oct. His first care was to rebuild the ruined monastery of St. Chiara and open it as a diocesan seminary. This he enriched with many gifts and a large legacy. A curious survival of his English title survives in an inscription at Segni to "Ph. M. Mylord Ellis". Eleven sermons preached in 1685 and 1686 before James II, Queen Mary of Modena, and Queen Henrietta Maria, were published in pamphlet form, some of which have been reprinted (London, 1741; 1772). The Acts of his synod at Segni in 10 were published in 1751 and 1752 under the title of Collectanea XI.

Edwin Burton.
Abbot Ermenrich (c. 845), author of the life of St. Solhs which may be found in the fourth volume of the "Acta Sanctorum" of Mabillon. Adalbero, a monk of this abbey, was made Bishop of Augsburg in 894. Abbots Lindebert became Archbishop of Mainz, as also did Abbots Hatto (891). St. Gebhard, Abbots of Ellwangen no doubt the most famous of the abbots of Ellwangen, was 905. Abbots Milo about the middle of the tenth century was one of the visitors appointed for the visitation of the famous abbey of St. Gall. Nothing is known of the property connected with Ellwangen during the period of its Benedictine history, but in the eighteenth century, after the War of the First Coalition, one of its possessions included the court manor of Ellwangen, the manors of Taustell, Neuler, Rothleih, Tannenburg, Wasseraltingen, Abtei-Urmündt, Kockenlen near the town of Aalen, Henschlingen on the River Lein, and Lautern. Most of the ecclesiastical buildings still exist, though they are no longer used for religious purposes. Since the secularisation they have been held by the State and used for state purposes.

Elohim, Saint. See Peter Gonzalez, Saint.

Elna, Diocese of. See Perignon.

Elno, Synod of. See Perignon.

Elohim (Sept. בֵּית; Vulg. Deus) is the common name for God. It is a plural form, but the usage of the language gives no support to the supposition that we have in the plural form Elohim, as applied to the God of Israel, the remains of an early polytheism, or at least a combination with the higher spiritual beings (Kautzsch). Grammarians call it a plural of majesty or of rank, or of abstraction, or of magnitude (Genesius, Grammatic; 27th ed., an. 124 g. 132 h). The Ethiopic plural 'amlak has become a proper name of God. Hoffmann has pointed out an analogous plural 'adam in the Phoenician inscriptions (Ueber einige phon. Inserh., 1889, pp. 17 sqq.), and Barton has shown that in the tablets from El-Amarna the plural form ladam replaces the singular more than forty times (Proceedings of the American Oriental Society, 21-23 April, 1902, pp. xxvii-xxix).

Etymology. — Elohim has been explained as a plural form of 'eloh or as a plural derivative of 'el. Those who derive it from 'eloh do not agree as to the derivation of 'Elohim. There is no such verbal stem as 'aláh in Hebrew; but the Arabeist Fleischer, Franz Delitsch, and others appeal to the Arabic 'alah (Of. the root 'alah, meaning to be filled with dread; "anxiously to seek refuge", so that 'alah (aláh) would mean in the first place "dread", then the object of dread. Gen., xxxi, 42, 53, where God is called "the fear of Ismao", Is., viii, 13, and Ps., xix, 12, appear to support this view. But the fact that 'alah is probably not an independent verbal stem but only a denominateive derived from the root 'alah (cf. Arzoudar, 'azwara) renders the explanation more than precarious. There is no more probability in the contention of Ewald, Diilmann, and others that the verbal stem, 'alah, means to be mighty" and is to be regarded as a by-form of the stem 'alah; that, therefore, 'Elohim grows out of 'alah as 'Et springs from 'alah (Baethgen, Beitrage, 297) has pointed out that of the fifty-seven occurrences of 'Elados forty-one belong to the Book of Job, and the others to late texts or poetic passages. Hence he agrees with Buon in assigning the form 'Elohim into existence only after the plural form 'Elados had been long in common use; in this case, a singular was supplied for its pre-existent plural. But even admitting 'Elohim to be the prior form, its etymology has not thus far been satisfactorily explained. The ancient Jewish and the early ecclesiastical writers agree with many modern scholars in deriving 'Elohim from 'El, but there is a great difference of opinion as to the method of derivation. Nestle (Theol. Stud. aus Wurtz., 1882, pp. 213 sqq.) considers 'Elohim as an artificial, like the Hebrew 'amáhóh (maidens) from 'amáh. Buhle (Genesius' Hebräische Hand- wörterbuch, 12th ed., 1895, pp. 41 sq.) considers 'Elohim as a sort of augmentative form of 'El; but in spite of their disagreement as to the method of derivation, these write to the same in so far that in early Hebrew the singular of the word signifying God was 'El, and its plural form 'Elohim; and that only more recent times coined the singular form 'El, thus giving 'Elohim a grammatically correct correspondent. Lagrange, however, maintains that 'Elohim and 'Elados are derived collateral and independently from 'El.

The Use of the Word. — The Hebrews had three common names for God, 'El, 'Elohim, and 'Elados; besides, they had the proper name Yahweh, by which they were known in the Old Testament, while all the common names of God taken together do not occur half as often. The name 'Elohim is found 2570 times; 'Elados, 57 times (41 in Job; 4 in Psa.; 4 in Dan.; 2 in Hab.; 2 in Canticle of Moses (Deut. xxxi, 8); Prov.; 1 in Is.; 1 in Par.; 1 in Neh. (II Eed.)); 'El, 226 times ('Elohim, 9 times). Lagrange (Etudes sur les religions sémitiques, Paris, 1905) infers from Gen., xvi, 3 (the most mighty God of thy father), Ex., vi, 3 (by the name of God Almighty), and Deut. xxvii, 18 (by the name of Yahweh), that the fact that 'El replaces Yah in proper names, the conclusion that 'El was at first a proper and personal name of God. Its great age may be shown from its general occurrence among all the Semitic races, and this in its turn may be illustrated by its presence in the proper names found in Gen., iv, 18; xxv, 13; xxxvi, 43. 'Elohim is not found among the Semitic races; the Aramaeans alone seem to have had an analogous form. It has been suggested that the name 'Elohim must have been formed after the descendants of Sem had separated into distinct nations.

Meaning of the Word. — If 'Elohim be regarded as derived from 'El, its original meaning would be "the strong one" according to Wellhausen's derivation of 'El from 'ál (Skissen, III, 169); or "the foremost one," according to Delitzsch's (cf. Delitzsch, Synopsis; "Elados", "to be in front") (Sitzungsberichte der berl. Akademie der Wissenschaften, 1880, pp. 760 sqq.; 1882, pp. 1175 sqq.): or "the mighty one", according to Dillmann's derivation of 'El from 'án (the root 'ánáy, to be mighty" (Genesia, 1, 1) or "the mighty one," according to Ewald (Deut., iv, 18; xxv, 13; xxxvi, 43). 'Elohim is not found among the Semitic races; the Aramaeans alone seem to have had an analogous form. It has been suggested that the name 'Elohim must have been formed after the descendants of Sem had separated into distinct nations.

If we have recourse to the use of the word 'Elohim in the study of its meaning, we find that in its proper sense it denotes either the true God or false gods, and metaphorically it is applied to judges, angels, and kings; and even accompanies other names, giving them a superlative meaning. The presence of the article, the singular construction of the word, and its context show with sufficient clearness whether it must be taken in its proper or its metaphorical sense, and what is its precise meaning in each case. Kautzsch
ELPHIN

(Eloquence Biblica, III, 3324, u. 2) endeavours to do away with the metaphorical sense of Elohim. Instead of the rendering "judges" he suggests the translation "God," as witness of a lawsuit, as giver of decisions on points of law, or as dispenser of oracles; for the rendering "angels" he substitutes the gods of the Persians, which in later post-exilic times, fell to a lower rank. But this interpretation is not supported by solid proof.

According to Renan (Histoire du peuple d'Israel, I, p. 30) the Semites believed that the world is surrounded by water, and governed by the Elohim, the myriads of active beings, analogous to the spirits of the savage, alive, but somehow inseparable from one another, not even distinguished by their proper names as the gods of the Aryans, so that they can be considered as a confused totality. Marti (Geschichte der israelitischen Religion, p. 26) too, finds in Elohim a trace of the original Semitic polydeism: he maintains that the word signified the sum of the divine beings that inhabited any given place. Baethgen (op. cit., p. 287), F. C. Baur (Symbolik und Mythologie, Berlin, 1864), and Hellmuth Hettner (Elohim in Berlin, 1900) make Elohim an expression of power, grandeur, and totality. Lagrange (op. cit., p. 78) urges against these views that even the Semitic races need distinct units before they have a sum, and distinct parts before they arrive at a totality. Moreover, over and above the Elohim (op. cit., p. 77 sq.), and El is both a proper and a common name of God. Originally it was either a proper name and has become a common name, or it was a common name and has become a proper name. In either case, Eli, and, therefore, also its derivative form Elohim, must have denoted the one true God. This inference becomes clear after a little reflection. If El was, at first, the proper name of a false god, it could not become the common name for deity any more than Jupiter or Juno could; and if it was, at first, the common name for deity, it could become the proper name only of that God who combined in him all the attributes of deity, who was the one true God. This does not imply that all the Semitic races had from the beginning a clear concept of God's unity and Divine attributes, though all had originally the Divine name El.

A. J. MAAS.

Eloai (ELOY), Saint. See ELOIUS.

Elphego (or Alphego), Saint, b. 954; d. 1012; also called Godwine, martyred Archbishop of Canterbury, left his widow mother and patrimony for the monastery of Deerhurst (Gloucestershire). After some years an anchorite at Bath, he there became abbot, and (19 Oct., 984) was made Bishop of Winchester. In 994 Elphego administered confirmation to Olaf of Norway at Andover, and it is suggested that his patriotic spirit inspired the decrees of the Council of Ely. In 1006, on becoming Archbishop of Canterbury, he went to Rome for the pallium. At this period England was much harassed by the Danes, who, towards the end of September, 1011, having sacked and burned Canterbury, made Elphego a prisoner. On 19 April, 1012, at Greenwich, his captors, drunk with wine, and enraged at ransom being refused, pelted Elphego with bones of oxen and stones, till one Thurm dispatched him with an axe. Elphego's body, after resting eleven years (London), was translated by King Canute to Canterbury. His principal feast is kept on the 19th of April; that of his translation on the 5th of June. He is sometimes represented with an axe cleaving his skull.

A. R. CHRONICLE, ed. PLUNKET (Oxford, 1892-96); THOMAS CHRONICLE, in P. L. CXXIX, 1894; OESER, Vita S. Elphegi in WHARTON, Anglia Sacra, I, 112 sqq.; Acta SS.,

ELPHIN (ELPHINUM), Diocese of, suffragan of Tuam, Ireland, a see founded by St. Patrick. All the known facts respecting its first bishop are recorded in two important memorials of early Irish hagiography, the "Vita Tripartita" of St. Patrick, and the so-called "Patrician Documents" in the "Book of Armagh" (q. v.). On his missionary tour through Connaught, which he entered by crossing the Shannon at Drum- bolian, near Battlebridge, i. e. the parish of Arderne, in 434 or 435, St. Patrick came to the territory of Coreoglann, in the parish of Arderne, the place now called Elphin. The chief of that territory, a noble Druid named Ono, of the royal Nennian race of Hyhriu, gave land, and afterwards his castle or fort, to St. Patrick, to found a church and monastery. The place, which had hitherto been called, from its owner's name, Emlagh-Ono, received the designation of Elphin, which signifies "rock of the clear spring," from a large stone raised by the saint from the well opened by him in this land and placed on its margin, and the copious stream of crystal water which flowed from it and still flows through the street of Elphin. There St. Patrick built a church called through centuries Tempull Phadruig, i. e. Patrick's church. He established here an episcopal see, and placed over it St. Assius as bishop, and with him left Bite, a bishop, son of the brother of Assius, and Cipia, mother of Bite. St. Patrick also founded at Elphin an episcopal monastery or college, one of the first monasteries founded by him, and placed Assius over it, in which office he was succeeded by Bite, who was buried at Raccane, in Donegal, where St. Patrick built a church and a habitation for seven bishops. The "Septem episcopi de Racoone" are invoked in the Festology of Kenneth the Culdee (q. v.).

The first bishop of Elphin is described in the "Book of Armagh" as the elder, i. e. the wright or goldsmith of St. Patrick; and he made chalices, patens, and metal book-covers for the newly founded churches. Following the example of their masters, the successors and spiritual children of St. Assius founded a school of art and produced beautiful objects of Celtic workmanship in the Diocese of Elphin. Some of these remain to the present day, objects of interest to all who see them. The famous Cross of Cong (see CROSS), undoubtedly one of the finest specimens of its age in Western Europe, was (as the inscription on it and the Annals of Innisfallen testify) the work of Mailius MacEgan, successor of St. Finian of Clooneraaff near Elphin, in the County Roscommon, and was made at Roscommon under the superintendence of Domhnall, son of Flannan O'Duffy, successor of Coman and Kieran, abbots of Roscommon and Clonmacnoise, and Bishop of Elphin. It is held that the celebrated Ardagh CHalice, which was given to Clonmacnoise by Turlough O'Conor, and was stolen thence by the Danes, was made, if not by the same artist, at least in the same school at Roscommon. The Four Masters record (1166) that the shrine of Manchan
6961. The present chapter consists of a dean, archdeacon, treasurer, chancellor, theologian, penitentiary, and four prebendaries. The parishes number 33, parochial priests and curates 100. There is a convent of Dominicans at Sligo. The female orders in the diocese are: Ursulines, Sligo; Sisters of Mercy, in various places; and Franciscan Missionaries of Mary, at Loughlynn. To the convents are attached primary schools attended by 2500 girls. There are also industrial schools for orphan and homeless children. The Ursulines conduct a boarding-school for young ladies. The diocesan seminary is the college of the Immaculate Conception at Sligo. The Marist and Presentation Brothers teach large schools. The cathedral of the diocese at Sligo, an early Romanesque structure, simple and massive, was erected by Most Rev. Dr. Gillooly, and consecrated in 1897. He also built St. Mary’s Presbytery, and the College of the Immaculate Conception, Sligo. These, with a Temperance Hall, form a group of ecclesiastical buildings worthy of their beautiful scenic surroundings.

Bishop Gillooly was succeeded, 24 March, 1895, by the Most Rev. John Joseph Clancy, born in the parish of Riverstown, County Sligo, in 1856. He was educated at the Massachusetts College, Sligo, and Summerhill College, Athlone, and entered Maynooth in 1876, where he spent two years on the Dunboyne Establishment. In 1883 he was appointed professor in the Diocesan College, Sligo, and in 1887 professor of English Literature and French in Maynooth College, which office he held until he was made Bishop of Elphin.

Elusa, a titulus see of Palestina Tertia, suffragan of Petra. This city is called Σελευς in the Greek text of Judith, i, 9. It is also mentioned by Ptolomy, V, xv, 10 (in Iudaea), Peutinger’s “Table”, Stephanus Byzantius (as being formerly in Arabia, now in Palestina Tertia), St. Jerome (in Isaiam, V, xv, 4), the pilgrim Theodosius, Antoninus of Piacenza, and John Moschus (Pratum Spirituale, cxiv). In the fourth century, as is to be learned from St. Jerome’s life of St. Hilarion, there was at Elusa a great temple of Aphrodite; the saint seems to have introduced Christianity there in the time of Hilarion (died 379). Early in the following century a Bishop of Elusa after redeeming the son of St. Nilus, who had been carried off from Mount Sinai by the Arabs, ordained both him and his father (P. C., LXXIX, 373-93). Other bishops known are Theodulus, 451; Aretas, 451; Peter, 518; and Zenobius, 536 (Lequien, Or. christ., III, 735). To-day the ruins of the city are seen at El-Khalaṣa (Khalaṣah), about nineteen miles south of Bersabee, in a large plain belonging to nomad tribes. Many inscriptions have been found there (Revue Biblique, 1906, 248-49, 253-55). In the vicinity, according to the Targums, was the desert of Sur with the well at which the angel found Agar (Gen., xvi, 7). (See Revue Biblique, 1906, 597).

The ancient See of Elusa (Eaune) in Gaul was united with that of Auch (q. v.) probably in the ninth century.

Elveria, Council of, held early in the fourth century at Eliberis, in Galicia, a city now in ruins not far from Grandanca. It was, so far as we know, the first council held in Spain, and was attended by nineteen bishops from all parts of the Pen-

Ruins of Cistercian Abbey (1161) 
Boyle, County Roscommon, Ireland

John, postulated by the dean Malachy, the archdeacons John and Clare, and the treasurer Gilbert. Among the early bishops was Bron of Killaspugbrane, a favoured disciple of St. Patrick. He was also the friend and adviser of St. Brigid when she dwelt in the plain of Roscommon and founded monasteries there. According to Ware, of the successors of St. Assicus in the See of Elphin he found mention of only two before the coming of the English, Domhnall O’Dubhaithigh (O’Duffy), who died in 1064, and Flannanach O’Dubhataigh, who died in 1108. There is reference to at least two other bishops of Elphin, in 640 and 1190. From St. Assicus to 1609 the names of at least fifty-four occupants of the see are enumerated in the ecclesiastical annals and public records of Ireland and Rome. Many of them were renowned for learning, wisdom and piety. During the Reformation and subsequent persecutions, there continued in Elphin an unflailing succession of canonically appointed Catholic bishops. They were faithful dispensers of the duties of their charge, like Cain of Graigh, and John Max: confessors true to the Catholic Faith and the See of Peter, through years of persecution and exile like O’Higgins and O’Crea; martyrs scaling their testimony with their blood, like O’Healy and Galviriux.

The present Diocese of Elphin includes nearly the whole of the county of Roscommon, with large portions of Sligo and Galway. In the census of 1901 the population was: Catholics, 125,743; non-Catholics, 30,102; total, 155,845.
insula. The exact year in which it was held is a matter of controversy upon which much has been written. Some writers speculate that the Acta contains the date which corresponds with the year 324 of our reckoning; by others the council has accordingly been assigned to that year. Harduin suggests 315, Mansi 399, and Hefele 305 or 306. Recent opinion (Duchesne, see below) would put the date considerably earlier, from 300 to 303, consequently previous to the persecution of Diocletian. The principal bishop attending the council was the famous Hosius of Cordova. Twenty-six priests are also recorded as sitting with the bishops. Its eighty-one canons were, however, subscribed only by the bishops. These canons all disciplinary, throw much light on the religious and ecclesiastical life of Spanish Christians on the eve of the triumph of Christianity. They deal with marriage, baptism, idolatry, fasting, excommunication, the cemeteries, usury, vigils, frequentation of Mass, the relations of Christians with pagans, Jews, heretics, etc. In canon xxxiii we have, says Hefele (op. cit. below), the oldest positive ecclesiastical ordinance concerning the celibacy of the clergy. Canon xiii exhibits the institution of nuns (virginis Deo sacrate) as long familiar to Spain (placuit pictures in ecclesiis esse non debere ne quod colitur et adoratur in parietibus depingatur) has often been urged against the veneration of images as practised in the Catholic Church. Binterim, De Rossi, and Hefele interpret this prohibition as directed against the use of images in over-ground churches only, lest the pagans should caricature sacred scenes and ideas; Von Funk, Turmel, and Dom Lecleerq opine that the council did not pronounce as to the licitely or non-licitely of the use of images, but as an administrative measure simply forbade them, lest new and weak converts from paganism should incur thereby any danger of relapse into idolatry, or be scandalized by certain superstitious excesses in no way approved by the ecclesiastical authority. (See Von Funk in "Tifibungen Quartalschrift," 1883, 270–78; Nolte in "Rev. des Sciences ecclésiastiques," 1877, 482–84; Turmel in "Rev. du clergé français," 1906, XLV, 508.) Several other canons of this council offer much interest to students of Christian archaeology. (See text and commentary in Hefele-Lecleerq, "E. d. Conciles," I, 212 sqq.)

ARTHUR S. BARNES.

ELY (ELIA OF ELYS), ANCIENT DIOCESE OF (ELIENSIS), in England. The earliest historical notice of Ely is given by Venerable Bede who writes (Hist. Eccl., IV, xiv): "Ely is in the province of the East Angles, a country of about six hundred families, in the nature of an island, enclosed either with marshes or waters, and therefore it has its name from the great abundance of sels which are taken in those marshes." This district was assigned in 649 to Etheldreda, or Audrey, daughter of Anna, King of the East Angles, as a dowry on her marriage with Tonber of the South Girvi. After her second marriage to Egfrid, King of Northumbria, she became a nun, and in 673 returned to Ely and founded a monastery on the site of the present cathedral. She gave it the entire principality of the Isle, from which subsequent Bishops of Ely derived their temporal power. St. Etheldreda died in 679, and her shrine became a place of pilgrimage. In 870 the monastery was destroyed by the Danes, having already given to the Church four sainted abbesses, Sts. Etheldreda, Sexburga, Ermenilda, and Werburga. Probably under their rule there was a community of monks as well as a convent of nuns, but when in 970 the monastery was restored by King Edgar and Bishop Ethelwold it was a foundation for men only. For more than a century the monastery flourished, till about the year 1105 Abbot Richard suggested the creation of the See of Ely, to relieve the enormous Diocese of Lincoln. The pope's brief erecting the new bishopric was issued 21 Nov., 1086, and in Oct., 1106, the king granted his charter, the first bishop being Harvey, formerly Bishop of Bangor. The monastery church thus became one of the "conventual" cathedrals. Of this building the transepts and two bays of the nave already existed, and in 1170 the nave as it stands to-day (a complete end perfect specimen of late Norman work) was finished. As the bishops succeeded to the principality of St. Etheldreda they enjoyed palatine power and great resources. Much of their wealth they spent on their cathedral, with the result that Ely can show beautiful examples of Gothic architecture of the period, including two unique features, the un-rivalled Galilee porch (1125–41) and the central octagon (1322–38) which rises from the whole breadth of the building and towers up until its roof forms the only Gothic dome in existence. The western tower (215 feet) was built between 1174 and 1197, and the octagon was added to it in 1400. Of the cathedral as a whole it is true that "a more vast, magnificent and beautiful display of ecclesiastical architecture and especially of the different periods of the pointed style can scarcely be conceived" (Winkles, English Cathedrals, II, 46). It is fortunate in having perfect specimens of each of the successive styles of Gothic architecture: the Ely East, Galilee porch, the Decorated Lady-chapel (1321–1349), and the Perpendicular chantry of Bishop Alcock (c. 1500).

The original Catholic diocese was much smaller than the present Anglican see and consisted of Cambridgeshire alone, while even of this county a small part belonged to Norwich diocese. The bishops of Ely usually held high office in the State and the roll includes many names of famous statesmen, including eight lord chancellors (marked *) and six lord treasurers (marked **). Two bishops—John de Fontibus and Hugh Belsham—were reputed as saints, but never received formal cultus; the former was commemorated on 19 June. The following is the list of bishops:-

Harvey, 1109
Nigel, 1110
Geoffrey Riddell, 1174
William Longchamp, 1189*
Eustace, 1198*
John de Fontibus, 1220†
Hugh Norwald, 1229
William de Kilkenny, 1255*
Hugh Belsham, 1257
John Kirkby, 1266
William de Louth, 1290
Walpole Walpole, 1299
Robert Orford, 1302
John Keeton, 1310
John Hotham, 1316†
John Montague, 1327
Thomas de Lisle, 1345
Simon Langham, 1362*
John Barnet, 1366†
Elymism 397

EMANATIONISM

in the sense commonly received to-day, it is not primarily a theological, but rather a cosmogonic system, not a direct answer to the question of who or what is the creator of God, but to that of the mode of origin of things from God. In general it holds that all things proceed from the same divine substance, some immediately, others mediately. All beings form a series the beginning of which is God. The second reality is an emanation from the first, the third from the second, and so on. At every step the derived being is less perfect than its source; but, by giving rise to other beings, the source itself loses none of its perfections. The first source, then, from which everything flows, remains unchanged; its perfection is never exhausted nor lessened.

Emanationism is frequently referred to as a form of pantheism; but while this latter is primarily a system of reality, identifying all things as modes or appearances of the one substance, emanationism is concerned chiefly with the mode of derivation. Nor does it necessarily affirm the substantial identity of all things; it may assert the distinct, though dependent, substantiality of emanated realities. It is true that emanation is conceived by some in a pantheistic sense, as an immanent process, an expansion of the Divine substance into all things, and thus as imitating a separation of the derived beings from their source.

Hence, not only some forms of pantheism are not emanationistic, but also many emanationists—more or less consistently—reject pantheism. For those who admit that matter is eternal and exists independently of God, God cannot be more than an architect, who arranges pre-existing materials. In the doctrine of complete emanationism, all things, from the highest spiritual substances to the lowest forms of matter, come from God as their first origin, matter being the last and therefore most imperfect emanation. Some views, however, combine the theory of the eternity of matter with the theory of emanation.

The doctrine of creation teaches that all things are distinct from God, but that God is their efficient cause. God does not produce things from His own substance nor from any pre-existing reality, but by an act of His will brings them out of nothing. According to emanationism, on the contrary, the Divine substance is the reality from which all things are derived, not by any voluntary determination, but by a necessity of nature. And God does not produce all things immediately; the lower are more distant, and are separated from Him by necessary intermediaries. (It may be noted, however, that sometimes the word emanation is used in a broader sense including also creation. Thus St. Thomas: "Quæritur de modo emanationis rerum a primo principio qui dicitur creatio"—Summa I, q. xiv, a. 1.) Evolution implies the change of one thing into something else, whereas a reality from which another emanates remains identical with itself. The process of evolution—at least in its totality—is generally considered as an ascent, a movement upwards towards a greater perfection. Emanation is a descent; it begins with the infinitely perfect, and at every step the emanating beings are less pure, less perfect, less divine. The Infinite is postulated as a starting-point, instead of being the goal which the universe is ever striving to realize. Some comparisons used by emanationists, though only metaphors, and consequently misleading if taken literally, may give a clearer idea of the system. Things proceed from God as water from a spring or an overflowing vessel; as the stem, branches, leaves, etc., from the roots; as the web from the spider; as light or heat from the sun or a fire; as the doctrine from the teacher. It is easy to see that all such comparisons are deficient in many points. They are intended simply to illustrate that which is above human comprehension.

II. Vague indications of emanationism are found in ancient mythologies and religions, especially those of...
India, Egypt, and Persia. Thus in the Upanishads things are said to issue from their eternal principle as the web from the spider, the plant from the earth, the hair from the skin. But, while these and other comparisons and expressions may be interpreted in the sense of the whole system, there is one which, explicit to serve as a basis for the assertion that such systems of philosophy or religion are emanationistic. Philo's teaching on this point is not much clearer. His thought was influenced by two distinct currents: Greek philosophy, especially Platonism, and Judaism. In his endeavor to reconcile them, he sometimes falls into inconsistencies, and his real position is doubtful. According to him, God, infinitely perfect, cannot act on the world immediately, but only through powers or forces (σωματά) which are not identical with Him, but proceed from Him. The primitive Divine force is the Logos. Whether the Logos is a substance or only an attribute, remains an obscure point. From the Logos the Spirit (νεφελή) proceeds. It is the soul, or vivifying principle, of the world. Sometimes God is looked upon as the efficient and active cause of the world, sometimes also as immanent, as the one and the whole (ἐν καὶ τὰ υπὸ τοῦ κόσμου θεός).

The first clear and systematic expression of emanationism is found in the Alexandrian school of Neo-Platonism. According to Plotinus, the most important of this school, all things are the One. Absolute unity and simplicity is the best expression by which God can be designated. The One is a totally indeterminate essence, for any attribute or determination would introduce both limitation and multiplicity. Even intelligence and will cannot belong to this Primal Reality, for they imply the duality of subject and object, and duality presupposes a higher unity. The One, however, is also described as the First, the Good, the Light, the Universal Cause. From the One all things proceed; not by creation, which presupposes the separation of will, and therefore is incompatible with unity; nor by a spreading of the Divine substance as pantheism teaches, since this would do away with the essential oneness. The One is not all things, but before all things. Emanation is the process by which all things are derived from the One. The infinite goodness and perfection "overflows", and, while remaining within itself and losing nothing of its own perfection, it generates other beings, sending them forth from its own superabundance. Or again, as brightness is produced by the rays of the sun so emanation is produced from the Intelligible Light. The various emanations form a series every successive step of which is an image of the preceding one, though inferior to it. The first reality that emanates from the One is the Nous (Nous), a pure intelligibility, a principle of thought. From the Nous emanates the Soul of the world, which forms the transition between the world of ideas and the world of the senses. It is intelligent and, in this respect, similar to the ideal world. But it also tends to realize the ideas in the material world. The World-Soul generates particular souls, or rather plastic forces, which are the "forms" of all things. Finally, the soul and its particular forces beget matter, which is of itself indeterminate and becomes determined by its union with the form. With a few variations in the details, the same essential doctrine of emanation is taught by Iamblichus and Proclus. 

According to Proclus, from the One come the unities (ενελίθη), which alone are related to the world. From the unities emanate the triads of the intelligible essences (being), the intelligible-intellectual essences (life), and the intellectual essences (thoughts). These again are further divided, and the first order comes directly from one of the intelligible triads.

Gnostics teach that from God, the Father, emanated numberless Divine, supra-mundane Æons, less and less perfect, which, taken all together, constitute the fullness (ενελίθη) of Divine life. Without the last of these, produced an inferior wisdom named Arahmin, and also the psychical and material worlds. To denote the mode according to which an inferior is derived from a superior degree, Basileus uses the term ἀναβάσεως ("flowing from", "efflux"), and Valentinus, the term πορεία (throwing forth, projection). The Fathers of the Church and Christian writers, especially when they treat of the divine exemplarism or of the relations of the three Divine Persons in the Trinity, and even when they speak of the origin of the world, may use expressions that remind one of the theory of emanation. But such expressions must be interpreted according to the doctrine of creation to which they adhere. Pseudo-Dionysius follows Plotinus and the later Neo-Platonists, especially Proclus, frequently borrowing their terminology. Yet he endeavours to adapt their teaching to the Christian faith. God is primarily goodness and love, and other beings are emanations from His goodness, as light is an emanation from the sun. John Scotus Eriugena takes his doctrine from Pseudo-Dionysius and interprets it in the sense of pantheistic emanations. There is only one Being who, by a series of substantial emanations, produces all things. Nature has four divisions, or rather there are four stages of the one nature: (1) The nature which creates, but is not created, i.e. God in His primordial, incomprehensible reality, unknown and unknowable, for it is God alone truly is, and He is the essence of all things. (2) The created and creating nature, i.e. God considered as containing the ideas, prototypes, or, to use Eriugena's expression, the primordial causes of things. It is the ideal world. (3) The nature which is created, but does not create, is the world of things existing in time and space. All flow, proceed, or emanate from the first principle of being. Creation is a "procession". Creatures and God are one and the same reality. In creatures God manifests Himself. Hence God's self is the same from the light of love to the light of knowledge, and from the light of knowledge to the light of truth. (4) Nature, which neither creates nor is created, i.e. God as the term towards which everything ultimately returns.

Arabian philosophy—not to speak here of the various forms of Arab philosophy—point of view has been influenced by Neo-Platonism, and generally holds some form of emanationism, the emanation of the different spheres to which all things celestial and terrestrial belong. According to Alfarabi, from the First Being, conceived as intelligent (in this Alfarabi departs from Plotinus), the intellection emanates, then the intellect, the intellectual, the cosmic soul; and from the cosmic soul, matter. Avicenna teaches that matter is eternal and uncreated. From the First Cause comes the intelligentia prima, from which follows a series of progressions and emanations of the various celestial spheres down to our own earthly sphere. For Averroes the intellect is not individual, but identical with the universal spirit, which is an emanation from God. Interesting is a comparison found in one of the later mystics, Ibn Arabi. Water that flows from a vessel becomes separated from it; hence this water is not an emanation from God, but issue from God are not separated from Him. Emanation is illustrated by the comparison with a mirror, which receives the features of a man, although the man and his features remain united.

In Jewish philosophy, influences of Neo-Platonism...
EMANCIPATION

are apparent in Avicennas and Maimonides. In the Cabbala the famous doctrine of the Sephiroth is essentially a doctrine of emancipation. It was developed and systematized especially in the thirteenth century. The Sephiroth are the necessary intermediaries between God and the universe, between the intellectual and the material world. They are divided into three groups, the first group of three forming the world of thought, the second group, also of three, the world of sense, the third group, of five, of matter.

III. Philosophically the discussion of emancipation supposes the discussion of the whole problem of the nature of God, especially of His simplicity and infinity.

The doctrine of the Catholic Church is contained in the definition of the dogma of the creatio ex nihilo by the Fourth Lateran Council and, especially, the Council of the Vatican. The latter expressly condemns emancipationism (I. De Deo rerum omnium creator, can. iv), and anathematizes those “asserting that finite things, both corporeal and spiritual, or at least spiritual, have emanated from the Divine substance.”

The literature on this subject includes the works of the authors mentioned in the course of the article, works on history of the and condition of the slave, was able, however, to gradually substitute for slavery the milder institution of servitude, and to introduce in place of the elaborated formalities of the emancipation the simpler form of the manusmissio in ecclesiis (Cod., De his, qui in ecclesiis manumittuntur, i, 13), in which a simple statement to that effect by the master before the bishop and the congregation sufficed.

The emancipation of a slave was especially necessary as a preliminary to his ordination (c. Synod of Poitiers 1049, can. xxi), X, De servis necessariorum ordinantis vel non ordinantis, c. iii (Fourth Synod of Toledo, 633, can. lxxv), X, De servis nce ordinandis et eorum manumissionibus, i, xviii). Similarly, the entrance of a son into a religious order, i.e. the taking of solemn vows, or the professio religiosa, carries with it a dispensation from the legal authority (potestas) of the father. No positive law, however, can be quoted on this point, nor does modern civil legislation recognize this consequence of religious profession. The canon law recognizes another, purely imitative form of emancipation. This was the release of a pupil of a cathedral school, domiciliaris, from subjection to the authority of the schola
cularis, or head of the school. This emancipation took place with certain well-defined ceremonies, known in the old German cathedral schools as Papenfang.

The term emancipation is also applied to the release of a secular ecclesiastic from his diocese, or of a regular from obedience and submission to his former superior, because of election to the episcopate. The petition requesting release from the former condition of service or submission, which the collegiate electoral body, or the newly elected person, must present to the former superior, is called postulatio simplex, in contradistinction to the postulatio sollemnis, or petition to be laid before the pope, in case some canonical impediment prevented the person from obtaining the episcopal office. The document granting the dismissal from the former relations is called littera dimis-
embroidery may date back to the first centuries, since, under various forms, it is found in all the Occidental and in a great many Oriental, particularly Syrian, Liturgies. The Greek Liturgies of St. Basil and St. John Chrysostom, however, do not contain it. In the Middle Ages the Rite the prayer is very beautiful and is recited not only in the Mass, but also after the Our Father at Lauds and Vespers. The Roman Church connects with it a petition for peace in which she inserts the names of the Mother of God, Sts. Peter and Paul, and St. Andrew. The name of St. Andrew is found in the Gelatin Sacramentary so that its insertion in the Embolismus would seem to have been anterior to the time of St. Gregory. During the Middle Ages the provincial churches and religious orders added the names of other saints, their founders, patrons, etc., according to the discretion of the celebrant (see Micrologus).

II. In the calendar this term signifies the difference of days between the lunar year of only 354 days and the solar year of 365.222 days. In the Alexandrian lunar cycle of 19 years, therefore, seven months were added, one each in the second, fifth, eighth, tenth, thirteenth, sixteenth, and nineteenth (the embolistic) years. Each embolistic year had 13 lunar months, or 384 days. The lunar calendar was called Dionysian, because Dionysius Exiguus, in the sixth century, reckoned the introduction of the Alexandrian Easter cycle of 19 years and computed it for 95 years in advance.

Embroidery, Ecclesiastical.—That in Christian worship embroidery was used from early times to cover the vestments in connection with notices, especially the statements of the Liber Pontificalis”.

For the period before the tenth century no account, even partially satisfactory, has come down to us, either of the methods of producing the embroidery or of the manner and extent of its use. What is incidentally said is not sufficient to make the matter clear, and no embroidery of this period for ecclesiastical purposes has been preserved. The oldest extant examples are the remains of a maniple and of a stole dating from the beginning of the tenth century, in the cloisters of Durrow, and fragments of an altar-cover of the same century in the National Museum at Ravenna. Vestments magnificently embroidered appeared at the beginning of the eleventh century, such as the chasuble completely covered with pictures embroidered in pure gold, which is preserved in the Bamberg cathedral; the coronation mantle of Hungary, originally also a chasuble; and other specimens of the highest importance not only on account of their costly material and the skill shown in their execution, but even more on account of the deep significance of the pictures. Up to the thirteenth century embroidery in gold thread was the ornamentation mainly used for ecclesiastical purposes. To a certain degree gold embroidery was intended to take the place of figured materials woven with gold thread. Consequently, this embroidery so closely resembles fabrics woven with gold that on superficial examination it could easily be taken for such. At the same time, however, embroidery with silk threads was also practised, as is shown by the splendid examples preserved in the treasury of St. Paulin in Carinthia.

Ecclesiastical embroidery reached its fullest development in the thirteenth, fourteenth, and the first half of the fifteenth centuries. In this period whatever bore the name of vestment, wherever means allowed, was more or less richly embroidered. The working materials were gold, silver, and silk threads, small disks and spangles cut with a stamp from silver plain or gilded, spangles and small disks of enamel, real pearls, precious stones, paste diamonds, and coral. The embroidery of figures was the branch of the art most pursued, purely ornamental embroidery being restricted to the copes and chasubles covered with pictorial embroidery of a deeply religious character, the auriflora (bands) magnificently ornamented with embroidered figures, that were laid on the liturgical clothing and other vestments, the chalices and wall-hangings embroidered in striking pictorial design, and the robes covered with wonderful needlework, all these examples of the art of the needle that era, still found in large numbers in the church treasuries and museums, show that ecclesiastical embroidery then reached a height never since regained. In the eleventh and twelfth centuries Sicily was famous for its ecclesiastical embroidery; in the thirteenth and fourteenth centuries the workshops of England were more noted than all others. In this latter period mention of English embroidery, called opus Anglicanum, is found in almost all inventories of the more important churches of the Continent, even in Italy. The vestments most frequently sent from England into other parts of Western Europe was a cope completely covered with a rich embroidery of figures on a background of gold thread, and often the background being worked in gold thread; examples of these cope are still preserved at St. John Lateran at Rome, at Pienza, Vich, and Daroca in Spain, Salzburg, Saint-Bertrand-de-Comminges in France, and elsewhere. A large amount of superb ecclesiastical needlework, splendid specimens of which still exist, was also produced in Germany, France, and Italy; in the last-named country the work of Florence, Siena, Lucca, and Venice was especially noted. In the fifteenth century the finest ecclesiastical embroidery was made in Flanders. The vestments largely produced was of that kind in which couched gold thread was worked over with coloured silks. The best examples of this are the mass-vestments of the Order of the Golden Fleece preserved in the Hofburg at Vienna. With the close of the Middle Ages ecclesiastical embroidery began to decline. Instead of the flat stitch, use was now made of the more striking raised embroidery, which frequently degenerated into a purely formal high relief totally unsuited in character to ecclesiastical embroidery. There was a return to the traditional forms typical at brilliant effects and a stately magnificence. At the same time pictorial needlework was less and less in use, owing to the influence of secular embroidery.

Needlework for church vestments was limited more and more to purely ornamental designs, taken entirely from the plant world, and to certain symbolic designs. The art sank to its lowest depths both in design and technique at the commencement of the sixteenth century, during the so-called Biedermeier (honest citizen) period.

Ecclesiastical embroidery flourished in the various provinces of the Byzantine Empire. While the costly needlework produced there was naturally used mainly in the services of the Greek Church, still many pieces were brought into Western Europe. This Byzantine needlework did not fail to influence Western ecclesiastical embroidery. One of the finest examples of art needlework of the Byzantine Empire of the Middle Ages is the imperial dalmatic in the treasury of St. Peter’s at Rome, erroneously attributed to the twelfth century, but, it is, in reality, a Greek accoto (vestment of a Greek bishop or patriarch) which was ordered, probably, in the latter half of the fourteenth century. At no period has ecclesiastical differed in its technique from secular embroidery. The same varieties of stitches and other art resources have been employed in both cases. No special ordinances have
Embroidery in Scripture.—It is probable that the Israelites learned the art of embroidery during their sojourn in Egypt. The ornamentation of woven fabrics, especially of linen, by needlework in threads of different colours, spun or drawn from various materials, such as wool, flax, or gold, was known to ancient nations. The Greek and Romans acquired the art from the Syrians and Persians, and the Jews and Babylonians represent the garments of kings and officials as highly ornamented with what are commonly regarded as embroideries, and specimens of embroidered work have been found in Egyptian tombs.

In Ezek. xxvi, 4, "the rich brocades of the fine brocade of linen" used for sails on the ship of Tyre. The first reference to embroidery in Scripture is found in the Book of Exodus (xxvi, 1, 31, 36) in the directions given to Moses concerning the curtains of the Tabernacle, the veil for the Ark, and the hanging in the entrance to the Holy of Holies. The Douay, following the Vulgate, does not distinguish between the two Hebrew expressions הַסֵּפֶדֶךְ (Ex., xxvi, 1, 31) and הַסֵּפֶדֶךְ הַרְבָּיִי (Ex., xxvi, 36). The former is translated in the Revised Version by "the work of a cunning workman" and the latter refers to the weaving of figured designs from different coloured threads; the latter may have been real embroidery, or needlework, called in the later books הַסֵּפֶדֶךְ הַרְבָּיִי.

Besides the hanging at the entrance of the Tabernacle (Ex., xxvi, 36), the hanging in the entrance of the court (Ex., xxvi, 16) and the girdle of the high-priest (Ex., xxviii, 39; xxxix, 28) were the work of the embroiderer הַסֵּפֶדֶךְ הַגָּרָה, whereas in regard to the ephod (Ex., xxviii, 6; xxxix, 3), and the rational (Ex., xxviii, 15; xxxix, 8) the word הַסֵּפֶדֶךְ is employed. These words allude to the embroidered work (Ex., xxxix, 35; xxviii, 22, 23). The word is used of the embroidered garments or scuffs mentioned in the Canticle of Deborah (Judges, x, 30), and of the bride's apparel in Ps. xlv (Heb., xlv), 15, where according to the Hebrew text she is said to be arrayed in embroideries of gold and raiment of needlework. The garments of the faithless spouse, the figure of Israel (Esch., vi, 10, 13, 18), were likewise embroidered. In Esch., xxvi, 16, it is foretold that the princes of the sea shall put off their brocaded garments, and brocaded stoles are mentioned among the merchandise of Tyre (Esch., xxvii, 7, 16, 24).

In the Authorised or King James Version (Ex., xxviii, 4) one of the high-priest's garments is called "a broidered coat"; the Revised Version changed it to "a coat of choicer work", and the Douay has "a strait linen garment" (linear strikion in the Vulgate). The Hebrew word הַסֵּפֶדֶךְ הַיַּפִּי used here is not found elsewhere in Scripture. It is believed by some to indicate "a surface device of lustre upon one colour", similar to work still done in Damascus. Even in regard to the pageantry הַסֵּפֶדֶךְ הַיַּפִּי is used in translating "embroidery", and authorities are somewhat divided. Some regard it as painting on cloth, others as an ornamentation produced by sewing on to a stuff pieces of materials of other colours, others again as a fabric woven from threads of different colours.

Emertonian, Saint, virgin and martyr, d. at Rome in the third century. The old Itineraries to the graves of the Roman martyrs, after giving the place of burial on the Via Appia, mention the church of St. Emerentiana. Over the grave of St. Emerentiana a church was built which, according to the Itineraries, was near the church erected over the place of burial of St. Agnes, and somewhat farther from the city wall. In the Vicennale mentioned the cemeterium majus located in this vicinity not far from the cemeterium Agnetis. Armellini believed that he had found the original burial chamber of St. Emerentiana in the former cemeterium. According to the legend of St. Agnes Emerentiana was her foster-sister. Some days after the burial of St. Agnes Emerentiana, who was still a catechumen, went to the grave to pray, and while praying she was suddenly attacked by the pagans and killed with stones. Her feast is kept on 23 January. In the Martyrology Hieronymanus she is mentioned as Emerentiana,

Emery, Jacques-André, Superior of the Society of St-Sulpice during the French Revolution, b. 26 Aug., 1732, at Gex; d. at Paris, 28 April, 1811. After his preliminary studies with the Carmelites of his native town and the Jesuits of Mâcon, he passed to the Seminary of St. Irénée at Lyons and completed his studies at St-Sulpice, Paris, where he became a member of the society of that name and was ordained priest (1758). He taught with distinction in the seminaries of Orléans and Lyons; at Lyons, too, he sustained the right of the Holy See with firmness and ability, yet with due courtesy, before the archbishop, Mgr. de Moutazet, a prince of unenlightened tendencies. Partially on the recommendation of the archbishop, he was made superior of the seminary at Angers (1776), and later became vicar-general of the diocese, displaying in both capacities marked powers of governing. In 1782 he was elected Superior-General of the Seminary and Society of St-Sulpice. His rule began in the lax days preceding the French Revolution, and Father Emery showed himself indefatigable in his zeal for the reform of the seminaries and for the training of a clergy fit to cope with existing evils and prepare for the troubles which, to some extent, he foresaw. After the Revolution broke forth, he watched its terrible progress without despair; he was, perhaps, during that period, the coolest head among the churchmen of France. His wide acquaintance among the priests and bishops, many of whom, in the course of his thirty years of touring all Italy, in the seminaries, had been under his authority, and his position as administrator of the Diocese of Paris during the absence of the exiled archbishop, and as superior of St-Sulpice, brought many to him for advice. He was, says the historian Sicard, "the head and the arm" of the party whose counsels were so marked by moderation and common sense; "a man who was rarely endowed in breadth of reading, in knowledge of his time, in the clearness of his views, in the calmness and energy of his decisions; the oracle of the clergy, consulted on all sides by-
reason of his high position than of his superior wisdom. M. Emery was called by Providence to be the guide throughout the long interregnum of the episcopate during the revolution" (L'Ancien Clergé, III, 549). And Cardinal de Bausset declares that he was the "real moderator of the clergy during twenty years of the most violent storms.

The decisions of the Archiepiscopal Council at Paris concerning the several oaths demanded of the clergy, inspired by Emery, were accepted by large numbers of priests and violently assailed by others. To their acceptance was due whatever practice of cult remained in France during the Revolution; to their rejection was due, in large part, the cessation of worship and the opinion which came to regard the clergy as "the irreconcilable enemies of the republic." Emery did not, like many others, mistake purely political projects for vital questions of religion. He felt to free to take the "Oath of Liberty and Equality," but only as concerning the civil and political order; he upheld the lawfulness of declaring submission to the laws of the Republic (30 May, 1795), and of promising fidelity to the Constitution (23 Dec., 1796). He lent his influence toMgr. Spina in his vain opposition to the resignations of the recently appointed bishops, according to the will of Pius VII (15 Aug., 1801). While ready, for the good of religion, to go as far as the rights of the Church permitted, he was stanch in his opposition to the Civil Constitution of the Clergy (1790). Public religious services were suspended during the Revolution, and the seminaries closed; St-Sulpice was taken over by the revolutionists, and Father Emery was imprisoned and several times narrowly escaped execution. His faith, courage, and good humour sustained many of his fellow-prisoners and prepared them to meet death in a brave and Christian spirit; the gaolers, in fact, came to value his presence because it saved them annoyance from prisoners condemned to death. The closing of the seminaries in France led Father Emery, on the request of Bishop Carroll, to send some Sulpicians to the United States to found the first American seminary at Baltimore (St. Mary's, 18 July, 1791). The future religion of the country, he wrote to Father Nagot, the first superior, depended on the formation of a native clergy, which alone would be adequate and fit for the work before it. Besides the fact that in forty years, he continued the supporter of the institution and welcomed the foundation of the college at Pigeon Hill, and later at Emmitsburg, for young aspirants to the priesthood. At one time, however, Bishop Carroll feared the withdrawal of the Sulpicians, but his arguments and above all his convincing zeal for Father Emery's desire that the good of religion in America required their presence.

After Napoleon came into supreme control, Father Emery re-established the Seminary of St-Sulpice. His defence of the pope against the emperor caused Napoleon to expel the Sulpicians from the seminary; but, however, did not daunt Father Emery, who defended the papal rights in the presence of Napoleon (3 March, 1811) and gained the emperor's admittance, if not his good will. "He was," remarks Boiard, "the only one among the clergy from whom Napoleon would take the truth." The death of Father Emery occurred a month later. He left many writings which have been published by Migne in his collection of theological works. They deal chiefly with the political-religious questions of the day. He is best remembered, perhaps, by his dissertation on the mitigation of the sufferings of the damned. He wrote also on Descartes, Leibniz, and Bacon, and published from their works extracts in defence of religion. While clearly perceiving the intellectual evils of his day and the necessary remedies, he did not forget the fertility and originality of intellect, or the peculiar genius needed to counteract the influence of the powerful minds which then ruled France and Europe.

Emesa, a titular see of Phoenicia Secunda, suffragan of Damascus, and the seat of two Uniat archdioceses (Greek Melchite and Syrian). Emesa was renowned for its temple of the sun, adored here in the shape of a black stone, whose priests formed a powerful aristocracy. One of them, Bassiansus, became Roman emperor under the name of Aurelianus (A.D. 218). A native Arab dynasty ruled over the city between 65 a.c. and A.D. 73, from which period the series of Emesa coins dates. Emesa was the birthplace of the philosopher Longinus (c. A.D. 210), the friend of Queen Zenobia, and St. Romanos, the great Byzantine hymnographer (in the sixth century). Among twelve Greek bishops, known from the fourth to the eighth century, are: St. Silvanus, a martyr under Maximinus I in company with the physician Julian (c. 312); Eusebius, a famous rhetorician suspected of Arianism; Nemesius, the fifth-century bishop of Emesa, and five of his friends of St. Basil and St. Cyril of Alexandria (Le- quien, Or. christ., II, 837). Another, whose name is unknown, was burned by the Arabs in 666 (Lambin in "Mélanges de la faculté orientale de Beyrouth", 1906, 3-14). The dioceses of Thermopylae still exists for the Greek Melchites, both the Catholic and Uniat (Echoes d'Orient, 1907, 223, 226). It was raised to the rank of an autocephalous archbishopric in 432, when the supposed head of St. John the Baptist was found at the monastery of the Speleon, and it was made a metropolitan see with four suffragan sees in 781, when the relic was transferred to the cathedral (Echoes d'Orient, 1907, 93-98, 142, 368). Sosomai (Hist. eccl., III, xvii) speaks of this church as a marvellous; the Arabs on capturing the city in 638 took over half of it; later it was changed into a mosque. In 1110 Emesa was taken by the Crusaders, and in 1157 suffered severely from an earthquake. The modern city, which the Arabs call Homa (Homs, Huma), built on the Orontes in sand-coloured basalt, is the chief town of a caza, in the sanjak of Hamah, vilayet of Damascus. The population is about 50,000 including some 30,000 weavers. There are 33,000 Musalmans, 14,500 Greeks, 1000 Jacobites, 500 Greek Catholics, 350 Maronites, and a few Catholics of other rites. The Orthodox Greek metropolitan and the Jacobite bishop are at Homatres (For data and bibliography, see Lequien, op. cit., II, 1141, and "Revue de l'Orient chrétien", 1901, 196, 199). The Greek Melchite metropolitan resides at Ibrad; he has jurisdiction over 8000 faithful, 20 priests, 12 churches, 7 schools, and 2 monasteries of Shooerities. The Syrian Catholic metropolitan resides in Beirut; he includes 2000 faithful, with 4 parishes and 6 churches. The Jesuits have a residence and school at Homs, and native Mariamites Conduct a school for girls.

S. VAIHLÉ.,

Emigrant Aid Societies.—Records of the early immigration to the North American colonies are indefinite and unsatisfactory. The first legislation on immigration enacted by the United States was on 2 March, 1819, when Congress provided that a record be kept of the number of the immigrants arriving from abroad, their ages, sex, occupations, and nationality. Ireland has always supplied a large proportion of those landed at American ports, the steady stream

V. AILÉ.
commencing in the first years of the eighteenth century. These immigrants were then nearly all Presbyterians, few Catholics being among those taking passage prior to the Revolution. Arthur Young, in his "Tour in Ireland" (1776-79), declares that "the spirit of emigrating in Ireland appears to be confined to two circumstances, the Presbyterian religion and the linen manufacture, nearly as absolutely as among manufacturers of that persuasion. The Catholics never went; they seemed not only tied to the country, but almost to the parish in which their ancestors lived." In a message to the "Representatives of the Freemen of the Counties and the Three Lower Counties", Lieutenant Governor Patrick Gordon declared, on 17 December, 1728, that he had "positive orders from Britain to provide by proper law against these crowds of Foreigners who are yearly poured upon us." It may also require thoughts to prevent the importation of Irish Papists and convicts, of whom some of the most notorious, I am credibly informed, have of late been landed in this River."

The earliest American organisation for the care of immigrants was the Charitable Irish Society of Boston, Massachusetts, founded 17 March, 1737. Says its charter: "Several Gentlemen, Merchants and Officers of the Irish Nation residing in Boston in New England from an Affectionate and Compassionate concern for the misfortunes of the Irish People, who have been reduced by Sickness, Shipwreck, Old Age and other Infirmities and unforeseen Accidents, Have thought fit to form themselves into a Charitable Society for the relief of such of their poor and indigent Countrymen."

The Managers, according to the rules, were to be "Natives of Ireland, or Natives of any other part of the British Dominions of Irish Extraction being Protestants and inhabitants of Boston". This anti-Catholic rule did not last long, for representatives of the Faith were members of the Society in 1742, and to-day they are in the majority on its roll.

In Philadelphia the Hibernian Society for the Relief of Emigrants from Ireland was organised on 3 March, 1790. Mathew Carey was its secretary, and Commodore John Barry, Jasper Moylan, George Meade, and other Catholics prominent in those days were among its first members. The Hibernian Society for "the aid of distressed Irishmen and their descendants" was started at Savannah, Georgia, in March, 1812, and emigration from Ireland being constantly on the increase, other societies were formed in New York and other cities. The Emigrant Aid Society was organised in 1825, with Dr. William James Macnevene, one of the United Irishmen of 1798, at its head. It was the canal-and railroad-building era, and the aim of this society was to take care of the new arrivals and direct them where to find employment. It was the predecessor of the Irish Emigrant Society founded, also in New York, in 1841, through the efforts of Bishop Hughes, with Gregory Dillon as its first president. Out of this organisation ten years later came the Emigrant Industrial Savings Bank, which in subsequent years did more than any other of the greatest financial institutions in the country.

As New York was the great entrepôt for aliens, the Legislature, by act of 5 May, 1847, created the Board of Emigration of the State of New York to protect from fraud and imposition alien passengers arriving at New York, and to care and provide for the helpless among them. The president of the Irish Emigrant Society was ex-officio a member of this commission, and at Castle Garden, which became the official landing depot, its agents were recognised officially in their arrangement of the emigrants except on the trains. In addition to looking out for the welfare of the immigrants, a banking department was organised by the society to transmit money to Europe, to secure passage tickets over the ocean and the railways, to exchange the money brought in by the immigrants, and safeguard their material interests generally. In this way many millions of dollars, as well as several millions of immigrants, have been safely cared for through the instrumentality of this society. The discounts and commissions in these financial transactions paid its expenses and left a surplus which is given in charity, so that it will be handed down from generation to generation.

The law by which the State of New York established the Commissioners of Emigration was declared by the Supreme Court, in May, 1876, an unconstitutional regulation of commerce, and an usurpation of the power of Congress. In the twenty-nine years of its existence it had collected by a head-tax from the immigrants the sum of $11,239,329. The responsibility of caring for the immigrants was then taken over by the Federal Government, in July, 1891. The State commission was abolished, Castle Garden abandoned, and the United States landing station established on Ellis Island under the supervision of the Treasury Department. Here, as under the State control, the representatives of the Emigrant Aid Societies are accorded all facilities for protecting and assisting the those who need their help in starting out in the New World.

For the protection of Irish immigrant girls the Mission of Our Lady of the Rosary was founded in New York in 1881, through the efforts of Charlotte Grace, daughter of Captain Brien, and Miss O'Brian, the Irish priest of 1848. At her solicitation—she was not a nun—till several years later a Catholic—Cardinal McCloskey appointed the Rev. John J. Riordan chaplain at Castle Garden, and he began there the work of the mission which exercises a moral influence over the steamship companies to protect the girls on board their vessels, and watches over and assists the girls at the landing depot. From its opening to the end of 1908, fully 100,000 girls were cared for by the mission, all free of charge. It is supported by voluntary contributions.

The increase of immigration having thus been recognised as a fact calling for charitable action, the German Society of New York offered advice and systematic assistance to German immigrants, but took no interest in their religious welfare. Its president was ex officio a member of the State Emigration Commission. In 1886, at the Catholic Congress held at Trier, Peter Paul Cahensly, a prominent merchant of Limburg, Prussia, suggested the establishment of the St. Raphael Society for the systematic protection of German emigrants, both at the point of departure and the port of landing. After much deliberation the States-General of the Congress which met at Bamberg in Bavaria, and was taken up with much energy throughout Germany, Connexion with the United States was established through the Central Verein, which, at its convention in New York, in 1886, created a committee of five for immigrant affairs. The agents of this body looked after the affairs of the immigrants at New York, but received only a waning support from their fellow Germans. In 1883 Peter Paul Cahensly crossed the ocean to New York, travelling, as Miss O'Brien had done, in the steerage, so that he might experience the wants and hardships of the immigrant.

At his suggestion a branch of the St. Raphael Society was formed in New York, with Bishop Winand M. Wigger of Newark as its president. Not much progress was made by this society until 1892, when the Rev. John Reuland was sent over from Germany to manage its bureau at New York. As an adjunct to it, a hospice called the Leo House was established under a separate corporation in 1889. It cost $45,000. The Sisters of St. Agnes have charge of the Leo House, and the hospital and hospices for the German immigrants. From 1889 to 1 November, 1908, there were 51,719 immigrants cared for by the St. Raphael Society. Since the decline of German immigration after 1895, the Leo House has also enter-
tained natives of France, Poland, Bohemia, and other Slavonic sections of the Austro-Hungarian Monarchy. The St. Raphael Society has its agents at Bremen, Hamburg, Antwerp, Rotterdam, Havre, Liverpool, and London, representatives in every diocese in Germany, and correspondents in all the large cities of the United States and of South America.

The Society of St. Raphael in New York was founded in 1896 by a number of former Austrians to aid the newly arrived immigrants at Ellis Island, and to maintain a home under its supervision for the purpose of boarding them free of charge. Those who can afford it pay a nominal fee. Advice and help in employment is given free not only to the newcomers, but also to Austrians who have been in the country for any length of time. The Society is supported by the dues of the members and by donations including an annual subsidy of $6000 from the Austrian Government. Among the members are twenty-one priests. The Austrian Society employs three agents at Ellis Island; one of them is the missionary who pleads before the board of inquiry for the unfortunate detained, cares for the sick, and looks after the spiritual needs of all. In the ten years of its existence, 8000 Austrians have been received at its immigrant house. To maintain the Catholic character of the home and of the Austrian Society at large, as originally intended by the Emperor of Austria, it has from the start been chiefly interested in the Catholic immigrants, but all others are welcome to its care and facilities.

Polish priests ministering in the Eastern section of the United States established at New York, in 1893, the St. Joseph's Society, for the aid and care of the immigrants of that nationality. Its chaplain and agents work on the same lines as those of other societies of the Government landing station. Its home is in charge of the Ficilian Sisters, and its accommodations are free. Its support is derived from voluntary contributions and a yearly grant of $1000 from the Austrian Government on account of the Poles from Galicia who may seek the assistance of the home.

Under the auspices of the Fathers of Mercy the Jeanne d'Arc Home for the protection of French immigrant women was opened in 1895, in New York. It was founded through the generosity of Miss C. T. Smith, who gave the home as a memorial of her mother Mrs. Jeanne Durand Smith. Two years later the Sisters of Divine Providence took charge of it, and they have since managed its affairs. Since its establishment 6800 women have received its care. It is supported by voluntary contributions and yearly grants; if they can, most of them are taken care of gratuitously; Employment is found for them and they are taught useful domestic arts.

As part of the great work in behalf of Italian immigrants undertaken by Bishop Seslalvini of Piacenza, Italy, members of his Congregation of St. Charles Borromeo established the Society of St. Raphael for Italian Immigrants at New York in 1891. Its home is managed by the Sisters of Charity (Pallottine). Only women and children are kept there; men are given money and lodging elsewhere. The chaplain and agent meet the immigrants at Ellis Island. A branch of this society was organized at Boston, in 1902. In December, 1908, Archbishop Blank of New Orleans appointed an Italian priest as chaplain to look after immigrants from Italy and open a home for them. Work here is carried on by the St. Vincent de Paul Society.

The Society for Italian Immigrants is a secular corporation organized in New York in 1901 for the aid and protection of immigrants. It has no religious affiliation and no government appropriation equal to the amount received from all other sources, and its income is derived from the subscriptions of those interested in philanthropic work. Its home has accommodations for 200. It has founded four schools in Italian labour camps to prevent the demoralization usually attending these communities. The enormous volume of Italian immigration during recent years may be realized from the fact that from 1880 to 1908 it amounted to 2,500,000. In 1857 it was about 1000; in 1880 it was 12,000; in 1907, 298,000. It is estimated that 250,000 aliens arrived in the United States between Jan. 1 and Aug. 20, 1920. From 1820, when the official records begin, to the end of the fiscal year, 30 June, 1907, the number of immigrants arriving was 25,985,237.

The Association for the Protection of Belgian and Dutch Immigrants was organized on June 4, 1907, at Chicago, Illinois, by priests in charge of congregations in various sections of the United States, made up of those nationalities. Other priests interested in the spiritual and temporal welfare of the Catholic immigrants from Belgium and Holland assisted in its progress.

U. S. CATH. HOSP. SOC. AND PILGRIM'S SOCIETY. A. V., Emmanuelle signifies "God with us" (Matt., i, 23), and is the name of the child predicted in Is., vii, 14: "Behold a virgin shall conceive, and bear a son, and his name shall be called Emmanuel." The various views advanced as to the identity of the child cannot be fully explained and discussed here; the following observations must suffice: (1) The child is not a merely ideal or metaphorical person; he cannot be identified with the regenerate people of Israel (Hoffmann), nor with religious faith (Porter), for "he shall eat butter and honey" (2). The Prophet does not refer to a child in general, but points to an individual (cf. Roorda, Kuenen, W. R. Smith, Smend, Duham, Cheyne, Marti); both text and context require this. (3) The child is not a son of the Prophet Isaiah (cf. Hitzig, Reuss, Ewald), because "from the days of Chester" has a name different from that of Emmanuel. (4) The child is not a son of Ahas (cf. Lagarde, McCurdy); for Eschias did not possess the most essential characteristics of Emmanuel as described by Isaiah. (5) The Emmanuel is the Messiah foretold in the other prophecies of Isaiah. In, vii, 8, Palestine is called the land of Emmanuel, though in other passages it is termed the land or the inheritance of Yahweh (Is., xiv, 2, 25; xlvii, 8; etc.). (6) So Emmanuel and Yahweh are identical, so that Emmanuel is Yahweh, and the Prophet predicts the futurity of all the enemies' schemes against Palestine, because of Emmanuel. (7) In, 6, 7, the characteristics of the child Emmanuel are so clearly described that we can doubt no longer of his Messianic mission. The eleventh chapter pictures the mission of the Messiah which the Emmanuel will bring upon the earth. Moreover, Matthew (i, 23) expressly identifies the Emmanuel with Jesus the Messiah, and Christian tradition has constantly taught the same doctrine.

The question is whether the Messias was called Emmanuelle, or "God with us," admits of a double answer; the name is a pledge of Divine help, and also a description of the nature of the Messias. King Ahas had not believed the Prophet's first promise of deliverance from
his enemies, Rasin, King of Syria, and Phaeseus, King of Israel (Josh. vii, 1-9). And when the Prophet tried a second time to restore his confidence, Achaas refused to ask for the sign which God was ready to grant in confirmation of the prophetic promise (vii, 10-12). The Prophet, therefore, forces, in a way, King Achaas to confide in God, showing that the Messiah, the hope of Israel and the glory of the house of David, implies by his very name "Emmanuel," or "God with us," the Divine presence among his people. A number of the Fathers, e.g. St. Ireneaus, Lactantius, St. Epiphanius, St. Chrysostom, and Theodoret, regard the name "Emmanuel" as merely as a pledge of Divine assistance, but also as an expression of the mystery of the Incarnation by virtue of which the Messias will be "God with us" in very deep.

A. J. MAAS.

Emmanus, a titular see in Palestina Prima, suffragan of Caesarea. It is mentioned for the first time in 166-165 B.C., when Judas Machabeus defeated there the army of Gogias, the Bishop, iii, 40; iv, 25). A little later the Syrian general Bacchides fortified and garrisoned it (Josephus, Anti. Jud., XIII, i, 3). In a.d. 4, during the rebellion of Athronios against the Romans, the inhabitants left their city, which w as, nevertheless, destroyed by Varus (Josephus, "Ant. Jud."

The supper at Emmanus

Carpaccio, San Salvador, Venice

This is evidently the Emmanus of the Gospel. But it must have been destroyed at the time of the revolt of Bar-Cocheba (A. D. 132-35) under Hadrian, and its site was unknown as early as the third century. Ori gen and his friends merely placed the Gospel Emmanus at Nicopolis, the only Emmanus known at that time. The identifications of Koubelheb, Abou Gosh, Koulunieh, Beit Misheh, etc. with Emmanus, as proposed by some modern scholars, are inadmissible.

S. VAILHÉ.

Emmeram, Saint, Bishop of Poitiers and missionary to Bavaria, b. at Poitiers in the first half of the seventh century; martyred at Asheim (Bavaria) towards the end of the same century. Of a noble family of Aquitaine, he received a good education and was ordained priest. According to some authors, Emmeram occupied the See of Poitiers, but this cannot be verified, for his name does not appear among the Bishops of Poitiers. He probably held the see for a short time, from the death of Dido (date unknown) to the episcopate
of Ansgaualdus (674). Having heard that the inhabitants of Bavaria were still idolaters, he determined to carry the light of the Faith to them. Ascending the Loire, crossing the Black Forest, and going down the Danube, he reached Ratibon in a region then governed by the Duke Thasdo. For three years he lived and labored, preaching the Gospel, and converting the people, acquiring also a renown for holiness. He then turned his steps towards Rome, to visit the tombs of Sts. Peter and Paul, but after a five days' journey, at a place now called Kleinhelfendorf, south of Munich, he set upon by envoys of the Duke of Bavaria who had come after him. He was conveyed to Asheim, about fifteen miles distant. The cause of this attack and the circumstances attending his death are not known. According to the legend related by Ario, Bishop of Freising, the first to write a life of St. Emmeram, Ota, daughter of the Duke of Bavaria, who had been seduced by Sigipaldus, an important personage of her father's court, fearing her father's wrath, confessed her fault to the bishop. Moved with compassion, he advised her to name herself, whom every one respected, as her seducer, and it was in consequence of this action that Emmeram found it expedient to be followed and put to death. The improbability of the tale, the details of the saint's martyrdom, which are certainly untrue, and the fantastic account of the prodigies attending his death show that the writer, in attempting to make his story simple, resorted to the facts imaginary details supposed to redound to the glory of the martyr.

All that is known as to the date of the saint's death is that it took place on 22 September, some time before St. Rupert's arrival in Bavaria (696). At Kleinhelfendorf, where he was tortured, there stands to-day a chapel of St. Emmeram, and at Asheim, where he died, is also a martyr's chapel built in his honour. His remains were removed to Ratibon and interred in the church of St. George, from which they were transferred about the middle of the eighth century by Bishop Gawibaldus to a church dedicated to the saint. This church having been destroyed by fire in 1642, the saint's body was found under the altar in 1645 and was encased in a magnificent reliquary. The relics, which were canonically recognised by Bishop Ignas de Sutterlinum in 1553, are exposed to the veneration of the faithful every year on 22 September. It is impossible to prove that Emmeram occupied the See of Ratibon, for the official episcopal list begins with the above-mentioned Gawibaldus, who was consecrated by Bishop Vigilius in 655. The name is, however, that of a middle of the eighth century by Bishop Gawibaldus to a church dedicated to the saint. This church having been destroyed by fire in 1642, the saint's body was found under the altar in 1645 and was encased in a magnificent reliquary. The relics, which were canonically recognised by Bishop Ignas de Sutterlinum in 1553, are exposed to the veneration of the faithful every year on 22 September. It is impossible to prove that Emmeram occupied the See of Ratibon, for the official episcopal list begins with the above-mentioned Gawibaldus, who was consecrated by Bishop Vigilius in 655. The name is, however, that of a...

Emmerich, Anne Catherine, an Augustinian nun, mystic, and ecstatic, b. 8 September, 1774, at Flamme, near Coesfeld, in the Diocese of Münster, Westphalia, Germany; d. at Dülmen, 9 February, 1824. Her parents, both peasants, were very poor and pious. At twelve she was bound out to a farmer, and later was a seamstress for several years. Very delicate all the time, she was sent to study music, but finding her family's poverty very poor she gave them the help she had saved to enter a convent, and actually waited on them as a servant for several years. Moreover, she was at times so pressed for something to eat that her mother brought her bread at intervals, parts of which went to her master's family. In her twenty-eight, year (1802) she entered the Augustinian convent of Agnetenberg, Dülmen. Here she was content to be regarded as the least in the house. Her zeal, however, disturbed the tepid sisters, who were puzzled and annoyed at her strange powers and her weak health, not to mention her church, cell, or at work, treated her with some antipathy. Despite her excessive frailty, she discharged her duties cheerfully and faithfully. When Jerome Bonaparte closed the convent in 1812 she was compelled to find refuge in a poor widow's house. In 1833 she became a nun. She foresaw the downfall of Napoleon twelve years in advance, and counselled in a mysterious way the successor of St. Peter. Even in her childhood the supernatural was so ordinary to her that in her innocent ignorance she thought all other children enjoyed the same favours as she herself did, to converse familiarly with the Child Jesus, etc. She displayed a marvellous knowledge when the sick and poor came to the "bright little sister" seeking aid; she knew their diseases and prescribed remedies that did not fail. By nature she was quick and lively and easily moved to great sympathy by the sight of the sufferings of others. This feeling passed into her spiritual being with the result that she prayed and suffered much for the souls of Purgatory whom she often saw, and for the salvation of sinners whose miseries were known to her even far away. Soon after she was consecrated (1813) the stigmata came externally, even to the marks of the thorns. All this she unsuccessfully tried to conceal as she had concealed the crosses impressed upon her breast.
Then followed what she dreaded on account of its publicity. General commission to inquire into her life and the reality of these wonderful signs. The examination was very strict, as the utmost care was necessary to furnish no pretext for ridicule and insult on the part of the enemies of the Church. The vicar-general, the famous Overberg, and three physicians conducted the investigation with scrupulous care and became convinced of the sanctity of the "pious Beggine", as she was called, and the genuineness of her stigmata. At the end of 1818 God granted partially her earnest prayer to be relieved of the stigmata, and the wounds stopped, closed, but without the other remains, and on Good Friday were all wont to reopen. In 1819 the government sent a committee of investigation which discharged its commission most brutally. Sick unto death as she was, she was forcibly removed to a large room in another house and kept under the strictest surveillance day and night for three weeks, away from all her friends except her confessor. She was insulted, threatened, and even flattered, but in vain. The commission departed without finding anything suspicious, and remained silent until its president, the count, declared, with a certain air, that the fraud, to which the obvious reply was: In what respect? and why delay in publishing it? About this time Klemens Brentano, the famous poet, was induced to visit her; to his great amazement she recognized him, and told him he had been pointed out to her as a messenger to deliver her to God's command, namely, to write down for the good of innumerable souls the revelations made to her. He took down briefly in writing the main points, and, as she spoke the Westminster dial, he immediately rewrote them in German. He would read what he wrote to her, and change and efface until she gave her complete approval. Like so many others, he was won by her evident purity, her exceeding humility and patience under sufferings indescribable. With Overberg, Sailer of Ratibon, Clement Augustus of Cologna, Uolberg, Louise Hennel, etc. be reverenced her as a chosen bride of Christ.

In 1833 appeared the first-fruits of Brentano's toil, "The Dolorous Passion of Our Lord Jesus Christ according to the Meditations of Anne Catherine Emmerich," which was prepared for publication by "The Life of the Blessed Virgin Mary", but this appeared at Munich only in 1852. From the MS. of Brentano Father Schenoeiger published in three volumes "The Life of our Lord" (Ratisbon, 1858-60), and in a certain branch of the Stigmata he is admirable. His humanity stands out clear and distinct, but through it shines always a gleam of the Divine. The rapid and silent spread of her works through Germany, France, Italy, and elsewhere speaks well for their merit. Strangely enough they produced no controversy. Dom Guéranger extols their merits in the highest terms (Le Monde, 15 April, 1860).

Sister Emmerich lived during one of the saddest and least glorious periods of the Church's history, when revolution triumphed, impurity flourished, and several of the worst vices of modern society infested and cast into such ruinous confusion that the Faith seemed about to be completely extinguished. Her mission in part seems to have been by her prayers and sufferings to aid in restoring Church discipline, especially in Westphalia, and at the same time to strengthen at least the little ones of the flock in their belief. Besides all this she saved many souls and recalled to the Christian world that the supernatural is around about it to a degree sometimes forgotten. A rumour that the body was stolen caused her grave to be opened six weeks after her death. The body was found fresh, without any sign of corruption. In 1892 the process of her beatification was introduced by the Bishop of Münster.

Empiricism (Lat. empiricus, the standpoint of a system based on experience)._Primarily, and in its psychological application, the term signifies the theory that the phenomena of consciousness are simply the product of sensuous experience, i.e. of sensations variously associated and arranged. It is thus distinguished from idealism or idealism of consciousness, and in its logical (epistemological) usage, it designates the theory that all human knowledge is derived exclusively from experience, the latter term meaning, either explicitly or implicitly, external sense-percepts and internal representations and inferences exclusive of any supervisory (innate or fundamental) intellectual factor. In this connexion it is opposed to Intellectualism, Rationalism, Apriorism. The two usages evidently designate but two inseparable aspects of one and the same theory, the epistemological being the application of the psychological to the problem of knowledge. Empiricism appears in the history of philosophy in three principal forms: (1) Materialism, (2) Sensism, and (3) Poetivism.

(1) Materialism in its crudest shape was taught by the ancient atomists (Democritus, Leucippus, Epicurus, Lucretius), who, reducing the sum of all reality to atoms and motion, taught that experience, whereof they held knowledge to be constituted, is generated by images reflected from material objects through the sensory organs into the soul. The soul, a mere complex of the finest atoms, perceives not the objects but their effluent images. With modern materialists (Helvetius, d'Holbach, Diderot, Feuerbach, Molechott, Büchner, Vogt, etc.), knowledge is accounted for either by cerebral secretion or by motion; while Hâckel looks on it as a physiological process effected by specific "empiricites", i.e., definite intellectual data, which subliterate this process so far as to reduce all experience to internal (empirico-criticism).

(2) Sensism.—All materialists are of course sensists. Though the converse is not the case, nevertheless, by denying any essential difference between sensations and ideas (intellectual states), sensism logically involves materialism. Sensism, which is found with Empedocles and Protagoras amongst the ancients, was given its first systematic form by Locke (d. 1704), though Bacon (d. 1626) and Hobbes (d. 1679) had prepared the way. Locke admitted ideas from external experience (sensations), all compound ideas (modes, substances, relations) from internal experience (reflection). Substance and cause are simply associations of subjective phenomena; universal ideas are mere mental figments. Locke admits the existence, though he denies the demonstrability, in man of an immaterial and immortal principle, the soul. Berkeley (d. 1753), accepting the teaching of Locke that ideas are only transfigured sensations, subjectivises not only the sensible or secondary qualities of matter (sensibilia physis, e.g., colour and sound) as his predecessor had done, but also the primary qualities (sensibilia cominucius, extension, space, etc.), which Locke held to be objective. Berkeley denies the objective basis of universal ideas and indeed of the
whole material universe. The reality of things he places in their being perceived (esse res est percipere), and this "perceived," is effected in the mind by God, not by the object or subject. He still retains the substance-reality of the human soul and of spirits generally, God included. Hume (d. 1770) agrees with his two predecessors in his assent to the view that the supersensible knows only its own subjective organic impressions, whereof ideas are but the images. The supersensible is therefore unknowable; the principle of causality is resolved into a mere feeling of successiveness of phenomena; its nature is subjective feeling resulting from uniform association experienced in consciousness, and the spiritual essence or substantial being of the soul is dissected into a series of conscious states. Locke's sensism was taken up by Condillac (d. 1780), who eliminated entirely the subjective factor (Locke's "reflection") and sought to explain all cogitations by a mere mechanical, passive transmission of external sensations. The French sensist retained the spiritual soul, but his followers dispensed with it as Hume had done with the Berkelean soul. On this subject Locke says that "nor does Wundt make a clear distinction between primitive concepts (empirische Begriffe, representations of individual objects) and the image: "Denken ist Phantasieren in Begriffen und Phantasieren ist Denken in Bildern".

(C) Positiveism.—Positivists, following Comte (d. 1857), do not deny the supersensible; they declare it unknowable; the one source of cognition, they claim, is sense-experience, experiment, and induction from phenomena. John Stuart Mill (d. 1870), following Hume, reduces all knowledge to series of conscious states linked by empirical associations and enlarged by inductive processes. The mind has no certitude of an external world, but only of "a permanent possibility of sensations" and antecedent and anticipated feelings. Spencer (d. 1902) makes all knowledge relative. The actual existence of things is their persistence in consciousness. Consciousness contains only subjective feelings. The relative supposes the absolute, but the latter is unknowable to us; it is the object of faith and religion (Agnosticism). All things, mind included, have resulted from a comical process of mechanical evolution wherein they are still involved; hence all concepts and principles are in a continuous flux.

The Teaching of Catholic Philosophy is that sense-experience is the primary source, and indeed the primary source, of human knowledge, but it holds that there are other sources beyond sensations. There is nothing in the intellect that had not its birth in sense; this is one of the generalizations of the School. Moreover, though every intellectual act is accompanied by sense-motion, and especially by some sense-representation (phantasma) evoked in the imagination, nevertheless sensation and sensuous representation (phantasma, image) differ essentially from the idea produced in and by the intellect, which is an immaterial, supersensible and supernatural faculty. The theory here proposed may be called empirico-intellectualism since it conjures a sensuous factor with the purely intellectual or immaterial agency in the genesis of knowledge. Its bases are as follows: (a) Ideas represent the natures or essences of things, not the mere sensuous qualities, the phenomena of things, but the underlying subject and cause thereof, e.g. substance, life, cause, truth, etc.; while ideas of sensuous qualities as such represent them in the abstract and as universal, e.g. light. (b) The mind recognizes two kinds of things (substance and accidents) immortal, invisible, possible, and impossible, etc., e.g. ideas of God, spirit, etc.—ideas which cannot be formed from purely sensuous presentations or images; (c) We make clear-cut distinctions between the essential and accidental or contingent properties and attributes of things. (d) Every predicate idea represents not a congeries of sensuous qualities, but what the subject is (its essence), under some particular aspect. Now none of these peculiarities of the idea can be discovered in any sensation or image, which always represents sensuous phenomena, existent and concrete. In short, "the true essence of association" will not suffice to transmute sensations into ideas, since these two states are essentially, because objectively (representatively), different. Positivists inadvertently slip into an immanent agency, whereby indeed they beg the question when they appeal to induction to explain the genesis of knowledge, for the inductive process involves universal abstract principles and logical laws which are constituted of ideas that essentially transcend sensations. The supersensible character of ideas follows equally from their "extension" or range of applicability. Ideas as representative of essences, are available as predicates, and are the terms whereof absolutely universal principles are constituted. Hence ideas are universal, whereas sensations and images can represent only the sensory organs, i.e. individual, physically existing objects. Moreover, ideas are objects as abstract—physically abstract, e.g. individual sensible qualities; mathematically abstract, e.g. extension and number; metaphysically abstract, e.g. nature, entity, substance, truth, etc. And indeed understanding objects as the abstract, physical, mathematical, or philosophical; all these sciences consider their objects apart from concrete individual determinations. No intellectual judgment whatsoever would be possible, since every predicate is a generalised term and hence in some degree abstract. Sensation cannot represent an abstract object; for though the sight, e.g., perceives colour apart from sound, nevertheless (a) no sense can abstract from the subject-matter—from the existence and individuality of its proper object; the eye does not see colour as such and abstracted, but the coloured object physically and individually existing—(b) no sense can abstract from the proper object (its appropriate stimulus or object-quality), nor from its common object (quantity, the extended object), (c) a fortiori, no sense can perceive one dimension of extension or a mathematical point, or things non-existent, or abstract forms like man and humanity.

Nor does the common image suffice to explain the universal idea as Locke and the Herbartians suppose, for the common image, though indistinct, remains always in some way or other the image of the imagination as primarily reproductive can represent only what the senses have reported. Consciousness attests this; for if the imagination represent e.g. a triangle, it is always of some certain size and shape; it cannot represent a triangle of which is neither rectangular, obtuse, nor acute; while the idea of a triangle precludes from every size or shape. Besides the image there is therefore the thought, the intellectual concept, the latter differing essentially from the former. Hence the common image is not the representative of the individuals distributively, because it is still somewhat concrete, singular, sensible, material, and represents only quality. Nor can it be predicated as confusedly blending all its inferior, because the predicate of a judgment is attributed according to comprehension rather than extension. At best, moreover, the image is like a thing; the concept is identical with the subject of which it is predicated. According to the empiricists the common image results from a comparison of representations, so that what is common to them, i.e. some part of the concept. But, in the intellect would thus have to imagine the images and compare the images, which is impossible; nor could it form a concept unless a number of sense perceptions and representations of a thing or things of the same species had proceeded. We know, however, that we
immediately form a concept of a thing, even though perception be inoperational. Further, in order to form the common image a concept of the object must have preceded; for in order to compare similar things we must previously have perceived their likeness. Now, to perceive their likeness means to perceive some common objective aspect wherein the similar things agree, while differing in other aspects. But this the senses cannot perceive; hence there must precede an intellectual perception of the note of agreement common to the objects represented by the images, i.e. a universal idea must proceed the common image. The common image themselves does no perceivable but follows the common concept, whereof it is a sort of shadow. This is specially so in the case of the productive imagination, which rearranges in new forms previously compared images and hence supposes reflection and judgment, operations which no sense can perform.

Sensism implies scepticism. (a) For if we do not immediately perceive external objects but only our subjective sensuous modifications, then, since these differ with different individuals (e.g. the varying judgments of distance, heat, cold, etc., which varying judgments are the factor in the concept Karl Theodor, who in this case, senses are incapable), there could be no certain and objective truth, each individual would be the measure of truth, there would be no objective criterion of certitude, no universal truths. (b) In order to pass from a subjective affection to a knowledge of its object we must be able in some way to show this object to ourselves. Here sensism, either the concept of cause is not objective or cause is not perceived at all; therefore the principle of causality is either rejected or is pronounced doubtful. Hence there can be no object of the objective existence of things. Hume was but logical when he deduced universal scepticism from the theory of Locke.

Sensism involves the destruction of all science. (a) Science is the knowledge of things in and by their causes; but the senses cannot perceive causes. (b) Positivists claim that by their method the sciences have made wonderful progress, that by employing observation and induction the laws of nature have been discovered. Now, observation of phenomena entails universal ideas whereby the phenomena are classified and grouped in order to produce legitimate and certain, postulates the principle of causality. Therefore the physical sciences suppose physical abstraction; the mathematical, mathematical abstraction, the metaphysical, metaphysical abstraction (primitive, i.e. direct, and reflective; ontological, and metaontological necessary, immutable ideas essentially different from sensations means the destruction of even physical science, a fortiori of mathematical and philosophical sciences.

Sensism destroys the foundations of morality and religion. For, as sensists and positivists admit, their theories leave no proof of the soul's spirituality and immortality; of the existence of moral law, its obligation and sanction in a future life; of the existence of God and His relation to man. Now, history bears witness that these truths are fundamental for man's religious and moral life.

F. P. SIEGFRIED.

EME, CONGRESS, on a meeting of the representatives of the German Archbishops Friedrich Karl von Erthal of Mainz, Maximilian Franz of Cologne, Clemens Wenceslaus of Trier, and Hieronymus von Colloredo of Salzburg, at the little town of Bad-Em's, near Coblenz, in August, 1786, for the purpose of protesting against papal interference in the exercise of ecclesiastical powers and fixing the future relations between these archbishops and the Roman pontiff.

The Gallican principles concerning the relation between the bishops and the pope, which had been disseminated in Germany by Honthem, the Auxiliary Bishop of Trier (1745-1786), in his treatise "Ikona ecclesiae et legitimat pontificem Rom. Pontificium" (1780), under the pseudonym "Febronius", were shared by some of the most influential archbishops of Germany. The archbishops became confirmed in the position which they took towards the pope by the encouragement and support given them by Joseph II of Austria. With them it was not a question of obedience to himself both temporal and spiritual jurisdiction. As early as 1769 the representatives of the Elector-Archbishops of Mainz, Cologne, and Trier, at a meeting held in Coblenz, had drawn up a list of thirty-one articles, most of which were directed against the Roman Curia. The proximate occasion of the Congress of Ems was the erection of an Apostolic nunciate in Munich (27 Feb., 1785) and the appointment of Zoglio, titular Archbishop of Athens, as nuncio (27 June), with jurisdiction over the entire territory of the Electorate. In protest, both Mainz and Cologne with the Rhine Palatinate and the former Duchies of Jülich and Berg. Pius VI erected this nunciature upon the urgent request of the Elector of Bavaria, who was bound to have parts of his territory under the spiritual jurisdiction of bishops who, being elected like himself, were at the disposal of the prince. He had previously suggested to the Elector-Archbishops of Mainz, Cologne, and Trier to appoint special vicars-general for their districts in his territory. Upon their refusal he requested Pius VI to erect separate dioceses for his territory. In defense of the wishes of the three elector-archbishops, the pope also refused. Finally the Elector of Bavaria asked for the above-mentioned nunciature, and despite the protests of the archbishops his wish was granted.

Meanwhile Bellissimi, the nuncio at Cologne, was transferred to Liébou, and Paccia, the titular Archbishop of Damietta was appointed to succeed him at Cologne. Maximilian Franz, Archbishop of Cologne (a brother of Emperor Joseph II), refused to see him, and none of the three elector-archbishops honored his credentials. Maximilian Franz, to be legitimate and certain, postulates the principle of causality. Therefore the physical sciences suppose physical abstraction; the mathematical, mathematical abstraction, the metaphysical, metaphysical abstraction (primitive, i.e. direct, and reflective; ontological, and metaontological necessary, immutable ideas essentially different from sensations means the destruction of even physical science, a fortiori of mathematical and philosophical sciences.

Sensism destroys the foundations of morality and religion. For, as sensists and positivists admit, their theories leave no proof of the soul's spirituality and immortality; of the existence of moral law, its obligation and sanction in a future life; of the existence of God and His relation to man. Now, history bears witness that these truths are fundamental for man's religious and moral life.

F. P. SIEGFRIED.

Assuming that Christ gave unlimited power of binding and loosing to the Apostles and their successors, the bishops, the "Punctuation" maintains that all prerogatives and reservations which were not actually connected with the primacy during the first three centuries owe their origin to the Pseudo-Ildore decretals, universally acknowledged as false, and, hence, that the bishops must locate all influence of the Roman Curia with the exercise of their episcopal functions in their own dioceses as encroachments on their rights. Upon these schismatic principles the four archbishops
based their demands, which may be summarized as follows: all direct appeals to Rome must be discontinued, the monasteries must become subject to the bishops in whose districts the monasteries are situated; no German monasteries must have generals, provincials, or other superiors who do not reside in Germany; the bishops need not obtain quinquennial faculties from Rome, because by virtue of their office they can dispense from abstinence from matrimonial impediments, including the second degree of consanguinity and the second and first degrees of affinity, from solemn religious vows and the obligations resulting from Holy orders; papal Bulls and ordinances of the other bishops are binding on the bishop after the respective bishop has given his place; all Apostolic nunciatures must be abolished; the manner of conferring benefices and the procedure in ecclesiastical lawsuits must be changed in favour of the bishops; the episcopal oath must be changed so that it shall not appear to be the oath of a vassal, etc.

It may easily be seen that the articles of the "Punctuation" lower the papal primacy to a merely honorary one and advocate an independence of the archbishops in regard to the pope which is entirely incompatible with the doctrine of the Church of Christ. Still the "Punctuation" was immediately ratified by the four archbishops and sent to Emperor Joseph II with an humble request for his support. The emperor was pleased with the articles and would have pledged his unqualified support if his councillors, especially Kaunitz, had not for political reasons advised him otherwise. In his reply of 16 Nov., 1786, the emperor wisely makes his support dependent on the condition that the archbishops gain the consent of their suffragan bishops, the superiors of the exempt monasteries, and the estates into whose districts their spiritual jurisdiction extends. The suffragan bishops, especially the pious and learned prince-bishops August von Styrum von Speier and Franz Ludwig von Erthal of Würzburg-Bamberg (a brother of the Archbishop of Mainz), protested against the schematic tendency of the "Punctuation" and saw in the anti-papal procedure of the archbishops merely an attempt to increase their own power to the detriment of their suffragans. The Elector of Bavaria likewise remained a zealous defender of the pope and his nuncio at Munich, and even the Protestant King Frederick II. of Prussia was an opponent of the "Punctuation" and favoured the nuncio Pacca at Cologne.

Still the archbishops insisted on their demands. When the nuncio at Cologne by authority of the pope granted a matrimonial dispensation from the second degree of consanguinity to the Protestant King Frederick II. of Prussia, the archbishops Maximilian Franz of Cologne addressed him to a strong protest forbidding him for the future the exercise of all jurisdiction in the Archdiocese of Cologne. The archbishops themselves now began to grant dispensations from such degrees of relationship as were not contained in their ordinary quinquennial faculties, just as if the "Punctuation of Ems" were in full force. When the nuncio at Cologne, by order of the pope, informed the pastors that all marriages contracted by virtue of such dispensations were invalid, the archbishops ordered their pastors to return the circular to the nuncio and to obtain all future dispensations directly from their ordinary, the archbishop. The Church in Germany was now near to a schism. For instance, Cardinal von Dalberg as coadjutor, and, to obtain the consent of Rome, he withdrew, at least apparently, from the "Punctuation" and obtained a renewal of his quinquennial faculties from Rome on 9 Aug., 1787. The Archbishop of Trier, however, his faculties as Bishop of Augsburg, but not as Archbishop of Trier. Von Erthal's submission to Rome was only a pretended one. He continued his opposition and on 2 June, 1788, requested Emperor Joseph II, in the name of himself and the three other archbishops, to bring the affair concerning the German nuncios before a diet. But soon the archbishops discovered that all the estates were opposed to the "Punctuation" and that a diet would rather retard than accelerate the fulfillment of their wishes. For this reason they addressed a letter to Rome (1 Dec., 1788) asking the pope to put an end to the unduly inciting ecclesiastical dissensions in Germany by withdrawing the faculties from the nuncios and by sending representatives to the German estates with authority to come to an amicable agreement regarding the other bishops. This request appeared the publication of a memorable document composed by order of the pope and entitled: "Sanctissimi Dom., nostri Pii Papae VI responsio ad Metropolitanos Moguntinum, Trevirensen, Coloniensem et Salisburgensem super Nunciaturae Apostolicae" (Rome, 1788). It was a masterpiece in form and contents of Apostolic firmness and paternal reproof. After presenting a dispassionate and objective view of the whole litigation, the document refutes all the arguments of the archbishops against papal authority and afterwards turns to the other bishops and explains that the pope cannot send representatives to worldly estates who have no right to pass judgment on ecclesiastical affairs, and admonishes the archbishops to give up their untenable position towards the Holy See.

The papal writing was not without effect. Archbishop Wenceslaus of Trier, who had long desired an amicable settlement of the odious affair, into which, it appears, he was drawn against his will, publicly withdrew from the "Punctuation" on 20 Feb., 1789, and admonished his colleagues to follow his example. They, however, continued their opposition and on occasion of the imperial capitulation of Leopold II (1790) and that of Francis II (1792) obtained the promise that their complaints concerning the nunciatures would be attended to as soon as possible by a decree of the diet. The threatening progress of the French Revolution finally changed the attitude of the Archbishops of Cologne and Salzburg, but the Archbishop of Mainz clung to the "Punctuation" until the victorious French army invaded his dioceses and he was deprived of all his possessions west of the Rhine, at the Peace of Campo Formio, in 1797.

**Emser, Hieronymus, the most ardent literary opponent of Luther, b. of a prominent family at Ulm, 20 March, 1477; d. 8 Nov., 1527 at Dresden. At the University of Tübingen, whither he went in 1493, he acquired a thorough knowledge of Greek and Latin. But in 1497 he began the study of law and theology and he went to the University of Basle. Through the good offices of Christopher, later Bishop of Utenheim, he barely escaped imprisonment at Basle for having inscribed some satirical verses of his countryman, Rebci, in a volume which was circulated among the students. The legendarium, Card. Patrizi in 1507, that Emser had been put in the ground by the judge in this trial, shortly after engaged him as secretary. In 1500 he published a medicoe work on the miraculous cures which were generally supposed to have fallen from heaven. Four years later he began Archdiocese of Breslau. From Reuchlin's "Scribbas vel Caput Capitis" and numbered Martin Luther among his hearers. On account of his triumphs at Erfurt he always claimed the
distinction of having been one of the pioneers of classical humanism in Germany. Despite the renown and brilliancy of his career, he was not spared the necessities of life. In 1505, he made little progress in law. Disgusted at his failure he turned to the study of theology and won the degree of bachelor. George of Saxony befriended him, and in a financial way during these and subsequent years. Dissatisfied with the methods of teaching theology then prevalent, Emser applied himself earnestly to canon law, and on the completion of his studies served George of Saxony as secretary. At the request of the latter he composed a Latin ode in honour of St. Benno of Meissen, who had just been canonized. The composition was largely due to the efforts of Emser at Rome, whither he went in 1510 at the express wish of George of Saxony, who saw in this solemn act a source of glory for his realm. The life of the saint, which Emser wrote in faultless Latin on his return in 1512, is worthless from a critical point of view.

About this time Emser received Holy orders and two prebends at Dresden and Meißen. While preaching by command of George of Dresden, he became better acquainted with Luther. Emser admired the fiery Augustinian; Luther, the accomplished litterateur. But in 1513 they parted. At the dispute in Leipzig in 1517, he sent a copy of George of Saxony, who was present with Emser, gave utterance to Husseine opinions of a radical sort regarding the pope. Emser was deeply pained at this; and on learning that the Bohemians, in two semi-public letters, hailed a second Hus in Luther, he went in a letter to John Zacck that Luther had reprimanded the Bohemians for their attitude towards the pope, and had upheld the papal supremacy as a necessary means to prevent division. Emser added a vivid explanation based on Scripture in proof of the primacy, and in a subsequent poem dealt a severe blow to the calumnies against the pope. Luther soon learned the contents of this letter and, regarding it as an attempt to discredit him among the Bohemians, replied in his "Ad agocoretur Emseranum M. Luther addition", where abuse of all kind was heaped upon the Church. Emser answered with an equally violent though not scurrilous work: "A venatione lutherianæ agocerotic Asercio", in which he portrayed the certain scandal arising from the words and conduct of a refractory monk. He defended the Scripture and the pope, and pointed out the logical results of the new teaching. In 1522 he translated the address which the Englishman, John Clark, delivered on holding over to Pope Leo X the book written by Henry VIII against Luther. (O'Donnovan, The Defence of the Seven Sacraments by Henry VIII, New York, 1906, pp. 110-17.) Among other works may be mentioned his German translation of the New Testament with a laudatory preface by George of Saxony. Emser showed in this work the liberties taken by Luther with the Scriptures and refuted his errors.

ENCINA

Enchilas (or Engrina), Juan de la., Spanish dramatic poet, called by Ticknor the father of the Spanish secular drama. B. in the province of Encina near Salamanca, 7 Aug., 1468; d. at Salamanca, 24 Oct., 1519. He graduated at the University of Salamanca, whence he proceeded to Madrid, where at the age of twenty-five he became a member of the household of Fabrique de Toledo, first Duke of Aльba. Later, Encina went to Rome, where he took orders, and owing to his music attracted the attention of Leo X who made him maestro di capella, which was a signal honour. In 1519 he accompanied Fabrique Anan de Ribera, Marquis of Tarifa, on a pilgrimage to the Holy Land, where he remained two years, and upon his return in 1521 he published a poetical collection without the void of literary merit, under the title "Trabagia 6 Via Sagrada de Hierusalem". At a more advanced age, he was appointed prior of Leon and returned to Spain, where he died. He was buried in the cathedral of that city.

Encina published the first edition of his works under the title of "El Cancionero". This was reprinted five times during the sixteenth century, showing that he enjoyed great popularity. Although he wrote lyrical poems, songs, and villancicos in the old Spanish style, his most important works were his dramatizations which he himself calls representaciones, and which fill the fourth division of his "Cancionero". They are eleven in number, all in the nature of eclogues, and written in some form of old Spanish verse; in all there is singing, and in one of them a dance. They therefore have several elements of the secular drama, the origin of which, according to Ticknor, can be traced no further back by any existing authentic monument. Two things must be considered, however, in connexion with these compositions as the foundation of the secular drama. One is that they are eclogues in form and name but not in substance; the other, that they were really acted before an audience. The date of these performances has been given as early as 1542. The representaciones have not much dramatic merit. They are crude and slight, and there is no pretension to a plot. Some of the most important works of Encina are: "The Triumph of Love", "The Knight who turns Shepherd", and "The Shepherds who turn Courtiers". He was also the author of a prose work on the condition of the poet's art, "Arte de Poesía Castellana", published about 1497.

VENTURA F U N T E S.

Enciso, Díez Ximénez de, dramatic poet, b. in Andalusia, Spain, c. 1585; date of death unknown. All trace of him is lost after 1632. He was much admired and praised by Covantes, Lope de Vega and Montalban; the last considers him a "model for those who wish to write great comedies". Although he enjoyed some fame, as his frequent mention by his contemporaries would show, he has shared the fate of many other Spanish dramatists of his day, and his works have undeservedly been consigned to oblivion. In his catalogue of the Spanish theatre, Caystano Barrera gives a list of eleven plays by Enciso, but most of them are scattered throughout the great libraries of Europe, and only three have reached several editions, namely, "El Príncipe Don Carlos", "La Mayor Hazada del Emperador Carlos Quinto", and "Los Médicos de Florencia". To the average reader, however, only the last named is easily accessible. It is to be found in "La Biblioteca de Autores Españoles". These three plays were probably chosen for repeated editions because they show Enciso at his best. Enciso's idea of the historical drama is thoroughly unique for a Spanish dramatist, for he alone of all his contemporaries seems to regard the historical
Encratites [Ἐγκράτεις (Irenaeus) Ἔγκρατείοι (Clement Alex., Hippolytus)], literally, "abstainers" or "persons who practised continence", because they refrained from the use of wine, animal food, and marriage. The name was given to an early Christian sect, or rather to a tendency common to several sects, chiefly Gnostic, whose asceticism was based on heretical views regarding the origin of matter.

I. History.—Abstinence from the use of some creatures, because they were thought to be intrinsically evil, is much older than Christianity. Pythagorism, Esseniism, Indian asceticism betrayed this erroneous tendency, and the Indian ascetics are actually quoted by Clement of Alexandria as the forerunners of the Encratites (Strom., I, xv). Although St. Paul refers to people, even in his days, "forbidding to marry and abstaining from meats" (1 Tim., iv, 1-6), the first mention of a Christian sect of this name occurs in Irenaeus (I, xxvii). He connects their origin with Saturninus and Marcion. Rejecting marriage, they implicitly accuse the Creator, Who made both male and female. Refraining from all flesh (animal food and intoxicants), they are ungrateful to Him Who created all things for man. And not content with Irenaeus, "they reject the salvation of the first man [Adam]; an opinion recently introduced among them.
by Tatsian, a disciple of Justin. As long as he was with Justin he gave no sign of these things, but after his marriage he became a Christian. Elected and puffed up by his professorship, he established some teaching of his own. He talked about some invisible sons, as the Valentinians do; and proclaimed marriage to be corruption and fornication, as Marcion and Saturninus do, but he made the denial of Adam's marriage a speciality of his own. The Encratites are next mentioned by Clement Alex. (Fest., II, ii, 33; Strom., I, xv; VII, xvii). The whole of the third book of the Stromata is devoted to combating a false encreatisia, or continency, though a special sect of Encratites is not there mentioned. Hippolytus (Philos., VIII, xiii) refers to them as "a sect which concerns God and Christ in like manner with the Church; in respect, however, of their mode of life, passing their days inflated with pride"; "abstaining from animal food, being water-drinkers and forbidding to marry"; "estimated Cynics rather than Christians". On the strength of this passage it is supposed that some Encratites were perfectly orthodox in doctrine, and erred only in practice, but η Τέρη της ἐναντίων ξανθάνειν need not include the whole of Christian doctrine. Somewhat later this sect received a new name and the accession of a certain Severus (Eusebius, Hist. Eccl., IV, xxix), after whom Encratites were often called Severians. These Severian Encratites accepted the Law, the Prophets, and the Gospels, but rejected the Book of the Acts and cursed St. Paul and his Epistles. But the account given by Epiphanius of the Severians rather betrays Syrian Gnosticism than Judaic tendencies. In their hatred of marriage they declared woman the work of Satan, and in their hatred of intoxicants they called wine drops of venom from the great Serpent, etc. (Herm., xiv). Epiphanius states that in his day Encratites were very numerous throughout Asia Minor, in Pisidia, in the Adustan district of Phrygia, in Isauria, Pamphylia, Cilicia, and Galatia. In the Roman Province and in Antioch of Syria they were found scattered here and there. They split up into a number of smaller sects, of whom the Apostolic (q. v.) were remarkable for their condemnation of private property, the Hydrophobastae for their use of water instead of wine in the Eucharist. In the Eccl. of 382, Theodosius pronounced sentence of banishment on all who went to the name of Severus, Simon of Campaspe, or Hydrotholostae, and commanded Florus, the Magister Officiorum, to make strict search for these heretics, who were Manicheans in disguise. Socomen (Hist. Eccl., V, xi) tells of an Encratite of Anchiza in Galatia, called Dusiris, who was burnt the faithful in the Manichaean section, and who under Theodosius abjured his heresy and returned to the Catholic Church. On the other hand, we learn from Macarius Magnes (about 403—Apollo., III, xlii) of a certain Dositheus, a Cilician, who about the same time wrote a work in eight books in defence of Encratite errors. About the middle of the fifth century they disappear from history, absorbed, probably, by the Manicheans, with whom they had so much in common from the first.

II. Warnings.—The Encratites developed a considerable literary activity. The earliest writer in their defence probably was Tatsian in his book "Concerning Perfection according to the Saviour", which Clement of Alexandria quotes and refutes in Strom., III, xii. Almost contemporary with him (about A.D. 150) was Justin Cassius, an Adramytite (Apol. Prof., I). (For Justin see above.) He wrote a work "Concerning Self-restraint and Contency", of which Clement and St. Jerome have preserved some passages (Strom., I, xxi; Euseb., Præp. Ev., X, xii; Strom., III, xiii; Jerome, ad Gall., VI, vii). Concerning the eight books of Dositheus we know only that he maintained that, as the world had its beginning by sexual intercourse, so by continency (encreatisia) it would have its end; and that he inveighed against wine-drinkers and flesh-eaters. Among the apocryphal works which originated in the Encratite circles, and were dedicated to the Church, were the "Logia" of the Egyptians, referred to by Clement (Strom., III, ix, 13), Origen (Hom. in i Luc.), Hippolytus (Philos., V, vii), which contained a dialogue between Jesus and Salome specially appealed to by the Encratites in condemnation of marriage (to this Gospel the recently discovered "Logia" probably allude); the Gospel of Philip, of Thomas, the Acts of Peter, of Andrew, of Thomas, and other Apocrypha, furthering Gnostic-Encratite views.

Eusebius (Hist. Eccl., IV, xxi, 28) says that Musanus (a.d. 170 or 210) wrote a most elegant book addressed to some foreign writer who was afraid of the heresy of the Encratites. Theodoret (Hist. Arm., I, xxii) says that Apollinaris of Hierapolis in Phrygia (about 171) wrote against the Severian Encratites.

Encyclical (Lat. Litterae Encyclical).—According to its etymology, an encyclical (from the Greek ένκυκλιος, ένκυκλιος meaning a circle) is nothing more than a circular letter. In modern times, usage has confined the term almost exclusively to certain papal documents which differ in their technical form from the ordinary style of either Bulls or Briefs, and which in their superscription are explicitly addressed to the patriarchs, primates, archbishops, and bishops of the Universal Church in communion with the Apostolic See. By exception, encyclicals are also sometimes addressed to archbishops and bishops of a particular country. This title is given to the letter of Pius X (6 Jan., 1907) to the bishops of France, in spite of the fact that it was published, not in Latin, but in French; while, on the other hand, the letter "Longinquae Oceans" (5 Jan., 1926) addressed by Leo XII to the archbishops and bishops of the United States, is not styled an encyclical, although in all other respects it exactly observes the forms of one. From this and a number of similar facts we may probably infer that the precise designation used and not intended to imply any great significance in the nature of the case, was really addressed to the bishops of the world, and are generally concerned with matters which affect the welfare of the Church at large. They condemn some prevalent form of error, point out dangers which threaten faith or morals, exhort the faithful to correct faults, or inveigh against evils foreseen or already existent. In form an encyclical at the present day begins thus:—we may take the encyclical "Pascendi" on Modernism as a specimen:—

The conclusion takes the following form:—"Nos vero, signis caritatis Nostre divinique in adversis cohortationes, Apostolici Domicilii, sanctissimaeque populi nostri vestris amantisimae imperative. Datum Rome, apud Sanctum Petrum, die VIII Septembris MCMVII, Pontificatus Nostri anno quinto. Pius PP. X."

Although it is only during the last three pontificates that the most important utterances of the Holy See have been given to the world in the shape of encyclicals, this form of Apostolic Letter has long been in
ENCyclopediA

occasional use. Almost the first document published by Benedict XIV after his election was an "Epistola encyclicæ et communioria" on the duties of the episcopate (23 April, 1740). Under Benedict XIV, many anathemas were presented in this shape. The famous pronouncement "Quanta cura" (8 Dec., 1864), which was accompanied by a Syllabus (q. v.) of eighty anathematized errors, was an encyclical. Another important encyclical of Pius IX, described as an "Encyclical of the Holy Office", was the beginning "Supreme" (4 Aug., 1856) in condemnation of Spiritualism. Leo XIII published a series of encyclicals on social and other questions which attracted universal attention. We may mention especially "Eucharistic" (23 April, 1885) on the Holy Sacrifice; "Nostre fratelli" (8 Dec., 1888) on the Holy Family; and "Nostre fratelli" (8 Dec., 1888) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb., 1889) on the Holy Sacrifice; and "De nobis" (10 Feb.,
and interrelation of sciences was Francis Bacon, Lord Chancellor, in his incomplete "Instauratio Magna" (1620), the second part of which was the "Novum organum" (London, 1620), and his "De dignitate et augmentis scientiarum" (1623). His immediate successors, however, who had not mastered their materials, did not rise above the old-fashioned compilation of dry facts such as the course of the planets, the properties of the elements, for scholars, e.g., the "Pera librorum juvenilium" of Wagenstein (Aldtord, 1695), Chevigny’s "La science de l’homme de corps d’épeé et de robe" (18 vols., Amsterdam, 1732), and Daniel Morhof’s "Polyhistor" (Leipzig, 1688) and "Tulip" (1704). The theories of the present organic construction of an encyclopedic work is first apparent in J. M. Gesner's "Prima linea isagoges in eruditionem universalem" (3rd ed., Göttingen, 1786), and J. G. Sulzer’s "Kurzer Begriff aller Wissenschaften" (Leipzig, 1745; Eisenach, 1779). The way had been prepared, however, by two earlier works, which mark an important advance in the conception of what is proper to an encyclopedia. Both works, but especially the second, exerted a far-reaching influence on the whole intellectual life of the time. These were: Barthelemy Prévost’s "Histoire de l’Asie" (Amsterdam, 1696), and "Encyclopédie ou dictionnaire raisonné des sciences, des arts et des métiers", compiled by Diderot and d’Alembert (28 vols., Paris, 1751–72, with 7 supplementary vols., 1776–80). While in these works the matter is arranged on an alphabetical system, the purpose seems to be the systematic presentation of sciences on the old plan, e.g., Delambre, "Kurzer Begriff menschlicher Fertigkeiten und Kénntnisse" (Leipzig, 1778); Reimarus, "Encyklopädie" (Hamburg, 1776); Büssch, Encyk. der mathematischen Wissenschaften" (Hamburg, 1795); Reuss, "Encyclopädie" (Tübingen, 1783); Buhle, "Encyklopädie" (Leipzig, 1790). A successful attempt in this direction, based on Kantian principles, was made by J. J. Eschenburg in his "Lehrbuch der Wissenschaftskunde" (Berlin, 1792; 3rd ed., 1808). In competition with this, Krug’s Introduction of a new method in "Versuch einer systematischen Encyklopädie der Wissenschaften" (Leipzig, 1796–97; Zürich, 1804–19) was unsuccessful. Not to mention Habel, Rüf, and Strass, the following imitators of Eschenburg gained no little reputation: Hoffter, "Philosophische Darstellung eines Systems der Wissenschaften" (Leipzig, 1806); Bürdach, "Organismus der menschlichen Wissenschaften und Kunst" (Leipzig, 1809); Kraus, "Encyklopädische Ansichten" (Leipzig, 1802); von Thünen, "Encyklopädie" (Königsberg, 1837); "Allgemeine Encyklopädie der Methodik der Wissenschaften" (Jena, 1810), and K. A. Schaller, "Encyk. und Methodolog." (Magdeburg, 1812). The increase in knowledge and the demands for specialisation which are noticeable from the beginning of the century, destroyed even the possibility of presenting completely all the departments of human knowledge or even a single branch of any great extent. The last attempts made in this direction (and they deserve some attention) were Kierkegaard’s "Enzyklopädie" (Leipzig, 1842) and "Hodgetek" (1852), also Schleiermacher’s "Bibliographisches System der gesammten Wissenschaftskunde" (Brunswick, 1852). The increasing specialisation of sciences has resulted in the production of special encyclopedias, which in the course of time have gradually come to cover every department of science and art and every phase of human life. Thus there have appeared, for instance, Beckh, "Encyk. und Methodolog. der philosoph. Wissenschaften" (2nd ed., Leipzig, 1880); Hommel, "Grundriss der roman. Philologie" (Leipzig, 1883); Schmitz’s work on the modern languages, Körting’s works on English and Romance philology (Heilbronn, 1884); Gröber, "Grundriss der roman. Philologie" (Strasbourg, 1888–93); Paul, "Grundriss der german. Philologie" (Strasbourg, 1889–93); Else, "Grundriss der engl. Philologie" (Halifax, 1887); Geiger-Kuhn, "Grundriss der iranischen Philologie" (Strasbourg, 1896–); Bühler-Kielhorn, "Grundriss der indo-arischen Philologie" (Strasbourg, 1896–); Jäger, "Grundriss der slawischen Philologie" (1908). The province of jurisprudence has also been covered in a similar manner in the "Handbuch der gesammten Rechts-" (Arndt, 1843; 10th ed., 1901); Bluhme, "Encyk. der in Deutschland geltenden Rechte" (Bonn, 1847–58); Merkell, "Juristische Encyk." (Berlin, 1885; 3rd ed., 1904). Theology was covered by the Catholic: Staudenmaier, "Encyk. der theolog. Wissenschaften" (2nd ed., Mainz, 1840); Wirthmüller, "Encyk. der kath. Theologie" (1874); Klee, "Encyk. der Theologie" (1832); Kühn, "Encyk. und Methodologie der Theologie" (1852); Krieger, "Encyk. der theolog. Wissenschaften" (1899); By Protestant: Zöckler, "Handbuch der theolog. Wissenschaften" (Munich, 1882–85); Hagenbuch, "Encyk. und Methodologie der theolog. Wissenschaften" (12th ed., Leipzig, 1889); Heinrich, "Theolog. encyk." (1893); Kähler, "Handbuch der Lebenswissenschaften" (1893); "Theologik" (1880); Achelis-Baumgarten, "Grundriss der theol. Wissenschaften" (1892). Pedagogy is treated in the "Encyk. der Pädagogik" of Stoy (1861; 2nd ed., 1878); political science by Baumstark, "Kamerlistische Encyk." (1873); and von Möhl, "Encyk. der Staatswissenschaften" (1873). The social sciences are covered by: "Kulturgeschichte" (1872); the progress of civilization by Dinkelberg, "Encyk. und Methodologie der Kulturtechnik" (1884); forestry by Dombrowski, "Allg. Encyk. der ges. Forst- und Jagdwissenschaften" (1880–94); physics by Landtner, "Kabinet Cyclopaedia" (122 vols., London, 1829–46; 2d ed., 1854); "Allgemeine Encyk. der Physik", ed. Lamont, Helmholts, and others; and chemistry by Frémy, "Encycl. chim." (Paris, 1888). The "Encyclopedia Metropolitana" of S. Taylor Coleridge is of a more general scope, as also the vast undertaking of Iwan Müller, which embraces every branch of classical learning, treated by specialists, "Handbuch der klassischen Altertums-" (Munich, 1885; vols. since republished separately). Among the various attempts to treat history in this manner may be mentioned Oncken’s "Algemeine Gesch. in Einzeldarstellungen" (45 vols., Berlin, 1879–93). Nearly every branch may boast of some encyclopedic work to facilitate a rapid general survey of the subject, its history, aim, and object, and, above all, to present the results of special investigations in all the departments of the science. An important contribution along these lines, now in the course of publication, which will give the general reader an outlook upon the various branches of knowledge, is "Die Kultur der Gegenwart", ed. Hinnemann (Leipzig, 1906). The first to arrange encyclopedic matter according to an alphabetical system was Suidas, during whose time (tenth and eleventh centuries) the necessity of general information on Byzantine culture made itself felt, especially during the "Akrotheia" of Constantine VII Porphyrogenitus (913–95). The first effort of Suidas was firstimitated by Furtéire (Rotterdam, 1690); Thomas Corneille (Paris, 1694); Ephraim Chambers in his "Cyclopaedia" (London, 1728); Jablonski, "Lexikon der Künste und Wissenschaften" (Leipzig, 1721); Moret, "Grand dictionnaire" (Lyons, 1674); and Hubner, "Reales-Staats-Zeitungs- und Konversations-Lexikon" (1704; 31st ed., Leipzig, 1824–28). As to contents the encyclopedia of this period may likewise be divided into general encyclopedias (Konzertationslexiken), and technical encyclopedias (Realwörterbücher, Realencyclopädie). The most important work for the popularization of the results of scientific research was Bayle’s "Dict. historique et critique" (Rotterdam, 1695–97). The am-
bition of the "Biblioteca universale" of Coronelli (7 vols., Venice, 1701) remained incomplete; the immense "Großes vollständiges Universal-Lexicon für Wissenschaften und Künste", edited by J. P. von Ludewig, Frankenstein, Longolius, and others and published by Zedler (64 vols. and 4 suppl. vols., Leipzig, 1751–54), was brought to completion. About the middle of the eighteenth century a second important encyclopedia, the encyclopedia of Diderot and d'Alembert who were assisted in their work by numerous champions of rationalism, e.g. Voltaire, d'Holbach, Rousseau, and Grim; "Encyclopédie ou Dictionnaire raisonné des sciences, des arts et des métiers" (28 vols., Paris, 1751–72; with 3 supplementary vols., 1763–71; Amsterdam, 1767–77, and 2 vols. of alphabetical index, Paris, 1780). This resembles the German work in breadth of scope, but had much greater influence on European thought, popularising as it did the empiricism, sensism, and materialism of Locke. The first edition of 30,000 copies was followed by many later editions.

The encyclopedia of Diderot paved the way for the alphabetic encyclopedia. It was not only frequently reprinted but was re-arranged as a system of separate dictionaries. The "Panckoucke Universal-Lexikon" in the "Encyclopédie méthodique ou par ordre des matières" (166 vols. of text and 51 vols. of illustrations; Paris, 1782–1832). In Germany the first encyclopedia modelled on Diderot's, by Köster and Roes, only reached a 1st vol. of 23 vols., Frankfort, 1778–1804; the next attempt, however, made on a large scale by Ersh and Gruber, proved a success. This was considered the most scientific German encyclopedia, the "Allgemeine Encyclopädie der Wissenschaften und Künste," begun by Professor Johann Samuel Ersh in 1813 and continued by Professors Hufeland, Gruber, Meier, Brockhaus, Müller, and Hoffmann. The work is divided into three sections: Section 1, A to G, 99 vols. (1818–22); Section II, H to N, 43 vols. (1827–90); Section III, O to Z, 25 vols. (1839–50). Equally ambitious in scope is the "Oekonomisch-technolog. Encyk.," (242 vols., Berlin, 1773–1858), planned by Krünst as a dictionary of economics and technology, but gradually enlarged by his successors Flörke, Korth, and C. O. Hoffmann into a general encyclopedia. Outside of the encyclopedia of Ersh and Gruber, the most important achievement of the nineteenth century, the model of encyclopedia presentation, is the Brockhaus "Konversationslexikon", which took its name from Hübner, and from Bayle's "Dictionnaire" its arrangement and plan of presenting results in a clear and systematic form. The latter in a popular form. Hübner gave as the reason for naming his work "Reales-Staats-Zeitungs- und Konversations-Lexikon" the fact that "it was to contain no professional learning but all items of refined learning needed in daily intercourse with educated people." As it was printed chiefly to satisfy people of a curious turn of mind, it was confined principally to geography, while history was excluded as a special science. The first encyclopedia according to modern ideas was begun by Löbel in 1796 (6 vols., Amsterdam, 1808; 2 supplementary vols., 1810). In 1800 the publishing rights were acquired by Friedrich Arnold Brockhaus; the firm of Brockhaus completely altered the original plan and is still engaged on the work (14th ed., 1901—abridged ed., 2 vols., 4th ed., 1888;). Constructured on the same lines as the encyclopedia of Brockhaus is Pierer's "Universallexikon" (26 vols., 1824–36; 7th ed., 12 vols., 1888–93), to which were added the Pierer "Jahrbuch der Wissenschaften, Künste und Gewerbe" (1855–73); similar works are Meyer's "Konversations-Lexikon" (37 vols., Leipzig, 1840–52; 6th ed. 20 vols., 1902–76; ed. abridged, 6 vols., 1907) and Spamer's "Illustriertes Konversationslexikon" (8 vols., 1889–79; 2 supplementary vols., 1879–82; 2nd ed., 1894–91). These works were inspired by a superficial rationalism, if not by conscious hostility to everything Catholic. Early 19th century German encyclopedias were marked by religious indifferentism by the publication of encyclopedias from the Catholic point of view, such as the "Allgemeine Realencyklopädie oder Konversations-Lexikon für das katholische Deutschland" (13 vols., 1846–50; and "Realhistorisches Konversationslexikon" (5 vols., Freiburg, 1853–57); neither proved a thorough success. The third edition of the latter (8 vols., 1901–08), through its preservation of Catholic interests, by its impartiality, thoroughness, and comprehensiveness, gained general approval. Encyclopedias in Germany were chiefly of a cultural character, in France were published the "Encyclopédie des gens du monde" (22 vols., 1833–45); "Encyclopédie du XIXe siècle" (75 vols., 1837– 59; 3rd ed., 1867–72; continued as Annuaire encyclopedique moderne) (1846–51; ed. 30 vols., 12 suppl. vols., atlas, 2 vols., 1866–62); "Dictionnaire de la conversation et de la lecture" (16 vols., 1851–58); "La Grande Encyclopédie", compiled by Berthelot, Derenbourg, and others (31 vols., 1855–1903); "Dic. univ.," ed. Larousse (17 vols., 1860–71; 4th ed. 1886–90; ed. Claude Augé (1898–1904); Larousse, "Dic. complet illustré" (129th ed., 1903). The chief Spanish encyclopedias are "Enciclopedia moderna", ed. Meliades (34 vols., 3 vols. of charts, Madrid, 1848–51); "Diccionario de la lengua espanola" (2 vols., 1793–1940); in the last, the grammarian y Simon (25 vols., Barcelona, 1887–99); and the "Enciclopedia universal ilustrada europeo-americana" (Barcelona, 1907—), edited along Catholic lines; Portuguese: "Dicionario popular hist. geogr. mythol. biog." (16 vols., Lisbon, 1870–76); "Dicionario universal portugues", ed. Costa; "Enciclopédia portuguesa ilustrada", ed. Lemos (254 nos. to 1903). Italy: "Nuova Enciclopedia popolare italiana" (14 vols., Turin, 1841–51; 6th ed., 25 vols., 1875–89; suppl., 1889–99); "Enciclopedia popolare economica", ed. Berri (Milan, 1871); "Dizionario universale di scienze, lettere ed arti", ed. Lessona and Valle (Milan, 1874–1883); "Piccola Enciclopedia" (Milan, 1891). Rumunia: "Enciclop. Română" (3 vols., Hermannstadt, 1896–1903). England: "Encyclopedia Britannica" (1771; 9th ed., 24 vols. and index, 1875–78; suppl. 11 vols., index and atlas, 1902–03); "New Encyclopaedia" of (45 vols., London, 1802–20); "Encyclopedia Metropolitana", ed. Smelledy (30 vols., 1818–45); "English Cyclopaedia", ed. Knight (27 vols., 4 suppl., London, 1854–79); "English Dictionary of the Church" and dictionary of church history and literature in a popular form in England. The United States: "The American Cyclopaedia" (16 vols., New York, 1858–83; new ed., 1873–78); "Deutsch-Amerikanisches Konversations-Lexicon", ed. Schem (New York, 1870–74); "Johnson's New Universal Encyc." (4 vols., New York, 1874–8; new ed., 8 vols., 1893–5); "The American Cyclopaedia" (New York, 1903–06); "The New International Encyclopaedia" (17 vols., New York, 1902–94); "The Jewish Encyclopedia" (1906—). The Netherlands: "Nieuwenhuis's Woordenboek van kunsten en wetenschappen" (Leyden, 1851–68); "De algemene Nederlandsche Encyclopedie" (15 vols., Zutphen, 1865–88); "Geillustreerde Encyclopedie", ed. Winkler Prins (15 vols., 1888–92); "Woordenboek voor vennootschappen en kunst", ed. Sijthoff (Leyden, 1891). Denmark and other northern countries: "Nordisk Konversationsleksikon", ed. Mollerup (3rd ed., Copenhagen, 1881–94); "Store Illustrerede Konversationsleksikon", ed. Blangstrup (12 vols. Copenhagen, 1891–1900); "Norsk handbog", ed. Johansen (1875–86); "Nordisk Familjenog", ed. Brockhaus and Efross (35 vols., 1878–1908); ed. Meijer (1889–94). Russia: "Entiklopedicheskij Slovar", ed. Brockhaus and Efross (35 vols., 1878–1908).

Besides these general encyclopedias dealing with different arts and sciences, there are also special technical dictionaries devoted to departments of each science, often treating recondite subjects, but in the hands of scholars facilitating acquaintance with the details of these sciences.

JOSEPH SAUER.

Encyclopedists.—(1) The writers of the eighteenth century who edited or contributed articles to the "Encyclopédie". (2) Those among them especially who belonged to the "philosophic" party, joined in the "illumination" movement, and may be grouped together because of a certain community of opinions on philosophical, religious, moral, and social questions. The "Encyclopédie", or "Dictionnaire raisonné des sciences, des arts et des méta"iers, par une société de gens de lettres, mis en ordre et publié par M. Diderot... et quant à la partie mathématique par M. d’Alembert..." (At the complete original edition comprises 35 folio volumes as follows: 17 vols. of text (Paris, 1751–1765); 11 vols. of plates (Paris, 1762–1772); 5 vols. of supplement, i.e. 4 of text and 1 of plates (Amsterdam and Paris, 1776–1777); 2 vols. of analytical index prepared by G. C. Seidou and at Bruxelles (Amsterdam and Paris, 1780). In 1745, a French translation of Chambers’s "Cyclopedia", prepared by John Mills with the assistance of Gottfried Sellius, was to be published in Paris by the king’s printer, Le Breton. After the necessary royal privilege had been obtained, a number of difficulties between Mills and Le Breton caused the failure of the enterprise, and Mills returned to England. Le Breton asked Jean-Paul de Guia, professor in the Collège de France, to assume the editorship and revise the manuscripts. But again misunderstandings and disputes obliged Guia to resign. Diderot then called upon to complete the preparation of the manuscripts. At his suggestion, however, it was decided to undertake a more original and more comprehensive work. Diderot’s friend, d’Alembert, agreed to edit the mathematical sciences. Diderot (1713–84) had not yet written any original work except the "Pensees philosophiques" (1748), in which the foundations of Christianity are examined and undermined, revelation rejected, and reason proclaimed independent. The Parliament had ordered the book to be burnt. The "Promenade d’un sceptique" was written in 1747, but Diderot did not publish it until 1762. Diderot also published a translation of Stanyan’s "Grecian History" (1743) and an adaptation of Shaftesbury’s "Inquiry concerning Virtue and Merit" under the title "Principes de la philosophie, ou Essai sur le naturel de la vertu et de la justice" by d’Alembert. Diderot was also an assistant editor and general editor of the new Encyclopédie, however, and was the "Dictionnaire universel de médecine" (1746–1748), a translation of Dr. Robert Jahn’s "Medical Dictionary". D’Alembert (1717–83) was already famous as a mathematician. At the age of twenty-two he had presented two studies to the Académie des Sciences, "Sur la réfraction des corps solides" (1739), and "Sur le calcul intégral" (1740). The following year he was elected a member of the Académie. He had acquired a still greater reputation by his "Lettres sur les mathématiques" (1745). It was the first attempt at a "histoire générale des vents" (1747), the latter winning for its author the prize offered by the Berlin Academy and membership in that body.

While the articles were being printed Diderot was imprisoned at Vincennes, 29 July, 1749, for his "Lettres sur les mathématiques", and d’Alembert was imprisoned rather for a passage in it which had displeased Madame Dupré de Saint-Maur. After four months his publishers obtained his release; in November, 1750, the Encyclopédie was announced in a prospectus by Diderot, and, in July, 1751, the first volume was published. It opened with a "Discours préliminaire" by d’Alembert, in which the problem of the origin of ideas is solved according to Locke’s sensualism, and a classification of sciences is proposed which, except in a few minor points, is that of Bacon. In the prospectus Diderot had already said: "If we succeed in this vast enterprise our principal debt will be to Chancellor Bacon who sketched the plan of a universal dictionary of sciences and arts at a time when there were, so to say, neither sciences nor arts." D’Alembert acknowledges the same indebtedness. Thus, British influence was considerable both in shaping the doctrine of the "Encyclopédie" and in bringing about its publication. The second volume appeared in January, 1752. In consequence of many protests against the spirit of the work, its sale was stopped, and later an arrest of the editors, C. F. C. de Rouillé and a supposed conspiracy in relation to religion and royal authority (7 February, 1752). Three months later, however, Diderot and d’Alembert were asked to continue the work, a fact which they announce with pride in the preface to the third volume (October, 1753). The following volumes were published without any interruption until after the publication of the seventh volume (1757), when new difficulties arose. In his article on Geneva, d’Alembert had stated that the ministers of that city were Socinians, a charge which was strongly protested by the city authorities. Diderot also ceased to have anything to do with the Encyclopédie, and thereupon showed a vehement hostility to it. On the other hand, there were so many denunciationsthat finally an arrêt of the Council (8 March, 1759) revoked the privilege granted in 1746, and forbade the sale of the volumes already printed and the printing of any future ones. Diderot and d’Alembert were forever banished from Geneva. The secret protection of Choseul, Madame de Pompadour, Malesherbes, then director-general of the Librairie, and Sartine, the chief of police, work was resumed almost immediately. The ten remaining volumes
were to be published together. After Diderot had corrected the proof-sheets, Le Breton, fearing new vexations, suppressed passages likely to be objectionable and to cause friction with the authorities. Diderot noticed the changes too late to prevent them. The work published as Diderot's and attributed to an extent which is now impossible to determine, as all manuscripts and proof-sheets were immediately destroyed. At last, in 1785, volumes VIII–XVII were published, completing the text of the Encyclopédie.

It is not possible to mention here all the contributors (about 160) to the work. Diderot himself wrote 900 articles on almost every subject, philosophical, religious, and moral, but especially on the arts and trades. Great care was taken in the treatment of the mechanical arts. No trouble was spared to obtain minute descriptions of various machines and the means of using them. All this was explained in the text and illustrated in the plates. D'Alembert's articles, with few exceptions, are on the mathematical and physical sciences. From the beginning Rousseau (1712–1778) was an important figure. He sought not only to acquaint musicians with the latest compositions and compositions, but also to write the articles on music. He also wrote the article, "Economie politique". The collaboration of Buffon (1707–88) who had promised to write on "Nature" is announced in the second volume, but it is doubtful if the contents are from his hand. From him. Most of the topics in natural history were treated by Daubenton (1716–99). Articles by d'Holbach (1723–89), Marmontel, Bordieu, are announced in the third volume. The fourth introduces Voltaire (1694–1778) as the author of some literary articles, and says of him: "The Encyclopédie, on account of the justice which it has rendered and will always continue to render him, was worthy of the interest which he now takes in it." In the "Discours préliminaire", d'Alembert had praised him as occupying "a distinguished place in the very small number of great poets", and extolled him for his qualities as a prose writer. Condorcet, Grimm, Quesnay, Turgot, Necker also contributed articles or memoirs. Jaucourt furthered the cause of the Encyclopédie not only by his numerous articles and his constant interest, but also by his attitude and reputation. Far from sharing the materialistic and atheistic tendencies of many of his co-workers, he was at the same time friendly to the Encyclopédists and to some of their enemies. Montesquieu at his death (1755) left an uncalled on picture of the Encyclopédie. "lettres persanes" (1721) and "Esprit des lois" (1748) inspired many of the social and political articles in the Encyclopédie.

II. THE SPIRIT AND INFLUENCE OF THE ENCYCLOPÉDIE.—The expression spirit of the Encyclopédie may at first seem to be a misnomer. In that vast compendium is found the greatest diversity of subjects and even of views on the same subjects. The writers of the articles belong to all professions and to all classes of society. Names of military men, lawyers, physicians, and philosophers, scientists, philosophers of theology, statesmen, etc. appear on the lists of contributors given at the beginning of each volume. The articles are of unequal value; proportion is lacking, each contributor apparently writing as he thinks fit. Veracity is a prominent defect, and, at times, the authors indulge in endless digressions. Voltaire repeatedly asked for brevity and better method. (See Letters to d'Alembert, esp. in 1756.)

The articles seem to have been gathered together from various sources without any preconceived plan, with little interrelation, and each writer wrote in his own style. Under these conditions the spirit of the Encyclopédie might be. denote merely one special tendency, or one group of tendencies, which, at first manifested along with many others, gradually became important and finally predominant. To some extent it is that, but it is also more than that. The Encyclopédie was not intended only as a great monument to record the progress realized in sciences, arts, civil and religious institutions, industry, commerce, and all other lines of human endeavour; the Encyclopédists purposed moreover to prepare the future and indicate the way to further progress. They desired to establish a new civilization which would be better, but it would also be a standard; not a mere onlooker, but a leader. In fact, appearing as it did in the third quarter of the eighteenth century, it is a mirror in which the events of the whole century are focused. At the time of the Fulton, the French Government was, owing to mass causes and influences, already considerably weakened, and still weakening. Dissatisfaction and unrest, though not yet well defined, were spreading among the people. Existing institutions and customs, both religious and political, had recently been denounced in several publications. The "philosophers" were favourably received in the salons of the aristocracy. On the other hand, Jansenism, with the endless discussions of which it had been the source or the occasion, and also with the banking and financial questions of the time, had quite disappeared. The members of the clergy, had prepared the way for a reaction in the sense of unbelief. There were other causes less direct, perhaps, and more remote, yet influential in bringing about a break with the past. In Descartes one may find unequivocal germs of the neglect, contempt even, in which religious questions were treated when immediate evidence, the idee claire, is made the sole valid criterion of truth. The influence of British philosophers was far from tending to check the growth of rationalism. Nor can we overlook the influence of the famous "Querelle des Anciens et des Modernes", as it is known in the history of French literature. In the last two decades of the seventeenth century it was one of the main centres of attention. To this discussion, which resulted in a victory for those who favoured the "moderns", Brantôme traces back three important consequences: first, the meaning of tradition becomes gradually identified with that of superstition; second, progress is conceived as an emancipation from, and an abjuration of, the past; finally, and this is still more important, education in all its stages consists more and more in the derision of the past. True, recent times everywhere offered masterpieces in art, literature, and science. Whatever side we may take in the old quarrel to-day, and however much less radical and more impartial our views may be, we can at least understand the attitude of those who succeeded the great men of the age of Louis XIV.

Another important factor was scientific progress. After being too frequently confined to idle a priori controversies, science was asserting its rights, and these it soon came to exaggerate, while it failed to recognize the rights of others. Reason gradually freed itself from the superstition of the past and claimed absolute independence. Ancient, or rather Christian, conceptions of God and the world were not even deemed worthy of the serious consideration of a "thinker". Ancient causes alone were recognized, final causes proscribed. In the words of Diderot, there is an"immutable laws; soon the possibility of miracles and revelation was denied, while mysteries were regarded as absurd. Thus, in the place of traditional beliefs, new ideas were introduced, tending to rationalism, materialism, naturalism, and deism. On positive points there was little agreement; the tendency was primarily negative. It was an opposition to received dogmas and institutions, an effort to establish a new theoretical and practical philosophy on the basis of merely empirical evidence. Nothing is truer than Diderot's statement, in the "Discours préliminaire", that our century believes itself destined to change all kinds of laws". Towards the middle of the eighteenth century the representatives of this movement were the "philosophers", and they were about to centralize their efforts in the Encyclopédie. Great prudence
who controlled, among other things, the granting of privileges for new publications and the censoring of books, and by Sartine, the chief of police, on whom depended the enforcement of laws and ordinances concerning the printing and sale of books. Malèserbes always showed himself the friend not only of the Encyclopédie but of their convictions. As Voltaire says, they were in the sad necessity of "printing the contrary of what they believed." (Letter to d'Alembert, 9 October, 1756). More was innsinuated than was clearly expressed, and at times a sarcastic phrase was better effect than a definite statement or argument. Whichever the main article to which one would naturally turn for information contained nothing objectionable, other articles, less likely to attract attention, expressed different and more "philosophic" views. That such was the condition of affairs is attested by a significant passage in a letter of d'Alembert to Voltaire (21 July, 1757). To the latter's criticism of certain articles he replies: "No doubt we have bad articles in theology and metaphysics; but with theologians for censors, and a privilege, I defy you to make that worse. They are other articles as exposed to the daylight in which all is repaired. Time will enable people to distinguish what we have thought from what we have said." Hence, although the Encyclopédie itself contains many articles in which anti-Christian principles are openly and plainly the true, unvarnished spirit was found in the meetings of the "philosophers" and in the salons, where they were looked upon as oracles. To-day it is to be found in the later works of the Encyclopédistes and chiefly their letters and memoirs.

In the impious and cynical d'Alembert, for instance, as known from his correspondence with Voltaire, one would fail to recognize the prudent and reserved d'Alembert of the Encyclopédie. "You were born with the firmest and most virile genius," Voltaire wrote to him (4 June, 1769), "but you are free only with your friends, when the doors are closed." This last remark applies also to Diderot and the other Encyclopédistes. Their private letters reveal their true spirit and intentions, and prove that the apparent moderation and tolerance shown in their public writings were dictated by fear and not by conviction.

It is difficult to estimate the influence which the Encyclopédie exerted on the events that followed its publication, especially the French Revolution. To a large extent undoubtedly it was not the source, but only the reflection, of the religious and social views of the time. Nevertheless, the Encyclopédie exerted a considerable influence on the Church and, in many respects, also to the State, one may ask why its manifestations were not suppressed; why in particular its organ, the Encyclopédie, was allowed to proceed, notwithstanding the warnings of its adversaries and its repeated condemnation by the civil authorities. In a word, what was done to check its influence or to oppose its doctrines? In general, it may be answered that little was done, and, under the circumstances, perhaps little could have been done. It has been said that, after all, the Encyclopédie was a collection of learned extravagances. They were not. They were books and articles in refutation of the "philosophers": their voice was not heard, and their scattered efforts were of little avail against the organized forces and the powerful protectors of their adversaries. The Jesuits, the secular clergy, especially Archbishop Christophe de Beaumont, of Paris, and Bishop Le Franc de Pompignan, of Le Puy, who wrote pastors on the subject, and many other writers and preachers denounced the Encyclopédie. We have seen that they succeeded more than once in having its publication and sale prohibited by the Government. The suspensions were only temporary. The Encyclopédistes were under the patronage of high personages at the Court; they were protected specially by Malèserbes, the director of the Librairie, Owing to this friendship, many works were published notwithstanding the official opposition of the Government. In 1759, after the decision of the council had revoked the privilege formerly granted, it was Malèserbes who warned Diderot that his papers were to be seized the next day. And Diderot was to look for a place of safety where they could be taken, Malèserbes had sent them to his own house.

Thus the Government secretly favoured an enterprise which it officially censured, and, under this protection the Encyclopédie was begun and completed. Partly for the same reason, partly also for deeper reasons concerning the religious and civil conditions in France, the efforts to combat the Encyclopédie were not rewarded with much success. Moreau in the "Monument pour servir" (1757), Paillet in his "Petites lettres sur de grands philosophes" (1757) and in his comedy "Les philosophes" (1760), tried to use the weapons of ridicule and satire which some of the "philosophers," especially Voltaire, wielded with greater skill. Fréron, in the "Mémoires pour servir," (1760), was ready to give and take blows. Constantly at war with the Encyclopédistes, he was at a great disadvantage, for they enjoyed Malèserbes's protection, whereas for him the censure was always very severe. Thus he was hardly allowed to write on Voltaire's "Économie" (1769), in which he had been publicly insulted on the stage. The Jansenists, in the "Nouvelles ecclésiastiques," did little more than insult the Encyclopédistes. In the "Journal de Trévoux," Fréron, and among them especially Berthier (1764-62), who was director of the Journal from 1764 till the suppression of the Society of Jesus, wrote frequent criticisms. But notwithstanding all this opposition the spirit of irreligion was steadily gaining. Too often the criticism was weak, the attack unskilful. In some cases, even the anti-Encyclopédistes, instead of harming their opponents, rather contributed to their success by giving them notoriety and affording them an opportunity for using their influence. The Jesuits were expelled from France in 1762; this gave a new victory and a new prestige to the "philosophers." Diderot's "Oeconomie politique," in the "Journal de Trévoux," (1765), looks upon this expulsion as the just punishment of their hostility towards the Encyclopédie. Gradually the people were becoming accustomed to the new spirit, and thus it was that, whereas the first volumes had created a great stir in France, the appearance of the last volumes was scarcely noticed.

Unknown or little known in 1750, the "philosophers" had now won their battle, and were the recognised victors. Their success made them bold in declaring openly what they had hitherto concealed in their former works and in the Encyclopédie. These doctrines had also been made more familiar by the publication of several works before the completion of the Encyclopédie, the most important being Diderot's "Pensées sur l'interprétation de la nature" (1754); Helvétius's "De l'esprit" (1758); Rousseau's "Discours sur l'origine et les fondements de l'inégalité parmi les hommes" (1753), "Contrat social" (1762), and "Emile" (1762); Voltaire's "Dictionnaire philosophique" (1765); d'Holbach's "Système de la nature" (1771). On 7 August, 1765, Voltaire could write to d'Alembert: "They clamour against the philosophers, and are right; for, if opinion is the ruler of the world, this ruler is governed by the philosophers. You can hardly imagine how their empire is spreading."
Steadily the new current of thought gained in volume and power, until nothing could stop its destructive course. The French Revolution, following closely upon the publication of the Encyclopédie and the other works through which the new thinking became the result of the general spirit which these represented.

Brunetière, Études critiques sur l'histoire de la littérature française (Paris, 1896—); in these Études are found several essays on men and events related to the Encyclopédie. De, Manuel de l'histoire de la littérature française (2d ed., Paris, 1897), and the sources indicated in it, especially les Mémoires and les Encyclopédies de l'Encyclopédie. See also the bibliographic essay on l'histoire de l'Encyclopédie in Revue hebdomadaire (November, 1906, pp. 431, 432, 433), Mémoires pour servir à l'histoire de la philosophie au XVIIIe siècle (Paris, 1858—1863); D. Endlicher, Stephan Ladislau, Austrian botanist (botanical abbreviation, Endli), linguist, and historian, b. at Pressburg, Hungary, 24 June, 1804; d. at Vienna, 28 March, 1849. The son of a physician, he studied philosophy at Leibnitz and theology from 1822 to 1827 in Vienna; he did not, however, enter the priesthood. From 1826 at Pressburg he turned his attention to languages, studying especially Chinese, a knowledge of which is shown in some of his later works: "Anfangsgründe der chinesischen Grammatik" (Vienna, 1844), and "Atlas von China nach der Aufnahme der Jesuiten" (Vienna, 1843). Urged by his father, Endlicher took up the study of botany in 1826, and devoted all his spare time to it during the years 1828—36, when he had charge of the MSS. in the Imperial Library of Vienna. In this same period he issued as libris, in addition to a number of works on the ancient classical, German, and Hungarian literatures, the first volume (Vienna, 1836) of the MS. catalogue of the Imperial Library. In 1836, he was made curator of the botanical department of the Royal Natural History Museum, and in 1840, professor of botany at the University of Vienna, and director of the Botanical Garden of the University. In 1830, he had issued his first botanical treatise, that on the flora of Pressburg. As curator of the botanical department he united the various distinct herbaria in the institutions of Lower Austria, which he added, as a gift, his own containing 30,000 species of plants; the classification adopted by Endlicher remained unchanged until 1885. On his appointment as curator he began at once to develop his botanical system, which is explained in his well-known and most important work: "Genera plantarum secundum ordines naturales disposita" (Vienna, 1839—50), a work regarded as one of the fundamental writings of systematized botany.

As early as 1829 he founded the first periodical in Austria for the natural sciences, the "Annalen des Wiener Museums der Naturgeschichte." Its numerous other writings on botanical subjects show an independent critical judgment, acute observation, and comprehensive knowledge. Endlicher also collaborated in number of publications on the same subject with Schott, Fenzi, and especially with Unger in "Grundzüge der Botanik" (Vienna, 1843); with Hopp in a work on the plants of Chile, Peru, and the region of the Amazon (Leipsig, 1835—45); also in conjunction with the American Asa Gray, and with George Bentham and Hooker, in a work on the flora of the British Isles. Up to the time of his death Endlicher aided von Martius in editing the latter's great work "Flora Brasiliensis" (Munich and Leipzig, 1840—1906); the work, a folio costing 8000 marks, was finally completed in 130 parts of 20,783 pages in all, and containing 3981 plates. It was not until 1852 that the work was finally published, and a large part of the work was enabled to begin the bringing out of this work under the patronage, and with the financial aid, of the Emperor Ferdinand I. Endlicher's botanical MSS. and correspondence belong to the botanical department of the Royal Museum at Vienna; his correspondence with Unger was published by the botanist Haberlandt (Berlin, 1899). In addition to his other labours, he had a large share in founding (1846—47) the Imperial Academy of Sciences of Vienna, and was one of its first forty members. Endlicher became involved in the political movement of 1848; he was elected a member both of the German and the Austrian parliaments, but his political activities were not successful. Botanists have, on three occasions, sought to use his name as a designation of species of plants (Endlichiera, Endlichieria), but according to the rules of the botanical nomenclature, such appellations express synonyms which should be avoided.

Von Beck in Botan. Centralblatt (Onzeal, 1888), XXXIII, 29, Neubuch in Berichte (Verhandlungen der Kaiserlichen Akademie der Wissenschaften, 1855), V, 51; Sachsen, Geschichte der Botanik (Munich, 1875); Diderot, in Revue de Biographie, Lexicon des Kaiserreich Österreich (Vienna, 1880); D., in Handbuch der bekannten Arzneimitteln Wiens (Vienna, 1884); Botanik und Zoologie in Oesterreich (Vienna, 1901) contains a portrait of Endlicher. Joseph Rompel.

Endowment (Ger. Stiftung, Fr. fondation, It. fondazione; Lat. fundatio), a property, fund, or revenue permanently appropriated for the support of any person, institution, or object, as a student, professorship, school, hospital. The term is more frequently applied to the establishment of eolomosynary corporations by private endowment. In ecclesiastical circles the word is used also in a more restricted sense, signifying a conditional donation or legacy, i. e. the establishment of a fund, by the provisions of a last will or otherwise, in order to secure permanently, or at least for a long time, some spiritual benefit, as, for instance, the offering and application of a monthly or annual Mass.

The early Christians were lavish in their support of religion, and frequently turned to private means of support to the Church [Lallemand, "Hist. de la charité" (Paris, 1903), II; Uhlhorn, "Hist. of Christ. Charity"; Hefele, "Chrestenthum u. Wohlthätigkeit" in his "Beiträge", I, 175]. The Emperor Justinian (Novella xlvii) compelled those who built churches to enendow them; and at the same time, ecclesiastical legislation prescribed that no deed was to be ordained for a church without proper provision for his maintenance (Couno. of Epars, 517, c. xxv). Whoever desired to have a parochial church on his estate was obliged to set aside a sufficient endowment for its clergy (IV Couno. of Arles, 541, c. xxxiii); while a bishop was forbidden to consecrate a church till the endowment had been properly secured by a deed or charter (II Couno. of Orages, 572, c. v). If one who held a fief from the king built and endowed churches, the bishop was required to procure the royal confirmation of the gift (III Couno. of Toledo, 589, c. xv). Ancient and noble Roman families, as well as others of less means, inspired by feelings of love and gratitude, made large bequests to the Church. In the fifth and sixth centuries, in countries subject to the eastern part of the Empire, the Church was endowed especially with lands. These possessions were lost during the political and social upheaval that followed the Germanic invasions, known as the Wanderings of Nations. Towards the end of Charlemagne's reign the regenerated peoples contributed once more voluntarily and generously to the support of ecclesiastical institutions.

Amongst the gravest objections raised by the progress of modern science against Theism, the possibility of miracles, free-will, the immateriality of the human soul, its eternity, and immortality are, according to many thoughtful men, those based on the law of the conservation of energy. Consequently, as a full treatment of this topic in its philosophical aspects as the limits of space will allow, is here attempted.

Exposition of the Doctrine.—The word energy comes from the Greek ἐργασία, "operation", "activity". This term is itself a compound of ἐργόν and ἑργον, "work". In modern physical science the notion of energy is associated with mechanical work. It is commonly defined as "the capacity of an agent for doing work". The word energy implies the production of motion against resistance. Such energy, whilst existing in many forms, is considered especially in two generically distinct states known as kinetic energy, or energy of motion, and potential energy, or energy of position. The power of doing work in the former case is due to the actual motion possessed by the body, e. g. a cannon-ball on its course, or a swinging pendulum. Potential energy, on the other hand, is exemplified by a wound-up spring, or by the bob of a pendulum when at its highest point; as the bob goes upward it is losing potential energy, but when it is at its lowest point it has no remaining potential energy, whilst its potential will have vanished. Energy is also recognised in the heat of a furnace, or the fuel of the same, in explosives, in an electric current, in the radiations of the ether which illuminates and warms the earth.

Now, it has been found that these different forms of energy can be changed into one another. Further, the amount of a sum of energy in different forms can be measured by the quantity of work it can accomplish. A weight suspended over a pulley can be employed to do work as it sinks to a lower level; likewise a steel spring as it expands; heat as it passes to a cooler body; electric current as it is expended, and chemical compounds in the course of decomposition. On the other hand, a corresponding amount of work will be required in order to restore the original condition of the agents. Perhaps the greatest and most fruitful achievement of modern physics is the scientific discovery of the law which has been the establishment of a law of quantitative equivalence between these diverse forms of energy measured in terms of work. Thus a certain amount of heat will produce a definite amount of motion in a body, and conversely this quantity of motion may be made to
reproduce the original amount of heat—assuming that in the actual process of transformation there were no waste. In other words, it is now accepted as established that, in any "conservative" or completely isolated system of energies, whatever changes or transformations may take place, by way of mutual action upon these bodies, though it may be transformed into any of the forms of which energy is susceptible "(Theory of Heat, p. 93). Thus stated, the law may be admitted to hold the position of a fundamental axiom in modern physics; the nature of the evidence for it, we shall consider later. But there is a further generalization, advancing a considerable way beyond the frontiers of positive science, which affirms that the total sum of such energy in the universe is a fixed amount "immutable in quantity from eternity to eternity" (Von Helmholtz, "On the Nature of the Conservation of Force," Principia Philosophiae, II, 36). But the effort to establish such assumptions by accurate experiment begins later. According to many we have the principle of the conservation of energy virtually formulated for the first time in Newton's Scholion developing his third law of motion (action and reaction are equal and opposite), though his participation in the current erroneous conception of heat as a "caloric", or independent substance, prevented his clearly apprehending and explicitly formulating the principle. Others would connect it with the second law. "Here the seventeenth-century, seems to have grasped, though somewhat vaguely, the notion of momentum, or vie Inst (MV). This was clearly enunciated by Leibniz later. The fundamental obstacle, however, to the recognition of the "law of conservation of energy" is the difficulty of applying the principle to decomposable bodies. Assuming heat to be some sort of substance, its origin and disappearance in connection with friction, percussion, and the like seemed a standing contradiction with any hypothesis of the constancy of energy. As early as 1780, Lavosier and Laplace, in their "Memoire sur la chaleur," grew signs of approaching the modern doctrine, though Laplace subsequentially committed himself more deeply to the caloric theory. Count Rumford's famous experiments in measuring the amount of heat generated by the boring of a cannon barrel, and his direct observations (1799) on the beam caused by the friction of ice, proved the death-blow to the caloric theory. For the view was now beginning to receive wide acceptance among scientists, that heat was "probably a vibration of the corpuscles of bodies tending to separate them." Dr. Thomas Young, in 1807, employed the term energy to designate the vie Inst or active force of a moving body, which is measured by its mass or weight multiplied by the square of its velocity (MV)." Sadi Carnot (1824), though still labouring under the caloric theory, adopted Laplace's equation, and essentially in his remarkable paper, "Réflexions sur la puissance motrice du feu," by considering the question of the relation of quantity of heat to amount of work done, and by introducing the conception of a machine with a reversible cycle of operations. The great epoch, however, in the history of the doctrine occurred in 1842, when Julius Robert Mayer, a German physician, published his "Remarks on the Forces of Inanimate Nature", originally written in a series of letters to a friend. In this little work, "contemplatively" considered by the "plenitude of physics of this day" (Poincaré), Mayer clearly enunciated the principle of the conservation of energy in its widest generality. His statement of the law was, however, in advance of the existing experimental evidence, and he was led to it partly by philosophical reasoning, partly by a consideration of the possibilities of energy of the order of magnitude of those substances of which the commonest are the gases, and partly by a speculative theory of the nature of the forces of attraction and repulsion. At about the same time, Joule, in Manchester, was engaged in determining by accurate experiments the dynamical equivalent of heat—the amount of work a unit of heat could accomplish, and vice versa; and "Colding was contributing important papers on the same subject to the Royal Society of Copenhagen, so that no particular man can be described as the Father of the doctrine of the Conservation of Energy" (Preston). Between 1848 and 1851, Lord Kelvin (then Sir William Thomson), Clausius, and Rankine developed the approach to the final form of the "law of conservation of energy." Since then, the "law of conservation of energy" has found its way into all branches of physics, and has been confirmed in the science of heat. About the same time Helmholtz, approaching the subject from the mathematical side, and starting from Newton's Laws of Motion, with certain other assumptions as to the constitution of matter, deduced the "principle of the conservation of energy". Subsequently, Faraday and Grove illustrated in greater detail the extent and variety of the transformation and correlation of forces, not only heat being changed into work, but light occasioning chemical action, and this generating heat, and heat producing electricity. Thus the cycle is again converted into motion, and so on running the cycle. But it further became evident that in such a series there inevitably occurs a waste in the uselessness of energy. Though the total energy of a system may remain a constant quantity, since work can be done by heat only in its transition from a warmer to a cooler body, in proportion as such heat gets diffused throughout the whole system it becomes less utilizable, and the total capacity for work diminishes owing to this dissipation or degradation of energy. This general fact is expressed by the formulation in what has been called the "Second Law of Thermodynamics" of Carnot or of Clausius. It is also styled the second law of thermodynamics and has been made the basis of very important conclusions as to the finite duration of the universe by Lord Kelvin. He thus enunciates the law "It is impossible to devise any agency to derive a mechanical effect from a portion of matter by cooling it below the temperature of the coldest surrounding bodies." Living Organisms.—The successful determination of the quantitative equivalent of one form of energy in some other form, obviously becomes a far more difficult problem when the subject of the experiment is not inanimate matter in the chemical or physical laboratory, but the consumption of substances in the living organism. Scientific research has, however, made considerable progress in this direction, and several attempts have been made to establish by experiment that the principle of the constancy of energy holds also in vital processes. By the nature of the case the experimental evidence is of a rougher and less accurate character. Still it tends to show at all events approximate equivalence in the case of some organic functions. Among the best investigations so far seem to be those of Rubner, who kept dogs in a calorimeter, measuring carefully the quantity of food received and the heat developed by them. The chemical energy of the substances consumed manifests itself in heat and light; and the consumption of different substances by the animals seems to have corresponded rather closely to that resulting in laboratory experiments; hence it is affirmed that the observations all point to the conclusion that "the sole cause of animal heat is a chemical process."
ENERGY

(Schäfer). This, however, is a long way from experimental proof that the conservation of energy holds in all vital processes with such rigid accuracy that every slightest change in the motor nerve cells of the brain must have been completely determined by a preceding physical stimulus. Whether this proposition be true or not, there is not as yet even a remote approach to experimental proof of it (cf. Ladd).

The Law. Considered Character and Range of the Law, and Its Bearing on Sundry Philosophical Problems, There has been and still is much dispute. As a rule, however, the most eminent scientists, e. g. men like Clerk Maxwell and Lord. Kelvin, are most cautious and guarded in their enunciation of the law. (Perhaps this is explicable, when strictly stated, this proposition, "The sum of the kinetic and potential energies of a conservative system amid all changes remains constant," first applies only to an isolated or closed system. But such systems are hypothetical or ideal. As a matter of fact, no group of agents in the present universe is or can be thus isolated. Next, the proposition may be stated, as a legitimate generalization, only of inanimate bodies and material energies. The law affords no justification for the assertion that the only energies in any particular system are the universal energies, or universal energies. Clerk Maxwell, though, explicitly reminds us that "we cannot assert that all energy must be either potential or kinetic, though we may not be able to conceive of any other form." Again, many physicists insist that this concept of energy contained in the formula proves, when examined closely, to be vague and elusive. H. Poincaré asks: "What exactly remains constant?" And he concludes a searching analysis with the statement that "of the principle nothing is left but an enunciation: 'There is something which remains constant'" (Science and Hypothesis, p. 127). As eminent a physicist as George F. FitzGerald tells us that "the doctrine of the conservation of energy is most valuable, but it only goes a very little way in explaining phenomena" (Scientific Writings, p. 391). Helmholtz's extension of the principle in the statement, that "the total quantity of all the forces capable of work in the whole universe remains eternal and unchanged throughout all its changes," is a hazardous leap from positive science into very speculative metaphysics. This should be restricted to the total quantity of control energy. It cannot be demonstrated a priori. It is not self-evident. It is obviously beyond the possibility of experimental proof. It assumes the present universe to be a closed system into which new agents or beings cannot enter. Yet, as this energy is never entirely derived, Lucien Poincaré's contention is just: "It behooves us not to receive without a certain distrust the extension by certain philosophers to the whole Universe of a property demonstrated for those restricted systems which observation can alone reach. We know nothing of the Universe as a whole and ever generalization of this kind outstrains in singular fashion the limit of experiment." James Ward's account of its character is much the same: "Methodologically, in other words, as a formal and regulative principle, it means much, really it means very little." It furnishes very little information about the past, present, or future of the universe.

Proof of the Law.—On what evidence precisely, then, does the principle rest? Here again we find considerable disagreement. E. Mach tells us: "Many derive it from the law of invariance of the potential motion, which again they either derive from experience or deem self-evident. . . Others frankly claim only an experimental foundation for the principle." He himself considers the justification of the law to be furnishing evidence from the formal postulate of the intellect. We have already alluded to the view that it is implicit in Newton's laws of motion. The principle of causality, according to others, is its parent. Mayer himself quotes Archimedes Palimpsest, and argues that creation or annihilation of a force lies beyond human power, and therefore should not be laboured so diligently to establish an experimental proof, would reinforce the latter with the proposition, that "it is manifestly absurd to suppose that the powers with which God has endowed matter can be destroyed." H. Poincaré judiciously observes: "The general principle of the conservation of energy is not to be proved by mathematical formulæ. A law of nature must be founded on experiment and observation, and the general agreement of the law with facts leads to a general belief in its probable truth. Further, the conservation of energy cannot be absolutely proved even by experiment, for the proof of a law requires a universal experience. On the other hand, the law cannot be said to be untrue, even though it may seem to be contradicted by certain experiments, for in these cases energy may be dispersed in modes of which we are as yet unaware" (p. 90). In view of the extravagant conclusions some writers have attempted to deduce from the doctrine, it is useful to note these serious divergencies of opinion as to what is its true justification among those who have a real claim to speak with authority on the subject.

We shall best approximate to the truth by distinguishing three different parts of the doctrine of energy: the law of constancy; the law of transformation; and the law of dissipation or degradation. The law of transformation, that all known forms of energy can be transmuted into each other, and are convertible, is a general fact which can only be ascertained and proved by experience. There is no a priori reason requiring it. The law of dissipation, that, as a matter of fact, in the course of the changes which take place in the present universe there is a constant tendency for portions of energy to become unusable, owing to the equal diffusion of heat through all parts of the system—this truth similarly seems to us to rest entirely on experience. Finally, with respect to the principle of quantitative constancy, the main proof must be experience—but experience in a broad sense. It has been shown by positive experiments with portions of inanimate matter that the more perfectly we can isolate a group of material agents from external interference, and the more accurately we can calculate the energy at the beginning and end of a series of qualitative changes, the more perfectly our results agree. Further, modern physics constantly assumes this principle in most complex and elaborate calculations, and the experimental development of the experimentalist who makes the assumption in a manner which would seem to be impossible were the principle not true. In fact, we may say that the assumption of the truth of the law, when correctly formulated, lies now at the basis of all modern physical and chemical theories, just as the assumption of inertia or the constancy of mass is fundamental to mechanics. At the same time we must not forget the hypothetical character of the conditions postulated, and the limitations in its application to particular concrete problems. Bearing this in mind, even if there occurs some novel experience, as, e. g., the fact that radium seemed capable of sustaining itself at a higher temperature than surrounding objects and of emitting a constant supply of heat without any observable diminution of its own store of energy, science does not therefore immediately abandon its correctness, but affords in the certainty of the fact some hypothesis by which this apparently rebellious fact can be reconciled with so widely ranging a general law—as, for example, the hypothesis that this eccentric substance possesses a peculiar power of constantly increasing its own temperature and then dispensing it in the form of heat; or, that the high complexity of the molecular constitution of
radium enables it, while slowly breaking down into simpler substances, to continue expending itself in heat for an extraordinarily long time. Such an exception, however, is a useful reminder of the unwarranted rashness of those who, ignoring the true character and limitations of the law, would, in virtue of its alleged universal supervenience, rule out of existence whatsoever is living being, or its residue, in such a way as to make every agent or agency which may condition, control, or modify in any way the working of the law in the concrete. As we have before indicated in regard to some changes of a chemical and mechanical character in the living being, the principle of material erosion may work in the same way as in non-living matter; whilst, in regard to other physiological or psycho-physical processes, the necessary qualifications and limitations may be of a different order. The kind of evidence most cogent in regard to inanimate matter—both direct experimental and verified deduction—is wanting here; and many of the vital processes, especially those connected with consciousness, are so unlike mechanical changes in many respects that it would be scientifically unjustifiable to extend the generalization so as to include them. The other words that are available for a cycle of changes in inanimate matter, is here unthinkable. We could conceivably recover the gaseous and solid products of exploded gunpowder and convert them into their original condition, but the effort to imagine the reversion of the process of the growth of a nation or a nation brings us face to face with an absurdity.

**Philosophical Deductions.**—The philosophical conclusions which some writers have attempted to deduce from the law affect the question of God’s existence and action in the world, the possibility of Divine interference in the form of miracles, the nature of the human soul, its origin and relation to the body, and its moral freedom.

The **Materialistic Mechanical Theory**, which seeks to conceive the world as a vast self-moving machine, self-existing from all eternity, devoid of all freedom or purpose, perpetually going through a series of changes, each new state necessarily emerging out of the previous and passing into the subsequent state, claims to find its justification in this law of the conservation of energy. To this it may be replied in general, as in the case of the old objections to Theism based on the indestructibility of matter, that the constancy of the total quantity of energy in the world or the convertibility of different forms of material energy, does not affect the world (for every contingent event in the world, the existence of self-conscious human minds, and the moral law. These things are realities of the first importance which every philosophical creed that pretends to be a rational system of thought must attempt to explain. But the mere fact that the sum of material energies, kinetic and potential, in any isolated system of bodies, or even in the physical universe as a whole, remains constant, if it be a fact, affords no rational account or explanation whatever of these realities.

**H. Spencer’s Doctrines.**—As Spencer is the best-known writer who attempts to deduce a philosophy of the universe from the doctrine of energy, we shall take him as representative of the school. Though the term force is confined by physicists to a narrower and well-defined meaning—the rate of change of energy per distance—Spencer identifies it with energy, and styles the conservation or constancy of energy the “Persistence of Force.” To this general principle, he tells us, an ultimate analysis of all our sensible experience brings us down, and on this a rational synthesis must be built up. Consequently, from this his “Synthetic Philosophy” seeks to deduce all the phenomena of the evolution of the universe. With respect to its proof he assures us that “the principle is deeper than demonstration, deeper than definite cognition, deep as the very nature of the mind. Its authority transcends all other whatever, for not only is it given in the constitution of our consciousness, but it is impossible to imagine a consciousness so constituted as not to give it” (First Principles, p. 162). The value of this assertion may be gauged from the fact that in Newton and all who followed him up to the middle of last century were ignorant of the principle, and that it required the labour of Mayer, Joule, Helmholtz, and others to convince the scientific world of its truth. “Evolution is an integration of matter and concomitant dissipation of motion during which matter passes from an indefinite coherent homogeneity to a definite heterogeneity, and during which the retained motion undergoes a parallel transformation. Owing to the ultimate principles the transformation among all kinds of existence cannot be other than we see it to be. The redistribution of matter and motion must everywhere take place in those ways and produce those traits which celestial bodies, organisms, societies alike display, and it has to be shown that this universality of process results from the same necessity which determines each simplest movement around us. In another word, it is deduced from the Persistence of Force” (Spencer). The proof is merely a description of the changes which have taken place. He does not show, and it is impossible to show, from the mere fact that the quantity of total energy has to undergo certain transformations in forms in which it has appeared—the Roman Empire, Shakespeare’s plays, and Mr. Spencer’s philosophy—must have appeared. The principle can only tell us that a constant quantitative relation has been preserved amid all the qualitative transformations of the physical universe, and that it will be preserved in the future. But it furnishes no reason for the order and seemingly intelligent design which abounds, and it offers not the faintest suggestion of an explanation why the primitive nebula should have evolved into life, minds, art, literature, and science. To describe the process of building a cathedral is not to deduce a masterpiece of architecture from so many tons of stone and mortar. To show even that the law of gravitation prevailed during every event in the history of England would not be a deduction of the history of England from the law of gravitation. Yet this is precisely the sort of undertaking Spencer’s “Synthetic Philosophy” is committed to in seeking to deduce the present world from the conservation of energy, and so to dispense with an intelligent Creator. The same remarkable feature still in Spencer’s handling of the present subject is that he sees this “Persistence of Force” in the Absolute itself. It really “means the persistence of some Power which transcends our knowledge and conception...the Unknown Cause of the phenomenal manifestations” of our ordinary experience. This is a complete misconception, misrepresentation, and misuse of the principle of conservation, as known to science. Mayer and Joule never attempted to establish that some noumenal power or unknown cause transcended the law, but every physical system has a constant quantity of energy in itself. Nor is it a self-evident datum of our consciousness that, if there be such an unknown cause, its phenomenal manifestations must be always quantitatively the same throughout all past and future time.” The scientific principle merely affirms constant quantitative equivalence amid the actual transmutations of certain known and knowable realities, heat, mechanical work, and the rest. This, however, would afford no help towards an explanation of the universe. Consequently, it had to be transformed into something very different to serve as the basis of the Synthetic Philosophy.

**Professor Ostwald.** On the other hand, apparently opposed to mechanical theories, carries us a little farther
by his special doctrine of energy. Matter, the supposed vehicle or support of energy, he rejects as a useless hypothesis. Every object in the universe is merely some manifestation of energy of which the total amount retains a constant value. Energy itself is work, or what arises out of work, or is converted back into work. It is the substance of the process of change in the world. Mass is merely capacity for energy of movement, density is volume-energy. All we can know of the universe may be expressed in terms of energy. To accomplish this is the business of the savant. Hypotheses are to be abandoned as useless or useless for the explanation. The mere application of a generic common name to diverse objects furnishes no real account of their qualitative differences. We do not advance knowledge by the easy process of assigning new properties to energy, any more than the ancients did by the liberal allotment of occult qualities. The simple truth is that the quantitative law of constancy supplies not the faintest clue to the fundamental problem, and new and novel and ingenious forms of the laws of nature are to catalogue objects as forms of energy. But surely this is merely to abandon all attempt at explanation. The mere application of a generic common name to diverse objects furnishes no real account of their qualitative differences. We do not advance knowledge by the easy process of assigning new properties to energy, any more than the ancients did by the liberal allotment of occult qualities. The simple truth is that the quantitative law of constancy supplies not the faintest clue to the fundamental problem, and new and novel and ingenious forms of the laws of nature are to catalogue objects as forms of energy. But surely this is merely to abandon all attempt at explanation. The mere application of a generic common name to diverse objects furnishes no real account of their qualitative differences. We do not advance knowledge by the easy process of assigning new properties to energy, any more than the ancients did by the liberal allotment of occult qualities.

The Law and Its Consequences.—Not only does the modern scientific dogma of energy fail to provide a foundation for a materialistic theory of a mechanical sort to any purpose, but a modification of that doctrine—the second law of thermodynamics and its consequences—presents us with the materials for a very powerful argument against that theory. Lord Kelvin, the most eminent authority on this point, working from data established by Carnot and Clausius, has shown that the total mechanical energy is indestructible, there is a universal tendency to its dissipation, which produces throughout the system a gradual augmentation and diffusion of heat, cessation of motion and exhaustion of the potential energy of the material Universe" (Lectures, vol. II, p. 336). The heat becoming thus diffused at an equally low temperature throughout the entire universe, all living organisms will perish of cold. In fact, the conclusion which Kelvin deduces from the modern scientific doctrine of energy is that the physical world, so far from being a self-existing machine endowed with perpetual motion, much more closely resembles a clock which has been put together and wound up at some definite date in the past and will run down to a point at which it will stop dead in the future.

Chemistry, Matter, and the Human Soul.—According to the ordinary Catholic doctrine, philosophical and theological, the soul is a spiritual principle, distinct from matter, yet, by its union with the organism constituting one substantial being, the living man. It is the source of the spiritual activities, thought, and volition. It is endowed with free-will. It originates and controls bodily movements. In its origin it has been created; at death it is separated from the body and passes away from the material universe. Now if the soul or mind, though itself not a form of matter, is a material quality on the brain, or modifies bodily movements, then it seems to perform work and so to interfere with the constancy of the sum of energy. Moreover, if thus being sources of energy individual souls are created and introduced into this material universe and subsequently pass out of it, then their irritations seem to constitute a continuous infringement of the law. For clearance we will handle the subject under separate heads.

I. Does the soul or mind initiate or modify in any way movements of matter, or changes in the forms of energies of the material world? Yes, assuredly: the soul through its activities, does thus act on matter—Clifford, Huxley, Hodgson notwithstanding. The thoughts, feelings, and volitions of men have had some influence on the physical events which have constituted human history. All the movements of every material particle in the world would not have been precisely the same if there had been no sensation or thought. Art, literature, science, invention have had their origin in ideas, and they involve movements of material bodies. The mental states called feelings and desires are substances by which it acts on the body. If these feelings and ideas had been different, war, trade, art, literature, and invention would have been different. The movements of some portions of matter would have been other than they have been. The soul and the course, therefore, does really act on the body. II. Is the soul, or mind, or the psychic activity something distinct in kind, not interchangeable with any form of material energy? Yes. That mental or psychic states and activities are realities, utterly distinct in kind from material energy, is the judgment of philosophers and scientists alike. These states are subjective phenomena perceptible only by the internal consciousness of the individual, and the existence of the individual is really an allotropic form of reality which has come into existence.
the living, conscious organism, endowed with the power of self-direction, differs fundamentally in nature from a mere machine, and that it is therefore illegitimate to extend the application of the law to organisms in precisely the same sense as to inanimate matter until this extension is rigidly justified by experimental evidence. But evidence of this quantitative accuracy is not forthcoming—nor at all likely to be. As a consequence, scientists of the first rank, such as Clerk Maxwell and Lord Kelvin, have always been careful to exclude living beings from their formulation of the law. However, they remind us that, in certain respects, the animal structure resembles a very delicate mechanism in which an extremely minute force may liberate or transform a relatively large store of latent energy preserved in a very unstable condition, as, e.g., the pressure of a hair-trigger may explode a powder magazine.

(2) Again, many physicists of high rank (Clerk Maxwell, Tait, Balfour Stewart, Lodge, Poynning), who suppose, for sake of argument, the strict application of the law to even living beings, claim to harmonise the result with what they regard as so central a fact as the constancy of the quantity of energy by conceiving this action as exercised merely in the form of a guiding or directing force. They generally do so, moreover, in connexion with the established truth of physics that an agent may modify the direction of a force without altering the quantity of its energy, or adding to the work done. Thus, a force acting at right angles to another force can alter the direction of the latter without affecting its intensity. The pressure of the rail on the side of the revolving earth reduces the tension of gravitation keeps the earth in its elliptical course round the sun without affecting the quantity of energy possessed by the moving mass. If the enormous force of gravitation were suddenly extinguished, say, by the annihilation of the sun, the earth would fly away at a tangent with the same energy as before. The axiom of physics, that a deflecting force may do no work, is undoubtedly helpful towards conceiving a reconciliation, even if it does not go the whole way to meet the difficulty.

(3) At the same time, the philosophy of Aristotle and St. Thomas provides us with a clue which assists us farther than any modern theory towards the complete solution of the problem. For this, four distinct factors must be kept in mind:

(a) The entire quantity of the work done by the living organism is not accounted for by the material energies—mechanical, chemical, electrical, etc.—stored in the bodily organism. The soul, or mind, or vital power merely administers these, but does not increase or diminish them. The living organism is an agglomeration of complex collection of chemical compounds stored in blood and cellular tissue. Many of these are in very unstable condition. A multitude of qualitative changes are constantly going on, but the quantity of the work done is always merely the result of the using up of the material energies of the organism into some useful form, and in this way transformation of some of these material energies without altering the sum total.

(b) The action of the soul, whether through its conscious or its merely vegetative activities, must be conceived as primarily directive.

(c) But this is not all. The soul not only guides but initiates and checks movements. The most delicate hair-trigger, it is urged, requires some pressure to move it, and this is done, and so an addition to that of the machine. The trigger, too, presses with equal force against the finger, and through this emits some of its energy back to another part of the universe. Consequently, any action of the soul upon the body, even if the pressure or tension be relatively small, involves, it is said, a double difficulty: the pressure communicated by the soul to the body and that returned by the body to the soul. In reply:

First, what is needed in order to originate, guide, or even inhibit a bodily movement is a transformation of the quality of some of the energy located in certain cells of the living organism. Whilst physics, which seeks to reduce the universe to a unitary system, is primarily interested in quantity, qualitative differences cannot be ignored or ultimately resolved into quantitative differences. Direction is the qualitative element in simple movement, and it is as important as velocity or duration. Now, although the initiation of bodily movement, or the origin of a change, in the quality of the material energy located in particles of inanimate matter, needs a stimulus involving the expenditure of some energy, however small, it does not seem necessary, and there is no proof, that every transformation of energy in living beings requires a similar expenditure of energy to occasion the change. Be it noted also that the energy of the stimulus often bears no relation to the magnitude of the change and that in many cases it is not incorporated in the main transformation. Indeed, the explosive materials of the earth would light a spark and make the explosion of an infinitesimal force sufficient to blow up a continent and effect a qualitative transformation of energy vaster than the sum total of all the changes that have gone on in all living beings since the beginning of the world. Hence we conclude that any action of the human mind on the body would constitute a serious interference with the constancy of the sum total of energy.

However, as a matter of fact, some qualitative changes of energy in the living organism which result in movement at least appear not to be excited by anything of the nature of physical impact. Psychology teaches that concentration of thought on certain projected movements, and the fostering of certain feelings, are speedily followed by qualitative changes in organic fluids with vascular and neuro-motor properties. States of consciousness becoming intense seem to seek expression and find an outlet in bodily movement, however this is actually realised. This brings us to the further step in the solution of the problem which the Aristotelio-Scholastic conception of the relation of body and mind, as "matter" and "form", contributes. In that theory the soul or vital principle is the "form" or determining principle of the living being. Coalescing with the material factor, it constitutes the living being. It gives to that material "body" its special character, holds it together, and unites the elements into one individual. It makes them and holds them a single living being of a certain kind. Biology reveals that the living organism is a mass of chemical compounds, many of them most complex and in every unstable equilibrium, constantly undergoing change and tending to dissolution into simpler and more stable substances. When life ceases, the process of disintegration sets in with great rapidity. The function, then, of this active informing principle is of a unifying, conserving, restraining character, holding back, as it were, the running away of the potential energies of the organism in its unstable condition. From this view of the relation of the soul to the material constituents of the body, it would follow that the transformation of the potential energies of the living organism is accomplished in vital processes by anything akin to positive physical pressure, but by some sort of liberative act. It would in this case suffice simply to unloose, to "let go", to cease the act of restraining, and the unstable forms of energy released will thereby issue of themselves into other forms. In a sack of gas or liquid, for instance, the covering membrane determines the contents to a particular shape, and conserves them in a particular space. Somewhat analogously, in the Scholastic theory the soul, as "form", determines the qualitative character of the material with which it coalesce, while it con-
serves the living being in its specific nature. A "form" endowed with consciousness operates as a substrate, partly voluntary, partly involuntary, over the qualitative character of the constituents of the organism, and in this view it would occasion qualitative changes in some of these by a merely liberative act, without adding to or taking from the quantity of physical energy contained in the material constituents of the organism. The illustration is of course imperfect, like all such analogies. It is given merely to aid towards a conception of the relations of mind and body in the Aristotelian theory.

In this theory, the action of the soul, or vital principle, upon the material energies of the living organism, must be conceived not as that of a foreign agent, but as of a co-principle uniting with the form to constitute one specific being. This most important factor in the solution is not sufficiently emphasized, or indeed realized, by many physicists who seek to harmonize the law with the real action of the soul. Accepting the philosophy of Descartes, many of these adopt a very exaggerated view of the separateness and mutual independence of soul and body. In that philosophy we consider a being as two distinctly separate beings, and this is not the way the soul acts, according to the philosophy of St. Thomas and Aristotle. Here the soul is not merely a component principle capable of liberating and guiding the transformation of energies stored up in the constituents of the material organism, which along with itself combines to form a single complete individual being. This point is a vital element in the solution, whether the basis of the difficulty be the conservation of energy, the conservation of momentum, or Newton's third law. The directing influence is not exercised as the pressure of one material particle on another outside of it. The soul is in the body which it animates and in every part of it. Neither is "outside" the other.

This solution obviously provides an answer at the same time to the objections derived from the conservation of energy against the creation of human souls or the freedom of the will. If the soul were a fount of energy distinct from and added to the material energies of the organism, and if the freedom of the will involved incursions of a foreign physical force into the mind, a direct violation of the energy conservation law of thermostatics would seem inevitable. But if the soul merely directs the transformation of existing reserves of energy in the manner indicated, no violation of the law seems necessary. Similarly, the departure of such an immortal soul from the physical universe would not involve any withdrawal of material energy from the total sum. Finally, if human thought and volition can interfere in any degree with the movements of matter, and exercise a guiding influence on any of the processes of the bodily organism, a fortiori must it be possible for an Infinite Intelligence to intervene and regulate the course of events in the material universe; and if the human mind can effect its purposes without infringement of the law of conservation of energy, assuredly this ought to be still more the case within the powers of a Divine Mind, which, according to the Scholastic philosophy, sustains all beings in existence and co-operates with their activity.

The extensive literature of the subject may roughly be distinguished as scientific and philosophic, though the two grade into each other.

"The extensive literature of the subject may roughly be distinguished as scientific and philosophic, though the two grade into each other. "

ENGAD
Engel, Ludwig, canonist, b. at Castle Wagenin, Austria; d. at Grillenben, 22 April, 1674. He became a Benedictine in the monastery of Molk (Molk), 10 September, 1654, and, at the order of his abbot, applied himself to the study of law at the University of Salzburg, where theological studies were committed to the care of the Benedictines. He was proclaimed doctor of civil and canon law in 1657, ordained priest in the following year, and was soon professor of canon law at this university. His profound knowledge and personal qualities procured for him the most honourable functions. In 1669 he was unanimously chosen vice-chancellor of the university. He left Salzburg in 1674 at the invitation of the Abbot of Molk, who was desirous that Engel should be known and appreciated by the religious of this monastery, in order to be chosen as his successor. The death of Engel, which occurred in the same year, prevented this plan from being realized. His principal works are: "Manuale parochorum" (Salzburg, 1661); "Forum competens" (Salzburg, 1663); "Tractatus de privilegiis et juriibus monasterium" (Salzburg, 1664); and especially his "Collegium universi juris canonici", etc. (Salzburg, 1671–1674), a work remarkable for its conciseness, clearness, and solidity. It has placed its author in the first rank among Benedictine canonists. The fifteenth edition appeared in 1770. A compendium or summary of this work was published in 1790 by Mainardus Schwartz.

Engelberg, Abbey of, a Benedictine monastery in Switzerland, formerly in the Diocese of Constance, but now in that of Chur. It is dedicated to Our Lady of the Angels and occupies a commanding position at the head of the Nidwalden valley in the Canton Unterwalden. It was founded in 1082 by Blessed Conrad, Count of Seldenburg, the first abbot being Blessed Adelhelm, a monk of the Abbey of St. Blasien in the Black Forest, who had come from the monastery at Eberbach already in 1059. He received the habit and ended his days there as a monk. Numerous and extensive rights and privileges were granted to the new monastery by various popes and emperors, amongst the earliest being Pope Callistus II, in 1124, and the Emperor Henry IV. The abbey was placed under the immediate jurisdiction of the Holy See, which condition continued until the formation of the Swiss Congregation in 1602, when Engelberg united with the other monasteries of Switzerland and became subject to a president and general chapter. In spiritual matters the abbots of Engelberg exercised a episcopal jurisdiction over all their vassals and dependents, including the towns which sprang up around the walls of the abbey, and also enjoyed the right of collation to all the parishes of the Canton. In temporal matters they had supreme and absolute authority over a large territory, embracing one hundred and fifteen towns and villages, which were incorporated under the abbatial rule by a Bull of Pope Gregory IX in 1236. These and other rights they enjoyed until the French Revolution, in 1789, when most of them were left to the community. Engelberg was the paramount position in Switzerland which the abbey occupied for so many centuries was seriously threatened by the religious and political disturbances of the Reformation period, especially by the rapid spread of the Zwinglian heresy, and for a time its privileges suffered some curtailment. The troubles and vicissitudes, however, through which it passed, were happily brought to an end by the wise rule of Abbot Benedict Sigrist, in the seventeenth century, who was justly called the restorer of his monastery. Alienated possessions and rights were recovered to him and the good work he began was continued by his successors, under whom monastic discipline and learning have flourished with renewed vigour. The library, which is said to have contained over twenty thousand volumes and two hundred choice MSS., was unfortunately pillaged by the French in 1792. The abbey buildings were almost entirely destroyed by fire in 1729 but were rebuilt in a substantial, if not very beautiful style and so remain to the present day. The monastery is now (1908) in a very flourishing state, having a community of about fifty and a school of over a hundred boys. The monks have charge of the parish of two thousand souls attached to the abbey and also minister to the needs of seven convents of nuns in the vicinity. In 1873 a colony from Engelberg founded the Abbey of New Engelberg, at Conception, Missouri, U. S. A. Abbot Leodegar Scherer, elected in 1901, was the fifty-third abbot of the monastery.

Engelbert of Cologne, Saint, archbishop of that city (1216–1225); b. at Berg, about 1150; d. near Schwerm, 7 November, 1225. His father was Engelbert, Count of Berg, his mother, Margaret, daughter of the Count of Gelderland. He studied at the cathedral school of Cologne and while still a boy was, according to an abuse of that time, made provost of the churches of St. George and St. Severin at Cologne, and of St. Mary's at Aachen. In 1199 he was elected provost of the cathedral at Cologne. He led a worldly life and in the conflict between Archbishops Adolf and Bruno sided with his cousin Adolf, and waged war for him. He was in consequence excommunicated by the pope together with his cousin and deposed in 1206. After his submission he was reinstated in 1208 and, to stone for his sin, joined the crusade against the Albigenses in 1212. On 29 Feb., 1216, the chapter of the cathedral elected him archbishop by a unanimous vote. In appearance he was tall and handsome. He possessed a penetrating mind and keen discernment, was kind and descending and loved justice and peace, but he was also ambitious and self-willed. His archiepiscopal see had passed through severe struggles and suffered heavily, and he worked strenuously to repair the damage and to restore order. He took care of its possessions and revenues and was on that account compelled to resort to arms. He defeated the Duke of Limburg and the Count of Cleves and defended against them also the Counts of Berg, which he had inherited in 1218 on the death of his brother. He
restrained the impetuous citizens of Cologne, broke the stubborness of the nobility, and erected strongholds for the defence of his territories. He did not spare even his own relations when guilty. In this way he gained the universal veneration of his people and increased the number of his vassals from year to year. Although he resigned the episcopal see and renounced the duties of a bishop, for which he was blamed by pious persons, he did not disregard his duties to the Church, but strove to uplift the religious life of his people. The mendicant orders, which had been founded shortly before his accession, settled in Cologne during his administration, the Franciscans in 1506, the Dominicans in 1221. He was well disposed towards the monasteries and insisted on strict religious observance in them. Ecclesiastical affairs were regulated in provincial synods. Blameless in his own life, he was a friend of the clergy and a helper of the poor.

In the affairs of the empire Engelbert exerted a strong influence. Emperor Frederick II, who had taken up his residence permanently in Sicily, gave Germany to his son, Henry VII, then still a minor, and in 1221 appointed Engelbert guardian of the king and joint emperor. As he entered the empire he had reached the age of twelve when he was crowned at Aachen, 8 May, 1222, by Engelbert, who loved him as his own son and honoured him as his sovereign. He watched over the king's education and governed the empire in his name. He was well-versed in both the civil and sacred law, and without the realm. At the Diet of Nordhausen (24 Sept., 1223) he made an important treaty with Denmark; in the rupture between England and France, he sided with England and broke off relations with France. The poet Walther von der Vogelweide extols him as "Master of Sovereigns," and "True guardian of the king, thy exalted traits do honour to our emperor; chancellor whose like has never been."—Engelbert's devotion to duty, and his obedience to the pope and to the emperor were eventually the cause of his ruin. Many of the nobility feared rather than loved him, and he was obliged to surround himself with a body-guard. The greatest danger threatened him from among his relations. His cousin, Count Frederick of Isenberg, the secular administrator for the nuns of Essen, had grievously oppressed that abbey, Honorius III and the emperor urged Engelbert to protect the nuns in their rights. Frederick wished to forestall the archbishop, and his wife invited him to murder. Even his two brothers, the Bishops of Münster and Osnabrück, were suspected as privy to the matter. Engelbert urged them to surrender the province of Divine Providence, and amid tears made a confession of his whole life to the Bishop of Münster. On 7 Nov., 1225, as he was journeying from Soest to Schwerin to consecrate a church, he was attacked on a dark evening by Frederick and his associates in a narrow defile, was wounded in the thigh, torn from his horse and killed. His body was covered with forty-seven wounds. It was placed on a dung-cart and brought to Cologne on the fourth day. King Henry wept bitterly over the remains, put the murderer under the ban of the land and gave an annual pension to certain religious institutions. Engelbert's works is his historical-political treatise "De ortu, progressu et fine Romani imperii," which was written during the reign of Henry VII (1308-1313). It puts forth the following political principles: a ruler must be a learned man; his sole sin must be the welfare of his subjects; an unjust ruler may be justly deposed; emperor and pope are, each in his sphere, independent rulers; the Holy Roman Empire is a Christian continuation of the pagan empire of ancient Rome; there should be only one supreme temporal ruler, the emperor, to whom all other temporal rulers should be subject. He bewails the gradual decline of both imperial and papal authority, prophesies the early coming of Antichrist and with it the ruin of the Holy Roman Empire and a wholesale desertion of the Holy See. The work was published repeatedly, even according to the proofsheets of 1610; finally it was re-edited by Schott and printed in the Supplement to the "Bibliotheca Patrum" (Cologne, 1622) and in "Maxima Bibliotheca veterum Patrum" (Lyons, 1677). Following are the most important of the other works of Engelbert which have been printed: "De gratiis et virtutibus beatæ et gloriosæ semper V. Mariæ" (Pez, "Theasuræ", I, pt. I, 503-762); "De libero arbitrio" (ib., IV, pt. 2, 121-147); "De causa longevitatis hominum ante diluvium" (ib., I, pt. 4, 437-502); "De providentiæ Dei" (Pez, Bibliotheca sacra, I, 150); "De ludo et vi diaboli" (ib., I, 113-195); "Spectulum virtutis pro Alberto et Ottone Austriæ ducibus" (ib., III, entire); "Super passionem secundum Matthæum" (ib., VII, 67-112); "De regimine principum", a work on political science, containing sound suggestions on education in general, edited by Hufnagel (Ratisbon, 1725); "De animo bono hominæ in hac vitæ," "Dialogus concupiscientis et rationis," "Utrum sapiens occuparet duccem uxorom" (the last three valuable works on ethics were edited by John Conrad Pez in "Opuscula philosophica et theologica", Engelberti Engelberti, Ratisbon, 1726); "De museis tractatus", a very interesting treatise on music, illustrating the great difficulties with which teachers of music were beset in consequence of the complicated system of the hexachord with its solmization and mu-
tation. The treatise was inserted by Gerbert in his "Scriptores ecclesiastici de musica sacra" (St. Blasen, 1764, anastatic reprint, Graz, 1905), II, 287 sqq. W. Roth, "Munich, Kloster Admont und seine Beziehungen zur Wissenschaft und zum Unterricht" (Graz, 1862), 47-49; Engelbert von Admont in his "Beiträge zum Studium des Veitstum," 1874-1880, III, 1, 30, 511-545; Idem, "Kloster Admont" in "Denkmäler der österreichischen Kunst," Abt. II, bis zum Auszug des Mönchstiftes (Freiburg in Br., 1903), III, 133, 248-251, 274-278; Ziegelbauer, Historia Rev Literar. O.E.S. (Augsburg and Würzburg, 1797), 170-178, 179-182; Michael Ott.

Engelbert of Saint-Riquier. See Angelbert.

Engelbrechtsen, Cornelis (also called Engelbert and Engelbrecht), Dutch painter, b. at Leyden, 1648; d. there 1833; is believed to have been identical with a certain Cornelis de Hollander who was a member of the Guild of St. Luke at Antwerp in 1492. He is said to have been the first artist in Holland who painted in oils, and to have been a profound student of the works of Jan Van Eyck. His principal paintings were executed in Leyden and for a long time preserved in that city, which still possesses in its picture gallery his large "Cru cifixion," with wings representing the Sacrifice of Abraham and the Brazen Serpent, and a "Pieta" containing six scenes from the Life of Christ. There is an important "Cru cifixion" by him at Amsterdam, recorded in the Guild of St. Luke at Utrecht, and "Madonna and Child" in the London National Gallery, and a "Cru cifixion" in the Munich Gallery, and there are two double pictures at Antwerp. However, most of his religious works were destroyed in Holland during the Iconoclastic movement in the sixteenth century. He has been declared to have been the master of Lucas Van Leyden, but nothing very definite is known on this matter. Many of his pictures are signed with a curious mark resembling a figure 4 supported upon two swords, and others with a sort of star. He had two sons: Cornelis, known as Koon (1493-1544), and Luke, known as Kok, born 1495. The latter came over to England during the reign of Henry VIII, and a picture signed by him is in Lord De L'Isle's collection at Penshurst.

George C. Williamson.

England.—This term is here restricted to one constituent, the largest and most populous, of the United Kingdom of Great Britain and Ireland. Thus understood, England (taken at the same time as including the Principality of Wales) is all that part of the Island of Great Britain which lies south of the Solway Firth, the River Liddell, the Cheviot E44s, and the River Tweed; its area is 57,668 square miles, i.e., 10,048 sq. m. greater than that of the State of New York, but 11,067 sq. m. less than that of Missouri; its total resident population in 1901 was 23,280,693, or 75.2 per cent of the population of the United Kingdom.

The history of England will be considered in the present article chiefly in its relations with the Catholic Church—I. Before the Reforma tion; II. Since the Reforma tion. The concluding section will be III. English Literature.

Before the Reformation.—For the history of England down to the Norman Conquest the reader may be referred to the article Anglo-Saxon Church (in Vol. I, 503-12). We begin our present account of pre-Reformation England with the new order of things brought about by King Edward the Confessor.

Although the picture of the degradation of the English Church in the first half of the eleventh century which has been drawn by some authorities (notably by H. Boehmer, "Kirche und Staat," 79) is very exaggerated, it is nevertheless certain that even King Edward himself, and the clergy with all his benevolence, had not been able to repair the damage caused partly by the anarchy of the last ten years of Danish rule, but not less surely, if remotely, by the disorders which for many generations past had existed at the centre of Christendom. Of the prevalence of simoniacal prac tices, of a spirit of jealousy and warfare pervading the canons enjoining clerical celibacy, and of a general subordination of the ecclesiastical order to secular influences, there is no room for doubt.

These evils were at that time almost universal. In 1065, the year of St. Edward's death, things were no better in England than on the Continent of Europe. Probably they were rather worse. But the forces which were to purify and renovate the Church were already at work. The monastic reform begun in the tenth century at Cluny had spread to many religious houses of France and among other places had been cordially taken up in the Norman Abbey of Fécamp, and later at Bec. On the other hand this same ascetical discipline had done much to form the character both of Brun, Bishop of Tou, who in 1049 became pope, and is known as St. Leo IX, and of Hildebrand his chief counsellor, afterwards still more famous as St. Gregory VII. Under the auspices of these two popes a new era dawned for the Church. Effective action was at last taken to restrain clerical incontinence and avarice, while a great struggle began to rescue the benefices from the imminent danger of becoming mere feudalatories to the emperor and other secular princes. William the Conqueror had established intimate relations with the Holy See. He came to England armed with the direct authorization of a papal Bull, and his expedition, in the eyes of many earnest men, and probably even his own, was identified with the cause of ecclesiastical reform. The behaviour of Normans and Saxons on the night preceding the battle of Hastings, when the former prayed and prepared for Communion while the latter caroused, was in a measure significant of the spirit of the two parties. Taken as a whole, the Conqueror's dealings with the English Church were worthy of a great mission. All the best elements in the Saxon hierarchy he retained and supported. St. Wulstan was confirmed in the possession of the See of Worcester. Leofric of Exeter and Siward of Rochester, both Englishmen, as well as some half-dozen prelates of foreign birth who had been appointed in Edward's reign, were not interfered with. On the other hand, Stigand, the intriguing Archbishop of Canterbury, and one or two other bishops, probably interfered with. In this there was no indecent haste. It was done at the great Council of Winchester (Easter, 1070), at which three papal legates were present. Shortly afterwards the vacant sees were filled up, and, in procuring Lanfranc for Canterbury and Thomas of Bayeux for York, William gave to his new kingdom the very best prelates that were then available. The results were undoubtedly beneficial to the Church. The king himself directly enjoined the separation of the civil and ecclesiastical courts, for these jurisdictions in the old shires and hundreds had hardly been distinguished. It was probably partly as a consequence of this division that ecclesiastical synods now began to be held regularly by Lanfranc, with no small profit to discipline and piety. Strong legislation was adopted (e. g. at Winchester in 1170) to secure celibacy among the clergy, though not with out some temporary mitigation for the old rural priests, a mitigation which proves perhaps better than anything else that in the existing generation a sudden and complete reform seemed hopeless. Further, several episcopal sees were re-established from mere villages to more populous centres. Thus bishops were transferred from Sherborne to Salisbury, from Selsey to Chichester, from Lichfield to Chester, and not many years after from Dorchester to Lincoln, and from Thetford to Norwich. These and the like measures were no doubt inspired by the very real need of Lanfranc's new constitutions for the Church
monks were all significant of the improvements introduced by the new ecclesiastical regimes. With regard to Rome, the Conqueror seems never to have been wanting in respect for the Holy See, and nothing like a breach with the pope ever took place during his lifetime. The two archbishops went to Rome in 1071 to receive their pallia, and when (c. 1075) a demand was made through the papal legate, Hubert, for the payment of arrears of Peter's-pence, the claim was admitted, and the contribution was duly sent. Gregory, however, seems at the same time to have called upon the King of England to do homage for his kingdom, regarding it as a payment of his debt, and an acknowledgment of vassalage, as in some cases, e.g. that of the Normans in Apulia (See Jensen, "Der englische Peterspfennig", p. 37), it undoubtedly was. But on this point William's reply was clear. "One claim [Peter's pence] I admit," he wrote, "the other I do not admit. To do fidelity I have never been willing in the past, nor am I willing now, inasmuch as I have never promised it, nor do I discover that my predecessors ever did it to your predecessors." It is plain that all this had nothing whatever to do with the recognition of "the spiritual supremacy of the Church," in fact the latter was in the concluding sentence of the letter: "Pray for us and for the good estate of our realm, for we have loved your predecessors and desire to love you sincerely and to hear you obediently before all" (et vos precor, precatis de suis dominis dilectissimis, ut obedientem habeas). Possibly the incident led to some slight coolness, reflected, for example, in the rather negative attitude of Lanfranc towards the antipope Wibert at a later date (see Lieberman in "Eng. Hist. Rev.", 1901, p. 329), but it is also likely that William and his archbishop were only careful not to get tangled in the strife between Gregory and the Emperor Henry IV. In any case, the more strictly ecclesiastical policy of the great pontiff was cordially furthered by them, so that St. Gregory, writing to Hugh, Bishop of Die, remarked that although the King of England does not bear himself in all things as religiously as might be wished, still, inasmuch as he does not destroy or sell the churches, rules peaceably and justly, refuses to enter into alliance with the enemies of the Cross of Christ (the partisans of Henry IV), and has compelled the clergy to take up their task of their holy office, the Pope, says he, has proved himself worthy of special consideration. As has been recently pointed out by an impartial authority (Davis, "England under Normans and Angevins", p. 54) "Lanfranc's connexion with Henry II and his laymen friends and arrears of tithe, he has proved himself worthy of special consideration. As has been recently pointed out by an impartial authority (Davis, "England under Normans and Angevins", p. 54) "Lanfranc's connexion was with the King, and he fled his persons and interests except to the office of the Bishop of Bath and Wells where they were not received with the same cordiality with which they were received in Normandy. The connection of Lanfranc with the King was more like that of a temporal than a spiritual minister, and his influence on the King was commensurate with the services he rendered. He was a foreigner, and his character and influence were those of a foreigner. He was not a clergyman, but a layman, and his influence on the Church was not that of a clergyman, but that of a layman. He was not a spiritual ruler, but a temporal, and his influence on the Church was that of a temporal. He was not a penitent, but a penitent, and his influence on the Church was that of a penitent. He was not a religious, but a religious, and his influence on the Church was that of a religious. He was not a layman, but a layman, and his influence on the Church was that of a layman.

No doubt a strong centralised government was then springing up, in the Church, in the State, and it was need not too readily condemn Lanfranc as guilty of personal ambition because he insisted on the primacy of his own see and exacted a profession of obedience from the Archbishop of York. The recent attempt that has been made to fasten a charge of forgery upon Lanfranc in connexion with this incident (see Boehmer, "Talchungen Erzbischof Lanfranks") breaks down at the point where the personal responsibility of the great archbishop is involved. Undoubtedly many of the documents upon which Canterbury's claims to supremacy were based were forgery, and forgeries of that kind were not unknown to the thirteenth century, but there is no evidence that Lanfranc was the forger or that he acted otherwise than in good faith (see Walter in "Gotting. gelehrte Anzeige", 1903, 582; and Saltet in "Revue des Sciences Ecclesi." 1907, p. 423).

Well was it for England that William and Lanfranc, without any violent overthrow of the existing order of things, either in Church or State, had nevertheless introduced systematic reforms and had provided the country with good bishops. A struggle was now at hand which ecclesiastically speaking was probably more momentous than any other event in history down to the time of the Reformation. The struggle was known as that about Investitures, and we may note that it had already been going on in Central Europe for some years before the question, through the action of William II and Henry I, sons of the Conqueror, which reached a climax in 1107. It is in the eleventh century it may be said that, though the election of bishops always supposed the free choice, or at least the acceptance, of their flocks, the procedure was very variable. In these earlier ages bishops were normally chosen by an assembly of the clergy and people, the neighbouring bishops and the king or civil magnates exercising more or less of influence in the selection of a suitable candidate (see Imbert de la Tour, "Les elections episcopales"). But from the seventh and eighth centuries onwards it became invariable that the electors, or, as they were termed, the chapter, put themselves in some measure of bondage. From the ancient principle of "no land without a lord" it was easy to pass to that of "no church without a lord". And whether the bishopric was situated upon the royal domain or the fiefs of one of the great feudalists, men came to regard each bishop as a see as a mere fief which the lord was free to bestow upon whom he would, and for which he duly exacted homage. This development was no doubt much helped by the fact that as the parochial system grew up, it was the ordinary of the local magnate who in rural districts became the parish church, and it was his private chaplain who was transformed into the parish priest. Thus the great landowner became the patronus ecclesiae, claiming the right to present for ordination any cleric of his own choice. Now the relation of a sovereign towards his bishops came in time to be regarded as precisely analogous. The king was held to be the lord of the lands from which the bishop derived his revenues. Instead of the possession of these lands being regarded as the panage of the spiritual office, they were looked upon as the special condition or service upon which these lands were held from the king. Thus the temporal sovereign claimed to make the bishop, and, to show that he did so, he "invested" him with the spiritual office, conferring upon him the episcopal ring and crosier. The episcopal consecration was a subordinate matter which the king's nominee was left to arrange for himself with his metropolitan and the neighbouring bishops. Now, as long as the supreme authority was wielded by religious-minded men, princes who took thought for the spiritual well-being of their kingdoms, no great harm necessarily resulted from this perversion of right order. But when, as too often happened during the iron age, the monarch was godless and unprincipled, he either kept the see vacant or he filled it with men of his own choice who did not bear himself in all things as religiously as might be wished, still, inasmuch as he does not destroy or sell the churches, rules peaceably and justly, refuses to enter into alliance with the enemies of the Cross of Christ (the partisans of Henry IV), and has compelled the clergy to take up their holy office, he has proved himself worthy of special consideration. As has been recently pointed out by an impartial authority (Davis, "England under Normans and Angevins", p. 54) "Lanfranc's connexion with Henry II and his laymen friends and arrears of tithe, he has proved himself worthy of special consideration. As has been recently pointed out by an impartial authority (Davis, "England under Normans and Angevins", p. 54) "Lanfranc's connexion was with the King, and he fled his persons and interests except to the office of the Bishop of Bath and Wells where they were not received with the same cordiality with which they were received in Normandy. The connection of Lanfranc with the King was more like that of a temporal than a spiritual minister, and his influence on the King was commensurate with the services he rendered. He was a foreigner, and his character and influence were those of a foreigner. He was not a clergyman, but a layman, and his influence on the Church was that of a layman.

Now the fact cannot be disputed that in the tenth century a very terrible laxity had come to prevail almost everywhere throughout Western Christendom.
The great monastic reform of Cluny and many individual saints like Ulric, at Augsburg, and Dunstan and Æthelwold, in England, did much to stem the tide, but the times were very evil. Worldly minded men, often morally corrupt, were promoted by several electionists for the more important sees of the Church, many of them obtaining that promotion by the payment of money or by simoniacal compact. The lower clergy as a rule were grossly ignorant and in many cases unchaste, but under such bishops they enjoyed almost complete immunity from punishment. No doubt the corruptions of the age have been exaggerated by writers of the stamp of H. C. Lea, Michelet, and Gregorovius, but nothing could more conclusively prove the gravity of the evil than the fact that in the early centuries the Church had to struggle with the abuse by which benefices threatened to become hereditary, descending from the priest to his children. Happily help was at hand. Many individual reformers strove to introduce higher religious ideals and met with partial success, but it was the merit of the great pontiff, St. Gregory VII, to go straight to the root of the evil. It was useless to fulminate decrees against the concubinage of priests and against their neglect of their spiritual functions if the great feudal lords could still nominate unworthy lay tenants to exalt their ring as archbishops and bishops, and forcing their consecration at the hands of other bishops as unworthy as the candidates. Gregory saw that no permanent good could be effected until this system of lay investitures was utterly overthrown. Those who have accused Gregory of insufferable arrogance, of a desire to exalt without measure the spiritual authority of the Church and to humble all secular rulers to the dust, make little allowance for the gravity of the evil he was combating and for the desperate nature of the struggle. When feudalism seemed triumphant, Anselm, Archbishop of Canterbury, in his ecclesiastical organization, it was pardonable that St. Gregory should have believed that the remedy lay not in any compromise or balance of power, but in the unqualified acceptance of the principle that the Church was above the State. If, on the one hand, he considered that it was the function of the Vicar of Christ to direct and, if need be, chastise the princes of the earth, it is also clear from the history of his life that he designed to use that power impartially and well.

In England the struggle over investitures developed sooner than in any other country. As the conqueror died there was no election of the bishops, Gregory VII forbore to press the claims of the Church to extremities under such a ruler as William the Conqueror, this was surely not to be attributed to pusillanimity. The pope's forbearance was due quite as much to the fact that he was satisfied that the king made good appointments, as to the circumstance that his own energies were for the time absorbed in the greater struggle with the emperor. Even under the rule of William Rufus no great abuses declared themselves before the death of Lanfranc (1089). It is very noteworthy that William of St. Calais, Bishop of Durham, in 1088, having been accused of treason before the King's Court, questioned the competence of the Court and appealed to the pope. Practically speaking, his appeal was allowed, and he was granted a safe-conduct out of the kingdom, though only after the surrender of his fief. This was virtually an admission that a bishop held only the temporalities of his sees from the crown, and that as a spiritual person he was free to challenge the decision of any national tribunal. Such an incident can with difficulty be reconciled in any views of the office of the English Church which commonly prevail among modern Anglicans.

With the death of Lanfranc, however, all that was evil in the nature of William Rufus seems to have come to the surface. Under the influence of the man who was his evil genius, Ralph Flamstead, a cleric whom he eventually made Bishop of Durham, the king during nearly the whole of his reign set himself to undo the good effected by his father and Lanfranc. In the words of the chronicler, "God's Church was brought very low." Whenever a bishop or abbot died, one of the king's clerks went immediately to the revenues for the use of the crown, leaving but a bare pittance to the monks or canons. The prelates whose revenues were thus confiscated were long kept vacant, and no new appointment was made except upon payment of a large sum or the threat of a "relief." For the credit of one or two really good men like Ralph Luffa and Herbert Losings, who during these bad times became respectively Bishops of Chichester and Norwich (the latter paying a thousand pounds for his nomination), it should be pointed out that a certain pretext of feudal custom lent a decent veil to the simony involved in these transactions. The obsolete doctrine that a fief was a precarious estate, and granted only for a lifetime, was revived by Flamstead; and, as a corollary, large sums of money, as "reliefs" (from relievere, "to take up again"), were demanded, when any fief, lay or spiritual, was conceded to a new possessor. But bishops and abbots were made to pay proportionately more than earls or barons, and a relief was exacted in some cases even from the subordinates of the metropolitan. Even then William Rufus only yielded to the solicitations made to him because he had fallen grievously ill and was lying at the point of death. Most providentially this illness coincided with the presence in England of Anselm, who was regarded as marked out for the priory alike by his learning and by his holiness of life. The king summoned Anselm to his bedside, and the latter exerted a solemn promise of radical reform in the administration of both Church and State. Shortly afterwards, in spite of all his protests, Anselm himself was invested, literally by force, with the insignia of the primacy, and he was consecrated archbishop before the end of the year. But though the saint's firmness secured the restoration of all the possessions which belonged to the See of Canterbury, it was not to be supposed that the king would thus return to his evil ways. In particular he still clung to the theory that by accepting investiture Anselm had become his liege man (ligerus homo), liable to all the incidents of vassalage. When an aid was demanded for the war in Normandy, Anselm at first refused. Then, not wanting to provoke a conflict, he offered 500 marks; but when this sum was rejected as insufficient, he distributed the money to the poor. Early in 1096 the archbishop asked permission to go to the pope to receive the pallium. Rufus objected that, while the antipope Clement III was still dispossessing the title, it was for him and his Great Council to decide which pope should be recognized. When asked to recognize the jurisdiction of this council, Anselm replied: "In the things that are God's I will tend obedience to the Vicar of St. Peter; in things touching the earthly dignity of my lord the King I will to the best of my ability give him faithful counsel and help." The other bishops seem to have been cowed by Rufus and to have supported the king's claim to decide which of the rival popes he should recognize. But Anselm stood alone under the title of archbishop of Canterbury when Abbot of Bec, he had sworn to Urban. He recognized no right of king or bishops to interfere, and he declared he would give his answer "as he ought and where he ought." These words, written Dean Stephens (History of The English Church, II, 90), were understood to mean, that, as Archbishop of Canter-
bury, Anselm "refused to be judged by any one save the pope himself, a doctrine which it seems no one was prepared to deny". Through the saint's firmness Urban eventually withdrew and then sent him to England; but a little later Anselm again asked leave to go to Rome, and when it was refused he declared in the plainest terms that he must go without leave, for God was to be obeyed rather than man. Pope Urban received him with all possible respect, and publicly spoke of him as "alterius orbis papa", a phrase much quoted by Anglicans, as though it implied the recognition in the Archbishop of Canterbury of a jurisdiction independent of Rome.

But the whole lesson of Anselm's life centred in his belief that the Church should lay with the pope to determine what course was to be followed in matters affecting the Church even at the risk of the king's displeasure, and despite any pretended national customs. Neither does it appear that the rest of the English bishops maintained the contrary as a matter of principle, though they considered that Anselm's attitude was needlessly provocative and uncompromising. There are not wanting signs that Eadmer's desire to exalt his own beloved master led him to be somewhat less than just to Anselm's suffragans and to the Holy See itself. The anger of the king was in evidence. The queen, Ada, and Rufus, when Henry, who succeeded, made generous promises of freedom to the Church, explicitly renouncing any sort of payment or relief for the appointment of new bishops or abbots, and promising that church revenues should not be interfered with for any purpose. Anselm recalled Anselm to England, but came into conflict with him almost immediately over the same old question of investitures. At the Councils of Bari (1098) and Rome (1099), at which the saint had personally assisted, anathema had been pronounced on those bishops or abbots who received investiture at the hands of laymen. Anselm accordingly refused either to do homage for himself to the restitution of the possessions of the archbishopric or to consecrate other bishops who had received ring and crosier from the king. Eventually, by the consent of both parties, the matter was referred to Rome. In three different embassies that were sent, the pope upheld Anselm's view, despite the efforts made by Henry's envoys to extort some concession. Then Anselm himself went to Rome (1101) and found the French queen was dispatched to work against him at the Curia. Nothing was settled, for Henry still held out, and Anselm accordingly remained abroad. But at last, when Anselm was on the point of launching an excommunication against the king, the latter, being in political straits, made a modified concession. He could obtain from the Holy See. Anselm was allowed to consecrate those who had previously received investiture, but the king at a great council (1107) renounced for the future the claim to invest bishop or abbot by ring and crosier. On the other hand it was tacitly admitted that bishops might do homage to the king for the temporal possessions of their sees. This settlement of the investiture question in England was fifteen years earlier than that arrived at on very similar lines between Pope Callixtus II and the Emperor Henry V. The importance of the struggle can hardly be exaggerated, for, as already pointed out, the whole ecclesiastical order was in danger of being reduced to the status of vassals sharing all the vices of secular princes. Moreover this resolute stand made by St. Anselm and his church was modified neither by the concord with the pope.

As regards national feeling, the people evidently regarded the cause of the Church as the cause of liberty. The Lollards and the Anabaptists contributed so much to win the confidence of the nation as the independence shown by the Church in such struggles as those that are associated with the names of St. Anselm, St. Thomas Becket, and Cardinal Stephen Langton.

St. Anselm died peacefully at Canterbury in 1109, but Henry I lived on until 1135. During the remainder of Henry's reign and throughout the anarchy which prevailed under the rule of Stephen (1135-1154), good bishops were for the most part elected. The chapters were ostensibly left free in this dispensation, though they no doubt responded in some measure to the known preferences of the king. In any case monastic compacts are no longer heard of, while the Holy See had generally much to say to the final acceptance of the archbishops and of the more important prelates. A certain impatience of dictation from Rome, shown, for example, in occasional unwillingness to receive a legate or to allow appeals to the pope, may be noted at this as at other periods, but the principle of papal authority was never disputed. For example, the papal legate in the dispute with the Anglo-Saxon Church was a symbol of archiepiscopal jurisdiction which still appears in the arms of the English Sees of Canterbury and York, was personally fetched from Rome or at least petitioned for by every archbishop, as it had been in the Anglo-Saxon Church from the Anglo-Saxon kings. In cases when the pall was brought to England instead of being conferred at the papal curtilage, archbishops like St. Anselm and Ralph d'Escuras went to meet it barefoot. To legates of the Holy See, notwithstanding the fact that their presence was not always desired, extreme deference was shown. Even a mere priest like Cardinal John of Crema, when he came to the country as papal legate, took precedence of the two archbishops in the Council of Westminster (1125). Moreover, when protests were made against the sending of legates, it was not so much that the presence of a papal representative in England was resented, as because men believed that such legatine powers, by old tradition, ought to be conferred on the Archbishop of Canterbury, as had been done, for example, in the case of Tatwine, Prior of Canterbury, by Pope Gelasius I. (Egerton, Gesta Henrici II, 1239). The Archbishop of Canterbury was usually constituted legatus natus (native, or ordinary, legate), a term used in contradistinction to the legatus a latere dispatched on extraordinary occasions "from the side" of the sovereign pontiff in Rome. But in any case the significance of the ordinary legatine appointment, first associated with the person of William de Corbeil (d. 1156), is unmistakable. It was, as Dean Stephens truly observes, "an acknowledgment of the supreme authority of the Pope. The primacy shone with a redoubled clearness, but its source was the Pope" (Hist. of the Eng. Church, II, 142). Evil as were the times during the first half of the twelfth century the English Church was by no means lacking in vivifying influences. This was the period of the chief development in England of the Cluniac Order (see Cluniac Congregation) and, a great Benedictine reform already alluded to, of which the first English house, that of Lewes, had been established by
William de Warrenne and Gundrada his wife c. 1077. But the priory of Lewes later on became the mother of several other religious houses, of which the best known are those of Wenlock, Thetford, Bermondsey, and Pontefract. Still more intimately associated with England was the Cistercian Order, another Benedictine reform of which the virtual founder was a Somervil. The monastery was established by a wealthy baron, Humphrey de Bohun (the wealthy patron of the Abbey of Clervaux, as it was known as the Abbey of St. Bernard, the last of the foundations of which the Abbey of Clervaux, but it was Stephen who received St. Bernard and his brothers at Oteaux in 1113, and who gave them the white habit prescribed by the Cistercian rule. The first house of the order in England was at Waverley, founded by Waverley Abbey (1128), which itself became the mother of several other foundations. But Waverley was closed by the Yorkshire Abbey of Rievaulx established (c. 1183) by monks sent directly from Clairvaux by St. Bernard. Among the earliest recruits of Rievaulx was St. Eadred, the next to the pre-Reformation English preachers. The foundations of the white monks throve and multiplied exceedingly. By the year 1152 there were fifteen Cistercian houses in England (ed. E. H. Ren, Oct. 1893). One of the best known was that of the Cistercian monks at Tintern, and Meaux. Unfortunately, this rapid development seems to have been followed by the need for some relaxation of the strict observance of the rule, and the movement while it lasted must have contributed greatly to the decline of the religious houses, and to the decay of the monastic life. The Cistercian movement, which was almost exclusively a lay movement, was not intended to be a means of reforming the secular clergy, and the purpose of the monk was not a monastic life, but the performance of religious duties in the parish churches. By this arrangement the monasteries were placed in the charge of the abbots, who were required to have a certain number of monks, who were to be supported by the revenue of the monasteries. The Cistercian order was not introduced into England until somewhat later—the first house of the order in England was at Witham in Somerset, founded by Henry II in 1180, one of the indirect results of the Martyrdom of St. Thomas. Probably the extreme rigour of the life prevented the Cistercian foundations from ever becoming numerous. But the Charterhouse at Witham gave to England one of its greatest and holiest bishops, St. Hugh of Lincoln (d. 1200), and the Charterhouse of London a later date played a noble part in the resistance it offered to the first stages of Henry VIII's revolt from Rome.

The houses of the Austin Canons, or "Black Canons", were more numerous and of earlier date than those of the Cistercians. Their first foundation was that of Colchester, in 1105, and they possessed two great establishments in London: St. Bartholomew's Smithfield, and St. Saviour's Southwark. At Carlisle they formed the cathedral chapter, the only exception to the rule that all the cathedrals were not yet subject to the jurisdiction of the secular canons. And here we may conveniently notice the fact that, owing, probably, to the influence of generous men, the monasteries of the Austin Canons were given up to the secular clergy, and that "competent stipends", for which a minimum amount was determined, should be paid to the secular clergy. Where, however, these and similar precautions were observed it is certain that many of the best and holiest of the English prelates regarded the impropriations of churches to religious communities with no disapprobation. St. Hugh of Lincoln made many such grants (see Thronton, "Life of St. Hugh", p. 483), and it seems indisputable that in the 13th century the monastic clergy were in a worse case than that of the secular clergy, from having recovered completely from the state of ignorance and demoralization into which they had fallen in the preceding century, the churches for which the monastic clergy had made no provision for the clergy who had been filled with new life, and had been given a better opportunity of serving God in the monastic houses. Strange to say, it is precisely true that some of the secular clergy, who, by the time of the Reformation, were living in solitudo, in a remote country district, and were living there in a monastery, who was responsible for the discharge of his trust, and might from time to time be refreshed by a visit to the monastic house, or by visitors from it."

(Stephen, Hist. Eng. Church, II, 272.)
With the accession of Henry II, in 1154, England, after years of strife, once more passed into the hands of a strong and capable ruler. Without being a whit less of a rival to the period of Henry I in the 12th century, Henry at the beginning of his reign seems to have been well viewed in Rome, and believing, as the present writer does, that the Bull "Laudabiliter" is unquestionably genuine (see Adrian IV, and cf. "The Month", May and June, 1908), the religious mission entrusted to the king, no doubt upon his own representations, in the proposed conquest of Ireland, bears a close resemblance to the pretext advanced for William the Conqueror's invasion of Great Britain. In both cases, also, the Roman pontiff seems to have claimed dominion, granting the land to the invader as a fief upon payment of a certain tribute. The fact, that, according to the Bull "Laudabiliter", Henry himself had admitted (quod tua etiam nobilitas recognoscit) that "Ireland and all other islands upon which Christ, the Sun of Justice, his Son, has to set his face to be, Peter and the Holy Roman Church", deserves to be borne in mind in connexion with King John's formal surrender of his kingdom to the Holy See at a later date.

But what specially interests us here in the reign of Henry II is the disputes between the king and Thomas, his Archbishop, culminating, in 1170, in the martyrdom of the latter. Thomas Becket, a clerk in the household of Theobald, Archbishop of Canterbury, having been strongly recommended to Henry, had been taken into his intimate friendship and made Chancellor of the Kingdom, an office which he had discharged with splendid ability for seven years. After the death of Theobald, Thomas, at the instance of the king himself, was elected Archbishop of Canterbury. He vainly tried to escape from the proposed dignity, but, once appointed, his consecration marked the beginning of a complete change of life. He renounced the chancellorship and all secular pursuits, while he devoted himself to the practice of rigorous asceticism. It was not long before he found himself in conflict with the king, as indeed he had foreseen from the first. The dispute which came between the two of them was a purely secular one. Henry demanded that a certain tax called "the sheriff's aid" should be paid directly into the Exchequer. Thomas, in a Great Council, declared that he was willing to make it out of the rest, which had been levied for the most of the monasteries, but absolutely refused to pay if the money was to be added to the revenue of the Crown. Whether this tax was really the Danelag, as Bishop Stubbs supposes, is very questionable, but in any case we may share his admiration for this, "the first instance of any opposition to the King's will in the matter of taxation which is recorded in our national history", and, as he adds, "it would seem to have been, formally at least, successful" (Const. Hist., I, 463). This incident, however, was soon thrown into the shade by the more serious quarrel over the Constitutions of Clarendon. What was put by the king in the forefront of the dispute was the alleged inadequacy of the punishment meted out to clerics who were guilty of criminal offences. The statement then made that a hundred homicides had been committed by clerics in the nine years since the death of Henry I is quite unfounded, and neither are the cases of which we have definite particulars much more satisfactory (see Morris, "Life of St. Thomas", pp. 114 seq.). It may be that the king was honestly intent on a scheme of judicial reform, and that the Church and the growth of the ecclesiastical courts (the publication of the "Decretum Gratiani" and the increased study of the canon law had made them very popular) was an obstacle in his way. But Becket, who knew him well, suspected that Henry was deliberately striking at the privileges of the Church, and that a pretext was to be extorted from the bishops to observe the "prima quies consuetudines" before any knew what these were, as well as the pretence that the Constitutions of Clarendon represented nothing but the customs said to have been observed in the time of Henry I, do not leave the impression of straightforward dealing. The general purport of the Constitutions, when they were at last made known, was to transfer certain causes—for example, those regarding presentations to benefices—from the jurisdiction of the ecclesiastical to that of the King's Courts, to restrain appeals to Rome, to prevent the excommunication of the king's officers and great vassals, and to sanction the king's appropriation of the revenues of bishoprics and abbeys. On one clause, that dealing with criminal clerics, much apprehension has prevailed. It was formerly supposed that Henry wanted all clerks accused of crimes to be tried in the King's Courts. But this impression, as F. W. Maitland has shown (Roman Canon Law, pp. 132-147), is certainly wrong. A rather complicated arrangement was proposed by which cognizance of the criminal clause was to be exercised by the English archbishops, and the culprit proved to be a clerk, the case was to be tried in the ecclesiastical court, but an officer of the King's Court was to be present, who, if the accused were found guilty, was to conduct him back to the King's Court after degradation, where he would be dealt with as an ordinary criminal and deposed; punishment, if the king's contention was that flogging, fines, degradation, and excommunication, beyond which the spiritual courts could not go, were insufficient as punishment. The archbishop urged that, apart from the principle of clerical privilege, to degrade a man first and to hang him afterwards was to punish him twice for the same offence. Once degraded, he lost all his rights, and if he committed another crime he might then be punished with death like any other felon. And here also it must not be forgotten that "the forces at the back of St. Thomas represented not only the respect which many feel for a bold fight for principle, but also that blind struggle against the hideous punishments of the age, of which the assertion of ecclesiastical privilege, covering widows and orphans as well as clerks and laics, was one of the most dangerous" (W. H. Hutton in "Social England", I, 394). After a moment of weakness in the earlier stage of the discussion, St. Thomas, in spite of Henry's fury, refused to have anything to say to the Constitutions. Among the interesting circumstances in connection with this matter was the fact that Pope Alexander III, loyally supported him. The rest of the story is well known. The archbishop soon found himself compelled to leave the kingdom. For nearly six years he remained abroad, an exile and bereft of his revenues. In 1170 a hollow reconciliation was patched up with the king, and Becket returned to Canterbury. But in a few weeks fresh cause of offence was given, and the king in a fit of passion uttered the rash words which led to the terrible tragedy of the martyrdom. St. Thomas fell in the transept of his cathedral, close beside the steps leading to the high altar, in the late afternoon of 29 December, 1170. All Christendom was horrified, and Henry II, whether from policy or genuine remorse, surrendered his former pretensions while, in 1174, he performed humiliating penance at the martyr's tomb. Within a very short time the Teutonic and English ceremonies of the ascension of Christ were celebrated throughout Europe. No one who studies carefully the history of the times can fail to see the immense moral force which such an example lent to the cause of the weak and to the liberties both of the Church and the people of England against oppression and tyranny. The precise quarrel for which St. Thomas gave his life was relatively a small matter.
What was of supreme importance was the lesson that there was something higher, stronger, and more enduring than the will of the most powerful earthly despot. The life of the Carthusian, St. Hugh, whom Henry II himself caused to be elected Bishop of Lincoln in 1186, forms an admirable pendant to that of St. Thomas. It may be noted in the first place, in view of the outcry raised a little later against the proposal of foreigners to English sees, that St. Hugh was a Burgundian, who even at the end hardly understood the language of the people. But no man ruled his diocese better; no man was more beloved alike by his own secular canons of Lincoln and by the numerous religious in his diocese; while, owing to his holiness, his remembrance and his protection of the poor were so great that he was even said to be a 'second St. Thomas.' The only bishop who without yielding an inch of his high principles, preserved the respect and even the friendship of three such monarchs as Henry II, Richard Cœur de Lion, and John. Very memorable was his firm refusal in the national council to grant Richard annulling bull, and his refusal of a pension. It was the reign of Richard, like that of his predecessor Henry II, still continued to be a period of reform in law, it was also a period of unparalleled exactions in money. In this case the great Justiciar, Hubert Walter, by his edicts, as much as by his personality, as much as by his influence with the king, made himself the instrument of the king's designs. Though all the temporal lords submitted, St. Hugh offered an uncompromising and successful resistance. "This," says Bishop Stubbs, "which was done not on ecclesiastical but on constitutional grounds, is an act which stands out prominently by the side of St. Thomas's protest against Henry's proposal to appropriate the sheriffs' share of Danegeld." (Select Charters, p. 28).

Richard's extreme need of money had no doubt been heightened by his participation in the Crusades and by the huge ransom he had had to pay when captured on his way home by Duke Leopold of Austria. Englishmen, both now and at an earlier date, had played their part in the Crusades. Baldwin, Archbishop of Canterbury, who accompanied Richard, and who had been a most earnest preacher of the holy war, left his bones in Palestine, and Bishop Hubert Walter, who was destined to succeed him in the archbishopric, became the virtual commander of the English forces upon his death. But the Crusades exercised no great influence upon the English. Under the present purpose they are chiefly memorable as emphasizing the truth, so often ignored by Anglican writers, that medieval Christendom, while recognizing many different peoples and many different governments, acknowledged the Church of God not as manifold, but as one. According to that "political theory of the Middle Age" which, founded by Gregory VII, had already imposed itself almost universally upon the speculative philosophy of Europe, the Church, embracing and controlling every form of civil government, was thought above and beyond the law. It was precisely the fact that she was not identified with any country or people, and that she appealed for her sanctions to forces outside of this visible world, that gave to the head of the Church his great position as the arbiter of nations. In principle no temporal ruler disputed the supremacy of the Vicar of Christ so long as the question remained in the abstract and so long as it was some other sovereign who was the sufferer. It was only when his own will was thwarted that active resistance was made, and then it was nearly always on some side issue, some technicality of law that the monarch and his advisers sought to evade the force of an unwelcome pronouncement. The very persistence with which monarchs at times sought to prevent the introduction into England of papal Bulls, provisions, or excommunications, was an acknowledgment rather than a repudiation of the papal authority; just as a man who barricades himself in his house that a writ may not be served on him is really giving proof of his supreme respect for the majesty of the law. This point of view is one that has carefully to be borne in mind in connection with the remittances of the thirteenth century and with such apparently unfriendly legislation as the Statutes of Premunire and Provisors which we shall have to consider later on.

The reign of John (1199–1216) was a time of terrible suffering for the country, but it had results of untold importance in the consolidation of England as a nation. The very loss of her foreign possessions—for in Henry II's day more than half France had recognized the suzerainty of the King of England—contributed to that result. But, as with the other English kings, even since the Norman Conquest, the political constituents of the nation had been divided between two strongly marked parties more or less in opposition. The first, or feudal, element consisted of the great nobles of the Conquest, with their vassals and the influences they wielded. Their capacity for being either further, more disruptive or less, and they looked upon the country and its people as their lawful prey. The second, which, for convenience' sake may be called the national element, was less homogeneous. It comprised the king, the newer nobility of the Church, the burgesses and small officials of the Crown appointed under Henry I and Henry II, and with these the bishops and clergy almost to a man. Taken as a whole, all these recognized the advantage of a centralized government and sympathized with the native population, wishing their rights to be respected and justice to be done. Now it was the work of John's lawsless and despotic rule, especially after the restraining influence of Hubert Walter was withdrawn by death, to break up this combination and to unite all parties against himself. In this the action of Pope Innocent III, culminating in the sentence of deposition pronounced against John, played a most vital part. It is needless to recapitulate the story of the election of Stephen Langton as Archbishop of Canterbury, over which John's quarrel with the Holy See practically began. But it is well to recall that Langton, who rendered such splendid service to the liberties of his country, and whose name is imperishably associated with Magna Charta, was the pope's own nominee, elected at his instance by the Christ Church monks who had been dispatched to Rome. Under pressure of these exactions, the old feudal lords, the clergy, and the new "ministerial" nobility gradually drew together. John found that he had none but a few personal partisans upon whom he could count, and Philip of France with a great following threatened invasion to enforce the pope's sentence of deposition. Under these circumstances John made his submission to the legate, Pandulf, promising to receive all the exiled bishops and to make restitution for the injuries and losses the Church had sustained. A few days later, on 13 May, the vigil of the Ascension, 1213, he went by way of Dover, fugal surrendered his crown and kingdom into the hands of the legate to be received back from him as a sief which he and his successors were to hold of the pope for an annual rent of one thousand marks. It is not unnatural, perhaps, that this transaction should have been denounced by historians in the language of unmeasured indignation. Even Lingard in his day described it as "heaping everlasting infamy on the memory of John," but the considerations he puts forward in explanation of the act have not been without weight with later students. It may be said to be now generally acknowledged that the idea of such a surrender probably did not originate with the pope, but with John himself (see Davis, "England under the Normans and Angevins", 1905, p. 398; Norgate, "John Lackland", 1902, p. 181). As the second writer's explains, there is a quite intelligible motive for
such an act: "John felt that he must bind the Pope to his personal interest by some special tie of such a nature that the interest of the papacy itself would prevent Innocent from casting it off or breaking it." But nothing of the kind was ever said about the cry of indignation heard in England, when the news reached the ears of the English people, who knew little or no foundation. The vehement denunciation of the act by the partisan Matthew Paris, as "a thing to be detested for all time," was written many years afterwards. "Some," says Davis, "stigmatized the transaction as an unwarrantable act" (cf. J. G. Frazer, "The Judicial Bracteate of the Day calls it: a prudent move, for, he adds, there was hardly any other way in which John could escape from all his dangers. Even the hostile barons whose plans received an unexpected check did not venture either now or later to dispute the validity of the transaction" (cf. Adams, "Political Hist. of Eng., II, 315). For such vassalage there were abundant precedents, both within and without the British Isles. Only twenty years earlier, as Hove- den states, Richard Cour du Lion resigned his crown to the Emperor Henry, engaging to receive it out of the empire for an annual payment of five thousand pounds; while the Scottish patriots a century later, to defeat the claims of Edward I, acknowledged the pope as their feudal lord and pretended that Scotland had a hereditary chief of the House of Anjou, most misleading to interpret these and other similar transactions merely in the light of modern sentiment. Perhaps one of the most regrettable features in the incidents of John's submission and absolution is the encourage- ment which the sense of papal protection seems to have given him to proceed in his career of wrongdoing. His later action toward his subjects was no more straightforward or constitutional than before, and he seems to have deceived or gained over the legate to his side. But Archbishop Langton and his brother bishops knew the chief of the French, and it was only in his persistence they forced John to accept their terms. Taking as their foundation an earlier document granted by Henry I at the beginning of his reign, they drew up a charter of liberties, many times confirmed with slight variations in the course of the next century, and destined to be famous through all time as Magna Charta. This great treaty between the king and his people, which Stubbs has described (Const. Hist., II, p. 1) as "the consummation of the work for which unconsciously kings, prelates and lawyers had been preparing for centuries, the making of a period of national life and the starting point of another", begins with a religious preamble declaring that John was moved to issue this charter out of reverence for God, for the benefit of his own soul, for the exaltation of the Holy Church, and for the amendment of his kingdom, and, further, that he had acted therein by the advice of Stephen, Archbishop of Canterbury, of the other bishops, and of Pandulf "subdeacon of the Lord Pope and member of his household", as also of the secular lords, the more important of whom are mentioned by name. As in the charter of Henry II here, the first article promises freedom to the Church in England (quod ecclesia Anglicana libera sit et habebat jura sua integra et libertates suas illas) and specifies in particular the freedom of election of bish- ops, which, as the document further explains, had already been promised by the king and ratified by Pope Innocent. For the rest it will be sufficient to say that Magna Charta in substance lays down the principle that the king has no right to violate the law, and, if he attempts to do so, may be restrained by force to obey it. In particular, justice is not to be sold, or de- layed, or refused to any man. No Freeman is to be taken or imprisoned or outlawed except by the lawful judgment of his peers. No scutage or tax, other than the three regular aids, is to be imposed except by the consent of the barons; and, should the king fail to obtain the consent of the barons, Twenty-five barons were appointed to watch over the execution of the Charter, but they were far from retaining the sympathy of all. "Before the conference at Runnymede came to an end," says Mackechnie, "confidence in the good intentions of the 25 executors, drawn it must be remembered, from the section of the baronage unfriendly to John, was now seen to have been completely lost" (Mackechnie, "Magna Carta", p. 53). The indignation, therefore, formerly expressed at the subsequent action of Innocent III in declaring the charter null and void is now gen- erally admitted to be the justifiable righteous indignation of the barons who had themselves claimed the credit of making England a papal fief (Lingard, II, 333; Rymer, I, 185), and it was certainly contrary to feudal usage for a vassal to contract obligations of this serious kind without reference to the overlord. That the papal condemnation was not directed in principle against English popular liberties, may be inferred from the fact that the Charter was confirmed in November, 1216, upon the accession of the child king, Henry III, at a time when the papal legate who was a good deal beyond the actual support of the new pope, Honorius III. The long reign which then began with a regency, despite the personal piety of Henry, was a period of much distress in England. The king's weakness and his partiality for foreign favourites and favourites of foreign favorites, the wretched state of the finances on the other hand, the taxation thus necessitated could only have been carried through without disturbance by a strong central government, which was here entirely lacking. Cabals and intrigues of all kinds abounded, and the situation was complicated by constant demands for money made by the Holy See. The exactions of the various legates and the never ending "provisions" of papal nominees to canonries and rich livings were undoubtedly the cause of very bitter feeling at the time, and have formed the favourite theme of modern historians, who have been by no means unwilling to deny the existence of very serious abuses, more especially the fact that a large number of French and Italian clergy provided to English benefices never visited the country at all, and were content with simply drawing the revenues. But on the other hand there is much to be said in extenuation of the papal action, which unfortunately has been set before English readers in the most unfavourable light, owing to the bitter antipapal feeling of the great St. Albans chronicler, Matthew Paris. How much Paris's judgment was swayed by personal animosity, is only too clearly seen in his unfriendly references to the friars, though they were then, at least relatively, in their first ferv- ouir. Lingard says of him that he seems to have collected and preserved every scandalous anecdote that would gratify his censorious disposition, and he adds with very strong personal expression of opinion regarding Paris's untrustworthiness (Hist. of Eng., II, 479). It is not wonderful that in that outspoke age Matthew Paris and others like him, finding their pockets touched by the papal demands, should have raised an outcry which was only too readily accepted by the barons. This very period, when England, it is alleged, was ground under the heel of papal tyranny, was in all other fields of action, except the political, an epoch of unexampled progress" (Tout in "Polit. Hist. of England" III. 61). Again, the pope's need of money, owing to the life-and-death struggle with the Hoben- staufen, was real enough. In the eyes of Gregory IX and Innocent IV the wars with the excommunicated German emperor were as genuine a crusade in behalf of the Church as the campaigns of God that undertaken against the Turks. Moreover, with respect to the provision of foreigners to English benefices, even after making all allowances for the bitter feeling against aliens which manifested itself so often in the reign of Henry III, it is impossible to deny that the world in the thirteenth and fourteenth centuries, and especially the ecclesi- asical world, was cosmopolitan to a degree of which we
can now form no conception. In the early part of the thirteenth century nearly all the oldest and most influential men in England had made at least part of their training at Canterbury. Stephen Langton and St. Edmund Rich, both men of pure English descent, might be instances as conspicuous examples, and if Englishmen had to complain of the many foreign ecclesiastics provided for in England, it must not be forgotten that there was quite a number of Englishmen who gained promotion under the influence of foreign sees and other positions of emolument on the Continent. The fact is indisputable—as indisputable as the fact that Englishmen formed a large proportion of the freebooters who roamed through Italy a century later and accepted the pay of anyone who would hire them—but it is interesting to find it proudly insisted upon by Matthew Paris, who in his indignation at the nomination of foreign ecclesiastics to English benefices, declares that England has no occasion to go abroad to beg for suitable candidates, seeing that she herself was rather accustomed to supply dignitaries for other distant lands ("Nee indigit Anglia extra fines suas in remotis regionibus personas regimini ecclesiastici idoneas mendicare, quae solet alis seapia ministrare"—Historia Major, IV, 61).

The exiles by those who were fully reconciled to were very much increased in the thirteenth century by one of the greatest religious revivals which the world has seen, viz., that resulting from the foundation and rapid development of the mendicant orders. There is no need to state the process by which the preaching of the Franciscan and Dominican friars, who first came to England in 1224 and 1221 respectively, were more remarkable in this country than abroad, but all historians are agreed that the impressions produced by this popularising of religion were very marked. The work of spiritual regeneration which they performed at the first was wonderful, and they were warmly encouraged by such holy men and patriotic prelates as the great Bishop Grosseteste. It is perhaps more important to note that, despite the accusations of idleness and worldliness made against them at a later date, their zeal was not extinguished, even if it flagged. An impartial historian who has given special attention to the subject says: "For more than three hundred years the mendicant Friars in England were on the whole a power for good up and down the land" (Jesopp, History of England, 34). Their influence was felt in the highest quarters. During all that long time they were supported only by the voluntary offerings of the people at large—just as the hospitals for the sick and incurable are supported now—and when they were driven to the formation of a guild to yield them relief, they were looted in common with those of the monks and nuns, the Friars had no broad acres and no manors, no real property to seize, and very little was gained by the spoiling of their goods, but inasmuch as they were at all times the most devoted servants and subjects of the Pope of Rome, they had to go at last, when Henry VIII had made up his mind to rule over his own kingdom and to be supreme head over State and Church.

The great polemical controversy which was often shown by strong kings like Edward I, and also at times by the clergy themselves, proved absolutely nothing against the acceptance of any pope's supremacy over the Church. That subordinates should wish to be left free to enjoy a large measure of independence is a law of human nature. England's colonies, for example, may be quite loyal. They may fully recognize in principle the supreme right of the imperial Government, and yet an appeal to precedent on the part of those who, however docile, are doubtful of the ability of a foreign authority to understand local conditions. An entire acceptance of the spiritual supremacy of the Holy See is not in the least inconsistent with the belief that an individual pontiff, and still more the officials who form the entourage of that pontiff, may be influenced by mercenary or unworthy motives. There is not any form of authority in the world which is not at times disobeyed and defied under more or less specious pretense. England's supremacy is only a matter of personal expedience, not of principle, and it will fail altogether in producing any, even the faintest, repudiation in principle of the pope's spiritual supremacy by the accredited representatives of the pre-Reformation Church. By no historian has this truth been more clearly recognized than by the distinguished jurist, F. W. Maitland. Challenging the statement of the Ecclesiastical Courts Commission of 1883, which, largely under the guidance of the eminent historian, Bishop Stubbs, reported that "papal law was not binding in [medieval] England even in questions of faith and morals unless it had been accepted by the national authorities", Professor Maitland, with an irrefragable array of illustrations drawn mainly from the classical canon-law book of the English pre-Reformation Church, the "Provinciale" of Bishop Lyndwood (1453), maintains the exact contrary. According to Dr. Maitland, the "Pope is above the law...to dispute the authority of a papal decretal is to be guilty of heresy, at a time when deliberate heresy was a capital crime". "The last", Dr. Maitland concludes, "is no private opinion of a great jurist, but the opinion of the bishops, bishops and clergy of the provinces of Canterbury have adhered by solemn words" (Roman Canon Law, 17). As the same authority goes on to show, not only did the pope claim and obtain recognition of his right to take into his own hands the judgment of every ecclesiastical cause over the head of the bishop, but it was largely through the questions and appeals of English bishops to Rome, asking for decisions, that the fabric of Roman canon law was built up (loc. cit., 53, 68, etc.). In full accord with this we find Archbishop Peckham telling such a monarch as Edward I that the emperor of all has given authority to the decrees of the popes, and that all men, kings are bound by those decrees. So we find the Archbishop of Canterbury with all his suffragans writing a joint letter to the pope and telling him that all bishops deposed and deposed of the see of Canterbury are under the fountainhead (Sandale's "Register", 90-98). We find the pope carving a big slice from the jurisdiction of English bishoprics, as in the case of the Abbey of St. Albans or of Bury St. Edmunds, and making it subject to the see of Canterbury. But this is an act of an authority. We find the very kings who are supposed by their Statutes of Provisors and Premunire to have
shaken off their allegiance to Rome, begging the sovereign pontiff in most respectful language to issue letters of provision or Bulls of confirmation in favour of their foundations. In this the king enjoyed the pope's favour. No doubt these statutes of Provisors and Premonstrates do in some sense play an important part in the history of the English Church during the fourteenth century, though it is admitted that they were so continually set aside that the permanent results of the legislation were greatly to strengthen the development of the king's dispensing power. The Statutes of Provisors, of which the first was passed in 1351, claimed for all electing bodies and patrons the right to elect or to present freely to the benefices in their gift, and moreover declared in all the appointment brought about by way of papal "provision", i.e., nomination. Two years later this legislation was supplemented by the first Statute of Premonstrate, which enacted that those who brought matters cognizable in the King's Courts before foreign courts should be liable to forfeiture and outlawry. It has been maintained that these acts prove that the English Church did not acknowledge any providing power in the Holy See. To this we may reply (1) that, like all the other English bishops, even Grosseteste, who is so constantly represented throughout his whole ministry as not to possess authority, in this matter fully recognised the right in principle, though he protested against abuses in the use of it; (2) that the legislation at least professed to be passed not in a spirit of hostility to Rome, but as a remedy for manifold abuses caused by "Roman-runners"—priests travelling to Rome and importing the Holy See for benefices. It was the lay patrons of livings whose interests suffered by the papal provisions who were the chief promoters of the Acts. (3) That the bishops refused to consent to the Acts (Stubbs, "Const. Hist." III, 340) and caused their formal protest to be entered on the rolls of Parliament; (4) that the bishops and clergy petitioned spontaneously and repeatedly for their repeal (ibid., 342), that the universities, in 1399, declared that the Acts operated to the detriment of learning, and that in 1416 the Commons also petitioned the king for the abolition of the Statute of Provisors; (5) that the kings themselves disapproved the Acts and constantly asked the popes to provide to the sees; (6) that it is universally admitted that papal provisions were more numerous after the passing of the Statute than before. Proceeding to the Reformation 313 bishops are known to have been provided by the popes; of these 47 were before the passing of the Statute, 266 after it (see Moyes in "The Tabley", 2 Dec., 1893). One thing is certain: it has been shown by the highest authority of the Church that these grants were made by her best and holiest prelates to the action of the present in providing to English sees in opposition to the known wishes of the king. Stephen Langton, in 1205, St. Edmund Rich, in 1232, and John Peckham, in 1279, are conspicuous examples. We have already said above that a reaction against current Anglican theories regarding the position of the pope in the medieval English Church has been steadily growing during the last quarter of a century. The complete agreement of such writers as Professor F. M. Maitland, Dr. James Gairdner, and Mr. H. Rashdall, approaching the subject along quite different lines of research, is very remarkable. The following passage from one of the most distinguished of the younger school of English historians, Prof. Tout, of Manchester, states the case as frankly as it could have been stated by Lillyard: "In the Statutes of Provisors and Premonstrates, like that of Labourers, or the sumptuary laws, remained a dead letter in practise, and after declaring that to the average clergyman or theologian of the day the pope was the one Divinely appointed source of ecclesiastical authority, the subject is followed by the assertion given commonly to feed His sheep, Prof. Tout continues: "The anti-
papal laws of the fourteenth century were the acts of the secular not of the ecclesiastical power. They were not simply antipapal, they were also antieretical, and their tendency to make an end of the authority of the Pope on the Pope was an attack on the Church... The clergyman, though his soul grew indignant against the curialists, still believed that the Pope was the divinely appointed autocrat of the Church universal. Being a man, a Pope might be a bad Pope; but the faithful Christian, though he might lament and protest, could not but obey in the last resort. The papacy was so essentially interwoven with the whole Church of the Middle Ages, that few figments have less historical basis than the notion that there was an antipapal Anglican Church in the days of the Edwards" (Publ. Hist. of Eng., III, 379). No one who carefully studies the language and acts of such a man as Grosseteste can fail to realise the truth that in spite of all his fearers criticism of the Roman Curia, his attitude of mind is thoroughly reverential to papal authority. The most famous, as being the least temperately worded, of all his pronouncements is now known to have been addressed, not, as formerly thought, to Pope Innocent IV himself, but to one of his subordinates. On the other hand, as Maitland points out, Grosseteste was throughout his whole ministry an avowed supporter of his belief in the plentitude of the papal power. "I know", he says, "and I affirm without any reserve that there belongs to our lord the Pope, and to the Holy Roman Church, the power of disposing freely of all ecclesiastical benefices. And this, and a similar language, acknowledging, for example, the pope to be the sun from which other bishops, like the moon and stars, receive whatever powers they have to illuminate and fructify the Church, was not only maintained by Grosseteste to the end (see 'The Month', March, 1895), but re-echoed by Bishop Arundel nearly two centuries afterwards.

So again the occurrences which followed the publication by Boniface VIII of the Bull "Clerices laicos", in the days of Edward I and Archbishop Winchelsea, tend to show that even when the pope took up a position which was too extreme and from which he was forced ultimately to retire, the English Church was not less, but more, loyal to the Apostolic See than other, Continental, nations. Nothing could be less true to the facts of history than the idea that England by her action in the days of Edward I, entirely disregarded ecclesiastical law, a theology, or in any essential matter even a ritual, of her own. The cosmopolitanism of the religious orders, especially the mendicants, and of the universities, would alone have sufficed to render the isolated Church of England powerless. Concerning the religious orders, banished every Catholic priest, and adopted a pronunciatin of Latin which no Continental scholar could understand.

The great disturbing force in the ecclesiastical life of England during the fourteenth century was much more than the Statutes of Provisors or, even the Black Death, was the rise and spread of Lollardy. We may perhaps doubt if the significance of the movement in this country was by any means as great as that which historians, partly in account of the Bohemian upheaval under John Hus which grew out of Wyclif's doctrines, partly through the favourite modern theory that Lollardy produced the Reformation, have generally attributed to it. Dr. James Gairdner, however, who has recently investigated the whole matter in the Statutes of Provisors and Premonstrates, like that of Labourers, or the sumptuary laws, remained a dead letter in practise, and after declaring that to the average clergyman or theologian of the day the pope was the one Divinely appointed source of ecclesiastical authority, the subject is followed by the assertion given commonly to feed His sheep, Prof. Tout continues: "The anti-

English
the reformer's lifetime because of the neglect of his views developed later, only ten years or less before his death (1384), but which were eagerly caught up and even exaggerated by ignorant disciples at a time of weak rule and political unrest. The fact that the Great Schism of the West broke out only six years before Wyntif's death added to the complications by leaving the waverers part of the Church from a state of uncertainty as to which of the rival popes had the better claim to men's allegiance, and to this cause most probably is due the fact that Wyntif was left during his last years to propagate his doctrines practically undisturbed or with only sporadic oppositions under conditions revolutionary, as judged by any standard of opinion tolerated up to that time it would be absurd to deny. No one can fail to see the danger of teaching that there was no real dominion, no real authority, no real ownership of property without the grace of God. From this he deduced the conclusions that a man in mortal sin had no right to anything at all, that among Christians there ought to be community of goods, and that, as to the clergy having property of their own, it was a gross abuse. Similarly he held that every layman had the right of baptism, because the pope was only to be obeyed when taught according to Scripture, and that a king might take away all the endowments of the Church. With these were combined in his latter years theological opinions regarding the Church, as the Church is the institution most offensive to the Christian sense of that day. Wyntif, no doubt, in his philosophical teaching provided safeguards which mitigated the practical consequences of the principles he held, but these were subtilties which were lost upon the more ignorant and fanatical of his followers, more especially after their master's death. The points that they clearly understood were that tithes were pure alms, and that if the parish priests were not good men the tithes need not be paid; that a priest receiving any annual allowance by compact was simoniacal and excommunicated; that a priest who said Mass in mortal sin did not validly consecrate, but rather committed idolatry; that any priest could hear confessions (without faculties), and in fact that any holy layman predestined by God was competent to administer the sacraments without ordination, which reigns dereignty among the ignorant and uninstructed, and reinforced by a constant railing against devotional practices, such as pilgrimages, and against the Roman Court, the friars and all ecclesiastical authority, were obviously full of truth. It is improbable that all the provincial preachers were at the Council of Constance or that the Death and the question of vellinage which resulted from it, had already provided many elements of disturbance.

Speaking of the proceedings against the foremost representative of Lollardy opinions, Sir John Oldcastle, in 1413, Dr. Gairdner says: "It seems to have been a life-and-death struggle between established order and heresy"; and Bishop Stubbe, while doing too much honour by far to the fanatic creed of the Wyntifile leader, remarks: Perhaps we shall most safely conclude that it was composed of a hint that its great principle was far sounder than the principles which guided either his moral or his political conduct." These comments really sum up the situation. The Wyntifile heresy became for a while a real danger to the peace of the country, as Oldcastle's insurrection proved. On the other hand, there was very little that was either sane or ennobling in the dreams which inspired the leaders, and which were imparted to their often very ignorant followers. Given the ideas then, and long after, universally prevalent in regard to heresy and the measures required to suppress it, it is very hard to understand how spreading, there was nothing exceptionally cruel or intolerant about the statute "De hereticismo bumurondo" of 1401, which provided that heretics convicted before a spiritual court, and refusing to recant, were to be handed over to the secular arm and burnt. There can be no doubt that before this extreme measure was resorted to much provocation had been given by the preaching of doctrines which all Christians then deemed blasphemous, and which were not confined to the viliying of the Holy Eucharist, the pope, and the clergy, but touched upon the sanctity of marriage and the observance of Sunday as a day of rest. Dr. Gairdner, after a very careful survey of all the evidence, is satisfied that Archbishop Arundel and his suffragans acted in the interests of public order and showed no inclination to enforce the statute either immediately. In point of fact after the suppression of Oldcastle's insurrection and his execution at the stake, Lollardy was no longer to be feared as a political power. Wyntif's ideas had little hold in England upon men of any weight or consideration. They lingered on for a while and perhaps never entirely died down, though prosecutions for heresy became very rare long before the end of the fifteenth century, but they certainly cannot be regarded as a direct and primary cause of the religious changes which took place in the reign of Henry VIII. Perhaps the most important consequence of all Wyntif's tenets was the supreme importance which he attributed to Holy Scripture. In his treatise "De Veritate Sacrae Scripturae," written about 1378, he practically adopts the position that the Scripture is the book which is to judge the Church. He would have the idea that the word of God ought to become accessible to all, and that all men were free to interpret it for themselves. We are told, moreover, by a contemporary and hostile authority, the chronicler Knighton, that Wyntif himself translated the Gospel into English. Upon this and other evidence it has been commonly supposed that Wyntif was the first to bring the Bible to the knowledge of English readers and that the medieval Church uniformly adopted the practice of withholding the Scriptures from the laity. It is to the credit of modern students of medieval history that the grave misrepresentations involved in this traditional Protestant view are now generally abandoned (see e.g. Gairdner, "Lollardy," I, 100-17; "Cambridge Hist. of Eng. Literature," II, 56-62). We may summarize from the former of those writers the following conclusions as to the Wyntifile's views of the Bible and the Church. The Church was not opposed in principle to the use of vernacular translations. Undoubtedly, translations into English of separate books of Scripture existed as far back as in the days of Bede. In the thirteenth century, the text of the Vulgate, as distinct from Anglo-Saxon, existed before Wyntif's time; neither was it much required, for nearly all who could read, could read the Bible either in the Latin of the Vulgate, which the Church preferred, or in French. There was, however, no express prohibition to translate the Scriptures into English until the prohibition of the Provincial Synod of Oxford published in 1409. This prohibition was not seemingly occasioned by corrupt renderings or anything liable to censure in the text, but simply by the fact that the translation was not in the hands of men who were encouraged to interpret it in their own way without reference to the tradition and teaching of the Church. In fine, Dr. Gairdner concludes: "The possession by worthy laymen of licensed translations of the Church was never opposed, but to place such a weapon as an English Bible in the hands of men who had no regard for authority, and who would use it without being instructed to use it properly, was dangerous not only to the souls of those who read, but to the peace and order of the Church." The view has of late years been held that the Bible translated by Ambrose in 1186 is the English version (or versions, for there are really two) commonly known as the Wycliffite Bible, has no connexion with Wyntif, but is simply the fourteenth-century translation approved by ecclesiastical author-
ity and existing probably before Wyck’s time. There are not wanting arguments in support of such a conten-
tion; but the difficulties are also serious, and the
theory cannot be said to have found general accept-
ance.

The fifteenth century, owing mainly to the long
minority of King Henry VI, and to the Wars of the
Roses, was a period of political disturbance, and it
does not add to the ecclesiastical history of the
country. We shall do well, however, to note that the
invention of printing in England, as elsewhere, was
cordially welcomed by the Church, and that it was
under the shadow of the English Abbeys of Westmin-
ster, Lincoln, and Canterbury the first presses were
erected. Despite the religious indifference which is
supposed to have heralded the Reformation, the tone
of the literature given to the world at these presses
seems to bear witness to the prevalence of a very
genuine spirit of piety.

As the story of the English Reformation is more fully
told in the second part of this article, while many sepa-
rate articles are to be found in The Catholic En-
cyclopedia dealing with particular phases and leading
personalities of that period, a brief outline of the great
church under the old ecclesiastical history of the
Reformation. Catholic historians and all others,
except a small minority representing a particu-
lar school of Anglicanism, are agreed that, so far as
England was concerned, even after the Wyck movement,
the Great Schism of the West, and the humanist revival
of learning had done their worst, the position
of the Church under the jurisdiction of Rome re-
mained as secure as it had ever been. Lollardy no
doubt had inoculated a certain section of the nation,
and there were here and there stirrings indicative of a
doctrinal revolt even during the early days of Henry
VIII’s reign, but with an episcopate thoroughly loyal
to the Holy See and with the support of the king’s
strong government, these rumblings threatened no
danger to the religious peace of the kingdom at large.

Neither does there seem to have been any great decay
of morals among clergy or laity. The public opinion
of the learned world has in all substantial respects
endorsed Abbot Gasquet’s vindication of the discipline
observed in the religious houses prior to the suppres-
sion. Occasional scandals there probably were, and
even a great abbey like St. Alban’s may possibly have
given some cause for the very grievous charges re-
hearsed against it in 1491 by Archbishop Morton,
though the matter is seriously contested (see bibliog-
raphy), but there is not the least reason to believe that
any great peril of a schismatical character or any
resentment of Roman authority had made themselves
felt amongst the people of England until many
years after Luther had thrown down the gaunt-
et in Germany. What produced the English Re-
formation was simply the passion of an able and unscru-
pulous despot who had the cleverness to turn to his
own account certain revolutionary forces which are
always inherent in human nature and which are al-
ways especially liable to be awakened into activity by
the dogmatic teaching and the stern censure of the
Church of Rome. Of course the movement was much
helped forward by the wider distribution of a medium
of learning which had been effected by the invention
of the printing press, and which, while enabling people
to read and interpret the text of Scripture for themselves,
had too often filled them with conceit and with con-
tempt for the authority of the Church. Of course the
reign of Henry VIII was not without its trials; but
least relatively, an age of novelties and of unrest.
The discovery of America had fired the imagination;
the humanism of a coterie of scholars had in a measure
spread to the masses. There was general talk of the
“new learning” by which, however, as Abbot Gas-
quet has pointed out, men meant not the revival of
classical studies, but rather the bold and often hereti-
cal speculations about religion which were agitating so
many minds. A great part of Germany was already
revolted, and England was not so isolated but that the
news of things made Henry’s task easier, but for the
severance of England from the obedience of the pope he,
and he alone, was responsible. So far as Parliament had
any share in the matter, the Parliament was Henry’s too.

This estimate of the situation, which was long ago put
forward by Dr. Brewer and Linderg, has impressed its
self of late years with ever-increasing force upon Anglican opinion and will nowhere be found
more clearly enunciated than in the writings of Dr.
Brewer and Dr. James Gairdner, who, by their initi-
tive, have filled our best press with all the manuscript
materials for the reign of Henry VIII, are entitled to
speak with supreme authority.

The fact that Henry was himself an amateur theolo-
gen and had vindicated against Luther the Catholic
dogctrine of the sacraments, thereby earning from Leo
X the title of “Defender of the Faith,” was probably
fraught with tremendous consequences in the situation
created by his attempted divorce from Queen Cath-
erine. Profoundly impressed with his own dialectical
skill, he persuaded himself that his case was
forever a fait accompli and that there was no need
without his being aware of it, into positions from
which no retreat was possible to a man of his temper-
ament. It was in 1529 that the papal commission to
Wolsey and Campeggio, to pronounce upon the validity
of the dispensation granted to Henry many years
before to marry his deceased brother’s widow, was
announced by the pope’s revocation of the cause to Rome.
The failure of the divorce commission was quickly fol-
lowed by the disgrace and death of Wolsey, and Wol-
sey’s removal allowed all that was least amiable in
Henry’s nature to come to the surface. Two versa-
ible men, Thomas Cranmer and Thomas Cromwell,
were ready at hand to second his designs, skilfully an-
ticipating and furthering the king’s wishes. To
Cranmer is undoubtedly due the suggestion that
Henry might obtain sufficient authority for treating
his marriage as null if only he procured a number of
opinions to that effect from the universities of Chris-
tendom. This was acted upon, and, by various arts
and after the expenditure of a good deal of money, a
collection of highly favourable answers was obtained.
From Cromwell, on the other hand, the idea came that
the king should make himself supreme head of the
Church in England and thus get rid of the imperium
in imperio. This was ingeniously contrived by the out-
rageous pretense that the clergy had collectively in-
surrected the Roman pontiff, by which trick Henry
replaced the Pope with the imperial dignity, and
under the protection of the royal arms, passed the
legislation that enabled him to take or give the
Clergy’s legislative jurisdiction; though this, of course,
had been exercised with the royal knowledge and au-
thority. Upon this preposterous pretext the clergy in
convocation were compelled to make a huge grant of
money and to insert a clause in the preamble of the
vote acknowledging the King as “Protector and Su-
preme Head of the Church of England, as far as the
law of Christ allows.” This last qualification was
only inserted after much debate, though it seems that
at that period Henry was willing that the phrase “Su-
preme Head” should be understood in a way that was
not inconsistent with the supremacy of the pope. At
any rate, even after this, bishops still continued to re-
ceive their Bulls from Rome, and the royal divorce
still continued to be pleaded there. Early in 1532
another move was made. The Commons were per-
mitted to receive the oaths of the Clergy of which drafts remain in the handwriting of Cromwell,
showing from whom it emanated. This, after various
negotiations and a certain amount of pressure, resulted in
the “Submission of the Clergy,” by which they
promised not to fill any vacant sees, committing their
enactments for the approval of the king and a mixed committee of Parliament. To bring
pressure to bear on the pope, the king caused Parlia-
sent to leave it in Henry's power to withhold from the Holy See altogether the payment of annates, or first-fruits of bishoprics, which consisted in the amount of the first year's revenue. By such gradual steps the breach with Rome was brought about, though even as late as 1534, 1535, and 1536, immediately previous to the formal separation from Rome, the King seems to have entertained such teaching as dangerous to public order. Very remarkable are the words used by Henry in his last speech in Parliament, when he deplored the results of the pernicious Bible-reading: "I am exceedingly sorry to know how that most precious jewel, the Word of God, is disputed, rhymed, sung and jangled in every alehouse. I am equally sorry that readers of the same follow it so faintly and coldly in living; of this I am sure, that charity was never so faint among you, and virtuous and godly living was never less used, and God Himself among Christians was never less reverenced, honoured and served."

If ever a moral and religious cataclysm was the work of one man, most assuredly the first stage of the Reformation in England was the work of Henry VIII. One could wish we knew the sense of his own personal responsibility for the evils he despised in the man he had come to himself before the hour when, on 28 January, 1547, he was summoned to his account.

Perhaps the most remarkable feature in the religious condition of England during the last year of Henry's reign was the fact that, besides the king himself, there were probably not a score of persons who were contented with the existing settlement. One large section of the nation was in complete sympathy with the doctrines of the German reformers, and to them the Mass, confession, communion in one kind, etc., which had been preserved untouched throughout all the changes, were simply as gall and wormwood. The great numerical majority, on the other hand, especially in the more remote and thinly populated districts, longed for the restoration of the old order of things. They wished to see the monasteries re-established, Canterbury and the shrines of Our Lady once more in honour, and the pope recognised as the common father of Christendom. During the two short reigns which intervened before Elizabeth came to the throne each of these parties alternately gained the ascendant. Under Edward VI, the Protector Somerset, and after him the Duke of Northumberland, in full harmony with Cranmer, Hooper, and other bishops even more Calvinistically minded, abolished all remnants of popery. Chantages and guilds were suppressed, and their revenues confiscated. The images of the "Assertio septem sacramentorum", the book he had written to refute Luther. Both in the Six Articles and in the "Necessary Doctrine" the dogma of Transubstantiation is insisted upon; and indeed more than one unfortunate reformer who denied the Real Presence was sent to the stake. It was on this side that Henry's task was hardest. Against the Papalists sympathisers amongst his own subjects he consistently maintained a ruthless severity, neither did he relent until all were cowed into submission. Towards men of Calvinist and Lutheran tendencies, who were represented in high places by Cranmer, Cromwell, and many more, the king had intermittently shown favour. He had used them to do his work. They had been of the greatest assistance in prejudicing the cause of the pope, and even the most violent and sanguine had rendered him service. True, the railing translation of the New Testament by Tyndale, which had been printed and brought to England as early as 1526, was prohibited, as was Coverdale's Bible later on, in 1546, very near the close of his reign. It is plain that the horrulity of the more revolutionary form of the text was of such teaching as dangerous to public order. Very remarkable are the words used by Henry in his last speech in Parliament, when he deplored the results of the pernicious Bible-reading: "I am very sorry to know how that most precious jewel, the Word of God, is disputed, rhymed, sung and jangled in every alehouse. I am equally sorry that readers of the same follow it so faintly and coldly in living; of this I am sure, that charity was never so faint among you, and virtuous and godly living was never less used, and God Himself among Christians was never less reverenced, honoured and served."

If ever a moral and religious cataclysm was the work of one man, most assuredly the first stage of the Reformation in England was the work of Henry VIII. One could wish we knew the sense of his own personal responsibility for the evils he despised in the man he had come to himself before the hour when, on 28 January, 1547, he was summoned to his account.

Perhaps the most remarkable feature in the religious condition of England during the last year of Henry's reign was the fact that, besides the king himself, there were probably not a score of persons who were contented with the existing settlement. One large section of the nation was in complete sympathy with the doctrines of the German reformers, and to them the Mass, confession, communion in one kind, etc., which had been preserved untouched throughout all the changes, were simply as gall and wormwood. The great numerical majority, on the other hand, especially in the more remote and thinly populated districts, longed for the restoration of the old order of things. They wished to see the monasteries re-established, Canterbury and the shrines of Our Lady once more in honour, and the pope recognised as the common father of Christendom. During the two short reigns which intervened before Elizabeth came to the throne each of these parties alternately gained the ascendant. Under Edward VI, the Protector Somerset, and after him the Duke of Northumberland, in full harmony with Cranmer, Hooper, and other bishops even more Calvinistically minded, abolished all remnants of popery. Chantages and guilds were suppressed, and their revenues confiscated. The images of the "Assertio septem sacramentorum", the book he had written to refute Luther. Both in the Six Articles and in the "Necessary Doctrine" the dogma of Transubstantiation is insisted upon; and indeed more than one unfortunate reformer who denied the Real Presence was sent to the stake. It was on this side that Henry's task was hardest. Against the Papalists sympathisers amongst his own subjects he consistently maintained a ruthless severity, neither did he relent until all were cowed into submission. Towards men of Calvinist and Lutheran tendencies, who were represented in high places by Cranmer, Cromwell, and many more, the king had intermittently shown favour. He had used them to do his work. They had been of the greatest assistance in prejudicing the cause of the pope, and even the most violent and sanguine had

ST. BOTOLPH'S, BOSTON, LINCOLNSHIRE
schools which are known by the name of King Edward VI. We have now learned that not one of these schools was originally of Edwardian creation (see Leach, "English Schools at the Reformation"). Educational resources had already been seriously impaired under Henry VIII, and "the schools which bear the name of Edward VI owe nothing to him or his government." Of the over 500 which counted by the 16th century, many of them had been chantry schools, for if the chantry priest of old wasted his time in singing for souls he not infrequently did good work as a schoolmaster." So says a judicious summarizer of Mr. Leach's pamphlet.

There can be no doubt that these violent measures provoked a reaction. Already in 1549 there had been serious insurrections all over the country, and more particularly in Devonshire and in Norfolk. On the death of the boy king, in July, 1553, an attempt was made by Northumberland to secure the succession for Lady Jane Grey, but Mary, at least for the time, had the people completely with her, and now it was the turn of Bonner, Gardiner, and the Catholic reaction. Overtures were made to the reigning pope, Julius III, and even Cardinal Pole, whose accession as legate was unfortunately delayed by the Emperor Charles V for diplomatic reasons connected with the marriage of Queen Mary to his son Philip II, reached England in November, 1554, where he was warmly received. A reconciliation through the king and queen had been humbly requested for reconciliation with the Holy See, Pole, on St. Andrew's day, 30 November, 1554, formally pronounced absolution, the king and queen and all present kneeling to receive it. The restoration of ecclesiastical property confiscated during the previous reign was not insisted upon.

The reign of Mary is, unfortunately, chiefly remembered by the severity with which the statutes against heresy, now revived by Parliament, were put into force. Cranmer had been previously sentenced to death for high treason, and the sentence seems to have been politically just, but it was not at once executed. There seems to have been no desire upon the part of Mary or any of her chief advisers for cruel reprisals, but the reactionary forces always at work seem to have frightened them into stern measures, and, as a result, Cranmer, Latimer, Ridley, and a multitude of less conspicuous offenders, most of them only after refusal to recant their heresies, were condemned and executed at the stake. No one has judged this miserably epoch of persecution more leniently than the historiographer Kingsley, whose justice of the spirit of the times. Dr. James Gairdner, stanch Anglican as he is, in his recent work, "Lollardy and the Reformation", seems only to press farther the apology which he has previously offered for their terrible measures of repression. Thus he says: "With all this one might imagine that it was not easy for Mary to be tolerant of the new religion, and yet tolerant she was at first, as far as she well could be. . . .

The case was simply that there were a number of persons determined not to demand mere toleration for the moral offenders, but honesty everywhere and to keep the Edwardine service in the parish churches in defiance of all authority, and even of the feelings of their fellow parishioners. In short, there was a spirit of rebellion still in the land which had its root in religious bitterness; and if Mary was to reign in peace, and order to be upheld, that spirit must be repressed. Two hundred and seventy-seven persons are recorded to have been burned in various parts of England during those sad three years and nine months, from the time the persecution began to the death of Mary, 1558, in which number the sufferers must not blind us altogether to the provocations. Nor must it be forgotten that if it be once judged right to pass an Act of Parliament it is right to put it in force. And as the same authority elsewhere says, "Amongst the victims no doubt, there were many true heroes and really honest men, but many of them would have been persecutors if they had had their way." Queen Mary died 17 November, 1558, and Cardinal Pole passed away on the same day twelve hours later.

To discuss at any length the monastic chronicles, the charters, rolls, and other documents which constitute the bulk of our information regarding the medieval history of England would be out of place in the present article. Only a small selection can in any case be made of the wealth of material which has been published in recent years. It will be convenient to mention first some names of selected Catholic books and studies which the reader is likely to find generally useful, and to add a section of miscellaneous works and of books written from a standpoint which are not at any rate in the Catholic camp.

Catholic.—Langbard, History of England (10 vols., London, 1889); Rule, Life of St. Anselm (2 vols., London, 1850); Raget, Histoire de S. Anseme (2 vols., Paris, 1880); Delaro, La Sainte-Siège et la conquête d'Angleterre en Reine des Quest. Histor. XII Consil.; Raget, Histoire de S. Anselme (1882); Mon. Ed. 190; Thomas Beckett (London, 1885); L'Huillier, S. Thomas de Canterbury (Paris, 1891); Thurston, Life of St. Hugh of Lincoln (London, 1898); CXVIII; Wallace, Life of St. Edmund (London, 1892); Ward, St. Edmund, Archibishop of Canterbury (London, 1903); de Parchacini, Life of St. Edmund of Abingdon (London, 1898); Kneeler, Das Hochliehers deutsche Kaiserzeit (Freiburg, 1876); Faber, Leben des Bischof von Lincoln (Freiburg, 1878); Gasquet, Henry III and Edward I (1878); Strickland, Ricerche storiche sopra il B. Bonifacio da Ermolao (Tavignano, 1895); Palmer, Fasti Ordinis FF. Pradectorum (London, 1878); Hasted, History of the Bishops under the Norman and Saxon Monarchs (London, The Tablet, Nov., 1865, and many other articles in the same periodical); Gasquet, The Great Peace (London, 1903); Id., The English Bishops and other Essays (London, 1887); Strickland, The Truth about John Wycliff (London, 1885); Stone, Reformation and Remonstrance Studies (London, 1885); Eye of the Reformation (London, 1900); Bridgett, Life and Death of Blessed John Fisher (London, 1888); Id., Life and Writings of Sir Thomas More (London, 1888); Gasquet, Henry VIII and the English Monasteries (London, 1888); Rivington, Rome and Westminster (London, 1887); Bridgett, Life and Death of St. Thomas More (London, 1889); Gasquet, The Last Abbot of Glastonbury (London, 1895); Id. (ed.), Corbin, Hist. of the Reformation; Stone, The Church of England (London, 1897); The Life of Cardinal Pole, sein Leben und seine Schriften (Kislabon, 1898); Gasquet and Bishop, Edward VI and the Book of Common Prayer (London, 1898).

Non-Catholic Works.—Of general histories, three different series produced by recent authors are the last word, and they are representative as well of the best modern scholarship and as aiming, each in its own way, at impartiality in the treatment of religious questions: The Political History of England, on which the five volumes reaching from 54 B.C. to A.D. 1547 are written respectively by T. H. Dodsley, G. H. Adams, T. F. Jones, A. D. Wright and A. L. Fisher (London, 1904-1905).—M. Tout's volume in particular is excellend.—A History of England in Six Volumes.—The first four volumes, reaching from 54 B.C. to 1307, are written respectively by C. Oman, H. W. C. Gwatkin, G. O. E. Driffield, and A. L. Fisher, with the help of A. I. Fisher, and by the last author respectively by C. Oman, H. W. C. Gwatkin, G. O. E. Driffield, and A. L. Fisher, with the help of A. I. Fisher; and by the last author. By far the best contribution in this series is that of Mr. Davis.—A History of the English Church.—The first four volumes, which are devoted to the history of Queen Elizabeth, are written respectively by W. Hunt, D. Stephens, C. D. Capper, and Dr. J. A. Harper. Of the last volume, dealing with the reign of James I, it must be said that, although Mr. Freeman is indispensable to the student of the Reformation period, the whole of the late Bishop Stubbe's have exercised an immense influence on historians. Only in England and in the Constitutional History (3 vols.); the Select Charters, and the Preface to various contributions to the Rolls Series (e.g. The Chronicles, Bulau, etc.), while all of which are of great value, have been published separately. Stubbe's views on the tenure of land during the medieval period are sound and accurate, but the chief defect of his work from a Catholic point of view is his adherence to the fiction of a national English Church independent of Rome, and when Freeman, John (2 vols., London, 1892); William Rufus (2 vols.) show an immense command of detail, they are biased in the author's favour against the Catholicism. Many of the less reliable conclusions of Stubbe and Freeman will be found corrected in the works of Martland.
ENGLAND

which are of primary importance in more than one field. His Romantic Canon Law in the Church of England (1888) is of the very highest value as correctly stating the position of the English Church as regard to the Holy See. His History of English Law (1895), Settlement and Beyond (1897), and various contributions to Legal Studies (1901), are all written from a legal and constitutional point of view. For the later period ending in the reign of Henry VIII or Mary, part of the Preface to the Calendars re-edited under the title of The Reign of Henry VII to the Death of Wolsey, 1535 (1908), Dr. J. GARDNER, in particular, has an importance, especially as correcting the reckless inaccuracies of Froude. Dr. G. GARDNER in particular has recently published a work entitled Law and the Reformation (1910), which does much justice to the Catholic position. 

The following may be mentioned: BÖMME, Kirche und Staat in England und in der Normandie (Leipzig, 1889); 10. Die Fälschungen Erzbischöf Lanfranks (Leipzig, 1890); and others have been added. H. R. C. FRASER, England (London, 1885); NORRIS, England under the Angers kings (2 vols., London, 1877); Is. JOHNSTON, Robertson, St. George's Chapel (London, 1899); Húsls and Trinity, Calendar of Entries in Papal Registars Relating to Great Britain and Ireland (8 vols. already published); JÄHEREN, Der englische Papsttreue (Halleberg, 1903); CARNEGIE, History of Rome (London, 1904); IN, History of Rome (London, 1903);—both these able works are much blessed by the writer's Anglican standpoint; JESSE, The Coming of the Pope (1909); and to the works of G. L. CARPENTER; H. R. Cort, Constitutional History of the Church of England (London, 1897); and H. A. BOURNE, The Manor Law (London, 1894);—the last two are highly commended. H. R. C. FRASER, England (London, 1885); NORRIS, England under the Angers kings (2 vols., London, 1877); LEACE, English Schools at the Reformation (London, 1896); and FREEMAN, On the History of the Reformation in England, particularly the Religious Revolution, 1603 (London, 1905).

ENGLAND SINCE THE REFORMATION.—The Protestant Reformation is the great dividing line in the history of England, as of Europe generally. This momentous Revolution, the outcome of many causes, assumed varying shapes in different countries. The Anglican Reformation did not spring from any religious motive. Lord Maccalay is well warranted in saying in his Essay on HALFORD's Correspondence between Pope and King the following: "This is not to say that no important share in bringing it about, Ridley was, perhaps, the only person who did not consider it mere political job", and that "Ridley did not play a very prominent part". We shall now proceed, first, to trace the history of the so-called Reformation in England, and then to indicate some of its results.

It was not until the twenty-sixth year of the reign of Henry the Eighth—1535—that the English Schism was consummated. The instrument by which that consummation was effected was the "Act of Supremacy", by which the King's Highness was to be the Supreme Head of the Church of England, and to have authority to reform and restore all errors, heresies and abuses in the same. This statute severed England from the unity of Christendom and transferred the jurisdiction of the supreme pontiff to the realm. That is the special peculiarity of the Anglican Reformation—the bold usurpation of all papal authority by the sovereign. "The clavis potentiae and the clavis scientiae, the universal power of Government in Christ's Church, the power to rule, to distribute, and to dispose of all, is the crown of that realm. That is the unique peculiarity of the Anglican Reformation—" the bold usurpation of all papal authority by the sovereign. "The clavis potentiae and the clavis scientiae, the universal power of Government in Christ's Church, the power to rule, to distribute, and to dispose of all, is the crown of that realm. That is the unique peculiarity of the Anglican Reformation—" the bold usurpation of all papal authority by the sovereign. "The clavis potentiae and the clavis scientiae, the universal power of Government in Christ's Church, the power to rule, to distribute, and to dispose of all, is the crown of that realm. That is the unique peculiarity of the Anglican Reformation—" the bold usurpation of all papal authority by the sovereign.

The first formal step towards the putting away of Catherine appears to have been taken in 1527, when Henry caused himself to be cited before Cardinal Wolsey and Archbishop Warham on the charge of living incestuously with his brother's widow. The proceedings were secret, and the Court held three sessions, then adjourning sine die for the purpose of consulting the most learned bishops of the kingdom on the question whether marriage with a deceased brother's wife was lawful. The majority of the prelates were this time affirmative, with the proviso that a papal dispensation had been obtained. Henry, thus baffled, then determined to proceed in common form of law, and Sir Francis Geary in his learned work, "Marriage and Family Relations", has summed up the proceedings as
follows: "By a process well known to Ecclesiastical Law, the King wished to institute his suit in the Ap- peal Court for this purpose given original jurisdiction. Within the six months, instead of immediately interposing in an English Consistory or Arches Court, from which appeal lay to Rome, then menaced or actually occupied by the armies of Charles V, a commission from Pope Clement, dated June 9, and confirmed by a pontifical dated July 15, 1526, was obtained constituting the two Cardinals as legate of the Papal Court of both original supreme and ultimate jurisdiction and to proceed judicially. The Court opened May 21, 1529; there followed citation, articles, examination, and publication, and on Friday, July 23, 1529, the cause was ripe for judgment. But, on the 25th, the Papal Legate, or [Con- peggio] adjourned till October, on the ground that the Roman Vacation, which he was bound to observe, had already begun. But in September the advocacy of the cause to Rome, and inhibition of the Legatine Court, given by Clement contrary to his written prom- ise on the word of a Pope, had arrived in England, and the Court never sat again. Henry waited for more than three years, negotiating to have the suit brought to judgment, till at last, in November, 1532, he mar- ried Anne Boleyn, and in the following year, May, 1533, was raised to the archbishopric, by Clement. The latter, for the benefit of the Annunciation, gave an ex- tentence of nullity. At Rome the cause dragged on,—there is a gap at this epoch in the reports of the Rota, and it does not appear if there was any argument either by the advocates of the 'oratrix' or 'orator', by or for the denouners,—till at last, on March 25, 1534, the Pope, in a Consistory of Cardinals, of whom a minority voted against the marriage, pronounced the marriage, with Katherine valid, and ordered restitution of con- jugal rights."

The Statute of 1535 (26 Hen. VIII, c. 1) above quoted—it is commonly called the Act of Supremacy—which transferred to the king the authority over the Church in England hitherto exercised by the pope, may be regarded as Henry's answer to the papal sen- tence of 1534. But, as Professor Brewer remarks, "to this result the King was brought by slow and silent steps". The Act of Supremacy was in truth simply the last of a series of enactments whereby, during the whole progress of the matrimonial cause, the king sought to intimidate the pontiff and to obtain a de- cision favourable to himself. Seven statutes in par- ticular must be noted, as preparatory steps, leading up to, the Act of Supremacy. The 21 Hen. VIII, c. 13, prohibited, under pecuniary penalties, the obtaining from the Holy See of licences for pluralities or non-residence. The 23 Hen. VIII, c. 9, forbade the court of Rome to sit, except out of the time when the sovereign dwelt, except in certain specified cases. The 23 Hen. VIII, c. 20, which is entitled "Concerning the restraint of payment of annates to the See of Rome", was not only an attempt to intimidate, but also to bribe the pope. It forbade, under penalties, the payment of firstfruits to Rome, provided that, if the Bulls for a bishop's consecration were in consequence denied, he might be consecrated without them, and authorized the king to disregard any consequent ecclesiastical censure of "our Holy Father the Pope" and to cause Divine service to be continued in spite of the same; and further empowered the King by letters patent to give or withhold his assent to the Act, and at his pleasure to suspend, modify, annul and enforce it. The Act was in fact what Dr. Lingard has called it, "a political experiment to try the resources of the Papal Pontiff". The period of the papal failure was in the next year the royal assent was given to the Act by letters patent. In this year also was passed the Statute, 24 Hen. VIII, c. 12, prohibiting appeals to Rome in testamentary, matrimonial, and certain other causes, and requiring the clergy to assume "a_View in the interests of ecclesiastical censes from Rome. The next year witnessed the passing of the Act (25 Hen. VIII, c. 19) "for the submission of the clergy to the King's Majesty", which prohibited all appeals to Rome. The Act fol- lowing this in the Statute Book abolished annates, for- feit and the like; and, by conciliating the whole corporation of bishops and archbishops to "the Bishop of Rome, otherwise called the Pope", and the procuring from him of Bulls for their consecration, and established the method still existing in the Anglican Church (of which more will be said later on) of electing, con- firming, and ordaining bishops by the king. This procedure was not immediately followed by an Act forbidding, under the same penalties, the king's subjects to sue to the pope, or the Roman See, for "licenses, dispensations, compen- sations, faculties, grants, rescripts, delegacies or other similar instruments or writs", or any summons, or any invitations, congregations, or assembly for religion, or to maintain, allow, admit, or obey any process from Rome. The net effect of these enactments was too take away from the pope the headship of the Church of England. That headship the Act of Supremacy conferred on the king.

This sudden falling away of a whole nation from Catholic unity, is an event so strange and so terrible as to require some further explanation than Macaulay's, who refers it to "the brutal passion" and "selfish policy". "One of the main arguments that the monarch and the pope was the last phase of a con- test between the papal and the regal power which had been waged, with longer or briefer truces, from the days of the Norman Conquest. The Second Henry was no less desiring than the first, to gain for himself from the jurisdiction of the supreme pontiff, and the destruction and pillage of the shrine of St. Thomas à Becket was not merely a manifestation of uncontrollable fury and unscrupulous greed; it was also Henry VIII's way of repressing a quarrel of nearly forty years' standing. The reason why Henry VIII succeeded where Henry II, a greater man, had failed must be sought in the political and religious conditions of the times. Von Ranke had pointed out that the state of the world in the sixteenth century was "directly hostile to the Papal domination ... The civil power would no longer acknowledge any higher authority" (Die römischen Päpste, I, 39). In England the monarch was virtually a tyrant. The Wars of the Roses had destroyed the old nobility, formerly an effective check upon regal despotism. "The problems which it was now possible, as both in theory and practice, Government was identi- fied with the will of the Sovereign; his word was law for the conscience as well as the conduct of his sub- jects. He was the only representative of the nation. His demands were met with few scruples, in the name of granting subsidies." (Letters and State Papers, II, Part I, p. cxvii, Introd.). The lax lives led by too many of the clergy, the abuses of pluralities, the scandals of the Consistorial Courts, had tended to weaken the influence of the priesthood; "the papal authority", to quote again Brewer, "had ceased to be more than a mere form, a decorum to be observed." The influence of the ecclesiastical order as a check upon arbitrary power was extinct at the death of Wolsey. Thus it was that the royal supremacy was now to triumph after years of effort, apparently fruit- less and often purposeless. That which had been present to the English mind was now to come forth in a distinct consciousness, armed with the power that nothing could resist. Yet that it should come forth in a form so different from its medieval tradition. All events had prepared the way for the King's temporal appointment to Papal authority was familiar to men; but a spiritual supremacy, an ecclesiastical headship as it separated Henry VIII from all his predecessors by an irreparable and always supreme tradition. (Brewer, Letters and State Paters, I, cxxvi, Introd.). Henry VIII made full proof of his ecclesiastical
ministry. In 1536 he appointed Thomas Cromwell his vicegerent, vicar-general, and principal official, with full power to exercise all and every that authority appertaining to himself as head of the Church. The vicar-general's function was, however, confined to ecclesiastical discipline. The settlement of doctrine Henry took under his own care and, as is related in the preamble to the "Act abolishing diversity of opinions" (31 Hen. VIII, c. 14), "most graciously vouchsafed, in his own person, to descend and come into his High Court of Parliament" and there expounded his theological views, which were embodied in that Statute, commonly called "The Statute of the Six Articles". It was in 1539 that this Act was passed. It asserted Transubstantiation, the sufficiency of communion under one kind, the obligation of clerical celibacy, the validity "by the law of God" of vows of chastity, the excellence of private masses, the necessity of the sacrament of penance. The penalty for denial of the first article was the stake; of the rest imprisonment and forfeiture as of felony. But while thus upholding, after his own fashion, Catholic doctrine, Henry had possessed himself of a vast amount "conformed forwards and backwards as the King changed his mind". During the minority of Edward VI, no longer cowed by the "vultus instantis tyranni" he favoured first Lutheranism, then Zwinglianism, and finally Calvinism, so that it may seem doubtful what form of Protestantism, if any, he really held. Certain it is, however, that he had "the convictions of his own interests", and that these were bound up with the anti-Catholic party. He had judicially pronounced the invalidity of Henry's marriage with Catherine and the illegitimacy of Mary, thereby deeply offending and scandalising Catholics, who were by no means mollified because, not long afterwards, he had similarly prostituted his judicial office in dealing with Anne Boleyn and her daughter Elizabeth. He was mar-ried, contrary to the Statute of the Six Articles, to a daughter of the Protestant divine Osianer, whom, according to a tradition preserved by Sander and Harpokrit (both first-rate authorities), he was in the habit of carrying about in a chest until, in the latter part of Henry VIII's reign, he judged it prudent to send her, for greater security, to Germany. Shortly after the death of the king, he reclaimed her, showing
of the Holy Ghost”. Notwithstanding this enco-
matum, it was superseded, within four years, by a second
Cranmerian Prayer Book, not similarly commented in
the Act prescribing it, in which the slight outward
similarity to the Mass, preserved in the Communion
Service of the first Prayer Book, was obliterated. The
Ordinal underwent similar treatment; the sacrificing
priest, like the Sacrifice, was abolished. Another of
Cranmer’s exploits was the compilation of Forty-two
Articles of Religion which, reduced to Thirty-nine and
slightly recast, still form the Confession of Faith of the
Anglican Church. Had Mary, daughter to Henry VIII,
met her death at the stake, after vainly endeavouring by
copious recantations—Sander averes that “he signed
them seventeen times with his own hand” —to save his
life. This severity, though doubtless impolitic, can
hardly be deemed unjust if his career be carefully con-
sidered. But his work lived after him and formed the
basis of the ecclesiastical legislation of Elizabeth,
when Mary’s brief reign came to an end, and with it
the ineffectual endeavour to destroy the new religion
by the fagot. Mary’s fiery zeal for the Catholic Faith
failed to undo the work of her two predecessors, and
unquestionably did ill service to the Catholic cause.
It would be foolish to blame her for not practising a
tolerant utterly alien from the temper of the times.

But there can be no question that Queen is well war-
ranted in the assertion that to her is due the bated
brance of the blood shed in the cause of Rome which,
however partial and unjust it must seem to an his-
toric observer, still lies graven deep in the temper of
the English people” (Short History, p. 360).

The first act of Elizabeth, when she found herself
firmly seated on the throne, was to annul the religious
restorations of her sister. “All Laws and Statutes
made against the See Apostolic of Rome since the
twentieth year of King Henry VIII” had been abol-
ished by the 1 and 2 Philip and Mary, c. 8, which “en-
acted that the Bishop of Rome should not have any
jurisdiction over the bishoprics within the realm of
England and Wales” (1 and 2 Edward VI, c. 11) to be
restored, and to have and enjoy such au-
thority, pre-eminence and jurisdiction as Holiness
used and exercised, or might lawfully have used and
exercised, by authority of his supremacy, before that
date” (Short History, p. 360). By the first Act of Parliament
of her reign, repealed this Statute, and revived the last
six of the seven Acts against the Roman pontiff
passed between the 21st and 26th year of Henry VIII
which we have given an account, and also certain
other anti-papal Statutes passed subsequently to the
enactments of the See Apostolic of Rome’s Act of Supremacy.
The last Act of the Roman Church was not revived, doubtless because Elizabeth, as a
woman, shrank from assuming the title of Supreme
Head of the Church bestowed by it on the sovereign.
But, although she did not take to herself that title, she
looked on with disapproval of her seducer’s reign,
by this destruction of her reign. It veste the plentitude of ecclesiastical
jurisdiction in the Crown and the Queen’s Highness,
who is described as “the only Supreme Governor of
this realm as well in all spiritual and ecclesiastical
things or causes as temporal”, and it prescribes an
oath recognizing her supremacy as the binding of the lives of the official officers of
Church and State. The next Act on the Statute Book is the Act of Uniformity. It orders the use in
the churches of the second Prayer Book of Edward VI, in
the place of the Catholic rites, and provides penalties for ministers disobeying this injunction. It also en-
forces the attendance of the laity at the parish church
on Sundays and holidays, for the new service. This
was the definite establishment of the new religion in
England, the consummation of the revolution initi-
ated by the Dissolution of the Monasteries. The bishop-
ition of Kitchen of Llandaff, refused to accept it, as did
about half the clergy. The majority of the laity pas-
sively acquiesced in it, just as they had acquiesced in
the ecclesiastical changes of Henry, and Edward, and
Mary. Its effect was, virtually, to reduce the Church
of England to a department of the State. The Angli-
can bishops became, and are still, nominees of the
Crown, election by the dean and chapter, where it ex-
ists—in some of the newer dioceses there are no
chapters, and the bishops are appointed by Letters
Patent—being a mere facce form of which Emerson
has given an excellent account. When, in his conclusion, they were involved in the penalties of a
preumunire. The Convocations of York and Canter-
bury are similarly fettered. They cannot proceed so
much as to discuss any project of ecclesiastical legis-
lation without “Letters of Business” from the Crown.
The sovereign is the ultimate arbitrer in causes,
whether of faith or morals within the Anglican
Church, and his decisions of them given by the voice
of his Privy Council, are irrefutable. But of course
in these days the sovereign practically means the
Legislature. “The National Church”, Cardinal New-
man writes in his “Anglican Difficulties”, “is strictly
part of the Nation, just as the Law or the Parliament
is part of the Nation.” “It is simply an organ or de-
partment of the State, all ecclesiastical acts really pro-
ceed from him, and is binding as to its efficacy and
itself is the sovereign Lord and Master of the Prayers
Book, its composer and interpreter.”

Queen Elizabeth’s Acts of Supremacy and Uniformity
form, in the words of Hallam, “the basis of that
restrictive code of laws which pressed so heavily, for
more than two centuries, upon the adherents of the
Roman church”. It is not necessary here to describe
in detail that “restrictive code”. An account of it
will be found in the first chapter of “A Manual of the
Law specially affecting Catholics”, by W. S. Lilly
that the queen who originated it was animated by very
different motives from those which influenced her
father in his revolt against Rome. Sander has cor-
correctly said, “he gave up the Catholic faith for no other
reason in the world than that which came from his lust
and wickedness”; and, indeed, while severing himself
from Catholic unity, and pillaging the possessions
of the Church, he was as far as possible from sympathis-
ing with the doctrinal innovations of Protestantism
and savagely repressed them. Elizabeth, by the very
fact that she preserved the title of Supreme Head of
the Church in the crown, was a manifestation of
humane die—to espouse the Protestant cause. No
doubt, as Lingard writes, “it is pretty evident that she
had no settled notions of religion”, and she freely
exhibited her contempt for her clergy on many occas-
ions—notably on her death-bed, again, by this destro-
year from the presence the Archbishop of Canterbury
and certain other Protestant Prelates of her own making
telling them “she knew full well that they were hede
priests, and took it for an indignity that they should
speak to her” (Dodd, “Church History”, I 1, 70). But,
like Cranmer, if she had any, she indulged in private
horrors; she had the convictions of her interests. Her lot was
plainly cast in with the Protestant party. Rome had
declared her mother’s marriage null, and her own birth
illegitimate. Catholics, in general, looked upon Mary
Queen of Scots as the rightful claimant to the throne
which she occupied. Throughout her reign
Church policy and State policy are conjoint:
But Janus-faces, looking different ways.
The Anglican Church, as established by her, was a
more or less a Catholic, with the exception that she
commonly two, and the maxim, Cujus regio ejus
religio, was currently accepted in her time. It
seemed according to the natural order of things that the people
should profess the creed of the prince. Elizabeth
is not open to the charges made against her sister of
religious fanaticism. But she was given up to that
“self will and self worship” which Bishop Stubbe justly attributes to her father. And, in the well-weighed words of Hallam, “she was too deeply imbued with arbitrary principles to endure any deviation from the mode of worship she should prescribe”.

It was on the feast of St. John Baptist, 1559, that the statute took effect which abolished throughout England the mass and set up the new. The forth Catholic rites could be performed only by stealth, and at the risk of severe punishment. But during the first decade of the queen’s reign Catholics were treated with comparative lenity; occasional fines, sometimes and individual lives were the severest penalties imposed against them. Camden and others assert that they enjoyed “a pretty free use of their religion”. But this is too strongly put. The truth is that a vast number who were Catholics at heart temporized, resorting to the new worship more or less regularly, and attending secretly, when opportunity offered, Catholic rites celebrated by the Marian clergy commonly called “the old priests”. Of these a considerable number remained scattered up and down the country, being generally found as chaplains in priories, or exploring that felt a mission in a way supported by the vague hope of political change which might give relief to their consciences. Elizabeth and her counsellors calculated that when the old priests dropped off, through death and other causes, people grown used to the worship of the new religion, there would not be so much opposition to the introduction of the old rites. But it fell out otherwise. As the old priests disappeared, the question of a supply of Catholic clergy began to engage the minds of those to whom they had ministered. Moreover, stricter conceptions of their duty in respect of heretical worship were gaining ground among English Catholics, partly on account of the decision of a congregation appointed by the Council of Trent, that attendance at it was “grievously sinful”, inasmuch as it was “the offspring of schism, the badge of hatred of the Church”. Then a man appeared whom Father Bridgett rightly describes as “the father, under God, of the Catholic Church in England after the destruction of the ancient hierarchy”, to whom “principally, we owe the continuation of the priesthood, and the succession of the secular clergy”. That man was William Allen, afterwards cardinal. By a kind of instinct he probably sought for the object the perpetuation of the Faith in England, and in 1568 he founded the seminary at Douai, then belonging to Spanish Flanders, which was for so many generations to minister to the wants of English Catholics. Parliament, according to the rules and constitution of the Council of Trent. The missionaries, full of zeal, and not counting their lives dear, who were sent over from this institution, revived the drooping spirits of the faithful in England and maintained the standard of orthodoxy. Elizabeth viewed with much displeasure this fructification of her hopes, nor was the Bull “Regmagygniol” (by which, in 1570, St. Pius V declared her deposed and her Catholic subjects released from their allegiance, calculated to mollify her. Increased severity of policy of the earl of Essex. The persecution against that statute had been made liable to capital punishment as traitors, the queen hoping thereby to escape the odium attaching to the infraction of death for religion. Few will now dissent from the words of Green in his “Short History”: “There is something even more revolting than open persecution in the policy which brands every Catholic priest as a traitor, and all Catholic worship as disloyalty.” But, for a time, the policy succeeded, and the martyrs who suffered sought an odium greater than that commonly believed to have been put to death for treason. In 1581 this offence of spiritual treason was the subject of a far more comprehensive enactment (23 Eliz., c. 1). It qualified as traitors all who should absolve or reconcile others to the See of Rome, or willingly be so absolved or reconciled. Many English historians (Hume is the most considerable of them) have affirmed that “sedition, revolt, even assassination were the means by which seminary priests sought to compass their ends against Elisabeth”. But this sweeping accusation is not true. No doubt Cardinal Allen, the Jesuit, Persyn [see Parsons (Parsyon), Roger], and other Catholic exiles were cognizant of, and involved in, plots which had for their end the queen’s overthrow, nor would some of the conspirators have shrank from taking her life any more than she herself shrank from taking the life of Mary Queen of Scots. But, in spite of all their sufferings, the great body of English Catholics maintained their loyalty. From the political intrigues in which the exiles were so deeply involved they held aloof, nay, many of them viewed with suspicion not only the exiles, but the whole Society of which Persyn was a foremost representative, and desired the exclusion of Jesuits from English Colleges and from the English mission. When the Armada was expected they repaired in every county to the standard of the Lord Lieutenant, who, they were not only not enemies of, but were actively aiding the national independence for their religious belief. They received from Elisabeth a characteristic reward. “The Queen,” writes Lingard, “whether she sought to satisfy the religious animosities of her subjects, or to display her gratitude to Almighty by extinguishing the enemies of His Church, nobly rewarded her triumph with the immolation of human victims” (History of England, VI, 255). In the four months between 22 July and 27 November, of 1588, twenty-one seminary priests, eleven laymen, and one woman were put to death for their Catholic faith. During the rest of Elisabeth’s life her Catholic subjects groaned under incessant persecution, of which one special note was the systematic use of torture. “The rack seldom stood idle in the Tower during the latter part of her reign”, Hallam remarks. The total number of Catholics who suffered under her was one hundred and eighty-nine, one hundred and twenty-eight of them being priests, fifty-eight laymen, and three women. To them should be added, as Law remarks in his “Calendar of English Martyrs” (London, 1870), thirty-two Franciscans who were starved to death.

Notwithstanding the severities of Elisabeth, the number of Catholic clergy on the English missions in her time was considerable. It has been estimated that at the sixteenth and seventeenth centuries amounted to three hundred and sixty-six, fifty being survivors of the old Marian priests, three hundred priests from Douai and the other foreign seminaries, and sixteen priests of the Society of Jesus. On the queen’s death the eyes of the persecuted remnant of old faith turned hopefully towards James. Their hopes were doomed to disappointment. That prince took himself seriously as head of the English Church. He chose rather to be the successor of Elisabeth than the avenger of Mary Stuart, and continued the savage policy of the earl of Essex. The year 1625 saw an Act was passed “for the due execution of the Statutes against Jesuits, Seminary priests and other priests”, which took away from Catholics the power of sending their children to be educated abroad, and of providing schools for them at home. In the course of the same year a proclamation was issued banning all missionary priests out of the kingdom. The next year is marked by the Gunpowder Plot, “the contrivance”, as Tierney well observes, “of half a dozen persons of desperate fortunes, who, by that means, sought an odd benefit than they have ever since laboured under the weight of the calumny, though no way concerned”. Soon afterwards a new oath of allegiance was devised, rather for the purpose of dividing than of relieving Catholics.
was incorporated in "An Act for the better discovery and repression of Popish recusants" (a recusant Catholic was simply one who refused to be present at the new service of the Protestant religion in the parish church), and was directed against the deposing power. This act was passed in 1625, but was allowed to lapse. Among them being Blackwell the Archpriest. Twenty-eight Catholics, of whom eight were laymen, suffered under James I, but that prince was more concerned to exact money from his Catholic subjects than to slay them. According to his own account he received a net income of 250,000 a year from fines of Popish recusants (Hardwick Papers, I, 446).

With the accession of Charles I (1625) a somewhat brighter time began for English Catholics. He was unwilling to shed their innocent blood—indeed only two underwent capital punishment while he bore rule—and this reluctance was one of the causes of rupture between him and the Parliament. His policy, Hallam writes, "with some fluctuations, was to wink at the domestic exercise of the Catholic religion, and to admit its professors to pay could compensations for clemency, of the king was regularly enforced". The number of Catholic clergy in England received a considerable augmentation in his reign. Panzani reported to the Holy See that in 1634 there were on the English mission five hundred secular priests, some hundred and a hundred a bursars, a hundred Franciscans, seven Dominicans, two Minims, five Carmelites, and one Carthusian lay brother, besides two Jesuits in London and one in Cambridge. This large increase in the number of Jesuits was not regarded by all as an unmixed gain, unquestionable as was their zeal and devotion. It was considered by some as the cause of rivalries and dissensions, unpleasant to read of, among the small remnant who kept the faith. The Jesuits seem to have been, at times, open to the charge of aggression, and other times to be guilty of persecution; they were, however, universal against them. One of the burning questions among English Catholics was concerning the episcopal succession. The secular clergy desired a bishop, and Allen had proposed to Gregory XIII that one should be sent. Through Persons' influence at Rome, which was very great, instead of a bishop an archpriest was appointed (1598) in the person of George Blackwell, who has been already mentioned, a friend of his own, who was deprived by the Holy See ten years later for taking the oath of allegiance under James I. But a Fellow of Pembroke College, John Birkhead, until, in 1623, Dr. William Bishop was appointed Vicar Apostolic of England. He died in 1624, and was succeeded by Dr. Richard Smith. Shortly afterwards there was an outbreak of persecution occasioned by the Puritan party in the House of Commons, led by Sir John Elliot, and Bishop Smith withdrew to France at the end of 1628, never to return to England, which remained without a bishop till 1688.

When war broke out between Charles I and the Parliament, English Catholics, to a man, espoused the cause of the former. They sided with the Successors of the Bishops of Birkhead, until, in 1623, Dr. William Bishop was appointed Vicar Apostolic of England. He died in 1624, and was succeeded by Dr. Richard Smith. Shortly afterwards there was an outbreak of persecution occasioned by the Puritan party in the House of Commons, led by Sir John Elliot, and Bishop Smith withdrew to France at the end of 1628, never to return to England, which remained without a bishop till 1688.

Hatred of Catholicism was a dominant note of the Parliamentary party, who bitterly resented the quasi-toleration which the Catholics had for some years enjoyed; and between the meeting of the Long Parliament and the death of Cromwell twenty-four adherents of the Faith suffered martyrdom. The Catholics, as Hallam points out, were "the most strenuous of the King's adherents"; they were also the greatest sufferers for their loyalty. One hundred and seventy Catholic gentlemen lost their lives in the royal cause; and Catholics were especially oppressed under the Commonwealth.

At the Restoration of Charles II, in 1660, English Catholics expected, not unnaturally, to receive some remunence for their uns wearying devotion to the royal cause, and this more especially as the new king's personal obligations to them were very great. After his total overthrow at the battle of Worcester, he owed his life to the Catholics of Staffordshire, the Huddlestons, the Giffards, the Whitegreaves, the Penderells. But "let not virtue seek remuneration for the thing it has done" is a Catholic maxim, and Charles continued the policy of the Stuarts. Catholics asked, in a petition presented to the House of Lords by Lord Arundell of Wardour, that they might receive the benefit of the Declaration of Breda. Charles was inclined to give them "mercy of consideration", but Lord Chancellor Hyde, afterwards Earl of Clarendon, denounced Dryden's "Register and Chronicle", "was so hot upon the point, that His Majesty was obliged to yield rather to his importunities than his reasons". The king, who, as he himself expressed it, was not minded to set out again on his travels, recognized that there was in the nation a strong anti-Catholic feeling, and bowed to it, though himself intellectually convinced of the truth of the Catholic religion. The laws against Papists remained on the statute book, and, from time to time, proclamations—they were, it is true, for the most part brutum fulmen—were read in St. Paul's, in St. Stephen's, and in St. Mary's Church, where the Jesuits and other priests to quit the kingdom under the statutory penalties. A singular instance of overmastering anti-Catholic prejudice prevailing in the nation is supplied by the monument erected by the Corporation of London in 1666. It bore an inscription in which Catholics were accused of being the authors of that calamity, a monstrous assertion for which no shred of evidence was ever adduced.

Where London's column pointing to the skies,
Like a tall bulwark lifteth its head and lies,
Pope had the courage to write. But not until the nineteenth century was well advanced was the calumny erased.

It is not possible here to follow, even in briefest outline, the course of Charles II's reign. We may, however, point out that two things are necessary to a right view of it: to understand the character and aims of Charles II, and to realize the dominant temper of the English nation. Idle, voluptuous, and good-humoured yet cynical, Charles certainly was; but he possessed deep knowledge of human nature, great political tact, and remarkable tenacity of purpose. That he preferred the Catholic religion to any other, is certain; and he was glad to embrace it on his death-bed. But he recognized the strong Protestant feeling of the people over which he succeeded, and was careful not to pervert his crown by defying it. He was, however, really desirous to do what he could, without risk to himself, for the relief of Catholics; and this was the motive of his Declaration of Indulgence in 1672, by which he ordered "that all manner of penal laws in matters ecclesiastical against whatever sort of Non-conformist or recusants" should be suspended, and gave liberty of public worship to all dissentients, except Catholics, who were allowed to celebrate the rites of religion in private houses only. This declaration, however, was not well received, and was not likely to conciliate all parties in the House of Commons, who answered it by a resolution "that the penal statutes in matters ecclesiastical cannot be suspended except by consent of Parliament", and refused supplies until the declaration was recalled. That was a convincing argument to Charles. He recalled the declaration forthwith. Parliament then proceeded to pass a bill—it went through both Houses without opposition, and Charles dared not refuse his royal assent to it—which required every one in the civil and military establishment of the Crown to take the oaths of allegiance and supremacy, to subscribe a declaration against Transubstantiation, and to receive the Eucharist according to the rites of the Church of England. One effect of this Act (25 Car. II, c. 2) was to deprive James, Duke of York, who had become Catholic, of his office of Lord High Admiral.
During the next nine years the struggle between the king and the Parliament continued. The popular leader was Ashley, Earl of Shaftesbury—for some time Chancellor—whose character has been delineated by Dryden with merciless severity, but with substantial accuracy, in "Abolam and Achitophel". This statesman's own Protestantism was of the highest kind; but he was zealous, from political motives, for the national religion, and for that reason was bent upon excluding the Duke of York from the succession to the throne. To accomplish this end, he fought strenuously, unremittingly, nor was any weapon too vile for his purpose. Thus, in his exultation in 1675, rendered Catholics incapable of sitting in Parliament, and thus deprived twenty-one Catholic peers of their seats in the House of Lords; but the king contrived to procure the insertion of a clause exempting the Duke of York from the operation of the Statute. It was in this same year that Titus Oates appeared on the scene with his pretended Popish Plot. There is no evidence that Ashley was the instigator of the colossal villainy, but he did not scruple to employ it for his own purposes. The origin of the Church of England is memorably written in "Blackwood's Magazine" (May, 1908), "is a mystery. We know no more than that the English people, being mad, interrupted the course of justice, insisted that the judges should condemn every man brought before them, suspecting every sinner, and only believed the cause of hired spies. It is not probable that Oates himself contrived the death of Sir Edmund Godfrey." However that may have been, certain it is that the calumnies of Oates and his confederates and imitators awakened the Elizabethan Statutes into fresh activity. The king was far too shrewd to give credence to what Macaulay has well called "a hideous romance resembling rather the dream of a sick man than any transaction which ever took place in this world." But he was powerless to save the victims of popular fanaticism; "I cannot pardon them," he said, "for I dare not." And so, in 1679, the horrors of 1688 were repeated, eight priests of the Society of Jesus, two Franciscans, five secular priests, and seven laymen being put to death, while many more died in their foul prisons. The next year witnessed the judicial murder of Lord Shaftesbury, his peers being unable to withstand the madness of the people. In 1681 Oliver Plunket, the Archbishop of Armagh, was executed at Tyburn, after a mock trial. His was the last blood shed for the Catholic religion in England. The persecutions of Charles II brought to London three saintly Carthusian friars in the twenty-sixth year of Henry VIII, had lasted, with little intermission, for a century and a half. Three hundred and forty-two martyrs had sealed their faith with their blood, while some fifty confessors, in the reign of Elizabeth and her successors, ended their lives in prison. The king's long struggle with the popular party ended in his complete victory. No more consummate master of political strategy ever perhaps existed; and the violence of the party led by Shaftesbury and the Bishop of London toward him. Charles was arrested on a charge of suborning false witnesses to the Plot; although the Grand Jury of Middlesex ignored the bill of his indictment, he saw that the tide of popular feeling, which had begun to ebb with the execution of Lord Stafford, was now turned completely against him, and at the end of 1682 he fled to Holland, where, two months afterwards, he died.

Charles II was the most popular of kings during the last two years of his reign, and he was careful not to mar his popularity by illegal acts or by measures opposed to the principles of the Church. The regulation of printing, passed immediately after the Restoration, had expired in 1679; Charles made no attempt for its renewal. In the same year the Habeas Corpus Act—that great charter of the liberty of the subject—was passed; Charles acquiesced in it. He did indeed infringe the Test Act by the Duke of York's readmission to the Council and restoration to the office of lord high admiral. But, in the recrudescence of loyalty, this tribute to fraternal affection passed unblamed. In his last illness the churches were thronged with crowds praying that God would raise him up again to be a father to his people; and on his death, in February, 1685, all sorts and conditions of his subjects made great lamentation over him.

In the first year of the reign of James II Dr. Leyburn was appointed by the Holy See as vicar Apostolic in England. In the meantime Dr. Dr. Ellis, appointed in his stead, as Dr. Ellis and Dr. Smith the year after that, England being divided into four districts: the London, the Midland, the Western, and the Northern, in each of which the papal vicar exercised all the authority possessed by an ordinary. The new king came to the throne with advantages which he could hardly have hoped for. He inherited, in some sort, the popularity of his brother, and his religion was forgotten in his blood. He began his reign by a solemn pledge to keep the laws inviolate and to protect the rights of the English. In February, 1685, he said, "We have the word of a king", it was said, "and of a king who was never worse than his word." The saying, whoever was its author, went abroad. It expressed the general conviction, and his first Parliament made proof of exuberant loyalty, granting to the king, without any formality, a revenue of two millions for life. Argyll's rebellion in the North and Monmouth's in the West but served to bring out the devotion of the nation at large to the sovereign. But the cruelties of Kirke and the savageries of Jeffreys in the "Bloody Circuit" caused a change in the general feeling. The king's popularity began to wane, and the measures to which he now resorted soon put an end to it. Monmouth's revolt was made the pretext for raising the army to twenty thousand men, and it soon appeared that James, supposed himself able, with this force at his command, to place himself above the law. He attempted to nullify the provisions of statutes by the exercise of his dispensing power. Judges who refused to fall in with his plans were dismissed; and it was held by a bench packed with his creatures that his dispensing power was buttressed by an Act of Parliament. Armed with this decision, the king proceeded to set aside the disabilities of Catholics and the restrictions upon the exercise of their religion. They were admitted to civil and military offices without being naturalized, the law of primogeniture was relaxed, and religious orders appeared in the streets of London in their habits; the Jesuits opened a school which was soon crowded. Further, the king found himself ex officio supreme head of the Anglican Communion, and he resolved to use his supremacy as a weapon for its overthrow. Following the precedent of Elizabeth, he appointed an Ecclesiastical Commission, in defiance of an Act of Charles I which declared that court illegal; and he placed Jeffreys at the head of it. He forbade the clergy to preach against popery, and suspended the last session of Convocation. At Oxford he presented a Catholic to the deanship of Christ Church and converted Magdalen College into a Catholic society. Among English Catholics most men of reputation stood aghast at this reckless violence. For approved it but converted of broken fortune and tarnished reputation. Rome gave no countenance to it. Macaulay is absolutely warranted in writing: "Every letter which went from the Vatican to Whitley recommended patience, moderation and respect for the prejudices of the English people." Yet, "the spirit of the age which in the general justice, "was too wise a man to believe that a nation so bold and stubborn could be brought back to the Church of Rome by the violent and unconstitutional exercise of the royal authority. It was not difficult to
see that if James attempted to promote the interests of his religion by illegal and unpopular measures, his attempt would fail; the hatred with which the hereti-
cal islanders regarded the true faith would become intensified, and an indication association would be created in men’s minds between
Protestantism and civil freedom, between Popery and arbitrary power.” This is precisely what happened.
And indeed it is not too much to say that British Catholics have, in great measure, to thank the two last
Catholic sovereigns for the strong feeling which so long existed against them throughout the nation, and
which, even now, has not wholly disappeared. The severities of Mary appeared to give countenance to the
popular Protestant opinion that Catholics rely chiefly on the argument from fire and are always ready, if they
they, to burn dissenters from their religious belief.
The conduct of James II seemed an object lesson con-
firmatory of the vulgar conviction that Catholics are not bound to keep faith with heretics, and that any
violation of law, any “crooked and indirect by-ways,” are justifiable means to the end of advancing the Cath-
olic religion.
The reign of James II lasted only three years. It is
not too much to say that before two of them were out
he had succeeded in alienating the devotion of the en-
tire Catholic body. It was known that the Pope supplied the supreme proof of his folly and was
the immediate occasion of his downfall. The gist of it
was that by the royal authority all laws against all
classes of Nonconformists were suspended; that all
religious tests imposed upon them by statute as a
qualification for office were abrogated. Only an ab-
solute monarch could claim to exercise such a preroga-
venta.
It is true that the Declaration was full of pro-
fessions of love of liberty of conscience—professions
which came oddly from a monarch with James’s record.
Moreover, as we now know, upon the very eve of pub-
lishing it he had written to congratulate Louise XIV
upon his revocation of the Edict of Nantes, an exam-
ple which Barillon, a very competent judge, thought
he would have only too gladly followed if he had been
able. Those hollow and palpably false professions
deceived no one, and the failure of the Declaration to
conciliate the support of those who would have chiefly
benefited by it, might have suggested caution to a
wiser man. But James would brook no opposition;
and on 27 April, 1688, he ordered the Anglican clergy
to attend divine service on two successive Sundays. Nearly all the
dergy refused to obey, and Sancroft, the Archbishop
of Canterbury, with six of his suffragans, addressed to
the king a respectful and temperate protest. The
denunciation of the French as the chief cause of the
seven bishops was the result. The acquittal of the
priests was greeted throughout the country with a
tumult of acclamation, which was the signal for the Revo-
lation, whereby the ancient liberties of England were
vindicated, and a parliamentary title to the crown
was substituted for an hereditary one.
The disfavour with which Catholics were viewed
when William and Mary were placed on the throne
vacated by James II, was natural enough. They
shared in the hatred inspired by the perfidy, cruelty,
and tyranny of the ascended sovereign. William,
indeed, would have gladly extended to them the same
measure of toleration which, in spite of Tory opposi-
tion, he was able to secure for Protestant Nonconform-
ists. He was under great obligations not only to the
emperor, but also to the Irish, with whose sympathy and
diplomatic support he had been of much help to him in his
perilous enterprise. He was, by temperament and by
conviction, averse from religious persecution. More-
ever, as Hallam justly observes, “no measure would
have been more politic, for it would have dealt to the
Jacobites the deadly blow of sympathy and double taxation or penal laws were able to effect.”
And this, no doubt, was one of the reasons why the
High Tories persistently opposed it. But the Legisla-
ture did not content itself with leaving on the statute
book the former statutes against Catholics; it en-
sued various new enactments, and the Bill of Rights provides that no member of the reigning
house who is a Catholic, or has married a Catholic, can
succeed to the throne, and that the sovereignty, on be-
coming a Catholic, or marryimg a Catholic, thereby
forfeit the crown. This article of the constitution
was confirmed by the Act of Settlement (23 & 24
Will. III. c. 2), which conferred the succession on the
descendants of the Electress Sophia (a daughter of
James I), being Protestants. Another statute, of the
first year of William and Mary, prohibited Catholics
from residing within ten miles of London and em-
powered justices to tender to reputed Papists “the oath
appointed by law,” providing that any who refused it,
yet remained within ten miles of London, was to be
forfeit and suffer as a Papist recusant convict. A
third Act of the same year (1 W. & M. c. 15) pro-
vides that no suspected Papist who shall neglect to
take the oath appointed by law, when tendered to him
by two justices of the peace, and who shall not appear
before them upon notice from one authorized under
their hands and seals, shall keep any arms, ammuni-
tion, or powder, or keep any gun or firearm, or
attempt to supply the same, or in any way to any extent
in that in of any other person to his use
(other than such as shall be allowed him by the ses-
sion for defence of his house and person); that any
two justices may authorize by warrant any person to
search for all such arms, ammunition, and horses
in the daytime, with the assistance of the constable or
his deputy or tithing-man, and to seize them for
the king’s use; and that if any person shall conceal
such arms, ammunition, or horses, he shall be imprisoned
for three months and shall forfeit to the king treble
the value of such arms, ammunition, or horses.
The 7 & 8 Will. III. c. 24, closed to Catholics the profes-
sions of counsellor-at-law, barrister, attorney, and
 solicitor; and the 7 & 8 Will. III. c. 27, declared that
any person who refuses to take the oaths of allegiance
and supremacy, when lawfully tendered, should be
liable to suffer as a Popish recusant convict; and
that no person who should refuse the said oath should be
admitted to give a vote at the elections of any member
of Parliament. In 1700 an Act was passed which, Sir
Erskine M. Wilson observes, “put an end to the
punishment”. It incapacitated every Roman Catho-
lic from inheriting or purchasing land, unless he ab-
jured his religion upon oath; and on his refusal it
vested his property, during his life, in his next of kin
being a Protestant. He was even prohibited from
condemning his will if he was a Catholic. The 7 &
8 Will. III. c. 24, and subsequent enactments.
Concerning this Act of William IIII Hallam remarks,
“So unprovoked, so unjust a persecution is the dis-
grace of the Parliament that passed it.” But he goes on
to add, “The spirit of Liberty and tolerance was
too strong for the tyranny of the law and this statute
was not executed according to its purpose. The Cath-
olic landholders neither renounced their religion nor
abandoned their inheritance. The judges put such
constructions upon the clause of forfeiture as eluded
its efficiency. Nor did the issue of this Controv-
er, as Charles Butler tells us in his “Historical Memoirs”
(London, 1819–21), “in many instances the laws
which deprived Catholics of their landed property
were enforced.” He adds that “in other respects they
were subject to great vexation and contempt. They
were worse than any other minority in an age when a common creed was regarded, in every
European country, as the chief bond of civil politity and dissidents from it were more or less rigorously repressed. As a matter of fact, it is to a great English magistrate that we owe the ruling which placed an almost insuperable difficulty in the way of the tribe of informers. At the trial of the Rev. James Webb on the 25th of June, 1788, at Westminster, at the suit of a nonconformist former pastor, Lord Mansfield told the jury that the defendant could not be condemned “unless there were sufficient proof of his ordinance”. Such proofs, of course, were not forthcoming. Lord Mansfield, as Charles Butler relates in his above-mentioned “Historical Memoirs”, denounced the contention, and doubts of Church and State, that the accused should have every advantage that the form of proceedings, or the letter or spirit of the law, could allow. And at that period the same temper animated English judges generally.

As the second half of the eighteenth century wore on, English Catholics ceased to be regarded by the Government as politically dangerous. A certain number of them had taken part in the rising of 1715, and in the far more serious rising of 1745, and had in some instances been executed for their pains. But in 1778 the terrors of the Jacobite plot died away, and the warning, that upon whom their claim devolved, had ceased to excite either dread or enthusiasm. Men no longer took him seriously, and English Catholics in time—it was no very long time—acquiesced in the Revolution of 1688. Nor did they do anything that signified.

In 1778 the Addresses was presented to George III, bearing the signatures of the Duke of Norfolk and nine other peers, and of one hundred and sixty-three commoners, on behalf of the Catholic body. It represents to the sovereign their “true attachment to the civil constitution of the country, which having been perpetuated through all changes of religious opinions and establishments, has been at length perfected by that Revolution which has placed your Majesty’s illustrious house on the throne of these Kingdoms, and inseparably united your title to the crown with the law and liberties of your people”. In this year, 1778, the first Catholic Relief Act was passed. It repealed the worst portions of the Statute of 1699 above mentioned, and set forth a new oath of allegiance which a Catholic could take without denying his religion. Though a very moderate measure of relief, it was extremely distasteful to some bigoted Protestants, among whom it is distressing to find the name of John Wesley. But in truth Wesley—it is not a rare case—was no less ignorant and narrow-minded than zealous and devout. He was “one of the most zealous concerning the Principles of Roman Catholics”. In this document, besides other equally foolish assertions, he alleges that they hold an oath not binding if administered by heretics, and that they believe in the remission of future sins through the Sacrament of Penance. The conclusion be draws is that no government “ought to tolerate men of the Roman Catholic persuasion”. There can be no doubt that the diatribes of Wesley and his followers largely swelled the agitation for the repeal of the Act of 1778, which was conducted by the Protestant Association, and which issued in the Lord George Gordon Riots. It would be an error to impute the prevalence of a milder spirit towards Catholics at this period to sympathy with their religion. It arose rather from the relaxation of dogmatic belief, the latitudinarianism, the individualism, which infected the country. The Act of 1778 removed the oath of supremacy prescribed by the Statute of William and Mary. Various disabilities were removed, and toleration was extended to Catholic schools and worship. Shortly after this Act was passed the Catholic Committee turned itself into the Cisalpine Club and continued under that name, for thirty years, to trouble more or less the vicars Apostolic.

There can be little doubt that the passing of the Relief Act was facilitated by the outbreak of the Revolution in France. Another result, at first extremely prejudicial to the Catholic Church in England, of that great upheaval was the closing of the seminaries on the Continent, which had furnished to that country a supply of priests. Douai was seized by the French Revolutionary Government in 1793. The English Benedictine houses in France also disappeared, and the English clergy there, of which the greater part in France was, however, to some extent compensated by the influx of clergy from that country. No less than eight thousand of these confessors of the Christian Faith sought the hospitality of Protestant England, and it was ungrudgingly given. The French Embassy House at Westminster offered a thousand of them lodging, and for several years a considerable sum was voted for their relief by Parliament and was largely supple-
mented by voluntary subscriptions. A certain number of these priests sought and found work on the English Mission. By far the greater part of them returned home when Napoleon had concluded his Concordat with the Holy See and re-established Christian worship in France. They had hardly fewer men than the French missions. They conciliably disassociated with the new ecclesiastical arrangements in their country. They were known as Blanchardists, from their leader Blanchard, and were a source of much annoyance to the vicars Apostolic.

The heroic Milner was especially prominent in combating them, and in asserting the rights of the Holy See. That strenuous champion of orthodoxy had, at the same time, to contend with Catholics of his own nationality. The spirit which had animated the Catholic Committee and the Caislaine Club was by no means extinct, and led to the formation, in 1808, of what was called a "Select Board" which professed as its object the organization of an association for "the general advantage of the Catholic body". That "general advantage" turned out to be the further removal of Catholic disabilities, and the price which was paid for its preservation was the removal of the vesting in the Crown of an effectual negative upon the appointment of Catholic bishops—commonly called the Veto. The Irish episcopate unanimously opposed this arrangement, and passed a vote urging Dr. Milner to "resist apologist constancy" in withstanding it. On 30 April, 1813, Gratian brought forward a Catholic relief bill in the House of Commons, which substantially provided for the Veto. It was thrown out on the third reading. Eight years later a similar bill passed the House of Commons, but was rejected by the House of Lords. Of the eventual emancipation of Catholics Dr. Milner had no doubt. Twelve years before his death, which took place in 1826, he assured the pope that it was certain to come. He would not purchase it by the slightest concession. However, the question was put forward by all the vicars Apostolic of England explanatory of various articles of the Catholic Faith greatly misunderstood by many Protestants. It was widely read and doubtless helped to remove prejudice. In the same year Sidney Smith published his masterly "Letter on the Catholic Question". Not, however, till March, 1829, was the long desired boon conceded to Catholics. It was wrung, so to speak, from statesmen who had always opposed it. The Clare election convinced Peel and the Duke of Wellington that it was necessary to assist the advancement of the Irish question was a political necessity. The duke reminded the House of Lords that in the next year mainly for the purpose of introducing this very measure of concession, and not obscurely intimated his opinion that further to refuse it must lead to civil war. This relief bill passed both Houses by large majorities. The king's consent was reluctantly given, and the Emancipation Act became law. It should be noted that before the passing of the Emancipation Act the friction of which we have been obliged to speak, between certain prominent members of the Catholic laity and the vicars Apostolic, was virtually at an end. The Caislaine Club still existed; but, as Monsignor Ward remarks (Catholic London A Century Ago, p. 38), "there was very little Cisalpineism in it". This was largely due to the personal influence of Dr. Poynter, Vicar Apostolic of the London District, whose gentleness and meekness triumphed where the bony seal of Milner failed.

In the nineteenth century opened, the Catholics of Great Britain were, to quote Cardinal Newman's words, "a gens lucifuga, found in corners and alleys and cellars and the hoistops, or in the recesses of the country". Their chapels were few and far between, and were purposely placed in quarters where they were unlikely to attract observation. It was common to locate them in mews, and in their exterior they were hardly distinguishable from the adjoining stables. George Eliot has well remarked in Felix Holt, "the agitation about the Catholics in '29, rural England..." Norway had hardly known more Catholics than of the fossil mammals. Their probity was the beginning of a great change in their social condition. "The steps were higher that men took"; their ostracism began to pass away. Moreover, the reaction which had followed the French Revolution had told in favour of Catholics in England. Chausseboud's "Génie du christianisme" had a world-wide influence, and some of the historical novels of Sir Walter Scott, however deficient in accuracy, presented a much kinder view of the ancient faith than had been commonly taken in Protestant countries. In the history of the Catholic Church in England since 1829 two events require special notice. One was the rise of what is called "The Oxford Movement". Cardinal Newman used to date that movement from the year 1833, when Keble preached at Oxford his famous "Craftsman's sermon". It was utterly devoted to it simply the bodying-forth of tendencies which had been long in the air. The old notion of the medievals as a "millennium of darkness" had passed away; and from the contemplation of its masterpieces of architecture and apostolical confraternity, its intellectual and spiritual life. The Oxford were led to investigate, in the light of facts and first principles, the claims of Anglicanism. No doubt the "Lectures on the History and Structure of the Prayer Book of the Church of England" delivered by Dr. Lloyd, the Regius Professor of Divinity at Oxford, set many of his hearers thinking, Newman among them. But the object of the leaders of the Oxford Movement at its beginning was not to examine, but to defend, the Anglican Church. This was the intention of the "Tracts for the Times", which began in 1833. It is not necessary, or indeed necessary, to follow the course of the movement, which, as it went on, departed ever more and more widely from the standards—even the highest—of Anglicanism, and approximated ever more and more closely to the Catholic ideal. It culminated in the famous "Tract XC", the theme of which was that the Thirty-nine Articles were susceptible of a Catholic interpretation and could be accepted by one who held all the dogmas of the Council of Trent. Of course the movement greatly interested Catholics, and by no one was it more greatly disliked than Bishop Wiseman, who had made the acquaintance of Newman and Fréme upon the occasion of their visiting Rome in 1833. In September, 1840, Wiseman arrived at Oscott from Rome—where almost all his previous life had been spent—to take up his residence as president of that college and Vicar Apostolic of the Midland District. He felt from the day of his arrival there, as he wrote in a memorandum eight years afterwards, that a new era had commenced in England. To help forward that era was the end to which his great gifts and his holy life were utterly devoted. The majority of hereditary English Catholics were much prejudiced against the Tractarians. Dr. Lingard warned Bishop Wiseman not to trust them. Dr. Griffiths, the Vicar Apostolic of the London District, used similar language. But Wiseman did not heed them. He held that Catholic principles, if honestly entertained, must lead to the Catholic Church, and he fully believed in the honesty of Newman and Newman's followers. How Newman was influenced by a paper of his on the Donatists, published in the Dublin Review in 1839, is well known. He had always directed to the impossible aim of unprotesting the Anglican Church. Newman and many of his friends came gradually to see that the aim was impossible. The kindly light which they had so faithfully followed step by step led them to Rome.
Wiseman testified: "The Church has not received at any time a convert who has joined her in more docility and simplicity of faith than Newman."

Wiseman had earnestly desired "an influx of fresh blood" into the Catholic Church in England. The accession of the converts due to the Oxford Movement brought it. And no doubt it accelerated the restoration of the hierarchy which had been so strongly desired by generations of Catholics. In 1840 Gregory VI had increased the number of English vicars Apostolic from four to eight. Ten years afterwards Pius IX decreed that "the hierarchy of Bishops ordinary, taking their titles from their sees, should, according to the usual rules of the Church, again flourish in the Kingdom of England". The whole of the country was formed into one province consisting of the metropolitan See of Westminster, and the twelve suffragan sees of Southwark, Plymouth, Clifton, Newport and Menevia, Shrewsbury, Liverpool, Salford, Hexham and Newcastle, Beverley, Nottingham, Birmingham, Northampton. This restoration of the hierarchy was certainly not designed as an act of war; it was indeed "unattended by any suspicion that it would give offence to others". But it did give dire offence, and the country resounded with denunciations of what was called "The Papal Aggression". An "insolent and insidious aggression", Lord John Russell, the premier, pronounced it to be, and shortly afterwards introduced into the House of Commons a bill by which the Catholic bishops were prohibited, under penalties, from assuming the territorial titles conferred upon them by the pope. The bill became law after long and angry debates but was, from the first, a dead letter. There can be no question that Cardinal Wiseman's appeal to the people of England largely contributed to allay the popular passion which his pastoral letter "From without the Piamatin Gate" had had no small share in exciting. Though a somewhat lengthy pamphlet, it was printed in extenso in "The Times" and in four other London newspapers, and its circulation was immense. The cardinal appealed to the "manly sense and honest heart" of his countrymen, to "the love of honourable dealing and fair play, which is the instinct of an Englishman", and he did not appeal in vain.

Cardinal Wiseman filled the metropolitan See of Westminster from 1850 to 1865, and it would be hard to overrate the greatness of his services to the Catholic cause in England. Manning truly said in the sermon preached at his funeral: "When he closed his eyes he had already seen the work he had begun expanding everywhere, and the traditions of three hundred years everywhere dissolving before it." When he began that work, there were less than five hundred priests in England; when he ceased from it there were some fifteen hundred. The number of converts during these fifteen years had increased tenfold, and fifty-five monasteries had come into being. But mere statistics give no sufficient notion of the progress made by the Catholic Church under Wiseman's rule, a progress directly due to him in large measure. Not the least important item of his service to religion was the way in which he presented the Church to his countrymen. Mr. Wilfrid Ward is well warranted when he writes: "Wiseman may claim to have been the first effectively to remind Englishmen in our own day of the historical significance of the Catholic Church, which so much impressed Macaulay, and which affected permanently such a man as Comte, which kindled the historical enthusiasm of a De Maistre, a Gobineau and a Frederick Schlegel." The organization of the Catholic Church, as it now exists in England, may be said to be due to him. He himself drew up, almost entirely, the decrees regarding it for the First Provincial Synod, held at Oscott (1852). His work, indeed, was not done in the tranquillity which he loved. Without were fightings, within were fears. Some of the converts did not fuse with the hereditary Catholics, "the little remnant of Catholic England", whom they judged to be ill-educated and behind the times, and this prejudice Wiseman regarded as ungenerous, even if, to some extent, it was not unfounded. He deprecated strongly the spirit of party and sought in all gentleness, to put it down and to guide his flock into the way of peace. On the other hand, some of the old clergy, taking their stand upon the ancient ways, regarded with distrust certain innovations of discipline and devotion introduced by the more zealous of the converts. They looked upon the Oratorians as extravagant. They viewed Monsignor Manning with suspicion. It is unnecessary to enter into the disensions which embittered Wiseman's declining years. The last two, indeed, were passed in comparative quiet, but amid much physical suffering. Not long before he died he said: "I have never cared for anything but the Church. My sole delight has been in everything connected with her."

Cardinal Wiseman's successor in the See of Westminster—the successor he desired—was the provost of his chapter, Monsignor Manning, whose episcopate lasted until 1892. They were twenty-seven years of fruitful activity, through evil report and through good report. For some time he was certainly unpopular, not only among his Protestant fellow countrymen but among his own clergy, who did not like his strict discipline and some of whom by no means sympathized with what was called his "ultra-papalism". But gradually the prejudice against him wore off, and his great qualities obtained general recognition. It was the victory of his faith unfeigned, his deep devotion, his spotless integrity, his indomitable courage, his singleness of aim, his entire devotion to the cause which, in his heart of hearts, he believed to be the only cause worth living for. One who knew him well said of him: "He was an Archbishop who lived among his people", "the door-steps of his house were worn with
the footsteps of the fatherless and the widow, the poor, the forlorn, the tempted and the dismayed, who came to him in their hours of trouble and sorrow." No doubt he made mistakes, some of them grave enough—as, for example, his persistent opposition to the freer admission of the Universities of Oxford and Cambridge by young Catholic men and his abortive and costly attempt to supply the loss of academical training by a college of higher studies at Kensington under the direction of Monsignor Capel. But it is certainly true that the active part which he played in every department of social reform revealed him not only as a great philanthropist and a great churchman, but also as a statesman of no mean order. It was said by an able writer, upon the occasion of the twenty-fifth anniversary of his decease, "To him, more than to any man, it is due that English Catholics have at last outgrown the narrow cramped life of their past of persecution, and stand in all things upon a footing of equality with their fellow countrymen." No doubt this happy result was largely due to Manning; but perhaps it was more largely due to another. The revelation of his inner life which John Henry Newman thought himself obliged to put before his countrymen in order to vindicate himself from the wanton attacks of Charles Kingsley, in 1864, came like a revelation to many who had held that Catholicism as a religion really is. The "Apologia pro Vita Sua" was like a burst of sunlight putting to flight the densest mists of Protestant prejudice. And the "Letter to the Duke of Norfolk" (1875), in reply to Gladstone's pamphlet on the Vatican decrees which appeared in 1874, may be said to have made an end of the old error that a loyal Catholic cannot be a loyal Englishman. It was enough for Newman to affirm that there was no incompatibility between the two characters. His countrymen believed him on his word. Lord Morley of Blackburn, a young lawyer, was present at Westminter Church to which would, not so long before, have seemed a strange and incredible rank in the mind of Protestant England" (Miscellanea, Fourth Series, p. 161).

Herbert Vaughan, who succeeded Cardinal Manning in the See of Westminster, ruled the diocese as archbishop, and the province as metropolitan for nearly eleven years. It was reserved for him to take up a work which his predecessor had put aside—the erection of a cathedral for Westminster. The first public act which his conflict with Rome necessitated was the completion of the cathedral—this was accomplished in 1889 after his consecration. The building of the cathedral, as he announced in 1874, to his successor. The magnificent affair conceived by the genius of John Francis Bentley may, in some sort, be considered as Vaughan's monument, as being the outcome of his energy and zeal. It is a memorial of him, as well as of Cardinal Wiseman.

So much must suffice regarding the history of Catholicism in England from the so-called Reformation to the present day. We now proceed to give some account of the actual position of the Church in that country. The taking of Oxford and Cambridge in 1850 by Pius IX reconstituted the hierarchy, making England one ecclesiastical province under the metropolitan See of Westminster, with the twelve suffragan Sees of Southwark, Hexham and Newcastle, Beverley, Liverpool, Salford, Newport and Menevia, Clifton, Plymouth, Nottingham, Birmingham, and Northampton.

In 1878 the Diocese of Beverley was divided into the Dioceses of Leeds and Middlesbrough; in 1882 the Diocese of Southwark was divided into the Dioceses of Southwark and Portsmouth, and in 1895 Wales, excepting Glamorganshire, was separated from the Diocese of Ross, along with Hereford and Worcester. In 1928 the Vicariate Apostolic of Wales. Three years later this vicariate was erected into the Diocese of Menevia, so that the Archbishop of Westminster now has fifteen suffragans. This, quite, since the Reformation, England and had been regarded as a missionary country, and had been immediately subject to the Congregation of Propaganda. But Pius X, by his Constitution, "Sapienti Consilio", transferred (1908) England from that state of tutelage to the common law of the Church.

The number of priests, secular and regular, in England, according to the most recent list, is three thousand five hundred and twenty-four, and the number of churches, chapels, and institutes, one thousand seven hundred and thirty-six. Of the regulars who are over a thousand in number, many are French exiles, and a considerable number of them are not engaged in parochial or missionary work. There are three hundred and eleven monasteries and seven hundred and eighty-three convents, a great increase during the half-century which has passed since 1873, when there were seven monasteries and fifty-three convents. During the same period many churches of imposing proportions, adorned with more or less magnificence, have been erected. Notorious among them is the cathedral of Westminster of which mention has been already made. It is in the Byzantine style and is certainly one of the noblest of modern religious edifices. Nearly two hundred and fifty thousand pounds have already been expended on it, and, although still unfinished, it has been open for daily use since Christmas, 1903.

The Catholic church is subject to various legal disabilities. We have already seen that by the Bill of Rights (1 Will. and Mary, st. 2, c. 2) no member of the reigning house who is a Catholic, or has married a Catholic, can succeed to the throne, that the sovereign, on becoming a Catholic, or marrying a Catholic, thereby forfeits the crown, and that the Act of Settlement (12 and 13 Will. III, c. 2, s. 2), by which the succession was confined to the descendants of the Electress Sophia, being Protestants, confirms this article of the Constitution. This last-mentioned statute further provides that "nothing contained in it shall extend or be construed to enable any person otherwise than he is now by law entitled, to hold the office of Lord Chancellor of England or Lord Lieutenant of Ireland", and the common opinion is that Catholics cannot now fill these great positions, but this view appears questionable. The point is discussed at length in Lilly and Wallis's "Manual of the Law specially affecting Catholics", pp. 36-43. The Emancipation Act also contains sections imposing fresh disabilities upon "Jesuits and members of other religious orders, communities or Societies of the Church of Rome, bound by monastic or religious vows". These sections have never been put in force; still, as they remain on the statute book, they have the serious effect of disabling religious orders of men from holding property. An Act of 1890 (28 and 24 Vic., c. 194) has, however, somewhat mitigated this hard enactment, and in 1895 the Law of Property Act of 1874 was extended to include "all other religious houses" for what are deemed superstitious uses, such as Masses for the dead. Such bequests are held by English law to be void, but the Irish courts do not follow the English on this point. It should be noted that up to the passing of the Emancipation Act, trusts for the promotion of Catholic charities were held to be illegal.

English Statute Miles.
Nor did that enactment expressly refer to them, so that three years later, in order to remove all doubts concerning them, the Roman Catholic Charities Act was passed. Such charities were made subject to the same laws as Protestant Dissenting charities. The English law as to trusts for Catholic purposes, which are neither charitable nor void as being for "superstitious uses" or for support of forbidden orders, is the same as that which applies to other bodies which are lawful but not charitable.

The only other Catholic disability which need be noticed here is that no person in Holy orders of the Church of Rome is capable of being elected to serve in Parliament as a Member of the House of Commons. This disability is shared by the clergy of the Church of England, who, however, can escape from it by the legal process vulgarly, though incorrectly, called renouncing their orders, but not by Protestant Dissenting ministers.

It should be noticed that in England provision is made for securing religious liberty for pauper and criminal Catholics. In every workhouse a creed register is kept in which the religion of every inmate is entered by the master, upon admission, and the Guardians of the Poor are empowered to appoint Catholic priests if they desire such. Similarly, Catholic chaplains may be appointed in public lunatic asylums. Catholic pauper children may be transferred from the workhouse schools to schools of their own religion, and, if boarded out, provision is made for their attendance at Catholic church. Catholic ministers to prisons are appointed by the Home Secretary, and are duly remunerated. There are sixteen commissioned army chaplains paid by the State. In the Navy there are twenty-three Catholic chaplains, and a hundred and thirty priests receive capitation allowances.

We go on to say some words on Catholic education in England since the Reformation. Of course it hardly existed when the penal laws were enforced in their full rigour. The clergy, as we have seen, were trained abroad at Rome, at Douai, at Lisbon, at Valadolid. The young laity benefited in intermittent and uncertain fashion by the teaching of the priests. Shakespeare, whom there is strong reason for accounting a Catholic (see Lilly's "Studies in Religion and Literature"), was "reared up," according to an old tradition, on the盖罗学士, the Gallican, at Thomas Combe, or Coomes. In Pope's time a few Catholic schools were found here and there, and he was sent to one of them, a "Roman Catholic seminary," it is called, at Twyford, kept by Thomas Deane, an Englishman. The so-called convents and "seminaries" were carried on with difficulty, being illegal, and it was not until the outbreak of the French Revolution that much was effected for the cause of Catholic education in England. The professors and pupils of the University of Douai, after enduring many hardships, returned to England in 1795, some going to Herefordshire, in the South, and some to Tudhoe, in the North. The Herefordshire establishment developed in time into St. Edmund's College. The school founded at Tudhoe, and removed first to Crook Hill, has expanded into the great college of Ushaw, which now also serves as a seminary for the five northern Dioceses of Hexham and Newcastle, Leeds, Middlesborough, Salford, and Shrewsbury. Thus these two noble institutions may claim as their far-off founder Cardinal Allen. The magnificent Jesuit college at Douai, founded in 1562 by FatherPersons, for it was founded by the religious who fled from the house established by him at St. Omer. The not less magnificent college of Downside is the descendant of St. Gregory's, Douai, i.e., of the Benedictine monastery and college there in 1606. The monks fleeing from the fury of the French Revolution were received at Acton Burnell in Shropshire by Sir Edward Smith who had been one of their pupils. It was in 1814 that they settled at Downside.

The great college of Oscott is now a seminary in which priests are trained for the southern dioceses and is under the joint direction of the Archbishop of Westminster and the Bishops of Birmingham, Clifton, Menevia, Newport, Northampton, and Portsmouth.

St. Joseph's Missionary College was founded by Cardinal Vaughan, who ever took the deepest interest in it, and who is buried in the grounds. Of Catholic higher schools two deserve special mention; that at Edgbaston, founded by Cardinal Newman, and that at Beaumont, established by the Jesuits. Until 1895 Catholic young men were discouraged—nay were forbidden—to enter any of the educational institutions of the Church of England, but in that year a letter from the Congregation of Propaganda to Cardinal Vaughan announced that the Holy See had removed this restriction, the bishop, however, being enjoined to make proper provision for Catholic worship and instruction for Catholic young men resorting to these ancient seats of learning. Elementary education has also been largely provided for by Catholics in England. Before the Protestant Reformation all the great monasteries had schools for their own children and for poor children. These of course disappeared with the monasteries. In the eighteenth century a number of Protestant charity schools were founded, but it was not until the end of the first quarter of the nineteenth century that provision for elementary public instruction began to be recognized as a public duty. In 1833 a Parliamentary grant was first made "for the purpose" of education. It was divided between two Protestant societies, the British and Foreign School, which ignored dogmatic religious teaching, and the National, which represented the Church of England. In 1847 Catholic elementary schools, which had much increased in numbers, were admitted to share in the government grant, and the Catholic Poor School Committee was founded to supervise and direct them, a duty which this body, now called the Catholic Education Council, still fulfils.

Catholic journalism in England is zealously represented by "The Tablet", newspaper, which was founded so long ago as 1840. It is published weekly. Other Catholic journals are "The Catholic Times", "Catholic Weekly", "Catholic Herald", "Catholic News", and "Universal". The chief Catholic review is the "Dublin Review", founded by Cardinal Wiseman, long edited by W. G. Ward, and now by his son Mr. Wilfrid Ward. It is published quarterly. The "Catholic Monthly", a magazine and literary periodical, is published monthly. It is the organ of the Catholic Press. The "American Catholic" is issued monthly, as its name denotes. An extremely important publication is the "Catholic Directory", which in its present form dates from the year 1838. But for nearly a century previously there had been a Directory which, however, in its earlier issues was merely an Ordo, or Calendar, for the use of priests reciting Office.

It remains now to speak of certain Catholic societies existing in England. In the first place mention must be made of the Catholic Union of Great Britain, founded in 1871. The earliest meeting recorded in the minute book was held at Norfolk House, on the 10th of February of that year, when it was unanimously agreed, "that a Society of Catholics be founded, under the title of the Catholic Union of Great Britain, to promote all Catholic interests, and to effect the restoration of the Holy Faith to his lawful Sovereign rights". The establishment of the society was sanctioned by the archbishops and bishops of England and by the vicars Apostolic of Scotland (the hierarchy in that country was not restored until 1878), and was emphasised by the resolution contained in the rules of the Catholic Union the following means of affecting its objects are specified: "1. By meetings of
trunk, and of the bursting of bud and bloom in manifestation of that life which, during the long winter of persecution, had been but dormant. Successive cuts, cut down almost to the ground, the tree planted by Augustine has manifested again the divine life within it; it has put forth once more new branches and leaves, and gives promise of abundant fruit.  

Anything like a complete bibliography of the subject treated in the foregoing article would attain to the dimensions of a large literary catalogue. But the following may be mentioned:

W. S. LILLY.

ENGLISH LITERATURE. It is not unfitting to compare English Literature to a great tree whose far spreading and ever fruitful branches have their roots deep down to the foundations of human nature; and that, since the small beginnings of its growth, many vicissi- tudines of climate have passed; periods of storm, of calm, of sunshine, and of rain; of bitter winds and of genial life-bearing breezes; each change leaving its traces behind in the growth and development of the living plant. It is obvious, then, that to present the complete history of such an organism in a few pages is impossible; all that can be attempted in this article is to describe the main lines of its life.

It should not be forgotten, at the outset, that English literature has been growing all the time. This has sprung from the common Aryman root, has branches from the primal stem, and has received, and continues to receive, in the course of its growth, multi- tudinous influences from other literatures growing up around it, as well as from those of an earlier time. Yet, as Freeman said, "We must not think of somebody else", and one of the most remarkable things about English literature is its power of assimilation. Latin, French, Italian, Greek, Spanish litera- tures, to name only a few, have poured their influ- ences upon it, and, not only upon it, but in leaving their trace, and yet our character, our lan- guage, our literature, remain unmistakably English. The ancestors of the English (the Teutonic tribes of Angles, Saxons, Jutes, and some Frisians) spent nearly
one hundred and fifty years (455 to 600) in the conquest of the island from the British tribes who had been bringing in its train Roman colonizers nearly fifty years earlier, in 410. Little by little these fierce and hardy heathen tribes, after much fighting among themselves for the supremacy, settled down, and a slow process of civilization made itself felt among them. Christianity, preached by St. Augustine in 597, was, with the arts, the main factor in this refining change. Such British tribes as had escaped the English destroyer remained for a time almost entirely apart, though they and their literature were afterwards to have no small influence on the literary development of England.

It is not unlikely that the written literature may have begun as early as the sixth century, but at any rate, by the middle of the seventh century the traces of it are clear in the work of Cædmon, according to research that Cædmon himself only wrote a very small portion of the so-called Cædmonian poems, but the story of his vision, given in the Cædmonian legend, testifies clearly that the first poetry produced in England began among the people and in religion. The chief interest of the work lies, not in the actual subject-matter, Scriptural paraphrase, but in the way the matter is treated, a Teutonic aspect being frequently given to the narration. The craving for freedom, the exultation in war, the longing for moral goodness, the respect for women, all these and many other things come out in the rendering of the "Fall of the Angels", the "Temptation of Man", and elsewhere. It is quite clear that Cædmon worked at the Cædmonian poems, but in the next great group, a hundred years later, we come upon one individual poet who has signed at least four poems with his name, Cynewulf, and he insists upon our knowing him as the Ancient Mariner constrained the Wedding Guest. He reveals his personality, he becomes real to us. His poems are religious, and perhaps the finest is the "Christ"; he is a poet of high order. Among the rest of Old English poetry the elegies and the war poems stand out as the most original.

Old English prose, if we except St. Bede's lost translation of St. John's Gospel, groups itself round two names, those of Alfred and Aelfric. Alfred (849-901) was eager for his people's education, and his literary work consists chiefly of translations of important books of his time:—Gregory the Great's "Pastoral Care", Orosius's "History of the World", Boethius's "Consolation of Philosophy", and (probably done under his supervision) Bede's "Ecclesiastical History" and Bishop Wulfstan's "Dialogues". To some of these he added prefaces and notes in simple, unaffected English, which make us realize his remarkable and lovable character, both as man and scholar.

Many years after, Aelfric (c. 945-1025), Abbot of Eynesham, a much more cultivated scholar, and a more finished, though not more attractive, prose writer than Alfred, put forth volumes of homilies, saints' lives, translations of books of the Old Testament, and other works, which were greatly and justly prized by his hearers and readers.

The "Old English Chronicle", of which there are seven MSS, a record of events in England from the sixth century to 1154, was meanwhile being written in the monasteries, undisturbed by the many changes passing over England. It is almost certain that Alfred encouraged this work and set it on a surer foundation, perhaps himself adding portions of the record where it concerned his own reign. One other piece of prose literature must be mentioned, that of the "Address to the English", with its vivid indignation at the sufferings of the people from the Danes, the author is often as impassioned as an English reformer might be over the abuses of present-day society. It brings us up to date to the last half-century before the Norman Conquest.

The Norman Conquest is as important in the history of English literature as in that of England's political
and social life. It brought a new and invigorating influence to bear upon the English genius, though in the immediate present of the eleventh century it seemed a crushing disaster for the nation. For nearly one hundred and fifty years the race, the language, and the literature of the people were apparently stifled. It seemed as if everything became Norman-French. But as long as the down-trodden English kept life in them the springs of poetry and art could not dry up; and though Robert of Gloucester says that only “low men” held to English at this time, yet there were a good many of these “low men”, and we have proof that the native population became Norman-French. But the wandering bards, in certain of the monasteries the monks went on chronicling events in their mother tongue much as they had done when a Saxon king had ruled England. The continuity of native verse ceased but never really broken, and just as the English race was last to absorb its foreign conquerors, and to gain infinitely more than it had suffered from them, so English language and literature were by the same means to be enriched and ennobled to an extent no one then looking on could have dreamed of.

Yet at first literature was apparently silenced, and until the beginning of the thirteenth century there is no writing of much importance except the “Old English Chronicle”, which ends in 1154. There was, of course, writing in Latin and in French, and the French was even looked upon by some as likely to be more enduring than the Latin. But the Latin writing was in reality no enemy to English; it was the tongue, then as now, of the Church, and it was the medium for communication between scholars and the language of nearly all books of scholarship. The native work, however, never quite disappeared, revives unmistakably at the beginning of the century, and between that date and the death of Chaucer in 1400 there is produced a great mass of literature of endless variety but of varying value.

We come then to the Middle Ages, called “of Faith”’; the age of the Crusades, of cathedrals, tournaments, old coloured glass, and other splendid “things” — the age to which, in times of dryness, artists, lovers of romance, as well as pious souls of all kinds, have often looked back and have drawn from it fresh inspiration. It has stimulated in modern times new arts and movements in art and in poetry, and its power of inspiration is not yet exhausted. It was an age of contrasts, of faith and of unbelief, of extraordinary saintliness and of strange wickedness, of reverence and of ribaldry. It was the great Catholic age, when the sacred robe of the Church, spotted though it might be in places through human frailty, was still unmarred whole, and she herself was everywhere acknowledged in Europe as the Divinely appointed mother of men. The history of English literature from the beginning of its revival in the thirteenth century is first that of translation (to about 1250), then of development for about eighty years, in which the work is largely anonymous, finally, a period of achievement, the second half of the fourteenth century, in which individual writers of power begin to emerge, and among them one supreme artist, Geoffrey Chaucer. We trace, too, during these ages the rise of the drama in the miracle and morality-plays.

On the threshold of the revival stand two works: “The Brut” (1205), a poem of 30,000 lines concerning the history of Britain, written by Layamon, a patron of the English priest of Wykeham, and written by Archdeacon Ormin, an Augustinian canon. After this the stream of English literature is continued in poems of great variety, of which many are lyrics. In “The Owl and the Nightingale”, a delightful poem standing at the end of the “transition period”, we have a happy combination of old and new elements which have already begun to form a fresh native poetry. No prose had been idle; one of the most interesting books of the time is the “Ancient History” (q.v.), a series of exhortations on their rule for a community of Dorsetshire nuns.

Passing on over these fifty years we are met by a further outpouring of literary work, abundant and various, if not remarkably original, poetry always taking the chief place. The main kinds of literature in this period of quick development are romances; tales; religious works (legends of saints, treatises and homilies on morality and religion); the great book called “Cursor Mundi”; historical writings; lyrics of love and religion, and songs of political and social life. In all this, French influence is very strong, but there is a rapid emergence of English elements which are now beginning to hold their own. The romances concerned with the adventures of well-known heroes are the most prominent among them, and those in some cases are translated directly from the French, though never without English touches. The religious work of this time is edifying, but the prose homilies and treatises are sometimes very long and commonplace. Yet a simple faith and tender piety, together with a most sincere sense of humour and imagination, make the religious writings not unfrequently attractive, even from the literary point of view. But regarded as literature, the lyrics of the thirteenth century are perhaps the most remarkable. They are native, and though they bear the marks of artistic culture in their matter, they remind us more of the country than the town. There is a real though un-self-concious love of nature in them, and the promise of that peculiar and fine quality of the later English lyric which is one of the glories of our literature. Nature, love, and religion are the inspiration of these little medieval poems.

This multitudinous work formed a discipline and preparation, and resulted in the achievements of the latter half of the century. The period 1360 to 1400 is marked by a strong reaction on the national spirit, and in literature there is a curious reappearance of the Old English alliterative verse after 300 years of apparent neglect. Amongst other poems in this metre there are four by an anonymous writer of high
poetic power, one of them, "The Pearl", of great beauty and of deep religious feeling. To this alliterative class belongs too the well-known "Piers the Plowman". Of this poem, coming almost at the same time, has to some extent overshadowed this poem, but as a picture of the society and ideals of the time it forms a complement to Chaucer's "Canterbury Tales". In "Piers the Plowman" we have that grave outlook upon life which marks the English character at its best, carried almost to excess. The author (or authors, we ought now to say, for it has been recently proved that at least three writers must have had a hand in its making) looks upon the society of his time as "the beast". He describes the world almost entirely on its dark side, and though the remedies he offers are good ("Love is the physician of Life"), and though he never altogether loses his belief in a Divine over-ruling order, yet there is an accent of uncertainty and sometimes of despair in his voice.

Chaucer (1340-1400), on the other hand, does not care for problems of life or dark thinking. His picture of society is, on the whole, from its bright side, when men are out on holiday, and when serious business would seem out of place. Poetically, and in its structure, "Piers the Plowman" is much below Chaucer's work, but its forcefulness, its pathos, its sincerity, its grim humour, its realistic descriptiveness, and its dramatic moments make it a great poem. Chaucer's work marks the full flowering of English literature in the Middle Ages, and it was he who first raised English poetry to a European position. It is the custom of historians of literature to divide the literary life of Chaucer into a French, an Italian, and an English period, according as his work was influenced by the manner of each national literature. This division recognizes a fact if it be remembered that he carried on, all through his career, certain of the lessons he had learned from the foreign source in the earlier time. There is little doubt that the impulse to write verse came to Chaucer from France. Old English literature was practically unknown to him, but he was saturated with French poetry, for the literature of France was then, outside the classics, the most influential in Europe. Among many shorter poems of this early time, the very first of which is a hymn to the Blessed Virgin, the translation (in part) of the long French allegorical poem of the "Romance of the Rose", and his original and most interesting elegy on the "Death of Blanche the Duchess", are the most important. It is, however, after he has come upon the literature of Italy—Dante, Petrarch, and Boccaccio—that his true genius begins to show itself. The "Troilus and Criseyde", "The Parliament of Foules", "The House of Fame", and "The Legend of Good Women" (the two last unfinished), as well as some of the "Canterbury Tales", belong to this time. They show him as a true artist, feeling his way through experiment to greater perfection of work and developing his unique sense of humour. Then, in the later years of his life, he strikes upon the fruitful idea of the Canterbury pilgrimage as a framework in which to show the full power of his art in his picture of the life of his own, and, to some extent of all, time; and into this frame he fitted tales he had already written, as well as new ones, and nothing exceeds the power and truth of the "Prologue" to the "Tales". His picture of life and the commentary upon it comes straight out of his own observation and character. As he saw men so he fears, and he portrays them, the good, the bad, and the indifferent. A few of his tales reflect the coarseness of the time, and it is just possible that the apology placed at the end of the MS. of "The Parson's Tale" was written by himself at the close of his life. But, however that may be, over all he writes he throws a great sunniness of humour and wide charity, and with the warmth of his sympathies he is not unworthy to be named with Shakespeare. He is the one supreme literary artist before Spenser, and the best brief summary of him and his work is given in that proverb quoted by Dryden in his criticism of Chaucer, "Here is God's plenty". The name of John Gower (1380-1468) is linked by custom with that of Chaucer, but we recognize now what his contemporaries did not, that Gower's lengthy books in verse are the work rather of an expert journeyman than of a genius. But we may legitimately class together the two writers in their influence on the language. Both being widely read, they helped to make the East Midland dialect in which they wrote the literary language of England, and by their choice or rejection of French words welded the language into greater stability and unity. The English language, at the end of the fourteenth century, had begun to assume nearly that modern form we know. People, language, and literature had now become wholly English.

After reviewing this brilliant half-century of poetry, the prose of the same time seems poor. There is no great progress to record, nothing really original or of importance was written, and the style follows Latin models rather than the simpler natural manner of the Old English prose. Chaucer wrote prose which in its mediocrity is a curious contrast to his poetry. Sir John Mandeville's "Travels" was a translation of an amusing book, and Wyclif's translation or paraphrase of the Vulgate (in which, however, several other hands than his own had a share), together with his vigorous but heretical treatises and sermons, form the chief prose work of this time.

After the death of Chaucer, poetry declined in quality with strange swiftness. For the next one hundred and fifty years there is no great poet; the art of poetry, chiefly owing to the scarcity of native poetical genius, but also partly to the spirit of change, "The Idylls of the King" and "The Legend of Good Women", the footsteps of the master they revered, but frankly recognized their own failure. Their voluminous and mediocre work, especially Lydgate's, is not without
interest to the student, but certain anonymous poets, such as the authors of "The Flower and the Leaf" and "London Lickpenny" (formerly given to Lydgate), succeeded better than they, and the latter poem shows that Chaucer's power of social satire had not disappeared. Satire, as always, in the decline after a rich imaginative period of verse, came to the front as subject-matter for verse, and later in the century the satirical verse of John Skelton (1460?–1529), though poor as art, is of interest in the light it throws upon the social life of the times. This poet and Stephen Hawes (d. 1523?), who tried in the "Pastime of Pleasure" to revive an old allegorical style, are the only English names of any note in verse in the latter part of the century. In Scotland, however, the followers of Chaucer, of whom the chief were King James I, Dunbar, Henryson, and Gawain Douglas, were producing and continued to produce poetry worthy of immortality.

Fifteenth-century prose was less barren than the poetry of the age. Since the Conquest, nearly all serious subject-matters, with few exceptions, had been written of in Latin, but with the invention of printing, and as the power to read and write spread downwards, English prose became more widely recognized as a medium for the treatment of many varied as well as more popular kinds of matter. Four names—Pecock, Fortescue, Caxton, Malory—are recognized as leaders of this movement, but out of their work only Sir Thomas Malory's has become classic. His "Morte D'Arthur", which draws together as many stories and series of stories about King Arthur as he could lay hands upon, is a work of genius, and remains a living book. Its matter is of great intrinsic value and interest, but it is the beauty of its strange childlike style, its un-self-conscious appreciation of lovely and noble things in man and nature, and its underlying religious mysticism, which make it a book of the first order.

These works, which grew up during these centuries, was, with one or two exceptions, not the work of poets or literary artists, yet it was one of the most educative influences of the time. Beginning in connexion with the liturgy of the Church, there gradually developed a whole cycle of religious plays, showing forth the history of the world from the Creation to the Last Judgment. These, acted in a series, in public places of the towns, at certain great church festivals, provided as much instruction as amusement. There is no doubt that, in spite of passages in them which may seem material or irreverent, these simple and rude dramatic representations, both miracle-plays and the later developed moralities, pressed home great religious truths upon the people. From the point of view of the development of drama, we may say that English tragedy and comedy have, at least to some extent, their roots in these crude plays in doggerel verse.

Leaving the Middle Ages behind us, we come now to the threshold of the most fateful epoch in the history of the English people—the disruption of the Church, or the so-called "Reformation". This was preceded and accompanied by the earlier movement called the "Renaissance", which, having opened up fresh branches of classical learning, more especially that of Greek poetry and philosophy, awakened and stimulated the human mind both to good and to evil. In England the "New Learning" movement, in the hands of men like More and Colet tended to enlightenment and true learning. The "Utopia" of Sir Thomas More, a book of the noblest ideals, represents its spirit at the best. But the effect of the Renaissance on the manners and morals of these Englishmen came back imbued with its interest derived from Italy, as much lamented by contemporary writers, as we find in Ascham's "Schoolmaster". Yet it is to this acquaintance with Italy and its literature that we owe the revival of English poetry after its long repose since the death of Chaucer. In the persons of Sir Thomas Wyatt and of the Earl of Surrey, young men who had studied and felt the beauty and power of the great Italian poets, we discover a new beginning, a new poetic art. It was yet uncertain of itself, experimental, hesitating, and not engaged with deep or very noble subject-matter, but, while observing certain common laws of stanza and diction which the last one hundred years had ignored, attempted new and better melodies.

The publication of Tottel's " Miscellany " in 1557, which contains the work of these two poets, marks an epoch in literature. It set up a standard of poetic art below which no future work could sink. The literary world of that age grew full of expectation looking for a new poet who should embody still more fully the poetic ideals of the time.

The new poet came in Edmund Spenser (1552–1599). Seldom has a young writer been so immediately recognized and acclaimed by the accredited literary judges of his own time as Spenser was. And posterity has agreed with their judgment. He forms the second great landmark in English poetry after Chaucer, from whom he received inspiration. He had been bred in the stimulating atmosphere of the new learning and was greatly influenced by classic and Italian literature, but he also appreciated earlier English literature, and the only master of all was Chaucer. Spenser's poetic thoroughness is of wonderful beauty in its art, and is marked by nobility of aim, purity of spirit, and reverence for religion. His "minor poems" are many, and as Professor Saintsbury remarks, would be "major poems" for any smaller poet. He was, for example, a satirist of no mean order and a sonneteer, but in the general judgment, and rightly, Spenser is the poet of the "Faerie Queene". All his special powers are shown there, and all his character, one might almost say his history. The large allegorical pictures of the "Faerie Queene", not half completed, interesting as it is, does not form the great attraction of the poem. That lies in the pure and appealing beauty of the versification, in the varied and glorious description, often minutely detailed, in the wealth of imagination, and in the impassioned love of everything beautiful which enthralls the reader as it did the poet. That there are flaws in the poem goes without saying, more especially as Spenser died leaving it half finished.

The complete plot of the work can not be gathered from the poem itself. Spenser's letter to Sir Walter Raleigh, prefixed to all editions, is necessary to make it clear. "The centre falls outside the circle." For Catholics, too, the historical allegory is seriously marred by the anti-Catholic bias of the poet's time.
In places, the Church is bitterly assailed, though in other passages Spenser clearly deprecates the desecration of monasteries, churches, altars, and images as the work of the "Blatant Beast of Calumny". Nor does he give by any means undiluted approval to the Anglican Church or to the Puritans. Modern criticism, however, has placed him on a pedestal upon any portion of the historical allegory, regarding it as an antiquated hindrance rather than a living help to the true appreciation of the poem. The mere purely spiritual elements of the allegory, such as the struggle of the human will against evil, embodied by Divine power, are those which are valued by discerning readers. Considered in its essential aspect, the "Faerie Queene" is "the poem of the noble powers of the human soul struggling towards union with God". Spenser holds the supreme place among a multitude of other poets of as real though of less genius than his in the sixteenth century, and the work of these, outside the drama, is perhaps seen at its best in the song and the sonnet, two forms which had now an extraordinary vogue. Nearly a dozen anthologies of Elizabethan lyrics, of which the finest is England's "Hymnicon" (1600), remain to show us the sweetness, beauty, and rarity of these songs. The sonnets, one of the new Italian poetic forms, introduced by Surrey and Wyatt, are less original, and many of them are translations from foreign sources, but those of Sidney and Shakespeare, at least, stand out by their exceptional force and beauty.

Among the many lesser poets of the time Michael Drayton (1563-1631) has been singled out as especially representative of the general character of Elizabethan poetical genius. He wrote every sort of poetry that was the fashion except metaphysical. His works deserve more notice than is often given to it, and his name is sometimes only associated with his long historical poem of the "Polyolbion". This type of poetry reflects the patriotism of the age, and Samuel Daniel and William Warner, both poets of some genius, also worked at it. The huge "Mirror for Magistrates", begun in 1555, and not in its final edition until James I's reign, had encouraged this kind of verse. Poetry of an argumentative and philosophic type was produced towards the end of the century, but very little of value that was religious, except the work of Robert Southwell. This heroic young Jesuit and martyr wrote with a high object: to show to the brilliant young poets of his time, whose love poems often expressed unworthy passion, "how well verse and virtue sort together". And he did this by using the literary manner of the age, "weaving", as he himself says, "a new web in their old loom". His book had a distinct influence on contemporary and later poetry, touching even Ben Jonson and perhaps Milton himself. Its quaintness of wit (alloying it somewhat to the "metaphysical" school of the next generation) are shot through with warm human feeling which makes its direct appeal to the reader. And sincerity is the very note of it all.

But it is, of course, in the drama that we find all the well-known poets—with the one exception of Spenser—putting forth their greatest force. The sudden rise of the drama in the latter half of the sixteenth century is the most remarkable phenomenon of this supremely remarkable literary age. It has never been fully accounted for. Many of the contemporary records concerning plays and the theatre have unfortunately been lost, so that we have to form our judgment of Elizabethan dramatic literature and its causes upon, comparatively speaking, insufficient grounds. Out of some 2000 plays known to have been acted, only about 50 exist, as far as we know, and discoveries of new contemporary testimony or of Biblical power, are those which are valued by discerning readers. Considered in its essential aspect, the "Faerie Queene" is "the poem of the noble powers of the human soul struggling towards union with God". Spenser holds the supreme place among a multitude of other poets of as real though of less genius than his in the sixteenth century, and the work of these, outside the drama, is perhaps seen at its best in the song and the sonnet, two forms which had now an extraordinary vogue. And he did this by using the literary manner of the age, "weaving", as he himself says, "a new web in their old loom". His book had a distinct influence on contemporary and later poetry, touching even Ben Jonson and perhaps Milton himself. Its quaintness of wit (alloying it somewhat to the "metaphysical" school of the next generation) are shot through with warm human feeling which makes its direct appeal to the reader. And sincerity is the very note of it all.
the civil war they would have ceased of themselves for want of good plays. Not only had the technical skill in versification, dialogue, and plot decayed, but the moral tone had so much degenerated that most of the plays brought against the Puritans at this time seem well justified.

When we turn to Elizabethan prose we find it a much inferior and less practised form of art than verse. No standard of good prose towards which writers might aim was recognized, and the masterpieces of the Elizabethan age are few. Hooker’s “Ecclesiastical Polity” has rightly, by its weighty argument and its grave eloquence, won a place among classics. Lyly in his two volumes of “Euphues” was the first, perhaps, to treat prose as equally worthy with poetry of artistic elaboration, and his book, a medley of story-telling and moralizing, often most excellent as well as interesting in its ethical musings, instituted a fashion of speech and writing from which for some years few writers stood aloof. Sir Philip Sidney’s “Arcadia”, a long pastoral romance of sentiment, however, broke the spell and in its turn created a vogue. The novels of this time follow the “Euphues” or the “Arcadia” in most cases, but there is also a third type in the work of Nash, the novel of wild and reckless adventure, which was afterwards to become famous in the greater work of Smollett. Criticism of poetry, history, often in the form of chronicles, geography, and adventure, such as in Hakluyt’s collection of “Voyages”, together with innumerable translations from classical and modern authors, were some of the matters treated in prose. In the novel, as in the drama, the foreign influences, especially those of Spain and Italy, are easy to trace. Though not of the first order of art, the Elizabethan prose is yet most attractive, for it reflects the varied interests and the complex character of the time. The wonderful time of the sixteenth century, and it exhibits in their early stages certain forms of literature, such as criticism and the novel, which were afterwards to develop into forms of the first importance. It is scarcely needful to say that Catholics, of necessity, in this epoch, for them, of distinction in education, took little part in the great output of literature.

From one point of view the history of English poetry would seem to be a record of action and reaction, of a struggle between one type of poetry and another, between that in which the matter delivered is all important, and that where correctness of form is the chief end at which the poets strain, between, in fact, the romantic and the classical schools. This general trend may be most clearly seen in the work of the crow of secondary poets in his age, but the few who excelled will be found to combine and reconcile in themselves, more or less, the opposing elements, though, naturally, both small and great poets will exhibit some individual bias, however slight, towards one type of work or another. This statement is practically true of the seventeenth century. In the very heart of the romantic poetry of the immediate successors of the Elizabethans, there arose, in the early years of the century, a few young men who began to write verse of another kind altogether, whose work was not developed to its full scope, however, until later. Meanwhile, one matchless poet, John Milton, living through the greater part of the century, went his own way (“his soul was like a star and dwelt apart”), taking little notice of prevailing types or subject-matter, fusing romantic and classical elements into one superb kind of work that we can find no name for but “ Miltonic”.

Before looking in any detail at seventeenth-century verse, it is well to glance at the general character of the age. It is a contrast to that which had preceded it. The Elizabethan time had been exuberant almost to intoxication, rejoicing in the great range of possibilities for human life that new knowledge, exploration, and learning seemed to open out before it. But over this mood at the end of the century there passed a change. Questioning succeeded the brilliant joy in things as they had appeared; self-consciousness followed the almost impersonal delight in life; the very foundations of religion, politics, and social life were called up for investigation. There had in reality always been a good deal of unrest beneath the surface, even after the settlement of these matters attempted and apparently in part accomplished by Elizabeth. Now the unrest increased, and a sceptical spirit, light or sad, according to the author’s temperament, pervades much of the most capable writing. At the same time there are religious writers who express both in prose and verse the best spirit of the Anglican Church when under the sway of Archbishop Laud, and now this spirit rises also to its full height the great Puritan movement (already, however, split up into a growing number of sects), strongly and narrowly affirmative of certain views concerning Divine and human things, passing often nearer than not into intolerance and wild fanaticism. Milton, on the whole, represents this movement at its best, though its weaknesses may be discovered, especially in his prose work, even in him.

At the beginning of the reign of James I we find the group of poets whose inspiration was Spenser, amongst whom the chief are the two Fletchers, William Browne, and George Wither. All have a sweetness and fullness in their work which links them to the Elizabethans. Passing on to the reign of Charles I, we are struck by a more widely spread order of verse, but best, are all more or less touched by the desire to find behind material objects an imaginative idea, “the search for the after-sense”, and who in trying to express that which they thought they found in over-abundance of imagery, sometimes beautiful, but often pedantic and fantastic to the point of absurdity. To these Dr. Johnson gave the name of “metaphysical”, and to see them at their worst one should look at his quotations from them in his “Life of Cowley”. The movement was not confined to England; Italy, France, and Spain had felt it earlier. John Donne (whose verse belongs in date to the reign of Elizabeth) is reckoned as the founder of this school in England. Herrick and the amours known as “Cavalier Lyrist” form one group in it, and Crashaw, Herbert, and Vaughan, religious poets, together with Herrick, are the only ones whose work has secured immortality. Crashaw, a fervent Catholic convert, whose religious verses are often very beautiful, shows in a marked degree the great strength and the great weakness of the age. Dryden, the most discerning critic of this poetical group, has said that if Crashaw “could but have kept himself at
his best he would have been the greatest of English poets. Of another Catholic poet, William Habington, Crashaw's contemporary, but less than he, though occasionally writing fine passages, the same critic remarks that he is "credibly distinguished" from too many others "by a streak and remarkable deficiency of thought and language.

But this was poetry which could not develop; it was a kind of second crop from the Elizabethan field, and it gradually withered away. Some time before its end, certain young poets, several of whom had been in France, exiled with the Queen, Henrietta Maria, and had caught a new spirit, turned to fresh ways of verse. Edmund Waller (1605-1687) led the way as early as 1630. Denham, Cowley, and Davenant (a Catholic and romantic, brought up in the house of Lord Brooke, Sir Philip Sidney's friend) followed him in varying degrees. These young poets initiated a change of far-reaching effect. In their hands poetry took on another aspect. It discarded nearly all forms of metre except the heroic couplet, refused to use any but rather commonplace imagery, and turning away from all passionate emotion, tended to treat of subjects which belonged to the intellect rather than to imagination or feeling. Satirical or didactic poetry gradually usurped almost the whole field. But this was not accomplished in full until Dryden came. It was he who stamped this school with its leading marks, and gave the heroic couplet its "long resounding march and energy divine". Yet the restricted and prosaic subject-matter of the verse—saturae, didactice, and argumentative work on religion ("The Hind and the Panther" was written in the cause of the Church) and politics—has made some critics deny it, unjustly, the name of poetry. It is poetry of a certain restricted kind.

John Dryden (1631-1700), had he lived in a time more favorable to imaginative work, would have written verse more purely poetic. He had about him something of the amplitude, inventiveness, and freedom of the Elizabethans, and the history of his poetic development shows him passing from stage to stage of excellence. Though he was the crown and chief of the school, he was indeed deeply tinged with romantic feeling, and he himself knew and acknowledged that poetry was capable of a higher flight and wider range than it had ever taken in his own day. He was, moreover, a man of many powers. He was a prolific dramatist, and his critical writings have made an epoch in the history of English prose, in the course of his life he changed his politics and his religion; and though doubts have been cast upon his good faith in this respect, the most recent criticism is of opinion that he had nothing but spiritual ends to gain by his conversion to Catholicism. It is unfortunate that we cannot exonerate him as an author from the charge of that sensuality which mars a good deal of his dramatic writing—it is no better and sometimes worse than the immoral though brilliantly witty dramas of his time. He himself, at the close of his life, wrote a full apology for this trait in his work.

Dryden's lines on Milton show the exalted estimate he had formed of his greater and earlier contemporary, and time has proved the general truth of it. The poetry of Milton (1608-1674) has become an English classic, and "Paradise Lost" has been translated into many tongues. It is regarded as the one great epic in English, and its fame has somewhat overshadowed that of Milton's earlier work—"L'Allegro", "Il Penseroso", "Comus", and "Lycidas"—poems within their own limits as perfect as anything he ever did. It is when we turn to his prose that we see the real difference between it and his verse, how comparatively low the received standard of prose must have been. "Milton, the great architect of the paragraph and the sentence in verse, seems to be utterly ignorant of the laws of both in prose, or at least utterly incapable or careless of obeying those laws." Yet it contains some splendid passages more like poetry than prose, but the controversial matter which is the subject of most of it—to say nothing of its often violent manner—is scarcely interesting to the present generation. Prose in the seventeenth century had an eventful history, and in spite of the lack of a high common standard, produced some masterpieces. At the beginning of it there is the weighty work of Sir Francis Bacon (1611-1626), embracing in many volumes matters of natural science, philosophy, history, ethics, worldly wisdom, even fiction, and in the "Essays" and the "Advancement of Learning" especially, adding to English literature. Lord D'Aubigny's "History" presents a noble gallery of portraits; there is Sir Thomas Browne (accounted for by his enthusiastic admirers one of the greatest prose writers in all the range of English), the finest of the rhetorical, fantastic, and wholly delightful set of writers who arose at this time, treating in a semi-speculative fashion a wide, various range of subject-matter. A number of religious and devotional works appear, among which the sermons of Jeremy Taylor stand high, and John Bunyan in "The Pilgrim's Progress" produced a masterpiece of English. Nor must we forget the Authorized Version of the Bible, in 1611—a work of a wonderful prose style, eclectic, drawn from many sources, and, in the appearance of absolute naturalness and simplicity. Preaching was a notable feature of the time, and the very long sermons of Tillotson, Barrow, Stillingfleet, and others make good literature. Dryden claimed Archbishop Tillotson as his master in prose, and it is when we come to Dryden that we find half of the century that we find prose beginning to take its place as "the other harmony" of verbal artistic expression. On the whole, it is the mark of Restoration prose to become conversational, and we may say that modern prose, easy, flexible, and fitted for general use, arose in Dryden's critical prefaces.

Dryden died in 1700, and with the opening of the eighteenth century we pass into an age of strongly marked characteristics. The Revolution by which the Stuart dynasty was displaced had been accomplished, involving, naturally, great changes in the fortunes of religious and political life, particularly disastrous to the Catholic Faith in England. In its earlier stages the century is filled by the party strife of Whigs and Tories, and by the religious movements known as Methodism and Deism—two opposite philosophies. In the upper classes there was a general lowering of spiritual and emotional temperature—to be enthusiastic was "bad form"—and religion and literature equally suffered. The growing middle class seems to some extent to have escaped this tepidity, and the preaching of Methodism touched their hearts.
The "Church of England", now the State "established" Church, was, however, in a state of spiritual poverty—many of her best clergy having left her for conscience' sake at the time of the Act of Uniformity. As far as the current stream of poetry was concerned, it has been an affair of leisurely and fashionable people. A great admiration prevailed for the classics and classical principles, seen generally through the eyes of French critics.

The century opened badly for literature. For years there had not been such a barren literary time. Dryden had just died, and though much verse was being written, it was mostly poor. In prose, there were few men of any mark. The only work showing power was the drama, in the brilliant and unalmoral comedies of Congreve, Vanbrugh, and Farquhar. But within ten years there was a remarkable change. Pope came to the front in verse, and for many years poetry was to be almost synonymous with his name. In prose there was a galaxy of genius, Swift (1667-1746), Addison (1672-1719), Steele (1671-1726), Berkeley (1685-1753), to mention only a few, in whose hands modern prose—mature, varied, capable, combining, when at its best, strength, sweetness, grace, and magnificence—becomes henceforth a secure possession of English literature. But this was not all at once. Prose had first to go through a discipline from the hands not only of writers just mentioned, together with the great novelists in the first half of the century, but from Dr. Johnson and those who followed him, especially the historians Gibbon and Robertson. It thus took on a certain formality and stenotness not known before.

Pope and Johnson are the two names that dominate almost tyrannically the first and second half respectively of the eighteenth century. Most of the elements of his age are more or less represented in the work of Alexander Pope (1688-1744), though, as a Catholic, his religious sympathies are in another direction than those of his day. His first important poem, the "Essay on Criticism", lays down rules for the guidance of critics according to the prevalent classical ideals; his "Rape of the Lock", perhaps his best poem, gives a picture of the high society of his time; his translation of Homer is a Greek story told in an eighteenth-century manner; his "Essay on Man" is a versifying of Shaftesbury's philosophy; and the "Essays and Epistles" and the "Dunciad" are didactic and satiric. Dryden and Pope share between them the chief honours of English satire: Pope's picture of Atticus (Addison) and Dryden's of Zimri (Buckingham) have no equals in our satiric literature. The subject-matter of Pope's poetry may sometimes fail to interest us, but the versification always claims attention. Pope refined and polished and super-refined the heroic couplet until it became the most perfect instrument for satiric verse. It has not the original vigour and variety of Dryden's couplet, but it has a finer finish and a more subtle thrust.

The greatest strength of literature, however, at this time is the prose writers contemporary with Pope are men of genius, with Swift by far the greatest of them. His "Tale of a Tub" and "Gulliver's Travels"—to mention only the two greatest of his writings—show a power of intellect and imagination worthy to be employed upon much finer subject matter. The first part of "Gulliver's Travels" finds him, perhaps, at his happiest, and is less marred by the bitter rage against men and life, and the touches of futility, which spoil so much of his work. He is, too, one of the great humourists, and his style is marked by sincerity, clearness, force, flexibility, and sometimes grace.

But the greatest work in prose, on the whole, was done by Addison and Steele in the essays of "The Tatler" and "The Spectator". They were men of less genius than Swift, but who looked at life humanly and wished to add to men peace and happiness, so that they impressed with wit, kindliness, and literary skill their views and their intentions. Their definite aim was to bring together the opposing parties in politics and religion by showing how much of life and interests they possessed in common, and by gentle raillery and well-bred exhortation, to "rub off their corners". They did accomplish much of this; everybody, regardless of politics, read the Essays, which came out several times a week, or daily, and every one enjoyed and talked them over. Polite literature by this means permeated and helped to refine the great and growing middle class.

Another form of prose which arose now, and was destined to even a much greater future than the essay, was the novel. The modern novel is born with the work of Richardson and Fielding—the work of the two—viewing things from an emotional standpoint, that of the other giving a more comprehensive and objective picture of life. Richardson wrote out of his own native feeling and somewhat restricted experience; Fielding, equally original, was largely and beneficially influenced by Cervantes and the novel of Spain. Both are men of genius, whose work grips the reader, but their offences against good taste and morality will always prevent their becoming household companions as Scott and Dickens have become. Smollett and Sterne continue the life of the novel, and Goldsmith, in his masterpiece, "The Vicar of Wakefield", has earned the gratitude of all readers. Biography, philosophy, and history have a large and distinguished place in the prose of this time. Samuel Johnson (1709-1784) accomplished a great deal. His earliest attempt as well as his latest is biography; of essays he wrote many, but his genius is not best suited to that form, and the work is too often ponderous and mannered; novel and ethical treatise are combined in the delightful pages of "Rasselas". His great dictionary is philosophy with an autobiographical flavour; his lives of the poets are partly biographical, but mainly critical, while criticism fills a good space in his edition of Shakespeare. But it is not only the range and value of all this work which makes it so attractive, but—in spite of its limitations—the sincere, strong, kindly character that animates every line of it.

"That fellow calls forth all my powers", said Johnson of Burke. Edmund Burke (1729-1797) is now looked upon as England's greatest political writer, and his writings belong in subject-matter to history and politics, rather than to literature. Their style, however, rich, imaginative, full of energy, varied to suit its theme, moving among wealth of knowledge, and selecting just the right word and illustration in each place, puts him among the great sty
ary writers of the century. Both Johnson and Burke are touched with the romantic spirit, but Johnson would have vigorously repudiated any charge of roman-
ticism in Burke, and indeed he stood as a great
bulwark against the flood of new thought and feeling
which, becoming apparent after the death of Pope, had
been rising little by little, especially in poetry, ever
since the twenties. The great romantic movement,
sO difficult to define, and yet so easy to trace, becomes
the supreme point of interest for the literary
historian in the later eighteenth century. There is no
class of poetry written during this time but stands in some
relation to it, and its influence, as we have said, may be
seen, though less clearly, in many of the prose writings.
This movement was for the widening and deepening of
literature. New fields of subject-matter were taken
in hand, and the treatment of these gradually became
more imaginative and emotional than it had been since
the Elizabethan age. Nature and human life, after
suffering from somewhat frigid treatment at the hands
of the classical school, seemed to unifester and to become
warm, living, and natural with the romantic writers. But this
was a very gradual process, and began in the very heart of
the classical movement; we may even see traces of it in the un-
realized longings of Pope himself, who loved Spenser, and
who wished he could write a fairy tale. We see the change
coming in the gradual rise of fresh metres, and especially of
blank verse, in opposition to the heroic couplet; in fact the
struggle of romantic against the classic tend to some extent
round these two forms.

But just as marked is the choice of new subject-matter.
“Nature for her own sake”—natural description imbedded
in other matter, or even forming the sole subject of
poems—now occupy the writer. Human life, in aspects neglect-
ed by the school of Pope, begins to assert itself. And all this new matter,
treated first in a melancholy moralizing spirit, gradu-
ally grows in imaginative strength, simplicity, and
naturalness, until we reach the poetry of Wordsworth
such a poem in which the movement is brought to
its height and at the same time takes on a new fresh-
ness and impetus. James Thomson (1700–1748) pub-
lished his blank-verse poem of “The Seasons” in
1726–30, and, even though there are many traces in it
of the school of Pope, it sounds the first clear note of
revolt. It is the first blank-verse poem of importance
in the century, and the first important poem devoted
to natural description. Many new elements are found
in it, too, such as the interest in the poor and the la-
bouring class, and in lands beyond England, as well as
a new feeling and affection for animals. In 1748, the
year of his death, Thomson published his “Castle of
Indolence”, the best imitation of Spenser’s verse and
manner that exists, and this was another sign of
change. There were many poems written in blank
verse or in Spenserian stanzas between this poet and
the work of Wordsworth to which the romantic
movement is seen perhaps most clearly in his transla-
tions from the Icelandic and Gaelic, where he opened up
a new field of subject-matter for the interest of
readers and the use of poets. And Gray’s poems,
starting off simply, and unexquisitely finished, were not
his own work; as a prose writer he gives us in his letters
and journals first-hand and beautiful descriptions
of nature in unaffected English. But his poetry is less
simple, and, with its restraint of manner, might in
some aspects be claimed by the classical school. It is
the declade after his death that we find the move-
ment towards the more natural style expressing itself
unmistakably in the half-mournful glamour of Mac-
pherson’s rhythmical prose “translations” of the Cel-
tic poetry of Ossian, in the poems of the unhappy boy-
gentleman Chatterton, and in the collection of “Percy
Ballads”.

Following on these, however, there is a strong at-
tempt at reaction in the poetry of Dr. Johnson,
Churchill, and Goldsmith—though Goldsmith’s charm-
ing poems are more romantic than he knew. But in
the next few years the battle is quietly won for ro-
mance by four poets: Burns, Cowper, Crabbe, and
Blake, whose significance in the movement is more
fully recognized now than it was then. Burns, who
wrote the best of his poetry in a mixed Scottish dia-
l ect, had been nourished on the best English poets of
the past, and the clearness and precision of his verse as well as
its satirical and didactic subject-matter belongs to the school
of Pope at its best. But, on the other hand, the essential
spirit of his satire, in contrast with the detached coldness of Pope’s,
is a consuming fire, as Swin-
burne has pointed out, while his songs, full of melody and
passionate feeling, though all in the line of previous Scottish
poetry, were new as regards England, and were truly roman-
tic in tone and manner. There are poems and passages of verse
that we wish Burns had never
written, but the largest part
of his work belongs to our great
literary store of things noble
and humane.

In William Cowper (1731–
1800) we come to a poet whose
influence is more and more
recognized as of first impor-
tance in the romantic trend.
Scottish as Cowper, but
living the most retired of lives, and not writing
much until over fifty years of age, he has left a
body of poetry marked with his own gentle, affection-
ate, humorous, and sometimes tragic genius, much of
which has become classic in England. The ground
of his poem, “The Task”, in blank verse, contains his most
original work in the clear and simple descriptions of
natural scenery. He also, like Gray, was one of the
best of our letter-writers. George Crabbe (1754–
1832) wrote nearly all his poetry in the heroic couplet,
but used that form with more freedom than his con-
temporaries. Much of his work is of the story kind,
and some of his poems are like novels in verse. Though
he chose a hackneyed form for his work, and though
all his sketches and stories tend to edification in a
didactic way, he is never dull, and his analysis of mot-
tive and temperament and his realism are strangely
modern in the antiquated setting of the heroic couplet.
His work deserves more notice than English readers
as a rule give to it. William Blake (1757–1827),
the fourth of these poets, is one of those geniuses who be-
long to no one time or country. He has been the
most charming poems in his two best-known little volumes,
“Songs of Innocence” and “Songs of Experience”,
might have been written by an Elizabethan, while his
long mystic works in verse, not truly poetical, show
him in the light of a man who drew his inspiration in
some spiritual reality which only a very few readers
can discern with him. But his poetry, as a whole,
though scarcely headed at all by the public of his own
day, has been found, as it has received more attention
recently, to contain within it the germ of many
later developments of thought and feeling in society
and literature. He was an engraver and painter as
well as a poet, and his work in these capacities cannot
be neglected if one wishes to understand the character
of his genius.

Cowper and Blake carry us on into the nineteenth
century, but before their death Wordsworth and Cole-
ridge accomplished the first of their epoch-making
work. With these two poets we enter upon the story
of our modern literature. Wordsworth and Colderidge
are not the poets of their predecessors of the
seventeenth and eighteenth century are not. All
English modern poets are directly or indirectly influ-
ced by them. They deliberately determined to be
missionaries in poetry, and they accomplished a mis-
sion in the face of great discouragement and opposi-
tion. The small volume of "Lyrical Ballads" pub-
lished in 1798, when they were young men together
under thirty, made a revolution in poetry and was the
fulfilment of nearly all that the romantic writers had
been trying half unconsciously to bring about. The
"Lyrical Ballads" raised the state of the English type,
and the "Tintern Abbey Lines", which closed it, to say
nothing of many successes and few failures which fill
up the space between were alone enough to set up a poetic
standard of high and peculiar significance. In these
poetry poets never exhaust nature without the best
kind, shot through with the poet's own imagina-
tion and feeling; there was love of, and interest in,
vivid human life, regardless of class or country; there
was weighty ethical matter without dullness. It is
perhaps in this seriousness with which life is viewed
that we find one of the chief notes of the poetical litera-
ture of the later Victorian age. It has been said of
William Wordsworth (1770-1850) that he wrote of
"what is in all men", and the leading ideas of his
poetry are indeed those in which all natural and sane
human beings can join. The healing and joy-giving
power of nature, the strength, beauty, and pathos of
the simplest human affections, more especially as seen
in the less sophisticated men and women of the poorer
classes in the country, may be realized by all. But
Wordsworth had also a philosophy of nature and her
relation to human beings which was the foundation
of all his teaching, and which he expounded in poems
after poems, in passages often of very great beauty,
and in much variety of style. It may be here noticed
that Wordsworth's style varies more than the ordinary
judgment of his reputation, and that this freedom from
conventional phrasing, as he himself tells us in his prose
critical prefaces to the poems, for utter simplicity of language which to us at
times seems bare and even puerile in its effect; but he is
able more than most of a richness of style and
diction, especially in his blank verse, that is the very
opposite of his own theory. He has many styles, and
no critical summing up of his manner is ever quite
satisfactory to the Wordsworthian who realizes this.
The poetry of Samuel Taylor Colderidge (1772-1834)
do not represent the poet with anything like the
same fullness as does that of Wordsworth. Those of
Colderidge's poems which are of the first order of poetry
are few, but they are inimitable and perfect of their
kind and have a melody of peculiar witchery. Cold-
ridge was a greater writer genius than Wordsworth, and
his deepest thoughts went into pedestal prose. He has left only fragmentary work on philosophy and
criticism behind him, but even that has affected and
still affects the thought of our own time. Had Colder-
ridge possessed the will-power and endurance of Wordsworth he might have soared to heights of which
tell to what heights he might have attained. His
career is a tragedy of character.

On these two poets when young men, as well as on

Southey and others, the altruistic philosophy of the
French revolutionary movement had a profound
effect. It is no wonder if to some extent the extraordinary and stimulating influ-
ence of these ideas upon some of the young and gener-
ous English minds. But in spite of much that was
true in it, the elements of error, inadequacy, and
sensationalism in this philosophy became apparent, es-
specially in the course of the "French Revolution," and as a
revulsion from it fell upon both Colderidge and Words-
worth. Wordsworth alone of the two emerged from
the trial unembittered—thanks to nature and to his
sister Dorothy—though how crucial to his life this
evangel was he himself told us. We can understand the poetry of this time, nor of the follow-
ing age of Shelley, Byron, and Keats, if he does not to
some extent realize the high and generous hopes raised
by the ideas of the Revolution in certain ardent minds
in England. They saw countless evils and oppression in
the social life of the time, and here, in the working out of
the ideas of Liberty, Equality, and Fraternity, seemed
a full remedy. The three poets just mentioned lived
in the reaction from these hopes. Byron was embitter-
ted, partly from personal causes, and partly because
his work in which so much was left unachieved began
with no redemption at hand. Shelley was fired by the
revolutionary principles as he found them interpreted
by the rationalism of Godwin, even while he shared,
too, in the reaction caused by the excesses of France.
On the other hand, Keats seems to have been formed by a
sort of instinct away from the dreaminess of life, as he
saw it around him, to nature and beauty.

But there is one great writer who was untouched
either by the action or reaction of the revolutionary
ferment. Sir Walter Scott (1771-1832) loved the past and
believed in it, and to the end of his life he was a
conservative in religion and politics. In his novels
and in much of his poetry he made popular those
romantic elements in the life of the past which are
more particularly associated with the Ages of Faith.
His close and affectionate description of the Scottish
scenery he loved so much was a strong influence in de-
veloping the care for natural scenery which has become
one of the leading marks of the nineteenth century.
His poetry at its very best is found in many of his
short songs and ballads, and in detached passages of
his longer poems, and it is verse not unworthy to be
placed beside the finest romantic work of the time.
But his best-known narrative poems—"The Lay of
the Last Minstrel", "Marmion", and "The Lady of
the Lake"—have all through a great and special charm,
and the longer, longer poems, when put together with their almost faultless diction, make them
worthy of their place among our classics. The popu-
laritauty of Scott's narrative poetry was overshadowed,
however, by the narrative work of Lord Byron, but to
our gain, since this led Scott to turn to a new form of
art and to produce "The Waverley Novels."

Of the three young poets of genius whose short lives
accomplished such remarkable poetic work, Lord
Byron (1788-1824) is now perhaps the least influen-
tial, though at the time his fame overshadowed every
other writer of verse. His extraordinarily vigorous
natures, marked by his study of Pope, whose poetry he
championed in a literary controversy of the time, are
unique in the energy of their style and the strength
and sting of their wit. It is unfortunate that a large
part of them are marred, for the ordinary reader, by
their extreme voluptuousness. His verse tales of
romantic adventure are imaginative, but pull upon us by
their tendency to sentimentality. His songs and oc-
casional pieces, together with "Childe Harold"—part
of which have fine nature-description—show him in a
more agreeable light. His narrative verse is not truly dramatic, but are rather the outpouring of
his own powerful mind seeking an outlet. If we are
inclined to take an anti-Byronic attitude, it is well to
remember, first, that his brilliant, undisciplined, passionate work, though it never reached the heights of the noblest art, yet taught a lesson of force, vitality, and sincerity to an age which, in spite of its good, was marked by mediocrity, coldness, and insincerity in both life and literature. He did this in a rude and melodramatic way, but he did it. And secondly, let those who judge Byron's wild private career not forget to read the last poem that he wrote, and realize that a change of temper, aspiration towards nobler things, was already taking place. Keats and Shelley invite comparison; their difference and their likeness are equally striking. They lived the same length of time, did all their work before thirty, dying young and with tragedy. They left behind them poetry of the highest order—their lyrics are masterpieces—containing the promise of still finer work. They were the devoted lovers of beauty, believing in it as the supreme reality, and were in earnest over their art, both of them leaving behind grave poems expressing their unfinished, and therefore often unsatisfactory and misleading, philosophy of life. Each poet also has written remarkable prose. It is a great mistake to consider Percy Bysshe Shelley (1792–1822) as the "indefectible angel" sketched by Matthew Arnold. He was quite half human, and not at all inferior in his seashore and sea-washed poems a basis of logical thought, while his prose writings show him as a thinker quite capable of keeping the imagination in her place. There are signs, too, in the development of his work that he was growing more and more capable of preserving the balance of the intellect and the imagination. The work that he accomplished in his short life is much and varied. Putting aside his early poems, there is the almost perfect "Adonais," the grave and beautiful lyrical drama of "Prometheus Unbound," in which he states his hopes for the spiritually awakened; a religion (Christian, though he revered certain elements in Christianity) for the future of the world; there is a crowd of short and exquisite lyrics—the highest water-mark of English poetry of this kind—as well as the fateful and mystic "Triumph of Life!" to say nothing of many others, and amongst them some fine dramatic work in blank verse. And he was only twenty-eight when he was drowned. Upon his errors of thought and of conduct we need not dwell. They are plain before us in his life. Outside his literary work, and not connected with it, a certain crudity and immaturity appears. But all he does and says is in good faith, and for his errors he suffered bitterly during his short life. One of the noblest and most discerning of tributes ever paid to his genius has been lately published from the pen of the now well-known Catholic poet, Francis Thompson. John Keats (1795–1821) accomplished less actual work, but had in him, it is generally allowed, greater potentiality of genius. He started life handicapped in circumstance and physical health, while he had no influence or following in his own short lifetime, and "it is the opulent perfection of work accomplished so early and under so many disadvantages which is the wonder of biographers." His odes on "The Nightingale," "A Grecian Urn," and "Autumn" are supreme art. Some of his narrative poems are among the best of his kind and his fragment of "Hyperion" shows what he might have accomplished had he lived to practise this graver type of poetry. His fame, however, is now established, and his poetic influence has been one of the strongest in the nineteenth century.

All the death of Keats poetry seems for a time to have exhausted itself. There is little to chronicle except the chirpings of small poets until the great age of Victorian poetry opens with Tennyson and Browning. But, to fill up the early years of the century, there is first, the poetry of the great historical Sir Walter Scott's novels extend from 1813 to 1831, and many smaller efficient writers are ranged round this central figure. The wild enthusiasm with which the Waverley novels were received can perhaps never be renewed. A multitude of causes have tended to divert and disturb the public taste for these great books, and it now fluctuates sometimes farther from, sometimes nearer to, them. But such work as his is immortal, and regardless of human fluctuations, it will, and does, appeal always to a multitude of readers—learned or unlearned—whose mind and imagination are open to receive the gift from him. And Scott's novels are full of kindly humanity, of close and accurate drawing of many types of character, only to be equalled by Shakespeare or Chaucer, of wide and detailed historical knowledge, though, to Catholic regard, he never understood or adequately represented the Church, handled magnificently with equal imagination and sanity, so that age after age lives again, not only as the dry facts of history which have been brought laboriously together "bone to his bone", but as a living human world whose dwellers have been raised out of silence to their feet by the creative voice—"an exceedingly great army". Of Scott's work even more than of Chaucer's, we may say, with Dryden, "Here is God's plenty". Scott died in 1832, and the Victorian age opened in literary faintheartedness. The four great Tennyson and Robert Browning were on the verge of the horizon, but it was not until 1840 or so that there came that dazzling revival of literature such as had not been seen since the Elizabethan age, and which in extent and swiftness of production eclipsed that age. Into the void of this it is impossible here to enter. Tennyson and Browning are leaders among the poets far into the century, while Elizabeth Barrett Browning makes a distant third. Tennyson and Browning are representative of the most important phases of the Victorian age, unifying through genius and art, the works of this age divided as to their relative merits. Both are artists of a high order, but Tennyson is the greater and more consistent. Both feed the importance, gravity, and interest of life. Both take a religious view of life and have that spirit of reverence which is lacking in many of their followers. Both believe in their mission to call men to forsake materialism, and each, in his own particular way, is a lover of natural beauty. Browning's sympathies are, in a sense, wider than Tennyson's, but Tennyson's feeling goes deeper, perhaps, on the great religious and moral questions than Browning's.

If we are still too near Tennyson and Browning to be able to form a true estimate of them, we are even less able to judge the writers of the latter half of the nineteenth century. The Catholic poet, Francis Thompson, John Keats (1795–1821) accomplished less actual work, but had in him, it is generally allowed, greater potentiality of genius. He started life handicapped in circumstance and physical health, while he had no influence or following in his own short lifetime, and "it is the opulent perfection of work accomplished so early and under so many disadvantages which is the wonder of biographers." ENGLAND

ENGLAND

with almost every great previous English poet, and whatever may be the more balanced verdict of the future, his poetic immortality is assured. And his Catholic religion was his deepest inspiration.

The prose which grew up around the greatest Victorian poet was worthy of its company. A brilliant group of writers as well as of thinkers in many spheres of knowledge and art appeared, and in this respect the age has surpassed the Elizabethan. The development of the novel is the most distinguishing mark of Victorian prose literature. Dickens and Thackeray follow upon Scott, with a host of other novelists, men and women, of varying grades of power, who come up to our own day. Graver forms of literature also have been many and splendid. There are the essayists, with Lamb and Hazlitt as their chief; the historians with Macaulay and Carlyle, Froude, Freeman, and Green; Ruskin, with his immense and varied work upon art, economics, and the conduct of life, and whose influence, all for good, in spite of the vagaries of literary taste, is still strong and growing. The enormous extent and range of theological literature is a remarkable feature of the last fifty years, and here the writings of John Henry Newman (q. v.) stand out as a supreme "literary glory". Newman touched poetry with imagination, grace, and skill, but it is by his prose that he is recognized as a great master of English style. While all the book is that the "Apologia" is a masterpiece, and that "nothing he wrote in prose or verse is superfluous", there is some difference of opinion as to the respective literary values of his earlier and later work. R. H. Hutton, however, one of his acutest non-Catholic critics, considers that "in irony, in humour, in imaginative force, the writings of the later portions of his career far surpass those of his theological apprenticeship".

Catholic writers are now many. After long years of research and the full freedom in the arena of literature, and there is more than a promise that when the history of the twentieth century comes to be written many Catholic names will be found in the highest places on the roll of honour.

K. M. WARREN.

ENGLAND, ESTABLISHED CHURCH OF. See ANGLICANISM.

ENGLAND, JOHN, first Bishop of Charleston, South Carolina, U. S. A.; b. 23 September, 1786, in Cork, Ireland; d. 11 April, 1842. He was educated in Cork until his fifteenth year, was then taught privately for two years, and entered Carlow College, 31 August, 1803. In his nineteenth year he began to deliver catechetical instructions in the parish chapel and zealously instructed the soldiers in garrison at Cork. He also established a female reformatory together with male and female poor schools. Out of these schools grew the Presentation Convent. He was ordained priest in Cork, 10 October, 1809, and was appointed lecturer at the cathedral. Wherever he preached people thronged to hear him. Pending the opening of the Magdalen Asylum he maintained and ministered to many applicants. In the same year he published the "Religious Repertory", established a circulating library in the parish of St. Mary, Shandon, and attended the city jail. In the elections of 1812 he fearlessly exerted his influence, maintaining that, "in vindicating the political rights of his countrymen he was but asserting their liberty of conscience". In the same year he was appointed president of the new diocesan College of St. Mary, where he taught theology. He unceasingly asserted, with tongue and pen the insidious Veto measure which threatened disaster to the Church in Ireland. Next to O'Connell's influence was the greatest in the agitation which culminated in Catholic Emancipation. To help this cause he founded "The Chronicle" which he continued to edit until he left Ireland. In 1817 he was appointed parish priest of Bandon. (The bigotry and prejudice of this city at that time may be conjectured from the inscription over its gates: "Turk, Jew or Atheist may enter here, but not a Papist.") In spite of the prejudices which he found there, he soon conciliated men of every sect and party.

He was consecrated Bishop of Charleston at Cork, 21 Sept., 1820, and refused to take the customary oath of allegiance to the British Government, declaring his intention to become a citizen of the United States as soon as possible. He arrived in Charleston 30 Dec., 1820. Conditions were most uninviting and unpromising in the new diocese, which consisted of the three States of South Carolina, North Carolina, and Georgia. The Catholics were scattered in little groups over these States. The meagre number in Charleston consisted of very poor immigrants from Ireland and ruined refugees from San Domingo and their servants. In 1832, after twelve years of labour, Bishop England estimated the Catholics of his diocese at eleven thousand souls: 7500 in South Carolina, 3000 in Georgia, and 500 in North Carolina. South Carolina was settled as a royal province by the Lords Proprietors, who brought with them the religion of the Established Church, and it was only in 1790 that enactments imposing religious disabilities were expunged from the constitution of the new State. Religious and social antecedents and traditions, and the resultant public opinion, were unfavourable, if not antagonistic, to the growth of Catholicism. The greatest need was a sufficient number of Catholic clergy. This sparsely settled section, with scattered and impoverished congregations, had not heretofore attracted many men of signal merit and ability. Bishop England faced these unfavourable conditions in a brave and determined spirit. The day after his arrival he assumed formal charge of his see, and almost immediately issued a pastoral and set out on his first visitation of the three States comprising his diocese. No bishop could be more regular and constant in these visitations. He went wherever he heard there was a Catholic, organized the scattered little flocks, ministered to their spiritual needs, appointed persons to teach catechism, and wherever possible urged the building of a church. During these visitations he preached in halls, court houses, State houses, and in chapels and churches of Protestant sects, sometimes at the invitation of the pastors. When in Charleston he preached at least twice every Sunday and delivered several courses of lectures besides various addresses on special occasions. He successfully advocated before the Legislature of South Carolina the granting of a charter for his diocesan corporation, which had been strongly opposed through the machinations of the disaffected trustees. In 1826 he delivered, by invitation, an eloquent discourse before the Congress of the United States. It was the first time a Catholic priest was so honoured. He was chiefly instrumental in having the First Provincial Council of Baltimore convened, and pending this, formulated a constitution for his diocese defining its relations to civil and canon law. This was incorporated by the State and adopted by the several congregations. He
also organized conventions of representative clergy and laymen in each of the States in his diocese, to meet annually. In 1840 these were merged into one general convention. He held a synod of the clergy, 21 Nov., 1831, and in 1832 established a seminary and college. He then sealed it, reducing the attendance from one hundred and thirty to thirty; but he continued and it became the alma mater of many eminent laymen and apostolic priests. 

In the words of Chancellors Kent, Bishop England revived classical learning in South Carolina. In 1822 he organized and incorporated a Book Society to be established in each congregation, and in the same year his indefatigable energy and zeal led him to establish the "United States Catholic Miscellany", the first distinctively Catholic newspaper published in the United States. It contributed to the intellectual and cultural life of the country, and was a valuable resource for instructive and edifying reading. He also compiled a catechism and prepared a new edition of the Missal in English with an explanation of the Mass. He was an active member of the Philosophical Society, the Literary and Philosophical Society of Philadelphia, the American Institute, and the Asiatic Society. He was a prominent member of the anti-slavery society, and strenuously opposed nullification in a community where it was vehemently advocated. His intense loyalty to his faith led him to several controversies which he conducted with a dignity and charity that commanded the respect of his opponents and elicited touching tributes from some of them at his death.

In 1830 he established in Charleston the Sisters of Our Lady of Mercy "to educate females of the middle class of society; also to have a school for free colored and to instruct them in religious instructions, and to prepare them to be slaves; they will also devote themselves to the service of the sick." Subsequently their scope was enlarged, and branch houses were established at Savannah, Wilmington, and Augusta. In 1834 he further promoted education and charity by the introduction of the Ursulines. In 1835 Rev. William Clancy arrived from Ireland as the coadjutor of Bishop England, but, after a year's disinterested sojourn, he requested and obtained a transfer to another field. Bishop England had originally asked for the appointment of the Rev. Dr. Power, a member of the Irish hierarchy (afterwards the first Irish cardinal), as his coadjutor.

A striking phase of Bishop England's apostolic character was manifested in his spiritual care of the negroes. He celebrated an early Mass in the cathedral for them every Sunday and preached to them at this Mass and at a Vesper service. He was accustomed to deliver two afternoon sermons; if unable to deliver both, he would disapprove the rich and cultured who flocked to hear him, and preach to the poor ignorant Africans. In the epidemics of those days he exhibited great devotion to the sick, while his priests and the Sisters of Mercy volunteered their services in the visitations of cholera and yellow fever. His personal poverty was pitiable. He was known to have walked the streets of Charleston with the bare soles of his feet to the ground. Several times the excessive fatigue aroused in his visits and ministrations prostrated him, and more than once he was in danger of death. Twice he visited Haiti as Apostolic Delegate. In 1823 he was asked to take charge of East Florida and, having been given the powers of vicar-general, made a visitation of that territory.

In the interests of his impoverished diocese he visited the chief towns and cities of the Union, crossed the ocean four times, sought aid from the Holy Father, the Propaganda, the Leopoldine Society of Vienna, and made appeals in Ireland, England, France, Italy, wherever he could obtain money, vestments, or books. After Easter, in 1841, he visited Europe for the last time. On the long and boisterous return voyage there was much sickness, and he became seriously ill through "fatigue and exposure." Notwithstanding, on his arrival in Philadelphia, he preached seventeen nights consecutively, also four nights in Baltimore. With his health broken and his strength almost exhausted, he promptly resumed his duties on his return to Charleston, where he died, sincerely mourned by every clergymen and every party. His apostolic zeal, saintly life, exalted character, profound learning, and matchless eloquence made him a model for Catholics and an ornament of his order.

Most of his writings were given to the public through the columns of the "United States Catholic Miscellany", in the publication of which he was aided by his sister, a woman of many-sided ability and talents. His successor, Bishop Reynolds, collected his various writings, which were published in five volumes at Baltimore in 1854. The edition is dedicated by Archbishop S. B. Mesmair of Milwaukee, was published at Cleveland in 1908.

P. L. DUFFY

Englefield, Felix, a Franciscan friar, d. 1767. He was the younger son of Henry Englefield of White Knights, Reading, and Catherine, daughter of Benjamin Poole of London. His elder brother, Henry, succeeded their cousin Charles as sixth baronet in 1728. It is uncertain whether his own baptismal name was Charles or Francis. He joined the Franciscans at Douai and was ordained there, probably about 1732, when he was approved for preaching and hearing confessions. He had been teaching philosophy there before ordination, and from 1734 to 1746 he taught theology. In 1744 and 1745 he was titular guardian of York, but remained in residence at Douai. From 1746 to 1749 he acted as vicar apostolic of the English Missions (Charleston, Virginia); during this period was in England, for in March, 1749, he was sent to Rome on behalf of his own order and other regulars to procure the repeal of the papal decree of 1745 regulating the relations between the vicars Apostolic and the irresponsibility. In this he failed, as Benedict XIII had supported the vicars Apostolic by the "Rules of the English Mission", issued in 1753. In 1749 Father Felix was titular guardian of Oxford, and in the following year he attended the general chapter at Rome in place of the provincial, Father Thomas Holmes, who was too ill to undertake the journey. In 1760-1761 he was titular guardian of Greenwich; custos 1752-1755, and finally, on 19 Aug., 1755, he was elected provincial and held that office till 1758, living for part of the time at Horton in Gloucestershire. While provincial he drew up a valuable list of all the Franciscan then (1758) in England, with their addresses. Father Thaddeus, O.F.M. (op. cit. inf., p. 14) states that he was the reputed author of the "Miraculous Powers of the Church of Christ", published anonymously in 1756. But this was really written by William Walton, afterwards Vicar Apostolic of the Northern District, whose name appears on the title-page of a subsequent issue. Father Englefield died probably at Douai, though one account says he was on the English mission at the time.

EDWIN BURTON.
Enfield, Sir Henry Charles, Bart., antiquary and scientist, b. 1752; d. 21 March, 1822. He was the eldest son of Sir Henry Enfield, sixth baronet, by his second wife, Catherine, daughter of Sir Charles Bucke, Bart. His father, who was the son of Henry Enfield, Knight of the Garter, succeeded in 1728 to the title and the Enfield estates at Wooton Bassett, Wilt; so that Henry Charles inherited both White Knights and Wooton Bassett on the death of his father, 25 May, 1780. He was never married and devoted his entire life to study. In 1779 at the age of twenty-nine he was elected a Fellow of the Royal Society, and in the following year Fellow of the Society of Antiquaries. For many years he was vice-president of the latter, and succeeded the Marquess Townshend as president. Owing, however, to his being a Catholic, objection was taken to his re-election, and he was replaced by the Earl of Aberdeen. Under his direction the society produced between 1797 and 1813 the series of engravings of English cathedrals, to which series he contributed the dissertations on Durham, Gloucester, and Exeter. In 1781 Enfield joined the Dilettanti Society and acted as its secretary for fourteen years. Besides his antiquarian studies, which resulted in many contributions to "Archaeologia", he carried on research in chemistry, mathematics, astronomy, and geology. His "Discovery of a Link in the Chain of the Public Hall, Westminster" was a valuable illustration to the Society of Arts. He took no part in public life, owing to Catholic disabilities, but was intimate with Charles James Fox, and his cheerful temperament and vivacious conversation won him many friends. His portrait was painted by Sir Thomas Lawrence, and two bronze medals were struck bearing his likeness.

In Catholic affairs Enfield took a prominent part, being elected in 1782 a member of the Catholic Committee, formed by the laity for the promotion of Catholic interests, a body which subsequently found itself in opposition to the views of the Enfield Catholics. He was dissuaded at the last moment by the three who undertook to act as "Gentlemen Mediators" between the two parties. During his latter years his eyesight failed; he died at his house, Tilney St., London, the baronetcy thereon becoming extinct. His works are: "Tables of the Apparent Places of the Comet of 1601" (London, 1788); "Letter to the Author of "The Review of the Case of the Protestant Dissenters" (London, 1790); "On the Determination of the Orbits of Comets" (London, 1792); "A Walk Through South England" (London, 1801); "Description of the Nevis Transit Instrument, Improved by Sir H. Enfield" (London, 1814); "The Andrian, a Verse Translation from Terence" (London, 1814); "Description of the Principal Beauties, Antiquities and Geological Phenomena of the Isle of Wight" with engravings from his own drawings, and a portrait (London, 1816); "Observations on the Probable Consequences of the Demolition of London Bridge" (London, 1821). Gillow has printed (op. cit. infra) a list of papers contributed to the transactions of the Society of Antiquaries, Royal Society, Royal Institution, Society of Arts, and the Linonian Society, as well as to "Nicholson's Journal" and "Tillock's Philosophical Magazine".

Edwin Burton.

English College, The, in Rome—II. Foundation. Some historians (e.g. Dodd, II, 168, following Polydore Vergil, Harpsfield, Spelmann, etc.) have traced the origin of the English College back to the Saxon school founded in Rome by Ina, King of the West Saxons, in 727. To an antiquity so great, however, the college, venerable though it be, has no just claim. It dates from about the middle of the fourteenth century, when the Hospice of St. Thomas of Canterbury was founded. This hospice owed its establishment to the jubilees, which brought pilgrims to the Holy City from every country of Europe. Those who arrived from England in 1350 to perform their devotions, found it difficult to obtain suitable accommodation. This suggested an institution, national in character, where English pilgrims might receive shelter and hospitality. The archives of the English College seem to point to the establishment of a guild of laymen, which acquired certain property in the Via Montesanto, the principal persons who took part in the transactions being John Shepherd and Alice his wife, who devoted themselves and their fortunes to the service of the pilgrims in the hospice, and William de Chandeler, a highly prominent layman. The foundation deed, which gives the names of John Williams, officials of the community and society of the English of the city. The deeds show that the property in question was acquired in the year 1362, which therefore may be taken as the date of the foundation of the hospice. But from the time of the growth of the hospice began to decline. After the persecution had broken out anew under Elizabeth, many of the clergy went into exile. Some of those who found their way to Rome were received into the hospice, and formed a permanent community therein. During the pontificate of Urban VIII (1630-44) an arrangement was made between Pope Gregory XIII that a college should be founded there for the education of priests for the English Mission. As soon as he returned to Douai (30 July, 1576) he sent ten students to Rome to form the nucleus of the new college; six more went in 1577, and again six in 1578. Dr. Gregory Martin, writing on 26 May, 1578, to Father Campion, tells him that twenty-six students are living either in the hospice itself or in the house next door, which has internal communication with the hospice (Douai Diaries, Appendix, p. 31). Indeed, the intention was determined to convert the hospice into a seminary; and at Christmas, 1578, "There came out a Breve from the Pope's Holines commanding all the said Chaplains to depart within 15 days, and assigning all the rest of the rooms of the Hospital unto the use of the Seminary, which is presently obeyed by the said Priests" (Father Persons' Memoirs: Catholic Record Society, II, 144). Unfortunately, however, Cardinal Morone, the Protector of England, and therefore also of the College, appointed as its rector Dr. Glennock, the warden of the hospice, which was assisted by two Jesuit Fathers as prefect of Studies and procurator. Dr. Gregory Martin, again writing to Father Campion, 18 Feb., 1579 (from Reims), informs him that there are in the college in Rome "at the present moment forty-two of our students, most of whom are divines, one rector, three fathers of your Society, and six servants. They live in the hospital and the adjoining house. The revenues of the hospital have been transferred to the seminary, except what is required for the entertainment of the pilgrims" (Douai Diaries, I, viii, appendix, p. 19). However, into the immediate future such distress soon arose. Most of the students of the college were, of course, English; but there were also seven or eight Welshmen, for no national distinction was made between the Cambrian and the Saxon, all being considered as English for the purposes of the institution.
The Welsh rector was accused of favouring his fellow-countrymen; and finally the English students broke out into open mutiny. They petitioned the Holy Father that the college should be entrusted to the Fathers of the Society of Jesus, and declared that they would rather leave the college than remain under Dr. Gregory.

The students were opened by the Cardinal Protector to submit under pain of expulsion; but they preferred to go, and began to make preparations for the journey back to Douai and Reims, or to England.

Much sympathy, however, was shown for them in Rome and elsewhere, and when the Pope, hearing their petition, was reinstated in the college after two days, and their petition was granted. Dr. Clenck was removed from the rectorship and the government of the college handed over to the Jesuits, the famous Father Robert Persons being given temporary charge till the appointment of the first permanent Rector, Father Alphonse Agassari, on 23 April, 1579. This day is the real birthday of the English College in Rome; for on this day the Bull of Foundation was signed by Pope Gregory XIII; on this day the students were allowed to proceed to England when it should seem good to their superiors; and on this day the College Register begins. The Bull, however, was not published till 23 Dec., 1580. Under this date, the entry occurs in the College Register: "November 21. II. R. R. R. English College provision for the English College, on 29th Dec., which is dedicated to St. Thomas the Martyr; and although it does not explicitly appear in the Bull, yet the Pope declared by word of mouth that this College was bound to receive and maintain the English pilgrims according to the statutes of the said Hospice. This Bull has been deposited in the College Archives."

The English College, the oldest but two of all the national colleges of Rome (the German College and the Greek College), was launched on its career, the number of students at the time in the college being sixty, a number which later rose to seventy-five. The reason of this small number is that the purpose for which it was founded, is abundantly attested by the lists of names of the priests sent into the mission-field, and especially by the roll of its martyrs. During the period 1682–1694, under the Cardinal Protector Howard, O.P., the greater part of the college was rebuilt. The eighteenth century was a period of decline. Contrary to the original constitution of the college, boys were admitted for the course of humanities, and some even, of very low standing, for more elementary studies. From 1775, to 1814, the college was suspended, and the administration of the college was handed over to Italian secular priests. During this period the students were ill-treated, the college was mismanaged, and a large portion of the archives sold for waste-paper. "At the time of the suppression, the number of Students was reduced to four divines, three philosophers, and three grammarians . . . Of those divines and philosophers, only three were ordained priests at Rome, and two at Douay; and the whole number of those ordained at Rome from 1775 to the year 1798, a period of 23 years, did not exceed seven, and of those, two never performed any missionary duties, and the third but for a short time. In that same period four died in the College, and 34, if not more, quitted the house re injustâ; Six, however, afterwards pursued their studies in other Colleges, and were ordained priests." (Catholic Magazine, 1832, pp. 359-360.) Bishop Challoner, and afterwards the three vicars Apostolic, Bishops James and Thomas Talbot and Matthew Gibson, entreated the Pope to restore the college to its first administrators, the English secular clergy. Finally, on 14 April, 1817, the Congregation of Propaganda answered that when the rectorship fell vacant, an English priest might be appointed to the post. Cardinal Braschi, the Protector, wrote to Bishop Douglis on 4 November, 1797, informing him that the rector was about to resign, and requesting him to choose, in consultation with Mgr. (afterwards Cardinal) Erskiine, an English priest for the office. But before this could be done, the French had invaded Rome, the college was seized and suppressed, and the students sent to England. On the 30th of July, 1814, Cardinal Litta, Prefect of Propaganda, wrote to Bishop Poynter, vicar Apostolic of the London District, informing him that the college was about to be reopened, and enquiring about the fitness of the Rev. Stephen Green, who had been recommended by Bishop Milner for the rectorship. But Father Green died, and nothing more was done for three years. Then Cardinal Consalvi, Secretary of State, acting as protector of the college, directed the English vicars Apostolic to select a priest for rector, and to send him to Rome at once. They chose Father Richard Robert Wiseman, who received his appointment on 8 March, 1818. Ten students, among whom was the future cardinal, Nicholas Wiseman, arrived in the following December. Thus the English College began to live again, and continued to flourish in its career of usefulness to the Church in England.

II. SCHOLASTIC STATUS.—In the Bull of Foundation, Gregory XIII confers on the college the privileges and rights of a University with the power of conferring the degrees of Bachelor, Licentiate, Doctor, and Master in Arts and Divinity. The students, from the beginning, attended the lectures of the Roman College, and then during the suppression of the Society of Jesus, at the University of St. Apollinare (the Roman Seminary). They returned, however, to the Roman College, or Gregorian University, in 1855, and still attend it, taking its degrees in philosophy and theology, as the English College does not exercise its faculty of conferring degrees. The college is immediately subject to the Holy See, which is represented by a cardinal protector. The immediate superiors are the rector, appointed by the Holy See in representation of the English hierarchy, and vice-rector, appointed by the rector. The first rector, Dr. Maurice Clencon (1758–1859), belonged to the English secular clergy. The Jesuits took the reins of government in 1799, and held them for one hundred and ninety-four years. Three of their rectors were Italians, and the rest English, the last being Wm. Hetherington, who, on the suppression of the society, handed the college over to Italian secular priests. From the restoration in 1818 the rector has always been chosen from the English secular clergy. The college, besides the ordinary of parochiality, the rector being parish-priest for all its members, and exemption from the jurisdiction of the cardinal vicar and other ordinaries and tribunals.

III. ILLUSTROUS STUDENTS.—Among the names of those included on the college lists, who have laid down their lives for the Faith, and the supremacy of the Holy See, six have been beatified, and thirty-six declared Venerable. The former are: Ralph Sherwin, John Shert, Luke Kirby, Lauret Johnson, Robert Adcock, and William Hart. The first rector of the college, Frederick Reddall, who was the first missionary priest from the college to enter England. The Venerables are: George Haydock, Thomas Hemerford, John Munden, John Lowe, Robert Morton, Richard Leigh, Christopher Burton, Ed-

The famous Father Robert Persons was rector of the college in 1588, and again from 1598 till his death in 1610. Father Mico Vitelleschi, afterwards General of the Society of Jesus, held the rectoryship from 1592 to 1594, and again from 1597 to 1598. Cardinal Wiseman went to the college as a student in 1818, became rector in 1828, and was made bishop in 1840. The English College may claim as teachers the great Jesuit theologians of the Roman College: Bellarmine, Suarez and Maffei, and in the distance, in modern times Perrone, Franselini, Ballerini, Billot.

IV. INFLUENCE ON THE CHURCH IN ENGLAND.—The college shares with Douai and the other continental seminaries, the honour of having kept alive the lamp of the Faith in England during the dark days of persecution. Without these colleges the supply of priests for the English Mission would have entirely failed. Moreover, the college in Rome was for English Catholics a connecting link with the centre and Head of Christendom; and the missionaries sent thence forwarded the supplies of spiritual life and apostolate to the scattered missions in England and the Holy See for the supremacy of which the faithful in England were suffering so much. When we turn to the nineteenth century, it suffices to mention the name of Cardinal Nicholas Wiseman, the "Man of Providence," who had the greatest share in the work of the re-establishment of the Catholic hierarchy in England in 1850, and as its head, by his genius reconciled the English people to what they at first regarded as a "Papal Aggression". It was he who put the Church in England on a firm basis, and gave it the "Second Spring". But Wiseman was not alone. Of the rectors of the nineteenth century, all but two were made bishops, and in every part of the country the English College alumni may be found in positions of responsibility, vicars-general, canons, and especially professors of the ecclesiastical colleges and seminaries, whence the purity of the Roman Faith is diffused throughout the length and breadth of the land.

The Diary of the English College (1579-1713); published in English, by S.J., Records of the English College Society of Jesus (London, 1880), VI. The title of the original MS is Annals Colleui, Par. I, Hynon, A.M., editor. The College Missal, Massachusetts, F.B. (the real Diary). Foley's version is sometimes inaccurate and defective in both the text and notes, names having been omitted from the Register without any indication of such omission; Catholic Record Society, Misselliana, 11 (London, 1906), The Memoirs of Father Robert Persons, S.J.; Dopf, Church History of England, Tertium ed. (London, 1833), II and III, with documents and letters; The English College and Catholic Missions, 1 (London, 1879); The Catholic, 1, Douai Diaries (London, 1875); I, The Letters and Memorials of William, Catholic Alien (London, 1883); The Calendar of Sion Manuscripts, 1907; Various letters, principally to the period 1773-1818; and A Short Account of the English College in Rome: probably by Dr. Bradwell, in Journals of the Royal Historical Society, 3 (1832); Minutes of the Motte and Priests (Derby, 1842); CAMM, Lives of the English Martyrs (London, 1891); The English College (1598-1607), and the History of the English College, 1894; Historia ecclesiastica, 1, Recollects of the Last Four Popes (London, 1858); Ward, Life of Cardinal Wiseman (London, 1897), Under Dublin Rel- vied (1840); and Allen, L. and C, Atti del Comitato Internazionale di Scienze stor. (Rome, 1903), The National English Institutions of Rome during the Fourteenth Century; Gillow, Blog, Dic. of the Eng. CHARLES J. CRONIN.

English Confessors and Martyrs (1534-1729).—Though the resistance of the English as a people to the Reformation compares very badly with the resistance offered by several other nations, the example given by those who did stand firm is remarkably interesting and instructive. (1) They suffered the extreme penalty for maintaining the unity of the Church and the supremacy of the Bishop of Rome. See the stories most im- pugned by the Reformation in all lands and at all times. (2) They maintained their faith almost entirely by the most modern methods, and they were the first to so maintain it, i.e. by education of the clergy in seminaries, and of Catholic youth in colleges, at the risk and often at the cost, of life. (3) The tyranny they had to withstand was, as a rule, not the sudden violence of a tyrant, but the continuous oppression of laws, sanctioned by the people in Parliament, passed on the specious plea of political and national necessity, and operating for centuries with that almost irresistible force which the law acquires when acting for gener- ations in conservative and law-abiding countries. (4) The study of their causes and their acts is easy. The number of martyrs is many; their trials are spread over two centuries, and in the main are transmitted in the scattered papers of the prosecution as well as those of the defence, and the voice of Rome is frequently heard pronouncing on the questions in debate, and declaring that this or that matter is essential, on which no com- promise can be permitted; or by her silence she lets it be understood that some other formula may pass.

THE CAUSE OF THE BEATIFICATION of the English Martyrs is important not for England only, but for all missionary countries, where its precedent may possibly be followed. The same cause is very close to the heart of Pope Gregory XIII, born 1569 and died 1585, made several important viva voce concessions. Relics of these martyrs might, in default of others, be used for the consecration of altars, a Te Deum might be publicly sung on the receipt of the news of their martyrdoms, and their pictures with their names at- tached might be placed in the church of the English College, Rome. These permissions were given without any systematic inquiry that we know of. Pope Urban VIII, in 1642, commenced such an inquiry, and though the outbreak of the civil war in 1642 postponed indefinitely the public progress of the cause, a list of martyrs was drawn up by the then vicar Apostolic, Dr. Richard Smith, Bishop of Chaldenwod, which was subsequently amplified and published by Dr. Richard Challoner. It was not till 1855 that the cause was revived, when Canon John Morison (died after 1866) became its apostle. After several unsuccess- ful petitions, as that of the Third Synod of Westminister in 1859, to obtain an immediate sanction of their cultus by a papal decree, a formal "ordinary process" was held in London, June to September, 1874. The work was one of much difficulty, first be- cause nothing of the sort had been attempted in England before, and secondly because of the multitude of the martyrs. Largely, however, through the public spirit of the Fathers of the London Oratory, who de- voted themselves to it unconditionally, success was achieved both in gathering together a large body of evidence and in fulfilling the multifarious ceremonial precau- tions on which the Roman jurists so strongly insist. After the cause had been for twelve years in the Ro- man Curia, two decrees were pronounced, one speaking, gave full force and efficacy to the two ancient papal ordinances before mentioned (see BEATIFICATION and CANNONIZATION).

Thus Pope Gregory's concession resulted in the equivalent beatification of sixty-three martyrs mentioned by name in the pictures (at first, in 1585, fifty-
four were admitted; in 1858 five more were added, with one not in the Roman picture), while the lists drawn up by Bishops Smith and Challoner led to the "admission of the cause" of 241 martyrs (all but twelwe post-Gregorian), who are therefore called "Venerables". Forty-four were left with their fate still in suspense and are termed "Callumns", who certainly died in prison for their faith, though it is not yet proven that they died precisely because of their imprisonment. There is yet another class to be described. While the foregoing cause was pending, great progress was being made with the arrangements for the passing of the Public Record Office of London, so that we now know immeasurably more of the persecution and its victims than before the cause began.

In short, over 230 additional sufferers seemed possibly worthy of being declared martyrs. They are called the Proteremiss, because they were passed over in the first cause. A new cause was thereupon held at Westminster (September, 1888, to August, 1889), and the proceedings have been sent to Rome. For reasons which it is not necessary to touch upon here, it was thought best to include every possible name that could be gathered from the records, and it is likely that there is very little definite information, and the far-reaching cause of Queen Mary Stuart. This, however, proved a tactical mistake. An obscure cause needs as much attention as a clear cause, or more. Moreover, the Roman courts are disposed to dismiss such things as the grudge giving men to a work which will lead to little result, and, on the other hand, they are overwhelmed with causes which certainly need attention. In order to facilitate progress, therefore, the cause has been split up; the case of Queen Mary has been handed over to the hierarchy of Scotland, and other simplifications have been attempted; nevertheless the cause of the Proteremiss so far hangs fire. Apostolic letters for a Processus de Scriptis was issued by the Sacred Congregation of Rites on 24 March, 1889, ordering the then Archbishop of Westminster to gather up copies of all the extant writings of the martyrs declared Venerable. This proved a lengthy task, and when complete the collection comprised nearly 500 scripta, and over 2000 pages. It was not completed till 17 June, 1904. Then, by special concession, four censors were appointed to draw up a preliminary census in England, and this was forwarded to Rome, where, after further consideration, a decree was drawn up and confirmed by the pope on 2 March, 1906, declaring that none of the writings produced would hinder the cause of the martyrs declared venerable. For this reason the decree of the same year a further decree was obtained, allowing altars for the beatit, but not without many restrictions.

II. BRITISH.—The sixty-three Blessed will be noticed in all elsewhere, and the principal authorities will be there noted. Their names are here arranged in companies when they were tried or died together.

II. VENERABLES.—Separate notices will be given of the more notable martyrs and groups of martyrs. But, though they all died heroically, their lives were so recorded from an obscure source that we know very little about them. It may, however, be remarked that, being educated in most cases in the same seminaries, engaged in the same work, and suffering under the same procedure and laws, the details which we know about some of the more notable martyrs (of whom special biographies are given) are generally also true for the more obscure. The authorities, too, will be the same in both cases.

(1) Under King Henry VIII. (12).—1537—38: Anthony Brookby, Thomas Belcham, Thomas Cort, Franciscaus, thrown into prison for preaching against the king's supremacy. Brookby was strangled with its own girdle, the others died of ill treatment. 1539: Friar Waire, O.S.P.F., and John Griffith p. (generally known as Griffieth Clarke), Vicar of Wandsworth, for supporting the papal legate, Cardinal Pole, drawn and quartered (8 July) at St. Thomas Waterings: Sir Thomas Dingley, Knight of St. John, beheaded, 10 July, with Bl. Adrian Fortescue, q. v. John Travers, Irish Augustinian, who had written against the supremacy; before execution his hand was cut off and burnt, but the writing of more than one day's duration was preserved. 1540—44: Edmund Brindolph, p. of London, and Clement Philpot, q. of Calais, attained for having “adhered to the Pope of Rome”, hanged and quartered at Tyburn, 4 Aug., 1540; Sir David Gunson (also Genson and Gunston), Knight of St. John, and Vice-Admiral of the Fleet, q. v. Sir Edmund Gunson, attained for “adoring” to Cardinal Pole, hanged and quartered at St. Thomas Waterings, 1 July, 1541; John Ireland p., once a chaplain to More, condemned and executed with Bl. John Lerke, 1544; Thomas Mashbur, q. v. and Marsh, 1544.

May, Tyburn. 1654: John Southworth, p., q., v., 28 June, Tyburn.

IV. DURING THE YEARS OF those, as has been explained above, are those "put off" for further proof. Of these the majority were confessors, who perished after a comparatively short period of imprisonment, though definite proof of their death ex aeternis is not forthcoming. (1) Under Queen Elizabeth (1558-1603).—Robert Dinnock, hereditary champion of England, was arrested at Mass, and perished after a few weeks imprisonment at Lincoln, 11 Sept., 1580; John Cooper, a young man, brought up by the writer, Dr. Nicholas Harpsfield, and probably a distributor of Catholic literature, who was tried in 1602. Oliver Plunket, of the Tower, died of "hunger, cold and stench", 1580; Mr. Allworth (Aylwold), probably of Passage Castle, Waterford, who admitted Catholics to Mass at his house, was arrested, and died after eight days, 1580; William Chaplain p., Thomas Cosmoere p., Robert Holmes p., Roger Wakeman p., James Lomax p., perished in 1580. Cosmoere was a bachelor of Oxford in 1536; of Wakeman's sufferings several harrowing details are on record. Thomas Crowther p., Edward Pole p., John Jetter p., and Laurence Vaux p., q., v., perished in the same fashion as John Harrison p., 1580; Harpsfield, and Gabriel Thimby, p., 1587; Thomas Metham, S.J., 1592; Eleanor Hunt and Mrs. Wells, gentlewomen, on unknown dates in 1600 and 1602. (2) Under the Commonwealth (1649-1660).—Edward Wilkes p., died in York Castle before execution, 1643; Boniface Kempe (or Francis Kipson) and Iddophan Henkel (or William Hanson), O.S.B., professed of Montserrat, seized by Puritan soldiery in Yorkshire, and worried to death, 26 July (?), 1644; Richard Bradley, S.J., b. at Brymhall, Lancs., 1605, of a well-known Catholic family, died when in prison, but his birth is incorrectly stated in Manchester, 20 Jan., 1645; John Felton, S.J., visiting another Father in Lincoln, was seized and so badly used that, when released (for no one appeared against him), he died within a month, 17 Feb., 1645; Thomas Vaughan of Courtfield p., and Thomas Bolton p., imprisoned at Shrewsbury, d. at unknown dates; Robert Cox, O.S.B., d. in the Clink Prison, 1650. (3) During the Oates Plot (1590-1649).—Thomas Jenkinson, S.J., d. after twelve months imprisonment, 27 Sept., 1679. He had renounced a handsome inheritance, and, according to Calamy, 1679, his health being apostatized, turned king's evidence against him. William Lloyd, d. under sentence of death at Brecknock, 1679. Placid Aldham or John Adland (O.S.B.), a convert clergyman, chaplain to Queen Catherine of Braganza, d. under sentence in 1679. William Atkin, S.J., condemned at Stafford, was too deaf to hear the sentence. When it was shouted in his ear, he turned and thanked the judge; he was reprieved and d. in bonds, 7 March, 1681. Richard Birkett p., d. 1680 under sentence in Lancaster Castle; but our recent court historians see nothing to choose between him and John Penketh, S.J., a fellow prisoner (see Gough, Catholic Rec. Soc., IV, pp. 431-40). Richard Lacey (Prince), S.J., Newgate, 11 March, 1680; William Allison p., York Castle, 1681; Edward Turner, S.J., 19 March, 1681, Gatehouse; Benedict Constable, O.S.B., points to a Lamspring, 1669, 11 Dec., 1683, Durham Gaol; William Benett (Bentney), S.J., 30 October, 1692, Leicester Gaol under sentence of death. (4) Others Put off for Various Causes. (5)—John Mawson, assigned to 1614, is not yet sufficiently distinguished from John Mace, 1614; there is a similarity between Matthias Harrison, assigned to 1600, and James Harrison, 1602; William Tyrwhitt, named by error for his brother Robert; likewise the identity of Thomas Dyer, O.S.B., has not been fully proved; James Atkinson, killed under torture by Topcliffe, but evidence is wanted of his constancy to the end. Father Henry Garnet, S.J., q., v.; was he killed ez odio fidei, or was he believed to be guilty of the Powder Plot, by merely human misjudgment, not through religious prejudice? The case of Lawrence Hill and Robert Godman at the time of the same Plot is similar. Was it due to odio fidei, or an unjustified error?

ENNIUS, MAGNUS FELIX, rhetorician and bishop, b. probably at Arles, in Southern Gaul, in 474; d. at Pavia, Italy, 17 July, 521. When quite young he went to Pavia, where he was educated, was betrothed, and eventually became a priest, his fiancee at the same time becoming a nun. It does not appear certain that he ever visited the East; to the story of his benefactor, Epiphanius (496), he received minor orders at Milan, attracted thereto no doubt by his uncle Laurentius, bishop of that city. Soon he was ordained deacon and taught in the schools. About this time (496) two popes were elected simultaneously, the design of Symmachus and the archpriest Laurentius. King Theodoric was in favour of the former, and convened a council at Rome in 501, the famous Synodus Palmaris, to settle this question and put an end to much scandal. On this occasion Ennius acted as secretary to Laurentius of Milan, who was the first to sign the decrees of the council. The adherents of the archpriest Laurentius, who was rejected by the council, wrote against the decisions of the latter. Ennius answered them and defended the synod in a still extant work entitled "Libellus adversus eos qui contra synodum scribere prae sumperunt." After referring to the objections urged against the incompetency and irregularity of the council, he attacks the enemies of Symmachus and proclaims the inability of human judges to decide matters pertaining to popes: "God no doubt consented to this affair... and the things that have been handed down to Himself the passing of judgment upon the pontiff of the supreme see" (Libellus, §93). In 513 Ennius was still at Milan, but shortly afterwards he was made Bishop of Pavia. In 515 and 517 he headed two successive embassies which Pope Hormisdas sent to Emperor Anastasius at Constantinople, both of which, however, were barren of results. The unrelenting enmity of the emperor endangered the lives of the envoys in 517. Of the remaining years of his episcopate nothing is known. His epitaph, found by accident, gives the date of his death.

The works of Ennius comprise poems for special occasions and epigrams, particularly inscriptions for churches or other religious monuments. His defence of the synod of 502, often known as "Libellus pro Synodo," his autobiography (Eucharchicum), his panegyric on King Theodoric, and the biographies of his predecessor Epiphanius of Milan, and a monk, Antonius of Léris, are interesting from an historical point of view; the first four especially. As much can be said of his numerous letters, addressed to various correspondents. Notwithstanding their brevity, they contain much useful information concerning the addresses and the customs of the time. Ennius is the last representative of the ancient schools of rhetoric. His "Parenesis dialeicae" (511) celebrates
Enthronization

From Greek ἱεροπριτρυ (to place on a throne). This word has been employed in different meanings: (1) formerly, it meant the solemn placing of the relics upon the altar of a church which was to be consecrated, hence a newly consecrated church was called maos enthronismenosmos (ras ἱεροπριτρυ-κυρίων). (2) It is used to designate the ceremony by which the pope, or the bishop, confers the consacration of marriage, which was nothing else than the blessing in the nuptial Mass (beneficio nuptiarum). (3) In the East it was employed, but seldom, to denote the induction into a parochial benefice. (4) It was used especially to designate the ceremony by which the pope, or the bishop, confers the consacration of marriage, which was nothing else than the blessing in the nuptial Mass (beneficio nuptiarum). The letters which it was customary for him to send to the other bishops in token of his being in communion with them in the same faith, were called littera inthroniastic, or epistolae endromiasticæ, which were sent to the consacrating bishop and the bishop who had consecrated him, and to the bishops who had taken part in the consistory. The gifts which accompanied the consacration of a bishop. After receiving episcopal consecration, the newly consecrated bishop was solemnly conducted to the episcopal throne, of which he took possession. He received the kiss of peace and listened to the reading of a passage of Holy Scripture, whereupon he pronounced an address or sermo inthroniasticus. The letters which it was customary for him to send to the other bishops in token of his being in communion with them in the same faith, were called litteræ inthroniasticæ, or epistolae endromiasticæ, which were sent to the consacrating bishop and the bishop who had consecrated him, and to the bishops who had taken part in the consistory.

Eoghan, Saints.—(1) Eoghan of Ardstraw was a native of Leinster, and, after presiding over the Abbey of Kilnamanagh (Co. Wicklow) for fifteen years, settled in the valley of Mounab (Co. Tyrone), his mother's country, about the year 576. He was followed by many disciples including St. Kevin of Glendalough, who completed his studies under this saint. As a boy he had been carried off to Britain, and subsequently he was taken captive to Brittany, together with St. Tighernach, who is best known as the founder of the Abbey of Clones, Co. Monaghan. So great was the fame of the sanctity and learning of St. Eoghan, at Mounab, that he was consecrated first Bishop of Ardstraw about the year 581. It is difficult to give his chronology with any degree of exactness, but the Irish annalists give the date of his death as 23 Aug., 613. His name is generally latinised as Eugenius, but the Irish form is Eoghan (Owen), hence Tir Eoghan, or Tyrone.

Ardstraw continued as an episcopal see until 1150, when it was translated to Ráthluire and subsequently to Maghers, but in 1254 it was definitely removed to Derry. In all these changes St. Eoghan was regarded as the patron of the see, and the tutelary guardian of the see of Derry to this day. His feast is celebrated on 23 August.

O’Hanlon, Lives of the Irish Saints (Dublin, a. d.), VIII; Lyons, Ecc. Hist. of Ireland (1829); Sirr (Dublin, 1829); Leoz Patriciana (Dublin, 1822); Acta Sanctorum, ex Cod. Sar. (London, 1888); O’Donnell, Ouran na (Dublin, 1903).

(2) Eoghan of Cloncullen, Co. Tipperary, has been identified with Eoghan, son of Saran of Cloncullen, for whom St. Ailbe of Emly composed a rule. He is entered in the Martyrologies of Tallaght and Donegal, and is venerated on 15 March.

(3) Eoghan, Bishop, is commemorated in the Martyrology of Tallaght on 18 April, and is included by the Bollandists under that date, but the particulars of his life are scanty in the extreme.

(4) Eoghan the Sage (Sapiens) finds a place in the Irish martyrologies, and he is also included in the “Acta Sanctorum,” but no reliable data as to his life is forthcoming. His feast is celebrated on 26 May.

(5) Eoghan of Cranfield (Co. Antrim) has been described as Abbot of Moville, but there is reason to believe that he is the same person as the Cranfield of the Cranfield Martyrology. He is supposed to have a special devotion to St. Eoghan, and he is styled him Episcopus et Sacent. de Magh-Cranfield. A St. Ernan of Cremaulie (Cranfield) is honoured on 31 May, but this is also the feast day of St. Eoghan. However, “Eran” may be a scribal error for “Eoghan” and this would account for the seeming mistake and take no harm.”

There are other Irish saints of this name, but their history is somewhat obscure, and it is not easy to reconcile their chronology.

W. H. Grattan-Flood.

Ephant (Gr. ἐναέντα ἡμέρα; Lat. dies adjacent), the surplus days of the solar over the lunar year; hence, more freely, the number of days in the age of the moon on 1 January of any given year. The whole system of ephants is based on the Metonic Lunar Cycle (otherwise known as the Cycle of Golden Numbers), and serves to indicate the days of the year on which the new moons occur.

The Church Lunar Calendar.—It is generally held that the Last Supper took place on the Jewish Feast of the Passover, which was always kept on the fourteenth day of the first month of the old Jewish calendar. Consequently, since the month always began with that new moon of which the fourteenth day occurred on or next after the vernal equinox, Christ arose from the dead on Sunday, the seventeenth day of the so-called paschal moon. It is evident, then, that an exact anniversary of Easter is impossible in years in which the seventeenth day of the paschal moon falls on Sunday. In the early days of Christianity there existed a difference of opinion between the Eastern and Western Churches as to the day on which Easter ought to be kept, the former keeping it on the fourteenth day and the latter on the Sunday following. To secure uniformity of practice, the Council of Nicaea (325) decreed that the Western method of keeping Easter on the Sunday after the fourteenth day of the moon should be adopted throughout the Church, believing no doubt that it was the historical facts and wishing to give a lasting proof that the Jewish Passover was not, as the Quartodecimans heretics believed, an ordinance of Christianity.

As in the Julian calendar the months had lost all their original reference to the moon, the early Christians were compelled to use the Metonic Lunar Cycle of the Greeks to find the fourteenth day of the paschal moon. This cycle in its original form continued to be used until 1582, when it was revised and embodied in the Gregorian calendar. The Church claims no astronomical exactness for her lunar calendar; we shall show presently the confusion which would necessarily result from an extreme adherence to precise astronomical data in determining the date of Easter. She wishes merely to ensure that the fourteenth day of the calendar moon shall fall on or shortly after the real fourteenth day but never before it, since it would be chronologically absurd to keep Easter on or before the Passover. Otherwise, as Clavius plainly states (Roman Calendar) a Gregorio XIII P.M. restitut. explicit., ccap. v, § 15, p. 40, he also regards with the historical facts and wishes to give a lasting proof of the fact that the Jewish Passover was not, as the Quartodecimans heretics believed, an ordinance of Christianity. As in the Julian calendar the months had lost all their original reference to the moon, the early Christians were compelled to use the Metonic Lunar Cycle of the Greeks to find the fourteenth day of the paschal moon. This cycle in its original form continued to be used until 1582, when it was revised and embodied in the Gregorian calendar. She wishes merely to ensure that the fourteenth day of the calendar moon shall fall on or shortly after the real fourteenth day but never before it, since it would be chronologically absurd to keep Easter on or before the Passover. Otherwise, as Clavius plainly states (Roman Calendar) a Gregorio XIII P.M. restitut. explicit., ccap. v, § 15, p. 40, he also regards with the historical facts and wishes to give a lasting proof of the fact that the Jewish Passover was not, as the Quartodecimans heretics believed, an ordinance of Christianity.

A. VAN HOVE.
part, is extremely modest, and the seats assigned by him to the new moons tally with strict astronomical findings in a degree which he seems never to have anticipated. The impossibility of taking the astronomic nomisms for granted. The difference in finding the date of Easter will be best understood from an example: Let us suppose that Easter is to be kept (as is at least implied by the British Act of Parliament regulating its date) on the Sunday after the astronomical full moon, and that this full moon, as sometimes happens, occurs just before midnight on Saturday evening in the western districts of London or New York. The full moon will therefore happen a little after midnight in the eastern districts, so that Easter, if regulated strictly by the paschal full moon, must be kept on one Sunday in the western and on the following Sunday in the eastern districts of the same city. Lest it be thought that this is carrying astronomical exactness to extremes, we may say that, if Easter were dependent on the astronomical moons, the feast could not always be kept on the same Sunday in England and America. Seeing, therefore, that astronomical accuracy must at some point give way to convenience and that an arbitrary decision on this point is necessary, the Church has drawn up a lunar calendar which maintains as close a relation with the moon as is possible. It has the defect of having to insert 11 days every 19 years, but, by the method adopted, it is to be kept on the Sunday after the fourteenth day of the paschal moon as indicated by this calendar.

Metonic Lunar Cycle or Cycle of Golden Numbers.—In the year now known as 452 B.C., Meton, an Athenian astronomer, discovered that 235 lunations (i.e., lunar months) correspond with 19 solar years, or, as we might express it, that after a period of 19 solar years the new moons occur again on the same days of the solar year. He therefore divided the calendar into periods of 19 years, which he numbered 1, 2, 3, etc., to 19, and assumed that the new moons would always fall on the same days in the years indicated by the same number. This discovery found such favour among the Athenians that the number assigned to the current year in the Metonic Cycle was henceforth written in golden characters on a pillar in the temple, and, whether owing to this circumstance or to the importance of the discovery itself, was known as the Golden Number of the year. As the 19 years of the Metonic Cycle were purely lunar (i.e., each contained an exact number of months), there was no difficulty in assigning the date of the new moons, and the insertion of one new moon always fell on the same day of the year. After the first year, the divergence between the calendars amounts to more than 30 days, and, as the last emolistic lunation consists of 29 days, it is clear that after the insertion of this month the nineteenth solar and lunar years will end on the same day and that the first new moon of the twentieth (as of the first) year will occur on 1 January. The divergence, therefore, at the end of the 19 successive years of the lunar cycle is: 11, 22, 3, 14, 25, 6, 17, 28, 9, 20, 1, 12, 23, 4, 15, 26, 7, 18, and 0 days.

Cycle of Epacts.—We have defined an epact as the age of the moon on 1 January, i.e. at the beginning of the year. If, then, the new moon occurs on 1 January in the first year of the Lunar Cycle, the Epact of the year is 0 or, as it is more usually expressed, *; and, since the lunar year always begins with the new moon, it is clear that the divergence between the solar and lunar calendars, of which we have just been speaking, gives the Epact of the following year, and so on. Thus, after the first year, the divergence between the calendars amounts to 11 days; therefore, the new moon occurs 11 days before 1 January of the second solar year, which is expressed by saying that the Epact of the second solar year is XI. Granted, then, that the new moon occurs on 1 January in the first year of the Lunar Cycle, the epacts of the 19 years are as follows:

<table>

Inaccuracy of the Metonic Cycle.—Meton’s theory, as adopted by the Church until the year 1852, might be briefly expressed as follows:

<table>
<thead>
<tr>
<th>19 lunar years averaging 354 days</th>
</tr>
</thead>
<tbody>
<tr>
<td>6 extra, or embolismic months, of which 6 are days, i.e., 180</td>
</tr>
<tr>
<td>1 embolismic month of 29 days</td>
</tr>
<tr>
<td>Total</td>
</tr>
</tbody>
</table>

V...31
19 solar years averaging 365 3/4 days equal...6939 3/4 days. But later computer models found that the average lunar cycle lasts 29 days, 12 hours, 44 minutes, 3 seconds, consequently:

235 calendar lunations (one Lunar Cycle) equal...6939 d. 18 h. 0 m. 0 s.

235 astronomical lunations equal...6939 d. 16 h. 31 m. 45 s.

Difference...1 h. 28 m. 15 s.

We thus see that the average Lunar Cycle is about 1 1/4 hour too long, and that, though the new moons occur on the same dates in successive cycles, they occur, on an average, 1 1/2 hour earlier in the day. The astronomical lunations are what the calendar calculated that after a period of 312 1/2 years (310 years is according to our figures a closer approximation) the new moons occur on the day preceding that indicated by the Lunar Cycle, that is, that the moon is one day older at the beginning of the year than the Metonic Cycle, if left unaltered, would show, and they removed this inaccuracy by adding one day to the age of the moon (i.e. to the Epacts) every 300 years seven times in succession and then one day after 400 years (i.e. eight days in 8 X 312 1/2 or 2500 years). This addition of days to the Lunar Cycle occurs at the beginning of the years 1800, 2100, 2400, 2700, 3000, 3300, 3600, 3900, 4300, 4600, etc. A second disturbance of the Epacts is caused by the occurrence of the non-bissextile centennial years. We have seen above how the assigning of 6939 3/4 days to every 19 solar years amounts to an error of 3 days every 400 years, and it is therefore necessary to omit one day from the solar calendar in every centennial year not divisible by 400. Consequently, since this extra day in February every fourth year is an essential part of the lunar calendar, the new moons will occur one day later in the non-bissextile centennial years than indicated by the Lunar Cycle (e.g. a new moon which under ordinary circumstances would have occurred on 29 February will occur on 1 March), and the age of the moon will, after the omission of the day, be one day less on all succeeding days of the solar year. As the fact that the January and February moons are not properly interpreted is immaterial in a system whose sole object is to indicate as nearly as practicable the fourteenth day of the moon after 21 March, the subtraction of one from the Epacts takes place at the beginning of all non-bissextile centennial years and is known as the leap year. In the following table, 1 is written after the years which have the Lunar Cycle, and -1 after those which have the Solar:

</table>

Clavius continued this table as far as the year 300,000, inserting the Lunar Equity eight times every 2500 years and the Solar three times every 400 years. As he found the date for 2000 as a leap year his table is untrustworthy after 5199.

**Indication of New Moons.**—Before proceeding further, it will be convenient to consider the method devised by Lilius of indicating the new moons of the year in the Gregorian calendar. As the first lunation of the year consists of 30 days, he copied the Epacts into XI, II, III, IV, the first 3 I days of January; then continuing, he wrote * opposite the thirty-first, XXIX opposite the first of February and so on to the end of the year, except that in the case of the lunations of 29 days he wrote the two Epacts XV, XXIV opposite the same day (cf. 5 Feb, 4 Apr, etc. in the Church calendar). From this arrangement it is evident that if, for example, the Epact of a year is X, the new moons will occur in that year on the days before which the Epact X is placed in the calendar. One qualification must be made to this statement. Following the Metonic Cycle, new moons never occur twice on the same date in the same nineteen years (the case is exceedingly rare even in the purely astronomical calendar); consequently, whenever the two Epacts XXV and XXIV occur in the same nineteen years, the new moons of the year whose Epact is XXV are indicated in the months of 29 days by Epact XXVI, with which the number 25 is for this object associated in the Church calendar.

**How to Find the Epact.**—We have already seen that the Church used the Metonic Cycle until the year 1582 as the only practical means devised of finding the fourteenth day of the paschal moon. Now, this cycle has always been regarded as starting from the year 1 b.c., and not from the year of its introduction (432 a. c.), probably (although all the authors we have seen appear to have overlooked the point) because such a change was found necessary if the leading characteristic of the Metonic Cycle were to be retained in changing from a lunar to a solar calendar, viz., that the first lunar and solar years of the cycle should begin on the same day. That two nations with calendars so fundamentally different as those of the Greeks and the Romans should regard the solar year as beginning with the same phases of the sun would be highly improbable, even if there were no direct evidence that such was the case. But we have shown that when the solar and lunar years begin on the same day, the Epacts of the successive years of the cycle are:

**Golden Numbers:**

1 2 3 4

**Epacts:**

* XI XXII III

5 6 7 8 9 10 11

**XXV** XXVI VII XXVIII IX

12 13 14 15 16 17 18 19

**XXVI** XXVII VII XXVIII

Consequently, if we divide the calendar into cycles of 19 years from 1 b.c., the first year of each cycle will have the Epact *, the second the Epact XI and so on, or, in other words, the Epact of any year before 1582 depends solely on its Golden Number. The Golden Number of any year may be found by adding 1 to the year and dividing by 19, the quotient showing the number of complete cycles elapsed since 432 a. c. and the remainder (or, if there be no remainder, 19) being the Golden Number of the year. Thus, for example, of the year 1484, the Golden Number of 1484 is 3, since 1484 + 19 = 78, with 3 as remainder; therefore the Epact of the year 1484 is XXII.

In the course of time it was found that the paschal moon of the Metonic Cycle was losing all relation to the real paschal moon, and in the sixteenth century (c. 1570) Gregory XIII entrusted the task of reforming the calendar to a small band of astronomers, of whom Lilius and Clavius were the most renowned. These astronomers having drawn up the table of equations to show the changes in the Epacts necessary to preserve the relations between the ecclesiastical and astronomical calendars, proceeded to calculate the
the solar year by about 5½ hours and the lunations by 5½ hours; (2) that in consequence of this under-estimation of the lunations one day must be inserted in every fourth solar year except in the case of the centenary years not divisible by 400; and (3) that the under-estimation of the lunations by 6 hours every year (the additional 2½ hours are compensated for in the emollient months and by the Lunar Equation) necessitates the insertion of one extra day in the lunar calendar every fourth year without exception. To take an example: the Epact of 1696 (its Golden Number being 6) is XXVI, and since this Epact is found opposite 4 February in the Church calendar we know that in 1696 the new moon happened on that day and that consequently 23 February was the twentieth day of the calendar month. But, since the under-estimation of the lunations amounts to one day in every four years, the following day (our 24 Feb.) was only nominally the twenty-first day of the month and the proper twenty-first was our 25 February. The Church therefore inserted an extra day after 23 February and treated this and the real 24 Feb. (our 24 and 25) as one continuous day in both the solar and lunar calendars, and consequently 25 February (our 26) was again legitimately regarded as the twenty-second day of the moon and the fifty-sixth day of the astronomical solar year. Coming now to the year 1700, we find its Epact to be X, consequently the new moon occurred on 19 February and 23 February was the fifth day of the calendar moon. But, since no extra day could be inserted in February, 1700, the twenty-fourth and twenty-fifth of this month had to be treated as the sixth day of the moon, and the age of the moon on every subsequent day of the year 1700 was one day less than indicated by the Epact X. As the moons of January and February are of very secondary importance in the Church calendar, we may say that the age of the moon in 1700 and all subsequent years was one day less than indicated by the above Cycle of Epacts, and thus the Epacts for the years of the Lunar Cycle after 1700 are:

<table>

In the year 1800, both the Lunar and Solar Equations (i.e. the addition and subtraction of 1) occur and no

This table may, with the help of the table of equations, be continued to 5199.

Examples.—(1) To find the Epact of the year 3097. Golden Number is 1, since $3097 + 1 = 163$, with 1 as remainder. Epact corresponding to Golden Number 1 after 2900 is XXV; therefore the Epact of 3097 is XXV.

(2) On what Sunday will Easter fall in the year 2493? Golden Number of 2493 is 9, and Epact of ninth year of Lunar Cycle after 2400 is XXVI. Since the Epact of 2459 is XXVI, the new moons of this year will occur on the days before which XXVI is placed in the Church calendar (e.g. in the Breviary). Now, since the paschal moon is that whose fourteenth day falls on or next after 21 March, the paschal new moon can never happen before 5 March. The first day after 8 March to which the Epact XXVI is prefixed in the Church calendar is 4 April; consequently the paschal new moon in the year 2459 will occur on 4 April.
Counting 14 days from 4 April, which we include in our reckoning, we find the fourteenth day of the paschal moon to be 17 April. In 2459, therefore, Easter will be kept on the Sunday after 17 April, which with the help of the Dominical Letters is found to be 20 April. (See Dominical Letter.)

For bibliography see Dominical Letter.

THOMAS KENNEDY.

Eparchy (ἐπαρχία) was originally the name of one of the divisions of the Roman Empire. Diocletian (284–305) and Maximian divided the empire into four great Prefectures (Gaul, Italy, Illyricum, and the East). Each was subdivided into (civil) Dioceses, and these again into Eparchies under governors (praesides, ἐπαρχοῦ). The Church accepted this division as a convenient one for her use. The Prefectures of Gaul, Italy, and Illyricum made up the Roman Patriarchate; the Prefecture of the East was divided (in the fourth century) between the Patriarchs of Alexandria and Antioch and three exarchates. The Diocese of Egypt was the Patriarchate of Alexandria, the Diocese of the East (not to be confused with the Prefecture of the East) became that of Antioch. Asia was under the Exarchate of Ephesus, Pontus under Cappadocia, and Thrace under Heraclia. Under these patriarchates and exarchates came the eparchies under metropolitan;

they had under them the bishops of the various cities. The original ecclesiastical eparchies then were provinces, each under a metropolitan. The First Council of Nicea (325) accepts this arrangement and orders that: "the authority [of appointing bishops] belong to the metropolitan in each eparchy" (can. iv.). That is to say that in each such civil eparchy there shall be a metropolitan bishop who shall have authority over the others. This is the origin of our provinces. Later in Eastern Christendom the use of the word was gradually modified and now it means generally the diocese of a simple bishop. The name Eparchy is, however, not commonly used except in Russia. There it is the usual one for a diocese. The Russian Church now counts eighty-six eparchies, of which three (Kiev, Moscow, and St. Petersburg) are ruled by bishops who always bear the title "Metropolitan", and fourteen others are under archbishops.

ADRIAN FORTECUE.

Epée, CHARLES-MICHEL DE L', a philanthropic priest and inventor of the sign alphabet for the instruction of the deaf and dumb; was b. at Versailles, 25 November, 1712; d. at Paris, 23 December, 1789. He studied theology, but, having refused to sign a condemnation of Jansenism, was denied ordination by Christophe de Beaumont, Archbishop of Paris. He then studied law, but no sooner had he been admitted to the Bar than the Bishop of Troyes consented to ordain him. This bishop died shortly afterwards, whereupon the Abbé de l'Epée returned to Paris, and began to occupy himself with the education of two deaf and dumb sisters who had been recommended to him by Father Vanin, of the Congregation of the Christian Doctrine. He endeavoured to develop the minds of his pupils by means of certain conventional signs constituting a complete alphabet. Succeeding in this attempt, he resolved to devote himself to the education of the deaf and dumb, and founded a school for their instruction at his own expense. His method is based on the principle that "the education of deaf mutes must teach them through the eye what other people acquire through the ear". Several other methods had been tried, previous to this time, to enable the deaf and dumb to communicate with one another and with the rest of mankind, but there can be no doubt that he attained far greater success than Pereira, Bulwer, Dalgarne, Dr. John Wallis, or any of his predecessors, and that the whole system now followed in the instruction of deaf mutes virtually owes its origin to his ingenuity and devotion. His own system has, in its turn, been replaced by a newer method, which teaches the pupils to recognize words and, in time, to utter them, by closely watching, and afterwards imitating, the motions of the lips and tongue in speech, the different portions of the vocal organs being shown by means of dis-
cashed in 1818 from the Diocese of Munkács, this dio-
cesan has had the following bishops: György Turóczy (1818–41); Joseph Gácomo (1842–76); Nicholas
Toth (1876–81); John Vályi (1882). The city of
Eperjes, called by the Slovak Pressova, was founded
by a German colony in the twelfth century on the
Tátra, a tributary of the Danube, and is now the
capital of the county of Eperjes, Hungary, with a popu-
lation of 11,000. It is famous for its sugar factories,
its mineral waters, and the rock salt mine situated at
Sovar, several miles distant. The diocese contains
100,000 Ruthenian Catholics; 212 priests (nearly all
male), 327 in the Cities and parishes of six coun-
ties; 190 churches, 25 chapels, 24 parochial
schools, with 28,000 pupils, a college for boys, 2 con-
vents of Basilians, and a theological seminary with 40
students. The episcopal residence, the seminary, and
most of the diocesan institutions are situated at
Eperjes.

oath. (Rom., 1807), 796.

S. VALÉRIE.

Ephesians, Epistle to the.—This article will be
understood under the following heads: I. Analysis of
the Epistle; II. Special Characteristics: (1) Form;
(2) Style; (3) Tradition. I. ANALYSIS OF THE
EPHESIANS.—The letter which, in the MSS.
containing the Epistles of St. Paul, bears the
title "To the Ephesians" comprises two parts dis-
tinctly separated by a doxology (Eph., iii, 20 sq.).
The address, in which the Apostle mentions himself
only, is not followed by a prologue; in fact, the entire
dogmatic part develops the idea which is usually the
subject of the prologue in the letters of St. Paul. In
a long sentence that reads like a hymn (Eph., i, 3–14),
Paul praises God for the blessings which He has
bestowed upon all the faithful in accordance with the
eternal plan of His will, the sublime plan by which all
are to be united under one head, Christ, a plan which,
although heretofore secret and mysterious, is now
made manifest to the Gentiles and of which the head
was formerly hidden in God, but is now revealed by
the Apostle in his address, having received the Gospel,
have, in their turn, been made participants of these
blessings, and the Apostle, having recently learned of
their conversion and their faith, assures them that he
cesses not to pray for the safety of the church (Eph., i, 15
and that, above all, he prays for the safety of the
people. In the explanation of this prayer, of its object and
motives, constitutes the remainder of the dogmatic part (cf.
Eph., iii, 1, 14). Paul asks God that his readers may
have a complete knowledge of the hope of their call-
ing, that they may be fully aware of both the riches of
their inheritance and the greatness of the Divine
power which guarantees the inheritance. This Divine
power manifests itself first in Christ, Whom it raised
from the dead and Whom it exalted in glory above all
creation and made Head of the Church, the Body of
His body. Next, this power and goodness of God
was evidenced in the readers, whom he rescued from
their sins and raised and exalted with Christ. But it
shone forth, above all, in the establishment of a com-
munity of salvation welcoming within its fold both
Jews and Gentiles without distinction, the Death of
Christ having broken down the middle wall of parti-
tion, i.e. the Law, and both sections of the human
race having thus been reconciled to God so as thence-
forth to form but one body, one house, one temple, of
which the Apostle and Christ Himself are the corner-
stone. (Eph., i, 16–ii, 20.) Paul, as his readers must
have heard, was the minister chosen to preach to the
Gentiles of this sublime mystery of God, hidden from
all eternity and not revealed even to the angels, ac-

tording to which the Gentiles are made coheirs with
the Jews,constitute a part of the family of God and are
joint partakers in the same promises (Eph., iii, 1–13).
Deeply imbued with this mystery, the Apostle im-
plores the Father to lead his readers to the perfection
of the Christian state and the complete knowledge of
Divine charity (Eph., iii, 14–19), continuing the same
prayer with which he had begun (Eph., i, 16 sqq.).

Having praised God anew in the solemn doxology
(Eph., iii, 20 sqq.), Paul passes on to the moral part
of his letter. His exhortations, which he bases more
often than in his wont on dogmatic considerations, all
revert to that of chapter i, verse 1, in which he
asks his readers to show themselves in all things worthy
of their vocation. First of all, they must labour to preserve
the unity described by the author in the first three
chapters and here again brought into prominence: One
Spirit, one Lord, one faith, one baptism, one God.
There is, of course, a diversity of ministries, but the
respective offices of apostles, prophets, etc. have all
been instituted by the same Christ exalted in glory and
all tend to the perfection of the society of saints
(Eph., iv, 1–16). From this great group of duties,
Paul proceeds to the consideration of individ-
al ones. He contrasts the Christian life that his
readers are to lead, with their pagan life, insisting
above all on the avoidance of two vices, immode-
ty and covetousness (Eph., iv, 17–v, 3). Then, in
the second part of the letter (v, 4–21), he exhorts the
bishops, deacons, and their wives, whose union he likens to that of
Christ with His Church, and the duties of children and
servants (v, 21–vi, 9). In order to fulfil these duties
and to combat adverse powers, the readers must put
on the armour of God (vi, 10–20)

The Epistle closes with a short epilogue (vi, 21–24),
wherein the Apostle tells his correspondents that he has
touched Tychicus to give them news of him and that
he wishes them peace, charity, and grace.

II. SPECIAL CHARACTERISTICS.—(1) Form.—(a)
Vocabulary.—This letter, like all of those written by
St. Paul, contains hapax legomena (σαρκικα ορθων),
about seventy-five words which are not found in
the Apostle's other writings; however, it was a mistake
to make this fact the basis of an argument against
Pauline authenticity. Of these words nine occur in
quotations from the Old Testament and others belong
to current language or else designate things which
Paul elsewhere had had no occasion to mention.
Others, again, are derived from roots used by the
Apostle and besides, in comparing these hapax lego-
mena (σαρκικα ορθων) are not, it is possible to recog-
nize in them a characteristic vocabulary that
would reveal a distinct personality. (Cf. Brunet,
"De l'authenticité de l'épître aux Ephésiens; preuves
philologiques", Lyons, 1897; Nægeli, "Der Wort-
schatz des Apostol Paulus", Gottingen, 1905.)

(b) Style.—This Epistle, even more than that to the
Colossians, is remarkable for the length of its periods.
The first three chapters contain hardly more than
three sentences, and these are overlaid with relative
or participial clauses that are simply strung together
frequently without being connected by the logical
particles that occur so frequently in St. Paul.
Each particular clause is itself encumbered with numer-
ous prepositional modifiers (especially with και
and το) of which it difficult to state the exact meaning.
Often, too, several synonyms are in juxtaposition and
in very many cases a noun has an explanatory geni-
te, the sense of which differs but very slightly from
that of the noun itself. For all of these reasons the
language of the Epistle, heavy, diffuse, and languid,
seems very different from the dialectical, animalge,
and vigorous style of the Apostle's uncounted letters.
It is important to note that in the moral part of
the Epistle these peculiarities of style do not appear and
hence they would seem to depend more on the matter
treated than on the author himself; in fact, even in the dogmatic expositions in the great Epistles, St. Paul's language is frequently involved (cf. Rom., ii, 13 sq.; iv, 16 sq.; v, 12 sq.; etc.). Moreover, it must be observed that all these peculiarities spring from the same cause: they all indicate a certain redundancy of idiom resulting in a certain density of a sublime passage in the original, which is, in effect, as it were, a quotation of the text, taken from a single sentence of the prologues to the epistles of St. Paul. Hence the inferences and the arguments of which simultaneously appear to the author's mind and evoke his admiration. Hence also the lyric tone that pervades the first three chapters, which constitute a series of praises, benedictions, thanksgivings, and prayers. A second body of exposition has been placed outside chapter i (cf. T. In light of the fact that the Greek word for 'hymnus' (cf. Eph., ii, 14") is used in 'Zeitschrift für katholische Theologie', 1904, 612 sq.), and in chapter iii traces of liturgical hymnology have been observed (Eph., iii, 20), but they are no more striking than in 1 Cor. and are not to be compared with the liturgical language of 1 Clement.

(2) Doctrines.—The doctrine on justification, the Law, faith, the flesh, etc., that are characteristic of the great Pauline Epistles, are not totally lacking in the Epistle to the Ephesians, being recognisable in chapter ii, but, however, the Epistles should lead him to develop these particular doctrines. On the other hand, he clearly indicates, especially in chapter i, the supreme place which in the order of nature and grace, is allotted to Christ, the author and end of the whole, which is made known through faith with all its spiritual gifts. Although, in his great Epistles, St. Paul sometimes touches upon these doctrines (cf. 1 Cor., viii, 6; xv, 45 sq.; II Cor., v, 18 sq.), they constitute the special object of his letter to the Colossians, where he gives to them so much greater extent than in that to the Ephesians. In fact this Epistle treats more of the Church than of Christ. (On the doctrine of the Church in the Epistle to the Ephesians see Münzer in "Revue bilingue", 1899, pp. 343 sq., and W. H. Griffith Thomas in the "Expositor", Oct., 1906, pp. 318 sq.) The word church no longer means, as it usually does in the great Epistles of St. Paul (see, however, Gal., i, 13; 1 Cor., xii, 28; xv, 9), some local church or other, but the one universal Church, an organic whole uniting all Christians in one body of which Christ is the head. Here we find the systematic treatment of the Church from time to time in the letters to the Galatians, Corinthians, and Romans. The author who has declared that there is now neither Jew nor Greek but that all are one in Christ Jesus (Gal., iii, 28); that in each Church Christ is the same one body (Gal., iii, 20; II Cor., iv, 11 sq.); that all are led by the Spirit of God and of Christ (Rom., viii, 9-14); that each one of the faithful has Christ for head (1 Cor., xi, 3), could, by combining these elements, easily come to consider all Christians as forming but one body (Rom., xii, 5; 1 Cor., xii, 12, 27), animated by one spirit (Eph., iv, 4), a single body having Christ for head. To this body the Gentiles belong by the same right as the Jews. Undoubtedly this mysterious dispensation of Providence was, according to the Epistle to the Ephesians, made manifest by the marriage of the Church to Christ, and thus, moreover, the Epistle to the Galatians does not contradict (Gal., ii, 3-9); however, this revelation remains, as it were, the special gift of St. Paul (Eph., iii, 3-8). The right of pagans seems to be no longer questioned, which is easily understood at the close of the Apostle's life. At the death of Christ the wall of separation was broken down (cf. Gal., iii, 13), and all have since had access to the Father in the same spirit. They do not meet on the Jewish ground of the abolished Law but on Christian ground, in the edifice founded directly on Christ. The Church being thus constituted, the author contemplates it just as it appears to him. Besides, if in the extension of the Church he beholds the realisation of the eternal decree by which all men have been predestined to the same salvation, he is not obliged to repeat the religious history of mankind in the way he had occasion to describe it in the Epistle to the Romans; neither is he constrained to explain the historical priviliges of the Jews, to which he neverless alludes (Eph., ii, 12), nor to connect the new economy with the old (see, however, Eph., iii, 6), nor indeed introduce, at least into the dogmatical exposition, the sins of the pagans, whom he had previously denounced as having lacked intimate communion with God (Eph., ii, 12). For the time being all these points are not his main subject of meditation. It is rather the recent, positive fact of the union of all men in the Church, the Church as the Body of Christ, to which he is preeminently the Apostle contemplates Christ Himself in His actual influence over this body and over each of its members; hence it is only occasionally that he recalls the redeeming power of Christ's Death. (Eph., i, 7; ii, 5, 6.) From heaven, where He has been exalted, Christ bestows His gifts on all the faithful without distinction, commanding, however, that in His Church certain offices be held for the common welfare. The hierarchical terms used so constantly later on (episcopos, presbyteros, bishops) are not met with here, yet the same idea is expressed. The bond of union, together, in the Epistle to the Ephesians, play a like part, being the founders of the Church (Eph., ii, 20). Thus placed on an equality with the prophets, the apostles are not the chosen Twelve but, as indicated in the letters, the letters were given to all the faithful who have been commissioned by Him to preach His Gospel. It is for the same purpose that the prophets in the Epistle to the Ephesians used the charisms, or spiritual gifts described in 1 Cor., xii-xiv. The evangelists, who are not noticed in Eph., ii, 20, or iii, 5, are inferior in dignity to the apostles and prophets in connection with whom they are, nevertheless, mentioned (Eph., iv, 11). In his first letters St. Paul had no occasion to allude to them, but they belong to the Apostolic age, as at a later epoch they are never referred to. Finally the "pastors and doctors" (A. V. pastors and teachers), who are clearly distinguished (Eph., iv, 11) from the apostles and prophets, founders of the churches, seem to be those local authorities already indicated in 1 Thess., v, 12: I Cor., xvi, 15 sq.; Acts, xx, 28. While the attention given to these different ministers forms a distinct element in the Epistle to the Ephesians, we cannot therefore admit (with Köppel, for example) that the author is preoccupied with the hierarchy as such. The unity of the Church, a point that he clearly emphasises, is not so much the juridical unity of a structure, but rather a spiritual unity which binds all the members of the body to its head, the glorified Christ. Nor is it true that the author already predicts centuries of future existence for this Church (Köppel) as, properly speaking, the age to come, referred to in the Epistle to the Ephesians (ii, 7), are to come in the Kingdom of Heaven (cf. ii, 6). On the other hand we know that St. Paul's hope of soon witnessing Christ's second coming kept constantly diminishing, and therefore, in the latter years of his life, he might well define (Eph., v, 23 sq.) the laws of Christianity as the laws of Christ. Concerning marriage, as we have seen in the preceding period (Cor., vii, 37 sq.) he regarded only in the light of the approaching advent of Christ. The exposition that we have given of the doctrines proper to the Epistle to the Ephesians has been so made as to show that none of these doctrines taken separately contradict the theology of the great Pauline Epistles and that each one individually can be connected with certain elements disseminated in these Epistles. It is nevertheless true that, taken in their entirety, this letter to the Ephesians constitutes a new doctrinal system, the Pauline authenticity of which can only be critically defended by pointing out the circumstances in consequence of which the Apostle was able thus to develop his first theology and profoundly to modify his manner of setting it forth. Naturally
this leads us first of all to try to ascertain the object of the letter to the Ephesians.

III. OBJECT.—It has been said that St. Paul combated immoral doctrines and an antagonistic propaganda that especially endangered those to whom the letter was addressed. He therefore would not explain the dogmatic part of the Epistle, and even in the hortatory part nothing betokens polemical preoccupation. All the warnings administered are called forth by the pagan origin of the readers, and when the author addresses his prayers to Jehovah, in whose name he addressed the letter, he does not mention any particular peril from which he would have God deliver their Christian life. Köppen thought that the author had Judeo-Christians in view, still denying converted pagans their full right in the Church, and Jacquier gives this as an additional motive. Others have said that the Gentile-Christians of the Epistle had to be reminded of the privileges of the Jews. But not one word in the letter, even in the section containing exhortations to unity (Eph., iv., 2 sq.), reveals the existence of any antagonisms among those to whom the Apostle wrote, and there is no question of the reproduction or re-establishment of unity. The author never addresses himself to any save converted pagans, and all his considerations tend solely to provide them with a full knowledge of the blessings which the Church of Christ confers on them in Christ and of the greatness of the love that God has shown them. If, in chapter iii. St. Paul speaks of his personal Apostleship, it is not by way of defending it against attacks but of expressing all his gratitude for having been called, in spite of its unworthiness, to announce the great mystery of which he had sung the praises. Briefly, nothing in the letter allows us to suspect that it responds to any special need on the part of those to whom it is addressed, nor that they, on their side, had given the author any particular occasion to write. Not even so far as either its dogmatic or moral part is concerned, it might have been addressed to any churches whatever founded in the pagan world.

IV. TO WHOM ADDRESSED.—To whom, then, was the Epistle addressed? This question has evoked a variety of answers. There are critics who maintain the traditional opinion that the Epistle was written to the Ephesians exclusively (Danco, Conley), but the greater number consider it in the light of a circular letter. Some maintain that it was addressed to Ephesus, others that it already penetrated as far as the metropolis (Michelis, Harless, and Henle), while others hold that it was sent to the Seven Churches of the Apocalypse (H. Holtzmann) or to the circle of Christian communities within and around Colosse and Laodicea (Gosset, Haupt, Zahn, and Belsen); or again to the faithful of Asia Minor (B. Weiss) or to all the Gentile-Christian Churches (Von Soden). The question can only be solved by comparing the Epistle with the knowledge possessed of the life and literary activity of the Apostle. Those who deny the authenticity of the letter must first prove that the Pseudo-Paul (iv., 1) was careful to conform to literary and historical probabilities; and if, not, since the letter vouches for no direct indication as to the correspondents whom he supposed the Apostle to be addressing, it would be idle to imagine who they were.

The words τω Εφέσῳ, in the first verse of the Epistle, do not belong to the primitive text. St. Basili attests that, even in his day, they were not met with in the ancient MSS.; in fact they are missing from the Codices Sinaiticus and Π (first hand). Moreover, the examination of the Epistle does not warrant the belief that it was addressed to the church in which the Apostle had sojourned longest. When St. Paul writes to one of his churches, he constantly alludes to his former relations with it (see Thess., Gal., Cor.), but here there is nothing personal, no greeting, no special recommendation, no allusion to the author's past. Paul is unacquainted with his correspondents, although he has heard them spoken of (Eph., i., 15), and they have heard of him (Eph., iii. 2; of iv. 21). When addressing himself to any particular church, even be it at the time still a little stranger to him, he is accustomed to speak in a tone that the Apostle always assumes a personal tone; hence the abstract and general manner in which he treats his subject from the beginning to the end of the Epistle to the Ephesians can best be accounted for by beholding in this Epistle a circular letter to a group of churches of which he is unknown to Paul. Interpretation based on the encyclical character of the Epistle, loses its value if the Church of Ephesus is numbered among those addressed; for, during his three years' sojourn in this city, the Apostle had had frequent intercourse with the neighbouring Christian communities, and in this case he would have had Ephesus especially in view, just as in writing to all the faithful of Achaia (II Cor., i. 1) it was chiefly to the Church of Corinth that he addressed himself.

Nevertheless, it was to a rather restricted circle of Christian communities that Paul sent this letter, as Tycheius was to visit them all and bring them news of him (Eph., vi. 21 sq.), which fact precludes the idea of all the churches of Asia Minor or of all the Gentile-Christian churches. Moreover, since Tycheius was a member of the Colossian Church, and the letter was written to the Ephesians at one and the same time (Col., iv. 7 sq.), to whom the latter was addressed could not have been far from Colosse, and we have every reason to suppose them in Asia Minor. However, we do not believe that the Epistle in question was addressed to the churches immediately surrounding Colosse, because the perils which threatened the faith of the Colossians virtually endangered that of the neighbouring communities, and wherefore, then, two letters differing in tone and object? Having had no personal intercourse with the Ephesians, Paul, not satisfied to address to them and their Christian neighbours an encyclical letter embodying all the matters treated in both Epistles. Hence it behoves us to seek elsewhere in Asia Minor, towards the year 60, a rather limited group of churches still unknown to St. Paul. Now, in the course of his three journeys, Paul had traversed all parts of Asia Minor except the northern provinces along the Black Sea, territory which he did not reach prior to his captivity. Nevertheless, the First Epistle of St. Peter shows us that the Faith had already become firmly established there; so what is the historical data at our disposal, it is in this vicinity that it seems most reasonable to seek those to whom the Epistle was addressed. These Christians must have been named in the authentic text of the inscription of this Epistle, as they are in all of St. Paul's letters. Now, whenever the substantive participle appears in one of these inscriptions, it serves the sole purpose of introducing the mention of locality. We are therefore authorised to believe that, in the address of the Epistle to the Ephesians (Eph., i., 1: τῷ ἀγίῳ τοῖς ἐφέσιοις), this is the case, and that, so difficult to understand in the received text, originally preceded the designation of the place inhabited by the readers. One might assume that the line containing this designation was omitted owing to some distraction on the part of the first copyist; however, it would then be necessary to admit the specification of locality, now in question, occurred in the midst of qualifying adjectives applied by the Apostle to his readers (τῷ ἀγίῳ τοῖς . . . τοῖς), and this is something that is never verified in the letters of St. Paul. Hence we may suppose that, in this address, the indication of place was corrupted rather than omitted, and this paves the way for conjectural restorations. We ourselves have proposed the following: τῷ ἀγίῳ τοῖς ἀγίων εἰς Ἰησοῦν τὸν Χριστὸν ἱεροῦ (Ladeuze in Revue biblique, 1902, pp. 573 sq.) Grammati-
cally, this phrase corresponds perfectly with the Apostle’s style (cf. Gal. i. 22; I Cor. i. 2; Phil. i. 1) and paleographically, if transcribed in ancient capitals, it readily accounts for the corruption that has certainly been produced in this. The Epistle to the Ephesians is therefore, as regarded its church location perhaps in various provinces (Pontus, Galatia, Pergamos, the kingdom of Polemon) and, for this reason, requiring to be designated by a general term, but all situated along the River Iris.

These churches of the north-east of Asia Minor played rather an obscure part in the first century. When the first collection of the Apostle’s letters was made, a collection on which the entire textual tradition of these letters depends (cf. Zahn, Geschichte des N. T. Epistles, i, 4, p. 230), it was Ephesus that finished the copy of this Epistle, having obtained it when Tycheus landed at that port, thence to set out for Colossae and in the direction of Pontus, and in this copy the text of the address had already been corrupted. Having come from Ephesus, this letter quickly passed for one to the Ephesians, the more so as there was no other written by the Apostle to the most celebrated of churches. This explains why, from the beginning, all except Marcion, even those who did not read the words εἰς Ἑφεσον in the first verse (Origin, Testimonia, upon this letter in an Epistle to the Ephesians, and why, in all MSS., it is transcribed under this title.

V. DATE AND PLACE OF COMPOSITION; OCCASION.—Like the Epistles to the Colossians, to the Philippians, and to Philemon, that to the Ephesians was written during the leisure hours of one of the Apostle’s imprisonments (Eph. iii, 1; iv, 1; vi, 20), when he had but little reason to resort to the services of a disciple to write in his name (De Wette, Ewald, and Renan). Lisco (Vincula Sacerorum, Berlin, 1890) is the only one who takes pains to explain that in the last period of the great captivity of St. Paul, maintaining that the Apostle must have written them while a prisoner in Ephesus in 57 and prior to those which he sent to the Corinthians and Romans. But we are not acquainted with any of the details of this captivity at Ephesus. Moreover, the doctrine set forth in the letters in question belongs to an epoch subsequent to the composition of the Epistle to the Romans (58); hence they were not written previously to the captivity in Caesarm (56–59). On the other hand, they are anterior to the Epistle to the Philippians, to which they make allusion when describing the armour and combat of the faithful; wherefore they cannot be assigned to the last captivity. It consequently remains for them to be ascribed to a period between 58 and 63, but which, for the most part, is the object of dispute among scholars (61–63) is still a much mooted question. The information gleaned here and there is very vague and the arguments brought forward are very doubtful. However, the freedom allowed Paul, and the evangelical activity he displays at the time of writing these letters, would seem more in keeping with his captivity in Rome (Acts, xxviii, 17–31) than in Cæsarea (Acts, xxiii, sq.). One thing, however, is certain, once the authenticity of the Epistles to the Colossians and to the Ephesians is admitted, and that is that they were written at the same time. They both show fundamentally and formally a very close connexion of which we shall speak later on. Tycheus was appointed to convey both Epistles to those to whom they were respectively addressed and to fulfil the same mission in behalf of them (Col. iv, 7 sq.; Eph. vi, 21 sq.). Very probably, as regards the transmission of one to the other, a general letter to the Ephesians, which would need to have been written first; besides, the Epistle here mentioned is scarcely an encyclical, the context leading us to look upon it as a special letter of the same nature as that sent to the Colossians. If, moreover, Paul knew that, before reaching Colossae, Tycheus would deliver the Epistle to the Ephesians to the Christians at Laodicea, there was no reason why he should insert greetings for the Laodiceans in his Epistle to the Colossians (Col., iv, 15). It is more probable that the Epistle to the Ephesians was written first, and that the others (Eph.) were to them as a greater solicitude evoked by the composition of the former.

How, then, admitting that St. Paul wrote the Epistle to the Ephesians, shall we explain the origin of this document? The Apostle, who was a captive at Rome, was informed by Epaphras of the doctinal and moral errors that had come to light in Colossae and the neighbouring cities, in churches of which he was not the founder. He also learned that he had been censured for not bringing to the perfection of Christianity those whom he had once converted, and for not taking sufficient interest in the personal affairs of those by his side with his own, although without his personal intervention (Col. i, 28–ii, 5). At the same time that Paul received the news concerning Colossae and its surroundings, he also heard (Eph. i, 15) that in a distinct part of Asia Minor Christian communities had been brought to the Faith, perhaps by evangelists (Eph., iv, 11). Impressed by the accusations made against him, Paul took advantage of the departure of Tycheus for Colossae, to enter into communication with those Christians who had heard of him (Eph., iii, 1, and to say his thanksgiving in the epistle to the Ephesians, and to limit himself to general considerations on Christianity, but he wished to prove his Apostolic solicitude for them by making them realise not only the dignity of their Christian vocation, but the oneness of the Church of God and the intimate union by which all the faithful, no matter what their history, are constituted a single body of which Christ is the head.

VI. AUTHENTICITY.—If one would only remember to whom the Epistle was addressed and on what occasion it was written, the objections raised against its Pauline authorship would lose all the force they had before. It is enough to remind the reader of the great Pauline Epistles. Of course one of the Apostle’s writings might have been utilised in these later documents but these similarities are too vague to establish a literary relationship. During the four years intervening between the Epistle to the Romans and that to the Ephesians, St. Paul had changed his headquarters and his line of work, and we behold him at Rome and Cæsarea connected with new Christian centres. It is, therefore, easy to understand why his style should savour of the Christian language used in these later books, when we recall that their object has so much in common with the matter treated in the Epistle to the Ephesians. Whatever may now and then have been said on the subject, the same phenomenon is noticeable in the Epistle to the Colossians.

If, indeed, the Epistle to the Ephesians agrees with the Acts in many points, it does not necessarily follow that the Colossians, it is because the two former have one identical object, namely, the constitution of the Church by the calling of the Jews and Gentiles.

The relationship between the Epistle to the Ephesians and 1 Peter is much closer. The letters to the Ephesians, unlike most of the Pauline Epistles, does
not begin with an act of thanksgiving but with a hymn similar, even in its wording, to that which opens I Peter. Besides, both letters agree in certain typical expressions and in the description of the duties of the dominion of Christ. He would, therefore, have given this exhortation to combat the devil. With the majority of critics, we maintain the relationship between these letters to be literary. But I Peter was written last and consequently depends on the Epistle to the Ephesians; for instance, it alludes already to the person of John the Baptist. Sylvanus, St. Paul's faithful companion, was St. Peter's secretary (I Peter, v, 12), and it is but natural that he should make use of a letter, recently written by St. Paul, on questions analogous to those which he himself had to treat, especially as, according to us, those addressed in both these Epistles are, for the greater part, identical (cf. I Peter, i, 1).

The attacks made upon the authenticity of the Epistle to the Ephesians have been based mainly on its similarity to the Epistle to the Colossians, although some have maintained that the latter depends upon the former (Mayerhoff). In the opinion of Hitzig and Holtzmann, a forger living early in the second century and already imbued with Gnosticism used an authentic letter, written by Paul to the Colossians against the Jews, as the basis of his work of composition of the Epistle to the Ephesians, in conformity to which he himself subsequently revised the letter to the Colossians, giving it the form it has in the canon. De Wette and Ewald looked upon the Epistle to the Ephesians as a verbose amplification of the uncontroversial parts of the letter to the Colossians. However, it is only necessary to read first one of these documents and then the other, in order to see how exaggerated is this view. Von Soden finds a great difference between the two letters but nevertheless holds that several sections of the Epistle to the Ephesians bear a similarity to those Paraphrase of passages from the letter to the Colossians (Eph., iii, 1–9 and Col. i, 23–27; Eph., v, 21–21, 9 and Col., iii, 18–iv, 1) and that still more frequently the later author follows a purely mechanical process by taking a single verse from the letter to the Colossians and using it to introduce and conclude, and serve as a frame, so to speak, for a statement of his own. Thus, he maintains that in Eph., iv, 25–21, the first words of verse 8 of Col. iii, have served as an introduction (Eph., iv, 25) and the last words of the same verse as a conclusion (Eph., iv, 29). The epistle to the Colossians could not be attributed to the Apostle himself. But, neither are we justified in ascribing them to the author of the Epistle to the Ephesians. For instance, the duties of husband and wife are well set forth in Col., iii, 18; but in these verses there is no comparison whatever between Christian marriage and that union of Christ with His Church such as characterizes the same exhortation in Eph., v, 22 sq.; consequently, it would be very arbitrary to maintain the latter text to be a vulgar paraphrase of the former. In comparing the text quoted, the phenomenon of Framing, to which Von Soden called attention, can be verified in a single passage (Eph., iv, 2–16, where verse 2 resembles Col., iii, 12 sq. and where verses 15, 16, are like Col., ii, 19). In fact, throughout his entire exposition, the author of the Epistle to the Ephesians is constantly repeating ideas and even particular expressions that occur in the letter to the Colossians, and yet neither a servile imitation nor any one of the well-known offences to which plagiarists are liable, can be proved against him.

Moreover, it is chiefly in their hortatory part that the two letters remind us of each other alike and this is only natural if, at intervals of a few days or hours, the same author had to remind two different circles of readers of the same common duties of the Christian life.

In the dogmatic part of these two Epistles there is a change of subject, treated with a different emphasis and in another tone. In the one instance he speaks of a hymn running through three chapters and celebrating the call of both Jews and Gentiles and the union of all in the Church of Christ; and in the other, an exposition of Christ's dignity and of the adequacy of the Law to the Kingdom of God. His aim is not to produce, as in the former case, a dedication service, as also thanksgiving and especially prayers for those readers who are liable to misunderstand this doctrine. However, these two objects, Christ and the Church, are closely akin. Besides, if in his letter to the Ephesians, St. Paul reproduces the ideas set forth in that to the Colossians, it is certainly less astonishing than to find a like phenomenon in the Epistles to the Galatians and to the Romans, as it is very natural that the characteristic expressions used by the Apostle in the Epistle to the Colossians should appear in the letter to the Ephesians, as they were written at the same time. In fact it has been remarked that he is prone to repeat typical expressions he has once coined (cf. Zahn, Einleitung, I, p. 363 sq.). Briefly, we conclude with Sabatier that these two letters come to us from one and the same author, who, when writing the one, had the other in mind and, when composing the second, had not forgotten the first. The vague allusions made in the Epistle to the Ephesians to some of the doctrinal questions treated in the Epistle to the Colossians, can be accounted for in this manner. The latter are not, as has been never proposed by those to whom the former Epistle was addressed.

(2) Difficulties Arising from the Form and Doctrine.—The denial of the Pauline authenticity of the Epistle to the Ephesians is based on the special characteristics of the Epistle from the viewpoint of style as well as of doctrine, and, while differing from those of the great Pauline Epistles, these characteristics although more marked, resemble those of the letter to the Colossians. But we have already dwelt upon them at sufficient length.

The circumstances under which the Apostle must have written the Epistle to the Ephesians seem to account for the development of the doctrine and the remarkable change of style. During his two years' captivity in Cæsarea, Paul could not exercise his Apostolic functions, and in Rome, although allowed more liberty, he could not preach the Gospel outside of the house in which he was held prisoner. Hence he must have made up for his want of external activity by a more profound meditation on his Gospel. The theology of justification by faith, the conditions essential to salvation, he had already brought to perfection, having systematized it in the Epistle to the Romans and, although keeping it in view, he did not require to develop it any further. In his Epistle to the Romans (vii, xii, 25 sq.), he had come to an investigation of the eternal counsels of Providence concerning the salvation of men and had expounded, as it were, a philosophy of the religious history of mankind of which Christ was the centre, as indeed He had always been the central object of St. Paul's faith. Thus, it was on Christ Himself that the solitary meditations of the Apostle were concentrated; in the quiet of his prison he was to develop, by dint of personal intellectual labour and with the aid of new revelations, this first revelation received when "it pleased God to reveal His Son in him". He was, moreover, urged by the news brought him from time to time by some of his disciples, as, for instance, by Epaphras, that, in certain churches, errors were being propagated which tended to lessen the rôle and the dignity of Christ, by setting up against Him other intermediaries in the work of salvation. On the other hand he was desired from the faithful and having no longer to travel constantly from one church to another, the Apostle was able to embrace in one sweeping glance all the Christians scattered throughout the world. While he regarded the context of the statement of Colossians 1:28, in its unity, comprised the world, it was one
universal Church of Christ, the fulfilment of the mys-
terious decrees revealed to him, the Church in which it had been his privilege to bring together Jews and Gentiles, that presented itself to him for contemplation.

These subjects of habitual meditation are naturally introduced in the letters that he had to write at that time. To the Colossians he speaks of Christ's dig-
ity; to the Ephesians, and we have seen why, the unity of the Church. But in these Epistles, Paul addresses those who are unknown to him; be no longer needs, as in preceding letters, to combat theo-
ries which undermined the very foundation of the work and to refute enemies who, in their hatred, at-
tended to destroy it. A further occasion to use the serried argumentation with which he not only overthrew the arguments of his ad-
versaries but turned them to the latter's confusion. There is more question of setting forth the sublime considerations with which he is filled than of discus-
sions. Then, ideas so crowd upon him that his pen is overtaxed; his sentences teem with synonyms and qualifying epithets and keep taking on new proposi-
tions, thus losing the sharpness and vigour of contro-
versy and assuming the ample proportions of a hymn of praise. In these letters, Paul's style grows dull and sluggish and the literary composition differs so widely from that of the first Epistles. When writing to the Colossi-
sians he at least had one particular church to deal with and certain errors to refute; whereas, in the Epistle to

the Ephesians, he addressed himself at one and the same time to a group of unknown churches of which he had received but vague information. There was nothing concrete in this and the Apostle was left en-
tirely to himself and to his own meditations. The sug-
gestion is that the special characteristics already in-
dicated in the Epistle to the Colossians appear even more pronounced in that to the Ephesians, particu-
larly in the dogmatic part.

(3) Tradition.—If we thus keep in mind the circum-
stances under which Paul wrote both of these letters, their peculiar character seems no obstacle to their Pauline authenticity. Therefore, the testimony which, in their inscriptions (Col., i, 1; Eph., i, 1), they themselves render to this authenticity and the very ancient tradition which unreservedly attributes them to the Apostle preserve all their force. From the tra-
ditional viewpoint the Epistle to the Ephesians is in the same class as the best attested letters of St. Paul. Used in the First Epistle of St. Peter, in the Epistle of St. Polycarp, in the works of St. Justin, perhaps in the Didache, and perhaps in the Gospels, it seems to have been well known towards the end of the first century. Marcion and St. Irenæus ascribe it to St. Paul and it seems that St. Ignatius, when writing to the Ephes-
sians, had already made use of it as Pauline. It is also to be noted that if the authenticity of this Epis-
tle has been denied by most of the liberal critics since Schleiermacher's day, it is nevertheless conceded by many modern critics, Protestants among them, and held at least as probable by Harnack and Jullicher. In fact, the day seems to be approaching when the whole world will recognize as the work of St. Paul, this Epistle to the Ephesians, of which St. John Chrysostom admired the sublime sentences and doctrines: μακάριός ἡ ἡγγαμάτω

tinue our survey with the latest of the books in which the earlier bibliography is mentioned.

Commonwealth. For an account of the Commonwealth, see Ephesians, Philippi and Colossae (Münzer, 1866); HAMBURG, Der Epheserbrief des hl. Apostel Paulus erklärt (Augsburg, 1907); Eichhorn, Epheserbrief erklärt (Freiburg im Br., 1908); MARDERER, Commentary on the Epistles of Ephesians and Colossians (London, 1868).
but are attested as early as the latter part of the second century by St. Irenaeus (Adv. Haer., III, iii, 4), Polycrates, Bishop of Ephesus (Eusébius, Hist. Eccl., V, xxi), Clement of Alexandria, the "Acta Joannitana," and a little earlier by St. Justin and the Montanists. Byzantine tradition regards the tomb of the Apostle. Another tradition, which may be trustworthy, though less ancient, makes Ephesus the scene of the death of St. Mary Magdalen. On the other hand the opinion that the Blessed Virgin died there rests on no ancient testimony; the often quoted but ambiguous text of the Council of Ephesus (431), means only that there was at that time a church at Ephesus a church of the virgin. (See Rasmey in "Expositor", June, 1905, also his "Seven Cities of Asia"). We learn, moreover, from Eusebius (Hist. Eccl., V, xxv) that the three daughters of the Apostle St. "Philipp were buried at Ephesus.

About 110 St. Ignatius of Antioch, having been grated at Smyrna by messengers of the Church of Ephesus, sent to it one of his seven famous epistles. During the first three hundred years, Antioch was, not to say Antioch, the chief centre of Christianity in Asia Minor. In the year 190 its bishop, St. Polycrates, held a council to consider the paschal controversy and declared himself in favour of the Quartodeciman practice; many in the east held to the same practice in this particular to the practice of all the other Churches. It seems certain that the sixth canon of the Council of Nicaea (325), confirmed for Ephesus its ecclesiastical jurisdiction over the whole "diocese" or civil territory of Asia Minor, i.e. over ten ecclesiastical provinces; at all events, the second canon of the Council ofConstantinople (381) formally recognized this authority. But Constantinople was already claiming the first rank among the Churches of the East and was trying to annex the Churches of Thrace, Asia, and Pontus. Ephesus, the only Church of Asia which made common cause with Alexandria. We therefore find Bishop Memnon of Ephesus siding with St. Cyril at the Third Ecumenical Council, held at Ephesus in 431 in condemnation of Nestorianism, and another bishop, Stephanus supporting Dioscorus at the so-called Robber Council (Laetorici Episcopum) of 449, which approved the heresy of Eutyches. But the resistance of Ephesus was overthrown at the Council of Chalcedon (451), whose famous twenty-eighth canon placed the twenty-eight ecclesiastical provinces of Phrygia superior to the jurisdiction of the Patriarch of Constantinople. Henceforth Ephesus was but the second metropolis of the Patriarchate of Constantinople, nor did it ever recover its former standing, despite a council of 474 in which Paul, the Monophysite Patriarch of Alexandria restored its ancient rights. Egyptian influence was responsible for the hold which Monophysitism gained at Ephesus during the sixth century; the famous ecclesiastical historian, John of Asia, was then one of its bishops. The metropolis of Ephesus in those days ruled over the whole district of Asia Minor, understood Constantine in stripping the city of many works of art to adorn Constantinople, built there a magnificent church consecrated to St. John; this was soon a famous place of pilgrimage.

Ephesus was taken in 655 and 717 by the Arabs. Later it became the capital of the theme of the Thracianae. During the Iconoclastic period two bishops of Ephesus suffered martyrdom, Hypsistus in 735 and Theophilus in the ninth century. In the same year he again restored it, putting to death thirty-eight monks from the monastery of Pilece in Bithynia and other partisans of the holy images. In 899 Leo the Wise transferred the relics of St. Mary Magdalen to Constantinople. The city was captured in 1060 and destroyed by the Seljuk Turks, but was soon reconstructed. It was again sacked in 1422, but rebuilt and restored by the neighbouring hills around the city of St. John. Henceforth it was commonly called Hagios Theologos (the holy theologian, i.e. St. John the Divine), or in Turkish Aya Solouk (to the Greeks the Apostle St. John is "the Theologian"); the Franks called the site Alelot and the Italians Alciatore. In the year 1454 the city was invested by the metropolis, Nicholaus Nezaris, had an important rôle at conferences between the Greeks and the Latins. The city was again plundered by the Turks in the first years of the fourteenth century, then by the Catalonian mercenaries in the pay of the Byzantines, and once more by the Turks. The church of St. John was transformed into a mosque, and the city was ruled by a Turkish ameer, who carried on a little trade with the West, but it could no longer maintain its Greek bishop. A series of Latin bishops governed the see from 1318 to 1411. The ruins of Ephesus was completed by Timur-Leng in 1403 and by nearly a half-century of civil wars among its Turkish masters. When the Council of Florence in 1439 Mark of Ephesus (Marcus Eugenioc) showed himself so brazenly towards the Latins that he was the pretorium to miserable village, all that remained of the great city which Phiny once called ullerum lumen Asia, or the second eye of Asia (Hist. nat., V, xxxix; also Apoc., ii, 5; cf. W. Brockhoff, Ephesus vom vierten christl. Jhd., I, untergang). To-day Aya Solouk, with 7000 inhabitants, all Greeks. It is situated in the casse of Koush Adasi, in the villag of Faldin or Smyrna, about fifty miles from Smyrna, on the Smyrna-Aidan railway. The ruins of Ephesus stand in the marshy and unhealthy plain below the village. There are the remains of the temple of Diana, the theatre, with a capacity of 25,000 spectators, the stadium, the gymnasium, and the "Double Church," probably the ancient cathedral, one aisle of which was dedicated to the Blessed Virgin, while the choir of the other, which the council of 431 and 434 were held. The Greek metropolis resides at Manisa, the ancient Magnesia.
Patriarch of Alexandria and himself, and he worked so well that the letters of convocation were issued by the emperor to all metropolitans on 19 November, some days before the messengers of Cyril arrived. The emperor had no intention of having the council at Alexandria. He wanted to have it at Ephesus, in order to prevent Nestorius from going there, which would have been the natural place for such a council. The Nestorius received the message and was immediately conciliated, and the council was held at Ephesus on 22 June, sixteen days having passed since John had announced his arrival in five or six. It was clear to the majority that this delay was intentional, and they were probably right. Yet it is regrettable that all possible allowance was not made, especially as no news had yet come from Rome.

For Cyril had written to the pope with regard to an important question of procedure. Nestorius had not recanted within the ten days fixed by the pope, and he was consequently treated as excommunicate by the majority of the bishops. The council was hemmed in by the necessity of trying Cyril, although the pope had already condemned him. Or, on the other hand, was he to be merely given the opportunity of explaining or excusing his contumacy? One might have presumed that Pope Celestine, in approving of the council, intended that Nestorius should have a full trial, and in fact this was declared in his letter which was still on the way. But as no reply had come to Cyril, that saint considered that he had no right to treat the pope's sentence as a matter for further discussion, and no doubt had not much wish to use it. Thus, this was hemmed in by necessity. Cyril assumed the presidency both as Patriarch of Alexandria and as filling the place of the most holy and blessed Archbishop of the Roman Church, Celestine, in order to carry out his original commission, which he considered, in the absence of any reply from Rome, to be still in force. In the morning one hundred and sixty bishops were present, and by evening one hundred and ninety-eight had assembled.

The session began by a justification of the decision to delay no longer. Nestorius had been on the previous day invited to attend. He had replied that he would come if he chose. To a second summons, which was now dispatched, he sent a message from his house, which was surrounded with armed men, that he would appear when all the bishops had come together. Indeed only some twenty of the sixty-eight who had demanded a delay had rallied to Cyril, and Nestorius's own suffragans had also stayed away. To a third summons he gave no answer. This attitude corresponds with his original attitude to the ultimatum sent by Cyril. He would not acknowledge Cyril as a judge, and he looked upon the Nestorian bishops as his friends from Antioch as a flagrant injustice.

The session proceeded. The Nicene Creed was read, and then the second letter of Cyril to Nestorius, on which the bishops at Cyril's desire, severely gave their judgment that it was to be allowed. The bishops who had sided with Cyril were the minority of his friends from Antioch as a flagrant injustice.

The journey of thirty days had been lengthened by the death of some horses; he would accomplish the last five or six stages at leisure. But he did not arrive, and it was said that he was making his way to the council. The Nestorians were thus forewarned. Meanwhile the heat was great. Many bishops were ill. Two or three died. Two of John's metropolitans, those of Apamea and Hierapolis, arrived and declared that John did not wish the opening of the synod to be deferred on account of his death. However, these two bishops and Theodoret of Cyrus, with sixty-five others, wrote a memorial addressed to St. Cyril and Juvenal of Jerusalem, begging that the arrival of John should be awaited. Count Candidus arrived, with the imperial decree, and he took the same view. But Cyril and the bishops opened the council on 22 June, sixteen days having passed since John had announced his arrival in five or six. It was clear to the majority that this delay was intentional, and they were probably right. Yet it is regrettable that all possible allowance was not made, especially as no news had yet come from Rome.

For Cyril had written to the pope with regard to an important question of procedure. Nestorius had not recanted within the ten days fixed by the pope, and he was consequently treated as excommunicate by the majority of the bishops. The council was hemmed in by the necessity of trying Cyril, although the pope had already condemned him. Or, on the other hand, was he to be merely given the opportunity of explaining or excusing his contumacy? One might have presumed that Pope Celestine, in approving of the council, intended that Nestorius should have a full trial, and in fact this was declared in his letter which was still on the way. But as no reply had come to Cyril, that saint considered that he had no right to treat the pope's sentence as a matter for further discussion, and no doubt had not much wish to use it. Thus, this was hemmed in by necessity. Cyril assumed the presidency both as Patriarch of Alexandria and as filling the place of the most holy and blessed Archbishop of the Roman Church, Celestine, in order to carry out his original commission, which he considered, in the absence of any reply from Rome, to be still in force. In the morning one hundred and sixty bishops were present, and by evening one hundred and ninety-eight had assembled. The session began by a justification of the decision to delay no longer. Nestorius had been on the previous day invited to attend. He had replied that he would come if he chose. Indeed only some twenty of the sixty-eight who had demanded a delay had rallied to Cyril, and Nestorius's own suffragans had also stayed away. To a third summons he gave no answer. This attitude corresponds with his original attitude to the ultimatum sent by Cyril. He would not acknowledge Cyril as a judge, and he looked upon the Nestorian bishops as his friends from Antioch as a flagrant injustice. The session proceeded. The Nicene Creed was read, and then the second letter of Cyril to Nestorius, on which the bishops at Cyril's desire, severely gave their judgment that it was to be allowed. The bishops who had sided with Cyril were the minority of his friends from Antioch as a flagrant injustice.
either deny the Godhead [ἐνθρόνιον τοῦ Θεοῦ] of the Only-begotten to have become man, or else admit the same of the Father and of the Holy Ghost." (Nestorius means that the Divine Nature is numerically one—and if Nestorius really said Θεότητον, and not Θεότηται, he was right, and Acacius was wrong.) Acacius further said that he would send to the Pope, and complain that the bishops were creating a disturbance. Before he would speak to them, he held an assembly which he designated "the holy synod." Candidian deplored that he had disapproved of the assembling of the bishops before John's arrival; he had attended the session and read the emperor's letter (of this not a word in the Acts, so Candidian was apparently lying). John accused Memnon of violence, and Cyril of Arian, Apollinarian, and Eunomian heresy. These two were deposed by forty-three bishops present; the members of the council were to be for- given, provided they would condemn the twelve anathematisms of Cyril. This was absurd, for most of these could not be understood in anything but a Catholic sense. But John, who was not a bad man, was in a bad temper. He said in favour of Nestorius at this assembly. The party of Cyril was now complaining of Count Candidian and his soldiers, as the other side did of Memnon and the populace. Both parties sent their report to Rome. The emperor was much distressed at the confusion, and wrote that although he had received a letter from the bishops accepted with acclamation the words of Capreolus against novelty and in praise of ancient faith, and all proceeded to sign the sentence against Nestorius. As the excommunication by St. Celestine was still in force, and as Nestorius had contumaciously refused to answer the threefold summons enjoined by the canons, the sentence was worded as follows:—

The holy synod said: "Since in addition to the rest the most impious Nestorius has neither been willing to obey our citation, nor to receive the most holy and God-fearing bishops whom we sent to him, we have necessarily betaken ourselves to the examination of his impieties; and, having apprehended from his letters and from his writings, and from his recent sayings in this metropolis which have been reported, that his opinions and teachings are impious, we being necessarily impelled thereto both by the canons [for his contumacy] and by the letter [to Cyril] of our most holy father and colleague Celestine, Bishop of the City of Rome, we have arrived at the following grievous sentence against him: Our Lord Jesus Christ, Who has been blasphemed by him, has defined by this holy synod that the same Nestorius is excluded from all episcopal dignity and from every assembly of bishops."

This sentence received 198 signatures, and some more were afterwards added. A brief notification addressed to "the new Judas" was sent to Nestorius. The Coptic Acts tell us that, as he would not receive it, it was affixed to his door. The whole business had been arranged, and the procession of the bishops, with torches and incense, was being when the result was known. The people of Ephesus, full of rejoicing, escorted the fathers to their houses with torches and incense. Count Candidian, on the other hand, had the notice of the deposition torn down, and silenced the cries in the streets. The council wrote at once to the emperor and to the people and clergy of Constantinople, though the Acts had not yet been written out in full. In a letter to the Egyptian bishops in the same city and to the Abbot Dal- matius (the Coptic substitutes Abbot Victor), Cyril asked whether he had received his report. Reports. Sermons were preached by Cyril and his friends, and the people of Ephesus were much excited. Even before this, Nestorius, writing, with ten bishops, to the emperor to complain that the council was to begin without waiting for the Antiochenes and the Westerns, had spoken of the violence of the people, egged on by their bishop Memnon who (so the heretic said) had shut the churches to him and threatened him with death.

Five days after the first session John of Antioch arrived. The party of Cyril sent a deputation to meet him, and was not much lifted up by the encounter. John and the bishops had, it seemed, to do what they could and with what success they might, and complained that the bishops were creating a disturbance. Before he would speak to them, he held an assembly which he designated "the holy synod." Candidian deplored that he had disapproved of the assembling of the bishops before John's arrival; he had attended the session and read the emperor's letter (of this not a word in the Acts, so Candidian was apparently lying). John accused Memnon of violence, and Cyril of Arian, Apollinarian, and Eunomian heresy. These two were deposed by forty-three bishops present; the members of the council were to be forgiven, provided they would condemn the twelve anathematisms of Cyril. This was absurd, for most of these could not be understood in anything but a Catholic sense. But John, who was not a bad man, was in a bad temper. He said in favour of Nestorius at this assembly. The party of Cyril was now complaining of Count Candidian and his soldiers, as the other side did of Memnon and the populace. Both parties sent their report to Rome. The emperor was much distressed at the confusion, and wrote that although he had received a letter from the bishops accepted with acclamation the words of Capreolus against novelty and in praise of ancient faith, and all proceeded to sign the sentence against Nestorius. As the excommunication by St. Celestine was still in force, and as Nestorius had contumaciously refused to answer the threefold summons enjoined by the canons, the sentence was worded as follows:—

The holy synod said: "Since in addition to the rest the most impious Nestorius has neither been willing to obey our citation, nor to receive the most holy and God-fearing bishops whom we sent to him, we have necessarily betaken ourselves to the examination of his impieties; and, having apprehended from his letters and from his writings, and from his recent sayings in this metropolis which have been reported, that his opinions and teachings are impious, we being necessarily impelled thereto both by the canons [for his contumacy] and by the letter [to Cyril] of our most holy father and colleague Celestine, Bishop of the City of Rome, we have arrived at the following grievous sentence against him: Our Lord Jesus Christ, Who has been blasphemed by him, has defined by this holy synod that the same Nestorius is excluded from all episcopal dignity and from every assembly of bishops."

This sentence received 198 signatures, and some more were afterwards added. A brief notification addressed to "the new Judas" was sent to Nestorius. The Coptic Acts tell us that, as he would not receive it, it was affixed to his door. The whole business had been arranged, and the procession of the bishops, with torches and incense, was being when the result was known. The people of Ephesus, full of rejoicing, escorted the fathers to their houses with torches and incense. Count Candidian, on the other hand, had the notice of the deposition torn down, and silenced the cries in the streets. The council wrote at once to the emperor and to the people and clergy of Constantinople, though the Acts had not yet been written out in full. In a letter to the Egyptian bishops in the same city and to the Abbot Dal- matius (the Coptic substitutes Abbot Victor), Cyril asked whether he had received his report. Reports. Sermons were preached by Cyril and his friends, and the people of Ephesus were much excited. Even before this, Nestorius, writing, with ten bishops, to the emperor to complain that the council was to begin without waiting for the Antiochenes and the
the head of the Faith and of the Apostles." The Metropolitan of Ancyrza declared that God had shown the justice of the synod's sentence by the coming of St. John, the legate and of the legates. The session closed with the reading of the pope's letter to the emperor.

On the following day, 11 July, the third session took place. The legates had read the Acts of the first session and now demanded only that the condemnation of Nestorius should be formally read in their presence. When this had been done, the three legates severally pronounced a confirmation in the pope's name. The exordium of the speech of Philip is celebrated: "It is doubtful to none, nay it has been known of all ages and of all peoples and countries, that the only prince and head of the Apostles, the column of the Faith, the foundation of the Catholic Church, received from our Lord Jesus Christ, the Saviour and Redeemer of the human race, the keys of the Kingdom, and that to him was given the power of binding and loosing sins, who until this day and for ever lives and judges in his successors. His successor in order and his representative, our holy and most blessed Pope Celestine . . ." It was with words such as these before their eyes that Greek Fathers and council of the Arch of Ephesus celebrated. The Act of Celestine and Cyril". A translation of these speeches was read, for Cyril then rose and said that the synod had understood them clearly; and now the Acts of all three sessions must be presented to the legates for their signature. Arcadius replied that they were of course willing. The synod ordered that the Acts should be set before them, and they signed them. A letter was sent to the emperor, telling him how St. Celestine had held a synod at Rome and had sent his legates, representing himself and the whole of the West. The whole world has therefore agreed; Theodosius should allow the bishops to go home, for many suffering from being at Ephesus, and their dioceses also must suffer. Only a few friends of Nestorius held out against the world's judgment. A new bishop must be appointed for Constantinople.

On 16 July a more solemn session was held, like the first, in the cathedral of the Theotokos. Cyril and Memnon presented a written protest against the concilium of John of Antioch. He was cited to appear, but would not even admit the envoys. Next day the synod was held in the absence of John. John had set up a placard in the city accusing the synod of the Apollinarian heresy. He is again cited, and this is counted as the third canonical summons. He would pay no attention. In consequence the council suspended and excommunicated him, together with thirty-four bishops of his church, but refrained from deposing him. Some of John's party had already deserted him, and he had gained only a few. In the letters to the emperor and the pope which were then dispatched, the synod described itself as now consisting of two hundred and ten bishops. The long letter to Celestine gives a full account of the council, and mentions that the pope's decrees against the Pelagians had been read and confirmed. At the end of the sixth session, which dealt only with the case of two Nestorrian priests, was made the famous declaration that those must produce or compose any other creed than (repeat, proter, "beyond" ? contrary to ?) the Nicene, and that anyone who should propose any such to pagans, Jews, or heretics, who wished to be converted, should be deposed if a bishop or cleric, or an assembly. This declaration became later a fruitful source of objections to the decrees of later synods and to the addition of the filioque to the so-called Constantinopolitan Creed; but that creed itself would be abolished by this decree if it is taken to mean only of second class, with Pamphylia and Thrace which were treated by the council, which are not found in the Acts. St. Leo tells us that Cyril reported to the pope the synod by which Juvenal of Jerusalem tried to Ephesus to carve himself a patriarchate out of that of Antioch, in which he was three times to be excommunicated. He was to summon later, at Chalcedon. In the seventh and last session on 31 July (it seems) the bishops of Cyprus persuaded the council to approve their claim of having been anciently and rightly exempt from the jurisdiction of Antioch. Six canons were also passed against the adherents and supporters of Nestorius. Twenty years later, at Chalcedon. The people of Constantinople rejoiced at the deposition of their heretical bishop. But Count Candian and his troops were on the side of Nestorius, whose friend, Count Ireneus, was also at Ephesus, working for him. The emperor had always championed Nestorius, but had been somewhat shaken by the reports of the council. Communication with Constantinople was impeded both by the friends of Nestorius there and by Candian at Ephesus. A letter was taken to Constantinople at last in a hollow log of a tree, by a messengers celebrated church.
Ephesus, Robber Council of (Latrocinium).—

The Acts of the first session of this synod were read at the Council of Chalcedon, 451, and have thus been preserved to us. The remainder of the Acts (the first session being wanting) are known only through a Syriac translation by a Monophysite monk, published from the British Museum MS. Addit. 14,530, written in the year 555. On the events which preceded the opening of the council, 8 August, 449, see Dioscorus. The emperor had commanded it, the pope had agreed. No time had been left for any Western bishops to attend, except a certain Julius of an unknown see, who, together with a Roman priest, Renatus (he died on the way), and the deacon Hilarus, afterwards pope, represented St. Leo. The Emperor Theodosius II gave to Dioscorus, Patriarch of Alexandria, the presidency —τὴν αὐτοκράρων καὶ τὰ πρωτεία. The legate Julis is mentioned next, but when this name was read at Chalcedon, the bishops cried: "He was cast out. No one represented Leo." Next in order was Juvenal of Jerusalem, above both the Patriarchs of Antioch,Domnus, and St. Flavian, of Constantinople. The two bishops present were 127, with eight representatives of absent bishops, and lastly the deacon Hilarus with his deputy Dulcius. The question before the council by order of the emperor was whether St. Flavian, in a synod held by him at Constantinople in November, 448, had justly deposed and excommunicated the Archimandrite Eutyches for refusing to admit two natures in Christ. Consequently Flavian and six other bishops, who had been present at his synod, were not received; that they called the first session of convocation by Dioscorus was read, and then the Roman legates explained that it would have been contrary to custom for the pope to be present in person, but he had sent a letter by them. In this letter St. Leo had appealed to his dogmatic letter to Flavian, which he intended to be read at the council and accepted by it as a rule of faith. But Dioscorus took care not to have it read, and instead of it a letter of the emperor, ordering the presence at the council of the fanatical anti-Nestorian monk Bursasmas, was presented. The synod burst into fury with Dioscorus. Dioscorus declared that this was not a matter for inquiry: they had only to inquire into the recent doings. He was acclamed as a guardian of the Faith. Eutyches then was introduced, and declared that he held the Nicene Creed, to which nothing could be added, and from which nothing could be taken away. He had been condemned by Flavian for a mere slip of the tongue, though he had declared that he held the faith of Nicea and Ephesus, and had appealed to the present council. He had been in danger of his life. He now asked for judgment against the calumnies which had been brought against him.

The acuser of Eutyches, Bishop Eusebius of Doryleum, was not allowed to be heard. The bishops agreed that the Acts of the condemnation of Eutyches, at a council held at Constantinople in November, 449, should be read, and the legates asked that the pope's letter might be heard first. Eutyches interrupted with the complaint that he did not trust the legates; they had been to dine with Flavian, and had received much courtesy. Dioscorus decided that the Acts of the synod of Antioch, repeating the words of the letter of St. Leo, was never read at all. The Acts were then read in full (for an account of them see Eutyches) and also the account of an inquiry made on 13 April into the allegation of Eutyches that the synodal Acts had been incorrectly taken down, and of another inquiry on 27 April into the accusation made by Eutyches that Flavian had drawn up the sentence against him beforehand. While the trial was being related, cries arose of belief in one nature, that two natures meant Nestorianism, of "Burn Eusebius", and so forth. St. Flavian rose to complain that no opportunity was given them of defending themselves. A petition was read from the monastery of Eutyches, which had been communicated by Flavian. On the assertion of the monks that they did not agree in all things with Eutyches, and with the holy Fathers, the synod absolved them. Next in order to establish the true Faith an extract was read from the Acts of the first session of the Council of Ephesus of 431. Many of the bishops, and also the deacon Hilarus, expressed their assent, some adding that nothing beyond this faith could be allowed. Dioscorus then spoke, declaring that it followed that Flavian and Eusebius must be deposed. No less than 101 bishops gave their votes orally, and the signatures of all the 135 bishops follow in the Acts. Flavian and Eusebius had previously interposed an appeal to the pope and to a council under his authority. Their formal letters of appeal had been published by the Amelius. The synod given at Chalcedon is conclusive that the account in the Acts of this final scene of the session is not to be trusted. The secretaries of the bishops had been violently prevented from taking notes. It was declared that both Bursasmas and Dioscorus struck the first session, though this may be exaggeration. But we must believe that many bishops threw themselves on their knees to beg Dioscorus for mercy to Flavian, that the military were introduced and also Alexandrian Parabolani, and that a scene of violence took place, and one bishop was killed, and others were only saved through the timely fear of some who signed a blank paper, and that others did not sign at all, the names being afterwards filled in of all who were actually present.

The papal legate Hilarus uttered a single word in Latin, Contra dictur, annulling the sentence in the pope's name. He then escaped with difficulty. Flavian was deported into exile, and died a few days later in Lydia. No more of the Acts was read at Chalcedon. But we learn from Theodoret, Evagrius, and others, that the Robber Council deposed Theodoret himself, but not Domnus, and that the bishop of the city where the Chalcedonian Acts break off. Of the first session only the formal documents, letters of the emperor, prayers of Eutyches, are known to be preserved in Syriac, though not in the same MS. It is evident that the Monophysite editor thoroughly disapproved of the proceedings of the Chalcedonian Acts, and purposely omitted them, not because of the high-handed proceedings of Dioscorus, but because the Monophysites as a general rule condemned Eutyches as a heretic, and did not wish to remember his rehabilitation by a council which they considered to be ecumenical.

In the next session, according to the Syriac Acts, 113 were present, including Bursasmas. Nine new names appear. The legates were sent for, as they did not appear—but only the notary Dulcius could be found, and he was unwilling. The legates had shaken off the dust of their feet against the assembly. It was a charge against Dioscorus at Chalcedon that he "had held an (ecumenical) council without the Apostolic See, which was never allowed". This manifestly refers to his having continued the council after the deposition of the legates. Following the death of Domnus, Bishop of Edessa. This famous champion of the Antiochian party had been accused of crimes before Domnus, Bishop of Antioch, and had been acquitted, soon after Easter, 448. His accusers had gone to Constantinople and obtained a new trial from the emperor. The bishops Photius of Tyre, Eupathanus of
Berytus, and Uraniius of Imeria were to examine the matter. These bishops met at Tyre, removed to Berytus, and returned to Tyre, and eventually acquitted Ibas. He was also excommunicated by the Pope, together with Daniel, Bishop of Harran, and John of Theodosiopolis. This was in February, 449. The bishops had been too kind, Cheresa, Governor of Osroene was now ordered to go to Edessa to make a new inquiry. He was received by the people on 12 April with shouts (the church was full) of the victory won (we were given three pages of his report), in honour of the emperor, the governor, the late Bishop Rabbula, and against Nestorius and Ibas. Cheresa sent to Constantinople, with two letters of his own, an elaborate report, detailing all the accusations, and urging the see to take action against Ibas. The emperor ordered that a new bishop should be chosen. It was this report, which provided a history of the whole affair, that was now read at length by order of Dioscorus. When the famous letter of Ibas to Marie was read, cries arose such as—"These things pollute our ears... Cyril is immortal... Let Ibas be burnt in the midst of the city of Antioch... Exile is of no use. Nestorius and Ibas should be burnt together!" A final indictment was made in a speech by a priest of Edessa named Eulogius. Sentence was then brought in against Ibas, in deposition, by excommunication, without any suggestion that he ought to be cited or that his defence ought to be heard. It is scandalous to find the three bishops who had acquitted him but a few months previously, only anxious to show all the accusations. They ought as much to pray that what had been proved at Tyre and Berytus. In the next case, that of Ibas's nephew, Daniel of Harran, they declared that at Tyre they had clearly seen his guilt, and had only acquitted him because of his voluntary renunciation. He was quickly deposed by the agreement of all the council. He was, of course, not present and could not defend himself.

It was next the turn of Ireneus, who as an influential layman at the former Council of Ephesus had shown much favour to Nestorius. He had later become Bishop of Tyre, but the emperor had deposed him in 445, and the miserable Photius, already mentioned, had succeeded him. The synod made no difficulty in ratifying the deposition of Ireneus as a bigamist and a blasphemer. Aquilinus, Bishop of Byblus, because he had been consecrated by Ireneus, was also deposed. Flus his friend, was one of the accusers. Sophonius, Bishop of Tella, was a cousin of Ibas. He was therefore accused of magic, and his case was reserved for the judgment of the new Bishop of Edessa—a surprisingly mild decision. The council turned to higher game. The great Theodoret, whom they had excommunicated, was deposed by them in the presence of the pen were the terror of the party of Dioscorus, had been confined by the emperor within his own diocese in the preceding year, to prevent his preaching at Antioch; and Theodosius had twice written to prevent his coming to Ephesus to the council. It was not difficult to find reasons for deposing him in his absence. Far as he was from being a Nestorian, he had been a friend of Nestorius, and for more than three years (431-4) the most redoubtable antagonist of St. Cyril. But the two great theologians had come to terms and had celebrated their agreement with great joy. Theodoret had tried to make friends with Dioscorus, but his advances had been rejected with scorn. A monk of Antioch now brought forward a volume of extracts from the works of Theodoret. First was read Theodoret's fine letter to the monks of the East (see Manis, V, 1023), then some extracts from a lost "Apology for Dioscorus and Theodore" — the very name of this work sufficed in the eyes of the council for a condemnation to be pronounced. Dioscorus pronounced the sentence of deposition and excommunication.

When Theodoret in his reply to the accusations, revealed that he had heard of this absurd sentence on an absent man against whose repudiation not a word was uttered, he at once appealed to the pope in a famous letter (Ep. cxiii). He wrote also to the legate Renatus (Ep. cvxi), being unaware that he was dead. The council had a yet bolder task before it. It had to pronounce, in Domninus' absence, in the first session to the acquittal of Eutyches. But he refused, on the plea of sickness, to appear any more at the council. He seems to have been disgorged, or terrified, or both, at the tyranny exercised by Dioscorus. The council had sent him an account of their decisions, and a copy of the Act, in which he agreed to all the sentences that had been given and regretted that his health made his attendance impossible.

It is almost incredible that immediately after receiving this missive, the council proceeded to hear a number of petitions from monks and priests against Domninus himself. He was accused of friendship with Theodoret and Flavian, of Nestorianism, of altering the form of the Sacrament of Baptism, of intruding an immorality into Emessa, of having been uncanonically appointed himself, and in fact of being an enemy of Dioscorus. Several pages of the MS. are unfortunately lost; but it does not seem that the unfortunate patriarch was cited to appear, or given a chance of defending himself. The bishops shouted that he was worse than a dog. He was deposed from the council, and with this final act of injustice the Acts come to an end. The council wrote the usual letter to the emperor (see Perry, trans., p. 431), who was charmed with the result of the council and confirmed it with a letter (Manis, VII, 455, and Perry, p. 434). Dioscorus sent an encyclical to the bishops of the East, with a form of adhesion to the council which they were to sign (Perry, p. 375). He went to Constantinople and appointed his secretary Anatolius bishop of that great see. Juvenal of Jerusalem had become his tool, he had to act with Antioch and Constantinople; but one powerful adversary yet remained. He halted at Nicea, and with ten bishops (no doubt the ten Egyptian metropolitans whom he had brought to Ephesus), "in addition to all his other crimes he extended his madness against him who had been entrusted with the guardianship of the Vine by the Saviour"—in the words of the bishops at Chaledon—and excommunicated the pope himself.

Meanwhile St. Leo had received the appeals of Theodoret and Flavian, and others addressed by a group of clergy of Antioch and Constantinople; but one powerful adversary yet remained. He halted at Nicea, and with ten bishops (no doubt the ten Egyptian metropolitans whom he had brought to Ephesus), "in addition to all his other crimes he extended his madness against him who had been entrusted with the guardianship of the Vine by the Saviour"—in the words of the bishops at Chaledon—and excommunicated the pope himself.

Meanwhile St. Leo had received the appeals of Theodoret and Flavian, and others addressed by a group of clergy of Antioch and Constantinople; but one powerful adversary yet remained. He halted at Nicea, and with ten bishops (no doubt the ten Egyptian metropolitans whom he had brought to Ephesus), "in addition to all his other crimes he extended his madness against him who had been entrusted with the guardianship of the Vine by the Saviour"—in the words of the bishops at Chaledon—and excommunicated the pope himself.

(For the results of the Robber Council, or Latrocinium,—the name given to it by St. Leo—see Chaledon, Eutyches, and Leo I, Pope).

The Acts of the first session of the council will be found in those of the Council of Chaledon, in Manis, Hardouin, and the other collections. The Syriac Acts were published in the original by PERRI, Scriptorum Syriacorum, v[ol]. 1657). in the Second session of Ephesus from Syriac MSS. in English and German versions and other literature, see Dioscorus.

JOHN CHAPMAN.
it seems that the Greek form of the story, which is the basis of Symeon Metaphrastes, is the source. The story is this: Decius (249–251) once came to Ephesus to enforce his laws against Christians—a gruesome description of the horrors he made them suffer follows—here he found seven noble young men, named Maximian, Jamblicius, Martin, Claudius, Dionysios, Exakotodimos, and Anas (so De Rossi), who were Christians. The emperor tried them and then gave them a short time for consideration. He came back next day to Ephesus. The seven gave their property to the poor, took a few coins only with them and went into a cave on Mount Anchiloe to pray and prepare for death. Decius came back after a journey and inquired after these seven men. They heard of his return and then, as they said their last prayer in the cave before giving themselves up, fell asleep. The emperor told his soldiers to find them, and when found asleep in the cave he ordered it to be closed up with huge stones and sealed; thus they were buried alive. But a Christian came and wrote on the outside the names of the seven on their stones. Years passed, the empire became Christian, and Theodosius [either the Great (379–395) or the Younger (408–450), Koch, op. cit. in/nra, p. 12] reigned. In his time some heretics denied the resurrection of the body. Wishing to dispute the point, a certain landlord named Adolius had the Sleeper's cave opened, to use it as a cattle-stall. Then they awake, thinking they have slept only one night, and send one of their number (Diomedes) to the city to buy food, that they may eat before they give themselves up. Diomedes comes into Ephesus and tells the usual story of cross-purpose follows. He is amazed to see crosses over churches, and the people cannot understand whence he got his money coined by Decius. Of course at last it comes out that the last thing he knew was Decius's reign; eventually he gets up and the prefect go up to the cave with him, where they find the six others and the inscription. Theodosius is sent for, and the saints tell him their story. Every one rejoices at this proof of the resurrection of the body. The sleepers, having improved the occasion by a long discourse, then die praising God. The emperor wants to build golden tombs for them, but they appear to him in a dream and ask to be buried in the earth in their cave. The cave is adorned with precious stones, a great church built over it, and every year the feast of the Seven Sleepers is celebrated.

Koch (op. cit.) has examined the growth of this story and the spread of the legend of miraculously long sleep. Aristotle (Phys., IV, xi) refers to a similar tale about sleepers at Sarde; there are many more examples from various countries (Koch, pp. 24–40, quotes German, British, Slav, Indian, Jewish, Chinese, and Arabic versions). Frederick Barbarossa and Rip van Winkle are well-known later examples. The Ephesus story is told in the Koran (Sura xviii), and it has had a long history and further developments in Islam (ibid., p. 36), as well as in the Septuagint version of the Old Testament (ib., 153–183). Baroinius was the first to doubt it (Ann. Eccl. in the Acta SS., July, 386, 48); it was then disregarded till modern study of folk-lore gave it an honoured place again as the classical example of a widely spread myth. The Seven Sleepers have feasts in the Byzantine Calendar on 4 August and 22 October; in the Roman Martyrology they are commemorated as Sts. Maximianus, Malchus, Martinianus, Dionysius, Joannes, Serafion, and Constantin on 27 July.

ADRIAN FORTESECU,
and that worn by David, for they call this latter the idolatrous ephod.

The Idolatrous Ephod.—According to Judges, viii, 26 sq., Gideon made an ephod out of part of the spoils taken from the Midianites, their golden earlets, jewels, and golden chain, and the people paid idolatrous worship to this ephod, so that it became a ruin to Gideon and all his house. Some writers, following the Syriac and Arabic versions, have explained this ephod as denoting a gold casing of an oracular image. But there is no other instance of such a figurative meaning of ephod; besides, the Hebrew verb used to express the placing of the ephod on the part of Gideon denotes in Judges, vi, 37, the spreading of the fleece of wool. The opinion that Gideon’s ephod was a costly garment like that of the high-priest, is, therefore, preferable.

A. J. MAAS.

Ephraem (Ephraim, Ephraiem), Saint, b. at Nisibis, then under Roman rule, early in the fourth century; d. June, 373. The name of his father is unknown, but he was a pagan and a priest of the goddess Abnil or Abial. His mother was a native of Nisibis. At an early age he became a Christian, and the world of mystery-tellers by St. James, the famous Bishop of Nisibis, and was baptized at the age of eighteen (or twenty-eight). Thenceforth he became more intimate with the holy bishop, who availed himself of the services of Ephraem to renew the moral life of the citizens of Nisibis, especially during the sieges of 338, 346, and 350. One of his biographers relates that on a certain occasion he cursed from the city walls the Persian hosts, whereupon a cloud of flies and mosquitoes settled on the army of Sapor II and compelled it to withdraw. The advance line of Sapor was checkmated. After a time the menaced Persia, ended, as is well known, in disaster, and his successor, Jovianus, was only too happy to escape from annihilation some remnant of the great army which his predecessor had led across the Euphrates. To accomplish even so much the emperor had to sign a disadvantageous treaty, by the terms of which Rome lost the Eastern provinces conquered at the end of the third century; among the cities retroceded to Persia was Nisibis (363). To escape the cruel persecution that was then raging in Persia, Ephraem, who was a priest, the whole Church of Christian population abandoned Nisibis en masse. Ephraem went with his people, and settled first at Beilt-Garbaya, then at Amid, finally at Edessa, the capital of Osroene, where he spent the remaining ten years of his life, a hermit remarkable for his severe asceticism. Nevertheless he took an interest in all matters that closely concerned the population of Edessa. Several ancient writers say that he was a deacon; as such he could well have been authorized to preach in public. At this time some ten heretical sects were active in Edessa; Ephraem contended vigorously with all of them, notably with the disciples of the illustrious philosopher Baraneses. To this period belongs nearly all his literary work; apart from some poems composed at Nisibis, the rest of his writings—sermons, hymns, exegetical treatises—date from his sojourn at Edessa. It is not improbable that he is one of the chief founders of the theological “School of the Persians”, so called because its first students and original masters were Persian Christian refugees of 363. At his death St. Ephraem was borne without pomp to the cemetery “of the foreigners”. The history of the martyrdom of St. Sergius at Edessa claim to possess his body.

The aforesaid facts represent all that is historically certain concerning the career of Ephraem (see Bouvy, “Les sources historiques de la vie de S. Ephrem,” in “Revue Augustiniennne,” 1903, 155–64). All details added later by Syrian biographers are at best of doubtful value. To this class belong not only the legendary and occasionally puerile traits so dear to Oriental writers, but also others seemingly reliable, e. g. an alleged journey to Egypt with a sojourn of eight years, during which he is said to have confuted publicly the writings of certain Nestorian prelates. The dominations of St. Ephraem and St. Basil are narrated by very reliable authors, e. g. St. Gregory of Nyssa (the Pseudo?) and Sozomen, according to whom the hermit of Edessa, attracted by the great reputation of St. Basil, resolved to visit him at Csesarea. He was warmly received and was ordained deacon by St. Basil; four years later he refused both the priesthood and the episcopate that St. Basil offered him through delegates sent for that purpose to Edessa. Though Ephraem seems to have been quite ignorant of Greek, this meeting with St. Basil is not improbable; some good critics, however, hold the evidence insufficient, and therefore reject it, or at least withhold their adhesion. The life of St. Ephraem, therefore, offers not a few obscure problems; only the general outline of his career is known to us. It is certain, however, that while he lived he was very influential among the Syrian Christians of Edessa, and that his memory was revered by all, Orthodox, Monophysites, and Nestorians. They call him “the sun of the Syrians,” the “column of the Church”, the “light of the Holy Spirit”. More extraordinary still is the homage paid by Greeks who rarely mention Syrian writers. Among the works of St. Gregory of Nyssa (P. G., XLVI, 818) is a sermon (though not acknowledged by some) which is a real panegyric of St. Ephraem. Twenty years after the latter’s death St. Jerome mentions him as follows in his catalogue of illustrious Christians: “Ephraem, deacon of the Church of Edessa, wrote many works [opuscula] in Syriac, and became so famous that his writings are publicly read in some churches after the manner of the Gospels. He is described as the fosterfather of his on the Holy Spirit; though it was only a translation, I recognized in the sublime genius of the man” (De viris illus., c. cxv).

Theodore of Cyrus also praised his poetic genius and theological knowledge (Hist. Eccv., IV, xxvi). Sozomen pretends that Ephraem wrote 3,000,000 verses, and gives the names of some of his disciples, some of whom remained orthodox, while others fell into heresy (Hist. Eccv., III, xvi). From the Syrian and Byzantine Churches the fame of Ephraem spread among all Christians. The Roman Catholics, the Eastern Churches, the Monophysites, the Armenians and synoxaria Greeks and Russians, Jacobites, Chaldeans, Copts, and Armenians honour the holy deacon of Edessa.

Works of St. Ephraem.—The works of this saint are so numerous and important that it is impossible to treat them here in detail. Let it suffice to consider briefly: (1) the text and the principal versions and editions of his writings; (2) his exegetical writings; (3) his poetical writings.

(1) Texts and Principal Versions and Editions.—The Syriac original of Ephraem’s writings is preserved in many manuscripts, one of which dates from the fifth century. Through much transcription, however, his writings, particularly those used in the various liturgies, have suffered no little interpolation. Moreover, many of his exegetical works have perished, or at least have not yet been found in the libraries of the Orient. Numerous versions, however, console us for the loss of the originals. He was still living, or at least not long dead, when the translation of his writings into Greek was begun. Armenian writers seem also to have undertaken the translation of Ephraem’s commentaries. The Mechitarists have edited in part these commentaries and hold the Armenian version as very ancient (fifth century). The Monophysites, it is well known, were wont from an early date to translate and adapt many Syriac works. The writings of Ephraem were eventually translated into Arabic and
Ethiopian (translations as yet unedited). In mediev-

al times some of his minor works were translated
from the Greek into Slavonic and Latin. From these
versions were eventually made French, German, Ital-
ian, and English adaptations of the ascetic writings of
St. Ephraem. The first printed (Latin) edition was
begun by his supporter, the Venetian friar, Savino di
Traversari (St. Ambrose of Camaldoli), and issued
from the press of Bartholomew Guldenbeke of
Sults, in 1475. A far better edition was executed by
Gerhard Vossius (1589–1619), the learned provost
of Tongres, at the request of Gregory XIII. In 1705
Edward Thwaite, edited, from manuscripts in the
Bodleian Library, the Greek text, hitherto known only
in fragments. The Syriac original was unknown in
Europe until the fruitful Oriental voyage (1706–08)
of the Maronite Gabriel Ew, Elias, and especially
Joseph Simon Assemani (1716–17), which resulted in
the discovery of a precious collection of manuscripts
in the Nitrian (Egypt) monastery of Our Lady. These
manuscripts found their way at once to the Vatican
Library. In the first half of the nineteenth century
the British Museum was notably enriched by similar
fortunate discoveries of Lord Frudhol (1828), Curzon
(1832), and Tattam (1839, 1841). All recent editions
of the Syriac original of Ephraem's writings are based
on these manuscripts. In the Bibliothèque Nationale
(Paris) and the Bodleian (Oxford) are a few Syriac
fragments of manuscripts in inverse order. Joseph Simon
Assemani hastened to make the best use of his newly
found manuscripts and proposed at once to Clement
XII a complete edition of the writings of Ephraem in
the Syriac original and the Greek versions, with a new
Latin version of the entire material. He took for his
own share the edition of the Greek text. The Syriac
text was entrusted to the Jesuit Peter Mobarak
(Benedictus), a native Maronite. After the death of
Mobarak, his labours were continued by Stephanus
Eredis Assidius. Finally the monumental edition of
the works of Ephraem appeared at Rome (1732–46)
in six folio volumes. It was completed by the labours
of Overbeck (Oxford, 1863) and Bickell (Carmina
Nisibena, 1866), while other savants edited newly
found fragments (Zingerle, P. Martin, Rubens Duval).
A splendid edition (Mackin, 1882–1902) of the hymns
and sermons of St. Ephraem is owing to the late
Monsignor T. J. Lamy. However, a complete edition
of the vast works of the great Syriac doctor is yet to
be executed.

409

(3) Poetical Writings.—Most of Ephraem's sermons
and exhortations are in verse, though a few sermons
in prose have been preserved. If we put aside his
exegitical writings, the rest of his works may be di-
vided into homilies and hymns. The homilies (Syriac
madrasat, i. e. instructions) offer a greater variety
both of style and rhythm. They were written for the
choir service of nuns, and were destined to be chanted
by them; hence the division into strophes, the last verses
of each strophe being repeated in a kind of refrain.
This refrain is indicated at the beginning of each hymn,
under the manner of an antiphon; there is also an indication of the musical key
in which the hymn should be sung. The following may
serve as an illustration. It is taken from an Epiphany
hymn (ed. Lamy, I., p. 4).—Air: Behold the month:
Refrain: Glory to Thee from Thy flock on the day
of Thy manifestation. Strophe: He has renewed
the heavens, because the foolish ones had adored all
the stars; He has renewed the earth, and the sub-
vested vigour through Adam—A new creation was made by
His cradle! And He Who is all-powerful made straight
both bodies and minds—Refrain: Glory to Thee
etc.—Mgr. Lamy, the learned editor of the hymns,
had collected seventy-five different rhythms and airs. Some
hymns are acrostic, i.e., sometimes each strophe begins
with a letter of the alphabet, as is the case with several
(Hebrew) metrical pieces in the Bible, or again the
first letters of a number of verses or strophes form a
given word. In the latter way Ephraem signed sev-
eral of his hymns. In Syriac poetry Ephraem is a
pioneer of genius, the master often imitated but never
equalled. He is not, however, the inventor of Syriac
poetry; this honour seems due to the aforesaid heretic
Bardeanes of Edessa. Ephraem himself tells us that
in the neighbourhood of Nisibis and Edessa the poems of
this Gnostic and his son Harmonius contributed
ereciptically to the success of their false teachings.
Indeed, if Ephraem entered the same field, it was with
the hope of vanquishing heresy with its own weapons
perfected by himself. The Western writer of the
hymns of Ephraem is the Venetian friar, Savino di
Rabulas, in the harmonised "Ditetassor" of Tatian;
this is also text which serves as the basis of his com-
mentary. His text of the Acts of the Apostles ap-
ppears to have been one closely related to that called
the "Occidental". (J. R. Harris, Fragments of the
Commentary of Ephraem Syrus upon the Dietaetassor", 
London, 1605; J. H. Hill, "A Dissertation on the
Gospel Commentary of St. Ephraem the Syrian", 
Edinburgh, 1896; F. C. Burkitt, "St. Ephraim's
Quotations from the Gospel, Corrected and Arranged", 
in "Texts and Studies", Cambridge, 1901, VII, 2.)

500

Ephraem
remembered that his poems are known to most readers only in versions, from which of course the original rhythm has disappeared—precisely the charm and magic of choice and choice of the harmony, moreover, were not written for private reading, but were meant to be sung by alternating choirs. We have only to compare the Latin psalms as sung in the choir of a Benedictine monastery with the private reading of them by the priest in the recitation of his Breviary. Nor must we forget that literary taste is not everywhere and at all times the same. We are influenced by Greek thought more deeply than we are aware or like to admit. In literature we admire most the qualities of lucidity, sobriety, and varied action. Originality in form holding back and not half—or entirely—repetition of the same thought in slightly altered form; they delight in pretty verbal niceties, in the manifold play of rhythm and accent, rhyme and assonance, and acrostic. In this respect it is scarcely necessary to remind the reader of the well-known peculiarities and qualities of Arabic poetry.

As stated above there is no complete edition of the works of St. Ephraim; nor is there any satisfactory life of the great poet. Mention has been made of the Annales edition of his works: Opera omnia quae extant praesertim latine in saec. tomos duxerunt Medem (Rome, 1891-92); Hymni et Sermones (Mechlin, 1882-98 and 1892). Among the versions it may suffice to mention the Armenian version edited by A. Alaverdzjan, 1883; also Bschmann, Psalms i. Psalms in the Kiirkenzeitschr., e. v. Ephraim; especially Bardemwewer, Patrology, tr. Sharan (Freiburg im Br., 1908), 587-90, excellent appreciation and extensive bibliography; Rücker, Theo l. der Kiirkenz. f. prot. Theol. und Kirche, e. v. Ephraim, Duval, Hist. de la Lit. de l'Antiquite (3d. ed., Paris, 1906); Wissmann, Historia des Ephraims, 160-61; Lamy, Prolegomena zu Vols. I and II of the Hymni et Sermones.

Jérôme Labourt.

Ephraim of Antioch ('Ephatawos'), one of the defenders of the Faith of Chalcedon (451) against the Monophysites, b. at Amida in Mesopotamia; d. in 545. He was Count of the East (Comes Orientis) under Justin I (518-27). In 522 he succeeded Euphrasius as Patriarch of Antioch. Most of his many works are lost. We know the titles of them, however, from Anastasius Sinaita (c. 700), St. John Damascene (d. about 754) or whoever was the author of the "Sacra Parallela", and finally Photius (d. 891). Anastasius III in Lib. LXXXIX, 1184-85, notes passages from a work of Ephraim against Severus, the Monophysite Patriarch of Antioch (512-519). The "Sacra Parallela" give a short passage from "St. Ephraim, Archbishop of Antioch", taken from a work "On John the Grammarian and the Syriac" (Tit. Ivi. e. F. G. L. XXXVI, 6, 2104-2109). Photius (F. G., CIII, 957-1024) speaks of four books by Ephraim. The first consisted of sermons and letters, the second and third contained a treatise against Severus in three parts and an answer to five questions about Genesis addressed to the author by a monk named Anatolius. The fragments quoted by Photius represent practically all that is left of Ephraim's writings. Cardinal Mai was able to add a few more from a MS. in the Vatican library (F. G., LXXVI, loc. cit.). Krumbscheuer (Bys. Litt., loc. cit.) mentions a few other fragments in the Paris library, etc., and considers that Ephraim would deserve the same reputation as Leonius Byzantius if more of his work had been preserved. He had an extensive knowledge of Greek Fathers and followed chiefly St. Cyril of Alexandria in his Christology.

Bardemwewer, Patrology, tr. Sharan (St. Louis, 1898), 581.

Adrian Fortescue.

Epicureanism.—This term has two distinct, though cognate, meanings. In its popular sense, the word stands for a refined and calculating selfishness, seeking not power or fame, but the pleasures of sense, particularly of the palate, and those in company rather than solitude. An epicure is one who is extremely particular in his choice and care of the hours, and, moreover, was not written for private reading, but were meant to be sung by alternating choirs. We have only to compare the Latin psalms as sung in the choir of a Benedictine monastery with the private reading of them by the priest in the recitation of his Breviary. Nor must we forget that literary taste is not everywhere and at all times the same. We are influenced by Greek thought more deeply than we are aware or like to admit. In literature we admire most the qualities of lucidity, sobriety, and varied action. Among the versions it may suffice to mention the Armenian version edited by A. Alaverdzjan, 1883; also Bschmann, Psalms i. Psalms in the Kiirkenzeitschr., e. v. Ephraim; especially Bardemwewer, Patrology, tr. Sharan (Freiburg im Br., 1908), 587-90, excellent appreciation and extensive bibliography; Rücker, Theo l. der Kiirkenz. f. prot. Theol. und Kirche, e. v. Ephraim, Duval, Hist. de la Lit. de l'Antiquite (3d. ed., Paris, 1906); Wissmann, Historia des Ephraims, 160-61; Lamy, Prolegomena zu Vols. I and II of the Hymni et Sermones.

Jérôme Labourt.
those doctrines through which mental trouble, for the most part, arises. "The wise man will accordingly desire "not the longest life, but the most pleasurable. It is for the sake of this condition of permissive pleasure, he asserted that it was desirable. "We cannot live pleasurable without living prudently, gracefully, and justly; and we cannot live prudently, gracefully, and justly, without living pleasurable." In consequence; for "the virtues are by nature unified with a pleasurable life; and a pleasurable life, the addition of the virtues. If we from these new vues, in short, are to be practiced not for their own sake, but solely as a means of pleasure, "as medicine is used for the sake of health." In accordance with this view, he says that "friendship is to be pursued by the wise man only for its sake, but he will begin, as he sows the field in order to reap."

"The wise man will not take part in public affairs;" moreover, "the wise man will not marry and have children." But "the wise man will be humane to his slaves. He will not think all sinners to be equally bad, nor all philanthropists to be justly credited, nor yet, apparently, he will not have any very exacting standard, and will neither believe very much in human virtue, nor be very much surprised at the discovery of human frailty. In this system, "prudence is the source of all pleasures." The defects of this theory of life are obvious. In the first place, as to the matter of fact, experience shows that happiness is not best attained by directly seeking it. The selfish are not more happy, but less so, than the unselfish. In the next place, the theory altogether destroys virtue as virtue, and eliminates the idea and sentiment expressed by the words "ought," "duty," "right," and "wrong." Virtue, indeed, tends to produce the truest and highest pleasure; all such pleasure, so far as it depends upon ourselves. It includes sensation; but if it be true virtue for the sake of the pleasure alone is selfish, not virtuous, and he will never enjoy the pleasure, because he has not the virtue. A similar observation may be made upon the Epicurean theory of friendship. Friendship for the sake of advantage is not true friendship in the proper sense of the word. External actions, apart from affection, cannot constitute friendship; that affection no one can feel merely because he judges it would be advantageous and pleasurable; in fact he cannot know the pleasure until he first tries it. If it were not for the condemnation of patriotism and of the family life, we must pronounce a still severer censure. Such a view of life is the measiest form of selfishness leading in general to vice. Epicurus, perhaps, was better than the average Epicurean, for he did not separate in coldness of heart and meanness of spirit, was extremely well suited to encourage them. If sincerely embraced and consistently carried out, it undermined all that was chivalrous and heroic, and even all that was ordinarily virtuous. Fortitude and justice, as such, ceased to be objects of admiration, and appearance sank into a mere matter of calculation. Even prudence itself, dissociated from all moral quality, became a mere balancing between the pleasures of the present and of the future.

TECHNOL. — Epicurus said that "it was not impotent to deny the gods of the multitude, but it was impotent to think of the gods as the multitude thought;" a sound principle, but one which he wrongly applied, since he got rid of what was true as well as of what was corrupt in the vulgar religion. Fear of the gods was evil to eradicate, as incompatible with true tranquility. As to their nature, the gods are immortal, but material, like every other being. He seems to have held that there was one supreme being; but this god was not the creator, scarcely the orderer, of the universe, the god remaining a part of the All. The All is providence, for an interest in human affairs would be inconsistent with perfect happiness. In short, the gods are magnified Epicurean philosophers.

NATURAL PHILOSOPHY. — The physics of Epicurus are in a general sense atomic. He claimed originality for his system, and was careful that none of his friends should be upon a passage in Hesiod. As he reads in school that all things came from chaos, he asked, What is chaos? — a question which his teacher could not answer. It is generally held, however, that he really learned his atonism from the Democritean philosophy, modifying it in one important respect, for he supposed that the atoms in falling through empty space collide by virtue of a self-determining power, or rather an indetermination owing to which it is possible for them by chance to swerve a little from the vertical direction.

PHILOSOPHY. — In his works, Epicurus followed the view of Empedocles, that, first, all sorts of living things and animals, well or ill organized, were evolved from the earth and those survived which were suited to preserve themselves and reproduce their kind.

ANTHROPOLOGY. — The anthropology of Lucius has been derived by a few from ethics and biology, from Epicurus. According to the Lucretian theory men were originally savage; the primitive condition was one of mutual war; in this condition men were like the wild beasts in strength and cunning; in it the society was formed under the combined evils of anarchy and "social contract." The "golden age" is a dream.

LOGIC. — The Epicurean logic is critical. The test of truth practically is the pleasant and the painful belief. Theoretically, their criterion is sensation. Sensation never is deceptive; the error lies in our judgment. Dreams, the ravings of fever or lunacy, the delirium of the drunkard are true in their own way. The mind has been mingled with the concatenation of anticipations (προσθέτουσι). As when, seeing an object at a distance, one wonders whether it is a man or a tree. These notions are the results left by previous sensations. The notion does not appear to differ from the internal sense of a brute, such as enables a dog, for example, to welcome strangers belonging to the profession of his master, and to bark furiously at a beggar that he has never seen before. The understanding, then, does not differ essentially from the internal senses.

PSYCHOLOGY. — The human soul is material and mortal, being composed of the atoms, resembling those of air or fire, but even more subtle. It is the bodily organism that holds together the atoms composing the soul. Yet the human will is free. "Better were it to accept all the legends of the gods, than to make ourselves slaves to the fate of the natural philosophers." Fatalism, which to minds of a stoical disposition seemed a source of strength, was to those of an Epicurean temper simply a source of unpleasantness and helplessness. The freedom asserted by the Epicureans is not rational freedom in the true sense of the word. For it does not assert the power of choosing the right and the noble in preference to the pleasant. It is little better than physical contingency, and may be described as Casualism. The whole philosophy may well be described in a trenchant phrase of Macaulay as "the silliest and meanest of all systems of natural and moral philosophy."

The Volumina Herculanensia (first series, Naples, 1793-1855; and 2d series, Naples, 1861-1876), I-X, contain many fragments of treated in the Epicurean school. Fragments of Epicurus' Physics, Books II and XI, have been published by Orelli, after Rossi (Leipzig, 1818). See also A Discourse of the Nature of the Hercules Rolla (Oxford, 1888); Bogomils Lehrs, De Vitas et Dogmatismus Philosophorum, X from which almost every quarto in this article is taken. The fragments are especially the edition with notes by Mommsen, 2 vols. (London, 1895-1900); and A. Mommsen, Die Fragmente der Vorsokratiker, vii; Athenaeum, xii; Eleuther. Libri. Good weather makes even greenest woods secondant Epicurus devotia. Sensus, Epist. I, 182; In Beneficia, iv, iii; Cicero, De Fin., v; v, viii; vv, rev. xx, xxxi, xxxii;

Epistle. See Law.

Epiklesis (Gr. ἐπικλήσις; Lat. invocatio) is the name of a prayer that occurs in all Eastern liturgies and also (originally in Western liturgies) after the words of Institution, in which the celebrant prays that God may send down His Holy Spirit to change this bread and wine into the Body and Blood of His Son. This form has given rise to one of the chief controversies between the Eastern and Western Churches, inasmuch as all Eastern schematics now believe that the Epiklesis (or the words of Institution) is the essential form (or at least the essential complement) of the sacrament.

Form of the Epiklesis.—It is certain that all the old liturgies contained such a prayer. For instance, the Liturgy of the Apostolic Constitutions, immediately after the recital of the words of Institution, goes on to the Anamnesis—"Remembering therefore His Passion . . ."—in which occur the words: "Thou, the God who lackest nothing, being pleased with them (the Offerings) for the honour of Thy Christ, and sending down Thy Holy Spirit on this sacrifice, the witness of the Passion of the Lord Jesus, to manifest (δειοντα) this bread as the Body of Thy Christ and this chalice as the Blood of Thy Christ . . ." (Brightman, Liturgies Eastern and Western, I, 21). So the Greek and Syrian Liturgies of St. James (ibid., 54, 88-89), the Alexandrine Liturgies (ibid., 134, 179), the Abyssinian Rite (ibid., 233), those of the Nestorians (ibid., 287) and Armenians (ibid., 439). The Epiklesis in the Byzantine Liturgy of St. John Chrysostom is said thus: "We offer to Thee this reasonable and holy sacrifice, and in this sacrifice, O Lord, we pray Thee, we pray Thee that Thou, sending down Thy Holy Spirit upon us and on these present gifts (the Deacon says: "Bless, Sir, the holy bread") make this bread into the Precious Body of Thy Christ" (Deacon: "Amen, Bless, Sir, the holy chalice"); and that which is in this chalice, the Precious Blood of Thy Christ" (Deacon: "Amen, Bless, Sir, both"); "changing (περασάς) them by Thy Holy Spirit" (Deacon: "Amen, Amen, Amen")." (Brightman, op. cit., I, 386-387.)

It may therefore be doubted that the Western rites at one time contained similar invocations. The Gallican Liturgy has variable forms according to the feast. That for the Circumcision was: "Hac noe, Domine, instituta et praebita rituinae supplicat crum us ut hoc sacrificium sacrupere et beneficere et sanctificare dignaretur: ut fat nobis eucharistia legitimata et tuus Filii tuo nomine et Spiritus sancti, in transformationem corporis a sanguinis domini Dei nostri Iesu Christi unigeniti tui, per quem omnia cress . . ." (Duchesne, Origines du culte chrétien, 2ed. ed., Paris, 1898, p. 268. Taken from St. Didieres, 11, d. 576). There are many allusions to the Gallican Invocation, for instance St. Isidore of Seville (De ecclesi. officii, 1, 15, etc.). The Roman Rite too at one time had an Epiklesis after the words of Institution. Pope Gelasius I (492-496) refers to it plainly: "Quaodoque divini mysterii consecrationem ecelestis Spiritus adveniet, si aedecus . . . criminosis plenus actionibus reprobetur?" ("Epp. Fragm.", vii, in Thiel, "Epp. Rom. Pont.", I, 486.) Watterich (Der Konsekrationsmoment im h. Abendmahl, 1896, pp. 136 sq.) holds that the old Roman rite of invocation. He (p. 166) and Drews (Entstehungsgesch. des Kanons, 1902, p. 28) think that several secrets in the Leonine Sacramentary were originally Invocations (see article CANON OF THE MASS). Of this Invocation we have now only a fragment, with the essential clause left out—"our old Roman es- invocation. to discuss the question. The Greeks maintained that both forms are necessary, that Transubstantiation does not take place till the second one (the Epiklesis) is pronounced, and that the Latin "Supplices te rogamus" is a true Epiklesis having the same effect as theirs. On the other hand the Dominican John of Torquemada (for he is not necessary that the words of Institution alone and at once consecrate (Hardouin, IX, 977 sqq.). The decree of the council eventually defined this ("quod illa verba divina Salvatoris omnem virtutem transsubstantiationis habent", ibid.; see also the decree for the Armenians: "forma humana Christi deo suscepta""). As regards the emperor's 10th ed., no. 698-odd no. 593). Cardinal Bessarion afterwards wrote a book (De Sacramento Eucharistiae et quibus verbis Christi corpus confecit, 1462, in P. G., CLXI, 494-526), to whom Marcus Eugenicus of Epheus answered in a treatise with a long title: "That not only by the sound of the Lord's words are the divine gifts sanctified, but (in addition) by the prayer after these and by the consecration of the priest in the strength of the Holy Ghost."

The official Ecclesiastical view is that the consecration of the Orthodox Church has always been that of the words of Institution to explain that: "Since the demonstrative pronouns: This is my body, and again: This is my blood, do not refer to the Offerings that are present, but to those which Jesus, taking in His hands and blessing, gave to His Disciples. As Paul also says in his words reported in I Cor. 10, 14: 'for as often as ye eat this bread and drink this cup, ye do shew the death of the Lord until He come'." Consequently it is superfluous to show the Offerings (by an elevation) and indeed contrary to the right mind of the Eastern Church of Christ (ed. Venice, 1898, p. 63). This word to seem to imply that Christ's words have no part in the form of the sacrament. On the other hand the Synod of Jerusalem (1672) apparetly requires both words of Institution and Epiklesis: "It (the Holy Eucharist) is instituted by the essential word (μισχόν, σωτηρίαν, i.e. Christ's word) and sanctified by the invocation of the Holy Ghost" (Conf. Doxithem, in Kimmel, op. cit., I, 451), and this seems to be the common theory among the Orthodox in our time. Their arguments for the necessity of the Epiklesis as at any rate the perfecting part of the form are: (1) that the context shows the words of Institution to be used only as a narrative; (2) that otherwise the Epiklesis would be superfluous and deceptive: its very form shows that it consecrates; (3) tradition. The first and second points are not difficult to answer. The words of Institution are certainly used historically by the Orthodox at least in the following form: "... ac dixit: hoc est enim corpus meum;" as well as all Eastern forms, is an historical account of what happened at the Last Supper; but this is no proof that they may not be used effectively and with actual meaning. In the intention of so doing they necessarily would be so used. The second point is already answered above: the succession of time in sacramental prayers necessarily involves nothing but a dramatic representation of what presumably really takes place in one instant (this point is further evolved by Thomas Aquinas and others, E.g. Duns Scotus, etc., ad loc.). As for tradition, in any case it is only a question of Eastern tradition. In the West there has been a great unanimity in speaking of the words of Institution as consecrating, especially since St. Augustine; and the disappearance of any real Epiklesis in our Liturgy confirms this. Among Eastern Fathers there is less unanimity. Some, notably St. Cyril of Jerusalem, refer the consecration to the action of the Holy Ghost in a way that seems to imply that the Epiklesis is the moment (St. Cyril, Cat. xii, 7; xxii, 3; xxiii, 7, 19; Basil, "De Spiritu sancto""); others as St. John Chrysostom (Hom. i. De prod. Iude. 6: "He [Christ] says: This is my body. This word changes the offering"; cf. Hom. ii, in I Tim., i), quite plainly refer Consecration to Christ's words. It should be noted that these Fathers were concerned to defend the Real Presence, not to explain the moment at which it began, that they always thought of the whole Eucharistic prayer as one form, containing both Christ's words and the Invocation, and that a statement that the change takes place by the power of the Holy Ghost necessarily implies that the Epiklesis is the change to this special prayer. For instance St. Irenaeus says that "the bread which receives the Invocation of God is not common bread, but a Eucharist" (Adv. haer., IV, xviii, 5), and, yet immediately before (IV, xviii, 4), he explains that that bread is the Body of Christ over which the eucharistic prayer in the Apostles' Creed is said. The final argument against the Epiklesis as Consecration-form is the account of the Last Supper in the Gospels. We know what Christ did then, and that He told us to do the same thing. There is no hint of an Epiklesis at the Last Supper. It may finally be noted that, in the West too (since the sixteenth century especially), this question aroused some not very important discussion. The Dominican Ambrose Catharinus (sixteenth century) proposed the outer addition to the words of Institution that precedes the recital of Christ's words. This Epiklesis he thinks to be the prayer "Quam oblationem". A few others (including Rengaudot) more or less shared his opinion. Against these Hoppe (op. cit. infra) showed that in any case the Epiklesis always follows the words of Institution and never the words of Oblationem cannot be considered one at all. He and others suggest a mitigated theory, according to which the Invocation (in our case the "Supplices te rogamus") belongs not to the essence of the sacrament, but in some way to its (accidental) integrity. John of Torquemada at the Council of Florence (Hardouin, IX, 976), Suarez (De Sacram., disp. lviii, 3), Bellarmin (De Euch., iv, 14), Lugo (De Euch., disp. xi, 1) explain that the Invocation of the Holy Ghost is made rather that He may sanctify our reception of the Holy Eucharist. This is a theoretical explanation sought to account for the fact of the Epiklesis, without giving up our insistence on the words of Institution as alone consecrating. Historically and according to the text of the old invocations they must rather be looked upon as dramatically postponed expressions of what happens at one moment. There are many like cases in our rite (examples quoted in "The Orth. Eastern Church", loc. cit.).

Adrian Fortescue

Epiphania, a titular see in Cicia Secundus, in Asia Minor, suffragan of Anazarbus. This city is mentioned by many ancient geographers, Ptolemy, Pliny, Stephanus Byzantius, etc. It was formerly called at times Gandoces and Gandos, in the Euche, Epiphania, Epiphaneia, and IV Epiphanes, King of Syria (175-164 a. c.). Cicero once encamped there, and Pompey settled there some of the pirates he had subdued. The city had a special era beginning in a. d. 37 (Barthelmeus, Numismatique ancienne, 247). Seven bishops of Epiphania are known, from 325 to 692 (Lequien, Oriens christ., II, 895). The first, St. Amphon, suffered during the persecution of Dioctetian and was present at the Council of Nicaea (325). Epiphania was the birthplace of George, the usurping Bishop of Alexandria in the fourth century. He was hanged near Euphrasus in the sanjak of Djebeil-Bereket, vilayet of Adana; there are remains of walls, a temple, an acropolis, an aqueduct, and many houses, all built in basilica. Nearby are the celebrated "Cilician Gates" and the battle-
field of Issus (Ramsay, Asia Minor, 388; Allahain, Sisouan, Venice, 1899, 475).

It is the modern Hamah, on the Orontes (about 60,000

inhabitants). Jesuits and native Mariamet sisters care for its Catholic population, who are, for the most part, Greek Melchites. For these and for Catholic Syrians, Hamah is united with Emesa (q. v.).

S. VAILHÉ.

Epiphanius, surnamed Scholasticus, or in modern terms, the Philologist, a translator of various Greek works in the middle of the sixth century of the Christian Era. He was a Bishop of Salamis on the Cangale of Cadiphes. He is also well known for his two works of works of Socrates, Sozomen, and Theoret. We also have his translation of the commentary of Didy-
nus on the Seven Catholic Epistles and that of the "Codex eneausens", a list of the adhesions of the bishops of the East to the decrees of the Council of Chalcedon, a list drawn up in 458 by order of the Em-
peror Leo I. Epiphanius made several additions to it.

He also translated the commentary of Didyimus on the Book of Proverbs and that of Epiphanius of Salamis on the Canticle of Canticles. These works are either lost or as yet undiscovered. "He belongs," says Jullicher, "to the group who, like Dionysius Exiguus, Mutianus, and many unknown saints, satisfied the needs of the Latin church for translations of Greek theolog-
al literature." BARDENSEWER, Patrology (tr. St. Louis, 1906), 532, 557, 636; JULLICHEN in Kalendar. der eisernen Aelterternsmachsechaft (Stuttgart, 1907), VI, 1, 162.

PAUL LEJAY.

Epiphanius of Constantineople, d. 355. Epipha-
nius succeeded John II (518-20) as Patriarch of Con-
stantinople. It was the time of the reaction against Monophysitism in the Eastern Empire that followed the ascension of Justin I (518-27). Justin was Catholic; he let the Henoticon (482) of his predecessor Zeno (474-91) quietly drop, and very soon after his acces-
sion he caused a synod of forty bishops to meet under John II at the capital, in order to proclaim a general acceptance of the decrees of Chalcedon throughout the empire, the restoration of Catholic, and the deposition of Monophysite, bishops (P. C., LXXXVI, I, 756). The same synod reopened the controversy on the Roman See after the schism of Acacius (484-519). The reigning pope was Hormisdas (514-23), and it was on this occasion that he composed his famous formula. On Easter Day, 24 March, 519, the reunion was celebrated by several of the Monophysite leaders fled to Egypt. The papal legates remained at Constantinople till 530. In that year the Patriarch John died, and Epiphanius was elected as his successor. He was then given authority by the pope to enounce all schisms and Monophysite errors and to retract their errors and sign the formula. Epiphanius signed himself in the first place (Mansi, VII, 502 sqq.).

Four letters from Epiphanius to Hormisdas are extant, with the pope's letter to him (P. L., LXXI). In the first, from Hormisdas to Epiphanius (col. 493), the pope complains that he has received as yet no letter and no legate to announce the patriarch's accession. In the second letter (i. e. c.) the pope requires that three repentant Monophysite bishops, Elias, Thomas, and Nicostatros, should be restored to their sees, and he appoints Epiphanius to restore them. Epiphanius then writes to Hormisdas (col. 494-95) to announce his succession to the See of Constantinople, as the pope had demanded. He excuses himself for his delay by explaining the difficult circumstances and the disorder that still remain since the Monophysite troubles, and protests his exceeding desire for communion with the Roman See: "It is my special prayer, most blessed Father, to be united to you and to embrace the Divine

dogmas which were left by the holy Apostles especially to the holy See of Peter, chief of the Apostles, for I am not a man of suspicion, enemies of my kindred." (I. c.) He then draws up a very orthodox profession of faith according to the decrees of Epaphrodes and Chalcedon; he accepts all the dogmatic letters of St. Leo I, and declares that he will never name in his episcopic anyone who is not ordained by the pope. In his second letter (col. 497-99) to Hormisdas, praising the emperor's zeal for the Faith, explains the case of many bishops in Pontus, Asia, and the (civil) "diocese" of the East, whom Epiphanius wishes to receive back into communion now that they have renounced Monophys-
ism, to prove to them that he is not doing them a favor, but he sends to the pope (this letter is dated 520).

Hormisdas answers (col. 505-6), exhorting the patriarch to persevere in reconciling Monophysites and thanking him for his presents. Epiphanius' third letter relates that a number of Eastern bishops have petitioned the emperor for union with Rome (col. 506-7), and the fourth (col. 507) praises Paulinus, whom the pope had sent to Constantinople as his legate. Migne (P. C., LXXXVI, Pt. I, 783-86) gives the text of the con-
-demnation of Severus and Peter of Antioch, made by a synod of Constantinople in the year 537. Assemani (Bibl. Orient., I, 619) gives a list of forty-
five canons drawn up by this same synod. Epipha-
nius was succeeded by Anthimus I.

ADRIAN FORSCUB.

Epiphanius, known also under the following names: 
(1) τό ἑφάνην, or ἡ ἑφανίδη, ἡ ἑφανία (rarely ἡ ἑφανία): though, e. g., in Atheniensis, ἡ ἑφανία occurs); θεοφανία: dies epiphaniarum; festiva declarationis, manifestations; apparitio; ac-
ceptio. (2) ἡ ἱερὰ τῶν φωτών: dies luminis; dies lavacri. (3) φανέρα, Bathphania; etc. (4) Fest-
vus trium regum: whence the Dutch Drie-koningsdag, Danish Helligtvo-kongerag dag; etc. (5) Twelfth Day, Swedish Trettendag; etc.—The meaning of these names will be explained below. The feast was called among the Syrians denho (up-going), a name to be connected with the notion of rising light expressed in Luke, i. 78. The name Epiphanius comes from the Greek Εἰρήνη, the great fair held at that season in Rome; it is diffi-
cult to say how closely the practice then observed of buying all sorts of earthenware images, combined with whistles, and representing some type of Roman life, is to be connected with the current vogue during the December feast of the Saturnalia. For the earthenware or pastry sigillaria then sold all over Rome, see Macrobius; s. i. x, xxiv; n; xli; and Brand, "Pop. Ant.,” 180, 183.

I. Hieronym.—As its name suggests, the Epiphany had its origin in the Eastern Church. There exists indeed a homily of Hippolytus to which (in one MS. only) is affixed the lemma τό τά ἔφανη (not ἑφανία: Kelner); it is throughout addressed to one about to be baptized, and deals only with the Sacrament of Baptism. It was edited by Bonwert and Achelis (Leipzig, 1897); Achelis and others consider it spurious. The first reference about which we can feel certain is in Clement (Strom., i. xxii, 45, in P. G., VIII, 588), who writes: There are those, too, who over-curiously assign to the Birth of Our Saviour not only its year but its day, which they say to be on 25 Pachon (20 May) in the twenty-eighth year of Augustus. But the followers of Basiliades celebrate the day of His Baptism too, spending the previous night in readings. And they say that it was the 15th of the month Tybi of the 15th year of Tiberius Caesar. And some say that it was observed the 11th of the same month." Now, 11 and 15 Tybi are 6 and 10 January, respectively. The question at once arises: did these
Quadragesima de Epiphania (Peregrin. Silvian, ed. Geyer, c. xxvi), leaves us, however, in no doubt as to what she is describing. On the vigil of the feast (5 Jan.) a procession left Jerusalem for Bethlehem and returned in the morning. At the second hour the Epitaphies were held in the splendidly decorated Golgotha church, after which that of the Anastasis was visited. On the second and third days this ceremony was repeated; on the fourth the service was offered on Mount Olivet; on the fifth at the grave of Lazarus at Bethany; on the sixth on Sion; and on the seventh in the church of the Anastasis, on the eighth in that of the Holy Cross. The procession to Bethlehem was nightly repeated. It will be seen, accordingly, that this Epiphany octave had throughout so strong a Nativity colouring as to lead to the exclusion of the commemoration of the Baptism in the year 385 at any rate.

It is, however, by way of actual baptism on this day that the West seems to enter into connexion with the East. St. Chrysostom (Hom. in Bap. Chr. in P. G., XLIX, 363) tells us how the Antiochians used to take home baptismal water consecrated on the night of the festival, and that it remained for a year without corruption. To this day, the blessing of the waters by the dipping into river, sea, or lake of a crucifix, and by other complicated ritual, is a most popular ceremony. The practice is described by Neale ("Holy Eastern Church," Introduction, p. 754; cf. the Greek, Syrian, Coptic, and Russian versions, edited or translated from the original texts by John, Marquess of Bute, and A. Wallis Budge). The people consider that all ailments, spiritual and physical, can be cured by the application of the blessed water. This custom would seem, however, to be originally connected rather with the miracle of Cana than with the Baptism. That baptism on this day was quite usual in the West is proved, however, by the complaint of the pope Damasus (d. 384), that baptisms were being celebrated on the feast of the Epiphany. Pope Siricius, who answered him (P. L., XIII, 1134), identifies the feasts of Natale Christi and of His Apparition, and is very indulgent at the extension of the period for baptisms beyond that of Easter and that of Pentecost. Pope Leo I ("Ep. xvi ad Sicil. episcopos," c. i, in P. L., IV, 701; cf. 696) denounces the practice as an irrationabilis novitias; yet the Council of Gerona (can. iv) condemned it in 517, and Victor Vitensis praises it to it as the "day of days." The African Church (De Persec. Vandal., II, xvii, in P. L., LIV, 216). St. Gregory of Tours, moreover (De gloria martyrum in P. L., LXI, 783; cf. cc. xvii, xix), relates that those who lived near the Jordan bathed in it that day, and that miracles were then wont to take place. St. Jerome (Comm. in Ec., I, on vers 3 in P. L., XXV, 18) definitely asserts that it is for the baptism and opening of the heavens that the dies Epiphaniorum is still venerable and not for the Nativity of Christ in the flesh, for then ascendant est, et non apparuus—"He was hidden, and did not appear."

That the Epiphany was of later introduction in the West than the Christmas festival of 25 December, has been made clear in the article CHRISTMAS. It is not contained in the Philocalian Calendar, while it seems most likely that 25 December the celebrated at Rome before the sermon of Pope Liberius (in St. Ambrose, De virg., iii, in P. L., XVI, 231) which many assign to 25 Dec. 354. St. Augustine clearly observes Oriental associations in the Epiphany feasts: "Righly," says he (Serm. cxxii, 2, in Epiph. Domini, 4, in P. L., XXVIII, 1032), "there was no reason to refuse to celebrate this day with us; for neither do they love unity, nor are they in communion with the Eastern Church, where that star appeared." St. Philastrius (Hær., c. exxli, in P. L., XII, 1279) adds that certain heretics refuse to celebrate this day, not only guarding it, apparently, as a needless duplication of the
Nativity feast, though, adds the saint, it was only after twelve days that Christ "appeared to the Magi in the Temple." The dies epiphaniorum, he says (P. L., XII, 1274), is by some thought to be "the day of the Baptism, or of the Transformation which occurred on the second day after Christmas, as a day of obligation. In ancient times it was kept on 6 January. The reason why our fathers changed the solemnity celebrated on 6 January, and transferred it to 25 December, is that it was the custom of the heathens to celebrate the birthday of the sun on this very day. 25 December, and on it they lighted lights on account of the feast. In these solemnities and festivities the Christians too participated. When, therefore, the teachers observed that the Christians were inclined to this festival, they took counsel and decided that the true birth-feast be kept on this day, and on 6 Jan., the feast of the Epiphany. Simultaneously, the Latin Church, wishing to accord this appointment the custom prevailed of burning lights until the sixth day."

It is simpler to say that, about the time of the diffusion of the December celebration in the East, the Western, Anglo-Saxon, and Frankish Churches retained with its chief characteristics, though attaching overwhelming importance, as time went on, to the apparition to the Magi. Epiphanius indeed had said (loc. cit.): that not only did water in many places turn into wine on 6 Jan., but that whole rivers, and probably the Nile, experienced a similar miracle; nothing of this sort is noted in the West. The Leonine Sacramentary is defective here; but Leo's eight homilies on the Theophania (in P. L., IV, Serm. xxxvi, coll. 234, to Serm. xxxvii, coll. 263) bear almost wholly on the Magi, while Gregory, coll. 495, in his address to the Crusaders, refers to their visit to be the commemoration for which the feast was instituted. Fulgentius (Serm. iv in P. L., LXV, 732) speaks only of the Magi and the Innocents. Augustine's sermons (excitatio-invitatio in P. L., XXXVIII, 204) deal almost exclusively with this manifestation, and the Gelasian Sacramentary (P. L., LXXIV, 1062) exclusively, both on the vigil and the feast. The Gregorian Sacramentary makes great use of Ps. lxiii (A. V. lxxiii), 10 and mentions the three great apparitions in the Canon only. The Apostolus, however, refers to a new manifestation in the vigil, a sacrifice, and a new feast-preface to Baptism alone. The "Missale Vespontinum" (Neale and Forbes, The Anc. Liturgies of the Gallican Church, p. 238) speaks, in the prayer, of Illuminatio, Manifestatio, Declaratio, and composes its Gospel of Matt., iii, 13-17; Luke, iii, 22; and John, i, 1-11, where the Baptist and Cana are dwelt upon. The Magi are referred to on the Circumcision. The Gothic Missal (Neale and Forbes, op. cit., p. 82) mentions the Magi on the vigil, saying that the Nativity, Baptism, and Cana make Christ's Triumphato. All the manifestations are, however, referred to, including (casually) the feeding of the 5000, a popular allusion in the East, whence the name σφαγή. Augustine (Serm. suppl. cxxxvi, i, in P. L., XXXIX, 201) speaks of the raising of Lazarus (cf. day 5 of the Jerusalem ritual) as on an equality with the other manifestations, whence in the East the name Bethphania occurs. Maximus of Turin admits the day to be of three miracles, and speculates (Hom. vii, in epiph., in P. L., LVII, 273) on the historical connexion of date and event. Photius, Silouianus of Nola (Poem. xxxvii, Natal., v, 47, in P. L., LXI) and Sedulius (in P. L., LXXII) all insist on the three manifestations. The Mosarabic Missal refers mainly to the Magi, using of their welcome by Christ the word Accipe, a term of "initiation" common to Mithraists and Christians. In 301, the Council of Sardica (can. 4v), read together with the Mosarabic Missal's Mass in featurio epiphania, makes it clear that a fast at this season was not uncommon even among the orthodox. "Cod. Theod." (II, viii, 20; XXV, v, 2) forbids the circus on this day in the year 400; "Cod. Justi." (III, xii, 6) makes it a fast day in 423. It was marked by cessation of local business in Spain; in Thrace (if we can trust the "Passio S. Philippi" in Ruisart, "Acta", 440, 2) it was kept as early as 304. Kellner quotes the "Testamentum Jesu Christi" (Mainz, 1899) as citing it twice, (I, 25; IV, 67, 101) as a high festival together with Easter and Christmas.

In the present Office, Crucis et Herodes alludes to the three manifestations; in Nocturn i, the first response for the day, the octave, and the Sunday within the octave, deals with the Baptism, as does the second response; the third response, as all those of Nocturn i and iii, is on the Magi. The antiphon to the Benedictus runs: "To-day the Church is joined to her celestial spouse, because in Jordan Christ doth wash her sins; the Magi hasten with gifts to the royal marriage-feast, and the guests exult in the water turned to wine." O God, that didst at the beginning of the world order the confession of thine own Son in the waters of Jordan, and at the end of the world didst set the seal of thine image upon the waters of the Nile. We beseech thee, O Lord, that on the day of thine Epiphany thou wilt have compassion on us, who know not the commandments of thy Fathers, and are not washed with the water of thine only-begotten Son. The antiphon of Second Vespers reads: "We keep our Holy Day adorned with three miracles: to-day a star led the Magi to the crib, to-day wine was made from water at the marriage, to-day in Jordan Christ willed to announce with his baptism the beginning of the new year; and it was a very general custom to announce the date of Easter, and even of other festivals, a practice ordered by many councils, e. g. that of Orléans in 541 (can. 1); Auxerre in 578 and 885 (can. 11), and still observed (Kellner) at Turin, etc. Gelasius finally tells us (Ep. ad episc. Lucan., c. xii, in P. L., LXXII) that the dedication of virgins occurred especially on that day. II. ORIGIN.—The reason for the fixing of this date is impossible to discover. The only tolerable solution is that of Mgr. Duchesne (Orig. Chr., 262), who explains simultaneously the custom of Christmas and the date of 6 January. This is during the period of 24 and 25 December by a backward reckoning from 6 April and 25 March respectively. The Pepysite, or Phrygian Montanists, says Sosomen (Hist. Eccl., VII, xviii, in P. G., LVII, 1473), kept Easter on 6 April; hence (reckoning an exact number of years to the Divine life) Christ's birthday would have fallen on 6 January. But, it may be urged, the first notice we have of the observance of this date, refers to Christ's Baptism. But this (if we may assume the Basilidians, too, to have argued from 6 April) will have fallen on the exact anniversary of the Birth. But why proeminentely celebrate the Baptism? Can it be that the celebration started with those of whatever sect, who held that at the Baptism the Godhead descended upon Christ? On this uncertain territory we had better risk no footstep till fresh evidence, if such there be, is furnished us. Nor is this the place to discuss the legends of the Three Kings, which will be found in the article MAGI.

Epistemology (ἐπιστημονία), knowledge, science, and λόγος, speech, thought, discourse), in a most general way, is that branch of philosophy which is concerned with the value of human knowledge. The name epistemology is of recent origin, but especially since the publication of Ferriére's "Institutes of Metaphysics: the Theory of Knowing and Being" (1854), it has come to be used currently instead of other terms, still sometimes met with, like applied logic, material or
THE ADORATION OF THE MAGI—GHIRLANDAIO
OSPIZIO DEGLI INNOCENTI, FLORENCE
critical logic, critical or initial philosophy, etc. To the same part of philosophy the name 
"epistemology" is given by the authors of some Latin textbooks and by the Louvain School. The exact province of epistemology is as yet but imperfectly determined, the two main sources for the consideration of the subject being the Greek word "episteme". According to this is understood in its more general sense of knowledge, or in its more specific sense of scientific knowledge, epistemology is the theory of the origin, nature and limits of knowledge. (Baldwin, "Dict. of Philos. and Psychology", New York, 1906, v. "Epistemology", I, 336; cf. "Gno-
siologie", I, 414) or "the philosophy of the sciences", and more exactly, "the critical study of the principles, hypotheses and results of the various sciences, designed to determine their logical (not psychological) origin, their value and objective import" ("Bulletin de la société française de Philos."), June, 1903, fasc. no. 7 of the Vocabulaire philosophique, s. v. "Epistemologie", 221; cf. Aug., 1906, fasc. 9 of the Vocabul., s. v. "Gno-
siologie", 332). The Italian usage agrees with the French. According to Raimondi ("Dizionario di scienze precise", Milán, 1903, s. v. "Epistemologia", 226; cf. "Gnosiscologia", 280), epistemology determines the objects of every science by ascertaining their differentiating characteristics, fixes their relations and common principles, the laws of their development and their specific conditions; and to give certain definitions of epistemology in its first and broader meaning, which is the usual one in English, as applying to the theory of knowledge, the German Erkenntnistheorie, i. e. "that part of philosophy which, in the first place, describes, analyses, examines genetically the facts of knowledge as such (psychology of knowledge), and then tests chiefly the value of knowledge and of its various kinds, its conditions of validity, range and limits (critique of knowledge)" (Eisler, Wörterbuech der philos. Begriffe, 2d ed., Berlin, 1904, I, 288). In that sense epistemology does not include certain assumptions of science, but undertakes to test the cognitive faculty itself in all its functions.

HISTORICAL OUTLINE.—The first efforts of Greek thinkers centre around the study of nature. This early philosophy is almost exclusively objective, and supposes, without examining it, the validity of knowledge. Doubt arose later chiefly from the disagreement of philosophers in determining the primordial elements of matter and in discussing the nature and attributes of reality. Pyrrho is the first to seek for certain advantages of ignorance, i.e. the state of constant changing; Democritus endows it with an eternal inherent motion, while Anaxagoras requires an independent and intelligent motor. This led the Sophists to question the possibility of certainty, and prepared the way for their sceptical tendencies. With Socrates, Plato, and Aristotle, who oppose the Sophists, the power of the mind to know truth and reach certainty is vindicated, and the conditions for the validity of knowledge are examined. But epistemological questions are not yet treated on their own merits, nor kept sufficiently distinct from metaphysical and physical inquiries. The philosophy of the Stoics is primarily practical, knowledge being looked upon as a means of right living and as a condition of happiness. As man must act according to guiding principles and rational convictions, human action possesses the possibility of knowledge. Subordinating science to ethics, the Epicureans admit the necessity of knowledge for conduct. And since Epicurean ethics rests essentially on the experience of pleasure and pain, these sensations are ultimately the practical criteria. In the philosophy of Epicurus the relativity of demonstrating everything, the relativity of perception, became again the main arguments of scepticism. Pyrrho claims that the nature of things is unknowable, and consequently we must abstain from judging; herein consist human virtue and happiness. The representatives of the Middle Academy also are sceptical, although in a less radical manner. Thus Arcesilaus, while denying the possibility of certainty and claiming that the duty of a wise man is to refuse his assent to any proposition, admits nevertheless that a degree of probability suffices to form a basis for action; this is the doctrine of the Academic school, which is the first to develop the same doctrine and emphasizes its sceptical aspect. Later sceptics, Eubulides, Agrippa, and Sextus Empiricus, make no essential addition.

The Fathers of the Church are occupied chiefly in defending Christian dogmas, and thus indirectly in showing the harmony of revealed truth with reason. St. Augustine goes farther than any other in the analysis of knowledge and in the inquiry concerning its validity. He wrote a special treatise against the sceptics of the Academy who admitted no certain, but only probable, knowledge. What is probability, he asks in an argument ad hominem, but a likeness of or an approach to truth and certainty? And then how can one speak of probability who does not first admit certainty? On one point at least, the existence of the thinking subject, doubt is impossible. Should a man doubt everything he is in the very fact of doubting or being deceived impelled existence. First logical principles also are certain. Although the senses are not untrustworthy, perfect knowledge is intellectual knowledge based on the data of the senses and rising above the facts of experience. In that sense epistemology is the main epistemological issue is the subjective value of universal ideas. After Plato and Aristotle the Scholastics hold that there is no science of the individual as such. As science deals with general principles and laws, to know how far science is legitimate it is necessary to know first the value of general notions and the relations of the universal to the individual. Does the universal exist in nature, or is it a purely mental product? Such was the question discussed by Porphyry in his introduction to Aristotle’s "Categories". Until the time of Locke, the answers are limited to two, corresponding to the two possibilities mentioned by Porphyry. Hence if one may speak of Realism at that period, it does not seem altogether correct to speak of Conceptualism or Nominalism in the well-defined sense which these terms once had (see De Wulf, Hist. de la phil. médiévale, 2d ed., Louvain, 1905). Later, a distinction is introduced which St. Thomas formulates clearly and which avoids both extremes. The Conceptualism as such does not exist in nature, but only in the mind. Yet it is the root of real activity; it has a basis in really existing things; that is, by their individual and by their common features, existing things offer to the mind a basis for the exercise of its functions of abstraction and generalization. This moderate Realism, as it is called in opposition to Conceptualism on the one side, and, on the other, to exaggerated, or absolute Realism, is also essentially the doctrine of Duns Scotus; and it prevailed in the School till the period of decadence when Nominalism or Terminism was introduced by Ockham and his followers.

In modern times Descartes may be mentioned for his methodical doubt and his solution of it in the "Cogito, ergo sum", i.e. I think, therefore, I exist. But Locke, in his "Essay concerning Human Understanding", is the first to give a clear statement of epistemological problems. To begin with ontological discussions is to begin "at the wrong end" and to take "a wrong course". Hence "it came to my thoughts that... before we set ourselves upon inquiries of the nature, it was necessary to examine our own abilities, and to see what conclusions our understandings were, or were not fitted to deal with" (Epistle to the Reader). Locke's purpose is to discover "the certainty, evidence and extent" of human knowledge (1, 1, 3), to find "the horizon which sets the bounds between the enlightened and dark parts of things..."
between what is, and what is not comprehensible by us” (I, i, 7), and “to search out the bounds between opinion and knowledge” (I, i, 3). One who reflects on the contradictions among men, and the assurance with which they maintain their own opinions, “may perhaps have reason to suspect that either there is no such thing as truth at all, or that mankind hath no sufficient means to attain a certain knowledge of it” (I, i, 2). This investigation will prevent us from undertaking the study of things that are “beyond the reach of our capacities” (I, i, 4) and will be “a cure of skepticism and idleness” (I, i, 6). Such is the problem; among the main points in its solution may be mentioned the following: “We have the knowledge of our own existence by intuition; of the existence of God by demonstration; and of other things by sensation” (IV, ix, 2). The nature of the soul cannot be known, nor does the worthiness of the senses extend to “secondary qualities”; a fortiori, substance and essence are unknowable. These and other conclusions, however, are not reached by a truly epistemological method, i.e., by the criticism of the processes and postulates of knowledge, but almost exclusively by the psychological method of mental analysis. Following in Locke’s footsteps and proceeding farther, Berkeley denied the objectivity even of the data of the senses, and universal and radical phenomenism. Aroused from his “dogmatic slumber” by the skepticisms of Hume, Kant took up again the same problem of the extent, validity, and limits of human knowledge. This is the task of criticism, not the criticism of books and systems, but of reason itself in the whole range of its powers, and in regard to its ability to attain knowledge transcending experience. Briefly stated, the solution reached by Kant is that we know things-as-they-appear, or phenomena, but not the noumena, or the things-in-themselves. The latter, precisely because they are outside the mind, are also outside the possibility of knowledge. Kant’s successors, identifying the theory of being with the theory of knowledge, elaborated his “Critique” into a system of metaphysics in which the very existence of things-in-themselves was denied. After Kant we reach the present period in the evolution of epistemological problems.

Problems.—To-day epistemology stands in the foreground of philosophical sciences. The preceding outline, however, shows that a treatment of it as a distinct investigation and to receive a special systematic treatment. In older philosophers are found partial discussions, not yet co-ordinated and regarding only special aspects of the problem. The problem itself is not formulated before Locke, and no treatise, in fact, has devoted itself to this doctrine. In the beginning of philosophical investigation, as well as in the beginning of cognitive life in the individual, knowledge and certainty are accepted as self-evident facts needing no discussion. Full of confidence in its own powers, reason as one proceeds to the highest metaphysical considerations regarding the nature, essential elements, and origin of matter and of the human soul. But contradiction and conflict of opinions oblige the mind to turn back upon itself, to reflect in order to compare, test, and perhaps revise its conclusions; for contradictions cause doubt, and doubt leads to reflection on the value of knowledge. Throughout history, also, interest in epistemological questions is aroused chiefly after periods characterized by ontological investigations implying a fundamental assumption of knowledge. As the psychology of knowledge develops, problems of epistemology grow more numerous, and their solutions more varied. Originally the choice is almost exclusively between affirming the value of knowledge and denying it. For one who looks upon knowledge as a certainty, and the principles of knowledge cannot be examined apart from its exercise and therefore from the contents of knowledge. Logic in its strict sense is the science of the laws of thought; it is concerned with the form, not matter of knowledge, and in this it differs from epistemology. Therefore, it is the only logical fact, apart from its truth or falsity; it endeavours to deter-
mine the conditions, not only of cognitive, but of all mental processes and to discover their relations and the laws of their sequence. The prophet alludes to this, and comes to the work of psychology in two different directions, and epistemology forms a transition from psychology and logic to metaphysics. The importance of epistemology can hardly be overestimated, since it deals with the ground-work of knowledge itself, and therefore, more fundamentally, of the moral, ethical, and religious principles. At the present time especially it is an indispensable requisite for apologetics, for the very foundations of religion are precisely the doctrines most frequently looked upon as beyond the reach of human intelligence. The history of the threefold use of the value of knowledge has taken place on the ground of apologetics, and for the distinct purpose of testing the value of religious beliefs. If, contrary to the definitions of the Council of the Vatican, the existence of God and some at least of His attributes cannot be demonstrated, it is evident that there is no possibility of revelation and supernatural faith. As Pius X expresses it (Encycl. "Pascendi", 8 Sept., 1907), to confine reason within the field of phenomena and give it no right and no power to go beyond these limits is to make religion a mere matter of recognizing His existence by means of visible things.

... And then all will readily perceive what becomes of natural theology, of the motives of credibility and of external revelation." (See SCPTICISM; CERTITUDE; DOUBTS.)

Epistle (in the Mass). See LESSONS.

Epistle (in Scripture). Lat. epistola; Gr. ἐπιστολή; in Hebrew, at first only the general term meaning "book" was used, then certain transitional expressions signifying "writing", and finally שֵׁמוֹת (of Assyrian or Persian origin), and הַשֵׁמוֹת, are the only words the Hebrew always renders אֲמִסְרֵי. In the study of Biblical epistles, it will be found convenient to distinguish between the Old Testament and the New.

The Old Testament exhibits two periods in its idea of the epistle. The first of these represents the epistle under the general concept of a book or a writing; secondly, it regards the epistle as a distinct literary form. It may be difficult to point out the dividing line between these two periods with accuracy; in general it may be maintained that the Hebrews developed their notion of epistle as a specific form of writing during the time of the Captivity. The first instance of a written Biblical message is found in II K., xi, 14-16, where we are told about David's letter to Joab concerning Urias; there was need for secrecy in this case as well as in that of Jehozabad's order to the ancients and chief men of the city in the matter of Naboth (III K., xi, 8-9), and of Jeph's commands sent to Samaria (IV K., x, 1-6). It may have been in order to avoid the danger of a personal interview that the Prophet Elias (Eliseus) wrote to King Joram concerning impending punishment (I P., xxii, 12-15). The desire to be emphatic and peremptory prompted the letter of the King of Syria to the King of Israel, asking for the cure of Naaman's leprosy (IV K., v, 5-7), and Sennacherib's open letter to Eschatas (IV K., xix, 14; IS., xxxvi, 14; K., xxxi, 12-19), which last is considered by some to have inspired the letter of Merodach Baladan to Eschatas after the latter's recovery from sickness (IV K., xx, 12; IS., xxxix, 1). Similar to the foregoing authoritative letters is the message addressed by Jere- miyas to the exiles in Babylon (Jer., xxxix, 1); the more lenient letter to the prophetic from Babylon to Jerusalem with the purpose of undermining Jeremiyas's authority (ibid., 25, 26).

Thus far, letters are of relatively rare occurrence in the Bible, and they are not regarded as constituting a distinct class of literature. Hereafter they become more frequent, and both their number and their form mark them as a peculiar literary species. Their sub-sequent frequency may be inferred from their repeated occurrence in the Books of Esther, Esdras, and Nehemias: Esth., i, 22; iii, 12; vii, 5 sq.; ix, 20; xxix, 31; I Esdr., i, 1-24; I Esdr., v, 17, 19. Their general name "book" gives way, first, to that of "writing" (II Par., ii, 11; xxi, 12; Esth., iii, 13-14; viii, 10, 13), and then to that of "letter" (II Par., xxx, 1, 8; I Esdr., iv, 7 sq.; v, 5 sq.; Neh., ii, 7-9; vi, 17, 19; Esth., ix, 26, 29). Their form begins to be marked by a formal address and a distinctively epistolary ending. Instances of such explicit addresses may be seen in Esdr., v, 7: "To Darius the king all peace"; Esth., xii, 1: "Artaxerxes the great king who reigneth from India to Ethiopia, to the princes and governors of all the king's provinces, and to the people and the nations of the seven provinces, that are subject to his empire, greeting"; I Mach., xi, 30: "King Demetrius to his brother Jonathan, and to the nation of the Jews, greeting". An instance of an epistolary conclusion occurs in I Mach., xi, 33: "In the year forty and forty-eight, the fifteenth day of the month of Xanthisius"; a similar example may be seen, ibid., 38. But the Old Testament does not furnish us with any model of private correspondence between Hebrews.

The New Testament presents us with a very highly developed form of address. Recent writers on the subject have found it convenient to follow Professor Deissmann in his distinction between the letter and the epistle. The letter is a private and confidential conversation with the addressee, his anticipated answers shaping the course of the writing; the epistle is general in its aim, addresses all whom it may concern, and tends to publication. The letter is a spontaneous product of the writer, the epistle follows the rules of art. If publication be regarded as an essential condition of literature, the letter may be described as a "pre-literary form of self-expression". In order to apply this distinction more effectively to the written messages contained in, or referred to by, the New Testament Books, we shall group the relevant data as pre-Pauline, Pauline, and post-Pauline.

Pre-Pauline.—In Proverbs (xxvi, 2; xxxi, 21) shows that the Jews of Jerusalem sent occasional letters to the synagogues of the Dispersion; Acts, xv, 22-23, gives a parallel instance of a letter written by the Apostles from Jerusalem to the churches in Antioch, Syria, and Cilicia. We may also infer the existence of the New Testament (I Cor., xvi, 3; II Cor., iii, 1; Rom., xvi, 1-2; Acts, xviii, 27) that letters of commendation were of common occurrence. I Cor., vii, 1, informs us that the Corinthian Christians had applied to St. Paul in their difficulties by way of letter.

Pauline.—The Pauline Epistles form a collection which was formerly called διακονίας. They are called "epistles", though that addressed to the Hebrews hardly deserves the name, being really a theological homily. The Epistles mentioned in I Cor., v, 9, and Col., iv, 16, have not been preserved to us; their accidental loss makes us suspect that other Epistles may have perished. The peculiar form and style of the Pauline Epistles are studied in their respective introductions and commentaries; but we may add here that I Tim., ii, 1-24, is addressed in the form of an Epistle; owing to its peculiar style and form, it is supposed by some writers that the Epistle to the Hebrews was not even dictated by the Apostle, but
only expresses his doctrine. Only the three Pastoral Epistles and Philothen are addressed to individuals; all the others are directed to churches, most of which, however, are not named, as in the case of the Pauline Epistles, but after the inspired author. The Epistle of St. James has no final greetings; it was meant for a class, not for persons known to the writer. In 1 John we have a sermon rather than a letter, though its familiarity of language indicates that the readers were known to the writer. The following two Epistles of St. John are real letters in style and form. St. Peter's first Epistle supposes some familiarity with his readers on the part of the writer; this can hardly be said of 1 Peter or of the Epistle of Jude. What has been said sufficiently shows that Professor Diefen- mann's distinction between the artistic epistle and pre-literary letter cannot be applied with strict accuracy. Quite a number of the New-Testament Epistles contain those touches of intimate familiarity which are supposed to be the essential characteristics of the letter.

Epping, Joseph, German astronomer and Asy- riologist, b. at Neuenkirchen, near Rheine in Westfalia, 1 Dec., 1835; d. at Exaten, Holland, 22 Aug., 1894. His parents died while he was very young and he owed his early education to the fostering care of relations. After completing the usual gymnastic course at Rheine and at Münster he matriculated at the academy in Münster, where he devoted himself particularly to mathematics. In 1859 he entered the novitiate of the Society of Jesus in Münster and after his philosophical studies was appointed professor of mathematics and astronomy. In 1863 he left to study in Pisa, Tenerife, and finally in Rome, where he spent the years from 1867 to 1871 in the study of theology and was ordained priest in 1870. García More- no, President of Ecuador, had petitioned the General of the Jesuits in the early seventies for members of the faculty of the Pontifical University of Quito, which he had recently founded. A number of German Jesuits responded to the call, among them Epping, who set out in June, 1872, for Quito to become professor of mathematics. He quickly learned Spanish and was able to write a text- book of geometry in this language. He likewise took an active part in all the scientific work of the Fathers. The political disturbances which followed the assassina- tion of Moreno (6 Aug., 1875) made it necessary for the Jesuits to return to Europe, and Epping ar- rived in Holland in the fall of 1876. He spent the remaining years of his life at Blijdenbeek, and later at Exaten, as professor of astronomy and mathematics to the younger members of his order, devoting his leisure to research and literary work.

Epping's first published volume, "Der Kreislauf im Kosmos", appeared in 1882. It was an exposition and critique of the Kant-Laplace nebular hypothesis and a refutation of the pantheistic and materialistic conclusions which had been drawn from it. His most important work, however, was begun in collaboration with the naturalist and the astronomer, the latter who, in his own studies in Assyriology, had induced him to undertake a mathematical investigation of the Babylonian astronomical observations and tables. After consid- erable labour the key was found. He discovered the table of differences for the new moon in one of the tablets and identified it with Mars, Saturn, and Te-ul with Jupiter (Epping and Strass- maier in "Stimmen aus Maria-Lach", Vol. XXI, pp. 277-292). Eight years later he published "Astrono- mische Aus Babylon oder das Wissen der Chaldier über den geostirnten Himmel" (Freiburg in Br., 1889). This work was of much importance both for the standpoint of astronomy and chronology. It con- tains an exposition of the astronomy of the ancient Babylonians, worked out from their Ephemerides of the moon and the planets. This was supplemented by "Die babylonische Berechnung der Mondperiode" (Stimmen aus Maria-Lach, Vol. XXXIX, pp. 225- 240). He was also the author of a number of articles in the "Zeitschrift für Assyriologie". Father Epping suffered much from ill-health during the last years of his life. He was now the less a man of untiring activity and combined genius and a keen sense of hu- mour with a deep and simple piety.

Erasmus, Desiderius, the most brilliant and most important leader of German humanism, b. at Rot- terdam, Holland, 28 October, 1466; d. at Basel, Switzerland, 12 July, 1536. He was the illegiti- mate child of Gerard, a citizen of Gouda, and Mar- garetha Rogers, and at a later date latinized his name as Desiderius Erasmus. Eventually his father be- came a priest. Erasmus and an elder brother were brought up at Gouda by their mother. When nine years old he was sent to the school of the celebrated humanist Higius at Deventer, where his taste for hu- manism was awakened and his powers of mind re- ceived their bent for life. The most brilliant qualities of his intellect, a wonderful memory and an extraor- dinarily quick power of comprehension, showed them- selves even in this his earliest training. His mother died when he was thirteen years old, and a little later his father also; he was now sent by his guardians for two years to the University of Leiden, and afterwards called to the monastery school of HERTGENBROECK. Then, after wandering aimlessly about for a time, he was forced, through necessity and the insistence of his guardians, to enter in 1486 the monastery of Emaus, a Cell of the Order of the Regular Preachers. He felt not true religious vocation for such a step, and after years characterized this act as the greatest misfortune of his life. As a matter of fact the beginnings of his religious indifference and of his weakness of charac- ter are to be sought in his joyless youth and in the years spent under contemplation in the monastery. He was left free, however, to pursue his studies, and de- `voted himself mainly to the ancient classics, whose content and formal beauty he passionately admired. His religious training was obtained from the study of St. Jerome and Lorenzo Valla. In 1491 a lucky acci- dent freed him from monastic life. The Bishop of Cambray was minded to visit Italy and chose Erasmus as secretary and travelling companion, attracted by the young man's linguistic attainments; he also or- dained him priest in 1492. The journey was never completed, but Erasmus remained in the service of the bishop, who, in 1496, sent him to Paris to complete his studies. The scholastic method of instruction then prevalent at Paris was so repugnant to him that he spent much of his time travelling through France and the Netherlands, and in the latter part of his stay, taking to himself a occasional friendly help; he was also for a while at Orleans, where he enlarged his collection of proverbs, the later "Adagia."
money for a trip to England he earned by acting as tutor to three Englishmen, from whom he also obtained Ammianus. Having remained in England (1498–99), he made the acquaintance at Oxford of Colet, Thomas More, Latimer, and others, with all of whom acquaintance ripened into lifelong friendship. Colet showed him how to reconcile the ancient faith with humanism by abandoning the scholastic method and by basing his treatises on the serious study of the Scriptures. Consequently, on his return to the Continent he took up with ardour the study of Greek at Paris and Louvain. The first publications of Erasmus occurred in this early period. In 1500 was issued the "Colloquia familiares," in 1501 the "Enchiridion militis christiani," in which he described the nature of true religion and true piety, but with comments that were biting and antagonistic to the Church; in 1505 Lorenzo Valla’s "Annotations" to the New Testament, the manuscript of which he had found in a monastery at Bruges. His introduction to this work is important, for in it occurred his first utterance concerning the Scriptures, laying especial stress on the necessity of having a knowledge of the original text, and respect for the literal sense.

In 1506 he was finally able, by the aid of his English friends, to attain his greatest desire, a journey to Italy. On his way thither he received at Turin the degree of Doctor of Divinity; at Pavia, the doctorate of the sacred letters; and at the university of the Upper Italy, he was greeted with enthusiastic honour by the most distinguished humanists, and he spent some time in each of these cities. At Venice he formed an intimate friendship with the famous printer Aldus Manutius. His reception at Rome was no less flattering to the cardinal, especially Giovanni de’ Medici (later Leo X), and Domenico Grimani, who were particularly gracious to him. He could not, however, be persuaded to fix his residence at Rome, and refused all offers of ecclesiastical promotion. Henry VIII had just reached the throne of England, and thus awakened in Erasmus the hope of an advantageous appointment in that country, for which he accordingly set out. On his way out of Italy (1508) he wrote the satire known as "The Praise of Folly" ("Moriae Encomium," or "Leus Stultitiae"), which, a few months went through seven editions. Originally meant for private circulation, it secures the abuses and follies of the various classes of society, especially of the Church. It is a cold-blooded, deliberate attempt to discredit the Church, and its satire and scathing invective were not intended as a healing medicine but a deadly poison.

Erasmus may now be said to have reached the zenith of his fame; he was in high repute throughout all Europe, and was regarded as an oracle both by princes and scholars. Every one felt it an honour to enter into correspondence with him. His inborn vanity and self-complacency were thereby increased almost to the point of becoming a disease; at the same time he sought, often by the grossest flattery, to obtain the favour and material support of patrons or to secure the continuance of such benefits. This was also the period of his greatest literary productivity. He wrote at this time works destined to influence profoundly the ecclesiastical revolution that was soon to break out. The next five years he spent in England, but never accepted a permanent office; it was only for a short time that he held a professorship of Greek at Cambridge. When the hopes he had based on the friendship of Henry VIII proved vain and he realised that Henry’s money was all needed in warlike schemes, Erasmus returned to Brabant, where he became one of the closest contervener of the Emperor Charles V. This office gave him a fixed salary, and for his princely patron he now wrote the "Institutio principis christiani," a humanistic portrait of the ideal ruler. The archduke thought of making Erasmus a bishop, wherefore, with the aid of the papal legate Amoldus, he obtained a papal Brief releasing him from all obligations to his monastery and also from the censures he had incurred by discarding the dress of his order without permission. No longer obliged to have permanent residence, Erasmus kept up his wandering life, occupied alternately with the composition and the publication of his works. In order to secure absolute freedom Erasmus refused many brilliant offers, among them an invitation from the King of France to reside at Paris, from Archduke Ferdinand to come to Vienna, and from Cardinal Wolsey to become his chaplain. He went to Basle to visit the famous printer Froben, who published henceforth nearly all the writings of Erasmus and procured for them a very wide circulation. In this way Erasmus came into closer relations with German humanism, and his influence did much to increase its prestige in south-western Germany, inasmuch as the followers of the "new learning" in Basle, Constance, Sibibettstadt, and Strasbourg, looked up to him as their leader. One of his chief works at this period is the "Colloquia familiars," first published in 1518, issued in 1519 in a Latin translation, and reprinted. It is a kind of textbook for the study of the Latin language, an introduction to the purely natural formal training of the mind, and a typical example of the frivolous Renaissance spirit. The defects of ecclesiastical and monastic education, this work held up to pitiless scorn; moreover, he describes only too often to indecent and cynical descriptions. His edition of the Greek original of the New Testament, "Novum Instrumentum omne" (Basle, 1516) no model of text-critical scholarship, was accompanied by a classical Latin translation destined to replace the Vulgate. Among the notes, partly textual criticism, partly exegetical comments, were inserted sarcastic slurs on the ecclesiastical conditions of the period. In a general introduction he discussed the importance of the Scriptures and the best method of studying them. Although the Complutensian edition offered a better text and was also printed, but not published, at an earlier date, yet the edition of Erasmus remained for a long time authoritative on account of his high reputation, and became the basis of the textus receptus or received text. No less instrumental in preparing the way for the future Reformation, by setting aside the scholastic method and undermining the traditional authority of the Scriptures, were the "Paraphrases of the New Testament" (1517 and later). This work contains the passages dedicated to the princes and the ecclesiastics, the paraphrases of the Evangelists, to Charles V, Francis I, Henry VIII, and Ferdinand I. In these publications the attitude of Erasmus towards the text of the New Testament is an extremely radical one, even if he did not follow out all its logical consequences. In his opinion the Epistle of St. James shows few marks of the Apostolic spirit; the Epistle to the Ephesians has not the dictum of St. Paul, and the Epistle to the Hebrews he assigns with some hesitation to Clement of Rome. In exegesis he favoured a cold rationalism and treated the Biblical narratives just as he did ancient classical myths, and interpreted them in a subjective and figurative, or, as he called it, allegorical sense.

The literary works issued by Erasmus up to this time made him the intellectual father of the Reformers. What the Reformation destroyed in the organic life of the Church, Erasmus had at least covertly subverted in a moral sense in his "Praise of Folly," his "Adagia," and "Colloquia," by his pitiless sarcasm or by his cold scepticism. Like his teacher Lorenzo Valla, he regarded Scholasticism as the cause of the religious evils of his day. This led to this degeneration dated from the primitive Christological controversies, which caused the Church to lose its evangelical simplicity and become the vio-
tim of hair-splitting philosophy, which cultivated in Scholasticism. With the latter there appeared in the Church the domination of what was understood as righteously sainted good works and monastic sanctity, and on a ceremonialism beneath whose weight the Christian spirit was stifled. Instead of devoting itself to the eternal salvation of souls, Scholasticism repelled the religiously inclined by its hair-splitting metaphysical speculations and jurist-craft in place of the juridical maxims of the Church. The religious life, as he held, was not furthered by discussions concerning the procession of the Holy Ghost, or the causa formalis efficientis, and the character indefabilis of baptism, or gratia gratia data or acquisita; nor were its sequence and efficacy subject of original sin. Even his concept of the Blessed Eucharist was quite rationalistic and resembled the later teaching of Zwingli. Similarly he rejected the Divine origin of the primacy, of confession, the indissolubility of marriage, and other fundamental principles of Christian life and the ecclesiastical constitution. He would replace these traditio et constitutiones hæminum by the simple words of the Scriptures, the interpretation of which should be left to the individual judgment. The disciplinary ordinances of the Church were less desirable, the fasts and abstinence, the liturgy of the friedri, celibacy, and religious orders in general he classed among the perversities of a formalistic Scholasticism. Over against this "holiness of the old days," he preferred a "College of Teachers" as a purely natural ethical ideal, guided by human sagacity. Of course this natural standard of morals obliterated almost entirely all differences between heathen and Christian morality, so that Erasmus could speak with perfect seriousness of a "Saint" Virgil or a "Saint" Homer. In his edition of the Greek New Testament and in his "Paraphrases" of the same he forestalled the Protestant view of the Scriptures. Concerning the Scriptures, Luther did not express himself in a more rationalistic manner than Erasmus; nor did he interpret them more rationally. The only difference is that Luther said clearly and positively what Erasmus often merely suggested by a doubt, and that the former sought in the Bible, above all other things, the certainty of justification by Christ, while the latter, with an almost Pelagian definiteness, sought therein the model of a moral life. Substantially the same fundamental principles and arguments were put forth by the representatives of eighteenth-century "Enlightenment" to attain exactly the same results. It must be added, however, that the influence of Erasmus was much greater. Many of his questions of his time was conditioned rather by literary interests than by profound interior conviction. His demeanour was apt to be influenced by anxiety for peace and by personal considerations; moreover, in contrast to Luther, he was the refined and scholarly public not the common people, that he sought to influence by his writings. He, therefore, laboured for a reform of the Church that would not be antagonistic to the pope and the bishops, nor productive of a violent rupture, but which, through the dissemination of a larger enlightenment, would eventually but gradually result in the wished-for reorganization. This was to be the work, however, not of the common people, but of scholars and princes. Hence he tried subsequently to check the Lutheran movement by some kind of peaceful compromise. With a scholar's love of peace, he was from the beginning disinclined to enter deeply into the current religious dispute. For a time his reform ideas seemed to have some prospect of success, especially during the reigns of Adrian VI and Paul III. As soon, however, as the Lutheran movement was seen to threaten the Church's existence, it was clear that a rigorous adherence to the latter was the only logical attitude and the one most capable of defence. In the first years of the Reformation many thought that Luther was only carrying out the programme of Erasmus, and this was the opinion of those who interpreted the strictness of the great conflict included Erasmus in their attacks on Luther. Given the wavering character of Erasmus, such attacks were to provoke on his part a very equivocal attitude, if not a double-dealing. He gave Luther clearly to understand that he agreed with him, and that he desired to advance scholarship, which is again beginning to flourish, by my modesty rather than by passion or violence." That close relations between these two fundamentally different characters were maintained as late as the Diet of Worms, though both soon clearly saw the difference in their viewpoints, and their attitudes, was largely due to Melanchthon. Though Erasmus had prepared the way for him, Luther was greatly dissatisfied with him because of his strongly rationalistic concept of original sin and the doctrine of justification by faith. The latter was an essential basis of the whole attack against Erasmus. Luther's reference to a "certain writer, a Greek or Hebrew scholar." Luther felt hurt, and his cool and reserved manner in which Erasmus passed judgment on his writings and actions. Nevertheless, Erasmus always opposed any persecution of Luther, and frequently and in no measured terms condemned the Bull of excommunication. At the same time, he declined any association with Luther, and protested his ignorance of the latter's writings and his own complete submission to the highest ecclesiastical authority. But with all this he took the part of Luther in his correspondence with the Elector Frederick of Saxony. He expressed his views concerning Luther's doctrine in twenty-two "Axiomata" addressed to the Elector's court chaplain, Spalatinus, which, to his disgust, were soon afterwards printed. In this memoir and in other writings addressed to the emperor and to friends at Rome, Erasmus expressed his opinions by a court of scholars; he complained, moreover, of the violent attacks made on himself by the monks, and asserted his absolute neutrality and his fidelity to Rome. The latter assurance was all the more necessary as the temporal powers, and their agents, had usurped authority on their guard against Erasmus, and accused him of being an accomplice in the religious revolt. "The poison of Erasmus has a much more dangerous effect than that of Luther, who by his notorious satirical and insulting letters has injured his own teaching," While Erasmus, by his relations with the Roman Curia, was able to checkmate the aforesaid and similar hostile complaints, in Germany he continued to be regarded with distrust and even with hatred, sentiments that acquired new strength when, in spite of repeated entreaties, he refused to appear publicly against Luther. Insinuations and charges of this kind were brought against him, especially by the theologians of Louvain. Consequently, in 1521, moved to Basel, where the presence of numerous humanists of the Upper Rhine seemed to assure him peace and existence. Even here his attitude continued for a considerable time uncertain. To Duke George of Saxony he expressed himself most favourably concerning Luther and blamed both the Bull of excommunication and the case against the Church in his correspondence with the emperor and with Adrian VI he denied all association with Luther, and reverted again to his plan of reconciliation by means
ERASMUS—HOLBEIN
ACADEMY OF FINE ARTS, PARMA
et a court of arbitration. He also defended with great earnestness his own orthodoxy against Stunica, who wrote the treatise "Erasmii Rotterdami blasphemiae et impietates" (Rome, 1522), to prove that Lutheran errors were to be found in the aforesaid "Annotationes" to the New Testament. The same year (1522) he was involved with Luther over the "Adversus apodigmena Huttenii", in which, with equal violence, he attacked the character and life of his opponent, and defended himself against the reproach of duplicity. He had endeavoured, so he wrote, to hold aloof from all parties; he had, indeed, attacked Roman abuses, but he had never attacked the Apostolic See or its teaching.

All sympathetic association of Erasmus with the Reformers now ceased, though Melanchthon tried to stop the final rupture and, after all, the defenders of the new anti-Roman movement withdrew from the famous humanist, especially Zwingli and Calompanius. This same year Erasmus resolved at last to heed the many appeals made to him, especially by Adrian VI and Henry VIII, to write against Luther. For some years he had been a convert to the Reformation, but now he had no doubt, by the fear of losing the confidence of both parties. He chose with skill the point on which he would attack Luther. Erasmus had complained much earlier that the new religious movement begat only commotion, moral disorganization, and the interruption, if not the complete ruin, of learned studies. These abuses he traced to Luther's denial of free will.

He wrote, therefore, in defence of the freedom of the will, an attack on Luther, entitled: "Distribrio de libero arbitrio" (1524). The work, it may be said, was couched in a calm and dignified style. Though by no means sufficiently profound in its theological reasoning, the proofs are drawn with skill from the Bible and from reason. Luther's reply was the "De servo arbitrio" (1524), henceforth the official programme of the new movement. Starting from the third chapter of the Epistle to the Romans, it teaches the absolute incompetency of man in his fallen state to perform moral acts; no franker antithesis to the humanistic ideal could be imagined. Erasmus replied in a work entitled "Hyperaspistes" (1526), but without effect. Luther then published his "Opinions concersing the Christian Virtues", which he showed much irritation. Some years later, however, when the "Explanatio Symboli" of Erasmus appeared (1533), Luther attacked him once more in a public letter, to which Erasmus replied in his "Adversus calumniarum eiusmodem Martini Luthers". These passages at arms brought on Erasmus the violent hatred of the Wittenberg reformer, who now called him nothing but a seditious and an Epicurean. Catholics, however, considered that Erasmus had somewhat re-established himself, although the more extreme Lutheran doctrine disturbed him. He did not wish to insist on the need of reforms, though he now spoke more cosedly, in many matters, such as celibacy. In his later years, it may be said, he held aloof from all religious conflicts, devoted to his humanistic studies and to an intimate circle of such friends as Bonifacius Amerbach, Beatus Rhenanus, and Glareanus. Nor was he indifferent to contemporary efforts at conciliation; he was in favour of ecclesiastical reunion. Meantime, the Reformation made rapid progress in Basle, where it took the form, greatly detested by Erasmus, of a violent destruction of images. He removed, therefore (1529), to Freiburg in the Breisgau, not far from Basle, in which city he could still find congenial Catholic surroundings. He did not relax his efforts for religious peace, in favour of which he exerted all his influence, especially at the imperial court. He also wrote, at the request of Melanchthon and Julius von Pflug, his "De sacriandi Ecclesiae concordiata" (1533), in which he advocates the removal of ecclesiastical abuses in concord with Rome and without any changes in the ecclesiastical constitution. Nevertheless, notwithstanding his best endeavours with Luther in 1530, with whom Erasmus even wanted to make him a cardinal, but Erasmus declined the honour, alleging his age and ill-health. Naturally weak and sickly, and suffering all his life from calculei, his strength in the end failed completely. Under these circumstances he decided to accept the invitation of Mary, regent of the Netherlands, to live in Brabant, and was preparing at Basle for the journey when a sudden attack of dysentery caused his death. He died with composure and with all the signs of a devout trust in God; he did not receive the last sacrament, but why cannot he be received with great pomp in the cathedral at Basle. Shortly before his death he heard the sorrowful news of the execution of two of his English friends, Sir Thomas More and Bishop Fisher.

Editions of the classics and the Fathers of the Church kept Erasmus fully employed during the latter period of his life at Basle. In his editions of the Fathers Erasmus formed a means of realizing the theological ideal of Humanism, which was to make accessible the original sources of ecclesiastical and theological development and thus to popularize the historical concept of the Church as against the purely speculative viewpoint of Scholasticism. As early as 1516-18 Erasmus had published in nine volumes the works of St. Jerome, a theologian to whom he felt especially drawn. In 1523 he appeared his edition of St. Hilary of Poitiers; in 1526 that of St. Ireneus of Lyons; in 1527, St. Ambrose; in 1528, St. Augustine; in 1529 the edition of Epiphanius; in 1530, St. Chrysostom; his edition of Origen he did not live to finish. In the same period he issued the theological and pedagogical treatises: "Ecclesiastae sive Concionator evangelius" (1535), a greatly admired homiletic work; "Modus consubendi" (1525), a guide to right confession; "Modus orandi Deum"; "Vidua christiana"; "De civitate morum puerilium"; "De preparati" em mortem", etc. No one has defended him without reserve, his defects of character being too striking to make this possible. His vanity and egotism were boundless, and to gratify them he was ready to pursue former friends with defamation and inventively his literary, where favour and material advantages were to be had, was often repulsive, and he lacked straightforward speech and decision in just those moments when both were necessary. His religious ideal was entirely humanistic: reform of the Church on the basis of her traditional constitution, the "restoration of the government" into ecclesiastical doctrine, without, however, breaking with Rome. By nature a cold, scholarly character, he had no real interest in unconfessional questions and subjects, above all no living affectionate sympathy for the doctrines and destinies of the Church. Devoid of any power of practical initiative he was constitutionally unfitted for a more active part in the violent religious movements of his day, or even to sacrifice himself for the defence of the Church. His bitter sarcasm had, indeed, done much to prepare the way for the Reformation; it marked the spirit and the elements of religion nor his former friends. He was an absolutely unspeculatively brain, and he lacked entirely all power of acute philosophical definition; we need not wonder, therefore, that on the one hand he
was unable to grasp firmly ecclesiastical doctrine or deal justly with its scholastic formulation, while on the other he inveighed with extreme injustice against the institutions of the Church. It must not be forgotten that the grave defects of his character were compensated by brilliant qualities. His splendid gifts explain the rapid progress he made through many decades, a public esteem and admiration far excelling in degree and extent the lot of any scholar since his day. He had an unequalled talent for great, journalistic gifts, a surpassing power of expression; for strong and moving discourse, keen irony, and contro- versy. He was in his world beheld a scholar of comprehensive and many-sided learning, though neither profound nor thorough, a man of universal observation, a writer whose diction was brilliant and elegant in the highest degree. In a word, Erasmus exhibits the quintessence of the Renaissance spirit; in him are faithfully mirrored both its good and bad qualities.

It cannot be denied that Erasmus was a potent factor in the educational movement of his time. As the foremost humanist, he laboured constantly and effectually for the spread of the new learning, which imparted to the education of the Renaissance period its content and spirit. By his intercourse with scholars and students, his published satire on existing institutions and methods, and especially by his publishing and editing the Greek and Latin authors, he gave a powerful impulse to the study of the classics. But his more direct contributions to education are marked by the inconsistency which appears in his whole career. Some of his writings, e.g. his "Order of Study" (De ratione Studior. 1618) and his "Liberal Education of Children" (De puercis statim as liberaliter instituendis, 1529), contain excellent advice to parents and teachers on the care of children, development of individuality, training in virtue and in the practice of religion, with emphasis on the moral qualifications of the teacher and the judicious selection of subjects of study. In other writings, as in the "Colloquia", the tone and the language are just the opposite, so offensive in fact that even Luther in his "Table Talk" declares: "If I die I will forbid my children to read his Colloquies... See now what poison he scatters in his Colloquies among his made-up people, and goes craftily at our youth to poison them." It is not surprising that this work was condemned by the Sorbonne (1526) as dangerous to morals, and was eventually placed on the Index. That in modern times the history of the educational principles of Erasmus occupies so large a place, while others who contributed far more to the development of educational method (e.g. Vives) are not mentioned, is perhaps due to sympathy with the anti-ecclesiastical attitude of Erasmus, rather than to the intrinsic value of his constructive work (see Stöckl, Gesch. d. Pädagogik, Mainz, 1876).

A complete edition of the works of Erasmus, to which a life of him was added, was issued by Beatus Rhenanus (Basle, 1540-41) in 9 vols.; an edition was also published by Le Clerc (Leyden, 1703-06), 10 vols.; a complete edition was published by Basel. (18th century) 1564. The editions of the letters of Erasmus have been as follows: "Epistulae familiares Erasmi" (Basel, 1618); Herzog, "Epistulae famil. ad. Bon. Amerbachium" (Basel, 1779); Horwits, "Erasmi in the Transact. of the philosophical-historical section of the Academy of Vienna, vols. XC and XCIV (1878-85); Horwits, "Erasmi and Martini Lipsius" (1882); F. M. Nichols, "The Epistles of Erasmus" (London, 1901-04), 2 vols.; von Miasekow- ski, "Correspondence of Erasmus with Polen" (Dresden, 1891). The first English edition was published by Reischling, "Aussg. pädagogische Schriften des Erasmus" (Freiburg, 1896).

Information about the life of Erasmus is obtained from his letters to Servetus and Grunius. De Radaud, précurseur et initiateur de l'esprit moderne (Paris, 1872); II: Drummond, Eras. His Life and Character (Lon- don, 1873); II; Froehner, Eras. Stude sur sa vie et sa œuvre (Paris, 1845); Lilly, Eras. (1868); R. G. M. Scott, "Eraso- musstudien" (Dresden, 1891); Fr. ERASTUS 515

Erastus proceeded to excommunicate Erastus on the ground of his alleged Unitarianism. After a long further controversy, he succeeded in convincing them that this allegation was false; and the excommunication was removed in 1575; but his position had become a difficult one, and five years later he resigned his office to Bishop, where he taught ethics for a short time, until his death. On his tomb in St. Martin's church he is described as "an acute philosopher, a clever physician, and a sincere theologian". He left behind him the reputation of an upright life, with great availability of charity, coupled with an absorbing study for the Bible. He took an active part in combating the superstitions of astrology; but he showed that he was not free from the prejudices of his day by advocating the killing of witches.

The great work by which Erastus is known is his "Seventy-five Theses", to which he has already alluded. They were never printed in his lifetime, but during his last illness he expressed a desire that they should be published, and Castelvetro, who married his widow, carried out his wishes. The "Theses" and "Sixty-five Observations" of 1569 contain the protest of the Apostolic Church against the Socinians and Catholics; for Erastus looked upon the "preaching of the Word" as equal in sacredness with the sacraments. "I ask", he said, "are the sacraments superior in authority and dignity to the Word? Are they more useful and necessary? None of those whom I have been saved were saved without the Word; but without the sacraments, especially without the Lord's Supper, there doubtless might be, and there have been many saved who, however, did not despise these. The Apostolic Church was all the more zealous for the Word when he wrote that he was sent not to baptize but to preach the Word. Do not almost all divines hold the sacraments to be visible words and to exhibit to the eyes what words express to the ear? Why, then, do we go about to exclude nobody from the Word, while we exclude from the sacraments the very word to which the communication to which he alludes was the exclusion of those of bad life from participation in the sacraments. He explains what he means in the introduction to the "Theses" which he wrote at the end of his life. "It is about sixteen years ago", he writes, "since some men were seized on by a certain excommunicatory fever, which they did adorn with the title of ecclesiastical discipline. ... They affirmed the manner thereof to be this: that some certain presbyters should sit in the name of the Apostolic Church, and such a judge who were worthy or unworthy to come unto the Lord's Supper." The first eight theses are devoted to a detailed explanation of the various senses in which the word excommunication is used, and in the ninth Erastus defines the issue with which he is concerned: "This, then, is the question, whether any command or any example can be produced from Holy Scriptures requiring or intimating that such persons [i.e. sinners] should be excluded from the sacraments." In the following thesis (x) he says: Our answer is that none such can be found in any manner civil and moral precepts, of an opposite tendency, occurs everywhere in the Bible. The following twenty-eight theses are devoted to developing and maintaining his conclusions, before proceeding in the last half of his work to answer possible objections.

The chief argument on which Erastus bases his whole system is an analogy between the Jewish and Christian Dispensations, and it is exactly here that the fallacy of his conclusions becomes manifest. A Catholic, indeed, would be less likely to fall into the error of loose construction of the Church and the State, which the seventeenth century did in the Sacrament of the Mass as in any close way analogous to the Sacraments of the Old Law, and the slaying of the paschal lamb; or the relation of the ceremonial law to the political law of the Jews as in any way realized or realizable in the most Christian of states. To a Protestant who looked upon the Bible as the sole source of Revelation this was different. Erastus argued that the Law of Moses no one was excluded from the offering of the paschal sacrifice, but every male was commanded to observe it under pain of death; and with reason, he said, the habits of the Jews were most wisely founded, arranged, and pointed, any other must merit approbation which approaches to its form as nearly as present times and circumstances will permit. Now that wherever the magistrate is godly, there is no need of any other authority under any other pretension or title to rule or
punish the people—as if the Christian magistrate differed nothing from the heathen. . . . I allow indeed the magistrate ought to consult, when doctrine is concerned, those who have particularly studied it; but that there should be any such ecclesiastical tribunal to teach men's conscience (for example, the Pope, or Mohammedan), grave and pious men should be chosen according to the precept of the Apostle, to settle disputes by arbitration, compose quarrels, and do other offices of that sort. These men ought also, in conjunction with the ministers, to admonish and reprove the them who live unholy and impure lives; and if they do not succeed, they may also punish, or rather recall them to virtue, either by refusing to hold private intercourse with them or by a public rebuke, or by any other of the disapprobations. But from the sacraments which God has instituted, they may not debar any who desire to partake.

The full system of Erasmus was never accepted or promulgated by any definite sect or band of followers; but the influence of his opinions was very considerable, both in the Church and in general literature. The Protestantists of course have always vigorously repudiated his doctrines; but in the Westminster Assembly (1643–7) there was a strong Erastian party. After a long controversy, a definite resolution, affirming that the Church has its own government distinct from the civil power, was carried almost unanimously, the sole dissentient being the well-known divine, John Lightfoot. On the general questions of the relation between Church and State, it must be admitted that the opinions popularly denoted by the word Erastian have had unmistakable influence on the Established Church of England, though there has always been a party resisting the encroachments of the civil power. We can, perhaps, take Hooker's "Ecclesiastical Polity" as an authoritative exposition of this phase of Anglicanism. Hooker was a contemporary of Erasmus, and in his preface he gives an account of the controversy of the latter with Beza. The eighth volume, however, in which he deals with the question before us did not appear until 1648, many years after his death. Its authenticity has been questioned; but it is now generally admitted as a work of great note written during his lifetime. He adopts the analogy of Erastus between the Jewish nation and a Christian state. Starting from the truism that a good monarch should look to the spiritual good of his subjects no less than to his political, he says: "If at once the title of the king be to head of the Church. He considers that the consent of the laity is required before an ecclesiastical law can be binding, and looks upon Parliament as their mouthpiece, and accordingly defends the right of Parliament to legislate on ecclesiastical matters. He defends the king's power of appointing bishops and his jurisdiction over ecclesiastical courts.

We may contrast this with the Catholic system of the union of Church and State which has always been the Church's ideal, and has often been in great measure realized, and in our own days has been brought into prominence by the solemn pronouncements of Pius IX. The power of the State is maintained to be of God, either immediately, or mediatly through the will of the people; and the civil government exists side by side with the ecclesiastical. In the State is complete in its own sphere. The pope has "temporal power", using the term in its true sense, i.e. of his right to certain interference with the temporal government of states when the principles of religion are at stake. On the other hand, any interference on the part of the State with ecclesiastical appointments, as, for example, by nomination of bishops or by veto on such nomination, or even on the election of the pope, such as has sometimes existed in the case of some Catholic powers, is conceded by courtesy, in consideration of services rendered and by no means acknowledged or demanded by the non-Catholics. See also Church and Christian State" (tr. London, 1876). The "Theses" of Erasmus and the "Confirmatio Thes.ium" were reprinted at Amsterdam in 1649. An English translation of the "Theses", without the "confirmatio", appeared in London in 1615—a very literal rendering of the original in Latin. A new translation of the "Theses", by Dr. Robert Lee, with a valuable preface, was published at Edinburgh in 1844 and is still the standard edition.

Erasmus, English Religious in the Seventeenth Century, articulo Erastionismum (London, 1903); Finkenburg, Reformation Erastianism (1892); STANLEY, Essays on Church and State (London, 1870); DAVENPORT, The English Congregational Church (London, 1871); LEICHLER-STEINHILBRANDEN, Realencyclopdie f ur protestantische Theologie, etc., v. Erastus: BERNARD, Thomas Brate und des Dissises ekklesiastique (Lausanne, 1864).
had recently been appointed Governor of Chile. During the succeeding two or three years he played a brilliant part in combating an insurrection among the natives of Arauco, a province of Chile, suffering great hardships, and distinguishing himself several times in battle. After a severe illness he returned to Spain in 1562, and for a time resumed his travels through Europe. In 1570, he married Doña María de Bazán, a woman of illustrious family and of intellectual attainments. He died at Madrid neglected and in great poverty.

Ereúllo's great work is "La Araucana," an epic poem of thirty-three cantos, describing the difficulties encountered by the Spaniards during the insurrection in Arauco, and the heroic deeds of the natives as well as his companions. The epic par excellence of the character of history, and the author adheres with such strict fidelity to the truth, that subsequent historians characterise his work as thoroughly trustworthy. In it the difficult art of story-telling is carried to perfection. Places are admirably described, dates are given with accuracy, and the customs of the natives faithfully set forth, giving to the narrative animation and colour. The first part was published in three parts, the first appearing in 1569, the second in 1578, and the third in 1590. The best editions are those published by the Spanish Academy in 1778 and 1828.

Ercowald, Saint, Bishop of London, d. about 690. He belonged to the princely family of the East Anglian Offa, and devoted a considerable portion of his patronage to founding two monasteries, one for monks at Chertsey, and the other for nuns at Barking in Essex. Over his brother he placed his sister, Ethelburga, as abbess. He himself discharged the duties of superior at Chertsey. Ercowald continued his monastic life till the death of Bishop Wini in 675, when he was called to the See of London, at the instance of King Sebiba and Theodore, Archbishop of Canterbury. As his income was not considerable, he was renowned for holiness of life, and miracles were wrought in attestation of his sanctity. The sick were cured with the litter on which he had been carried; this we have on the testimony of Venerable Bede. He was present at the Synod of Whitby when Archbishop Theodore and Wilfrith, King Ine in the presence of his laws calls Ercowald "my bishop". During his episcopate he enlarged his church, augmented its revenues, and obtained for it special privileges from the king.

According to an ancient epitaph, Ercowald ruled the Diocese of London for eleven years. He is said to have eventually retired to the convent of his sister at Barking, where he died 30 April. He was buried in St. Paul's, and his tomb became renowned for miracles. The citizens of London had a special devotion to him, and they regarded with pride the magnificence of his shrine. During the burning of the cathedral in 1087 it is related that the shrine and its silken coverings remained intact. A solemn translation of St. Ercowald's body took place 14 Nov., 1148, when it was raised above the high altar. The shrine was robbed of its jewels and ornaments in the sixteenth century; and the bones of the saint are said to have been buried at the east end of the choir. His feast is observed by the Anglicans of 14 November. Prior to the Reformation, the anniversaries of St. Ercowald's death and translation of his relics were observed at St. Paul's as feasts of the first class, according to an ordinance of Bishop Brapray in 1386.

Erdely. See Transylvania.

Erdeswicke, Sampson, antiquarian, date of birth unknown; d. 1603. He was born at Sandon in Staffordshire, his father, Hugh Erdeswicke, being descended from Richard de Vere, V baron of Arundel in the reign of William the Conqueror. The family resided originally at Erdeswicke Hall, in Cheshire, afterwards at Leighton and finally in the reign of Edward III settled at Sandon. Hugh Erdeswicke was a staunch Catholic who suffered much for the Faith. In 1582 he was reported to be a recusant by the Anglican Bishop of Coventry as "the sorest and dangeroust papist, one of them in all England". His son, Sampson, born in the reign of Henry VIII, entered Brasenose College, Oxford, as a gentleman-commoner in 1533. Leaving Oxford, he returned to Sandon where he spent the rest of his life as a country gentleman under the usual disabilities of a recusant. He devoted himself to antiquarian studies, particularly to the thorough "Survey of Staffordshire". By this work his name is chiefly remembered, but it was not published during his lifetime, and considerable mystery exists as to the original MS., because the numerous existing copies differ much from one another. A description of these was published by William Salt, F.S.A., in 1844. The "Survey" itself was published by David Dunlop in 1717 and by 725. It was republished by Staffordshire (1788), and lastly by Harwood (1820 and 1844). Other unpublished MSS. by Erdeswicke are in the British Museum and the College of Arms. Laterly he employed as amanuensis, William Wylye, a youth whom he had educated and who afterwards published writings of his own. One of these, "The True Use of Armorie", was claimed by Erdeswicke as his own work, but he told William Burton the anti- quary, that he had given Wylye leave to publish it under his own name; but Antony à Wood denies this, adding that "Erdeswicke being at times a priest, especially in his last day, and fit then for no kind of serious business, would say anything which came into his mind, as 'tis very well known at this day among the chief of the College of Arms" (Ath. Oxon., Bliss ed., II, 217-18). Erdeswicke married first Elizabeth Dixwell, secondly Mary Digby (24 April, 1593). He died in 1603, but the date usually given, 11 April, must be erroneous, as his will is dated 15 May. He is buried in Sandon Church, beneath an elaborate monument representing his own recumbent figure. Camden and other antiquaries use his name almost synonymously, and it is believed to have been elected a member of the Society of Antiquaries founded by Archbishop Parker in 1572.

Edwin Burton.

Erdington Abbey, situated in a suburb of Birmingham, Warwickshire, England, belongs to the Benedictine congregation of St. Martin of Beuron, Germany, and is dedicated to St. Thomas of Canterbury. Driven from Germany by the Falk laws, four of these exiled monks went to Erdington at the request of Bishop Ullathorne, O.S.B., and founded there Henry, M.A., a convert Anglican clergyman who gave them the splendid Gothic church which he had built and embellished out of his own private fortune, as a thank-offering to Almighty God for the gift of the true Faith. Father Haigh's most precious gift was the first monastery, and here Dom Plaisid Walter, Arch-Abbot of the Beuron Congregation, Dom Hildebrand de Hemptine, later Abbot Primate of the Benedictine Order, Dom Leo Linse, afterwards Abbot of Fort Augustus in

COLUMBA EDMONDS.
Scotland, Dom Leodgar Stocker, and a lay brother took up their abode in October, 1876. Dom Plaeid was the first workman, Dom Rildebrandt succeeded Dom Plaeid, and at once set about building a monastery that would accommodate a community large enough to chant the Divine Office in choir. It was finished in 1880, when the number of monks was increased to eleven with three lay brothers.

Meanwhile Father Haigh had found his last resting-place in the Blessed Sacrament chapel, so the untenanted presbytery was converted into a Catholic grammar school, the first of its kind in the neighbourhood of Birmingham, with Dom Willfrid Wallace, an English priest who had lately joined the community, as headmaster. Dom Leo Linee became prior in 1882, and was succeeded in 1886 by Dom Boniface Wolff, who was followed, in turn, by Dom Silvester Schlecht in 1895. On the feast of the Assumption, 1896, the priory was transformed into an abbey by a Brief of Leo XIII, though three years elapsed before it received an abbey. These were years of spiritual and material development. A novitiate was opened and a school for oblates, several members were added to the community, and a large addition made to the monastic buildings, enclosing the abbots' apartments and the chapel, rooms for guests, entrance hall, parlours, novitiate, and clerestory. They were completed and blessed in 1898. In July, 1899, Dom Ansgar Hoekelmann was appointed its first abbot, and he was blessed in the abbey church, by Bishop Baxam of Birmingham. Since then a spacious refectory and library have been built, and the community continues to grow.

The Church and Abbey of Erdington, A Record of fifty years, 1843-1900 (Birmingham: 1900); (Birmingham: 1900); Baxam, The Catholic Pioneers (London, 27 Dec., 1902).

Peter Nugent.

Erhard of Ratisbon, Saint, bishop of that city in the seventh century, probably identical with an Abbot Erhard of Ebersheimmunthe mentioned in a Merovingian diploma of 684. Ancient documents call him Ermon, Eram, and Erhard. The legendary account of his life offers little that is historically certain. The following, however, seems reliable. Erhard was born in Ireland, then known as "Scots". Like many of his countrymen he went to the Continent as missionary bishop or choripous, and came to the Vindobona met at there St. Hildulf, said to have been Archbishop of Trier, and who lived there a hermit (666–671). He is called Erhard's brother, but very likely spiritual relationship was meant. It is said that each of them founded a church at Trier. The other Erhard went to Ratisbon and founded the nunnery of Niederstetten. By Divine inspiration he was recalled to the Rhineland to baptize St. Odilia, blind from her birth, but who received her eyesight at her baptism. He sent a messenger to her father, Duke Attich, and reconciled him with his disobedient daughter. Accordin to another account, St. Odilia was baptized by Hildulf, Erhard acting as her sponsor. The year of his death is not known. He was interred in the still-extant Erhardscrypt at Niederstetten, and miracles were wrought at his grave, that was guarded in the Middle Ages by "Erhardinonnen", a religious community of women who observed there a perpetual round of prayer. Otto II, in 974, made donations of properties in the Danube valley to the convent "where the holy confessors Erhard rests". On 7 Oct., 1032, the remains of the holy bishop Erhard and Wolfgang were raised by Pope St. Leo IX in presence of Emperor Henry III and many bishops, a ceremony which was at that time equivalent to canonization. Ratisbon documents, however, mention only the raising of Wolfgang, not that of Erhard. At the close of the seventh century Paul von Bernried, a monk of Fulda, at the suggestion of Abbess Heilika of Niederstetten, wrote a life of Erhard and added a second book containing a num-

mer of miracles. The learned canons of Ratisbon, Conrad of Megenberg (d. 1374), furnished a new edition of this work. The church in Niederminster, now a parish church, still preserves the crosier of the saint, made of black buffalo-horn. A bone of his skull was enclosed in a precious receptacle in 1866 and is placed upon the heads of the faithful on his feast day, 8 Jan. Three ancient Latin lives of the saint are found in the Acta Sanctorum (8 Jan). The beautiful reliquary is reproduced in Jakob, "Die Kunst im Dienste der Kirche" (illus. 16).

Gabriel Meier.

Erie the Red. See America, Pre-Columbian Discovery of.

Erie, Diocese of (Eriensis), established, 1853; it embraces the thirteen counties of North-Western Pennsylvania, U. S. A.: Erie, Crawford, Warren, McKean, Potter, Mercer, Venango, Forest, Elk, Cameron, Clarion, Jefferson, and Clearfield, an area of 10,027 square miles.

This territory enjoys the distinction of having been under the jurisdiction of different national and ecclesiastical governments: under the French flag and the See of Quebec from 1753 to 1758; under the English flag and the Vicariate Apostolic of London from 1758 to the Treaty of Paris, 3 September, 1783, and the erection of the See of Baltimore in 1789; under the American flag since the Treaty of Paris and a part of the See of Baltimore until the establishment of the Diocese of Philadelphia in 1808. In August, 1843, when the Diocese of Pittsburg was formed, it included all that part of the State of Pennsylvania west of a line running along the eastern border of Crawford, Huntington, Clearfield, Elk, McKean, and Potter counties, and consequently, the territory of the present Diocese of Erie.

In 1853 the Right Rev. Michael O'Connor, the first Bishop of Pittsburg, petitioned the Holy See, through the Fifth Provincial Council of Baltimore, for a diocese of his diocese, and took for himself the poorest part, and thus became the first Bishop of the Diocese of Erie. When Bishop O'Connor assumed the government of the diocese, 29 July, 1853, there were only twenty-eight churches with eleven secular priests and three Benedictine Fathers to attend to the wants of the Catholics scattered throughout the thirteen counties. At the urgent request and petition of the priests and people of Pittsburg, Bishop O'Connor was restored to them, having governed the Diocese of Erie for the short period of seven months.

His successor at Erie was the Rev. Josue Moody Young, a member of an old Puritan, New England family, born 29 Oct., 1808, at Shapleigh, Maine. He became a convert from Congregationalism and was baptized in October, 1828, by the famous New England missionary, Father Charles D. French, O. F., when he then changed the Moody of his name to Maria. He was ordained priest 1 April, 1838, and consecrated second Bishop of Erie, in Cincinnati, by Archbishop
Purcell, on 23 April, 1854. The outlook at his accession was gloomy. Many of the priests who were affiliated with Pittsburgh before the division, returned there with Bishop O'Connor. Among those who cast their lot with the new diocese the most noteworthy were the Very Rev. John D. Cosdy, Rev. Joseph Hartman, M. A. De La Roque, John Berbegier, Andrew Skopes, Kieran O'Briennaughan, and also Meares. John Koch and Thomas Lonnergan, at that time studying for the priesthood. There were but two churches in Erie city, St. Patrick's, the pro-cathedral, and St. Mary's, built for a German congregation by Rev. Joseph Hartman. Outside the city there were twenty-eight churches, with eleven secular priests and three Benedictines for a Catholic population of 12,000. The church buildings outside the city of Erie were mostly wooden structures. There was only one Catholic school. The discovery of petroleum on Oil Creek, 28 August, 1859, gave a great impetus to both secular and religious progress throughout the diocese. To accommodate the settlers that located in the vicinity of the new churches, several new churches and schools had sprung up. The vicar-general, Very Rev. John D. Cosdy, governed the diocese during the interregnum until the third bishop, the Rev. Tobias Mullen, was consecrated, 2 August, 1868. He was born in the County Tyrone, Ireland, 4 March, 1818, and was ordained priest at Pittsburg, 1 Sept., 1844, having gone there with Bishop O'Connor from Maynooth the previous year as a volunteer for the American mission. Under his direction new churches were erected, new parishes sprang up, churches and schools were built, regular conferences for the clergy were held. Religious orders were introduced and new institutions arose for the maintenance and spread of religion, and for the enlightenment, and comfort, and shelter of suffering humanity. The frame churches gave place to brick and stone structures. The bishop himself was a tireless worker and infused his own spirit into his priests. A Catholic weekly, the “Lake Shore Visitor,” was issued, edited mostly by the bishop himself, in the midst of labor and sickness. When his health failed, the diocese was in a condition to continue its work. The Poles, the Slavs, the Hungarians, and the Italians had churches and priests provided for them, the orphans a large new home, the sick were provided with two large hospitals, and finally his crowning work, St. Peter's Cathedral, was finished, cleared of debt, and consecrated in 1838, the twenty-fifth anniversary of his consecration. In the following year he celebrated the golden jubilee of his priesthood. His strong active mind and body began to fail and on 19 May, 1897, he suffered a paralytic stroke and a coaguliter the Rev. John G. O'Meara and the Rev. J. P. Comiskey. He resigned, 10 August, 1899, and died, 22 April, 1900. Bishop Fitz Maurice succeeded as fourth bishop of the diocese, on 19 September, 1899, and the good work inaugurated under the late bishop went on quietly and steadily. He was born at Newtown-Sandes, County Kerry, Ireland, 9 Jan., 1840, and ordained priest in Philadelphia, 24 Dec., 1862. After officiating as parochial and curate he was appointed rector of the diocesan seminary in 1888. The religious orders in the diocese are the Benedictines, the Redemptorists, the Brothers of Mary, the Benedictine Nuns, the Sisters of St. Joseph, the Sisters of Mercy, and the Felician Sisters. At one time the Francisiscans, the Bridgefittites, and the Sisters of the Humility of Mary had houses in the diocese. The Benedictines settled at St. Mary’s, Elk county, under Bishop O’Connor and in 1858 took charge of St. Mary’s, Erie. The Redemptorists in 1875 began their foundation, purchasing a Presbyterian college—at the southeast—where they made a seminary and college for young men who intended to join their order. They have 142 students. The Sisters of St. Joseph entered the diocese in 1860, and have charge of the orphan asylum, the home for the aged, the two hospitals, the Academy of Villa Marin, the mother-house in the diocese, and of fifteen parochial schools. The Sisters of Mercy, who entered the diocese 24 September, 1870, besides the academy in Titusville, the mother-house, have charge of eight parochial schools. The Sisters of St. Benedict (St. Mary’s, Penn.) (22 July, 1822) have St. Benedict’s Academy, the mother-house as St. Mary’s, and teach seven schools. The (Erie) Sisters of St. Benedict, besides the academy and school of St. Mary’s Church, teach five parochial schools, and also conduct an orphan asylum in Slippery Rock. The (Lancaster) Sisters of St. Stanislaus’ Polish school, in the city of Erie. There are in the diocese 100 churches, with resident priests, 46 missions with churches, and 11 chapels; 100 priests—135 secular, 25 regular; 45 parochial schools, 3 academies for young ladies, 1 orphan asylum with 216 orphans making a total of young people under the care of the Church, 10,385; two hospitals, and one home for the aged. The Catholic population of the diocese is estimated at 121,108.

ERUGENA

Erugena, John Scotus, an Irish teacher, theologian, philosopher, and poet, who lived in the ninth century.

NAME.—Erugena’s contemporaries invariably refer to him as Joannes Scotus or Joannes Scottigene. In the MSS. of the tenth and subsequent centuries the forms Burigina, Irurigina, and Erigina occur. Of these, the oldest and most acceptable, philologically, is Erugena, which, as it was perhaps sometimes written Erigina, was changed into Erugena. It means “a native of Ireland”; the form Ierugina is evidently an attempt to correct the first part of this word. The Greek word λυκός, and means “a native of the Island of Saints”; the combination Joannes Scotus Erigena cannot be traced beyond the sixteenth century.

BIRTHPLACE.—At one time the birthplace of Erugena was a matter of dispute. Eriven in Wales and Ayr in Scotland claimed the honour, and each found advocates. Nowadays, however, the claim of Ireland to be considered the birthplace of John is universally admitted. All the evidence points that way, and leads us to conclude that when his contemporaries taunted him with having come to Britain from Ireland they meant not only that he was educated in the Isle of Saints but also that Ireland was his birthplace. Whatever doubt there may have been about the meaning of Scotus, there can be none as to the signification of the surname Erigena.

LIFE.—What is known of the life of Erigena is very soon told. About 847 he appeared in France at the court of Charles the Bald, was received with special favour by that prince, appointed head of the palace school, which seems to have had some kind of permanent location in Paris. Of his communication for the translation of the works of Pseudo-Dionysius into Latin. This translation brought him into prominence in the world of letters and was the occasion of his entering into the theological controversies of the day, especially into those concerning predestination and the Eucharist. His knowledge of
Greek is evident from his translations, and is also proved by the poems which he wrote. It is doubtful, on the other hand, whether he possessed the knowledge of Hebrew and other Oriental languages which is sometimes ascribed to him. In any case there is no evidence of his having travelled extensively in Greece and Asia Minor, of which he spent the rest of his days in France, probably at Paris and Laon. There was, as we know from the MSS., an important colony of Irish scholars at the latter place. The tradition that after the death of Charles the Bald he went to England at the invitation of Alfred the Great, that he taught school at Malmesbury, and that he was put to death by his pupils, has no support in contemporary documents and may well have arisen from some confusion of names on the part of later historians. It is probable that he died in France, but the date is unknown. From the evidence available it is impossible to determine whether he was a cleric or a layman, although it is difficult to deny that the general condition of the time made it more than probable that he was a cleric and perhaps a monk.

With regard to translations, the works of Pseudo-Dionysius are "De Coenobio Hierarchia," "De Ecclesiastica Hierarchia," "De Divinis Nominibus," "De Mystica Theologia," "Epistola," translations of the "Ambigua" of St. Maximus. 2. Commentaries: "Homilia in prologum S. Evangelii sec. Joannem," and "Homilia in Evangelium Joh. of which a few fragments only have come down to us: commentaries on the "Celestial Hierarchy" and on the "Ecclesiastical Hierarchy" of Pseudo-Dionysius; glosses on the work of Martianus Capella (still in MS.), and on the theological opuscula of Boethius (Rand ed., Munich, 1906), with which is connected a brief "Life" of Boethius (Pieper ed., "Consolatio Philo.," Leipzig, 1871). 3. Theological works: "Liber de Predestinatione," and very probably a work on the Eucharist, though it is certain that the tract "De Corpore et Sanguine Domini," at one time believed to be Eriugena's, is the work of Paschasinus Radbertus. 4. Philosophical works: "De Divisione Naturae," his principal work, and a treatise, "De Esgesuo et Regresu Anima ad Deum," of which we possess only a few fragments. 5. Poems: These are written partly in Latin and partly in Greek. Many of them are dedicated to Charles the Bald. The most complete edition of Eriugena's works is that of Dr. Floss, which is printed as Vol. CXXII of Migne's P. L. A new edition embodying the results of recent discoveries of manuscripts is often spoken of, and will doubtless be forthcoming before long.

Doctrines.—Although the errors into which Eriugena fell both in theology and in philosophy were many and serious, there can be no doubt that he himself abhorred heresy, was disposed to treat the heretic with no small degree of harshness (as is evident from his strictures on Gotteschalk), and all through his life believed himself an unwaveringly loyal son of the Church. Taking for granted the authenticity of the works attributed to Dionysius, it is considered that the doctrines he discovered in them were not only philosophically true, but also theologically acceptable, since they carried with them the authority of the distinguished Athenian convert of St. Paul. He did not for a moment suspect that in those writings he had to deal with a loosely articulated system of thought in which Christian teachings were mingled with the tenets of a subtle but profoundly anti-Christian pantheism. To this remark should be added another in order that we may fully understand Eriugena's teaching. He was accepted by his contemporaries of leaning too much towards the Greeks. And, in fact, the Greek Fathers were his favourite authors, especially Gregory the Theologian, and Basil the Great. Of the Latins he prided Augustine most highly. The influence of these on the temperament of the venturesome Celt was towards freedom and not towards restraint in theological speculation. This freedom he reconciled with his respect for the teaching authority of the Church as he understood it. However, in the actual exercise of the freedom of speculation which he allowed himself, he fell into the error of which is incompatible with orthodox Christianity.

The "De Prædestinatione" seems to have been written after the translation of the works of Pseudo-Dionysius. Nevertheless there is in it only one allusion to the authority of the Greek Fathers and very little of the doctrine of predestination, which is abundantly presented in the later works. It deals with the problem raised by Gotteschalk regarding the doctrine of predestination, and, more specifically, undertakes to prove that predestination is single, not double—in other words, that there is no predetermination to sin and punishment but only to grace and eternal happiness. The authority of Augustine is used very extensively. In the philosophical setting of the problem, however—namely, the discussion of the true nature of evil—Eriugena appears to go back farther than St. Augustin himself and to hold the radical view that evil is non-existent. He is thus compelled to go even farther than St. Augustine in rejecting the doctrine of a double predestination. That he exceeded the bounds of orthodoxy is the censure of Prudentius of Troyes and of Florus of Lyons. John of, which is full of bitter personal attacks on Eriugena. Their views prevailed in the Councils of Valencia (855) and Langres (859), in which Eriugena's doctrine was condemned.

While the "De Corpore et Sanguine Domini" is not Eriugena's, though ascribed to him, there can be no doubt that in some work, now lost, on that subject he maintained doctrines at variance with the Catholic doctrine of Transubstantiation. From the fragment which has come down to us of his commentary on St. John we infer that he held the Eucharist to be merely a type or figure. At least he insists on the spiritual, to the exclusion, apparently, of the physical, of the "eating of the Flesh of the Son of Man".

In the "De Divisione Naturae," his most important and systematic work, Eriugena treats in the form of a dialogue the principal problems of philosophy and theology. The meaning of the title is evident from the opening sentences in which he outlines the plan of the work. "Nature", he says, "is divided into four species": (1) "Nature which creates and is not created"—this is God the Source and the Cause; (2) "Nature which is created and creates"—this is the world of primordial causes or (Platonic) ideas; (3) "Nature which is created and does not create"—this is the world of phenomena, the world of contingent, sense-perceived things; (4) "Nature which neither creates nor is created"—this is God, the Term to which all things are returning.

(1) "Nature", then, is synonymous with reality, and also with God. For, whatever reality the world is, God is reality, and the term of the most literal and most subtle sense, the reality of God himself. "The being of all things is the over-being of God" (esse omniun est superesse Divinitatis) is a saying which he never tires of quoting from the works of Pseudo-Dionysius. So supremely perfect is the essence of the Divinity that God is incomprehensible not only to us but also to Himself. For if He knew Himself in any adequate sense He should place Himself in some category of thought, which would be to limit Himself. God is above all categories. When, therefore, we speak about Him we are safer in using the negative (à deserver) than the positive (à venger), mode of predication. That is, we are safer in predicating what He is not than in venturing to predicate what He is. If we have recourse to positive predication, we must use the prefix hyper and say God is hyperubstantia, i.e. more-than-
substance, etc. Similarly, when we say that God is the 'Creator' of all things we should understand that predisposition in God to 'create' and the faculty distinct from the meaning which we attach to the predicate 'maker' or 'producer' when applied to finite agents or causes. The 'creation' of the world is in reality a theophania, or showing forth of the Essence of God in the things created. Just as He reveals Himself to the mind and the soul in higher intellectual and spiritual truth, so He reveals Himself to the senses in the created world around us. Creation is, therefore, a process of unfolding of the Divine Nature, and if we retain the word 'Creator' in the sense of 'One who makes', we must understand that God 'makes' the world out of His own Essence, which, because of its incomprehensibility, may be said to be 'nothing'.

(2) Nature in the second sense, "Nature which creates and is created", is the world of primordial causes, or ideas, which the Father 'created' in the Son, and which in turn 'creates', that is, determine the generic and specific natures of concrete visible things. These, says Eriugena, were called "prototypes", ἀγαθάδημαρα, or "ideas", by the Greeks. Their function is that of exemplar and efficient causes; since they are self-identical, they are identical with God, and since their locus is the Word of God, the Second Person of the Blessed Trinity, they are operative causes and not merely static types. They are coeternal with the Word of God. From this, however, it is not necessary to imply that the Word and the Son have to gain them. Eriugena the primordial causes are identical with the Word. As examples of primordial causes Eriugena enumerates goodness, wisdom, intuition (insight), understanding, virtue, greatness, power, etc. These are united in God, partly separate or scattered in the Word, and fully separated or scattered in the world of phenomena. For there is underlying all Eriugena's doctrine of the origin of things the image to which he often referred, namely, that of a circle, the radii of which are united at the centre. The centre is God, the radii at a point near the centre are the primordial causes, the radii at the circumference are phenomena.

(3) These phenomena are "Nature" in the third sense, "which is created and does not create". The stream of reality, setting out from the centre, God, passing through the Word, enters in turn all the genera suprema, media, and infra of logic, then enters the region of number and the realm of space and time, where ideas become subject to multiplicity, change, imperfection, and decay. In this last stage they are no longer pure ideas but only the shadow of God. For Pope Nicholas (1059), if a smaller region of number the ideas become angels, pure incorporeal spirits. In the realm of space and time the ideas take on the burden of matter, which is the source of suffering, sickness, and sin. The material world, therefore, of our experience is composed of idea clothed in matter—here Eriugena attempts a reconciliation of Platonism with Aristotelian notions. Man, too, is composed of idea and matter, soul and body. He is the culmination of the process of things from God, and with him, as we shall see, begins the process of return of all things to God. He is the image of the Trinity in so far as he unites in one soul being, wisdom, and love. In the state of innocence in which he was created, he was perfect in body as well as in soul, independent of bodily needs, and without differentiation of sex. The dependence of man's mind on the body and the subject of the body to the world of sense, as well as the distinction of male and female in the human kind, are all the results of original sin.

This downward tendency of the soul towards the conditions of animal existence has only one remedy, Divine grace. By means of the heavenly grace man is enabled to rise superior to the needs of the sensuous body, to place the demands of reason above those of bodily appetite, and from reason to ascend through contemplation to ideas, and thence by intuition to God Himself. The three faculties here alluded to as reason, contemplation and intuition, are designated by Eriugena as internal sense (ἰδιαύωσις), ratiocination (λόγος), and intellect (μνήμη). These are the three degrees of mental perfection which man must attain if he is to free himself from the bondage into which he was cast by sin, and attain that union with God in which salvation consists.

(4) Not only man, however, but everything else in nature is destined to return to God. This universal resurrection of nature is the subject of the last portion of Eriugena's work, in which he designates nature as "another creation". This is God, the final Term, or Goal, of all existence. When Christ became man, He took on Himself body, soul, senses, and intellect, and when, ascending into Heaven, He took these with Him, not only the soul of man but his senses, his body, the animal and the vegetative natures, and even the elements were redeemed, and the final return of all things to God was begun. Now, as Heraclitus taught, the upward and the downward ways are the same. The return to God proceeds in the inverse order through all the phenomena and the downward course, the process of creation of things from God. The elements become light, light becomes life, life becomes sense, sense becomes reason, reason becomes intellect, intellect becomes ideas in Christ, the Word of God, and through Christ returns to the oneness of God, the cause of all things. This "incorporation" in Christ takes place by means of Divine grace in the Church, of which Christ is the invisible head. The doctrine of the final return of all things to God shows very clearly the influence of Origen. In general, the system of thought just outlined is a combination of neo-Platonic mysticism, emanationism, and pantheism which Eriugena strove in vain to reconcile with Aristotelian empiricism, Christian creationism, and theism. The result is a body of doctrines loosely articulated, in which the mystic and idealistic elements predominate, and in which there is much that is irreconcilable with Catholic dogma.

Influence.—Eriugena's influence on the theological thought of his own and immediately subsequent generations was doubtless checked by the condemnation of the doctrine of predomination of the Eucharist which was subjected in the Councils of Valensia (855), Langres (859), and Verceil (1050). The general trend of his thought, so far as it was discernible at the time of his translations of Pseudo-Dionysius, was referred to with suspicion in a letter addressed by Pope Nicholas to Cistarius (1059). Eriugena was, however, not, however, until the beginning of the thirteenth century that the pantheism of the "De Divinis Natura" was formally condemned. The Council of Paris (1225) coupled the condemnation of Eriugena's work with the previous condemnations (1085) of the doctrines of Amalric of Chartres and David of Dinant, and there can be no doubt that the pantheists of that time were using Eriugena's treatise. While the great Scholastic teachers, Abelard, Alexander of Hales, St. Bonaventure, St. Thomas, and Albert the Great knew nothing, apparently, of Eriugena and his pantheism, certain groups of mystical theologians, even as early as the thirteenth century, were interested in his work and drew their doctrines from it. The Albigenese, too, sought inspiration from him. Later, the Mystics, especially Meister Eckhart, were influenced by him. And in recent times the great transcendental idealists, especially the Germans, recognize him in a kindred spirit and speak of him in the highest terms.

WILLIAM TURNER.

ERLAL. See AGRIA.

ERMLAND, or EMRLAND (VARMIENSIS, VARMA), a district of East Prussia and an exempt bishopric. St. Adalbert of Prague (d. 997) and St. Bruno of Querfurt (d. 1009) converted the early inhabitants of this region to Christianity. In the first centuries later Teutonic Knights and members of the Cistercian Order introduced civilization also into the land. Among these latter was the saintly Bishop Christian of Oliva (d. 1245). In 1243 the territorial possessions of the Teutonic Knights were divided into the Dioceses of Culm, Pomesanien, Ermland, and Samland. Albert Suerbier, who came from Cologne, and who had been Archbishop of Armagh, Ireland, was appointed Archbishop of Prussia. In 1251 he took up the thanks of the other bishops, wherein he was encouraged by Alexander IV, who in 1255 made Riga the metropolis of the four dioceses just mentioned. A priest of the Order of Teutonic Knights, Heinrich of Strateich, was selected as the first Bishop of Ermland, but he was not able to enter upon his office. It was not until August 1260, that the first Bishop of Ermland, Anselm of Mrissen, was consecrated at Valenciennes by the papal legate Pietro of Albano. The diocese included the whole of the old Prussian districts of Warmen, Narten, Barten, and Galindien, the northern half of Pomesanien, and the southern halves of Nadrauen and Sudauna. The bishop was given one-third of this territory as personal property for his support, and in this district he was the secular ruler and a prince of the Holy Roman Empire; these rights of the bishop were confirmed in the Golden Bull of the Emperor Charles IV. In 1260 Bishop Anselm founded a chapter of sixteen canons attached to the cathedral of St. Andreas at Braunsberg and transferred to the chapter the right of electing the bishop. But Braunsberg could not rival the grandeur of Prudien, in 1262, and the second bishop, Heinrich I (1278–1300), was obliged in 1280 to transfer the chapter to Frauenburg where it has remained ever since.

From the thirteenth century to the fifteenth the bishopric was one of constant wars. Repeated rebellions of the native Prussians, wars of the Lithuanians, and frequent wars with Poland, in which the bishop was always the faithful ally of the Teutonic Order, checked the development of Christianity and the cultivation of the soil. The bishops did not allow the constant encroachments and violence of the Teutonic Knights who sought to bring Ermland, like the other Prussian dioceses, under the dominion of the order. Ermland, however, defended its rights with great determination against such efforts, and could allow the Teutonic Knights in no way the election of the bishops and the chapter. Yet in everything else the bishops held faithfully to the order, even when its star began to decline, and the whole territory ruled by the knights revolted in the so-called War of the Ciètes (1454–60). It was in this period that the celebrated Cardinal Enes Silvio de Piccolomini (Enneas Silvius) was elected (1457) Bishop of Ermland; in the following year, however, he ascended the papal throne as Pius II. The Peace of Thorn (1460) removed the diocese from the protectorate of the Teutonic Knights, placed it under the sovereignty of the King of Poland. This transfer caused the discord to break out afresh, for the King of Poland claimed for himself in Ermland the same right he exercised in the rest of his kingdom, that of naming the bishop. Bishop Nikolaus of Tungs (1457–59) and especially the determined Lukas Watzelrode (1489–1512) energetically opposed these unjust claims and guarded the right of a free election of the bishop. In 1512 the latter bishop obtained from Pope Julius II the release of his diocese from its suffragan connexion, always a loose one, with the metropolitan See of Riga. When this resolution was dissolved Ermland was declared an exempt bishopric and has remained such ever since. Bishop Watzelrode was equally successful in regulating the internal affairs of his diocese. On 20 February, 1497, he held a diocesan synod at Heilberg, to which he summoned all until 1800; in 1503 he made new laws for his domain, reorganized the cathedral school at Frauenburg, selecting for it excellent teachers, among whom was his celebrated nephew Copernicus, published the Breviary (Nuremberg, 1494) and the Missal (Strasburg, 1497), etc. His weak successor Fabian of Loizainen (1522–23), however, in the Treaty of Piotrkow (7 December, 1512), conceded to the King of Poland a limited influence in the election of bishops. Existing conditions were, however, entirely changed by the deflection of the Prussian bishops from the Protestant Reformation. In 1573 William Alexander, Master of the Teutonic Knights, and the two bishops of the order who ruled Samland and Pomesanien, and the secularization of the domain of the order by the Peace of Cracow (1528). Two-thirds of the former 220 parishes of Ermland went to the two apostate Protestant bishops. In 1587 five other bishops, rulers saved the diocese from complete defection; among these bishops was the energetic Moris Ferber (1523–37), who by the ordinances issued in 1526 restored order to his desolated territory; another such bishop was Joannes Dantis (1537–48), a noted poet and diplomat, who conscientiously fulfilled his duties as bishop and raised the intellectual life of his clergy (concerning Dantis cf. Czaplicki, De vitæ et carminibus J. de Curis Dantis, Breslau, 1855; Geistliche Gedichte des Dantische übersetzt und herausgegeben von Franz Hipiter, Münster, 1857).

But the bishops who deserve the greatest praise for holding the diocese to the Catholic Faith when threatened by the surrounding Protestantism were Stanislaus Hosius (1531–79), later a cardinal, who was distinguished for erudition and learning; and Martin Kroner (1579–89), a noted historian. Among the means successfully used for the maintenance of the Faith were the assembling of various diocesan synods, of which the most important was the one held by Hosius in 1555, in which those of carrying out the decisions of the Council of Trent were enforced; and the foundation of the Jesuit College at Braunsberg in 1585 [cf. Duhr, Geschichte der Jesuiten in den Ländern deutscher Zunge (Freiburg im Br., 1907), I, 179 sqq., 307 sqq.]). In addition to these the Congregation of St. Catherine (Katharineninnen), founded at Braunsberg in 1571 by Regina Prothmann, did effective work in the instruction and training of girls; since the annulment of the right of teaching at the time of the Kulturkampf the congregation has devoted itself almost entirely to the instruction of boys. In the seventeenth century (1626–30, 1655–60), and at the beginning of the eighteenth century (1703–09), the diocese was repeatedly ravaged by the Swedes, who forcibly suppressed the Catholic Church services and carried away its literary and artistic treasures. At the time of the First Partition of Poland (1772) the whole of Ermland fell to the share of the Kingdom of Prussia. In the Treaty of Warsaw (18 September, 1773), King Frederick II, it is true, guaranteed the status quo and the free exercise of religion for the Catholic clergy and faithful, nevertheless all schools and institutions for education and training of the religious control were gradually suppressed, and the landed property of the Church secularized.

The Bull "De salute animarum", of 16 July, 1830,
ERMAN

GREGOR REINHOLD.

ERMAN, name of four Irish saints. O'Hanlon enumerates twenty-five saints bearing the name Erman, Ernain, or Ernain; it is, therefore, not surprising that their Acts have become confused.

(1) ST. ERMAN, who flourished d. about 640. He is mentioned in the Martyrology of Tallagh on 1 January. He was a nephew of St. Columba, Mellin or Feidlimidh (St. Columba's father) being his paternal grandfather. Owing to this relationship, some writers have mistaken our saint for Erman, an uncle of St. Columba. His monastery in Ireland was at Drumtorr in the district of Drumhome, County Donegal. Adamnan relates the wonderful vision he had on the night St. Columba died (Vit. S. Col., III, 20). Erman, with some forty monks, fled to Donegal. Suddenly at midnight he beheld the whole sky brightly illuminated. Looking towards the east he perceived an immense pillar of fire shining as the sun at noonday. This marvellous light then passed into the heavens and had a great dedication, Bruns- berg, Elbing, Guttafei, Heiligen, Luttain, Maren- burg, Masen, Mehlack, Neuteich, Rosel, Samland, Seeburg, Stuhm, Wartenburg, Wermitt. In 1903 there were 141 parishes; 37 curacies and vicariats; 67 chaplaincies; 335 diocesan priests; 171 parish priests and curates; 96 assistant, chaplains, and holders of benefices, 66 priests in other positions. Reli- gious—Sisters of St. Catherine, 4 mother-houses (Braunschweig, Halle, Rosel, Wermitt), 82 branch houses, and 364 religious; Grey Sisters (Sisters of St. Elizabeth), 4 houses and 80 religious; Sisters of St. Vincent de Paul, 2 houses, 17 religious. The Catholic higher schools of learning are, the Royal Lyceum Hsianum with philosophical and theological faculties, opened in 1818; at the close of 1808 the lyceum had 9 regular professors, 1 adjunct professor, 1 Privat- dozent (instructor), 39 students; the seminary was for priests at Braunschweig, reorganized in 1832; the gymnasium at Braunschweig, reopened in 1811; the gymnasium (studies not carried so far as in a gymnasium) at Rosel, founded in 1853, and the episcopal semi- naries of Braunschweig and Rostock, which were carried on in connexion with the last two institutions. The cathedral chapter is established at Braunschweig in the circle (subdistrict) of Braunschweig; since 1800 this city has been the see of the bishop. The chapter consists of 8 canons, including the two dignitaries, a cathedral provost and a cathedral dean, 4 honorary canons, 5 cathedral vicars. Pope Benedict XIV granted the pallium and the cruz gestatoria to the bishops. In 1901 Dr. Eduard Herrmann, a canon of the cathedral, was appointed auxiliary bishop and titular of the See of Cyprius, and on 13 October, 1827, 327,587 in a total population of about 2,000,000. The most important building of the diocese is the Cathedral of the Assumption at Braunschweig. It is a splendid Gothic structure built of brick and begun by Bishop Heinrich II (1292—34); the choir was consecrated in 1342 and the nave, commenced in 1355, was completed in 1388 when the fine vestibule was finished. The best-known and most visited place of pilgrimage in the diocese is Helligenland.

(2) ST. ERMAN, ABBOT OF HINNA, lived in the sixth century. He was uncle of St. Columba, and one of the twelve who accompanied him from Ireland to Iona. He was brother of Ethbas, St. Columba's mother, and son of Dima, the son of the race of Killerman, in Ross-shire; and it may be that the dedications of Kilvieve (church of the son of Eogan) in Mull, and of Kilearnadale in Jura, Argyshire, are in his honour. In the "Scottish Kalendar", collected by Bishop Forbes, his name appears as Ethenaun (and sometimes as Ethenan), and was assigned to 21 and 22 December (pp. 170, 222, 243).

(2) ST. ERMAN, ABBOT OF HINNA, lived in the sixth century. He was uncle of St. Columba, and one of the twelve who accompanied him from Ireland to Iona. He was brother of Ethbas, St. Columba's mother, and son of Dima, the son of the race of Killerman, in Ross-shire; and it may be that the dedications of Kilvieve (church of the son of Eogan) in Mull, and of Kilearnadale in Jura, Argyshire, are in his honour. In the "Scottish Kalendar", collected by Bishop Forbes, his name appears as Ethenaun (and sometimes as Ethenan), and was assigned to 21 and 22 December (pp. 170, 222, 243).

Ernin rejoiced at his coming, started to meet him. Ernan likewise hastened, but when he was twenty-four paces from his nephew he fell to the earth and died. Thus was the prophecy of St. Columba fulfilled, that he would die before his nephew (Adrainan, I. xiv.).

(3) St. Ernan of Cluanain-Deoghra in Meath (or in County Longford), sixth or seventh century. He is commemorated on 11 January in the Martyrology of Tallagh. When St. Fechin visited St. Ernan at Cluanain-Deoghra, the dozing noise of the mill outside the guest-house gave him much annoyance. St. Fechin blessed the mill, and it is said that in consequence thereof the noise ceased to be heard in the guest-house for the future. O'Hanlon, Lives of the Irish Saints, I. 174; Colgan, Acta SS. H. B., 138.

(4) St. Ernan of Torach, d. 17 August, about 650. He was son of Colman of the race of Eogan, son of Niall, and is numbered by some among the disciples of St. Columba. The latter saint founded a church and monastery on the island of Torach or Toroy, off the N. coast of Donegal. It is uncertain whether St. Ernan actually accompanied St. Columba thither (the chronology would seem to preclude it), but he was chosen to be its abbot, and in after years was regarded as the local patron. Colgan has erroneously identified him with Ernan of Cluain-Deoghra. It has been conjectured that he is identical with the Ernan whose name appears in the epistle of John, the pope-elect, to the prelates of North Ireland in 640. If this be so, he must have been a person of some importance. The whole question of the separate identity of the last three Ernans, as recorded by Colgan, Lanigan, and O'Hanlon, is exceedingly complex and obscure.

O'Hanlon, Lives of the Irish Saints (Dublin, 1875), I. 174; VIII. 239.

COLUMBA EDMONDS.

Erin, Saint. See Mernoc.

Erain, Saint. See Mernoc.

Ernest of Hesse-Rheinfalls, landgrave, b. 9 Dec., 1625, at Cassel; d. 12 May, 1695, at Cologne. He was the sixth son of Moritz, Landgrave of Hesse-Cassel, after whom his designation in the government in 1627 to his son Wilhelm V, Ernst, and his brother Hermann respectively founded the collateral lines of Hesse-Rheinfalls and Hesse-Rotenburg. He figures prominently in the religious history of his country on account of the thoroughgoing religious reforms carried forth by his convocation to the Catholic Faith. Under the strict discipline of his mother his instruction in the principles of the Reformed Church received the utmost attention. After considerable travel he chose, in 1641, the military career. In 1642 he entered the Hessian army, proving himself an able commander of the Hessian troops who fought on the side of Sweden during the Thirty Years' War. While visiting the Hessian General Geyso, who was in prison at Geseeke, he was himself arrested and taken prisoner to Paderborn. His social intercourse here with the royal army chaplain laid the foundation of his conversion. After the Peace of Westphalia he took up the government of his portion of Hesse. His desire to establish a collateral line independent of Cassel brought him in 1650 to Vienna, where his conversion to the Catholic Church was effected by the Augustinian Alfons Stainos. Before his formal reception into the Church, he returned to Rheinfall and challenged the Hessian theologians, George Calixtus of Helmstadt, Crocius of Marburg, and George of of Giessen, to a public disputation on certain points of doctrine, with the Capuchin Valerian Magnus. After the disputations the landgrave made a formal profession of the Catholic Faith and gave the reasons for his conversion in the work: "Conversionis ad fidem Catholicam motiva" S. et C. Principis ac Dom. Ernesti Hasei Rheinfallivni (Cologne, 1654). This work gave rise to a long and bitter controversy in which he himself took an active part, defending fearlessly in various writings against his opponents the course he had taken. His character as a prince is best described by himself in "Pourtraict ou description de la vie du Prince Ernest" (1683).

Joseph Schroeder.

Ernulf, architect, b. at Beauvais, France, in 1040; d. 1124. He studied under Lanfranc at the monastery of Bec, entered the Benedictine Order, and lived long as a brother in the monastery of St.-Lucien, Beauvais. At the suggestion of Lanfranc he went to England, sometime after 1070, and joined the monks of Christ Church, Canterbury. He was made prior by Archbishop Anselm, and in 1107 Abbot of Peterborough; in 1114 he was appointed Bishop of Rochester. While at Canterbury, he had taken down the eastern part of the church which Lanfranc had built, and erected a far more magnificent structure. This included the famous crypt (Our Lady of the Undercroft), as far as Trinity Tower. The chancel was finished by his successor Conrad. The chapel of St. Andrew is also part of Ernulf's work. At Peterborough and Rochester, Ernulf had the old buildings torn down and replaced with new dormitory, monastic, and other houses. He is the author of "Textus Roffensia" (a large collection of documents relating to the Church of Rochester); "Collectanea de rebus seculi Ruffenusia" in P. L., CLXIII, 1443 sqq., also of several canonical and theological treatises in D'Achery, "Spicilegii," III, 404 sqq.

Thomas H. Poole.

Errington, William, priest, founder of Sedgley Park School, b. 17 July, 1716; d. 25 September, 1768. He was son of Mark Errington of Wiltshire, a descendant of the Erringtons of Walwick Grange, Northumberland; his mother's maiden name was Martha Baker. In 1737 he went to Douai, took the mission oath 28 December, 1741, and was ordained a priest in December, 1747. If he acted in professor at Douai after his ordination, as is generally stated, it could only have been for a very short time, as he left there for England, 26 March, 1748 (manuscript list of Douai clergy in the Westminster archives). On arrival in London he took up his residence with Bishop Challoner, then coadjutor to Bishop Petre, the English Franciscan, and, in high opinion of Mr. Errington, both as an active and zealous missionary and as a man of business'. It was on account of these qualities that when the bishop wished to found a good middle-class school in England he induced Errington to undertake the work. It was a most difficult undertaking, and Errington made three unsuccessful attempts, the first in Buckinghamshire, the second in Wales, and the third at Betley near Newcastle-under-Lyne in Staffordshire, before he succeeded in founding a permanent school at Sedgley Park in the neighbourhood of Wolverhampton. On Lady-Day, 1763, he opened this school with twelve boys in the house known as the Park Hall, till then the residence of John, Lord Ward, afterwards Viscount Dudley and Ward. The little foundation was at once attacked by the Duke of Manchester, who charged him with laying out a large plot of ground without the full consent of the owner, and defended himself. The school was not interfered with; it developed into the famous Sedgley Park School which did good service to the Church for over a century, and is now represented by St. Wilfrid's College, Osbworth, near Cheddle. Having founded the school, Errington's work was done, and as soon as he secured the appointment of the Rev. Hugh Kendall as head-master in May, 1763, he returned to
ERROR

EDWIN BURTON.

ERROR, reduplicatively regarded, is in one way or another the product of ignorance. But besides the lack of information which it implies, it adds the positive element of a mental judgment, by which something false is held to be true, or something true avouched to be false. The subject-matter of error so far as morals go, like that of the want of knowledge whence it proceeds, is either (1) the law itself, or (2) a fact, or circumstance of a fact. In the first instance, one is astray in affirming or denying the existence of a law, or at any rate the inclusion of some individual case under its operation. In the second, one is labouring under an equal misapprehension, but with regard to an object of sheer fact. Thus, for example, a Catholic, who in some unaccountable way would persuade himself that there was no law of abstinence on Friday, would be in error as to the law. If, although well aware of the precept of the Church, he is under the mistaken impression that on a particular day, which happens to be Friday, is not Friday, he is in error or as to the fact.

Taking account of the error in whom the error exists, it is said to be either visible or invincible. Error is deemed to be invincible when, in spite of what is called moral diligence in the premises, it still persists. This may happen either because one has never been touched with any doubt as to the validity of one's stand, or as to the necessity of an inquiry, or it may be that one having, with full honesty of purpose, used such efforts as are demanded by the importance of the question at issue, is nevertheless unable to discover the truth. Much depends on the value to be attached to the phrase "moral diligence". It is not easy to state it in any set formula, unless it be this, that it is the diligence which prudent persons are accustomed to bring to bear upon the settlement of like matters. This notion may be set forth more in detail by the following considerations: (1) The moral diligence required does not mean that a person is to have recourse to every conceivable expedient. (2) It does imply that the necessity of the secular man, provided an agent should be such as are exacted by the seriousness of the business involved, as well as bear a proper ratio to his capacity and resources. Error is reckoned morally invincible as often as it is chargeable to the failure to exercise these ordinary and necessary precautions.

When an agent deliberately omits means calculated to dispel his error, or purposely fosters it, it is called affected. It is not so styled to indicate that it is simulated, but rather to point out that the erroneous tenet has been studiously aimed at. When the error is the offspring of the secular man, the manner in which it affects is termed casus. The influence of error on moral responsibility may be determined as follows. An act done in invincible error, whether the latter regard the fact or the law, is never imputable as a sin. The reason is that, in this hypothesis, there is no knowledge of, and consequently no volition of, evil. On the contrary, what is done in morallyvincible error is esteemed properly imputable to the agent. This is so, because the error itself is then of the agent's own choosing, and he is therefore accountable for its outcome as such. Exceptionally, however, that the moral di-

Erskine, CHARLES. Cardinal, b. at Rome, 13 Feb., 1739; d. at Paris, 20 March, 1811. He was the son of Colin Erskine of the Erskine family, who were Earls of Kellie and Mar; his mother was Agatha Gigli of the noble family of Gigli of Anagni. He was educated by Cardinal Henry, Duke of York, at the Scotch College, Rome, and was afterwards a successful advocate, becoming Doctor of Laws in 1770. Pope Pius VI made him pro-auditor and Promoter of the Faith in 1792, also a domestic prelate, canon of St. Peter's, and dean of the college of consistorial advocates. He was ordained subdeacon, 28 August, 1783. In October, 1793, he was sent as papal envoy to England. By his tact and ability Mgr. Erskine established excellent relations with the Court and the ministry, diminished the dissensions among Catholics, and avoided stirring up any anti-Catholic demonstration against himself. During his stay in London the pope named him auditor, and in 1796 gave him additional powers as envoy extraordinary. He left London in 1801 and returned to Rome, where in January, 1803, he was created cardinal. As a member of the Propaganda he was called useful to English Catholics, in that particularly, which happened to be Friday, is not Friday, he is in error or as to the fact.

Taking account of the error in whom the error exists, it is said to be either visible or invincible. Error is deemed to be invincible when, in spite of what is called moral diligence in the premises, it still persists. This may happen either because one has never been touched with any doubt as to the validity of one's stand, or as to the necessity of an inquiry, or it may be that one having, with full honesty of purpose, used such efforts as are demanded by the importance of the question at issue, is nevertheless unable to discover the truth. Much depends on the value to be attached to the phrase "moral diligence". It is not easy to state it in any set formula, unless it be this, that it is the diligence which prudent persons are accustomed to bring to bear upon the settlement of like matters. This notion may be set forth more in detail by the following considerations: (1) The moral diligence required does not mean that a person is to have recourse to every conceivable expedient. (2) It does imply that the necessity of the secular man, provided an agent should be such as are exacted by the seriousness of the business involved, as well as bear a proper ratio to his capacity and resources. Error is reckoned morally invincible as often as it is chargeable to the failure to exercise these ordinary and necessary precautions.

When an agent deliberately omits means calculated to dispel his error, or purposely fosters it, it is called affected. It is not so styled to indicate that it is simulated, but rather to point out that the erroneous tenet has been studiously aimed at. When the error is the offspring of the secular man, the manner in which it affects is termed casus. The influence of error on moral responsibility may be determined as follows. Erskine, CHARLES. Cardinal, b. at Rome, 13 Feb., 1739; d. at Paris, 20 March, 1811. He was the son of Colin Erskine of the Erskine family, who were Earls of Kellie and Mar; his mother was Agatha Gigli of the noble family of Gigli of Anagni. He was educated by Cardinal Henry, Duke of York, at the Scotch College, Rome, and was afterwards a successful advocate, becoming Doctor of Laws in 1770. Pope Pius VI made him pro-auditor and Promoter of the Faith in 1792, also a domestic prelate, canon of St. Peter's, and dean of the college of consistorial advocates. He was ordained subdeacon, 28 August, 1783. In October, 1793, he was sent as papal envoy to England. By his tact and ability Mgr. Erskine established excellent relations with the Court and the ministry, diminished the dissensions among Catholics, and avoided stirring up any anti-Catholic demonstration against himself. During his stay in London the pope named him auditor, and in 1796 gave him additional powers as envoy extraordinary. He left London in 1801 and returned to Rome, where in January, 1803, he was created cardinal. As a member of the Propaganda he was called useful to English Catholics, in that particularly, which happens to be Friday, is not Friday, he is in error or as to the fact.

Taking account of the error in whom the error exists, it is said to be either visible or invincible. Error is deemed to be invincible when, in spite of what is called moral diligence in the premises, it still persists. This may happen either because one has never been touched with any doubt as to the validity of one's stand, or as to the necessity of an inquiry, or it may be that one having, with full honesty of purpose, used such efforts as are demanded by the importance of the question at issue, is nevertheless unable to discover the truth. Much depends on the value to be attached to the phrase "moral diligence". It is not easy to state it in any set formula, unless it be this, that it is the diligence which prudent persons are accustomed to bring to bear upon the settlement of like matters. This notion may be set forth more in detail by the following considerations: (1) The moral diligence required does not mean that a person is to have recourse to every conceivable expedient. (2) It does imply that the necessity of the secular man, provided an agent should be such as are exacted by the seriousness of the business involved, as well as bear a proper ratio to his capacity and resources. Error is reckoned morally invincible as often as it is chargeable to the failure to exercise these ordinary and necessary precautions.

When an agent deliberately omits means calculated to dispel his error, or purposely fosters it, it is called affected. It is not so styled to indicate that it is simulated, but rather to point out that the erroneous tenet has been studiously aimed at. When the error is the offspring of the secular man, the manner in which it affects is termed casus. The influence of error on moral responsibility may be determined as follows. An act done in invincible error, whether the latter regard the fact or the law, is never imputable as a sin. The reason is that, in this hypothesis, there is no knowledge of, and consequently no volition of, evil. On the contrary, what is done in morallyvincible error is esteemed properly imputable to the agent. This is so, because the error itself is then of the agent's own choosing, and he is therefore accountable for its outcome as such. Exceptionally, however, that the moral diligence which has its rise in invincible error will have various degrees of guilt, in proportion to the greater or lesser culpability of the error itself.

BLATTE, Manual of Moral Theology (New York, 1938); BAYL,
Erthal, Friedrich Karl Joseph, Freiherr von, last Elector and Archbishop of Mainz, b. 3 Jan., 1719, at Mainz; d. 25 July, 1802, at Aschaffenburg. He was an unworthy brother of Franz Ludwig, the Prince-Bishop of Bamberg and Würzburg, received his education at Reims, held prebends in Bamberg and Mainz at an early age, became canon at the cathedral of Mainz in 1753, rector of the university in 1754, president of the Aulic Council in 1758, and custos of the cathedral in 1768. From 1769-1774 he was plenipotentiary of the Electorate of Mainz at the imperial court of Vienna. On 18 July, 1774, he succeeded to the See of Bamberg-Bürresheim as Elector and Archbishop of Mainz and eight days later as Prince-Bishop of Worms. He was ordained priest on 11 Sept., 1774, and received episcopal consecration the following year on 14 May. At the beginning of his reign he demanded to have the ". . . rationalism which had swept over the Church of Mainz during the weak rule of von Breydach-Bürresheim. . . ." His first act as bishop was the dismissal of the free-thinking councillors of his predecessor. Soon, however, he became one of the most notable supporters of free-thought in theology and of Febronianism in the government of the Church. George Forster, a Protestant, became his librarian and William Heine, another Protestant, and author of the famous Romanesque Ardinghelli, was his official reader. Erthal suppressed the Carthusian monastery and two nunneries at Mainz and used their revenues to meet the expenses of the university, in which he appointed numerous Protestants and free-thinkers as professors. Notorious unbelievers such as Anthony Blu and others were invited to the university in 1784 to supplant the Jesuits in the faculty of theology.

As a spiritual ruler, Erthal was guided by the principles of Febronianism. In union with the Archbishops Max Franz of Cologne, Clemens Wenzel of Trier, and Hieronymus Joseph of Salzburg he threw off the Council of Embs at which twenty-three antipapal articles, known as the "Punctuation of Embs," were drawn up and signed by the plenipotentiaries of the four archbishops on 25 August, 1786. The purpose of the Punctuation was to lower the papal dignity to the level of a "prima inter pares," with practically no authority over the territories of the archbishops. In order to increase his political influence he joined (25 October, 1785) the Confederation of Princes which was established by King Frederick the Great. In 1787 he apparently receded from the schismatic position of the Punctuation of Embs and applied to Rome for a renewal of his quinquennial faculties and for the approbation of his new coadjutor, Karl Theodor von Dalberg. Somewhat later, however, he resumed his opposition to papal authority and continued to adhere to the Punctuation even after the other archbishops had rejected it. His opposition was made futile by the revolutionary wars which raged in his electorate from 1792-1801. By the treaty of Campo-Formio in 1797 he was deprived of his possessions west of the Rhine and by the Concordat of 1801 he lost also spiritual jurisdiction over that part of his diocese. The negotiations concerning the reimbursement of Erthal for the loss of his territory west of the Rhine were not yet completed when he died.

Erwin of Steinbach, one of the architects of the Straubing cathedral, date of birth unknown; d. at Straubing, 17 January, 1318. According to a tradition which arose at a later age he was bom in the year 1270 in Steinbach, and a monument has been erected to him in the village of Steinbach near Baden-Baden. Two of his sons, Erwin and Johannes, after him his grandson Gerlach, from 1341-71 and, up to 1382, another seigneur of the family named Kuntze, were also superintending architects. Hence they were heads of the Straubing guild of stone-masons, the influence of which extended as far as Bavaria, Austria, and the borders of Italy. No written account exists as to the training for his work which the elder Erwin received. It must, however, be taken for granted that he did prove himself as an artist and a master-builder in other places before he was entrusted with the construction of the façade of the cathedral of Straubing about the year 1277. His work on the cathedral shows the influence of the French Gothic. 1307-18 when he was called to the town of Straubing, the construction was completed except a part of the nave that had been damaged by fire in 1298 had to be repaired. Three plans of the façade are still in existence; according to Dehio the best design belongs to Erwin, to whom it is customary to ascribe the entire construction. Elchhorn, it is true, has tried to prove that Erwin drew the weakest of the three plans. In any case the three master-architects by their joint work deserve the praise that, especially since Goethe, has been assigned to Erwin alone; they are not responsible, however, for the ungrateful task of making the façade a unity. Between the towers, nor for the pinnacle of the north tower. This front offers a happy combination of horizontal members in the French style with the German principle of daring height. The rose-window, also French in design and placed in the central one of the three lower fields, is a work of expert craftsmanship. The somewhat peculiar ornamentation consists of a double tracer of bars and geometrical designs which covers the façade like a net dividing and filling the large surfaces. By the novelty and the daring of the new style the individual members of this façade are in marked contrast to the older parts of the building; the front, moreover, is connected directly with the body of the cathedral. The ornamental sculpture of the building, which is richer than that ordinarily found in German cathedrals, is attributed to Erwin's workshop from which came also the monument to Conrad of Lichtenberg in the chapel of St. John. In this chapel the early Gothic forms correspond to the carving in the chapter-hall. Erwin's last work was the construction of the beautiful chapel of the Blessed Virgin. The legend of the woman sculptor, Savina, who, it is asserted, was a daughter of Erwin, rests on a mistaken interpretation of the words of a scroll. The inscriptions referring to Erwin, which along with tradition are our only sources of information, have also given rise to various legends west of the Rhine.
ERYTHRÆ, a titular see in Asia Minor. According to legend the city was founded by colonists from Crete. The name must have been derived from the red stone common in the country. Ruled by kings at first, the city passed through periods of oligarchy and democracy, became tributary to Creuse and Cyrus, submitted to Athens, then to Sparta, and finally obtained independence. After Alexander, it had various masters until 191 a. c., when it took sides with the Romans, though it still preserved its autonomy. Finally it was incorporated with the province of Asia. Erythrae was famous for its Sibyl Herophile and its temples of Hercules, Athena Polias, etc. At an early date it became a suffragan of Ephesus; to the bishops mentioned by Lequen (Or. christ., I, 727) Eutychius (431), Danciaufius (451), Theoctistus (553), Eustathius (787), Araphus (886), may be added Michael in 1229 (Revue des études grecques, VII, 80). By the sixteenth century the see had disappeared, together with the city and its port. A new village has arisen on its site, Litri or Ethri, not far from Tahasem, in the vilayet of Aidin or Smyrna. The ruins include walls which about three miles in circuit, a theatre, aqueducts, columns, and a Byzantine fortress.

S. VAILHÉ.

ERYZURUM, Dioceze of (Theodosiopolis), Diocese of (Erzerumenis Armenorum). The native name, Garin (Gr. Erythrae; Arab. Kalikelah), is still used by the Armenians. The kings of Armenia established here their summer residence. Later Garin fell into the power of the Byzantines, who named it Theodosiopolis (415), under which title it is still a Latin titular see. It became then a Greek bishopric, suffragan to Cilicia of Cappadocia. Three bishops are known at this period, Peter (448), Manasses (451), and another Peter (553). (See Lequen, Or. christ., I, 437.) This ecclesiastical situation lasted at least until the ninth century. In the eleventh century, owing to a confusion with another Theodosiopolis in Mesopotamia, the see passed under the jurisdiction of the Patriarch of Antioch. From 622 to 633, a great council, which brought about a temporary union of the Armenian and Greek Churches, was held at Garin; the Emperor Heraclius attended with the Armenians and Greek patriarchs and many bishops of both Churches (Hefele, III, 73, 132). In 1201 the city was plundered by the Seljuk Turks, who named it Erzerum, which appears to mean "the country of the Romans", that is to say of the Greeks, upon which it is to be thought that the name is a corruption of Arzun er-Roum, Arzun being an ancient Armenian city in the neighbourhood. Erzerum was captured in 1214 by the sultans of Iconium, in 1387 by Timur-Leng, in 1490 by the Osmanli Turks. In 1490 it fell into the power of local dynasties, which held it under the hegemony of Persia until 1514, when it passed again to the Osmanli. In 1528 and 1578 it was occupied by the Russians. In 1859 it was almost destroyed by an earthquake.

Erzerum is built at an altitude of over six thousand feet on a hill, which is surrounded by mountains of some ten thousand feet in height. The climate is healthful, but rigorous. Winter lasts from February to May. In the summer only four months. The Western Euphrates (Kara Su) is about four miles from the city. Garin is the capital of a vilayet and has a population of about 40,000, of whom 27,000 are Turks, the rest Armenians, Greeks, and a few Europeans (about 900 Copts or Armenians). The city is divided into three parts: the citadel, near the centre of the city, the city proper surrounded by a double wall, and four suburbs. There are 55 mosques, many churches, and several large bazaars. The chief industries are blacksmiths' and cooper's work. Besides the Greek metropolitan, still subject to the Patriarch of Antioch, Gregorian and Catholic Armenian bishops reside at Erzerum. The Diocese of Theodosiopolis (Erzerum) was re-established in 1850 and on 10 July, 1883, divided into the Dioceses of Erzerum and Mush. The former diocese has (1909) 10,000 faithful, 38 priests, 30 parishes, 64 chapels, or chapels, a seminary, 19 schools with about 1000 pupils, and a hospital. Armenian Sisters of the Immaculate Conception have a monastery. Two Capuchins conduct the Latin mission.

ESAU (Egypt), hairy, the eldest son of Isaac, the twin-brother of Jacob. The struggle of the two brothers, when still within Rebecca's womb, was prophetic of the lifelong opposition, deepening at times into hatred, which marked the relations between Esau and Jacob (Gen. xxv, 22 sqq.). Esau, who came forth first, when grown up, became a skilful hunter, and was much loved by Isaac, who ate of his hunting (Gen. xxv, 24-28), "Coming faint out of the field", and much moved by the sight and savour of the pottage boiled by his brother, Esau said to Jacob, "Give me of this red pottage". No doubt already informed as to the import of the oracle revealed to Rebecca, Jacob was quick to draw advantage from the greed of his famished brother. Conceding to the condition imposed, Esau not only exchanged his first birthright for the red pottage but even confirmed the sale by an oath, saying, "Lo, I die; what will the first birthright avail me? . . . And so taking bread and the pottage of lentils, he ate and drank, and went his way; making little account of having sold his first birthright (Gen. xxv, 28 sq.). That this transaction was widely known is justly inferred from the very name (Edom, red), which, though rarely given to Esau himself, is almost universally applied to his descendants. "Esau, being forty years old, married wives, Judith, the daughter of Beeri the
Hethite, and Basemath the daughter of Elon of the same place" (Gen., xxvi, 34). This selection of Chanaanite wives, who "both offended the mind of Isaac and Rebecca" (Gen., xxvi, 35), seemed to have caused peculiar suffering to Rebecca, who, speaking with her husband, declared, "I am weary of my life because of these bonds of my soul; if Jacob take a wife of the stock of this land, I choose not to live" (Gen., xxvii, 48). Old and with eyes so dim he could not see, Isaac ordered Esau to take quiver and bow, so that after having prepared a savoury dish with the fruit of his hunting, he might receive the parting blessing, belonging to the eldest born. He, yielding to the ready obedience, went "into the field to fulfil his father's commandment" (Gen., xxvii, 1-5). Meanwhile, clothed with the very good garments of his older brother, with hands and neck so carefully covered under the tender hides of the kids as to resemble the hairy skin of Esau, Jacob, following in every detail the advice of Rebecca, knelt before Isaac, offered the savoury dish, and begged and obtained the coveted blessing. Great then was the astonishment, and genuine the indignation, of the disappointed Esau, who "cried" (Gen., xxvii, 41) on hearing the deceived Isaac declare, "thy brother came deceitfully and got thy blessing". Though sympathizing with his grief-stricken son, Isaac, realizing more fully the import of the oracle communicated to Rebecca, felt inwardly blessed as well, and he shall be blessed": "I have appointed him thy lord, and have made all his brethren his servants" (Gen., xxvii, 6-37). The restraining influence of the father's presence is admirably portrayed in the few words uttered by Esau: "the days will come when the mourning of my father, and I will kill my brother Jacob" (Gen., xxvii, 41). That this exclamation revealed a deep-seated purpose, the evident anxiety of Rebecca, the hasty flight of Jacob to Haran, and his long stay with his uncle Laban, clearly demonstrated. (Gen., xxvii, 42-xxviii, 3) and the strategic division of his household and flocks into two companies clearly indicate Jacob's abiding sense of distrust (Gen., xxxii, 4-9).

After extending a cordial welcome to his returning brother, Esau parted from Jacob and "returned, that day, the way that he came, to Seir" (Gen., xxxiii, 1-16), where he and his descendants became exceedingly rich (Gen., xxxvi, 1-8). The very name Edom, the descendants of Esau (Edomites), apparently preserve the remembrance of the circumstances attending Esau's birth and the sale of his first birthright. From the noteworthy preference of Jacob to Esau (Gen., xxv, 22 sq.), St. Paul (Rom., ix, 4-8) shows that in the mystery of election and grace God is bound to no particular nation and is influenced by no prerogative of birth or antecedent merit. When Isaac, old and full of days, had died, we find Esau with Jacob at Hebron, there to bury their father in the cave of Machpelah (Gen., xxv, 25-31).

Daniel P. Duffey.

Esch (Eschius), Nicolaus Van, a famous mystical theologian, b. in Oisterwijk near Hertogenbosch (Bois-le-Duc), Holland, in 1607; d. 19 July, 1758. After finishing his classical studies in the school of the Hieronymites, he studied philosophy, theology, and canon law at Leuven, but refused to take his doctor's degree. In 1638 he was ordained priest, and then settled in Cologne, in order to devote himself to higher studies and the practice of Christian perfection. At the same time he became the private tutor of a number of young men, mainly university students. Blessed Peter Canisius and Lawrence Surius are the most celebrated of his pupils.

In Cologne, too, he contracted a close friendship with several members of the Carthusian Order, among whom Johann Landsberger, Gerhard Hammonatus, and Theodorich and Bruno Loher are worthy of special mention. Though his feeble health did not allow him to become a member of the order, he lived in the monastery, for a time in a famous monastery, with the rule of life as closely as possible. In 1558 Nicolaus was appointed pastor of the Bégunage at Diest; after a year he surrendered his charge for a time, but took it up again with such success that after his death he was commonly spoken of as the saintly Father Eschius. He was also important in forming the seminaries according to the rules laid down by the Council of Trent. Among his literary works the following are worthy of note: "Introductio in vitam inviriosam", which is really an introduction to a new edition of the "Templum animae" (Antwerp, 1563 etc.); "Exercitio theologiae mysticae, seu exercitium quamdam pia, que comprehendo hominem ad vitam perfec- tam instituendum juvare possint" (Antwerp, 1663).

Huster, Homöologus (Innsbruck, 1892); Heimes in Kirchen- kirchenerz (Freiburg, 1889), II, 468.

A. J. Maa.

Eschatology, that branch of systematic theology which deals with the doctrines of the last things (" apokalypse"); the Greek title used by Origen in his "Introduction", but in modern usage it has largely supplanted its Latin equivalent De Novissimis. As the numerous doctrinal subjects belonging to this section of theology will be treated ez professo under their several proper titles, it is proper here merely to take such a view of the whole field as will enable us to indicate the place of eschatology in the general framework of religion, explain its subject-matter and the outlines of its content in the various religions of mankind, and illustrate by comparison the superiority of Christian eschatological teaching.

As a preliminary indication of the subject-matter, a distinction may be made between the eschatology of the individual and that of the race and the universe at large. The former, setting out from the doctrine of personal immortality, or at least of survival in some form after death, seeks to ascertain the fate or condition, temporary or eternal, of individual souls, and how far the issues of the future depend on the present life. The latter deals with events like the resurrection and the general judgment, in which, according to Christian eschatology, all people will be judged with the signs and portents in the moral and physical order that are to precede and accompany those events. Both aspects—the individual and the universal—belong to the adequate concept of eschatology; but it is only in Christian teaching that both receive due and proportionate recognition. Jewish eschatology only attained its completion in the teaching of Christ and the Apostles; while in ethnic religions eschatology seldom rose above the individual view, and even then was often so vague, and so little bound up with any adequate notion of Divine judgment and of moral retribution, that it barely deserves to be ranked as religious teaching.

I. Ethical Eschatologies.—(1) Even among the lower—savage and barbarian—races the universality of religious beliefs, including belief in an after-life, has been acknowledged to exist; but on closer scrutiny the evidence for this claim has broken down in so many cases that we are justified in presuming against any exception. Among the lower—savage and barbarian—races the purity of eschatological beliefs vary, as a rule, with the purity of the idea of God and of the moral standards that prevail. Some savages seem to limit existence after death to the good (with extinction for the wicked), as the Nicaraguas, or to men of rank, as the
Eschatology

Eschatology

Roses; while the Greenlanders, New Guinea negroes, and others seem to hold the possibility of a second death, in the other world or on the way to it. The next world itself is variously located—on the earth, in the skies, in the sun or moon—but most commonly under the earth; while the life led there is conceived either as a dull and shadowy and more or less impotent existence, or as an activity; in the result of one generation, that the notion of retribution is claimed to be altogether wanting. Sometimes mere physical prowess, as bravery or skill in the hunt or in war, takes the place of a strictly ethical standard; but, on the other hand, some savage religions contain unexpectedly clear and elevated ideas of many primary moral duties.

(2) Coming to the higher or civilized races, we shall glance briefly at the eschatology of the Babylonian and Assyrian, Egyptian, Indian, Persian, and Greek religions. A great catastrophy is to be said to have taken place in eschatology, except the very indefinite belief involved in the worship of ancestors, whose happiness was held to depend on the conduct of their living descendants. Mohammedan eschatology contains nothing distinctive except the glorification of barbaric sanctions.

(a) Babylonian and Assyrian.—In the ancient Babylonian religion (with which the Assyrian is substantially identical) eschatology never attained, in the historical period, any high degree of development. Retribution is confined almost, if not quite, entirely to the present life, virtue being rewarded by the Divine bestowal of strength, prosperity, long life, numerous offspring, and the like, and wickedness punished by contrary temporal calamities. Yet the existence of an hereafter is believed in. A kind of semi-material ghost, or shade, or double (stimma), survives the death of the body, and when the body is buried (or, less commonly, cremated) the ghost descends to the underworld to join the company of the departed. In the "Lay of Ishtar" this underworld, to which she descended in search of her deceased lover and of the "waters of life," is described in gloomy colours; and the same is true of the other descriptions we possess. It is the "pit," the "land of no return," the "house of darkness," the "place where dust is their bread, and their lives utter destruction"; and it is stimulated by various animal-shapes. It was this belief which, the degenerate stage at which he encountered Herodotus mistook for the doctrine of the transmigration of souls. It should be added that the identification of the blessed with Osiris ("Osiris N. N." is usual form of inscription) did not, at least in the earlier and higher stage of Egyptian religion, imply pantheistic absorption in the deity or the loss of individual personality. Regarding the fate of those who fail in the judgment after death, or succumb in the second probation, Egyptian eschatology is as mysterious as that of the Babylonians. "Second death," and other expressions apply to them might seem to suggest annihilation; but it is sufficiently clear from the evidence as a whole that continued existence in a condition of darkness an misery was believed to be their portion. And as there were degrees in the happiness of the blessed, so also is the punishment of the lost (see Book of the Dead, t Budge, London, 1901).

(b) Egyptian.—On the other hand, in the Egyptian religion, which for antiquity competes with the Babylonian, we meet with a highly developed and comparatively elevated eschatology. Leaving aside such difficult questions as the relative priority and influence of the different, and even conflicting, elements in the Egyptian religion, it will suffice for the present purpose to refer to what is most prominent in Egyptian eschatology taken at its highest and best. In the first place, then, life in its fulness, ascending life with Osiris, the sun-god, who journeys daily through the underworld 'even identification with the god, with the right to be called by his name, is what the pious Egyptian looks forward to as the ultimate goal after death. The departed are habitually called the "living"; the coffin is the "chest of the living," and the tomb the "lord of life." It is not a higher or more idealised form of the pursuits and pleasures of earthly life. In most savage religions there is no very high or definite doctrine of moral retribution after death; but it is only in the case of a few of the most degraded races, whose existence is in the result of one generation, that the notion of retribution is claimed to be altogether wanting. Sometimes mere physical prowess, as bravery or skill in the hunt or in war, takes the place of a strictly ethical standard; but, on the other hand, some savage religions contain unexpectedly clear and elevated ideas of many primary moral duties.

(c) Indian.—In the Vedas, the earliest historic form of the Indian religion, eschatological belief is simpler and more directly and influentially and conclusively forms that succeeded it. Individual immortality is clearly taught. There is a kingdom of the dead under the rule of Yama, with distinct realms of the good and the wicked. The good dwell in a real
of light and share in the feasts of the gods; the wicked are banished to a place of "nethermost darkness". Already, however, in the later Vedas, these beliefs find developed expression, retribution begins to be ruled more by ceremonial observances than by strictly moral laws. On the other hand, there is no trace whatever of the dreary doctrine of transmigration, but critics profess to discover the germs of later pantheism.

In Brahminism (q. v.) retribution gains in prominence and severity, but becomes hopelessly involved in transmigration, and is made more or less dependent either on sacrificial observances or on theological knowledge. Though after death there are numerous heavens and hells for the reward and punishment of every degree of merit and demerit, these are not final states, but only so many preludes to further rebirths in higher or lower forms. Pantheistic absorption in Brahma, the world-soul and only reality, with the consequent extinction of individual personality—this is the only final solution of the problem of existence, the only salvation to which man may ultimately look forward. But it is a long, long journey, a few may hope to reach after the present life, the few who have acquired a perfect knowledge of Brahma. The bulk of men who cannot rise to this high philosophic wisdom may succeed, by means of sacrificial observances, in a temporary heaven, but they are destined to further births and deaths.

Buddhist eschatology still further develops and modifies the philosophical side of the Brahministic doctrine of salvation, and culminates in what is, strictly speaking, the negation of eschatology and of all theology—a religion without a God, and a lofty moral code without hope of reward or fear of punishment hereafter. Existence itself, or at least individual existence, is the primary evil; and the craving for existence, with the many forms of desire it begets, is the source of all misery in which the soul is inevitably involved. Salvation, or the state of Nirvana, is to be attained by the utter extinction of every kind of desire; and this is possible by knowledge—not the knowledge of God or the soul, as in Brahminism, but the purely philosophical knowledge of the real truth of things. For all who do not reach this state of philosophic enlightenment or who fail to live up to its requirements—that is to say for the vast bulk of mankind—there is nothing in prospect save a dreary cycle of deaths and rebirths with intercalated heavens and hells, or a mere suspension of this dreary cycle with still more dread and inexorable than in pre-Buddhist Brahminism. (See Buddhist.)

(d) Persian.—In the ancient Persian religion (Zoroastrianism, Mazdaism, Parseeism) we meet with what is, perhaps, in its better elements, the highest type of ethical eschatology. But as we know it in the Parsee literature, it contains elements that were probably borrowed from other religions; and as some of this literature is certainly post-Christian, the possibility of Jewish and even Christian ideas having influenced the later writings and the devils, is not to be excluded of. The radical defect of the Persian religion was its dualistic conception of deity. The physical and moral world is the theatre of a perpetual conflict between Ahura Mazda (Ormuzd), the good, and Angra Mainyu (Ahriman), the evil, principle, co-creators of the universe and of man. Yet the evil principle is not eternal ex parte post; he will finally be vanquished and exterminated. A pure monotheistic Providence promises at times to replace dualism, but never quite succeeds—the latest effort in this direction being the belief in Zoroaster's Ahura Mazda, supreme deity above both Ahriman and Ormuzd. Morality has its sanction not merely in future retribution, but in the present assurance that every good and pious deed is a victory for the cause of Ahura Mazda; but the call to the individual to be active in this cause, though vigorous and definite enough, is never quite free from ritual and ceremonial conditions, and as time goes on becomes more and more complicated by these observances, especially by the laws of purity. Certain elements are holy (fire, earth, water), certain others unholy or impure. Death is considered as a separation that liberates the soul (the body, etc.); and to defile oneself on the holy elements by contact with the impure is one of the clearest sins. Consequently corpses could not be buried or cremated, and were accordingly exposed on platforms erected for the purpose, so that birds could eat the flesh. When the soul leaves the body it has to cross the bridge of Chinvat (or Kinvad), the bridge of the Gatherer, or Accountant. For three days good and evil spirits contend for the possession of the soul, after which the reckoning is taken, and the just man is rejoiced by the appellation, in the form of a fair maiden, of his good deeds, words, and thoughts, and passes over safely to a paradise of bliss; while the wicked man is confronted by a hideous apparition of his evil deeds and is dragged down to hell. If the judgment is neutral the soul is reserved until an intensive state (so at least in the Pahlavi books) till the decision at the last day. The developed conceptions of the last days, as it appears in the later literature, has certain remarkable affinities with Jewish Messianic and millenial expectations. A general resurrection of the dead during the messiah, Ahriman is fought, and the Messiah is to be followed by two millennial periods, in each of which a great prophet will appear to herald the coming of Sohyant (or Sosioch), the Conqueror and Judge, who will raise the dead to life. The resurrection will occupy fifty-seven years and will be followed by the general judgment, the separation of the good from the wicked, and the passing of both through a purgatorial fire, gentle for the just, terrible for sinners, but leading to the restoration of all. Next will follow the final combat between the good and the evil spirits, in which the evil spirit is inextricably involved. Salvation, or the state of Nirvana, is to be attained by the utter extinction of every kind of desire; and this is possible by knowledge—not the knowledge of God or the soul, as in Brahminism, but the purely philosophical knowledge of the real truth of things. For all who do not reach this state of philosophic enlightenment or who fail to live up to its requirements—that is to say for the vast bulk of mankind—there is nothing in prospect save a dreary cycle of deaths and rebirths with intercalated heavens and hells, or a mere suspension of this dreary cycle with still more dread and inexorable than in pre-Buddhist Brahminism. (See Buddhist.)

(e) Greek.—Greek eschatology as reflected in the Homeric poems remains at a low level. It is only very vaguously migratory and is altogether cheerless in its outlook. Life on earth, for all its shortcomings, is the highest good for men, and death the worst of evils. Yet death is not extinction. The ψυχή survives—not as a pure spiritualism but takes on and is clothed with the thoughts, and the destiny of the earthly man; and of the life of the underworld is a dour, impoverished, almost functionless existence. Nor is there any distinction of fates either by way of happiness or misery in Hades. The judicial office of Minos is illusory, and has nothing to do with earthly conduct; and there is only one allusion to the Furies suggestive of their activity among the dead (Iliad, XIX, 288-60). Tartarus, the lower hell, is reserved for a few special nobles against whose evil deeds, or due punishment, or fate, the idea of the earthy man; and of the life of the underworld is a dour, impoverished, almost functionless existence. Nor is there any distinction of fates either by way of happiness or misery in Hades. The judicial office of Minos is illusory, and has nothing to do with earthly conduct; and there is only one allusion to the Furies suggestive of their activity among the dead (Iliad, XIX, 288-60). Tartarus, the lower hell, is reserved for a few special nobles against whose evil deeds, or due punishment, or fate, the idea of the earthy man; and of the life of the underworld is a dour, impoverished, almost functionless existence. Nor is there any distinction of fates either by way of happiness or misery in Hades. The judicial office of Minos is illusory, and has nothing to do with earthly conduct; and
which the body is but a temporary prison, and the doctrine of a retributive transmigration are more or less closely associated. It is hard to say how far the common belief of the people was influenced by these metaphysical and philosophical ideas; but in the evolution of the doctrine a philosophical influence is unmistakable. This doctrine of Manichaeism is found in Zoroaster, and in Plato among the philosophers. Plato has a definite promise of a future life of bliss for the good and the initiated, and not merely for a few, but for all. Even for the wicked who descend to Hades there is hope; having purged their wickedness they obtain rebirth on earth, and if, during three successive existences, they prove themselves worthy of the boon, they will finally attain to happiness in the Isles of the Blest. Though Plato's teaching is vitiated by the doctrine of pre-existence, metempsychosis, and other serious errors, it represents the highest achievement of pagan philosophic speculation on the subject of the future life. The divine dignity, spirituality, and essential immortality of the soul being established, the issues of the future for every soul are made clearly dependent on its moral conduct in the present life in the body. There is a divine judgment after death, a heaven, a hell, and an intermediate state for penance and purification; and rewards and punishments are graduated according to the degree of sin. Even the wicked are condemned to everlasting punishment in Tartarus; the less wicked or indifferent go also to Tartarus or to the Acherusian Lake, but only for a time; those eminent for goodness go to a happy home, the highest reward of all being for those who have purified themselves by philosophy.

From the foregoing sketch we are able to judge both of the merits and defects of the ethical systems of eschatology. Their merits are perhaps enhanced when they are presented, as above, in isolation from the other factors which make up the complex of our collective religious life. Their defects are obvious enough; and even those of them that were best and most promising turned out, historically, to be failures. The precious elements of eschatological truth contained in the Egyptian religion were associated with error and superstition, and were unable to save the religion from sinking to the state of utter degeneration in which it is found at the approach of the Christian Era. Similarly, the still richer and more profound eschatology of the Persian religion, vitiated by dualism and other corrupting influences, failed because of a singularly deficient ethical life. Plato's speculative teaching failed to influence in any notable degree the popular religion of the Greco-Roman world; it failed to convert even the philosophical few; and in the hands of those who did profess to adopt it, Platonism, corrected by Christianity, ran to seed in Pantheism and other forms of error.

II. OLD-TESTAMENT ESCHATOLOGY.—Without going into details either by way of exposition or of criticism, it will be sufficient to point out how Old-Testament eschatology compares with the ethical systems, and how, notwithstanding its deficiencies in point of clearness and completeness, it was not an unworthy preparation for the fullness of Christian Revelation.

(1) Old-Testament eschatology, even in its earliest and most imperfect form, shares in the distinctive character which belongs to O.T. religion generally. In the first place, as a negative distinction, we note the entire absence of certain erroneous ideas and tendencies that have a large place in ethical religions. There is no pantheism or dualism, no doctrine of pre-existence, no immortality of the soul, no metempsychosis; nor is there any trace, as might have been expected, of Egyptian ideas or practices. In the next place, on the positive side, the O.T. stands apart from ethical religions in its doctrine of God, and of man in relation to God. Its doctrine of God is sure and uncomprising monotheism; the universe is ruled by the wisdom, justice, and omnipotence of the one, true God. And man is created by God in His own image and likeness, and destined to relations of friendship and fellowship with Him. Here we have revealed in clear and definite fashion the beginning of the eschatological truth, and which, once they had taken hold of the life of a people, were bound, even without new additions to the revelation, to safeguard the purity of an adequate eschatology and to lead in the time to richer and higher developments. Such additions and developments occur in O.T. teaching; but before noticing them it is well to call attention to the two chief defects, or limitations, which attach to the earlier eschatology and continue, by their persistence in popular belief, to hinder more or less the correct understanding and acceptance by the Jewish people as a whole of the highest eschatological utterances of their own inspired teachers.

(2) The first of these defects is the silence of the earlier and of some of the later books on the subject of moral retribution after death, or at least the extreme vagueness of such passages in these books as might be understood to refer to this subject. Death is not extinction; but Sheol, the underworld of the dead, in early Hebrew thought is not very different from the Babylonian Avernus, and the concept of Sheol as condemned to everlasting punishment in Tartarus; the less wicked or indifferent go also to Tartarus or to the Acherusian Lake, but only for a time; those eminent for goodness go to a happy home, the highest reward of all being for those who have purified themselves by philosophy.

(3) The tendency to sink the individual in the nation and to treat the latter as the religious unit was one of the most marked characteristics of Hebrew life. And this tendency is evident in the way the Hebrews prolonged the other limitation just noticed, according to which retribution was looked for in this life. Deferred and disappointed personal hopes could be soliced in the thought of their present or future realization in the nation. It was only when the national calamities, culminating in the exile, had shattered for a time the
people's hope of a glorious theocratic kingdom that the eschatology of the individual became prominent; and with this the conception was too abstract to convert to the national point of view. It is true of the O.T. as a whole that the eschatology of the people overshadowed that of the individual, though it is true at the same time that, in and through the former, the latter is a clear and vivid assurance that the personal resurrection from the dead, at least for the children of Israel who are to share, if found worthy, in the glories of the Messianic Age.

It is beyond the scope of this article to attempt to trace the growth or describe all the national eschatological phases of the Messianic Age, or to note the centres in the hope of the establishment of a theocratic and Messianic kingdom on earth (see Messias). However spiritually this idea may be found expressed in O.T. prophecies, as we read them now in the light of their progressive fulfillment in the N.T. Dispensation, the Jewish people as a whole a clung to a material and political interpretation of the kingdom, coupling their owndomination as a people with the triumph of God and the worldwide establishment of His rule. There is much, indeed, to account for this in the insecurity of the species themselves. The Messia as a distinct person is not always mentioned in connexion with the inauguration of the kingdom, which leaves room for the expectation of a theophany of Jahve in the character of judge and ruler. But even when the person and place of the Messias are directly revealed, the future glory of the Messianic kings and the majesty of the kingdom are so vast and so remote that it is rather the prophet's way to predict the events of what we have learned to distinguish as His first and His second coming tend to give to the whole picture of the Messianic kingdom an eschatological character that belongs in reality only to its final stage. It is thus the resurrection of the dead in Isaies, xxvi, 19, and Daniel, xii, 2, is introduced; and many of the descriptions foretelling the "day of the Lord" the judgment on Jews and Gentiles, the renewal of the earth and other phenomena that usher in that day, while applicable in a limited sense to contemporary events and to the inauguration of the Christian Era, are much more appropriately understood of the end of the world. It is not, therefore, surprising that the religious hopes of the Jewish nation should have become so predominantly eschatological, and that the popular imagination, foreshortening the perspective of Divine Revelation, should have learned to look for the establishment on earth of the glorious Kingdom of God, which Christians are assured will be realized only in heaven at the close of the present dispensation.

(4) Passing from the general idea of eschatology, which serves as a foundation for the true understanding of O.T. eschatology, a brief reference will be made to the passages which exhibit the growth of a higher and fuller doctrine of immortality. The recognition of individual as opposed to mere corporate responsibility and restitution may be reckoned, at least remotely, as a gain to eschatology, even when retribution is confined chiefly to this life; and this principle is repeatedly recognized in the earliest books. (See Gen., xliii, 25; Ex., xxxvi, 33; Num., xvi, 22; Deut., vii, 10; xxiv, 10; II K., xxiv, 1; IV K., viii, 6; Jer., xxiii, 16 sq.; Jer., xiv, 1 sq.; xvii, 5-10; xxxii, 18 sq.; Esch., xiv, 12-20; xviii, 4, 18 sq.; Psalms, passim; Prov., ii, 21 sq.; x, 2; xi, 19, 31; etc.) It is recognized also in the very terms of the problem dealt with in the Book of Job.

But, coming to higher things, we find in the Psalms and in Job the clear expression of a hope or assurance for the just of a life of blessedness after death. Here is voiced, under Divine inspiration, the innate craving of the righteous soul for everlasting fellowship with God, the protest of a strong and vivid faith against the popular conception of Sheol. Omnibus dubitasse, it is enough to refer to Psalms xv (A.V. xvi), xvi (A.V. xvii), xlviii (A.V. xlix), and lxxii (A.V. lxxiii). Of these it is not impossible to explain the first two as prayers for deliverance from some imminent danger of death, but the assurance expressed in Psalms xxxix, 12 and cxxxix, 8, and found repeated in Psalms lxxxvi, 10 and lixiv, 22, finds its interpretation as the most natural. And this assurance becomes still more definite in the other two psalms, by reason of the contrast which death is asserted to introduce between the fates of the just and the sinner, and the same faith emerges in the Book of Job, first as a hope somewhat questionably expressed, and then as an assured conviction. Despairing of indication in this life and rebelling against the thought that righteousness should remain finally unrewarded, Job suffers some isolation in the hope of a renewal of God's friendship beyond the grave: "O that thou wouldest hide me in Sheol, that thou wouldest keep me secret, until thy wrath be past, that thou wouldest appoint me a set time, and remember me. If a man die, shall he live again? All the days of my warfare would I wait, till my release should come" (xiv, 13 sq.). In xvi, 18-xvii, 9, the expression of this hope is more absolute; and in xix, 23-27, it takes the form of a definite certainty that he will see God, his Redeemer: "But I know that my Redeemer liveth and that in the latter days thou wilt arise, and the dust of my skin shall I see God, whom I shall see for myself and my eyes shall behold, and not another" (25-27). In his rising body he will see God, according to the Vulgate (LXX) reading: "and in the last day I shall arise together, and will see God again with my skin, and in my flesh I shall see my God" (25-28).

The doctrine of the resurrection finds definite expression in the Prophets; and in Isaies, xxvi, 19: "thy dead shall live, thy dead bodies shall rise again. Awake and sing, ye that dwell in the dust" etc.; and Daniel, xii, 2: "and many of those that sleep in the dust of the earth shall awake: some unto everlasting life, and others unto everlasting shame and contempt" etc., it is clearly a personal resurrection that is taught in Isaies a resurrection of righteous Israelites; in Daniel, of both the righteous and the wicked. The judgment, which in Daniel is connected with the resurrection, is also personal; and the same is true of the judgment of the living (Jews and Gentiles) which in various forms the prophecies connect with the "day of the Lord". Some of the Psalms (e.g. xlviii) seem to imply a judgment of individuals, good and bad, after death; and the certainty of a future judgment of "every work, whether it be good or evil", is the final solution of the problem of the ultimate fate of the wicked. Psalms, passim, Psalms, xxvii, 23-31 (cf. xxvii, 23-31). Coming to the later (deuterocanonical) books of the O.T. we have clear evidence in II Mach. of Jewish faith not only in the resurrection of the body (vii, 9-14), but in the efficacy of prayers and sacrifices for the dead who have died in-godliness (xii, 43 sqq.). And in the second and first centuries n. c., in the Jewish apocalyptic literature, new eschatological developments appear, chiefly in the direction of a more definite doctrine of retribution after death. The word Sheol is still most commonly interpreted as the abode of the wicked, but departed awaiting the resurrection; this abode having different divisions for the reward of the righteous and the punishment of the wicked; in reference to the latter, Sheol is sometimes simply equivalent to hell. Gelemna is the name usually applied to the final place of punishment of the wicked after the last judgment, or even immediately after death; while paradise is often used to designate the intermediate abode of the souls of the just, and heaven their home of final blissfulness (for detailed references to apocalyptic literature see II Macc., Chaldee and Syriac, and the article Paradise, Bel. §§ 63, 70). Christ's use of these terms shows that the Jews of His day were sufficiently familiar with their N.-T. meanings.

III. CATHOLIC ESCHATOLOGY — In this article there
ESCHATOLOGY

A critical discussion of N.-T. eschatology nor any attempt to trace the historical developments of Catholic teaching, which is extensive, and only a brief concursus is given of the developed Catholic system. For critical and historical details and for the refutation of opposing views the reader is referred to the special articles dealing with the various doctrines. The eschatological summary which constitutes the "four last things" (death, judgment, heaven, and hell) is popular rather than scientific. For systematic treatment it is best to distinguish between (A) individual and (B) universal cosmic eschatology, including under (A): (1) death; (2) the particular judgment; (3) merit of purgatory; (4) the intermediate state; (5) hell, or eternal punishment; and under (B): (6) the approach of the end of the world; (7) the resurrection of the body; (8) the general judgment; and (9) the final consummation of all things. The superiority of the occultic eschatology consists in the fact, that, without professing to answer every question that idle curiosity may suggest, it gives a clear, consistent, satisfying statement of all that need at present be known, or can profitably be understood, regarding the eternal issues of life and death for each individual, and the final and universal consummation of the cosmos of which we are a part.

(A) Individual Eschatology.—(1) Death, which consists in the separation of soul and body, is presented under many aspects in Catholic teaching, but chiefly (a) as being naturally and historically, in the present order of supernatural Providence, the consequence and penalty of Adam's sin (Gen., ii, 17; Rom., v, 12, etc.); (b) as being the end of man's period of probation, the event which decides his eternal destiny (II Cor., v, 10; John, ix, 4; Luke, xii, 48; xvi, 19 sqq.; etc.), though it does not exclude an intermediate state of purification for the imperfect who die in God's grace; and (c) as being universal, though as to its absolute universality (for those living at the end of the world) there is some room for doubt because of 1 Thess., iv, 14 sqq.; I Cor., xv, 51; II Tim., iv, 1.

(2) That a particular judgment of each soul takes place at death is implied in many passages of the N. T. (Luke, xvi, 22 sqq.; xxii, 43; Acts, i, 25; etc.), and in the teaching of the council of Florence (Denzinger, Enchiridion, no. 688) regarding the speedy entry of each soul into its own purgatory, or hell. (See Judgment, Particular.)

(3) Heaven is the abode of the blessed, where (after the resurrection with glorified bodies) they enjoy, in the company of Christ and the angels, the immateriality and blessedness of a life, after their souls, already elevated by the light of glory so as to be capable of such a vision. There are infinite degrees of glory corresponding to degrees of merit, but all are unsurprisingly happy in the eternal possession of God. Only the pure and holy can enter heaven; but for those who have attained that state, either at death or after a course of purification in purgatory, entry into heaven is not deferred, as has sometimes been erroneously held, till after the General Judgment.

(4) Purgatory is the intermediate state of unknown duration in which those who die imperfect, but not unrepentant mortal sin, undergo a course of penal purification, to qualify for admission into heaven. They share in the communion of saints (q.v.) and are benefited by our prayers and good works (see Pardon, Prayers for). As well as the just, who had things in this formers introduced a dismal blank in their eschatology and, after the manner of extremes, has led to extreme reactions. (See Purgatory.)

(5) Hell, in Catholic teaching, designates the place or state of men (and angels) who, because of sin, are excluded for ever from the beatific vision. This wide sense it applies to the state of those who die with only original sin on their souls (Council of Florence, Denzinger, no. 588), although this is not a state of misery or of subjective punishment of any kind, but merely implies the objective privation of supernatural bliss, which is a condition of perfect natural happiness. But in the narrower sense in which the name is ordinarily used, hell is the state of those who are punished eternally for unrepentant personal mortal sin. Beyond affirming the existence of such a state, with varying degrees of punishment corresponding to degrees of guilt, and its eternal unending duration, Catholic doctrine does not go. It is a terrible and mysterious truth, but it is clearly and emphatically taught by Christ and the Apostles. Rationalists may deny the eternity of hell in spite of the authority of Christ, and the ultimate consignment to it of all sinners and the voluntary disappearance of moral evil from the universe. Annihilationists, on the other hand, failing to find either in reason or Revelation any grounds for such optimism, and considering immortality itself to be a grace and not the natural attribute of the soul, believe that the finally imperfect will be annihilated or cease to exist—that God will thus ultimately be compelled to confess the failure of His power and will.

(B) Universal and Cosmic Eschatology.—(6) Notwithstanding Christ's express refusal to specify the time of the end (Mark, xiii, 32; Acts, i, 6 sqq.), it was a common belief among early Christians that the end of the world was near. This seemed to have some support in certain sayings of Christ in reference to the destruction of Jerusalem, which were set down in the Gospels side by side with prophecies relating to the end (Matt., xxiv; Luke, xxii), and in certain passages of the Apostolic writings, which might, not unnaturally, have been so understood (but see II Thess., ii, 2 sqq., where St. Paul corrects this impression). On the other hand, Christ had clearly stated that God's kingdom was already being established among all nations before the end (Matt., xxiv, 14), and St. Paul looked forward to the ultimate conversion of the Jewish people as a remote event to be preceded by the conversion of the Gentiles (Rom., xi, 25 sqq.). Various other signs are spoken of as preceding or ushering in the end, as a great apostasy (II Thess., ii, 3 sqq.), or falling away from faith or charity (Luke, xvii, 8; xii, 26; Matt., xxiv, 12), the reign of Antichrist (q.v.), and great social calamities and terrifying physical convulsions. Yet the end will come unexpectedly and take the living by surprise.

(7) The visible coming (parousia) of Christ in power and glory will be the signal for the rising of the dead (see Resurrection). It is Catholic teaching that all the dead who are to be judged will rise, the wicked as well as the just, and that they had in this life. But nothing is defined as to what is required to constitute this identity of the risen and transformed with the present body. Though not formally defined, it is sufficiently certain that there is to be only one general resurrection, simultaneous for the good and the bad; (see Matt., xxiv). Regard the qualities of the risen bodies in the case of the just we have St. Paul's description in I Cor., xv (cf. Matt., xiii, 43; Phil., iii, 21) as a basis for theological
speculation; but in the case of the damned we can only affirm that their bodies will be incorruptible.

(8) Regarding the general judgment there is nothing of importance to be added here to the graphic description given by Christ himself, who is Judge (Matt., xxv.; etc.). (See JUDGMENT, GENERAL.)

(9) There is mention also of the physical universe sharing in the general consummation (II Pet., iii, 13; Rom., viii, 19 sqq.; Apoc., xxii, 1 sqq.). The present heaven and earth will be dissolved and a new heaven and earth take their place. But what, precisely, this process will involve, or what purpose the renovated world will serve is not revealed. It may possibly be part of the glorious Kingdom of Christ of which “there shall be no end”. Christ’s militant reign is to cease with the advent of His second appearance (I Cor., xv, 24 sqq.), but as King of the elect whom He has saved He will reign with them in glory for ever.

A good bibliography of older works is given in Alger, A Critical History of the Doctrine of the Future Life with complete Bibliography by Ezra Abbott (New York, 1871; SALMON, Christian Doctrine of Immortality (5th ed. 1885); bibliography, 401)—very complete; OSTERLEY, The Doctrine of the Last Things (London, 1898). For ethical eschatologies the reader is referred for a fuller study to the special articles on the various religions mentioned; it is enough to refer here, for the lower races, to peripatetic philosophy in LUCRECIO, On the Origin of Civilization and the Primitive Condition of Man (16th ed. 1886; Tylor, Primitive Culture (3rd ed., London, 1881); REVILLOC, Les religions de l’Inde (Paris, 1887); for higher races: JASTROW, Religion of Babylonia and Assyria (Boston, 1889); JEREMIAH, Die babylonisch-assyrischen Vorstellungen vom Zustand der Seele nach der Abmessung (Leipzig, 1887); EGYPTIAN RELIGION, The Future Life (London, 1901); PEEHE, Religion and Conscience in the Ancient Egyptian Religion (London, 1899); SECCAS, The Religion of Ancient Egypt and Babylonia (Gifford Lectures, 1901; RIVET, Primitive Buddhism (London, 1882); JACQUARD, Zoroaster, the Prophet of Ancient Iran (New York, 1898); ROHE, Psyche, Seele, und Unsterblichkeitsglaube der Griechen (2nd ed., Freiburg, 1898); I SIAK, general works on ancient religions like those of IULY, DE LA SAUCIÈRE, etc. (ibid., 407); bibilical eschatology, see DAVISON-CHARLES-SALMON in HART, Dict. of the Bible; CHARLES, A Critical History of the Doctrine of a Future Life in Israel, in Judaism and in Christianity (London, 1909; IOM) in Encyclopaedia Biblica, s. v. (this author is to be read with care because of his strong arbitrariness in theology); and interesting documents; ATZENBERG, Die christliche Eschatologie in den Studien ihrer Oberflächer im Alten und Neuen Testament (Freiburg im Br., 1890); MANGENTO, Fin du monde en VIG., Dict. de la Bible. For the history of Catholic eschatology see ATZENBERG, Geschichte der christlichen Eschatologie innerhalb der vorchristlichen Zeit (Freiburg im Br., 1896); and for modern eschatological, see in Ancient Egypt (London, 1898); WAGNER, General Eschatology of the several articles referred to in the last section of this article.

Eschenbach, WOLOFM VON. See WOLOFM.

Escobar, MARINA DE, VENERABLE, mystic and foundress of a modified branch of the Brigittine Order of Valladolid, Spain, 8 Feb., 1554; d. there 9 June, 1633. Her father, Iago de Escobar, was professor of civil and canon law and for a time governor of Ouenas, a man noted for his learning and his piety; her mother was Margaret Montas, daughter of Charles V’s physician. She was an apt scholar and even in youth showed powers of reflection beyond her age. Until her forty-fifth year her attention was given mainly to prayer and recreation, her chief devotion being that of promoting the piety of others. At fifty her continual bodily afflictions became so severe that she was confined to her bed for the remainder of her life. Providence provided her with an admirable spiritual guide, the venerable Luis de Ponte (1554-1624). The special external work entrusted to her was to establish a branch of the Order of the Holy Saviour or Brigitines but with the rules greatly modified to suit the times and the country. With the revelation of the work came the knowledge that she would not live to see it accomplished. By day, as she believed, she wrote her revelations, and when too feeble she dictated them. Luis de Ponte arranged them and left them for publication after her death. In his preface he declares his belief in their genuineness and that they advanced in virtue and was preserved free from temptations and frailties. The work was published in 1658 and had peace in prayer, feared deception, desired no extraordinary favours, loved suffering, was zealous for souls and, lastly, was obedient to her confessor. The writings were published in one large volume and are divided into six books containing his remarks and her visions. There is no division between the visions themselves. Book I treats of the extraordinary means by which God had led her; II contains revelations about the mysteries of redemption; III about God and the Blessed Trinity; IV about Guardian Angels and the B. V. M. and the means to receive them; V about the souls in purgatory and to save souls on earth; and VI reveals her perfection as shown under terrible sufferings. The style of the work is free and flowing and she speaks with simplicity and naive frankness. The visions, always picturesque, and pleasing or alarming according to their subject, are all instructive and at times distinctly curious; but the descriptions are mere outlines, leaving much to the imagination, and never going into details. Their variety is great. What for some the following would have special interest: Daily communion and Satan’s objection to it; mystic espousals; how the bodies of saints can appear in visions; internal stigmata; some saints with whom modern hagiographers have dealt harshly, as St. Christopher. Their brevity of detail may account in part for the oblivion into which they have fallen. Her life, so far as de Ponte had prepared it, was published at Madrid in 1664; the second part appeared there in 1673. It was translated into Latin by M. Hane, S. J., and published again at Prague in 1672-1688, and in an enlarged edition at Naples 1690. All these editions are now very rare. A German translation, in four volumes, appeared in 1861. (See BRIGITTINES.)

Edward P. Graham.

Escober y Mendoza, ANTONIO, b. at Valladolid in 1599; d. there 4 July, 1669. In his sixteenth year he entered the Society of Jesus. Talent and untiring labour won him distinction for scholarship among the leaders of ecclesiastical science in his age. His writings are recognized as classical and challenge criticism as far as their orthodoxy is concerned. For this reason Pascal’s efforts (fifth and sixth Provincial Letters) to fasten the charge of laxism on Escober’s “Manual of Cases of Conscience”, together with his unscrupulous insinuations of adroit hypocrisy on Escober’s part, are too base and cowardly to merit serious consideration. At the same time, it must be said that Escober’s writings are not entirely beyond the pale of criticism. Unprejudiced critics find him inexact in quotations, subtle in discussion, obscure and loose in reasoning. Besides the “Manual”, Escober’s chief works are Summulae ethicae (1607; Lyons, 1626); “Examen et praxis confessariorum” (Lyons, 1647); “Theologia Moralis” (Lyons, 1650; Venice, 1652); “Universe Theologiae Moralis receptas sententias” (Lyons, 1663); “De Triplici Statu Ecclesiastico” (Lyons, 1663); “De Justitia et de legibus” (Lyons, 1663).

Escober was also a preacher of note. For fifty consecutive years he delivered a series of Lenten sermons with signal success.

E#

Escolar, THE, a remarkable building in Spain situated on the south-eastern slope of the Sierra Guadarrama about twenty-seven miles north-west of Madrid. It was commanded by Don Lorenzo del Escorial, Escolar being the name of a small town in the vicinity. The structure comprises a monastery, church, pantheon or royal mausoleum, a palace intended as summer and autumn residence of the court, college, library, art-galleries, etc., and is considered by some to be the finest building of the world.

It was begun in 1563, at the order of Philip II, by the
THE ESCORIAL, SITUATED ABOUT TWENTY-SEVEN MILES NORTHWEST OF MADRID
CALLED THE EIGHTH WONDER OF THE WORLD
architect Juan Bautista de Toledo, assisted by Lucas de Esquivel and Pedro de Toledo, was intended to commemorate the Spanish victory over the French at the Battle of St. Quentin on 1557. The reason was that Philip II was obliged by the will of Charles V to erect a royal mausoleum.

Bautista's plan was ambitious and eccentric; he was influenced by Renaissance ideals and used the Doric style in its severest form. He died in 1567 and was succeeded by Juan de Herrera and Juan de Mijonez. The plan of the building is somewhat in the shape of a gridiron, and is thought thus to commemorate the fate of its patron saint, St. Laurence, upon whose feast day, 10 August, the battle of St. Quentin was fought.

The church was consecrated in 1568, and the pantheon was completed in 1564. Charles III built some additions and the building generally was restored under Ferdinand VII. The Escorial has twice been devastated by fire, and in 1837 it was looted by the French troops. It is built of a light-colored stone resembling granite, for the most part highly polished. The general plan is a parallelogram with a perimeter of 3000 feet; its area is about 500,000 square feet. There are four façades, the finest external aspect being on the southern side, as purposes, with 142 feet long and 72 feet high, while the towers at each end rise about 200 feet. The main entrance is in the centre of this façade. Monegro's figure of Saint Laurence stands above the door. The vestibule is about eighty feet wide and leads into the Court of the Kings. To the right are the library, refectory, and convent; the college is on the left. The church is the finest of the several buildings contained within the walls of the Escorial. Its tall towers on either side, the immense dome, with its superimposed massive lantern and cross, and the portals of the façade all once attract attention. The church is of stone throughout, huge in plan, and severe in its Doric simplicity. Pompeo Leoni designed and cast the metal statues that ornament the splendid screen. A hall behind the ante-choir is known as the library. On the south side of the church is the Court of the Evangelists, a square of 166 feet with two-storied cloisters in the Grecian style. Adjoining it is the monastery of Saint Laurence. Both the monastery and the church were served by Hieronymite monks until 1835; in 1885 Augustinians took charge. The Augustinian monks also conduct the college, the building of which formed an important part of the great structure. On 10 Feb., 1909, it was slightly damaged by fire. The small room which Philip II occupied during the latter part of his life and in which he died in 1598 is marked by a tablet. Through an opening in the wall he could see the celebration of the Mass when ill. The corridor of the Hall of the Caryatides is supposed to represent the handle of the gridiron.

The Escorial is a treasure-house of art and learning. The civilized world searched to stock the library with great books and fine manuscripts. Greece, Arabia, and Palestine contributed, and the collection was at one time the finest in Europe, the Arabic documents being among the most remarkable of the manuscripts. From the Inquisition the library received about one hundred and forty works. It contains 7000 engravings and 35,006 volumes, including 4627 manuscripts; among the last named are 1886 Arabic, 582 Greek, and 73 Hebrew manuscripts, besides 2086 in Latin and other languages (cf. Castiglione, Bibliotheca arab.-hisp. man. Bologna, 1780-1770, 2 vols.). The Latin manuscripts, besides the usual papal and family missals, are the most interesting, as they contain the original commentaries. The four principal commentaries are those of St. Thomas Aquinas, St. Bonaventura, St. John Damascene, and St. Bernard. Of the other manuscripts, the most important are those of St. Jerome, St. Alphonsus Liguori, and St. Ignatius of Loyola.

Many years had elapsed after permission had been given to the Jews to return to Palestine; amidst difficulties and obstacles the restored community had settled down again in their ancient home and built a new temple; but their condition, both from the political and the religious point of view, was most precarious: they chafed under the oppression of the Persian satraps and had grown indifferent and unobservant of the Law. From Babylon, where this state of affairs was well known, Esdras longed to go to Jerusalem and use his authority as a priest and interpreter of the Law to restore things to a better condition. He was in favour at the court of the Persian king; he not only obtained permission to visit Judea, but a royal edict clothing him with all the features of his life and work, without regard to the problems involved, which it suffices to mention.
like to be enforced by severe penalties. The edict left all Jews who felt so inclined free to go back to their own country. Some 1800 men, including a certain number of priests, Levites, and Nathinites, started with Esdras from Babylon, and after five months the conquered Jerusalem. Long-neglected abuses had taken root in the sacred city. These Esdras set himself vigorously to correct, after the silver and gold he had carried from Babylon were brought into the Temple and sacrifices offered. The first task which confronted him was that of dealing with mixed marriages. Regardless of the Law of Moses, many, even the leading Jews and priests, had intermarried with the idolatrous inhabitants of the country. Horror-stricken by the discovery of this abuse—the extent of which was very likely unknown heretofore to Esdras—he gave utterance to his feelings in a prayer which made such an impression upon the people that Sechenias, in their names, proposed that the Israelites should put away their foreign wives and the children born of them. Esdras seized his opportunity, and enacted from the congregation an oath that they would comply with this proposition. A general assembly of the people was called by the princes and the ancients; but the business could not be transacted easily at such a meeting and a special conference of ourselves at its adjournment to take the matter in hand. For three full months this commission held its sessions; at the end of that time the "strange wives" were dismissed.

What was the outcome of this drastic measure we are not told; Esdras's memoirs are interrupted here. Nor do we know whether his task accomplished, he returned to Babylon or remained in Jerusalem. At any rate we find him again in the latter city at the reading of the Law which took place after the rebuilding of the walls. No doubt this event had kindled the enthusiasm of the people; and to gratify the popular demand, Esdras brought the Book of the Law. On the first day of the seventh month (Tishri), a great meeting was held in the street that was before the watergate, for the purpose of reading the Law. Standing on a platform, Esdras read the book aloud "from the morning until midday." At hearing the words of the Law, which they had so much transgressed, the congregation broke forth into lamentations unsuited to the holiness of the day; Nehemias therefore adjourned the assembly. The reading was resumed the next day by Esdras and they found in the Law the directions concerning the feast of the Tabernacles. Thereupon steps were at once taken for the due celebration of this feast, which was to last seven days, from the fifteenth to the twenty-second day of Tishri. Esdras continued the public reading of the Law every day of the feast; and two days after its close a strict fast was held, "and they stood, and confessed their sins, and the iniquities of their fathers" (II Esd., ix, 2). There was a good opportunity to renew solemnly the covenant between the people and God. This covenant pledged the community to the observance of the Law, the abstention from intermarriage with heathens, the careful keeping of the Sabbath and of the feasts, and to various regulations agreed to for the care of the Temple, its service, and the payment of the tithes. It was formally recited by the princes, the Levites, and the priests, and signed by Nehemias and chosen representatives of the priests, the Levites, and the people (strange as it may appear, Esdras's name is not to be found in the list of the subscribers—II Esd., ix, 1–27). Henceforth no mention whatever of either the Temple or the Law is made in the books, while he is not spoken of in connexion with the second mission of Nehemias to Jerusalem, and this has led many to suppose that he was dead at the time. In fact both the time and place of his death are unknown, although there are traditions of his being killed near the river where this river joins the Euphrates, a monument purporting to be Esdras's tomb, and which, for centuries, has been a place of pilgrimage for the Jews.

Esdras's rôle in the restoration of the Jews after the exile left a lasting impression upon the minds of the people. This is due mostly to the fact that henceforth Jewish life was shaped on the lines laid down by him, and in a way from which, in the main, it never departed. There is probably a great deal of truth in the tradition which attributes to him the organization of the synagogues and the determination of the books of the Bible. His activity seems to have extended still further. He is credited by the Talmud with having compiled "his own book" (that is to say Esd.-Nehem.), and the genealogies of the book of Chronicles as far as himself ("Tzem. b. b., 19"). Modern scholars, however, differ widely as to the extent of his literary work: some regard him as the last editor of the Hexa- teuch, whereas, on the other hand, his part in the composition of Esdras-Nehemias and Paralipomenon is doubted. At any rate, it is certain that he had nothing to do with the so-called "genuine" books of the O.T., which were believed to have perished during the Exile; he likewise replaced, in the copying of Holy Writ, the old Phoenician writing by the alphabet still in use. Until the Middle Ages, and even the Renaissances, the books he wrote were regarded with history, in the course of time Esdras's personality and activity assumed, in the minds of the people, gigantic proportions. He was appointed by God to supply the scantiness of information concerning his life; he was looked upon as a second Moses to whom were attributed all institutions which could not possibly be ascribed to the former. According to Jewish traditions, he restored from memory—an achievement little short of miraculous—all the books of the O.T., which were believed to have perished during the Exile; he likewise replaced, in the copying of Holy Writ, the old Phoenician writing by the alphabet still in use. Until the Middle Ages, and even the Renaissances, the books he wrote were regarded with history, in the course of time Esdras's personality and activity assumed, in the minds of the people, gigantic proportions. He was appointed by God to supply the scantiness of information concerning his life; he was looked upon as a second Moses to whom were attributed all institutions which could not possibly be ascribed to the former. According to Jewish traditions, he restored from memory—an achievement little short of miraculous—all the books of the O.T., which were believed to have perished during the Exile; he likewise replaced, in the copying of Holy Writ, the old Phoenician writing by the alphabet still in use.

II. Books of Esdras.—Not a little confusion arises from the titles of the books. Esdras and the Septuagint is III Esd. of St. Jerome, whereas the Greek Esdras B corresponds to I and II Esdras of the Vulgate, which were originally united into one book. Protestant writers, after the Geneva Bible, call I and II Esdras of the Vulgate respectively Ezra and Nehemias, and III and IV Esdras of the Vulgate respectively I and II Esdras. It would be desirable to have uniformity of titles. We shall follow here the terminology of St. Jerome.

I Esdras (Gr. Esdras B, first part; A.V. Ezra).—As remarked above, this book formed in the Jewish canon, together with II Esd., a single volume. But Christian writers of the fourth century adopted the custom—the origin of which is not easy to assign—of considering them as two distinct works. This custom prevailed so long an extent that it found its way even into the Vulgate Bible. It has therefore lasted down to our own times. On the other hand, the many and close resemblances undeniably existing between Esd.-Neh. and Par., and usually accounted for by unity of authorship, have suggested that possibly all these books formed, in the beginning, one single whole, for which reason the "Ecclesiastical Chronicle of Jerusalem" has been pro-
posed as fairly expressing its contents. Should these books be regarded as independent, or as parts of a larger work, the issue of discussion as to the union of I and II Eed., which may well be considered as a single book. As to the opinion holding Eed.-Neh. and Par. to be only one work, although it seems gaining ground among Biblical students, yet it is still strongly opposed by many who deem its arguments unable to outweigh the evidence in the opposite direction. We should not expect to find in I Eed., any more than in II Eed., a complete account of the events connected with the Restoration, even a complete record of the lives of Esdras and Nehemiah. The reason for this lies in the author's purpose of simply narrating the principal steps taken in the re-establishment of the theocracy in Jerusalem. Thus, in two parallel parts, our book deals (1) with the return of the Jews under the leadership of Zorobabel; (2) with the return of another branch commanded by Esdras. In the former, with the decree of Cyrus (I, 1–4) and the enumeration of the most prominent members of the caravan (ii), we read a detailed account of the rebuilding of the Temple and its successful completion, in spite of bitter opposition (iii–vi). The events therein contained extend from 529 to 516 B.C. (536–615). The latter part deals with facts belonging to a much later date (458 or 397). Opening with the decree of Artaxerxes (vii) and the census of the members of the party, it briefly relates the journey across the desert (viii), and gives full and faithful the enforcement of the law concerning marriages with foreign women (ix–x).

I Eed. is a compilation of the various parts of which differ in nature, in origin, and even in language. At least three of the parts may be recognized: (1) the personal memoirs of Esdras (vii, 27–ix, 15); (2) lists very likely taken from public documents (i, 1–70; vii, 1–5); (3) Aramaic writings (iv, 7–vi, 18; viii, 12–26), supposed with some probability to be a portion of "a more comprehensive history of the restored community" (Stade).

These the compiler put together into the present shape, adding, of course, now and then some remarks of his own, or some facts borrowed from sources otherwise unknown to us. This compilatory character does not, as some might believe, lessen in any way the high historical value of the work. True, the compiler was very likely not endowed with a keen sense of criticism, and he has indiscriminately transcribed side by side all his sources "as if all were alike trustworthy" (L. W. Batten); but we should not forget that he has preserved to us pages of the highest value; even those that might be deemed of inferior trustworthiness are the only direct evidence we have with us of the history of those times; and the compiler, even from the standpoint of modern scientific research, could hardly do anything more praiseworthy than place within our reach, as he did, the sources of information at our disposal. The composition of the work has long been attributed without discussion to Esdras himself. This view, taught by the Talmud, and still admitted by scholars of good standing, is, however, abandoned by several modern Biblical students, who, although their opinions are widely at variance on the question of the date, fairly agree, nevertheless, that the book is later than 330 B.C.

II Eedras.—See Nehemiah.

III Eedras (Gr. Esdras A; Prot. writers, I Eedras).—Although not belonging to the Canon of the Sacred Scriptures, this book is usually found, ne prozus theoc, in an appendix to the editions of the Vulgate. It is made up almost entirely from materials existing in canonical books. The following scheme will show sufficiently the contents and point out the canonical parallels:

III Eed., i, 1–15 (Greek text, 14) = I Eed., i–
Cyrius's decree. Return of Zorobabel.
III Eed., ii, 16 (Gr. 31)–31 (Gr. 26) = I Eed., iv, 6–
Opposition to the rebuilding of the Temple.
III Eed., v, 7–46 (Gr. 45) = I Eed., ii—List of those returning with Zorobabel.
III Eed., vi, 47 (Gr. 46)–73 (Gr. 70) = I Eed., iii, 1–iv, 5—Altar of holocausts. Foundation of the Temple laid. Opposition.
III Eed., ix, 37–56 (Gr. 55) = I Eed., vii, viii–
Reading of the Law by Esdras.

The book is incomplete, and breaks off in the middle of a sentence. True, the Latin version completes the broken phrase of the Greek; but the book in its entirety probably contained also the narrative of the feast of Tabernacles (II Eed., viii). A very strange feature in the work is its absolute disregard of chronological order; the history, indeed, runs directly backwards, mentioning first Artaxerxes (ii, 16–31), then Darius (iii–v, 6), finally Cyrus (v, 7–73). All this makes it difficult to detect the real purpose of the book, or to determine the purpose of the compiler. It has been suggested that we possess here a history of the Temple from the time of Josias down to Nehemiah, and this view is well supported by the subscription of the Old Latin version. Others suppose that, in the main, the book is rather an early translation of the chronicles of the work, made at a time when Par., Eed., and Neh. still formed one continuous volume. Be this as it may, there seems to have been, up to St. Jerome, some hesitation with regard to the reception of the book into the Canon; it was freely quoted by the early Fathers, and is included in the "Hexapla". This might be accounted for by the fact that III Eed. may be considered as another recension of canonical Scriptures. Unquestionably our book cannot claim to be Esdras's work. From certain particulars, such as the close resemblance of the Greek with that of the translation of Daniel, some details of vocabulary, etc., scholars are led to believe that III Eed. was compiled, probably in Lower Egypt, during the second century B.C. Of the author nothing can be said except, perhaps, that the above-noted resemblance of style to Daniel might indicate that both works are possibly from the same hand.

IV Eedras.—Such is the title of the book in most Latin MSS.; the (Prot.) English Apocrypha, however, give it as II Eed., from the opening words: "The second book of the prophet Esdras!" Modern authors often call it also the Apocalypse of Esdras. This remarkable work has not been preserved in the original Greek text: but we possess translations of it in Latin, Syriac, Arabic (two independent versions), Ethiopian, and Armenian. The Latin text is usually printed in the appendix to the editions of the Vulgate; but these editions miss seventy verses between vii, 35, and vii, 36. The missing fragment, which was read in the other versions, was discovered in a Latin MS. by R. L. Bensley, in 1874, and has been since repeatedly printed. In the Latin the book is divided into sixteen chapters. The two opening (i, ii) and the two concluding (xv, xvi) chapters, however, which are not to be found in the Eastern translations, are unhesitatingly regarded by all as later additions, and are not to be regarded as part of the primitive work. The body of the Fourth Book, the unity of which appears to be unquestionable, is made up of seven visions which Esdras is supposed to have seen at Baby-
Jesu-Christ Hubert was nominated coadjutor that same year, but the approval of the British Government was withheld till 1786. Bishop d’Egiss tried unsuccessfully to supply the dearth of clergy by obtaining priests from France. The British Government favoured preferably the emigration of priests for the settlement of the back-country, and particularly of Negroes. Pending the arrival of a missionary for the Acadians, a layman was authorized to baptize and witness marriage contracts. Bishop d’Egiss issued (1787) a pastoral letter to all the faithful of the lower provinces, exhorting them to unite and steadfastness in the Faith. He died in the fifty-fifth year of his priesthood and was buried at Saint-Pierre.

Lionel Lindsay.

Eskil, Archbishop of Lund, Skåne, Sweden; b. about 1100; d. at Clairvaux, 6 (77) Sept., 1181; one of the most capable and prominent princes of the Church in Scandinavia. A man of profound piety, he was always zealous for the welfare of the church, and was a courageous and unselfish defender of the rights of the hierarchy in its struggle against the civil power and clerical usurpers. His father Christian was descended from an illustrious dynastic family of Jutland and was related to several royal families. When twelve years of age the young Eskil was received into the renowned cathedral school at Hildesheim. Here, during a dangerous illness, he was honoured by a vision of the Mother of God, who, chiding him with his frivolous conduct, saved him from imminent perdition and restored his health, demanding five measures of different varieties of corn as a thank-offering. This vision was interpreted to mean that Eskil would attain high ecclesiastical dignity and establish five canons. In 1131, his uncle, Asser (Asger), the first Archbishop of Lund, was invited to several royal families. When twelve years of age he was consecrated Bishop of Roskilde, and on Asser’s death (1137) succeeded him as archbishop. He successfully defended the metropolitan rights of his see in spite of the protestations of the archbishops of Bremen. He received the pallium from Innocent II through the papal legate, Cardinal Theodignus, who, with many Scandinavian bishops, were present at the provincial Synod of Lund (1139). Eskil completed the new cathedral (Romanesque), which he consecrated in 1149. On this occasion, it is said, the authors were called to the cathedral for the membership and the endowments of the cathedral church, and improved the condition of the cathedral school.

On various occasions Eskil was involved in the internal political disputes of rival kings, even to the extent of being temporarily held captive in his own cathedral, for which he was, however, later indemnified by various land-grants. During the Crusades, Eskil, animated by the example of St. Bernard, also preached a crusade against the pagan Wends, which, unfortunately, proved unsuccessful. He, nevertheless, continued his campaign with youthful ardour, even in his old age, till, after the conquest of Rügen, the Wends accepted Christianity. In 1152 Cardinal Nicholas Breakspear, as papal legate, was sent to Scandinavia to settle ecclesiastical affairs. Norway was constituted a separate ecclesiastical province with its metropolitan see at Trondheim (Nidaros). Eskil remained Archbishop of Lund. He was also nominated Primate of Sweden and papal legate for the North. By a proper selection of persons for the higher ecclesiastical offices, such as the bishop of Skäne, twelve years later, was introduced into Seeland. The monastic orders are especially indebted to Eskil. As Bishop of Roskilde he called the Benedictines to Nestved; and the monastery of the Regular Augustins...
tians at Eskile near Roskilde most probably traces its origin to him. Later he established the Premonstratensian monastery in Tommerup, Skåne; the Knights of St. John also settled in Lund during his time. There was also, in Seeland, an establishment of Carthusian monks, but only for a short time. The Cistercian monks were especially favourites of Eskil, who found a stretch of territory very rewarding away near Helsingborg, which was soon followed by one at Esrom in Nordseeland (1154). From both of these various branches were established. Eskil corresponded with St. Bernard, whom he admired and revered, and was perhaps the first to inform the Cistercian Order he visited St. Bernard at Clairvaux in 1152. Bernard refused him admission, pointing out that his services as bishop would be more beneficial to the Church at large.

Hearing of Bernard's death (1153), Eskil made a pilgrimage to the saint's grave and thence to Rome, where all his archiepiscopal privileges were ratified by Pope Adrian IV (Breakspear). Returning he was imprisoned at Thionville (at the instigation of the Archbishop of Bremen?). In a dignified letter to the kings of Denmark and Sweden, he protested his willingness rather to suffer innocently in defiance of the Church's prerogatives than to be sanctioned. Having obtained his liberty in 1158, Eskil returned home, where he found King Waldemar sole sovereign. When the latter took the part of Victor, the antipope, Eskil, faithful to Alexander III, took refuge in foreign parts. Excepting a pilgrimage to Jerusalem, he lived in France (Clairvaux), in close proximity to the pope. In 1164 he consecrated Stephen of Alvastra, a Cistercian monk, first Archbishop of Upsala. After Waldemar's reconciliation with Alexander III, Eskil returned home (1168). Subsequent to the solemn translation of the relics of the canonized (1169) martyr-duce, Knud Lavard (d. 1131), Waldemar's father, Eskil crowned the king's seven-year-old son at Ringsted, 1170. After another sojourn at Clairvaux (1174-76), the venerable archbishop received permission from the pope to resign and to nominate a successor. In the spring of 1177, in the presence of the king, numerous prelates, and a great concourse of people assembled in the cathedral of Lund, Eskil, having read the papal decree, declared that he resigned on his own initiative, laid the official insignia on the altar, and, all consenting, designated Bishop Absalon of Roskilde as his successor. He then retired to Clairvaux, spending his last days as a simple monk. The Cistercian canons, and other such questions, whether Eskil was married and had a daughter is a subject of controversy. Although the celibacy of the clergy did not generally obtain during his time, we may, nevertheless, infer from his strictly religious principles that Eskil did not ignore the provisions of canon law by marrying after his admission to Sacred Orders.

PHILIPP BARON VON KETTENBURG.

**Eskimo.** A littoral race occupying the entire Arctic coast and outlying islands of America from below Cook Inlet in Alaska to the mouth of the St. Lawrence, a distance of more than five thousand miles, make three main seafaring areas of Labrador, Baffin Land, and Ellesmere Land, with the west and south-east coasts of Greenland, the northern shores of Hudson Bay, and the Aleutian Islands, while one body, the Yuit, has even crossed Bering Strait, and is now permanently established on the extreme point of Siberia. Traditional and historical evidences go to show that the Eskimo formerly extended considerably farther south along Hudson Bay and the St. Lawrence, and perhaps even into New England. With the exception of the Aleut, who differ very considerably from the rest, the various small bands scattered throughout the vast expanse of country speak only one language, in several dialects, and have, linguistically and ethnologically, indicating long ages of slow development under similar and highly specialized conditions. In physique they are of medium stature, but strong and hardy, with yellow-brown skin, matted black hair, and features suggestive of the Mongolian rather than the Indian, although there is no reason to suppose them of other than American origin. The only apparent admixture with the Indian occurs on their extreme southern frontier in Alaska. Owing to their constant exposure in the chilling waters, they are not long-lived. In character they are generally peaceable, cheerful, and honest, but with the common savage disregard of morality. The Aleut of the Alaskan peninsula and the Aleutian Islands speak a distinct language in two dialects, while all the others, including the Yuit of Bering Sea and Aleut and other languages, in several dialects. The name by which they are commonly known is derived from an Algonkian term signifying "eaters of raw flesh." They call themselves Inuit, in various dialectic forms, meaning simply "people." Living in a tent of skin and furs, and having no clothes, the Eskimo depend entirely upon hunting and fishing for a living, while the seafaring habit has made them perhaps the most expert and daring boatmen in the world. In summer they hunt the caribou and musk-ox on land; in winter they hunt the seal and polar bear in the water or on the ice floes. In travelling by land, and to some extent in hunting and sealing, they rely much upon an intelligent breed of dogs trained to harness. Their houses are grouped into little settlements never more than a day's journey from the ocean. Those for temporary summer use are generally simple tents of skin or seal-skin. Their winter homes are either subterranean excavations roofed over with sod and earth laid upon a framework of timber or whale ribs, or are dome-shaped structures built of blocks cut from the hardened snow, with passage-ways and smaller rooms of the same material, with sheets of clear ice for windows. The roof of the snow-house is sometimes lined on the inside with skins to prevent dripping from the melting snow. Besides the bed platforms extending around the sides of the rooms, with the spears, harpoons, and skins, the other important items of furniture are the stone lamps, fed with whale oil, for heating, lighting, and cooking purposes. The characteristic woman's tool is the ulu or skin-dressing knife.

Their clothing is of skins with the hair outside, or of the intestinal membranes of the larger sea animals, there being little difference between the costumes of men and women. Tattooing is common among the women, labrets are used in some tribes, but trinkets are seldom worn and the face is not painted. Their clothes consist of a straight tunic or shirt made in a stone kettle, with an abundance of blubber and oil, together with berries gathered in the short summer season. From lack of running water, crowded quarters, and greasy environment, they are as a rule extremely filthy in person and habit. They are very ingenious and expert in the dressing of skins, the shaping of their fishing and hunting implements, and the construction of their skin canoes; they also display great artistic instinct and ability in the carving of designs in walrus ivory. The peculiar Eskimo knack of making an opening in the top only large enough to accommodate the sitting body of one man, is one of the most perfect contrivances in the world for water travel, being light, swift,
and practically unsinkable. It is propelled by means of a double paddle. The sledge is commonly a framework of drift-wood, but is sometimes made from the rib bones of whales, or even of a cigar-shaped mass of dried salmon wrapped in skins and frozen solid. The social and political organization of the Eskimos is very loose, with little voice among themselves, the community being usually distinct and independent from the others, with little of tribal cohesion or chiefly authority, the head man being rather an adviser than a ruler. Established custom, however, has all the force of law. The bond of affection between parent and child is very strong, children being either corrected or punished, and old people being held in respect. Monogamy is the rule, but polygamy and polyandry are sometimes found. Violations of law, including murder, are punished by the injured individual or his nearest relations.

Their religion, like that of most primitive peoples, is a simple animism, interpreted by the angakoks or medicine-men and enforced by numerous taboos. All the powers of nature, animate and inanimate, on sea and land, are invoked or propitiated as the occasion arises. A special deity in the central region is an old woman of the sea, who presides over storms and sea-animals, the latter having been created from her own fingers. Some tribes believe in two souls, one of which remains near the dead body until it can enter the shop, while the other goes to one or several souls lands, either above or below the earth. There are numerous hunting and eating taboos and ceremonial precautions. Singing, music, story-telling, hand-games, mask-dances, and athletic competitions make up a large part of the home life. A peculiar institution among the central and eastern tribes is that of the so-called “ninth song” (Norse nith, contention), or duel of satire, in which two rivals exhaust upon each other their capacity for ridicule until one or the other is declared victor by the company.

The Eskimo goes north beyond the Columbian period as far as at least their first contact with the Scandinavians about the year 1000, almost simultaneously in Greenland and on the coast of Labrador or New England. They do not seem to have approached the neighbourhood of the Scandinavian settlements in South Greenland until about the end of the thirteenth century. In 1379 they made their first attack upon the Greenland colony, and a war began, of which all details are lost, but which ended in the complete destruction of the colony. The close of the new century marks the end of the way to Greenland was entirely forgotten, and on the second discovery of the island in 1586, by Davis, it was found occupied only by Eskimo, who remained in sole possession until the second colonization from Denmark in 1721, under the leadership of Hans Egede. Since then most of the Greenland Eskimo have been gradually civilized and Christianized under Lutheran and Moravian auspices.

In 1762 a Moravian missionary party made a landing on the Eekimo coast of Labrador, but was at once attacked by the natives, who killed six of them. In 1771, however, they attempted a mission settlement at Tain, this time with success, Tain now being the chief station on the Labrador coast, with five other subordinate stations, counting altogether some 1200 Christian Eekimo. Regular mission work in Alaska was begun among the Aleut by the Russian Orthodox church in 1794, resulting in a few years in the complete Christianization of the Aleut, who had already, however, been terribly reduced by the wanton cruelty of the Russian mislions. This work is still carried on successfully both on the islands and along the west coast of Alaska. Protestant workers entered the field about 1880, beginning with the Presbyterians, followed successively by the Moravians, Episcopalians, the Swedish Evangelical Union, Congregationalists, Lutherans, and Friends, numbering now altogether about fifteen stations along the Eekimo coast of Alas- ka, besides others among the neighbouring Indians. Of special note in connexion with this work is the successful introduction of Siberian reindeer by Rev. Sheldon Jackson, Presbyterian, under government auspices. This movement was initiated com- pletely by the supply of the natives. In 1865 the noted Oblate missionary explorer Father Emil Petito, descending the Mackenzie, visited the Eekimo at the mouth of the Anderson River on the Arctic coast of the British North-West, preached to them, and afterwards to those at the mouths of various other rivers. The mission at Cook's Inlet was founded in 1870 into Alaska. Among the ethnologic results of his work in this region are a grammar and vocabulary of the Techtig Eekimo (Paris, 1876). In 1856 the Jesuits entered Alaska, establishing their first mission among the Indians at Nisula on the Yukon, and proceed- ing later to the Eekimo, among whom they have now a number of flourishing stations, the principal being those of Holy Cross (Kosefesky), St. Mary's (Akularak), and one at Nome. They are assisted by the Sisters of St. Anne and the Lamennais Brothers, and count some 1300 converts among the Eekimo, exclusive of Indians. The Eekimo grammar and dictionary of Father Francis Barnum, S.J. (1901) ranks as standard. No permanent mission work has ever been attempted by any denomination along the Arctic and Mackenzie, with the exception of Hudson Bay, in which Jesuits have had charge since 1669 (Alaska).

The total number of Eekimo is estimated at about 29,000, viz. Greenland 11,000; Labrador 1400; Central Region 1100; Alaska Eekimo proper 15,000; Aleut 1000; Yuit of Siberia 1200.

J. M. MOONEY.
Espejo, ANTONIO, a Spanish explorer, whose fame rests upon a notable expedition which he conducted into New Mexico and Arizona in 1582-3. According to his own statement, he was b. in Cordova, but the dates both of his b. and d. are unknown. Following the reports brought to Mexico from the north by Cabana de Yaca and the Franciscan monk, Marco de Niza, a powerful expedition had been fitted out under the governor, Coronado, in 1540, which after passing through the territories of the Pueblo tribes of the Rio Grande, had penetrated as far as the province of Quivira, probably the country of the Wichita Indians on the Middle Arkansas, returning in the summer of 1542. Two Franciscan volunteers, Father Juan de Padilla and a lay brother, Luis, remained behind, of whom the first was afterwards murdered by the tribe known as the Pueblos, and the second was a prisoner of the United States government, while of the fate of the other nothing was known. Forty years later three other Franciscans undertook to establish missions among the Tiguas, about the present Bernalillo, New Mexico. Soon rumors of their death at the hands of the Indians came back to Mexico, and the authorities directed that in no way should the missions be destroyed. Espejo, a wealthy mining proprietor, offered to equip and lead a search expedition at his own expense. The offer was accepted and, being regularly commissioned, with only fourteen soldiers, a number of Christian Indians, and a cavalcade of horses and men, he left San Bartolome, Chihuahua, for the north on 10 Nov. 1582. From the junction of the Concho with the Rio Grande he ascended the latter stream, through populous tribes, to the pueblo of Puara, where he learned definitely of the murder of the three missionaries. Fearing punishment, the Indians had deserted their pueblo, and fled to the mountains.

Having accomplished his first purpose, Espejo determined to explore the unknown country beyond. After visiting several of the neighboring pueblos he crossed over to the Zuñi, near the present Arizona line, where he found three Christian Indians of Coronado's earlier expedition. Here several of the party decided to return, and with only nine soldiers and a party of Indians he pushed on to the Hopi (Moqui) villages in northern Arizona, where he met a friendly reception, and was given guides to a mountain country farther on—apparently some fifty miles northward from the site of Prescot—where he procured some rich specimens of silver ore. Returning to the Rio Grande, he visited several other pueblos farther up the river and then went over to the Pecos, noting other mines by the way. In consequence of the threatening attitude of the Tanos tribe he finally decided to return to Mexico, arriving at his starting point in September 1583, having accomplished, without bloodshed and with a handful of men, as great results as had been obtained by Coronado with a whole army and at the cost of an exterminating warfare upon the Indians. He soon afterwards submitted a report, with a map of the regions explored, but his later proposition to organize a colonizing expedition was defeated by the jealousy of the viceroy.

(1854-1855), Spanish and English, in Hakluyt, Voyages (London, 1800). 111; Serra, The Catholic Church in Colonial Days (New York, 1875), chap. 5; and New Mexico (San Francisco, 1889), XVII of complete works.**

JAMES MOONEY.

Espej, ZEGER ERIAARD VAN, also called Espenius, a Belgian canonist, b. at Louvain, 9 July, 1646; d. at Amersfoort, Netherlands, 2 Oct., 1728. He completed his higher studies at Louvain, became priest in 1673, and doctor of civil and canon law in 1675. He soon began to teach canon law at the University of Louvain where he was obliged to lecture only for six weeks during the summer vacation; the professor might explain one or other important chapter of the decreals, at his choice. He never accepted any other chair at the university, and he resigned even this position in order to devote himself entirely to study. He was consulted by all classes on account of his profound learning in canon law, and his famous work, "Jus canonicum universum," although it raised numerous just criticisms, still remains remarkable. The author is accused, without reason, of having borrowed considerably from the works of his predecessors, notably from Thomasin, yet it must be recognized that Van Espej possessed the art of setting forth in a lucid and intelligible way the discipline of the ancient Church; he also cast light upon questions which up to his time had been obscure. His work a valuable work a value which the labors of his predecessors do not possess. He collected the most recent legislative decisions of the Church and discussed them with judgment, except where party spirit blinded him. He also introduced the modern and legal side of the canon law, giving the special law of Belgium. Benedict XIV recognized his authority in this matter. On the other hand, he was a strenuous defender of the Gallican theories. He misconstrued the right of religious authority and exaggerated beyond measure the right of the civil power. He may be added, however, that he exalted and combated in turn all power, even the civil power. He extolled the power of the bishops in order to lessen that of the religious orders, and the rights of an extinct chapter in order to combat the powers of the pope. He gained a reputation for himself in the Jansenist conflict, by denying the importance of the famous distinction between right and fact with regard to the doctrine of Jansen; he declared that it was of little consequence to admit that Jansen had taught the propositions condemned by the Bull "Unigenitus" (1713) provided the doctrine itself was rejected.

The Jansenist quarrels led to Van Espej's ruin. On being consulted by the Jansenists of Holland with regard to the ordinance of the Jansenist Bishop of Utrecht, Cornelius Steenderen, he fell into disfavour with this ordination, which had been performed without the authorization of the Holy See. An unsuccessful attempt has been made to justify Van Espej's conduct in this matter, on the ground that he merely declared that episcopal ordination performed by a single bishop was valid. This was not the whole question, nor was it indeed the principal question, viz, to determine whether episcopal ordination, performed without the pope's consent, was admissible. His action in this matter and his Jansenist doctrines brought about his suspension from his see and his excommunication by the Bishop of Mechlin. The latter summoned him to make a declaration of orthodox faith. At the order of the civil power, the University of Louvain condemned and deprived (1728) Van Espej of his university functions. In the meantime he fled, and took refuge first at Maastricht, and afterwards at Amersfoort, where he found protection in the Jansenist community, and where he died. The Augustinian Désirant, professor at the University of Louvain, is accused of having fabricated false documents in the controversy with Van Espej, this accusation being known as the "Forgery of Louvain." Désirant was condemned by the academical authorities and banished forever from his native country. The best edition of the works of Van Espej, all of which are on the Index, is that published in four volumes at Louvain, 1754. A fifth volume, "Supplementum ad varias collec-
tiones operum", was published at Brussels in 1768, and contains numerous biographical details.

Du Pae de BELLERIVE, Vie de Van Espe (Brussels, 1767); LACROIX, P. C. de, "Van Espe, jureconsul et commissaire belge en Belgique Judiciaire (Brussels, 1947); IV, 487; DE RAM en BAKKER, Acta Erudi Bernardi Van Espe circa missione Hollandicum (Mechlin, 1827).

A. VAN HOVE.

Espese (ESPERANCISCH). Claude P' a French theologian, was born in 1551 Châlons-sur-Marne; d. 6 Oct. 1571, at Paris. He entered the Collège de Navarre in 1536, and four years later was made rector of the University of Paris, even before receiving the doctorate, which was conferred on him in 1542. He was then called to the court of Cardinal de Lorraine. Some propositions in his Lenten sermons of 1543 were referred to the Sorbonne, and d'Espense was asked to explain or retract them. He was one of the theologians called to the consultation held at Mêlin in 1544 in relation to the Council of Trent. In 1547, having been sent to the council itself, then transferred to Bologna, he returned to France almost immediately, as the council was again adjourned. He went to another consultation held at Orleans in 1560. At the Conference of Poissy (1561) he argued against Beza in favour of tradition, the infallibility of the Church, the Sacraments, etc. (See O. C. V. 200). The 1560 revision of an anonymous work was published on the veneration of images. This work was censured by the Sorbonne, and as d'Espense was believed to be its author, he was required to subscribe to the sixteenth article of the faculty, which was directed against Protestants.

D'Espense's works, collected in one volume (Paris, 1619), are: "Traité contre l'erreur vieil et renouvelé des Prédécesseurs" (Lyons, 1549); "Institution d'un prince chrétien" (Lyons, 1548), dedicated to Henry II; "Lettres de ban de prison" (Paris, 1561), in which the parents' consent is held to be necessary for the validity of marriage; "Cinq sermons ou traités . . ." (Paris, 1562); "Libellus de privata et publica misa", which shows that in the primitive Church Mass was not celebrated unless some of the faithful were present; "De continentia" (Paris, 1565); "Commentarius in epistolam primam ad Timotheum" (Paris, 1561); "Comm. in posteriorum epist. ad Timotheum" (Paris, 1564); "Comm. in epist. ad Titum" (Paris, 1568). To these are added a few other works, treatises, discourses, sermons, and poems.

C. A. DUBY.

Espinel, VICENTE, poet and novelist; b. at Ronda (Malaga), Spain, 1854; d. at Madrid, 1834. He studied at Salamanca and while still young went as a soldier to Italy and Flanders. Returning to Ronda, he took holy orders and was made chaplain of the hospital at that place. Later, he went to Madrid, where he lived with Lope de Vega whose friend and teacher he was, and died there in poverty, as we are told by Lope in his "Laurel de Apolo". In 1818 he published at Barcelona a romance descriptive of Spanish manners entitled "Relaciones de la Vida y Hechos del Escudero Marcos de Obregón". The work attracted attention at the time, and afterwards became famous because of several imitations and because of the controversies which it caused. It has been thought that many of the adventures of the hero are to a great extent drawn from those in the life of Espinel himself. The work is admirably written, filled with wise maxims, and the language is pure and simple. Le Sage, the author of "Gil Blas de Santillanes", has been accused of borrowing many incidents and characters from Espinel's work. As a poet, Es-
Esposals of the Blessed Virgin Mary (Desponsatio Beate Marie Virginis), a feast of the Latin Church. It is certain that a real matrimony was contracted by Joseph and Mary. Still Mary is called "espoused" to Joseph ("his mother Mary was espoused to Joseph", Matt. i, 18) because the matrimony was never consummated. The term *espouse* is applied to married people until their marriage is consummated (Colvernius, Cal. Marian., 23 Jan.). Peter d'Ailly, chancellor of the University of Paris (d. 1420), and his contemporary the archbishop of Cambrai, GEO. Gerson, were the first energetic propagators of the devotion in honour of St. Joseph. Gerson worked many years to effect the institution of a special votive feast (Thursday of ember week in Advent), the object of which should be the virginal espousal of Mary and Joseph. Gerson's friend, Henry Chiciotti, canon of the cathedral chapter of Chartres, had bequeathed a certain sum for the celebration in the cathedral of this votive feast, for which Gerson had composed a proper Office. It seems that Gerson carried out the will of his friend, but tradition does not tell us on what day the feast was celebrated.

The first definite knowledge of a feast in honour of the espousals of Mary dates from 28 Aug., 1517, when with nine other Masses in honour of Mary, it was inserted in the Proper of the Vigil of the Assumption of Mary, founded by Sainte Jeanne de Vaillot. This feast was celebrated on 22 October as a double of the second class. Its Mass, however, honoured the Blessed Virgin exclusively; it hardly mentioned St. Joseph and therefore did not correspond to the idea of Gerson. Also purely as a feast of Mary it appears in the Missal of the Franciscans, to whom it was granted 21 Aug., 1537, for 7 March (double major). About the same time the Servites obtained the feast for 8 March. The Office of the Nativity of Mary was recited, changing the word *Navicula* to *Desponsatio*. After the religious orders, among the dioceses which adopted the feast of the Espousals of Mary, Arras takes the lead. It has been kept there since 23 Jan., 1556. The first proper Office was composed by Pierre Doré, O.P. (d. 1609), confessor of Duke Claude of Lorraine. This Office followed the outlines given by Gerson and commemorated both Joseph and Mary. Pierre Doré in 1546 unsuccessfusely petitioned Paul III to extend the feast of the *Desponsatio B.M.V.* to the Universal Church. But even without the recommendation of the Apostolic See, the feast was adopted by many Churches. In Moravia it was in the sixteenth century kept on 18 July. In subsequent times Rome did not favour any further extension of the feast, but after it had been refused (1558) to the King of Spain, it was granted to the Austrians (23 Jan., 1562); in 1650 it was conceded to Spain, but transferred (13 July, 1682) to 26 Nov., because in Spain the feast of St. Ildemontus or St. Raymond is kept 23 Jan. In 1680 it was extended to the entire German Empire, 1690 to the Holy Land (double, second class), 1702 to the Cisternians (20 Feb.), 1720 to Tuscany, and 1725 to the Pontifical States. In our days it is kept in nearly the entire Latin Church on 23 Jan., in the Spanish-speaking countries on 26 Nov., but it has never been extended to the Universal Church.

The Office of the Mass of the Psalterium V is still used when the new law does not provide for the annulment of espousals. The reasons that formerly sufficed to annul them still remain. If espousals were made as prescribed by the new law, their binding force continues until they shall have been dissolved by proof of either or both parties claiming their dissolution.

**Joseph Selinger.**

**Essence and Existence (Lat. essentia, existentia) —** Since they are transcendentals, it is not possible to put forward a strict definition of either of the subjects of the present article. Essence, however, is properly described as that whereby a thing is what it is, an equivalent of the ἐσεῖα τῆς ζωής of Aristotle (Metaph. VII, 7). The essence is thus the radical or ground from which the various properties of a thing emanate.
and to which they are necessarily referred. Thus the notion of the essence is seen to be the abstract counter-part of the concrete entity; the latter signifying that which is or may be (ens actu, ens potentia), while the former is the reason why it is (the ess- cially what it is. As furnishing in this manner an answer to the question What? (Quid?)—as, e. g., What is man?—essence is equivalent to quiddity; and thus, as St. Thomas remarks (I, Q. i, a. 3), the essence of a thing is that which is expressed by its defi-nition. Essence and nature express the same reality envisaged in the two points of view as being or acting. As the essence is that whereby any given thing is that which it is, the ground of its characteristics and the principle of its being, so its nature is that whereby it acts as it does, the essence considered as the founda-tion and principle of its operation. Hence again St. Thomas: "Nature is seen to signify the essence of a thing according as it has relation to its proper opera-tion" (De ente et essentia, cap. i). Furthermore, essence is also in a manner synonymous with form, since it is chiefly by their formal principle that beings are segregated into one or other of the species. Thus, while created spiritual things, because they are not composed of matter and form, are specifically what they are by reason of their essences or "forms" alone, the compounded beings of the natural order, their specification and determination of nature, or essence, principally from their substantial forms. A further synonym of essence is species; but it is to be carefully noted that essence in this connexion is used rather with a logical or metaphysical connotation than with a real or physical one. This distinction is of considerable importance. The real or physical es-sence of compound entities consists in, or results from, the union of the constituent parts. Thus if we consider man as a being composed of matter and form, body and soul, the physical essence will be the body and soul. Apart from any act of abstraction, body and soul exist in the physical order as the con-stituents of man. On the other hand, we may con- sider man as the result of a composition of genus proximum and differentia ultima, i. e. of his animality and his rationality. Here the essence, humanity, is metaphysical or logical. Thus, while the real es-sence, to speak still only of composite beings, consists in the collection of all those physical component parts that constitute a thing in its identity what it is—either actually or potentially existent, without which it can be neither actual nor potential, the logical es-sence is no more than the composition of ideas or no-tions, abstracted mentally and referred together in which the number of the second intentions 1 . The distinction of identity or being for the distinction of essences according to the degree of physical and metaphysical complexity or simplicity which they severally display. The Supreme Being has—or rather is—a unique and utterly simple essence, free from all composition, whether physical, or metaphysical. Moreover, in God—otherwise, as we shall see, than in creatures—there is no distinction of any kind between His essence and His existence. Spiritual created beings, however, as free from the composition of matter and form, have physically simple essences; yet they are composite in that their essences are the result of a union of genus and differentia, and are not identical with their existence. In the angel the essence is the species consequent on this union. Corpo-real creatures not only share in metaphysical com-plexity of essence, but have also an amount of the material composition, a physical complexity as well. The characteristics attributes of the essence are im-mutability, indivisibility, necessity, and infinity.— Since the essence of anything is that whereby the thing is, it follows directly from the principle of contradiction that essence cannot be composite. This, of course, is not true in the sense that physical essences
terms and exploded theories, they, on the other hand, express opinions and make implicit admissions, tell strongly against their own thesis. Indeed, it would generally seem that these philosophers, to some extent at least, misunderstand the position which they attack, that they combat a sort of intuitive knowledge of essences, erroneously supposed by them to be claimed by Scholastics, and do not at all grasp the theory of the natures of things as derived from a painstaking consideration of their characteristic properties.

Thus even Bain admits that there may in all probability be some one fundamental property to which all the others may be reduced, and calls words "real essence" to designate that property. Mill tells us that "to penetrate to the more hidden agreement on which these more obvious and superficial agreements (the differences leading to the greatest number of interesting propria) depend, is often one of the most difficult of scientific problems. And as it is among the most difficult, so it seldom fails to be among the most important." Father Rickaby in his "General Metaphysics" gives the citations from both Mill and Bain, as well as an important admission from C. W. S. Baynes, according to which it is "absurd for persistent types, a synonym, in this context, for essences. The philosophical tradition, or school, to which allusion is made—although we have anticipated its assertions by the admissions into which its professors have allowed themselves to be drawn by the exigencies of possible and actual existence—must be divided roughly into two main classes, with their representatives in Locke and Mill. Locke got rid of the old doctrine by making the "supposed essences" no more than the bare significations of their names. He does not, indeed, deny that there are real essences; on the contrary, he fully admits this. But he asserts that we are incapable of knowing more than the nominal or logical essences which we form mentally for ourselves. Mill, though, as we have seen, he occasionally abandons his standpoint for one more in keeping with the Scholastic view, professedly goes further than Locke in utterly rejecting real essences, a rejection quite in keeping with his general theory of knowledge, which eliminates substance, causality, and necessary truth.

The considerations previously advanced will serve to indicate a line of argument used against scepticism in this matter. The Scholastics do not and never have claimed any direct or perfect acquaintance with the intimate essences of all things. They recognize that, in very many cases, no more than an approximate knowledge can be obtained, and this through accidental modes of thought, not by a direct and indirect method. Still, though the existence of the concrete beings, of which the essences are in question, is contingent and mutable, human knowledge, especially in the field of mathematics, reaches out to the absolute and necessary. For example, the properties of a circle or triangle are deducible from its essence. That the one differs specifically from the other, and each from other figures, that their diverse and necessary attributes, their characteristic properties, are dependent upon their essential nature and can be inferred by a mathematical process from those—much we know. The deductive character of certain geometrical proofs, proceeding from essential definitions, may at least be urged as an indication that the human mind is capable of grasping and of dealing with essences.

Similarly, and even from the admissions of the opponents of the Scholastic tradition given above, it may reasonably be maintained that we have a direct knowledge of essence, and also an indirect, or inductive knowledge of the physical existence of things which we know about us. The essences thus known do not necessarily point to the fact of existence; they may or may not exist; but they certify to us what the things in question are. The knowledge and reality of essences emerges also from the doctrine of universals, which, although formally subjective in character, are true expressions of the characteristic properties of the objects about which they are abstracted. As Father Rickaby remarks: "In the rough form of expression could hardly be rejected, that science seeks to arrive at the very nature of things and has some measure of success in the enterprise; and again, "in short, the very admission that there is such a thing as physical science, and that science is cognitio rerum per causas—a knowledge of things, according to the rationale of them—is tantamount to saying that some manner of acquaintance with the essence is possible; that the world does present its objects in such a way that at least a certain number of different kinds, and that we can do something to mark off one kind from another." (General Metaphysics, c. III.)

Existence is that whereby the essence is an actuality in the line of being. By its actualization the essence is removed from the merely possible, is placed outside its causes, and exists in the world of actual things. St. Thomas describes it as the first or primary act of the essence as contrasted with its secondary act or operation (I Sent., Dist. xiv., q. 1, a. 1); or as "the actuality of all form or nature" (Summa, I, q. iii, a. 4). Whereas the essence or quiddity gives an answer to the question as to what the thing is, the existence is the affirmative to the question as to whether it is. Thus, while created essences are divided into both potential and actual, the latter is always connoted by its nature to simple potentiality. With regard to the existence of things, the question has been raised as to whether, in the ideal order, the possible is antecedent to the actual. The consideration here does not touch on the real or physical order, in which it is conceded by Scholastics that the potentiality of creatures precedes their actuality. The unique actuality, pure and simple (as against such theorists as van Hartmann, maintaining an absolute primitive potentiality of all existence), that necessarily precedes all potentiality, is that of God, in whom essence and existence are identical. We are concerned with the question: Is the concept of a possible entity prior to that of an existing one? Rosmini answers this question in the affirmative. The School generally takes the opposite view, maintaining that the primary idea is that of an existing entity—that is, essence as actualised and placed outside of its causes—in the concrete, though confused and indeterminate. Such an idea is of narrow intension, but extensively it embraces all being. The thesis is supported by various considerations, such as that the essence is prior to its actualisation by a potential act actual. Thus the idea of a circle or triangle is equally actual to the act, that the act generally is prior to potentiality, and that this latter is known, and only known, through its corresponding actuality. Or, we know the possible being as that which may be, or may exist; and this necessity is coextensive with actual existence, without which the possible is not presented to the mind, indicates the priority, in the line of thought, of the actually existent over the merely possible. Existence is thus seen to be in some sense distinguished from the essence, or it acquires a new meaning.

The question agitated in the School arises at this point: What is the nature of the distinction that obtains between the physical essence and the existence of creatures? It is to be borne in mind that the controversy turns not upon a distinction between the merely possible essence and the same essence as actualised, and thus physically existent; but on the far different and extremely nice point as to the nature of the distinction to be drawn between the actualised and physically existent essence and its existence or actualisation by the act of actualisation. That there is no such distinction in God is conceded by all. With regard to creatures, several opinions have been advanced. Many Thomists hold that a real distinction obtains here and that the essence and exist-
ence of creatures differ as different entities. Others, among them Dominicus Soto, Lepidii, etc., seem to prefer a distinction other than real. The Scotists, affirming their "formal distinction," which is neither precisely logical, nor real, but practically equivalent to virtual, decide the point against a real distinction. Suarez, with many of his school, teaches that the distinction to be made is a logical one. The principal arguments in favour of the two chief views may be summarised as follows:—

(a) If essence and existence were but one thing, we should be unable to conceive the one without conceiving the other. But we are as a fact able to conceive of essence by itself. (b) If there be no real distinction between the two, then the essence is identical with the existence. But in God alone are these identical.

Suarez: (a) A real physical essence is actual in the line of being and not merely possible. But this actuality must belong to H, as a physical essence; for it is ex hypothesi, neither nothing nor merely possible, and the actuality of an essence is its existence. Car. Franzelin cast the argument in this form: "Est omnino evidens in re posita extra suae causae, in statu actualitatis, ne ratione quidem abstrahi posse formaliter existentiam" (De Verbo Incarnato). (b) It is inconceivable that there is a physical essense should differ from the essence of its existence.

These positions are maintained, not only by argument, but by reference to the authority and teaching of St. Thomas, as to whose genuine doctrine there is considerable difference of opinion and interpretation. It does not, however, appear to be a matter of great moment, as Soto remarks, whether one holds or rejects the doctrine of a real distinction between essence and existence, so long as the difference between God and His creatures is safe-guarded, in that existence is added as the essence itself, and not of the essence of creatures. And this would seem to be sufficiently provided for even in the supposition that created essences are not distinct from their existences as one thing is from another, but as a thing from its mode.

FRANCIS AVELING.

ESSENEES, one of three leading Jewish sects mentioned by Josephus as flourishing in the second century B.C., the two others being the Pharisees and the Sadducees. Concerning their origin, history, and tenets there has been much inconclusive controversy. The only ancient authorities we have are a few paragraphs in Philo Judaeus, a somewhat lengthy description in Josephus, and a scanty notice in Pliny. The following synopsis is derived mainly from the first two.

They are styled Esseni by Philo, who derives it from βεσσης, "holy," and Esseri and Esseni by Josephus. Their number according to both authors was about 40, and their chief places of residence were on the west side, but away from the shore, of the Dead Sea. They also dwelt in other, mostly seceded, parts and small towns of Palestine; yet some were found in cities. The sect arose about 150 B.C. (the first-named Essene is Judas, 110 B.C.) and disappeared towards the end of the first century A.D. They worshipped one God, Creator and Ruler of all things, omnipotent and omniscient. Moses was held in very high esteem and to blaspheme his name meant death. The sun was held in such reverence as to awaken a suspicion of idolatry. An all-disposing Fate was ad- mitted, but free was not entirely denied. They refused to join in the Temple sacrifices through fear of pollution, though they sent gifts thither; it seems that no blood-sacrifice was offered by them, as they claimed that a reverent mind was the best offering to God. The Sabbath was observed with most rigorous strictitude, not even liceans being answered. Assembled in their meeting-places, where they sat according to seniority, the Scripture was read and explained, generally in an allegorical manner, by some wise member. They washed frequently, as extreme importance was attached to ceremonial purity, and they followed scrupulously the prescriptions against Levitical defilements; even for a junior to touch a senior was pollution to the latter. What their eso- teric doctrines were is not known. Death was welcom, as they held "that bodies are corruptible and the matter composing them is not lasting, but souls are immortal and live for ever, and proceeding from the most subtle either have been drawn into bodies as into prisons by some natural longing. But when they are set free from the bonds of the flesh then they receive incorruptible bodies, i.e., bodies upwards. And agreeing with the opinions of the Greeks, they declare that the good dwell beyond the ocean in a place which is never oppressed by snow or rain-storms or intense heat, but is always calm and pleasant by a cool breeze breathing from the ocean. To the bad souls they assign a gloomy, tempestuous cave full of never-ending torments" (Jos. Bell. Jud., I, ii, 8). Some conclude from the words just quoted that the Essenes disbelieved in the resurrection of the body.

Among the virtues the Essenes cultivated especially obedience, truthfulness, continence, justice, and temperance; they paid great attention to the sick, respect to the aged, and showed marked kindness and hospitality to strangers. All men were regarded as equal, and slavery was abhorred as contrary to the law of nature. Those guilty of great crimes were punished by long excommunication or perpetual excommunication which, since they were not allowed to eat anything prepared by outsiders, entailed always great hardship and often death. Philosophy was neglected as useless and beyond the capacity of the lower classes. They lived in seclusion, knew nothing of the world, and were perfectly acquainted with the Bible. They searched for medicinal remedies in nature, as they devoted special care to the sick irrespective of creed, and investigated the properties of minerals. They laid claim to magical powers and ability to predict. For the latter some were held by Josephus, among them that of the Essene, Manaem, who foretold Herod the Great's kingship when he was but a boy without any royal prospects. All things were held in common, their very houses not being their own. They laboured principally at agricultural pursuits or made farm implements and houses, and sold these at their market. They were not allowed to carry, except a staff for defence when travelling. Harbours and wages went to the stewards, who gave as each needed. Clothes and shoes were retained until worn out. No trading was allowed except barter. Anointing with oil was considered a defilement. Servants were forbidden as tempting men to injustice. Their rulers or presidents were elected, likewise their priests—if they can be so called—among whom was one who was appointed to look after travelling brethren. One hundred members constituted a court of justice whose unanimous decision was irrevocable. The members were divided into four classes. The daily routine is given as follows: They were up before daybreak and spoke of the mysteries before sunrise. When it was addressed a prayer as if soliciting it to rise. Each
was sent then to his appointed employment at which he worked until the fifth hour, i.e. eleven o'clock, when all assembled and having bathed in water specially exercized, and clothed themselves in white, they entered the small dining-room quietly and silently. Before each were placed some bread and a dish of one sort of food. A priest said grace and then, but not before, they might eat. At the end of the repast prayer was again said, the white garments laid aside, and reasuming their ordinary attire they worked until evening. When that came and the meal was served, the people were numbered, and the rest ate at the noonday meal, which was regarded apparently as a sacrificial feast, being prepared by their priests, no stranger was admitted, but at supper it was otherwise. As they spoke only in turn and observed great moderation in food and drink the silence at the meals appeared to outsiders, so we are told, something very solemn and mysterious. Many of the Essenes reached a great age and they acquired such fortitude of mind and body that the worst torments inflicted on them by the Romans failed to shake their constancy and they met death with a smile.

Most of the Essenes rejected marriage, not on account of any wrong in it but because they did not trust women and desired peace and harmony. They perpetuated their sect by adopting children and admitting into their community young men from Saron through sea of life, as Pliny says. At their coming they received an apron to wear during their ablutions, a white garment, and a little spade-like instrument with which to dig a hole and cover their excrement from the rays of the sun. For one year their temperance was tested by observing outside the community its ascetic rules. Then came a fresh trial of two years during which they shared in the lustral rites, but not in the meals, of the initiated. If found satisfactory they were chosen full members and bound themselves by oath to God, observe justice, to be loyal to all, but especially to those in authority, and if ever in authority themselves not to outrage others by dress, to love truth and honesty, to conceal nothing from their fellows, and to reveal nothing to strangers, also to keep secret at all costs their books and the names of their angels. This was the only time when Essenes took oaths, their word being regarded by all as so sacred that Herod excused them from the oath of allegiance. Some of them observed the same rules yet married, but merely for the order's sake and only after three years. If a woman appeared healthy and likely to bear children.

The Essenes have received an amount of attention during the last three centuries out of all proportion to their numbers, their influence upon contemporary life, their importance in Jewish thought and movement. This sprang from two causes, one external and the other internal. The latter was the curious mixture of Jewish and foreign elements in their tenets and customs. This peculiarity aroused the curiosity and exercised the ingenuity of the learned to account for the Essenes. That the Essenes were really Jews, though speaking very likely Greek (Jews by race, says Josephus), is admitted. Their belief in one God, reverence for Moses, strict observance of the Sabbath, fanatical adherence to circumcision (Hippolytus, etc.), all show this; while their attitude towards the sun, election of priests, their mode of life, likened to the Pythagorean by Josephus himself, etc. seem to show outside influence. The source of this influence, like everything Essenic, beget controversy, but so far no one has succeeded in determining it satisfactorily. Budde, Tarn, Graf (Dervish, Orphic), Hellenism, etc., have all had their claims put forth as one of the parents of this hybrid sect. Suffice it to say that Persian-Babylonian influence through the Captivity, and Hellenism filtering in through Alexandria, are the main influences to explain account for foreign elements. The claim that these elements, if divested of their Grecian appearance, could be proved to have their roots in Biblical ground is not lightly to be set aside. The external cause of attention was the bias of English deists and Continental rationalists to make the Essenes into predecessors from whom gradually and quite naturally Christians developed; and Freemasons pretended in reference to such chimeras it is enough to say that between Esseneism in certain aspects and Christianity there are some points of resemblance. It will be very well otherwise because Esseneism was Judaic in its foundation and Christianity was not destructive but progressive. On the other hand, the differences are fundamental. That John the Baptist and Christ were the only Essenes is an assumption based on similarities which spring naturally and independently from asceticism and voluntary poverty. So likewise the vaunted dependence between Esseneism and monasticism can be resolved into necessary traits of any ascetic, communistic life (see "Wukār" in "Studien u. Mitteilungen" xiii, p. 222, Berlin in "Revue Bénéd.", 1891, VIII, 12-190). The attitude of Jesus and His disciples is altogether anti-Esseneic (Jewish Encyc.). The strict silence about any Messiahs is due partly perhaps to the secrecy of the sect, and partly to the age of the Esseneic chronicler, Josephus. In fine, our present knowledge of the Essenes is slight and not all of it trustworthy, as its sources are scanty, coloured, and unreliable.

E. P. Graham.

Est (Estus), Wilhelm Hessel van, a famous commentator on the Pauline Epistles, b. at Gorcum, Holland, in 1542; d. at Douai, 20 Sept., 1613. Gorcum at that time contained about 5000 inhabitants, among whom the most illustrious belonged to the family of Est, both on his father's and mother's side. Est was born at a time of great excitement, and though the mildest of men his whole life was spent amidst scenes of controversy and civil war. Luther was still in full vigour, though he had only four years to live. Calvin was active at Geneva, and Europe was flooded with books and pamphlets vilifying the Church. Very few writers did more to show (and that in quite an unostentatious manner) the hollowness of the reformers' Biblical arguments than Est. He received his early education at home, after which he went to Utrecht, where he studied classics and theology. He proceeded to Louvain, a Celtic Abbey, and spent twenty years in the study of philosophy, theology, and Holy Scripture. During the last ten years there he was professor of philosophy in one of the colleges. In 1580 he received the degree of Doctor of Theology. He was thoroughly distinguished by studious piety, great ability, and application to study. During the
time he was frequently the bearer of pecuniary aid to his uncle, Nicolas Pieck, O.S.F., who was giving missions in the Flevopolder. But the last would never accept any help. In 1572, while Est was still at Louvain, a great catastrophe befell his native town, which was captured by the Calvinists. His father, brother, and uncle were made prisoners and were in imminent danger of their lives. The father and brother escaped, but Nicolas Pieck, who was then a papal vicar at Leiden, was taken prisoner. The papal vicarate was a position of great dignity in the Church, and theicle of the Congregation of Gereon, and eighteen other ecclesiastics, were taken to Brielle, on the sea-coast, and put to death for the Catholic Faith with revolting brutality. Est wrote what is considered the best history of the martyrdom of the Gereon vicars, who were canonized by Pius IX in 1867. From this history we learn many details about Est and his relatives.

When Est first arrived at Louvain he found the place in a ferment owing to the recently broached opinions of Buis (q. v.), one of the professors of Holy Scripture, and who held a leading position in the university all the time that Est was there. Violent controversy raged about the person of Buis during all that time. It is evident from the commentaries of Est that he was much influenced on questions of grammar by the teaching of his old professor, Buis; and on these points he has to be read with some caution. After having made doctor, he continued teaching philosophy at Louvain two years longer. In 1582 he was made professor of theology at Douai, a position which he held for thirty years. He was also for many years rector of the diaconal seminary and during the last eighteen years of his life chancellor of the University of Douai. He was noted for his piety, modesty, and compassion for the poor, and greatly admired for his vast learning, solid judgment, and on no very narrow views. He was afterwards styled doctor fundatisimus by the learned Pope Benedict XIV. Soon after he left Louvain a fresh controversy broke out there, into which he appears to have been drawn. About 1586 Lessius began to refute the errors of Buis in his ordinary course of lectures. The friends of Buis, who admired him for his edifying life, great learning, and manly submission, felt annoyed that his shortcomings should have been thus pointlessly accentuated by their opponents. They attacked certain propositions of Lessius, resembling those of Molina and Suarez, and had them condemned by the university as savouring of Semipelagianism. The sister university of Douai added its condemnation (said to have been obtained under a missprenension), and its terms were in still more violent language. It has been observed that in this instance, the title of form of the condemnation was drawn up by Est. There can be little doubt that he was in favour of the condemnation. The whole controversy finally led up to the Congregatio de Auxiliis (q. v.). On his return to the teaching of Lessius on grace etc. was found to be innocuous.

Most of Est's works, which were written in Latin, were not published until after his death. His greatest work is his "In omen Divi Pauli et Catholicae Epistolae Commentarii" (Douai, 1614–15; Mainz, 1639–60). There are several later editions, that of Mainz (1841–45, 7 vols.) being one of the best. To this work was prefixed the author's protestation of loyalty to the Church in which he declares that he desires to submit all things to the judgment of the Catholic Church and its supreme pastor and judge on earth, the Roman pontiff, and if anything has been spoken in error that it be considered as unsaid. In his commentaries he everywhere endeavours to arrive at the literal meaning of the author, with great judgment, acumen, and erudition. He refutes objections, as occasion offers, without regard to any modern consideration. No serious student of the Epistles can afford to neglect this work. Horne, a Protestant writer (Intro., London, 1834, II, 293), says that it is "a most valuable work, which Romanists and Protestants alike concur to recommend as an excellent critical help in the exposition of the Apostolic Epistles. The prefaces of Est are particularly interesting. His other works are: "Commentarii in IV libros Sententiarum Petri Lombardi" (Douai, 1615); "Annotationes in precipua et difficilia S. Scripturae loca" (Douai, 1617); "Historia Martyrum Gorcomiensium" (Douai, 1633); also in the "Annales" for July 9, 1754.

He also translated the life of Blessed Edmund Campon, S.J., from French into Latin, and left copious notes for a new edition of the works of St. Augustine.

Establishment (or Established Church), The.

—The union of Church and State setting up a definite and distinctive relation between the two is frequently expressed in English by the use of the word "established", applied to such union in both Catholic and Protestant States, in spite of the fundamental differences between them. Such a union is called "Established" or "the Established Church" is often used as a distinctive name for the ecclesiastical system established by law in Scotland, in Ireland (until 1869), but especially in England. The pre-Reformation Church of England was the religion of the realm, and its establishment was the spontaneous act of the people; the distinctive feature of the post-Reformation Church is that it was imposed upon the people by legal enactment, and based upon the principle of royal supremacy. Papal jurisdiction was not simply swept away but was transferred entirely to the Crown. And except for the brief return to Catholic unity under Mary (1553–1558) and during the Commonwealth (1649–1660), the arrangements then made have continued to limit the liberty of action of the Anglican body alike in matters doctrinal and disciplinary. Convocation cannot meet, discuss, or enact new canons without royal permission (25 Hen. VIII, c. 19); the effective nomination of archbishops and bishops, etc., rests with the Crown (25 Hen. VIII, c. 19); supreme spiritual and ecclesiastical jurisdiction is annexed to the Crown (25 Hen. VIII, 19, cf. 1 Eliz., c. 1). Moreover, no modification of its formulas or doctrines has been permitted without the sanction of an act of Parliament. The term "by law established", as applied to the Church of England, is not always met with in evidence, though the form of the establishment was drawn up by Est. There can be little doubt that he was in favour of the condemnation of the whole controversy finally led up to the Congregatio de Auxilii (q. v.). On his return to the teaching of Lessius on grace etc. was found to be innocuous.

Most of Est's works, which were written in Latin, were not published until after his death. His greatest work is his "In omen Divi Pauli et Catholicae Epistolae Commentarii" (Douai, 1614–15; Mainz, 1639–60). There are several later editions, that of Mainz (1841–45, 7 vols.) being one of the best. To this work was prefixed the author's protestation of loyalty to the Church in which he declares that he desires to submit all things to the judgment of the Catholic Church and its supreme pastor and judge on earth, the Roman pontiff, and if anything has been spoken in error that it be considered as unsaid. In his commentaries he everywhere endeavours to arrive at the literal meaning of the author, with great judgment, acumen, and erudition. He refutes objections, as occasion offers, without regard to any modern consideration. No serious student of the Epistles can afford to neglect this work. Horne, a Protestant writer (Intro., London, 1834, II, 293), says that it is "a most
on parole, entered the service of the French East India Company, and (with two vessels) destroyed the British factories in Sumatra and the Persian Gulf. He was on his way to France, in 1760, when he fell into the hands of the English and was sent to Plymouth. Released a second time, he was appointed lieutenant-general of the navy in 1763, and vice-admiral in 1777. One year later, he left Toulon in command of a fleet of twelve battleships and fourteen frigates with the intention of assailing the struggling American colonies against Great Britain. Unfavourable winds delayed him and so Admiral Howe's fleet escaped his pursuit and d'Estate took possession of Newport (3 August). A great naval battle was about to take place, when a violent storm arose and dispersed the two fleets. After a short sojourn in Boston harbour, he sailed to the West Indies where he took St. Vincent and Grenada (4 July, 1779) and badly damaged Admiral Byron's fleet. His attempts to retake Savannah, in concert with the Americans, were unsuccessful; a severe wound obliged him to give up the enterprise. On his return to France, in 1780, he fell into disfavour at the court. 

Three years later, however, he was placed at the head of the French Spanish fleet assembled before Cadiz, that he gave in the third year of his reign, divorced her and ordered the most attractive maidens of the kingdom brought before him that he might select her successor from among them. Among these was Esther, whose rare beauty captivated the king and moved him to place her on the throne. Her uncle Mardochoi remained constantly near the palace so that he might advise and counsel her. While at the gate of the palace he discovered a plot of two of the king's eunuchs to kill their royal master. This plot he revealed to Esther, who in turn informed the king. The plotters were executed, and a record of the services of Mardochoi was entered in the chronicles of the kingdom. Not long thereafter, Aman, a royal favourite before whom the king had ordered all to bow, having frequently observed Mardochoi at the gate of the palace and noticed that he refused to prostrate himself before him, cunningly obtained the king's consent for a general massacre in one day of all the Jews in the kingdom. Following a Persian custom, Aman determined by lot (pars, pl. parətn), that the massacre should take place a twelvemonth hence. A royal decree was thereupon sent throughout the Kingdom of Persia. Mardochoi informed Esther of this and

THE CORONATION OF
Esther

The Triumph of
Mardochoi

Esther being Presented to King Assuerus

Esther (Heb. אסתר, star, happiness; Sept. Ἐσθή), Queen of Persia and wife of Assuerus, who is identified with Xerxes (485–465 B.C.). She was a Jewess of the tribe of Benjamin, daughter of Abihail, and bore both the names of Esther (אסתר, Ἐσθή, γυναῖκα τοῦ Ἀσσουροῦ), and a book on the colonies. JAL. Dictionnaire critique de biographie et d'histoire (Paris, 1872); Etudes du journal d'un officier de la marine de l'ancêtre de M., le Comte d'Estate (Paris, 1783); Etudes sur la marine (Paris, 1857).

Esther (Heb. אסתר, star, happiness; Sept. Ἐσθή), Queen of Persia and wife of Assuerus, who is identified with Xerxes (485–465 B.C.). She was a Jewess of the tribe of Benjamin, daughter of Abihail, and bore both the names of Esther (אסתר, Ἐσθή, γυναῖκα τοῦ Ἀσσουροῦ), and a book on the colonies. JAL. Dictionnaire critique de biographie et d'histoire (Paris, 1872); Etudes du journal d'un officier de la marine de l'ancêtre de M., le Comte d'Estate (Paris, 1783); Etudes sur la marine (Paris, 1857).

LOUIS N. DELAMARE.
people to which she belonged, and pleaded that they should be spared. The king ordered that Aman should be hanged on the gibbet prepared for Mardochai, and, confiscating his property, bestowed it upon the intended victim. He charged Mardochai to address to all the governors of Persia letters authorizing them to destroy the Jews, and to kill all those who, by virtue of the previous decree, should attack them. During two days the Jews took a bloody re- venge on their enemies in Susan and other cities. Mardochai then instituted the feast of Purim (lots) which he exhorted the Jews to celebrate in memory of the day when Aman had determined to destroy, but which had been turned by Esther into a day of triumph. The foregoing story of Esther is taken from the Book of Esther as found in the Vulgate. Jewish traditions place the tomb of Esther at Hamdas (Ecbatana). The Fathers of the Church considered Esther as a type of the Blessed Virgin Mary. In her poet's have found a favourite subject. (R. Schwartz, Esther im deutschen u. neulateinischen Drama des Reformationszeitalters, Oldenburg, 1894.)

But in the Hebrew Bible and the Septuagint the Book of Esther is called by the word "Esther" as title. But the Jewish rabbis called it also the "volume of Esther," or simply the "volume" (megillah) to distinguish it from the other four volumes (megilloth), written on separate rolls, which were read in the Temple on certain feast days. One was read on the feast of Purim and consisted largely of epistles (cf. Esth., ix, 20, 29), it was called by the Jews of Alexandria the "Epistle of Purim." In the Hebrew canon the book was among the Hagiographs and placed after Ecclesiastes. In the Latin Vulgate it has always been classed with Tobias and Judith, after which it is placed. The Hebrew text that has come down to us varies considerably from those of the Septuagint and the Vulgate. The Septuagint, besides showing many unimportant divergencies, contains several additions in the body of the book or at the end. The additions are the portion of the Vulgate text after ch. x, 3. Although no trace of these fragments is found in the Hebrew Bible, they are most probably translations from an original Hebrew or Chaldaic text. Origen tells us that they existed in Theodotion's version, and that they were used by Josephus in his "Antiquities" (XVI). St. Jerome, finding them in the Septuagint and the Old Latin version, placed them at the end of his almost literal translation of the existing Hebrew text, and indicated that he had used them in the margin of his version of the books. In the MSS. the chapters being thus rearranged, the book may be divided into two parts: the first relating the events which preceded and led up to the decree authorizing the extermination of the Jews (i-iii, 13; xi, 2; xiii, 7); the second showing how the Jews escaped from their enemies and avenged themselves (iv-v, 8; xiii-xv).

The Book of Esther, thus taken in part from the Hebrew Canon and in part from the Septuagint, found a place in the Christian Canon of the O.T. The chapters taken from the Septuagint were deuterocanonical, and, after St. Jerome, were separated from the ten chapters taken from the Hebrew which were called protocanonical (see CANON OF THE HOLY SCRIPTURES). A great many of the early Fathers clearly considered the entire work as inspired, although no one among them found it to his purpose to write a commentary on it. Its omission in some of the early catalogues of the Scriptures was accidental or unimportant. The first to reject the book was Luther, who declared that he so hated it that he at first had the idea that it did not exist. His first followers wished only to reject the deuterocanonical parts, whereupon these, as well as other deuterocanonical parts of the Scriptures, were declared by the Council of Trent (Sess. IV, de Can. Scripture) to be canonical and inspired. With the rise of rationalism the opinion of Luther found many supporters. When modern rationalists argue that the Book of Esther is irreverent in character, unlike the other books of the O.T., and therefore to be rejected, they have in mind only the first or proto- canonical part, not the entire book, which is manifestly religious, especially so because of its explicit religious content. As to the authorship of the Book of Esther there is nothing but conjecture. The Talmud (Baba Batha 15'9) assigns it to the great Synagogue; St. Clement of Alexandria ascribes it to Mardochai; St. Augustine suggests Esdras as the author. Many, noting the writer's familiarity with Persian customs and institutions and with the character of Assuerus, hold that he was a contemporary of Mardochai, whose memoirs he used. But such memoirs and other contemporary documents showing that such familiar knowledge could have been possessed by a writer of his day, although the absence in the text of allusion to Jerusalem seems to lead to the conclusion that the book was written and published in Persia at the end of the reign of Xerxes I (485-465 B.C.) or during the reign of his son Artaxerxes I (465-424 B.C.). Not infrequently the book offers several facts which may be added with some show of reason in favour of a later date. They are: (1) an implied statement that Susana had ceased to be the capital of Persia, and a vague description of the extent of the kingdom (i, 1); (2) an explanation of Persian usages that implies unfamiliarity with them on the part of the readers (i, 13, 19; iv, 11, viii, 8); (3) the revengeful attitude of the Jews towards the Gentiles, by whom they felt they had been wronged, and with whom they wished to have little to do (iii, 8 sqq.); (4) a diction showing many late words and a deterioration in syntax; (5) references to 'the Macedonians' and to the plot of Aman as an attempt to transfer 'the kingdom of the Persians to the Macedonians' (xvi, 10, 14). On the strength of these passages various modern critics have assigned late dates for the authorship of the book, as 135 B.C., 167 B.C., 238 B.C., the beginning of the third century B.C., or the early years of the Greek period which began 332 B.C. The majority accept the last opinion. Some of the modern critics who have fixed upon a later date for the appearance of the book deny that it has any historical value whatever, and declare it to be a work of the imagination, written for the purpose of popularizing the feast of Purim. In support of their contention they point out in the text what appear to be historical improbabilities, and attempt to show that the narrative has all the characteristics of a romance, the various incidents being artfully arranged so as to form a series of contrasts and to develop into a climax. But what seem to be historical improba- bilities in a romance are in many cases in the text. Critics do not agree as to which seem quite seri- ous. While some, for instance, consider it wholly improbable that Assuerus and Aman should have been ignorant of the nationality of Esther, who was in frequent communication with Mardochai, a well- known Jew, others maintain that it was quite possible and probable that a young woman, known to be a Jewess, should be taken into the harem of a Persian king, and that with the assistance of a relative she should avert the ruin of her people, which a high official had to deal with (Table Talmud). The improbability of other passages, if not entirely explained, can be sufficiently explained to destroy the conclusion, on this ground, that the book is not histori- cal. As to artful contrasts and climax to which appeal is made as evidences that the book is the work
of a mere romancer, it may be said with Driverv (op. cit.) that fact is stranger than fiction, and that a conclusion based upon such appearances is precarious. There is undoubtedly an exercise of art in the composition of that part of the history of Ancisois and the "Antiquités", already mentioned, he collected sixteen volumes of "Fragmenta historica", but though he did not publish much under his own name, he worked incessantly in the chief libraries of Italy, all of which were open to him, and the results of his researches he forwarded to Dom Mabillon and others at St-Germain-des-Prés, to whom they were of great service. He was buried in the church of the Minims of SS. Trinità de Monti.

Eternal Gospel. See Joachim of Flora.

Eternity (aeternum, originally æternum, altsor, æon-long) is defined by Boetius (De Consol. Phil. V. vi) as "perpetuum, without succession and perfect of interminable life" (interminabilis vitae tota simul et perfecta possessio). The definition, which was adopted by the Schoolmen, at least as applying to eternity properly so called, that of God, implies four things: (1) beginning or end, (3) or succession, and (4) of the most perfect kind. God not only is or exists, but lives. The notion of life, like all notions however abstract or spiritual, is, when applied to God, but analogous. He not only does not live precisely as anything else with which we are acquainted lives; He does not even exist as anything else exists. Our notions of life and existence are derived from creatures, in which life implies change, and existence is something added to essence, thus involving composition. In God there can be no composition or efflux of life from or to anything, but all is pure act or being. The agnostic, however, is not thereby justified in saying that we can know nothing and should predicate nothing of God. It is true that, however we conceive Him or in whatever terms we speak of Him, our ideas and expressions are utterly beneath and unworthy of Him. Yet, even while arguing in this way, the agnostic thinks and speaks of Him as really as we do; nor can he or we do otherwise, compelled as we are to trace things back to their first cause. Yielding to this necessity, we can but think and speak of Him in the highest terms known to us; not merely as existing for instance, but as living; correcting at once, as far as we can, the form of our thought and predication, by adding that the Divine life is perfect, free from the least trace of defect. That is why and why the Divine existence as a life. It is a life, moreover, not without beginning or end but also without succession —tota simul, that is without past or future; a never-changing instant or "now". It is not so difficult to form some faint notion of a duration which never begins and shall never end: We hope that our own life shall be endless; and materialists have accustomed us to the notion of a series stretching backward without limit in time, to the notion of a material universe that never came into being but was always there. The Divine existence is that and much more: excluding all succession, past and future time—indeed all time, which is succession—and to be conceived as an ever-enduring and unchanging "now".

In forming this notion of eternity it is well to think of the Divine immensity in its relation to space and time. The metaphysical relations of things may come to mind first, a straight line—a line of separate dots; then a continuous line within two limits, beginning and end. The line can be, but is not, divided into parts, shorter lines or dots, and the whole is finite both ways. It is like and yet Unlike a finite spirit; like, since it has no actual parts or divisions and is limited; yet unlike since it
may be divided, whereas a spirit cannot be divided. Spirit exists whole and entire wherever it exists at all; and though it may fill the space occupied by a human body, let us say, it is whole and entire in every possible part of it; not quite unlike the continuous line. If we further think of the end or limits of the line as remoter or farther from the observer's axis, forming an indefinitely space line, the line is not only continuous or unbroken but infinite, without end or beginning, yet still divisible; like, but so unlike, the immensity of God. For God is a spirit, and as the human soul fills the space occupied by the body to which it is united, yet is whole and entire in every possible part of that space, so God fills all space whatsoever, extending without limit in all directions, and yet is whole and entire everywhere, in the smallest conceivable point, in the very loose or improper sense in which we may think or speak of God as being "whole." Even the spatial relations of the soul to the body are coarse as compared to those which God's existence bears to that of creatures and the spaces in which they exist or may exist. For however free from extension created spirits may be, the whole line of real existence of a soul is some kind of space within themselves; whereas God, filling all space, is incapable of least change or motion, but is so truly the same throughout that He is best conceived as an infinitely extended point, the same there, here, everywhere.

Yet this is the time-line which we have been attempting in that space, the infinite, unchangeable point which was immensity becomes eternity; not a real succession of separate acts or changes (which is known as "time"); nor even the continuous duration of a being which is changeless in its substance, however it may vary in its actions (which is what St. Thomas understands by an eternity); but an endless line of existence and action which not only is not actually interrupted, but is incapable of interruption or of the least change or movement whatsoever. And so, if an instant should pass away and another succeed, the present becoming past and the future present, there is necessarily a change or movement of instants; so, if we are not to be irreverent in our concept of God, but to represent Him as best we can, we must try to conceive Him as excluding all, even the least, change or succession; and his duration, consequently, as being without even a possible past or future, but a never beginning and never-ending, absolutely unchangeable "now." That is how eternity is presented in Catholic philosophy. That is the concept of space we are interested in helping us to realize, however faintly, the relations of God to created things, especially with regard to His foreknowledge. In Him there is no before or after, and therefore no foreknowledge, objectively; the distinction which we are wont to draw between His knowledge of intelligence or science in experience and His knowledge of vision is merely our way of representing things, natural enough to us, but not by any means objective or real in Him. There is no real objective difference between His intelligence and His vision, nor between either of them and His existence in space, in which there is no possibility of difference or change. That infinitely perfect substantial intelligence, immense as it is eternal, and withal existing entire and immoveable as an indivisible point in space and as an indivisible instant in time, is coextensive, in the sense of being intimately present, with the space-extension and the time-succession of all creatures; not beside them, nor parallel with them, nor before or after them; but present in and with them, sustaining them, co-operating with them, and therefore seeing—not foreseeing, for there may not, or any party of the space-extension, or at any instant of the time-extension, in which they may exist or operate. God may be considered as an immovable point in the centre of a world which, whether as a more or less closely connected group of granulated individuals, or as an absolutely continuous other mass, turns round Him as a sphere may be supposed to turn in all directions round its centre (St. Thomas, Cont. Gent., I, c. lvii.). The imagery, however, must be corrected by noting that while in the time-line God's duration is an ever-enduring point or "now," His immensity in the space-line is another kind of "now," or in space; but is a point, rather, which is coextensive with, in the sense of being intimately present to, every other point, actual or possible, in the continuous or discontinuous mass that is supposed to move around Him. Barring this correction, not well in mind, we may conceive Him as this immovable point in the centre of an ever-moving, though here and there continuous, circle or sphere. The space and time relations are constantly changing between Him and the moving things around Him, not through any change in Him, but only by reason of the constant change in them. In them there is before and after, but not in Him, Who is equally present to them all, no matter how or when they may come into being, or how they may succeed one another in time or in space. Some of them are not to be created by Him; and hence, in the case of one of them, the second known instance of the third, when some began to speculate on these questions, and wherever still there are any even rudimentary speculations, the question has arisen and does arise, as to how an act can be free not to happen if, as we suppose, God's absolutely infallible oversight holds from all eternity that it may never so happen.

To this Catholic philosophy may be added the only answer which can be given; that it is not true to say that God either saw or foresaw anything, or that He will see it, but only that He sees it. And as my seeing you act does not interfere with your freedom of action, but I see you acting freely or necessarily, as the case may be, so God sees all finite things, quiescent or active, of necessity or freely, according to what may be objectively real, without in the least interfering thereby with the mode or quality of their existence or of their action. Here again, however, care must be taken not to conceive the Divine knowledge as being determined by what the finite may be or do; somewhat as we see things because the knowledge is borne in upon us from what we see. It is not from the finite that God gets His knowledge, but from His own Divine essence, in which all things are represented or mirrored as they are, existing or merely possible, necessary or free. On this aspect of the question see God. When, therefore, one is asked or tempted to ask, what God did or where He was before time and place began, one may reply that His consciousness is too wide for the dimensions of space and time, or the denial of the legitimacy of the supposition that He was "before." It is only in relation to the finite and mutable that there can be a before and after. And when we say, that, as faith teaches, the world was created in time and was not from eternity, our meaning has been stretched back infinitely before He brought the world into being; but rather that while His existence remains an unchangeable present, without possibility of before or after, of change or succession, as regards itself, the succession outside the Divine existence, to each instant of which it corresponds as the centre does to any point in the circumference, had a beginning, and might have extended indefinitely further backward, without however, escaping the omnipresence of the eternal now" (See Billet, De Deo Uno et Trino, q. 10, p. 122).

So far for the strict or proper notion of eternity, as applying solely to the Divine existence. There is a wide or improper sense in which we are wont to represent as eternal what is merely endless succession in time; and they may have any past or present time, which should have had a beginning, as when we speak of the reward of the good and the punishment of the wicked as eternal, meaning by eternity only time or succession without end or limit in the future. In the Apocalypse there is a well-known passage in which a great angel is
represented as standing with one foot on each and on
land, and swaying by Him that liveth forever, that
time shall be no more. Whatever the meaning of the
cath may be, it has found an echo in our religious ter-
minology, and we are wont to think and say that with
death, and especially with the Last Judgment, time
shall cease. The meaning is not that there will be no
more succession of any kind; but that there will be no
substantial change or corruption in what survives
death, the soul; or in the body that shall have been
raised from the dead; or in the heavens and earth as
they shall be renewed after Christ's second coming.
There is, moreover, an implication or connotation of
the doctrine that in the future life of souls, whether in
heaven or in hell, succession will be accidental, the act
in which their essential happiness or misery will con-
sist being continuous and unbroken vision and love,
or blinded wrong vision and hatred, of God. The
kind of duration is in our ordinary language spoken
of as life or death eternal, by a kind of participation, in
a wide or improper sense, in the character of the Divine
eternity (Bilbót, op. cit., 119). Questions of the greatest
importance have been raised as to the possibility of an
eternal state of happiness or misery, or whether the
man, such as we know, having never had a beginning and
therefore not needing a first cause; also as to the
possibility of eternal creation, in the sense of a being,
with or without succession, having had no beginning
of existence and as such being created by God
(Cartesian). For other questions as to eternity see
Heaven, Hell. "Eternal life" is a term some-
times applied to the state and life of grace, even before
death; this being the initial stage or seed, as it were,
of the never-ending life of bliss in heaven, which, by a
species of metonymy, is regarded as being present in
its first stage, that of grace. This, if we are true to
ourselves and to God, is sure to pass into the second
stage, the life eternal.

The basis of all later treatment of the question of eternity is
that of St. Thomas, I. q. xii. For a fuller exposition see
ScUares, De Deo, I. iv; Iadem, Metaphysica, disp. I, ad. 4 sq.;
Gesamta, De perfectionibus divinis, IV. For the teaching of
early non-Christian philosophers (Plato, Aristotle, and
the Stoics) also of the Fathers, see Patauus, De
Deo, III. iii. iv. In the same chapters he discusses the meaning
of the term resurrection. For the testimony of the Fathers as to
the possibility of creation from eternity, see Patauus, op. cit.,
IV. Brief expositions may be found in the ordinary handbooks
of philosophy, on ontology and natural theology; also in
the various treatises De Deo Uno.

WALTER McDoNALD.

Ethelbert, Saint, date of birth unknown; d. 794;
King of the East Angles, was, according to the
"Speculum Historiale" of Richard of Cirencester
d. about 1401), the son of King Ethelred and Leo-
frana, a lady of Mercia. Brought up in piety, he
was elected King on Ethelred's death, ruled wisely, and
was a man of singular humility. Urged to marry, he de-
clared his preference for a life of celibacy, but at length
consented to woo Altrida (Alfrida), daughter of Offa,
King of the Mercians. Leofrana foreboded evil and
tried to dissuade Ethelbert; but in spite of an earth-
quake, an eclipse of the moon, and a warning vision, he
proceeded to the church of St. Peter at Canterbury
to marry the lady Offa resided. On his arrival Altrida expressed
her admiration for Ethelbert, declaring that Offa
ought to accept him as susearn. Cynethryth, the
queen-mother, urged by hatred of Ethelbert, so poi-
soned Queen's mind against him, that she reported the
offence of her husband Grimbil to murder the King of
Ethelbert, having come for an interview with Offa,
was bound and beheaded by Grimbil. The body
was buried ignominiously, but, revealing itself by a
heavenly light, was translated to the cathedral at
Hever, where the metropolitan, Ethelbert, supported by August-
tine, successfully resisted the attempt, and thus fixed
for more than nine centuries the individual character of
the English Church. He left three children, of whom
the only son, Eadbald, lived and died a pagan.

PATRICK RYAN.

Ethelbert, Saint, King of Kent, b. 559; d. 24
February, 618; son of Eormenric, then who was
descended from Hengest. He succeeded his father,
in 560, as King of Kent and made an unsuccessful
attempt to win from Cæwinian of Wessex the over-
lordship of Britain. His political importance was
doubtless advanced by his marriage with Bertha,
daughter of Charibert, King of the Franks (see Ber-
thia, I.). A noble disposition to fair dealing is argued
by his giving her the old Roman church of St. Martin
in his capital of Cantwarburh (Canterbury) and
affording her every opportunity for the exercise of her
religion, although he himself had been reared and re-
mained, as worshipper of Odin. The same natural
virtue, combined with a quaint spiritual caution and,
.on the other hand, a large instinct of hospitality, ap-
pears in his message to St. Augustine when, in 597,
the Apostle of England landed on the Kentish coast
(see AUGUSTINE, I.).

In the interval between Ethelbert's defeat by Cæw-
lin and the arrival of the Roman missionaries, the
duty of the Wessex king had left Ethelbert, at least
virtually, supreme in southern Britain, and his bap-
tism, which took place on this occasion, was not
accompanied by baptism of the English people. But
the landing of Augustine (2 June, 597) had such an
effect in deciding the minds of his waverers to agree
that as many as 10,000 are said to have followed
his example within a few months. Thenceforward
Ethelbert became the watchful father of the infant
Anglo-Saxon Church. He founded the church which
in after-ages was to be the primatial cathedral of all
England, besides other churches at Rochester and
Canterbury. But, although he permitted, and even
helped, Augustine to convert a heathen temple into
a Christian church of St. Peter at Canterbury, he
repelled his heathen subjects to accept baptism. In
more, as the lawgiver who issued their first written
laws to the English people (the ninety "Dooms of Ethelbert",
A. D. 604) he holds in English history a place thoroughly consistent with his character as the
first popular founder of the English law, and
other for the upbuilding of free and orderly political
institutions in Christendom. When St. Mellitus had
converted Sebert, King of the East Saxons, whose
capital was London, and it was proposed to make
that see the metropolitan, Ethelbert supported by August-
tine, successfully resisted the attempt, and thus fixed
for more than nine centuries the individual character of
the English Church. He left three children, of whom
the only son, Eadbald, lived and died a pagan.
He then retired to a cell where he spent some time in devotion. Shortly before his death, in the autumn of 781 or 782, he appeared once more in public that he might consecrate the cathedral which was now complete. Ten days later he died and was buried in the church at York. Alcuin mourned his loss as that of a father, and composed in his honour the splendid panegyric (lines 1394-1595) which is the gem of the poem on the Church of Christ. To him Ethelbert—or Elbert, as he calls him—was both pontiff and saint, "Iam cum Christo amus, potus, cibus, omnibus Christus".

Edwin Burton.

Etheldreda, Saint, Queen of Northumbria, b. probably about 630; d. at Ely, 23 June, 679. While still very young she was given in marriage by her brother, Ethelbert, King of East Anglia, to Ethelbert, a subordinate prince, from whom she received as morning gift a tract of land locally known as the Isle of Ely. She never lived in wedlock with Tonbert, however, and for five years after his early death she spent the time in austerities that enabled her to live a life of prayer and piety. She then arranged for her a marriage of politics, and a monastic institution with Egfrid, son and heir to Oswy, King of Northumbria. From this second bridgegroom, who was said to have been only fourteen years of age, she received certain lands at Hexham; through St. Wilfrid of York, she gave these lands to the minster of St. Andrew. St. Wilfrid was her friend and spiritual guide, but it was to him that Egfrid, on succeeding his father, appealed for the enforcement of his marital rights as against Etheldreda’s religious vocation. This bishop succeeded at first in persuading Egfrid to consent that Etheldreda should live for some time in peace as a sister of the Coldingham nunnery, founded by her aunt, St. Ebba, in what is now Berwickshire. But at last the imminent danger of being forcibly carried off by the king drove her to wander southwards, with only two women in attendance. They made their way to Etheldreda’s own estate of Ely, not, tradition said, without the interposition of miracles, and, on a spot hemmed in by morasses and the waters of the Ouse, the foundation of Ely Minster was begun. This region was Etheldreda’s native home, and her royal East Anglian relatives gave her the material means necessary for the execution of her holy design. St. Wilfrid had not yet returned from Rome, where he had obtained extraordinary privileges for her foundation from Benedict II, when she died of a plague which she herself, it is said, had circumstantially foretold. Her body was, throughout many succeeding centuries, an object of devout veneration in the famous church which grew up on her foundation. (See Ely, ancient diocese of.) One hand of the saint is now venerated in the church of St. Etheldreda, Ely Place, London, which enjoys the distinction of being the first—and at present (1909) the only—pro-Reformation church in Great Britain restored to Catholic worship. Built in the thirteenth century as a private chapel attached to the town residence of the Bishop of Ely, the structure of St. Etheldreda’s passed through many vicissitudes during the centuries following its descension, until, in 1873–74, it was purchased by Father William Lockhart and occupied by the Institute of Charity, of whose English mission Father Lockhart was then superior.

Dodd, Church History of England; Schoolills in Kirchenleben, s. v. Ethalred; Beede, Hist. Eicol., IV.—with the historian’s caution proper to his honour; Mann, Lockhart, S. Etheldreda’s and Old London (2nd ed.), London, 1860.

E. Macpherson.
Ethelward (Ethelheard, Ethelheard), fourteenth Archbishop of Canterbury, England, date of birth unknown; d. 1 June, 705. Much obscurity surrounds the death of Ethelward and his immediate successor. He is described by Symeon of Durham as "Abbas Hludenis Monasterii", but it is uncertain what monastery is thus designated. It has been variously located at Louth in Lincolnshire (the most probable identification), Lydd, and Ludgershall in Kent, and at Malmesbury. William of Malmesbury is certainly mistaken in identifying him with Ethelheard, ninth Bishop of Winchester.

The rise of Offa, King of the Mercians (757-796), had divided England into three great states: Northumbria, Mercia; and Wessex, which consolidated his kingdom by giving it an independent ecclesiastical organization; for although Northumbria had its own archbishopric at York, Mercia, after conquering Kent, was still ecclesiastically subject to the powerful see of Canterbury, then ruled over by Jaenbert (765-791). Offa's scheme was to weaken Canterbury's influence by dividing the southern province, and creating a Mercian archbishopric at Lichfield: this he successfully accomplished when on the occasion of the consecration of Cuthbert and Theodore in 757, he was present by Pope Hadrian I (772-796) in 786-798, at the consecration of the archbishopric of Lichfield, and Canterbury was left with only London, Winchester, Sherborne, Rochester, and Selsey as suffragan sees. On the death of Jaenbert (12 Aug., 791), Ethelward was raised to the see through the influence of Offa, which makes it likely that he was a Mercian abbot. Although he was elected in 791, his consecration only took place on 21 July, 793: the delay being probably due to the unwillingness of the Kentish clergy and people to receive a Mercian archbishop, and to his being consecrated by the Archbishop of Lichfield. Had Offa's policy of separate ecclesiastical organization prevailed, it would have impeded the attainment of national unity, and its defeat by Ethelward is an event of the greatest importance in the history of the making of the English nation. During Offa's lifetime little could be done to restore Canterbury's rights and prestige. The year 796 was full of incident: the nobles of Kent rose in arms, and rallying round Eadbert, Præa, a cleric and a member of their royal house, endeavored to take off the yoke of the Mercian Offa. As Ethelward's difficulties increased Alcuin exhorted him not to desert his Church; but after taking severe ecclesiastical measures against the recalcitrant cleric he was obliged to flee. Offa died on 26 July. His son Ethelwulf, who reigned after him, had a short reign, about 13 Dec.; Cenwulf succeeded in Mercia, but was forced to struggle continued in Kent until the capture of Eadbub in 798.

The co-operation of Ethelward and Cenwulf in deposing Eadbub, and in upholding the Mercian cause in Kent, increased the importance of Canterbury, and the archiepiscopal authority of Higbert waned. Cenwulf restored an estate taken from Canterbury by Offa, and wrote in 798 to Pope Leo asking him to examine into the question of the diminution of the rights of that see, and enlocking a letter from Ethelward and his suffragans. Ethelward meanwhile had returned to his see, and Alcuin wrote exhorting him to do penance for having deserted it. The success of Abbot Wada's mission to Rome, the tone of the letter of Leo III to Cenwulf, and the successful conference between Eadbub II of York, with reference to the confirmation of the rights of his see, determined Ethelward to set out for Rome in 801. Alcuin's friendship once more stood him in good stead; he sent a servant to meet him at St. Joss-sur-mer, and furnished him with letters. In 802 his name is spelled in various ways: Ethelward, Ethelward, Ethelward, Ethelward, and Ethelward. Cenwulf attended his efforts in Rome. Pope Leo III (795-816) granted his request, and ended the dispute between Canterbury and Lichfield by depriving Lichfield of its recently acquired honours and powers. The pope's decision was officially acknowledged by the Council of Clovesho on 12 Oct., 805, in presence of Cenwulf and his ninth bishop. He was deprived of his pallium, in spite of Alcuin's plea that so good a man should be spared that humiliation.

It is during Ethelward's occupancy of the See of Canterbury that we first meet with official records of the profession of faith and obedience made by the English bishops to their sovereign. His first document of that type is the profession of obedience to the See of Canterbury made in 796 by Bishop Eadulf of Linsey, who, as a suffragan of Lichfield, ought to have been consecrated by Higbert: it would appear to coincide with the collapse of Higbert's archiepiscopal authority at the death of Offa. Strobinus of Durham (Rolls Series), II, 83; William of Malmesbury, Gestis Pontificum Anglicarum (Rolls Series), 57-59; Stubbs, s. v. Ethelward in Dict. Christ. Biog.; Howes in Dict. Nat. Biog. The extant documents concerning Ethelward are collected in Harding's and Stubbs, Concilia and Ecclesiastical Documents, III, 467-555 (Oxford, 1871).

Edward Myers.

Ethelwold, Saint. Bishop of Winchester was born there of good parentage in the early years of the tenth century; d. 1 Aug., 984. After a youth spent at the court of King Athelstan, Ethelwold placed himself under Elphege the Bald, Bishop of Winchester, who gave him the tonsure and ordained him priest along with Dunstan, at Glastonbury. When Dunstan was dean under Saint Dunstan, he was a mirror of perfection. In 955 he became Abbot of Abingdon; and 29 November, 963, was consecrated Bishop of Winchester by Dunstan, with whom and Oswald of Worcester he worked zealously in combating the general corruption occasioned by the Danish invaders. At Winchester, both in the old and in his new minster (see Swrhin, Saint), he replaced the evil-living seculars with monks and refounded the ancient nunnery. His labours extended to Chertsey, Milton (Dorsetshire), Ely, Peterborough, and Thorney; expelling the unworthy, rebuilding and restoring; to the rebellious "terrible as a lion", to the meek "gentler than a dove". The epithet "father of monks" and "benevolent bishop" summarize Ethelwold's character as reformer and friend of Christ. Though he suffered much from ill-health, his life as scholar, teacher, priest, and royal counsellor was ever austere. He was buried in Winchester cathedral, his body being translated later by Elphege, his successor. Abingdon monastery in the twelfth century had relics of Ethelwold. His feast is said to have written to his clergy to romanize the "Regulæ Concordiæ". His feast is kept on 1 August.

Not to be confounded with the foregoing are (2) St. Ethelwold, monk of Ripon, anchor of Lindisfarne, d. about 720; feast kept 23 March; and (3) St. Ethelwold, Abbot of Melrose, Bishop of Lindisfarne, d. c. 740; feast kept 12 February.

Primary sources for Ethelwold of Winchester are Chronicon de Abingdon, in Rolls Series, passim, especially his Life, by Elygraph, II, 255; and the Life ascribed to Wolstan, precentor of Winchester, in Adsa, A., 1893 sqq. (cf. also Memorials of Dunstan, in Rolls Series, I, 190); Bollandists, Bibl. hagi. lat., 396; Chevalier, Védictas, 92; Sytarov, 794; Stenton, 376; and L, 11, 57. For Ethelwold's Benedictines see Archæologia, XXXVIII.

Patrick Ryan.

Ethanrius, Hugh and Leo, brothers, Tuscans by birth, employed at the court of Constantineople under the Emperor Manuel I (Commnenus, 1143-1180). Their name is spelled in various ways: Ethanrius, Ethanrienius, etc. Leo is of little importance. We know from his brother (Adv. Græc., I, 20) that he was "occupied in translating the imperial
letters", evidently an interpreter for Latin correspondence. Hugh, who does not seem to have held any official post at court, but was a very learned theologian, had many opportunities of discussing the questions at issue between the Orthodox and Catholici (so he tells us: Adv. Grec., Pref. I., Migne, P. L., CLXVII, 3) and the later authors date his works in three books: "De harssibus quas Graeci in Latinos devolvunt, sive quod Spiritus sanctus ex utroque Patre et Filio procedit" (P. L., CLXII, generally quoted as "Adv. Graecos"). This work, the first exhaustive and scientific defence of the Filioque, was composed in both Latin and Greek languages. By it he published the author sent copies to the Orthodox Patriarch of Antioch, Aimerikos, and to Pope Alexander III (1159-1181), whose letter of acknowledgment is still extant (Ep. CLXII, Barillon, an. 1177, n. 37, 38). Hugh Etherius by this treatise obtains a very important place among Catholic controversialists against the Eastern Church. It appears that the emperor, who was well disposed towards Latins, had suggested that he should write it, he says asked him whether they have "any authorities of their own who say that...not from the Son" (ib. Pref. I., CLXII, col. 165). Hugh had used his knowledge of Greek and his opportunities of studying their Fathers so well that he was able to produce texts from nearly all the recognized authorities on both sides. He quotes especially Sts. Cyril of Alexandria, Basil, Gregory Nazianzen, Chrysostom, John Damascus, etc. From the Latins he produced witnesses from Sts. Augustine, Jerome, Gregory I, Ambrose, Hilary. He was also well acquainted with the writings of his adversaries and quotes Photius, Niceas of Thessalonice, Theophylactus of Acrensis, etc. The Latin version is very corrupt and untrustworthy. There are also some incorrect expressions noted by the later editors, such as that God the Father is the cause of the Son (this is a concession to the Greeks that was, however, tolerated by the Council of Florence; Denzinger, Enchiridion, n. 586). Nevertheless, since it was written this work has been the foundation of nearly all Latin controversy with the Greeks. St. Thomas Aquinas used it for his "Opusc. I., contra errores Grecorum and Cardinal Bessarion refers to it with great praise (Ep. ad Alex., P. L., CLXI, 328). Hugh Etherianus also wrote a treatise "De regressu animarum ab inferis", in answer to a petition of the clergy of Pisa, and (probably) a short work "De Grecorum malis consuetudinibus''. A "Libre de immortali Deo", written by him is lost.

ADRIAN FORTEUSE.

Ethics.—I. Definition.—Many writers regard ethics (Gr. ἔθικη) as any scientific treatment of the moral order and divide it into theological, or Christian, ethics (moral theology) and philosophical ethics (moral philosophy). What is usually understood by ethics, however, is philosophical ethics, and in this sense the present article will treat the subject. Moral philosophy is a division of practical philosophy. Theoretical, or speculative, philosophy has to do with being, or with the order of things not dependent upon reason, and its object is to attain by the natural light of reason a knowledge of this order in its ultimate causes. Practical philosophy, on the other hand, concerns itself with what ought to be, or with the order of acts which are human and which therefore depend upon reason. It is also divided into two ethics. The former treats of intellectual and practical activities and teaches the proper method in the acquirement of truth, while the latter directs the activities of the will; the object of the former is the true; that of the latter, the good. Hence ethics may be defined as the science of the moral rectitude of human acts in accordance with the first principles of natural reason. Logic and ethics are normative and practical sciences, because they prescribe norms or rules for human activities and show how, according to these norms, a man ought to direct his actions. Ethics is pre-eminently practical and directive; for it orders the conduct of the whole human acts, which sets all the other faculties of man in motion. Hence, to order the will is the same as to order the whole man. Moreover, ethics not only directs a man how to act if he wishes to be morally good, but sets before him the absolute obligation he is under of doing good and not doing evil.

A distinction must be made between ethics and morals, or morality. Every people, even the most uncivilised and uncultured, has its own morality or sum of prescriptions which govern its moral conduct. Nature has so provided that each man establishes for himself a code of moral concepts and principles which are applicable to the details of practical life, without the necessity of awaiting the conclusions of science. Ethics is the scientific or philosophical treatment of morality. The subject-matter proper of ethics is the deliberate free actions of men; for these alone are in our power, and concerning these alone can rules be prescribed, not concerning those actions which are performed without deliberation, or through ignorance or coercion. Besides this, the scope of ethics includes whatever operation whatever relation or principle or cause of action (law, conscience, virtue), or as effect or circumstance of action (merit, punishment, etc.). The particular aspect (formal object) under which ethics considers free acts is that of their moral goodness or the rectitude of order involved in them as human acts. A man may be a good artist or orator and at the same time a morally bad man, or, conversely, a morally good man and a poor artist or technician. Ethics has merely to do with the order which relates to man as man, and which makes of him a morally good man. Like ethics, moral theology also deals with the moral actions of men; but unlike ethics, it has its origin in supernaturally revealed truth. It presupposes man's elevation to the supernatural order, and, though it avails itself of the scientific conclusions of ethics, it draws its knowledge for the most part from Christian Revelation. Ethics is distinguished from the other natural sciences which deal with moral conduct of man, as jurisprudence and pedagogy, in this, that the latter do not ascend to first principles, but borrow their fundamental notions from those sciences and therefore subordinate it. To investigate what constitutes good or bad, just or unjust, what is virtue, law, conscience, duty, etc., what obligations are common to all men, does not lie within the scope of jurisprudence or pedagogy, but of ethics; and yet these notions of ethics, principles must be presupposed by the former, must serve them as a ground-work and guide; hence they are subordinated to ethics. The same is true of political economy. The latter is indeed immediately connected with man's economic life, such as it treats of the production, distribution, and consumption of material commodities, but this activity is not independent of ethics; industrial life must develop in accordance with the moral law and must be dominated by justice, equity, and love. Political economy was wholly wrong in trying to emancipate itself from the requirements of ethics. Sociology is at the present day considered by many as a science distinct from ethics. If, however, by sociology is meant a philosophical treatment of society, it is a division of ethics; for the latter embraces humanity as a whole, from the general into the origin, nature, object, and purpose of moral societies (the family, the state) and their relations to one another forms an essential part of Ethics. If, on the other hand, sociology be regarded as the aggregate of the sciences which have reference to the social
ethics

I. Be of man, it is not a single science but a complexus
of sciences; and among these, so far as the natural
order is concerned, ethics has the first claim.

II. Sources and Methods of Ethics.—The
sources of ethics are partly man's own experience and
erthological religious truth, and partly philosophical
disciplines (logic and metaphysics). Ethics takes its origin from the empirical fact that
certain general principles and concepts of the moral
order are common to all peoples at all times. This
fact has indeed been frequently disputed, but recent
ethological researches have shown the possibility of doubt.
All nations distinguish between what is good and what is bad, between good men and bad
men, between virtue and vice; they are all agreed in this:
that the good is worth striving for, and that evil
must be shunned, that the one deserves praise, the
other, blame. Though in individual cases they may
not be one in denominating the same thing good or
evil, they are nevertheless agreed as to the general
principle, that good is to be done and evil avoided.
Whoever everywhere seeks to hide himself or to put on the
masks of virtue, to conceal a an unrecognised truth.
It would be reasonable to wish that we should not not to others what we would not
wish them to do to us. With the aid of the truths
layed down in logic and metaphysics, ethics proceeds to
give a thorough explanation of this undeniable fact, to
persuade the mind of the rationality of ethics, to
derive fundamental moral principles certain conclusions
which will direct man, in the various circumstances and
relations of life, how to shape his own conduct towards
the attainment of the end for which he was created.
Thus the proper method of ethics is at once speculative
and empirical; it draws upon experience and
metaphysics. Supernatural Christian Revelation is not
a proper source of ethics. Only those
conclusions properly belong to ethics which can be reached
with the help of experience and philosophical prin-
ciples. It must not be supposed that one can
ignore supernatural revelation, but must at least
recognize it as a negative norm, insomuch as he is
not to advance any assertion in evident contradiction to
the revealed truth of Christianity. God is the
fountain-head of all truth—whether natural, as made
known by Creation, or supernatural as revealed through
Christ and the Prophets. As our intellect is an image
of the Divine Intellect, so is all certain scientific
knowledge the reflex and interpretation of the Creator's
thoughts embodied in His creatures, a participation in
God's wisdom. God must therefore naturally and command us to believe on His authority
anything that contradicts the thoughts expressed by
Him in His creatures, and which, with the aid of the
faculty of reason which He has given us, we can discern
in His works. To assert the contrary would be to
deny God's omniscience and veracity, or to suppose
that God was not the source of all truth. A conflict,
therefore, between faith and science is impossible, and
hence the Christian philosopher has to refrain from
advancing any assertion which would be evidently
antagonistic to the revealed truth. Only those
researches lead to conclusions out of harmony with
faith, he is to take it for granted that some error has
crept into his deductions, just as the mathematician
whose calculations openly contradict the facts
of experience must be satisfied that his demonstration is
at fault.

After what has been said, the following methods of
ethics must be rejected as unsound. (1) Pure Rationalism.—This system makes reason the sole source of
truth, and therefore at the very outset excludes every
reference to Christian Revelation, branding any such
reference as degrading and hampering scientific
investigation. The supreme law of science is not
freedom, but truth. It is not derogatory to the true
dignity and freedom of science to abstain from asserting
what, according to Christian Revelation, is mani-

fester erroneous. (2) Pure Empiricism, which would
erect the entire structure of ethics exclusively on the
foundation of experience, must also be rejected.
Experience can tell us merely of present or past
phenomena; but as to what, of necessity, and univer-
sally, must, or ought to, happen in the future, experi-
ence can give us nothing but the results of necessary and universal principles. Closely allied to
Empiricism is Historicism, which considers history as
the exclusive source of ethics. What has been said of
Empiricism may also be applied to Historicism.
History is concerned with what has happened in the past
and only too often has to rehearse the moral aberrations
of mankind. (3) Positivism is a variety of Empiricism;
it seeks to emancipate ethics from metaphysics and
base it on facts alone. No science can be con-
structed on the most fundamental facts, and inde-
pendently of metaphysics. Every science must be built up from evident principles, which form the basis of all cer-
tain cognition. Ethics especially is impossible without
metaphysics, since it is according to the metaphysical
view we take of the world that ethics shapes itself.
Whichever conception of the world we adopt, the
highly developed brute will hold different ethical views
from one who discerns in man a creature fashioned to
the image and likeness of God, possessing a spiritual,
immortal soul and destined to eternal life; whoever
refuses to recognize freedom of will or man's moral
destroys the very foundation of ethics. Whether man
was created by God or possesses a spiritual, immortal soul
which is endowed with free will, or is essentially differ-
ting from brute creation, all these are questions per-
taining to metaphysics. Anthropology, moreover, is
necessarily presupposed by ethics. No rules can be
prescribed for man's actions, unless his nature is clearly
understood. (4) Another untenable system is Tra-
ditionalism, which in France, during the first half of
the last century, counted many adherents (among others, de Bonald, de Maistre), and which advanced the
doctrine that complete certainty in religious and moral
questions was not to be attained by the aid of reason
alone, but only by the light of revelation as made
known to us through tradition. They failed to see
that for all reasonable belief certain knowledge of the
existence of God and of the fact of revelation is neces-
sarily presupposed, and this knowledge cannot be
gathered from revelation. Fideism, or, as Paulsen
designated it, the Irrationalism of many Protestants,
also denies the ability of reason to furnish certainty in
matters relating to God, and in Theism it teaches that
reason does not rise above the phenom-
ena of the visible world; faith alone can lead us into
the realm of the supersensible and instruct us in
matters moral and religious. This faith, however, is
not the acceptance of truth on the strength of external
authority, but rather consists in certain authoritative
judgments, i.e. assumptions or convictions which are
the result of each one's own inner experiences, and
which have, therefore, for him a precise worth, and
correspond to his own peculiar temperament. Since
these persuasions are not supposed to come within the
range of reason, exception to them cannot be taken
on scientific grounds. According to this opinion, re-
ligion and morals are relegated to pure subjectivism
and lose all their objectivity and universality of value.

III. Historical View of Ethics.—As ethics is the
philosophical treatment of the moral order, its history
does not consist in narrating the views of morality ent-
tained by different nations at different times; this
is properly the scope of the history of civilization, and
of ethnology. The history of ethics is concerned
solely with the various ethical systems which in the
course of time have been elaborated with reference
to the moral order. Hence the opinions ad-
anced by the wise men of antiquity, such as Pytha-
goras (582-500 B.C.), Heraclitus (535-475 B.C.), Con-

cius (555-478 B.C.), scarcely belong to the history
of ethics; for, though they proposed various moral truths and principles, they did so in a dogmatic and didactic, and not in a philosophically systematic manner. Ethics properly so called is first met with among the Greeks, i. e., in the teaching of Socrates (470-399 B.C.). According to him, the ultimate object of human activity is happiness, and its ultimate means to reach it, virtue. Since everybody necessarily seeks happiness, no one is deliberately corrupt. All evil arises from ignorance, and the virtues are one and all but so many kinds of prudence. Virtue can, therefore, be imparted by teaching and instruction. The disciples of Socrates, Plato (427-347 B.C.), declares that the *summum bonum* consists in the perfect imitation of God, the Absolute Good, an imitation which cannot be fully realized in this life. Virtue enables man to order his conduct, as he properly should, according to the dictates of reason, and acting thus he becomes like unto God. But Plato differed from Socrates in that he did not consider virtue to consist in wisdom alone, but in justice, temperance, and fortitude as well, these constituting the proper harmony of man’s activities. Lightly put, each activity is man’s virtue and its furthering is to train his citizens in virtue. For his ideal State he proposed the community of goods and of wives and the public education of children. Though Socrates and Plato had been to the fore in this mighty work and had left the mark of their names on the upbuilding of ethics; nevertheless, Plato’s illustrious disciple, Aristotle (384-322 B.C.), must be considered the real founder of systematic ethics. With characteristic keenness he solved, in his ethical and political writings, most of the problems with which ethics concerns itself. Unlike Plato, who began with ideas as the basis of his observations, Aristotle chose rather to take the facts of experience as his starting-point; these he analysed accurately, and sought to trace to their highest and ultimate causes. He set out from the premise that all men tend by nature to the ultimate object of all their endeavours, as the highest good, which is sought for its own sake, and to which all other goods merely serve as means. This happiness cannot consist in external goods, but only in the activity proper to human nature—not indeed in such a lower activity of the vegetative and sensitive life as man possesses in common with plants and brute, but in the highest and most perfect activity of his reason, which springs in turn from virtue. This activity, however, has to be exercised in a perfect and enduring life. The highest pleasure, he teaches, is the only pleasure that is at one with the life of virtue, and not the mere contents of the mind, as some of his followers held. Pure sensualism or Hedonism was first taught by Aristippus of Cyrene (435-354 B.C.), according to whom the greatest possible pleasure, especially sensual pleasure, is the end and supreme good of human endeavour. Epicurus (341-270 B.C.) differs from Aristippus in holding that the largest sum total possible of spiritual and sensual enjoyments, with the greatest possible freedom from displeasure and pain, is man’s highest good. Virtue is the proper directive norm in the attainment of this end. The Cynics, Antisthenes (443-399 B.C.) and Diogenes of Sinope (404-323 B.C.), taught the direct contrary of Hedonism, namely, that virtue alone suffices for happiness, that pleasure is an evil, and that the truly wise man is above human laws. This teaching soon degenerated into haughty arrogance and open contempt for law and authority. The disciples of Socrates, Plato (427-347 B.C.) and his disciples, Cleanthes, Chrysippus, and others, strove to refine and perfect the views of Antisthenes. Virtue, in their opinion, consists in man’s living according to the dictates of his rational nature, and, as each one’s individual nature is but a part of the entire natural order, virtue is, therefore, the harmonious agreement with the Divine Reason, which shapes the whole course of nature. Whether they conceived this relation of God to the world in a pantheistic or a theistic sense, is not important. The point is that the aim of the life of virtue is to train the citizen to live, not for his own sake, and it suffices for man’s happiness. All other things are indifferent and are, as circumstances require, to be striven after or shunned. The passions and affections are bad, and the wise man is independent of all that is of a bodily nature (4 B.C.-A.D. 65). Epictetus (about A.D. 50), and the Emperor Marcus Aurelius (A.D. 121-180), upon whom, however, at least upon the latter two, Christian influences had already begun to make themselves felt. Cicero (106-43 B.C.) elaborated new philosophical systems of his own, but chose those particular views from the various systems of Grecian philosophy which appeared best to him. He maintained that moral goodness, which is the general object of all virtues, consists in what is becoming to man as a rational being distinct from the brute, and that it is often good or bad, just or unjust, not because of human institutions or customs, but of their own intrinsic nature. Above and beyond human laws, there is a natural law embracing all nations and all times, the expression of the rational will of the Most High God, from obedience to which no human authority can exempt us. Cicero gives an exhaustive exposition of the cardinal virtues and the obligations connected with them; he insists especially on devotion to the gods, without which human society could not exist. Paradoxically enough, Christian and other human ethical systems run a sceptical tendency, which rejects every natural moral law, bases the whole moral order on custom or human arbitrariness, and frees the wise man from subjection to the ordinary precepts of the moral order. This tendency was furthered by that Gotthold, against whom Socrates and Plato arrayed themselves, and later on by Carneades, Theodorus of Cyrene, and others.

A new epoch in ethics begins with the dawn of Christianity. Ancient paganism never had a clear and definite concept of the relation between God and the world, of the unity of the human race, of the destiny of man, of the nature and meaning of the moral law. Christianity first shed full light on these and similar questions. As St. Paul teaches (Rom., ii, 24 sq.): God has written His moral law in the hearts of all men, even of those outside the influence of Christian Revelation; this law manifests itself in the conscience of every man and is the norm according to which the whole human race will be judged on the day of reckoning. In consequence of their perverse instincts, it is true, some of these people become obscured and distorted among the pagans: Christianity, however, restored it to its pristine integrity. Thus, too, ethics received its richest and most fruitful stimulus. Proper ethical methods were now unfolded, and philosophy was in a position to follow up and
develop these methods by means supplied from its own stores of truth. These methods were soon adopted in the Church by the Fathers and ecclesiastical writers, as Justin Martyr, Ireneaus, Tertullian, Clement of Alexandria, Origen, but especially the illustrious Doctors of the Church, Ambrose, Jerome, and Augustine, who, in the exposition and defense of Christian truth, made use of the principles laid down by the pagan philosophers. True, the Fathers had no occasion to treat moral questions from a purely philosophical standpoint, and independently of Christian Revelation; but in the explanation of Catholic doctrine, the Fathers made use of philosophical investigations. This is clearly true of St. Augustine, who proceeded to thoroughly develop along philosophical lines and to establish firmly most of the truths of Christian morality. The eternal law (lex eterna), the original type and source of all temporal laws, the natural law, conscience, the ultimate end of man, the cardinal virtues, sin, marriage, etc., were treated by him in the clearest and most penetrating manner. Hardly a single portion of ethics does he present to us but is enriched with his keen insight. Later ecclesiastical writers followed in his footsteps.

A sharper line of separation between philosophy and theology, and in particular between ethics and moral theology, is first met with in the works of the great Schoolmen of the Middle Ages, especially of Albert the Great (1205-1280), Bonaventure (1221-1274), and Duns Scotus (1274-1308). Philosophy and, by means of it, theology reaped abundant fruit from the works of Aristotle, which had until then been a sealed treasure to Western civilization, and were first elucidated by the detailed and profound commentaries of Bl. Albert the Great and St. Thomas Aquinas, and pressed into the service of Christian philosophy. The same is particularly true as regards ethics. St. Thomas, in his commentaries on the political and ethical writings of the Stagirite, in his "Summa contra Gentiles" and his "Questiones disputate", treated with his wonted clearness and penetration nearly the whole range of ethics in a purely philosophical manner, so that even to the present day his works are an inexhaustible source of guidance and aid to students of this subject, and the foundations laid by him the Catholic philosophers and theologians of succeeding ages have continued to build. It is true that in the fourteenth and fifteenth centuries, thanks especially to the influence of the so-called Humanism, ethics was less prominent in philosophy set in, but the sixteenth century is marked by a revival. Ethical questions, also, though largely treated in connexion with theology, are again made the subject of careful investigation. We mention as examples the great theologians Victoria, Dominicus Soto, L. Molina, Suarez, Lesseps, and De Lugo. Since the sixteenth century special chains of ethics (moral philosophy) have been erected in many Catholic universities. The larger, purely philosophical works on ethics, however, do not appear until the seventeenth and eighteenth centuries; the important question of which we may instance the production of Ign. Schwartz, "Institutiones juris universalis nature et gentium" (1743).

Far different from Catholic ethical methods were those adopted for the most part by Protestants. With the rejection of the Church's teaching authority, each individual became on principle his own supreme teacher andarbiter in matters appertaining to faith and morals. True it is that the Reformers held fast to Holy Writ as the infallible source of revelation, but as to the supreme good and evil, the Reformed were left to their own devices about how far, it is inspired, and what is its meaning—all this was left to the final decision of the individual. The inevitable result was that philosophy arrogantly threw to the winds all regard for revealed truth, and in many cases became involved in the most pernicious errors. Melanchthon, in his "Elementa philosophiae moralis", still clung to the Aristotelian concept of virtue, as did Hugo Grotius, in his work, "De jure bell et pacis". But Cumberland and his follower, Samuel Pufendorf, set out along rather devious paths in matters ethical, inasmuch as they identified moral goodness with the utilitarian interests of human society. Pufendorf, moreover, assumed, with Descartes, that the ultimate ground for every distinction between good and evil lay in the free determination of God's Will, a view which renders the philosophical treatment of ethics fundamentally impotent. Influential factors in the development of ethics was Thomas Hobbes (1688-1679). He supposes that the human race originally existed in a rude condition (status natura) in which every man was free to act as he pleased, and possessed a right to all things, whence arose a war of all against all. Lost destruction should be the result, it was decided to abandon this condition of nature and to found a state in which, by agreement, all were to be subject to one common will (one ruler). This authority ordains, by the law of the State, what is to be considered good and evil, and then does there arise a distinction between good and evil of universal binding force on all. The Pantheist Baruch Spinoza (1632-1677) considers the impulse to self-preservation as the foundation of virtue. Every being is endowed with the necessary impulse to assert itself; and, as nothing apart from nature, it requires each one to follow this impulse and to strive after whatever is useful to him. And each individual possesses power and virtue just in so far as he obeys this impulse. Freedom of the will consists merely in the ability to follow unreservedly this natural impulse. Shaftesbury (1671-1713) bases ethics on the affections or inclinations of man. There are sympathetic, idiopathic, and unnatural inclinations. The first of these regard the common good, the second the private good of the agent, the third are opposed to the other two. To lead a morally good life, war must be waged upon the unnatural impulses, while the idiopathic and sympathetic inclinations must be made to harmonize. This harmony constitutes virtue. In the attainment of virtue the subjective source of knowledge, which is the "moral sense", a sort of moral instinct. This "moral sense" theory was further developed by Hutcheson (1694-1747); meanwhile, "common sense" was suggested by Thomas Reid (1710-1796) as the highest norm of moral conduct. The development of the theories of the eighteenth century—as Helvetius, de la Mettrie, Holbach, Condillac, and others—dissipated the teachings of Sensualism and Hedonism as understood by Epicurus.

A complete revolution in ethics was introduced by Immanuel Kant (1724-1804). From the wreck of pure theoretical reason he turned for rescue to practical reason, in which he found an absolute, universal, and categorical moral law. This law is not to be conceived as an enactment of external authority, for this would be heteronomous, whereas the law is autonomous; it is rather the law of our own reason, which is, therefore, autonomous, that is, it must be observed for its own sake, without regard to any pleasure or utility arising therefrom. Only that will is morally good which obeys the moral law under the influence of such a subjective principle or motive as can be willed by the individual to become the universal law for all men. The followers of Kant have selected now one now another doctrine from his ethics and combined therewith various pantheistical systems. Fichte places man's reason at the supreme good and evil and develops it into the kingdom of the free, rational being; Schleiermacher, in co-operating with the progressive civilization of mankind. A similar view recurs substantially in the writings of Wilhelm Wundt and, to a certain extent, in those of the pessimist, Edi-
ward von Hartmann, though the latter regards culture and progress merely as means to the ultimate end, which, according to him, consists in delivering the Absolute from the torment of existence.

The system of Cumberland, who maintained the eternal goodness of God, speaking to be and criterion of moral conduct, was removed on a positivist basis in the nineteenth century by Auguste Comte and has counted many adherents, e. g., in England, John Stuart Mill, Henry Sidgwick, Alexander Bain; in Germany, G. T. Fechner, F. E. Beneke, F. Paulsen, and others. Hartmann seeks to reconcile a compromise between social Utilitarianism (Altruism) and private Utilitarianism (Egoism) in accordance with the theory of evolution. In his opinion, that conduct is good which serves to augment life and pleasure without any admixture of displeasure. In consequence, however, of man's lack of adaptation to the conditions of life, such absolute goodness of conduct is not as yet possible, and hence various compromises must be made between Altruism and Egoism. With the progress of evolution, however, this adaptability is in itself becoming more perfect, and consequently the benefits accruing to the individual from his own conduct will be most useful to society at large. In particular, sympathy (in joy) will enable us to take pleasure in altruistic actions.

The great majority of non-Christian moral philosophers have followed the path trodden by Spencer. Starting with the assumption that man, by a series of transformations, was gradually evolved from the brute, and therefore differs from it in degree only, they seek the first traces and beginnings of moral ideas in the brute itself. Charles Darwin had done some preparatory work along these lines, and Spencer did not hesitate to descend on brute-ethics, on the pre-human justice, conscience, and self-control of brutes. Positivists who followed him endeavored to show how animal morality has in man continually become more perfect. With the aid of analogies taken from ethnology, they relate how mankind originally wandered over the face of the earth in semi-savage hordes, knew nothing of marriage or the family, and only by degrees reached a higher level of morality. These are the merest creations of fancy. If man is nothing more than a highly developed brute, he cannot possess a spiritual and immortal soul, and there can no longer be question of the freedom of the will in the modern sense. Thus, all retribution, all personal morality in consequence be hindered from ordering his life as he pleases and regarding the well-being of others only in so far as it redounds to his own profit.

As the Evolutionists, so too the Socialists favour the theory of evolution from their ethical viewpoint; yet the latter do not base their observations on scientific principles, but on social and economical considerations. According to K. Marx, F. Engels, and other exponents of the so-called "materialistic interpretation of history", all moral, religious, juridical, and philosophical concepts are but the reflex of the economic conditions of society in the minds of men. Now these social relations are subject to constant change; hence the ideas of morality, religion, etc., are also continually changing. Everyone, every people, and even each class in a given people forms its moral and religious ideas in accordance with its own peculiar economical situation. Hence, no universal code of morality exists binding on all men at all times; the morality of the present day is not of Divine origin, but the product of history, and will soon have to make room for another system of morality. Allied to this materialistic historical interpretation, though derived from other sources, is the system of Relativism, which recognizes no absolute and unchangeable truths in regard either to ethics or to anything else. Those who follow this opinion aver that nothing objectively true can be known by us.

Men differ from one another and are subject to change, and with them, the manner and means of viewing the world about them also change. Moreover the judgments passed on matters religious and moral depend essentially upon the inclinations, interests, and character of the judge; and, finally, the latter in turn are constantly varying. Pragmatism differs from Relativism inasmuch as that only is to be considered true which is proven by experience to be useful; and, since the same thing is not always useful, unchangeable truth is impossible.

In view of these differences of opinions and systems just described, it need not surprise us that, as regards ethical problems, scepticism is extending its sway to the utmost limits, in fact many exhibit a formal contempt for the traditional morality. According to Max Nordau, moral precepts are nothing but "conventional lies"; according to Max Stirner, that alone is good which serves my interests, whereas the common good, the love for all men, etc., are but empty phantoms. Men of genius and superiority in particular are coming more and more to be regarded as exempt from the moral law of love and the family whose doctrines are founded on these principles. According to him, goodness was originally identified with nobility and gentility of rank. Whatever the man of rank and power did, whatever inclinations he possessed, were good. The rich, on the other hand, were bad, i.e., lowly and ignoble, without any other derogatory meaning being given to the word bad. It was only by a gradual process that the oppressed multitude through hatred and envy evolved the distinction between good and bad, in the moral sense, by denouncing the characteristics and conduct of those in power and rank as bad, and their own behaviour as good. And thus arose the opposition between the morality of the master and that of the slave. Those in power still continued to look down on the old morality and approves that of the slave and good, while the oppressed populace lauded the "instincts of the common herd", i.e., all those qualities necessary and useful to its existence—as patience, meekness, obedience, and love of one's neighbour. Weakness became goodness, cringing obsequiousness became humility, subjection to hated oppressors was obedience, cowardice meant patience. "All morality is one long and audacious deception." Hence, the value attached to the prevailing concepts of morality must be entirely re-arranged. Intellectual superiority is above all, and evil must be defined, not in the traditional sense. There is no higher moral order to which men of such calibre are amenable. The end of society is not the common good of its members; the intellectual aristocracy (the over-man) is its own end; in its behalf the common herd, the "many", must be reduced to slavery and decimated. As it rests with each individual to decide who belongs to this intellectual aristocracy, so each one is at liberty to emancipate himself from the existing moral order.

In conclusion, one other tendency in ethics may be noted, which has manifested itself more particularly, the effort to make morality independent of all religion. It is clear that many of the above-mentioned ethical systems essentially exclude all regard for God and religion, and this is true especially of materialistic, agnostic, and, in the last analysis, of all pantheistic systems. Apart, also, from these systems, "independent morality", called also "lay morality", has gained many followers and defenders. Kant's ideas formed the basis of this tendency, for he himself founded a code of morality on the categorical imperative: "One expressly declared that morality is sufficient for itself, and therefore has no need of religion. Many modern moral philosophers—Herbert, Eduard von Hartmann, Zeller, Wundt, Paulsen, Ziegler, and a number of others—have followed Kant in this respect. For several decades practical attempts have been made
to emancipate morality from religion. In France religious instruction was banished from the schools in 1832 and moral instruction substituted. This trend in France was adopted in the United States in 1876, when the "Society for Ethical Culture" was founded in New York. Similar societies were formed in other countries. These societies were generally known as the "science of living," and their teachings are known as the "ethical movement," whose home, properly speaking, is in the United States. In 1876, Felix Adler, professor at Cornell University, founded the "Society for Ethical Culture," in New York City. Similar societies were formed in other cities. These societies are generally known as the "Societies for Ethical Culture." Besides Adler, the chief propagators of the movement by word of mouth and writing, were W. M. Salter and Stanton Coit. The purpose of these societies is to be the "science of living," the moral life of the members of the society and of the community to which they belong, without any regard to theological or philosophical opinions." In most of the European countries ethical societies were founded on the model of the American organization. All these were combined in 1894 into the "International Ethical Association." Their purpose, i.e., the amelioration of man's moral condition, is indeed praiseworthy, but it is erroneous to suppose that any such moral improvement can be brought about without taking religion into consideration. These societies are openly antagonistic to all religions, and would therefore do away with denominational schools and suppress religious teaching by mere moral instruction. Even upon purely ethical considerations such attempts must be unreservedly rejected. It is true that even in the case of adults moral instruction without religion, without any higher obligation or sanction, is a nonentity, a meaningless sham, how much more so is it in the case of the young? It is evident that, judged from the standpoint of Christianity, these efforts must meet with a still more decided condemnation. Christians are bound to observe not only the prescriptions of the natural law, but also all the precepts given by Christ concerning faith, love, Divine worship, and the imitation of Himself. The Christian, moreover, knows that without Divine grace and, hence, without prayer and the frequent reception of the sacraments, a morally good life for any considerable length of time is impossible. From their earliest years, therefore, the young must not only receive thorough instruction in all the Commandments, but they must also teach themselves the spirit of religion, and practice the means of grace. Religion must be the soil and atmosphere in which education develops and flourishes.

While, among non-Catholics ever since the Reformation, and especially since Kant, there has been an increasing divergence and to dissolve it into countless venturesome and frequently contradictory systems, Catholicism for the most part have remained free from these errors, because, in the Church's infallible teaching authority, the guardian of Christian Revelation, they have always found secure orientation. It is true that towards the end of the eighteenth century, and at the beginning of the nineteenth century, Illuminism and Rationalism penetrated here and there into Catholic circles and attempted to replace moral theology by purely philosophical ethics, and in turn to transform the latter according to the Kantian autonomy. This movement, however, was but a passing phase. With a reawakening of the Church's activity, fresh impetus was given to Catholic science, which was of benefit to ethics also and produced in its domain some excellent fruits. Recourse was again had to the illustrious past of Catholicism, while, at the same time, modern ethical systems gave occasion to a thorough investigation and verification of principles of the moral order. Tapparelli d'Aseqlio led the way with his work "Saggio teoretico-sperimentale sulla morale" (1840-43). Then followed, in Italy, Audiso, Rosmini, Liberatore, Sanseverino, Roselli, Zignara, Sig-
which He wished to rule the world and direct it to its end. This ordination existing in the mind of God from all eternity, and depending on the nature and essential relations of rational beings, is the eternal law of God (lex aeterna Dei), the source from which all temporal laws, whether of nature or grace, proceed and govern His creatures by a mere executive directive in which the archer does the arrow, but by means of internal impulses and inclinations, which he has bound up with their natures. Irrational creatures are urged, by means of physical forces or natural impulses and instincts, to fulfill the ends for which they were created and to keep the order designed for them. Man, on the other hand, is a being endowed with reason and free will; as such, he cannot be led by blind impulses and instincts in a manner conformable to his nature, but must needs depend upon practical principles and judgments, which point out to him how he is to order his conduct. These principles must somehow or other be manifested to him by nature. All created things have implanted in their natures certain guiding principles, necessary to their corresponding activities. Man must be no exception to this rule. It must be ruled by a natural, inborn light, manifesting to him what he is to do or not to do. This natural light is the natural law. When we speak of man as possessing a natural, inborn light, it is not to be understood in the sense that man cannot transgress it. Indeed, it is true, nevertheless, that the Creator has endowed man with the ability and the inclination to form many concepts and develop principles. As soon as he comes to the use of reason, he forms, by a natural necessity, on the basis of experience, certain general concepts of theoretical reason,—e. g. those of being and not being, of cause and effect, of space and time—and so he arrives at universal principles, e. g. that "nothing can exist and not exist at the same time," that "every effect has its cause," etc. As it is in the theoretical, so also it is in the practical. And when reason has been sufficiently developed, and the individual can somehow or other practically judge that he is something more than a mere animal, by an intrinsic necessity of his nature he forms the concept of good and evil, i. e. of something which is proper to the rational nature which distinguishes him from the brute, and which is therefore worth striving for, and something which is unbecoming and therefore to be avoided. And, as by nature he feels himself attracted by what is good and repelled by what is evil, he naturally forms the habit of a secure feeling of what is good and what is to be avoided, that "man ought to live according to the dictates of reason," etc. From his own reflections, especially when assisted by instruction from others, he easily comes to the conclusion that in these judgments the will of a superior being, of the Creator and Designer of nature, has its expression. Around about him he perceives that all things are well ordered, so that it is very easy for him to discern in them the handiwork of a superior and all-wise power. He himself has been appointed to occupy in the domain of nature the position of lord and master. He must lead a well regulated life, as befits a rational being, not merely because he himself chooses to do so, but also in obedience to his Creator. Man did not give himself his nature with all its faculties and inclinations; he received it from a superior being, whose wisdom and power are everywhere manifest to him in Creation.

The general practical judgments and principles: "Do good and avoid evil," "Lead a life regulated according to reason," etc., from which all the Commandments of the Decalogue are derived, are the general and the practical application of the natural law, of which St. Paul (Rom., i), 14), says, that it is written in the hearts of all men. This law is an emanation of the Divine law, made known to all men by nature herself; it is the expression of the will of nature's Author, a participation of the created rational being in the eternal law of God. Hence the obligation it imposes does not arise from man's own autonomy; as Kant held, nor from any other human authority, but from the Will of the Creator; and man cannot violate it without rebelling against God, his master, offending Him, and becoming amenable to His justice. How deeply rooted among all nations this conviction of the authority of the moral law was is shown by the fact that for various violations of it (as murder, adultery, perjury, etc.) they did their utmost to propitiate the angered deity by means of prayers and sacrifices. Hence they looked upon the immortal property as the greatest blessing to them and their posterity, who would not allow the contempt of it to go unpunished. The same conviction is manifested by the value all nations have attached to the moral order, a value far surpassing that of all other earthly goods. The noblest among the nations maintained that it was better to undergo any hardship, even death itself, rather than prove recreant to one's duty. They understood, therefore, that, over and above earthly treasures, there were higher and more lasting goods whose attainment was dependent upon the observance of the moral order. This notion of the dignity of man was, but because of the law of God. This being premised, it is clearly impossible to divorce morality from religion without robbing it of its true obligation and sanction, of its sanctity and inviolability and of its importance as other cardinal vices exist.

The natural law consists of general practical principles (commands and prohibitions) and the conclusions necessarily flowing therefrom. It is the peculiar function of man to formulate these conclusions himself, though instruction and training are to assist him in doing so. Besides, each individual has to take these principles as the guide of his conduct and apply them to his particular actions. This, to a certain extent, everybody does spontaneously, by virtue of an innate tendency. As in the case of all practical things, it is, in regard to the reason, that is to say, it uses syllogistic processes. When a person, e. g. is on the point of telling a lie, or saying what is contrary to his convictions, there rises before his mental vision the general precept of the natural law: Lying is wrong and forbidden." Hence he avails himself, at least virtually, of the following syllogism: "Lying is forbidden; what you are about to say is a lie; therefore, what you are about to say is forbidden." The conclusion thus arrived at is our conscience, the proximate norm of our conduct. Conscience, therefore, is not an independent and independent and independent practical judgment of our reason on the moral character of individual acts. If we follow the voice of conscience, our reward is peace and calm of soul; if we resist this voice, we experience disquiet and remorse.

The natural law is the foundation of all human laws and precepts. It is only because we recognize the necessity of authority for human society, and because the natural law enjoins obedience to regularly constituted authority, that it is possible for a human superior to impose laws and commands binding in conscience. Indeed all human laws and precepts rest upon the fundamental conclusions, or more minute determinations, of the general principles of the natural law, and for this very reason every deliberate infrac- tion of a law or precept binding in conscience is a sin, i. e. the violation of a Divine commandment, a rebellion against God, an offence against Him, which will not escape punishment in this life or in the next, unless duly repented of before death.

The problems hitherto mentioned belong to general, or theoretical, ethics, and their investigation is applied to all cases beyond the sphere of the law whose origin, nature, subject-matter, obligation, and properties it is the scope of ethics to explain thoroughly and verify. The general philosophical doctrine of right is usually treated in general ethics. Under no circumstances may the example of Kant and others be imitated in
severing the doctrine of right from ethics, or moral philosophy, and developing it as a separate and independent science. The juridical order is but a part of the moral order, even as justice is but one of the moral virtues. The first principles of right: "Give every one his due"; "Render to Caesar the things that are Caesar's"; "He that is not fit to be a slave should not be a master"; "Render to Whomsoever the things that are Whosoever's"; are derived from necessary conclusions from these: "Thou shalt not kill"; "Thou shalt not commit adultery"; and the like, belong to the natural law, and cannot be deviated from without violating one's duty and one's neighbour's rights, and staining one's conscience with guilt in the sight of God.

Special ethics applies the principles of general, or theoretical, ethics to the various relations of man, and thus deduces his duties in particular. General ethics teaches that man must do good and avoid evil, and must inflict injury upon no one. Special ethics, descending to particulars and demonstrates what is good or bad, right or wrong, and therefore to be done or avoided in the various relations of human life. First of all, it treats of man as an individual in his relations to God, to himself, and to his fellow-men. God is the Creator, Master, and ultimate end of man; from these relations arise man's duties toward God. Presupposing his own individual efforts, he is, with God's assistance, to hope for eternal happiness from Him; he must love God above all things as the highest, infinite good, in such a manner that all other goods are means to that end. He must acknowledge Him as his absolute lord and master, adore and reverence Him, and resign himself entirely to His holy Will. The first, highest, and most essential business of man is to serve God. In case it is God's good pleasure to reveal a supernatural religion and to determine in detail the manner and means of our worship of Him, man is bound by the natural law to accept this revelation in a spirit of faith, and to order his life accordingly. Here, too, it is plain that divorce morality from religion is impossible, because the principles of which have direct reference to God, are man's principal and most essential moral duties. Linked to these duties to God are man's duties regarding himself. Man loves himself by an intrinsic necessity of his nature. From this fact Schopenhauer drew the conclusion that the commandment concerning self-love was superfluous. This would be true, if it were a matter of indifference how man loved himself. But such is not the case; he must love himself with a well-ordered love. He is to be solicited by the love of Him and by the desire to attain to eternal happiness. He is not his own master, but was created for the service of God; hence the deliberate arbitrary destruction of one's own life (suicide), as well as the freely intended mutilation of self, is a criminal attack upon the proprietary right God has to man's person. Furthermore, every man is supposed to take a reasonable care to preserve his health. He has certain duties also as regards temperance; for the body must not be his master, but an instrument in the service of the soul, and hence must be cared for in such far only as is conducive to this purpose. A further duty concerns the acquisition of external material goods, as far as they are necessary for man's support and the fulfilment of his other obligations. This again involves the obligation to work; furthermore, God has endowed man with the capacity for work in order that he might prove himself a beneficial member of society; for idleness is the root of all evil. Besides these self-regarding duties, there are similar ones regarding our fellow-men: duties of love, justice, fidelity, truthfulness, gratitude, etc. The commandment, "Thou shalt love thy neighbour as thyself," receives its true appreciation in the Christian Dispensation. Though doubtlessly contained to a certain extent in the natural law, the pagans had so lost sight of the unity of the human race, and of the fact that all men are members of one vast family dependent upon God, that they looked upon every stranger as an enemy.

Christianity restored to mankind the consciousness of its unity and solidarity, and supernaturally transfigured the natural precept to love our neighbour, by demonstrating that all men are children of the same Father in heaven, were redeemed by the blood of the Lamb, and destined to the same natural salvation. And, better still, Christianity provided man with the grace necessary to the fulfilment of this precept and thus renewed the face of the earth. In man's intercourse with his fellow-men the precepts of justice and of the other allied virtues go hand in hand with the precept of love. There exists in man the natural tendency to assert himself when there is question of his goods or property. He expects his fellow-men to respect what belongs to him, and instinctively resists any unjust attempt to violate this proprietorship. He will brook an injury from no one in all that regards his life or health, his wife or child, his honour or good name; he resents faithlessness and ingratitude on the part of others, and the lie by which they would lead him into error. Yet he clearly understands that only then can he reasonably expect others to respect his rights when he in turn respects theirs. Hence the general maxim: "Do not do to others, what you would not wish them to do to you"; from which are naturally deduced the general commandments known to all men: "Thou shalt not kill, nor commit adultery, nor steal, nor bear false witness, nor covet". In this part of ethics it is customary to investigate the principles of right as regards private ownership. Has every man the right to acquire property? Or, at least, may not society (the State) abrogate private ownership and assume possession and control of all material goods either wholly or in part, in order thus to distribute among the members of the community the products of their joint industry? This latter question is answered in the affirmative by the socialists; and, if it be possible to reconcile the agreement of all ages that the community of goods and of ownership is impracticable in larger commonwealths, and would, if realized in any case, involve widespread slavery.

The second part of special, or applied, ethics, called by many sociology, considers man as a member of society, as far as this can be made the subject of philosophical investigation. Man is by nature a social being; and his innate needs, inclinations, and tendencies the family and State necessarily arise. And first of all the Creator had to provide for the preservation and propagation of the human species. Man is so constituted that provision made for the perpetuation of the human species, the world would soon become an uninhabited solitude, a well-appointed abode without occupants. Hence God has given man the power and propensity to propagate his kind. The generative function was not primarily intended for man's individual well-being, but for the general good of his species; and in its exercise, therefore, he must be guided accordingly. This general good cannot be perfectly realized except in a lasting, indissoluble monogamy. The unity and indissolubility of the marriage bond are requirements of the nature of the natural law, at least in the sense that man may not on his own authority set them aside. Marriage is a Divine institution, for which God Himself has provided by means of definite laws, and in regard to which, therefore, man has not the power to make any change. The Creator might, of course, dispense for a time from the unity and indissolubility of the marriage tie; for, though the perfection of the married state demands these qualities, they are not of absolute necessity; the principal end of marriage may be attained to a certain degree without the former, and for certain reasons grant a dispensation in regard to them for a certain length of time. Christ, however, restored marriage to the original perfection consonant with its nature. Moreover, He raised marriage to the dignity of a sacrament and made it symbolize of His own union with the Church; and had He done nothing more in
this respect than restore the natural law to its pristine integrity, mankind would be bound to Him by an eternal debt of gratitude. For it was chiefly by means of the unity and indissolubility of the married life that the mission of the Christian institution was accomplished, from which mankind has reaped the choicest blessings, and compared with which paganism has no equivalent to offer. This exposition of the nature of marriage from a theistic standpoint is diametrically opposed to the views of modern Darwinists. According to them, it is primordially an institution as the married state, but lived together in complete promiscuity. Marriage was the result of gradual development, woman was originally the centre about which the family crystallised, and from this latter circumstance there arises an explanation of the fact that many savage tribes reckon heredity and kinship between families according to the lineal descent of the female. We cannot dwell long upon these fantastic speculations, because they do not consider marriage as essentially different from the brute, but as gradually developed from a purely animal origin. Although marriage is of Divine institution, not every individual is obliged, as a human being, to embrace the married state. God intends marriage for the propagation of the human race. To achieve this purpose, it is necessary for a person to consider marriage as a sacred and a holy state, a member of the human family to enter upon marriage, and this particularly at the present time, when the question of over-population presents so many grave difficulties to social economists. In this connexion certain other considerations from a Christian point of view arise, which do not, however, belong to philosophical ethics. Since the principal end of marriage is the procreation and education of children, it is incumbent upon both parents to co-operate according to the requirements of sex in the attainment of this end. From this it may easily be gathered why duties mutually exist between husband and wife, and between parents and their children.

The second natural society, the State, is the logical and necessary outcome of the family. A completely isolated family could scarcely support itself, at all events it could never rise above the lowest grade of civilization. Hence we see that at all times and in all places, owing to natural needs and tendencies, larger groups of families are formed. A division of labour takes place, and a family directs its industry in which it may improve and develop its resources, and then exchanges its products for those of other families. And now the way is opened to civilization and progress. This grouping of families, in order to be permanent, has need of authority, which may act in the family order, and for certain purposes. This authority, considered in itself and apart from the human vehicle in which it is placed, comes immediately from God, and hence, within its proper sphere, it imposes upon the consciences of the subject the duty of obedience. In the light of this interpretation, the exercise of public power invested with its proper dignity and inviolability, and at the same time is circumscribed by necessary limitations. A group of families under a common authoritative head, and not subject to any similar aggregation, forms the primitive State, however small the number of its individuals and small its extension, or by contact with other States, larger States gradually come into existence. It is not the purpose of the State to subplant the families, but to safeguard their rights, to protect them, and to supplement their efforts. It is not to forfeit their rights or to abandon their proper functions. Individuals and families form the State, but to be secured in these rights, and to find support and encouragement in the discharge of the various duties assigned them. Hence the State may not deprive the family of its right to educate and instruct the children, but must simply lend its assistance by supplying certain means in order to facilitate the better accomplishment of this duty. Only so far as the order and prosperity of the body politic requires it, may the State circumscribe individual effort and activity. In other words, the State is to possess the conditions whereby it may abet private endeavour or be lacking in each individual and each family may attain to true earthly happiness. By true earthly happiness is meant such as not only does not interfere with the free performance of the individual’s moral duties, but even upholds and encourages him therein. Having defined the end and aim of the State, we are now in a position to examine in detail its various functions and their extent. Private morality is not subject to State interference; but it is the proper function of the State to concern itself with the interests of public morality. It must not only prevent vice from spreading in public and becoming a snare to many (e.g. through immoral literature, theatres, plays, or other means of seduction), but also see to it that the public ordinances and laws facilitate and advance morally good behaviour. The State may not affect involuntary crimes as regarded as sins against God; to honour God publicly is binding upon the State as such. It is true that the direct supervision of religious matters in the present supernatural order was entrusted by Christ to His Church; nevertheless, it is the duty of the Christian State to protect and uphold the Church, the one true Church founded by Christ. Of course, owing to the unfortunate division of Christians into numerous religious systems, such an intimate relation between Church and State is at the present day but rarely maintained. The separation of Church and State, with complete liberty of conscience and worship, is often the only practical modus vivendi. In circumstances such as these the State must be satisfied to leave the affairs of religion to the various bodies, and to protect the latter in those rights which have reference to the general public order. The education and instruction of children belongs per se to the family, and should not be monopolised by the State. The latter has, however, the right and the duty to suppress schools which disseminate immoral doctrines or subvert the social order. Beyond such control it may not set limits to free individual endeavour. It may, however, assist the individual in his efforts to secure an education, and, in case these do not suffice, it may establish schools and institutions for his benefit. Finally, the State has to exercise important functions in regard to private property and see to it that in man’s industrial life the laws affecting justice be carried out in all their force and vigour. But its duties do not stop here. It should pass such laws as will enable its subjects to secure what is needed for the respectable maintenance and even to attain a moderate competency. Both excessive wealth and extreme poverty involve many dangers to the individual and to society. Hence, the State should pass such laws as will favour the sturdy middle class of citizens and add to their numbers. Much can be done to bring about this desirable condition by the enactment of proper tax and inheritance laws, of laws which protect the labouring, manufacturing, and agricultural interests, and which supervise and control trusts, syndicates, etc. Although in the author of the State comes immediately from God, the person who exercises it is not immediately designated by Him. This determination is left to the circumstances of men’s progress and development or of their modes of social aggregation. According as the supreme power resides in one individual, or in a collective body, the persons who exercise the power and functions of government are divided into three forms: the
monarchy; the aristocracy; the democracy. The monarchy is hereditary or elective, according as succession to supreme power follows the right of primogeniture in a family (dynasty) or is subject to popular election. At the same time, every kind of monarchy is the hereditary, the elective monarchies, such as Poland and the old German Sovereignty, having long since disappeared. Those States in which the sovereign power resides in the body of the people, are called polycracy, or more commonly, republics, and are divided into aristocracies and democracies. In republics the sovereignty is vested in the people. The latter elect from their number representatives who frame their laws and administer the affairs of government in their name. The almost universally prevailing form of government in Europe, fashioned upon the model created by England, is the constitutional monarchy, a mixture of the monarchical, aristocratic, and democratic forms. The law-making power is vested in the king and two chambers. The members of one chamber represent the aristocratic and conservative element, while the other chamber, elected from the body of citizens, represents the democratic element. The monarch himself is responsible to no one, yet his governmental acts require the counter-signature of the ministers, who in turn are responsible to the chamber.

With regard to its appointed functions the government of the State is divided into the legislative, judiciary, and executive powers. It is of primary importance that the State enact general and stable laws governing the activities of its subjects, as far as this is required for the good and well-being of the whole body. For this purpose it must possess the right to legislate; it must, moreover, carry out these laws and provide, by means of the administrative, or rather executive, power for what is needful to the general good of the community; finally, it has to punish infractions of the laws and authoritatively settle legal disputes, and for this purpose it has need of the judicial power (in civil and criminal courts). This right of the State to impose penalties is founded upon the necessity of preserving good order and of providing for the security of the whole body politic. In a community there are always found those who can in no other way be effectively forced to obey the laws and respect the rights of others than by the infliction of punishment. These are what should be the right to enact penal statutes, calculated to deter its subjects from violating the laws, and the right, moreover, to actually inflict punishment after the violation has occurred. Among the legitimate modes of punishment, the death sentence, and the capital punishment, are rightly so, a step forward in civilization, that nowadays a milder practice has been adopted in this regard, and that capital punishment is more rarely inflicted, and then only for such heinous crimes as murder and high treason. Nevertheless, humanitarian sentiment has been brought to an exaggerated degree, so much so that many would on principle do away with capital punishment altogether. And yet, this is the only sanction sufficiently effective to deter some men from committing the gravest crimes.

When it is asserted, with Aristotle, that the State is a society sufficient for itself, this is to be considered true in the sense that the State needs no further development to complete its organization, but not in the sense that it is independent in every respect. The greater the advance of mankind in progress and civilization and the freer and more frequent the communication between nations becomes. Hence the question arises as to what rights and duties mutually exist between nation and nation. That portion of ethics which treats this question from a philosophical standpoint is the law of nations. Of course, many writers of the present day deny the propriety of a philosophical treatment of international law. According to them the only international rights and duties are those which have been established by some positive measure or other explicitly or implicitly given, to which every man, if he is to be considered a law-abiding subject of the law, is bound. It is the province that must be taken by all who reject the natural law. On the other hand, this position precludes the possibility of any positive international law whatever, for lasting and binding compacts between various States are possible only when the primary principle of right is recognized—that it is just and obligatory to stand by lawful agreements. Now this is a principle of natural law; hence, those who deny the existence of the natural law (e. g. E. von Hartmann) must consequently reject any international law. International law properly so called and the international agreements are mere conventions, which each one observes as long as he finds it necessary or advantageous. And so we are eventually led back to the principles of ancient paganism, which, in the intercourse between nations, too often identified right with might. But Christianity brought the nations into a closer union and broke down the barriers of narrow-minded policy. It proclaimed, moreover, the duties of love and justice as binding on all nations, thus restoring and perfecting the natural law. The fundamental principle of the ancient law was: "Each one to do to others what he would not have them do to you," etc., have an absolute and universal value, and hence must obtain also in the intercourse between nations. Purely natural duties and rights are common to all nations; the acquired or positive ones may vary considerably. Various, too, are the rights and duties of nations in peace and in war. Since, however, there are, under this head, many details of a doubtful and changeable character, the codification of international law is a most urgent desideratum. Besides this an international court should be established to attend to the execution of the various measures promulgated by the law and to arbitrate in case of dispute. The foundations of such an international court of arbitration have been laid at The Hague; unfortunately, its competence has been hitherto very much restricted, and beside, it exercises its functions only when the Powers at variance appeal to it of their own accord. In the codification of international law no one would be more competent to lend effective cooperation and to maintain the principles of justice and to direct the future between nations than a man who has once had to do with another, than the pope. No one can offer sounder guarantees for the righteousness of the principles to be laid down, and no one can exert greater moral influence towards carrying them into effect.

Year by year, it has become clearer that not only are certain principles certain parts of the demarcation of the international law are now recognized as part of the law of nations. Religious politicians, as well as those who, in the wake of the recent wars, placed many difficulties in the way of realizing this plan.

Ethiopia.—The name of this region has been derived, through the Greek form *aithoria*, from the two words *aitho*, "I burn", and *Φ*, "race". It would thus mean the coloured man's land—the land of the scorched faces. But a different origin is claimed for the name by many modern writers, some of whom say that the Greeks borrowed the word from the Egyptians, and that as early as the Twelfth Dynasty the Egyptians knew Ethiopia under the name of *Καθ,* or *Kubi*. One form of this word, with the diphthong prefix, *Ethiopian* is found in early Egyptian inscriptions. Another is thought to be the real root-word. Others again maintain that it is derived from the Arabic word *ṣufab*, the plural form of *ṣif*, which means "spices", "perfumes" (Glaser, "Die Abessinier in Arabien und Afrika", Munich, 1885), or from an Arabo-Sabean word, *ṣabab*, which has the same meaning. (Hallevy in "Revue Sémitique", IV.)

Geography.—It is not easy to determine precisely to what part of the world the name of Ethiopia properly applies in the course of history. The territory it covered, being the use of the term *Ethiopia* to denote a territory, have varied in various ages and at the hands of different writers. In the early pages of the Bible Ethiopia is used to designate the lands inhabited by the sons of Cush, and is therefore applied to all the scattered regions inhabited by that family. Such a use of the word is purely ethnographical. Elsewhere, however, in the Bible it is applied to a definite region of the globe without consideration of race, and is thus used geographically. It is in this sense that we find it mentioned in all Egyptian documents (Brugsch, Geographie Ägypten, iii. 134) and in the Gospels (Catharina, Morphilosophia Christiana, 4th ed., 1804). It denoted the region of Africa south of Egypt, and its boundaries were by no means constant. Generally speaking, it comprised the countries known in our own day as Nubia, Kordofan, Senaar, and Northern Abyssinia, that is, the empire extended from the southern border of Mauretania to the northern boundary always begun at Syene. We know from the writings of Pliney, Strabo, and Pomponius Mela that in the eyes of Greek geographers Ethiopia included not only all the territory south of Syene on the African Continent, but embraced all that part of Asia below the same parallel of latitude. Hence it came to pass that there were two regions with but one name: Eastern Ethiopia, including all the races dwelling to the east of the Red Sea as far as India; Western Ethiopia stretching southward from Egypt and westward as far as the southern boundary of Mauretania. Of all the vast tracts of country to which the name Ethiopia was given at one or other period of history, there are two to which the name has more peculiarly attached itself: the one is modern Nubia and the Egyptian Sudan (the ancient Ethiopia of the Pharaohs); the other is the ancient Ethiopia of our own day), the last of all those regions to preserve the ancient name.

Nubian Ethiopia.—In Egyptian inscriptions the name Ethiopia is applied to the region of the Upper Nile, and it was placed under a viceroy of the Pharaohs. After the conquest of the land by Thothmes II, the viceroy was made a tributary of the First Cataract. After that time, when the country was divided into *nomes* on the Egyptian system, the name continued to be applied to the district from the First Cataract to the Mountains of Abysinia. The office, entrusted at first to high functions
ries, soon became one of the most important in the State, and the custom arose at court of nominating to it the heir presumptive to the throne, with the title of Prince of Cush. The glorious reigns of Ramses II, of the Nineteenth Dynasty, and of Ramses III, of the Twentieth Dynasty, served to consolidate this conquest for a time, but for a time only. Egypt, worn out, was weary of war, and even of victory, and the era of her campaigns ended with the Ramessid dynasty. Ethiopia, always alert to note the doings of her enemy, profited by this respite to recover her strength. She collected her forces, and soon, having won back her independence, an unexpected event left her mistress of her former conqueror.

The descendants of the royal priesthood of Amun-Ra, exiled from Thebes to Ethiopia by the Pharaohs of the Twenty-second Dynasty, had infused a new life into the land of their exile. They had reorganized its political institutions and centralized them at

Napata, which city, in the hands of its new lords, became a sort of Ethiopian Thebes modelled on the Thebes of Egypt. With the co-operation of the native peoples Napata was soon reckoned among the great political powers. While Ethiopia was developing and flourishing, Egypt, so disintegrated as to be a mere collection of feudal States, was being more and more weakened by incessant revolutions. Certain Egyptian princes having at this period appealed to the King of Napata for help, he crossed over into the Thebaid, and established order there; then, to the surprise of those who had appealed to him, he continued his way northwards and went as far as Memphis, nor did he halt until he had subdued the country and proclaimed the suzerainty of Ethiopia over the whole Nile Valley. Piankh, to whom belongs the honour of this achievement, caused an account of it to be engraved at Jebel Barkal, near Napata. After his reign the throne passed to a native family, and during the Twenty-fourth and Twenty-fifth Dynasties Ethiopia had the glory of giving birth to the Pharaohs who ruled all the land from Abyssinia to the shores of the Mediterranean.

But at the very time when the Ethiopian armies were advancing from the South to subdue the North, the victorious Assyrian armies of the King of Nineveh were already encamped on the borders of Phoenicia. Menaced by Sargon II in the days of Shabaka, Egypt was invaded for the first time by Sennacherib’s army during the reign of Shabataka. Taharqa, his succes-

sor, was defeated by Esarhaddon, and forced to retreat as far as Napata, pursued by the Ninevite hosts. The victory, however, was dearly bought by the Assyrians, and the Ethiopians, even in retreat, proved so dangerous that the pursuit was abandoned. Taharqa, encouraged by the fear he inspired in his enemies, tried to win back the Nile Valley. He assumed the offensive a few years after this, and soon entered Memphis almost without striking a blow. But the princes of the Delta, of whom Necho was the most powerful, far from extending him a welcome, joined forces with the King of Nineveh. Asurbanipal, who had now succeeded his father, Esarhaddon, straightway attacked Taharqa, and the King of Ethiopia fell back once more towards the Cataracts. His son-in-law, Tanuat-Amen, once more victorious, went up as far as Memphis, where he defeated the Delta princes, allies of the Assyrians, but a fresh expedition under Asurbanipal completely broke his power. Thereafter Tanuat-Amen remained in his Kingdom of Napata; and thus Ethiopian sway over Egypt was brought to a close.

Restricted to its natural limits, the Ethiopian kingdom did not cease to be a powerful State. Attacked by Psammetichus I and Psammetichus II, it was able to maintain its independence and break the ties which bound it to the northern kingdom. In the following century Cambyses, the conqueror of Egypt, attracted by the marvellous renown of the countries along the Upper Nile, set on foot an expedition against Ethiopia, but in spite of the numbers and prowess of his troops, he was obliged to retreat. When Artaxerxes II, sur-
named Ochus, invaded the Delta, Nectanebo II, King of Egypt, could find no safer refuge than Ethiopia, and in the days of the Ptolemies one of its kings, Arq-Amen (the Ergamenes of Diodorus Siculus), was powerful enough to commemorate his exploits in the deco-
rations of the temple at Philae. Nevertheless these last rays of glory were to fade quickly. Abandoned to itself, removed from the civilizing influences of the North, the country fell back step by step into its primi-
tive barbarism, and defeat is written upon the last page of its history. The last invasion of Ethiopia was by Roman legions; led by Petronius, they advanced as far as Napata, where a queen occupied the throne, and the city was destroyed. After this, darkness falls upon all these countries of the Upper Nile, and ancient Ethiopia disappears—to appear again transformed by a new civilization which begins with the history of modern Nubia.
Ethiopia.

Institutions.—The only civilization we know of in Ethiopia is that which was borrowed from Egypt. We find no record of really native institutions on any of the monuments that have come down to us, and the earliest records extant do not take us beyond the founding of the priestly dynasty of Thebes. At Napata and at the head of the pyramidical polity, the pharaohs were the priests, and it is to be regretted that in the history that the monarchy became elective in Ethiopia. The election took place at Napata, in the great temple, under the supervision of the priests of Amun-Ra, and in the presence of a number of special deputies chosen by the magistrates, the literati, the soldiers, and the officers of the palace. The members of the reigning family, "the royal brethren", were brought into the sanctuary and presented one after another to the statue of the god, who indicated his choice by a signal previously agreed upon. The choice could understand nothing without the priests' consent, and was subject to them for life. Arq-Amen seems to have broken through this tutelage and secured complete independence for the throne.

Language.—The tongues in the land of Cush were as varied as the peoples who dwelt there, but Egyptian is the chief language of Ethiopia. All the monuments dating from the last epoch of Ethiopian history we find a special idiom. It is written by means of hieroglyphics, of which the alphabetical values, however, have been modified. Hitherto indecipherable, this language has recently been held to be related to Egyptian, with a large admixture of foreign (doubtless Nubian) words. The development of the study of demotic, as well as a more intimate knowledge of the speech of later times, will, perhaps, eventually bring a fuller knowledge of this idiom.

 Abyssinian Ethiopia.—Geography.—This region corresponds to the group of territories nowadays known as Abyssinia, extending from the Italian colony of Eritrea to the shores of the Great Lakes. Yet the ancient empire of this name did not by any means permanently occupy the whole of this area, the boundaries of which rather indicate its greatest extent at any period of its history. Among all the countries that have been known under the name of Ethiopia, this alone took the name for itself, and calls itself by that name to this day. It was, in early times, Abyssinia, a term which in Arabic is given it by Arab writers. Western writers have often employed both terms, Abyssinia and Ethiopia, indifferently, but in our own day a distinction seems to be growing up in its use. It seems that with the name of Ethiopia we should connect that portion of the country's history the documents of which are supplied by Geez literature alone; with that of Abyssinia, what belongs to the modern period since the definitive appearance of Amharic among the written languages.

Ethiopian.—The modern Tigre, formerly the Kingdom of Axum, would seem to have been the kernel of this State. It was founded by refugees who came to the African continent when the Arsacidae were extending their sway in the Arabian peninsula, and the power of the Ptolemies was declining in Egypt. These refugees belonged to the Sabean tribes engaged in the gold and spice trade between Arabia and the Roman Empire; their dealings with civilized races had developed them, and, thanks to their more advanced stage of mental culture, they acquired a preponderating influence over the empire. The empire had come to dwell. Still, the descendants of these immigrants form a minority of the Ethiopian people, which is mainly composed of Cushite tribes, together with members of an aboriginal race called by the Ethiopians themselves Shoangala.

History.—From native sources we know nothing accurately of the political beginnings of the State. Its annals open with the rule of monsters in that land, and for many centuries Arue, the serpent, is the only ruler mentioned. Many writers see in this but a personification of idolatry or barbarism, and the explanation seems not to be fulfilled supposing it to be a divination. In Gees, Ethiopia embraced the Jewish religion at the time of Solomon, and received a prince of that monarch's family to rule over it. The Queen of Saba (Sheba), spoken of in the First Book of Kings, was an Ethiopian queen, as is the legend of Ketewagash (the glory of the kings), and it was through her that Ethiopia received this double honour. But this tradition is of comparatively recent origin, and finds no confirmation in the most ancient native documents, nor in any foreign writings. History still waits for some foundation upon which to base this appropriation of the sacred text, as well as for proofs to justify the variants with which Ethiopian chroniclers have embellished it.

The first thing that we know with certainty as to the history of Ethiopia is its conversion to Christianity. This work was accomplished in the early half of the fourth century by St. Frumentius, known in that country as Abba Salama. Rufinus of Aquileia has preserved the story for us in his history. According to him, a Christian of Lyca, named Mera, had gone over to Ethiopia. In the meantime two children, Eudesius and Frumentius, his nephews. On their return journey the ship that carried them was captured by pirates off the Ethiopian coast, and every one on board was put to death except the two children. These were sent as captives to the king, and were afterwards appointed tutors to his son, whom they converted to Christianity. Later, they returned to their own country. But Frumentius had but one ambition: to be consecrated bishop by the Patriarch of Alexandria. This wish having been fulfilled, he returned to Axum, organized Christian worship, and, under the title of Abba Salama, became the first metropolitain of the Ethiopian Church. Missionary monks coming later from neighbouring countries (in the sixth century) completed the work of his apostolate by establishing the monastic life. National traditions speak of these missionaries as the Nine Saints: they are the abbas Alé, Shema, Aragasi, Garima, Panta-lewun, Liganos, Azif, Gougo, and Yemata. Henceforth Ethiopia takes its place among the Christian states of the East. Christianity was contemporaneous with the Nine Saints, and canonized as St. Elesban, is famous in Oriental literature for an expedition he led against the Jewish kingdom of Yemen. The authority of the Ethiopian kings then extended over Tigri, Shoa, and Amhara, and the seat of government was the Kingdom of Axum.

But from this time forward the history of this country is enveloped in darkness, and remains almost unknown to us until the thirteenth century. We have nothing to guide us but long and, for the most part, mutually conflicting traditions of kings with dynastic and political revolution, which perhaps explains the brevity of the chronicles. Perhaps, in the midst of these troubles, the historical documents of preceding ages were purposely destroyed; and this seems likely since the foreign dynasty of the Zagues, which at that time usurped the throne of the pretended descendants of the son of Solomon, would feel constrained to destroy the prestige of the suppliant dynasty in order to establish itself. According to the abridged chronicle published by Bruce, the Falashes, a tribe professing Judaism, who had come to dwell, formed a minority of the Ethiopian people, which is mainly composed of Cushite tribes, together with members of an aboriginal race called by the Ethiopians themselves Shoangala.
monian dynasty regained power through the aid of the monk Takla Häymätot. After the restoration of the ancient national dynasty, the country, once more at peace within itself, had to concentrate its whole energy upon resisting the southward progress of Mohammedianism. For several centuries Ethiopia had to wage wars without respite for liberty and faith, and it alone, of all the African kingdoms, was able to maintain both. The most famous of these wars was against the Emir of Harar, Ahmed Ibn Ibrāhīm, surmounted the left-handed. It took place during the reigns of Kings Lebna Dengel (1508-40) and Gašaw-déwos (1540-56), and the exhausted country was only saved by the timely help of Portuguese armies. Delivered from its foes, it might have become a great power in the East, but it lacked a capable leader, and its people, deriving but little moral support from a corrupt religion, fell rapidly away until, after a long series of civil wars, Ethiopia became a land of anarchy.

Under Minasse (1559-63), Sarse Dengel (1563-97), and Yāqob Za Dengel (1597-1607), civil war was incessant. There was a brief respite under Susense (1607-32), but war broke out afresh under Fasiladas (1632-67), and the clergy, moreover, increased the trouble by their theological disputes as to the two natures of Christ. These disputes, often, indeed, but a cloak for ambitious intrigues, were always occasions of revolution. Under the successors of Fasiladas the general disorder passed beyond all bounds. Of the seven kings who followed him but two died a natural death. Then there was a short period of peace under Bako (1721-30), and Yosef II (1730-55), Yosef (1755) and Yohannes (1756-60) were again victims of an ever-spreading revolution. The end of the eighteenth century left Ethiopia a feudal kingdom. The land and its government belonged to its Ras, or provincial chieftains. The unity of the nation had disappeared, and its kings reigned, but did not govern. The Ras became veritable Mayors of the Palace, and the monarchs content to be roi fantomas. Side by side with these kings who have left in history only their names, the real masters of events, as the popular whim happened to favour them, were Ras Mikael, Ras Abeto of the Godjam, Ras Gabriel of the Samen, Ras Ali of Begameder, Ras Gabra Masqal of Tigré, Ras Walda-Sellase of the Sheo, Ras Ali of Amhara, Ras Oubide of Tigré, and the like. But war among the kings was incessant; every new birth brought to each one of their offspring a supreme, and it was only after a century of strife that peace was at length established. A son of the governor of Kowara, named Kassa, succeeded in bringing it about, to his own profit; and he made it permanent by causing himself to be proclaimed king under the name of Theodore (1855). With him the ancient Ethiopia took its place as one of the nations to be reckoned with in the international affairs of the West, and Abyssinia may be said to date its origin from his reign.

Religion.—Previous to the conversion of the country to Christianity, the worship of the serpent was perhaps the religion of a portion of Ethiopia, i.e. of the aboriginal Cushite tribes. From inscriptions at Axum and Adulis it would seem that the Semites, on the other hand, had a religion similar to that of Chaldeans and Syria. Among the gods mentioned we find Astar, Beber, and Medcr—perhaps representing the triad of sky, sea, and land. As to the Jewish religion, and its introduction in the time of Solomon, we have only vague reminiscences in the Scripture, which, as we have already said, cannot be received as history. The origin of the Judaistic tribe called the Falashas, who nowaday occupy the country, is quite hidden from us, and there is no reason to regard them as representatives of a national religion which has disappeared. After the evangelization by St. Frumentius, and in spite of the resulting general conversion of the people, Paganism always retained some adherents in Ethiopia, and has its representatives there to this day. Moreover, at the time of the Musulman wars Islam succeeded in securing a foothold here and there. Nevertheless Christianity has always been the really national religion, always practised and defended by the rulers of the nation.

Although converted to Christianity by missionaries of the Catholic Church, Ethiopia to-day professes Monophysite. Being subject to the influence of Egypt, it has adopted in the course of time the theory of the Egyptian Church concerning the human nature of Christ. Our lack of information about the country prior to the thirteenth century hinders us from following the history of its separation from Rome, or even fixing the date of that event. Like the Egyptian, the Ethiopian Church anathematizes Eutyches as a heretic, yet remains Monophysite and rejects the Catholic teaching as to the two natures. United in the statement of their belief, the Ethiopian theologians have divided into two great schools in its explanation. On the one hand, the Walda-Qeb (" Sons of Union", as they are nowadays called) hold that the most radical unification (tawadho) exists between the two natures, such being the absorption of the human by the Divine nature that the former may be said to be merely a fantasm. This unification is the work of the unction of the Son Himself according to the general teaching of the Walda-Qeb. Some among them, however, known as the Qeb'at (Unction), teach that it is the work of the Father. Others again, the Sego-lefi, or Walda-sepa (Sons of Grace), hold that the unification takes place in such a way that the nature of Christ becomes a special nature (bahrey), and this is attributed to the Father, as in the teaching of the Qeb'at. But, as the mere fact of the unction does not effect a radical unification (for this school rejects absorption), the unification is made perfect, according to them, by what they call the adoptive birth of Christ—the ultimate result of the unction of the Father. In effect, they recognize in the Incarnation three kinds of birth: the first, the Word begotten of the Father; the second, Christ begotten of Mary; the third, the Son of Mary, begotten the Son of God the
Father by adoption, or by His elevation to the Divine dignity—the work of the Father anointing His Son with the Holy Spirit, whence the name Sone of Grace. However, while rejecting absorptionism, this latter school refuses to admit the distinction of the two natures. Both schools, moreover, assert that the union takes place without any blending, without change, without confusion. It is contradiction itself set up as a dogma.

The difficulties following from this teaching in regard to the reality of Redemption, the Monophysite Church of Ethiopia calls mysteries; her theologians confess themselves unable to explain them, and simply dismiss them with the word Ba jagada; it is so, they say, "by the will of God". In sympathy with the Church of Constantinople, as soon as it was separated from Rome, the Ethiopian Church in course of time adopted the Byzantine teaching as to the procession of the Holy Ghost; but this question never was as popular as the mystery of the Incarnation, and in reference to it the contradictions to be found in the texts of native theologians are even more numerous than those caused the Bible text to be unequal, so also the revision of it was not uniform and official, and consequently the number of variant readings became multiplied. Its canons, too, is practically unsettled and fluctuating. A host of apocryphal or falsely ascribed writings are being published on the same name, and the most esteemed of which may we mention the Book of Henoch, the Kyjale, or Little Genesis, the Book of the Mysteries of Heaven and Earth, the Combat of Adam and Eve, the Ascension of Isaiah. The "Hâymanot Abaw" (Faith of the Fathers), the "Mäbale Abaw" (History of the Mysteries), the "Wehät Bet" (Book of the Compilation), "Qério" (Cyrius), "Zêna hâymanot" (Tradition of the Faith) are among the principal works dealing with matters moral and dogmatic. But, besides the fact that many of the quotations from the Fathers in these works have been modified, many of the canons of the "Synodos" are, to say the least, not historical.

Liturgy.—In the general effect of its liturgical rules the Ethiopian Church is allied to the Coptic Rite. Numerous modifications, and especially additions, have, in the course of time, been introduced into the Coptic ritual; but the basic text remains that of Egypt, from which, in many places, it differs only in the language. Its calendar and the distribution of festivals are regulated as in the Coptic Church, though the Ethiopians do not follow the era of the martyrs. The year consists of 365 days, with a leap year every four years, as in the Julian calendar. Its ordinary year begins on 29 August of the Julian calendar, which corresponds to 11 September of the Gregorian calendar. After a leap year the new year begins on the 30th of August (12 September). The year has twelve months of 30 days each, and an added thirteenth month of six days or of five days—according as the year is the leap year or not. The era followed is seven years behind ours during the last four months of our year, and eight years during the remaining months. The calendar for each year is arranged in an ecclesiastical synod held in the springtime. It is at this gathering that the dates of the principal movable feasts are settled, as well as the periods for the fasts to be observed during the course of the year. The greater feasts of the Ethiopian Church are Christmas, the Baptism of Christ, Palm Sunday, Holy Week, Ascension Day, Pentecost, the Transfiguration. A great number of feasts are scattered throughout the year, either on fixed or movable dates, and their number, together with the latter, reaches the thousands. Every feast on which work is forbidden, reduces by almost one-third the working-days of the year. Feasts are observed every Wednesday and Friday, and five times annually during certain periods preceding the great festivals: the fast of Advent, is kept for forty days; of Ninisheh, three days; of Lent, fifty-five days; of the Apostles, fifteen days; the fast of the Assumption, fifteen days. Most of the saints honoured in Ethiopia are to be found in the Roman Martyrology. Among the native saints (about forty in all), only a few are recognised by the Catholic Church—St. Frumentius, St. Elestan, the Nine Saints, and St. Taklu Hâymanot. But, deprived of religious instruction, the Ethiopian people mingle with their Christianity many practices which are often opposed to the teaching of the Gospel; some of these seem to have a Jewish origin, such, for instance, as the keeping of the Sabbath, the distinction of animals as clean and unclean, circumcision, and the custom of marrying a widow to the nearest relative of her deceased husband.

Ecclesiastical History.—The Ethiopian hierarchy is subject to the Coptic Patriarch of Alexandria. This dependence on the Coptic Church is regulated by one of the Arabic canons found in the Coptic edition of the Council of Nicea. A delegate from this patriarch, chosen from among the Egyptian bishops, and called the Abouns, governs the Church. All-powerful in
matters spiritual, his influence is nevertheless very limited in other directions, owing to the fact that he is a private person and not the head of a church. His court is the Etchmiadzin, which also has jurisdiction over the regular clergy. This functionary is always chosen from among the monks and is a native. Legislation concerning the clergy is always regulated by a special code, of which the fundamental principles are contained in the Fetha Zebabic. Only regular clergy observe celibacy, and the facility with which orders are conferred makes the number of priests very large.

**Language and Literature.**—Although the races inhabiting Ethiopia have very different origins, only the Semitic or Hebrew race is represented. This is one of the results of the conquest made in olden days by the immigrants from the African Continent. Two dialects were spoken by these tribes, the Geez, which is akin to Sabean, and a speech more akin to Minoan, the tongue which later developed into Amharic. In the course of time Geez ceased to be a spoken language, but it gave rise to two vernacular dialects, Tigré and Tigriff, which have supplanted it. No longer in popular use, Geez has always retained the language of the Church and of literature. Amharic, on the contrary, is still spoken today. As for the other two, even in our own day they have hardly begun to be written. The beginnings of Geez literature are connected with the evangelization of the country. The earliest document we possess is a translation of the Psalter into Geez made in the fifth, or perhaps the fourth, century. Christian in its origin, Geez literature has remained so in its productions, most of which are apocryphal, hagiographical compositions, or theological works. History and poetry have only a secondary place in it, and these are the only subjects in which we find any original effort; almost everything else is translation from the Greek, Coptic, or Arabic. Most of its manuscripts have come down to us without date or author's name, and it is no easy task to follow the history of letters in this country. As far as we know at present, the fifteenth seems to have been the great literary century of Ethiopia. To the reign of Zara Yaqobo (1434–58) belong the principal compositions of which the history is known. The wars against Adal and against Ahmed Ibn Ibrahim, in the sixteenth century, arrested this literary movement. The decline began after the civil wars of the seventeenth and eighteenth centuries, and the coming of Amharic as a literary language completed it. The earliest writings in Amharic date from the fourteenth century, and about the time of the Portuguese inquisition, brought to Ethiopia, Geez was placed on a secondary level. The Jews made use of it to reach the people more surely, and henceforward Geez tends to become almost exclusively a liturgical language. At the present day it is nothing else, Amharic having altogether taken its place in other departments, and it may be that at no distant date Amharic will supplant Geez even as the language of the Church.

Job Ludolf, a German, in the seventeenth century, was the first to organize the study of Ethiopian subjects and to write the first grammar and the first dictionary of the Geez language. After a period of neglect these studies were taken up once more in the second half of the nineteenth century by Professor Dillmann, of Berlin, and, besides incomparable works on the grammar and lexicography, we are indebted to him for the publication of many texts. Thanks to the extension of philological, historical, and patristic studies, the study of this language has spread in our own times to a greater and greater degree. Works of the first importance have been published on the Ethiopians and their patriarchs at Aghatam, Jerusalem, Constan- tinope, Berlin, and Constantinople (1461), the latter for the Armenians of the Ottoman Empire, also an independent Archbishop of Lemberg. Several patriarchs of Etchmiadzin, Stephen V (1541), Michael of Sebaste (1564), David IV of Etchmiadzin, a famous Armenian monastery, since 1441 the ecclesiastical capital of the schismatic Armenians, and seat of their patriarch or catholicoi (q. v.), whom the greater part of the Non-Uniat Armenian Church acknowledge as their head. It is situated in Russian territory, in the extreme south of the Caucasus, on the border of the Ottoman Empire. As early as the fifth or sixth century, if not earlier, a monastery existed there attached to the royal residence of Valarshapet, itself the immemorial national centre of Armenia. According to national tradition, more or less reliable, the occasion of the foundation of the fifth, or perhaps the fourth, century. Christian in its origin, Geez literature has remained so in its productions, most of which are apocryphal, hagiographical compositions, or theological works. History and poetry have only a secondary place in it, and these are the only subjects in which we find any original effort; almost everything else is translation from the Greek, Coptic, or Arabic. Most of its manuscripts have come down to us without date or author's name, and it is no easy task to follow the history of letters in this country. As far as we know at present, the fifteenth seems to have been the great literary century of Ethiopia. To the reign of Zara Yaqobo (1434–58) belong the principal compositions of which the history is known. The wars against Adal and against Ahmed Ibn Ibrahim, in the sixteenth century, arrested this literary movement. The decline began after the civil wars of the seventeenth and eighteenth centuries, and the coming of Amharic as a literary language completed it. The earliest writings in Amharic date from the fourteenth century, and about the time of the Portuguese inquisition, brought to Ethiopia, Geez was placed on a secondary level. The Jews made use of it to reach the people more surely, and henceforward Geez tends to become almost exclusively a liturgical language. At the present day it is nothing else, Amharic having altogether taken its place in other departments, and it may be that at no distant date Amharic will supplant Geez even as the language of the Church.

Job Ludolf, a German, in the seventeenth century, was the first to organize the study of Ethiopian subjects and to write the first grammar and the first dictionary of the Geez language. After a period of neglect these studies were taken up once more in the second half of the nineteenth century by Professor Dillmann, of Berlin, and, besides incomparable works on the grammar and lexicography, we are indebted to him for the publication of many texts. Thanks to the extension of philological, historical, and patristic studies, the study of this language has spread in our own times to a greater and greater degree. Works of the first importance have been published on the Ethiopians and their patriarchs at Aghatam, Jerusalem, Constantinople, Berlin, and Constantinople (1461), the latter for the Armenians of the Ottoman Empire, also an independent Archbishop of Lemberg. Several patriarchs of Etchmiadzin, Stephen V (1541), Michael of Sebaste (1564), David IV of Massaja, Lemberg, d'Abbadie, Pretorius, Guli, Mondon-Kidalbet, and Afoverk have served to definitely place it within the domain of Oriental studies.
EVARIA

(1587), Melchisedek (1593), Moses (1629), Pilipos (1633), Aghob IV (1655), and others, took steps towards reunion with Rome, and some made profession before the new cathedral of Vagharshapat. In 1867, the Armenians finally abandoned Etschmiadzin as their religious centre, and obtained a Uniat patriarchate, first at Aleppo (1742), later at Constantinople (1830-67). The Armenian subjects to Etschmiadzin underwent bitter persecution when Orontes: Armenia passed into the power of Persia; even the right hand of St. Gregory and other prized relics and images of the national apostle, and of King Tiridates and St. R'hpsime, were carried away (1604) to the Persian capital; these were finally restored to Etschmiadzin in 1838. Since 1828 the monastery and its church have passed into Russian hands, whereby the independence of the patriarchate has been naturally diminished. He is not, however, subject to the Holy Synod of Russia, but presides over his own holy synod of seven members. In 1836 the Russian Government issued an official constitution for the administration of the Gregorian (i. e. Armenian) Church in Russia. It comprises 141 articles regulating the election of patriarchs and the ruling of Gregorian dioceses. In 1882 non-Russian Armenians refused to recognize the Russian appointment of the Armenian Archbishop of Smyrna to Etschmiadzin, but in 1884 they yielded. Thus a Russian ecclesiastical functionary residing at Etschmiadzin is, in theory, the "Supreme Patriarch and Catholics of all the Armenians". Even in fact, the religious authority of the schismatic Armenian Church acknowledges his authority; only a small minority adheres to Sis, Aghtamar, Constantinople, and Lemberg. In the United States, the Armenian Bishop of Worcester is subject to Etschmiadzin, and has as quasi-suffragans the Vartapetos of Boston, New York, Providence, and Chicago. In England the Vartapet of Manchester is subject to the Armenian Bishop of Paris. Since Kirakos Virapetz (1441) some thirty-eight successors have ruled at Etschmiadzin, but however without numerous schisms. The patriarchs are often assisted by a conductor, or rather co-titular bishop, whose name sometimes erroneously gets inserted in the list of patriarchs proper. The Patriarch of Etschmiadzin alone consecrates the myron (ehrium) and also the bishops for the schismatic Armenians. The curia is formed by (a) a patriarchal synod (two archpriests); (b) an board of administration (one bishop, two archpriests); (c) an editorial committee (two archpriests and a deacon). The monastery consists of about twenty monks; since 1874 a seminary has been maintained for the training of Armenian clerics. Though prominent in a hierarchical sense, as a centre of Armenian literary and theological activity Etschmiadzin ranks far behind Venice, Vienna, Vienna, Moscow, and Constantinople (see MECHTARTES), though of late some life and energy are evident. Etschmiadzin is richly endowed. Externally it resembles a great fortress; within its walls are the monastery proper, the magnificent church dedicated to the Blessed Virgin, and six chapels, one of them said to stand on the site of the apparition of Jesus Christ to St. Gregory. Outside the walls are several churches, among them three dedicated to the earliest Armenian martyrs, St. R'hpsime and her companions and St. Gaiane, hence the Turkish name Utch Kilisse (Three Churches). The numerous buildings, either restored or rebuilt, date mostly from the last three centuries, and make an imposing appearance. (See ARMENIA; GREGORY ILLUMINATOR; STS.)

For the earliest history of the site of Etschmiadzin, see Weil, Die Kirche in Armenien (Freiburg i. Br. 1880); GEHLEN, Die Anfänge der armenischen Kirche (1895). The monastery is described at length by BREMSER, Description d'Etschmiadzin in Rev. Arch. (1859), XV, 427-37; Etschmiadzin, en e la Roma dels Armesins in Rev. Générale (1892), LV, 701-24; St. IGNATIUS, The Land of Ararat (London, 1890); IMBERT, Histoire de l'Arménie (Venice, 1888); IDURN, ARMENIA and the Armenians (Venice, 1785); TRIBE, History of the Armenians (London, 1897); HERRON, History of the Armenians (Venice, 1853); SKENNE, The Expansion of Russia, 1815-1900 (London, 1908). For the annals of the monastery see NEVE, Studier over Tigranes der armenische Kaisar (1404) in Journal de l'Archéologie (Paris, 1855). For the names of the Patriarchs of Etschmiadzin, see PARIS, Les Patriarches de l'Eglise arménienne (Paris, 1886-00; P ferr, Des Cultes de l'Arménie (Paris, 1876), 415; VON HIPPEL, Histoire des Églises de l'Arménie (Paris, 1894), 942-43. For a list of the monastery library see KARMENI, Des manuscrits de la bibliothèque patriarcale d'Etschmiadzin (Tiflis, 1883), and for a specimen of Armenian medieval Illumination, METSOGHROTS, Das Etschmiadzin Evangelarium (Vienna, 1901). J. F. ARENDSEN.

EVARIA, a titular see of Phoeacia Secunda or Libanensis, in Palestine. The true name of this city seems to have been Hawarin; as such it appears in a Syrian inscription of the fourth to the sixth century of the Christian Era. According to the Greek text, it was situated in the Palmyrene province. Georgez Cyprus calls it Evaria or Justinianopolis. The "Notitiae episcopatuum" of the Patriarchate of Antioch (sixth century) gives it as a suffragan see of Damascus. [See Echoc d'Orient, X (1867), 145] Some of its bishops, Thomas, around 1100, raises some uncertainty about another, John, who lived a little later (Lequien, Oriens chr., II, 847). It is to-day El Hawarin, a large Mohammedan village, a three-hour journey north of Karyste and on the road from Damascus to Palmyra, then by a Dominican road to a Roman castellum and of a basilica. Evaria (Hawarin) is to be distinguished from Haurar or Huvara, another titular see in Palestine Tertia, south of Petra.

S. VAILLÉ.

EUCARPIA, a titular see of Phrygia Salutaris in Asia Minor. Eucarpia (Ekearpia), mentioned by Strabo (XII, 576) and several other geographers, was situated on a road from Doryleum to Eumenia, between the Doryleum-Acmonia and Doryleum-Synada roads, probably at the modern village of Emin Hisar, in the vilayet of Brusa. The imposing ruins, seen by Hamilton in 1837, have almost disappeared. Nothing is known about the history of the city. It struck its own coins from the time of Augustus till the reign of Volusianus. The bishopric, being a suffragan of Synnada, figures in the "Notitiae episcopatuum" until the twelfth or thirteenth century. Six bishops are known: Eugenius, present at the Council of Chalcedon (451); Auxenomus in 381; Cortaran in 451; Dionysius in 536, Constantinian or Constantines in 787 (not mentioned by Lequien), and Constantin in 879. LEQUEN, Orient chr., (Paris, 1740), I, 845; HAMILTON, Researches on Asia Minor, II, 186; RAMBAT, The Cities and Bishoprics of Phrygia (Oxford, 1895-97), 690-693, 706.

S. PETRIDES.

Eucharist (Gr. ἐχουσία, thanksgiving), the name given to the Blessed Sacrament of the altar under its twofold aspect of sacrament and Sacrifice of the Mass, and in which, whether as sacrament or sacrifice, Jesus Christ is truly present under the appearances of bread and wine in the Eucharist as an offering of thanksgiving and as the Lord's Supper (Cana Domini), Table of the Lord (Mensa Domini), the Lord's Body (Corpus Domini), and the Holy of Holies (Sanctissimium), to which may be added the following expressions, now obsolete and some of them altered from Greek, i.e. "Agrpea" (Lover of Flesh), "Eulogia" (Blessing), "Breaking of Bread" (Synaxis), Assembly, etc.; but the ancient title "Eucharistia," appearing in writers as early as Ignatius, Justin, and Irenæus, has taken precedence in the technical terminology of the church. The expression "Blessing of the Altar," introduced by Augustine, is at the present day almost entirely restricted to eucharist.
and popular treatises. This extensive nomenclature, describing the great mystery from such different points of view, is in itself sufficient proof of the central position the Eucharist has occupied from the earliest ages, both in the Divine worship and services of the Church and in the life of faith and devotion which animates it.

The Church honours the Eucharist as one of her most exalted mysteries, since for sublimity and incomprehensibility it yields in nothing to the allied mysteries of the Trinity and Incarnation. These three mysteries constitute the Holy Trinity, which contains the essential characteristic of Christianity, a religion of mysteries far transcending the capabilities of reason, to shine forth in all its brilliance and splendour, and elevates Catholicism, the most faithful guardian and keeper of our Christian heritage, far above all pagan and non-Christian religions. The organic connection of this mysterious triad is clearly discerned, if we consider Divine grace under the aspect of a personal communication of God. Thus in the bosom of the Blessed Trinity, God the Father, by virtue of the eternal and Permanent Incarnation, communicates His Divine Nature to God the Son, “the only begotten Son who is in the bosom of the Father” (John, 1, 18), while the Son of God, by virtue of the hypostatic union, communicates in turn the Divine Nature received from His Father to His human nature formed in the womb of the Virgin Mary, so that thus the God-man, hidden under the Eucharistic Species, He might deliver Himself to His Church, who, as a tender mother, mystically cares for and nurtures in her own bosom this, her greatest treasure, and daily places it before her children as the spiritual food of their souls. Thus the Trinity, Incarnation, and Eucharist are really welded together like a precious chain, which in a wonderful manner links heaven with earth, God with man, uniting them most intimately and keeping them thus united. By the very fact that the Eucharistic mystery does transcend reason, no rationalistic explanation of it, based on a merely natural hypothesis and seeking to comprehend one of the sublimest truths of the Christian religion as the spontaneous conclusion of logical processes, may be attempted by a Catholic theologian.

The modern science of comparative religion is striving, wherever it can, to discover in pagan religions “religio-historical parallels,” corresponding to the theoretical and practical elements of Christianity, and to the extent that this is not possible, to give a negative interpretation of the latter. Even were an analogy discernible between the Eucharistic repast and the ambrosia and nectar of the ancient Greek gods, or the haoma of the Iranians, or the soma of the ancient Hindus, we should nevertheless be very cautious not to stretch a mere analogy to a paralysis strictly so called, since the Christian Eucharist has nothing at all in common with these pagan foods, whose origin is to be found in the crudest idol- and nature-worship. What we do particularly discover is a new proof of the reasonableness of the Christian religion, a great and drink his blood” (John, 6, 55). For Jesus Christ in a wonderfully condescending manner responds to the natural craving of the human heart after a food which nourishes unto immortality, a craving expressed in many pagan religions, by dispensing to mankind His own Flesh and Blood. All that is beautiful, all that is true in the religions of nature, Christianity has appropriated to itself, and like a con cave mirror has collected the dispersed and not frequently distorted rays of truth into their common focus and again sent them forth resplendently in perpetuity.

It is the Church alone, “the pillar and ground of truth”, imbued with and directed by the Holy Spirit, that guarantees to her children through her infallible teaching the full and unadulterated revelation of God. Consequently, it is the first duty of Catholics to adhere to what the Church proposes as the “proximate norm of faith” (regula fidei praecox), which, in reference to the Eucharist, is set forth in a particularly clear and detailed manner in Sessions XIII, XXI, and XXII of the Council of Trent. The quintessence of these doctrinal decisions consists in this, that in the Eucharist the Body and Blood of the God-man are truly present, and substantially present for the nourishment of our souls, by reason of the transubstantiation of the bread and wine into the Body and Blood of Christ, and that in this change of substances the unbloody Sacrifice of the New Testament is maintained. Since the Eucharistic Sacrifice is to be treated in the article MASS, there remain here for a more detailed consideration two principal truths: (1) The Real Presence of Christ in the Eucharist; and (2) The Eucharist as a Sacrament.

I. THE REAL PRESENCE OF CHRIST IN THE EUCHARIST.—In this section we shall consider, first, the fact of the Real Presence, which is, indeed, the central dogma; then the several allied dogmas grouped about it, namely, the Totality of Presence, Transubstantiation, and Permanence of Presence. In each of these we shall consider the Eucharist; and, finally, the speculations of reason, so far as speculative investigation regarding the august mystery under its various aspects is permissible, and so far as it is desirable to illumine it by the light of philosophy.

(1) The Real Presence as a Fact.—According to the teaching of theology a revealed fact can be proved solely by recurrence to the sources of faith, viz. Scripture and Tradition, with which is also bound up the infallible magisterium of the Church.

(a) Proof from Scripture.—This may be adduced both from the words of promise (John, vi, 26 sqq.) and, especially, from the words of Institution as recorded in the Synoptics and St. Paul (1 Cor., xi, 23 sqq.). By the miracles of the loaves and fishes and the walking upon the waters, on the previous day, Christ not only prepared His hearers for the sublime discourse containing the promise of the Eucharist, but also proved to them that He possessed, as Almighty God-man, a power superior to and independent of the laws of nature, and could, therefore, provide such a supernatural food, none other, in fact, than His own Flesh and Blood. This discourse was delivered at Capharnaum (John, vi, 26–72), and is divided into two distinct parts, about the relation of which Catholic exegetes vary in opinion. Nothing hinders our interpreting the first part (John, vi, 26–63) literally and understanding by “bread of heaven” Christ Himself as the object of faith, to be received in a figurative sense as a spiritual food by the mouth of faith. Such a figurative explanation of the second part of the discourse (John, vi, 52–72), however, is not only unusual but absolutely impossible, as even Protestant exegetes (Delitzsch, Köstlin, Keil, Kahnis, and others) readily concede. First of all the whole structure of the discourse of promise demands a literal interpretation of the words: “eat the flesh of the Son of man and drink his blood” (John, vi, 55). For Jesus Christ mentions a threefold food in His address, the manna of the past (John, vi, 31, 32, 49, 59), the heavenly bread of the present (John, vi, 32 sq.), and the Bread of Life of the future (John, vi, 27, 52). Corresponding to the three kinds of food and the three periods, there are as many dispensers—Moses dispensing the manna, the Father nourishing man’s faith in the Son of God made flesh, finally Christ giving His own Flesh and Blood. Although the manna, a type of the Eucharist, was indeed eaten with the mouth, it could not, being a nonliving food, ward off death. The second food, that offered by the Heavenly Father, is the bread of heaven, which He dispenses hic et nunc to the Jews for their spiritual nourishment, inasmuch as by reason of the Incarnation He holds up His Son to them as the object of their faith. If, however, the third kind of food, which Christ Him-
self promises to give only at a future time, is a new
tection, differing from the last-named food of faith,
it can be none other than His true Flesh and Blood, to
be really eaten and drunk in Holy Communion. This
is why Christ was so ready to use the realistic expres-
sion, "to eat" (John, vi, 52; τραφεῖν). Cardinal
Bellarmine (De Euchar., I, 3), moreover, calls atten-
tion to the fact, and rightly so, that if in Christ's mind
the manna was a figure of the Eucharist, the atti-
ute must have been something more than mere blessed
bread, as otherwise the prototype would not substan-
tially excel the type. The same holds true of the other
figures of the Eucharist, as the bread and wine offered
by Melchisedech, the loaves of proposition (panes pro-
positionis), the paschal lamb. The impossibility of a
figurative interpretation is brought home more forec-
ibly by an analysis of the following text: "Except you
eat the flesh of the Son of man, and drink his blood,
you shall not have life in you. He that eateth my flesh
and drinketh my blood, hath everlasting life: and I will
raise him up at the last day. For my flesh is meat
indeed: and my blood is drink indeed" (John, vi, 54-55).
It is true that even among the Semites, and in Scripture
itself, the phrase, "to eat some one's flesh", has a figurative
meaning, namely, "to perse-
pute" (cf. Jev. xxv, 26). But when the spokesmen
of Jesus are to be taken figuratively, it would appear
that Christ had promised to His enemies eternal life
and a glorious resurrection in recompense for the in-
juries and persecutions directed against Him. The
other phrase, "to drink some one's blood", in Scrip-
ture, especially, has no other figurative meaning than
that of dire chastisement (cf. Is., xli, 26; Apoc., xvi,
6); but, in the present text, this interpretation is just
as impossible here as in the phrase, "to eat some one's
flesh". Consequently, eating and drinking are to be
understood as the actual partaking of Christ in person,
hence literally.

This interpretation agrees perfectly with the con-
duct of the hearers and the attitude of Christ regarding
their doubts and objections. Again, the murmuring
of the Jews is the clearest evidence that they had
understood the preceding words of Jesus literally
(John, vi, 53). Yet far from repudiating this con-
struction as a gross misunderstanding, Christ re-
peated them in a most solemn manner, in the text quoted
above (John, vi, 54 sqq.). In consequence, many of the
Disciples were startled by this statement, and Jesus
replied: "This saying is hard, and who can hear it?" (John,
vi, 61); but instead of retracting what He had said,
Christ rather reproached them for their want of faith,
by alluding to His sublimer origin and His future As-
cension into heaven. And without further ado He
allowed these Disciples to go their way (John, vi, 62
sqq.). Finally He turned to His twelve Apostles with
the question: "Will you also go away?" Then Peter
stepped forth and with humble faith replied: "Lord,
to whom shall we go? thou hast the words of eternal
life. And we have believed, and have known, that
thou art the Christ, the Son of God" (John, vi, 68
sqq.). The entire scene of the discourse and murmura-
tings against it proves that the Zwinglian and Anglican
interpretation of the passage, "It is the spirit that
quickenneth", etc., in the sense of a glosing over or
retraction, is wholly inadmissible. For in spite of
these words the Disciples severed their connexion with
Jesus, while the Twelve accepted with simple faith a
mystery which as yet they did not understand. Nor
did Christ's invitation to faith in His Flesh be inter-
preted in a figurative sense, but: "My words are
spirit and life". These are two views regarding the
sense in which this text is to be interpreted. Many
of the Fathers declare that the true Flesh of Jesus (σάρξ)
is not to be understood as separated from His Divin-
ity (spiritus), and hence not in a cannibalistic sense,
the case, which demand that He did not, in a matter of such paramount importance, have recourse to meaningless and deceptive metaphors. For figures enhance the clearness of speech only when the figurative meaning is obvious, either from the nature of the case (e.g. from a reference to a statute of Lincoln, by saying: "This is Lincoln") or from some usage of common parlance (e.g. in the case of this synonyme: "This glass is wine"). Now, neither from the nature of the case nor in common parlance is bread an apt or possible symbol of the human body. Were one to say of a piece of bread: "This is Napoleon", he would not be using a figurative but the historical sense, but by means of rendering a symbol improperly so called clear and intelligible, namely, by conventionally setting beforehand what it is to signify, as, for instance, if one were to say: "Let us imagine these two pieces of bread before us to be Socrates and Plato". Christ, however, instead of informing His Apostles that he intended to use such a figure, told them rather the contrary in the discourse containing the promise: "the bread that I will give, is my flesh, for the life of the world" (John, vi, 52). Such language, of course, could not be otherwise. How it is that the Real Presence necessarily presupposes belief in the true Divinity of Christ. The foregoing rules would of themselves establish the natural meaning with certainty, even if the words of Institution, "This is my body" (John, xxi, 35) or 1 John, 1, 22, 23 are original text corpus (body) and sanguis (blood) are followed by significant appositional additions, the Body being designated as "given for you" and the Blood as "shed for you [many]"; hence the Body given to the Apostles was the same Body that was crucified on Good Friday, and the Chalice drunk by them, the same Blood that was shed on the Cross for our sins. Therefore the above-mentioned appositional phrases directly exclude every possibility of a figurative interpretation.

We reach the same conclusion from a consideration of the concomitant circumstances, taking into account both the hearers and the Initiator. Those who heard the words of Institution were not learned Rationalists, possessed of the critical equipment that would enable them, as philologists and logicians, to analyze an obscure and mysterious phraseology; they were simple, uneducated fishermen, from the ordinary ranks of the people, who, with childlike naiveté hung upon the words of their Master and with deep faith accepted whatever He proposed to them. This childlike naiveté was particularly on the eve of His Passion and Death, when He made His last will and testament and spoke as a dying father to His deeply afflicted children. In such a moment of awful solemnity, the only appropriate mode of speech would be one which, stripped of unintelligible figures, made use of words corresponding exactly to the meaning to be conveyed. It must be remembered, also, that Christ as omniscent God-man, must have foreseen the shameful error into which He would have led His Apostles as His Church, by a slight misapplication of metaphor; for the Church down to the present day appeals to the words of Christ in her teaching and practice. If then she practices idiocy by the adoration of mere bread and wine, this crime must be laid to the charge of the God-man Himself. Besides this, Christ intended to institute the Eucharist as a most holy sacrament, to be solemnly celebrated in the Church even to the end of time. But the content and the constituent parts of a sacrament had to be stated with such clearness of terminology as to exclude the possibility of misunderstanding.

As may be gathered from the words of consecration of the Chalice, Christ established the New Testament in His Blood, just as the Old Testament had been established in the typical blood of animals (cf. Ex., xxiv, 8; Heb., ix, 11 sqq.). With the true instinct of justice, jurists prescribe that in all debatable points the words of a will must be taken in their natural, literal sense; for they are led by the correct conviction, that every testator of sound mind, in drawing up his last will and testament, is deeply concerned to have it done in language at once clear and uncompromising language. The same is true of the terms of the testament of Christ, according to the literal purport of His testament, has left us as a precious legacy, not mere bread and wine, but His Body and Blood. Are we justified, then, in contradicting Him to His face and exclaiming: "No, this is not your Body, but mere bread, the sign of your Body"?

The refutation of the so-called Sacramentarians, a name given by Luther to those who opposed the Real Presence, evinces as clearly the impossibility of a figurative meaning. Once the manifest literal sense is abandoned, occasion is given to innumerable controversies about the meaning of an enigma which Christ supposedly offered His followers for solution. There were no limits to the dispute in the sixteenth century, for at that time Christopher Rasperger wrote a whole book on some 200 different interpretations: "Ducento versi" (v. 300 verses) of His words of Institution (Ingolstadt, 1577). In this connexion we must restrict ourselves to an examination of the most current and widely known distortions of the literal sense, which were the butt of Luther's bitter ridicule even as his own words. For example, for the interpretation of Zwingli, discovers a figure in the copula est and renders it: "This signifies = (esse, existo) of itself can ever be used as the "copula in a figurative relation" (Weiss) or express the "relation of identity in a metaphorical connexion" (Heinrici), which most logicians deny, the fundamental principles of logic firmly establish this truth, that all propositions may be divided into two great categories, of which the first and most comprehensive denominates a thing as it is in itself (e.g. "Man is a rational being"), whereas the second designates a thing according as it is used as a sign of something else (e.g. "This picture is my father"). To determine whether a speaker intends the second manner of expression, there are four criteria, whose joint concurrence alone will allow the verb "to be" to have the meaning of "sign": Abstractive criteria, mentioned above, which have reference either to the nature of the case, or to the usages of common parlance, or to some convention previously agreed upon, there remains a fourth and last of decisive significance, namely: when a complete substance is predicated of another complete substance, there can exist no logical relation of identity between them, but only the relation of similarity, inasmuch as the first is an image, sign, symbol, of the other. Now this last-named criterion is inapplicable to the Scriptural examples, but a hope forward the question of whether it may also be so with regard to their interpretation of the words of Institution: for the words are not: "This bread is my Body", but indefinitely: "This is my Body". In the history of the Zwinglian conception of the Lord's Supper, certain "sacramental expressions" (locutions sacramentales) of the Sacred Text, regarded as parallelisms of the words of Institution, have attracted considerable attention. The first is to be found in 1 Cor., x, 4: "And the rock was [signified] Christ". Yet it is evident that, if the subject rock is taken in its material sense, the metaphor is quite unmeaning. The just mentioned, is as apparent as in the analogous phrase: "Christ is the vine". If, however, the rock in this passage is stripped of all that is material, it may be understood in a spiritual sense, because the Apostle himself is speaking of that "spiritual rock"
(petra spiritualis), which in the Person of the Word in an invisible manner ever accompanied the Israelites in their journeyings and supplied them with a spiritual fountain of waters. According to this explanation, the latter phrase succeeded in one day in winning over to his interpretation the entire Catholic population of Zurich. And yet it is clear that no parallelism can be discerned between the aforesaid expressions and the words of Institution; no real parallelism, because there is question of entirely different matters. Not even a verbal parallelism can be pointed out, since in both texts of the Old Testament the subject is a ceremony (circumcision in the first case, and the rite of the paschal lamb in the second), while the predicate involves a mere abstraction (covenanted, Passover of the Lord). A more weighty consideration is this, that on closer investigation the copula est will be found to retain its proper meaning of "is" rather than "signifies". For just as the circumcision not only signified the nature or object of the Divine covenant, but really was the seal of the ratification of the pact of the passover, so also the Passover (Phase) or Pasch, instead of its mere representation. It is true that in certain Anglican circles it was formerly the custom to appeal to the supposed poverty of the Aramaic tongue, which was spoken by Christ in the company of the Apostles; for it was maintained that no word could be found in this language corresponding to the concept "to signify". Yet, even precluding from the fact that in the Aramaic tongue the copula est is usually omitted and that such an omission rather makes for its strict meaning of "to be", Card. Wiseman (Hors Syriac, Rome, 1828, pp. 2-73) succeeded in producing no less than forty Syriac expressions conveying the meaning of "to signify" and thus effectually exploded the myth of the Semitic tongue's limited vocabulary.

A second group of Sacramentarians, with Eclecticpadus, shifted the diligently sought-for metaphor to the concept contained in the predicate corpus, giving to the latter the sense of "signum corporis", so that the words of Institution were to be rendered: "This is a new sign of my Body." Initially tallying with the Zwingleian interpretation, this new meaning is equally untenable. In all the languages of the world the expression "my body" designates a person's natural body, not the mere sign or symbol of that body. True it is that the Scriptural word for "Body" was often used to designate the mystic Body of Christ, and labouring to take on a definite form, the incomplete eschatological explanation would make the Eucharist a mere anticipation of the future heavenly banquet. Supposing the truth of the Real Presence, this consideration might be open to discussion, inasmuch as the partaking of the Eucharist is diametrically opposed to the text and finds not the slightest support in the life and character of Christ.

Concerning the entire matter, see Hurn, Die Einsetzung der Abendmahlsbratze für die Gemeinde, 3 Bände (Basel, 1913); Branning, Der Einsetzung der hl. Eucharistie in unserer sprachengeschichte (Boppard, 1947); Koehl, Die menschentafel- und demestätische und die neue Abendmahlsforde in Thüringer Theol. Quartalschrift (1903), pp. 230 seq.; Steffens, Jesus Abendmahl im Neuen Testament, 1. Teil, Realencyklopädie für protest. Theol. (2022), Die Abendmahlauflage in ihrer geschichtlichen Entwicklung (Leipzig, 1904).

(b) Proof from Tradition.—As for the cogency of the argument from tradition, this historical fact is of decided significance, namely, that the dogma of the Real Presence remained, properly speaking, unmodified down to the time of the heretic Berengarius of Tours (d. 1037) and that the uninterrupted possession of ten centuries. In the course of the dogma's history there arose in general
three great Eucharistic controversies, the first of which, begun by Paschasia Radbertus, in the ninth century, scarcely extended beyond the limits of his audience and concerned itself solely with the philosophical question, whether the Eucharistic Body of Christ is identical with the natural Body. He held that God's Body now has heaven. Such a mystical identity could well have been denied by Ratrianus, Rabanus Maurus, Ratherius, Lanfranc, and others, since even nowadays it is true, although accidental, distinction between the sacramental and the natural condition of Christ's Body is nowhere wanting. The first occasion for an official procedure on the part of the Church was offered when Berengarius of Tours, influenced by the writings of Scotus Erigena (d. about 894), the first opponent of the Real Presence, rejected the latter truth and that of Transubstantiation. He repaired, however, the public scandal he had given by a sincere retraction made in the presence of Pope Gregory VII at a synod held in Rome in 1079, and died reconciled to the Church. The third and the sharpest controversy was that opened by the Reformers in the sixteenth century, in regard to which it must be remarked that Luther was the only one among the Reformers who still clung to the old Catholic doctrine, and, though subjecting it to manifold misrepresentations, defended it most tenaciously. He was even of the opinion that Doctor's text, which as was seen above, reduced the Eucharist to an empty, meaningless symbol. Having gained over to his views such friendly contemporary partisans as Carlstadt, Bucer, and Oecolampadius, he later on secured influential allies in the Arminians, Mennonites, Socinians, and Anglians, and even取得了 the rationalistic conception of the doctrine of the Lord's Supper does not differ substantially from that of the Zwinglians. In the meantime, at Geneva, Calvin was cleverly seeking to bring about a compromise between the extremes of the Marian or of his own theses. His delusive interpretations, by suggesting instead of the substantial presence in one case or the merely symbolical in the other, a certain mean, i.e. "dynamic", presence, which consists essentially in this, that at the moment of reception, the efficacy of Christ's Body and Blood is communicated from heaven to the souls of the predestined and spiritually nourished. Thanks to Melancthon's pernicious and dishonest double-dealing, this attractive intermediary position of Calvin made such an impression even in Lutheran circles that it was only after the doctrine of the "crypto-Calvinistic venom" was successfully rejected from the body of Lutheran doctrine. The Council of Trent met these widely divergent errors of the Reformation with the dogmatic definition, that the God-man is truly, really, and substantially present under the appearances of bread and wine, purposely intending thereby to oppose the expression vere to Zwingli's signum, realiter to Oecolampadius's figura, and essendiander to Calvin's virtus (See XIII. can. 1). And this teaching of the Council of Trent has ever been and is the ever-burning position of the whole of Christian Christendom.

As regards the doctrine of the Fathers, it is not possible in the present article to multiply patristic texts, which are usually characterized by wonderful beauty and clearness. Suffice it to say that, besides the Didaché (ix, x, xiv), the most ancient Fathers, as Ignatius (Ad. Smyrn., vii; Ad. Ephes., xx; Ad. Philad., iv), Justin (Apol., i, lxvi), Ireneaus (Adv. Her., iv, xvii, 6; iv, xviii, 4; V, ii, 2), Tertullian (De resurrectione carni., vii; De pudic., ix; De orat., xix; De bapt., xvii), and Cyprian, Origen, are not altogether without the slightest shadow of a misunderstanding what is the faith of the Church, while later patristic theology bears witness to the dogma in terms that approach exaggeration, as Gregory of Nyssa (Orat. catech., xxxvii), Cyril of Jerusalem (Catech. myst., iv, 2 sqq.), and especially the Doctor of the Eucharist, Chrysostom (Hom. lxxxii (lxxxiii), in Matt., 1, sqq.; Hom. xvi, in Joan., 2 sqq.; Hom. xxiv, in I Cor., 1 sqq.; Hom. ix, de penit., 1), to whom may be added the Latin Fathers, Hilary (De Trinit., VIII, 14, 13) and Ambrose (De myst., viii, 9; 10, 51), speaking of the Syro-Helle, and Th. Lambini, De Syrorum fide in re eucharistica" (Louvain, 1869). The position held by St. Augustine is at present the subject of a spirited controversy, since the adversaries of the Church rather confidently maintain that he favoured the twofold side of the question by an un decided "Symbolist". In the opinion of Loofs ("Dogmengeschichte", 4th ed., Halle, 1906, p. 409), St. Augustine never gives the "reception of the true Body and Blood of Christ" a thought; and this view Ad. Harneck (Dogmengeschichte, 3rd ed., Freiburg, 1897, III 148) emphasises when he declares that St. Augustine "undoubtedly was one in this respect with the so-called pre-Reformation and with Zwingli". Against this rather hasty conclusion Catholics first of all advance the undoubted fact that Augustine demanded that Divine worship should be rendered to the Eucharistic Flesh (In Ps. xxxiii, enarr., i, 10), and declared that at the Last Supper "Christ held and carried Himself in His own hands" (In Ps. xxviii, n. 9). They insist, and rightly so, that it is not fair to separate this passage from the context of his doctrine of the Holy Sacrifice, since he clearly and unmistakably asserts that the true Body and Blood are offered in the Holy Mass. The variety of extreme views just mentioned requires that an attempt be made at a reasonable and unbiased explanation, whose verification is to be sought for and found in the acknowledged fact that a gradual process of development took place in the mind of St. Augustine. No one will deny that certain expressions occur in Augustine as forcibly realistic as those of Tertullian and Justin, such as Ambrose, Anastasius, and Optatus of Mileve, Hilary, and Chrysostom. On the other hand, it is beyond question that, owing to the determining influence of Origen and the Platonic philosophy, which, as is well known, attached but slight value to visible matter and the sensible phenomena of the world, Augustine did not refer what was properly real (res) in the Blessed Sacrament to the Flesh of Christ (caro), but transferred it to the quickening principle (spiritus), i.e. to the effects produced by a worthy Communion. A logical consequence of this is that when Augustine speaks of the antitype of res, not indeed a mere symbolical worth, but at best a transitory, intermediary, and subordinate worth (signum), and placed the Flesh and Blood of Christ, present under the appearances (figura) of bread and wine, in too logical a setting of the natural, historical Body. Since Augustine was a strenuous defender of personal co-operation and effort in the work of salvation and an enemy to mere mechanical activity and superstitious routine, he omitted insisting upon a lively faith in the real personality of Jesus in the Eucharistic wafer, and paid attention to the spiritual efficiency of the Flesh of Christ instead. His mental vision was fixed, not so much upon the saving caro, as upon the spiritus, which alone possessed worth. Nevertheless a turning-point occurred in his life. The conflict with Pelagianism and the diligent perusal of Chrysostom freed him from the bondage of Platonism, and he thenceforth attached to caro a separate, individual value independent of that of spiritus, going so far, in fact, as to maintain too strongly that the Communion of children was absolutely necessary to salvation. If, moreover, the reader finds in some of the other Fathers difficulties, obscurities, and a certain inaccuracy of expression, this may be explained on three general grounds: (1) because of the peace and security there is in their possession of the Church's truth, whence resulted a certain want of accuracy in
EUCHARIST

EUCHARIST

their terminology; (2) because of the strictness with which the Discipline of the Secret, expressly concerned with the Holy Eucharist, was maintained in the East until the end of the fifth, in the West down to the middle of the sixth, century; (3) because of the preservation, however, of a literal interpretation of Scripture, which was especially in vogue in the Alexandrian School (Clement of Alexandria, Origen, Cyril), but which found a salutary counterpoise in the emphasis laid on the literal interpretation by the School of Antioch (Theodore of Mopsuestia, Theodoret). St. Ignatius, however, in the precursory sense of the Alexandrians did not exclude the literal, but rather supposed it as a working basis, the realistic phraseology of Clement (Pap., I, vi), of Origen (Contra Cels., VIII, xiii, 32; Hom. ix, in Lev., x), and of Cyril (Martyr. 18., Contra Nestor. I, V, 5) concerning the Real Presence is readily accounted for. (For the solution of patristic difficulties see Pohle, "Dogmatik," 3rd ed., Paderborn, 1908, III, 209 sqq.)

The argument from tradition is supplemented and completed by the argument from prescription, which traces the constant belief in the dogma of the Real Presence through the Middle Ages back to the early Apostolic Church, and thus proves the anti-Eucharistic heresies to have been capricious novelties and violent ruptures of the true faith as handed down from the beginning. It is over the course of time that is decisive, since the Reformation, as this period receives its entire character from the Council of Trent, we have for the time of the Reformation the important testimony of Luther (Wider etliche Rottengeister, 1532) for the fact that the whole of Christendom then believed in the Real Presence. And this firm, universal belief can be traced back unbrokenly to Berengarius of Tours (d. 1088), in fact—omitting the sole exception of Scotus Erigena—to Paschasius Radbertus (831). On these grounds, therefore, we may proudly maintain that the Church has been the legitimate possessor of this dogma for fully eleven centuries. When Photius started the Greek Schism in 869, he took over to his Church the inalienable treasure of the Catholic Eucharist, a treasure which the Greeks, in the negotiations for reunion at Lyons in 1274 and at Florence in 1439, could show to be still intact, and which they vigorously defended in the schismatical Synod of Jerusalem (1672) against the sordid machinations of the Calvinistic-minded Cyril Lucas, Patriarch of Constantinople (1520). From this it follows conclusively that the Real Presence must have been much older than the Eastern Schism under Photius. In fact, even the Nestorians and Monophysites, who broke away from Rome in the fifth century, have, as is evident from their literature and liturgical books, preserved their faith in the Eucharist as unwaveringly as the Greeks, and this in spite of the dogmatic difficulties which, on account of their denial of the hypostatic union, stood in the way of a clear and correct notion of the Real Presence. Therefore the Catholic dogma is at least as old as Nestorianism (431 a. n.). But is it not of even greater antiquity? The universal question only is, how far, in order to examine the oldest Liturgies of the Mass, whose essentia elements date back to the time of the Apostles (see articles on the various liturgies), to visit the Roman Catacombs (see Catacombs, Roman), where Christ is shown as present in the Eucharistic food under the symbol of a fish (see Eucharist, Early Symbols of the), to decipher the famous Inscription of Abercisius (see Abercisius, Inscription of) of the second century, which, though composed under the influence of the Discipline of the Secret, plainly attests the faith of that age. And by the argument from prescription carries us back to the dim and distant past and thence to the time of the Apostles, who in turn could have received their faith in the Real Presence from no one but Christ Himself.

Niole, Ratramnus und die hl. Eucharistie (Vienna, 1903); Schnitter, Berichtig von Touras, sein Leben und sein Werk (Stuttgart, 1922); AD. Harnack, Die Patristischen Zeugnisse (1894), III, pp. 278 sqq; Möhler, Symbolik (Mainz, 1841, §§ 35, 56, 58; Bernard, Konfessionelle Lehrgemeinden (Hildesheim, 1898), pp. 73 sqq.; Dillingen, Theological Interpretation of Scripture, which was especially in vogue in the Alexandrian School (Clement of Alexandria, Origen, Cyril), but which found a salutary counterpoise in the emphasis laid on the literal interpretation by the School of Antioch (Theodore of Mopsuestia, Theodoret). St. Ignatius, however, in the precursory sense of the Alexandrians did not exclude the literal, but rather supposed it as a working basis, the realistic phraseology of Clement (Pap., I, vi), of Origen (Contra Cels., VIII, xiii, 32; Hom. ix, in Lev., x), and of Cyril (Martyr. 18., Contra Nestor. I, V, 5) concerning the Real Presence is readily accounted for. (For the solution of patristic difficulties see Pohle, "Dogmatik," 3rd ed., Paderborn, 1908, III, 209 sqq.)

The argument from tradition is supplemented and completed by the argument from prescription, which traces the constant belief in the dogma of the Real Presence through the Middle Ages back to the early Apostolic Church, and thus proves the anti-Eucharistic heresies to have been capricious novelties and violent ruptures of the true faith as handed down from the beginning. It is over the course of time that is decisive, since the Reformation, as this period receives its entire character from the Council of Trent, we have for the time of the Reformation the important testimony of Luther (Wider etliche Rottengeister, 1532) for the fact that the whole of Christendom then believed in the Real Presence. And this firm, universal belief can be traced back unbrokenly to Berengarius of Tours (d. 1088), in fact—omitting the sole exception of Scotus Erigena—to Paschasius Radbertus (831). When Photius started the Greek Schism in 869, he took over to his Church the inalienable treasure of the Catholic Eucharist, a treasure which the Greeks, in the negotiations for reunion at Lyons in 1274 and at Florence in 1439, could show to be still intact, and which they vigorously defended in the schismatical Synod of Jerusalem (1672) against the sordid machinations of the Calvinistic-minded Cyril Lucas, Patriarch of Constantinople (1520). From this it follows conclusively that the Real Presence must have been much older than the Eastern Schism under Photius. In fact, even the Nestorians and Monophysites, who broke away from Rome in the fifth century, have, as is evident from their literature and liturgical books, preserved their faith in the Eucharist as unwaveringly as the Greeks, and this in spite of the dogmatic difficulties which, on account of their denial of the hypostatic union, stood in the way of a clear and correct notion of the Real Presence. Therefore the Catholic dogma is at least as old as Nestorianism (431 a. n.). But is it not of even greater antiquity? The universal question only is, how far, in order to examine the oldest Liturgies of the Mass, whose essentia' elements date back to the time of the Apostles (see articles on the various liturgies), to visit the Roman Catacombs (see Catacombs, Roman), where Christ is shown as present in the Eucharistic food under the symbol of a fish (see Eucharist, Early Symbols of the), to decipher the famous Inscription of Abercisius (see Abercisius, Inscription of) of the second century, which, though composed under the influence of the Discipline of the Secret, plainly attests the faith of that age. And by the argument from prescription carries us back to the dim and distant past and thence to the time of the Apostles, who in turn could have received their faith in the Real Presence from no one but Christ Himself.

(2) The Totality of the Real Presence.—In order to forestall at the very outset the unworthy notion, that in the Eucharist we receive merely the Body and merely the Blood of Christ but not Christ in His entirety, the Council of Trent defined the Real Presence to be such as to include with Christ's Body and Blood His Soul and Divinity as well. A strictly logical conclusion from the words of the Eucharist, "Give me thyself, O Lord" and "I am thy night, O Lamb," is, "I am the same also shall live by me." This Totality of Presence was also the constant property of tradition, which characterized the partaking of separated parts of the Saviour as a sacrophagy (flesh-eating) Allowed by the Divinity to God. Although the separation of the Body, Blood, Soul, and Logos, not literally speaking, within the almighty power of God, yet their actual inseparability is firmly established by the dogma of the indissolubility of the hypostatic union of Christ's Divinity and Humanity. In case the Apostle had celebrated the Lord's Supper during the interval of the resurrection (the time during which Christ's Body was in the tomb), when a real separation took place between the constitutive elements of Christ, there would have been really present in the Sacred Host only the bloodless, inseparable Body of Christ as it lay in the tomb, and in the Chalice only the Blood separated from His Body and absorbed by the earth as it was shed, both the Body and the Blood, however, remaining hypostatically united to His Divinity, while His Soul, which sojourned in Limbo, would have remained entirely united to His Soul. And therefore outside from the effects of the reanimation, or ex vi verborum, that only is made present which is expressed by the words of Institution, namely the Body and the Blood of Christ. But by reason of a natural concomitance (per concomitantiam), there becomes simultaneously present all that which is physically inseparable from the Body and which, must, from a natural connection with them, always be their accomplishment. Now, the glorified Christ, Who "died now no more" (Rom., vi, 9), has an animate Body through whose veins courses His life's Blood under the vivifying influence of the soul. Consequently, together with His Body and Blood and Soul, His whole Humanity also, and, by virtue of the hypostatic union, His Divinity, i.e. Christ whole and entire, must be present. Hence Christ is present in the sacrament with His Flesh and Blood, Body and Soul, and Humanity and Divinity.

This general and fundamental principle, which entirely abstracts from the duality of the species, must, nevertheless, be extended to each of the species of bread and wine. For we do not receive in the Sacred Host the Spirit of Christ and the Blood of Christ, though our reception of the totality depended upon our partaking of both forms; on the contrary, under
The appearance of bread alone, as well as under the appearance of wine alone, we receive Christ whole and entire (cf. Council of Trent, Sess. XLI, can. iii). This, however, is not to be understood to mean that there is no verification in the fact, that St. Paul (I Cor., xi, 27, 29) attaches the same guilt "of the body and the blood of the Lord" to the unworthy "eating or drinking," understood in a disjunctive sense, as he does to "eating and drinking," understood in a copulative sense. The truth and faith in the Holy Eucharist is founded in the testimony of the Fathers and of the Church's liturgy, according to which the glorified Saviour can be present on our altars only in His totality and integrity, and not divided into parts or distorted to the form of a monstrosity. It follows, therefore, that supreme adoration is separately due to the Sacred Host and to the consecrated contents of the Chalice. On this last truth are based especially the permissibility and intrinsic propriety of Communion only under one kind for the laity and for priests not celebrating Mass (see Communion under Both Kinds). But in particularizing upon the dough, we are naturally led to the further truth, that, at least after the actual division of either Species into parts, Christ is present in each part in His full and entire essence. If the Sacred Host be broken up into two or more parts, which are drunk by the celebrant, this in no way diminishes the presence of Christ; for Christ is, in this case, present in each and every part. The restrictive clause, separationes facta, the Council of Trent (Sess. XLI, can. iii) rightly raised this truth to the dignity of a dogma. While from the capture of the Host we may only judge it improbable that Christ consecrated separately each particle of the bread He had broken, we know with certainty, on the other hand, that He blessed the entire contents of the Chalice and then gave it to His disciples to be partaken of distributively (cf. Matt., xxvii, 27 sq.; Mark, xiv, 22). It is only on the basis of the Tridentine dogma that we can understand how Cyril of Jerusalem (Catech. myst. v, n. 21) obliged communicants to observe the most scrupulous care in conveying the Sacred Host to their mouths, so that not even a "crumb, more precious than gold or jewels," might fall from their hands to the ground; how Cassarius of Arles taught that there is "just as much in the small fragment as in the whole"; how the different liturgies assert the abiding integrity of the "indivisible Lamb," in spite of the "division of the Eucharistic Species" and the celebration proper to each one; how the faithful partook of the broken particles of the Sacred Host and drank in common from the same cup.

While the three foregoing theses contain dogmas of faith, there is a fourth proposition which is merely a theological adjuvant. Christ, as the perfect sacrifice, acquires and possesses the actual division of the Species, Christ is present wholly and entirely in each particle of the still unbroken Host and in each drop of the collective contents of the Chalice. For were not Christ present in His entire Personality in every single particle of the Eucharistic Species even before the actual division took place, we should be forced to conclude that it is the process of dividing which brings about the Totality of Presence, whereas according to the teaching of the Church the operative cause of the Real and Total Presence is to be found in Transubstantiation alone. No doubt this last conclusion directs the attention of philosophical and scientific inquiry to a mode of existence peculiar to the Eucharistic Body, which is contrary to the ordinary laws of experience. It is, indeed, one of those sublime mysteries, concerning which speculative theology attests nothing and reason nothing. This much as regards the general notion of conversion. Transubstantiation, however, is not a conversion simply so called, but a substantial conversion (conversio substantialis), inasmuch as one thing is substantially or essentially converted into another. Thus from the concept of Transubstantiation is excluded every sort of merely accidental conversion, whether it be purely natural (e.g. the metamorphosis of insects) or supernatural (e.g. the Transfiguration of Christ on Mount Tabor). Finally, Transubstantiation differs from every other substantial conversion in this, that the accidents remaining the same—just as would be the case if wood were miraculously converted into iron, the substance of the iron remaining hidden under the external appearance of the wood.

The application of the foregoing to the Eucharist is an easy matter. First of all the notion of conversion is verified in the Eucharist, not only in general, but in
all its essential details. For we have the two extremes of consecration, namely, bread and wine as the terminus a quo, and the Body and Blood of Christ as the terminus ad quem. Furthermore, the intimate connexion between the cessation of one extreme and the appearance of the other seems to be preserved by the fact, that both events are the results, not of two independent processes, as, e. g. annihilation and creation, but of one single act, since, according to the purpose of the Almighty, the substance of the bread and wine departs in order to make room for the Body and Blood of Christ. Lastly, we have the common tertium in the unceasing appearance of bread and wine, under which appearances the transcendent Christ accomplishes his new, sacramental mode of being, and without which His Body and Blood could not be parted of by men.

That the consequence of Transubstantiation, as a conversion of the total substance, is the transition of the entire substance of the bread and wine into the Body and Blood of Christ, is the express doctrine of the Church (Council of Trent, Sess. XIII, can. ii). Thus were condemned as contrary to faith the antiquated view of Durandus, that only the substantial form (Deus panis factus) of the bread and wine, while the primary matter (materia prima) remained, and, especially, Luther's doctrine of Consubstantiation, i. e. the coexistence of the substance of the bread with the true Body of Christ. Thus, too, the theory of Impastion advocated by Osiander and certain of the Lutherans, and according to which a constant union is supposed to take place between the substance of the bread and the God-man (impanatio = Deus panis factus), is authoritatively rejected. So the Catholic doctrine of Transubstantiation sets up a mighty bulwark around the dogma of the Real Presence and constitutes in itself a distinct doctrinal article, which is not involved in that of the Real Presence, though the doctrine of the Real Presence is necessarily contained in that of Transubstantiation. It was for this very reason that Pius VI, in his dogmatic Bull "Auctorem fidelis" (1784) against the Jansenistic pseudo-Synod of Pistoia (1786), protested most vigorously against suppressing this "scholastic question", as the synod had advised pastors to do.

(b) In the mind of the Church, Transubstantiation has been so bound with the Real Presence, that both dogmas have been handed down together from generation to generation, though we cannot entirely ignore a dogmatico-historical development. The total conversion of the substance of bread is expressed in the words of Institution: "This is my body". The words from the Lord's words, practical proposition, whose essence consists in this, that the objective identity between subject and predicate is effected and verified only after the words have all been uttered, not unlike the pronouncement of a king to a subject: "You are a major", or, "You are a captain", which would immediately cause the promotion of the officer to a higher command. When, therefore, He Who Is All Truth and All Power said of the bread: "This is my body", the bread became through the utterance of these words, the body of Christ; consequently, on the completion of the sentence the substance of bread was no longer present, but the Body of Christ under the outward appearance of bread. Hence the bread must have become the Body of Christ, i.e. the former must have been converted into the latter. The words of Institution were at the same time the words of Transubstantiation. Indeed the actual manner in which the absence of the bread and the presence of the Body of Christ is effected, is not read into the words of Institution but entirely and exegetically deduced from them. The Calvinists, however, are entirely right when they reject the Lutheran doctrine of Consubstantiation as a fiction, with no foundation in Scripture. For bad Christ intended to assert the coexistence of His Body with the substance of the bread, He would not have expressed a simple identity between loaves and persons, or between the elements of the bread and wine. For this reason the Lutherans have resorted to some such expression as: "This bread contains my body", or, "In this bread is my body." Had He desired to constitute bread the sacramental receptacle of His Body, He would have had to state this expressly, for either from the nature of bread as food according to common parlance can a piece of bread be made to signify the receptacle of a human body. On the other hand, the synedroche is plain in the case of the Chalice: "This is my blood", i.e. the contents of the Chalice are my blood, and hence no longer wine. Regarding the conversion of the wine as the consequence of the conversion of the bread, all witnesses, as Tertullian and Cyprian, could hardly have given any particular consideration to the genetic relation of the natural elements of bread and wine to the Body and Blood of Christ, or to the manner in which the former were converted into the latter; for even Augustine was deprived of a clear conception of Transubstantiation, so long as he was held in the bonds of Platonism. On the other hand, complete clearness on the subject had been attained by writers as early as Cyril of Jerusalem, Athanasius, and the fathers of Cappadocia, of Nysa Stesichorus, and Cyril of Alexandria in the East, and by Ammonius and the later Latin writers in the West. Eventually the West became the classic home of scientific perfection in the difficult doctrine of Transubstantiation. The claims of the learned work of the Anglican Dr. L. W. Pyne ("The Doctrine of the Real Presence in the Church of England", Oxford 1855) were not fully met and thoroughly answered by Cardinal Franszoni (De Euchar., Rome, 1857, theiv.); the argument from tradition is strikingly confirmed by the ancient liturgies, whose touching and beautiful prayers express the idea of conversion in the clearest manner. Many examples may be found in Renauldt, "Liturgie orient." (2nd ed., Frankfort, 1847); Assemani, "Codex liturg." (13 vols. Rome, 1749-86); Denninger, "Ritus Orientalium" (2 vols., Würzburg, 1864). Concerning the Adduction Theory of the Scotists and the Production Theory of the Thomists, see Pohle, "Dogmatik" (3rd ed., Paderborn, 1908), 311, 237 sqq.

(4) The Real Presence and the Adorableness of the Blessed Eucharist.—Since Luther arbitrarily restricted the Real Presence to the moment of reception (in etsam, non extra), the Council of Trent (Sess. XIII, can. iv) by a special casus emphasized the fact, that immediately after the Consecration Christ is truly present and, consequently, that there is adoration upon the eating or drinking. On the contrary, He continues His Eucharistic Presence even in the consecrated Hosts and Sacred particles that remain on the altar or in the ciborium after the distribution of Holy Communion. In the demand of faith the Real Presence and the Permanence of Presence are so closely allied, that in the mind of the Church both continue on as an undivided whole. And rightly so; for just as Christ promised His Flesh and Blood as meat and drink, i.e. as meat and permanent (cf. John vi, 56, 57, 58), so when He said: "Take, ye, and eat. This is my body", the Apostles received from the hand of the Lord His Sacred Body, which was already objectively present and did not first become so in the act of partaking. This non-dependence of the Real Presence upon the actual reception is manifested very clearly in the case of the Chalice, when Christ said: "Drink ye all of this. For [enam] this is my Blood." Here the act of drinking is evidently neither the cause nor the condition sine quod non for the presence of Christ's Blood.

Much as he disliked it, even Calvin had to acknowledge the evident force of the argument from tradition (Instit. IV, xvii, §39). Not only have the Fathers and among them Chrysostom with special vigour, de
fended in theory the permanence of the Real Presence, but the constant practice of the Church has also established its truth. In the early days of the Church the faithful frequently carried the Blessed Eucharist with them to their homes (Ambrose, De excessu fratris, I, 43, 40), while the deacons were accustomed to take the Blessed Sacrament to those who did not attend Divine service (cf. Justin, Apol., I, n. 67), as well as to the martyrs, the incarcerated, etc. (Ambrose, De excessu fratris, I, 43, 4); Cyril, De lapsis, xxvi) or upon long journeys (Ambrose, De excessu fratris, I, 43, 40). The deacons were also obliged to transfer the particles that remained to specially prepared repositories called Passaphoria (cf. Apostolic Constitutions VIII, xiii). Furthermore, it was customary as early as the fourth century to celebrate the Mass of the Presence (cf. Symod of Laodicea, can. xlix.), in which were received the Sacred Hosts that had been consecrated one or more days previously. In the Latin Church the celebration of the Mass of the Presanctified is nowadays restricted to Good Friday, whereas, even since the Trullan Synod (692), the Greeks celebrate it during the whole of Lent, except on Saturdays, Sundays, and the feast of the Annunciation (25 March). A deeper reason for the permanence of Presence is found in the fact, that some time elapsed between the Consecration and the Consecration proper, i.e. the moment of consecration and the communion, whereas in the case of the other sacraments both the consecration and the reception take place at the same instant. Baptism, for instance, lasts only as long as the baptismal act or abolition of water, and, therefore, is a transitory sacrament; on the contrary, the Eucharist, and the Eucharist alone, constitutes a permanent sacrament (cf. Council of Trent, Sess. XIII, can. iii). The permanence of Presence, however, is limited to an interval of time of which the beginning is determined by the Consecration and the end by the corruption of the Eucharistic Species. If the Host has become mouldy or the contents of the Chalice sour, Christ has discontinued His Presence therein. Since in the process of corruption those elementary substances return which correspond to the peculiar nature of the changed accidents, the law of the indestructibility of matter, notwithstanding the miracle of the Eucharistic conversion, remains in force without any interruption.

The Adorableness of the Eucharist is the practical consequence of its permanence. According to a well-known principle of Christology, the same worship of laudia (cultus laudia) is due to the Triune God as due also to the Divine Word, the God-Man Christ, and in fact, by reason of the hypostatic union, to the Humanity of Christ and its individual parts, as for instance the Head: It is His Sacred Heart. Now, identically the same Lord Christ is truly present in the Eucharist as is present in heaven; consequently He is to be adored in the Blessed Sacrament, and just so long as He remains present under the appearances of bread and wine, namely, from the moment of Transubstantiation, to the moment in which the species are decomposed (cf. Council of Trent, Sess. XIII, can. vi).....

In the absence of Scriptural proof, the Church finds a warrant for, and a propriety in, rendering Divine worship to the Blessed Sacrament in the most ancient and constant tradition, though of course a distinction must be drawn between the dogmatic principle and the varying discipline regarding the outward form of worship. While even the East recognized the unchanged reality of the Holy Communion, as attested by the schismatical Synod of Jerusalem in 672, the West has furthermore shown an untrining activity in establishing and investing with more and more solemnity, homage and devotion to the Blessed Eucharist. In the early Church, the adoration of the Blessed Sacrament was perfunctorily bestowed by the Conunion, just as it is to-day among the Orientals and the Greeks. Even in his time Cyril of Jerusalem insisted just as strongly as did Ambrose and Augustine on an attitude of adoration and homage during Holy Communion (cf. Ambrose, De Sp. Sancto, III, iv; Augustine, Rer. div., I, 26, 36; Cyril, De lapsis, xxvi) or upon long journeys (Ambrose, De excessu fratris, I, 43, 40), while the deacons were accustomed to take the Blessed Sacrament to those who did not attend Divine service (cf. Justin, Apol., I, n. 67), as well as to the martyrs, the incarcerated, etc. (Ambrose, De excessu fratris, I, 43, 4); Cyril, De lapsis, xxvi) or upon long journeys (Ambrose, De excessu fratris, I, 43, 40). The deacons were also obliged to transfer the particles that remained to specially prepared repositories called Passaphoria (cf. Apostolic Constitutions VIII, xiii). Furthermore, it was customary as early as the fourth century to celebrate the Mass of the Presence (cf. Symod of Laodicea, can. xlix.), in which were received the Sacred Hosts that had been consecrated one or more days previously. In the Latin Church the celebration of the Mass of the Presanctified is nowadays restricted to Good Friday, whereas, even since the Trullan Synod (692), the Greeks celebrate it during the whole of Lent, except on Saturdays, Sundays, and the feast of the Annunciation (25 March). A deeper reason for the permanence of Presence is found in the fact, that some time elapsed between the Consecration and the Consecration proper, i.e. between the Consecration and the Communion, whereas in the case of the other sacraments both the confection and the reception take place at the same instant. Baptism, for instance, lasts only as long as the baptismal act or abolition of water, and, therefore, is a transitory sacrament; on the contrary, the Eucharist, and the Eucharist alone, constitutes a permanent sacrament (cf. Council of Trent, Sess. XIII, can. iii). The permanence of Presence, however, is limited to an interval of time of which the beginning is determined by the Consecration and the end by the corruption of the Eucharistic Species. If the Host has become mouldy or the contents of the Chalice sour, Christ has discontinued His Presence therein. Since in the process of corruption those elementary substances return which correspond to the peculiar nature of the changed accidents, the law of the indestructibility of matter, notwithstanding the miracle of the Eucharistic conversion, remains in force without any interruption.

The Adorableness of the Eucharist is the practical consequence of its permanence. According to a well-known principle of Christology, the same worship of latraia (cultus latraia) is due to the Triune God as due also to the Divine Word, the God-Man Christ, and in fact, by reason of the hypostatic union, to the Humanity of Christ and its individual parts, as for instance His Sacred Heart. Now, identically the same Lord Christ is truly present in the Eucharist as is present in heaven; consequently He is to be adored in the Blessed Sacrament, and just so long as He remains present under the appearances of bread and wine, namely, from the moment of Transubstantiation, to the moment in which the species are decomposed (cf. Council of Trent, Sess. XIII, can. vi).......

The principal aim of speculative theology with regard to the Eucharist, should be to discuss philosophically, and seek a logical solution of, three apparent contradictions, namely: (a) the continued existence of the Eucharistic Species, or the outward appearances of bread and wine, without their natural underlying substances (accidenta et substantia), (b) the visible, transubstantiation, spiritual mode of existence of Christ's Eucharistic Body (existentia corporis ad modum spiritus); (c) the simultaneous existence of Christ in heaven and in many places on earth (multilocatio).

(a) The study of scriptural and patristic sources leads us to conclude that not the accidents of bread and wine continue their existence without their proper substance, but must be based upon the clearly established truth of Transubstantiation, in consequence of which the entire substance of the bread and the entire substance of the wine are converted respectively into the Body and Blood of Christ in such a way that "only the appearances of bread and wine remain" (Council of Trent, Sess. XIII, can. ii: monentibus dumtaxat speciebus pane et vino). Accordingly, the continuance of the appearances without the substance of bread and wine as their connatorial substratum is just the reverse of Transubstantiation. If it be further asked, whether these appearances have any subject at all in which they inheres, we must answer with St. Thomas Aquinas (q. 113, art. vi), that they do not. From this unbecoming, as though the Body of Christ, in addition to its own accidents, should also assume those of bread and wine. The most that may be said is, that from the Eucharistic Body proceeds a miraculous sustaining power, which supports the appearances bereft of their natural subject or substratum.
be readily determined from the Council of Constance (1414–1418). In its eighth session, approved in 1418 by Martin V, this synod condemned the following articles of Wyclif: (1) "Substantia panis materialis et substantia vini materialis est in Sacramento altaris", i.e. the material substance of bread and likewise the material substance of wine remain in the Sacrament of the Altar; (2) "Accidentia panis non manent sine subiecto", i.e. the accidents of the bread do not remain without a subject. The first of these articles contains an open denial of Transubstantiation. The second, so far as the text is concerned, might be considered as merely a different wording of the first, were it not that the history of the council shows that Wyclif had directly opposed the Scholastic doctrine of "accidents without a subject" as absurd and even heretical (cf. De Augustinis, De sacramentarii, Rome, 1889, II, 573 sqq.). Hence it was the intention of the council to condemn the second article, not merely as a conclusion of the first, but as a distinct and independent proposition; wherefore we may gather the Church's teaching on the subject from the contradictory proposition: "Accidentia panis manent sine subiecto", i.e. the accidents of bread do remain without a subject. Such, at least, was the opinion of contemporary theologians regarding the matter; and this understanding is referred to in the above-mentioned canon of the Council of Trent, tersely explains: "The accidents of bread and wine inhere in no substance, but continue existing by themselves." This being the case, some theologians in the seventeenth and eighteenth centuries, who inclined to Cartesianism, as e.g., Maigman, Drouin, and Vitasse, displayed but little theological penetration when they asserted that the Eucharistic appearances were optical illusions, phantasmagoria, and make-believe accidents, ascribing to Divine omnipotence an immediate influence upon the five senses, whereby a mere subjective impression of what seemed to be the accidents of bread and wine was created. Since Descartes (d. 1650) places the essence of corporeal substance in its actual extension and recognizes only modal accidents metaphysically united to their substance, it is clear, according to his theory, that together with the conversion of the substance of bread and wine, the accidents must also be converted and thereby made to disappear. If the eye nevertheless seems to behold bread and wine, it is to be attributed to an optical illusion alone. But it is clear at first blush, that no doubt can be entertained as to the physical reality, or in fact, as to the identity of the accidents before and after Transubstantiation. This physical, and not merely optical, continuance of the Eucharistic accidents was recognized in Rome, in the form of a Dogma, and both Father and theological writers exerted excessive vigour that the notion of Transubstantiation seemed to be in danger. Especially against the Monophysites, who based on the Eucharistic conversion an a priori argument in behalf of the supposed conversion of the Humanity and Divinity of Christ into the Divinity, did the Fathers retort by concluding from the continuance of the unconverted Eucharistic accidents to the unconverted Human Nature of Christ. Both philosophical and theological arguments were also advanced against the Cartesians, as, for instance, the infallible testimony of the senses, the necessity of the communes tertium to complete the idea of Transubstantiation [see above, (3)], the idea of the Sacrament of the Altar as the visible sign of Christ's invisible Body, the physical signification of Communion as a real partaking of food and drink, the spiritual food and drink of the real presence of bread and wine (tractio panis), which supposes the divisibility reality of the accidents, etc. For all these reasons, theologians consider the physical reality of the accidents as an incontrovertible truth, which cannot without tenuity be questioned. As regards the philosophical possibility of the accidents existing without their substance, the older school drew a fine distinction between modal and absolute accidents. By the modal accidents were understood such as could not, being mere modes, be separated from their substance without involving a metaphysical suspension, as in the case of the substance of a body. Those accidents were designated absolute, whose objective reality was adequately distinct from the reality of their substance, in such a way that no intrinsic repugnance was involved in their separability, as, e.g., the quantity of a body. Aristotle himself taught (Metaphys., VI, 3rd ed. of Bekker, p. 1029, a. 13), that quantity was not a corporeal substance, but only a phenomenon of substance. Modern philosophy, on the other hand, has endeavored since the time of John Locke, to reduce all these from the realm of ideas the concept of substance as something imaginary, and to rest satisfied with qualities alone as the excitants of sensation, a view of the material world which the so-called psychology of association and actuality is trying to carry out in its various details. The Catholic Church does not feel called upon to follow up the ephemeral vagaries of these new philosophical systems, but bases her doctrine on the everlasting philosophy of sound reason, which rightly distinguishes between the thing in itself and its characteristic properties (color, form, size, etc.). To this extent the "thing in itself" may remain imperceptible to the senses and therefore be designated in the language of Kant as a noumenon, or in the language of Spenser, the Unknowable, yet we cannot escape the necessity of seeking beneath the appearances the thing which appears, beneath the color that which has form, i.e. the substratum or subject which sustains the phenomena. The older philosophy designated the appearances by the name of accidents, the subject of the appearances, by that of substance. It matters little what the terms are, provided the things signified by them are rightly understood. What is particularly important regarding material substances and their accidental qualities, is the necessity of proceeding cautiously in this discussion, since in the domain of natural philosophy the greatest uncertainty reigns even at the present day concerning the nature of matter, one system pulling down what another has reared, as is proved in the latest theories of atomism and energy, of ions and electrons. The Old theology tried with St. Thomas Aquinas (III, Q. Ixxvii) to prove the possibility of absolute accidents on the principles of the Aristotelian-Scholastic hylomorphism, i.e. the system which teaches that the essential constitution of bodies consists in the substantial union of materia prima and forma prima, in accordance to this system, a real distinction between force and its manifestations, between energy and its effects, may be seen that under the influence of the First Cause the energy (substance) necessary for the essence of bread is withdrawn by virtue of conversion, while the effect of energy (accidents) in a miraculous manner continue. For the rest it may be said, that it is far from the Church's intention to restrict the Catholic's investigation regarding the doctrine of the Blessed Sacrament to any particular view of natural philosophy or even to require the supporting explanation of medieval physics; all that the Church demands is that those theories of material substances be rejected which not only contradict the teaching of the Church, but also are repugnant to experience and sound reason; as atheism, Hylozoism, Monism, Absolute Idealism, Cartesianism, etc. (b) The second problem arises from the Totality of
Presence, which means that Christ in His entirety is present in the whole of the Host and in each smallest part thereof, as the spiritual soul is present in the human body [see above, (2)]. The difficulty reaches its climax when we consider that there is no question here of a second identity, as in the case of the Corpus Christi Body, which, with its head, trunk, and members, has assumed a mode of existence spiritual and independent of space, a mode of existence, indeed, concerning which neither experience nor any system of philosophy can have the least inkling. That the idea of conversion of "corporeal" matter into a spirit could be entertained, is clear from the material substance of the Eucharistic Body itself. Even the above-mentioned separability of quantity from substance gives us no clue to the solution, since according to the best-founded opinions not only the substance of Christ's Body, but by His own wise arrangement, its corporeal quantity, i.e. its full size, with its complete organization of integral members and limbs, is present within the diminutive limits of the Host and in each portion quantity. Present theologians (as Rossignol, Legrand) resorted to the admirable explanation which Christ is present in diminished form and stature, a sort of miniature body; while others (as Oswald, Fernandez, Casajaona) assumed with no better sense of fitness the mutual compensation of the members of the Edicule of presence to the point of a pin. The vagaries of the Cartesians, however, went beyond all bounds. Descartes had already, in a letter to P. Mesland (ed. Emery, Paris, 1811), expressed the opinion, that the identity of Christ's Eucharistic with His Heavenly Body was preserved by the identity of His Soul, which animated all the Eucharistic Bodies. On this basis, the geometrician Varignon suggested a true multiplication of the Eucharistic Bodies upon earth, which were supposed to be most faithful, though greatly reduced, miniature copies of the prototype, the Heavenly Body of Christ. Nor does the modern theory of n-dimensions throw any light upon the subject; for the Body of Christ is not invisible or impalpable to us because it occupies the fourth dimension, but because it transcends and is wholly independent of space. Such a mode of existence, it is clear, does not come within the scope of physics and mechanics, but belongs to a higher, supernatural order, even as does the Resurrection from the sealed tomb, the passing in and out through closed doors, the Transfiguration of the future glorified risen Body. What explanation may, then, be given of the fact? The simplest treatment of the subject was that offered by the Schoolmen, especially St. Thomas (III, Q. lxvi, a. 4). They reduced the mode of being to the mode of becoming, i.e. they traced back the mode of existence peculiar to the Eucharistic Body to the Transubstantiation; for a thing has to so "be" as it was in "becoming". Since ex vlturum the immediate result is the presence of the Body of Christ, its quantity. Hence, as a matter of warrant, must follow the mode of existence peculiar to its substance, and, like the latter, must exist without division and extension, i.e. entirely in the whole Host and entirely in each part thereof. In other words, the Body of Christ is present in the sacrament, not after the manner of "quantity" (per modum quantitatis), but of "substance" (per modum substantiae). Later Scholasticism (Bellarmine, Suarez, Billuart, and others) tried to improve upon this explanation along other lines by distinguishing between internal and external quantity: the one now completely understood (quantitas in actu primo) is understood that entity, by virtue of which a corporeal substance merely possesses "aptitudinal extension", i.e. the "capability" of being extended in tri-dimensional space. External quantity, on the other hand (quantitas externa seu in actu secundo), is the same entity, but in so far as it follows its natural tendency to occupy space and actually extends itself in the three dimensions. While aptitudinal extension or internal quantity is so bound up with the essences of bodies that its separability from them involves a metaphysical contradiction, external quantity is, on the contrary, indifferent as to consecutive and effect, which can be so suspended and withheld by the First Cause, that the corporeal substance, retaining its internal quantity, does not extend itself into space. At all events, however plausibly reason may seem to explain the matter, it is nevertheless true that the process is great mystery. (c) The third and last question has to do with the multiloculation of Christ in heaven and upon thousands of altars throughout the world. Since in the natural order of events each body is restricted to one position in space (unilocatio), so that even the proof of an alibi immediately frees a person from the suspicion of crime, multiloculation without further question belongs to the supernatural order. First of all, no intrinsic repugnance can be shown in the concept of multilocatio. For if the object of the event is the object of being, it is not separated from itself or shown forth to distances between its various selves, the sophism is readily detected; for multilocatio does not multiply the individual object, but only its external relation to and presence in space. Philosophy distinguishes two kinds of presence; (1) the definitive and (2) the definitive. The first, the only mode of presence proper to bodies, is that by virtue of which an object is confined to a determinate portion of space in such wise that its various parts (atoms, molecules, electrons) also occupy their corresponding positions in that space. The second mode of presence, that properly belonging to a spiritual being, requires the substance of a thing to exist in its entirety in the whole of the space, as well as whole and entire in each part of that space. The latter is the soul's mode of presence in the human body. The distinction made between these two modes of presence is important, inasmuch as in the Eucharist both kinds are found in combination. For, in the first place, there is verified a continuous definitive multilocatio, called also repugnation, which consists in this, that the Body of Christ is totally present in each part of the continuous and as yet unbroken Host and also totally present throughout the whole Host, just as the human soul is present in the body. And precisely this latter analogy from nature gives us an insight into the possibility of the Eucharistic miracle, for it shows that Divine omnipotence can in a supernatural manner impart to a body such a spiritual, unextended, spatially uncircumscribed mode of presence, which is natural to the soul as regards the human body, one may well surmise the possibility of Christ's Eucharistic Body being present in its entirety in the whole Host, and whole and entire in each part thereof. There is, moreover, the discontinuous multilocatio, whereby Christ is present not only in one Host, but in numberless Hosts, whether in the tabernacle or upon all the altars throughout the world. The intrinsic possibility of discontinuous multilocation seems to be based upon the non-repugnance of continuous multilocatio. For the chief difficulty of the latter appears to be that the same Christ is present in two different parts, A and B, of the continuous Host, it being immaterial whether we consider the distant parts A and B joined by the continuous line AB or not. The marvel does not substantially increase, if by reason of the breaking of the Host, the two parts A and B are entirely separated. Nor does it matter how great the distance between the parts may be. Whether or not the fragments of a Host are distant one inch or a thousand miles from one another is altogether immaterial in this consideration; we need not wonder, then, if Catholics adore their Eucharistic Lord at one and the same time in New
Eucharist

584

Eucharist

York, London, and Paris. Finally, mention must be made of mixed multilocation, since Christ with His natural dimensions reigned in heaven, whence He does not depart, and at the same time dwells with His Saco-

merss in numerous places throughout the

world. This third case would be in perfect accord-

ance with the two foregoing, were we per impossibile

permitted to imagine that Christ were present under

the appearances of bread exactly as He is in heaven

and that He had relinquished His natural mode of ex-

istence. This, however, would be but one more mar-

vel of God's omnipotence. Hence no contradiction

is noticeable in the fact, that Christ retains His natural

dimensional relations in heaven and at the same time
takes up His abode upon the altars of earth.

There is, furthermore, a fourth kind of multilocata-

tion, which, however, has not been realized in the Eu-

charist, but would be, if Christ's Body were present

in its natural mode of existence both in heaven and on

earth. Such a miracle might be assumed to have

occurred in the conversion of St. Paul before the gates

of Damascus, when Christ in person said to him:

"Saul, Saul, why persecutest thou me?" So, too, the

bilocation of saints, sometimes read of in the pages of

hagiography, as, e. g., in the case of St. Alphonsus

Liguori, cannot be arbitrarily cast aside as untrust-

worthy. Moreover, even if later theologians declare

it true, reject this kind of multilocation as intrinsically

impossible and declare bilocation to be nothing more

than an "apparition" without corporeal presence.

But Cardinal De Lugo is of opinion, and justly so, that

debility might be attributed unfavorably upon the Eu-

charistic multilocution itself. If there were question of

the vagaries of many Nominalists, as,

e. g., that a bilocated person could be living in Paris

and at the same time dying in London, lasting in Paris

and at the same time loving in London, the impost-

ing bilocation would be comparable to an inordinate

remaining such as he is, cannot be the subject of con-

trary propositions, since they exclude one another.

The case assumes a different aspect, when wholly ex-

ternal contrary propositions, relating to position in

space, are used in reference to the bilocated individual.

In such a bilocation, which leaves the principle of con-

tradiction intact, it would be hard to discover an

intrinsically impossible.

On the foregoing matter see WILSON, Exploratio minimulium, qua sermone usque in Eucharistia Sacramentum operatur (Bonn, 1895); RAYNAUD, Exercice pari et viri in Opera (Lyons, 1665); V. II. THE BLESSED Eucharist AS A SACRAMENT.—Since Christ is present under the appearances of bread and wine in a sacramental way, the Blessed Eucharist is unquestionably a sacrament of the Church. Indeed, in the Eucharist the definition of a Christian sacrament as "an outward sign of an inward grace instituted by Christ" is verified. The investigation into the precise nature of the Blessed Sacrament of the Altar, whose existence Protestants do not deny, is beset with a number of difficulties. Its essence cer-

tainly exists in the Commu-

nion, the former being merely the sacrificial action,

the latter the reception of the sacrament, and not the

sacrament itself. The question may eventually be

reduced to this, whether or not the sacramentality is

to be ascribed, in the Eucharist, not to the Body and Blood of Christ hidden beneath them. The majority of theologians rightly respond to the query

by saying, that neither the species themselves nor the

Body and Blood of Christ by themselves, but the

union of both factors constitute the moral whole of

the Sacrament of the Altar. The species undoubtedly

belong to the essence of the sacrament, but only by

means of them, and not by means of the invisible Body

of Christ, that the Eucharist possesses the outward

sign of the sacrament. Equally certain is it, that the

Body and the Blood of Christ belong to the concept

of the essence, because it is not the mere unsubstantial

appearance of the species, but the real presence of

the substance, which is based on the sacrificial action

by means of the Mass (see MASE), there is a question of a

higher relation, in that the separated species of bread

and wine also represent the mystical separation of

Christ's Body and Blood or the unbloody Sacrifice of

the Eucharistic Lamb. The Sacrament of the Altar

may be regarded under the same aspects as the other

sacraments, provided only it be ever kept in view that

the Eucharist is a permanent sacrament [see above I,

(4)]. Every sacrament may be considered either in

connection with itself or in connection with other sac-

raments. Passing over the Institution, which was
discussed above in connexion with the words of Institu-

tion, the only essentially important points remaining

are the outward sign (matter and form) and inward

grace (effects of Communion), to which may be added

the necessity of Communion for salvation. In regard
to the persons concerned, we distinguish between the

minister of the Eucharist and its recipient or subject.

(1) The Matter or Eucharistic Elements.—There are
two Eucharistic elements, bread and wine, which

commute for one another, that is, in the Sacrament of

the Altar, while the proximate matter can be none other

than the Eucharistic appearances under which the

Body and Blood of Christ are truly present.

(a) The first element is wheaten bread (panis tria-

ceus), without which the "confection of the Sacrament
does not take place" (Missale Romanum: De deflecti-

bus, [3]). Being true bread, the Host must be baked,

since mere flour is not bread. Since, moreover, the

bread required is that formed of wheaten flour, not

every kind of flour is allowed. Even wheat, e. g., as

ground from rye, oats, barley, Indian corn or maize,
these though all botanically classified as grain (frumentum). On the other hand, the different varie-
ties of wheat (as spelt, amel-corn, etc.) are valid, inasmuch as they can be proved botanically to be genuinely
wheat. The necessity of wheaten bread is immediately from the words of Institution: "The Lord took bread" (viv el epos), in connexion with which it may be remarked, that in Scripture bread (epos), without any qualifying addition, always signi-

fies wheaten bread. No doubt, also, Christ, adhered unconditionally to the Jewish custom of using only

wheaten bread in the Passover Supper, and by the

words, "Do this for a commemoration of me", com-
danded its use for all succeeding times. In addition to

this, uninterrupted tradition, which in the testimony of the Fathers or the practice of the Church, shows wheaten bread to have played such an essential part, that even Protestants would be loath to regard

rye bread or barley bread as a proper element for the

celebration of the Lord's Supper.

The controversy or the discussion in the controversy respecting the use of fermented or unfer-

mented bread. By leavened bread (fermentum, fves) is meant such wheaten bread as requires leaven or yeast in its preparation and baking, while un-

leavened bread ( unleva, unleved) is that bread of wheaten flour and water, which has been kneaded to dough and then baked. After the Greek
Patriarch Michael Cerularius of Constantinople had sought in 1053 to palliate the renewed rupture with Rome by means of the controversy concerning un- leavened bread. The Church of the Western Union at Florence, in 1439, came to the unanimous dogmatic decision, that the distinction between leavened and unleavened bread did not interfere with the consecration of the sacrament, though for just reasons based upon the Church's discipline and practice, the Latins were obliged to retain unleavened bread, whereas the Greeks still held on to the use of leavened (cf. Denzinger, Enchirid., Freiburg, 1908, no. 692). Since the Schismatics had before the Council of Florence entertained doubts as to the validity of the Latin custom, a breach between the use of unleavened bread will not be out of place here. Pope Leo IX had as early as 1054 issued a protest against Michael Cerularius (cf. Migne, P. L., CXLIII, 775), in which he referred to the Scriptural fact, that according to the three Synoptics the Last Supper was celebrated “on the first day of the week” and so the custom of the Western Church received its solemn sanction from the example of Christ Himself. The Jews, moreover, were accustomed even the day before the fourteenth of Nisan to get rid of all the leaven which chance to be in their dwellings, and that according to Scripture (cf. Matt., xvi, 3, 5) and also the Talmud, take exclusively of the so-called maazoth as bread. As regards tradition, it is not for us to settle the dispute of learned authorities, as to whether or not in the first six or eight centuries the Latins also celebrated Mass with the use of leavened bread (Simond, Döllinger, Kraus) or have observed the present custom ever since the time of the Apostles (Mabillon, Probst). Against the Greeks it suffices to call attention to the historical fact that in the Orient the Maronites and Armenians have used unleavened bread from time immemorial, and that according to Origen (In Matt., xii, 6, 8) the people of the East “sometimes”, therefore not as a rule, made use of leavened bread in their Liturgy. Besides, there is considerable force in the theological argument that the fermenting process with yeast and other leaven, does not affect the substance of the bread, but merely its quality. The reasons of con- trivancy advanced by the Greeks in behalf of leavened bread, which would have us consider it as a beautiful symbol of the hypostatic union, as well as an attractive representation of the savour of this heavenly Food, will not be here very extensively considered. It may be due consideration be given to the grounds of propriety set forth by the Latins with St. Thomas Aquinas (I, II, Q. lxix, a. 4) namely, the example of Christ, the aptitude of unleavened bread to be regarded as a symbol of purity and of His sacrifice, the idea of the remission of sin, and finally the instruction of St. Paul (1 Cor., v, 8) to keep the Pasch “not with the leaven of malice and wickedness, but with the unleavened bread of sincerity and truth”.

(b) The second Eucharistic element required is wine of the grape (vino de vite). Hence are excluded as invalid, not only the juices extracted and prepared from other fruits (as cider and perry), but also the so-called artificial wines, even if their chemical constitution is identical with the genuine juice of the grape. The necessity of wine of the grape is not so much the result of the authoritative decision of the Church, as it is presupposed by her (Council of Trent, Decr. pro Armenia: aqua modicissima), a practice, whose legitimacy the Council of Trent (Sess. XXII, can. ix) established under pain of anathema.

The rigour of this law of the Church may be traced to the ancient custom of the Romans and Jews, who mixed water with the strong southern wines (see Prov., ix, 2), to the expression of coUz mitzâā found in Justin (Apol., xiii, 9), Irenæus (Adv. haeres., xxi, 1), Tertullian (De pudicit., xliii, ad Cassel., n. 13 sqq.), and especially to the deep symbolic meaning contained in the mingling, inasmuch as thereby are represented the flowing of blood and water from the side of the Crucified Saviour and the intimate union of the faithful with Christ (cf. Council of Trent, Sess. XXII, cap. viii).

In this connexion, see Gries, Streifzüge über den Gebrauch der Asynam (Münster, 1852); FUHR, Die Abendmahlsbräuche bei den Dioskuren des C. C. Abarbanel (Paderborn, 1897), l, 378 sqq.; SCHWILK, Die Elemente der Eucharistie in den ersten drei Jahrhunderten (Mainz, 1903).

(2) The Sacramental Form or the Words of Consecration.—In proceeding to verify the form, which is always made up of words, we may start from the indubitable fact, that Christ did not consecrate by the mere fiat of His omnipotence, which found no expression in articulate utterance, but by pronouncing the words of Institution: “This is my body... this is my blood”, and that by the addition: “Do this for a commemoration of me”, He commanded the Apostles to follow His example. Were the words of Institution mere declarative propositions, they might have taken place in the “benediction” unanounced and articulately unexpressed, the Apostles and their successors would, according to Christ’s example and mandate, have been obliged to consecrate in this mute manner the Body and Blood of the Lord, while the Church, together at variance with the deposit of faith. It is true, that Pope Innocent III (De Sacro altaris myst., IV, vi) before his elevation to the pontificate did hold the opinion, which later theologians branded as “temerarious”, that Christ consecrated without words by means of his “benediction”. Not many theologians, however, followed him in this regard, among the few being Ambrose Catharinus, Choffontaines, and Hoppe, by far the greater number preferring to stand by the unanimous testimony of the Fathers. Meanwhile, Innocent III also insisted most urgently that at least in the case of the celebrating priest, the words of Institution were prescribed as the sacramental form. It was, moreover, not until its comparatively recent adherence in the seventeenth century to the famous Confessio fidelis orthodoxae, of Peter Moglias (cf. Kimmelm, Monumenta eccles. apud. s. Ioann., i, 1806, p. 180), that the Schismatical Greek Church adopted the view, according to which the priest does not at all consecrate by virtue of the words of Institution, but only by means of the Epiklesis occurring shortly after the Offertory, and the Orans petition to the Holy Spirit, “that the bread and wine may be converted into the Body and Blood of Christ”. 
Were the Greeks justified in maintaining this position, the immediate result would be, that the Latins who have that tradition, would, in their present Liturgy, possess neither the true Sacrifice of the Mass nor the Holy Eucharist. Fortunately, however, the Greeks can be shown the error of their ways from their own writings, since it can be proved, that they themselves formerly placed the form of Transubstantiation in the words of Institution. Not only did such renowned Fathers as Justin (Apol., I, iv, XVI), Ireneus (Adv. haer. v, ii, 3), Gregory of Nyssa (Or. catech., xxxvii), Chrysostom (Hom. i, de proph. Judae, n. 6), and John Damascene (De fide orth., iv, xiii) hold this view, but there was also the very powerful testimony of the Church, to the effect, that Cardinal Bessarion in 1439 at Florence called the attention of his fellow-countrymen to the fact, that as soon as the words of Institution have been pronounced, supreme homage and adoration are due to the Holy Eucharist, even though the famous Epileksis follows some time after.

The objection that the mere historical recitation of the words of Institution taken from the narrative of the Last Supper possesses no intrinsic consecratory force, would be well founded, did the priest of the Latin Church, by the mere recital of the words of Institution, tend to make some historical event rather than pronounce them with the practical purpose of effecting the conversion, or if he pronounced them in his own name and person instead of the Person of Christ, whose minister and instrumental cause he is. Neither of the two supposed conditions in the case of the Greek Liturgy, tends to celebrate Mass. Hence, though the Greeks may in the best of faith go on erroneously maintaining that they consecrate exclusively in their Epileksis, they do, nevertheless, as in the case of the Latins, actually consecrate by means of the words of Institution contained in their Liturgies, if Christ has instituted these words as the words of Consecration and the form of the sacrament. We may in fact go a step farther and assert, that the words of Institution constitute the only and wholly adequate form of the Eucharist, and that, consequently, the words of the Epileksis possess not inherent consecratory value. The contention that the words of the Epileksis have a joint essential value and constitute the partial form of the sacrament, was indeed supported by individual Latins, such as the Fathers of Trent, and Lebrun. Though this opinion cannot be condemned as erroneous in faith, since it allows to the words of Institution their essential, though partial, consecratory value, it appears nevertheless to be intrinsically repugnant, for it supposes of Christ that he cannot remain in a state of suspense, but is completed in an instant of time, there arises the dilemma: Either the words of Institution alone and, therefore, not the Epileksis, are productive of the conversion, or the words of the Epileksis alone have such power and not the words of Institution. Of more considerable importance is the circumstance that the whole question came up for discussion in the council for union held at Florence in 1439. Pope Eugene IV urged the Greeks to come to a unanimous agreement with the Roman faith and subscribe to the words of Institution as alone constituting the sacramental form, and to drop the contention that the words of the Epileksis also possessed a partial consecratory force. But when the Greeks, not without foundation, pleaded that a dogmatic decision would reflect with shame upon their whole ecclesiastical past, the synodical council was satisfied with the oral declaration of Cardinal Bessarion recorded in the minutes of the council for 5 July, 1439 (P. G., CLXI, 491), namely, that the Greeks follow the universal teaching of the Fathers, especially of Chrysostom, familiarly known to us, according to whom the "Divine words of Our Redeemer contain the full and entire force of Transubstantiation".

The venerable antiquity of the Oriental Epileksis, its peculiar position in the Canon of the Mass, and its permanent reception by the theologians to determine its dogmatic value and to account for its use. Take, for instance, the Epileksis of the Ethiopian Liturgy: "We implore and beseech Thee, O Lord, to send forth the Holy Spirit and His Power upon this Bread and Chalice and convert them into the Body and Blood of Our Lord Jesus Christ at this Hour; and this prayer always follows after the words of Institution have been pronounced, the theological question arises, as to how it may be made to harmonize with the words of Christ, which alone possess the consecratory power. Moreover, the psychological retrospective transfer is met with in other portions of the Liturgy, as in the Mass for the Dead, wherein the Church prays for the departed as if they were still upon their bed of agony and could still be rescued from the gates of hell. Thus considered, the Epileksis refers us back to the Consecration as the centre about which all the significance contained in its words revolves. A second explanation is based, not upon the enacted Consecration, but upon the approaching Communion, inasmuch as the latter being the effective means of uniting us more closely in the organised body of the Church, brings forth in our hearts the mystical Christ, as is read in the Roman Canon of the Mass: "Ut nobis corpus et sanguis fiat", i. e. that it may be made for us the body and blood. It was in this purely mystical manner that the Greeks themselves explained the meaning of the Epileksis at the Council of Florence (Mansi, Collect. Concil., XXXI 106). Yet since much more is contained in the plain words than this true and deep mysticism, it is desirable to combine both explanations into one, and so we may regard the Epileksis as both in point of liturgy and of time, as the significant connecting link, placed midway between the Consecration and the Communion in order to emphasize the part taken by the Holy Spirit in the Consecration of bread and wine, and, on the other hand, that Christ cannot obtain the realization of the true Presence of the Body and Blood of Christ by their fruitful effects on both priest and people.

Spiritus in Liturgia Graeca et orientalis (Munich 1731); Hoppo, Die Epileksis der griechischen und orientalischen Liturgien (Schränken, 1874); Fassbender, Die eucharistischen Wund- und die Epileksis (Würzburg, 1880); Schreyer, Mysterien des Christentums (Freiburg, 1885), pp. 449 sqq.; Inserlecker, Welche Bedeutung hat das Christus in der Liturgie (1893). P. 743 sqq.; (1897), p. 51 sqq.; Sermont, La Messe nella sua storia e nel suo simbolo (Rome, 1904), 153 sqq.

(3) The Effects of the Holy Eucharist.—The doctrine of Holy Communion regarding the effects or the fruits of Holy Communion centres around two ideas: (a) the union with Christ by love and (b) the spiritual repent of the soul. Both ideas are often verified in one and the same effect of Holy Communion.

(a) The first and principal effect of the Holy Eucharist is union with Christ by love (Dee. pro Arminia: adunatio ad Christum), which union as such does not consist in the sacramental reception of the Body and Blood of Christ, but is known to us as a loving, andBeer as the theological virtue of love. Christ Himself designated the idea of Communion as a union by love: "He that eateth my flesh, and drinketh my
blood, abideth in me, and I in him” (John, vi, 57). St. Cyril of Alexandria (Hom. in Joann., IV, xvii) beautifully represents this mystical union as the fusion of one soul with another, and of one flesh with another. Just as the wax is fused with other wax. Since the Sacrament of Love is not satisfied with an increase of habitual love only, but tends especially to fan the flame of actual love to an intense ardour, the Holy Eucharist is specifically distinguished from the other sacraments, and hence it is in a literal sense that Suáres recognizes the so-called “grace of the sacrament”, which otherwise is so hard to discern. It stands to reason that the essence of this union by love consists neither in a natural union with Jesus analogous to that between soul and body, nor in a hypostatic union of the soul with the Person of the Word, nor finally in a pantheistical deification of the communicant, but simply in a moral but wonderful union with Christ by the bond of the most ardent charity. Hence the chief effect of a worthy Communion is to confer a certain extent a foretaste of heaven, in fact the anticipation and pledge of our future union with God by love in the Beatific Vision. He alone can properly estimate the precious boon which Catholics possess in the Holy Eucharist, who knows how to ponder these ideas and how to make them all the more readily understood. The immediate result of this union with Christ by love is the bond of charity existing between the faithful themselves, as St. Paul says: “For we, being many, are one bread, one body, all that partake of one bread shall know each other” (I Cor., x, 17). And so the Communion of Saints is not merely an union by faith and grace, but an eminently real union, mysteriously constituted, maintained, and guaranteed by partaking in common of one and the same Christ.

(b) A second fruit of this union with Christ by love is an increase of sanctifying grace in the soul of the worthy communicant. Here let it be remarked at the outset, that the Holy Eucharist does not per se constitute a person in the state of grace as do the sacraments of the dead (baptism and penance), but presupposes such a state. It is, therefore, one of the sacraments of the living. It is as impossible for the soul in the state of mortal sin to receive this Heavenly Bread with profit, as it is for a corpse to assimilate food and drink. Hence the Council of Trent (Sess. XIII, can. v), in opposition to the opinion of the Suárezians, purposely denial; that the “chief fruit of the Eucharist does not consist in the forgiveness of sins”. For though Christ said of the Chalise: “This is my blood of the new testament, which shall be shed for many unto remission of sins” (Matt., xxvi, 28), He had in view an effect of the sacrifice, not of the sacrifice itself. Hence, it is not surprising that Suárez would be drummed unto remission of sins, but shed for that purpose. It is for this very reason that St. Paul (I Cor., xi, 28) demands that rigorous “self-examination”, in order to avoid the heinous offence of being guilty of the Body and the Blood of the Lord by “eating and drinking unworthily”, and that the Fathers insist upon nothing so energetically as upon a pure and innocent conscience. In spite of the principles just laid down, the question might be asked, if the Blessed Sacrament could not at times per accidens free the communicant from mortal sin, if he approached the Table of the Lord unconscious of the sinful state of his soul. Presupposing what is self-evident, that there is question neither of a conscious sacrilegious Communion nor a lack of imperfect contrition (abtrita), which would altogether moral condition has been effected, sacrament, theologians incline to the opinion, that in such exceptional cases the Eucharist can restore the soul to the state of grace, but all without exception deny the possibility of the reviviscence of a sacrilegious unfruitful Communion after the restoration of the soul’s proper and natural condition has been effected, the Eucharist being different in this respect from the sacraments which imprint a character upon the soul (baptism, confirmation, and Holy orders). Together with the increase of sanctifying grace there is associated another effect, namely, a certain spiritual relish of the heavenly Bread and Drink, that is, real spiritual delight and drink delight and refresh the heart of man, so does this “Heavenly Bread containing within itself all sweetness” produce in the soul of the devout communicant ineffable bliss, which, however, is not to be confounded with an emotional joy of the soul or with possible sweetness. Although both may result from the reception of a special grace, its true nature is manifested in a certain cheerful and willing fervour in all that regards Christ and His Church, and in the conscious fulfilment of the duties of one’s state of life, a disposition of soul which is perfectly compatible with interior desolation and spiritual dryness. A good Communion is recognized less in the transitory sweetness of the emotions than in its lasting practical effects on the conduct of our daily lives.

(c) Though Holy Communion does not per se remit mortal sin, it has nevertheless the third effect of “blotting out venial sin and preserving the soul from mortal sin” (Council of Trent, Sess. XIII, cap. ii). The Holy Eucharist is not merely a food, but a medicine as well. The destruction of venial sin and of all affection to it, and the preservation of the soul from mortal sin, are the immediate effects of the above mentioned ideas mentioned above. Just as material food banishes minor bodily weaknesses and preserves man’s physical strength from being impaired, so does this food of our souls remove our lesser spiritual ailments and preserve us from spiritual death. As a union based upon love, the Holy Eucharist cleanses with its purifying flame the smallest stains which adhere to the soul, and at the same time serves as an effective prophylactic against grievous sin. It only remains for us to ascertain with clearness the manner in which this preservative influence against relapse into mortal sin is exerted. According to the teaching of the Roman Catechism, it is effected by the allaying of concupiscence, which is the chief source of deadly sin, particularly of impurity. Therefore it is that spiritual writers recommend frequent Communion as the most effective remedy against impurity, since its powerful influence is felt even after other means have proved unsavory (cf. St. Thomas, III, Q. lxix, a. 6). Whether or not the Holy Eucharist is directly conducive to the ablation of concupiscence, and whether it is so directly, as Suárez, or indirectly, as St. Thomas (ibid., a. 5), since the Blessed Sacrament of the Altar was not instituted as a means of satisfaction; it does, however, produce an indirect effect in this regard, which is proportioned to the communicant’s love and devotion. The case is different, as regards the effect of the Communion in the presence of the Spouse of our souls, which will readily find a hearing, and then, because the fruits of Communion as a means of satisfaction for sin may be applied to a third person, and especially per modum suffragii to the souls in purgatory.

(d) As a last effect we may mention that the Eucharist is the “pledge of our glorious resurrection and eternal happiness” (Council of Trent, Sess. XIII, cap. ii), according to the promise of Christ: “He that eateth my flesh and drinketh my blood, hath everlasting life: and I will raise him up on the last day.” Hence the reason why the eminent path in the fact that (Eph., 20), Irenæus (Adv. haer., IV, xviii, 4), and Tertullian (De resurr. carn., viii), as well as later patristic writers, insisted so strongly upon our future resurrection, was the circumstance that it is the door by which we enter upon unending happiness. There can be nothing incongruous in the fact that the body also shares in this effect of Communion, since by its physical contact with the Eucharistic species,
and hence (indirectly) with the living Flesh of Christ, it acquires a moral right to its future resurrection, even as the Blessed Mother of God, inasmuch as she was the former abode of the Word made flesh, acquired a moral claim to her own bodily assumption into heaven. The further discussion as to whether some physical quality (Continentia) or a "sort of generative necessity" (Hominization) is implanted in the body of the communicant, has no sufficient foundation in the teaching of the Fathers and may, therefore, be dismissed without any injury to dogma.

5 The Necessity of the Holy Eucharist for Salvation.

—We distinguish two kinds of necessity, (1) the necessity of means (necessitas mediæ) and (2) the necessity of precept (necessitas præcepi). In the first case a thing or action is necessary because without it a given end cannot be attained; the eye, e. g. is necessary for vision, and the word of Christ is that which Nature imposes by the free will of a superior, e. g. the necessity of fasting. As regards Communion a further distinction must be made between infants and adults. It is easy to prove that in the case of infants Holy Communion is not necessary to salvation as a means or as of precept. Since they have not as yet attained to the use of reason, they are free from the obligation of positive laws; consequently, the only question is whether Communion is, like Baptism, necessary for them as a means of salvation. Now the Council of Trent under pain of anathema, solemnly rejects such a necessity (Sess. XXI, cap. iv.) and declares that the custom of the primitive Church of giving Holy Communion to children was not based upon the erroneous belief of its necessity to salvation, but upon the circumstances of the times (Sess. XVI, cap. iv.). Since according to St. Paul's teaching (Rom., viii, 1) there is "no condemnation" for those who have been baptized, every child that dies in its baptismal innocence, even without Communion, must go straight to heaven. This latter position was that which was taken by the Fathers, who in the Council of St. Augustine who from the universal custom of the Communion of children drew the conclusion of its necessity for salvation (see COMMUNIO OF CHILDREN). On the other hand, Communion is prescribed for adults, not only by the primitive Church, but also by St. John (John, vi, 50 sq.), though for its absolute necessity as a means to salvation there is no more evidence than in the case of infants. For such a necessity could be established only on the supposition that Communion per se constituted a person in the state of grace or that this state could not be preserved without Communion. Neither supposition is correct. Not the first, for the simple reason that the Blessed Eucharist, being a sacrament of the living, presupposes the state of sanctifying grace; not the second, because in case of necessity, such as, e. g., in a temporary state of grace, the eucharistic graces may be supplied by actual graces. It is only when viewed in this light that we can understand how the primitive Church, without going counter to the Divine command, withheld the Eucharist from certain sinners even on their deathbeds. There is, however, a moral necessity on the part of adults to receive Holy Communion, as a means, for instance, of overcoming violent temptation, or as a viaticum for persons in danger of death. Eminent divines, like Suarez, claim that the Eucharist, if not absolutely necessary, is at least a relatively and morally necessary means to salvation, in the sense that no adult can long sustain his spiritual, supernatural life who neglects on principle to approach Holy Communion. This view is supported, not only by the solemn and earnest words of Christ, when He promised the Eucharist, and by the very nature of the sacrament as the spiritual food and medicine of our souls, but also by the fact of the helplessness and perversity of human nature and by the daily experience of confessors and directors of souls.

Since Christ has left us no definite precept as to the frequency with which He desired us to receive Him in Holy Communion, it belongs to the Church to determine the Divine command more accurately and prescribe what the limits of time shall be for the reception of the sacrament. In the course of centuries the Church's practice in this respect underwent considerable change. Whereas the early Christians were accustomed to receive at every celebration of the Liturgy, which probably was not celebrated daily in all places, or were in the habit of Communicating privately in their own homes every day of the week, a falling-off in the frequency of Communion is noticeable since the fourth century. Even in his time Pope Fabian (236-250) made it obligatory to approach the Holy Table three times a year, viz. at Christmas, Easter, and Pentecost, and this custom was still prevalent in the eleventh century. It is, however, not without some danger that we should go so far as to say that it is the intention of the Church that Holy Communion be received at least once a year. But in the earlier centuries, the practice of going to Communion more frequently during the year was rather rare among the laity and obtained only in cloistered communities. St. Bonaventure reluctantly allowed the lay brothers of his monastery to approach the Holy Table weekly, whereas the rule of the Canons of Chorodegang prescribed this practice. When the Fourth Council of Lateran (1215), held under Innocent III, mitigated the former severity of the Church's law to the extent that all Catholics of both sexes were to communicate at least once a year, and this during the Paschal season, St. Thomas (III, Q. lx., a. 10) ascribed this ordinance chiefly to the "reign of impurity and the growing cold of charity". The precept of the yearly Paschal Communion was solemnly reiterated by the Council of Trent (Sess. XIII, cap. ix. The mystical theologians of the Augsburg Confession, Tauler, St. Vincent Ferrer, Savonarola, and later on St. Philip Neri, the Jesuit Order, St. Francis de Sales, and St. Alphonsus Liguori were zealous champions of frequent Communion; whereas the Jansenists, under the leadership of "comminio sine contactu" (communion without contact) (Paris, 1643), strenuously opposed them and demanded as a condition for every Communion the "most perfect penitential dispositions and the purest love of God". This rigorism was condemned by Pope Alexander VIII (7 Dec., 1690); the Council of Trent (Sess. XIII, cap. viii.; Sess. XXII, cap. vi) and Innocent XI (12 Feb., 1679) had already emphasized the permissibility of even daily Communion. To root out the last vestiges of Jansenistic rigorism, Pius X issued a decree (24 Dec., 1905) wherein he allows and recommends the voluntary weekly Communion, the practice which requires but two conditions for its permissibility, namely, the state of grace and a right and pious intention.

Concerning the non-requrement of the two-fold species as a means necessary to salvation see COMMUNION UNDER BOTH KINDS.

See HOFFMANN, Geschichte der Liturgik (1869); Triduum (Speyer, 1891); BEHREND, De la Communion (1856); HOFFMANN, Die Liturgik (1869); MÜLLER, De frequenti communi (1895).

6 The Minister of the Eucharist.—The Eucharist being a permanent sacrament, and the consecration (consecratio) and reception (sustentatio) thereof being separated from each other by an interval of time, the minister may be and is in fact twofold: (a) the minister of consecration and (b) the minister of administration.
In general it is of Divine right, that the laity should as a rule receive only from the consecrated hand of the priest (cf. Trent, Sess. XIII, cap. viii). The practice of the faithful giving themselves Holy Communion was not allowed only in the Church of Rome. In ancient Christian times it was customary for the faithful to take the Blessed Sacrament to their homes and Communicate privately, a practice (Ter-tullian, Ad uxor., II, v), to which, even as late as the fourth century, St. Basil makes reference (Ep. xciii, ad Cresciam). Up to the ninth century it was usual for the priest to place the Sacred Host in the right hand of the recipient, who kissed it and then transferred it to his own mouth; women, from the fourth century onward, were required in this ceremony to have a cloth wrapped about their right hand. The Precious Blood was in early times received directly from the Chalice, but in Rome the practice, after the eighth century, was to receive it through a small tube (fistula); at present this is observed only in the pope's Mass. The latter method of drinking the Chalice spread to other localities, in particular to the Cistercian monasteries, where the practice was partially continued into the eighteenth century.

Whereas the priest is both by Divine and ecclesiastical right the ordinary dispenser (minister ordinarius) of the sacrament, that is to say, he distributes the extraordinary minister (minister extraordinarius), yet he may not administer the sacrament except ex delegatione, i.e. with the permission of the bishop or priest. As has already been mentioned above, the deacons who were accustomed in the Early Church to take the Blessed Sacrament to those who were absent from Divine service, as well as to present the Chalice to the laity during the celebration of the Sacred Mysteries (cf. Cyprian, De laes. vn. 17, 25), and this practice was observed until Communion under both kinds was disapproved. In St. Thomas' time (III. Q. Ixxvi, a. 2), the deacons were allowed to administer only the Chalice to the laity, and in case of necessity the Sacred Host also, at the bidding of the bishop or priest. After the Communion of the laity under the species of wine had been abolished, the deacon's powers were more and more restricted. According to a decision of the Sacred Congregation of Rites (25 Feb. 1777), still in force, the deacon is to administer Holy Communion only in case of necessity and with the approval of his bishop. "Der Kommunionritus" in his Kirchengeschichtl. Abhandlungen und Untersuchungen, Paderborn, 1897, I, pp. 263 sqq.; see also Theol. praktische Quartalschrift, Limz, 1900, LIX, 95 sqq.)

The Recipient of the Eucharist.—The two conditions of objective capacity (capacitas, aptitude) and subjective worthiness (dignitas) must be carefully distinguished. Only the former is of dogmatic interest, while the latter is treated in moral theology (see COMMUNION and COMMUNION OF THE SICK). The first requisite of aptitude is that the recipient be a "human being" since it was for mankind only that Christ instituted this Eucharistic food of souls and commanded its reception. This condition excludes not only irrational animals, but angels also; for neither possess human souls, which alone can be nourished by this food unto eternal life. The expression "Bread of Angels" (Ps. lxvii, 25) is a mere metaphor, which indicates that in the Beatific Vision where He is not concealed under the sacramental veils, the angels spiritually feast upon the God-man, this same prospect being held out to those who shall gloriously rise on the Last Day. The second requisite, the immediate deduction from the first, is that the recipient be still in the "state of pilgrimage" to the next life (status victoriae), since it is only in the present life that man can validly Communicate. Exaggerating the Eucharist's importance as a means of sanctifying the entire community, some have given the untenable opinion that at the moment of death
Eucharist

this heavenly food is supplied in the next world to children who had just departed this life, and that Christ could have given Himself in Holy Communion to souls in limbo, was condemned by Leo XIII (14 Dec., 1887). In the fourth century the Synod of Hippo (393) forbade the practice of giving Holy Communion to the dead as a grace in the Church, since the canons of that Synod, that "acceptance were no longer capable of eating". Later synods, as those of Auxerre (578) and the Trullan (692), too, took very energetic measures to put a stop to a custom so difficult to eradicate. The third requisite, finally, is based on the fact that without the body it could not be validly received: for in its very concept baptism is the "spiritual door" to the means of grace contained in the Church. A Jew or Mohammedan might, indeed, materially receive the Sacred Host, but there could be no question in this case of a sacramental reception, even though by a perfect act of devotion on the part of the pure love of God he had put himself in the state of sanctifying grace. Hence in the Early Church the catechumens were strictly excluded from the Eucharist. (Cf. Schanz, Die Lehren von den hl. Sakramenten der Urgeschichte, 1869, p. 153.)

The literature on the subject of the Eucharist is very extensive, hence only the most important works are cited here. The arguments given in the literature on this subject have been indicated in connexion with the various subdivisions of this article. Concerning the Eucharistic Sacrifice, see MAB, Consensus among the Fathers of the Church, D. L., 1, p. 968 sq.; De sacramento Eucharistiae, sermons, ed. Jacobi (Ratisbon, 1893); S. Thomas Aquinas, Summa theologiae, Part III, Q. XXIII, 3, a., q. 26; Speculum, ed. B. Maria, vol. I, pp. 190 sqq.; (Città di Castello, 1866). See also the commentaries on S. Thomas, e.g. BUILLARD, Summa S. Thomas, (ed. Leclerq, V. 626, 1862 sqq.) following are valuable even at the present day: BIEL, "Contradictions de sacrames sacrées", ed. Paris (1847); CALDERINI, "De sacramento Eucharisticum, ed. Fournier (Paris, 1939), III and IV; DUPRIEUR, Traité du sacrement de l'Eucharistie (Paris, 1853); among later writers, see ROCK, "The Holy Eucharist, Our Fathers, "WESAN, Lectures on the Real Presence (London, 1842); BRIDGMORE, The Holy Eucharist in Great Britain (London, 1857), new illustrated edition with valuable notes by THUMBERT; LONDON, 1908); HEDLEY, "The Holy Eucharist, in The Westminster Library (London, 1907); HUNST, On the Origin of the Exposure of the Holy Sacrament in the Month (1896), p. 68, 69-90; DUSSA devise, Origines du Culte chrétien, 1e, McClure, Christian Worship, 4th ed. (London, 1908); SALMON, "The Ancient Irish Church (Dublin, 1897), contains good bibliography; MORAN, "Essays on the Origins, Doctrines and Discipline of the Early Irish Church (Dublin, 1894); WARE, The Liturgy and Ritual of the Celtic Church (Oxford, 1981); JOURDAN, De ss. Eucharistia, Somme théologique (Paris, 1883); CAPPEDALLI, L'Eucharistie dans son état sacré et canonic, (Turin, 1883); Lat. monographs: ROBERT, De Eucharistia mysterio (Ratis- bon, 1886); FRANZELIN, De ss. Eucharistia sacrati et sacri famulan, ed. A. S., (Cologne, 1888); De ss. Eucharistia mysterio sacri famulan, ed. A. S., (Cologne, 1887); GASPARE, Tract. canonici de ss. Eucharistia (2 Vol., Fribourg, 1885); POINCE, Tract. dogmatico-moralis de ss. Eucharistia mysterio (Bruges, 1899). To these may be added the numerous textbooks of dogma, as: BILLIOT, De Ecclesia sacra- mente (Rome, 1893), I. HEINRICH-GÖTTERBERG, Dogmatique Théologie (Mains, 1903); IX, GHE, Die hl. Sakramente der Kathol. Kirche (Freiburg, 1902); 1. SCHREIBER-AYBERGER, Handbuch der Dogmatik (Fribourg, 1901); IV, POHLE, Lehrbuch der Dogmatik (Paderborn, 1908), III. Much material may be had from the learned periodicals, e.g. An- nuario Eclesiastico liturgico, Smith, Dictionary of Christian An- titiques, Vincible and Mangenot, Dictionnaire de théologie catholique (Paris, 1903-); Schmid in Kirchenz., 1. alt. Eucharistie-sacrament.

Eucharist, Early Symbols of the.—Among the symbols employed by the Christians of the first ages in decorating their tombs, those which relate to the Eucharist hold a place of the first importance. The momentous consequences which with these symbols are depicted exist, primarily, in the sub- ranean cemeteries of early Christian Rome, better known as the Roman catacombs (see Catacombs, Roman; Cemetery, Early Roman Christian Cemeteries). Their discovery and reopening in the latter half of the eighteenth century have thrown great light on more or less obscure allusions in early Christian literature. In this way Catholic theology now pos-

sees supplementary information of appreciable value bearing on the belief in, and the manner of celebrating, the Eucharist in the sub-Apostolic age. According to the testimony of the catacombs and of the miracle anckology, the symbolic representations of the catacombs which refer to the Eucharist form three groups, inspired by three of Christ's miracles, namely, the miraculous multiplication of the loaves and fishes, the banquet of the seven Disciples by the Sea of Galilee after the Resurrection, and the miracle of Cana. It is to the first two of these miracles, probably, that we owe the famous fish symbol, which briefly summed up the chief articles of the Christian belief (see Fish, Symbolism of the). The earliest and always the favourite symbol of the Eucharist, in the monuments was that inspired by the miracle of the multiplication of the loaves and fishes; the banquet of the seven Disciples appears only in one (second-century) catacomb scene; the miracle of Cana in two, one of which is of the early third, the other of the fourth century.

1. The Multiplication of the.—On two occasions Christ fed with loaves and fishes, miraculously multiplied, a large concourse of people who had followed Him into the desert. On the first of these occasions, which is recorded by St. Matthew (XV, 36 sq.), seven loaves and a few fishes more than sufficed for four thousand people, a fact which corresponds with the practice of repeating only those features which were necessary to convey the meaning of a symbol, the Christian artiste of the catacombs represented the miraculous multiplication as a banquet, in which the guests are seen partaking of a repast of loaves and fishes. In frescoes of this category, the source of the artist's inspiration is clearly indicated by the baskets of fragments on the right and left of the banquet scene. The number of baskets represented is not always historical, this being regarded as a matter of indifference so far as the symbol was concerned; six Eucharistic frescoes show each seven baskets, but in three others the number is two, eight, and twelve, respectively. The number of guests in all symbolic representations of the Eucharist is invariably seven, a peculiarity which Wilpert regards as due to the early Christian fondness for the symbol of the seven planets, the seven senses, and the seven correspondences of the seven veils (Tract xxiii., in Joan.), the number seven represented the totality of the Christian world. The most ancient representations of the Eucharist in the catacombs is the fresco known as the "Franto Pani", an omen- tendent at the apse of the little underground chapel, consequently in close proximity to the place where once stood the altar. One of the banqueters is a woman. The place of honour, to the right (in cornu dextro, is occupied by the "president of the Brethren" (described about 150-153 by Justin Martyr in his account of the Christian worship), e. i. the bishop, or a priest depicted in his place for the occasion (Apol., I, xxvii). The "president" (president), a venerable, bearded personage is depicted performing the function described in the Acts of the Apostles (ii, 42, 46, xxvii., 7) as "breaking bread"; hence the name "Franto Pani" (s franto pani), appropriately given to the fresco by its discoverer. It is to be noted that these words are frequently used in the earliest non-inspired Christian literature as a synonym for the Eucharist (Liber Temporum, 7, 1238, 1508). The moment represented, therefore, is that immediately before the Communion, when the celebrant, the
Eucharist

as now, divided the Sacred Host. And, as though to exclude all doubt as to the character of his subject, the artist added a detail found in no other representation of the Eucharist: in front of the celebrant he placed a two-handled cup, evidently the chalice (calix minis-
terale) of the second century. Such is the earliest representation in Christian art of the offering of the Mass. A recent writer regards the scene as representing the celebration of the Eucharist in connexion with the funeral agape on the anniversary of some person interred in the chapel. The guests partaking of the banquet, in this view, represent the relations of the deceased assisting at an anniversary Mass (sacrificium pro dormitio) for the repose of his soul (Wieland, Messa und Confesso, p. 139). In addition to these unique details showing a real celebration of the Mass in the early second century, the author of this fresco depicted, side by side with the reality, a symbol of the Eucharist. In the centre of the table are two plates, one containing five loaves, the other two fishes, while on the right and left of the divan seven baskets of bread are arranged symmetrically.

After the "Fractio Panis" the most remarkable frescoes in which the miraculous multiplication is employed as a symbol of the Eucharist are two in the crypt of Lucina, the most ancient part of the cata-
comb of St. Callistus. Each consists of a fish and a basket of bread on a green field. At first view it would seem as though the fishes were represented each carrying a basket of bread, in the act of swim-
ing. A closer examination of the frescoes made by Wilpert, however, has shown that the baskets are placed very close to, but not on, the fishes, and that the supposed blue surface is really green. The sub-
ject, therefore, is the miraculous multiplication, the green surface representing a field. As a symbol of this pictures are particularly striking from the introduc-
tion of two glasses, containing a red substance, into the baskets. Evidently the artist in this detail had in mind the Eucharistic matter of wine. Consequently, the frescoes as a whole conveyed to an unlooker in the second century a meaning somewhat as follows: the miraculously multiplied bread, together with wine, formed the matter of the Eucharist, which, in turn, by a still greater miracle, became the substance of the Body and Blood of the Divine Incarnation, Jesus Christ.

The various Eucharistic banquet scenes of the cata-
combs appropriately symbolised the reception of Holy Communion. In one early instance the artist por-
trayed, besides a representation of this character, a new symbol having special reference to the Consacra-
tion. This consists of a scene showing two persons be-
side a tripod, on which are placed a loaf and fish. One of the figures is clad in the tunic and pallium reserved in early Christian art to persons of sacred character, while the other, at the opposite side of the tripod, stands in the attitude of an orans. The sacred per-
sonage holds his hands extended over the loaf and the

fish, somewhat after the manner of a priest holding his hands over the chalice before the consecration. Wil-
pert's interpretation of the scene is that the figure with extended hands represents Christ performing the mir-
acle of the multiplication, which, as in the intention of the artist, is symbolic of the Consolation. On the other hand, is a symbol of the deceased, who, through the reception of Holy Communion, has ob-
tained eternal happiness: "He that eateth this bread shall live forever" (St. John, vi, 59). The representation described forms one of a series comprising three sub-
jects, all relating to the Eucharist. The second of the series is the usual banquet of seven persons, symbolis-
ing Communion, while the third depicts Abraham and Isaac in the orans attitude. In the symbolism of the time Isaac was regarded as a figure of Christ, whence the inference that this representation of Abraham's sacrifice was figurative of the Sacrifice of the Cross.

II.—The Banquet of the Seven Disciples.—
The repast of the seven Disciples by the Sea of Galilee is recorded by the Evangelist St. John (xxi, 9 seq.). St. Peter and his fellow-disciples set an allegory, after taking the miraculous draught of fishes, drew their boats on shore, where they found "hot coals

Eucharistic Symbol

End of second century, Sacrament Chapel, Catacomb of St. Callistus

ly ing, and a fish laid thereon, and bread". The risen Saviour then invited them to eat, "and none of them... durst ask him: Who art thou? Knowing that it was the Lord!". The incident thus recorded was just as ap-
propriate a symbol of the Eucharist as the miracle of the multiplication, and as such it is once depicted in a painting of the second century. In this, as in all Eucharistic frescoes, the symbol of Communion ap-
ppears in close proximity with a baptismal symbol. The banquet scene itself at first view seems in no wise different from the category of Eucharistic representa-
tions already described: seven persons are partaking of food, which consists of loaves and fishes. Two de-
tails, however, differentiate this particular picture (Sacrament Chapel A 2; cemetery of Callistus), from the symbolic banquets based on the miraculous multi-
plification. The first of these details is the absence of the basket of fragments always present in frescoes inspired by the latter subject, and the second consists in the fact that the seven banqueters are depicted nude, the manner in which fishermen were invariably repre-
sented in classic art. The author of this fresco, we may safely conclude, drew his inspiration from the repast by the Sea of Galilee, which he depicted as a symbol of the Eucharist. St. Augustine alludes to this symbol when he speaks of the "roasted fish" on the hot coals as representing Christ crucified (Pieta asus Christus est passus, Tract. cxxii, in Joan.).

During the first and second centuries, with the one exception noted, the only symbol of the Eucharist adopted in Christian art was that inspired by the miraculous multiplication. The mode of representing the symbol, also, during this period scarcely varied; seven guests partake of the symbolic loaves and
fishes, while baskets of bread are distributed at the
sides. In one instance, however, the guests are
omitted, and only a tripod with loaves and fishes and
the baskets of bread are depicted. This fresco, which
occupies a lunette of the Sacrament Chapel containing
the symbol of the seven Disciples, Wilpert regards as
a sort of compendium of the two symbols of the
Consecration and the Communion described above.
In the third century a new mode of representing the
famous Eucharistic symbol was adopted in a number of frescoes. This consisted in a scene showing
Christ performing the miracle of multiplication by
touching with a rod one of several baskets of bread
placed before Him. In the loaves, also, incisions,
sometimes made in the form of a cross, are seen.
Paintings of this class were symbols of the Consecration.
One of them (chamber III in the catacomb of
St. Domitilla) is of more than ordinary interest.
Unfortunately it has suffered serious injury at the hands of
collectors. By the aid of a design made for Bosio,
Wilton has been able to reproduce the picture. It
consists of three scenes. In the centre Christ is per-
forming the miracle of multiplication with a rod. To
the right of this He is again represented, His right
hand raised in the orant gesture, while within the foli
eum five loaves are depicted, with a cross. To the
left are visible. Balancing this figure on the left is the
Samaritan woman drawing water from the well of
Jacob. According to the general principles under-
lying early Christian art, some relationship was here
intended between the three groups. Ordinarily the
Samaritan woman is a symbol of the refregium
(refreshment) petitioned for in the Memento for the
Dead at Mass. In the present instance Wilpert reg-
ards it as more probable that she is intended as a
symbol of the soul in the enjoyment of eternal hap-
piness; the Eucharist, like the fountain of water (John,
iv, 14) "springing up into life everlasting," being a
pledge of immortality. In the catacomb of St. Callis-
tus there is a fourth painting of the miracle of the
multiplication which conforms more closely to histori-
cal narrative than the representations of an earlier
date: Christ is here depicted with both hands held
over the loaves and fishes presented to Him by two
Apostles. It may be added that more than thirty
frescoes of the miraculous multiplication still exist
in the Roman catacombs. For an exact and reliable
reference, see Wilpert, "Le Piture delle catacombe Romane," Rome, 1903.

III.—THE WEDDING AT CANA.—The custom in-
duced in the third century of representing the mul-
tiplication of the loaves to the exclusion of the fishes is
thought to have been introduced by a painter who, in
bringing about a new and beautiful symbol of the
Eucharist in early Christian painting. Previous to
this time only two frescoes contained any allusions to
the Eucharistic wine: the chalice of the "Fructio Panis" and the red substance in the baskets of the
crypt of Lucina. But the epitomizing of the mul-
tiplication symbol by the omission of the fishes (leaving
only bread, one of the two species required for the
Eucharist) probably suggested the idea of a special
symbol for the Eucharistic wine. No more appropri-
able symbol for this purpose was to be desired than the
miracle of Cana (John, ii, 1-11), which was actually
adopted. As Christ at the marriage feast changed
wine into water, so on another occasion He changed
wine into His blood. Quite apposite in this relation
is a statement of St. Cyril of Ambrose: "The Lord is a
fruit of the vine and of the blood of the New
Christ." In Cana of Galilee changed wine into water,
which is akin to blood," why should it be regarded as "incredible that He should have changed
wine into blood?" (Cat., XXII, 2). Two frescoes represent the miracle of Cana exist in the
Roman catacombs of St. Peter and St. Marcellus. The
ancient of these, which dates from the middle of the
third century, represents four men and three women
partaking of a repast. Before the couch on which
they are reclining is a table, while on the left a servant
is carrying a dish to the person occupying the post of
honour at the right extremity. The hands of the
servant are covered by a cloth. On the right Christ is
touching with a rod one of six water pots that stand
in front of Him. Taken as a whole, there can scarcely
be any doubt that here we have a Eucharistic scene,
with the symbol of wine substituted for the symbol of
bread. The number of questioners is the number in Eucharistic representations. The servant with
veiled hands is the bearer of some sacred object (else-
where St. Peter receiving the Law from Christ has his
hands similarly veiled). Finally, as in all other
Eucharistic frescoes, the Sacraments of Baptism and
Holy Communion are brought into close relationship:
on the right of the scene described is the fountain of
Moses and on the left a representation of the admin-
istration of baptism. In the centre of the vault also a
veiled orans is an allusion to the effects of Communion
(a pledge of eternal life).

The second fresco of this subject belongs to the mid-
dle of the fourth century. Here Christ is twice repre-
seated, once multiplying the loaves, and a second time
changing water into wine. A banquet scene, which
includes the seven witnesses of the miracle, is re-
scribed with a cross. The scene offers a possible clue to
the identification of the seven participants can still be recognized as
men. The discovery in 1864 at Alexandria of an
ancient Christian subterranean cemetery similar in
some respects to the catacombs of Rome, brought to
light a fresco in which two Eucharistic symbols of the
first Christian age are reproduced in a new and striking
manner. The picture occupies the frieze of the apse
in a small cemeterial basilica and is, consequently,
above the place formerly occupied by the altar. The
stone bench for the clergy in the sanctuary is still in
place. Three scenes, separated by trees, are repre-
seated. The central subject is the miraculous mul-
tiplication; Christ, identified by the nimbus, is seated
on a throne and is in the act of blessing loaves and
fishes presented by St. Peter and St. Andrew (identi-
fied by inscriptions). At his feet twelve baskets
of bread are distributed symmetrically. To the right
and left of this picture were two banquet scenes.
The former is almost wholly destroyed, but a Greek in-
scription gives a clue to the subject. This reads:
"Those partaking of the eulogia of Christ." Eulogia
is the term employed by St. Paul when he wrote to
the Eucharist: "the chalice of eulogia [benedic-
tion] which we bless, is it not the communion of the
blood of Christ?" The application of this term,
to, therefore, to the food set before the banqueters,
points to the inference that here we have a Eucharistic
scene in which the guests partook of the symbolic
loaves and fishes. The scene on the right, we learn from inscriptions ("Jesus", "Mary", "Serv-
ante"), represented the miracle of Cana. The author
of this fresco, who was well acquainted with the sym-
bolism of the first centuries, evidently reproduced (1)
the favourite symbol of the Eucharist, i.e. the
miraculous multiplication of the loaves and fishes,
and (2) the later symbol of the Eucharistic wine,
inpired by the miracle at the wedding feast.

Eucharistic Congresses are gatherings of cate-
sists and laymen for the purpose of celebrating and
glorifying the Holy Eucharist and of seeking the best
means to spread its knowledge and love throughout

EUCARISTIO | 592 | EUCARISTIO
the world. The Real Presence of Jesus Christ in the Eucharist is one of the principal dogmas of the Catholic Faith and is therefore of paramount importance as the foundation of the Church as the centre of Catholic worship and as the source of Christian piety. The main advantages of these congresses have been in the concentration of the thoughts of the faithful upon the mystery of the altar, and in making known to them the means by which the Church has been built up and the Holy Eucharist has been promoted and implanted in the hearts of the people.

The promoters of Eucharistic congresses believe that, if recent years devotion to the Holy Eucharist has become more widespread, if works of adoration, Confraternities of the Blessed Sacrament, and the practice of frequent Kommunion have spread rapidly and extensively, it must be ascribed in great part to these gatherings.

The first congress owed its inspiration to Bishop Gaston de Ségrí, and was held at Lille, France, 21 June, 1851. The idea at first was merelylocal and met with few adherents, but it grew from year to year with an ever-increasing importance. The second congress was at Avignon, 1882, and the third at Liége, in the following year. When from the 9th to the 15th of September of the year 1850, the First Eucharistic Congress met in Switzerland, under the presidency of the famous Mgr. Mermillod, Bishop of Lausanne and Geneva, his influence and example drew to the platform members of the Cantonal Government, officials of the municipality of Fribourg, officers of the army, judges of the courts, while thousands of Catholics from all over Europe joined in the formal procession. Toulouse, in the South of France, was the place of meeting of the fifth congress, from the 20th to the 25th of August, 1886, and about 1500 ecclesiastics and 30,000 laymen were present at the closing exercises.

The sixth congress met in Paris, 2-6 July, 1888, and the great memorial church of the Sacred Heart on Montmartre was the centre of the proceedings. Antwerp, in Belgium, entertained the next congress, 15-21 August, 1890; an immense altar of repose was erected in the Place de Meir, and it was estimated that 150,000 persons were gathered about it when Cardinal Goossens, Archbishop of Mechlin, gave the solemn Benediction. Bishop Doutreloux of Liége was then president of the Permanent Committee for the Organiztion and Conduct of these meetings, a duty which has charge of the details of these meetings.

Special importance was attached to the eighth congress, which went to Jerusalem and held its sessions from the 14th to the 21st of May, 1893. Pope Leo XIII. sent representatives of the Sacred Congregation of the Holy Eucharist, and the Bishop of Reims. Here the reunion of the Oriens was advocated, and an adoration of the Blessed Sacrament was preached on the very spot where tradition says the Agony in the Garden took place. Next year the congress was held at Reims, 20-29 July, and the different churches of the East were largely represented. A place was given in the deliberations for the first time to the study of social questions affecting the working classes. Paray-le-Monial, the city of the Sacred Heart, 20-24 September, 1897, was the scene of the tenth congress; and the eleventh, the best organized and most numerously attended of the series, met at Brussels, 13-17 July, 1898. Cardinal Langenieux was again the pope's legate at the twelfth congress which had Lourdes, the city of Eucharistic miracles, as its meeting place, 7-11 August, 1899. This great Eucharistic Congress, which drew the most conspicuous of the religious community to take part in the procession. When the thirteenth congress met at Angers, 4-8 September, 1901, a special section was formed for young men to read and discuss papers having reference to such works as young men could best undertake, and the paper of the Holy Eucharist and the solution of social questions.

Namur, Belgium, 3-7 September, 1902, was chosen as the location for the fourteenth congress, and the fifteenth, 20-24 July, 1904, went to Angoulême, where the operations of French law forbade the usual procession of the Blessed Sacrament to the altar of the Church as the centre of Catholic worship and as the source of Christian piety. The main advantages of these congresses have been in the concentration of the thoughts of the faithful upon the mystery of the altar, and in making known to them the means by which the Church has been built up and the Holy Eucharist has been promoted and implanted in the hearts of the people. The promoters of Eucharistic congresses believe that, if recent years devotion to the Holy Eucharist has become more widespread, if works of adoration, Confraternities of the Blessed Sacrament, and the practice of frequent Kommunion have spread rapidly and extensively, it must be ascribed in great part to these gatherings.

Paray-le-Monial, the city of the Sacred Heart, 20-24 September, 1897, was the scene of the tenth congress; and the eleventh, the best organized and most numerously attended of the series, met at Brussels, 13-17 July, 1898. Cardinal Langenieux was again the pope's legate at the twelfth congress which had Lourdes, the city of Eucharistic miracles, as its meeting place, 7-11 August, 1899. This great Eucharistic Congress, which drew the most conspicuous of the religious community to take part in the procession. When the thirteenth congress met at Angers, 4-8 September, 1901, a special section was formed for young men to read and discuss papers having reference to such works as young men could best undertake, and the paper of the Holy Eucharist and the solution of social questions.

Namur, Belgium, 3-7 September, 1902, was
of Milan, Mathieu of France, and Mercier of Belgium. Bishops, priests, and laymen from all quarters of the globe were among them. The regular sessions began on 11 September. The Bishop of Paris celebrated the Mass. Two sectional meetings in English and one in French then listened to the papers and discussions. In the evening there was a great meeting of 15,000 people at the Albert Hall, to greet the papal legate, at which meeting resolutions pledging all to promote devotion to the Eucharist and fidelity to the Holy See were passed. The speakers included Archbishops Carr of Melbourne and Bruchesi of Montreal. On 11 September Archbishop Von der Wetering, of Utrecht, was the celebrant of the Mass, and the next day Mass was celebrated by the Byzantine Rite by the Very Reverend Arsenius Atiyeh, archimandrite of the church of St. Julian-Le-Pauvre of Paris, assisted by several Greek Assumptionist priests from Constantinople. The Mass on Sunday, 13 September, celebrated by the papal legate, and at which Cardinal Gibbons preached, closed the series of splendid ceremonies that marked the congress. Vespers followed, and then the solemn procession took place.

It had been intended to carry the Blessed Sacrament through the streets, but, owing to a protest and public clamour against this, made by the societies composing the Protestant Alliance, the Prime Minister, Mr. Asquith, sent a formal request to Archbishop Bourne on the part of "His Majesty's Government", for the abandonment of this programme, and this was complied with. The legate, attended by a guard of honour headed by the Duke of Norfolk, Earl Marshal of England, and made up of eleven English noblemen and the Duke of Orleans and the Comte d’Eu and some members of the French Chamber of Deputies, after passing over the route, gave solemn benediction from the balcony of the cathedral to the multitude below. Telegraphing after the ceremony to Rome, Cardinal Vanutelli said to the Cardinal Secretary of State: "The Congress concluded with a great triumph to-day when the procession passed through the streets of London packed with crowds raising continuous cheers for the cardinal legate and the other cardinals and prelates. The Sacred Host was not carried in the procession, but I gave a final benediction with the Sacrament to the crowd from three open balconies on the route. The first of these was on the balcony of the Garden and the other cardinals and prelates followed. The Sacred Host was not carried in the procession, but I gave a final benediction with the Sacred Host to the crowd from three open balconies on the route. The first of these was on the balcony of the Garden and the other cardinals and prelates followed. Before it closed the congress had to have the session 1909 meet at Cologne, and that of 1910 at Montreal." 

François Désiré, Cardinal Mathieu, Archbishop of Toulouse, France, who had attended the Congress, was struck with an illness that necessitated an operation shortly after his arrival in London. He died in London from the effects of this on the 25th of October following. Another great dignitary of the Church who was called to his reward shortly after attending this memorable Congress was the Most Rev. Most Rev. Dr. Paschal Hervé, Archbishop of Toledo and Patriarch of the West Indies, who died at Toledo, 25 February, 1909, in the seventy-first year of his age.

Official reports of the several Eucharistic Congresses: Stouts, Bishop (as Monseigneur de M., as Archbishop of Toledo, Catholic Times, Catholic Herald (London), files, Oct., Sept. 1908, The Catholic World (New York, November, 1908); The Rosary Month (New York, Nov., Oct., 1908), under the editorship of Thomas F. Meehan, New York, Nov., Oct., 1908. }

GABRIEL MEIER.

Eucherius, Saint, Bishop of Lyons, theologian, b. in the latter half of the fourth century; d. about 449. On the death of his wife he withdrew to the monastery of Lérins, where his sons, Veranius and Salonius, lived, and he sought to lead the neighboring laity at Lérins (now Sainte-Marguerite), where he devoted his time to study and mortification. Desirous of joining the anchorites in the deserts of the East, he consulted John Cassian, who, in reply, sent him some of his "Collationes", describing the daily lives of the hermits of the Thebaid. It was at this time that Eucherius wrote his beautiful letter "De laude Eremiti" to St. Hilary of Arles (c. 428). Though imitating the virtues of the Egyptian solitaries, he kept in touch with men renowned for learning and piety, e.g. Cassian, St. Hilary of Arles, St. Honoratus, later Bishop of Marseilles, and Valerian, to whom he wrote his "Epistola pararenatica de contemplandi mundi". The fame of Eucherius was soon so widespread in southeast Gaul, that he was chosen Bishop of Lyons. This work shows that it is certain at least that he attended the First Council of Orange (441) as Metropolitan of Lyons, and that he retained this dignity until his death. In addition to the above-mentioned letters, Eucherius wrote "Formularium spiritualis intelligentiae ad Veranium", and "Institutiones ad solitários", besides many other works. His works have been published both separately and among the writings of the Fathers. There is no critical edition but the text is accessible in Migne, "P. L.", I, 685–894. In the same volume (appendix, 869–1214) is to be found a long series of works ascribed to Eucherius, some of doubtful authenticity, others certainly apocryphal.

All these in Rev. de Marseille (Marseille, 1962), VII, 277–86, 345–58, 409–18; GOUILLAUD, S. Eucher, Lerins, et l'église de Lyon au V siècle (Lyons, 1981); MILLIÈRE, De vita et scriptis S. Eucherii Lugdunensi episcopi (Lyons, 1877); Rev. du Lyonais (Lyons, 1965), CVI, 422–46; BARDENHEUER, Patrology, tr. SHARAN (Freiburg-im-BR, St. Louis, 1908), 518–19.

LÉON CLIGNET.

Euchites. See MESSALLIAN.

Euchologion (εὐχολόγιον), the name of one of the chief service-books of the Byzantine Church. It corresponds more or less to our Missal and Ritual. The Euchologion contains first, directions for the deacon at the Matins (Vespers), oracles (Laudas), and Liturgy. The priest's prayers and the deacon's litanies for those two hours follow. Then come the Liturgies; first, rubrics for the holy Liturgy in general, and a long note about the arrangement of the breads at the Proskomide. The Liturgy of St. John Chrysostom is the frame into which the others are fitted. The Euchologion contains only the parts of priest and deacon at full length, first for the Chrysostom-Liturgy, then for those parts of St. Basil's Liturgy that differ from it, then for the Presanctified-Liturgy, beginning with the Hesperion that always precedes it. After the Liturgies follow a collection of sacraments and sacramentals with various rules, canons, and blessings. First the rite of electing the mother after child-birth (εὐχαίρια γενναία λέγεται), adapted for various conditions, then certain "canonizations of the Saints and Fathers" about baptism, prayers to be said over catechumens, the rite of baptism, followed by the washing (ἀφόρσωσι) of the child, seven days later, certain exorcisms of St. Basil and St. John Chrysostom, and the rite of consecrating chriat (μολὼν) or the diaconate, the services for deacon, priest, and bishop (there is a second rite of ordaining bishops "according to the exposition of the most holy Lord Metropolitan, Metropolitan of Nyssa"), the blessing of a hegemene (abbot) and of other superiors of monasteries, a prayer for those who have begun to serve in the Church, prayers for minor orders (reader, singer, and subdeacon).

The ceremonies for receiving novices, clothing monks in the mandyas ("the little habit") and in the "great and angelic habit" come next, the appointing of a priest to be confessor (σευσματικός) and the manner of hearing confessions, prayers to be said for poor persons who take a solemn oath, for those who inure canonical punishments, and for those who are absolved from them. Then comes a collection of prayers for various necessities. A long hymn to Our Lady for "forgiveness of sins", written by a monk, Euthymius, follows, and we come to the rites of espousal, marriage (called the "crowning", Στήριγμα, from the most striking feature of the ceremony), the prayers for taking off the crowns eight days later, the rite of second marriages (called, as by us, "bigamy", διαζεύγησις, in which the persons are not crowned), and the very long invocation of the sick (το ἵππον ζωής), performed normally by seven priests. Next, blessings for new churches and antimensia (the corporal containing relics they use for the Liturgy; it is really a kind of portable altar), and the ceremonies of the ceremonial Mass of St. Mundy Thursday, erection of a Stauropegon (exempt monastery), the short blessing of waters (ἱεράμιον), and the great one (used on the Epiphany) followed by a sacramental which consists of bathing (ἀφάνεια) afterwards. After one or two more ceremonies, such as a curious rite of kneeling (κνίσις, otherwise a rare gesture in the Eastern Churches) on the evening of Whit sundays, exorcisms, prayers for the sick and dying, come the burial services for laymen, monks, priests. Then follows a very miscellaneous collection of prayers and hymns (prayers of patron saints, prayers of penance, against earthquakes, for time of pestilence, and war, and two addressed to Our Lady. More prayers for various occasions end the book.

In modern Euchologia, however, it is usual to add the "Apostles" (the Epistles) and Gospels for the chief feasts (these are taken from the two books that contain the whole collection of liturgical lessons), and lastly the arrangement of the court of the ecclesiastical patriarch in choir, with rubrical directions for their various duties during the Liturgy. This last chapter is found, of course, only in the "choir books".

It will be seen, then, that the Euchologion is the handbook for bishops, priests, and deacons. It contains only the short responses of the choir, who have to use their own choir-books (Triodion, Pentekostarion, Oikonomikon). It is also an Euchologion, in common with all Byzantine service-books, suffers from an amazing want of order. One discerns a certain fundamental system in the order of its chief parts; but the shorter services, blessings, prayers, hymns, etc., are thrown together Pell-mell. The first printed edition was published at Venice in 1526. The Orthodox official edition in Greek is printed (as are all their books) at the Phoenix press (τυπώσεως ἐν Φόνικε) at Venice (7th ed., edited by Spiridon Zerzos, 1898). There is also an Athenian edition and one of Constantinople. The Churches that use other liturgical languages have presses (generally at the capital of the country, St. Petersburg, Bukarest, Jerusalem) for their translations. Proost Alexios Maltzaw of the Russian Empire Church (in Berlin) has published an Euchologion in Greek and German with notes (Vienna, 1861, reprinted at Berlin, 1892). Uniates use the Propaganda edition and have a compendium (μικρόν εὐχολόγιον) containing only the Liturgies, Apostles and Gospels, baptism, marriage, unction, and confession (Rome, 1872).

J. C. GOAR, O.P., translated this complete Euchologion, added explanations, and illustrations (Eucholog-

Eudes, Jean, Blessed, French missionary and founder of the Eudistes and of the Congregation of Our Lady of Charity; author of the liturgical worship of the Sacred Hearts of Jesus and Mary; b. at Rônes, France, 1465; d. there, 19 Aug., 1546. He was a brother of the French historian, François Eudes de Mézières. At the age of fourteen he took a vow of chastity. After brilliant studies with the Jesuits at Caen, he entered the Oratory, 25 March, 1623. His masters and models in the spiritual life were Fathers de Bérulle and de Condren. He was ordained priest 20 Dec., 1625, and began his sacrificial life with heroic labours for the victims of the plague, then ravaging the country. As a missionary, Father Eudes became famous. Since the time of St. Vincent Ferrer, France had probably not seen a greater. He was called *Olivar*, or *Olivier* of Caen*. In 1643 he founded the Congregation of Our Lady of Charity of the Refuge, to provide a refuge for women of ill-fame who wished to do penance. The society was approved by Alexander VII, 2 Jan., 1666. With the approval of the Théatines and the great number of others, Father Eudes severed his connexion with the Oratory to establish the Society of Jesus and Mary for the education of priests and for missionary work. This congregation was founded at Caen, 25 March, 1643, and was considered a most important and urgent work (see Eudistes). Father Eudes, during his long life, preached not less than one hundred and ten missions, three at Paris, one at Versailles, one at St-Germain-en-Laye, and the others in different parts of France. Normandy was the principal theatre of his apostolic labours. In 1674 he obtained from Clement X six bulls of indulgences for the Confessionaries of the Sacred Heart already erected or to be erected in the seminaries. He also established the Society of the Heart of the Mother Most Admiraible—which resembles the Third Orders of Sts. Dominic and St. Francis. This society numbers from 20,000 to 25,000 members. Father Eudes dedicated the seminary chapels of Caen and Coutances to the Sacred Hearts. The feast of the Holy Heart of Mary was celebrated for the first time in 1649, and that of the Sacred Heart of Jesus in 1672, each as a double of the first class with an octave. The Mass and Office proper to these were composed by Father Eudes, who thus had the honour of preceding the blessed Margaret Mary in establishing the devotion to the Sacred Hearts. For this reason, Pope Leo XIII, in proclaiming his virtues heroic in 1903, gave him the title of "Author of the Liturgical Worship of the Sacred Heart of Jesus and Holy Heart of Mary". Father Eudes wrote a number of books remarkable for elevation of doctrine and simplicity of style. His principal works: "Le Regne du Roi de Dieu"; "De la Deum et de la Vierge contract de l'homme avec Dieu par le Saint Baptisme"; "Le Mémorial de la vie Ecclesiastique"; "Le Bon Confesseur"; "Le Prédicateur Apostolique"; "Le Cœur Admirable de la Très Sainte Mère de Dieu". This last is the first book ever written on the devotion to the Sacred Hearts. His virtues were declared heroic by Leo XIII, 6 Jan., 1903. The miracles proposed for his beatification were approved by Pius X, 3 May, 1908, and he was beatified 25 April, 1909.

Eudistes. See Eudes, Jean, Blessed.

Eudistes, or Society of Jesus and Mary, an ecclesiastical society instituted at Caen, France, 25 March, 1643, by the Venerable Jean Eudes. The principal works of the society are the education of priests in seminaries, and the giving of missions. The end which Father Eudes assigned to his society made him decide not to introduce religious vows. He was persuaded that, better than religious, priests, finding in the very dignity with which they were invested the reason and means of rising to eminent perfection, were in a position to inspire young men with a high estimate of the priesthood and of the sanctity which it required. He also felt that bishops would not so willingly give their seminaries over to priests who were not entirely subject to them. Father Eudes shared the opinions of Cardinal de Bérulle and Father Olier, who did not think it proper to admit religious vows in the order which they founded. Even St. Vincent de Paul did so only after great hesitation and on the condition, ratified by the sovereign pontiff, that the Priests of the Mission should not form a religious order, properly so called, but an ecclesiastical society.

The Society of Jesus and Mary is not, therefore, a religious order, but an ecclesiastical body under the immediate jurisdiction of the bishops, to aid in the formation of the clergy. It is composed of priests, and postulants who are admitted after a probation of three years and three months. There are also lay brothers employed in temporal affairs, but who do not wear the ecclesiastical habit. To develop the spirit of Jesus Christ in the members of the society, Father Eudes caused to be celebrated every year in his seminaries the feast of the Holy Priesthood of Jesus Christ and of all Holy Priests and Levites. After the feast of the Sacred Hearts of Jesus and Mary it is one of the principal in the community. The solemnity begins on 13 November and is celebrated with an octave. It thus serves as a preparation for the renewal of the clerical promises on 21 November, the feast of the Presentation of the Blessed Virgin. As early as 1649 Father Eudes had prepared an Office proper to the feast. Some years later the feast and office were adopted by the Sulpician Fathers. Although a religious order, the society is not subject to discipline which does not differ from that of orders with simple vows. The administration is modelled on that of the Oratory to which Father Eudes had belonged for twenty years. The supreme authority resides in a general assembly which names the superior general, who is elected at intervals, to control his administration. It alone can make permanent laws. In the intervals between the general assemblies, the superior general, named for life, exercises full authority in matters spiritual and temporal. He has the right to reside and depose local superiors, to fix the personnel of each house, to make the annual visit, to admit, and, in case of necessity, to dismiss, subjects, to accept or give up foundations, and, in general, to perform, or at least to authorize, all important acts. He is aided by assistants, named by the general assembly, who have a deciding vote in temporal affairs, and a consulting vote only in other questions.

During the lifetime of Father Eudes, the society founded seminaries at Caen (1645), Coutances (1650), Rouen (1652), Paris (1667), and Rennes (1670). These were all "grand" seminaries; Father Eudes never thought of founding any other. He admitted, however, besides clerical students, priests with newly granted benefices who came for further study, those who wished to make retreats, and even lay students who followed the wishes of the Bishop of Caen and of the University of Caen and of the University of Paris. After his death directors were
appointed for the Seminaries of Valognes, Avranches, Dol, Senlis, Blois, Domfront, and Sées. At Rennes, Rouen, and some other cities seminaries were conducted for students of a poorer class who were called to exercise the ministry in country places. These were sometimes called "little" seminaries. The possibility of this early national policy, of a general ecclesiastical and educational system, was prepared for. During the French Revolution, three Eudists, Fathers Hébert, Potier, and Lefranc, perished at Paris in the massacre of September, 1792. The cause of their beatiﬁcation with that of many other martyrs of the Revolution, which has been introduced in Rome. Father Hébert was the founder of King Louis XVI, and shortly before his death he made the king promise to consecrate his kingdom to the Sacred Heart if he escaped from his enemies. After the Revolution the society had great difﬁculty in establishing itself again, and it was only in the second half of the nineteenth century that it began to prosper. Too late to take over again the direction of seminaries formerly theirs, the Eudists entered upon missionary work and secondary education in colleges. Then they founded the Eudist Association (1830), and built a hospice in Paris, a home for destitute and aged women. As early as 1838 a foundation was made in London. Besides the scholastistics which they have opened in Belgium and in Spain, they direct seminaries at Carthage, at Antioch, at Pamplona, at Panamá (Columbia), at Lima, and at Lima in Peru. In Canada they have the Vicariate Apostolic of the Gulf of St. Lawrence, a seminary at Halifax, N. S., a college at Church Point, N. S., and at Caraquet, N. B., and a number of other establishments less important. They number about thirty-one establishments and about one hundred and twenty priests in Canada. In France, where the majority still remains, the Eudists continue to preach missions and to take part in various other works.

CHARLES LEBRUN.

Eudosia (Eudoxia).—Elisia Eudosia, sometimes wrongly called Eudoxia, was the wife of Theodosius II; died c. 460. Her original name was Athanasia, and she was the daughter of Leontius, one of the last pagan tutors who taught rhetoric at Athens. Malalas and the other Byzantine chroniclers make the most of the romantic story of her marriage. Leontius, when dying left her a legacy, and she devoted it to the welfare of the church. Athens she bequeathed only 100 pieces of gold with the explanation that she would not need more, since her “luck was greater than that of all women.” She came to Constantinople to dispute this will, and was there seen by Pulcheria, the elder sister of Theodosius II, who ruled for him till he should be of age. The emperor had already expressed his wish to marry (he was just twenty years old); both he and Pulcheria were greatly delighted with Athanasia. Malalas (op. cit., p. 353) enlarges on her beauty. She was instructed in the Christian Faith and baptized by the Patriarch Atticus. On 7 June, 421, she married Theodosius. At her baptism she had taken the name Eudoxia. Pulcheria took charge of her education in the department that was expected of an empress. Theodosius and Eudoxia had one daughter, Eudoxia, who married the Western Cesar, Valentinian III (425-455). It seems that after the wedding a certain rivalry began between Pulcheria and Eudoxia and that this was the beginning of the empress’s troubles. In 428, when the young Iliric was on the way he stopped at Antioch and made a speech with a quotation from Homer that greatly delighted the citizens—so much so that they set up a golden statue in her honour. From Jerusalem she brought back St. Peter’s chains, of which she sent half to her daughter in the West, who gave it to the pope. The basilica of St. Peter ad Vincula was built to receive this chain (Brev. Rom., I Aug., Lect. 4-6).

In 441 Eudosia fell into disgrace through an unjust suspicion of infidelity with Paulinos, the “Master of the Offices.” Paulinos was murdered and Eudosia banished. In 442 she went back to Jerusalem and lived there till her death. She was an ardent Monophysite. In 453 St. Leo I of Rome wrote to convert her. She then returned to the Catholic Faith and used her influence in Palestine in favour of the Council of Chalcedon (451). Theodosius II died in 450; Pulcheria in 453; another dynasty under Marcellian took the place of the line of Theodosius the Great. Eudosia, forgotten by the world, spent her last years in good works and quiet meditation at the holy places of Jerusalem. She was buried in the church of St. Stephen, built by her outside the northern gate. Byzantine history offers few so strange or picturesque stories as that of the little pagan Athenian who, after having been mistress of the civilised world, ended her days as an ardent mystic, almost a nun, by the tomb of Christ. Eudosia wrote much Hagiography. A synaxarion dedicated to her in Hildesheim (457) celebrates her marriage and her death. Eudosia and Justinian (a legend about a converted magician that seems to be one version of the Faust story; see Th. Zahn, “Cyprian von Antiochien und die deutsche Faustsage” (1887). The extant fragments of these poems were edited by A. Ludwig, “Eudosia Augustia ... carminum grecorum reliquiae” (Leipzig, 1897). See also fragments in P. G., LXXXV, 832 sqq.

Another Byzantine empress of the same name (d. 494), like the above often wrongly called Eudoxia, was the daughter of the Frank general Bauto, and wife of the Emperor Arcadius, was the cause of the first and second exile of St. John Chrysostom. After the fall of the empress Euphrosyne this beautiful but proud and avaricious woman dominated Arcadius. She was the mother of Pulcheria and Theodosius II. The homily against her attributed to St. John Chrysostom (P. G., LIX, 485) is not genuine. Cf. Tilmont, “Hist. des Empereurs” (Paris, 1701), V, 785.

ADRIAN FORTESCUE.

Eudosia, a titular see of Galatia Secundus in Asia Minor, suffragan of Pessinus. Eudosia is mentioned only by Hierocles (Synecdemus, 698, 2) and Parthey (Notit. episc. I, VIII, IX). Two bishops are known, Aquila in 451 and Melas in 536 (Lequien, Or. chr., I, 498). Another is spoken of in the life of St. Theodore of Sicyon, about the end of the 5th century. The original name of the town is unknown, Eudosia being the name given to it in honour of either the mother or the daughter of Theodosius II. It was perhaps Gordium, where Alexander the Great cut the famous knot, and stood perhaps at the modern Yurme, in the vilayet of Angora. Others, however, identify Eudosia with Akkilaion, whose site is unknown, and see Germe at Yürme.

S. PÉTRIDES.

Eugendus, Saint (Augustinus; Fr. Oyand, Oyan); fourth Abbott of Condât (Jura), b. about 449, at Izernore, Ain, France-Comté; d. 1 Jan., 510, at Condât. He was instructed in reading and writing by his
father, who had become a priest, and at the age of seven was given to St. Romuald and Lupicinus to be educated at Condant, in the French Jura. Thenceforth he never left the monastery. He imitated the example of the above-named saints with such zeal that it was difficult to tell which of the two he resembled more. Eugenius acquired much learning, read the Greek and Latin authors, and was well versed in the Scriptures. He led a life of great austerity, but out of humility did not want to be ordained priest. Abbot Minausius made him his coadjutor, and after the former's death (about 400) Eugenius became his successor. Evidently, the influence of his humility remained that he had been before, a model for his monks by his penitence and piety, which God deigned to acknowledge by miracles. After the monastery, which St. Romuald had built of wood, was destroyed by fire, Eugenius erected another of stone, and improved the community life; thus far the brethren had lived in separate cells after the fashion of the Eastern ascetics. He built a beautiful church in honour of the holy Apostles Peter, Paul, and Andrew, and enriched it with precious relics. The order, which had been founded by Saint Romuald, in the Cartesianum, took on more of the character of the Western brethren; the rule of Tarantum is thought to have served as a model. Condant began to flourish as a place of refuge for all those who suffered from the misfortunes of his province, and it was a school of virtue and knowledge amid the surrounding darkness, an oasis in the desert. When Eugenius felt his end approaching he had his breast anointed by a priest, took leave of his brethren, and died quietly after five days.

A few years after his death, his successor, St. Vivien- tiolus, erected a church over his tomb, to which numerous pilgrims travelled. A town was founded, which was called, after the saint, Saint-Oyand de Joux, and which retained that name as late as the sixteenth and seventeenth centuries, while its former name of Condant passed into oblivion. But when St. Claudius had, in 687, resigned his Diocese of Besançon and had died, in 690, as twelfth abbot, the number of pilgrims who visited his grave was so great that, since the thirteenth century, the name Saint-Claude came more and more into use. It was to this that Eugenius owed his reputation. The feast of St. Eugenius was at first transferred to 2 Jan.; in the Dioceses of Besançon and Saint Claude it is now celebrated on 4 Jan.

GABRIEL MEIER.

EUGENE I-IV. Pius IX.—Eugene I, Saint, was elected 10 Aug., 654, and d. at Rome, 2 June, 657. Because he would not submit to Byzantine dictation in the matter of Monothelism, St. Martin I was forcibly carried off from Rome (18 June, 653) and kept in exile till his death (September, 655). What happened in Rome after his departure is not well known. For a time the Chalcedonian council, which met in 648, met during a vacancy of the Holy See, or during the absence of its occupant, viz., by the archbishop, the archdeacon, and the primicerius of the notaries. But after about a year and two months a successor was given to Martin in the person of Eugene (10 Aug., 654). He was a Roman of the first ecclesiastical region of the city, and was the son of Rufinianus. He had been a cleric from his earliest years, and is set down by his biographer as distinguished for his gentleness, sanctity, and generosity. With regard to the circumstances of his election, it can only be said that he was for- cibly placed on the Chair of Peter by the power of the emperor, in the hope that he would follow the imperial will, these calculations miscarried; and that, if he was elected against the will of the reigning pope in the first instance, Pope Martin subsequently acquiesced in his election (Ep. Martini xvi in P. L., LXXXVII).

One of the first acts of the new pope was to send legates to Constantinople with letters 'or the Emperor Constans II, informing him of his election, and presenting a profession of his faith. But the legates allowed themselves to be deceived, or gained over, and brought back a formal letter from Peter, the Patriarch of Constantinople (656-666), while the emperor's envoy, who accompanied them, brought offerings for St. Peter, and a request from the emperor that the pope would enter into communion with the Patriarch of Constantinople. The letter proved to be written in the most obscure style, and avoided making any specific declaration as to the number of "wills or operations" in Christ. When its contents were communicated to the clergy and people in the church of St. Mary Major, they not only rejected the letter with indignation, but would not allow the pope to leave the basilica until he had promised that he would not on any account accept it (656). So furious were the By- zantine officials at this contemptuous rejection of the wishes of their emperor and patriarch that they threat- ened to make war on the papal legates, unless all the papal letters were torn up. The pope himself, in answer to letters from all the talkers at Rome along with him, as they had advised Pope Martin I (Disp. inter S. Maxim. et Thed. in P. L., CXXIX, 654). Eugene was saved from the fate of his predecessor by his prescientful turn of mind. He took Rhodes in 654, and defeated Constans himself in the naval battle of Phoenix (655). It was almost cer- tainly this pope who received the youthful St. Wilfrid on the occasion of his first visit to Rome (c. 654). He went thither because he was anxious to know the ecclesiastical and monastic rites which were in use there. At Rome he gained the affection of Arch- deacon Boniface, a counsellor of the apostolic pope, who presented him to his master. Eugene "placed his blessed hand on the head of the youthful servant of God, prayed for him, and blessed him" (Bede. Hist. Eccles., V, 19; Eddius. In vit. Wilf., c. v). Nothing more is known of Eugene, except that he conse- crated twenty-one bishops for different parts of the world, and that he was buried in St. Peter's. In the Roman Martyrology he is reckoned among the saints of that day on the other.

EUGENE I, elected 6 June, 824; died 27 Aug., 827. On the death of Paschal I (Feb.—May, 824) there took place a divided election. The late pope had wisely endorsed to curb the rapidly increasing power of the Roman nobility, who, to strengthen their position against him, had turned for support to the Frankish power. When he died these nobles made strenuous efforts to replace him by a candidate of their own; and despite the fact that the clergy put forward a can- didate likely to continue the policy of Paschal the nobles were successful in their attempt. They selected the neophyte of the imperial household, S. Sabina on the Aventine, although by a decree of the Roman Council of 769, under Stephen IV, they had no right to a real share in a papal election. Their candidate is stated, in earlier editions of the "Liber Pontificalis", to have been the son of Boemund; but in the recent and better editions his father's name is not given. Whilst archpriest of the Roman Church he is credited with having fulfilled most conscientiously the duties of his position and after he became pope he beautified his ancient church of S. Sabina with mosaics and a marble work bearing his name as bishop of Rome in the twelfth century. Eugene is described by his biographer as simple and humble, learned and eloquent, handsome and generous, a lover of peace, and wholly occupied with the thought of doing what was pleasing to God.
The election of Eugene II was a triumph for the Franks, and they resolved to improve the occasion. Emperor Louis the Pious accordingly sent his son Lothair to Rome to strengthen the Frankish influence. Those of the Roman nobles who had been banished during the preceding reign, and who had fled to Frankland (Francia), were recalled, and their property was restored. A concordat was then agreed upon between the pope and the emperor (824). This "Constitutio Romana", in nine articles, was drawn up seemingly with a view of advancing the imperial pretensions in the city of Rome, but at the same time of weakening the power of the nobles. It de creed that those who were under the special protection of the pope or emperor were to be inviolable, and that proper obeisance be rendered to the pope and his officials; that church property be not plundered after the death of a pope; that only those to whom the right had been given by the decree of Stephen IV, in 769, should take part in papal elections; that two commissioners (missi) were to be appointed, the one by the pope and the other by the emperor, who should report to them how justice was administered, so that any minister who denied the law was to be punished. The pope, or, in the event of his not doing so, by the emperor; that the people should be judged according to the law (Roman, Salic, or Lombard) they had elected to live under; that its property be restored to the Church; that robberies which were committed in the presence of the papal see in Rome the chief officials should appear before him to be admonished to do their duty; and, finally, that all must obey the Roman pontiff. By command of the pope and Lothair the people had to swear that, saving the fidelity they had promised the pope, they would obey the Emperors Louis and Lothair; would not allow a papal election to be made contrary to the canons; and would not suffer the pope-elect to be consecrated save in the presence of the emperor's envoy.

Seemingly before Lothair left Rome, there arrived ambassadors from Emperor Louis, and from the Greeks concerning the image-question. At first the Greek emperor, Michael II, showed himself tolerant towards the image-worshippers, and their great champion, Theodore the Studite, wrote to him to exhort him "to unite us [the Church of Constantinople] to the head of the Churches of God, viz. Rome, and through it with the three Patriarchs" (Ep., II, lxxvi); and in accordance with ancient custom to refer any doubtful points to the decision of Old Rome (II, lxxvii); cf. Jaffé, pp. 253-254. Michael also exerted himself to stop the persecution of the image-worshippers, and endeavoured to secure the co-operation of Louis the Pious. He also sent envoys to the pope to consult him on certain points connected with the worship of images (Einhard, Annales, 824). Before taking any steps to meet the wishes of Michael, Louis sent to ask the pope's permission for a number of his bishops to assemble, and make a selection of passages from the Fathers to elucidate the question the Greeks had put before them. The leave was granted, but the bishops who were to act on the commission (826) were not accompanied by a staff of chroniclers worthy as showing that Eugene had at heart the advance of learning. Not only were ignorant bishops and priests to be suspended till they had acquired sufficient learning to perform their sacred duties, but it was deemed that, as in some localities there were neither masters nor zeal for learning, masters were to be attached to the episcopal palaces, cathedral churches and other places, to give instruction in sacred and polite literature (can. xxxiv). To help on the work of conversion of the North, Eugene wrote commending St. Ansger, the Apostle of the Scandinavians, and his companion, the most reverend St. Adalrich (Jaffé, 2564). Coins of this pope are extant bearing his name and that of Emperor Louis. It is supposed, for no document records the fact, that, in accordance with the custom of the time, he was buried in St. Peter's.

Eugene III, BLESSED (BERNARDO PIGNATELLI), born in the neighbourhood of Pisa, elected 15 Feb., 1145; d. at Tivoli, 8 July, 1153. On the very day that Pope Lucius II succumbed, either to illness or the wounds he had received at the Battle of Ascoli, the Roman populace would have made a determined effort to force the new pontiff to abdicate his temporal power and swear allegiance to the Senatus Populusque Romana, hastily buried the deceased pope in the Lateran and would have removed to the remote cloister of St. Crescentius on the Appian Way. But he, for fear of being deserted, they sought a candidate outside their body, and unanimously chose the Cistercian monk, Bernard of Pisa, abbot of the monastery of Tre Fontane, on the site of St. Paul's martirium. He was enthroned as Eugene III without delay in St. John Lateran, and since residence in the rebellious city was impossible, the pope and his cardinals fled to the country. Their rendezvous was the monastery of Farfa, where Eugene received the episcopal consecration. The city of Viterbo, the hospitable refuge of many of the anti-papal clergy, opened its gates to welcome him; and thither he proceeded to await developments. Though powerless in face of the Roman mob, he was assured by embassies from all the European powers that he possessed the sympathy and affectionate homage of the entire Christian world.

Concerning the parentage, birth-place, and even the original name of Eugene, each of his biographers has advanced a different opinion. All that can be assured certain is that he was born in the territory of Pisa. The name is sometimes given to Michael of Farfa, the names of Pignatelli, and whether he received the name of Bernardo in baptism or only upon entering religion, must remain uncertain. He was educated in Pisa, and after his ordination was made a canon of the cathedral. Later he held the office of vice-domus or steward of the temporalities of the diocese. In 1130 he came under the magnetic influence of St. Bernard of Clairvaux; five years later when the saint returned home from the Synod of Pisa, the vice-domus accompanied him as a novice. In course of time he was employed by his master on several points for the papal see, even with a colony of monks to repeople the ancient Abbey of Farfa; but Innocent II placed them instead at the Tre Fontane.

St. Bernard received the intelligence of the elevation of his disciple with astonishment and pleasure, and gave expression to his feelings in a paternal letter addressed to the new pope, in which he quotes the famous passage so often quoted by reformers, true and false: "Who will grant me to see, before I die, the Church of God as in the days of old when the Apostles let down their nets for a draught, not of silver and gold, but of souls?" The saint, moreover, proceeded to compose in his few moments of leisure that admirable handbook for popes called "De Considerationes". Whilst Eugene sojourned at Viterbo, Arnold of Brescia
EUGENE

(g. v.), who had been condemned by the Council of 1138 to exile from Rome and latterly returned to Rome at the beginning of the new pontificate and threw himself on the clemency of the pope. Believing in the sincerity of his repentance, Eugene absolved him and enjoined on him as penance fasting and a visit to the tombs of the Apostles. If the veteran demagogue entered upon his new role of apologist with a touch of nostalgia, he was a saintly reformer, as the visit to the tombs of the Apostles and Mains, and, for a cause which St. Bernard thought not sufficiently grave, he withdrew the pallium from the Archbishop of Reims. But if the saintly pontiff could at times be severe, this was not his natural disposition. The general model of democratic politics, based on his own principles soon caused him to revert to his former self. He placed himself at the head of the movement, and his incendiary philippics against the bishops, cardinals, and even the ascetic pontiff who treated him with extreme loyalty, worked upon the minds of the hearers into such fury that Rome resembled a city captured by barbarians. The palaces of the cardinals and of such of the nobility as held with the pope were razed to the ground; churches and monasteries were pillaged; St. Peter’s church was turned into an arsenal; and pious pilgrims were plundered and maltreated.

But the storm was too violent to last. Only an idiot could fail to understand that medieval Rome without the pope had no means of subsistence. A sinner in exile was impoverished, and the victors consisting of the principal families and their adherents, in the interests of order and the papacy, and the democrates were induced to listen to words of moderation. A treaty was entered into with Eugene by which he was preserved as subject to the papal sovereignty and swearing allegiance to the supreme pontiff. The senators were to be chosen annually by popular election and in a committee of their body the executive power was lodged. The pope and the senate should have separate courts, and an appeal could be made from the decisions of either court to the other. By virtue of this treaty Eugene made a solemn entry into Rome a few days before Christmas, and was greeted by the fickle populace with boundless enthusiasm. But the dual system of government proved unworkable. The Romans demanded the destruction of Tivoli. This town had been faithful to Eugene during the rebellion of the Romans and merited his protection. He therefore refused to permit it to be destroyed. The Romans growing more and more turbulent, he retired to Castle S. Angelo, thence to Viterbo, and finally crossed the Alps, early in 1146.

Problems lay before the pope of vastly greater importance than the maintenance of order in Rome. The Christian principalities in Palestine and Syria were in an uncertain state, and the eleventh crusade (1144) had aroused consternation throughout the West, and already from Viterbo Eugene had addressed a stirring appeal to the chivalry of Europe to hasten to the defence of the Holy Places. St. Bernard was commissioned to preach the Second Crusade, and he acquitted himself of the task with such success that within a couple of years two magnificent armies, commanded by the King of the Romans and the King of France, were on their way to Palestine. That the Second Crusade was a wretched failure cannot be denied. But it is one of those phenomena so frequently met with in the history of the papacy, that a pope who was unable to subdue a handful of rebellious subjects could hurl all Europe against the Saracens. Eugene spent three busy and fruitful years in France, intent on the propagation of the Faith, the correction of errors and abuses, and the maintenance of discipline. He sent Cardinal Brezzi to afterwards Adrian IV as legate to Scandinavia; he entered into relations with the Orientals with the view to reunion; he proceeded with vigour against the recent Manichean heresies. In several synods (Paris, 1147, Trier, 1148), notably in the great Synod of Reims (1148), canons were enacted regarding the dress and conduct of the clergy. To ensure the strict execution of these canons, the bishops who should neglect to enforce them were threatened with suspension. Eugene was intolerant in punishing the unworthy. He deposed the metropolitan of Toulouse and Mains, and, for a cause which St. Bernard thought not sufficiently grave, he withdrew the pallium from the Archbishop of Reims. But if the saintly pontiff could at times be severe, this was not his natural disposition.

“No, never”, wrote Ven. Peter of Cluny to St. Bernard, “have I found a truer friend, a sincerer brother, a purer father. His ear is ever ready to hear, his tongue is swift and mighty to advise. Nor does he卫健委 himself any name or title, but rather as an equal or an inferior... I have never made him a request which he has not either granted, or so refused that I could not reasonably complain.” On the occasion of a visit which he paid to Cluny, his former companions discovered to their joy that “he who externally alone in the pontifical robes remained in his heart an observant monk.”

The prolonged sojourn of the pope in France was of great advantage to the French Church in many ways and enhanced the prestige of the papacy. Eugene was the first who encouraged the development of a movement to which Peter Lombard had given a strong impulse. With the aid of Cardinal Pullus, his chanceller, who had established the University of Oxford on a lasting basis, he reduced the schools of theology and philosophy to better form. He encouraged Gratian in his preludium to the decretals, and entrusted him with to him various useful regulations bearing on academic degrees. In the spring of 1148, the pope returned by easy stages to Italy. On 7 July, he met the Italian bishops at Cremona, promulgated the canons of Reims for Italy, and solemnly excommunicated Arnold of Brescia, who still reigned over the Roman mob. Eugene, having brought with him considerable financial aid, began to gather his vassals and advanced to Viterbo and thence to Tusculum. Here he was visited by King Louis of France, whom he reconciled to his queen, Eleanor. With the assistance of Roger of Sicily, he forced his way into Rome (1149), and celebrated Christmas in the Lateran. His stay was not of long duration. During the next three years the Roman court wandered in exile through the Campagna while both sides looked for the intervention of Conrad of Germany, offering him the imperial crown. Aroused by the earnest exhortations of St. Bernard, Conrad finally decided to descend into Italy and put an end to the anarchy in Rome. Death overtook him just before the fall of Eugene (1152), leaving the task to his more energetic nephew, Frederick Barbarossa. The envoy of Eugene having concluded with Frederick at Constance, in the spring of 1153, a treaty favourable to the interests of the Church and the empire, the more moderate of the Romans, seeing that the days of the Arnoldists were numbered, joined with the nobles in putting down the Arnoldists, and the pontiff was enabled to spend his concluding days in peace.

Eugene is said to have gained the affection of the people by his affability, his benevolence. He died at Tivoli, whither he had gone to avoid the summer heats, and was buried in front of the high altar in St. Peter's, Rome. St. Bernard followed him to the grave (20 Aug.). “The unassuming but satutee pupil of St. Bernard”, says Gregorovius, “had always continued to wear the coarse habit of Cluny, the purple; the stoic virtues of monasticism accompanied him through his stormy career, and invested him with that power of passive resistance which has always remained the most effectual weapon of the pope.” St. Antoninus Ecumenical, of Eugene II, “one of the greatest and most afflicted of the popes”, Pius IX by a decree of 28 Dec., 1872, approved the cult which from time immemorial the Pisans have rendered to their countryman, and ordered him to be honoured.

JAMES F. LOUGHLIN.

EUGENE IV (GABRIELLO CONDULMARO, OF CONDULMERO), b. at Venice, 1382, elected 4 March, 1431; d. at Bologna, 27 July, 1447. He was the son of a wealthy Venetian family and was a nephew, on the mother’s side, of Gregory XII. His personal presence was princely and imposing. He was tall, thin, with a remarkably winning countenance. Coming at an early age into the possession of great wealth, he distributed 20,000 ducats to the poor and, turning his back upon the world, entered the Augustinian monastery of St. George in his native city. At the age of twenty-four he was appointed by his uncle Bishop of Siena; but since the people of that city objected to the rule of a foreigner, he resigned the bishopsric and, in 1408, was created Cardinal-Priest of St. Clement, an important office in the papal state. He rendered signal service to Pope Martin V by his labours as legate in Piacenza (March of Ancona) and later by quelling a sedition of the Bolognese. In recognition of his abilities, the conclave, assembled at Rome in the church of the Minerva after the death of Martin V, elected Cardinal Condulmaro to the papacy on the first scrutiny. He assumed the name of Eugene IV, possibly anticipating a stormy pontificate similar to that of Eugene III. Stormy, in fact, his reign was destined to be; and it cannot be denied that many of his troublous were owing to his own wish of tact, which alienated all parties from him. By the terms of the capitulation which he signed before election and afterwards confirmed by a Bull, Eugene secured to the cardinals one-half of all the revenues of the Church, and promised to consult with them on all questions of importance relating to the spiritual and temporal concerns of the Church and the Papal States. He was crowned at St. Peter’s, 11 March, 1431.

Eugene continued on the throne his simple routine of monastic life and gave great edification by his regularity and unfeigned piety. But his hatred of nepotism and the desire of his family to possess him into a fierce and sanguinary conflict with the house of Colonna, which would have resulted disastrously for the pope, had not Florence, Venice, and Naples come to his aid. A peace was patched up by virtue of which the Colonna surrendered their castles and paid an indemnity of 75,000 ducats. Scarcely was this danger averted when Eugene became involved in a far more serious struggle, destined to trouble his entire pontificate. Martin V had convoked the Council of Basle (q.v.) which opened with so much enthusiasm on 3 July, 1431, disturbing the spirit which was reigning at the council, Eugene, by a Bull dated 18 Dec., 1431, dissolved it, to meet eighteen months later in Bologna. There is no doubt that this exercise of the papal prerogative would sooner or later have become imperative; but it seems unwise to have taken any overt steps in the wrong direction. It alienated public opinion, and gave colour to the charge that the Curia was opposed to any measures of reform. The prelates at Basle refused to separate and, issued a decree against all the faithful with which they proclaimed their determination to continue their labours. In this course they had the assurance of support from all the secular powers. and on 15 Feb., 1432, they asserted the Gallican doctrine of the superiority of the council to the pope (see CONSTANCE, COUNCIL OF). All efforts to induce Eugene to recall his Bull of dissolution having failed, the council, on 29 April, formally summoned the pope and his cardinals to appear at Basle within three months, or to be punished for contumacy. The schism which now seemed inevitable was for the time arrested by the exertions of Sigismond, who had come to Rome to receive the imperial crown, 31 May, 1433. The pope recalled the Bull and acknowledged the council as ecumenical, 15 Dec., 1433. In the following May, 1434, a revolution, fomented by the pope’s enemies, broke out in Rome. Eugene, in the garb of a monk, and pelted with stones, escaped down the River to Ostia, whence the friendly Florentines conducted him to their city and received him with an ovation. He took up his residence in the Dominican convent of Santa Maria Novella, and sent Vitelleschi, the militant Bishop of Reccaniti, to restore order in the States of the Church.

The prolonged sojourn of the Roman Court in Florence, then the centre of the literary activity of the age,

toved Eugen. XIV

Tomb of Eugene IV

by a strong impetus to the Humanistic movement. During his stay in the Tuscan capital, Eugene consecrated the beautiful cathedral, just then finished by Brunelleschi. Meanwhile, the rupture between the Holy See and the revolutionists at Basle, now completely controlled by the radical party under the leadership of Cardinal d’Allemand, of Aries, became complete. This time our sympathies are entirely on the side of the pontiff, for the proceedings of the little coterie which assumed the name and authority of a general council were utterly subversive of the Divine constitution of the Church. By abolishing all sources of papal revenue and restricting in every way the papal prerogative, they sought to reduce the head of the Church to a mere shadow. Eugene answered with a dignified appeal to the European powers. The struggle came to a crisis in the matter of the negotiations for union with the Greeks. The majority at Basle were in favour of holding a council in France or Savoy. But geography was against them. Italy was much more convenient for the Greeks; and they declared for the pope. This so provoked the radical party at Basle that on 3 July, 1437, they issued a monumum against Eugene, heaping all sorts of accusations upon him. In reply the pope published (19 Sept.) a Bull in which he transferred the council to Ferrara. Though the council declared the Bull invalid, and threatened the pope with deposition, yet the Bull dealt a deadly blow to the adversaries of papal supremacy. The better disposed leaders, notably Cardinals Cesarini and Cuss, left them and repaired to Ferrara, where the council convened by Eugene opened, 8 Jan., 1438, under the presidency of Cardinal Albergati.
The deliberations with the Greeks lasted for over a year, and were concluded at Florence, 5 July, 1439, by the Decree of Union. Though the union was not permanent, it vastly enhanced the prestige of the papacy. The union was well received by that of the Armenians, 22 Nov., 1439, the Jacobites, 1443, and the Nestorians, 1445. Eugene exerted himself to the utmost in rousing the nations of Europe to resist the advance of the Turks. A powerful army was formed in Hungary, and a fleet was despatched to the Hellespont. The first successes of the Christians were followed, in 1444, by the crushing defeat at Varna. In the meantime, the dwindling convention at Basle proceeded on the path of schism. On 24 Jan., 1438, Eugene was pronounced suspended, and this step was followed by his deposition on 25 June, 1438, on charge of heretical conduct towards a general council. To crown their infamy, the sectaries, now reduced to one cardinal and eleven bishops, elected an anti-pope, Duke Amadeus of Savoy, as Felix V. But Christendom, having recently experienced the horrors of a schism, repudiated the revolutionary step, and, before his death, Eugene had the happiness of seeing the entire Christian world, at least in theory, obedient to the Holy See. The decrees of Florence have since been the solid basis of the spiritual authority of the papacy.

Eugene secured his position in Italy by a treaty, 6 July, 1443, with Alfonso of Aragon, whom he claimed as monarch of Naples, and after an exile of nearly ten years he made a triumphant entry into Rome, on 28 Sept., 1443. He devoted his remaining years to the amelioration of the sad condition of Rome, and to the consolidation of his spiritual authority among the nations of Europe. He was unsuccessful in his efforts to induce the French court to cancel the anti-papal Pragmatic Sanction of Bourges (7 July, 1438), and, to compensate for the absence of the skill of Enea Silvio, he gained a marked success in Germany. On the eve of his death he signed (5, 7 Feb., 1447) with the German nation the so-called Frankfort, or Princes', Concordat, a series of four Bulls, in which, after long hesitancy and against the advice of many cardinals, he recognized, nor without diplomatic reserve, the persistent German contentions for a new council in a German city, the mandatory decree of Constance (Frequens) on the frequency of such councils, also its authority (and that of other general councils) in manner of the precedents, from which he declared that he did not intend to differ. On the same day he issued another document, the so-called "Bulla Salvatorii," in which he asserted that notwithstanding these concessions, made in his last illness when unable to examine them with more care, he did not intend to do aught contrary to the teachings of the Fathers, or the rights and authority of the Apostolic See (Hergenrother-Kirsch, II, 941–2). See Pius II; GREGORY OF HEIMBURG.

JAMES F. LOUGHLIN.

**Eugenius II (the Younger), Archbishop of Toledo from 647 to 13 Nov., 657, the date of his death. He was the son of a Goth named Evantius, became a cleric in the cathedral of Toledo, and at the death of Eugenius I was elected his successor. The office was so little to his taste that he fled to Saragossa to lead a monastic life, but was forced to return to Toledo by being Chindaswinth and made an abbot. He was Pope at an early age. His numerous poems, though lacking polish and elegance, are still read. He undertook the reform of the ecclesiastical chant of the Divine Office and achieved distinction as a writer of prose and poetry. He is the author of a Latin translation of the "Seventh Day", and a letter to King Chindaswinth explaining the plan of the whole work; he also edited the liturgical "Satisfactori" of Dracorus, an account of the writer's misfortunes. Of this work Bardenhewer says (Patrologia, Tr. St. Louis, 1958, p. 619) that it is "underwent a substantial modification at the hands of Eugenius II, Bishop of Toledo, in keeping with the wish of the Visigothic King Chindaswinth (642–49); not only were the poetical form and the theology of the poem affected by this treatment, but probably also its political sentiments. It is the division that Dracorus makes to his pupil, Ezechiel Eleiga (Migne, P.L. LXXXVIII, 389–88), until the edition of Arevalo (Rome, 1791, 362–402, and 901–32) made known the original text". He also wrote a treatise on the Trinity probably against the Arian Visigoths. Ferrera mentions a letter of Eugenius to the king and one to Protausius, the Metropolitan of Tarragona, promising if possible to write a mass of St. Hippolytus and some festal sermons, but disclaiming the ability to equal his former productions.

**MARK J. MCNEAL.

**Eugenius of Carthage, Saint, unanimously elected Bishop of Carthage in 480 to succeed Decogratius (d. 445); d. 510. July 8, 510. He suffered owing to the opposition of the Arian Vandals and was only permitted by Hunicus at the instance of Zenus and Placidia, into whose family the Vandals had married. The bishop's wise government, charity to the poor, austerity of life, and courage under persecution, won the admiration of the Vandals. In his uncompromising defence of the Divinity of the
Word he was imitated by the members of his flock, many of whom were exiled with him, after he had admitted Vandals into the Catholic Church, contrary to royal edict, and had worsened in argument Arian theologians, whom the king pitted against the Catholics. Both sides claimed the name "Catholic", the Arians calling their opponents "Homousians". The conference was held some time between 411 and February, 454, and ended by the withdrawal of the chief Arian bishop on the plea that he could not speak Latin. The Arians being enraged, Huneric persecuted the Catholics, exiling forty-six bishops to Corsica, and three hundred and two to the African deserts. Among the latter was Eugenius, who under the custody of a ruffian named Antonius dwelt in the desert of Tripoli. On settling down, he wrote a letter of consolation and exhortation to the faithful of Carthage which is still extant in the works of Gregory of Tours (P. L., LVII, 769-71). Gunthamund, who succeeded Huneric allowed Eugenius to return to Carthage and permitted him to reopen the churches. After eight years of peace Thrasamund succeeded to the throne, revived the persecution, arrested Eugenius, and condemned him to death, but commuted the sentence into exile atVienne, near Albi (Languedoc), where the Arian Alaric was king. Eugenius built here a monastery over the tomb of St. Victor, where he lived the rest of his life till his death. He is said to have miraculously cured a man who was blind.

He wrote: "Expositio Fidei Catholicae", demanded of him by Huneric, probably the one submitted by the Catholic bishops at the conference. It proves the con-substantiality of the Word and Divinity of the Holy Ghost. He wrote also an "Apologiae pro Fide", "Altercatum cum Arianis", fragments of which are quoted by Victor de Vita; also pleas for the Catholics, addressed to Huneric or his successors. His letter to the king has been men with a great deal about VICTOR DE VITA. Historia persecutionis Vandalorum in P. L., LVIII; Acts SS. 13 July: GENNADIES. De sua vita illustr., c. xviii: ROMBACH. Histo. Univ. de l'Eglise Catholique (Paris, 1837), VIII, 384-406: BARENDSENKEN. Patrology, tr. SHAHAN (Freiburg, 1898), 615.

MARK J. MCNEAL.

Eugippius. See Severinus, Saint.

Eulalia of Barcelona. SAINT, a Spanish martyr in the persecution of Diocletian (12 Feb., 304), patron of the cathedral and city of Barcelona, also of sailors. The martyrdom was worked by Phebe in the twelfth century, and with elegant conciseness, by the learned ecclesiastic Renallus Grammaticus (Bol. acad. hist., Madrid, 1902, XXI, 253-55). Their chief historical source is a Latin hymn of the middle of the eleventh century, written by Quintus of Dio-II, friend and correspondent of St. Idelfonso of Toledo and of Tajo, Bishop of Saragoza. This hymn, identical with that of Prudentius (Peristephanon, III) for the feast of St. Eulalia of Merida (10 Dec., 304), was preserved in the Visigothic Church and has reached us through the Mozarabic Liturgy.

There is no reason to doubt the existence of two distinct saints of this name, despite the over-hasty and hypercritical doubts of some. The aforesaid Quiricus of Barcelona and Orunicus of Merida were present at the tenth council of Toledo (656). The latter had already founded (651) a convent of nuns close by the basilica of the celebrated martyr of his episcopal city, had written a rule for its guidance, and given it for ahs the noble lady Eugenia. Quiricus now did as much for the basilia and sepulchre of the martyr of Barcelona, and he wished his burial be in the last lines of the hymn. The inscriptions on many Visigothic altars show that they contained relics of St. Eulalia; except in the context, however, they do not distinguish between the martyr of Barcelona and the martyr of Merida. On the altar of a village of Moar, Province of Badajoz, we find enameled consecutively Sts. Fructuosus and Augurius (Tarragona), Sts. Eulalia (Barcelona), Sts. Baudilus and Nemes (Narbonne). The Visigothic archology of Eastern Spain has been hitherto poor in hagiological remains; nevertheless, the inscription found at Montagut near Bissera mentions a basilica dedicated to the martyr Sts. Vincentius, Ines, and Eulalia (of Barcelona). Until 23 Nov., 874, the body of the Barcelona martyr reposed outside the walls of the city in the church of Santa Maria del Mar. On that date both the body and the tomb were transferred to his cathedral by Bishop Froidouin. In memory of this act he set up an inscription yet preserved in the Museo Provincial de Barcelona (no. 864); see also volume XX of Flores, "España Sagrada", for a reproduction of the same inscription of long before this great act of St. Eulogius, having occasion to defend the martyr of Cordova for their spontaneous confession of the Christian Faith before the Mussulman magistrates, quoted the example of St. Eulalia of Barcelona, and referred to the ancient Acts of her martyrdom. Her distinct personality is also confirmed by the existence of an ancient church and monastery in Cordova that bear the name of the Barcelona martyr; this important evidence is borne out by the Mozarabic calendars examined by the learned Dom Feronti (below).

Eulalia, Anti-pope. See Boniface I.

Eulogia (Greek εὐλογία, "a blessing").—The term has been applied in ecclesiastical usage to the object blessed. It was occasionally used in early times to signify the Holy Eucharist, and in this sense is especially frequent in the writings of Sts. Cyril of Alexandria. The origin of this use is doubtful to be found in the words of St. Paul (I Cor., 10, 16): τὸ πνεῦμα τῆς εὐλογίας τῶν ἑλεομένων. But the more general use is for such objects as bread, wine, etc., which was customary to distribute after the celebration of the Divine Mysteries. This is read on the Monstrance of St. Augustine (De peccat. merit., ii, 26), was customarily distributed in his time to catechumens, and he even gives it the name of sacramentum, as having received the formal blessing of the Church: "Quod aoe sperantur catechumeni, quod aoe est corpus Christi, sanctum tamen est et sanctum quae est corpus alimur, quoniam sacramentum est" (What the catechumens receive, though it is not the Body of Christ, is holy—holier, indeed, than our ordinary food, since it is a sacrament). For the extension of this custom in later ages, see Antidoron; Bread, Liturgical Use of.

The word eulogia has a special use in connexion with monastic life. In the Benedictine Rule monks are forbidden to receive "litteras, eulogias, vel quilibet munuscula" without the abbot's leave. Here the word may be used in the sense of blessed bread only, but it seems to have a wider significance, and to designate any kind of present. There was a custom in monasteries of distributing in the refectories, after Mass, the eulogiae of bread blessed at the Mass.

Eulogius of Alexandria, Saint, patriarch of that see from 550 to 607. He was a successful combatant of the heretical errors then current in Egypt, notably the various forms of Neoplatonism. He was a
warm friend of St. Gregory the Great, corresponded with him, and received from that pope many flattering expressions of esteem and admiration. Among other mentions, he speaks of the primacy of the Roman See (Baronius, Ann. Ecol., ad an. 597, no. 9) Eulogius refuted the Novatians, some communities of which ancient sect still existed in his diocese, and vindicated the hypostatic union of the two natures in Christ, against both Nestorius and Eutyches. Baronius (ad ann. 600, no. 6) says that Gregory wished Eulogius to survive him, recognizing in him the voice of truth. It has been rightly said that he restored for a brief period to the church of Alexandria that unity of youthful vigor and character which those churches once which remained closely united to Rome. Besides the above works and a commentary against the various sects of the Monophysites (Severians, Theodosians, Calinites, Acephali) he left eleven discourses in defense of Leo I and the council of Chalcedon, also a work against the Agnoeta, submitted by him before publication to Gregory I, who after some observations authorized it unchanged. With exception of one sermon and a few fragments all the writings of Eulogius have perished. E. McNeail, The life and works of Eulogius of Alexandria (London, 1850), II, 46-52; Bardeghewer, Paralogue, tr. Sina— (Freiburg and St. Louis, 1905). Of extant fragments of the writings of Eulogius are in F. G. LX XXXVI (5) 593-64.

M. J. McNeail

Eulogius of Cordova, Saint. Spanish martyr and writer who flourished during the reigns of the Cordovan Caliphs, Abd-er-Rahman II and Mohammed I (822-886). It is not certain on what date or in what year of the ninth century he was born; it must have been previous to 819, because in 845 he was a priest highly esteemed among the Christians of Catalonia and Navarre, and priesthood was then conferred only on men thirty years of age. The family of the saint was of the nobility and held land in Cordova from Roman times. The Muslim rulers of Spain, at the beginning of the eighth century, tolerated the creed of the Christians and left them, with some restrictions, their civil rule, ecclesiastical hierarchy, monasteries, and property, but made them feel the burden of subjection in the shape of pecuniary exactions and military service. In the large cities like Toledo and Cordova, the civil rule of the Christians did not differ from that of the Visigothic epoch. The government was exercised by the comex (count), president of the council of senators, among whom we meet a similarly named ancestor of Eulogius. The saint, like his five brothers, was educated with his blood birth and under the guardianship of his mother Isabel. The youngest of the brothers, Joseph, held a high office in the palace of Abd-er-Rahman II; two other brothers, Alvarus and Isidore, were merchants and traded on a large scale as far as Central Europe. Of his sisters, Nidia and Anulodes, the first remained with her mother; the second was educated from infancy in a monastery where she later became a nun.

After completing his studies in the monastery of St. Zollis, Eulogius continued to live with his family the better to care for his mother; also, perhaps to study with famous masters, one of whom was Abbot Speinadeo, an illustrious writer of that time. In the meantime he found a friend in the celebrated Alvarus Paulus, a fellow-student, and they cultivated together all branches of science, sacred and profane, within their reach. Their correspondence in prose and verse filled volumes; later they agreed to destroy it as too exuberant and lacking in polish. Alvarus married, but Eulogius preferred the ecclesiastical career, and was finally ordained priest by Bishop Robert of Cordova. Alvarus has left us a portrait of his friend: "Devoted", he says, "from his infancy to the Scriptures, and growing daily in the practice of virtue, he quickly reached perfection, surpassing in knowledge all his contemporaries, and became the leader of his masters. Mature in intelligence, though in body a child, he excelled them all in science even more than they surpassed him in years. Fair in feature (durus vultu), honest and honourable, he shone by his eloquence, and yet more by his works. What books escaped his avidity for reading? What works of Catholic writers, of heretics and Celsian philosophers? Poets, historians, rare writings, all kinds of books, especially sacred hymns, in the composition of which he was a master, were read and digested by him; his humility was none the less remarkable and the judgment of others less learned than himself. This humility showed particularly on two occasions. In his youth he had decided to make a foot pilgrimage to Rome; notwithstanding his great fervour and his devotion to the sepulchre of the Prince of the Apostles (a notable proof of the union of the Mosarabie Church with the Holy See), he gave up his project, yielding to the advice of prudent friends. Again, during the Saracen persecution in 850, after reading a passage of the works of St. Epiphanius he decided to refrain for a time from reading any other author of heretical books on account of the cause of the martyr; however, at the request of his bishop, Saul of Cordova, he put aside his scruples. His extant writings are proof that Alvarus did not exaggerate. They give an account of what is most important from 848 to 859 in Spanish Christianity, both within and without the Muslim dominions, especially of the lives of the martyrs who suffered during the Saracen persecution, quidam paras ipsa magna fut. He was elected Archbishop of Toledo shortly before he was beheaded (11 March, 859). He left a perfect book on the Christian doctrine as defended, the intellectual culture which he propagated, the imprisonment and sufferings which he endured; in a word, his writings show that he followed to the letter the exhortation of St. Paul: "Imitatores mei caste scitudo e quo Christi. He is buried in the cathedral of Oviedo.

F. Vita

Eumenia, a titular see of Phrygia Pacatiana in Asia Minor, and suffragan to Hierapolis. It was founded by Emperor Marcianus II Phocas. It is situated near the sources of the Clodrus and near the Glaucus, on the site of the modern Ishekli, the centre of a nabié in the vilayet of Brusa (1000 inhabitants). The new city was named by its founder after his brother Eumenes. Numerous inscriptions and many coins remain to show that Eumenes built an important and prosperous city under Roman rule. On its coins it boasts of its Achaean origin. The spread of Christianity is, however, the most interesting fact in its history. As early as the third century its population was in great part Christian, and it seems to have suffered much during the persecution of Diocletian. Its bishop and martyr, St. Thrasaeus (Euseb., H. E., X, 29), must belong to this period. Another bishop, Metrodorus, known by an inscription, lived probably soon after Emperor Constantine. Four other bishops are known by their subscription to the synods of councils—Theodore in 361, Leo in 787, Paul and Euphronius in 879 (Lequen, Oriens christ., I, 807). The see is mentioned in the "Notitia episcopatum" as late as the twelfth or thirteenth centuries.

S. Petriolos
EUNOMIANISM

Eunomianism, a phase of extreme Ariarian prevalent amongst a section of Eastern churches from about 350 until 381; as a sect it is not heard of after the middle of the fifth century. The teaching of Arius is called "Arianism," but it is more often called "Eunomianism." The word homoeousian adopted as the touchstone of orthodoxy. The subsequent history of the Arius heresy is the history of the endeavours to arianise sympathizers to get rid of the obnoxious word. The diplomacy of court intrigues forms the dark background against which stand out Eusebians and Semi-Arians. Imperial influence had been all-powerful too long in the official religion to allow imperial inerence in church affairs to cease with the imperial change of attitude towards Christianity. That influence was exercised through the court prelates tinged with the fundamental rationalism underlying Arianism. They skillfully avoided the real issue, represented the whole affair as merely a question of the propriety of using particular terms, and for a time deluded those who were unfamiliar with the metaphysics of the question. St. Athanasius was represented as a political fire-brand whose watchword was homoeousian. The Emperor Constantius (337-361), to his great personal annoyance, was obliged to allow Athanasius to return from his second exile (339-346) to Alexandria (31 Oct., 346). His influence is known of Eusebius, who clearly points out that Eus- nasius was due to the political circumstances arising out of the disastrous Persian War and the civil war against Maxentius; and it was until not until the victory of Mount Seleucia (13 Aug., 363) that the emperor's hands were freed.

In the meantime a new and more defiant Arian school was arising, impatient of diplomacy, and less pliant to imperial dictation. It frankly returned to the fullest expression of the errors of Arius, and sought to defend it on the rationalizing basis of Aristotelian dialectics. The history of the new school coincides with the life-history of Aetius and Eunomius. Aetius, its founder, successively a goldsmith, physician, and grammarian, turned his attention to theology under Arian influences at Antioch and Alexandria. Aristotle's categories henceforth formed the limits of his knowledge, and the abuse of the sylogism his principal weapon. Ordained deacon at Antioch in 350, he was deposed by Leontius and sought refuge at Alexandria, where he found a disciple in Eunomius. Radical and uncomproemising with their identification of the Son in substance with the Father, Aetius and Eunomius was the same as the Eunomians and Anomoeans. Their doctrines were received favourably by Eudoxius of Antioch and the Synod of Antioch in 356; but the formulation of their tenets produced a reaction, and in the same year they were condemned by the Semi-Arians at Ancyras and in the Third Synod of Sirmium, and the leaders were exiled for a short time to Persia. They reappeared, however, at the Semi-Arian Synod of Seleucia (Sept., 359), where Acacius of Caesarea rejected the assertion and the triumph of the Homoeans led to the exile of Aetius to Mopsuestia in Cilicia and later to Ambiada in Phrygia. After 360 the Anomoean Arians ceased to be formidable. Julian the Apostate (361-363) allowed Aetius to return; he was rehabilitated in an Arian synod, and died c. 370. Meanwhile Eunomius was teaching the Son and Father distinct in being, the doctrine of the Son. His flock appealed to Constantine, who obliged Eudoxius to take action against him. Deposed in his absence and banished, Eunomius found a sort of his own church in the bishopric of the Eunomians. Julian recalled both Aetius and Eunomius, who acquired considerable importance in Constantinople. The Synod of Antioch, 362, explicitly set forth the Anomoean doctrine that "the Son is in all things unlike the Father." The orthodox, therefore, begin the history of Eunomianism without the beginning of the beginning of Eunomianism. The sectaries were excluded from the benefit of Gratian's edict of toleration (end of 378), were directly condemned by the Council of Constantinople (381), and were the objects of special repressive measures in addition to those directed against Arius and heretics in general. Moreover, disruptive forces were at work within the sect. Eunomius died about 386, and for all practical purposes the sect may be said to have died with him.

The dogmatic system of Eunomius is characterized at once by its presumptuous dialectics and its shallowness. His errors concerning Christ are founded upon his erroneous theology, which involves the assertion that a God of simplicity cannot be a God of mystery at all, for even man is as competent as God to comprehend simplicity. Eunomius proclaims the absolute intelligibility of the Divine Essence: "God knows no more of His own substance, than we do; nor is this more known to Him, and less to us: but whatever we know about the Divine Substance, that is the same thing that God Himself knows about. Whatever He knows, the same also you will find without any difference in us" (Socrateis, Hist. Eoes., IV, vii). Apollonius, he maintains, perfectly expresses the Divine Essence: as the Unbegotten, God is an absolutely simple being: an act of generation would involve a contradiction of His essence, by introducing duality into the Godhead. The Father is kyriotexitous, the Son kyriotexitous; hence, he held, there must be diversity of substance. The general line of his sophistical reasoning against the Orthodox was as follows: You allow kyriotexitous to be a Divine attribute. Now the simplicity of God excludes all multiplicity of attributes. Consequently kyriotexitous is the only attribute which befits the Divine nature, the only one therefore essential to Him. In other words, God is essentially incapable of being begotten. Hence it is folly to speak of a God begotten, of a Son of God. The one God, kyriotexitous and koukousia, unbegotten and without beginning, could not communicate His own substance, nor beget even a consubstantial Son; consequently there must be two distinct and independent substances (hypostases) or of likeness of substance (homoeousian) between the Father and the Son. There could be no essential resemblance (koukousia), but at most a moral resemblance. For the Son is a being drawn forth from nothing by the will of the Father, yet superior to all Creation inasmuch as He alone was created by the One God to be the Creator of the world. He does not share in the incommunicable Divine Essence (bosia), but he does partake in the communicable Divine creative power (koukousia), and it is that partaking which constitutes the Son's Divinity and establishes Him, as regards creation, in the position of Creator: and as the principle of paternity in God is not the bosia but the koukousia, the sense in which the term Son of God may be used is clear.

The works of Eunomius are of less importance in themselves than in the fact that they called forth the best efforts of St. Basil and St. Gregory of Nyssa. His Commentary on the Romans and his letters have perished. His "Apologisticus" (P. G., XXX, 839), written before 365, seeks to refute the Nicene teaching concerning the Son and Father, the Eunomian doctrine of the Son. It is extremely obscure, and has been frequently misunderstood. For example, Tillmont, VI, 501-516, needs careful checking. It was against this work of Eunomius that St. Basil wrote his "Adversus Eunomium" (183). His work on the Virgin (It is clear, however, that books IV and V are from another pen.) Eunomius retorted with his "Antidotea"
EUPHROSYNE

EUPHROSYNE

ovis áρειτας (Defence of the Defence), written after the death of St. Basil (1 Jan., 379), wherein he does his best to defend more fully and by new arguments his teaching concerning the nature of God. This work was elaborately refuted by St. Gregory of Nyssa in his lengthy 'Adversus Eunomium', of which several fragments have been preserved and the fragmentsary remains of the 'Αρειτας, which are gathered in Retzbeg's "Marecelliana" (Göttingen, 1794, pp. 124-147). A very full analysis of it is found in Diekamp, "Gotteslehre des hl. Gregor von Nyssa" (1896), I, 123 sqq. The third extant work is his "De Veritate" or "Confession of Faith", presented by order to the Emperor Theodosius in 383. (See Arianism.)

EDWARD MYERS.

Euphemia, Mother Superior Sisters of Charity. See Blenkinsop, Peter.

Euphemiotes. See MESSALIANS.

Euphemius of Constantinople (490-496) succeeded as patriarch Flavitas (or Fravitas, 489-490), who succeeded Acacius (471-489). The great Acacian schism (484-519), therefore, lasted during his reign. The Emperor Theodosius II (401) had published a codex called the "Henotikon" (482) that forbade in the current theological discussions any other criterion but that of Nicea-Constantinople (ignoring the decrees of Chalcedon), carefully avoided speaking of Christ's two natures, and used ambiguous formule that were meant to conciliate the Monophysites. The "Henotikon" really satisfied no one. Consistent Monophysites disliked it as much as Catholics. But Acacius at the capital, Peter Mongus of Alexandria, and Peter Fallo (Grapheus) of Antioch, signed it. Pope Felix III (or II, 485-492) in a Roman synod of sixty-seven bishops (484) condemned the emperor's decree, deposed and excommunicated Acacius, Peter Mongus, and Peter Fallo. Acacius retired by striking the pope's name from his diplomas and persecuted Catholics at Constanti- nople. When he died, Flavitas, his successor, appointed the position at Rome by lot in vain, since he would not give up communion with Peter Mongus. Euphemius recognized the Council of Chalcedon, restored the pope's name to his diplomas, and broke with Peter Mongus, who died in the year of Euphemius's succession (490). He was therefore a well-meaning person who wanted to restore the communion with the Holy See. Unfortunately he still refused to erase the names of his two predecessors (Acacius and Flavitas) from the diplomas, where they occurred among the faithful departed. The pope insisted that heretics and fa- vorers of heresy should not be prayed for publicly in the Liturgy; so during the reign of the Euphemius the union he desired was not brought about. But Euphe- mius was always a Catholic at heart. Before the acces- sion of the Emperor Anastasius I (491-518) he had made him sign a Catholic profession of faith (Evagrius, P. L., LXXI, 253). After the death of Pope Felix, Euphemius wrote to his successor, Gelasius I (492-496), again asking for intercommunion on any terms but the condemnation of Acacius. This time, too, the pope re- fused to modify his condition (Gelasii Epist. et Decret. P. L., LXXI, 253). The patriarch had already summoned Peter Mongus to Constantinople in which he confirmed the decrees of Chalcedon (Mansi, VII, 1180). Eventually he fell foul of the emperor. A war against the Bulgars and Slavs was then going on, and Euphemius was accused of treason by revealing the emperor's plans to his enemies. A soldier tried, unsuccessfully, to mur- der the patriarch, apparently by order of Anastasius. The emperor further wanted to have back his written profession of faith, which Euphemius refused to give up. So he was deposed (496) in spite of the resistance of the people, and Macedonius II (496-511) was ap- pointed successor. This Macedonius tended to have been unwilling to take his place and refused to wear patri- archal vestments in his presence. Euphemius was exiled to Asia Minor and died in 515 at Ancyra. He was recognized to the end as lawful patriarch by the Church of the East (Elias of Jerusalem, Flavian of Antioch, etc.).

ADRIAN FORTESCUE.

Euphemia, or Euphraxia, Saint, Virgin, b. 380; d. after 410. She was the daughter of Antigonus, a senator of Constantinople, and a relation of Emperor Theodosius. Her father died shortly after her birth, and her mother also, Euphemia, devoted her life thenceforth exclusively to the service of God. To carry out her ideal she abandoned her childhood, with her seven-year-old daughter, repaired to Egypt, where she dwelt on one of her estates, near a convent, and adopted the nun's austere mode of life. This example aroused in her daughter the desire to enter the convent, and her mother gave her the means to do so, to the extent that she might be trained in the religious life. After her mother's death she declined an offer of marriage made, by the Emperor Theodosius, on behalf of a senator's son, transferred to the emperor her entire fortune, to be used for charitable purposes, and took up, with a holy ardor, the rigorous practices of Christian perfection. She was about thirty when she died. Her feast is celebrated in the Greek Church on 25 July, and in the Latin Church on 13 March. She is mentioned by St. John Damascene, in his third "On- tio de imaginibus".

Euphrates. See PARATHE.

Euphrosyne, Saint, d. about 470. Her story belongs to the group of legends which relate how Chris- tian virgins, in order the more successfully to lead the life of celibacy and asceticism to which they had dedi- cated themselves, put on male attire and passed for men. According to the narrative of her life in the "Ita Patrum" Euphrosyne was the only daughter of Paphnutius, a rich man named, who married her to a wealthy youth. But having conse- crated her life to God and apparently seeing no other means of keeping this vow, she clothed herself as a man and under the name of Smergadus gained admis- sion into a monastery of men near Alexandria, where she lived for thirty-eight years after. She soon attracted the attention of the abbot by the rapid strides which she made toward a perfect ascetic life, and when Paphnutius appealed to him for comfort in his sorrow, the abbot commended the latter to the care and received from his own daughter, whom he failed to rec- ognize, helpful advice and comforting exhortation. No until she was dying did she reveal herself to him as his lost daughter Euphrosyne. After her death Paphnutius also entered the monastery. Her feast is celebrated in the Greek Church on 25 September, in the Roman Church on 16 January (by the Carmelites on 11 February).

J. P. KIRSCH.
EUROPE. 607

Europe, a titular see of Epirus Vetus in Greece, suffragan of Nicopolis. Europe is mentioned by Hierocles (Synecdedem, 651, 6). Justinian transferred its inhabitants to an islet in a neighbouring lake and built there a strong city (Procop., De edific., IV, 1). We know five bishops of Eurus; the first, St. Donatus, flourished in the 4th century. The name is mentioned in a letter of Pope St. Gregory the Great about 603 (Lequien, Or. christ., II, 143). The site of the city is unknown; Lequien identifies it with Paramythis, which is called At Donat (St. Donatus) by the Turks, in the vilayet of Janina. Others have placed it at Limbendi, now known to be Phocaea, on the coast of Asia Minor, at Janina itself.

P. H. P. T. L. (1852, II, 308) and Phil. V. N. (1892, II, 308) have also divided the region into two chains; of these the middle one passes into the Hungarian plain; the Carpathian and Balkan ranges unite in a great bend with the northern chain, and the southern one is continued by the Dinaric Alps and the western chains of the Balkan Peninsula as far as Crete and the south-western part of Asia Minor. Numerous islands belong to the Continent of Europe. The separation of the islands from the mainland arose in two ways. In the north and west, the encroachment of the sea produced bays and peninsulas and formed islands. In the south, the western and eastern basins of the Mediterranean, those of the Adriatic and Aegean Seas, the Sea of Marmora, and the southern part of the Black and Caspian Seas, were formed by folding; and in this way also were formed the Iberian, Spanish, and Italian peninsulas, lying between Greece and Asia Minor. The rivers of Europe belong to three different basins, namely, to the Caspian Sea, the Atlantic Ocean, including the Mediterranean and Black Seas, and the Arctic Ocean.
