(d) The Nympheon.—They possessed a special Gnostic sacrament of the bridechamber (νυμφαῖο) in which, through some symbolical actions, their souls were wedded to their angels in the Pleroma. Details of its rites are not as yet known. Tertullian, no doubt alluded to them in the words "Elenismus fecerunt lenocinia." (e) The Magic Vowels.—An extraordinary prominence is given to the utterance of the vowels: αείων. The Saviour and His disciples are supposed in the midst of their sentences to have broken out in an invariable gibberish of only vowels; magic spells have come down to us consisting of vowels by the fourscore; on amulets the seven vowels, repeated according to all sorts of artificial, form a very common inscription. Within the last few years these Gnostic vowels, so long a mystery, have been the object of careful study by Ruelle, Poiree, and Leclercq, and it may be considered proven that each vowel represents one of the seven planets, or archons; that the seven together represent the Universe, but without consonants they represent the Ideal and Infinite not yet imprisoned and limited by matter; that they represent a musical scale, similar to the Gregorian 1 tone re-re, or d, e, f, g, a, b, c, and many a Gnostic sheet of vowels is in fact a sheet of music. But research on this subject has only just begun. Among the Gnostics the Orthos were particularly fond of representing their cosmogonic speculations by diagrams, circles within circles, squares, and parallel lines, and other mathematical figures combined, with names written within them. How far these Gnostic systems were used as symbols in their liturgy, we do not know.

SCHOOLS OF Gnosticism.—Gnosticism possessed no central authority for either doctrine or discipline; considered as a whole it had no organization similar to the vast organization of the Catholic Church. It was but a large conglomerate of different sects, of which Marcionism alone attempted in some way to rival the constitution of the Church, and even Marcionism had no unity. No other classification of these sects is possible than that according to their main trend of thought. We can therefore distinguish: (a) Syrian or Semitic; (b) Hellenistic or Alexandrian; (c) dualistic; (d) antinoian Gnostics.

(a) The Syrian School.—This school represents the oldest phase of Gnosticism, as Western Asia was the
birthplace of the movement. Doëtichus, Simon Magus, Menander, Cerinthus, Cerdo, Saturninus Justin, the Bardesanes, Severians, Ebionites, Encratites, Ophites, Naassenes, the Gnostics of the Acts of Thomas, the Sethians, the Perate, the Caimites may be said to be attached to this school. The more fantastic elements and elaborate genealogies and sorozygies of the later Gnosis are still absent in these systems. The terminology is some barbarous form of Semitic: Egypt is the symbolic name for the soul's land of bondage. The opposition between the good God and the Old-Creator is not eternal or cosmic; though there is strong ethical opposition to Jehovah the God of the Jews. He is the last of the seven angels who fashioned this world out of eternally pre-existent matter. The demigurges attempt, to create man, created but a miserable worm, to which the Good God, however, gave the spark of divine life. The rule of the god of the Jews must pass away, for the good God calls us to his own immediate service through Christ his Son. We obey the Supreme Deity by abstaining from flesh meat and marriage, and by leading an ascetic life. Such was the system of Saturninus and Donatus, who taught that sinning did good (A. p. 120). The Naassenes (from Nahag wnyi, the Hebrew for serpent) were worshippers of the serpent as a symbol of wisdom, which the God of the Jews tried to hide from men. The Ophites (vpwusel, from φίδας, serpent), who, when transplanted on Alexandrian soil, supplied the main ideas of Valentinianism, were one of the most widely spread sects of Gnosticism. Though not strictly serpent-worshippers, they recognised the serpent as symbol of the supreme emanation, Aemamoth or Divine Wisdom. They were styled Gnostics par excellence. The Sethians saw in Seth the father of all spiritual (wswusel) men; in Cain and Abel the father of psychic (tvpyseel) and hylic (dvoel) men. According to the Perate there exists a trinity of Father, Son, and Hyle (Matter). The Son is the Cosmic Serpent, who freed Eve from the power of the ruler of Hyle. The universe they visualised by a triangle enclosed in a circle. The number three is the key to all mysteries. There are three supreme principles: the not-generated, the self-generated, the generated. There are three logos, or gods; the Saviour has a threefold nature, a threefold body, threefold power, etc. They are called Perates (vwpv) because they have “crossed over” out of Egypt into the Red Sea (Num. 14.29) and become the true Hebrews, in fact (hny, to cross over). The Perate were founded by Euphrates and Celbes (Aeombe?) and Ademes. This Euphrates, whose name is perhaps connected with the name Perate itself, is said to be the founder of the Ophites mentioned by Celsus about A. p. 175. The Caimites were so called because they venerated Cain, and Essu, and the Sodimites, and Core, and Judas, because they had all resisted the god of the Jews.

(b) The Hellenistic or Alexandrian School. — These systems were more abstract, and philosophical, and self-consistent than the Syrian. The Semitic nomenclature is entirely lost. The cosmicogonic problem had outgrown all proportions, the ethical side was less prominent, asceticism less strictly enforced. The two great thinkers of this school were Basilides and Valentinus. Though born at Antioch, in Syria, Basilides founded his school at Alexandria (c. A. D. 180), and was followed by his schoolmen. The cosmicogonic idea was the most consistent and sober emanationism that Gnosticism ever produced. His school never spread so widely as the next to be mentioned, but in Spain it survived for several centuries. Valentinus, who taught first at Alexandria and then at Rome (c. A. D. 180), elaborated a system of sexual duality, a rejection; a long series of male and female pairs of personified ideas is employed to bridge over the distance from the unknown God to this present world. His system is more confused than Basilidianism, especially as it is disturbed by the intrusion of the figure or figures of Zelus in the cosmicogonic process. Being Syrian Ophitism in Egyptian guise, it can claim the lusty and licentious spirit of the Gnostic spirit. The reductio ad absurdum of these unbridled speculations can be seen in the Pistas Sophia, in which light-maidens, paralemptores, spheres, Heirmarmene, thirteen sons, light-treasures, realms of the midst, realms of the right and of the left, Jaldabaoth, Adama, Michael, Gabriel, archangels, the Saviour, and mysteries without number; whish perhaps is like witches in a dance. The impression created on the same reader can only be fitly described in the words of "Jabberwocky": “gyre and gimble on the wabe”.

We learn from Hippolytus (Adv. Haer., IV, xxxv), Tertullian (Adv. Val., iv), and Clemens Alex. (Exc. ex Theod., title) that there were two main schools of Valentinianism, the Italian and the Alexandrian or Asiatic. In the Italian school were teachers of note: Secundus, who divided the Ogdoad within the Pleroma into two tetrads, Right and Left; Epiphanes, who described this Tetract as Monotes, Monotes, Mones, and Monotes (cf. also Carp., 8, and Paschasius, in a misreading of Kol Arba vno yz "All Four"). But the most important were Ptolemy and Heraclenus. Ptolemy is especially known by his letter to Flora, a noble lady who had written to him as Roman Presbyter (Texte u. Unters., N. S., XIII, Anal. z. alt. Gesch. d. Chr., p. 1, a fragment of his commentary on St. John to combating Heraclenon's commentary on the same Evangelist. Heraclenon called the source of all being Anthropos, instead of Bythos, and rejected the immortalitv of the soul—meaning, probably, the merely psychic element. He apparently stood nearer to the Christian Church than ValenIony and was a man of better judgment. Tertullian mentions two other names (Valent., iv), Theotinus and (De Carne Christi, xvii) Alexander. The Anatolian school had as a prominent teacher Alexiatus (Tertul., Adv. Val., iv; Hipp., Adv. HAer., VI, 6, 12), who had his school at Hierapolis. Tertullian calls this school the "master's most faithful disciple". Theodotus is only known to us from the fragment of his writings preserved by Clement of Alexandria. Marcus the Conjuror's system, an elaborate speculations with ciphers and numbers, is given by Ireneus (I, 11-12) and also by Hippolytus (VI, 15). Ireneus's account of Marcus was repudiated by the Marcionists, but Hippolytus asserts that they did so without reason. Marcus was probably an Egyptian and a contemporary of Ireneus. A system not unlike that of the Marcionians was worked out by Monoimus the Arabian, to whom Hippolytus devotes chapters v to vii of Book VII, another is mentioned by Alexander the Hegesippian. Hippolytus justified right in calling these two Gnostics inferior imitations of Pythagoras rather than Christians. According to the Epistles of Julian the Apostate, Valentinian collegia existed in Asia Minor up to his own times (d. 363).

(c) The Dualistic School. — Some dualism was indeed congenial with Gnosticism, yet it rarely did it overcome the main tendency of Gnosticism, e. g. Pantheism. This, however, was certainly the case in the system of Marcion, who distinguished between the God of the New Testament and the God of the Old Testament, as between two eternal principles, the first being Good, θεότης, the second merely Φεός, or just; yet even Marcion did not carry this system to its ultimate consequences. He may be considered rather as a forerunner of Mani than a pure Gnostic. Three of his
disciples, Pottius, Basiliscus, and Lucanus, are mentioned by Eusebius as being true to their master's dualism (H. E., V, xii), but Apelles, his chief disciple, though he went farther than his master in rejecting the Old Testament,-chevroned it only by the notion of the Logos: considering the inspirer of Old-Testament prophecies to be not a god, but an evil angel. On the other hand, Synesius and Prepon, also his disciples, postulated three first principles. A somewhat different dualism was taught by Hermogenes in the beginning of the second century (who, according to the Pseudepigrapha, was the Pistoris Sophia); also many books under the name of "Bith", "Revelations of Adam", Apocryphal Gospels attributed to Apostles; an Apocalypse of Elias, and a book called "Genna Mariae". Of these writings some revelations of Adam and Seth, eight in number, are not sharply extant, nor are the enemies of the Christian Church divided in the Mechitarist collection of Old-Testament apocrypha (Venice, 1806). See Freuchen, "Die apocryph. Gnost. Adameschr." (Gieszen, 1900). The Caimites possessed a "Gospel of Judas", an "Ascension of Paul" (ο αναστήσεως Παύλου), and some other book, of which we do not know the title, but which, according to Epiphanius, was full of wickedness. The Prdocians, according to Clem. Alex., possessed apocrypha under the name of Zoroaster (Strom., I, xv, 69). The Antinomians had an apocryphon "full of audacity and wickedness" (Strom., III, iv, 29; Origen, "In Math.," Aegypt). The Niketas Bonosius makes a large number of apocalypses largely quotes of which we do not know the title. It contained a commentary on Bible texts, hymns, and psalms. The Peraeata possessed a similar book. The Sethians possessed a "Paraphrasis Seth", consisting of seven books, explanatory of their system, a book called "Apologeton, or "Foreigners", an "Apocryphon of the Apocalypse of Simeon", a book attributed to the Apostles, and others. The Archontians possessed a large and small book entitled "Symphonia": this is possibly extant in Pitra's "Analecta Sacra" (Paris, 1888). The Gnostics attacked by Plotinus possessed apocrypha attributed to Zoroaster, Zostrian, Nicotheus, Allogon (the Sethian Books in Bezae, 21), and tantanta.

In addition to these writings the following apocrypha are evidently of Gnostic authorship: (1) "The Gospel of the Twelve".—This is first referred to by Origen (Hom. i, in Luc.). It is identical with the so-called Ebristheon, and is also called the "Gospel according to Matthew", because in it Christ refers to St. Matthew in the second person, and the author speaks of the other Apostles and himself as "we". This Gospel was written before a.d. 200, and has no connexion with the so-called Hebrew St. Matthew or the Gospel according to the Hebrews. (2) The "Gospel according to the Egyptians", which is so called from Egypt, not Alexandrians. It was written about a.d. 150 and referred to by Clem. Alex. (Strom., III, ii, 63; xi, 93) and Origen (Hom. i, in Luc), and was largely used in non-Catholic circles. Only small fragments are extant in Clem. Alex. (Strom. and Excerpt. of Theod.). Some people regard their origin as the work of "Logios" and the Strasbourg Coptic papyrus to this Gospel, but this is a mere guess. (3) "The Gospel of Peter", written about a.d. 140 in Antioch (see Docetism). About another Petrine Gospel, see description of the Ahmad Codex. (4) A "Gospel of Matthias" written about a.d. 125, ascribed to Matthias, a "Gospel of Thomas". According to the Pseudepigrapha, the three Apostles Matthew [read Matthias], Thomas, and Philip received a Divine commission to report all Christ's revelations after His Resurrection. The Gospel of Thomas must have been of considerable length (1300 lines); part of it, in an expurgated recension, is possibly extant in the once popular, but vulgar and foolish, "Stories of the Infancy of Our Lord by Thomas, an Israelite philosopher", of which two Greek, a Latin, a Syriac, and a Slavonic version exist. (6) Acts of Peter (ὁ Πέτρος ἔργα), written about a.d. 165. Large fragments of this Gnostic production have been preserved to us in the original Greek and also in a Latin translation under the title of "Martysdom of the Holy Apostle Peter", to which the Latin adds, "a Lino episcopo conscriptum". Greater
portions of this apocryphon are translated in the so-called "Acta Petri cum Simone", and likewise in Sahidic and Slavonic, and also in Ethiopic versions. These fragments have been gathered by Lipsius and Bonnet in "Acta apostolorum apoc." (Leipzig, 1891), I. Though these recensions of the "Acts of Peter" have been somewhat Catholicized, their Gnostic character is unmistakable, and they are of value for Gnosticism. (7) Close connected versions of the "Acts of Peter" are the "Acts of Andrew" and the "Acts of John", which three have perhaps one and the same author, a certain Leucius Charinus, and were written before A.D. 200. They have come down to us in a number of Catholic recensions and in different versions of the Acts of Andrew see Lipsius, "Acts", as above (1898), II, 1, pp. 111-127; for "Acts of John", ibid., pp. 151-216. To find the primitive Gnostic form in the bewildering variety and multiplicity of fragments and modifications is still a task for scholars. (8) Of paramount importance for the understanding of Gnosticism are the "Acts of Thomas", as they have been preserved in their entirety and contain the earliest Gnostic ritual, poetry, and speculation. They exist in two recensions, the Greek and the Syriac. It seems most likely, though not certain, that the original was Syriac; it is suggested that they were written about A.D. 232, when the relics of St. Thomas were translated to Edessa. Other Gnostic value are the two prayers of Consecration, the "Ode to Wisdom" and the "Hymn of the Soul", which are inserted in the Syriac narrative, and which are wanting in the Greek Acts, though independent Greek texts of these passages are extant (Syriac with English translation by W. Wright, "Apoc. Acts of the Apost.", London, 1871). The "Hymn to the Soul" has been translated many times into English, especially, by A. Bevan, "Texte et Studies", Cambridge, 1897; cf. F. Burkitt in "Journal of Theological Studies" (Oxford, 1900). The most complete edition of the Greek Acts is by M. Bonnet in "Acts", as above, II, 2 (Leipzig, 1903; see BARDESIS). The Acts, though written in the service of Gnosticism, and full of the weirdest adventures, are not entirely without an historical background.

There are a number of other apocrypha in which we are permitted to find traces of Gnostic fellowship, but these traces are mostly vague and unsatisfactory. In connexion with these undoubtedly Gnostic apocryphal mention must be made of the Pseudo-Clementine Homilies. It is true that these are more often classed under Judaism than under strictly Gnostic, and their affinity to the Gnostic speculations is at least at first sight so close and their connexion with the Book of Ezech (cf. ELCEBAITES) so generally recognized that they cannot be omitted in a list of Gnostic writings. If the theory maintained by Dom Chapman in "The Date of the Clementines" (Zeitschrift f. N. Test. Wiss., 1908) and in the article CLEMENTINES IN THE CATHOLIC ENCYCLOPEDIA be correct, and consequently Pseudo-Clement be a crypto-Arian who wrote A.D. 330, the "Homilies" might still have had some value in the study of Gnosticism. But Dom Chapman's theory, though ingenious, is too daring and, as yet too unsupported, to justify the omission of the "Homilies" in this place.

A great, if not the greatest, part of Gnostic literature, which has been saved from the general wreck of Gnostic writings, is preserved to us in three Coptic codices, commonly called the Askew, the Bruce, and the Akhmim Codex. The Askew Codex, of the fifth century, contains a version of the "Acts of Peter", i.e. "Faith-Wisdom". This is a work in four books, written between A.D. 250 and 300; the fourth book, however, is an adaptation of an earlier work. The first two books describe the fall of the Æon Sophia and her salvation by the Æon Soter; the last two books describe the origin of sin and evil and the need of Gnostic repentance. In fact the whole is a treatise on repentance, as the last two books only. In practice, an example of penance set by Sophia. The work consists of a number of questions and answers between Christ and His male and female disciples in which five "Odes of Solomon", followed by mystical adaptations of the same, are inserted. As the questioning is mostly done by Mary, the Pistis Sophia is probably identical with the "Questions of Mary" mentioned above. The codex also contains extracts from the "Book of the Saviour". The dreary monotony of these writings can only be realised by those who have read them. An English translation of the Latin translation of the Coptic, which itself is a translation of the Greek, was made by G. R. S. Mead (London, 1880). It is written on the same date as the Askew vellum codex and contains two treatises: (a) the two books of Jeö, the first speculative and cosmicogonic, the second practical, viz., the overcoming of the hostile world powers and the securing of salvation by the practice of certain rites; this latter book is styled "Of the Great Logos according to the mystery". (b) A treatise with unknown title, as the first and the last pages are lost. This work is of a purely speculative character and of great antiquity, written between A.D. 150 and 200 in Setian or Arebontian circles, and containing a reference to the Book of the Saviour. Of the greater number of complete English translations of these treatises exist; some passages, however, are translated in the aforesaid G. R. S. Mead's "Fragmenta of a Faith Forgotten". Both the Bruce and Askew Codices have been translated into German by C. Schmidt (1892) in "Texte u. Unters." and (1901) in the Berlin "Greek Fathers". A Latin translation exists of the "Pistis Sophia" by Schwartz and Petermann (Berlin, 1851) and a French one of the Bruce Codex by Amelineau (Paris, 1890). The Akhmim Codex of the fifth century, found in 1896, and now in the Egyptian Museum at Berlin, contains (a) a "Gospel of Mary", called in the subsciptions "An Apocryphon of John"; this Gospel must be of the highest antiquity, as St. Ireneæus, about A.D. 170, made use of it in his description of the Barbello-Gnosti (b) a "Sophia Jesu Christi", containing revelations of Christ after His Resurrection; (c) a "Faxslist", containing a faithful account of the events that worked on Peter's daughter. The study of Gnosticism is seriously retarded by the entirely unaccountable delay in the publication of these treatises; for these thirteen years we pass possess only the brief account of this codex published in the "Sitzungsber. d. k. preus. Akad." (Berlin, 1900, S. 319-356).

This account of Gnostic literature would be incomplete without reference to a treatise commonly published amongst the works of Clement and Alexandrius called "Excerpta ex Theodoto". It consists of a number of Gnostic extracts made by Clement for his own use with the idea of future refutation; and, with Clement's notes and remarks on the same, form a very confusing anthology. See O. Bibelius, "Studien zur Gesch. der Valen." in "Zeitschr. f. N. Test. Wiss." (Giessen, 1908).

Oriental non-Christian Gnosticism has left us the sacred books of the Mandaeans, viz. (a) the "Genzā nabū" or "Great Treasure", a large collection of miscellaneous treatises of different date, some as late, probably, as the ninth, some as early, perhaps, as the third century. The Genzā was translated into Latin, by Norberg (Copenhagen, 1817), and the most important treatises into German, by H. Branding (Leipzig, 1891); it contains the Gnostic baptism and the journey of the soul, published in Mandaean (a. Euting (Stuttgart, 1867). (c) Drähe d'Jahya, a biography of John the Baptist "ab utero usque ad tumulum"—as Abraham Echellensius puts it—not published. Alexandrian non-Christian Gnosticism is perceptible in Triamagic literature, published in Eng-
lish translation by G. R. S. Mead (London and Benares, 1902, three volumes). Specifically Jewish Gnosticism left no literature, but Gnostic speculations have an echo in several Jewish works, such as the Book of Enoch, the Zohar, the Talmudic treatise Chapiga XV. See Grüber, “Philo,” Vol. I, and Karpep, “Études sur les mythes gnostiques, esotériques et ésotériques.”

Rebuttal of Gnosticism.—From the first Gnosticism met with the most determined opposition from the Catholic Church. The last words of the aged St. Paul in his First Epistle to Timothy are usually taken as referring to Gnosticism, which is described as “profane notions of men and visions of lies falsly so called [ἀνθρώπους τοῦ φάσματος οἰκονομο- the antithesis of so-called Gnois] which some professing have erred concerning the faith.” Most probably St. Paul’s use of the terms pleroma, the aon of this world, the archon of the power of the air, in Ephesians and Colossians, was suggested by the abuse of these terms by the Gnostics. Other allusions to Gnosticism in the New Testament are possible, but not proven, such as Tit. iii, 9; I Tim., iv, 3; I John, iv, 1–3. The first anti-Gnostic writer was St. Justin Martyr (d. c. 165). His “Syntagma” (Συντάγμα κατὰ τὰς τῆς παλαιάς ημιορίδας) contains the fullest evidence of the abuse of these terms by the Gnostics, and in St. John Damascene’s “Sacra Parallelae.” St. Justin’s “Compendium against Marcion” (quoted by St. Irenæus (IV, vi, 2; V, xxvi, 2), is possibly identical with his “Syntagma.” Immediately after St. Justin, Miltiades, a Christian philosopher of Asia Minor, is mentioned by Tertullian and Hippolytus in his “Philosophumena.” (Eus., V, xxvii, 4) as having combated the Gnostics and especially the Valentinians. His writings are lost. Theophilus of Antioch (d. c. 185) wrote against the heresy of Hermogenes, and also an excellent treatise against Marcion (εις Μαρκιανόν Ἀντιοχειας. Eus., H. E., IV, xxiv). The book against Marcion is probably extant in the “Dialogus de rectâ in Deum fide” of Pseudo-Origen. For Agrippa Casor see Basiliades. Hegesippus, a Palestinian, travelled by way of Corinth to Rome, where he arrived under Anicetus (155–160), to ascertain the sound and orthodox faith from Apostolic tradition. The bishops of Rome and the same faith and in Rome he made a list of the popes from Peter to Anicetus. In consequence he wrote five books of Memoirs (Στοιχεια) “in a most simple style, giving the true tradition of Apostolic doctrine, becoming a champion of the truth against the godless here- ses.” (Eus., H. E., IV, vii, xxii sqq.) Of this work only a few fragments remain, and these are historical rather than theological. Rhodon, a disciple of Tatian, Philip, Bishop of Gortyna in Crete, and a certain Modestus wrote against Marcion, but their writings are lost. Irenæus (Adv. Hær., I, xv, 6) and the First Epistle of Barnabas (11) quotes some portion against the Oriental Valentinians and the conjuror Marcus by “an aged” but unknown author; and Zacheus, Bishop of Cesarea, is said to have written against the Valentinians and especially Ptolemy.

Beyond all comparison most important is the great anti-Gnostic work of St. Irenæus, the “Adv. Haeres,” which is usually called “Adversus Haereses.” It consists of five books, evidently not written at one time; the first three books about a. p. 180, the last two about a dozen years later. The greater part of the first book has come down to us in the original Greek, the rest in a very ancient and anxiously desired Latin translation, and some sort of missing portions. St. Irenæus knew the Gnostics from personal intercourse and from their own writings and gives minute descriptions of their systems, especially of the Valentinians and Barbelo-Gnostics. A good test of how St. Irenæus employed his Gnostic sources can be made by comparing the newly found “Evangelium Marie” with Adv. Hær., I, xix. Numerous attempts to discredit Irenæus as a witness have proved failures (see Irenæus, Saint, Bk. II, 1). But Irenæus wrote an open letter to the Roman priest Florinus, who thought of joining the Valentinians; and when the unfortunate priest had apostatized, and had become a Gnostic, Irenæus wrote on his account a treatise on the “Ogdoas”, and also a letter to Pope Victor, begging him to use his authority against him. Only a few passages of these writings are extant. Eusebius (H. E., IV, xxiii, 4) mentions a letter of Dionysius of Corinth (c. 170) to the Nicomedians, in which he attacks the heresy of Marcion. The letter is not extant. Clement of Alexandria (d. c. 215) only indirectly combated Gnosticism by defending the true Christian Gnosis, especially in “Pedagogos,” Bk. I, “Stromateis,” Bk. II, III, V, and in the so-called eighth book or “Excerpta ex Theodoto.” Origen devoted no work exclusively to the refutation of Gnosticism but his four books “On First Principles” (Iren. ἀρχαῖα), written before the year 230, shows that he thought of the same. Some Greek fragments and a free Latin translation by Rufinus, is practically a refutation of Gnostic dualism, Docetism, and Emanationism. About the year 300 an unknown Syrian author, sometimes erroneously identified with Origen, and often called by the literary pseudonym Adnaunus, or “The Man of Steel”, wrote a long dialogue of which the title is lost, but which is usually designated by the words, “De rectâ in Deum fide.” This dialogue, usually divided into five books, contains discussions with representatives of two sects of Marcionism, of Valentinianism, and of Bardesanesian. The writer plagiarizes extensively from Theophilus of Antioch and Methodius of Olympus; but adds a latter’s anti-Gnostic dialogue “On Free Will” (Iren. Ἀμαρωνος).

The greatest anti-Gnostic controversialist of the early Christian Church is Tertullian (b. 160), who practically devoted his life to combating this dreadful sum of all heresies. We need but mention the titles of his anti-Gnostic works: “De Prescriptione heretico- rum”; “Adversus Marcionem”; a book “Adversus Valentinianos”; “Scorpiace”; “De Caeretici”; “De Resurrectione Carnis”; and finally “Adversus Praxeum.” A storehouse of information rather than a refutation is the great work of Hippolytus, who some time after a. p. 234, once called “Philosophumena,” and ascribed to Origen, but since the discovery of Books IV–X, in 1842, known by the name of its true author and its true title, “Refutation of All Heresies” (εις παπογιανικης οἰκονομος). The publication of the Athos Codex by E. Byrner (Oxford, 1880) revolutionized the study of Gnosticism and rendered works published previous to that date antiquated and almost worthless. To students of Gnosticism this work is as indispensable as that of St. Irenæus. There is an English translation by J. Maenhon in “The anti-Nicene Library” (Edinburgh, 1868). Hippolytus tried to prove that all Gnosticism was derived from heathen philosophy; his speculations may be disregarded, but, as he was in possession of a great number of Gnostic writings from which he quotes, his information is priceless. As he wrote nearly fifty years after St. Irenæus, whose disciple he had been, he describes a later development of Gnosticism than that of the Bishop of Lyons. Besides his greater work, Hippolytus wrote, many years previously (before 217), a small compendium against all heresies, giving a list of the same, thirty-two in number, from Dositheus to Noet- tus; also a treatise against Marcion.

In the fourth century, Gnosticism was in rapid decline, there was less need of champions of orthodoxy, hence there is a long interval
between Adamantius's dialogue and St. Epiphanius's "Panarion", begun in the year 374. St. Epiphanius, who in his youth was brought into closest contact with Gnostic sects in Egypt, and especially the Philibonists, and whose masterly, as some hold, even to this day himself, is still a first-class authority. With marvelous industry he gathered information on all sides, but his judicious and too credulous acceptance of many details can hardly be excused. Philastrius of Brescia, a few years later (383), gave to the Latin Church what St. Epiphanius had given to the Greek. He described no fewer than one hundred and twenty-eight heresies, but took the word in a somewhat wide and vague sense. Though dependent on the "Syn

tagma" of Hippolytus, his account is entirely independent of that of Epiphanius. Another Latin writer, who probably lived in the middle of the fifth century in Southern Gaul, and who is probably identical with Arnobius the Younger, left a work, commonly called "Predestinatus", consisting of three books, in the first of which he describes ninety heresies from Simon Magus to the Predestinationists. This work unfortunately contains many doubtful and fabulous statements. The Council of Chalcedon (451) Theodoret wrote a "Compendium of Heretical Fables" which is of considerable value for the history of Gnosticism, because it gives in a very concise and objective way the history of the heresies since the time of Simon Magus. St. Augustine's book "De Haeres

ibus" (426) is even dependent on Philastrius and Epiphanius to be of much value. Amongst anti-Gnostic writers we must finally mention the neo-

Platonist Plotinus (d. A. D. 270), who wrote a treatise "Against the Gnostics". These were evidently schol

ars who frequented his collegia, but whose Oriental and fantastic pessimism was irreconcilable with Plotinus's views.

CONCLUSION.—The attempt to picture Gnosticism as a mighty movement of the human mind towards the noblest and highest truth, a movement in some way parallel to that of Christianity, has completely failed. It has been abandoned by recent unprejudiced schol

ars such as W. Bouset and O. Gruppe, and it is to be re

gretted that it should have been renewed by an Eng

lish writer, G. R. S. Mead, in "Fragments of a Faith Forgotten"; an un scholarly and misleading work, which in English-speaking countries may retard the sober and true appreciation of Gnosticism as it has indeed perhaps already done in Germany. In any case, it was a retrogression. It has been amidst the last thrones of expiring cults and civilizations in Western Asia and Egypt. Though hellenized, these countries remained Oriental and Semitic to the core. This Oriental spirit—Attis of Asia Minor, Istar of Babylonia, Isis of Egypt—was also the soul of the Asiatic world—first sore beset by Ahruramazda in the East, and then overwhelmed by the Divine greatness of Jesus Christ in the West, called a truce by the fusion of both Parseeism and Christianity with itself. It tried to do for the East what Neo-Platonism tried to do for the West. During the second and third centuries a real danger to Christianity, though not so great as some modern writers would make us believe, as if the mereest breath might have changed the fortunes of Gnosticism, as against orthodox Christianity. Similar things are said of Mithraism and neo-Platonism as against the religion of Jesus Christ. But these say

ings have more piquancy than objective truth. Chris

tianity survived, and not Gnosticism, because the former was the fittest—immeasurably, nay infinitely, so. Gnosticism died not by chance, but because it lacked vital power within itself; and no amount of trumpery, mere lying, flooding English and German markets, can give life to that which perished from intrinsic and essential defects. It is striking that the two earliest champions of Christianity against Gnos

ticism—Hegesippus and Irenaeus—brought out so clearly the method of warfare which alone was pos

sible, but which also alone sufficed to secure the victory in the conflict, a method which Tertullian some years later scientifically explained in his "De Præscript.

is..." Both Hegesippus and Irenaeus were the only Gnostic doctrines did not belong to that deposit of faith which was taught by the true succession of bis

ope in the primary sees of Christendom; both in tri

umphant conclusion drew up a list of the Bishops of Rome, from Peter to the Roman bishop of their day; and this list was taught by that Church with which the Christians everywhere were self-condemned. A just verdict on the Gnostics is that of O. Gruppe (Ausführungen, p. 162): the cir

sumstances of the period gave them a certain impor

tance. But a living force they never were, either in general history or in the history of Christendom. Gnosticism deserves the attention, as showing what mental dispositions Christianity found in existence, what obstacles it had to overcome to maintain its own life; but "means of mental progress it never was."

dominions in the East; metropolitan to the present province of Goa, which comprises as suffragans the See of Cochin, Mylapore, and Damão (or Damao) in India, Macao in China, and Mosambique in East Africa. The archbishop, who resides at Panjim, or New Christmas, is the honorary Primate of the East, and (from 1886) Patriarch of the East Indies. He enjoys the privilege of presiding over all national councils of the East Indies, which must ordinarily be held at Goa (Concordat of 1886 between the Holy See and Portugal, art. 2). The patronage of the see and of its suffragans belongs to the Crown of Portugal; and their bishops are nominated by the Holy See, on the advice of the King of Portugal. The history of the Portuguese conquests in India dates from the arrival of Vasco da Gama in 1498, followed by the acquisition of Cangano in 1500, Cochin in 1505, Goa in 1510, Chaul in 1512, Calicut in 1513, Damão in 1531, Bombay, Salsette, and Bassein in 1534, Diu in 1535, etc. From the year 1500, missionaries of all the different orders (Franciscans, Dominicans, Jesuits, Augustinians, etc.) flocked out with the conquerors, and began at once to build churches along the coast districts wherever the Portuguese power made itself felt. In 1534 Goa was created an episcopal see suffragan to Farless, and in 1538, it was established as Vicariate of the East Indies, with jurisdiction extending potentially over all past and future conquests from the Cape of Good Hope to China, in 1557 it was made an independent archbishopric, and its first suffragan sees were erected at Cochin and Malacca. In 1576 the suffragan See of Macao (China) was added; and in 1588, that of Fuzil in Japan. In 1600 another suffragan see was erected at Angamal (transferred to Cranganore in 1605) for the sake of the newly-united Thomas Christians (see, under EASTERN CHURCHES, Malabar Christians, V, 234, and Uniat Church of Malabar (V, 236)); while in 1896 a sixth suffragan see was established at Mylapore, near the modern Madras. In 1612 the prelacy of Mosambique was added, and in 1690 two other sees at Peking and Nanking in China. By the Bulls establishing these sees the right of nomination was conferred in perpetuity on the King of Portugal, under the titles of founder and endowment.

The limits between the various sees of India were defined by a papal Bull in 1616. The suffragan sees comprised roughly the south of the peninsula and the east coast, as far as Burma inclusive, the rest of India remaining potentially under the jurisdiction of the archdiocese of Goa, provisionally without jurisdiction exercised even outside Portuguese dominions wherever the Faith was extended by Portuguese missionaries. Missionary work progressed on a large scale and with great success along the western coast, chiefly at Chaul, Bombay, Salsette, Bassein, Damão, and Diu; and on the eastern coasts at St. Thomé and Mylapore, and as far as Bengal etc. In the southern districts the Jesuit mission in Madura was the most famous. It extended to the Kistna river, with a number of outlying stations beyond it. The mission of Cochin, on the Malabar Coast, was also one of the most fruitful. Several missions were also established in the interior northwards, e.g., that of Agra, and Lahore in 1570 and that of Tibet in 1624. Still, even with these efforts, the greater part even of the coast line was by no means fully worked, and many vast tracts of the interior northwards were practically untouched.

The decline of Portuguese power in the seventeenth century, together with the failure of many of its missions, etc., soon put limits to the extension of missionary work; and it was sometimes with difficulty that the results actually achieved could be kept up. Consequently, about this time the Holy See began, through the Congregation of Propaganda, to send out independent and specially-sent or auxiliary vicars Apostolic over several districts (The Great Mogul, 1637; Verapoly, 1657; Burma, 1722; Karnataka and Madura, after the suppression of the Jesuits in 1773; Tibet, 1826; Bengal, Madras, and Ceylon, 1834, and others later). In certain places where these vicars Apostolic came in contact with the Portuguese clergy, there arose a conflict of jurisdiction. This was particularly the ease in Bombay, which had been ceded to the British in 1861. Here the Portuguese clergy at first allowed to remain in charge of the churches; but in 1720, on the ground that they caused disaffection among the people against the British power, they were expelled from the island, and the Vicar of the Great Mogul, with his Carmelite missionaries, was invited to take their place. The Holy See, in authorizing this arrangement, did not deny or abrogate the ordinary jurisdiction of the Archbishop of Goa, but merely intended to make a temporary provision till such time as the British Government should allow the Portuguese clergy to return. (See BOMBAY, ARCHDIOCESE OF.) Efforts were made from time to time on the part of the Goan party to recover their place, and this ultimately, through a division of the churches in 1794, gave rise to the existence of two rival jurisdictions in Bombay—Pardoado and Propaganda. The Holy See had for a long time been dissatisfied with the general situation, and especially with the opposition shown to the vicars Apostolic by the Goan prelates and clergy.

After the revolution of 1834 in Portugal, the expulsion or abolition of the religious orders, and the severing of diplomatic relations with the Vatican came the famous Brief "Multa praecclare", on 24 April, 1838, declaring that the invasion of jurisdiction from the three suffragan sees of Cochin, Cranganore, and Mylapore, and assigning their territories to the nearest vicars Apostolic—at the same time implicitly, or at least by subsequent interpretation and enactments, restricting the jurisdiction of the Archdiocese of Goa to actual Portuguese territory. This Brief was, however, rejected by the Goan party as spurious or at least surreptitious, since they contended that even the Holy See could not rightly legislate in this manner without the consent of the King of Portugal, as was declared in the original Bulls of foundation, etc. The principles underlying this dispute fall outside the scope of the present article, which is concerned solely with the main historical facts. The resistance which followed, both in Bombay and in other parts of India, has uniformly been called the "Goan or Indo-Portuguese Schism" by writers outside the Padroado party; and the term schism recurs frequently in the present information. jurisdiction of Cochin and Mylapore was restored, and a third suffragan diocese (that of Damão) added—all in British territory; and after subsequent adjustments the present delimitations were agreed to. At the same time the Indian hierarchy was established, and the whole of the country divided into provinces, dioceses, and prefectures Apostolic.

In the following List of Prelates of the See of Goa, dates still under dispute are given in parentheses:

JOÃO AFONSO D’ALBUQUERQUE, 1538–1553; GASPAR DE LEÃO PEREIRA, 1550–1567, and again 1574–1576; HENRIQUE DE TAVORA, transferred from Cochin, 1578–1581; JOÃO VICENTE DA FONSECA, 1580–1586 (1581–1587); MATHEUS DE MEDINA, transferred from Cochin, 1585–1592; ALEXIO DE MENZIES, 1595–1610 (1612); CHRISTOPH DAMO, 1610–1622; SEBASTIÃO DE S. PEDRO, from the Bishopric of Mylapore (1623) 1625–1629; MANOEL TELLES DE BRITO, 1631 (died on voyage); FRANCISCO DOS MARTYRES, 1636–1652; CHRISTOFORO SILVEIRA, 1671 or 1672 (died on voyage); ANTONIO DE BRANDÃO, 1675–1678; MANOEL DE SOUZA E MENDES, 1681–1684; ALBERTO DE SILVA, 1687–1688; PEDRO DE SILVA, from the Bishopric of Cochin, 1689–1691; AGOSTINHO DA ANUNCIACAO, 1691–1713; SEBASTIAN DE ANDRADE PESSANHA, 1716–1721; IGNACIO DE SANTA THEREZA, 1721–1739; EUGENIO TRIGUEROS, 1741, from the Bishopric of Macao (died on voyage); LOURENÇO DE SANTA MARIA E MELO, 1744–1750; ANTONIO TAVEIRA DE NEIVA BRUM E SILVEIRA, 1750–1775; FRANCISCO DE ASSUMPCÃO E BRITO, 1775–1780; MANOEL DE SANTA CATHARINA, transferred from Cochin (1780) 1784–1812; MANOEL DE SÃO GUALDINO, 1812–1831; JOSÉ MARIA DE SILVA TORRES, 1844–1849; JOHN CHRYSSOSTOME D’AMORIM E PESSOA, 1853–1869 (1874); AYRES DE ORNELAS VALENCIELLO, 1875–1880; ANTONIO SEBASTIANO VALENTI (first patriarch) 1882–1908. The present prelate, MATHEUS D’OLIVEIRA XAVIER, transferred from Cochin, took possession of his see 1 July, 1909.

During the vacancies (some of which extended to 6, 7, 13, and one even to 23 years) the see was, according to the rules laid down by Gregory XIII in 1562 and Leo XII in 1826, administered by the Bishop of Cochin, or, failing him, by the Bishop of Mylapore; and failing both, sometimes by some prelate from elsewhere, sometimes by a coadjutor or vicar capitular, as circumstances allowed.

Synods.—The first and second provincial synods were presided over by Dom Gaspar de Leão Pereira in 1567 and 1575 respectively; the third, in 1585, by Dom Vicente da Fonseca; the fourth, in 1592, by Dom Matheus de Medina; the fifth, in 1606, by Dom Alexio de Mendes; the sixth, in 1615, by Dom Francisco de Carvalho; the seventh, in 1631, by Dom Francisco de Carvalho; and the eighth, in 1649, by Dom Damião de Souza. In recent times one provincial council was held (1894) by Dom Antonio S. Valente, in which seventy-nine decrees were framed. The special Synod of Diamper, held in 1599, had for its scope the reunion of the Thomas Christians, for whom the See of Angamaly was established in the following year.

The City of Goa.—The city of Goa, originally a fortress in the hands first of the Hindus and then of the Mohammedans, was taken by Albuquerque in 1510. As soon as he became master of the place he built the first church—that of St. Catherine, who thus became the patron of the new city. This was the beginning of a vast series of churches, large and small, numbering over fifty, with convents, hospices, and other institutions attached, which made Goa one of the most interesting ecclesiastical cities in the world. The civil splendour was kept with the ecclesiastical. But the situation was an unfortunate one. Lying on a low stretch of coast-land, surrounded on two sides by shallow creeks and on the other two by salinic marshes, the place was soon found unhealthy to such a degree that, after several ravages by epidemics, it was gradually abandoned in favour of Panjim, five miles nearer the sea. The transfer of the government in 1759 soon led to the total desertion of the old city. In consequence the civil buildings gradually fell into decay or were demolished for the sake of building materials, and, especially after the expulsion of the religious orders in 1835, many churches and monasteries followed suit. In place of houses thick palmeiros gradually grew up, which now, with the exception of a few open spaces, occupy the whole area. The original city extended almost two miles from east to west along the river, and comprised three low hills crowned with religious edifices.

Most of the churches have disappeared, leaving nothing but a cross to mark their site. Others are in various stages of decay, while a few are kept in repair. The finest of those still standing are grouped about the great square: the cathedral (built 1571), in which alone the full liturgy is kept up by a body of resident canons, and adjoining which is an archiepiscopal palace; the Bem Jesus church (Jesus, built c. 1566), containing the body of St. Francis Xavier incorrupt in a rich shrine; St. Cajetan’s, built about 1656, belonging to the Theatines; the Franciscan church of St. Francis of Assisi, built on the site of a mosque, 1517–21; and finally the little chapel of St. Catherine, built in 1510.

Farther away, on the western hill, stand the great nunneries of St. Monica (1598), still in full repair, formerly occupied by a large community of native nuns—the only female religious in Goa; the Augustinian church and convent built in 1572, now in ruins; convent and church of St. John of God (1685), now partly in ruins; the Rosary church of the Dominicans; built before 1543; the vice-regal chapel of St. Anthony, of about the same date. The last two are still in full repair. To the south are the ruins of the Jesuit
college of St. Paul, built about 1541, and the Carmelite church and convent, built about 1612, occupied after 1707 by Oratorians. The chapel of St. Francis Xavier, the scene of the “Domine, satis est”, built before 1542, is still in repair. The following either have entirely disappeared or their sites are marked only by ruins: the chapel of St. Martin, built shortly after 1547; college and church of St. Bonaventure (about 1602); Nossa Senhora de Serra (1513); convent and church of St. Dominic, built about 1548, rebuilt 1550; Santa Luzia, at Daujim (about 1544); church of St. Thomas, built to receive the relics of St. Thomas brought from Mylapore in 1560; church of St. Alexis, built before 1600; church of the Holy Trinity, built about the same time; convent and church of cans, with 61 inmates; 9 of Augustinians, with 79 inmates; 1 of Carmelites, with 28 inmates; 1 of Theatines, with 13 inmates; 4 of St. John of God, with 30 inmates; 2 of Oratorians, with 61 inmates, and the convent of St. Monica, with 61 inmates; total, 38 houses, with 486 inmates. Collectively their funds at this time amounted to a capital of £96,378 (about $481,000), with a resultant income of £5875 (about $29,000) per year (Fonseca, p. 69). On the expulsion of the religious orders in 1835, their property, with an aggregate value of £122,686 (about $610,000), was appropriated by the government, while the number of religious expelled was 248. Their missions were transferred to the secular clergy, who received some portion of the confiscated funds for their support.

Cru dos Milagres, built after 1619; Nossa Senhora da Luz, built before 1543; new college and church of St. Paul (altes convent of St. Roch) used as a college in 1610, church rebuilt later. From the church of Our Lady of the Mount, on the eastern hill, which is still in repair, a magnificent panorama is obtained.

Besides these convents and churches, there were others attached to the Royal Hospital, the Santa Casa de Misericordia, the retreats of N. S. de Serra and Santa Maria Magdalena, the hospital of St. Lazarus, the hospital of All Saints, etc., to say nothing of a long list of churches and chapels in the suburbs.

The Inquisition, which was introduced into Goa in 1560, possessed a majestic building in the great square close to the cathedral. The staff (Dominicans) consisted originally of three principal officials. In 1655 there were five, whose joint salaries amounted to about $355 per annum. In 1682 their number was raised to thirty-two, in 1800 it had increased to forty-seven. This institution, which had been once disbanded in 1774 and restored again in 1779, was finally abolished in 1812. The decaying building was pulled down in 1820, and at present only the site is preserved.

From a government list drawn up in 1804, we learn the number of convents and regulars existing under the Portuguese at that time. There were 3 convents of Observantine Franciscans, with 83 inmates; 7 of Reformed Franciscans, with 72 inmates; 10 of Domini-

According to the budget of 1873-74 the state contribution to the maintenance of 110 missionaries was £2145, while the total ecclesiastical expenditure for the same year was £4955 (Fonseca, p. 70). These figures include the suffragan dioceses. In 1908 the total government expenditure amounted, it is said, to over £16,000.

Present Condition of the Archdiocese.—In accordance with the concordat of 1886 (with subsequent adjustments) the Archdiocese of Goa comprises the whole of the Portuguese territory of Goa, and in British territory the three districts of North Canara, Savantwadi, and Belgaum, besides one exempted church in Poonah. The Archbishop of Goa is metropolitian over a province comprising the three suffragan Sees of Cochin, Mylapore, and Damão in India; Macao in China, and Mozambique in East Africa. The Portuguese territories consist of the Velhas Conquistas (Ilhas, Burdei, Salsette) and the Novas Conquis tas. North Canara is under a vicar-general, and Belgaum, Poona, and the native State of Savantwadi, etc., are under another called the Vicar-General of the Gautes. The patriarchal residence is at Panjim, or New Goa. There is an episcopal seminary at Rachol containing at present about 334 students, of whom 82 are in the course of theology. There is also a smaller seminary at Mapucá. The total number of priests belonging to the archdiocese is about 724, of whom four (at Belgaum) belong to the Jesuit Order, the rest
being secular clergy. Besides these there are 20 religious of the Hospitalers of St. Francis, who conduct a college for girls and an asylum at Panjim, and 10 Sisters of Charity of Canossa, who have under them an asylum and orphanage at Belgaum. There are several schools affiliated to the seminary at Mapusa and also at Panjim. The total Catholic population in Portuguese territory is reckoned at 233,628 out of a total population of 365,291. In British territory the Catholic population is more scanty, numbering about 35,403. According to the Madras Directory for 1906 the totals for the archdiocese are as follows: 102 parishes and 23 missions, with 59 churches and 336 chapels, 819 priests, 312 confessions, and 306 pious associations; 3879 children attending schools, and a total Catholic population of 335,031.

The map of Goa, representing an area of about a mile and a half by one mile, which accompanies this article is based on those of Cottinete de Kログion and Fonseca, modified by personal observations made in 1907. It claims to be a rough sketch only. The crosses represent objects of which no notable features remain.

**ERNEST R. HULL**

**GOA JACQUES, Dominican and helenist; b. at Paris, 1601; d. 23 September, 1653. He entered the convent of the Annunciation in the Rue St-Honoré, 1619, and made his profession there 24 May, 1620. Although lector of philosophy and theology, he applied himself to the study of Greek. He dedicated himself to putting in order the rich material he had brought from the East, which he had increased by visits to the libraries of France and Italy. Appointed vicar provincial in 1652, his health failed under so many labours, and he fell ill and died.**

The most important work of Goar is his "*Exegetico Rituale Ritualorum Graecorum"*, written in 1667, a classic work for the study of Greek Liturgy; it is important for its original texts and for its learned commentaries; in the second edition (Venice, 1790) a number of errors were corrected. He also edited "*Georgii Codini, commentarius historiarum*" (Paris, 1647); "*Georgii Codinius, episcopatus Europaeus, De officiis magnae Ecclesiae et aulae Constantinopolitanae*" (Paris, 1848); "*Georgii Monachi et S.P.N. Tarasii Chronographia ab Adamo usque ad Diocletianum*"; "*Necrologi patriarchae Brevisarium chronologorum*; "*Theologiae grammaticae et Leonis grammatici Vites*" (Paris, 1555). This edition of *Theophanes* was finished by F. Combe- fos. Goar also left unfinished (in manuscript) a work great number of souls. But being above all solicitous for his own sanctification, he resolved to leave the world, and about 618 he took up his dwelling in a lonely place at the extremity of the Diocese of Trier and in the neighbourhood of the little town of Oberwesel. It was here that, near a little chapel which he built, he spent the greater part of his time. Having become converted, he was attached to material and perishable things. Nevertheless it was impossible for him so to conceal himself that his reputation did not spread far and wide. Pilgrims flocked to him, thus furnishing him with occasions to exercise the duties of hospitality in their behalf and to give them sound advice. At last, after having denounced him to Rusticus, Bishop of Trier, as a hypocrite and fond of good living, and he was called upon by the bishop to defend himself. According to the legend, he did so with the help of a miracle which resulted in the bishop’s confession and in the manifestation of his unworthiness. King Sigefert III having learned of the occurrence summoned St. Goar to Metz and insisted that he should accept the episcopal see from which Rusticus had been driven. But the pious hermit was frightened by this offer, and asked time for reflection. On returning to his solitude he fell sick, and died before the bishop had learned the episcopal dignity had been imposed upon him. The see of Metz was dedicated to him, in 1768, in the little town on the banks of the Rhine which bears his name (St-Goar).**

**LÉON CLUGNET**

**GOAR, SAINT, an anchorite of Aquitaine; b. about 588; d. near Oberwesel (Germany), 6 July, 649. He came of a distinguished family, and at an early age gave evidence of sound piety. Prayer was the constant occupation of his life, and he pursued the truths of religion that of his mind. Having received Holy orders, and being thus enabled to act with more authority, he laboured to secure the salvation of a**
of the Greek canonist Blaetares: "Collectio elementaris materiarum omnium sacris et divinis canonibus contentarum et Mattheo Blaetare elucubrata simil et compacta", and a work of Sylvester Syropulos. Finally we owe to Goar the "Historia universalis Joanou Zonare ac MSS. codicii recognita" (Paris, 1687); it was continued and completed by Du Cange.

P. Leclercq.

Gobat, George, moral theologian; b. at Charmonnay, in the Diocese of Baule, now in the Department of the Doubs, France, July 1, 1660; d. March 12, 1679. He entered the Society of Jesus, June 16, 1618. After teaching the humanities he was professor or sacred sciences at Fribourg, Switzerland (1651-41), and of moral theology at Halle (1641-44), at Munich (1644-47), rector of Halle (1647-51), and professor of moral theology at Ratisbon (1651-54), rector at Fribourg (1654-58), professor of moral theology at Constance (1656-60), where he was also penitentiary of the cathedral, which post he retained until his death. Besides his "Expresidentia" (1659) and the Latin translation, "Narratio historica eorum quae Societas Jesu in Nova Francia fortiter egit et passa est anno 1648-49", from the French of Father Raguennau, S.J., there are mentioned smaller works on the Jubilees and on indulgences, and a collection of practical cases on the sacraments entitled "Alphabetum". Later these cases were republished under the title "Experientiae Theologicae sive experimentalis theologica" (Constance, 1670). The "Alphabetum quadruplex de voto, juramento, blasphemia, superstitiones" appeared at Constance in 1672. These works were several times republished in those volumes under the heading "Opera Moralia", for instance at Dousai, 1701, the last edition being published at Venice, 1749.

Gobat follows the casuistic method, treating the different questions in a clear and simple style with solidity and erudition, applying them especially to existing conditions in Germany, conditions well known to him from the confessional and the numerous cases referred to him for settlement. He is, however, inclined to be too lenient. Several of his doctrines were later condemned by the Holy See, notably by Inno- cent XI in 1679, the year of Gobat's death. The Douai edition (1700) of the "Opera Moralia" was drawn from a manuscript in the Society of St. Ignatius, near the Assumption of Ars, the censure of thirty-two propositions. The adversaries of the Jesuits in France, Germany, and Holland eagerly seized the occasion for an attack on the "Jesuit moral", but several apologies were published to refute the malignant exaggerations contained in their attacks; among these defenders of P. Gobat were Father Daniel S. J., who wrote "Apologia pro la doctrine des Jesuites" (Lige, 1703), and Christ. Ressler, S. J., author of "Vindicatio Gobotianae" (Ingolstadt, 1706).

J. Salesmann.

Goban Saer, regarded in traditional lore as the greatest Irish architect of the seventeenth century, and possibly the most celebrated in Ireland. He was b. at Turvey, near Malahide, Co. Dublin, about 1560. He was employed by many Irish saints to build churches, oratories, and bell-towers, and he is alluded to in an eight-century Irish poem, now in a monastery in Carthage. So wonderful are the stories told of this master-builder and builder of saints that it is difficult to regard him as a mythical personage, but he undoubtedly must be classed as an historical figure. He was much in advance of his time as an architect, and received commissions all over Ireland. In the "Life of St. Abban" it is prophetically said that "the fame of Goban as a builder in wood as well as stone would exist in Ireland to the end of time. Certain it is that even at the present day incapable stones in the Irish tongue are still current of the Goban Saer, or Gobban the Builder. He lived into the first half of the seventh century, or even later, according to some writers, but he laboured as late as 635.

Goban, Acta Sanctorum Hiberniae (Paris, 1845); O'Han- lon, Lives of the Irish Saints, VI (Dublin, s. d.); Halyt, Ire- land's Ancient Schools and Scholars (Dublin, 1802); Joyce, Conc. History of Ancient Irish Church (Dublin, 1892) and Origin of the Round Towers of Ireland, 2 ed. (Dublin, 1845).

W. H. G. Fitch.

Gobelus, Person (Persona); b. in 1358; d. 17 November, 1421. He was a Westernophil and was known as an historian and an ardent reformer of monastic life in his native land. He received his first schooling at Paderborn. It may be that he came originally from this city, it is certain that he was from the neighbourhood. As a young man he went to Italy, where he studied theology and canon law, be- coming a cleric of the cathedral and a travelling official of the papal exchequer. This was in 1384, under Urban VI, of whom he was ever a loyal adherent. This position ceased to be agreeable when the Great Schism came to disturb the Roman court. He re- signed, was ordained priest at Ancoon in 1388, and re- turned to his native land. Papal indulgences were secured for him a benefice from the church of the Holy Trinity, and later the post of the Archbishop of S. Pancratius at Paderborn. He now attended the University of Erfurt, which he entered during the incumbency of its first rector (1392-94). We glean from this that he was still pursuing his scientific studies. William Gobelus, who had been chosen Bishop of Paderborn (1406-1415), selected Gobelus for his court chaplain and induced him to enter his service. The latter availed himself of his position to labour for the further uplifting of religious life and particularly for the restoration of discipline in the claiest, which had drifted into an habitual disregard of their rules. The monastery of nuns at Bödeken, near Paderborn, where the abbes alone remained, was changed into a convent for men, and given over to the Augustinians. Not content with this, he undertook in spite of great difficulties, to reform the Benedictine Abbey of Abdinghof, at Paderborn. But the opposite was the case. He was every way the interference of the bishop, who transferred to Bielefeld that branch of the diocesan administration of which Gobelus was a part. The latter had already in 1405 given up his parish church at Paderborn, owing to certain differences with the munici- pal authorities. The bishop appointed him dean of the collegiate church of Bielefeld. The Archbishop of Cologne, Dietrich von Mors, who in 1415 received the See of Cologne, gave the dean authority to re- form the religious life, not only in the monastery of Bielefeld, but also in other institutions, a mission which Gobelus duly fulfilled.

But old age and illness undermined the strength of this zealous divine. He resigned in 1418 and once more betook himself to the monastery of Bödeken. He did not don the monk's habit, but spent the remaining years of his life in the quiet of monastic solitude.

Gobelus was also an historian. He wrote a history of the world entitled: "Cosmidromius, hoc est Chronicon universale completens res ecclesiæ et republicæ". This work he brought down to the year 1418; from the year 1347 it is valuable as being an original source of information. The author accomplished his task with scrupulous care, as far as to regard himself as a mythical personage, but he undoubtedly must be classed as an historical figure. He was much
nese", lost annals of the twelfth century which had been looked upon as an authority in its particular field. The work of "Vita Meinophi", a biography of St. Meinolf, a canon of the cathedral chapter of Paderborn in the first half of the ninth century, and the founder of the Bödelenen monastery. The Coemidromius of Gobelins was first published by Meibom (Frankfort, 1599) in the "Scriptores rerum Germanicarum", Max Jansen prepared a new edition (Münster, 1906). The "Vita Meinophi" narrowed and clarified in the "Acta SS." of the Bollandists, Oct., III, 216 sqq.

J. P. KIRSCH.

God (A.S. God: Germ. Gott; akin to Persian khoda; Hindi khoda), (1) the proper name of the One Supreme and Infinite Personal Being, the Creator and Ruler of the universe, to whom man owes obedience and worship; (2) the common or generic name of the several supposed beings to whom, in polytheistic religions, Divine attributes are ascribed and Divine worship is rendered; (3) the name sometimes applied to an idol as to the dwelling-place or abode of a god. The root-meaning of the name (from Gothic root gleu, Skt. āhu or āas, "to invoke or to sacrifice to") is either "the one invoked" or "the one sacrificed to" (see Murray, "New Dict. of the English Language", s.v.). From different Indo-Germanic roots (hia, "to shine", "to bear"), the Indo-Iranian deva, Skt. deva, (gen. divas), Lat. deus, Gr. θεός, Irish and Gaelic, dia, all of which are generic names; also Gr. θεός (gen. θεός), Lat. Jupiter (jupiter), Old Teut. Tiw or Tyr (surviving in Tuesday), Lat. Janus, Diana, and other proper names of pagan deities. The common name most widely used in Semitic occurs as ēl in Heb., ʿil in Babylonian, ʿilah in Arabic, etc.; and though scholars are not agreed on the point, the root-meaning most probably is "the strong or mighty one".

SCOPE AND PLAN OF TREATMENT.—For ethical concepts the reader is referred to the section under that title. The present article is concerned exclusively with the God (I) of monotheistic philosophy and (II) of Old- and New-Testament theology, i.e. with the one true God as He can be known by the light of unaided reason and as He is actually known, much less perfectly, than most people by His free revelation of Himself in the Jewish and Christian religions. It is necessary up to a certain point to observe the distinction here implied between philosophical and theological Theism—between the God of reason and of Revelation. For it is clear that, if the acceptance of Christianity is to be justified as a reasonable act of faith, the human mind must be capable of knowing naturally that a God exists who is free to reveal Himself supernaturally, in such wise that men may be rationally certain that He has done so through the ministry of Jesus Christ. In other words philosophical Theism as such ought to furnish the rational data which are implied in the possibility of revelation and the credibility of the Christian system; but more than this it need not undertake to do. Now all these data—in so far as they relate strictly to Theism—are contained in the comprehensive truth of the self-existence of a free and intelligent First Cause and Moral Ruler, a Personal God distinct both from but immanent in the universe, which is subject to His infinite power and wisdom; and we shall, therefore, confine our strictly philosophical treatment of the subject to the discussion of this fundamental truth. A good deal more than this is usually included in the systematic philosophy of Theism as developed by Christian, and more especially by Catholic, writers, in accordance with our present scope, which is theological as well as philosophical. It is convenient to adopt the combined viewpoint of philosopher and theologian in treating many questions which might be treated separately from either point of view. In doing so, moreover, we are but following the line along which theistic doctrine has been developed. It is clear that no philosophy of reason and of natural religion has ever been developed and maintained independently of Revelation, and it would be a mistake to infer from the admitted capacity of the human mind to arrive at a true knowledge of God as the Creator and Ruler of the universe that the systematic Theism of Christian philosophers is de facto the product of unaided reason. It is legitimate for the philosopher, while retaining the strictly rational viewpoint, to improve and perfect his philosophy in the reflected light of Revelation, and Christian philosophers have used this advantage freely.

—(1) The Problem stated.—Had the Theist merely to face a blank Atheistic denial of God's existence his task would be comparatively a light one. Formal dogmatic Atheism is self-refuting, and has never de facto won the reasoned assent of any considerable number of men (see Agnosticism). However, it may be that Polytheism (q. v.), however erro-

But passing from views that are formally anti-

Thus to accomplish even the beginning of his task the Theist has to show, against Agnostics, that the knowledge of God attainable by rational inference, however inadequate and imperfect it may be, is as true and valid, as far as it goes, as any other piece of knowledge we possess; and against Pantheists that the God of reason is a supra-mundane personal God distinct both from matter and from the finite human mind—that neither we ourselves nor those with whom we tread upon earth are the bearers of His being.

But passing from views that are formally anti-

Thus to accomplish even the beginning of his task the Theist has to show, against Agnostics, that the knowledge of God attainable by rational inference, however inadequate and imperfect it may be, is as true and valid, as far as it goes, as any other piece of knowledge we possess; and against Pantheists that the God of reason is a supra-mundane personal God distinct both from matter and from the finite human mind—that neither we ourselves nor those with whom we tread upon earth are the bearers of His being.
Some of these differences are merely formal and accidental and do not affect the substance of the theistic thesis, but others are of substantial importance and have already made clear, that Kantianism and the intellectual, or—if one prefers—religious criticism, may establish the truth of God's existence by the same kind of rational inference (e. g. from effect to cause) as we employ in other departments of knowledge, or whether, in order to justify our belief in this truth, we must not rather rely on some transcendental proofs, or on some superior and antecedent to dialectical reasoning; or on immediate intuition; or on some moral, sentimental, emotional, or aesthetic instinct or perception, which is voluntary rather than intellectual. Kant denied in the name of "pure reason" the inferential validity of the classical theistic proofs, and the same objection is put forward by the proponents of Agnosticism, who postulated God's existence as an implicate of the moral law; and Kant's method has been followed or imitated by many Theists—by some who fully agree with him in rejecting the classical arguments; by others, who, without going so far, believe that the apologetical expediency of trying to persuade rather than convince men to be Theists—by some who fully agree with him in rejecting the classical arguments; by others, who, without going so far, believe that the apologetical expediency of trying to persuade rather than convince men to be Theists. A moderate reaction against the too rigidly mathematical intellectualism of Descartes was to be welcomed, but the Kantian reaction by its excesses has injured the cause of Theism and helped forward the cause of anti-theistic philosophy, as much as every other, and in the main has borrowed most of his arguments for Agnosticism from Hamilton and Mansel, who had popularized Kantian criticism in England; while in trying to improve on Kant's reconstructive transcendentalism his German disciples (Fichte, Schelling, Hegel) drifted into Pantheism. Kant also helped to prepare the way for the total disarming of human reason in relation to religious truth, which constitutes the negative side of Traditionalism (q. v.), while the appeal of that system on the positive side to the common consent and tradition of mankind as the chief or sole criterion of truth and of religious truth—is justly called illogical by Kantian influences. This system maintains that we have naturally some immediate consciousness, however dim at first, or some intuitive knowledge of God—not indeed that we see Him in His essence face to face, but that we know Him by a sense of cognition, according to Rosmini, as we become conscious of being in general, and therefore that the truth of His existence is as much a datum of philosophy as is the abstract idea of being. Finally, the philosophy of Modernism (q. v.), about which there has recently been such a stir, is a somewhat complex medley of these various systems and tendencies; its main features as a system are, negatively, a thoroughgoing intellectual Agnosticism, and, positively, the assertion of an immediate sense or experience of God as immanent in the life of the soul—an experience which is at first only subconscious, but which, when the requisite moral dispositions are present, becomes an object of conscious certainty. Now all these varying types of Theism, in so far as they are opposed to the classical and traditional type, may be reduced to one or other of the two following propositions: (a) that we have naturally an immediate and particular claim for its existence, and that in the fact that contingent beings exist, i. e. beings whose own-existence is recognized as possible, implies the existence of a necessary being, who is God. (iv) The graduated perfections of being actually existing in the universe can be understood only by comparison with an absolute standard that is also actual, i. e. an Immanence.
Definitely perfect Being such as God. (v) The wonderful order or evidence of intelligent design which the universe exhibits implies the existence of a supreme designer, who is the other than God; this is the self. To these many Theists add other arguments, drawn, e.g. (vi) from the common consent of mankind (usually described by Catholic writers as the moral argument), (vii) from the internal witness of conscience to the supremacy of the moral law, and, the existence of a supreme Lawgiver (this may be called the ethical argument, or (viii) from the existence and perception of beauty in the universe (the aesthetic argument). One might go on, indeed, almost indefinitely multiplying and distinguishing arguments; but to do so would only lead to confusion. But the arguments mentioned—and the same is true of others that might be added—are not in reality distinct and independent arguments, but only so many partial statements of one and the same general argument, which is perhaps best described as the cosmological. This argument assumes the validity of the principle of causality or sufficient reason and—stated in its most comprehensive form, amounts to this: that it is impossible according to the laws of human thought to give any ultimate rational explanation of the phenomena of external experience and of internal consciousness—in other words to synthesize the actual universe as a whole from its own supplies (and this is the recognized aim of philosophy)—by admitting the existence of a self-sufficient and self-explanatory cause or ground of being and activity, to which all these phenomena may be ultimately referred. It is, therefore, mainly a question of method and expediency what particular points one may select from the multitude available to illustrate and enforce the general a posteriori argument. For our purpose it will suffice to state as briefly as possible (i) the general argument proving the self-existence of a First Cause, (ii) the special arguments proving the existence of an intelligent Designer and (iii) of a Supreme Moral Ruler, and (iv) the confirmatory argument from the general consent of mankind.

(i) We must start by assuming the objective certainty and validity of the principle of causality or sufficient reason—an assumption upon which the value of the physical sciences and of human knowledge generally is based. To question the certainty, as did Kant, and represent it as a mere mental priori, or possessing only subjective validity, would open the door to subjectivism and universal scepticism. It is impossible to prove the principle of causality, just as it is impossible to prove the principle of contradiction (which is not difficult to establish). If the latter is denied the latter may also be denied and the whole process of human reasoning declared fallacious. The principle states that whatever exists or happens must have a sufficient reason for its existence or occurrence either in itself or in something else; in other words that whatever does not exist of absolute necessity—whatever is not self-existent—cannot exist without a proportionate cause external to itself; and if this principle is valid when employed by the scientist to explain the phenomena of physics it must be equally valid when employed by the philosopher for the ultimate explanation of the universe as a whole. In the universe we observe that certain things are effects, i.e. they depend for their existence on other things, and these again on others; but, however far back we may extend this series of effects and dependent causes, we must, if human reason is to be satisfied, come ultimately to a point that is not itself explained in turn. Its words to an uncaused cause or self-existent being which is the ground and cause of all being. And this conclusion, as thus stated, is virtually admitted by Agnostics and Pantheists, all of whom are obliged to speak of an eternal something underlying the phenomenal universe, whether this something be the "Unknown", or the "Absolute", or the "Unconscious", or "Matter" itself, or the "Ego", or the "Idea" of being, or the "Will"; these are so many substitutes for the First Cause, and the self of Theism. What anti-Theists refuse to admit is not the existence of a First Cause in an indeterminate sense, but the existence of an intelligent and free First Cause, a personal God, distinct from the material universe and the human mind. But the very same difficulty that pertains to the problem of First Cause, and all requires that this cause should be a free and intelligent being. The spiritual world of intellect and free will must be recognized by the same philosopher to be as real as the world of matter; man knows that he has a spiritual nature and performs spiritual acts as clearly and as certainly as he knows that he has eyes to see with and ears to hear with; and the phenomenon of man's spiritual nature can only be explained in one way—by attributing spirituality, i.e. intelligence and free will, to the First Cause, in other words by recognizing a personal God. For the cause in all cases must be proportionate to the effect, i.e. must contain somehow in itself every perfection of being that is realized in the effect.

The cogency of this argument becomes more apparent if account be taken of the fact, recognized by modern scientists, that the human species had its origin in the material universe as a whole, and this origin is perpetuated in the history of the actual universe. There was a time when there was no man nor any other living thing inhabited this globe of ours; and without pressing the point regarding the origin of life itself from inanimate matter or the evolution of man's body from lower organic types, it may be maintained with absolute confidence that no explanation of the origin of man's soul can be made out on evolutionary lines, and that recourse must be had to the creative power of a spiritual or personal First Cause. It might also be urged, as an inference from the physical theories commonly accepted by present-day scientists, that the actual organization of the material universe had a definite beginning in time. If it be true that the goal towards which physical evolution is tending is the uniform distribution of heat and other forms of energy, it would follow clearly that the existing process has not been going on from eternity; else the goal would have been reached long ago. And if this process is to be brought to such a definite and certain end, it must have had a definite beginning in time.

But the argument, strictly speaking, is conclusive even if it be granted that the world may have existed from eternity, in the sense, that is, that, no matter how far back one may go, no point of time can be reached at which created being was not already in existence. In this sense Aristotle held matter to be eternal and St. Thomas, while denying the fact, admitted the possibility of its being so. But such relative eternity is nothing more in reality than infinite or indefinite temporal duration and is altogether different from the eternity we attribute to God. Hence to admit that the world might possibly be eternal in this sense implies no denial of the essentially finite and contingent character of its existence. On the contrary it helps to emphasize this truth, for the same relation of dependence upon a self-existing cause which is implied in the one effect, is equally implied a fortiori in the existence of an infinite series of such beings, supposing such a series to be possible.

Nor can it be maintained with Pantheists that the world, whether of matter or of mind or of both, contains within itself the sufficient reason of its own existence. A self-existing world would exist of ab
solute necessity and would be infinite in every kind of perfection; but of nothing are we more certain than that the world as we know it, in its totality as well as in its parts, realizes only finite degrees of perfection. It is a mere contradiction in terms, however much one may try to cover up and conceal the contradiction by an ambiguous and confusing use of language, to predicate of matter or of God a perfection, or its opposite, which one or the other or both must be held by the Pantheist to be infinite. In other words the distinction between the finite and the infinite must be abolished and the principle of contradiction denied. This criticism applies to every variety of Pantheism strictly so called, while crude, materialistic Pantheism or even Pantheism reinforced by additional and more obvious absurdities that hardly any philosopher deserving of the name will be found to maintain it in our day. On the other hand, as regards idealistic Pantheism, which enjoys a considerable vogue in our day, it is to be observed in the first place that in many cases this is a tendency rather than a formal doctrine, that it is in fact nothing more than a confused and perverted form of Theism, based especially upon an exaggerated and one-sided view of Divine immanence (see below). (iii) And this confusion works to the advantage of Pantheism by adding support to the supposed incompatibility of certain arguments which justify Theism. Indeed the whole strength of the pantheistic position as against Atheism lies in what it holds in common with Theism; while, on the other hand, its weakness as a world theory becomes evident as soon as it diverges from or contradicts Theism. Whereas Theism, for example, safeguards such primary truths as the reality of human personality, freedom, and moral responsibility, Pantheism is obliged to sacrifice all these, to deny the existence of evil, whether physical or moral, to destroy the rational basis of religion, and, under pretense of making man his own God, to rob all of nearly all the highest incentives to good conduct. The philosophy which leads to such results cannot but be radically unsound.

(ii) The special argument based on the existence of order or design in the universe (also called the theological argument) proves immediately the existence of a suprememind of vast intelligence, and ultimately the existence of God. This argument is capable of being developed at great length, but it must be stated here very briefly. It has always been a favorite argument both with philosophers and with popular apologists of Theism; and though, during the earlier enthusiasm as the hypothesis by way of opposition, it is now recognized or admitted that the evolutionary hypothesis had overthrown the theological argument, it is now recognized that the very opposite is true, and that the evidences of design which the universe exhibits are not less but more impressive when viewed from the evolutionary standpoint. To begin with particular examples of adaptation which may be appealed to in countless number—the eye, for instance, as an organ of sight is a conspicuous embodiment of intelligent purpose—and not less but more so when viewed as the product of an evolutionary process rather than the immediate handiwork of the Creator. There is no option in such cases between the hypothesis of a directing intelligence and that of blind chance, and the absurdity of supposing that the eye originated suddenly by a single blind chance is augmented a thousand-fold by supposing that there may be so many species in the world, of such chances. "Natural selection", "survival of the fittest", and similar terms merely describe certain phases in the supposed process of evolution without helping in the least to explain it; and as opposed to teleology they mean nothing more than blind chance. The objection of the Theist that adaptation to particular ends discernible in every part of the universe, inorganic as well as organic, for the atom as well as the cell contributes to the evidence available. Nor is the argument weakened by our inability in many cases to explain the particular purpose of certain structures or organisms. Our knowledge of nature is too limited to be made the measure of nature's entire design, while as against our ignorance of some particular purposes we are entitled to maintain that as soon as any purpose is anywhere apparent it is dominant everywhere. Moreover, in our search for particular instances of design we must not overlook the evidence supplied by the harmonious unity of nature as a whole. The universe as we know it is a cosmos, a vastly complex system of coordinated and interdependent parts, each subject to particular laws, and all together subject to a common law or a combination of laws, as the result of which the pursuit of particular ends is made to contribute in a marvellous way to the attainment of a common purpose; and it is simply inconceivable that this cosmic unity should be the product of chance or accident. If it be objected that there is another side to the picture, that the universe abounds in imperfections—maladjustments, failures, seemingly purposeless waste—the reply is not far to seek. For it is not maintained that the existing world is the best possible, and it is not even pretended that the most perfect of all beings referred to would be excluded. Admitting without exaggerating their reality—admitting, that is, the existence of physical evil—there still remains a large balance on the side of order and harmony, and to account for this there is required not only an intelligent mind but one that is good and benevolent, though so far as this special argument goes this mind might conceivably be finite. To prove the infinity of the world's Designer it is necessary to fall back on the general argument already explained and on the deductive argument to be explained below by which infinity is inferred from self-existence. Finally, by way of direct reply to the problem suggested by the objection, it is to be observed that, to appreciate fully the evidence for design, we must, in addition to particular instances of adaptation and to the cosmic unity observable in the world of to-day, consider the historical continuity of nature throughout indefinite ages in the past and indefinite ages to come. We do not and cannot comprehend the full scope of nature's design, for it is not a static universe we have to study but a universe that is progressively unfolding itself and moving towards the fulfillment of an ultimate purpose under the guidance of a master mind. And towards that end which the whole scheme of nature, with its apparent evil and discord as well as obvious good order—may contribute in ways which we can but dimly discern. The well-balanced philosopher, who realizes his own limitations in the presence of nature's Designer, so far from claiming that every detail of that Designer's purpose should at present be plain to his inferior intelligence, will be content to await the final solution of enigmas which the hereafter promises to furnish.

(iii) To Newman and others the argument from conscience, or the sense of moral responsibility, has seemed the most intimately persuasive of all the arguments for God's existence, while to it alone Kant allowed an absolute value. But this is not an independent argument, although, properly understood, it serves to emphasize a point in the general a posteriori proof which is calculated to appeal with particular force to an inferior intelligence. Kant's view, which contains a direct revelation or intuition of God as the author of the moral law, that, taking man's sense of moral responsibility as a phenomenon to be explained, no ultimate explanation can be given except by supposing the existence of a Superior and Lawgiver, the argument from design brings out prominently the attribute of intelligence, so the argument from con-
science brings out the attribute of holiness in the First Cause and self-existent Personal Being with whom we must ultimately identify the Designer and the Legislator.

(iv) The confirmatory argument based on the consent of mankind may be stated briefly as follows: mankind, as a whole, has at all times and everywhere believed, and continues to believe, in the existence of some superior being or beings on whom the material world and man himself are dependent, and this fact cannot be accounted for except by admitting that this belief is true, or at least contains a germ of truth. It is admitted of course that Polytheism, Dualism, Pantheism, and other forms of error and superstition have mingled with and disfigured this universal belief of mankind; but the fact that this is the belief we are considering. For at least the germinal truth, which consists in the recognition of some kind of deity, is common to every form of religion, and can, therefore, claim its support the universal consent of mankind. And how can this consent be explained except as a result of the perception by the minds of men of the evidence for the existence of deity? It is too large a subject to be entered upon here—the discussion of the various theories that have been advanced to account in some other way for the origin and universality of religion; but it may safely be said that, if there be a thing in which an argument, not to be discussed at this stage, no other theory will stand the test of criticism. And, assuming that this is the best explanation philosophy has to offer, it may further be maintained that this consent of mankind tells ultimately in favour of Theism. For it is clear from history that religion is liable to degenerate, and has in many instances degenerated instead of progressing; and, even if it be impossible to prove conclusively that Monotheism was the primitive historical religion, there is, nevertheless, a good deal of positive evidence adducible in support of this contention. And, if this be the true result of history, it is permissible to interpret the universality of religion as witnessing implicitly to the original truth, which, however much obscured it may have become in many cases, could never be entirely obliterated. But, even if the history of religion is to read as a record of progress, as the possessors of it all in a measure and in accordance with a well-recognized principle, to seek its true meaning and significance not at the lowest but at the highest point of development; and it cannot be denied that Theism, in the strict sense, is the ultimate form in which religion naturally tends to assume.

It has been, and are today, philosophers who oppose the common belief of mankind, these are comparatively few and their dissent only serves to emphasize more strongly the consent of normal humanity. Their existence is an abnormality to be accounted for as such things usually are. Could it be claimed on their behalf, individually or collectively, that in ability, education, character, or life they exceed the infinitely larger number of cultured men who adhere on conviction to what the race at large has believed, then indeed it might be admitted that their opposition would be somewhat formidable. But so much cannot be made; on the contrary, if a comparison were called for, it would be easy to make out an overwhelming case for the other side. Or again, if it were true that the progress of knowledge had brought to light any new and serious difficulties against religion, there would, especially in view of the modern vogue of Agnosticism, be some reason for altering the disregard of the traditional belief. But so far is this from being the case that in the words of Professor Huxley—an unsuspected witness—not a solitary problem presents itself to the philosophical Theist at the present day which has not existed from the time that philosophers began to think out the logical grounds and the logical consequences of theism” (“Life and Letters of Ch. Darwin”, by F. Darwin, II, p. 203). Substantially the same arguments have been used to-day were employed by old-time sceptical Atheists in the effort to overthrow man's belief in the existence of the Divine, and the fact that this belief has withstood repeated assaults during so many ages in the past is the best guarantee of its permanency in the future. It is too firmly implanted in the depths of man's soul for little surface storms to upset it.

(b) A Priori or Ontological Argument.—This argument undertakes to deduce the existence of God from the idea of Him as the Infinite which is present to the human mind; but, as already stated, theistic philosophers are not agreed as to the logical validity of this argument. As far as the St. Anselmian version of it runs thus: The idea of God as the Infinite means the greatest Being that can be thought of; but unless actual existence outside the mind is included in this idea God would not be the greatest conceivable Being, since a Being that exists both in the mind as an object of thought and outside the mind or objectively would be greater than a Being that exists in the mind only; therefore God exists not only in the mind but outside of it. Descartes states the argument in a slightly different way as follows: Whatever is contained in a clear and distinct idea of a thing must be predicated of the thing itself. An idea of a being in no respect differing from the idea of God, absolutely perfect Being contains the notion of actual existence; therefore, since we have the idea of an absolutely perfect Being, such a Being must really exist. To mention a third form of statement, Leibniz would put the argument thus: God is at least possible since the concept of Him as the Infinite implies no contradiction; but if He is possible He must exist, because the concept of Him involves existence. In St. Anselm's own day this argument was objected to by Gaukro, who maintained, as a reductio ad absurdum, that were it valid one could prove by means of it the actual existence somehow of an ideal island surpassing in riches and delights the fabled isles of the Blessed. But this criticism, however smart it may seem, is clearly unsound, for it overlooks the fact that the argument is not intended to apply to finite ideals, but only to the strictly infinite; and if it is admitted that the concept of an incomplete idea is itself an idea, the idea is not self-contradictory, it does not seem possible to find any flaw in the argument. Actual existence is certainly included in any true concept of the Infinite, and the person who admits that he has a concept of an Infinite Being cannot deny that he conceives it as actually existing. So far, the argument is valid. Another, atheistic, objection is to this preliminary admission, which if challenged, as it is in fact challenged by Agnostics, requires to be justified by recurring to the a posteriori argument, i.e., to the inference by way of causality from contingency to self-existence, and thence by way of deduction to infinity. Hence the great majority of scholastic philosophers have rejected the ontological argument as propounded by St. Anselm and Descartes, nor as put forward by Leibniz does it escape the difficulty that has been stated.

B. Nature and Fundamental Attributes of God—Having established by inductive inference the self-existence of a personal First Cause, distinct from matter and from the human mind, we now proceed by deductive analysis to examine the nature and attributes of this Being to the extent required by our limited philosophical scope. We will treat accordingly of (1) the infinity, (2) unity or unicity, and (3) simplicity of God, adding (4) some remarks on Divine personality.

(1) Infinity of God.—(a) When we say that God is infinite we mean that He is unlimited in every kind of perfection, or that every conceivable perfection belongs to Him in the highest conceivable way. In a different sense we sometimes speak, for instance, of
infinite time or space, meaning thereby time of such indefinite duration or space of such indefinite extension that we cannot assign any limit to one of the other; care should be taken not to confound these two essentially different meanings of the term. Time and space being made up of parts in duration or extension are essentially finite by comparison with God's infinity. Now we assert that God is infinitely perfect in the sense explained, and that His infinite perfection is not to be deduced from His self-existence. A self-existent being, if limited at all, could be limited only by itself; to be limited by another would imply causal dependence on that other, which the very notion of self-existence excludes. But the self-existing cannot be conceived as limiting itself, in the sense of curtailing its own powers, in the same way as a mind is to be conceived as limiting itself. Whatever it is, it is necessarily: its own essence is the sole reason or explanation of its existence, so that its manner of existence must be as unchangeable as its essence, and to suggest the possibility of an increase or diminution of perfection would be to suggest the absurdity of a changeable essence. It only remains, then, to say that whatever perfection is compatible with its essence is actually realized in a self-existing being; but as there is no conceivable perfection as such, i.e., no expression of positive being as such, that is not compatible with the essence of the self-existent, it follows that the highest extent of self-existence is infinite in all perfection. For self-existence itself is absolute positive being, and positive being cannot contradict, and cannot therefore limit, positive being.

(ii) This general, and admittedly very abstract, conclusion, as well as the reasoning which supports it, will be rendered more intelligible by a brief specific illustration of what it involves.

(i) When in speaking of the Infinite we attribute all conceivable perfections to Him we must not forget that the predicates we employ to describe perfections derive their meaning and connotation in the first instance from their application to finite beings; and on reflection it is seen that we must distinguish between different kinds of perfections, and that we cannot without palpable contradiction attribute all the perfections of creatures in the same way to God. Some perfections are such that, even in the abstract, they require or connote a finite being: e.g., a tree’s leaf imperfect in shape; while others do not of themselves necessarily connote imperfection. To the first class belong all material perfections—extension, sensibility, and the like—and certain spiritual perfections such as rationality (as distinct from simple intelligence); to the second belong such qualities as truth, goodness, intelligence, wisdom, justice, holiness, etc. Now while it cannot be said that God is infinitely extended, or that He feels or reasons in an infinite way, it can be said that He is infinitely good, intelligent, wise, just, holy, etc.; in other words, while perfections of the second class are attributed to God formally, i.e., without any change in the proper meaning of the predicates which express them, those of the first class can only be attributed to Him eminently and equivalently, i.e., whatever positive being they express belongs to God as their cause in a much higher and more excellent way than to the creatures in which they formally exist. By means of this important distinction, which Agnostics reject or neglect, we are able to think and to speak of the Infinite without being guilty of contradiction, and the fact that men generally—even Agnostics themselves when off their guard—confuse and until the distinction is made, it is a proof that it is pertinent and well founded. Ultimately it is only another way of saying that, given an infinite cause and finite effects, whatever pure perfection is discovered in the effects must first exist in the cause (via affirmationis), and at the same time that whatever imperfection is discovered in the effects must be excluded from the cause (via negationis vel exclusionis). These two principles do not contradict, but only balance and correct one another.

(iii) Xel sometime is a natural tendency to think and speak of God as if He were a magnified creature, more especially a magnified man; and this is known as anthropomorphism. Thus God is said to see or hear, as if He had physical organs, or to be angry or sorry, as if subject to human passions; and this perfectly legitimate and necessary mode of metaphor is often quite uncritically alleged to prove that the strictly Infinite is unthinkable and unknowable, and that it is really a finite, anthropomorphic God that men worship. But whatever truth there may be in this charge as applied to Polytheistic religions, or even to the Theistic beliefs of rude and uncivilized nations, it is not true in the case of philosophical Theism. The same reasons that justify and recommend the use of metaphorical language in other connexions justify and recommend it here, but no Theist of average intelligence ever thinks of understanding literally the metaphors he applies, or bears applied by others, to God, any more than he means to speak literally when he calls a brave man a lion, or a cunning one a fox.

Finally it should be observed that, while predescribing pure perfections literally both of God and of creatures, it is always understood that these predicates are limited by higher essences and by the limitations of creatures, and that there is no thought of co-ordinating or classifying God with creatures. This is technically expressed by saying that all our knowledge of God is analogical, and that all predicates applied to God and to creatures are used analogically, not univocally (see ANALOGY). I may look at a portrait or at its living original, and say of either with literal truth: that is a beautiful face. And this is an example of analogical predication. Beauty is literally and truly realized both in the portrait and in its living original, and retains its proper meaning as applied to either; there is sufficient likeness or analogy to justify literal predication, but there is not that perfect likeness or identity between painted and living beauty which univocal predication would imply. And similarly in the case of God and creatures. What we contemplate directly is the portrait of Him painted, so to speak, by Himself and represented by it. The idea of the infinite degree various perfections, which, without losing their proper meaning for us, are seen to be capable of being realized in an infinite degree; and our reason compels us to infer that they must be and are so realized in Him who is their ultimate cause.

In conclusion we admit, but this need not be said, that our knowledge of the Infinite is inadequate, and necessarily so since our minds are only finite. But this is very different from the Agnostic contention that the Infinite is altogether unknowable, and that the statements of Theists regarding the nature and attributes of God are so many plain contradictions. It is only by ignoring the well-recognized rules of predication that have just been explained, and consequently by misunderstanding and misrepresenting the Theistic position, that Agnostics succeed in giving an air of superficial plausibility to their own philosophy of blank negation. Anyone who understands these rules, and has learned to think clearly, and trusts his own reason and common sense, will find it easy to meet and refute Agnostic arguments, most of which, in principle, have been anticipated in what precedes. Only one general observation need be made here, viz.: that the principles to which the Agnostic philosopher must appeal in an attempt to invalidate the revealed religion, if consistently applied, invalidate all human knowledge and lead to universal scepticism; and it is safe to say that, unless absolute scepticism becomes the philosophy of mankind, Agnosticism will never supplant religion.

(2) Unity or Uniety of God.—Obviously there can
be only one infinite being, only one God. Did several exist, none of them would really be infinite, for, to have plurality of natures at all, each should have some parts that were substantially distinct. This is readily granted by every one who admits the infinity of God, and there is no need to delay in developing what is perfectly clear. It should be noted, however, that some Theistic philosophers prefer to deduce unity from self-existence and infinity from both combined, and a matter so very abstract it is no surprise that slight differences of opinion should arise. But we have followed what seems to us to be the simpler and clearer line of argument. The metaphysical argument by which unity, as distinct from infinity, is deduced from self-existence seems to be very obscure, while the self-existence and infinity, while distinct from one another, seems to be clearly implied in self-existence as such. If the question, for example, be asked: Why may there not be several self-existing beings? The only satisfactory answer, as it seems to us, is this: Because a self-existent being as such is necessarily infinite, and there cannot be several infinities. The unity of God as the First Cause might also be inductively inferred from the unity of the universe as we know it; but as the suggestion might be made, and could not be disproved, that there may be another or even several universes, of which we have no knowledge, this argument would not be absolutely conclusive.

(3) Simplicity of God.—God is a simple being or substance excluding every kind of composition, physical or metaphysical. Physical or real composition is either substantial or accidental—substantial, if the being in question consists of two or more substantial principles, forming parts of a composite whole, as man for example, consists of body and soul; accidental, if the being in question, although simple in its substance (as is the human soul), is capable of possessing accidental perfections (like the actual thoughts and volitions of man’s soul) not necessarily identical with its substance. Now it is clear that an infinite being cannot be substantially composite, for this would mean that infinity is made up of the union or addition of finite parts—a plain contradiction in terms. Nor can accidental composition be attributed to the infinite, since this would imply a finitude of the perfection, which the very notion of the infinite excludes. There is not, therefore, and cannot be any physical or real composition in God.

Neither can there be that kind of composition which is known as metaphysical, and which results from the union of diverse concepts referring to the same real being. The notion of the same being signified either explicitly or even implicitly the whole reality signified by their combination.” Thus every actual contingent being is a metaphysical compound of essence and existence, and man in particular, according to the definition, is a compound of animal and rational. Essence as such in relation to a contingent being merely implies its conceivability or possibility, and abstracts from actual existence; existence as such must be added before we can speak of the being as actual. But this distinction, with the composition it implies, cannot be applied to the self-existent or infinite being in whom essence and existence are completely identified. We say of a contingent being that it has a certain nature or essence, but of the self-existent we say that it is its own nature or essence. There is no composition therefore of essence and existence—of potentiality and actuality—in God; nor can the concepts and the difference, implied for example in the definition of man as a rational animal, be attributed to Him. God cannot be classified or defined, as contingent beings are classified and defined; for there is no aspect of being in which He is perfectly similar to the finite, and consequently no genus in which He can be included. From which it follows indeed that we cannot know God adequately in the way in which He knows Himself, but not, as the Agnostic contends, that our inadequate knowledge is not true as far as it goes. God transcends the limitations of formal logical definition, our propositions are an expression of real truth, provided that what we state is in itself intelligible and not self-contradictory; and there is nothing unintelligible or contradictory in what Theistic predicate of God. It is true that no single predicate is adequate or exhaustive as a description of His infinite perfection, and that we need to employ a multitude of predicates, as if at first sight infinity could be reached by multiplication. But at the same time we recognize that this is not so—being repugnant to the Divine simplicity—and that while there is no limitation from without, we conceive and define other attributes, as we conceive and define then, express perfections that are formally distinct, yet as applied to God they are all ultimately identical in meaning and describe the same ultimate reality—the one infinitely perfect and simple being.

(4) Divine Personality.—When we say that God is a personal being we mean that He is intelligent and free and distinct from the created universe. Personality as such expresses perfection, and if human personality as such connotes imperfection, it must be remembered that, as in the case of similar predicates, this connotation is excluded when we ascribe them to God. It is principally by way of opposition to Pantheism that Divine personality is emphasized by the Theistic philosopher. Human personality, as we know it, is one of the primary data of consciousness, and it is one of those created perfections which must be realised formally (although only analogically) in the First Cause. But Pantheism would require us to deny the reality of any such perfection, whether in creatures or in the Creator, and this is one of the fundamental objections to any form of Pantheistic teaching. Regarding the mystery of the Trinity or three Divine Persons in God, which can be known only through revelation, it is enough to say here that properly understood the mystery contains no contradiction, but on the contrary adds much that is helpful to our inadequate knowledge of the infinite.

C. Relation of God to the Universe.—(1) Essential Dependence of the Universe on God; Creation and Conservation.—In developing the argument of the First Cause we have seen that the world is essentially dependent on God, and this dependence implies in the first place that God is the Creator of the world—the producer of its whole being or substance—and in the next place, supposing its production, that its continuance in being rests on the Creator’s sustaining power. Creation (q. v.) means the total production of a being out of nothing, i. e. the bringing of a being into existence to replace absolute nonexistence, and the relation of Creator is the only conceivable relation in which the Infinite can stand to the finite. Pantheistic theories, which would represent the varieties of being in the universe as so many determinations of the Being or of aspects of the one and the same eternal reality—Substance according to Spinoza, Pure Ego according to Fichte, the Absolute according to Schelling, the Pure Idea or Logical Concept according to Hegel—unhappily bristle with contradictions, and involve, as has been stated already, a denial of the distinction between the finite and the infinite. And the relation of Creator to created remains the same even though the possibility of eternal creation, in the sense already explained (see above, A. 1.), be admitted; it is impossible to fix a time at which production may not already have taken place. For certain knowledge of the fact that created being and time itself, had a definite beginning in the past we can afford to rely on revelation, although, as already stated, science suggests the same fact.
It is also clear that if the universe depends on God for its production it must also depend on Him for its conservation or continuance in being; and this truth will perhaps be best presented by explaining the much-talked-of universe, or the manifestation of Divine providence as one of God's great works and counterbalanced by the equally important principle of Divine transcendence.

(2) Divine Immanence and Transcendence.—To Deists (see Deism) is attributed the view—or at least a tendency towards the view—that God, having created the universe, leaves it to pursue its own course according to fixed laws, and ceases, so to speak, to take any further interest in, or responsibility for, what may happen; and Divine immanence is urged, sometimes too strongly, in opposition to this view. God is immanent, or intimately present, in the universe because His power is required at every moment to sustain creatures in being and to concur with them in their activities. Conservation and concursus are, so to speak, continuations of creative activity, and imply an equally intimate relation of God towards creatures, or rather an equally intimate and unceasing dependence of creatures on God. Whatever creatures are, they are by virtue of God's conserving power; whatever they do, they do by virtue of God's concursus. It is not of course denied that creatures are true causes and produce real effects; but they are only secondary causes; their efficiency is always dependent; God is the first Cause is an ever active co-operator in their actions. This is true even of the free acts of an intelligent creature like man; only it should be added in this case that Divine responsibility ceases at the point where sin or moral evil enters in. Since sin as such, however, is an imperfection, no limitation is thus imposed on God's supremacy.

But lest insistence on Divine immanence should degenerate into Pantheism—and there is a tendency in this direction on the part of many modern writers—it is important at the same time to emphasize the truth of God's transcendence, to recall, in other words, what has been stated several times already, that God is one simple and infinitely perfect personal Being whose nature and action in their proper character as Divine infinitely transcend all possible modes of the finite, and cannot, without contradiction, be formally identified with them.

(3) Possibility of the Supernatural.—From a study of nature we have inferred the existence of God and deduced certain fundamental truths regarding His nature and attributes, and His relation to the created universe. And from these it is easy to deduce a further important truth, although the presentation of a philosophy that we may fittingly conclude this section. However wonderful we may consider the universe to be, we recognize that neither in its substance nor in the laws by which its order is maintained, in so far as unaided reason can come to know them, does it exhaust God's infinite power or perfectly reveal His nature. If then it be suggested that, to supplement what philosophy teaches of Himself and His purposes, God may be willing to favour rational creatures with an immediate personal revelation, in which He aids the natural powers of reason by confirming what they already know, and by imparting to them much that they could not otherwise know, it will be seen at once that this suggestion contains no impossibility. All that is required to realize it is that God should be able to communicate directly with the created mind, and that men should be able to recognize with sufficient certainty that the communications and conditions are capable of being fulfilled no Theist can logically deny (see Revelation; Miracles). This being so, it will follow further that knowledge so obtained, being guaranteed by the authority of Him who is infinite Truth, is the most certain and reliable knowledge we can possess; and this is the knowledge we shall freely utilize in the following section of this article.

II. The God of Revelation.—We assume here—what is elsewhere proved by Catholic apologists—that the supernatural revelation of Divine immanence and transcendence is given by God in the Jewish and Christian religions, and guaranteed by such evidence that men are reasonably bound to accept it; and we assume, further, that our authoritative sources for obtaining a knowledge of the contents of this revelation are the inspired Scriptures and the unimpaired but infallible teaching of the Catholic Church. This does not of course mean that reason abdicates its office when authority takes control, for, besides the fact that submission to such authority is eminently rational, there is always an appeal back to reason itself against anything that would be self-contradictory or absurd. As a matter of fact, however, although there is mystery, there is no contradiction in what God has revealed about Himself. On the contrary reason is helped very much, instead of being hindered, in its effort to acquire a worthy knowledge of Him Who is infinite and therefore necessarily mysterious. Whatever immanence relations to creatures; but apart from the mysteries of the Trinity and Incarnation, and the supernatural economy of salvation of which the Incarnation is the centre, there is scarcely an important truth about God and His relation to creatures that could not, absolutely speaking, be absolutely made the subject of this teaching our guide, referring back as occasion may require to Biblical sources. For the discussion of questions that are merely exegetical and critical the reader is referred to the article on God in standard dictionaries or encyclopedias of the Bible.

A. Existence and Knowability of God.—(1) Neither in the Old or New Testament do we find any elaborate argumentation devoted to proving that God exists. This truth is rather taken for granted, as being something, for example, that only the fool will deny in his heart (Ps. xiii. (xiv.); i. 11 (lii.)); and argumentation, when resorted to, is directed chiefly against polytheism and idolatry. But in several passages we have a cursory appeal to some phase of the general cosmological argument: v. g. Ps. xviii (xix.), 1; xciii (xciv.), 5 sqq.; Ps. xii., 26 sqq.; II Mach. vii., 28, etc.; and in some few others—Wis. xiii., 1-9; Rom. i., 18-20—theist, philosophic, and men who reason rightly are held to be inexcusable for failing to recognize and worship the one true God, the Author and Ruler of the universe.

These two latter texts merit more than passing attention. Wis., xiii., 1-9 reads: "But all men are vain, in whom there is not the knowledge of God: and who by these good things that are seen, could not understand him that is, neither by attending to the works have acknowledged who was the workman: but have imagined either the fire, or the wind, or the swift air, or the circle of the stars, or the great water, or the sun and moon, to be the gods that rule the world. With whose beauty, if they were delighted, took them to be gods: let them know how much the Lord of them is more beautiful than they: for the first author of beauty made all those things. Or if they admired their power and effects, let them understand by them, that he that made them, is mightier than they; for by the greatness of the beauty, and the creator of them may be seen, so as to be known thereby. But yet as to these they are less to be blamed. For they perhaps err, seeking God, and desirous to find him. For being conversant among his works, they search: and they are persuaded that the
things are good which are seen. But then again they are not to be pardoned. For if they were able to know so much as to make a judgment of the world: how did they not more easily find out the Lord thereof? Here it is clearly taught (a) by the phenomenon or effect of the things that are may—requires a cause distinct from and greater than itself or any of its elements; (b) that this cause who is God is not unknowable, but is known with certainty not only to exist but to possess in Himself, in a higher degree, whatever beauty, strength, or other perfections are realized in His works; (c) that this divination is obtainable by the right exercise of human reason, without reference to supernatural revelation, and that philosophers, therefore, who are able to interpret the world philosophically, are inexusable for their ignorance of the true God, their failure, it is implied, being due rather to lack of good will than to the incapacity of the human mind.

Substantially the same doctrine is laid down more briefly by St. Paul in Rom., i, 18-20: “For the wrath of God is revealed from heaven against all ungodliness and injustice of those men that detain the truth of God, because that which is true, is manifest to them. For God hath manifested it to them.” For the invisible things of him, from the creation of the world, are clearly seen, being understood by the things that are made; his eternal power also, and divinity: so that they are inexusable. It is to be noted that the pagans, whom St. Paul is addressing, are not speaking are blamed for their ignorance of supernatural revelation and the Mosaic law, but for failing to preserve or for corrupting that knowledge of God and of man’s duty towards him which nature itself ought to have taught them. Indeed it is not pure ignorance as such, but the fault of those who attempt to cover and exclude every type of the pantheistic theory, and nobody will deny that they are in harmony with Scriptural teaching. The doctrine of creation, for example (see Creation), which none is more clearly taught or more frequently emphasized in Sacred Scripture, is radically opposed to Pantheism—creation as the sacred writers understand it being the voluntary act of a free agent bringing creatures into being out of nothingness.

(3) It will be observed that neither the Scriptural texts we have quoted nor the Vatican decrees say that God’s existence can be proved or demonstrated; they merely affirm that it can be known with certainty. Now one may, if one wishes, insist on the distinction between what is knowable and what is demonstrable, but in the present connexion this distinction has little real import. It has never been claimed that God’s existence can be demonstrated, it is conditioned by faith of which it is important in geometry is proved, and most Theists reject every form of the ontological or deductive proof. But if the term proof or demonstration may be, as it often is, applied to a posteriori or inductive inference, by means of which knowledge that is not innate or intuitive is acquired by the exercise of reason, then it cannot fairly be denied that Catholic teaching virtually asserts that God’s existence can be proved. Certain knowledge of God is declared to be attainable “by the light of reason”, i.e. of the reasoning faculty as such, from or through “the things that are made”; and this clearly implies an inferential process such as in other connections may be the proof.

Hence it is fair to conclude that the Vatican Council, following Sacred Scripture, has virtually condemned the Scepticism which rejects the a posteriori proof [see above, A, (1)]. But it did not deal directly with Ontologism, although certain propositions of the Ontologists had already been condemned as unphilosophical (tutti tridoni non posse) by a decree of the Holy Office, 18 Sept., 1861 (Denzinger, 1659 sqq.—old no. 1516), and among the propositions of Rosmini subsequently condemned (14 Dec, 1887) several reassert the ontologist principle (Denzinger, 1911 sq.—old no. 1736). This condemnation by the Holy Office is quite sufficient to discredit Ontologism, regarding which it is enough to say here (a) that, as already observed (I, A), experience contradicts the assumption that the human mind has naturally or necessarily an immediate con-
sciouness or intuition of the Divine, (b) that such a theory obscures, and tends to do away with, the difference, on which St. Paul insists (I Cor. xiii, 12), between our earthly knowledge of God ("through a glass, darkly") and our vision of Him in the blessed in heaven enjoy ("face to face"), and seems irreconcilable with the Catholic doctrine, defined by the Council of Vienne, that, to be capable of the face to face or intuitive vision of God, the human intellect needs to be endowed with a special supernatural light, the lumen infans, and (c) that, so far as it is clearly intelligible, the theory goes dangerously near to Pantheism.

In the decree "Lamentabili" (3 July, 1907) and the Encyclical "Pascendi" (7 Sept., 1907), issued by Pope Pius X, the Catholic position is once more reaffirmed and theological Agnosticism condemned. In bearing on our subject this latest act of Church authority is merely a restatement of the teaching of St. Paul and of the Vatican Council and a reassertion of the principle which has been always maintained, that God must be naturally knowable if faith in Him and His revelation is to be reasonable, and if a divine, and natural, though not yet clearly, the substance of Christianity vanishes into thin air once the astatic principle is adopted, one has only to point the finger at Modernism. Rationalism is a necessary logical basis for revealed religion; and that the natural knowledge of God and natural religion, which Catholic teaching should be possible to each human person. The result of grace, i.e. of a supernatural aid given directly by God Himself, follows from the condemnation by Clement XI of one of the propositions of Quesnel (prop. 41) in which the contrary is asserted (Densinger, 1901—old no. 1256).

3. THE DIVINE NATURE AND ATTRIBUTES.—(1) As we have already seen, reason teaches that God is one simple and infinitely perfect spiritual substance or nature, and Sacred Scripture and the Church teach the same. The creeds, for example, usually begin with a profession of faith in the one true God, Who is the Creator and Lord of heaven and earth, and is also, in the words of the Vatican Council, "omnipotent, eternal, immense, incomprehensible, infinite in intellect and will and in every perfection" (Sess. III, cap. 1, De Doce, in Densinger, "Enchiridion", 1762—old no. 1631). The best way in which we can describe the Divine nature is to think of it as the infinitely perfect Being; but we must always remember that even itself, the most abstract and universal term we possess, is predicated of God and of creatures not univocally or identically, but only analogically. But other predicates, which, as applied to creatures, express certain specific determinations of being, are also used of God—analagically, if in themselves they express pure or unmixed perfection, but only metaphorically if they necessarily connote imperfection. Now of such predicates as applied to creatures we distinguish between those that are used in the concrete to denote beings, more or less determinate (v.g., substance, spirit, etc.), and those that are used in the abstract or adjectively to denote determinations, or qualities, or attributes of being (v.g., good, goodness; intelligent, intelligence; etc.) and we find it useful to transfer this distinction to God, and to speak of the Divine nature or essence and Divine attributes, being careful at the same time, by insisting on Divine simplicity (see above I.), to avoid error or contradiction in its application. For, as applied to God, the distinction between nature and attributes, and between the attributes themselves, is merely logical and not real. The finite mind is not capable of comprehending the infinite so as adequately to discern its essence by any single concept or term; but while using a multitude of terms, all of which are analogically true, we do not mean to imply that there is any kind of composition in God. Thus, as applied to creatures, goodness and justice, for example, are distinct from each other and from the nature or substance of the beings in whom they are found, and if finite limitations compel us to speak of such perfections in God as if they were contained in other concepts, or were ready, when needed, to explain, that this is not really so, but that all Divine attributes are really identical with one another and with the Divine essence.

(2) The Divine attributes or perfections which may thus logically be distinguished are very numerous, and I would not be a realist to say that they are all known; but if I am, then there is no rigid agreement as to the number of classification of such attributes. As good is a classification in itself any other, but that based on the analogy of entitative and operative perfections in creatures—the former qualifying nature or essence as such and abstracting from activity, the latter referring especially to the activity of the nature in question. Another distinction is often made between physical, moral, and religious attributes. The former are in themselves abstracting from, while the latter directs the perfection, moral. But without labelling with the question of classification, it will suffice to notice separately those attributes of leading importance that have not been already explained. Nothing need be added to what has been said about the attributes of eternity, immortality, and simplicity (which belong to the entitative class); but eternity, immortality, and immutability (also of the entitative class), together with the active attributes, whether physical or moral, connected with the Divine intellect and will, call for some explanation here.

(a) Eternity.—By God is eternal we mean that in essence, life, and action He is altogether beyond temporal limits and relations. He has neither beginning, nor end, nor duration by way of sequence or succession of moments. There is no past or future for God—but only an eternal present. If we say that He was or that He acted, or that He will be or will act, we mean in strictness that He is or that He acts; and this truth is well expressed by Christ when He says (John, viii, 58—A.V.): "Before Abraham was, I am." Eternity, therefore, as a predicate of God, does not mean indefinite duration in time—a meaning in which the term is often used of other things. For us, if it means the total exclusion of the finiteness which time implies. We are obliged to use negative language in describing it, but in itself eternity is a positive perfection, and as such may be best defined in the words of Boethius as being "interminabilis vitae tota simul et perpetua possessio," i.e. per se, in all eternity and perfection of life without beginning, end, or succession.

The eternity of God is a corollary from His self-existence and infinity. Time being a measure of finite existence, the infinite must transcend it. God, it is true, coexists with time as He coexists with creatures, but He does not exist in time, so as to be subject to temporal relations: His self-existence is timeless. Yet the positive perfection expressed by duration as such, i.e. persistence and permanency of being, belongs to God and is truly predicated of Him, as when He is spoken of, for example, as "Him that is, and that was, and that is to come" (Apoc. 1, 4); but the strictly temporal connotation of such predicates must always be corrected by recalling the true notion of eternity.

(b) Immensity, and Ubiquity, or Omnipresence.—Space, like time, is one of the measures of the finite, and as by the attribute of eternity we describe God's transcendence of all temporal limitations, so by the attribute of immensity we express His transcendental relation to space. There is this difference, however, to be noted between eternity and immensity, that the positive aspect of the latter is more easily realized by
us, and is sometimes spoken of, under the name of omnipresence, or ubiquity, as if it were a distinct attribute. Divine immensity means on the one hand that God is necessarily present everywhere in space as the immensity and sustainer of creatures, and on the other hand that He transcends the limitations of actual and possible space, and cannot be circumscribed or measured or divided by any spatial relations. To say that God is immense is only another way of saying that He is both immanent and transcendent in the sense already explained. Apocryphically and paradoxically He expressed it, "God's centre is everywhere, His circumference nowhere." That God is not subject to spatial limitations follows from His infinite simplicity; and that He is truly present in every place or thing—"that He is omnipresent or ubiquitous—follows from the fact that He is the cause and ground of all reality. According to our finite manner of thinking we conceive this presence of God in things spatial as being primarily a presence of power and operation—immediate Divine efficiency being required to sustain created beings in existence and to enable them to act; but, as every kind of Divine act is really identified with the Divine nature or essence, it follows that God is really present everywhere in creation not merely per virtutem et operationem, but per essentiam. In other words God Himself, or the Divine nature, is in immediate contact with, or immanent in, every creature—conserving it in being and enabling it to act. But if we consider this truth we must, if we would avoid contradiction, reject every form of the pantheistic hypothesis. While emphasizing Divine immanence we must not overlook Divine transcendence. There is no lack of Scriptural or ecclesiastical testimony to Divine immensity and ubiquity. It is enough to refer for example to Heb., i. 3; iv. 12, 13; Acts, xviii, 24, 27, 28; Eph., i. 23; Col., i. 16, 17; Ps. cxxxviii, 7-12; Job, xii, 10, etc.

(c) Immutability.—In God "there is no change, nor shadow of alteration" (James, i. 17); "They [i. e. "the works of thy hands"] shall perish, but thou shalt continue: and they shall all grow old as a garment. And as a vestment shalt thou change them, and they shall be changed: but thou art the same, and thy years shall not fail" (Heb., i. 10-12; Ps. ci, 26-28; Cf. Mal., iii, 6; Heb., xiii, 8). These are some of the Scriptural texts which teach the eternal constancy of Divine immutability, and this attribute is likewise emphasized in church teaching, as by the Council of Nicaea against the Arians, who attributed mutability to the Logos (Denzinger, 54—old No. 18), and by the Vatican Council in the definition quoted above.

That the Divine nature is essentially immutable, or incapable of any internal change, is an obvious corollary from Divine infinity. Changeableness implies the capacity for increase or diminution of perfection, that is, it implies finiteness and imperfection. But God is infinitely perfect and is necessarily what He is. It is true that some attributes by which certain aspects of Divine perfection are described are hypothetical or relative, in the sense that they presuppose the contingent fact of creation: omnipresence, for example, presupposes the actual existence of spatial beings. But it is obvious that the mutability implied in this belongs to creatures, and not to the Creator; and it is a strange confusion of thought that has led some modern Theists—even professing Christians—to maintain that such attributes can be laid aside by God, and that the Logos in becoming incarnate actually did lay them aside, or at least ceased from their active exercise. But as creation itself did not affect the immutability of God, so neither does the incarnation of a Divine Person; whatever change was involved in either case took place solely in the created nature.

(d) The so-called active Divine attributes are best treated in connexion with the Divine Intellect and Will—the principles of Divine operation ad extra—to which they are all ultimately reducible.

(i) Divine Knowledge.—(a) That God is omniscient, or possesses the most perfect knowledge of all things, follows from His infinite perfection, and from the fact that He knows and comprehends Himself fully and adequately, and in the next place He knows all created objects and comprehends their finite and contingent mode of being. Hence He knows them individually or singularly in their finite multiplicity; knows everything possible as an act of knowledge; not only as well as what is good. Everything, in a word, which to our finite minds signifies perfection and completeness of knowledge may be predicated of Divine omniscience, and it is further to be observed that it is on Himself alone that God depends for His knowledge. To make Him in any way dependent on creatures for knowledge of created objects would destroy His infinite perfection and supremacy. Hence it is in His eternal, unchangeable, comprehensive knowledge of Himself or of His own infinite being that God knows creatures and their acts, whether there is question of what is actual or merely possible. Indeed Divine knowledge itself is identical with Divine essence, as are all the attributes and acts of God; but according to our finite modes of thought we feel the need of conceiving them distinctly and of representing the Divine essence as the medium or mirror in which the Divine intellect sees all truth. Moreover, although the act of finite knowledge is identical with the act of finite essence, yet while it requires no further determination—nothing beyond the need of further distinctions—not as regards the knowledge in itself, but as regards the multiplicity of finite objects which it embraces. Hence the universally recognized distinction between the knowledge of vision (scientia visionis) and that of simple intelligence (scientia intellectus) and the fear of confusion or overloading our minds, is regarded in the scientia media. We shall briefly explain this distinction and the chief difficulties involved in this controversy.

(ii) Distinctions in the Divine Knowledge.—In classifying the objects of Divine omniscience the most obvious and fundamental distinction is between things that actually exist at any time, and those that are merely possible. And it is in reference to these two classes of objects that the distinction is made between knowledge of vision and "of simple intelligence"—the former relating to things actual, and the latter to things possible. Simple intelligence at first sight is to be absolutely comprehensive and adequate to the purpose for which we introduce distinctions at all; but some difficulty is felt once the question is raised of God's knowledge of the acts of creatures endowed with free will. That God knows infallibly and from eternity what, for example, a certain man, in the exercise of free will, will do or actually does in any given circumstances, and what he might or would actually have done in different circumstances, is beyond doubt—being a corollary from the eternal actuality of Divine knowledge. So to speak, God has no wait on the contingent, and the famous controversy of the man's free choice to know what the latter's action will be; He knows it from eternity. But the difficulty is: how, from our finite point of view, to interpret and explain the mysterious manner of God's knowledge of such events without at the same time sacrificing the free will of the creature.

The Dominican school has defended the view that the distinction between knowledge of vision and "of simple intelligence" is the only one we need or ought to employ in our effort to conceive and describe Divine omniscience, even in relation to the free acts of intelligent creatures. These acts, if they ever take place, are not known to God as if they were externally actual—and this is admitted by all; otherwise they remain in the category of the merely possible—and this is what the Jesuit school denies, pointing for example to statements such as that of Christ re-
garding the people of Tyre and Sidon, who would have done penance had they received the same graces as the Jews (Matt., xi. 21). This school therefore maintains that as a match to the purely possible we must add another category of objects, viz., hypothetical facts that may never become actual, but would become actual were certain conditions realised. The hypothetical truth of such facts, it is rightly contended, is more than mere possibility, yet less than actuality; and since God knows such facts, he has a moral character in their being true; it is good reason for introducing a distinction to cover them—and this is the *scientia media*. And it is clear that even acts that take place and as such fall finally under the knowledge of vision may be conceived as falling first under the knowledge of simple intelligence and then under the *scientia media*; the progressive formula would be first, it is possible Peter would do so and so; second, Peter would do so and so, given certain conditions; third, Peter will do or does so and so.

Now, were it not for the differences that lie behind, there would probably be no objection raised to *scientia media* moving towards the real problem. Admitting that God knows from eternity the future free acts of creatures, the question is how or in what way He knows them, or rather how we are to conceive and explain by analogy the manner of the divine foreknowledge, which in itself is free and volitional. If it is admitted that God knows them first as objects of the knowledge of simple intelligence; but does he know them as objects of the *scientia media*, i.e., hypothetically and independently of any decree of His will, determining their actuality, or does He know them only in and through such decrees? The Dominican contention is that God's knowledge of future free acts depends on the decrees of His free will which predetermine their actuality by means of the *premoto physica*. God knows, for example, that Peter will do so and so, because He has decreed from eternity so to move Peter's free will that the latter will infallibly, although freely, co-operate with, or consent to, the Divine premotion. In the case of good acts there is a physical and intrinsic connexion between the motion given by God and the consent of Peter's will, while as regards morally bad acts, the immorality as such, with which God and not a positive entity, comes entirely from the created will.

The principal difficulties against this view are that in the first place it seems to do away with human free will, and in the next place to make God responsible for sin. Both consequences of course are denied by the Dominicans, and it is, but, moral and not the mystery which shrouds the subject, it is difficult to see how the denial of free will is not logically involved in the theory of the *premoto physica*, how the will can be said to consent freely to a motion which is conceived as predetermining consent; such explanations as are offered merely amount to the assertion that after all the human will is free. The other difficulty consists in the twofold fact that God is represented as giving the *premoto physica* in the natural order for the act of will by which the sinner embraces evil, and that He withholds the supernatural *premoto* or efficacious grace which is essentially required for the performance of a salutary act. The Jesuit school on the other hand—with whom probably a majority of independent theologians agree—utilising the *scientia media* maintains that we ought to conceive God's knowledge of future free acts not as being dependent and subsequent to the exercise of His will, but in its character as hypothetical knowledge & being therefore independent and antecedent to them. God knows in the *scientia media* what Peter would do if in given circumstances he were to receive a certain aid, and this before any absolute decree to give that aid is supposed. Thus there is no predetermination by the Divine of what the human will freely chooses; it is not because God foreknows (having foredecided) a certain free act that that act takes place, but God foreknows it in the first instance because it is going to take place. He knows it as a hypothetical, objective fact before it becomes an object of the *scientia visionis*—or rather this is how, in order to safeguard human liberty, we must conceive Him as knowing it. It was thus, for example, that Christ knew what would have been the result of His ministering if it is going to take place in Tyre and Sidon. But one must be careful to avoid implying that God's knowledge is in any way dependent on creatures, as if He had, so to speak, to await the actual event in time before knowing infallibly what a free creature may choose to do. From eternity He knows, but does not predetermine the creature's choice. And if it be asked how we can conceive this knowledge to exist antecedently to and independently of some act of the Divine will, on which all things contingent depend, we can only say that the objective truth expressed by the hypothetical facts in question is somehow reflected in the Divine Essence, which is the mirror of all truth, and that in knowing Himself God knows these things also. Whichever way we turn we are bound ultimately to encounter a mystery, and, when there is a question of choosing between a theory which refers the mystery to God Himself and one which only saves the truth of human freedom by an ingenious deviation of the mystery, the theologians not unnaturally prefer the former alternative.

(ii) The Divine Will. —(a) The highest perfections of creatures are reducible to functions of intellect and will, and, as these perfections are realized analogically in God, we naturally pass from considering Divine knowledge or intelligence to the study of Divine volition. The object of intellect as such is the true; the object of will as such, the good. In the case of God it is evident that His own infinite goodness is the primary and necessary object of His will, created goodness being but a secondary and contingent object. This is what the inspired writer means when he says: "The Lord hath made all things for himself" (Prov., xvi, 4). The Divine will of course, like the Divine intellect, is really identical with the Divine Essence, but according to our finite modes of thought we are obliged to speak of them as if they were distinct; and just as the Divine intellect is dependent on created objects for its knowledge of them, neither can the Divine will be so dependent for its volition. Had no creature ever been created God would have been the same self-sufficient being that He is; the Divine will as an appetite faculty being satisfied with the volition of the Divine Essence. This is what the Vatican Council means by speaking of God as "most happy in and by Himself"—not that He does not truly wish and love the goodness of creatures, which is a participation of His own, but that He has no need of creatures and is in no way dependent on them for His bliss.

(2) Hence it follows that God possesses the perfection of free will in an infinitely eminent degree. That is to say, without any change in Himself or in His eternal act of volition, He freely chooses whether or not creatures shall exist and what manner of existence shall be theirs, and this choice or determination is an exercise of that dominion which free will (liberty of indifference) essentially expresses. In itself free will is an absolute and positive perfection, and as such is most fully realized in God. Yet we are obliged to describe Divine liberty as we have done relatively to its effects in creation, and, by way of negation, we must exclude the imperfections which fall to human will in creatures. These imperfections may be reduced to two, viz., potentiality and mutability as opposed to immutable pure act, and the power of choosing what is evil. Only the second need be noticed here.
(γ) When a free creature chooses what is evil, he does not choose it formally as such, but only sub specie boni, i.e., what his will really embraces is some aspect of goodness which he truly or falsely believes to be the opposite of evil. Moral providence intimately consists in choosing some such fancied good which is known more or less clearly to be opposed to the Supreme Good, and it is obvious that only a finite being can be capable of such a choice. God necessarily loves Himself, who is the Supreme Good, and cannot wish anything that would be opposed to Himself. Yet He permits the sins of creatures, and it has always been considered one of the gravest problems of theology to explain why this is so. We cannot enter on the problem here, but must content ourselves with a few brief observations. First, however difficult, or even impossible, may be the problem of moral evil for the theist, it is many times more difficult for every kind of anti-theist. Secondly, so far as we can judge, the possibility of moral deflection seems to be a natural limitation of created free will, and can only be excluded supernaturally; and, even viewing the question from a purely rational standpoint, we are conscious on the whole that, whatever the final solution may be, it is better that God should have created free beings capable of sinning than that He should not have created free beings at all. Few men would resign the faculty of free will just to escape the danger of evil. Thirdly, some possible solution may be present apparent to our limited intelligence, may be expected on mere rational grounds from the infinite wisdom and justice of God, and supernatural revelation, which gives us glimpses of the Divine plan, goes a long way towards supplying a complete answer to the questions that most deeply concern us. The clearly perceived truth to be emphasized here is that sin is hateful to God and essentially opposed to His infinite holiness, and that the willful discord which sin introduces into the harmony of the universe will somehow be set right in the end.

There is no need to delay in discussing mere physical as distinct from moral evil, and it is enough to remark that such evil is not merely permitted, but willed by God, not indeed in its character as evil, but as being, in such a universe as the present, a means towards good and in itself relatively good.

(2) Providence. — Providence is the manifestation of the divine knowledge, so also in the Divine will, and one of these latter is of sufficient importance to deserve a passing notice here. This is the distinction between the antecedent and consequent will, and its principal application is to the question of man's salvation. God, according to St. Paul (I Tim. ii, 4), "will have all men to be saved and to come to the knowledge of the truth," is antecedently to be seen and the preparation and bestowal of the means by which salvation is obtained; while reprobation is the foreknowledge of those who will de facto be damned and the permission of this eventuality by God. In both cases an act of the intellect, infallible foreknowledge, and an act of the will are supposed; but whereas in predestination the antecedent and consequent will is the same, in reprobation God wills consequently what He does not antecedently will at all but only permits, viz., the eternal punishment of the sinner.

Many controversies have arisen on the subject of predestination and reprobation that have entered here. But we shall briefly summarize the leading points on which Catholic theologians have agreed and the points on which they differ.

First, that predestination exists, i.e., that God knows from eternity with infallible certainty who will be saved and who will not, and that the Divine will antecedently decrees the graces by which salvation will be secured, is obvious from reason and is taught by Christ Himself (John, x, 27), and by St. Paul (Rom., viii, 29, 30).

Second, while God has this infallible foreknowledge, we on our part cannot have an absolutely certain assurance that we are among the number of the predestined — unless indeed by means of a special Divine revelation such as we know from experience is rarely, if ever, given. This follows from the Tridentine condemnation of the teaching of the Reformers that we could and ought to believe with the certainty of faith in our own justification and election (Sess. VI, cap. IX, can. xxv).

Third, the principal controverted point regarding predestination between Catholic theologians is concerned with its gratuity, and in order to understand the controversy it is necessary to distinguish between predestination in intention, i.e., as it is a mere act of knowledge and of purpose in the divine mind, and intention, i.e., as it means the actual bestowal of grace and of glory; and also between predestination in the adequate sense, as referring both to grace and to glory, and in the inadequate sense, as referring particularly to one's destination to glory, and abstracting
from the grace by which glory is obtained. Now, (1) speaking of predestination in execution, all Catholic theologians maintain in opposition to Calvinists that it is not entirely gratuitous; and in the case of such predestination as depends partly on the free mercy of God and partly on human co-operation; the actual bestowal of glory is at least partly a reward of true merit. (2) Speaking of predestination in intention and in the adequate sense, Catholic theologians agree that it is gratuitous; so that it is gratuitous in a degree which absolutely cannot be merited by man. (3) But if we speak of predestination in intention and in the inadequate sense, i.e. to glory in abstraction from grace, there is no longer unanimity of opinion. Most Thomists and several other theologians maintain that predestination in this sense is gratuitous, i.e. that God first destined a creature to glory antecedently to any foreseen merits, and consequently upon this decree to give the efficacious grace by which it is obtained. Predestination to grace is the result of an entirely gratuitous predestination to glory, and with this is combined for those not included in the decree of election what is known as a negative reprobation. Other theologians maintain on the contrary that there is no such thing as negative reprobation, and that predestination to glory is not gratuitous but dependent on foreseen merits. The order of dependence, according to these theologians, is the same in predestination in intention as it is in predestination in execution, and already stated; the actual bestowal of glory only follows upon actual merit in the case of adults. These have been the two prevailing opinions followed for the most part in the schools, but a third opinion, which is a somewhat subtle one, has been put forward by certain other theologians, and defended with great skill by so recent an authority as Billot. The gist of this view is that while negative reprobation must be rejected, gratuitous election to glory ante pravissima merita must be retained, and an effort is made to prove that these two may be logically separated, a possibility overlooked by the advocates of the first two opinions. Without entering into details here, it is enough to observe that the success of this subtle expedient is very questionable.

Fourth, as regards reprobation, (1) all Catholic theologians are agreed that God foresees from eternity all the eventual defects in the life of each creature, and that on the decree of His will destining them to eternal damnation is not antecedent to but consequent upon foreknowledge of their sin and their death in the state of sin. The first part of this proposition is a simple corollary from Divine omniscience and supremacy, and the second involves against Jansenistic teaching, according to which God expressly created some to the purpose of punishing them, or at least that subsequently to the fall of Adam, He leaves them in the state of damnation for the sake of exhibiting His wrath. Catholic teaching on this point reveres II Peter iii. 9, according to which God does not wish that any should perish but that all should return to penance, and it is the teaching implied in Christ’s own description of the sentence that is to be pronounced on the damned, condemnation being grounded not on the antecedent will of God, but on the actual demerits of man themselves (e.g. Matt., xxxv. 41). (2) So-called negative reprobation, which is commonly defended by those who maintain election to glory antecedently to foreseen merits, means that simultaneously with the predestination of the elect God either positively excludes the damned from the free decree of election to glory or at least fails to include them; but, without, however, destining them to positive punishment except consequentially on their foreseen demerits. It is this last qualification that distinguishes the doctrine of negative reprobation from Calvinistic and Jansenistic teaching, leaving room, for instance, for a condition of perfect natural happiness for those dying with only original sin on their souls. But, notwithstanding this difference, the doctrine ought to be rejected; for it is opposed to plain to the teaching of St. Paul regarding the universality of God’s will to save all (I Tim., ii. 4), and from a rational point of view it is difficult to reconcile with a worthy concept of Divine justice. A very full bibliography of Theism (especially of modern non-Catholic in Ba) will be found in Vandenhoeck, Monologium and Proseologium, St. Thomas, Summa Theologiae, i. [ii.], and, C. Gionata, De dogmatico praedicativo. a substantial treatise (Jesuits, Monologium and Proseologium, St. Thomas, Summa Theologiae, i. [ii.], and, C. College, Cambridge, and in 1640 he was made a Billingsley scholar. He proceeded B.A. in 1641, but the influence of John Sergeant, with whom he became acquainted during his college days, had induced him to enter the Catholic Church, and in 1642 the two set out for the English College at Lisbon. In due course Godden was ordained, and so distinguished himself by his scholarship and controversial ability that in 1650 we find him lecturing on philosophy in the college. He rapidly ascended the ladder of academic distinction, and after being successively pro- fessor of theology, prefect of studies, and vice-president, succeeded Dr. Clayton as president of the college in 1655. Five years later he was thought worthy of the degree of Doctor of Divinity, and had established so general a reputation for eloquence and piety that he was invited to accept the bishopric of London, an offer he refused. His influence soon began to decline, and he took refuge in Paris. His lodgings in Somerset House were searched and Hill, despite the testimony of witnesses who swore that he was elsewhere at the time of the murder, was convicted and executed at Tyburn, 21 Feb., 1679. Later evidence, tending to show that Godden was in no way connected with Godfrey’s death, altered popular feeling, and in the reign of James II. he returned to his former post as almoner to the queen dowager. From this time until his death he took a prominent part in the religious controversies in England, and in 1686, with Dr. Giffard, defended the doctrine of the Real Presence, before the king, against Dr. William Jane and Dr. Simon Patrick. He was buried under the royal chapel in Somerset House.

Godden’s printed works are for the most part controversial and religious. They include: “Catholicks no or a Full Representation of Dr. Stillingfleet’s Unjust Charge of Idolatry against the Church of Rome” (London, 1671); “A Just Discharge to Dr. Stillingfleet’s Unjust Charge of Idolatry against the Church of Rome.” With a discovery of the vanity of his late defense . . . By way of Dialogue between Eunomius, the Conformist, and Catholicus, a non-conformist (Paris, 1677); “A Sermon of St. Peter, preached before the Queen Dowager . . . on 29 June, 1686” (London, 1686); “A Sermon on the Nativity of Our Lord, preached before the Queen Dowager . . . at Somerset House” (London, 1686). He also left a manuscript treatise on the Oath of Supremacy.

Stanley J. Quinn.

Goddeau, Antoine, bishop, poet, and exegete; b. at Dreux in the Diocese of Chartres, 1605; d. at Venice, 21 April, 1672. His facility in verse-writing early won the interest of a relative in Paris, M. Conrart, at whose house the elect of the literary world gathered to hear the unordained son of the youngest of the last of the exiles. The outcome of these meetings was the foundation of the French Academy, of which Goddeau was one of the first members and the third to whose lot fell to deliver the weekly address to that body. He was induced to settle in Paris, where he soon became a favorite at the Hôtel Rambouillet, rivaling in the fecundity and ingenuity of his verse the most famous writers of his period. At that time to say of any work c’est de Goddeau was to stamp it with the seal of approval and to invite eager andante devote himself to the service of God, and in 1636 was named Bishop of Grasse by Richelieu, to whom he had dedicated his first religious composition, a poetical paraphrase of the Psalm “Benedicite omnia opera Domini.” He proved a model prelate, irreproachable in life, zealous for the interests of his flock, and unwaried in upholding ecclesiastical discipline among his clergy, whom he assembled in synods and admonished in sermons and pastoral letters. By a Bull of Innocent X he was empowered to unite the Dioceses of Grasse and Venice under his administration, but seeing the dissatisfaction of the clergy of the latter diocese, he relinquished the former and established himself at Nice.

But Goddeau by no means gave up his public and literary interests. In 1645 and 1655 he took a prominent part in the General Assembly of the French Clergy, and under the regency of Anne of Austria was deputy from the Estates of Provence. He turned his talent for versifying to good account, his output being a metrical version of the Psalms, poems on St. Paul, the Assumption, St. Eustace, Mary Magdalen, and one of 15,000 lines on the annals of the Church. The monotonous and mechanical arrangement of the poems are relieved at intervals by passages remarkable for thought or expression, among others those lines embodied by Corneille in his “Polyeucte”:

"Leur gloire tombe par terre,
Et comme elle l’éclat du verre,
Elle en a la fragilité.

The Jesuit Father Vassyseau published, in 1647, a satire on Goddeau, “Antonius Goddeus, episcopus Grassensis, an eloqui Aureliani scriptor idoneus idemque utrum poeta;” the verdict of which was echoed by Boileau in a letter to Maurocit.

The fame of Goddeau’s poetical works, however, has been quite overshadowed by that of his historical and technical works. His “Vie de M. de Cordes, conseiller au Châtelet” (1645) and “Éloges historiques des empereurs” (1667).

Among Goddeau’s works of a religious character are: “Prêtres, méditations” (Paris, 1643); “Avis à M. de Paris pour le culte du Saint-Sacrement dans les paroisses et de la façon de le porter aux malades” (1644); “Instructions et ordonnances synodales” (1644); “Vie de Saint Paul Apôtre” (1647); “La vie de saint Augustin” (1652); “La panégyrique de saint
Augustin" (1653); “La vie de saint Charles Borromée” (1657); “L'Eléoge de saint François de Sales” (1663). His chief title to fame, however, rests on his work in Holy Scripture. His paraphrases of the follow ing books appeared in the Proverbs, Galatians, and Ephesians (1632); Thessalonians, Timothy, Titus, and Philemon (1641); Hebrews (1637); the Canonical Epistles (1640), are still recommended as useful, the sense and connexion of ideas being brought out clearly by the insertion of the fewest possible words (Simon in “les principaux commentateurs du N. T.”, c. lviii). His “Version expliquée du Nouveau Testament” (1668) is something between a literal translation and a paraphrase. The greatest of all his works, according to Nicéron, is “La morale chrétienne pour l'instruction des Cures et des Prêtres du diocèse de Venise” (Paris, 1709), intended to combat the Cestius, a model of force, clearness, and revealing a precision rarely to be found in the other writings of the same author. In the Latin translation which appeared at Augsburg in 1774 under the title “Theologia moralis ex purissimis s. Scripturis, in particular from the Paulus derivata, noto theologica illustrata,” the arrangement of the matter is greatly improved.

Although opinions vary as to the importance of Bishop Godeau among his contemporaries, it would seem that too much stress is laid on his achievement as a compiler of the church in all and with his work as a prelate and an exorcist. He was stricken with apoplexy and died in his episcopal city at the age of sixty-seven.

Vie de Godeau in Godeau, Eloges des Eclesies (Mets, 1802); Serrurier, Alphonse, “Vita S. A. Godeau, vesu de Vence” (Venice, 1761); Simion, Histoire critique du Nouveau Testament (1677); Dupin, Bibliothèque éclatique de l'XIe siècle; Mora, Annales de France pour l'usage des étudiants (Paris, 1727-45); Pellemeron, Histoire de l'académie française, I (Paris, 1743), 12.59, 314-396; Racine, Abrégé de l'histoire act. (1749-56), XIII; Schöner in Kirchenlex., s. v.

F. M. Ruger.

Godeberta, Saint, b. about the year 640, at Boves, a few leagues from Amiens, in France; d. about the beginning of the eighth century, at Noyon (Oise), the ancient Noviomagus. She was very carefully educated, her parents being of noble rank and attached to the court of King Clovis II. When the question of her marriage was being discussed in presence of the king, the noble Lady of Noyon, Eligius, as by inspiration, presented Godeberta with a golden ring and expressed the hope that she might devote her life to the service of God. Godeberta, moved by the Holy Spirit and feeling her heart suddenly filled with Divine love, turned away from the bright prospects before her and refrains from the marriage. It was offered that she should lead a nun's life, but with these words ceased; it was further certified that no other case of typhoid occurred. In thanksgiving, a solemn procession took place under the guidance of the bishop, Mgr. Gignoux, a few weeks later, the relics of St. Godeberta being carried triumphantly through the town. A beautiful statue of the saint, in the cathedral of Noyon, which was blessed by Bishop of Noyon on 25 February, 1687, perpetuated the memory of this wonderful event.

Godegrand, Saint. See Chrodegang, Saint.

Godelina (Godeliva), Saint, b. at Hondesforte-les-Bouflogne, c. 1049; d. at Ghistes, 7 July, 1070. The hagiography of the three women subjected her self. She had a wonderful faith in the efficacy of that ancient practice of the early Christians—the sign of the cross, and it is recorded, that on one occasion, in 678, during the episcopacy of St. Mommelinus, when the town was threatened with total destruction by fire, she made the sign of the cross over the flames, and the conflagration was forthwith extinguished. The exact year of her death is unknown, but it is said to have occurred on 11 June, on which day her feast is celebrated in the Church. The saint had rested for over 450 years by Bishop Baudoin to the cathedral of Noyon. Providentially her relics have escaped the ravages of time and fire, and the malice of the irreligious. At the period of the Revolution a pious townsmen secretly buried them near the cathedral. When the storms had passed, the people of Noyon, hiding-place and their authenticity being canonically established they were replaced in the church. A bell is still preserved which tradition avers to have been the one actually used by Godeberta in her convent. It is certainly very ancient and there seems no good reason, in particular from an archæological point of view, for doubting the trustworthiness of the legend. In the treasury of the cathedral likewise may be seen a gold ring, said to have been that presented by St. Eligius to the saint. Mention is made in a record of the year 1167 of this relic having been then in the possession of Noyon. Unfortunately the most ancient documents we have giving details of Godeberta's life do not, in all probability, date back beyond the eleventh century, as the oldest "Vita", which, in truth, is rather a panegyric for her feast than a biography, is believed to have been compiled by Rabunus, who became Bishop of Noyon in 1067. In those days, too, the aim of such writers was the edification rather than the instruction of the faithful, so we find in this life the usual wonders related in such pious works of that period with but few historic facts. It is certain, however, that St. Godelina was looked upon as a protector in the time of plagues and catastrophes and we have every reason to hold that this practice was justified by the results that followed her solemn invocation. In 1866 a violent outbreak of typhoid fever occurred in Noyon, decimating the town. On 23 March of that year, one of the leading citizens, whose child had just been cured of typhoid fever by the cure of the church and recalling the favours that had been granted in ages past to the clients of the saint, earnestly asked that the shrine containing her relics should be exposed and a novena of intercession begun. This was done the following day, and through the prayers of the people, the child was cured. Another case of typhoid occurred. In thanksgiving, a solemn procession took place under the guidance of the bishop, Mgr. Gignoux, a few weeks later, the relics of St. Godelina being carried triumphantly through the town. A beautiful statue of the saint, in the cathedral of Noyon, which was blessed by Bishop of Noyon on 25 February, 1687, perpetuated the memory of this wonderful event.

Godfrey. See Sponsor.

Godfrey of Bouillon, Duke of Lower Lorraine and first King of Jerusalem, son of Eustache II, Count of Boulogne, and of Ida, daughter of Godfrey the Bearded, Duke of Lower Lorraine; b. at Rouen, 1060; d. at Jerusalem, 13 July, 1100 (according to a thirteenth-century chronicle, he was born at Bayeux, in Brabant; see Hainéré, Mémoires lui à la Sorbonne, Paris, 1868, 213). The history of his early years has been distorted by legend, according to which he slew with his own hand the anti-king Rodolphe at the battle of Moevenbirk (1079); but he remained in Rome after it had been besieged by Henry IV (1084). What appears certain is that he was chosen to succeed his uncle Godfrey the Hunchback, Duke of Lower Lorraine, who was assassinated in 1076. But Henry IV took Lorraine, leaving to Godfrey only the marquisate of Antwerp. As a vassal of the German Empire Godfrey took sides with the army of Henry IV in the War of the Investitures and followed the emperor on his expedition to Italy against Gregory VII (1080-1084). In the interval he was compelled to return in order to defend his possessions which had been attacked by the Counts of Noyon, and about 1089 Henry IV restored to him the legacy of Godfrey the Hunchback by creating him Duke of Lower Lorraine. The new duke's authority was extremely weak when opposed to the feudal power which had developed in the vicinity. At this time the whole north of France was aroused by the letter of Urban II, who besought the nobility of Flanders to go on the Crusade. Godfrey was among the first to take the cross, together with his two brothers, Eustache and Baldwin (1096). To procure resources he sold or pledged many of his estates. Many nobles at once arrayed themselves under his banner, and about 15 August, 1096, he departed at the head of 10,000 knights and 30,000 foot soldiers. His army was composed of Walloons and Flemings. "Born at the frontier of the two nations and himself speaking both languages," he served as the link between them, and by his authority appeased the quarrels provoked by their national self-esteem (Otto von Freisingen, Monumes. Rom, Gesamt, 1864). The crusaders reached the valley of the Danube and in September, 1096, arrived at Tollenburch (Tuln, west of Vienna), on the frontier of Hungary, where they learned of the disaster which had befallen the followers of Peter the Hermit. Before entering Hungary Godfrey negotiated with King Coloman for a passage through his dominions. He himself met the king, who welcomed him warmly, but took Godfrey's brother Baldwin as a hostage, together with his wife. During the march through Hungary (October, 1096) the strictest discipline prevailed among the crusaders, to whom the inhabitants furnished provisions in abundance. After receiving the Cross, the army entered the territory of the Byzantine Empire. At Belgrade Godfrey received a letter from the Emperor Alexius I (Comnenus), promising him assistance if the crusaders would refrain from violence. At Nish and at Sernis (Sofia), they found abundant provisions and presents from the emperor. After a halt of eight days at Philippopolis (26 Nov.-3 Dec.) the army approached Adrianople (8 December) and marched towards the Hellaspopont. Here occurred the first conflict between the crusaders and the imperial government. According to Albert of Aix, Godfrey, learning that the emperor held in captivity Hugh, a prince of France, commanded the latter's freedom; but the emperor's refusal pillaged the neighbourhood of Salabria (Selymbria). As a matter of fact, the French prince was not a prisoner, but Godfrey and his army arrived before Constantinople (23 Dec., 1096) in a hostile

Godet des Marais, Paul, Bishop of Chartres, France; b. at Talty, near Blois, 1647; d. at Chartres, 1709. He studied at Saint-Sulpice, took the doctorate of theology at the Sorbonne, was ordained, and became (1677) superior of the Séminaire des Trente-Trois. Louis XIV nominated him (1690) to the See of Chartres, but owing to difficulties between France and the Holy See the papal confirmation came only on 21 Jan., 1692. As spiritual director of Mme de Maintenon, for whom he wrote "Lettres de direction," Godet used his influence to have Mme Guyon removed from Saint-Cyr. A staunch opponent of Quisistan, he signed with Noailles and Bossuet the famous "Déclaration" condemning Fénélon's "Maximes des saints" (1697), and wrote (1698) several ordonnances, or pastoral letters, against the pseudo-mystical theories of Molinos, Fénélon, and Mme Guyon. He also did much to destroy Jansenism in France, and was one of the commissioners (1705) who commanded obedience to the papal constitution of Clement XI (1705), and severely censured Juénin's "Institutions théologiques" (1708). His zeal and charity, as well as his orthodoxy, were set forth in an epitaph written by his successor, Monseigneur de Marville.
mood, and closely watched by the imperial troops. When faced with the emperor, Godfrey kept away from the imperial palace.

However, during the Christmas festivities, he consented to cross the Golden Horn, and went into camp at Pera (29 Dec.). The chief desire of Alexius was to prevent the junction of Godfrey's army with that of Bohemond, leader of the Normans of Italy; Alexius had learned that Godfrey's men were far from the city, and then to remove his army to Asia. Throughout the winter Godfrey resisted the imperial demands. At last, 2 April, 1097 (the date given by Anna Comnena is 13 January given by Albert of Aix; see Chalandon, "Alexis Comnène", 179), on the approach of the winter, the city decided to surrender, and cut off the supplies of the crusaders. Several combats ensued, and, despite the contrary assertion of Albert of Aix, Godfrey must have been defeated. Anna Comnena states that he then consented to do homage to the emperor, promising to restore him any former imperial possessions which he might wrest from the infidels. Some days later the Lorraine army was conveyed to Pelekan on the Gulf of Nicomedia, and at the end of April all the leaders of the crusade were reunited. Godfrey appears to have acted as peacemaker, and he induced Raymond IV, of St-Gilles, Count of Toulouse, to swear fealty to the emperor. For a time it appeared as though he would be taken an obscure part in the council of leaders. He took part in the siege of Nicaea and the battle of Dorylæum (1 July, 1097).

During the crossing of Asia Minor he was seriously wounded while hunting. At the siege of Antioch he consented to obey the orders of Bohemond, and after the capture of the city he had to give up the castle which his followers had taken (July, 1098). On the way to Jerusalem, while others quarrelled, Godfrey marched towards Edessa, where his brother, Baldwin, had just established himself. He returned from this expedition in October, 1098, and before entering Antioch, with only twelve knights, put to flight one hundred and fifty Turks. According to the tradition repeated by Guibert de Nogent (Gesta, VII, 11), he had, with a stroke of the sword, hewn a Turkish horseman through the middle so that his body fell in two equal halves. The story was retold to Godfrey, and, together with Robert Courte-House, Duke of Normandy, in the council of arbitration assembled to reconcile Bohemond and Raymond of St-Gilles. After 23 November, 1098, a number of the crusaders left Antioch with Raymond, but Godfrey of Bouillon and Robert, Count of Flanders, began their march on Jerusalem at the end of February, 1099. After besieging Gibeil they rejoined the main army before Arka (12 March), were at Tripoli (13 May), Beirut (19 May), Cesarea (30 May), and reached Jerusalem on 7 June.

Godfrey and his army took an active part in the siege of the Holy City. His camp was pitched to the westward. On 15 July, 1099, about nine in the morning, Godfrey and his brother Eustache placed a movable tower against the walls and were the first to enter the city. During the ensuing massacre of Musulmans, Godfrey, thinking only of his vow, stripped himself of his arms, and, barefooted and in his undergarments, made the round of the ramparts, and then went to pray at the Holy Sepulchre. The crusaders were soon intent on providing a king for the new conquest. Several bishops offered the crown to Raymond of St-Gilles, who refused, declaring "that the title of king seemed to him out of place in that city." (Raymond, Historia, VI, 301.) Robert Courte-House was urged declining in like manner. All refused to accept the burden which the new royalty must prove. Finally, Godfrey, being unanimously elected, accepted "for the love of Christ" (22 July). According to the chronicles of those times, he refused to wear the crown "through respect for Him who had been crowned in that place with the Crown of Thorns." Indeed, he seems never to have borne the title of king (which was given only under his successor), and to have been content with that of Duke and Advocate of the Holy Sepulchre.

It may be that he acted in this manner through respect for the clergy, who regarded the new conquest as the property of all Christendom, and some of his contemporaries were severe towards him for this (Bernard de Aguilera, Hist. Occid. Crois. III, 295). Godfrey seems to have always considered himself the protector of the Church. Not only did he make so many donations that William of Tyre despairs of enumerating them, not only did he crown a fourth of Jaffa (in 1099), the city, the district of the city, and the land of the patriarch Daimbert, but he consented, as did Bohemond, to receive investiture from the patriarch (William of Tyre, Historia, IX, XV). Godfrey displayed great energy in meeting the many difficulties which threatened the new State, but he was destined to succumb to sickness. On 12 August, 1099, having rallied the crusading forces, he gained a victory at Ascalon, thus preserving Palestine from the Egyptian invasion.

Assisted by the Frisans, he rebuilt the city of Jaffa, which became a port of arrival for crusaders. He signed a treaty of alliance with the Venetian fleet, which was to escort the crusaders to the Holy Land. He died of the plague at Cesarea, 10 June. After a short stay at the hospital where he had founded at Jaffa, he returned to Jerusalem, where he died on 18 July, having named his brother Baldwin as his successor. He was buried in the church of the Holy Sepulchre.

The tomb of Godfrey was destroyed in 1808, but at that time a large sword, said to have been his, was still shown. Legend soon laid claim to him; in the contemporary accounts of the First Crusade (Gesta Francorum, Raymond de Aguiler, Foucher de Chartres, Anna Comnena, etc.), he is portrayed as the perfect type of a Christian knight. Tall and handsome, with pleasing countenance, and with such courteous a manner "that he seemed more a monk than a knight" (Robert the Monk, Hist. Occid. Crois., III, 731), in the hour of danger he showed admirable courage. As a zealous Christian, he was among the last to take the cross, accomplished his vow without the slightest deviation, and at great personal cost accepted the defence of the new conquest. Such is Godfrey as he appears in actual history. In the chronicle of Albert of Aix (d. 1120, ed. Hist. Occid. Crois., IV), the author already exhibits a tendency to idealize the figure of Godfrey, and to attribute to him, to a certain extent, the direction of the crusade. Albert of Aix and Guibert de Nogent attribute to Godfrey exploits of an epic character (Guibert de Nogent, Gesta, VII, 11). When, in the thirteenth century, Jean d'Belin and Philip of Novara edited the "Assises" of Jerusalem, they referred to Godfrey as a law-making king, and attributed to him a code, the "Letters of the Holy Sepulchre", which never existed. Indeed, at that time, and perhaps even as early as the twelfth century, Godfrey of Bouillon had become, like Roland and Arthur, a hero of the chansons de geste. The troubadours provided him with a mythical origin, making him a descendant of the legendary "Knight of the Swan", whose feats he is made to relate, and, after relating the events of his childhood, continued his adventures to the taking of Jerusalem. Under Philip Augustus, Grisourod of Douai reconstructed the works of a certain Richard le meneur, and composed the Chanson de Roi Raimond, and two different poems of the crusade: (1) "Elloix", ed. Todd (Baltimore, 1880); (2) "Beatrix", ed. Hippeau (Paris, 1888); (3) "Antioche", ed. P. Paris (Paris, 1848); (4) "Jerusalem", ed. Hippeau (Paris, 1893); see L. Gautier, "Bibliographie des chansons de gestes" (Paris, 1897). In the fourteenth century, all these poems were collected.
GODFREY 626

under the title of "Roman du chevalier au Cygne" (ed. de Reiffenberg, Brussels, 1846–59).

Godfrey of Fontaines (Godefroid de Fontaines, Doctor Venerandus), a scholastic philosopher and theologian; born near Liège within the first half of the thirteenth century, he became a canon of his native diocese, and also of Paris and Cologne, and was elected, in 1300, to the See of Tournai, which he declined. He taught theology at the University of Paris during the last quarter of the century, was a Master, or doctor, of theology and a member of the Sorbonne, to which he left a valuable collection of MSS. He is the author of a notable collection of disputations, "XIV Quodlibeta", which show him to have been not merely a distinguished theologian and philosopher, but also a canonist, jurist, moralist, and controversialist, who took a prominent part in the various ecclesiastical, trinial, and disciplinary disputes that stirred Paris at that period. In regard to the privileges of the mendicant orders, Godfrey opposed St. Thomas, but for the Angelic Doctor's teaching he professed a sincere admiration. The bold "innovations" of Thomism were just then on their trial; they were condemned by Tempier, Archbishop of Paris (1277), and opposed by Peckham and many others. Godfrey was a staunch supporter of Thomism, yet sufficiently original to differ in many things from the master's views, e. g., the principle of individuation, and the distinction between elementary and material things.

The "XIV Quodlibeta" of Godfrey, extensively studied and multiplied in MS. form in the medieval schools, are at present in course of being published for the first time. A critical edition of the first four of them has already appeared in the series "Les Philos. latines. Textes et Études" (I. i. "Les quatre premiers Quodlibets de Godefroy de Fontaines", by de Wulf and Peizer, Louvain, 1904). The remaining Quodlibeta (V–XIV) will form vols. III and IV of the same series; vol. V is to contain studies on Godfrey by de Wulf, de Munnynck, and Van Roel. Godfrey is one of the great masters of the philosophy scolastique dans les Pays-Bas, etc. (Louvain and Paris, 1893); Turner, History of Philosophy (Boston, 1903).

F. COFFET.

Godfrey of Viterbo, German writer of the twelfth century. Nothing is known as to the place or date of his birth, but he received his education at Bamberg, whither he was taken by Lothair in 1133. At an early age he displayed great activity as one of the clergy at the court of Conrad III and later of Frederick I, accompanying the latter on many of his campaigns, and frequently fulfilling for him diplomatic missions. As a reward for his services at Court, lands were bestowed on him in fief at Viterbo, probably in 1169. During his forty years as notary and chaplain to the Emperor Frederick, he displayed a multifarious activity, with which the prelates and personalities with whom he was particularly attracted towards the youthful Henry VI. He lived much in Italy, spending his last days at Viterbo. The year of his death has not been ascertained. In the politico-ecclesiastical conflicts of his time he sided with the emperor, without, however, declaring himself inimical to the pope. He blames Pope Alexander's predecessor, Hadrian, for the schism, inasmuch as the latter had allied himself with the Greeks and Normans against the emperor.

His works were for the most part composed during journeys. About 1183 he compiled for the use of schools his "Speculum regum", a history of the world beginning with the deluge, intended to reconcile the Romans with the Germans. His metrical account of the achievements of Frederick (the Frideric), extending to 1181, is a separate work, which, though not free from confusion, contains some valuable information. His "Memoria Seculorum" is a history of the world written partly in prose and partly in verse, and was completed in 1185. In the same year he began work on his "Pantheuma", a history of the world which enjoyed an unmerited success and dissemination.

The author, delighting as he does in fables, has gathered much material for the history of folk-lore. His works—some of them only in extracts—are to be found in the "Monumenta Germaniae historica: Scriptores", XI. 7.

Gordic, the name of two Abbots of Croyland, Godric I, 870–941. He was the successor of the Abbot Theodore, who had been slain by the Danes. The heathen had sacked and destroyed the abbey, despoiling the shrines and scattering the dead. On their return they unanimously elected Godric abbot, in spite of his reluctance. Soon after his election, at the request of the prior of Ancarig, Godric went with his monks to clear away the ruins of Medehamsted Abbey (Peterborough), to bury the corpses of its abbots and eighty monks, whom the Danes had murdered, and to erect a memorial near their grave. Evil times fell on Croyland during his abbacy. Beorred, King of Mercia, under pretext of driving out the Danes, seized the lands and possessions of all the monasteries in his dominions, among which was Croyland. Beorred died in 874, and was succeeded by one of his servants, Ceolwulf, who demanded a thousand pounds from the Abbey of Croyland, and reduced it to such poverty, that the monks were forced to sell nearly all their plate. So poor did the house become that none would join it, and, at Godric's death in 941, only five of its monks remained.

Godric II, 1005–18, was no less unfortunate than his namesake. King Ethelred the Redless first exacted from it large sums of money, and in the fourth year of Godric's rule the Danish jarl, Turkil, arrived with a fleet, demanded a ransom, and ravaged the manors of the abbey. In 1013 the Danish king, Sweyn, devastated the neighbouring country. Croyland, which was luckily isolated by floods, became the refuge of monks, secular priests, and layfolk, whose support was a heavy burden on the resources of the abbey. Sweyn extorted two large ransoms within three months, while the king's officials endeavoured to confiscate its ruin because it supported the Danes. In despair Godric and his monks engaged as protector Leofwin, brother of Leofric, Earl of Leicester, who, in return for a grant of lands, protected them till his death in 1017. The same year the accession of Cnut brought peace to England, and some relief to Croyland. Godric was buried in the chapter-house of his abbey.

Goethals. See HEIN OF GHENT.

Goets, MARIE JOSEPHINE, second superior-general of the Society of the Sacred Heart, daughter of Joseph Goets of Strasbourg and Marie Anne Wagner; b. 7 March, 1817, d. 4 January, 1874; her parents dying
early, her education was left to the care of an aunt who sent her to school at the Convent of the Sacred Heart, Besançon. At first her silent, observant, and distant attitude showed that she felt herself out of tune with her surroundings, but in the second year she threw herself into school life and carried all before her in lessons and play. At the age of seventeen she entered the novitiate of the Sacred Heart at Montet and took her vows on 13 October 1827. In 1829 she was entrusted with the charge of the school at Besançon, which was going through a difficult phase. Her judicious management showed what might be expected of her in the future, and immediately after profession in 1847 she was appointed mistress of novices at Conflans. She continued in this charge, to which she was afterwards promoted on the retirement of the house superior, until 1864, when she was named vicar-general. The failing strength of the foundress made it necessary for her to have some one at hand, to whom she could communicate her views for the future. She found a full understanding of them in Mother Josephine Goetz, who was elected superior-general in 1865 after the death of Blessed Madeleine Sophie Barat.

Mother Goetz governed as superior-general for nine years. Her work was principally one of consolidation and development of what had been established or projected by the foundress. She established a training school at Conflans to prepare the young religious for their duties as teachers, and entrusted to a small committee the revision and adaptation of the curriculum of studies to the growing needs of the order. During the Franco-Prussian war and the time of the siege and Commune in Paris, Reverend Mother Goetz was obliged to withdraw to Laval, that communications with the religious might not be cut off. She employed the enforced leisure of those months in collating and revising the summaries of decrees and decisions of the general congregations of the Society of the Sacred Heart. Reverend Mother Goetz made visitsations of the houses then existing in Europe, as far as time and health permitted—but her strength rapidly failed and she died from a stroke of paralysis, after a few days' illness. The marking features of her personality were breadth of view and rapid intuition that appeared unerring as an instinct, directness of intention and sincerity which lay concealed from the exterior, but astonished by their force when circumstances called for prompt decision and action—and a characteristic grace of humility which seemed to be her distinguishing supernatural gift.

J. STUART.

Goffe (or Gough), Stephen, Oratorian; b. 1605; d. at Paris, Christmas Day, 1681. He was the son of Stephen Goffe, Protestant rector of Stamper in Sussex, and was educated at Merton College, Oxford, becoming M.A. in 1627. He took orders and became chaplain to Colonel Vere's regiment in the Low Countries. Subsequently he was sent to St. Alban's and took his first appointment as one of the chaplains to Charles I, in which capacity he was created D.D. in 1636. He was often employed in secret negotiations in France, Flanders, and Holland. During the Civil War he was arrested and charged with attempting to rescue the king, then a prisoner at Hampton Court. After the execution of the king (whose death-warrant was signed by Stephen's brother William), he went to France, where he became a Catholic. Dodd and other Catholics have disproved the story that the Sorbonne admitted the validity of his Anglican orders. He became a canon on 14 January 1655, and died at Vertus near Paris, where he became superior in 1655. Here he helped English exiles, both Protestant and Catholics, using his influence with Queen Henrietta Maria on their behalf; and on her appointment he acted as tutor to the young Duke of Monmouth. He was a learned man and maintained a correspondence with Vossius and other scholars. Some of his letters were printed by Colomerius in 1690, and others, still in manuscript, are in the British Museum (Addit. MS. 6394).

Dict. of the Arts and Crafts, s. v.; COOPER in the Society for the Propagation of the Gospel, Minutes of Question and Information at a Meeting held at the Office of the Society in London on 16 June 1856, referring to a curious Parliamentary libel published in 1648 under the title The Lord George Digby's Cabinet and Dr Goffe's Negotiations.

EDWIN BURTON.

Goffine, or Goffine, Leonard; b. at Cologne, or according to some, at Broich, 6 December, 1648; d. 11 August, 1717. On the age of seventeen he entered the Norbertine Abbey of Steinfeld, in the Eifel district of Germany, and commenced his two years' novitiate in July, 1667. Having made his solemn profession on 16 July, 1669, he was sent for his course of philosophy and theology to the Norbertine college at Cologne. Ordained priest on Ember Saturday before Christmas, 1676, Goffine was sent to Dunwald to assist the priors who were charged with the direction of the parish and the convent of Norbertine canons. In the same capacity he was afterwards sent to Ellten, where there was also a convent of Norbertine nuns. Goffine remained four years in each of these places, and then he was sent to Freiberg, where he entered the office of novices master in the abbey. He was next given charge of the parish of Clarholz, which was incorporated with the Norbertine Abbey of the same name, in the Diocese of Osnabrick, for owing to the dearness of priests due to the Lutheran heresy and the Thirty Years War, abbots were no longer able to have recourse to other dioceses and religious orders to fill the vacancies.

Goffine remained at Clarholz five years (1688-95), and was sent thence to Niederhe, a priory which the Abbey of Steinfeld possessed in the Archdiocese of Trier. He remained in Niederhe but a very short time, being sent in 1695 to assist the clergy of St. Lambert's at Coesfeld, in the Diocese of Munster. He left Coesfeld in 1691, when, at the urgent request of the Archbishop of Trier, he undertook the charge of the parishes, first of Wehr (1691-94), then of Rheinbollen (1694-96), and last of Menden (1696-99). He returned to Niederhe in 1696, until his death in 1719. While parish priest of Oberstein he had also to attend the Catholics living at Weiersbach, in the Diocese of Mayence. The inhabitants of Oberstein were mostly Protestants, and at times Goffine had much annoyance to bear from them. Associated with apostolic ardor, he preached to all men, and, as Dr. Joseph Prickartz, president of the Norbertine college at Cologne, wrote, in a sketch of his life, "Goffine was a truly apostolic pastor, filled with an untiring zeal for souls, who edified everyone by his word and by his example. The purity of his life, the integrity of his morals, the fervour of his sentiments, the pleasing style of his writings, commanded the respect of even the enemies of his religion. From the rudest and most forward of these he had often to endure the bitterest insults, but at these he showed himself the more cheerful, since by them he became the more conformable to those who had the happiness to suffer insults for the name of Jesus." This is a characteristic sketch of the saintly priest, not only during the twenty-three years he worked at Oberstein, but even from the day of his ordination to the priesthood.

In the month of July, 1719, he returned to the Abbey of Steinfeld in order to be present at the feast of St. Norbert (July 11), and to follow the spiritual exercises during the octave. On the Sunday during the octave he preached the panegyric of the holy founder, and on 16 July he celebrated the golden jubilee of his own religious profession.

After the octave he returned to Oberstein, and less than a month later he rendered his well-tried soul to
God. Goffine himself states that he had taken St. Norbert, the founder of his order, as his model, "because St. Norbert cared and worked so much for the salvation of souls." Observing that so many had gone astray through ignorance of Catholic doctrine, he was determined always to be an instructive pastor to all people, both old and young, for whose benefit he wrote and published no fewer than ten books. While he was at Coesfeld he wrote his well-known work, "Handpostille oder Christkatholische Unterrichtungen auf alle Sonn- und Feyer-tagen des ganzen Jahrs" (brief commentaries in quest of answers to the Prophecy of the Mass, principally on the Epistle and Gospel of the day). This book was ready in 1687, and in 1688 it received the imprimatur of the Vicar-General of Münster, and in 1690 the approbation of Rev. William Heimbach, Norbertine prior of Meer, and of Rev. John Dinkeling, Rector of the Jesuit college of Hildebron. The first edition, printed at Mayence in 1690, was soon exhausted, and a second edition was printed at Cologne in 1692. Since then other editions have appeared at short intervals, and it is said that hardly any book, with the exception of the "Imitation of Christ" by Thomas à Kempis, has had as many editions and translations as Goffine's "Handpostille." As far as can be ascertained translations have been made into Moravian, Bohemian, Hungarian, English, French, Italian, and Flemish.

A writer in "Le Magasin Catholique Illustré," says of the worth of this book: "How many souls has this book saved?" Observing from error, during the last two centuries that it has been known in Germany? Here is an instance: Wherever in this classical land of Protestantism this book has become popular, the door was shut to heresy. Goffine's instructions, the like of which we have nothing in France, gives the dogmatic, moral, and liturgical teaching of the Church," etc. As Father Hattler, S.J., writes: "The child reads from it, for father and mother; the bride is presented with it on the day of her wedding; it is given to the emigrant when he leaves his country for the New World." Goffine also published the following books: (1) "Auslegung der Regel des heiligen Augustinus" (Cologne, 1692); (2) "Trostbuch in Tribusalen" (Cologne); (3) "Cibus animae matutinalis," etc. (Cologne, 1705); (4) "Sermons for the whole year," 2 vols. (Nuremberg, 1705); (5) "Erklärung des Katechismus Petri Canisii" (Cologne, 1712); (6) "Die Lehre Christi" (Cologne, 1717); (7) "Die Kindheit des Katechismus" (Cologne, 1717); (8) "Der Wächter des göttlichen Wortes" (Cologne, 1718); (9) "Frages Sacre seu modus explicandi ceremonias per annum" (Frankfort, 1719).

Gog and Magog.—Names, respectively, of a king and of his supposed kingdom, mentioned several times in the passages xxxi and xxxii of the Book of Ezechiel, and once in the Apocalypse (xx, 7). In the first passage of Ezechiel we read the command of Yahweh to the prophet: "Son of man, set thy face against Gog the land of Magog ... and prophesy of him ... Be hold, I come against thee, O Gog, the chief prince of [Rv., Vulg. caput, Sept. 'Pou] Mosoch and Thubal" (xxix). A similar command is found in the opening of chapter xxxii. These two chapters contain repeated reference to Gog and Magog, but they furnish only vague and uncertain indications as to the identity of the ruler or the location of the country.

In chapter xxxviii Gog is represented (verses 5 and 6) as accompanied by his invasion of the land of Israel by the Persians, Ethiopians, and Libyans, Gomer, and . . . the house of Thogorma; and in verse 15 we read: "And thou shalt come out of thy place from the northern parts." From the number and variety of the peoples mentioned in this connection some writers have inferred that the name Gog may be only a generic appellation, or figure, used in Ezechiel to designate the host of the enemies of Yahweh, and in the Apocalypse to denote the multitude of the foes of the Church. Others conjecture that it may be a local title expressing the royal dignity, such, for instance, as the name Pharaoh in Egypt. But it seems more probable that both names are historical; and by some scholars Gog is identified with the Lydian king called by the Greeks Gyges, who reigned in Lydia, on the Assyrian inscriptions. If this be true, Magog should be identified with Lydia. On the other hand, as Mosoch and Thubal were nations belonging to Asia Minor, it would seem from the text of Ezechiel that Magog must be in that part of the world. Finally, others with Josephus identify Magog with S пряssy, but in antiquity this name was used to designate vaguely any northern population.

Golden calf.—An object of worship among the Hebrews, mention of which occurs principally in Ex., xxxii, where the story of the molten calf of Aaron is narrated, and in III Kings, xii (cf. II Par., xi), in connexion with the policy of Jeroboam after the schism of the ten tribes. Various reasons make it probable that the rendering "calf" is not to be taken in a strict sense, for the Hebrew term 309 has a wider significance and it is likely that in the present case it stands for a young bull just arrived at maturity. Waiving all critical discussion as to the sources embodied in Ex., xxxii, the main features of the present narrative are as follows: Becoming impatient at Moses' long delay on the mount, the people ask Aaron to make them a god (προθέμιν) or gods to go before them. He yields to their solicitations, and, making use of the golden earrings of the women and children, he causes a "molten calf" or bull to be fashioned. Shortly after its construction Moses returns, and, moved to wrath and indignation, destroys the idol, reducing it to dust and throwing it into the brook from which the Israelites were made to drink. After a spell the ten tribes, Jeroboam, fearing that the regular pilgrimages of the people of the northern kingdom to Jerusalem would endanger their political allegiance to himself, resorted to the natural expedient of furnishing them with a substitute for the sanctuary of the Temple (III Kings, xii); and he set up an image in Bethel and the other in Dan. As to their construction information is lacking, but it is likely that they were life-sized bull figures constructed after the fashion of the one mentioned above. It seems also probable that they were intended as symbols of Yahweh, for, thus considered, they would be more effective in attracting the pious Israelites who were accustomed to go to Jerusalem.

Most writers have accepted the view of Philo and the early fathers, who regarded the worship of the golden calves as borrowed from the Egyptians, and in favour of this opinion is the fact that both Aaron and his brother Absalom had sojourned in Egypt shortly before constructing their respective idols; this view, however, has its difficulties, among which is the improbability of an Egyptian deity being set up as the god "who brought Israel out of the land of Egypt." Hence some recent scholars are inclined to seek the origin of the Hebrew bull worship among the surrounding peoples of the Israelites as an agricultural people, for whom the bull was naturally an appropriate symbol of strength and vital energy.

Golden Rose, a precious and sacred ornament made of pure gold by skilled artificers, which the popes have worn on their crowns and occasionally upon illustrious churches and sanctuaries as a token of special reverence and devotion, upon Catholic kings or queens, princes or princesses, renowned generals or other distinguished personages, upon governments or cities conspicuous for their Catholic spirit and loyalty to the blessed See, as a mark of esteem and paternal affection. The significations of the rose and Lastare Sunday (fourth of Lent), the day on which it is blessed, so blend that the Sunday is oftentimes called Rose Sunday, and rose-coloured vestments, altar and throne and chapel draperies (signs of hope and joy) are substituted for the penitential purple during the solemn function. The Church on this Sunday bids her children who have been so far engaged in prayer, fasting and other pietistic works, as also in serious meditation upon the malice of sin and the terrible punishment exacted on some who seek up and escape. Calvary shone in the first rays of the Easter sun, the risen Christ, Who brings them redemption, and "Rejoice!". The golden flower and its shining splendour show forth Christ and His Kingly Majesty, Who is heralded by the prophet as the flower of the field and the lily of the valle. In France shone the sweet odour of Christ which should be widely diffused by His faithful followers (Pope Leo XIII, Acta, vol. VI, 104); and the thorns and red tint tell of His Passion according to Isaías (xxiii, 2): "Why then is thy apparel red, and thy garments like theirs that tread in the winepress?"

Among the many mystical significations, as set forth in the papal diplomas accompanying the gift, as also in sermons of the popes in conferring it, the following of Innocent III is worthy of note: As Lastare Sunday, the day set apart for the function, represents love after hate, joy after sorrow, and fullness after hunger, so does the rose designate by its colour, odour, taste, love, joy, and sanctity respectively. Adverting to the spiritual resemblance, he continues that the rose is the flower spoken of by Isaías (xi, 1), "there shall come forth a rod out of the root of Jesse, and a flower shall rise up out of his root". Prior to the pontificate of Innocent IV (1243-1272) it consisted of a simple and single rose made of pure gold and slightly tinted with red. For greater embellishment, yet still retaining the mystical meaning, a ruby placed in the heart of the rose, and afterwards many precious gems set in the petals, were used instead of the red colouring of the gold. Pope Sixtus IV substituted in place of the single rose a thorny branch with leaves and many roses (a half-score and sometimes more), the largest of which sprang from the top of the branch and the smaller ones clustered naturally around it. In the centre of the principal rose was a tiny cup with a perforation through which the blood of the rose, poured the musk and balsam. The whole ornament was of pure gold. The Sixtine design has been maintained; but it has varied as to decoration, size, weight, and value. Originally it was little over six inches in height, and was easily carried in the left hand of the pope, whilst with his right he blessed the multitude through which he passed in procession from the church of Santa Croce in Gerusalemme (in Rome) to the Lateran Palace. Afterwards, and especially when a vase and large pedestal became part of the ornament, it required a robust cleric to carry it, who preceded the papal cross in the procession. The rose as an ornament on the pontifical tiara was in the time of Pius IX, towards emperor, by Innocent XI, weighed twenty pounds of gold. In height it was almost eighteen inches, and in form a bouquet; from the stem sprang three different branches which after many natural windings came together at the top, and supported the largest and principal rose in the midst of a beautiful cluster of leaves. The vase whence rises the shapely and elegant flower, as also the pedestal supporting the whole, is varied as to colour and design. In the beginning they were made of gold; but afterward of silver heavily gilt with gold. The pedestal was either triangular, quadrangular, or octagonal, and was richly ornamented with various decorations and basoreliëfos. In addition to the customary inscription, the coat of arms of the Pope who had the ornament made, and that of him who blessed and conferred it, were engraved on the pedestal. Their value varied according to the munificence of the pontiffs or the economic circumstances of the times. Father Baldasari, S.J. (De Rosa Mediana, p. 190) says that the rose conferred about the year 1630 cost five hundred dollars. The two roses sent by Alexander VII were valued at eight and twelve hundred dollars respectively. Clement IX sent the Queen of France one costing twelve hundred dollars, the gold alone used weighing eight pounds. The workmanship on this rose was exceedingly fine, for which the recipient paid for it 2,700 dollars. Innocent IX carved eight and one-half pounds of gold to be formed into a rose, which was further embellished with many sapphires, costing in all fourteen hundred dollars. In the nineteenth century not a few of the roses cost two thousand dollars and more. The skill and workmanship of the papal artificers are something truly wondrous.

The custom of giving the rose supplanted the ancient practice of sending to Catholic rulers the Golden Keys from St. Peter's Confessional, a custom introduced either by St. Gregory II (716) or St. Gregory III (740). A certain analogy exists between the rose and the keys, inasmuch as both are of pure gold blessed and bestowed by the Vicar of Christ upon illustrious children of the Church, and further, both partake somewhat of the nature of a reliquary—the rose containing musk and balsam, the keys filings from the Chair of St. Peter.

The exact date of the institution of the rose is unknown. According to some it is anterior to Charlemagne (742-814), according to others it had its origin at the end of the twelfth century. It is certain, however, that it antedates the year 1050, since Pope Leo IX (1051) speaks of the rose as of an ancient institution. To this day the blessing of the rose is not coeval with its institution. It was introduced to render the ceremony more solemn and induce greater reverence for it on the part of the recipient. According to Cardinal Petra (Comment. in Const. Apostolici, III, 2, col. 1), Pope Innocent IV (1244-1254) was the first to bless it. Innocent III (1258-1216) and Alexander III (1159-81) and Leo IX (1049-55) have each strenuous defenders of their respective claims to the authorship of the ceremony. Of the last it is said that he (A. d. 1051) imposed upon the monastery (nuns) of Bamberg in Franconia, then subject to the pope, the obligation of baptizing each child when he was born, to bless and have the Rose to be blessed and carried by the pope on Lastare Sunday (Theop. Raynald, De rosa mediana a pontifici consecrata, IV, 413). Pope Benedict XIV attests that the ceremony of blessing had its origin in the beginning of the fifteenth or at the end of the fourteenth century. Catalani, papal master of ceremonies, is of opinion that musk and balsam was coeval with the institution, but the blessing with prayers, incense, and holy water had its inception later on, yet earlier than the pontificate of Julius II (1503-13). The pope blesses the rose every year, but it is not always a new and different rose; the old one is used until it has been deprived of musk and balsam. Originally the rose was blessed in the Hall of Vestments (sacristy) in the palace where the pope was; but the solemn Mass and the donation of the rose took
place in the Church of Santa Croce in Gerusalemme (a figure, according to Pope Innocent III, of the heav-

eyly Jerusalem), and this was the practice until the 
pope, kings, and princes were in Avignon, and the blessing was 
followed by a solemn Mass sung either by the pope him-
self or the first cardinal-priest; in the former case the 
rose was placed on a veil of rose-coloured silk richly 
embroidered with gold; in the latter the pope held the 
rose in his hand, unless when he knelt, or at the 
Intrito, Confessor, Eleazign, and the singing of "Laudes-
mus in Domino". Returning processionally to the 
Lateran Palace, he carried the rose in his hand, and 
arriving at the door of the palace, he gave to the Prefect 
of Rome who had led his horse by the bridle and had 
held him to dismount, the rose as a recompense for 
acting and showing kindness, on condition that it was 
given in Rome to no outsider, except the emperor 
and to him only on the day of his coronation. Whilst 
residing at Avignon (1305-1375) the popes, unable to 
make visits to the Roman churches and basilicas, 
performed many of their sacred functions, among them 
the blessing of the rose, in the private chapel of their 
palace (whence the origin of the Cappella Poppificia). 
On their return to Rome they (Sixtus V excepted) 
retained the custom thus begun.

The blessing of the rose now takes place in the Hall 
of Vestmentes (camera dei paramenti) and the solemn 
Mass in the papal chapel, with the rose placed on a 
table with lighted candles, and the pope, vested in alb 
and rose-coloured stole and cope with precious mitre 
on his head, begins the ceremony with the usual ver-
sicles and the following beautiful and expressive 
prayer: "O God by Whose word and power all things 
have been created, by Whose will all things are di-
rected, we humbly beseech Thee Majesty, Who art 
the joy and gladness of all the faithful, that Thou 
wouldst deign in Thy fatherly love to bless and sanctify 
this rose, most delightful in odour and appearance, which 
we this day carry in sign of spiritual joy, in order that 
the people consecrated by Thy rose and delivered 
from the yoke of Babylonian slavery through the favour 
of Thine only-begotten Son, Who is the glory and exulta-
tion of the people ofIsrael and of that Jerusalem which 
is our Heavenly mother, may with sincere hearts show 
forth their joy. Wherefore O Lord, on this day, 
when the Church exults in Thy name and manifests 
her joy by this sign [the rose], confer upon us through 
hers true and perfect joy and accepting her devotion of 
to-day; do Thou remit sin, strengthen faith, increase 
piety, protect her in Thy mercy, drive away all things 
adverse to her and make her ways safe and prosperous, 
so that she may, like the fruit of good works, flourish 
in giving forth the perfume of the ointment of 
that flower sprung from the root of Jesse and which is 
the mystical flower of the field and lily of the valleys, 
and remain happy without end in eternal glory to-
gether with all the saints. The prayer finished, 
the pope puts incense (handed by the cardinal-deacon) 
to the censer and incenses the balsam and then the 
musk, and afterwards pours the balsam and powdered 
musk into the tiny cup in the heart of the principal 
rose. He then incenses the rose and sprinkles it with 
holly water. It is then given to the youngest cleric of 
the Camera, who carries it in front of the pope to 
the chapel, where it is placed on the altar at the foot of 
the cross upon a richly embroidered silk veil, where it 
remains during the Mass sung by the first cardinal-
priest. After the Mass, the rose is carried in proces-
ion before the pope to the sacristy, where it is care-
fully put away in a place set apart for it, until bestowed upon the queen.

The custom initiated at Avignon of conferring the 
rose upon the most deserving prince present at the 
papal court was continued in Rome when the popes 
yielding to tradition. The recipient of the rose 
from the hands of the pope, after the solemn function, 
was accompanied by the College of Cardinals from the 
papal palace to his residence. From the beginning of 
the eighteenth century the rose was sent only to 
quenches, princesses, and eminent noblemen; to em-
iminate princes, and great princes were 
prince was present in Rome on Lentare Sunday, he would be 
with the rose if he were deserving. The office 
of conveying and conferring the rose upon those living 
outside of Rome was given by the pope to ordina-
tion of the legates a latere, nuncios, inter-nuncios, and Apostolic 
legate. In 1895 a new office, called "Bearer of 
the Golden Rose", was instituted, and assigned to a secret 
chamberlain of sword and cloak 
participado.

Among the principal churches to which the rose has 
been presented is St. Peter's in Rome (1305-1306); the 
Latern (four roses—according to some two 
of the four were given to the basilica proper and two to 
the chapel called Santacita Santoritum); St. Mary Major 
two roses); St. Mary sopra Minerva (one rose), and 
St. Anthony of the Portuguese (one rose). It was 
also presented to the Archicof the Gontalone. 
All these roses have been lost. Among the many 
recipients of the gift, the following are noteworthy: Fal-
cone, Count of Angers, who received it from Urban II 
(1096); Alfonso VII, King of Castile (Eugene III; 
1148); Louis VII of France (Alexander III; 1163); 
Eugene IV; 1435); Henry VI of England (Eugene IV; 
1444); Casimir IV, King of Poland (Nicholas V; 1448); 
Emperor Frederick III and his wife Empress Eleon-
or, who were crowned on Lentare Sunday (1452) and 
received the Golden Rose next day from Nicholas V; 
Charles VII of France (Callistus III; 1457); James III 
of Scotland (Innocent VIII; 1486); Isabella I, Queen of 
Spain (Alexander VI; 1493); Alexander I of Poland 
(Julius II; 1505); Emanuele I of Portugal (Julius II; 
1506); Henry VIII of England, who received one from 
Pope Julius II, one from Leo X, and one from Clement 
VII in year 1534; Frederick, Duke of Mantua (Paul III; 
1537), because of his kindness towards the Fa-
thers of the Council of Trent; Mary, Queen of Eng-
land, daughter of Henry VIII (Paul IV; 1555); Henry 
of Anjou, King of Poland (Clement VIII; 1592); 
Margaret of Austria, Queen of Spain, on the day she 
was married to Philip II; Francesco da Assisi; 
Pope Clement VIII (1598); Henrietta Maria, Queen of 
England, at Amiens (Urban VIII; 1625); Maria 
Austria, Queen of Hungary (Urban VIII; 1630); 
Maria Theresa, Queen of France (1689), for her infan-
t son, the Dauphin, for whom Pope Alexander VII was 
father; Eleonor of Austria, Electress of Saxony (1671); 
Mary Casimir, wife of John III, King of Poland, 
Saviour of Vienna (Innocent XI; 1684); Amelia of 
Brunswick, empress (Innocent XII; 1699); Maria 
Louisa Gabriele of Savoy, Queen of Spain (Clement 
XIV; 1701); Francesco Loreno, Duke of Venice 
(Clement XIII; 1730); Maria Christina, Archduchess of 
Austria (Pius VI; 1776); Maria Theresa, widowed 
Queen of Sardinia (Leo XIII; 1825); Maria Anna, 
Queen of Hungary, afterwards empress (Gregory 
XVI; 1832); Maria II, Queen of Portugal (Gregory 
XVI; 1844); Maria I of Portugal, on the day of her 
baptism (Pius IX, her godfather, 1849); Isabella II of 
Spain (Pius IX; 1866); Maria Christina, Queen Regent 
of Spain (Leo XIII; 1886); Isabella, Princess Imperial 
of Brazil, then Regent of the Empire (Leo XIII; 
1880); Marie Amélie, Queen of Portugal (Leo XIII; 
1892); and, lastly, Marie Henriette, Queen of the Be-
gus (Leo XIII; 1897).
Goldoni, Carlo, dramatist; b. at Venice, 25 Feb., 1707; d. at Paris, 6 Jan., 1793. Goldoni is especially notable for the reform which he wrought in the Italian theatre by substituting for the drama of improvisation (commedia dell' arte) a fully elaborated character play inspired by the works of Molière, and yet replete with a realism due to his own keen observation of contemporary life. The story of his life has been told with much detail in the autobiographical "Mémoires," which he wrote in French in 1787. This work is important also for the account which it gives of the vicissitudes attending his attempts to improve the dramatic repertory of his day, and of his eventual success derived from the composition of his famous "Cafard" dramatised by Paganini in 1781. Born in Venice, he accompanied his father in his peregrinations to various Italian cities, among them Perugia and Rimini, where he practised as a physician. The boy was intended at first for his father's profession, but he early indicated his real tastes by running away from Rimini with a theatrical troupe. Later we find him at Venice studying law, and ere long he is seen occupying at Chigioia the post of assistant to the registrar or clerk of the criminal court. By this time he had begun the composition of plays. He finally took his degree in law and settled in Venice, practising as a lawyer until the continuous and heavy work of his profession became too oppressive for him, and he did not remain at rest long. Associated with the diplomatic service for brief periods, he sojourned in Milan and in Genoa, and then for one reason or another shifted his domicile hither and thither in Northern Italy, making his longest stay in Pisa, where for five years he devoted himself to legal pursuits. In 1748 he received the appointment of dramatic poet to the theatre S. Angelo at Venice, and in the following year betook himself to his native city. In his new position he wrote many comedies which were performed successfully, and in 1752 he accepted a similar appointment in the Venetia Nera at Mestre, by which he provided additional pieces. All the while warfare was being waged against him by the partisans of the inartistic "Commedia dell' arte," and finally, although he had gained the day, he determined from sheer weariness to accept the offer made him in 1761 of the place of poet to the Théatre Italien at Paris. Honourable though his post was, he felt not really happy in it, and when the time of his contract was finished, he meditated an instant return to his native land. This purpose he did not carry out, for an appointment as Italian tutor to the daughters of Louis XV induced him to remain in France. A pension was promised him, but it was revoked by the year 1792. He died the next year on the day before that on which, at the recommendation of Joseph Chénier, the Convention restored his pension.

During his residence in the French capital, Goldoni produced two important comedies in French, the "Enourru bienfaisant" (which he himself translated into Italian), and the "Avare fastueux". Goldoni's dramatic pieces are about 150 in number. They fall readily into three groups: those written entirely in the Venetian dialect, of which there are about eleven; those written partly in dialect, which form the largest part; and those written wholly in purer Italian, of which some are in prose and some in Martellian verse. The earlier among them, the tragedies, tragi-comedies and melodramas are almost negligible; his fame rests on the comedies picturing the customs of his time. Notable among these are "La locandiera" (1751), "Un curio" (1761), "Il baffuto d' Italia" (1764), "Le tegia di caffe", "I Rusteghi", and "Il Burbero benefico" (the Italian form of the play performed at Paris in 1771). These and a few others still live on the Italian stage. His "Lettere," published in a collection at Bologna in 1860, contain interesting matter which does not lead to the information conveyed in the "Mémoires." Two editions went to Venice, 1788—95 in 44 vols., and 1817—22 in 46 vols.

Goldwell, Thomas, Bishop of St. Asaph, the last survivor of the ancient hierarchy of England; b. probably at the family manor of Goldwell, in the parish of Great Chart, near Ashford, Kent, between 1501 and 1515; d. in Rome, 3 April, 1855. He was a member of a Kentish family of ancient lineage, long seated at Goldwell; and was educated at All Souls College, Oxford, where he held the degrees of B.A. in 1534 and B.D. in 1534. While at Oxford he attained more eminence in mathematics, astronomy, and kindred sciences, than in divinity or the humanities, a point worth remembering in view of his future career. He stood out firmly against the innovations in religion brought about by Henry VIII. At an early date he became intimate with Reginald, afterwards Cardinal, Pole, a friendship which proved to be a lasting one, and which had considerable influence on Goldwell's subsequent career. Soon after 1533, when the king had begun his drastic measures of ecclesiastical spoliation, Goldwell became a recusant and joined the monastery of St. Mary's, being included in the same Act of Attainder "for casting off his duty to the King, and submitting to the Bishop of Rome." He reached Rome in 1538, and shortly afterwards he was appointed camerarius of the English Hospital of the Holy Trinity. In 1547 he became a novice in the Theatine House of St. Paul, and in 1548 a lay professed member of the Order, at Naples. On the death of Paul III, Pole, now a cardinal, asked and obtained permission for Goldwell to accompany him to Rome, and thus he was present at the long conclave of 1549—50 in the capacity of Pole's personal attendant. After the election of Julius III, Goldwell returned to San Gregorio, but was later recalled as a Theatine. In 1553, while Edward VI was still reigning, an Act of General Pardon was passed, from which Goldwell had the signal honour of being specially excepted by name, along with Pole and some others. On the accession of Mary I there came an end to Pole's brief spell of prosperity for English Catholics. Pole, now papal legate, returned to England with Goldwell in his train, and the latter was soon nominated to the See of St. Asaph in North Wales (1555). While still only bishop-designate, he was sent to Rome (2 July, 1559) to make a report on the state of religion in England to Paul IV. While at Rome, on this occasion, he was probably consecrated bishop; and he returned to England at the end of the year. In 1556 he assisted at the consecration of Pole to the Archbishrope of Canterbury. He was then for some time actively engaged in the affairs of his Diocese of St. Asaph. He issued numerous injunctions to his clergy, prohibiting married priests from saying Mass, and forbade the use of churches as poor-schools. He revived the pilgrimages to the miraculous well of St. Winefride, at Holywell, and obtained from the pope a renewal of the indulgences for pilgrims to that shrine. He also examined the heretic John Philpot, which fact is chronicled in no friendly way by Foxe ("Actes and Monuments," ed. Townsend, VII, 620). It was about this time proposed, though without his knowledge or consent, to make him ambassador to the court of Rome, and to translate him to the See of Oxford; letters of credence to Paul IV had Goldwell and Pole's name down for the See. Immediately, he received the custody of the temporalities of the See of Oxford. Thomas Wood having received that of St. Asaph four days previously. But the death of Queen Mary on 17 November terminated all these arrangements. Just at this juncture Goldwell was at the deathbed of Cardinal Pole, to whom he gave the last sacraments.

The accession of Elizabeth was, of course, the signal...
for the final attack of Protestantism upon the ancient Faith. Goldwell strenuously resisted as far as in him lay. He was now by no means dishonestly and underhand methods the queen’s party put it out of his power to make his protest in a constitutional manner. It was alleged that, by his nomination to Oxford, he was no longer Bishop of St. Asaph; but that, as he had not done homage to the queen for Oxford, he was no longer bishop at all. It is true (see the Appendix) that he did not receive the summons to Parliament which was undoubtedly his legal due. In May, 1559, however, he was summoned before the queen with the other bishops, and all of them were expelled from their sees for their refusal to take the oath of supremacy. He was ordered to leave the country, for, as he afterwards stated, he was not allowed to perform a bishop’s office, say Mass, or administer the sacraments, as long as he remained in England.

Although the ports were being watched for him, he succeeded in making his escape. It was obviously impossible for him to have carried off the register and records of his see under such circumstances. This charge, however, has been maliciously made against him. He then became an active Catholic exile. He started at once for Rome, but was detained at Louvain by sickness. He refused the offer of an Italian bishopric, preferring to devote himself to his order (the Theatines) and to the causes of England. In 1561 he was made superior of his old convent at Naples, and also warden of the English Hospital at Rome. He was the only English bishop at the Council of Trent, where he was treated with marked respect. He was there engaged in the revision of the Breviary and the Missal; and also urged the council to excommunicate Queen Elizabeth. His mere presence at Trent was a cause of such excessive annoyance to Elizabeth that she wrote the following extraordinary arraignment of falsehood to her German envoy Mundt: “We think that it may be, that Goldwell, a very simple and fond man, having in late students’ time been named to a small bishopric in Wales called St. Asaph, though never thereto admitted, flying out of the realm upon our sister’s death, is gone to Rome as a renegade, and there using the name of a bishop, without order or title, is perhaps gone in the train of some Cardinal to Trent, and so it is written. This speech hath already produced many of a bishop of this land being there.” In 1563 Goldwell was vicar-general to the Archbishop of Milan, St. Charles Borromeo. In 1567 he was made vicar of the cardinal archpriest in the Lateran, and in 1574 the Cardinal Vicar Savelli made him his vicegerent; he thus became, so to speak, the virtual bishop of Rome. In 1582, an English traveller in 1598, said that Goldwell was the only English Catholic in Rome who was courteous to him. In 1580, in spite of his advanced age, he set out for England at the head of the mission which included Campan and Persons, but he was taken ill at Reims and obliged to return to Rome. One of the last acts of his long and strenuous career was to serve on the Congregation for the Revision of the Roman Martyrology, in 1582. On the death of the Bishop of Lincoln, in 1584, Goldwell became the sole survivor of the ancient English hierarchy. He died the next year, and was buried at St. Sylvester’s. A portrait of him exists at the English College, Rome.

Goliath. See David.

Gómez (or Góma), Francisco López de, b. at Seville, Spain, in 1510; studied at the University of Alcalá, was ordained priest, made a journey to Rome, and upon his return in 1540, entered the service of Hernando Cortés as private and domestic chaplain. He accompanied Cortés on the Algerian expedition, and, after the death of his patron, it is known that he was at Valladolid in 1556 or 1557, after which he is supposed to have retired to his native city of Seville, where he probably died. With the information given him by the conqueror and other persons who had returned from the Indian expeditions (See the Appendix to this volume), he wrote his “Hispania Victorix; First and Second Parts of the General History of the Indies, with the whole discovery and notable things that have happened since they were acquired until the year 1551, with the conquest of Mexico and New Spain.” It was translated into French by Martin Fumée and published at Paris in 1578; Augustin Gravelis translated it into Italian and published it at Venice in 1560; lastly, Juan Bautista de San Antonio Chimalpahin Quanahehuatlan translated it into Mexican. The author relates in the first part, which is dedicated “To Don Carlos, Emperor of Romans, King of Spain, Lord of the Indies and New World”, the whole discovery and conquest of the Antilles, Peru (up to the pacification effected by Gasca), Chile and Central America, also the voyage of Magellan and the discovery of the Philippines. In the second part, told in the tells of the conquest of Mexico, it is dedicated “To the Very Illustrious Lord Don Martin Cortés, Marques de Valmoral.”—the son and heir of the conqueror.

Whether through the desire to aggravate his patron, or through relying on the first-hand information which the latter gave him (it is to be noted that Góma was never in America), or from malice, or for some other reason, Góma fell into serious errors and in many instances sinned gravely against historical truth. It was perhaps for this reason that Prince Philip (afterwards Philip II), in a decree issued at Valladolid, 17 November, 1563, ordered all the papers or works of his which could be found to be gathered in and imposed a penalty of 200,000 maravedis on anyone who should reprint it. This prohibition was removed in 1727 through the efforts of Don Andrés Gonzales Barcia, who included Góma’s work in his collection of early and rare historical works of the reigns of the historians (primitivos de las Indias Occidentales). The “Verdadera historia de la conquista de Nueva España” (True History of the Conquest of New Spain) of Bernal Díaz del Castillo, a companion of Hernando Cortés, was written to refute Góma’s. The book’s style, says Hall, an Englishman running on rapidly and gracefully, all of which has had the effect of attracting readers to the work. Among other works of his which have remained unpublished are “Batallas de mar de nuestros tiempos” (Contemporary Naval Battles) and “Historia de Harrue y Harrudín Barbarroja”.

Camillus Chivelli.

Gomes De Amorim, Francisco, Portuguese poet, dramatist, and novelist; b. at Avelemor, near Oporto, 13 August, 1827; d. 4 November, 1891. His parents were respectable but so poor that Francisco had to leave school at the age of ten, when he went to Brazil and obtained a situation in a business house. At the same time he found an opportunity to study the manners and dialects of the Indian tribes of the Amazon forest. He returned to Portugal in his twentieth year, and two years later, under the influence of the revolutionary ideas of 1848, he composed the poems, "A liberdade", "A queda da Hungria", and "Garibaldi". Sympathizing as he did with the principles
of romanticism, he, like so many other young writers, fell under the spell of Almeida Garrett, and, to help him to carry out his plan of establishing a school of romanticism in Portugal, he began to write stories and poems. The first, "O filhó" (1852), was performed at Lisbon with signal success. It was followed by a long series of dramas, among which the best known are, "O divão de terra", "Alegreios sociais", "Os filhos de doce", "Figado de tigre", "A prohibição", "A vinha", "A abnegação", and "Os herdeiros do milho". He began to write novels in 1851, in order to make a living, he worked in a hatter's establishment, but in that year he was appointed to a government post, and found leisure to compose his dramas, poems, and romances. In 1859 he was made librarian to the Minister of Marine.

Gondulphus (GONDULPHUS), the name of three saints, of whom one was Bishop of Tongres (Maastricht), the second Bishop of Meta, while the third is known as Gondulphus of Berry. We possess little information concerning any of the three, and the slight idea of each afforded us by the documents of the Middle Ages is reduced to the following.

I. GONDULPHUS OF METZ is the one concerning whom our information is most reliable. His feast is celebrated in September. As he succeeded Angilram, him who caused Paul the Deacon to write the "Liber de episcopis Mettensibus", and who died probably in 791. At the death of Angilram there was a vacancy in the episcopate of Metz, which was terminated by the accession of Gondulphus. The acts of James S. Vincent M. Mettensis" give the date as 781. But, as it is known, on the other hand, that since the time of Bishop Chrodegang episcopal ordination took place on Sunday, the date of the consecration of Bishop Gondulphus must be set down as 28 (? December, 816. The old episcopal catalogue of the church of Metz informs us that Gondulphus occupied the see of this church for six years, eight months, and seven days, and that he died on the 7th of the Ides of September, which would be the sixth of that month, in the year 823. He was buried in the monastery of Gorze, where his relics are still honoured on 6 September. It is impossible to quote in this respect any special patronage, and with regard to his episcopal career, apart from the details furnished here, there exists no information.

II. GONDULPHUS OF TONGRES, or, as he is commonly called, GONDULPHUS OF MAASTRICHT, because his predominant episcopal see was in that city. He was bishopric from Tongres to Maastricht, which thenceforth was the actual residence of the bishops of Tongres. However, the official title of the Bishop of Tongres, "Episcopus Tongorum", was retained until the eleventh century, even when the episcopal see had been transferred from Maastricht to Liège. Bishop Gondulphus is a somewhat enigmatic figure; indeed, one is inclined to question whether he be not identical with Monulpus. But the saints must nevertheless be distinguished. Monulpus may perhaps have followed the see of Tongres until the end of the sixth or the beginning of the seventh century, while at the Council of Paris in 614 the presence is discovered of a Bishop of Maastricht named Betulpus. Gondulphus, then, probably comes between Monulpus and Betulpus, at least, if this Betulpus, at least, if this was the immediate successor of Monulpus on the grounds that the case is analogous to that of the episcopal list of Mainz, where Bertulfus and Crotoldus must be reckoned identical. Furthermore, the episcopal lists of the eleventh and twelfth centuries, whose value is, however, not very great, ignore Betulpus, and make Gondulphus the immediate successor of Monulpus. The biographies of Gondulphus, which are handed down to us from the Middle Ages, are merely an extract from the "Vita Servatii" of the priest Jocundus. They are quite without value and are full of legends. If they are to be believed, Gondulphus endeavoured to rebuild the town of Tongres, which had been destroyed by the barbarian invasions. But heavy opposed his scheme, and miraculously manifested his desire to the saint. Furiou wolves fell upon the pagan colonists of this region, and devoured them before the eyes of the horrified populace. Thus has legend quite obscured the authentic story of St. Gondulphus, the fact of his episcopacy at Maastricht being the only one that is authentic. According to local tradition he occupied the episcopal see for seven years and died about 607. This last statement does not tally with his presence at Paris in 614, if he is to be considered identical with the Betulpus who assisted at that council. In any case he was buried in the nave of the church of St. Servais at Maastricht, which had been magnificently restored by his predecessor, St. Monulpus.

The bodies of Monulpus and Gondulphus were solemnly exhume in 1039 by the Bishops Nithard of Liège and Gérard of Cambrai. An epitaph commemorating this event was afterwards misinterpreted, and gave rise to a legend according to which the two saints arose from their tomb in 1039 in order to assist at the dedication of the church of Aachen (Aix-la-Chapelle), and at the conclusion of the ceremony returned to their eternal abode. Some place in the church of St. Monulpus, St. Gondulphus is secondary patron of the city and church of Maastricht. His feast is kept on 16 July. The commemoration of the exhumation of 1039 is celebrated on 10 August.

III. SAINT GONDULPHUS (or Gondon) of Berry, is, according to the能做到enigraphie in which he is comparatively lately treated by a monk of Berry, he was Archbishop of Milan in the seventh century. Not succeeding in appeasing the troubles which had arisen in his church, he resolved to submit to the inevitable, and retired to Berry with a number of his disciples. It is not known, however, that any Archbishop of Milan had to deal with these conditions. It is true that it has been thought that Gondulphus lived at the time of the Milanese schism regarding the affair of the Three Chapters, that he was consecrated in 555, but that he was never received as bishop in his diocese. These are merely hypotheses, and in fact it must be said that the history of the St. Gondulphus who is honoured in Berry is unknown. The atonement of his cult in Berry appears late among the additions to the several Dioceses of France. In it is cited in the Breviary of Bourges in 1262. He is the patron of St.ondon, near Gien. His feast is kept on 17 June.

L. Van der Essen.

Gonet, Jean Baptiste, theologian; b. about 1616 at Bézières, in the province of Languedoc; d. there 24 Jan., 1681. From his early boyhood he was devout and fond of study. He received his primary education in his native place, and there at the age of seventeen entered the Order of St. Dominic. After his religious profession he was sent to the University of Bordeaux, where with unusual ability he devoted himself to the study of philosophy and theology, winning all honours in the customary examinations before advancement. Having received the doctorate, he was appointed to the chair of scholastic theology in the university, in which capacity he did great credit to himself and to his professors and an exceptionally gifted teacher. In 1671 he was elected provincial of his province; on the expiration of his term of office, he resumed the professorship of theology, holding it to 1678, when ill-health obliged him to return to his native place. As a theologian and academic disputant Gonet ranks among the most prominent figures of his time. An ardent defender and exponent of the teaching of St. Thomas and an illustrious representative of Neo-Thomism, he set forth the traditional teaching of his school with astonishing clearness and skill, if with some bitterness against the representatives of different views. He lived at a time when theological discussion was rife, when men, weary of treading beaten paths, had set themselves to constructing systems of their own. His zeal, however, for the integrity of Thomistic teaching, and his bitter aversion from doctrinal novelty sometimes castigated him against the teachings of his masters, led him to adopt opinions on certain questions of theology, especially those dealing with predetermination and reprobation, which were rejected by many learned theologians of his own school. In 1669 he published a work on the morality of human acts, the purpose of which was to guard his father’s teaching against what he called the laxities of the modern casuists, and the rigorism of the Jansenists. In this treatise he defends the probabiliarism of his school, and in the heat of the controversy is unsearing in his denunciations of the doctrine of probabilism. His principal work is the “Cyprius theologorum Thomistarum contra alios eius etiam impurum monum” (16 vols., Bordeaux, 1659-69). From 1669 to 1681 no less than nine editions of this work appeared; the latest is that of Paris, 1875. Shortly before his death he published his "Manule theologorum," which is an abridgment of his larger work. Consult and Échure, Scriptores O. Pr., II, 603; Huter, Nomenclator; Schwane, Dogmengesch. der neueren zeit (Freiburg im Br., 1890), 299, 197, 217, 240, 314, 377, 379.

Gong: See Altar, sub-title Altar-Bell.

Gonnelieu, Jean de, theologian, ascetical writer; b. at Paris, 28 Feb., 1715. At the age of seventeen he entered the Society of Jesus (4 Oct., 1657). Till the year 1674, when he pronounced his final vows, his services were requisitioned in various capacities, his work as a teacher being particularly efficient and valuable. From this date his abilities were long and actively directed towards the ministry of the pulpits, attracting by the piety and learning of his discourses, and the love of his students. He attained to considerable repute as a sacred orator, the qualifications which he possessed in this way being altogether exceptional and peculiar; he had, particularly, in a marked degree, the faculty of conveying spiritual thoughts of the loftiest and noblest import in a form that was assimilable by the people. His duties, of whatever order, were discharged with thoroughness and a laudable spirit of self-sacrifice; the zeal and earnestness which he always displayed in the cause of religion entitled Gonnelieu to a very high place among the evangelical workers of that time who laboured most to promote the spiritual welfare of men. Towards the latter end of his life he gave himself up almost exclusively to literary activity; and the renown which he acquired in this department was no less deserved than the celebrity with which his preaching was attended. The following is a list of his works: "Exercice de la vie spirituelle" (Paris, 1701); "De la Présence de Dieu qui renferme tous les principes de la vie intérieure" (Paris, 1703, 1709; Marseilles, 1827); "Méthode de bien prier" (Paris, 1710, 1769); "Pratique de la vie intérieure," etc. (Paris, 1710); "Instruction sur la Confession et la Communion" (Paris, 1710); printed with preceding work in Paris edition of 1713; "La Foi, l’Amour de Notre Seigneur Jésus-Christ, la Cène, avec des réflexions" (Paris, 1712); "Nouvelle retraite de huit jours à l’usage des personnes du monde et du clergé" (Paris, 1730).

To the above almost all the bibliographies add another work, of which the full title is "L’Imitation de Jésus-Christ, Traduction nouvelle: Avec une Pratique et une Prière à la fin de chaque Chapitre" (Parle R. P. de Gonnelieu, de la Compagnie de Jésus, Paris and Nancy, 1712); but the great majority of the bibliographies, too, if apparently somewhat arbitrarily, deny that the Traduction (translation), as distinct from the teaching (helps) at the end of each chapter, is by de Gonnelieu. The opinion of the negative critics seems to be based mainly on the statement of Calmet (op. cit. below) that "the translation is by Jean-Baptiste Cusson [printer at Nancy], and the rest by P. Gonnelieu." The most approved form of this theory is that which attributes the rendering, as more precisely by Jean Cusson, printer at Paris and clerk to the parlement, who, in his version published in 1673, had availed himself largely of the celebrated translation by Sacy. Jean-Baptiste Cusson, a man of culture and fine literary sense, after thoroughly revising and improving the work that had issued from the press at Nancy in 1712, became, as a result of the reading of the printer, bursts into a new edition, which was not published in 1870, substantially maintained this view; so also, Barber and Brunet (op. cit. below). The "Journal des Savans" (Aug., 1713), on the other hand, in a reservation made within one year after the publication of the work, while praising the seal and piety of the translator, says expressly that the version is by P. Gonnelieu; and adds that "Sieur Cusson (one time printer to the Journal) has enriched this first edition by many copper-plates." The testimony of the "Mémoires de Trévoux" (see below) for August, 1713, is almost identical with the preceding; and in the same notice it is stated that "the name of P. de Gonnelieu was a préjugé infaillible in favour of the excellence of the work." It is, if it be argued, with those who deny the Gonnelieu authorship of the rendering, that the title of the "Traduction" is misleading, as it not only does not suggest that to the Abbé of Sonnes, in his "Histoire des hommes illustres", written almost fifty years after the appearance of the version, was deceived by the ambiguity, than to assert such error on the part of those who were on terms of intimate relationship with Cusson, the printer, and Gonnelieu, the presumptive author?

P. J. Macauley.

Gonzalo García, Saint. See García, Gonzalo, Saint.

Gonzaga, Ercole (Hercules), cardinal; b. at Mantua, 23 November, 1505; d. 2 March, 1563. He was the son of the Marquesses Francesco, and nephew of Cardinal Sigismondo Gonzaga (1460-1525). He studied philosophy and law at Pavia, and later took up theology. In 1520, or as some say, 1525, his uncle Sigismondo renounced in his favour the See of Mantua; in 1527 his mother Isabella brought him back from Rome the insignia of the cardinalate. Notwithstanding his youth, he showed great zeal for church reform, especially in his own diocese; and in this he received help and encouragement from his friend Cardinal Giberla, Bishop of Verona. His mode of life was stainless and a manuscript work of his, "Vite Christiane institutio," bears witness to his piety. He published a Latin catechism for the use of the priests, and built the diocesan seminary, thus carrying out reforms urged by the Council of Trent, as his friends Contarini, Giberla, Caraffa, and other bishops had done or were doing, even before the council had assembled. His charity was unbounded, and many young men of talent and genius had their university expenses paid by him. The pope employed him on many embassies, e.g. to Charles V in 1530. Because of his prudence and his business-like methods, he was a favourite with the popes, with Charles V. and Ferdinand I, and with the Kings of France, Francis I and Henry II. From 1540 to 1560 he was guardian to the young sons of his brother Federico II who had died, and in their name he governed the Duchy of Mantua. The elder of the boys, Francesco, died in 1550 and was succeeded by his brother Guglielmo. In the concile of 1559 it was thought he would certainly be made pope; but the cardinals would not choose as pope a scion of a ruling house. In 1564 Pius IV named him legate to the Council of Trent, for which he had from the beginning laboured by every means in his command, moral and material. In its early stages, owing to the fact that not a few considered him as a party of Communism under both kinds, he met with many difficulties, and innumerable letters were directed against him. No offer, but the express wish of the pope could have persuaded him to remain at his post, and the energy he displayed was unwearied. He contracted fever at Trent, where he died, attended by Father Laino. His benefactions to the Jesuit college at Mantua and to the Monte di Pietà were very great, and his letters are invaluable to the historian of that period.

Gonzaga, Scipione, cardinal; b. at Mantua, 11 November, 1542; d. at San Martino, 1 January, 1593. He belonged to the family of the Dukes of Sabboneta, passed his youth under the care of Cardinal Ercole (Hercules) Gonzaga, and made rapid progress in Greek and Latin studies. At Bologna, and later at Padua, he studied mathematics and philosophy, and, in the latter city, founded the Accademia degli Eterei, or Academy of the Ethers. Throughout his whole life he patronized literature and men of letters, among the latter being Tasso, who sought his advice concerning his "Gerusalemme Liberata," and Guarino, who dedicated to him his "Pastor Fido." Having finished his theological studies he went to Rome, became consistorial secretary to Pius IV, and was ordained priest. In the early years of the reign of Gregory XIII Gonzaga had a serious lawsuit with the Duke of Mantua over some property, but they were soon reconciled. Through the Guise party, whose cause he had aided, he became Bishop of Mende in France, but Charles, Duke of Guise, pleaded unsuccessfully with Gregory XIII to have him made cardinal. Sixtus V, immediately on his elevation, appointed him Patriarch of Jerusalem, and in 1567, elected the successor of the late Pope Paul IV. The Pope raised him to the cardinalate. Sixtus also made constant use of his services in the execution of his policies, domestic and foreign. Cardinal Gonzaga was a friend of Saint Charles Borromeo and Saint Philip Neri, and his cousin Saint Aloysius Gonzaga owed him the evening of his life. After entering the Society of Jesus. For a time Cardinal Gonzaga was governor of the Marquessate of Monforte in the name of the Marquess Vincenzo. The three books of his "Commentarii," written in polished Latin, are an important source of information for the history of his cardinalate. He was buried in the church of St. Sebastian at Rome. His "Commentarii" were edited at Rome in 1791 by Marotti.

Caldwell, Memorie storiche de' Cardinali (Rome, 1702), 273.

González de Santaella, Thyrisus, theologian and thirteenth general of the Society of Jesus; b. at Arganda, Spain, 18 January, 1624; d. at Rome, 27 October, 1705. He entered the Society of Jesus 3 March, 1643, and taught philosophy and theology at Salamanca from 1653 to 1665 and from 1676 to 1687, the intervening years having been devoted to preaching. When about to set out for Africa to convert the Mussulmans in 1687, he was sent as elector to the thirteenth general congregation, by which he was chosen general, 6 July, 1687. As an ardent adversary of probabilism González had frequently asked his superiors to have some Jesuit write against the doctrine. He himself had composed a work in which he defended probabilism, assigning, however, an exaggerated importance to the subjective estimation of the degree of probability. The general revisors of the Society unanimously rendered an unfavourable opinion on the work, and accordingly, in 1674, Father-General Oliva refused permission for its publication. González received encouragement from Innocent XI, who had become pope in 1676, and by his order the Holy Office issued a decree, in 1680, ordering the superiors of the Society to allow their subjects to defend probabilism, a permission that had never been denied. As general of the Society, González thought himself obliged to fight probabilism to the death. In 1691, he had printed at Dillingen a modified edition of his former work, but, owing to the efforts of his assistants, this book was never published. Innocent XI ordered a new examination of it to be made, and with many corrections it finally appeared, in 1694, under the title "Fundamentum theologicae moralis—De recto usu opinionum probabilium" at Rome (three editions), Antwerp, Dillingen, Paris, Cologne, etc., and again at Antwerp, in 1695. Migne has reproduced it in his "Curiosa Theologiae," XI. Boesveld said that nothing more formidable had ever been written against probabilism, and St. Ignatius Liguori found in it an exaggeration of rigorist tendencies.

We also have from the pen of González some apologetic works: "Selectarum disputationum tumi quattuor" (Salamanca, 1680), in which are found chapters against the Thomists, Jansenius, and some doctors of Louvain; treaties on the Immaculate Conception, and on papal infallibility. These were directed against the Assembly of the Clergy of France in 1682, and printed by order of Innocent XI, was afterwards suppressed by Alexander VIII, who feared new difficulties with the French court. This work appeared, in résumé only, at Barcelona, in 1691.

J. SALZMANN.

Gonzalo de Berceo, Spanish poet, active between 1220 and 1242. Born in the closing years of the twelfth century, he appears to be the earliest Castilian author known to us by name. He became a priest and passed the whole of his life in or near the monastery of San Millán de la Cogolla. His compositions extend to more than 13,000 verses (Alexandrines), arranged in monohymed quatrains (cuadernas voces), and so far as the true authenticity can be determined, are religious and hagiographical in their nature. They are made up of lives of Spanish saints: "La vida de Santo Domingo de Silos," "La vida de San Millán," "La vida de Santa Oria," and of poems celebrating the Blessed Virgin; "Los Milagros de Nuestra Señora," "Las Milagros de la Santa Señora," and "El milagro de la Virgen"; and of other pius and didactic works: "El sacrificio de la misa," "Los sencillos delicios," and perhaps some hymns. In all these compositions he manifests but little originality, abiding, wherever possible, by Latin sources that were doubtless in the monastic library. His manner and style, however, are decidedly interesting, because they evince his desire to appeal to all the readers of Castile in his time. He writes, as he tells us, in the vernacular, so that he may be read by the common man; and he intentionally adopts the methods of the popular minstrel in order to reach more quickly the popular heart. In spite of his diffuseness, he can interest us to-day, and his quaint humour, heavy though it may be at times, has no little charm. If we are to believe the ascription contained in one of the two manuscripts of the old Spanish poem on Alexander the Great ("Libro de Alexandre") we must credit him with that secular worldliness; but scholars are not too prone to regard the ascription as correct.

Editions of his verse in Sánchez, Colección de poesía castellana anteriores al siglo xvi (Madrid, 1779-98); II. 4. la Biblio- teca de autores españoles, VII; and, for the San Millán in the Bibliotheca de l'École des Hautes Études, fasc. 149, ed. French; Laubert, Grammar and vocabulary of G. de Berceo (Madrid, 1903); Fitzgerald, History of Spanish Literature.

J. D. M. FORD.

Good is one of those primary ideas which cannot be strictly defined. In order to fix its philosophical significance we may begin by observing that the word is employed firstly as an adjective, and secondly as a substantive. The distinction is clear, but scholars are not too prone to regard the ascription as correct.

Editions of his verse in Sánchez, Colección de poesía castellana anteriores al siglo xvi (Madrid, 1779-98); II. la Biblioteca de autores españoles, VII; and, for the San Millán in the Bibliotheca de l'École des Hautes Études, fasc. 149, ed. French; Laubert, Grammar and vocabulary of G. de Berceo (Madrid, 1903); Fitzgerald, History of Spanish Literature.

J. D. M. FORD.
philosophers who have disputed his interpretation. The Supreme Good imports to the intellect the power to perceive, and gives the intelligency. It is, therefore, the source of truth. God, the essential and supreme Good, can impart nothing that is not good. This view leads to the inference that the origin of evil lies beyond the control of God. The theory leans, therefore, to dualism, and its influence may be traced through the early Gnostic and Manichean heresies, and, in a minor degree, in the doctrines of the Priscillianists and Albigenenses.

Aristotle.—Starting from the Platonic definition, good is that which all desire, Aristotle, rejecting the Platonic doctrine of a transcendent world of ideas, held evil and being identical; granting not something added to being, it is being. Everything that is, is good because it is; the quantity, if one may use the word loosely, of being or existence which a thing possesses, is at the same time its stock of goodness. A diminution or an increase of its being is a diminution or increase of its goodness. Being and the good are, then, objectively the same; every being is good, every good is being. Our concepts, being and good, differ formally: the first simply denotes existence; the second, existence as a perfection, or the power of contributing to the perfection of a being. It follows that what is evil is in the state of being at all; on the contrary, the privation of being. Again, while being, viewed as the object of tendency, appetite, or will, gives rise to the concept good, so, when considered as the proper object of the intellect, it is represented under the concept true or truth, and it is the beautiful, inasmuch as the knowledge of it is attended by that particular pleasant sensation which we call aesthetic. As God is the fullness of being, so, therefore, the supreme, infinite Being is also the Supreme Good from which all creatures derive their being and goodness.

Neo-Platonism.—The neo-Platonists perpetuated the Platonic theory, mixed with Aristotelian, Judaic, and other Oriental ideas. Plotinus introduced the doctrine of a triple hypostasis, i.e. the one, the intellence, and the universal soul, above the world of changing being. The good is identical with the one, and is above being, which is multiple. The intelligence is ordained to good; but, inasmuch as it cannot separate in its entirety, it breaks it up into parts, which constitute the essences. These essences by becoming united with a material principle constitute things. The Pseudo-Dionysius propagated the Platonic influence in his work "De Nominibus Divinis", the doctrine of "A", and "ome vonum sibi" or supereminently being—"I am who am"—but in Him the good is anterior to being, and the ineffable name of God is above all His other names. The good is more universal than being, for it embraces the material principle which does not possess any being of its own. The bond which unites beings and essences and the Supreme Being is love, which has for its object the good. The trend of the Pseudo-Dionysius is away from the dualism which admits a principle of evil, but on the other hand, it inclines towards pantheism.

The Fathers.—The Fathers, in general, treated the question of good from the standpoint of hermeneutics rather than from the philosophic. Their chief concern is to affirm that God is the Supreme Good, that He is the creator of all that exists, that creatures derive their goodness from Him, while they are distinct from Him; and that there is no supreme independent principle of good. St. Augustine, however (De Natura Boni), In Lib. X, Xr. 5, 6, 13, a. 79, 80, 81, 82, 83, in great detail. Some of his expressions seem tinged with the Platonic notion that good is antecedent to being; but elsewhere he makes the good and being in God fundamentally identical. Boethius distinguishes a double goodness in things created: first, that which in them is one with their being; second, an accidental goodness added to their nature by God. In God these two elements of good, the essential and the accidental, are one, since there are no accidents in God.

Scholastic Doctrine.—St. Thomas starts from the Aristotelian principle that being and the good are objectively one. Being conceived as desirable is the good. The good differs from the true in this, that, while both are objectively nothing else than being, the difference is being considered as such, not as something else. If the one is, and will, the true is being as the object of the intellect. God, the Supreme Being and the source of all other being, is consequently the Supreme Good, and the goodness of creatures results from the diffusion of His goodness. In a creature, considered as a whole, the distinction between the elements of the goodness which it possesses: (a) Its existence or being, which is the ground of all the other elements. (b) Its powers, activities, and capacities. These are the complement of the first, and they serve it to pursue and appropriate whatever is requisite for and contributory to sustaining its existence, and developing that existence into the fullness of perfection proper to it. (c) Each perfection that is acquired is a further measure of existence for it, hence a good. (d) The totality of these various elements, forming its total good subjectively, that is, its entire being in a state of complete actualization, constitutes the good complete. This is the sense of the axiom: omne ens est bonum sibi (every being is a good unto itself). The privation of any of its powers or due perfections is an evil for it, as, for instance, blindness, the loss of the power of sight, is an evil for an animal. Hence evil is not something positive and does not exist in itself; as the axiom expresses it, mutum in bono fundatur (evil has its base in good).

Let us pass now to good in the relative sense. Every being has a natural tendency to continue and to develop itself. This tendency brings its activities into play; each power has its proper object, and a creature, is, by pushing it to action. The end to which an activity is directed is something that is of a nature to contribute, when obtained, to the well-being or perfection of the subject. For this reason it is needed, pursued, desired, and, because of its desirability, is designated good. For example, the plant for its existence and development requires light, air, heat, moisture, nutrition. It has various organs adapted to appropriate these things, which are good for it, and, when by the exercise of these functions it acquires and appropriates them, it reaches its perfection and runs its course in nature. Now if we look into the cosmos, we perceive the innumerable activities of beings. These are all together in an indescribably complex system of mutual action and interaction, as they obey the laws of their nature. One class contributes to the other in that orderly relationship which constitutes the harmony of the universe. True—to change the metaphor—with our limited powers of observation we are unable to follow the innumerable threads of this mighty network, but we trace them in sufficiently large and varied sweeps to warrant the induction that everything is good for some other thing, that everything has its proper end in the great whole. Omne ens est bonum alior. Since this orderly correlation of things is necessary to them in order that they may obtain from one another the help which they need, it is too good for them. This order is also a good in itself, because it is a created reflection of the unity and harmony of the Divine being and goodness. When we consider the Supreme Being as the efficient cause, conception and directeur of this whole, we arrive at the conception of Divine Providence. And then arises the question, what is the end towards which this Providence directs the universe? The end again is the good, i.e. God Himself. Not indeed that, as in the case of creatures, He may derive any advantage or perfection from the world, but that it, by participating in His
goodness, may manifest it. This manifestation is what we understand by the expression, "giving glory to God." God is the Alpha and the Omega of the good; the source from which it flows, the end to which it returns. "I am the Beginning and I am the End." It must be remembered that, throughout the treatment of this subject, the term good, like all other terms which we predicate of God and of creatures, is used not uniquely but analogically when referred to God. (See Analogy.)

The defined doctrine on the good, ontologically considered, is formulated by the Council of the Vatican (Sess. III, Const. de Fide Catholica, Cap. 1): "This one, only, true God, of His own goodness and almighty power, has the increase of His own happiness within Him to acquire but to manifest His perfection by the blessings which He bestows on creatures, with absolute freedom of counsel created from the beginning of time both the spiritual and the corporeal creature, to wit, the angelic and the mundane; and afterwards the human creature."

In Canon iv we read: "If anyone shall say that finite things, both corporeal and spiritual, or at least spiritual, have emanated from the Divine substance; or that the Divine essence, by the manifestation and evolution of itself, becomes all things; or lastly, that God is universal or indefinite being, which by determining itself constitutes the universal and distinct actuality of persons, species, and individuals, let him be anathema." II. Ethical.—The moral good is not a kind distinct from the good viewed ontologically; it is one form of perfection proper to human life, but, because of its excellence and supreme practical importance, it demands special treatment with reference to its own distinctive character which differentiates it from all other goods and perfections of man. It is again, in Greek philosophy, that we find the principles which have supplied the school with a basis for rational speculations, controlled and supplemented by revelation.

Plato.—The supreme good of man is, as we have seen, the idea good, identical with God. By union with God man attains his highest subjective good, which is happiness. This assimilation is effected by knowledge and love; the means to achieve it is to preserve in the soul a due harmony throughout its various parts and faculties. Further, in the intense desire for the highest faculty. The establishment of this harmony brings man to a participation in the Divine unity; and through this union man attains to happiness, which remains even though he suffers pain and the privation of permissible goods. To regulate our actions harmoniously we stand in need of true knowledge and wisdom. The highest duty of education, therefore, is to obtain wisdom, which leads to God.

Aristotle.—The end of man, his highest subjective good, is happiness or well-being. Happiness is not pleasure; for pleasure is a feeling consequent upon action, while happiness is a state of activity. Happiness consists in perfect action, i.e., the actual exercise by man of his faculties—especially of his highest faculty, the speculative intellect—in perfect correspondence with the norm which his nature itself prescribes. Action may deviate from this norm either by excess or defect. The golden mean is to be preserved, and in this consists virtue. The various faculties, higher and lower, are regulated by their respective virtues to carry on their activities in due order. Pleasure follows action duly performed, even the highest form of activity, i.e., speculative contemplation of truth; but, as has been noted, happiness consists in the very operation itself. A life of happiness cannot be enjoyed unless a man possesses enough goods of the lower orders to relieve him from the toils and the cares of life. Hence happiness is the end of the reach of many. It is to be observed therefore that, while both Plato and Aristotle, as well as the Scholastics, hold that happiness is the end of man, their conception of happiness is quite different from the hedonistic idea of happiness as presented in English utilitarianism. For the utilitarian happiness is the sum total of pleasurable feelings, from whatever source they may be derived. On the other hand, in our sense, happiness—beatitude—is a distinct state or condition of consciousness accompanying and dependent on the realization in conduct of the definite good or excellence of which is objectively fixed and not dependent on our individual preferences. (See Utilitarianism.)

Hedonists.—The supreme good of man according to Aristotle is pleasure or the enjoyment of the moment, and pleasure is essentially gentle motion. Pleasure never can be a good, and the primary form of it is bodily pleasure. But, in order to sec the utmost of pleasure, prudent self-control is necessary; and this is virtue. Epicurus held that pleasure is the chief good; but pleasure is rest, not motion; and the highest form of pleasure is freedom from pain and the absence of all desires or needs that we cannot satisfy. Hence an important means towards happiness is the control of our desires, and the extinction of those that we cannot gratify, which is brought about by virtue. (See Cyrenaic School of Philosophy; Hedonism; Happiness.)

The Stoics.—Everything in the universe is regular by law. Man's highest good, or happiness, is to conform his conduct to universal law, which is Divine in its origin. To pursue this end is virtue. Virtue is to be cultivated in scorn of consequences, whether pleasurable or painful. The Stoic principle, "duty for duty's sake alone", reappears in Kant, with the modification that the norm of right action is not to be regarded as imposed by a Divine will; its original source is the human mind, or the free spirit itself.

St. Thomas.—The radical difference which distinguishes the noblest forms of ancient ethics from Christian ethics is that, whereas the former identifies virtuous life with happiness, that is, with the possession and enjoyment of the highest good, the Christian conception is that a virtuous life, while it is, indeed, the proximate end and good of man, is not, in itself, his ultimate end and supreme good. A life of virtue, the moral good, leads him to the acquisition of an end of virtue or utilitarian perfection, the highest good, the beatitude which, in an imperfect measure attends the virtuous life, may be accompanied with pain, sorrow, and the privation of terrestrial goods; complete happiness (beatitude) is not to be found in earthly existence, but in the life to come, and will consist in union with God, the Supreme Good.

(A) The Proximate End and Good (Bonus Morale).—Like all creatures involved in the cosmic system, man requires and seeks for the conservation and perfection of his being a variety of things and conditions, all of which are, therefore, good for him. A composite being, partly corporeal and partly spiritual, he possesses three sets of tendencies and appetites. Rational, he employs contrivance in order to obtain goods not immediately within his reach. That he may attain the perfection of this highly complex nature, he must observe an order in the pursuit of different kinds of goods, lest the enjoyment of a good of lower value may cause him to lose or forfeit a higher one, in which case the former would be no true benefit to him at all. Besides, with a hierarchy of activities, capacities, and needs, he is a unity, an individual, a person; hence there exists for him a good in which all his other goods focus in harmonious correlation; and they are to be weighed and valued through the medium of this paramount good, not merely in isolated relation to their respective corresponding appetites.

There are, then, several divisions of good: (a) corporeal good is whatever contributes to the perfection of the purely animal nature; (b) spiritual good is that which perfects the spiritual faculty—knowledge, truth; (c)
useful good is that which is desired merely as a means to something else; the delectable or pleasurable good is any good regarded merely in the light of the pleasure it produces. The moral good (bonum honestum) consists in the due ordering of free action or conduct according to the norm of reason, the highest faculty, to which it is to conform. This is the good which determines the true valuation of all other goods sought by the activities which make up conduct. Any lower good acquired through the deprivation of one is not good but a loss (bonae rerum). While all other kinds of good may, in turn, be viewed as means, the moral good is good as an end and is not a mere means to other goods. The pleasurable, though not in the order of things an independent end in itself, may be deliberately chosen as an end of action, or object of pursuit. Now let us apply all this to other ontological being the object of any tendency, man has as many kinds of goods as he has appetites, needs, and faculties. The normal exercise of his powers and the acquisition thereby of any good is followed by satisfaction, which, when it reaches a certain degree of intensity, is the feeling of pleasure. The end we often pursue and sometimes does pursue things not on account of their intrinsic worth, but simply that he may obtain pleasure from them. On the other hand, he may seek a good on account of its intrinsic power to satisfy a need or to contribute to the perfection of his nature in some respect, which can be illustrated in the case of food; for as the old adage has it, “the wise man eats to live, the epicure lives to eat”.

The faculty which is distinctively human is reason; man lives as a man properly speaking, when all his activities are directed by reason according to the law which reason reads in his own nature. This conformity of conduct to reason’s dictates is the highest natural perfection that his activities can possess; it is what is meant by rectitude of conduct, righteousness, or the moral good. “Those actions”, says St. Thomas, “are good which are conformable to reason. Those are bad which are contrary to reason” (I-II. xviii, a. 5).

“The proximate rule of free action is reason, the remote is the eternal law, that is, the Divine Nature” (Ibid., Q. xxi, a. 1; Q. xix, a. 4). The motive impelling us to seek the moral good is not self-interest, but the intrinsic worth of righteousness. Why does a just man pay his debts? Ask him and he will answer, “Because it is right”, in the first instance, “Because it is my duty”. But ask him further: “Why do you fulfill this duty?” He will answer: “Because it is right to do so”. When other goods are pursued in violation of the rational order, action is deprived of its due moral perfection, and, therefore, becomes wrong or bad. It is in this other ontological good. The good which is the object of such an action, although it retains its particular relative goodness with regard to the want which it satisfies, is not a good for the whole personality. For example, if, on a day when flesh meat is forbidden, a man dines on roast-beef, the food is just as good physically as it would be on any other day, but this goodness is outweighed, because his action is a violation of reason which dictates that he ought to obey the command of lawful authority.

While the moral good is fixed by the Author of nature, yet, because man is endowed with free will, the power of electing which good he shall make the goal of action, he can, if he pleases, ignore the dictates of right reason and seek his other goods in a disorderly manner. He may pursue pleasure, riches, fame, or any other desirable end, though his conscience—that is, his reason—tells him that the means which he takes to this end is wrong. It is his own rational nature and deprives himself of his highest perfection. He cannot change the law of things, and this privation of his highest good is the immediate essential punishment incurred by his violation of the moral law. Another punishment is that the loss is attended, generally speaking, by that peculiar painful feeling called remorse; but this effect may cease to be experienced when the moral impulses of reason have been habitually disregarded.

In order that an action may possess in an essential degree—no action is absolutely perfect—its moral perfection, it must be in conformity with the law in three respects: (a) The action, considered under the character by which it ranks as an element of conduct, must be good. The physical act of giving another person money may be either an act of justice, when one pays a debt, or it may be an act of mercy or benevolence, as it is if one gives the money to relieve distress. Both of these actions possess the fundamental element of goodness (bonum ex acto). (b) The motive, if there is a motive beyond the immediate object of the act, must also be good. If one pays a man some money that one owes him with the purpose, indeed, of paying one’s debt, but also with the ulterior purpose of enabling him to carry out a plot to murder one’s enemy, the end is bad, and the action is thereby vitiated. (c) The act, the actus, under the action is illustrated in the case of food; for as the old adage has it, “the wise man eats to live, the epicure lives to eat”.

The Ultimate Good—God—Restitute.—The perfection of life, then, is to realize the moral good. But now arises the question: “Is life its own end?” Or, in other words: “What is the ultimate end appointed for man?” To answer this question we must consider the good first under the aspect of end. “We are not alone act”, says St. Thomas, “for an immediate and direct end, but all our actions are directed to one ultimate end or good, otherwise the entire series would be aimless.” The test by which we may determine whether any object of pursuit is the ultimate end is: “Does it satisfy all desire?” If it does not, it is not adequate to complete man’s perfection and establish him in the possession of his highest good and supreme happiness. Here St. Thomas, following St. Augustine, examines the various objects of human desire—pleasure, riches, power, fame, etc.—and rejects them all as inadequate. What then is the highest good, the ultimate end? St. Thomas appeals to Revelation which teaches that in the life to come the righteous shall possess and enjoy God Himself in endless fruition. The argument is summed up in the well-known words of St. Augustine: “Thou hast made us, O Lord, for Thyself, and our hearts are restless till they rest in Thee.” The moral condition necessary to this future consummation is that our wills be here conformed to the Divine will as expressed in the moral law and in His revealed positive law. Thus the attainment of the proximate good in this life leads to the possession of the Supreme Good in the next. Another condition indispensable is that our actions be vivified by Divine grace (see GRACE). What precisely will be the act by which the soul will apprehend the Sovereign Good is a disputed question among theologians. The Thomist theory is that it will be an act of the intellect, while the Scotist opinion is that it will be an act of the will. However this may be, one thing is dogmatically certain: the soul in this assimilation shall not lose
Good

The highest. — We always act with a view to some good. "The good is the object which all pursue, and for the sake of which they always act," says Plato (Republic, I, vi). His disciple Aristotle repeats the same idea in other words when he declares (Ethics, I, 1) that the good is "that which all aim at". This is a principle in the 17th century, Thoma observing, a postulate. Yet, if appetitiveness does not constitute goodness, still it is our only means of identifying it; in practice, the good is the desirable. But experience soon teaches that all desires cannot be satisfied, that they are conflicting, and that some goods must be foregone in order to obtain those of higher value. The relative value of goods, of classifying them, and of ascertaining which of them must be procured even at the loss of others. The result is the division of goods into two great classes, the physical and the moral, happiness and virtue. Within either class it is comparatively easy to determine the relative goodness of one to another, but it has proved far more difficult to fix the relative excellence of the two classes of virtue and happiness. Still the question is of supreme importance, since in it the reason and final destiny of our life is involved. As Cicero says (De Finibus, v, 6), "Summum autem bonum si ignoratur, vivendi rationem ignorare necesse est." If happiness and virtue are mutually exclusive, we have to choose between the two, and this choice is a momentous one. But their incompatibility may be only on the surface. Indeed the hope is ever recurring that the sovereign good includes both, and that there is some way of reconciling them.

It has been the task of moralists to sift the conditions on which this may be done. (1) Some would reduce virtue to happiness; (2) others teach that happiness is to be found in virtue; (3) but, as both these solutions are ever found to be in contradiction with the facts of life, the consequent vacillations of opinion can be traced throughout the history of philosophy. In the East, they can be reduced to three heads, according as one or the other predominates, or both are made to blend: viz.: (1) Eudemonism or Utilitarianism, when the highest good is identified with happiness; (2) Rational Deontologism, when the highest good is identified with virtue or duty; (3) Rational Eudemonism, or tempered Deontologism, when both virtue and happiness are combined in the highest good.

I. EUDEMONISM. (a) Socrates (460-399 b. c.), the father of systematic Ethics, taught that happiness is the end of man; that it consists, not in external goods—signs of the uncertain favours of fortune, or of the gods (ευτυχία)—but in the renunciation of common delights (εὐπορία). He did not, however, carry this doctrine of moderation to the degree of asceticism, but rather insisted on the cultivation of the mind as being of greater importance. Knowledge is the only virtue, ignorance the only vice. Yet, from the Dialogues of Xenophon, it is seen that he descends to the common morality of Utilitarianism.

(b) This latter phase of Socratic teaching was adopted by Aristotle of Cyrene (435-356 b. c.), who as representative of the Hedonistic School among the ancients, and holding, on the one hand, with Socrates that knowledge is virtue, and, on the other, with Protagoras, that we can know only our sensations, and not that which causes them, concluded that that which produces in us the most pleasant feelings is the highest good. Culture and virtue are desirable only as means to this end. As pleasure is conditioned by organic states, it can be produced only by motion, which, to be pleasant, must be harmonious. According to the Cynic, it is not the mere absence of pain, but a transient emotion which makes man happy and constitutes his highest good.

(c) Aristotle (384-322 b. c.) admits with Socrates and the ancient philosophers generally, that the highest good to be identified with virtue, and in determining in what this highest happiness consists, he agrees with the Cynic, that it is not mere passing enjoyment, but action (λόγος τού ὁρισκ. και ἀρετῆς. Eth. Nic., IX, ix, 5). Still it is not any and every kind of activity that man may find agreeable which constitutes this supreme happiness, but that which is proper to him (οἰκεῖον ὁρισκ. — οἰκεῖα ἀρετή, Ibid., I, vii, 15). This cannot be merely the life which he shares with the plants and animals, or the sensibility, which he enjoys in common with the brutes, but thought, which is the distinctive characteristic of man. Moreover, as it is in the sphere of activity proper that the living being that its peculiar excellence is to be sought, it follows that man's rational activity (γνῶσις ἐνέργεια μεταλέγειω, Ibid., I, vii, 15) is at the same time honourable and virtuous (γνῶσις ἐνέργεια κατ' ἀρετήν, loc. cit.). Since, however, there are several such activities, it must be the noblest and most perfect of these. This is very other than speculation, or that which has to do with the contemplation of "honourable and divine subjects" (καλοί καὶ θειοί, Ibid., X, vii, 10), because this belongs to the noblest faculty and tends to the noblest object; because it is the most continuous the most pleasant, the most self-sufficing (Ibid., I, x, 8),
In thus defining human happiness, Aristotle does not aim at determining which good is absolutely supreme, but only that which relatively is the highest for man in his present condition—the highest attainable in life (ἡ ἑαυτοῦ ἄγονος ἡμών ἐπιπλέον, ibid., I, iv, 16). Though Aristotle thus makes happiness and the highest good to consist in virtuous action, yet he does not exclude pleasure, but holds that pleasure in its keenest form springs from virtue. Pleasure completes an action, is added to it, as "to your own bloom" (ἐπιμέρισμα ἐκ τῆς ἑαυτοῦ, ibid., X, iv, 8). Since therefore, Aristotle places man's highest good in his perfection, which is identical with his happiness and carries with it pleasure, he rightly accounted a Eudaimonist, though of a nobler sort.

(d) Epicurus (circa 340–270 B.C.), whilst accepting in substance the Hedonism of the Cyrenaics, does not address the problem of the highest good in the pleasure of motion (γύρωσις κατὰ σχισματικής), but rather in the pleasure of rest (ἐστάσις κατὰ χωρισματικής), says Cicero (De Finibus, II, v, 3)—that state of deep peace and perfect contentment in which we feel secure against all the storms of life (ἀσφαλεία). The attainment of this is the paramount problem of Epicurus's philosophy, to which his empirical logic (canonics) and his theory of nature (the materialism of Democritus) are merely preliminaries. Thus the whole of his philosophy is constructed with a view to his Ethics, for which he held the way and end of all human endeavor to be the highest good.

In holding that the pleasures of the mind are preferable to voluptuousness, inasmuch as they endure, while those of the senses pass with the moment that gives them birth, he is not consistent, seeing that his materialism reduces all the operations of the mind to mere sensations. Finally, as virtue is according to him the only good, which man can do whatever contributes to his welfare, and makes him avoid the contrary, it cannot be the highest good, but only a means of realizing it. By his materialism Epicurus paved the way for modern Utilitarianism, which has assumed two forms, viz.:

(e) Individual Utilitarianism, which places man's highest good in his greatest personal welfare and pleasure. This is identical with the Greek Hedonism, and was revived in the eighteenth century by the Encyclopedists, De la Mettrie (1709–1751), Helvetius (1715–1771), Diderot (1713–1784), and D. Volney (1747–1817). It was also advanced by the Scottish Hartley (1705–1757), Priestley (1733–1804) and Hume (1711–1776); and in the nineteenth century by the German Materialists, Vogt (1817–1895), Molechott (1822–1893), and Büchner (1824–1899).

(f) Social Utilitarianism, which is mainly of English origin. In its earliest stage, with Richard Cumberland (1632–1718), and Anthony Cooper, Earl of Shaftesbury (1671–1718), it still retained a somewhat subjective character, and placed the highest good in the practice of social benevolence. With Jeremy Bentham (1748–1832) and John Stuart Mill (1806–1873) there was a radical change. The utility of an act is the only criterion of its good, so they say, cannot be the happiness of the individual, but the happiness of the many, "the greatest happiness of the greatest number". Stated in these terms, the proposition is merely a truism. That in general, the happiness of a community is superior to the happiness of one of its members, is obvious; but, when it comes to be a personal affair, the individual is no longer a part of the whole, but one party pitted against others, and it is by no means evident, from the positivistic point of view, that his personal happiness is not for him the highest good.

(g) The Stoic school was founded by Zeno of Citium (330–288 B.C.). According to its followers, the highest purpose (good) of human life is not to be found in contemplation (θεωρία), as Plato would have it, but in action. To live according to nature (ἐναγώγημα ἐκ φύσεως ἔσται) was their supreme rule of conduct. By this they did not mean that individual nature of man, but the eternal and unchangeable law in nature as the measure to which all things in the universe should conform their action. For man to live according to nature, therefore, means to conform his will to the divine will, and in this consists virtue. Virtue alone is good in the highest sense of the word, and virtue alone is sufficient for happiness. As the law imposes itself through reason, the system is rightly called rational Deontology.

(c) Kant agrees with the Stoics in placing the essence of the highest good in virtue, and not in happiness. Yet he thinks our conception of it is incomplete unless it is made to include happiness as well. The highest good may mean either the Supreme (supremum) or the Complete (consummatum). The Supreme is a condition which is itself unconditioned, or is not subordinate to anything else (originarium). The

VI.—41
Complete, again, is a whole which is not itself a part of a larger whole of the same kind (perfectissimum). Virtue, or that disposition to act in conformity with the moral law, is not dependent on happiness, but all happiness, and the expectation of it, consists in his moral virtue. It is, therefore, the highest good, the supreme condition of whatever can be regarded as desirable. But it is not the whole, nor the supreme good, which finite rational beings crave; the complete good includes happiness. Hence the highest conceivable good must consist in the union of virtue and happiness proportionate to morality. This is what Kant means by the whole or complete good. Of its two elements, virtue, having no higher condition and being itself the condition of happiness, is the supreme good. Happiness, however, while it is agreeable to the person who possesses it, is not good in itself. The person who is at peace with himself is good only under the condition that a man's conduct is in conformity with the moral law. This is why Kant was wont to say that "nothing can be called good without qualification, but good will"; and since the best it can do in this life is to strive after holiness, the struggle between the desire to obey and the impulse to transgress must continue for ever, making the highest good in this life unattainable.

III. RATIONAL EUDEMONISM OR TEMPERED DEONTOLOGY.—Christian Philosophers, in dealing with the problem of the highest good, have necessarily kept in mind the rest of things; still they based the solution of it on motives of reason. Their system is neither strictly deontologico-rational, nor yet altogether eudemonistic, but a consistent blending of both. The ultimate end of man is to be placed in perfect rational activity, in ultimate perfection, and in happiness, not as in three different things, but as in one and the self-same, since the three conceptions are resolvable into one another, and each of them denotes a goal of human tendency, a limit beyond which no desire remains to be satisfied. Though they differ somewhat in their several ways of formulating it, at bottom they all agree: (1) that in the blissful possession of God is to be found the restful object of reason (man's deontologico-rational end), and of free will (his eudemonistic end); (2) that this eudemonistic end—the perfect satisfaction of the will in the possession of God—is not merely an accidental result of the former, but is the positive determination of God, the author of our nature. All this eudemonistic end may be intended by the will for its own sake, to the exclusion of the deontologico-rational end, which, by its nature, it presupposes, and to which it is subordinated.

It is St. Thomas Aquinas who best harmonized this system with revelation. His teaching may be summarized thus: (a) man's highest happiness does not consist in pleasure, but in action, since, in the nature of things, action is not for pleasure, but for action. This activity, on which man's happiness rests, must, on the one hand, be the noblest and highest of which his nature is capable, and, on the other, it must be directed toward the noblest and the highest object.

(b) This noblest and highest object of human activity is not that of the will, which merely follows upon and is conditioned by knowledge; it must rather be knowledge itself. Consequently, the highest happiness of man consists in the knowledge of the highest truth, which is God. With the knowledge of God must, of course, be joined the love of God; but this love is not the essential element of perfect happiness; it is merely a necessary complement of it (Summa Theol., I–II, Q. iii, a. 2; c. Con. Gen., III, xxxv, xxxvi).

(c) Since the knowledge of God can be acquired only by demonstration, by faith, and by intuition—the further question arises: which of these three kinds of knowledge is the foundation of man's highest happiness? Not knowledge by demonstration, for happiness must be something universal and attainable by all men, whereas only a few can arrive at this knowledge by demonstration; neither can knowledge by faith be a basis for perfect happiness, because that this consists in the intellectual, whilst in faith the will claims for itself the principal part, inasmuch as the will must here determine the intellect to give its assent. Consequently happiness can consist only in the intuitive knowledge of God; and since this is attainable only in the next life, it follows that the ultimate destiny of man consists in his highest good—reaches beyond all time into eternity. It must be everlasting, otherwise it would not be perfect (Con. Gent., III, xxxviii, sqq.).

(d) This end is not merely a subjective one which the reason imposes upon itself. Just because it is an activity, it involves relation to some external object. The intellect essentially represents a truth distinct from itself, as the act of the will is an inclination towards some good not identical with itself. The truth to be represented, therefore, and the good to be attained or possessed, are objects to which happiness refers as to further ends, just as the image has reference to a model as such. Indeed, as the intellect, therefore, and good are objective ends to which formal happiness corresponds as a subjective end. The absolutely ultimate end, therefore, is in the objective order, beyond which nothing remains to be known and desired, and which, when it is known and possessed, supersedes all else. This ultimate end is nothing else than the infinite truth and the infinite good, which is God. Hence the system is not a purely deontologico-rational one, constituting the reason a law to itself, the observance of which law would be the highest good.

(e) Still less is it purely eudemonistic, since the ultimate end and highest good does not coincide with subjective happiness as Hedonism teaches, but with the object of the highest acts of contemplation and love. This object is God, not merely as beingatastifying, but as the Absolute Truth and Goodness, infinitely perfect in itself. 

Good Faith, a phrase employed to designate the mental and moral state of honest, even if objectively unfounded, conviction as to the truth or falsehood of a proposition or body of opinion, or as to the rectitude or depravity of a line of conduct. One who is in this condition, so far as the violation of positive law, or even, in certain junctures, of the natural law, is concerned, is said to labor under an invincible error, and hence to be guiltless. This consideration is often invoked in behalf of those who are outside of the visible affiliation of the Catholic Church. It is not unfrequently applied to determine the degree of right or obligation prevailing in the various forms of human engagement, such as contracts, etc. In the exercise of this prescription it is held to be an indispensable requirement whether there be question of acquiring dominion or freeing oneself from a burden. Likewise, in deciding the duty incumbent upon one who finds himself in possession of another's property, cognizance is taken of the good faith with which perchance the holding has begun and accompanied. Finally, although actually in the state of mortal sin, were in good faith to come to Holy Communion, such a one, according to the judgment of many theologians, would receive sanctifying grace. The reason alleged by
GOOD 643  GOOD

them, although not regarded by other moralists as convincing, is that good faith saves the communicant from being an obstacle to the productive activity of the Sacrament.

JOSEPH F. DELANY

Good Friday, called Feria VI in Paracese in the Roman Missal, τηγία και μεγάλη παρασκευή (the Holy and Great Friday) in the Romance Languages, Greek Liturgy, Holy Friday in the Roman Liturgy (Sorrowful Friday) in German is the English designation of Friday in Holy Week, that is, the Friday on which the Church commemorates the Crucifixion of Jesus Christ. Paracese, the Latin equivalent of vespers, preparation (e.g. the preparation that was made on the sixth day for the Sabbath; see Mark, xxv, 42) came by metonymy to signify the day on which the preparation was made; while the Greeks retained this use of the word as applied to every Friday, the Latins confined its application to the one Friday, Tenebrae and Tertullian speak of Good Friday as the day of the Pasch; but later writers distinguish between the Πάσχα οπερφέρσης (the passage to death), and the Πάσχα άναστάσης (the passage to life, i.e. the Resurrection). At present the word Pasch is used exclusively in the latter sense (see Nilles, II, 253; also Kirchenlex., s. v. "Charfretag"). The two Paschs are the oldest festivities in the calendar (Bäumer, vol. I). From the earliest times the Christians kept every Friday as a fast day (Duchesne, 228) and every Sunday as a fast day (Duchesne, 47); and the obvious reasons for those uses explain why Easter is the Sunday par excellence, and why the Friday which marks the anniversary of Christ's Death came to be called the Great or the Holy or the Good Friday. The origin of the term Good is not clear. Some say it is from "God's Friday" (Gottes Freitag), so Hampson (op. cit. below); others maintain that it is from the German Gute Freitag, and not especially English. Sometimes, too, the day was called Long Friday by the Anglo-Saxons; so to-day in Denmark.

There is, perhaps, no office in the whole liturgy so peculiar, so interesting, so composite, so dramatic as the office and ceremonial of Good Friday. About the very first Friday in early times, night in the Roman, and at 3 a.m. in the Gallican Church, it will suffice to remark that, for 400 years past, it has been anticipated by five or six hours, but retains those peculiar features of mourning which mark the evening offices of the preceding and following days, being known in Latin as the Improperia. The morning office is in three distinct parts. The first part consists of three lessons from Sacred Scripture (two chants and a prayer being interposed) which are followed by a long series of prayers for various intentions; the second part includes the ceremony of unveiling and adoring the Cross, accompanied by the chanting of the Improperia; the third part is known as the Mass of the Presanctified, which is preceded by a procession and followed by vespers. Each of these parts will be briefly noticed here. The Hour of None being finished, the celebrant and ministers, clothed in black vestments, come to the altar and prostrate themselves for a short time in prayer. In the meantime, the acolytes spread a single cloth on the denuded altar. No lights are used. When the celebrant and ministers ascend the altar, a lector takes his place on the epistle side, and reads a lesson from Osee, vi. This is followed by a tract sung by the choir. Next comes a prayer for the celebrant. After a short period of silence, the second lesson is read by another lesson from Exodus, xii, chanted by the sub-deacon. This is followed by another tract (Ps. cxxxi), at the close of which the third lesson, viz. the Passion according to St. John, is sung by the deacons or recited from a bare pulpit—"dictitur passio super nundum pulpitum". When this is finished, the celebrant sings a long series of prayers for different intentions, viz. for the Church, for the faithful, for priests and bishops, for the different orders in the Church, for the Roman Emperor (now omitted outside the dominions of Austria), for catechumens . . . . The above order of lessons, chants, and prayers for Good Friday is found in our earliest Roman Ordines, dating from about A.D. 500. It represents, according to Duchesne (234), "the oldest order of the ancient Synaxarion, retained i.e. the order of the earliest Christian prayer meetings, at which, however, the liturgy proper, i.e. the Mass, was not celebrated. This kind of meeting for worship was derived from the Jewish Synagogue service, and consisted of prayers, and chants, and prayers. In the course of time, as a result of its being taken up by the Church, i.e. the Cabrol's "Origines Liturgiques," 137), the celebration of the Eucharist was combined with this purely eucological service to form one solemn act of Christian worship, which came to be called the Mass. It is to be noted that the Mass is still in two distinct parts, the first consisting of lessons, prayers, and chants; and the second being the celebration of the Eucharist (including the Offertory, Canon, and Communion). While the Judica, Introit, and the Gloria in Excelsis have been added to this first part of the Mass and the long series of prayers omitted from it, the oldest order of the Mass is retained in the Good Friday service. The form of the prayers deserves to be noticed. Each prayer is in three parts. (a) The celebrant invites the congregation to pray for a specified intention. (b) The deacon then says "Let us kneel" (Flectamus genua); then the people were supposed to pray for a time kneeling in silence, but at present immediately after the invitation to kneel the subdeacon invites them to stand up (Levate). (c) The celebrant collects, as it were, all their prayers, and voices them aloud. The modern collect is the representative of this old solemn form of prayer. The first part is reduced to the Oremus, the second part has disappeared, and the third part remains in its entirety and has come to be called the collect. It is curious to note in these very old Good Friday prayers that the second part is omitted in the prayers for the Jews, owing, it is said, to their having insulted Christ by bending the knee in mockery before him (Lev. xii, 43). Not peculiar to this office is the custom of the basilica of Drusiana, which has been observed at the Vigil and on Good Friday, which is not a prayer, remains to show where this old series of prayers was once said in all Masses.

The dramatic unveiling and adoration of the Cross, which was introduced into the Latin Liturgy in the seventh or eighth century, had its origin in the Church of Jerusalem. The "Peregrinatio Sylvieus" (the real name is Etheria) contains a description of the ceremony as it took place in Jerusalem towards the close of the fourth century. "Then a chair is placed for the Bishop in Golgotha behind the Cross . . . . a table covered with a linen cloth is placed before him; the Deacons stand around the table, and a silver-gilt casket is brought in which is the wood of the holy Cross. The casket is opened and (the wood) is taken out, and both the wood of the Cross and the Title are placed upon the table. Now, when it has been put upon the table, the Bishop, as he sits, holds the extraordinary gifts of the people. Then he commences a prayer, the Deacons who stand around guardians. It is guarded thus because the custom is that the people, both faithful and catechumens, come by one and one, and bowing down at the table, kiss the sacred wood and pass on" (Duchesne, tr. McClure, 564). Our present ceremony
is an obvious development of this, the manner of worshiping the true Cross on Good Friday observed at Jerusalem. A veiled image of the Crucifix is gradually exposed to view, while the celebrant, accompanied by his assistants, sings three times the "Ecce lignum Crucis" (Behold the wood of the Cross, which hung the salvation of the world), to which the choir answers, each time, "Venite adoremus" (Come let us adore). During the singing of this response the whole assembly (except the celebrant) kneel in adoration. When the Cross is completely unveiled the celebrant takes off the veil of the star, and places it on a cushion prepared for it. He then takes off his shoes and approaches the Cross (genuflecting three times on the way) and kisses it. The deacon and subdeacon also divest themselves of their shoes (the deacon and subdeacon may take off their shoes, if that be the custom of the place, S.C.R., n. 2789, ad X, q. 5, and act in like manner. For an account of the peculiarly impressive ceremony known as the "Creeping to the Cross", which was once observed in England, see article Cressus (vol. IV, p. 537). The clergy two and two follow, while one or two priests vested in surplice and black stole take other crosses and present them to the faithful. During this ceremony the choir sings what are called the Improperia, the Trisagion (in Greek as well as Latin), if time permits the hymn Crux fidelis. (Oh, Cross, our hope...). The Improperia are a series of reproaches supposed to be addressed by Christ to the Jews. They are not found in the old Roman Ordines. Duchesne, (249) detects, he thinks, a Gallican ring in them; while Martène (III, 136) has found some of them alternating with the Trisagion in ninth century Gallican documents. They appear in a Roman Ordo, for the first time, in the fourteenth century, but the retention of the Trisagion in Greek goes to show that it had found a place in the Roman Good Friday service before the Photic schism (ninth century). A non-Catholic may say that this is all very dramatic and interesting, but allege a grave dereliction in the act of adoration of the Cross on bended knees. Is not adoration due to God alone? The answer may be found in our smallest catechism. The act in question is not intended as an expression of absolute supreme worship (στροφις) which, of course, is due to God alone. The essential note of the ceremony is reverence (παρασκευή) which has a relative character, and which may be best explained by the words of the Pater Noster: "Sanctificamus corpore ante crucem, mente ante Dominum. Veneramus crucem, per quam redemti sumus, et illum deprecamus, qui redemit" (While we bend down in body before the cross we bend down in spirit before God. While we reverence the cross as the instrument of our redemption, we pray to Him who redeemed us). It may be urged: why sing "Behold the wood of the Cross", in unveiling the image of the Cross? The reason is obvious. The ceremony originally had immediate connexion with the True Cross, which was found by St. Helena in Jerusalem about the year A.D. 326 (see Gilmartin’s “History of the Church”, I, 157). Christ was present, and might imitate this ceremony to the letter, but other churches had to be content with an image, which in this particular ceremony represents the wood of the True Cross.

As might be expected, the ceremony of the unveiling and adoration of the Cross gave rise to peculiar usages in particular Churches. After describing the adoration and kissing of the Cross in the Anglo-Saxon Church, Rock (The Church of Our Fathers, IV, 103) goes on to say: "Though not insisted on for general observance, there was a rubric that allowed a rite, at the discretion of the office, to be followed, which may be called The Burial of the Rood." At the end part of the aucta...there was made a kind of sepulchre, hung all about with a curtain. Inside this recess...the cross, after the ceremony of kissing it had been done, was carried by its two deacons, who had, however, first wrapped it up in a linen cloth or winding-sheet. As they bore their burden along, they sang certain anthems till they reached this spot, and there they laid the cross in the rood, (the place of the Cross which had been observed in the Greek Church. An image of Christ, laid on a bier, is carried through the streets with a kind of funeral pomp, and is offered to those present to be worshipped and kissed (see Nilles, II, 242). To return to the Roman Rite, when the ceremony of adoring and kissing the Cross is concluded, the Cross is placed aloft on the altar between lighted candles, a procession is formed which proceeds to the chapel of repose, where the second sacred host consecrated in yesterday’s Mass has since lain entombed in a gorgeously decorated urn and surrounded by lights and flowers. This urn represents the sepulchre of Christ (decease of S.C.R., n. 3093). During this ceremony the choir sings the hymn "Vexilla Regis prodeunt" (The standards of the King advance). Arrived in the sanctuary the clergy go to their places retaining lighted candles, while the celebrant and his ministers ascend the altar and celebrate what is called the Mass of the Presanctified. This is not a Mass in the strict sense of the word, as there is no consecration of the sacred species. The host which was consecrated in yesterday’s Mass (hence the word presanctified) is placed on the altar, incensed, elevated ("that it may be seen by the people"), and consumed by the celebrant. It is substantially the Communion part of the Mass, beginning with the "Pater noster" which marks the end of the Canon. From the very earliest times it was the custom not to celebrate the Mass proper on Good Friday (see Nilles, II, 252, note 9). Speaking about this ceremony Duchesne (249) says, “It is merely the Communion separated from the liturgical celebration of the Eucharist properly so called. The details of the ceremony are not found earlier than in books of the eighth or ninth century, but the service must belong to a much earlier period. At the Mass with Vespers with the Mass of the Presanctified, the ‘Mass of the Presanctified’ must have been frequent also. In the Greek Church it was celebrated every day in Lent except on Saturdays and Sundays, but in the Latin Church it was confined to Good Friday.” At present the celebrant alone communicates, but it appears from the old Roman Ordines that formerly all present communed (Martène, III, 367). The omission of the Mass proper marks in the mind of the Church the deep sorrow with which she keeps the anniversary of the Sacrifice of Calvary. Good Friday is a feast of grief. A black fast, black vestments, a denuded altar, the slow and solemn chanting of the offices of the Triduum mortis Domini, the diocesan, the unveiling and reverencing of the Crucifix, these take the place of the usual festal liturgy; while the lights in the church of repose and the Mass of the Presanctified remind her children that Christ is with them behind this veil of mourning. The Mass of the Presanctified is followed by the recital of the Office and the removal of the linen cloth from the altar ("Vesperers are recited without chant and the altar is denuded").

The rubrics of the Roman Missal prescribe no further ceremonial for this day, but there are laudable customs in different churches which are allowed. For example, the custom (where it exists) of carrying in procession a statue of St. John the Baptist is expressly permitted by decretals of the Cong. of Rites (n. 278 and n. 2082); also the custom (where it exists) of
exposing a relic of the Holy Cross on the high altar (n. 2857), and the custom of carrying such a relic in procession within the walls of the church, not, however, during the usual ceremonies (n. 3466), are expressly permitted. Rock (op. cit., IV. 279, 290) notes, with interesting detail, a custom followed at one time in England of submitting voluntarily to the rod of penance on Good Friday.

T. P. Gilmartin.

**Good Hope, Eastern Vicariate of the Cape of Good Hope** was established in 1847, when the Vicariate of the Cape of Good Hope was divided into Eastern and Western. Later the Eastern Vicariate was subdivided three times. As now constituted, it is bounded on the north by the Orange River, on the west by the civil districts (included in the vicariate) of Hottentots, Richmond, Murraysberg, Britstown, Jansenville, Hummelschop, Aberdeen, and Uitenhage; on the south by the Indian Ocean; on the east by the western boundary of Tembuland, Griqualand East, and the southwestern boundary of Basutoland.

On 27 December, 1847, Dr. Devereux was consecrated, in Cape Town, Bishop of the Eastern Vicariate, and first Vicar Apostolic of the Eastern Vicariate, by Dr. Griffith, under whom he had worked for nine years. Through the Danish family of Belgium the new vicar Apostolic received the first considerable funds to start work. But his life was spent in the turmoil of Kafir wars, and was a struggle with poverty and the dearth of priests. His successor, Dr. Moran, had been curate of Triniti, Dublin, and arrived in the colony in November, 1856. He was a man of great energy, and a strenuous opponent of the grant of responsible government. The Sacred Congregation of Propaganda appointed him R. R. Bishop of Dunedin, New Zealand, in 1870. Next year, the Rev. J. D. Richards was consecrated bishop at Grahamstown, with the title in partibus of Retimo, by the Vicar Apostolic of Natal, Dr. Allard. Dr. Richards had already spent twenty-two years in the country and, whether as a writer, or lecturer, or pastor, had left his mark in the land. He founded the "Cape Colonist," a paper which did a unique work in its day by its fearless advocacy of purity in public life and sane views on the native problems. Several of the bishop’s larger controversial works are still read and highly appreciated. In 1889 he brought to South Africa the first contingent of Trappists, who were to serve the natives not only the Christian faith, but the much needed lesson of work. The expansion of this order (since transferred to the Natal Vicariate) has been remarkable. About two years before Dr. Richards’ death a coadjutor was appointed in the person of Dr. Strobino, who, however, became a hopeless invalid soon after the death of Dr. Ricards. Dr. Strobino was succeeded in 1896 by his coadjutor, the Rt. Rev. H. MacSharry, formerly administrator of Dundalk in Ireland, who had been consecrated a few months before.

There are 74 churches, chapels, and stations in the Eastern Vicariate, served by 52 priests, of whom 18 belong to the Society of Jesus, and two are Trappists. There are 44 schools, mission and private, two orphanages, and one nursing home. The number of members in Holy orders belonging to religious institutes is 37—Mariste, de la Salle Brothers, and Jesuits. There are 331 religious women—Dominicans, Sisters of Nazareth, of the Holy Cross, of the Little Company of Mary, of the Assumption. The Catholic population is more than 13,000, of whom only a few hundred are natives.

**Good Hope, Western Vicariate of the Cape of Good Hope**

The Western vicariate and the Central prefecture, although different in name, are virtually one. From 1874 to 1882 the Central prefecture was under the charge of the Missionary Fathers of Lyons; on their withdrawal, part of it was committed to the Oblates of St. Francis de Sales, and became the Orange River prefecture; the rest was incorporated in the Western vicariate.

This now has an area of 82,757 square miles. It is bounded on the north by the Olifants River, on the east by the Roggeveld Mountains and the Great Riet River, on the south west by the sea, and on the south west by the sea. The islands of St. Helena and Ascension are included in this vicariate. Bartolomeu Dias first planted the cross on South African soil at Croiz Island, Algoa Bay, in 1486; and the Cape soon became a place of frequent call for Portuguese ships. From the wealth of this part of it, we may conjecture that Mass was thenceforth celebrated frequently on these shores.

The great missionary work of the Portuguese on the Zambesi did not extend to the Cape. The first Dutch governor, van Riebeeck, arrived at the Cape in 1652; but under his regime and that of his successors, the public profession of the Catholic faith was forbidden. A new spirit animated the Dutch high commissioner, de Mist, who, in terms of the Treaty of Amiens, took possession of the Cape, after a brief British occupation. Under very slight restrictions he issued an edict of religious toleration. The first English governor reversed these measures, and later Lord Charles Somerset showed bitter hostility to Catholics. But through the good offices of Bishop Poynter of the English Midland District, the government agreed to salary a Catholic pastor for the Cape. On New Year’s Day, 1820, Bishop Sater, Vicar Apostolic of Mauritius (which diocese included the Cape), installed Father Selly in Cape Town. For the next eighteen years the ecclesiastical history of the colony is one of pilfer squabbles between pastors and people, with a short truce in the time of a Dutch priest named Wagenaar. On 6 June, 1837, Gregory XVI formed the Cape of Good Hope into a vicariate.

**Parliament and Table Mountain, Cape Town**
separate from Mauritius. In August following, Patrick Raymond Griffith, O.P., was consecrated Bishop of Paleopolis, in the church of St. Andrew, Dublin; and on 20 April, 1838, he set foot in Cape Town with Fathers Burke and Corcoran. After his first visitation, which was made chiefly in the labouring ox-wagon, and extended as far as Port Elizabeth and Graham's Town, he estimated the Catholic population of the country at 500. Worse than the paucity of numbers, were the lax morality and poor Catholic spirit of so many. A first painful duty of the bishop was to depose a body of churchwardens, who claimed to act as a board of directors of the vicariate. Some were lessened, but this prompt action restored peace and Catholic discipline. In 1841 he completed the fine church which is still the cathedral of Cape Town. At his death in 1862 his flock was united and no longer ashamed of their faith, several schools and churches having been established throughout the vicariate.

Dr. Grimley was appointed coadjutor to the first vicar Apostolic in 1861, and succeeded him in 1862. He brought out the Dominican Sisters and Marist Brothers; and died in 1871, just after his return from the Vatican Council. The name which is connected with the greatest progress of the Western vicariate is that of the Right Rev. John Leonard, D.D., who was curate at Blanchardstown, Dublin, when appointed to succeed Dr. Grimley. Nearly all the works recorded in the next paragraph were accomplished during his episcopate of thirty-five years. He was succeeded in 1907, the year of his death, by the Right Rev. John Rooney, who had been his coadjutor for twenty-one years.

There are 33 priests in the Western vicariate, of whom three are regulars (Salesians). Out of 153 religious, 28 are Marist Brothers and Salesians; the rest are nuns—Dominicans, Sisters of Nazareth, and Sisters of Holy Cross. There are 19 churches, 10 convents, an orphanage, an industrial school and 29 elementary schools. The only organ of Catholic opinion in South Africa is the Catholic Magazine for South Africa, founded in 1891 by Rev. Dr. Kolbe, now edited by the present writer. The Catholic population of the vicariate is over 8000—mostly of European descent.

*SIDNEY R. WELCH.*

**GOODMAN, GODFREY**; b. at Ruthin, Denbighshire, 28 February, 1582–3; d. at Westminster, 19 January, 1656. He was Anglican Bishop of Gloucester, and passed all his public life in the Protestant Church. His religious sympathies, however, inclined him to the old Faith, and when, misfortune and ruin overtook him, late in life, he entered its fold. He was the son of Godfrey Goodman and his wife, Jane Croxton, landed gentry living in Wales. In 1593 he was sent to Westminster School, where he remained seven years under the protection of his uncle, Gabriel Goodman, Dean of Westminster. He was an earnest student and when only seventeen won a scholarship in Trinity College, Cambridge. He graduated there in 1604 and was ordained at Bangor, Wales, shortly after. His first appointment was to the rectory of Stapleford Abbotts, Essex, in 1606. From this time ecclesiastical dignities and lucrative emoluments fell rapidly to his share. He was made successively prebend of Westminister 1607, rector of West Bury, 1610; vicar of=strand of Kenneren, Gloucester, canon of Windsor, 1617, Dean of Rochester, 1620–1, and finally Bishop of Gloucester, 1624–5. In addition he held two livings in Wales, at Llandysul and Llanarmon. Even when he was a bishop, he was allowed to retain most of these appointments. He became one of the Court preachers and was chaplain to Queen Henrietta Maria. His leaning towards Catholicity made enemies for him at Windsor and he was reprimanded by the king on two occasions for the views he put forward in his Court sermons. A few years later he was severely blamed for having erected a crucifix at Windsor and used altar cloths worked with a cross in his own cathedral at Gloucester, and further for having suspended a minister who insisted on preaching "that all who die profess go inevitably to hell". It is likely that at this time doubts were arising in his mind about the legitimacy of the separation from Rome, and he sought the society of the Catholic priests who were in hiding throughout the country. He was frequently in attendance with Archbishop Laud, and in 1640 refused on conscientious grounds to sign the seventeen Articles drawn up by him. He was thereupon arrested, but after five weeks in prison he overcame his scruples. This, however, availed him little, as he was soon impeached by Parliament along with Laud and the ten other signatories of the Articles and was sent to prison for four months. In 1643 his episcopal palace was pillaged by the parliamentarian soldiers and in a year or two he was stripped of all his emoluments. He withdrew now from public life to his small Welsh estate in Carnarvon. It was at this time too, most likely, that he was converted. About 1650 he came to London, and gave himself up to study and research; he was befriended by some Catholic royalists and lived in close connexion with them till his death in 1656. Father Davenport, O.S.F., former chaplain to Queen Henrietta, was his confessor and attended him in his last illness. By his will, in which he made a profession of his Catholic Faith, he left most of his property to Ruthin his native town; his manuscripts and books, however, were given to Trinity College, Cambridge. His contemporaries describe him as being a hospitable, quiet man, and lavish in his charity to the poor.

His principal works are: (1) "The Fall of Man, or the Corruption of Nature proved by the light of his Natural Reason" (1616); (2) "The two mysteries of the Christian Religion, the Trinity and the Incarnation, explained" (1653); (4) "Arguments and animadversions on Dr. George Hakewell's Apology"; (5) "The Creatures praying God" (1622); (6) "The Court of King James the First by Sir A. W. reviewed".

*GILLOW, Dict. Catb. Bisp., s. v.; FULLER, The History of the*
Goodman, John, Venerable, priest and martyr; b. in the Diocese of Bangor, Wales, 1690; d. 1642. He was educated at Oxford, and was ordained a Protestant minister, but abandoning heresy, he crossed over to Paris, where he was received into the Church by M. R. Harel, then Admitted to Douai College. In February, 1621, he continued his studies there until 1624, when he proceeded to St-Omer, in order to enter the Society of Jesus. Finding, however, that this was not his vocation, he was ordained a secular priest and sent on the English mission. He worked with uncommon zeal for some years, was twice apprehended and twice released. Once more a prisoner in 1641, he was brought to trial and condemned to death, but at the queen’s intercession was reprieved. When this act of clemency on the part of Charles I excited the anger of Parliament, Goodman, with great magnanimity, protested his unwillingness to be a cause of dissatisfaction with Charles. He even begged that he might be sacrificed to appease the popular displeasure. This heroic act of generosity made a considerable sensation, and probably suggested to Wentworth, Lord Strafford, the idea of doing the same. Goodman, however, was left to languish in North Shields for an end of five years of life on Good Friday, 1642, not 1645, as is sometimes said.

J. H. Pollien.

Good Samaritan, Sisters of the, a congregation of Tertiaries Regular of St. Benedict, established 2 February, 1857, at Sydney, Australia. In 1858 a second community was established at Windsor, and thereafter frequent foundations were made, so that now in the Archdiocese of Sydney alone there are 21 houses, with 202 members, and in all Australia 29 communities and 268 members. In the Archdiocese of Sydney the sisters conduct 14 superior schools, with an attendance of about 700. In the Archdiocese of Adelaide they are present at Gawler in 1902, and in the Archdiocese of Melbourne a house at Northcote (1904) and a high school at South Yarra. In the Diocese of Port Augusta, where they established a house in 1890, they have charge of a boarding school and a day school; in the Diocese of Rockhampton also they have a boarding school, founded in 1890; and in the Vicariate Apostolic of Cooktown a day school, established in 1903. At Tempe, Armidale, in the Archdiocese of Sydney, the Sisters of the Good Samaritan have established St. Magdalen’s Retreat, a home for penitent women of all creeds. It is supported entirely by voluntary contributions and the labour of the inmates, who number (1909) about 130, and are encouraged to remain at least two years in the institution.

Australasian Catholic Directory (1913); Heimbucher, Orden and Kongregationen (Paderborn, 1897).

F. M. Rudge.

Good Shepherd, Our Lady of Charity of the. —The aim of this institute is to provide a shelter for girls and women of dissolute habits, who wish to do penance for their iniquities and to lead a truly Christian life. Not only voluntary penitents, but also those consigned by civil or parental authority are admitted. Many of these penitents desire to remain for life; they are admitted to take vows, and form the class of “magdalenas”, under the direction of the Sisters of the Good Shepherd. They are an austere contemplative community, and follow the Rule of the Third Order of Mount Carmel. Prayer, penance and manual labour are their principal occupations. Many of these “magdalenas” frequently rise to an eminent degree of sanctity. Besides girls and women of this class, the order also admits children who have been secured from danger before they have fallen or have been formed by serious crime. They are instructed in habits of industry and self-respect and in all the duties they owe to themselves and to society. The “penitentes”, “magdalenas” and “preservantes” form perfectly distinct classes, completely segregated from one another.

The Good Shepherd is a fourth vowister and follows the Rule of St. Augustine. The constitutions are borrowed in great part from those given by St. Francis of Sales to the Visitation Sisters, but are modified to suit the nature of this work. Besides the three ordinary vows of poverty, chastity and obedience, the Sisters of the Good Shepherd take a fourth vow, namely, to work for the conversion and instruction of “penitentes”—a vow which makes this order one of the most beautiful creations of Christian charity. The vows are renewed every year, for five years, before becoming perpetual. The order is composed of choir sisters, and lay or “converse” sisters. The choir sisters recite every day the Divine Office of the Sacred Virgin. The habit is white, with white scapulars, reminding them of the innocence of the life they should lead. The choir sisters wear a black veil; the “converse” sisters a white veil. Around their necks, they wear a silver heart, on one side of which is engraved an inscription of “The Good Shepherd, Bishop of the Blessed Virgin, holding the Divine Infant, between a branch of roses and a branch of lilies. The heart represents that of the sister, consecrated to Mary and to her Divine Son, and the roses and lilies are symbolic of the virtues of charity and purity. The order is dedicated in an especial manner to the Holy Heart of Mary and to the Sacred Heart of Jesus, which are its two patrons. Besides the choir sisters and the “converse” sisters, the order also admits “Tourières” Sisters, who attend to the door and perform necessary duties outside the cloister. Their habit is black, and they take only the three ordinary vows.

The Institute of the Good Shepherd is a branch of “Our Lady of Charity of the Refuge”, founded by Blessed John Eudes, at Caen, France, in 1641, and approved by Alexander VII, 2 January, 1668, its constitutions being approved by Benedict XIV, in 1732. The order as private or public is not defined. John Eudes still exists in a flourishing state, under the first title of “Our Lady of Charity of the Refuge”, and counts about thirty-nine houses and about 1893 sisters. The distinction between the primitive order and its branch, the Institute of “Our Lady of Charity of the Good Shepherd”, consists mainly in the administration. According to the custom of his time, the Blessed John Eudes ordained that “Our Lady of the Refuge” should have no mother-house, but that every house founded by this order should be a distinct community, having its own administration, and being united to the other houses only by bonds of fraternal charity.

Among the noble women who entered the ranks of the Sisters of the Refuge in the nineteenth century, was one whose name will be long remembered, Mother Mary Euphrasia Pelletier. She was born in the island of Noirmoutier, of pious parents, on 31 July, 1796, and received in baptism the name of Rose Vergina. She entered the community of “The Refuge” of Tours, in 1814, and made her profession in 1816, taking the name of Mary St. Euphrasia. She became first mistress of the “penitents”, a short time after her profession, and about eight years later was made superior of the house of Tours. Desiring of extending the benefits of her order to the very extremities of the earth, she clearly saw that a central government, a mother-house, should be established. The house of
Angers, which she had founded, seemed destined by God for grand designs. He would decide, by the voice of His pontiff. Like many of God's elect, she was treated by her adversaries as an innovator, an ambitious person, impatient of authority. Only after inconceivable labours and formidable opposition did her cause triumph. The Brief in approval of the mother-house at Angers was signed 3 April, 1835, and published by Gregory XVI. The official title of the institute was henceforth "Our Lady of Charity of the Good Shepherd of Angers." It is directly subject to the Holy See, and Cardinal Odescalchi was its first cardinal-protector. Angers is authorized to send its sisters to the extremities of the earth. Mother Euphrasia heartily devoted herself to the work entrusted to her. She had been accused of ambition, of innovation, and of disobedience. Her sole ambition was to extend God's kingdom, and to offer the benefits of her institute to the whole world. Her innovations, in harmony with the spirit of the Gospel, with the fourth vow of her order, were approved by the Church, and gave in thirty-three years one hundred and ten soul-saving institutions to the Church and to society. Her institutions were all founded in obedience to the requests of ecclesiastical authorities in every part of the world. Thirty-three years she was mother-general of the Good Shepherd, and at her death, 29 April, 1868, she left 2067 professed sisters, 384 novices, 309 Tourlère sisters, 962 "magdalens", 6372 "penitents", and 8433 children of various classes. Her great work began since 1829, when Mother Euphrasia had come with five sisters to found the house. Within thirty-three years one hundred and ten convents had been founded, sixteen provinces established, in France, Belgium, Holland, Rome, Italy, Germany, Austria, England, Scotland, Ireland, Asia, Africa, the United States and Chili. Under her successors, Mother Mary St. Peter Coudenhove, in twenty-four years, eighty-five houses were founded, and thirteen new provinces established, making eleven in Europe, two in Africa, nine in North America, five in South America and one in Oceania.

The cause of beatification of Mother Euphrasia was inscribed by the postulator of the cause, 17 Nov., 1886. The preliminary examination terminated in 1890. Leo XIII received supplications from numerous cardinals, archbishops, bishops, several cathedral chapters, rectors of colleges and universities, hundreds of prominent and noble families, begging him to dispense from the ordinary ten years' interval required before the continuation of the cause. On 11 Dec., 1897, Leo XIII declared her "Venerable", to the great joy of the whole world, and to the honour and glory of all the convents of the Good Shepherd.

Leo XIII is still increasing everywhere. In 1901, it counted 232 houses, 24 provinces, 7044 sisters, with 43,159 subjects under their care.

This order glories also in the name of Mother Mary of the Divine Heart, who has been compared to the Blessed Margaret Mary Alacoque. The consecration of the heart to the Sacred Heart, 9 June, 1906, which Leo XIII referred to as the greatest act of his pontificate, was brought about by her suggestion. She died on the eve of the consecration (8 June, 1899), at Porto, Portugal, and already preparations are being made for her beatification.

GORDIAN (Lat. Gordianus).—There were three Roman emperors of this name, who reigned between A. D. 237—44, and all of whom met with violent deaths. The first, Marcus Antonius Africanus Gordianus I, ascended on the father's side from the Gracchi and on the mother's side from Trajan, was chosen emperor in Africa in opposition to the usurper Maximin, and the choice was confirmed by the Senate. On account of his advanced age, his son was associated with him in the purple. Their reign lasted only thirty-six days, the being slain in battle by Maximin's lieutenant, Capellianus, and the father putting an end to his own life (July, 237). M. Antonius Gordianus Pius, the grandson of the elder and nephew of the younger Go—

Good Works. See Merit.

After teaching at Brueil College at Mechlin, he be-
Gordianus, a boy of thirteen, was appointed to the dignity of Caesar under the joint-emperors Maximus and Balbinus. These latter were massacred in 238 by the Pretorian guards, and the youthful Gordian became sole emperor. After being for a time under the control of his mother's eunuchs, he married the daughter of Mithiæus, his teacher of rhetoric. Mithiæus proved to be a capable politician and general, and stirred up his young charge to march in person against the Persians. At first the expedition met with success, but the death of Mithiæus put an end to Gordian’s prosperity. His soldiers mutinied, at the instigation of Philip the successor of Mithiæus, and acted on 330. Under the Gordians the Church enjoyed peace. Their rival, Maximin, had been a fierce persecutor of the Christians; hence they naturally cultivated the goodwill of those who had every reason to oppose his rule.

T. B. SCANNELL.

Gordianus and Epimachus, Saints, Martyrs, suffered under Julian the Apostate, 362, commemorated on 10 May. Gordianus was a judge, but was so moved by the sanctity and sufferings of the saintly priest, Januarius, that he embraced Christianity with many of his household. Being accused before his successor, or as some prefer, before the prefect of the city, Apronianus, he was cruelly tortured and finally beheaded. His body was carried off by the Christians, and laid in a crypt on the Latin Way beside the body of St. Epimachus, who had been recently interred there. The two saints gave their name to the cemetery, and have ever since been joined together in the veneration of the Church. There is another Gordianus who suffered martyrdom (place uncertain) with two companions, and is commemorated on 17 September (Acta SS., XLI, 483); and a third, commemorated on 13 Sept., who with several companions was martyred in Pontus or Galatia (Acta SS., XLIV, 55).

There are also several martyrs named Epimachus, and, owing to the meagerness of the information possessed concerning them, less careful writers have confounded them greatly, while the greater hagiographers are unable to agree as to their number or identity. The Bollandists mention four saints of this name: (1) A martyr commemorated by the Greeks on 6 July (Acta SS., XXIX, 280); (2) Epimachus and Asirianus, martyrs venerated by the Copts and Abyssinians on 31 Oct. (Acta SS., LXXI, 684); (3) Epimachus of Epirus in Egypt, venerated by the Greeks on 31 Dec. (Acta SS., LX, 146); (4) Epimachus and Alexander, martyred at Alexandria in the persecution of Decius, commemorated in the Latin Church on 12 Dec.; (5) Epimachus, whose body, with that of St. Gordianus, is honoured at Rome on 10 May. Most of the great writers have denied the existence of an Epimachus martyred at Rome, and account for the relics honoured there by asserting that the body of the Alexandrian Epimachus was transported thither shortly before the martyrdom of St. Gordianus. Remi de Buck, the learned Bollandist, however, maintains that the evidence for the Roman Epimachus is too strong to be doubted, while he rejects the pretended translation of the relics of Epimachus of Alexandria.

JOHN F. X. MURPHY.

Gordon, Andrew, Benedictine monk, physicist; b. 15 June, 1712, at Cofnorach in Forfarshire, Scotland; d. 22 August, 1751, at Erfurt, in Saxony. Having travelled extensively on the Continent, Gordon became a Benedictine and in 1747 was appointed professor of natural philosophy in the University of Erfurt. He soon acquired considerable reputation by his works on electricity, among which were his "Phænomena electricitatis exposita" (1744); "Philosophia utilis et jucunda" (1745); "Physica experimentalis elementa" (1745–46). For the sake of producing a more uniform electrical whirl; the second is the beautiful device known as the electric chimes. Though these inventions are described in all textbooks of electricity, the name of Gordon is never mentioned, though both inventions are fully described by him in "Vorstudien zur Erklärung der Elektrizität" (Erfurt, 1745). Gordon, who is usually credited with the latter invention, simply adopted the "German chimes" (described by Watson in his famous "Sequel", 1746) to serve as an electrical annunciator in connexion with his experimental (lightning) rod of 1752. The "whirl" is of special interest because it was an electrostatic reaction motor, the earliest of its kind; while the second derives its theoretical importance from its being the first instance that we have of the application of what has come to be called "electric convection".

GORDIANUS

GORDON

GORDIANUS

GORDON

J F X MURPHY
the House Lord George demanded an immediate vote, while his followers were pressing into the lobbies and maltreating all members whom they regarded as hostile to the repeal. The motion was postponed, however, and when evening fell attacks were made on the best known embassy chapels, the Sardinian chapel, near Lincoln's Inn Fields, and the Bavarian chapel in Warwick Street. The method of attack was more or less the same on all occasions. First the windows were broken, then the doors forced, the house sacked and the furniture thrown out and burned in the street, thereby setting fire to the whole building. Warwick Street chapel was eventually saved by soldiers, who also arrested some bystanders. Two or three of these upon examination "appeared to be Catholics, but of excellent characters", against whom "as no material circumstances appeared, it was thought they would get off" ("Public Advertiser". 6 June, 1780). The undisputed master of the situation. All shops were closed, money was extracted from passers by, and every one put on the blue cockade, and chalked No Popery on his door. The Catholics suffered much, but unpopular Protestants suffered no less. The house of Lord Chief Justice Mansfield was sacked and burned, so were those of the justices, and even of the witnesses who had given evidence against the rioters. The prisons of Newgate and Clerkenwell were fired, and all the prisoners released. Next day the same fate befell the prisons of the King's Bench, the Fleet, and the Marshalsea. In other prisons, as the Poultry, all prisoners were discharged to prevent further disturbance. The large distillery in Holborn of Mr. Langdale, a Catholic, was burned, and all the store of spirits wasted or drunk. The bridges across the Thames were seized; the Bank of England was twice attacked, and only saved by soldiers. On Wednesday night

prisoners, presumably mere spectators, were remanded for trial to Newgate, whence they "got off" on the following Tuesday without any further investigations. Some disingenuous Protestants, however, have pretended that the burning of the chapels was really due to Catholics (cf. "Barnaby Rudge", Ixvii, end).

By Saturday morning there was a lull. On Sunday afternoon, however, there was a recurrence of violence, the temporary repairs at the embassy chapels were torn down and burned, Moorfields chapel house was sacked, and several neighbouring houses gutted, and their furniture burned. Worse would have followed but for the timely arrival of the soldiers. Next day, Monday, the Privy Council met at St. James's; but so little was the Government moved by the many misfortunes of the Catholics, so little did it foresee the future, that no adequate measures were adopted to suppress disorder, though in the city the blue cockades were asserting their power with ever growing boldness. On Tuesday, 6 June, Parliament again met; and again the mob pressed in, preventing the progress of business, and handling roughly all who displeased them. Lord North himself, the prime minister, only escaped that evening by putting his coach-horses to the gallop, having lost his hat in the fray, which was then upon torn up, and the pieces distributed as trophies among the crowd. The mob was henceforth

thirty-six different configurations might be counted from London Bridge. Fortunately the air was still, and the flames did not spread, or the consequences would have been terrible, for the mob had injured the fire-pumps and thrown the hoses into the burning buildings.

The delay in dealing with the mob violence was due to many causes. There had never been a tumult of this nature before, and there was no special force to cope with it. The police of the city in those days consisted but of a few dozen watchmen and constables. Of the magistrates some were infuriated for the Protestant Association, some were cowards, nearly all were of opinion that the Riot Act must be read an hour before the military could be called upon to interfere. At last King George himself (it had been thought prudent for him to retire from the royal apartments to more protected buildings in the rear of St. James's) summoned a council on Wednesday evening and active measures were ordered, and carried out that very night. Infantry and cavalry attacked the crowd wherever it made head, firing into their ranks, and charging them with sword and bayonet. Though the darkness and intricacies of the streets enabled the rioters to maintain themselves for a while, no serious resistance was, or could be, offered. By Thursday evening all organized disturbance was over, but
210 had been killed in the streets, 75 died in hospital, and 173 were severely wounded. Of the prisoners taken, 52 were convicted, and of these between 20 and 30 executed. Lord George’s trial, fortunately for him, had been held for some months. His men’s minds were cooler; he was admirably defended by the great advocate Thomas, afterwards Lord, Erskine, and acquitted. There was, no doubt, a miscarriage of justice here, but the formal indictment of “levying war on the king”, could not be substantiated. It is certain that he did not at all see the results of his actions, and that he exerted himself, when it was too late, to stem the torrent of mischief which he had let loose. John Wesley is sometimes said to have assisted in arousing the religious fanaticism of the associates; but this is neither true nor necessary, for the worst time, and had been for months before, engaged in a missionary circuit through the Northern counties. In the previous January, however, he had written a “Defence” of the “Appeal” issued by the Association, and obstinately maintained his narrow views in the “Freeman’s Journal”, though these were answered by Father Arthur O’Leary. The days of the Catholics were grave times, and cannot be precisely scheduled. Claim for compensation was afterwards made for 57 houses destroyed (three of these chapels or mass-houses), besides two embassy chapels. Numbers, moreover, were constrained to fly in confusion and by night, with their women and little stores of valuables. Protestant friends too often not daring to give them shelter, they fell in many instances into extreme distress. Others were shot by the soldiers in trying to escape from the mob; four are reported to have died from fear; Mr. Dillon of Moorfields, an old man, who had previously endured persecution for his priesthood, was wantonly thrown out of his sick-bed and died six weeks later. The sum eventually paid to the Catholics is said to have been £28,219 from the city, and £500 from the Government. Mr. Lendale put his losses at £100,000, but refused compensation, receiving instead leave to distil spirits for a year free of impost, and thereby (so runs the story) made up handomely the damage he had suffered.

The events of the riots were chronicled day by day in the newspapers, e.g. The Morning Advertiser, the London Chronicle, the London Gazette, and were summarized in the monthly journals, e.g. the Political Magazine, and The Annual Register. See also the Lords’ and the Commons’ Journals; London Gazette, 17 and 18 March. See also, between 18 March and 1 April, 1835, John Lewis, A Plain Narrative of the Late Riots in London (1790); Cobbe’s State Trials, 235, 485-487. Dickens has described the “Bloody Riots” in Bleak House, and the riots are also mentioned in the works of all historians and memoir writers of the period.

For the misfortunes of the Catholics in particular, see Burnet, Life and Times of Bishop Chalmers (London, 1809); The Catholic Magazine for 1833, being papers and documents collected by L. G.; Dobson’s Remains, vol. VI, ten contributions by Edward Price; Alexander J. F. Mills, The Riots in London in 1770 (London, 1835). The last two should be read with caution.

J. H. Pollen.

Gordii, a titular see in the province of Lydia, suffragan of Sardis. The city is mentioned by Strabo, Hierocles, and Georgius Cyprius. Ptolemy locates it between the River Hermus, the modern Guedia Techai, and Mt. Sipylos. Lequien (Or. Chris. I, 881) names five of its bishops: John, known to Sozomen (Hist. Eccl., VII, xxxvii), and who assisted at the Council of Ephesus in 431; Theodotus, 458; Theodore, 536; George, 787; and Leo, 787. Between the years 901 and 907, under Leo the Wise (Esthesis pseudo-Epiphani, ed. Gelzer, p. 553), Gordius is always mentioned as a suffragan of Sardis. It is not known when it was suppressed, but it no longer existed in the fifteenth century. Gordius, now Guezurah, is the chief town of a casa of the sanjaks of Saroukhan in the vilayet of Aidin. The city numbers four thousand inhabitants, six hundred of whom are Greek schismatics, the remainder being Musulmans. It is the chief centre of the manufacture of Sumyra carpets.

Cournil, Le Turquie d’Asie, III, 555-567.

S. Vailhè.

Gorgonius, Saint, Martyr, suffered in 304 at Nicomedice during the persecution of Diocletian. Gorgonius held a high position in the household of the emperor, and had often been entrusted with matters of the greatest importance. At the breaking out of the persecution he was consequently among the first to be charged, and, remaining constant in the profession of the Faith, was with his companions, Dorotheus, Peter, and several others, subjected to the most frightful torments and finally strangled. Diocletian, determined that their bodies should not receive the extraordinary honours which the early Christians were wont to pay the relics of the martyrs (honours so great as to occasion the charge of idolatry), ordered them to be thrown into the sea. The Christians nevertheless obtained later the intercession of them, and later the body of Gorgonius was carried to Rome, whence in the eighth century it was translated by St. Chrodegang, Bishop of Metz, and enshrined in the monastery of Gorze. Many French churches obtained portions of the saint’s body from Gorze, but in the general pillage of the French Revolution, most of these relics were lost. Our chief sources of information regarding these martyrs are Lactantius and Eusebius. Their feast is kept on 9 Sept.

There are five other martyrs of this name venerated in the Church. The first is venerated at Nica on 10 March; the second, martyred at Nica, is commemorated on 11 March; the third, martyred at Rome, is honoured at Tours on 11 March; the fourth, martyred at Nicomedice, is reverenced in the East on 12 March; while the fifth is one of the Forty Martyrs of Sebaste, whose feast is kept 10 March.

Acta SS., XLIII, 328; Analecta Bollandiana, XVIII, 5.

John F. X. Murphy.

Gorkum, The Martyrs of. In the year 1572, Luther and Calvin had already wrested from the Church a great part of its dynamism and influence. The iconoclastic storm had swept through the Netherlands, and was followed by a struggle between Lutheranism and Calvinism in which the latter was victorious. In 1571 the Calvinists held their first synod, at Embden. On 1 April of the next year the Watergeuzen (Sea-beggars) captured Briel and Burnham, in Essex. In 1572, and again in 1573, the Dutch party was strengthened by the arrival of French troops. In June, Dortrecht and Gorkum fell into their hands, and at Gorkum they captured nine Franciscans. These were: Nicholas Pieck, guardian of Gorkum, Hieronymus of Weert, vicar, Theodorus van der Eem, of Amersfoort, Nicaius Janssen, of Heese, Wilhelmi of Denemark, Godfried of Mervel, Antonius of Weert, Antonius of Hoornaer, and Franciscus de Roye, of Brussels. To these were added two lay brothers from the same monastery, Petrus of Asche and Cornelius of Wyk near Duurastede. Almost at the same time the Calvinists laid their hands on the learned Dutch priest of Gorkum, Lucas de Beuchel of Bois-le-Duc, who had made distinguished studies in Louvain, and also his assistant Nicolaas Janssen, surnamed Poppel, of Welde in Belgium. With the above, were also imprisoned Godfried van Duynsen, of Gorkum, who was active as a priest in his native city, and Joannes Lenarts of Oisterwijk, an Augustinian and director of the convent of Augustinian nuns in Gorkum. To these fifteen, who from the very first underwent all the sufferings and torments of the persecution, were later added four more companions: Joannes van Hoornaer, a Dominican of the Cologne province and parish priest not far from Gorkum, who was subjected to the incarceration of the clergy of Gorkum, hastened to the city in order to administer the sacraments to them and was seized and imprisoned with the rest, Jacobus Lecops of Oudenaaer, a Norbertine, who after leading a
frivolous life, being disobedient to his order, and neglectful of his religious duties, reformed, became a curate in Monster, Holland, and was imprisoned in 1572; Adrianus Janssen of Hilvarenbeek, at one time a Premonstratensian and parish priest in Monster, who was hanged, strangled, and quartered by Tycho de Lacrope; and lastly Andreas Wouters of Heenoord, whose conduct was not edifying up to the time of his arrest, but who made ample amends by his martyrdom.

After enduring much suffering and abuse in the prison at Gorkum (26 June–6 July) the first fifteen martyrs were transferred to Breda. On their way to Dortrecht they were exhibited for money to the curious and arrived at Brielle 6 July. On the following day, Lammy, the commander of the Watergeuzen, caused the martyrs to be interrogated and ordered a sort of disputation. In the meantime the four other martyrs also arrived. It was exacted of each that he abandon his belief in the Blessed Sacrament and in papal supremacy. All remained firm in their faith. Meanwhile there came a letter from William of Orange which enjoined all those in authority to leave priests and religious unmolested. Nevertheless Lammy caused the martyrs to be hanged in the night of 9 July, in a turf shed and cruel manner. Their beatification took place on 14 Nov., 1675, and their canonisation on 29 June, 1865. For many years the place of their martyrdom in Brielle has been the scene of numerous pilgrimages and processions.

**Göres, Johann Joseph, b. at Coblenz, in the heart of the Rhine country, 25 January, 1776; d. at Munich, 29 January, 1848. He was the strongest and most gifted champion of Catholic Germany, from the religious and the political point of view, during the first half of the nineteenth century. His father, Moritz Göres, had been a timber merchant, his mother was descended from an Italian family named Mazza, which had settled in Coblenz. He made his secondary studies at the gymnasium of Coblenz, where, after the expulsion of the Jesuits, pedantic and superficial rationalistic methods prevailed. In his youth Göres was a republican and rationalist, and he looked upon the French Revolution as a movement to free the nations. His earliest writings, „Der allgemeine Friede, ein Ideal“ (1798), likewise the monthly publication „Das rote Blatt“, which was continued in „Der Rubenrall in blauen Grunde“ (1798–1799), reflect this state of mind. He was one of several delegates sent by the Rhine and Moselle provinces to Paris in the fall of the year 1799, to protest against the conduct of the French general Leval in the Rhine country, and to remove the uncertainty hanging over his native country. His stay in Paris cured him of his enthusiasm for the French Revolution, and he turned to the study of law as a „flower-becked quaquaire“. The pamphlet „Die Resultate meiner Sendung nach Paris“ (1800) gives an account of his impressions. In it he closes the first period of his life, which was filled with plans and aspirations for the betterment of the human race and with bitter disappointments.

On returning from Paris, Göres became professor of physics at the Sekundarschule (college) at Coblenz, where he remained until 1806. On 14 September, 1801, he married Catherine von Lassaulx. As the fruits of his scientific studies at Coblenz he published a translation of Fourcroy's Synoptical Chemical Tables (1801), besides two essays "Aphorismen über Organon" (1803) and "Exposition der Physiologie" (1805). At the same time under the influence of Schelling he became interested in natural philosophy, art, and poetry, as appears in his essays "Aphorismen über Kunst" (1802); "Glauben und Wissen" (1805); and in his articles in Astrel's "Aurora", he identified himself with the Romantic movement, and in 1806 became Docent at the University of Heidelberg, where German romanticism flourished, and where he found himself thrown into close association with Achim von Arnim, Klemens Brentano, and Eichendorff. The "Pfänder" celebrated his election to the position of his "Teutschen Volksbücher" (1807). Later on came the "Alteutsche Volksund Meisterliteratur" (1817). He also contributed to the "Zeitung für
Einsiedler" and the "Heidelberger Jahrbücher", the official organ of the Romanticists. But the hostility of the Protestants at Heidelberg, many of whom turned against the Romanticists when the latter recognized and proclaimed the greatness and nobility of the Catholic church, led Görres to quit Heidelberg (1809), and he moved to Freiburg and then to Munich. There he now devoted himself to Germanic and mythological studies, which enabled him to produce his work, "Mythengeschichte der Asiatischen Welt" (2 vols., 1810).

The important political events of the following years compelled him once more to enter the political arena. He was again one of the leaders of the "Deutschnationale Partei", to whose cabinet he belonged (1814). But his "Rheinische Merkur", in which he violently attacked Napoleon, laboured for the advancement of Germany, and pleaded for the restoration of the old German Empire. Napoleon is said to have called this periodical the fifth of the great powers that were allied against him.

Görres at this period became superintendent of public instruction in the Rhine provinces. But his demand for the restoration of the old German Empire under the Emperor of Austria, and his courageous struggle on behalf of civil and political liberty, brought down upon him the hostility of the German princes, especially after the publication of his "Deutschlands Künftige Verfassung" (1816). The "Rheinische Merkur" was suppressed by the Prussian Government in 1816, and Görres was dismissed from his post as superintendent of public instruction. He went back to Heidelberg, but in 1817 returned to Cologne. He now worked for the extension and the liberalization of the Rhineland.

At the same time he continued his fearless work as a pamphleteer, as shown chiefly in his "Adresse der Stadt und Landschaft Koblenz und ihre Uebergabe beim Fürsten Hardeberg" (1818), and his brochure "Teutschland und die Revolution" (1819). The "Deutschland" Government at that time confiscated his papers and ordered his arrest. He escaped, however, to Frankfurt, whence he made his way to Strasburg. Here he remained, save for a visit to Switzerland in 1821 until the year 1827. His written defence "In Sachen der Rheinprovinz und in eigener Angelegenheit" (1821) was a brilliant vindication of himself against the attitude of the Prussian Government. At the same time he addressed a warning to the princes and nations of Europe, which was published the same year, "Europa und die Revolution".

In the following year he published "Die Heilige Allienz und die Völker auf dem Kongress von Verona" (1822). In 1824 he turned to his seat of worship in the Rhineland, and published numerous articles and pamphlets, which, in their views, were often in contrast with the attitude of the Rheinprovinz Government.

Now that the political difficulties in Prussia, in the thirties, were over, and the future seemed to be promising, he turned his attention to religious questions. He now devoted himself largely to the study of the Catholic faith and the history of Catholicism. His first work in this field was his "Deutschlands Künftige Verfassung" (1816), in which he violently attacked Napoleon, who was the enemy of the restoration of the old German Empire.

Görres's nomination by King Ludwig I of Bavaria to a professorship at the University of Munich (1827) marked the opening of the last period of his life. His lectures attracted a number of distinguished students among whom we may mention Brunner, Haneberg, Von Siemens, and others. But he became the spiritual head and front of a society of distinguished Catholic gentlemen who came to Munich under the patronage of King Ludwig I and who worked for the renovation of spiritual life, for the liberty of the Church, and for all things of interest to the Catholic Faith. Among the members of this circle we find the names of Arndt, Cornelius, Dollinger, Mühler, Phillips, Ringgels, and Streber. At intervals Görres was also visited by political and religious leaders of Catholicism, both in Germany and in other countries, among them Brentano, Böhm, Lacordaire, Lamennais, and Montalembert. In Munich also he continued his fertile and versatile literary activity. He pleaded for a Christian interpretation of history in his "Grundlage der Christlichen Geschichte", which was first published at Cobenzl (1830, new ed., 1884), and in the publication issued under his direction since 1831, "Gott in der Geschichte, Bilder aus allen Jahrhunderten der Christlichen Zeitrechnung". Other historical productions of his pen at this period were: "Die Japhetiden und die Keshemiten" (1844), and "Die drei Grundwurzeln des Keltischen Stammes in Gallien und ihre Einwanderung" (1845). He treated political questions in the "Eos", a review founded by Herber in 1828. His work "Der Dom zu Köln und das Münster zu Strassburg" (1842) properly belongs to the history of art.

But what engrossed Görres's attention above all since his stay in Strasburg was the study of mysticism. He carefully studied the mystical writers of the Middle Ages, observed partly in person the phenomena connected with the cases of the ecstatic young women of the 18th century, and endeavoured to comprehend more thoroughly the nature of Christian mysticism, which stands in the strongest contrast to rationalism and naturalism. These studies led to his writing his great work: "Die christliche Mystik" (4 vols., 1836–42; 2nd ed., 5 vols., 1879), which notwith-
Görtyna, a titular see, and in the Greek Church metropolitan see, of the Island of Crete. The city, situated at the foot of Mount Ida, not far from the River Lethe, was first called Larissa, afterwards Cremnίa, then Görtyna, and finally Gomer. Homer mentions it as a fortified city, which gives an idea of its great antiquity. Previous to the Roman occupation it was continually at war with the two neighbouring and rival cities of Cnosus and Cydonia, contending with them for supremacy. The result was desolation in an island predestined to happiness by its geographical position, climate, and soil. The Cretans, indeed, were ever the cause of their own distress, being at one time dissatisfied with their government, and at another with their government. Under Roman rule Görtyna became the civil and ecclesiastical metropolis of the island, which then prospered in a degree hitherto unknown. Its first bishop was St. Titus, the disciple to whom St. Paul addressed one of his Epistles. A basilica dedicated to St. Titus, discovered at Görtyna partly in ruins, dates from the fifth, perhaps from the fourth century. Among the earliest occupants of the see were St. Philip, a contemporary of Marcus Aurelius, whose feast is kept 11 April; St. Myron, commemorated 8 August; St. Cyril, 9 July; St. Eumenius, 18 September; St. Peter the Younger, 14 July. In 170 St. Dionysius, Bishop of Corinth, was addressed a letter to the community of Görtyna (Euseb., H. E., IV, xxiii), then probably the metropolitan see of Crete. Among its archbishops mention should also be made of St. Andrew of Crete (d. 740), a famous Byzantine poet and orator, and opponent of the Iconoclasts. In 825 the island was taken by the Arabs, Archbishop Cyril was slain for refusing to apostatize, and Görtyna so completely destroyed that it never rose from its ruins. Thenceforth, moreover, the metropolitan ceased to bear the title of Görtyna, took that of Crete, and resided elsewhere, probably at Candia, a city in the middle of the island and made capital in the tenth century. In the eleventh century Nicephorus Phocas reconquered Crete for the Byzantine Empire, which held it until 1204, when it fell into the hands of the Venetians, who retained the island until 1669, when the Turks took possession of it. The Venetians did not allow the Greek bishops to reside in Crete, while the Latin archbishop bore the title of Candia, not of Görtyna. Even yet the Latin diocese retains the name of Candia (q. v.), Görtyna being a titular archiepiscopal title. On the other hand the Greek Archbishop of Görtyna calls himself Metropolitan of Crete. The extensive ruins of Görtyna are located near the shore of the Bay of Kastoria, among the rocks of Apollo, several statues, the basilica of St. Titus, and numerous inscriptions, among which is the text of the so-called Laws of Görtyna, found in 1884, which afford us a good insight into Greek law of the fifth century B.C. Asaulapius was much honoured at Görtyna, being venerated as the husband of the Thracian goddess, an ancient grotto, by many archaeologists considered identical with the famous labyrinth. It is, however, only an ancient quarry out of which Görtyna was built; the labyrinth was situated near Cnosus.

Görs (St. Gorizia; Slovene Gorica), capital of the Austrian crown-land Görs and Gradiska, has a population (1900) of 25,432, almost exclusively Catholic, of which 68 per cent are Bohemian, 20 per cent Austrian, and 11.6 per cent Germans. Since 1761 Görs has been the seat of an archbishop, metropolitan of the ecclesiastical province of Illyria.

History.—The territory surrounding Görs belonged originally to the old Roman Prefecture of Illyricum, on the division of which into East and West Illyricum in 1599 it remained a part of the latter. After the fortunes until Emperor Otto III divided it in 1001 between the Patriarch of Aquileia and the Count of Friuli. The latter immediately assumed the title of Duke of Görs after the castle of that name, for the town of Görs was not recognized as such until 1307. In 1331 Görs passed to the House of Carinthia, and thence in 1090 to the Counts of Lurn, who in 1202, by arrangement with the patriarch, Pilgrim II, secured the territory belonging to the Patriarchate of Aquileia. By marriage Count Meinhard III came also into possession of the Tyrol. After his death (1256) it was divided into three Gőrs lines, represented by Count Albert II, and the Tyrolean-Carinthian line, represented by Count Meinhard IV. The latter line became extinct in 1335 with Henry of Carinthia, who had been for a time King of Bohemia (1307–10); the Görs line reached the zenith of its power under Henry II (d. 1223), among whose possessions were included Zinna, Pustertal, and Isola. The last Count of Gőrs was Gian Maria, the last office of viceroy of the empire in the March of Treviso. Unsuccessful wars, divisions of inheritance, etc. led to the decline of the house, and at the death of the last count, Leonhard, in 1500 without issue, his territory fell to Emperor Maximilian I, and, except for a brief interval of French occupation (1689–1715), has since remained a possession of the reigning house of Austria.

Ecclesiastically, this territory was from the beginning under the jurisdiction of the Patriarch of Aquileia. The fact that the patriarchs for the most part resided at Udine on Venetian land, while the patriarchal cathedral was situated at Aquileia on Görs territory, caused constant friction with Venice. Accordingly, in 1560 Emperor Ferdinand I agitated at Rome the question of establishing an independent bishopric at Görs, an attempt which was repeated many times during the following centuries, but finally undertaken by Pope Benedict XIV, yielding to Austrian urgency and overriding the claim of the Republic of Venice to the Austrian part of the Patriarchate of Aquileia, established a separate vicariate Apostolic with residence at Görs (29 Nov., 1749). On 6 June, 1751, the patriarchate was definitively replaced by two archbishoprics (18 April, 1752), those of Udine and Görs, the latter having as suffragans Trent, Triest, Como, and Pedena. The vicar Apostolic, Karl Michael, Count von Attme, was appointed first Archbishop of Görs, and in 1766 was raised to the dignity of a prince. After his death (1774) came Rudolf, Count von Belintz, who was, however, deposed, and in 1791 replaced by Joseph II in 1784 for his opposition to the imperial patent of tolerance of 13 October of that year, and died in 1803 at Lod. On 8 March, 1787, the emperor raised the Dioceses of Laiach to the rank of an archdiocese, and on 20 August, 1788, in place of Görs established a new diocese in the adjacent province of Gradiska. Pius VII gave his sanction to the new arrangement on the condition that Gradiska should be regarded only as a co-episcopal seat (with Görs); by his Bull "Recti prudentisque consili" of 12 September, 1797, however, he transferred the episcopal see and chapter back to Görs, and ordained that in future the bishop should bear both titles, Görs and Gradiska. By the Bull of 19 August, 1807, Pius VII reduced Laiach to the rank of a simple bishopric, and placed it with Görs and Triest under the immediate jurisdiction
of the Holy See. Finally, on 27 August, 1830, Pius VIII raised Gössl once more to the archiepiscopal rank, and assigned to it the Sees of Laibach, Triest-Capo d'Istria, Friuli, and Vogogna, as well as the suffragans of Wallach becoming archbishop. Since Archbishop Walland's death the archiepiscopal see has been occupied by: Franz Xaver Luschi (1833-54), distinguished for his apostolic zeal and unbounded charity; Andreas Gollmayr (1855-83), under whom the title of prior was restored to the bishop; Alois Zorn (1880-97), previously Bishop of Poreno-Pola; Jakob Missia (1899-1902), raised to the cardinalate, 19 June, 1899; Andreas Jordan (1902-05); and Franz Borgia Sedej, b. at Kirchheim, 10 October, 1854; ordained priest 26 August, 1877, appointed prince-bishop by the emperor, 20 January, 1906; confirmed by the pope, 2 February of the same year, and consecrated on 22 March.

Statist.—The archiepiscopal embraces the northern part of the Austrian coast, that is the County of Görz and Gradisca, and numbers (1909) 17 deaneries, 86 parishes, 42 curacies, 63 vicarages, 13 benefices, 112 positions for assistant priests, 271 churches and chapels, 304 secular and 41 regular priests, 257,704 Catholics. The following religious congregations have foundations in the archiepiscopal: the Franciscans, who have the monastery of Castagnazza, situated above the city of Görz, with an upper gymnasia for those destined for the order and also houses on the Triglav Mountain (Heiliger Berg) near Görz, and on the island of Barbat on Grado; the Capuchins at Görz and in the monastery of the Holy Cross near Haidenschaft; the Jesuits at Görz; the Brethren of Mercy of St. John of God, who have charge of the town hospital at Görz; the Ursulines at Görz; the Sisters of Mercy of St. Vincent de Paul, who have charge of the poor-house and the hospital for women at Görz, and of the orphan asylum at Contavaule, and have the domestic management of the preparatory seminaries of the prince-bishops at Görz; the School Sisters of Notre-Dame, who conduct a higher school for girls and St. Joseph's Asylum for girls at Görz; Sisters of Providence of St. Cajetan, with mother-house at Cormons and 5 branches; Sisters of Mercy of the Holy Cross, who are housekeepers in the central seminary of the prince-bishops at Görz. The cathedral chapter, established in 1781 by order of the Capitulum Teresinense after Emperor Maria Theresa, has 3 dignitaries (provost, dean, and scholasticus), 4 capitulary and 3 honorary canons, and at the present time (1909) one honorary canon extra statum. The patron of the diocece is St. Hermagoras, the theological seminary Carinum, founded in 1757 by Archbishop von Atteleng, and which, since 1818 has been the chief seminary for the whole ecclesiastical province of Görz, with the exception of the Diocese of Laibach, which has a seminary of its own. Besides the cathedral at Görz, completed about 1400, which exhibits various styles of architecture, mention should be made of the cathedral at Aquileia (basilica style), consecrated in 1031 by the Patriarch Popo; likewise the former patriarchal, now the parish, church in the city of Grado on the lagoon, ancient itself and rich in art treasures of the early Middle Ages, including sculptures, mosaics, etc., of the sixth century.

**GREGOR REINHOLD, GS.**

Gesolcin (or Gotselin, according to the spelling in the earliest MS. of his works), a Benedictine biographical writer; d. about 1099. He was born in the north of France and became a monk of St. Bertin's at Omer. Hermann, Bishop of Salisbury, brought him to England, but the exact date of his doing so is disputed. Wright gives him as Bishop of Wells, but Gesolcin himself states that he accompanied Hermann to Rome in 1049, shortly before the great Council of Reims in that year, and that he returned to England in 1053, it seems likely that Gesolcin came with him then. He remained in England to the end of his life, visiting many monasteries and cathedrals, and collecting wherever he went, materials for his numerous biographies of English saints. William of Malmesbury praises his industry in the highest terms. He was at Ely about 1082, where he wrote a life of St. Etheldreda. Between 1087 and 1082 he was at Ramsey, and compiled there a life of St. Ivo, or Ives. In 1095 he was at Cambridge, where he wrote his account of the translation of the relics of St. Augustine and his companions, which had taken place in 1091. This he dedicated to St. Anselm, and it was probably his last work. The Canterbury Obituary, quoted by Wharton, gives 15 May as the date of his death but does not name the year. It is certainly alive in the beginning of the year 1099, but we hear nothing of him afterwards. His works consist of the lives of many English saints, chiefly of those connected with Canterbury, where he spent his last years. Some of them have been printed by the Bollandists, by Mabillon, and by Migne. Others are contained in MSS. in the British Museum (London) and at Cambridge. A full list of his known writings is given in the eighth volume of the *Histoire littéraire de France*. His chief work was a life of St. Augustine of Canterbury, professing to be based on older records and divided into two parts,—an "Historia major" (in Mabillon, Acta SS. O.S.B., I) and an "Historia minor" (in Wharton, Anglia Sacra, I). His life of St. Swithin (in Bollandists, Acta SS., July) is also of some importance, but the majority of his writings have not much value at the present day. His method seems to have been usually to take some older writer, and to reproduce his work, in a somewhat inflated style, with additions of his own, but critics are agreed that no very great reliance can be placed on these latter. According to William of Malmesbury, Gesolcin was also a skilled musician.

G. CYPRIAN ALSTON.

**Gospel and Gospels.**—The word *Gospel* usually designates a written record of Christ's words and deeds. It is very likely derived from the Anglo-Saxon god (good) and spell (tell), and gives the exact equivalent of the Greek εὐαγγέλιον (εὖ ἀγαλλά, I bear a message), and the Latin Evangelium, which has passed into French, German, Italian, and other modern languages. The Greek εὐαγγέλιον originally signified the "reward of good tidings" given to the messenger, and subsequently, "good news". Its other important meanings will be set forth in the body of the present general article on the Gospels.

(1) *Titles of the Gospels.*—The first four historical books of the New Testament are supplied with titles (Εὐαγγέλιον κατὰ Ματθαίου, Εὐαγγέλιον κατὰ Μακαρ, Εὐαγγέλιον κατὰ Λουξ, Εὐαγγέλιον κατὰ Ευαγγελίστης).
etc.), which, however ancient, do not go back to the respective authors of those sacred writings. The Canon of Muratori, Clement of Alexandria, and St. Ireneus bear distinct witness to the existence of these headings in the latter part of the second century of our era. Indeed, the manner in which Clement (Strom., I, xi, 7) gives them implies that, at that early date, our present titles to the Gospels had been in current use for some considerable time. Hence, it may be inferred that they were prefixed to the evangelical narratives as early as the first part of that same century. That, however, the Gospels were not framed, and consequently not prefixed to each individual narrative, before the collection of the four Gospels was actually made. Besides, as well pointed out by Prof. Bacon, "the historical books of the New Testament differ from its apocalyptic and epistolary literature, as those of the Old Testament differ from its prophecy, in being generally anonymous, and for the same reason. Prophecies, whether in the earlier or in the later sense, and letters, to have authority, must be referable to some individual; the greater his name, the better. But history was regarded as a common possession. Its facts spoke for themselves. Only as the springs of common recollection began to twinkle, and marked differences to appear between the well-informed and accurate Gospels and the untrustworthy ..." did it become worth while for the Christian teacher or apologist to specify whether the given representation of the current tradition was 'according to' this or that special compiler, and to state his qualifications.

The first word common to the headings of our four Gospels is Ἐβαγγέλια, some meanings of which remain still to be set forth. The word, in the New Testament, has the specific meaning of "the good news of the kingdom" (cf. Matt., iv, 23; Mark, i, 15). In that sense, which may be considered as primary from the Christian standpoint, Ἐβαγγέλια denotes the good tidings of salvation announced to the world in connexion with Jesus Christ, and, in a more general way, the whole revelation of Redemption by Christ (cf. Matt., xvi, 19; Mark, xvi, 15; Luke, x, 9; Acts, xx, 24; Rom., i, 1, 9, 16; x, 16; etc.). This was, of course, the sole meaning connected with the word, so long as no authentic record of the glad tidings of salvation by Christ had been drawn up. In point of fact, it remained the only one in use even after such written records had been for some time received in the Christian Church: as there could be but one Gospel, that is, but one revelation of salvation by Jesus Christ, so the several records of it were not regarded as several Gospels, but only as distinct accounts of one and the same Gospel. Gradually, however, a derived meaning was connected with the word Ἐβαγγέλια. Thus, in his first Apology (c. xvi), St. Justin speaks of the "Memoriae of the Apostles which are called Ἐβαγγέλια", clearing referring, in this way, not to the substance of the Evangelical history, but to the books themselves in which it is recorded. It is true that in this passage of St. Justin we have the first undisputed use of the term Ἐβαγγέλια in the derived sense. Yet it is the holy Spirit who gives us to understand that in his day the word Ἐβαγγέλια had already that meaning, it is only natural to think that it had been thus employed for some time before. It seems, therefore, that Zech 7. is right in claiming that the use of the term Ἐβαγγέλια, as denoting a record of Christ's words and deeds, goes as far back as the beginning of the second century of the Christian era.

The second word common to the titles of the canonical Gospels is the preposition κατά, "according to", the exact import of which has long been a matter of discussion among Biblical scholars. Apart from various secondary meanings connected with that Greek particle, two principal significations have been attached to it. Many scholars have taken it to mean not "written by", but "drawn up according to the conception of" Matthew, Mark, etc. In their eyes the titles of our Gospels were not intended to indicate authorship, but to state the authority guaranteeing what is related, in about the same way as "the Gospel according to the Hebrews" or "the Gospel according to the Egyptians", does not mean the Gospel written by the Hebrews or the Egyptians, but that peculiar form of Gospel which either the Hebrews or the Egyptians had accepted. Most scholars, however, have preferred to regard the preposition κατά as denoting authorship, quite in the same way as, in Didotius Siculus, the History of Herodotus is called 'Ἡ Ἡροδοτος λεγομενος. At the present day it is generally admitted that, had the titles to the canonical Gospels been intended to set forth the ultimate authority or guarantor, and not to indicate the writer, the Second Gospel would not accord with the belief of primitive times, have been called "the Gospel according to Peter", and the third, "the Gospel according to Paul". At the same time it is rightly felt that these titles denote authorship, with a peculiar shade of meaning which is not conveyed by the titles prefixed to the Epistles of St. Paul, the Apocalypse of St. John, etc. The use of the genitive case in the latter titles (Παῦλου Ἐφραίμ χρηστοῦ, Ἀποκάλυψις Ἰωάννου, etc.) has no other object than that of ascribing the contents of such works to the writer whose name they actually bear.

The use of the preposition κατά (according to), on the contrary, while referring the composition of the contents of the Gospels to St. Matthew, of those of the second to St. Mark, etc., implies that practically the same contents, the same glad tidings or Gospel, have been set forth by more than one narrator. Thus, "the Gospel according to Matthew" is equivalent to the Gospel history in the form in which St. Matthew put it in writing; "the Gospel according to Mark", designates the same Gospel history in another form, viz. in that in which St. Mark presented it in writing, etc. (cf. Maldonatus, "In quatuor Evangelistas", cap. i).

(2) Number of the Gospels.—The name of the Gospel, as designating a written account of Christ's words and deeds, has been given to four. The earliest and most important of these four is the Gospel put in writing; "the Gospel according to Mark", designates the same Gospel history in another form, viz. in that in which St. Mark presented it in writing, etc. (cf. Maldonatus, "In quatuor Evangelistas", cap. i).

According to the account of the early Church, there were two only of these "gospels", that some information has been preserved. Their names, as given by Harnack (Chronologie, I, 589 sq.), are as follows:—

1-4. The Canonical Gospels.
5. The Gospel according to the Hebrews.
6. The Gospel of Peter.
7. The Gospel according to the Egyptians.
8. The Gospel of Matthias.
17. The Gospel of Philip.
19. The writing Ferae Magnae.

Despite the early date which is sometimes claimed for some of these works, it is not likely that any one of them, outside our canonical Gospels, should be reckoned among the attempts at narrating the life of Christ, of which St. Luke speaks in the prologue to his Gospel. Most of them, as far as can be made out, are
late productions, the apocryphal character of which is generally admitted by contemporary scholars (see APOCRYPHA).

It is indeed impossible, at the present day, to describe the precise manner in which out of the numerous works ascribed to some Apostle, or simply bearing the name of gospel, only four, two of which are not ascribed to Apostles, came to be considered sacred and canonical. It remains true, however, that all the early testimony which has a distinct bearing on the number of the canonical Gospels recognizes four such Gospels and none besides. Thus, Eusebius (d. 340), when sorting out the universally received books of the Canon, in distinction from those which some put in question, says: "And here, among the first, must be placed the holy quaternion of the Gospels", while he ranks the "Gospel according to the Hebrews" among the second, that is, among the disputed writings (Hist. Eccl., II, xxxv). Clement of Alexandria (d. about 220) and Tertullian (d. 220) were familiar with our four Gospels, frequently quoting and commenting on them. The last-named writer speaks also of the Old Latin version known to himself and to his readers, and by so doing carries us back beyond his time. The saintly Bishop of Lyons, Irenaeus (d. 202), who had known Polycarp in Asia Minor, not only admits and quotes the Gospels, but narrates that they were read just four, no more and no less. He says: "It is not possible that the Gospels be either more or fewer than they are. For since there are four zones of the world in which we live, and four principal winds, while the Church is scattered throughout the world, and the pillar and ground of the Church is the Gospel and the Spirit of life; it is fitting that we should have four pillars, breathing out immortality on every side and vivifying our flesh... The living creatures are quadriform, and the Gospel is quadriform, as is also the course followed by the Lord" (Adv. Haer., III, xi, 8). About the time when St. Irenaeus gave this explicit testimony to our four Gospels, the Canon of Muratorii bore likewise witness to them, as did also the Peshito and other early Syriac translations, and the various Coptic versions of the New Testament. The same thing must be said with regard to the Syriac harmony of the canonical Gospels, which was framed by St. Tatian, a disciple of St. Irenaeus, and was referred to under its Greek name of Diatessaron (Τὸ διὰ τέσσαρας Εὐαγγέλιασ). The recent discovery of this work has allowed Harnack to infer, from some of its particulars, that it was based on a still earlier harmony, that made by St. Hippolytus of Antioch, of our four Gospels, and was also a possible addition as to St. Justin's use of the canonical Gospels. "For since Tatian was a disciple of Justin, it is inconceivable that he should have worked on quite different Gospels from those of his teacher, while each held the Gospels he used to be the books of primary importance" (Adeney). Indeed, we know before the discovery of Tatian's "Diatessaron", an unbiased study of Justin's authentic writings had made it clear that the holy doctor used exclusively our canonical Gospels under the name of Memoirs of the Apostles.

Of these testimonies of the second century two are particularly worthy of notice, viz. those of St. Justin and St. Irenaeus. As the former writer belongs to the first part of that century, and speaks of the canonical Gospels as a well-known and fully authentic collection, it is only natural to think that at his time of writing (about A.D. 145) the same Gospels, and they only, had been recognized as sacred records of Christ's life, and that there was no fourth place to any Gospels as the beginning of the second century of our era. The testimony of the latter apostolic is still more important. "The very absurdity of his reasoning testifies to the well-established position attained in his day by the four Gospels, to the exclusion of all others. Irenaeus' bishop was Polinus who lived to the age of 90, and Irenaeus had known Polycarp in Asia Minor. Here are links of connexion with the past which go back beyond the beginning of the second century" (Adeney).

In the writings of the Apostolic Fathers one does not, indeed, meet with unquestionable evidence in favour of only four canonical Gospels. But this is only what one might expect from the writings of men who lived in the very century in which these inspired records were composed, and in which the word Gospel was yet applied to the glad tidings of salvation, and not to the written accounts thereof.

(3) Chief Differences between Canonical and Apocryphal Gospels.—From the four Gospels, the sacred character of which was thus recognized very early, differed in several respects from the numerous uncannical Gospels which circulated during the first centuries of the Church. First of all, they condemned themselves by their tone of simplicity and truthfulness, which stood in striking contrast with the trivial, absurd, or manifestly legendary character of many of these uncannical productions. In the next place, they had an earlier origin than most of their apocryphal rivals, and indeed many of the latter productions were directly based on the canonical Gospels. A third feature in favour of our canonical records of the life of Christ is the purity of their teachings, dogmatic and moral, over against the Jewish, Gnostic, or other heretical views with which not a few of the apocryphal gospels were tainted, and on account of which these unsound writings found favour among heretical bodies and, on the contrary, discreditable in the eyes of Catholics. Lastly, and more particularly, the canonical Gospels were regarded as of Apostolic authority, two of them being ascribed to the Apostles St. Matthew and St. John, respectively, and two to St. Mark and St. Luke, the respective companions of St. Peter and St. Paul. Many other gospels indeed claimed Apostolic authority, but none of them was this claim universally allowed in the early Church. The only apocryphal work which was at all generally received, and relied upon, in addition to our four canonical Gospels, is the "Gospel according to the Hebrews". It is a well-known fact that St. Jerome, speaking of this Gospel under the name of "Gospel of the Hebrews" according to St. Matthew. But, as far as can be judged from its fragments which have come down to us, it has no right to originality as compared with our first canonical Gospel. At a very early date, too, it was treated as being outside of therexempt from the canon of the Church itself, who states that he had its Aramaic text at his disposal, does not assign it a place side by side with our canonical Gospels: all the authority which he ascribes to it is derived from his persuasion that it was the original text of our First Gospel, and not a distinct Gospel over and above the one universally received from time immemorial in the Catholic Church.

(4) Order of the Gospels.—While the ancient lists, versions, and ecclesiastical writers agree in admitting the canonical character of only four Gospels, they are far from being at one with regard to the order of these sacred records of Christ's words and deeds. In early Christian literature, the canonical Gospels are given in no less than eight orders, besides the one (St. Matthew, St. Mark, St. Luke, St. John) with which we are familiar. The variations bear chiefly on the place given to St. John, then, secondly, on the respective positions of St. Mark and St. Luke. St. John passes from the fourth place to third, and to second, or even to the first. As regards St. Luke and St. Mark, St. Luke's Gospel is often placed first, doubtless as being the longer of the two, but at times also second, perhaps to bring it in immediate connexion with the Acts, which are traditionally ascribed to the author of our Third Gospel.
Of these various orders, the one which St. Jerome embodied in the Latin Vulgate, whence it passed into our modern translations, and even into the Greek editions of the New Testament, is unquestionably the most ancient. It is found in the Canon of Muratori, in St. Ireneus, in St. Gregory of Nazianzus, in St. Athanasius in the case of the sacred books drawn up for the Councils of Laodicea and of Carthage, and also in the oldest Greek uncial MSS.: the Vatican, the Sinaitic, and the Alexandrine. Its origin is best accounted for by the supposition that whoever formed the Gospel collection wished to arrange the Gospels in accordance with the order in which tradition ascribes their composition. Thus, the first place was given to St. Matthew's Gospel, because a very early tradition described the work as originally written in Hebrew, that is, in the Aramaic language of Palestine. This, it was thought, proved that it had been composed for the Jewish believers in the Holy Land, at a date when the Apostles had not yet started to preach the glad tidings of salvation outside of Palestine, so that it must be prior to the other Gospels written in Greek and for converts in Greek-speaking countries. In like manner, it is clear that St. John's Gospel was assigned the last place, because tradition at a very early day looked to the last of the four as having been written by St. Mark and St. Luke, tradition ever spoke of them as posterior to St. Matthew and anterior to St. John, so that their Gospels were naturally placed between those of St. Matthew and St. John. In this way, as it seems, was obtained the present general order of the Gospels which we find at the beginning, an order as author; at the end, the other Apostle; between the two, those who have to derive their authority from Apostles.

The numerous orders which are different from the one most ancient and most generally received can explained by the fact that, at the formation of the collection in which the four Gospels were for the first time united, these writings continued to be diffused, all four separately, in the various Churches, and might thus be found differently placed in the collections designed for public reading. It is likewise easy in most cases to make out the special reason for which a particular grouping of the four Gospels was adopted. The very ancient order, for instance, which places the two Apostles (St. Matthew, St. John) before the two disciples of Apostles (St. Mark, St. Luke) may be easily accounted for by the desire of paying a special honor to the Apostolic dignity. Again, such an arrangement as Matthew, Mark, John, Luke, bespeaks the intention of coupling each Apostle with an Apostolic assistant, and perhaps also that of bringing St. Luke nearer to the Acts, etc.

(5) Classification of the Gospels.—The present order of the Gospels has the twofold advantage of not separating from one another those Evangelical records (St. Matthew, St. Mark, St. Luke) whose mutual resemblances are obvious and striking, and of placing at the end of the list the Gospels the narrative (that of St. John) whose relations with the other three is that of dissimilarity rather than of likeness. It thus leads itself well to the classification of the Gospels of which so long has been noticed and which all scholars readily admit. Unbelievers of all ages have greatly exaggerated the importance of this fact, and have represented many of the actual variations between the Evangelical narratives as positive contradictions, in order to dispove the historical value and the inimitable character of the sacred records of Christ's life. Over against this contention, sometimes maintained with a great display of erudition, the Church of God, which is "the pillar and ground of the truth" (1 Tim., iii, 15), has always proclaimed her belief in the historical accuracy and consequent real harmony of the canonical Gospels (and doctors and commentators); and Augustine and St. Jerome, and St. Augustin and St. Augustine) and commentators have invariably
professed that belief. As can readily be seen, variations are naturally to be expected in four distinct, and in many ways independent, accounts of Christ's words and deeds, so that their presence, instead of causing anything to detract from the main value of the Evangelical narratives. From among the various answers which have been given to the alleged contradictions of the Evangelists we simply mention the following. Many a time the variations are due to the fact that not one but two really distinct events are described in parallel, of which the two are taken from parallel passages of the Gospels. At other times, as is indeed very often the case, the supposed contradictions, when closely examined, turn out to be simply differences naturally entailed, and therefore distinctly accounted for, by the literary methods of the sacred writers, and, more particularly, by the respective purpose of the Evangelists in setting forth Christ's words and deeds. Lastly, and in a more general way, the Gospels should manifestly be treated with the same fairness and equity as are invariably used with regard to other historical records. To borrow an illustration from classical literature, the works of the Apostles are treated [by unbelievers] by a method which no critic would apply to the 'Memoirs' of Xenophon. The [Rationalistic] scholar admits the truthfulness of the different pictures of Socrates which were drawn by the philosopher, the moralist, and the man of letters, and, combining all, finds an instinct with a noble life, half hidden and half revealed, as men viewed it from different points; but he seems often to forget his art when he studies the records of the Saviour's work. Hence it is that superficial differences are detached from the context which explains them. It is more than an objection that parallel narratives are not identical. Variety of details is taken for discrepancy. The evidence may be wanting which might harmonize narratives apparently discordant; but experience shows that it is as rash to deny the probability of reconciliation as it is to fix the exact method by which it may be made out. If, as a general rule, we can follow the law which regulates the characteristic peculiarities of each Evangelist, and see in what way they answer to different aspects of one truth, and combine as complementary elements in the full representation of it, we may be well contented to acquiesce in the existence of some difficulties which at present cannot and will not be solved. That there must be a necessary consequence of that independence of the Gospels which, in other cases, is the source of their united power" (Westcott).

FRANCIS E. GIGOT.

Gospel in the Liturgy.—I. HISTORY.—From the very earliest times the public reading of parts of the Bible was an important element in the Liturgy inherited from the service of the Synagogue. The first part of that service, before the bread and wine were brought up to be offered and consecrated, was the Liturgy of the catechumens. This consisted of prayers, litanies, hymns, and especially readings from Holy Scripture. The object of the readings was obviously to instruct the people. Books were rare and few could read. What the Christian of the first centuries wished to be read from the Old Testament history, St. Paul's theology, and Our Lord's life he had learned from hearing the lessons in church, and from the homilies that followed to explain them. In the first period the portions read were—like the rite—not yet stereo-
typed. St. Justin Martyr (d. c. 167) in describing the rite he knew (apparently at Rome) begins by saying that: "On the day of the sun, as it is called, all the inhabitants of town and country come to the same place, and the commentaries of the Apostles [diagram] are read as long as time will allow. Then, when the reader has stopped, he preaches admonitions and exhortations all to imitate such glorious examples" (I Apol., 67). At this time, then, the text was read continuously without a break, till the last sentence (the bishop who was celebrating) told the reader to stop. These readings varied in number. A common practice was to read first from the Old Testament (Prophecatia), then from an Epistle (Apostolus) and lastly from a Gospel (Evangelium). In any case the Gospel was read last, as a final and Apostolic all the rest. Origen calls it the crown of all the holy writings (In Johannem, i, 4, pref., P. G., XIV, 26). "We hear the Gospel as if God were present", says St. Augustine ("In Johannem", tract. xxx, i, P. L. XXXV, 1632). It seems that in some places (in the West especially) for a time catechumens were not allowed to stay for the Gospel, which was considered part of the disciplina arcani. At the Synod of Orange, in 441, and at Valencia, in 524, they wanted to change this rule. On the other hand, in all Eastern Liturgies (e. g. that of the Apostolic Constitutions; Brightman, "Eastern Liturgies", Oxford, 1865, p. 5) the catechumens are dismissed after the Gospel.

The public reading of certain Gospels in churches was the most important factor in deciding which were to be considered canonical. The four that were received and read in the Liturgy everywhere were for that very reason submitted to the Canon of Scripture. We have evidences of this liturgical reading of the Gospel from every part of Christendom in the first centuries. For Syria, the Apostolic Constitutions tell us that when a bishop was ordained he blessed the people "after the reading of the law and prophets and our Epistles and Acts and Gospels" (VIII, 5), and the manner of reading the Gospel is described in 11, 67 (Cabrol and Leclercq, "Monumenta eccl. liturgica", Paris, 1900, I, p. 225); the "Peregrinatio Silvia" (Etherie) describes the reading of the Gospel at Jerusalem (Duchesne: "Origines", 493). The homilies of St. Basil and St. John Chrysostom explain the Gospel as read at Caesarea, and through the monasticism of Egypt, St. Cyril of Alexandria writes to the Emperor Theodosius II about the liturgical use of the Gospels (P. G., LXXVI, 471). In Africa, Tertullian mentions the same thing (adv. Marc., IV, 1) and tells us that the Roman Church "reads the Law and the Prophets together with the Gospels after the Gospel" (prescr., VI, 36). St. Cyprian ordained a certain consecrated named Aurelian that he might "read the Gospel that forms martyria" (Ep. xxxiii, P. L., IV, 328). In every rite then, from the beginning, as now, the reading of the Gospel formed the chief feature, the cardinal point of the liturgy that is normally read in the Liturgy. The "Peregrinatio Silvia" (loc. cit.) alludes to the Gospel read at cock-crow. So in the Byzantine Rite it still forms part of the Office of Orthros (Lauds). At Rome the Gospel of the Liturgy was read first, with a homily, at Matins, of which use we have now only a fragment. But the monastic Office still contains the whole Gospel read after the Te Deum.

Gradually the portions to be read in the Liturgy became fixed. The steps in the development of the texts used are: first in the book of the Gospels (or complete Bible) marginal signs are added to show how the text is drawn up to show which passages are appointed for each. These indexes (generally written at the beginning or end of the Bible) are called Synagoria in Greek, Capitularia in Latin; they give the first and
last words of each lesson (pericope). The complete Capitularium giving references for all the Lessons to be read each day is a Comes, Liber comitis, or comitum. Laterly there are come with the whole text, so as to dispense with searching for it; they have thus become Evangeliaria. The next step is to arrange together all the Lessons for each day, Prophecy, Epistle, Gospel, and even readings from non-canonical books. Such a compilation is a Lectionarium. Then, finally, when complete lessons are to be found in the tenth to thirteenth centuries, the Lessons are included in them.

II. SELECTION OF GOSPELS.—What portions were read? In the first place there was a difference as to the text used. Till about the fifth century it seems that in Syria, at any rate, compilations of the four Gospels made into one narrative were used. The famous "Diasteron" of Tatian is supposed to have been composed for this purpose (Martin in Revue des Qest. Hist., 1883, and Savi in Revue bibl., 1893). The Mozarabic and Gallican Rites may have imitated this custom for a time (Cabrol, "Etude sur la Peregri nation Silvii", Paris, 1895, 188-9). St. Augustine made an unsuccessful attempt to introduce it in Africa by inserting into one Gospel passages taken from the others (Sermon 232, P. L., XXXVIII., 1108). But the commoner use was to read the text of one of the Gospels as it stands (see Baudot, "Les Evangeliaires", quoted below, 18-21). On great feasts the apostles of the passage were added. The "Peregrinatio" gives us the Gospels as read for a number of days throughout the year (Baudot, op. cit., 20). For the rest of the year it seems that originally the text was read straight through (probably with the omission of such special passages). At each Synaxis they began again where they had left off last time. Thus Cassian says that in his time the monks read the New Testament through (Coll. patr., X, 14). The homilies of certain Fathers (St. John Chrysostom, St. Augustine, etc.) show that the lessons followed each other in order (Bäumer, "Gesch. des Breviers", Freiburg, 1895, 271). In the Eastern Churches the principle of the "Catholic" may have been that the Four Gospels should be read straight through in the course of each year (Scrivenem in Smith, "Dict. of Christ. Antiquities", s. v. "Lectionary"). The Byzantine Church began reading St. Matthew immediately after Pentecost. St. Luke followed from September (when their new year begins), St. Mark began before St. John, and St. John was read during Eastertide. There were some exceptions, e.g. for certain feasts and anniversaries. A similar arrangement is still observed by them, as any copy of their Gospel-book will show (Εὐαγγελίον, Venice, 1893). The Syrians have the same arrangement, the Copts a different order, but based on the same principle of continuous readings (Scrivenem, "Introduction to the criticism of the N. Test.", London, 1894, I; Baudot, op. cit., 24-32). For the present arrangement of the Byzantine Church see Nilles, "Kalendarnium manuale", Innsbruck, 2nd ed., 1897, pp. 444-52. It is well known that they name their Sundays after the Sunday Gospel, e.g. the fourth after Pentecost is "Sunday of the Centurion" because Matt., viii, 5 sq., is read then. This brings us to a much-disputed question: what principle underlies the order of the Gospels in the Roman missal? It is clearly not that of continuous readings. Father Beissel, S.J., has made an exhaustive study of this question ("Entstehung der Continuierlichen Reproduktion", in which he compares all manner of Comites, Eastern and Western. Shortly, his conclusions are these: The root of the order is the selection of appropriate Gospels for the chief feasts and seasons of the year; for these, the account that seemed most complete was chosen, without regard to the particular Evangelist. The intervals were then filled up so as to complete the presentation of the Lord's life in a logical and historical order. First, Easter was considered with Holy Week. The lessons for this time are obvious. Working backwards, in Lent the Gospel of Our Lord's fast in the desert was put at the beginning, the entry to Jerusalem and the anointing by Mary (John, xii, 1, "six days before the Pasch he entered into Jerusalem"), etc. This led to the resurrection of Lazarus (in the East, St. John, xi). But the place). Some chief incidents from the end of Christ's life filled up the rest. The Epiphany suggested the Gospel about the Wise Men, the Baptism, and the first miracle, which events it commemorates (e. g. Antiph. ad Magn., in 2 vesp.) and then events of Christ's childhood. This continuous method did not have obvious Gospels; Advent, those of the Day of Judgment and the preparation for Our Lord's coming by St. John Baptist. Forward from Easter, Ascension Day and Pentecost demanded certain passages clearly. The time between was filled with Our Lord's last messages before He left us (taken from His words on Maundy Thursday in St. John). There remains the most difficult set of Gospels of all—those for the Sundays after Pentecost. They seem to be meant to complete what has not yet been told about His life. Nevertheless, their order is very hard to understand. The hypothesis that they are meant to correspond to the lessons of Matins is not in accord with Homilies, and at any rate, such a comparison is tempting. Thus, on the third Sunday, in the first Nocturne, we read about Saul seeking his father's asses (I Kings, ix), in the Gospel (and therefore in the third Nocturne) about the man who loses one sheep, and the lost drachma (Luke, xv), on the fourth Sunday, David fights Goliath ("in nomine Domini exercituum") (I Kings, xvii), in the Gospel, St. Peter throws out his net "in verbo suo" (Luke, v); on the fifth, David mourns his enemy Saul (II Kings, i), in the Gospel we are told to be reconciled to our enemies (Matt., v). The eighth Sunday begins the Book of Wisdom (first Sunday in August), and in the Gospel the wise steward is commended (Luke, vii). Perhaps the nearness of certain feasts had an influence, too. In some lists Luke, v, where our Lord says, "From henceforth thou shalt catch men", to St. Peter, came on the Sunday before his feast (29 June). Saul, the story of St. Andrew and the multiplied bread (John, vi) before 30 November. Durandus notices this ("Rationale", VI, 142, "De dom. 25a pot. Pent."); see also Beissel, op. cit., 195-6). Beissel is disposed to think that much of the arrangement is accidental, and that no satisfactory explanation of the order of the Gospels after the mid-fourth century has been found. In any case the order throughout the year is very old. A tradition says that St. Jerome arranged it by command of St. Damasus (Berno, "De officio missarum", i, P. L., CLXII, 1057; "Micrologus", xxx, P. L., CLI, 999, 1003). Certainly the Lessons now sung in our churches are those that St. Gregory the Great's deacon chants at Rome thirteen hundred years ago (Beissel, op. cit. 196).

III. CEREMONY OF SINGING THE GOSPEL.—The Gospel has been for many centuries in East and West the privilege of the deacon. This was not always the case. At first a reader (διδασκόντης, lector) read all the lessons. We have seen a case of this in the story of St. Cyprian and Aurelian (see above). St. Jerome (d. 420) speaks of the deacon as reader of the Gospel (Ep. clxxvi, n. 6), but the practice was not yet uniform in all churches. At Constantinople, on Easter day, the bishop did so (Socom, H. E., vii, 19); in Alexandria it was an archimandrite ("Αρχιμανδριτής", see below), in other places deacons read the Gospel; in many churches only priests). The Apostolic Constitutions refer the Gospel to the deacon; and in 527 a council, at Vaison, says deacons are "worthy to read the words that
Christ spoke in the Gospel” (Baudot, op. cit., 51). This custom became gradually universal, as is shown by the formula that accompany the tradition of the Gospel-book at the deacon’s ordination (the eleventh century Visigothic “Liber ordinum” has the form: “... in Christi, accepit, ex qua semita est bonam gratiam fidei populo”, Baudot, p. 52). An exception that lasted through the Middle Ages was that at Christmas the emperor, dressed in a rochet and stole, sang the midnight Gospel: “Exit edictum a Cesare Augusto” etc. (Mabillon, “Museum italicum”, I, 250, sqq.). The mark of respect was that everyone who stood to hear the Gospel, bareheaded, in the attitude of a servant receiving his master’s orders (Apost. Const., II, 57, and Pope Anastasius I, 399-401, in the “Lib. Pontif.”). Sozomenos (H. E., VII, 19) is indignant that the Patriarch of Alexandria sate (“a new and insolent practice”). The Grand Masters of the Knights of St. John drew their swords while the Gospel was read. This custom seems still to be observed by some great noblemen in Poland. If any one has a stick in his hand he is to lay it down (Baudot, 110), but the bishop holds his crosier (see below). The Gospel was sung from the ambo (affton), a pulpit set half-way down the church, from which it could be best heard by every one (Cabrol, Diet. d’archéol. chrét. et de liturgie, Paris, 1907, s.v. “Ambon”, I, 1330-47). Often there were two ambones: one, for the other lessons, on the left (looking from the altar); the other, for the Gospel, on the right. From here the deacon faced south, as the “Ordo Rom. II” says (Mabillon, “Museum italicum”, II, 49), noting that the men generally gather there. Moreover, when the ambo had disappeared, the deacon turned to the north. Micrologus (De missa, ix) notices this and explains it as an imitation of the celebrant’s position at the altar at low Mass—of the ways in which that service has reacted on to high Mass. The Byzantine Church still commands the deacon to sing the Gospel from the ambo (e.g. Brightman, op. cit., 372), though with them, too, it has generally become only a theoretical place in the middle of the floor. The deacon first asked the blessing of the bishop (or celebrant) then went to the ambo with the book, in procession, accompanied by lights and incense. Germanus of Paris (d. 576) mentions this (Ep. I, I, 30, iii, 23, 17; cf. Durandus, “Rationale”, IV, 24). See the ceremonies in the “Ordo Rom. I”, 11, and “Ordo Rom. II”, which are almost exactly ours. Meanwhile the Gradual was sung (see Gradual). The “Dominus vobiscum” at the beginning, the announcement of the Gospel (“Sequentia sancti Evangelii” etc.), and the answer, “Gloria tibi Domine” are also mentioned by the sixth-century Germanus (loc. cit.). At the end of the Gospel the people answered, “Amen,” or “Deo Gratias,” or “Benedictus qui venit in nomine Domini” (Durandus, “Rationale”, IV, 24; Beleth, “Rationale”, XXXIX; St. Benedict’s Rule, XI). Our present answer, “Laus tibi Christe”, seems to be a later one (Ghir, “Messopfer”, 444). The elaborate care taken to decorate the book of the Gospels through the Middle Ages was also a sign of respect for its cross first on the book and then on himself—taking a blessing from the book (“Ordo Rom. I”, 11, “ut sigillumur”; Durandus, loc. cit., etc.; Beleth, XXXIX). The meaning of all these marks of reverence is that the Gospel-book, where Christ’s words were taken as a symbol of Christ himself. It was sometimes carried in the place of honour in various processions (Beissel, op. cit., 4); something of the same idea underlay the practice of putting it on a throne or altar in the middle of the synods (Baudot, 109-110). During provincial and general synods the Gospel is to be sung at each session.—Car. Ep. I, xxxi, 16), and the superstitious abuses that afterwards developed, in which it was used for magic (ibid., 118; Catalani, “de codice S. Evangelii”, III, see below). The Byzantine Church has developed the ceremony of carrying the Evangelion to the ambo into the elaborate rite of the “Little Entrance” of the Liturgy of St. John Chrysostom”, London, 1908, 68-74), and all the other Eastern Churches have similar stately ceremonies at this point of the Liturgy (Brightman, op. cit., for each rite). Another special practice that may be noticed here is that at a papal high Mass the Gospel (and the Epistle too) is read in Latin and Greek. This is already noticed by the first Roman Ordo (40). At Constantinople the Patriarch, on Easter Day, reads the Gospel in Greek, and it is then read by other persons (of δυνα λαοπλείας δια πλούτον) for that day, ed. Athens, 1908, pp. 306, 372, Nilles, “Kal. man.”, II, 314-15). The same thing is done again at the Hesperinos. The little Synopsis (Διηγήματα εἰς) of Constantine (1883) gives this Gospel of the Hesperinos (John, xx, 19-25)
in Greek (with two poetic versions, hexameter and iambic), Slavic, Bulgarian, Albanian, Latin, Italian, French, English, Arabic, Turkish and Armenian (all in Greek characters, pp. 634–73). The same custom is observed in Russia (Prince Max of Saxony, "Processio de liturgia orientalibus", Freiburg im Br., 1908, I, 116–17), where the Gospel of the Liturgy (John, i) is read in Slavonic, Hebrew, Greek, and Russian.

IV. PRESENT CEREMONY OF THE GOSPEL.—Except for the disappearance of the ambo, the rules of the Rubrics in the Missal (Rubr. gen., X, 6; Ritus cel., VI, 5) are still almost exactly those we have seen observed in the Roman Rite since the seventh or eighth century. The Epistle begins on the gospel book in the middle of the altar (while the celebrant reads his Gospel from the Missal). Liturgical editors publish books containing the Epistles and Gospels, otherwise a second Missal is used (the subdeacon has already chanted the Epistle from the same book).

The celebrant then passes into the thurible and blesses it as usual. The subdeacon goes down and waits below, before the middle of the altar. The deacon kneeling by the celebrant just behind him at his right says the "Munda cor meum". Then, rising and taking the book, he kneels with it before the celebrant (kneeling towards the one that reads, he) and says "Domine nobis benedicere". Jube with an infinitive is a common late Latin way of expressing a polite imperative (Dusange-Maigne d'Arnis, "Lexicon manuale", ed. Migne, Paris, 1890, a. v., col. 1235). Domimus is a medieval form instead of dominus, which got to be looked upon as a Divine title (so in Greek, εστι and εσται for εστίν).

The celebrant blesses him with the form in the Missal (Domimus sit in corde tuo ...) and the sign of the cross, before the celebrant's hand laid on the Missal. The celebrant goes to the Epistle side, where he waits; he turns round towards the deacon while the Gospel begins. The deacon, holding the book lifted up with both hands, stands in front of the subdeacon's side; they make the usual reverence to the altar, and the procession starts. The thurifer goes first with incense, then two acolytes, then the deacon and subdeacon side by side, the deacon on the right. We have seen the antiquity of lights and incense at the Gospel. All this time, of course, the Gradual is being sung.

The procession arrives at the place that represents the old ambo. It is still to the right of the altar (north side), but now inside the sanctuary, so that, except in very large churches, there is hardly any way to go, often the old procession to the right (Latin "little entrance") is replaced by an awkward turning round. Arrived at the place, the deacon and subdeacon face each other, the subdeacon receives the book and holds it up open before him. Originally the subdeacon (two are required by the Ordo Rom. I., 11, one as thurifer) accompanied the deacon up to the now ambo, helped him find his place in the book, and then stood back behind him by the steps. At Milan, where the ambo is still used, this is still done.

In the Roman Rite the subdeacon himself takes the place of the desk of the ambo. But the "Cerimonia Episcoporum" still allows the use of "legillus vel amphibones" if there be any in the church. In that case the subdeacon is to stand behind the desk or at the deacon's right and to turn over the pages if necessary (II, viii, 45). There is a difficulty about the way they stand. The Ritus celebrandi says that the deacon is to stand on his right side "as a vir ille, suum populum" (IV, viii, 41). This must mean looking down the church. On the other hand the "Cerimum Episcoporum" (II, viii, 44) says that the subdeacon stands "vertens renes non quidem altari, sed versus ipsam partem dexteram quae pro aquilone figuratur". This means the way in which they stand now; namely, the deacon looks north or slightly north-east (supposing the church to be properly orientated); the book is in the same direction as the Missal for the Gospel at low Mass. The subdeacon reads the thurifer at the deacon's right. The deacon, junctis manibus, sings "Dominum vobiscum" (answered by the choir as usual), then, making the sign of the cross with the right thumb on the book (the cross marked at these words in the Missal is put there to show the choir the line), and signing himself on the breast, he sings "Sequentia [or Initium] sancti Evangelii secundum N. . . ." It appears that sequentia is a neuter plural (Gihb, op. cit., 438, n. 3). While the choir answers, "Gloria tibi Domine", he incenses the book three times, in the middle, to its right, and left. Then, the deacon reading before the book begins, and sings the text of the Gospel straight through. He bows at the Holy Name, if it occur, and sometimes (on the Epiphany, at the third Christmas Mass, etc.) genuflects (towards the book). The tones for the Gospel are given at the end of the new (Vatican) Missal.

The normal one is a recitative on do falling to la four syllables before the end of each phrase, with the cadence si, la, si, si-do for questions, and a scandicus la, si (guillimis), do before the end. Two others, more ornamented, are now added ad libitum. The celebrant, standing at the Epistle side, looking towards the deacon, hearing the Gospel, kneels before him, but towards the altar. When the Gospel is over the subdeacon brings him the book to kiss, he says: "Per evangelica dicta", and he is incensed by the deacon. The Mass then continues.

We have noted that the only other persons now allowed to kiss the book are the ordinaries, if he be present, and other prelates above him in rank (Carr. Episcop., I, xxx, I, 3).

A bishop celebrating in his own diocese reads his Gospel sitting on his throne, and he is standing there, holding his crosier with both hands (Carr. Episcop., II, vii, 41, 46). In this case no one else is ever to kiss the book (ibid., I, xxix, 6).

In low Masses, ceremonies for the Gospel are, as usual, merely an abridgment and simplifying of those for high Mass. When the celebrant has finished reading the Gradual he says the "Munda cor meum", etc., in the middle of the altar (he says, "Jube Domine benedicere", because he is addressing God). Meanwhile the server brings the Missal to the north side (this is only an imitation of the deacon's place at high Mass). With the book turned slightly towards the people, the priest reads the Gospel with the same ceremonies (except, of course, for the incense) and kisses it at the end.

THE LATER GOSPEL.—The Gospel read at the end of Mass is a late development. Originally (till about the twelfth century) the service ended with the words that still imply that, "Ite missa est". The prayer "Placeat tibi", the blessing, and the last Gospel are all private devotions that have been gradually absorbed by the Liturgical service. The last Gospel of St. John's Gospel (1, 1–14) was much used as an object of special devotion throughout the Middle Ages. It was sometimes read at children's baptism or at extreme unction (Benedict XIV, "De SS. Missae sacrifr.", II, xxiv, 8). There are curious cases of its use for various superstitious practices, written on amulets and charms. It then began to be recited by priests as part of their prayer after Mass. A trace of this is still left in the "Cerimonia Episcoporum", which directs that a bishop at the end of his Mass shall begin the last Gospel at the altar and continue it (by heart) as he goes away to take off the vestments. It is noted that it is still not printed in the Ordinary of the Mass, but the rubric about it is there, and it will be found in the third Christmas Mass. By the thirteenth century it was sometimes said at the altar. But Durandus still supposes the Mass to be finished by the "Ite missa est" (Rationale, IV, 57); he adds the "Placeat" and blessing as a sort of supplement, and then goes on at once to
describe the psalms said after Mass ("deinde statim dicetur hymni illi: Benedictic et Laudate", IV, 59). Nevertheless, the practice of saying it at the altar ground was at the end of his friar's career, for the Roman Rite in his edition of the Missal (1570). The fact that all these three additions after the "Ita missae est" are to be said, even at high Mass, without any special ceremony, preserves the memory of their more or less accidental connexion with the liturgy. The normal last Gospel is John, i. 1-14. It is read by the celebrant at the north side of the altar after the blessing. He reads from the altar-card with the usual introduction (Dominus vobiscum . . . Initium S. Evangelii, etc.), taking the sign of the cross from the altar. He genuflects at the words, "Et verbum caro factum est", and on receiving the host, "Passa transmigration". At high Mass the deacon and subdeacon stand on either side, genuflect too, and answer. They do not read the Gospel; it is in no way to be sung by the deacon, like the essential Gospel of the Liturgy. Whenever an office is commemorated, whose Gospel is begun in the ninth lesson of Matins, that Gospel is set at the end of the low Mass, and in the case of the Missal must be brought to the north side (at high Mass by the subdeacon). This applies to all Sundays, feasts, and vigils that are commemorated. At the third Mass on Christmas day (since John, i. 1-14, forms the Gospel of the Mass) that of the Epiphany is usual. The low Mass, the reading of the lessons and the Gospel of the blessing of palms is read. Of Eastern Rites the Armenians alone have copied this practice of the last Gospel from the Latin.

All the medieval commentators (Durandus, Berno of Constantine, Micahel, etc.) discuss the Gospel at Mass and give mystic explanations of its use. See especially Durandus, Examen de affectuum, v. 24, De Evangelio; Bernard of Burk, Entstehung der Uniformen des romanischen Messbuches (supplement to the Stimm und Motor-Loch, 96) (Freiburg im Br. 1895), series Liberique (Paris, 1898); HENRY, D. De Sacramentis Sacrae Missae, ed. SCHNEDER (Munich, 1894), ii, 7, pp. 22-23, 14, 24, pp. 197. GILL, Die Apostel, v. 19 (Freiburg, 1897), 433-445, 723-724 (ts. St. Louis, 1903); DE HEDRIN, Sacra Liturgia praxis (ed. 9, Louvain, 1894), i, 292-38, 436-436.

ADRIAN FORTESCUE.

GOSS, ALEXANDER, second Bishop of Liverpool; b. at Ormskirk, Lancashire, 5 July, 1814; d. at St. Edward's College, Liverpool, 3 Oct., 1872; connected on both sides with old Lancashire families who had always been Catholics; his father, Rev. John H. Goos or Gosses, his mother from the Rutters. His maternal uncle, the well-known priest, Rev. Henry Rutter, sent him to Ushaw College, 20 June, 1827, where he distinguished himself as a student. When he had completed his philosophy course, he was appointed as a "minor professor" to teach one of the classes in the humanity schools. On the death of his uncle, he spent the legacy he received, in going to Rome, where he studied theology at the English College, and was ordained priest, 4 July, 1841. On his return to England, early in March, 1842, he was sent to St. Wilfrid's Church, Manchester, but in the following October he was appointed vice-president of the newly-founded college of St. Edward, Everton, near Liverpool. Fr. Gooss held this office until he was chosen coadjutor-bishop to Dr. Brown, ten years later. He was consecrated by Cardinal Wiseman, at Liverpool, 25 Sept., 1852, and as there was no pressing need of his services, he took the opportunity to pay a long visit to Rome. On 25 January, 1856, he became Bishop of Liverpool by the death of Dr. Brown, and from that time his commanding personality made him a most prominent figure in that city. His lofty stature, dignified bearing, and vigorous speech were the first characteristics of a straightforward character. He showed a vast amount of apostolic zeal in the duties of his sacred office, and was an eloquent preacher and a powerful controversialist. He was the beau-ideal of the rugged folk from which he derived—the old recusants of Lancashire—the mainstay of the old Faith in England; which character obtained for him the respect of his adversaries, the estimation of his friends, and the admiration of the people at large, as being a typical Englishman, blunt, manly, and honest. He seldom used any words that were not of Anglo-Saxon origin, and he never indulged in any ambiguities of speech. In politics, he followed the Conservative party. Under his firm administration, Catholicity made great advances; many churches and schools were built, and the bishop proved an unflinching champion of Catholic education. His fearless denunciation of social evils, and his outspoken expression of opinion attracted the notice of the Press, and even "The Times" asserted special attention to his "unanswerable logic". An account of Harkirkie burial-ground for recusants, and an introduction written by him were published by the Chetham Society in Croisy Records (M. S., 12, 1887). He also collected materials for a history of Catholicity in the north, and edited Drioux's "Sacerdotal History," and Greef's "History of the Reformation of the Church of England," and founded a "Catholic Quarterly". For many years he suffered so much that his friend, Rev. T. E. Gibson, wrote of him (Lydiate Hall and its Associations, Introd.): "A prey to disease during the greater part of his episcopate, his life was the struggle of a fearless soul with bodily ailments and with the harassing mental anxieties incidental to his position." He was seized with his last illness suddenly, and he passed away the same evening. There are two paintings of the bishop at St. Edward's College, Liverpool.

GOSSAERT, JAN, called MABUSE from Maubeuge in Hainault; Flemish painter; b. about 1472; d. at Middelburg about 1533. Nothing is known of him till after the age of thirty. In 1508 he went to Rome with the embassy of Philip of Brabant, Duke of Cleves, and Abbot of Middelburg, sent to Julius II by the Archduchess Marguerite. The visit occupied a year. On his return, Mabuse remained in the service of Philip, who had become Bishop of Utrecht. Perhaps he also accompanied him to Copenhagen (1515). This prince was a collector, a lover of the beautiful, especially of elegant villas, fountains, and ornamental waterspouts. After his death in 1524 Mabuse entered the service of Adolphus of Burgundy, Marquis of Veere. He lived at his court, sharing his friendship and that of Christian of Denmark, a prisoner of the Archduchess, always enjoying the liberality and good-will of the great, and leaving in the environs of the country from Van Eyck to Van Dyck. The tales of Van Mander dealing with his manners and pranks must be regarded as trivial gossip. He had married Marguerite de Molenser, by whom he had two children, Pierre, who was a painter like his father, and Henri, who married the painter, Henri van der Heyden.

The career of Mabuse is divided into two distinct periods by his visit to Rome. During the first period he is merely a noteworthy painter of the school of Memling and Gheeraert David. Good examples of this period are the panels of the altar of the church returning from the Sepulchre", and the picture, incorrectly called "The Honest Judges", which represents the centurion and his escort descending from Calvary. These are beyond doubt the two wings of a lost "Cruci-
The execution is bold, the painting compact and smooth, but the faces are wooden and slightly grimacing, the emotional portrayal being weak. What is most striking is the power of touch, the carving of the faces as with a chisel, the almost sculptural effect. The brilliance of Gosselin's groups of Michael Angelo or Raphael was yet completed. But all Italy was filled with enthusiasm for the monuments of antiquity. Mabuse devoted his whole sojourn to studying and copying for Philip of Burgundy the ruins of Rome. The first result of this journey was a change in his decorative scheme, to which we owe the architectural backgrounds, the colonnades, the palaces, the visions of a world of marble with magnificent pediments, which raise their noble outlines in his pictures. It is plain that all this archeology is quite destitute of scientific value. It is nevertheless of extreme importance, for it was by these ruins that the archeologists of the Renaissance movement—Brunellesco, Alberti, and Bramante—were architects. It was through them that the world of Vitruvius dethroned the Gothic world. With architecture the whole system of the arts altered its principles, and was reorganized on a rational basis and a monumental scale.

This revolution is readily apparent in the works of Mabuse. Statures grow taller, forms expand to preserve their proportion with the heroic scale of the decorative scheme; the nude banishes the flowing draperies; colour becomes thin; edges begin to merge into less rigid lines; the palette fades and assumes the cold tones of fresco. The triumph of the "Descent from the Cross" in the church of the Premonstratensians at Middelburg, which Dürer admired in December, 1520, was unfortunately burnt in 1568. But the triptych of Prague, "St. Luke painting the Blessed Virgin" (1515), and above all the "Adoration of the Magi" of Howard Castle (Earl of Carlisle), with its twenty figures of life size, its animation, its breadth of conception, its vibrating life, enabled us to understand the emulation produced in the Flemish school by such original conceptions. It was in fact the grand historical style of painting that Mabuse sought to extend throughout Europe, and as author of cartoons for tapestry ("Legend of Herkenbald", Brussels) he retains, nevertheless, mingled with the taste of the Renaissance something of the flamboyant imagination displayed in the cathedral of Bruges. He seems less happy in his easel pictures, above all in the treatment of mythological and legendary subjects, which he was the first to treat and to spread throughout the North. His "Amphitrite" at Berlin (1516), his "Danaë" at Munich (1527), his "Lucretia" at the Colonna Gallery are paintings at once awkward and affected, unnatural, almost ridiculous. All the splendor of pagan epic escapes him. This portion of his work which most impressed his contemporaries, and Guichard, as well as Van Mander, lauds him as the first to emancipate Flemish art from theology and transport it to the wholly natural sphere of humanism.

Finally, Mabuse was a portraitist of considerable importance. The "Children of Christian of Denmark" at Hampton Court, the "Carondelet" at the Louvre (1517), and the "Monk" at the same museum, are pieces of a vigour that has never been surpassed. The outline of the model here attains a relief comparable to high relief. The painting is in a silver tone, thin, almost without substance. The Mabuse design is the best, quite as accurate as that of Holbein. The "Virgins" of Mabuse are also portraits; the best, those of the Louvre and of Douai, already portray the beautiful Flemish type, the fleshy oval, the transparency of the skin, which subsequently constitute the uniform grace of the Madonnas of Rubens. The spiritual beauty of Memling is absent; the charm is that of a beautiful woman. The nimbus has lost its significance; the ideal image is expressed solely by a subtle glance, and a more resplendent light. Mabuse's historical importance is very great. Although he trained no pupils, his influence was felt by all. At Flanders he pointed out the way of the future, the path of the Renaissance. He had the good fortune to be the first-comer, and to be prepared from the excesses of unities, gigantism and ridiculous imitation into which his successors fell, e.g. the Heemskirks, the Floris, and Martin de Vos. What he most lacked was feeling, true inspiration. He falls far below the exquisite poetry of Massys, but he realized much more clearly the trend of art. If his masterpiece, the picture at Howard Castle, were not almost inaccessible to the general public, it would be seen that Rubens, throughout the sixteenth century, had no greater precursor in his country.

Louise Gillet.

Gosselin, Jean-Edme-Auguste, ecclesiastical author; b. at Rouen, France, 28 Sept., 1787; d. at Paris, 27 Nov., 1858. He studied philosophy and theology at St-Sulpice, Paris, 1806–11; became professor of dogma, while yet a subdeacon, after the expulsion of the Sulpicians by the seminary by Napoleon, 1811; was ordained priest, 1812. On the return of the Sulpicians (1814) he entered their society; was vice-president of the seminary at Fays, 1814–30; professor of theology to the candidates for the society, 1814–18; superior of the seminary from 1831 to 1844, when the feeble state of his health, which had always been delicate, obliged him to resign. His increasing infirmities from that time till his death permitted him to render little service except by his pen and the example of his piety, industry, and fortitude. A charming portrait of M. Gosselin has been left by Ernest Renan; in his "Lettres du Séminaire" we see the impression produced on him by his personality: "A discreet, modest, sober, prudent, his vast and varied erudition. And in the work of his old age, "Souvenirs d'enfance et de jeunesse", Renan says: "He was the most polished and amiable man whom I have ever known."

Besides many minor writings of service in their day, Gosselin left three works which are still of great value. The first is the standard edition of Fénelon in twenty-two volumes (1820–24), to which he added his correspondence in eleven volumes (1827–29), besides a corrected and enlarged edition of Bauset's "Histoire de Fénélon" and other works. He remained to the death of the Archbishop of Cambrai. Gosselin's edition is valuable for its notes and discussions, but its accuracy has been somewhat marred by his partiality for Fénelon. Out of it grew his best-known work, "Pouvoir du Pape au moyen âge" (1839; 2nd edition, 1845; tr. as "The Power of the Popes during the Middle Ages", Baltimore, 1853). This remains the classic text on the subject, though in part superseded by Mgr Duchesne's researches. It proved beyond question that the popes exercised temporal power over sovereigns during the Middle Ages. Orestes Brownson, in several articles devoted to it, while admitting its great exhibition, attacked Gosselin's method. But this was a very large concession and a discrimination between (Féne- lon), that this power was derived not from Divine authority, but from the public law of that period. Gosselin lived to complete his valuable "Vie de M.
Emery" which was revised and published (1861) after his death.

JOHN F. FENLON.

GOSWIN. See MEERENBURG.

GOTHE (or Guten), J ohn, priest and controversialist, b. at Southampton, date unknown; d. at sea on a voyage to Lisbon, 2 October, 1704 (O.S.). Educated a strict Presbyterian, he became a convert and entered the English College at Lisbon in 1688. He was ordained priest in 1682, and then returned to England to work on the mission in London. He was of a very retiring disposition, and soon began to devote most of his time to controversial writings, with which he began in 1685. His famous work, "A Papist Misrepresented and Represented," contains a long list of the vulgar errors regarding Catholic doctrine and practice together with his masterly refutations of them, and is as appropriate for use in controversy to-day, as when it was written, with the solitary exception of his remarks about Papal infallibility, which need to be brought up to date. This work brought no less an antagonist than Stillington into the lists, together with a host of the lesser lights of Anglican Divinity, and then there arose a prolonged series of answers, rejoinders, and refutations, throughout which Gotthe single-handed more than maintained his position. His literary style was exceedingly pure, and was often a great factor in winning converts to the Church. His trenchant simplicity has often been compared to Swift at his best. Dryden once facetiously remarked that Gotthe was the only person, except himself, who knew how to write English.

He was afterwards chaplain to George Holman of Warkworth Castle, Northamptonshire, where he received into the Church and instructed Challoner, then a youth, the future celebrated Bishop and Vicar Apostolic of the London District. Shortly before his death, Gotthe was proposed as a possible successor to Bishop Ellis of the Western District. He died at sea on a voyage to Lisbon, having received the last rites from a priest who chanced to be on board. The master of the vessel was so impressed with Gotthe that he preserved the body of the English College at Lisbon, where it was interred. His principal works are "A Papist Misrepresented and Represented, or a two-fold Character of Popery" (original ed., London, 1665; has passed through numerous editions down to the present day; another edition is that of Bishop Challoner with additions), also published as a tract by the Catholic Truth Society; "Nubes Testim, or a Collection of the Primitive Fathers" (London, 1686); "The Sincere Christian's Guide in the choice of a Religion" (London, 1804); "Instructions on the Epistles and Gospels of the Whole Year" (London, 1758); "The Sinner's Complaint to God" (London, 1839); "Principles and Rules of the Gospel" (London, 1718); "A Practical Catechism"; "Instructions and Devotions for Hearing Mass" (London, 1767); "Instructions for Confession, Communion and Confirmation" (Dublin, 1825); and many other similar works.

C. F. WENTZ BROWN.

Gothic Architecture. — The term was first used during the later Renaissance, and as a term of contempt. Since then it has been used as the term for buildings which are barbarous nations erected buildings in that style which we call Gothic", while Evelyn but expresses the mental attitude of his own time when he writes, "The ancient Greek and Roman architecture answered all the perfections required in a faultless and accomplished building;"— but the Goths and Vandals destroyed these and introduced in their stead a certain fantastic and licentious manner of building, congestions of heavy, dark, melancholy, monkish piles, without any just proportion, use or beauty." For the first time, an attempt was made to destroy an instinctive and, so far as Europe was concerned, an almost universal form of art, and to sublimate in its place another built up by artificial rules and premeditated theories; it was necessary, therefore, that the buildings should be cleared of a once luxuriant growth that still showed signs of vitality, and to effect this the schools of Vignola, Palladio, and Wren were compelled to throw scorn on the art they were determined to discred. As ignorant of the true habitat of the style as some were of its nature, the Italians then called it the "maniera Tedesca," and since from time to time the word Goth implied the perfection of barbarism, it is but natural that they should have applied it to a style they desired to destroy. The style ceased, for the particular type of civilization it expressed had come to an end; but the name, like so many others, outlived the idea, and, as the term, was applied to more expressive of the idea of barbarity then, in the nineteenth century, the beginnings of a new epoch brought new apologists, the old title was taken over as the only one available, and since then constant efforts have been made to define it more exactly, to give it a new significance, or to substitute in its place a more expressive and more descriptive one. The word itself, in its present application, is repugnant to any sense of exact thought; ethnically, the art so described is immediately Franco-Norman in its origins, and between the Arian Goths, on the one hand, and the Catholic Franks and Normans, on the other, lies a racial, religious and chronological gulf. With the conquest of Italy and Sicily by Justinian (535-553) "the race and name of Ostrogoths perished for ever" (Bryce, "The Holy Roman Empire," III, 29) five centuries before the beginnings of the art that bears their name. Modern scholarship seeks deeper even than racial tendencies for the root impulse of art in any of its forms, and apart from the desirable correction of an historical anachronism it is felt that medieval art (of which Gothic architecture is but one category), since it owes its existence to influences and tendencies stronger than those of blood, demands a name that shall be exact and significant, and indicates more of the very features in which it now is held.

But little success has followed any of the attempts at definition. The effort has produced such varying results as the epitaphs of Vasari and Evelyn, the nebulous or sentimental paraphrases of the early nineteenth-century romantics, the severe and precise definitions of De Caumont, and the rigid formalities of the more learned logicians and structural specialists, such as MM. Violet Le Duc, Antheime St-Paul, and Enlart, and Professor Moore. The only scientific attempt is that of which the first was the originator, the last the most scholarly and exact exponent. Consciously stated, the contention of this school is that "the whole scheme of the building is determined by, and its whole strength is made to reside in a finely organized and frankly confessed framework rather than in walls. This framework, made up of piers, arches and buttresses, is freed from every unnecessary incommensurate of wall and is rendered as light in all its parts as is compatible with strength—the stability of the building depending not upon inert massiveness, except in the outermost abutments, but upon logical adjustment of active parts whose opposing forces neutralize each other and produce a perfect equilibrium. It is thus a system of balance, not a system of inert stability. Gothic architecture is such a system carried out in a finely artistic spirit." (Charles H. Moore, "Development and Character of Gothic Architecture," I, 8). This is an admirable statement
of the fundamental structural element in Gothic architecture, but, carried away by enthusiasm for the crowning achievement of the human intellect in the domain of construction, those who have most clearly demonstrated its pre-eminence have usually fallen into the error of declaring this one quality to be the touchstone of Gothic architecture, minimizing the importance of all aesthetic considerations, and so denying the name of Gothic to everything where the system of balanced thurts, ribbed vaulting, and concentrated loads did not consistently appear. Even Professor Moore himself has been accused of adhering to this criterion (Moore, op. cit., I, 8). The result is that all the medieval architecture of Western Europe, with the exception of that produced during the space of a century and a half, and chiefly within the limits of the old Royal Domain of France, is denied the title of Gothic. Of the whole body of English architecture produced between 1066 and 1328 it is said, "The English claim to any share in the original development of Gothic, or to the consideration of the pointed architecture of the Island as properly and exclusively English must be abandoned" (Moore, op. cit., Preface to first ed., 8), and the same is said of the contemporary architecture of Germany, Italy, and Spain. Logically applied, this rule would exclude also all the timber-roofed churches and the civil and military structures erected in France contemporaneously with the cathedrals, and would even extend to the west fronts of such admittably Gothic edifices as the cathedrals of Paris, Amiens, and Reims. As one of the most recent commentators on Gothic architecture has said, "A definition so restricted carries with it its own condemnation" (Francis Bond, "Gothic Architecture in England," I, 10). A still greater argument against the acceptance of this structural definition lies in the fact that while, as Professor Moore declares, "the Gothic monument, though wonderful as a structural organism, is even more wonderful as a work of art" (op. cit., V, 190), this great artistic element, which for more than three centuries was predominant through the greater part of Western Europe, existed quite independently of the supreme structural system, and varies only in minor details of racial bias and of presentation, whether it is found in France or Normandy, Spain or Italy, Germany, Flanders, or Great Britain—this, which is in its very definition an attribute of the era it commemorates, and the actual accomplishments of the era it connotes, is treated as an accessory to a structural evolution, and is left without a name except the perfunctory title of "Gothic", which is even less descriptive than the word Gothic itself.

The structural definition has failed of general acceptance, for the temper of the time is increasingly impatient of materialistic definitions, and there is a demand for broader interpretations that shall take cognizance of underlying impulses rather than of material manifestations. The fact is recognized that among structural, the structural and the aesthetic elements of Gothic architecture lie other qualities of equal importance and greater comprehensiveness, and, if the word is still to be used in the general sense in which it always has been employed, viz., as denoting the definite architectural expression of certain peoples acting under definite impulses and within definite limitations of time, a completely evolved structural principle cannot be used as the sole test of orthodoxy, if it excludes the great body of work executed within that period, and which in all other respects has complete uniformity and a consistent significance.

It may be said of Gothic architecture that it is an image of a civilization rather than a perfectly rounded accomplishment; aesthetically, it never achieved perfection in any given monument, or group of monuments, nor were its possibilities ever fully worked out except in the category of structural science. Here alone, as Professor Moore has admirably shown, finality was achieved by the cathedral-builders of the Île-de-France, but this fact cannot give to their work exclusive claims to the name of Gothic. The result is a diversity of name only in the practice of the arts. Such a style is Gothic architecture, and it is to this style, regarded in its most inclusive aspect, that the term Gothic is applied by general consent, and in this sense the word is here used.

Gothic architecture and Gothic art are the aesthetic expression of that epoch of European history when paganism had been extinguished, the traditions of classical civilization destroyed, the hordes of barbarian invaders beaten back, or Christianized and assimilated; and when the Catholic Church had established itself not only as the sole spiritual power, supreme and unquestioned in authority, but also as the architect of the destinies of sovereigns and of peoples. During the first five centuries of the Christian era the Church had been fighting for life, first against a dying imperialism, then against barbarian invasions. The removal of the temporal authority to Constantinople and the restrictions on the Pope's power continued, though prolonged; and even in the west the arts, Greek, Roman, and Asiatic elements were fused in a curious andlercious, one result of which was an architectural style that later, and modified by many peoples, was to serve as the foundation-stone of the Catholic architecture of the West. Here, in the meantime, the condition had become one of complete chaos, but the end of the Dark Ages was at hand, and during the entire period of the sixth century events were occurring which could only have issue in the redemption of the West. The part played in the development of this new civilization by the Order of St. Benedict and by Pope St. Gregory the Great cannot be overestimated: through the former the Catholic Faith became a more living and personal attribute of the people, and began as well to force its way across the frontiers of barbarism, while by its means the long-lost ideals of law and order were in a measure re-established. As for St. Gregory the Great, he may almost be considered the founder of the church of the Holy Roman Empire, and the redemption of Europe was completed during the four centuries following his death, and largely at the hands of the monks of Cluny and Pope St. Gregory VII (1073-1085), who freed the Church from secular dominion. With the twelfth century were to come the equally potent Cistercian reformation, the revitlifying and purification of the episcopate and the secular clergy by the canons regular, the development of the great schools founded in the preceding century, the communes, the military orders, and the Crusades; while the thirteenth century, with the aid of Pope Innocent III, the Papal bull of 1208, and the arrival of the Franciscans and Dominicans, was to raise to the highest point of achievement the spiritual and material potentialities developed in the immediate past.

This is the epoch of Gothic architecture. As we analyse the agencies that together were to make possible a civilization that could blossom only in combination art, we find that they fall into certain definite categories. Ethnically the northern blood of the Lombards, Franks, and Norsemen was to furnish the physical vitality of the new epoch. Politically the Holy Roman Empire, the Capetian sovereigns of the Franks, and the Dukes of Normandy were to furnish that sense of national civilization is impossible, while the papacy, working through the irresistible influence of the monastic orders gave the underlying impulse. Normandy in the elev-
enth century was simply Cluny in action, and during this period the structural elements in Gothic architecture were brought into being. The twelfth century was that of the Cistercians, Carthusians, and Augustinians, the former infusing into all Europe a religious enthusiasm that clamoured for expression, while by their antagonism to the over-rich art of the elder Benedictines, they turned attention from decoration to plan and form, and construction. The Cistercian and the Cistercian reforms through their own members and the other orders which they brought into being were the mobile and efficient arm of a reforming papacy, and from the day on which St. Benedict promulgated his rule, they became a visible manifestation of law and order. With the thirteenth century, the episcopate and the secular clergy joined in the labour of adequately expressing a united and questioned religious faith, and we may say, therefore, that the civilization of the Middle Ages was what the Catholic Faith organized and invincible had made it. We may, therefore, with good reason, substitute for the underscriptive title "Gothic" the name "The Catholic Style" as being exact and reasonably inclusive.

The beginnings of the art that signalized the triumph of Catholic Christianity were to be found in Normandy. Certain elements may be traced back to the Carolingian builders, the Lombards in Italy, and the Copts and Syrians of the fourth century, and so to the Greeks of Byzantium. They are but elements however, germs that did not develop until infused with the red blood of the Norsemen and quickened by the spirit of the Cluniac reform. The style developed in Normandy during the eleventh century contained the major part of these elemental nups, which were to be still further fused and co-ordinated by the Franks, raised to final perfection, and transfigured by a spirit which was that of the entire medieval world. Marvelous as was this achievement, that of the Normans was even more remarkable, for in the style they handed on to the Franks was inherent every essential potentiality. At this moment Normandy was the focus of northern vitality and almost, for the moment, the religious centre of Europe. The founding of monasteries was very like a mania and the result a remarkable revival of learning; the Abbeys of Bec, Fécamp, and Jumièges became famous throughout all Europe, drawing to themselves students from every portion of the continent; even Cluny herself had in this to take second place. It was a very vigorous and a very widespread civilization, and architectural expression became imperative. Convinced that "she was playing a part and a leading part in the civilization of Europe... Normandy perceived and imitated the architectural progress of nations even far removed from her own borders. At this time there was no other country in Europe that for architectural attainment could compare with Lombardy. Therefore it was to Lombardy that the Normans turned for inspiration for their own buildings. They adopted what was vital in the Lombard style, combined this with what they had already learned from their French neighbours, and a large element of their own national character (Arthur Kingsley Porter, "Medieval Architecture", VI, 243, 244).

What are these elements which were borrowed from the Lombards and the Franks, and which were to form the foundations of Gothic architecture? They are, from the former, the compound pier and archivolt, the alternate system, the ribbed and domed vault; from the latter (i.e. from the Carolingian remains), the modified basilican plan with its triune aisles crossed by a projecting transept, and its three apses. This, the basis of the typical Norman and Gothic plan, was derived directly from the Church of the Nativity at Bethlehem, the date of which is unknown. It may have been built by the Roman, or by Justinian, or at any date between, Professor Lethaby leaning to the latter conclusion. In any case it is not earlier than A.D. 300, nor later than 550. From the Franks were also borrowed the doubled western towers, the lantern or central tower over the crossing, and the threefold interior system of arcade, triforium, and clerestory. It will be seen that the main dispositions of the Gothic plan are derived from Carolingian developments of Byzantine modifications of the early Christian basilica, itself but an adaptation of that of pagan Rome; from the Lombards, however, had been acquired three elements which were to lie at the base of Gothic construction. Many of the characteristic features of Byzantine, Carolingian, and Lombard architecture had been permanently rejected, showing that the process followed was not one of slavish imitation but rather of conscious selection; the vast possibilities inherent in others had not been appreciated, as for instance the polychoral, domed motive of San Vitale and Aachen, surrounded by its vaulted ambulatory, from which the Franks were to evolve the Gothic chevet, while the pointed arch the Normans never used, though they must have known of it, imagined its existence. The actual steps in the development of what may be called the Gothic order, from the primitive basilica to the full perfection of Chartres, fortunately exist, and
we may trace the progress year by year and at the hands of diverse peoples. By the beginning of the tenth century, the available supply of ancient columns having become exhausted, square piers built up of small stones had everywhere taken the place of circular monolithic shafts, but the old basilican system remained intact (except in the polygonal, Carolingian churches), arcades supporting roof-bearing walls pierced by narrow windows, and an enclosing wall independent in its construction and forming aisles covered by lean-to roofs of wood. In Sant’ Eustorgio at Milan (c. 900) we find evidences that transverse arches were thrown from each pier of the arcade to the aisle wall, so necessitating the addition of a flat pilaster to each pier to take the spring of the arch. These arches may have been evolved for the purpose of strengthening the fabric, or for ornamental reasons, or in imitation of similar arches in the Carolingian domical churches; but whatever their source the fact remains that they form the first structural step towards the evolution of the Gothic system of construction. Next, transverse arches were thrown across the nave, the first recorded example being the church of SS. Felice e Fortunato at Vicenza, dated 983. Neither for structural nor aesthetic reasons was it necessary that these nave arches should spring from every pier, so every alternate pier was chosen, the intermediate transverse aisle arch being suppressed and the pier, that no longer had a lateral arch to support, reduced in size. To support the great nave arches, pilasters were of course attached to the nave face of the pier, and these, as well as the aisle pilasters, were made semicircular in plan. If we assume, as we may, that in other examples all the transverse arches of the aisle were retained, while only each alternate pier bore a nave arch, we shall have a plan made up of compound piers supporting longitudinal and transverse wall-bearing arches that divide the entire area into squares, large and small, the great square of the nave being four times the area of each aisle square.

The next step for a people on the highway of progress would be the vaulting, in mausoleum, of these squares, for the wooden roofs were inflammable; moreover the Carolingian builders had constantly so vaulted their smaller square roof areas. The process began at once, and of course with the aisle squares, where the structural problem was simplest. The date is not recorded; no early examples remain in Lombardy, but in Normandy we find, about 1050, churches which possess aisles covered by square, groined vaults, with the transverse arches showing. The next step was of course the vaulting of the great squares of the nave, but before this was attempted the rib vault was devised, and the task rendered structurally more simple. The old transverse aisle arches had given the hint; where an aisle so spanned was to be vaulted, the arches already in place formed a very convenient shelf on which some of the vault stones might rest, and, by so much, a portion of the temporary centering might be dispensed with. Intelligence could not fail to suggest itself to an expedient used in the first place the arch might be equally useful in that of the diagonals, which were far more difficult of construction, as well as the most liable to give way in the case of ribless, groined vaults. When did this era-making invention take place, and at the hands of what people? Where, and when, may it have probably received its first exact use, but it could not have been earlier than 1025, nor later than 1075? San Flaviano at Montefiascone, authentically dated 1032, has aisles with rib vaults which are possibly original and, if so, are the earliest on record, while the nave vault of Sant’ Ambrogio at Milan (c. 1060) is of fully developed rib construction. "The most recent authorities (such as Venturi, Storia dell’ Arte Italiana, 1903, who cites Steihl, 1898) accept the view that the vaults are of foreign fashion derived from Burgundy, and were about contemporaneous with the campanile [1129]. ... It seems that on the evidence we are compelled to suppose that Sant’ Ambrogio derive its scheme of construction from Lombardy. It may be that the origin of the vault is to be sought for in Normandy, or even in England; but there are many reasons for thinking that the seed idea, like so many others, came from the East." (W. R. Lethaby, "Medieval Art", IV, 109–111).

In all probability the Lombards are the originators of this device so pregnant of future possibilities. The new vault, groined, ribbed, and domed, was in a class by itself, apart from anything that had gone before. Particularly did it differ from the Roman vault in that, while the latter had a level crown, obtained by using semicircular lateral and transverse arches and elliptical groin arches (naturally formed by the intersection of two semicircular barrel vaults of equal radius), the "Lombard" vault was constructed with semicircular diagonals, the result being that domical form which was always retained by the Gothic builders of France because of its intrinsic beauty. Finally, the new diagonals suggested new vertical supports in the angles of the pier, and so we obtain the fully developed compound pier, which later, at the hands of the English, was to be carried to such extremes of beauty, and to form a potent factor in the development of the plastic logic of the Gothic structural system.

The last step in the working out of the Gothic vaulting plan remained to be taken—the substitution of oblong for square vaulting areas. This was finally accomplished in the Ile-de-France after various Norman experiments, the evidences of which remain in the vaults of St-George de Bocherville and the two great abbeys of Caen. The sexpartite vaulting of the latter, together with that of the five other similarly vaulted Norman churches and of the choir of St-Denis at Paris, has always been an architectural puzzle, since it is manifestly a stage in the development of the oblong quadripartite vault, and yet is found in these cases some years after the latter system is known to have been fully understood in France, and nearly three-quarters of a century later than the vault of Sant’ Ambrogio. There is reason to suppose that it is a revival of some of the earlier experiments in the development of the large, oblong, high vault from the small, square, aisled vault. It is conceivable that the quadripartite vault itself may once have existed in Lombardy and before the quadripartite vault was evolved; this would explain the persistence in Sant’ Ambrogio of the vaulting shafts on the intermediate piers, for which no apparent reason exists. The vault of the Abbaye aux Dames may be considered either as a square plan, bisected and strengthened by a transverse arch with solid spandrels, or as a series of transverse arches, one on each pair of nave piers, with the
roof spaces filled in by curved surfaces of stone supported on diagonal ribs meeting on the crown of each alternate transverse arch. In the first case would be indicated a fear to trust the stability of so large a quadripartite vault, until experiment proved its efficiency; in the second, a stage in the evolution of the great Sant' Ambrogio vault, all local evidence of which has been lost. The vault of the Abbaye aux Hommes is one more stage in the development; here the vault surfaces are curved both from the transverse arch and from the intermediate arch, which so becomes, not an arch—as in the Abbaye aux Dames—but a true vaulting rib. The result is a very strong vaulting system, particularly effective in its light and shade and its line composition, and it does not seem surprising that the Norman builders should have reverted to it from time to time, or that Abbot Suger himself should have borrowed it for his fine new abbey, choosing it for its strength or its beauty in place of the simpler and more open quadripartite vault.

In the meantime the second great structural problem, that of the abutment of the vault thrusts, had been solved by the Normans. In Roman construction the thrust of barrel vaults had been neutralized by walls of great thickness, that of groin vaults either by the same clumsy expedient or by transverse walls; when the Lombards first threw their transverse arches across narrow aisles, they added shallow exterior pilaster-strips at the point of contact, rather it would seem for decorative than for structural reasons, as the walls already were strong enough to take the slight thrust of the small arches. With the vaulting of the nave the problem became serious; in Sant' Ambrogio they dared not raise the spring of the high vault above the triforium floor, and the thrust of the vault was taken by two massive arches spanning the aisles, one below this floor, the other above, the latter being hidden under the wide, sloping roof of the nave which was continued unbroken to the aisle walls. This was, of course, but the transverse wall of the Romans, pierced by arched openings; the result was beautiful, and the task fell to the Normans of devising a better and more scientific method. At their hands the Lombard pilaster-strip became at once a functional buttress in

stead of a decorative adjunct, while the successive steps in the evolution of the flying buttress remain on record and are peculiarly interesting. In the Abbaye aux Hommes, "the expedient was adopted of constructing half-barrel vaults springing from the aisle walls and abutting against the vaults of the nave beneath the lean-to roof. These were in reality concealed flying buttresses, but they were flying buttresses of bad form; for only a small part of their action met the concentrated action of the vaults that they were designed to stay, the greater part of it operating against the walls between the piers where no abutments were required" (Moore, op. cit., I, 12, 13). In the Abbaye aux Dames these defects were remedied, for all the barrel vault was cut away except that narrow part which abutted against the spring of the vault. The flying buttress had been invented. As yet it was hidden under the triforium roof and did not declare itself to the eye, but functionally it was complete.

The fruit of the Cluniac reform working on Norman blood had been the evolution of the main lines of the Gothic plan (barring the easterly termination, or chevet) together with the development of the Gothic system of vaulting and the Gothic principle of concentrated thrusts met by piercing buttresses and flying buttresses. The true "Gothic system" is therefore the product of Normandy. In the meantime what had been done towards the working-out of the other half of the Gothic idea—the discovering anew of the underlying principles of pure beauty, their analysis into the elements of form and composition, proportion, relation and rhythm, line and colour, and chiaroscuro—finally what had been accomplished in the direction of evolving that new quality of form-expression which, differing as it does from any school of the past, gives to Gothic art its peculiar personality?—Nothing, so far as Normandy is concerned, except as regards certain large architectonic qualities first revealed in Jumièges, and, following this, in the Abbeys of Caen and St-Georges de Bocherville. The Abbaye aux Hommes is the norm of all French cathedrals; the Abbaye aux Dames, of the English order; while Jumièges, the first in date, remains one of the most astonishing buildings in history. If it had antecedents, if it came as the culmination of a long and progressive series of experiments in the development of architectonic form, the evidence is forever lost, for, as it now stands, it is isolated, almost preternatural. So far as we know, it had no precursors, and yet here are the majestic ruins of a monastic church larger than any since the time of Constantine and far in advance, so far as design and development are concerned, of any contemporary structure. Montier en Der, an abbey of Haute-Marne, built by Abbots Adso and Berenger (960, 998), is the only recorded structure which bears
the least kinship to Jumièges, and the difference between the two—separated by only fifty years—is that between barbarism and civilization. All that was good in Lombard architecture has been assimilated, and in addition we find fixed for the whole Gothic period those lofty and monumental proportions, that masterly setting out of plan, the powerful grouping of lofty towers, the final organism of arcade, triforium, and clerestory that together were to set the type of Gothic architecture for the centuries that followed. Thus unaltered, though infinitely perfected, so long as the Christian civilization of the Middle Ages remained operative. After Jumièges the abbeys of Caen were easy, and, given a continuation of cultural conditions, Amiens and Lincoln inevitable.

In the latter half of the eleventh century these cultural conditions ceased in Normandy. After the death of William the Conqueror the duchy fell on evil times, and the working out to its logical and supreme conclusion of the great style it had initiated fell into other hands, viz., those of the French of the old Royal Domain and of the transplanted Normans in England. In France the eleventh century had been marked by royal inefficiency, unchecked feudal tyranny, episcopal insubordination to papal control, indifference to the Cluniac reform, and general anarchy. By the middle of the century Cluny had done its immediate work and had begun to lapse from its lofty ideals, but others were to take its place and do its work, and, in 1075 St. Robert of Molesme founded in Burgundy the first house of that Cistercian Order which was to play in the twelfth century the part that Cluny had played in the eleventh. The preliminary fight that was to clear the ground in France began with the Council of Reims called by Pope Leo IX (1049-1054), when the sovereign pontiff and the monastic orders made common cause against the simony, secularism, and independence of the French episcopate. The contest was carried on simultaneously with the even greater fight against the empire, and, as there, the victory remained with the papacy. With the close of the eleventh century conditions in France had become such that the torch that fell from the hands of the decaying Norman could be caught by the crecent Frank and carried on without a pause.

During the first half of the twelfth century the outburst of architectural vigour in the Île-de-France is very remarkable. Soissons, Amiens, and Beauvais became simultaneously centres of activity, and the rib vault makes its appearance at the same time in many places. "During the first phase of the transition, 1100-40, the builders struggled to master the rib vault in its simpler phases: they learned to construct it on squares and on oblong plans and even over the awkward curves of ambulatories, but their experiments were always on a small scale. During the second phase (1140-80) the problem of vaulting great naves was attacked; the evolution centres in the peculiar development which the genius of the French builders gave to the concealed flying butress and to the semi-octave, both borrowed from Normandy" (Porter, op. cit., II, 54). The semicircular ambulacra of Morienval (c. 1140) are ported on ribs curved in plan, and the church of St.-Etienne at Beauvais (c. 1130), of which Professor Moore says that with the exception of St.-Louis of Poissy it is "the only Romanesque structure extant on the soil of France that was unmistakably designed for ribbed, groined vaulting over both nave and aisles", are valuable landmarks in the development. The second task of the French builders was simplified by the introduction of the pointed arch. As in the case of the ribbed vault, there is no means of knowing the exact source from whence this was derived. It had been in use in the East for nearly a thousand years before it appeared in the West; it was established in the South of France as an effective and economical contour for barrel vaults by the year 1050, whence it migrated to Burgundy and so to Berry (where it appears in 1110), but always in connexion with vaults rather than arches. The earliest structural pointed arch recorded in France is in the ambulatory of Morienval, referred to above, and is dated 1122.

This form, so pregnant of structural and artistic possibilities, may have been brought from the Holy Land by returning pilgrims, or it may have been independently evolved. Whatever its source, its advantages were so great from a practical standpoint that it is hard to believe that the races that had produced Sant' Ambrogio and Jumièges should not have worked out independently the idea of the pointed arch. Its two great virtues are its slight thrust as compared with the round arch, and its infinite possibilities of variation in height. The elliptical diagonals of the Romans did not commend themselves to the builders of the North, and the doming that resulted from the uniform use of semicircular arches, while not offensive in the case of square areas, became impossible where oblong spaces were to be covered, the expedient of stilting the longitudinal arches not yet having suggested itself. With the pointed arch in use, all difficulties disappeared. Once introduced it became in a few years the universal form, and its beauty was such that it immediately won its way against the round arch for the spanning of all voids. Almost coincidently with the acceptance of the pointed arch came the device of stilting, the transverse arches of Bury (c. 1123) being so treated. This would seem to indicate that to the Gothic builders the value of the pointed arch lay rather in its comparatively small thrust and in its intrinsic beauty than
in the facility with which it might be used for obtaining level crowns in oblong vaulting areas. This stiffening of the longitudinal arches was from the beginning almost invariable in France; structurally, it concentrated the vault thrust on a comparatively narrow vertical line, which is handled by the flying buttress; it permitted the largest possible window area in the clerestory, while the composition of lines and the delicately waved or twisted surfaces were so beautiful in themselves that, once discovered, they could not be abandoned by the logical and beauty-loving Franks.

The structural and aesthetic advance was now headlong in its impetuosity. A few years after Bury, St.-Germer de Fly was built, the date assigned by Professor Moore being about 1130. Here we find a building almost as surprising as Jumièges; for if the date quoted above is correct, the church has no prototype, no preceding stages of experiment. The vaulting, both of the ambulatory and of the apse, is stilted and has its full complement of ribs, the shafting throughout is finely articulated, the dimensions are stately, the proportions just and effective, while the easterly termination is a perfectly developed apse with rudimentary chapels—a chevet in posse. The flying buttresses are still concealed under the triforium roof, and outwardly the building has no Gothic character whatever; but the Gothic organism is practically complete.

With Abbot Suger’s St.-Denis, the easterly termination of which is of original construction and is dated 1140, we come to what is almost the fully developed Gothic plan, order and system, together with the true chevet of double apsidal aisles and chapels. This last feature, perhaps the most brilliant in conception and splendid in effect of the several parts of a Gothic church, may have been derived either from the triapsidal termination of the Carolingian basilican church, or from the polygonal domed structures of the same epoch. Transitional forms are found throughout the eleventh century, and the development from such a plan as that of St.-Genouillac, on the one hand, or Aachen, on the other, to St.-Denis presupposes only that degree of inventive force and overdowering vitality which, as a matter of fact, existed during the eleventh and twelfth centuries.

With the chevet as fully developed as it now appears in St.-Denis, there remains only the gradual perfection and refinement of the structural system and the giving it that quality of distinctive beauty in every detail that was to be the very flowering of the Catholic civilization of the Middle Ages. From the middle of the twelfth century both processes went on apace and simultaneously. Noyon followed immediately, and here, it is maintained, the flying buttress for the first time, displaying in logical fashion the system of construction, and at the same time bringing the abutment above the spring of the vault, where the greatest thrust actually occurred, while permitting the lowering of the triforium roof so that the clerestory windows might be given greater height in better proportion with the arcade and triforium. Sensis, of the same date, exhibits a great advance in mechanical skill and logical exactitude, with an innovation that commands less admiration—the substitution of cylindrical columns for the intermediate piers on the caps of which rest the shafts of the intermediate ribs of the sexpartite vault. Continued in Notre-Dame, this first line, but unconvincing, device proved to be but an experimental form, and was abandoned as unsatisfactory in the greatest monuments of French Gothic, such as Chartres, Reims, Bourges, and Amiens, where recourse was had to the specifically Gothic compound pier, with the shafts of the intermediate ribs, at least, of the vault, brought frankly and firmly down to the pavement.

The cathedral of Paris was begun in 1163 with the choir, and completed in 1235 with the raising of the western towers. From East to West there is a steady growth in certainty of touch, in structural efficiency, and in the expression through beauty of form and line of the culminating civilization of medievalism. The interior order exhibits the defects of the imperfectly organized Norman system, particularly in the lofty vaulted triforium or gallery, so great in size that there is no rhythm in the relationship of arcade, triforium, and clerestory, together with the columnar scheme of Sens and Noyon (the imposing of the vault shafts on the caps of plain cylindrical columns), which must be regarded as a falling back from the perfect articulation of the true Gothic system. The plan, however, is nobly developed, the general relations of height and breadth fine to a degree, while in the west front (1210-35) Gothic design reaches, perhaps, the highest point it ever achieved so far as classical simplicity, power, and proportion are concerned. The seed of Jumièges has developed into full fruition. The façade of Notre-Dame must rank as one of the few entirely perfect architectural accomplishments of man. With the cathedral of Paris, also, the new art shows itself in all its wonderful inclusiveness; design, as apart from constructive science, appears full flood in the entire treatment of the exterior; the Lombard rose window has evolved to its final point; decorative detail, both in design and in placing, has become sure and perfectly competent; while sculpture, stained glass, and, we know from records, painting have all forged forward to a point at least even with the sister art of architecture. In sculpture especially the advance has been amazing. For many generations it was held that the restoration of sculpture as a fine art was due to Italy, and specifically to Niccolo Pisano, but as a matter of fact the task was accomplished in France a century before his time. The revival began in the South, where Byzantine remains were numerous and the tradition still lingered. At Clermont-Ferrand, by the end of the eleventh century, a school of competent sculptors had been developed; Toulouse and Moissac followed suit, and by 1140 the Ile-de-France was producing works which show “a grace and mastery of design, a truth and tenderness of sentiment, and a fine-

**Interior View of Sens Cathedral**
ness and precision of chiselling that are unparalleled in any other schools save those of ancient Greece and of Italy in the fifteenth century" (Moore, op. cit., XIII, 366). The sculptures of St-Denis, Chartres, of the work and of Paris are all sublime in their sculpture beyond criticism in itself and exquisitely adapted to its architectonic function; the statue of Our Lady in the portal of the north transept of Paris may be placed for comparison side by side with the masterpieces of Hellenic sculpture and lose nothing by the test. Of stained glass enough remains here and elsewhere to show how marvellous was the wholly new art brought into being by the genius of medievalism; and that the painting and gilding of all the interior surfaces was on a scale of equal perfection, we are compelled to believe. As the cathedrals and churches now remain to us—much of the glass destroyed by savage iconoclasm and brutality, every trace of colour vanished from the walls, while the original altars themselves have been swept away together with their gorgeous hangings and decorations (monstrosities like that of Chartres, for instance, taking their places); shrines, screens, and tombs, all wonderfully wrought and glorious in colour and gold, shattered and cast into the rubbish heap—they can give but an inadequate idea at best of the nature of that Christian art which in the twelfth and thirteenth centuries came as the result of a fusion of all the arts, each one of which had been raised to the highest point of efficiency. Of the art of Gothic art Mr. Prior says, "We are readily assured that nothing of crudity found place in the colour scheme of the Middle Ages—for have we not their illuminated manuscripts in evidence? For its pure and delicate harmony, a page of a thirteenth or fourteenth century manuscript may compete with the work of the greatest masters of colour that the world has known, and we cannot doubt that the same mastery of brilliant and harmonious tints was shown in the colour scheme of cathedral painting" (op. cit., Introd., 19). Some hint of what has been lost may be obtained from the faded frescoes of Cimabue and the painters of Siena, as they may be seen to-day at Assisi and Florence and Siena itself.

The defects of Paris are almost wholly absent in Chartres, which is the most nearly perfect of all Gothic cathedrals both in conception and in the details of its working out. It is unquestionably the noblest and most perfect of all Gothic churches, even though the lower portions of its choir have been ruined by the most aggressive vandalism known to the eighteenth century. Its relations of dimension are of the same final and classical type as are those of the west front of Paris, and while it stands at that middle point of achievement when the feats of the Norman system had been emulated, and those of the too exuberant vitality of the thirteenth century had not yet appeared. As has been said above, Gothic architecture is an impulse and a tendency rather than a perfectly rounded accomplishment; the element of personality entered into it as into no other of the great styles, and it was the seat not only of dazzling flights of spontaneous genius, but also to the misguided imaginings of daring innovators. The noble calm of the Paris façade was followed by the nervous complexity and lack of relation of Laon. Only five years after this same masterpiece of Notre-Dame was achieved, the flying buttresses of the nave were constructed, and in place of the original fine simplicity and logic of the system of doubled aisles, announcing perfectly the fundamental plan, were substituted the present daring and superb, but illogical and unthinkably arched soaring from the outer abutments across both aisles sheer to the spring of the high vaults. Similarly, when Amiens was built, the just proportions of Chartres were sacrificed to the pride of structural ability, and a faultless harmony of parts and proportions yielded to wire-drawn elegance and awe-inspiring altitudes, destined a little later, in Beauvais, to be the Nemesis of Gothic art.

Finally, the system of concentrated loads, which made possible a structure of masonry that was but a skeleton of shafts, arches, and buttresses, supporting from the ground walls of glass, was so tempting to the sense of daring and to the inevitable logic of the French genius that it led to a recklessness in the reduction of solids to a minimum that, however much they may have justified itself structurally, however marvellous may have been the result it made possible in the line of glowing and transparent walls of glass, their cold, pale, icy colour, must be considered as falling away from the justice and the grandeur of a classically architectonic scheme such as that of Chartres. "It was the Logic of the Parisian that brought to his Gothic both its extreme excellence and its decay: the science of vault construction fell in with his bent. The idea once having attracted him, his logical faculty compelled him to follow it to the end. His vaults rose higher and higher; his poise and counterpoise, his linkage of thrust and strain grew more complicated and daring, until material mass disappeared from his design and his cathedrals were chain-works of articulated stone pegged to the ground by pinnacles" (Edward S. Prior, "A History of Gothic Art in England", I, 9).

The fact must not be ignored, that even in the culminating monuments of the thirteenth century in France the mania for skeleton construction led to unfortunate subterfuges. The reduction of masonry was carried one step too far, a pious and unaggressive point, supplemented by hidden bars, ties, and chains of iron. "The windows were sub-divided by strong grates of wrought-iron, some of the horizontal bars of which ran on through the piers continuously. At the Sainte Chapelle a chain was imbedded in the walls right round the building, and the stone vaulting ribs were reinforced by curved bands of iron placed on each side and bolted to them" (W. R. Lethaby, "Mediaeval Art", VII, 161). In spite of these errors of a too-perfect mastery of the art of building, the great group of cathedrals that followed during the thirteenth century in France must always remain the crowning glory of Catholic architecture. Bourges, Reims, and Amiens, with the numberless other examples of a perfected art, from the Channel to the Pyrenees, the Alps to the sea, form the greatest cycle of buildings in a definite and highly developed style that has ever been produced, and, though the lower portions of its choir have been ruined beyond the most exuberant vitality of the thirteenth century, its nature and growth of Gothic architecture on which much has been written, yet nothing thus far that may be considered finally conclusive: (1) the Comacini, or seventh-century guild of masons; (2) the "structural refinements" to which Professor Goodyear has devoted so much study; (3) the application of certain general rules of proportion, the solution of the problem of proportion. Of the Comacini, whose name first appears in a mid-fifth-century document, Mr. Lethaby says, "It is generally held by scholars that the word does not refer to a centre at Como, but should be understood as signifying an association or guild of masons, and that the Magister Comacini heard of in the seventh century were of no special importance. It does seem probable, however, that the expansion of N. Italian art over many parts of Europe, which appears to have taken place in the eleventh and twelfth centuries, may be traced to the fact that in Italy the guilds had privileges which made members free to travel at a time when Western masons were attached to manors or monasteries" (W. R. Lethaby, "Mediaeval Art", IV, 114). Professor Goodyear may be assumed to have proved that the
irregularities in plan, the variations in spacing, the inclination of walls, and all the other manifold peculiarities of medieval building are in many cases premeditated, and not the result of negligence or accident. The aesthetic excuse he makes less obvious, however, nor had the builders any general laws which had been consistently as do those governing architectural refinements in Greek architecture. The mystical deductions as to the persistence of certain numerical laws, the occult properties of numbers, and the angle called the "pi pitch" from the time of the builders of the pyramids, which are supposed to express certain fundamental laws governing the universe, and to have been transmitted from father to son for thousands of years, until they appear as the controlling principles of Gothic proportion, and the setting out of Gothic plans, may be found in "Ideal Metrology", by the Rev. H. G. Wood (Boston, 1900).

When the church of Le Mans was finished, in 1254, the beginnings recorded in Jumièges two centuries before had worked themselves out to a point beyond which further wholesome development was impossible. The Franks had perfected what the Normans had initiated; the structural scheme inherent in Jumièges had progressed step by step to its conclusion; the great architectural harmonies of form and proportion and dimension, the mysterious and evocative powers of subtle and rhythmical relationship, had already achieved their highest fruition in Chartres and Reims, while an entirely new category of art, no sign of which had been accorded to the Normans, had by the Franks been brought again into being, viz., that of absolute beauty in ornament and decoration, whether in stone or glass or pigment, whether in itself or as isolated detail or in regard to its placing and disposition. Moreover, this latter manifestation of art was in terms radically different to anything that had gone before, although the principles were identical with those of all great art: "In breadth of design, co-ordination of parts and measured recursion of structural and ornamental elements, the Gothic artist obeyed, though in a different form, the same primary laws that had governed the ancient Greek" (Moore, op. cit., I, 29). The same was true of his sense of abstract and concrete beauty; in the contours of his mouldings, the carving of his caps and crockets, bosses and spandrels, the development of his decorative compositions of mass and line, and light and shade, he fell in no respect behind his brothers of Greece, while he excelled those of Byzantium. The forms were different, wholly his own and original, but the essential spirit was the same.

In the meantime Gothic architecture had been following a parallel course of development in England, borrowing directly from Normandy and France, assimilating what it so acquired, and giving to all a distinctly national character that tended from year to year further to separate English Gothic from any other, both structurally and artistically. No sooner was the Conquest effected in 1066, than the building of Norman abbeys, cathedrals, and churches was put in hand. Actually the introduction of Norman Romanesque in England took place about 1050, when St. Edward the Confessor began the building of Canterbury. The earliest work differs in no essential particular from that of Normandy, except as regards size, which in many cases was astonishing; not only were the abbeys often far larger than anything in Normandy, they were the greatest buildings in Europe. Winchester and St. Paul's were more than double the ground area of the Abbaye aux Hommes, while the London cathedral and Bury St. Edmunds were each a fourth larger even than the gigantic Cluny itself. From the first the English peculiarity of great length consistently with comparatively narrow nave (30-35 feet in clear span) is conspicuous. As the Norman buildings were destroyed, and rebuilt under Gothic influence, the original-setting out was generally adhered

to, and Gothic naves are seldom found of a width greater than that of the Norman. Very early, also, occurs the typical deep English choir, Canterbury in 1096, having one nine bays in depth. This excessive length of the eastern arm was due quite as much to practical considerations as to those of beauty. Religion was popular in England for some centuries after the Conquest, and great quantities of worshippers had to be provided for. In Spain the choir of monks or secular clergy thrust itself through the nave half way to the west doors; in France it usually took in at least the crossing; the cathedrals of the Île-de-France were secular and the very wide choirs easily accommodated the few canons. In England, however, the numbers of the monks and canons was so great, and so many of the cathedrals were monastic in their foundation, that enormously long choirs were necessary for the seating, in their narrow width, of those permanently attached to each church.

The great abbeys and cathedrals were seldom vaulted, being covered by timber roofs of low pitch except as regards their easily vaulted aisles. Barrel vaults were occasionally used, groin vaults in innumerable cases; the groin vault with ribs first occurs in Durham in 1093, an astonishing date, since the earliest ribbed vault claimed for France is in the diminutive church of Rhuys, a structure the date of which is unknown, but is placed at about 1100. The earliest known rib vault is claimed by Rivoira to be that of San Flaviano, in Umbria, but there is some doubt as to whether this is the original vault of a church known to have been built in 1082. San Nazzaro Maggiore, at Milan, has an authentic rib vault of 1075, and it appears therefore that the choir vault of Durham is earlier than any certain example in France, however small, and that it was built within twenty years of the first dated rib vault in Lombardy. The vaults of Durham nave are pointed and ribbed, and are not later than 1128, six years after the pointed arch appears in the little French church of Morienval.

No further development towards Gothic occurred in England until the middle of the twelfth century. Great abbeys in the fully developed Norman style,
such as Kirkstall and Fountains, Malmesbury, Peterborough, Norwich, and Ely, were reared all over England, but the prevailing monastic influence was Benedictine, and this was always architecturally conservative, and at the same time magnificent. As a rule, with enclosing ambulatories were almost invariable, and there was frequently the western transept, as at Burry and Ely. Towards the end of the Norman era a period the Cluniac influence greatly intensified the native richness in decoration of Benedictine art, and to this we owe in great measure the rich and intricate carving of the late Norman work that persisted down even to the chapel of Our Lady at Glastonbury, built in 1184. Before this date had occurred events which were to initiate and, in varying degrees, control the growth of Gothic in England: the coming of the Cistercians and the rebuilding of Canterbury choir by William of Sens. The Cistercians always favoured Gothic, over the massive and grandiose Romanesque of the Benedictines and Cluniacs, because of its early austerity and the economies it made possible in building. Regular Canons, also, and for similar reasons, adopted the economical new form, and this double influence was constantly exerted to structural and artistic simplicity—a fortunate thing for the new style, since it prevented too early flowering in the richness and luxuriance of beautiful detail.

That William of Sens introduced to England and set before English eyes so much as he could of so much as then existed. French Gothic is quite true, but it does not appear that his was the first Gothic done in England, or that it had a wide or lasting influence. Mr. Bond divides the local adaptation of Gothic into three schools—of the West, the North, and the South—giving to the former priority in time. He says: "The first complete Gothic of England commences not with the choir of Lincoln, but with Wells, as begun by Reginald FitzBohun who was bishop from 1174 to 1191. It was in the West of England that the art of Gothic vaulting was first mastered; first, so far as we know, at Worcester; and it was in the West, first apparently at Wells, that every arch was pointed and the semicircular arch exterminated (q.v.). This development was under way at Worcester, Dorset, Wells, Shrewsbury, and Glastonbury, to name only a few of the examples quoted, by the time the work at Canterbury passed from the hands of William of Sens to those of William the Englishman, and there is little evidence that it had any particular effect on the progress already begun. In the North, Lincoln choir followed close after Canterbury and was manifestly influenced by it in many ways, but as Mr. Bond says, "it is equally plain that the obligation is almost wholly to the English and not to the French part of that design." (Op. cit., VI, 111–12) For not all of Canterbury choir is French, even in the case of the work of William of Sens himself; the slender shafts of Purbeck marble, the springing of the vault ribs from the level of the triforium caps rather than from the string course above, the penetrations of the clerestory, the elaborately compound angle piers, with their ring of detached columns, are all English, and it is precisely these features St. Hugh copied at Lincoln. Neither do they appear in the retro-choir of Chichester, begun about the time William of Sens went back to France, any evidence that his work had established a dominating precedent; here the work is of a distinctively native cast, the columns of the arcade in particular being original to a degree and of the most

The exotic element in Canterbury proved to be but an episode and English Gothic went on developing itself after its own independent fashion. The choir of Lincoln exerted far greater influence and became the general model for all parts of England. In some cases an attempt, and a successful one, was made to dispense with the vault entirely, as at Hexham, Tynemouth, and Whithby, where in each instance the timber roof of the Anglo-Norman abbey was retained, and the chief attention was devoted to refining and improving the detail and composition of the wall design, where extremely beautiful results were obtained, as at Whithby, by the mastery of English elaboration of the arch mouldings and the profiling of the pier sections. The flying buttress was also slow of acceptance and never, indeed, became the striking feature it was in all the buildings of thirteenth-century France. The English cared little for logic and less for structural bracing, or even consistency of the elements they aimed at were beauty in all its forms, individual expression, novelty, originality—qualities they not seldom achieved at the expense of structural integrity. The Gothic of France was singularly consistent; it rapidly developed into a classical system from which no radical departures were made and into which the element of individual initiative hardly entered, once the body of laws and precedents had been established. The Gothic of England never possessed any such canon either of logic or of taste. Every bishop, abbot, or master-builder strove to outdo his fellows, to strike out some new and dazzling masterpiece, and if, as a result, the medieval building of England failed of the finality, the certainty, and the uniformity of that of France, it achieved that variety and personality far in advance of anything to be found across the channel. The second importation of French ideas, in the shape of Westminster Abbey, was apparently as helpless to change the English character as Canterbury choir had been; here also the French setting out, the chevet, the structural system, were overlaid with English qualities. "We may readily make the fullest allowance for French influence at Westminster, for so entirely is it translated into the terms of English detail that the result is triumphantly English. It is a remarkable thing indeed, that this church, which was so much influenced by French facts, should, in spirit, be one of the most English of English buildings" (Lethaby, "Westminster Abbey and the King's Craftsmen", V, 125). French "facts" were apparently as helpless to control the general building of a people as they had been to restrain English workmen in their detail, and
After the great abbey was finished in all its beauty England went on as before. By this time the stylistic quality of English Gothic had been pretty well fixed in such works as Beverley choir and transept; Christ Church and St. Patrick's, Dublin; Ely presbytery, Southwell choir, Netley and Rievaulx Abbeys, together with the "Nine Altars" of Durham and Fountains, all completed between the years 1225 and 1250, the peculiar qualities of English work had taken on a definite and very beautiful form. This is the period usually denominated "Early English", and, while it shows an advance in structural development, it records a notable change in point of design; nearly all the attention of the builders seems devoted to solving the problems of beauty in form and line, in detail and composition—this chiefly in the interior treatment. The relations of the arcade, triforium, and clerestory, the varying designs of the latter with their subtle arrangements of slender shafts and delicate lancets; the beautiful pier sections and moulding profiles, together with the sculpture of capitals, bosses, crockets, and terminals—varying as between the many sub-schools of the four main architectural provinces divided by it, and yet yielding results in all of pure French inspiration, a seldom attained even in the Ile-de-France—all are significant of a distinctively national artistic development, even though it follows lines other than those that held across the Channel.

Coincidently with the building of Westminster was the retrochoir of Ely, the presbytery of Lincoln, the nave of Lichfield, and Tintern Abbey, wherein are the first signs of change from Early English to Geometrical. This process was continued up to the end of the century, and in the works of its last quarter are to be found the highest attainments of English art. Carlisle choir and east front, Gisborough and Pershore choirs, and St. Mary's Abbey, York, are all expressed in a type of art that rises to the level of the highest attainments of man. The exquisite line-composition of Pershore and of York Abbeys, the refinement combined with masculine strength, the swift, steel-like curves of the moulding profiles, the perfected beauty of the carved foliage, together with the masterly arrangement of the lines and spaces of light, the hollows and depths of shade—all work together to build up a masterly art. Much of the product of this time has perished, and even of York Abbey, which seems to have represented the high-water mark of English architecture, not a shivered aisle wall, a crossing pier, and a few piles of marble fragments. Though at the beginning of the nineteenth century the greater portion of the fabric was intact, about 1820 it was sold to speculators to be burned into lime.

During the first half of the fourteenth century architectural progress was cumulative, reaching its apogee during the reign of Edward III. The fine simplicity and almost Hellenic feeling for line visible in the work of the preceding half century, and that gives it a place in this respect in advance of any other Gothic work of any country, is indeed yielded by the multiplication of ornament and detail, and an intricate composition of light and shade. The incomparable carving of Lincoln and Wells, York Abbey, West Walton, and Llandaff, architectural yet with all the qualities of form that are found in the noblest sculpture, yields first to the lovely, but dangerously naturalistic, type of Southwell chapter house and, then to the globular forms, the bulbous modelling, and the effete curves of Patington, Heckington, and the fourteenth-century tombe of Beverley and Ely. Curvilinear window tracery, in all its suave grace, has taken the place of the fine and vigorous geometrical forms of the Perpendicular, and modest prototypes of France. Finally, the brilliantly articulated lierne vaulting, with its intermediate ribs emphasizing the verticality of the composition and carrying out to completion in the roof the fine drawing of multiple piers and moulded arches, is swerving towards the unjustifiable type that came just before the fan vault, i.e. the criss-crossing of a network of purely decorative ribs over the vault-surfaces in violation of structural principle.

Decadence and perfect achievement go hand in hand—Exeter nave, the finest English interior remaining intact, on the one hand, Wells presbytery, on the other. But whatever the weaknesses that were showing themselves, they entered little into the make-up of the great parish churches, which represent, more than the episcopal and monastic structures, the genius of the period. This was one of the three great epochs of such parish architecture in England, and it is not to be forgotten that the true qualities of English Gothic art reveal themselves quite as fully in the minor as in the major buildings of this country. For a full century, i.e. from 1350 until 1450, the history of English Gothic is largely a history of parish church-building. The Black Death, which in 1349 smote the land with a pestilence that cut its population almost in halves, was followed by the Wars of the Roses, and the peace and prosperity which ensued, while English architecture with the accession of Henry VII. During this long period, however, the trend of stylistic development was wholly changed by the remarkable innovations initiated by Abbot Thokey at Gloucester in 1330, and carried on by William of Wykeham at Winchester from 1380.

The supreme importance of Gloucester in the history of the later Gothic has never been adequately recognized. She turned the current of English architecture in a wholly new direction. But for Gloucester, English Decorated work might well have developed into a flamboyant as rich and fanciful as that of France. But to the remotest corners of the land, to cathedral, abbey church, collegiate and parish church, there was brought the influence of Gloucester by the countless pilgrims to the shrine of Edward the Second in her choir" (Bond, op. cit., VII, 134). The manifest tendencies of Decorated—not, it must be confessed, of the most promising kind—were terminated, and instead a new progress was instituted towards the development of what we now know as Perpendicular "the first style of architecture that can properly be called English" (Moore, op. cit., VI, 212). Hitherto English Gothic has been rather a lovely overlapping of Continental principles by a distinctively racial decoration and a functional decoration. For design, for clarification of plan and system that left the foundations intact, so far as they had been apprehended and assimilated. Now was to come a perfectly independent manifestation in which system, design, and decoration were all new and all exclusively English. The adoption of the French scheme of a structural framework, the walls being no longer of masonry, but of glass set in a thin scaffolding of stone mullions, was at last adopted, but its working-out bore almost no relation whatever to the French method. Before the architectural revolution there were signs that sense of proportion and composition characteristic of English design, and of adaptations of Continental forms, was carried into the Lady Chapel of Ely (1321), which has almost no architectural qualities to commend it, but, whether William of Wykeham or profounder psychological influences are responsible, the fact remains that the danger was averted, and England recalled to sounder principles, which resulted in a new life in Gothic that persisted until Henry VIII and the regents under Edward VI brought the whole epoch of medieval civilization to an end and surrendered an unwilling people to the Reformation. Winchester nave and York choir; Westminster Hall, King's College Chapel, Cambridge, and St. George's, Windsor. Sherborne and Malverd, the choir vault of Oxford, the central tower and the cloisters of Henry VII at Westminster, together with the major part of the Oxford and Cambridge colleges, the great central towers of many of the cathedrals and abbeys,
and, finally, parish churches of all sizes and almost without number, are indicative of the surprising new life in art and therefore of the strength of the sound Catholic civilization of the age. The beauty of the new style, its structural integrity, and its fecund variety are worthy of high admiration. What it lacked of the majesty of form and the serene reserve of an earlier time is almost made up for by a fineness of line, a richness of design without opulence, and a splendour of colour that find few antecedents in history, while the fan vault takes its place as one of the very great inventions of architecture. "In these splendid vaultings of the fifteenth century we have indeed the last work of English monastic art" (Prior, op. cit., VII, 95).

Step by step, diverging steadily from her point of departure in the Gothic of France, England worked out to the full her own form of Gothic artistic expression. French precedents sat lightly upon her, and she was not favourably disposed to coercion. In plan the Norman and Burgundian type had been adhered to, and instead of that concentration which had produced in France a parallelogram with one end semicircular, there had been an expansion which resulted in the episopal or archiepiscopal cross plans of Lincoln, Beverley, and Salisbury—long, narrow naves, equally long choirs, widely-spread, aisled transepts, and frequently choir transepts as well, with a deep Lady Chapel prolonging the main axis still further to the east. The plan of a church of Paris or Amiens announces its ordonance but indifferently; that of an English cathedral, exactly. Outwardly, the former is hardly more than a mountainous mass without composition; vast and awe-inspiring, but without emphasis or variety, except in regard to its western front when taken by itself. The latter—with its long, lateral façade, its building-up by successive planes, both horizontal and vertical, its Lady Chapel, choir, central tower, and west towers, its bold transepts, porches, and chapels—becomes an elaborate yet monumental composition of brilliant masses and infinitely varied light and shade. With the exception of Hales, Lincoln, and Beaujeu (now destroyed), Tewkesbury, and Westminster, the chevet gained no hold in England, nor did the apsidal terminaliation widely commend itself; instead, the square east end became the established type, and when to this was added for the structural advantage of the still longer Lady Chapel, and still further to the east, the result was an independent architectural scheme equally admirable to that complex glory of the French chevet. Mr. Prior advances the interesting theory that the square east end was a fixed feature of both Saxon and Celtic church-building, and that subsequent changes taken to English history. Harding, the Englishman, who had been a monk of Sherborne in Dorset, where the old national tradition had survived the Norman invasion, and that it came back with the Cistercians, who, by their sheer dynamic force, were able to impose it at last on Benedictine abbey and secular cathedral alike, so bringing an originally local device to its own again. He says further: "In this matter the Canterbury choir of William of Sens was a survival rather than a pattern for English use. By the end of the twelfth century the small Keltic sanctuary had imposed itself on the choirs of our great Norman churches still more decisively than it has in the basilican introduction of St. Augustine." (A History of Gothic Art in England, II, 79).—In height, as related to breadth, the earlier and more reserved French relations were never exceeded, while they were often discounted; until Tudor times the elimination of the clerestory was from the English construction complete, with glass screens, found little following, and a grave and conservative relationship was preserved between solids and voids. The central tower, the culmination and concentration of the composition, was almost invariable, while the west front was usually subordinated to the design as a whole. The elaborate articulation of piers and archivolts, until both became compositions of fine lines of light and shade, was carried further in England than elsewhere, and the introduction of crockets, of tiercerons, and of pinnacle, of ridge ribs to receive them, was in keeping with an instinct that felt the subtle beauty of these multiplied lines. The logical sense, that demanded the grounding of every downward thrust of vault rib either at the pavement or on the abacus of the pier or column steps, was not operative, and in most cases the vault ribs were stopped on corbels above the level of the arcade capitals. From the Cistercian aversion to ornament, and perhaps also in part from the use of turned shafts of dark marble applied to the piers and bonded in by stone rings or bronze dowels, came the French and modern English with its polygonal chapter houses England developed a brilliant conception all its own, and almost the same might be said of the parish church, while in the designing of tombs, chantries, reredoses, choir-screen, and chancel-fittings of wood, the delicate fancy of the English had full play in the creation of a mass of exquisite sculpture and joinery that has no counterpart elsewhere. If logic and consistency are the note of French Gothic, personality and daring are those of the Gothic of England. The west fronts of Peterborough, Bury St. Edmunds, Wells, Ely, and Lincoln; the chapter houses of York, Salisbury, Lincoln, and Westminster; the city cathedral at Durham, the chapter house at Gloucester, Sherborne, Oxford, and Westminster—all are examples of a vitality of impulse, a fertility in conception, a soaring imagination, and a cheerful disregard of scholastic precedent that give English Gothic a quality of its own as important in the make-up of the art of the Middle Ages as is the masterly and final structural achievement of the Ile-de-France.

Outside France and England the racial adaptations of the Gothic impulse are much less vital and distinctive. Wales early evolved a school which had great influence in the development of style in the West of England, but it soon became merged therein and did not long preserve its identity: Ireland shows in its minor monastic work peculiar and very individual qualities hitherunto unnoticed, but to which attention is being called at last by Mr. Champneys (cf. The Magasin des Antiquites, "L'Ile d'Irlande et l'Art Ambroise"); in Scotland French influence was more pronounced than in the South, and the Norman of Jedburgh and Kelso, the Gothic of Dryburgh, Melrose, and Edinburgh deserve more careful study than has yet been given them. In Scandinavia, however, Saxon and Gothic, Danish and English school, and show no radical departures from the type established in the South by the Benedictines, Cluniacs, Cistercians, Augustinians, and Friars. In Germany the Gothic expression was slow in establishing itself, few evidences appearing before the Gothic style had reached perfection in France and England. "A reason for this, may perhaps be found in the fact that Germany in the twelfth century possessed a Romanesque architecture which, especially in the important churches along the Rhine, was of a very admirable character and was well suited to the needs and tastes of the German people" (Moore, op. cit., VII, 237). Another reason may also be discovered in the further fact that the pressure of Cistercian influence during its great formative period was towards France and England rather than in the direction of Germany, while the impulse of creative civilization in the twelfth century came from the Continent through the Teutonic blood. When, about the middle of the thirteenth century, French architects began the construction of the cathedral of Cologne after the exaggerated manner of Beauvais, they might almost have claimed that theirs was the first Gothic structure in Germany. Pointed arches and ribbed vaults had

Gothic certainly contributes valuable elements to the total of medieval art. During the eleventh century one school after another had come into existence in almost every part of Italy, all based more or less on some local modification of the primitive basilican idea, yet varying in different directions as the peculiar influences of each section might direct. In Torecello, Murano, and Venice these were naturally Byzantine, more or less modified by the variations at Ravenna. In Sicily, Byzantine influence was mingled with strains from Mohammedan sources and with a strong influence brought in by King Roger and his Norman followers. Pisa and Florence worked on their own lines with some slight Lombard admixture, while those portions of the peninsula under Lombard control developed their vital and inspiring style from the

Flemish Gothic is distinctly a sub-school of that of France rather than of Germany. The nave of Tour- nai, built Flemish Gothic, is one of the most beautiful pointed arches and certain Burgundian qualities are creeping in; its proportions, however, partake of the finer feeling of the Franks, even though its general conception is Flemish. During the first half of the thirteenth century such thoroughly strong and refined examples of true Gothic as St. Martin, Ypres, St. Bavon and St. Michael, Ghent, appear, widely divided in their quality from the halting efforts of Germany proper. The civic work of Flanders is perhaps its most distinctly national creation, and the Cloth Hall, Ypres, with the great group of fourteenth- and fifteenth-century town halls—Bruges, Bruges, Louvain, Oudenarde, Alost, and Ghent—while excessively in their flamboyant detail, yet retain the essential elements of fine composition and vigorous design.

In Italy the introduction of Gothic forms was as long delayed as in Germany, while, so far as native work is concerned, the fundamental principles of Gothic construction were never accepted at all. It was essentially a northern art, and in Italy neither the mental disposition of the people nor the spiritual and temporal conditions put a premium on ideas in themselves racially foreign. Nevertheless, once introduced, they produced in many cases very beautiful results, particularly in decoration and design, and Italian persisting Carlovigian tradition. The abstract beauty of much of this Italian product of the eleventh century is very pronounced, St. Mark's at Venice, San Miniato at Florence, Cefalu, Monreale, and the Capella Palatina in Sicily; Troja, Toscanella, San Michelet at Pavia, San Zeno at Verona—all possess elements of great art, but no one of the styles indicated by any of these buildings was destined to a final working-out under cultural conditions that made such a result inevitable. Development during the twelfth century was almost wholly local in its extent and decorative in its scope, and it was not until the coming of the Cistercians, with their Gothic of Burgundy, at the opening of the thirteenth century, that the incipient or reminiscence local modes were extinguished, and an attempt made at a general unification of style.

The era when architecture was to be the favourite mode for the artistic voicing of a civilization was, at least in the South, nearly at an end; painting and sculpture were to take its place, and therefore the Gothic architecture of Italy was to remain both racially alien and in its nature episcopal. In the former class are those churches the designs of which were apparently imported almost bodily from Burgundy by the Cistercian monks, such as Fossanova, Casnari, and San Galgano, all works of great beauty of form and proportion, all vaulted in stone, the two former having fully developed rib vaults with stilted lateral arches in good Gothic form, though in none is the buttress sys-
tem well developed. A little later come Sant' Andrea, Vercelli (1219–24), said to be the work of an English architect, but manifestly French, with a full system of flying buttresses, San Francesco at Assisi (1226–53), attributed by Vasari to a German architect, but also unmistakably French in its first inspiration, though considerably modified by what may well be local Franciscan influence, and San Francesco at Bologna, of which much the same may be said.

The first really local development of Gothic seems to have been at the hands of the friars, Sta. Croce and Sta. Maria Novella at Florence, dating from the end of the century, varying so widely from any contemporary form of Gothic that their peculiarities must be assigned either to the friars themselves or to the influx of Italian personality. One of the fundamental characteristics of Gothic is a sense of just proportion and a fine relationship of parts, combined with a passion for beauty of line, form, light and shade, colour, and their relationships, not invariably achieved, but always sought for with a consuming eagerness. These qualities are almost wholly lacking in the churches above named, as well as in the cathedral itself, which partakes of nearly all of their peculiarities. We know that in England, when the Franciscans and Dominicans built their own great, popular churches, while they worked for the same large open spaces and economy of material, they nevertheless regarded these considerations of proportion and pure beauty, therefore the conclusion seems inevitable that it is not to the nature of the Mendicant Orders, but to some incapacity in the race, as it then was, that we owe the radical shortcomings of the work of Arnolfo and his fellows in Italy. The fact remains, however, that the great churches of the friars are the chief offenders. San Giovanni e Paolo and the Fra'ari at Venice, the cathedral of Arezzo, San Petronio, Bologna, and the cathedral of Florence are, with the friars churches in the city last named, brilliant examples of the lamentable results that may be obtained when the structural and aesthetic laws of a great style are ignored or misunderstood. Siena and Orvieto cathedrals avoid the bald ugliness of this class of work, but in their structure they have no kinship with Gothic, while in respect to their façades the only quality they possess which is Gothic in any degree is a certain sense of beauty in ornament, itself derived from a recurrence to the forms of nature for inspiration, combined with an intense refinement of line and modelling and a blending of the arts of sculpture and colour in a poetic and lovely composition. Perhaps the nearest approach to true Gothic feeling and accomplishment is to be found in the unfinished front of Genoa cathedral; being of the twelfth century, it is sufficiently early to have received something of the first great Gothic impulse, and is a masterpiece of delicate relations and exquisite detail. The best Gothic work in Italy is not ecclesiastical, but secular, and is to be found in the palaces of Venice, Siens, Florence, and Bologna. The Doge's Palace and the Ducal Palace and the other palaces in Venice, with their admirable private structures of the thirteenth and fourteenth centuries in the first-named city have all the qualities of pure beauty of design and detail, as well as the unerring sense of proportion and relationship, that are characteristic of Gothic art, while the forms through which these are expressed are wholly mediaeval yet with a completeness and note that raises them almost to the dignity of a national school of Gothic design.

Spain, as a Christian State, was non-existent except as a small area of still unconquered territory near the Pyrenees, until the middle of the thirteenth century, when Ferdinand III, afterwards Ferdinand I of Castile, and Leon, conquered the Moors from the Pyrenees to the Straits of Gibraltar, and established the final victory of the Cross over the Crescent in the Iberian Peninsula. Until this time the Gothic spirit had hardly more than crossed the mountains and always as a direct importation from Burgundy and Provence. The cathedrals of Seville, Cordova, and Cordova, the Abbey of Verula, and the church of Las Huelgas at Burgos, all built between 1120 and 1180, show a very undeveloped type of early Gothic construction, combined with a rich and imaginative treatment of Southern Romanesque detail in the exterior. Salamanca and St. Isidoro at Leon both possess domes or lanterns over the crossing, remarkable in point of structural ingenuity and beauty of design both internally and externally. If the scheme was borrowed from the other side of the Pyrenees, it has been wholly transformed and glorified, and this brilliant innovation, containing such possible development that were never carried further, may justly be attributed to native Spanish genius. No progressive growth occurred, however, during the next fifty years, and it was not until the definitive victories of St. Ferdinand made Spain nationalty possible, and the coming of the Cistercians gave the necessary spiritual impulse, that Gothic architecture in any true sense appeared in Spain, and then as another direct importation from France rather than as a development of the latent racial qualities inherent in Salamanca. Burgos, Barcelona, Toledo, and Leon are closely French in their setting-out and ornamentation, but in details vary widely from all French precedents. There is a southern richness and romance both in the exterior and interior design and detail of Burgos, for example, as well as in the other Spanish work from the middle of the thirteenth century onward, that gives it a certain personality quite different from that of any of the other schools of Gothic. This sumptuousness of detail and colour, and composition of light and shade, enters into every detail; altars and reredoses, the latter often vast in size and of the richest materials; grilles of intricately wrought and chiselled metal; sculptured tombs; stalls of the most elaborate carving; great pictures, tapestries, and statues innumerable, together with a Flemish type of stained glass in the most brilliant colouring, were lavished on every church; and since Spain has escaped the pillage and destruction of religious revolutions, much of medieval completeness remains, though considerably overlaid with a thick coating of Renaissance, and therefore it is only in Spanish churches that one may obtain some idea of the general effect of a medieval church as it once was before it became subjected to the mishandling of revolutionists, iconoclasts, and restorers.

The end of Gothic architecture and of all Catholic art came with varying rapidity and at different times as between the several schools of Europe. Generally speaking, its death-knell was sounded when the work of St. Gregory the Great, St. Gregory VII, and St. Innocent III was temporarily undone, and the
French Crown established a temporal control over the papacy. The exile at Avignon, begun in 1305, followed as it was by the Great Schism, broke the links that bound kings and peoples to the hitherto dominant Church, opened the doors to Italy to the influx of the neo-paganism that came from the East with the fall of Constantinople in 1453, permitted the uprising of heresy in all parts of Europe, and made possible the portions and a certain unusual restraint in the placing of decoration justify a dignity hardly argued by the unparalleled license of the general output of the Flamboyant period. To a certain extent it is an architectural mystery, for it is an excessive impoverishment of art appearing after the close of a period of sound and vigorous civilization, in the midst of war and anarchy, contemporaneously with religious degradation, growing side by side with tendencies that in a few years were to bring the civilization it connotes forever to an end. In this it was not alone, however. Similar conditions in Italy surrounded the culmination of the great arts of painting and sculpture, while in England the delicate and exquisite Perpendicular Gothic reached its highest development in the reign of Henry VIII. Says Mr. Porter, in considering this phenomenon: "Thus in the hour of political and economic misfortune, in the midst of the financial ruin and degradation of the Church, was born flamboyant architecture—the last frail blossom of medieval genius. Did this art come into being as a prophetic manifestation of the great national awakening that was to produce Jeanne d'Arc and shake off the English yoke? I should hardly dare assert it, for the history of architecture ever reflects, rather than presages, economic developments" (op. cit., II, X, 368). One may go further even than this, and say that the flowering of art is always a generation or more later than the causes of its being. Dante and Giottos are the last part of the medieval epoch, rather than the forerunners of the Renaissance. Shakespeare is Elizabethan by accident of birth, but essentially he is the fruit of pre-Restoration England.

The early Renaissance in Italy is the flowering of medievalism, rather than the germinating seed of the Renaissance, and similarly the poetic, if inorganic, Flamboyant art of France takes its colour not from the downfall of Catholic civilization in fifteenth-century France, but from the better days that preceded the great débâcle. The magic of fifteenth-century art is neither the unwholesome iriscentence of decay nor the first brightening towards the dawn of a Renaissance, but the afterglow of a great day, in the brightness of which stood the creative personalities of Sts. Odo of Cluny and Robert of Molesme, Bernard and Norbert, Gregory VII and Innocent III, King Philip Augustus and King Louis IX.

Generally speaking, fifteenth-century architecture throughout Europe is secular as opposed to the Classic Romanesque and Norman, and the Cistercian Gothic of the three preceding centuries. Perpendicular Gothic in England and its derivative, Tudor, is largely the product of guilds of architects, sculptors, and masons, working primarily for great merchants and the friars, the latter being the dominant religious influence of the time. In France and Flanders the Flamboyant style is peculiarly the product of the individualistic architect and the purveyor of artistic luxuries, and during the entire period the best and most significant work is to be sought amongst guild-
Gothic and the new "white robe of churches" was of other make. The underlying laws of the new style were identical with those of all other great styles, the vision of beauty characterizing the forms themselves were in their essential nature the same. Western Europe from Italy to England. The differences in the works of different lands are but local and external varieties (Norton, op. cit., I, 10).

This universal mode was universally destroyed, and in the space of a few years. With the opening of the fifteenth century the victory of the Renaissance was definitely assured, while it was brought to its completion just a century later. Of the production of these five centuries of activity comparatively little remains intact. As Mr. Prior says, "Western Europe up to the middle of the sixteenth century might be called a treasure house filled with gems of Gothic genius. The descensions and revolutions of two centuries wrecked one half, swept Gothic churches clear of their ornaments and then levied to the ground many of the fabrics which they furnished. Of much that was not actually destroyed by the dogmatic revolution they had not invited, but were powerless to resist, came an influx of German influence that rapidly wiped out the very tradition of Gothic, except in the case of the universities and in that of the minor domestic building, substituting in its place the most unintelligible use of supposedly classical forms anywhere to be found in the history of the Renaissance. At Oxford and Cambridge the cultural tradition was strong enough to withstand for a century the complete acceptance of the new fashion, and down to the middle of the seventeenth century the elder tradition persisted in such work as St. John's, Cambridge, and Wadham, Oxford, while its compulsion was so strong as to coerce even Inigo Jones into building the fine garden front of St. John's, Oxford, in a style at least reminiscent of what had been universal two centuries before. The same instinctive impulse continues, but of monasteries and castles, even of later date, and to this day in certain portions of England the stone-mason, carpenter, and tile layer preserve the old rules and traditions of the craft that have been handed down from father to son for centuries.

From the year 1000 to the year 1500, Catholic Europe had slowly worked out its own form of artistic expression, and the desire "for something more consummate," was the art of building which the world has achieved." (Prior, "History of Gothic Art in England", I, 7). As paganism had done in Greece, so, and equally, Christianity brought in the north. Primarily it was an art of church-building and adornment, for the Church was the one concrete and unmistakable fact in life. While all else was unstable and changeable, she, with her unbroken tradition and her uninterrupted services vindicated the principle of order and the moral continuity of the race. The services of monastic and secular clergy alike, their offices of faith, charity and labour in the field and the bower, in the school and the hospital as well as in the church were for centuries the chief witness of the spirit of human brotherhood (Norton, "Historical Studies of Church Building in the Middle Ages", I, 16). Therefore, on the heels of the tenth-century triumph of the Church came the eleventh-century church-building; and that of the twelfth under the leadership of the Abbot Suger, under the第一节 of the Church, under the leadership of the Abbot Suger, under the leadership of the Abbot Suger, 1122-1151. The building of the cathedral, with all its splendour, was the occasion of a great feast, before which the cathedral was the most conspicuous monument of the age and variety of adaptation, of beauty in design and skill in construction until at last, in the consummate splendour of such a cathedral as that of Our Lady of Chartres or of Amiens, it reached a height of achievement that has never been surpassed (op. cit., I, 13).

Gottfried von Strassburg, one of the greatest of Middle High German epic poets. Of his life we know
Absolutely nothing; even from our poetry we derive no information on this subject. The dates of his birth and death cannot be accurately fixed, but a passage in the eighth book of his "Tristan und Isolde" furnishes a close approximate date of its composition. There Hartmann and Wolfram are mentioned as still living, while Reinmar of Hagenau and Heinrich von Veldeke are spoken of as deceased. From this it may be inferred that the poem was written about 1210. The fact that Gottfried is referred to by contemporaries as Meister, not Her, has also been alleged as proof that he was of the burgher class. But this is not certain. The title was sometimes given to denote learning, and might then be applied even to one of noble birth, and Gottfried certainly was learned for his time, since he knew Latin and French. Moreover he shows himself thoroughly familiar with the life of courtly society. It would seem that he was in easy circumstances, since he indulges in no complaints, so frequent with medieval poets, about poverty and lack of patronage. The supposition that he was a town clerk at Strasburg has been given up as unsupported by convincing evidence. "Tristan und Isolde" is one of the most finished products of Middle High German literature. The story is briefly as follows. Tristan is sent by his uncle King Marke of Kurnewal (Cornwall) to woo for him the princess Isolde. On the home voyage the two young people by mistake drink a love-potion intended by Isolde's mother for King Marke and his broth- er. As they fall asleep, they are told to rise in the morning, and their illicit relations continue after Isolde's marriage to Marke. Time and again they know how to allay suspicion, but at last Tristan has to flee. He meets and loves another Isolde, her of the white hands, but finds he cannot forget his former love. Here Gottfried's poem breaks off, and the action is continued by Ulrich von Türheim (c. 1246) and Heinrich von Freiburg (c. 1300). According to this Tristan marries the second Isolde, but returns to Cornwall to enter on new love-adventures that culminate in the tragic death of the guilty pair.

Whether the Tristan legend is of Celtic origin, as generally believed, or whether it arose in France, has not been definitely settled. Its literary development certainly took place in Northern France, where it was also loosely connected with the Arthurian cycle of romances. It was introduced into Germany about 1200, and Oberon, who has edited his poems, probably composed the French jongleur version. Gottfried cites as his source the poem of the trouvère Thomas of Brittany, of which only a few fragments are extant. They begin unfortunately where Gottfried breaks off, and hence do not afford us a clear idea of his original. But Thomas's version is preserved in a Norwegian translation made by a monk Robert in 1226 and in the Middle English poem of "Sir Tristrem". Gottfried followed this version rather closely, and hence the merit of his work lies not in its composition, but in its style. This style is that of the courtly epic in its perfection. The rhyme is well broken off, and the action is clear and highly polished. Mannerisms are not wanting; antithesis, word-play, unnecessary repetitions, and inordinate fondness for allegory foreshadow the decline of the epic that was to set in after Gottfried's death.

Gottfried's poem is the most passionate love romance of the Middle Ages. Its wonderful psychological art cannot be questioned, but its morality is open to severe criticism. Its theme is the sensuous love that defies moral law and tramples under foot the most sacred human obligations. That the pair act under the irresistible spell of a magic potion, to be sure, serves in a manner to attenuate their guilt. If Gottfried had finished it, it may well be that he would have brought out more emphatically the tragic element of the story. In that case the poem would not have appeared to be a mere glorification of sensuous love.

Besides the Tristan nothing is preserved of Gottfried's poetry except a couple of lyrics. A lengthy song of praise in honour of the Blessed Virgin was formerly attributed to him, but has been proved to be of different authorship.

Editions of "Tristan und Isolde" have been given by R. Bechstein (3rd ed., Leipzig, 1890) in "Deutsche Klassiker des Mittelalters", VII, VIII, and W. Golther in Kürschers' "Deutsche National Litteratur", IV (Berlin and Stuttgart, 1889). A critical edition has been published by R. Marx (Leipzig, 1900). Translations into modern German with additions to complete the story were made by H. Kurz (3rd ed., Stuttgart, 1877) and by W. Hertz (4th ed., Stuttgart, 1904). The legend also furnished to Richard Wagner the theme for his famous music-drama "Tristan und Isolde" (1859).

Consult the introduction and notes to the editions mentioned. ARTHUR F. J. REMY.

Gottschalk (Godescalcus), Saint, Martyr, Prince of the Wends; d. at Lenzen on the Elbe, 7 June. His feast is kept on 7 June in the additions of the Carthusian Breviaries to the feast of Usuardus. He was the son of Udo, Prince of the Abrodites, who remained a Christian, though a poor one ("male christianus", says Adam of Bremen, Mon. Germ. SS., VII, 329), after his father Misitowi had renounced the faith. He was sent to the monastery of Hersfeld by Michael, at least personally, if not by ecclesiastical license. Michael also sent him a Udo, for some act of cruelty, was slain by a Saxon. At the news Gottschalk cast aside all Christian principles; thinking only of revenge, he escaped from the monastery, crossed the Elbe, and gathered an army from his own and the other Slavic tribes who then lived on the northern and eastern boundaries of Germany. It is said that thousands of Saxons were slaughtered before they were aware of the approach of an army. But his forces were not able to withstand those of Duke Bernhard II. Gottschalk was taken prisoner and his lands were given to Ratibor. After some years he was released, and went to Denmark with many of his people. Canute of Denmark employed them in his wars in Norway, and afterwards sent them to England with his nephew Sweyn. In these expeditions Gottschalk was very successful. He had now returned to the practice of his faith, and married Sigreth, a daughter, or niece, of Canute, others of King Magnus of Norway. After the death of Ratibor and his sons he returned to his home, and by his courage and prudence regained his princely position. Adam of Bremen calls him a pious and god-fearing man. But he was more; he was an organizer and an apostle. His object was to convert the scattered tribes of the Slavs into one kingdom, and to make that Christian. In the former he succeeded well. To effect the latter purpose he obtained priests from Germany. He would accompany the missionaries from place to place and would inculcate their words by his own explanations and instructions. He established monasteries at Oldenburger, Misiburg, Ratzeburg, Lübeck, and Lenzen; the first three he had erected into dioceses. He also contributed most generously to the building of churches and the support of the clergy. In all this he was ably seconded by Adalbert, Archbishop of Hamburg, and numerous conversos. The result was the result of their effort was to set in. Some of the tribes refused to adopt Christianity, and rose in rebellion; Gottschalk and many of the clergy and laity fell victims to their hatred of Christianity.

Francis S. Sherman.

Gottschalk of Orbalis, medieval theologian; b. about 855; d. after 868, probably 30 October, 868 (or 869), in the monastery of Hautvilliers near Reims; son of a noble Saxon count named Berno, who presented him, when still a child, as an oblate in the Benedictine monastery of Fulda. When Gottschalk came of age, he felt no vocation for the religious state, and asked to leave the monastery. But his abbot, Rabanus Maurus, following the prevailing opinion of the age, held that a child, who had been presented as an oblate by his parents, was bound to become a religious, and in consequence, Gottschalk was made a monk against his will. Before receiving major orders, he fled from Fulda and obtained dispensation from his vows at the Council of Mainz, in June, 829. Rabanus Maurus, however, appealed to the emperor and defended his position in a special treatise: "De oblative puerorum" (P. L., CVII, 419-440), whereupon Gottschalk was compelled to live the life of a monk, but was granted the privilege of exchanging the monastic tonsure for the imperial crown, in the Diocese of Soissons. In order to make his enforced life in the monastery more bearable, Gottschalk, who had brilliant talents, gave himself to the study of theology. He found great pleasure in the works of St. Augustine, whose doctrine on grace and predestination attracted him in an especial manner.

If we may believe his opponents, Gottschalk misinterpreted some difficult passages in the writings of St. Augustine and developed a false doctrine of double complete predestination for eternal salvation and for eternal repudiation. He left his monastery without permission, and under the pretence of a pilgrimage to Rome, travelled through Italy, spreading his doctrine wherever he went. In 840 Noting, the future Bishop of Brescia, informed Rabanus Maurus of the rapid spread of Gottschalk's doctrine in Upper Italy, and asked him to write a treatise against it. The treatise is found in P. L., CXII, 1505-38. After his return from Italy, Gottschalk had himself ordained priest, not by the Bishop of Soissons, to whose diocese he belonged, but by the chancypiscopus Richold of Reims, and again returned to Italy. In 846 Rabanus Maurus warned Count Eberhard of Friuli against Gottschalk, who was enjoying the count's hospitality. Gottschalk sought refuge in Germany, Pannonia, and Noricum. On 1 October, 848, he appeared at the Council of Mainz, where his doctrine on predestination was condemned as heretical and he was delivered for punishment to his metropolitan, Hincmar of Reims. At a synod held in Quirrery in the spring of 849, he was obliged to burn his writings, which were deposited from his priestly office because he had been ordained by a chancypiscopus without the consent or knowledge of his own bishop, and was whipped in accordance with the rule of St. Benedict, which prescribes such punishment for refractory monks. He was then imprisoned in the monastery of Hautvilliers where he died obstinate and mentally deranged, after an imprisonment of about twenty years. Most of Gottschalk's writings have been lost. There still remain two short treatises in defence of his doctrine on predestination, in the form of two confessions (P. L., CXXI, 355-366; ibid., cit. 365-368); and some well-written poems (Traube, loc. cit. below).

It is doubtful whether Gottschalk's doctrine on predestination was heretical. There is nothing in his extant writings that cannot be interpreted in a Catholic manner. But the monastic life, taught and taught by all men to be saved, and that Christ died only for those who were predestined to be saved; but these doctrines are not necessarily heretical. He may have meant (and certain passages in his extant writings warrant the assumption) that, in consequence of the foreknowledge that some men do not wish these to be saved; and that Christ's death was of no avail to those who will be damned for their sins. Gottschalk's doctrine concerning the Trinity scarcely admits a Catholic interpretation. He appears to hold that the one and common nature of the three Persons in God is eternal, which becomes individualized and receives concrete existence in the three Persons and that, hence, each Person has its separate deity (see Hinckmar's "De una et non trina deitate" in P. L., CXXV, 473-618).

Michael Ott.

Göttingen (Götwein, Gottviciam, Göttingenk), abbey of, a Benedictine abbey situated on a hill of the same name, about five miles south of Kremm, in Lower Austria. It was founded as a monastery for Canons Regular by Blessed Altmann, Bishop of Passau. In 1072 the high altar of the church was dedicated, but the solemn dedication of the monastery did not take place until 1083. The charter of foundation, 9 September, 1083, is still preserved in the archives of the monastery. In 1094 the discipline of the Canons Regular at Göttingen had become so lax that Bishop Ulrich of Passau, with the permission of Pope Urban II, introduced the Rule of St. Benedict. Prior Hartmann of St. Blasien in the Schwarzwald was elected abbot. On 24 October, 1094, St. Blasien a number of chosen monks, among whom were Bl. Wirnto and Bl. Berthold, who later became Abbe of Formbach and Garsten respectively. Under Hartmann (1094-1114) Göttingen became a famous abode of learning and strict monastic observance. He founded a monastic school, organized a library, and built at the foot of the hill a nunnery where Ava, the earliest German poetess (d. 1127), lived as a recluse. The nunnery, which was afterwards transferred to the top of the hill, continued to exist until 1557.

The history of Göttingen, as might be expected, has its periods of decline as well as of great activity. During the fifteenth and sixteenth centuries it declined so rapidly that from 1556 to 1564 it had no abbots, and in 1564 not a single monk was left at the monastery. At this crisis the imperial deputation arrived at Göttingen, and elected Michael Herrlich, a conventual of Meik, as abbot. The new abbot (1564-1584) restored the monastery spiritually and financially, and rebuilt it after it had been almost entirely destroyed by fire in 1580. Other famous abbots were: George Falb (1612-1631) and David Corner (1631-1648), who successfully opposed the spread of Protestantism in the district; Gottfried Bessel (q.v., 1745-1750), who reconstructed the monastery on a grander scale after it had burnt down in 1718, and inaugurated an era of great intellectual activity; and Magnus Klein (1768-1783), during whose rule Göttingen became a centre of learning. The chief employment of the Benedictines of Göttingen has always consisted in caring for the sick. Its first hospital, St. Albert Dungel (b. 1542; abbey since 29 Sept. 1590), is also president of the Austrian Benedictine Congregation of the Immaculate Conception. To Göttingen belong (Dec., 1908) 65 priests, 5 clerics, 1 novice, 4 lay brothers, 31 parishes administered by Benedictines, 3 administered by secular priests, and 7 succursals of churches. It has a library of about 1100 manuscripts, and valuable collections of coins, engravings, antiquities, and natural history.
apparent from his earliest childhood, were carefully developed by his mother. He received his first great musical impression at the age of thirteen, when his mother took him to hear Rossini's opera "Otello", the principal rôles of which were presented by Malibran, Rubini, Lablache, and Tamburini, four of the greatest singers the world has ever heard. That same year he witnessed a performance of Mozart's "Don Juan" and was raised by it to a high pitch of enthusiasm. In fact, Mozart remained Gounod's ideal throughout his career. Other works which he heard at this period and which left lasting effects upon his mind were Beethoven's Pastoral and Ninth Symphonies. Having taken his degree as Bachelor-és-lettres at the Lycée, he was sent by his mother to the Conservatoire, where he entered the theory classes of Reicha and Lesueur. Subsequently he studied counterpoint and composition under Halévy and Paër, professors in the same institution.

In 1839 his cantatas "Fernand" won for him the Grand Prix de Rome, carrying with it the privilege of a three years' sojourn in Rome and a year's travel in Germany at the expense of the Government. The stay in Rome was, for a young man like Gounod, with a mind receptive of general culture and a delicate artistic temperament, fruitful of results which remained with him for life. It was not alone the works of the Christian Era which absorbed his attention, but the monuments of pagan antiquity seemed to draw him even more powerfully. The great works of classic polyphony which he heard, Sunday after Sunday, in the Sistine Chapel undoubtedly left an indelible impression upon Gounod's imagination and memory; still he does not seem to have penetrated to the life from which they sprang and the spirit which animated them, that is the spirit of the Church and her liturgy. This is easily accounted for, when one considers that his favourite reading during this, the formative, period of his life was Goethe's "Faust" and the poems of Lamartine, and that the atmosphere in which he lived was not pronouncedly Christian. Throughout the greater part of the composer's career he seems to have been unable to rise above this dualism of principles and ideals. After leaving Italy, Gounod visited Vienna, where he wrote a requiem for chorus and orchestra and a mass a capella. Both works were performed under his direction in the church of St. Charles. In 1842 he returned to Paris and was soon appointed choirmaster at the church of the Missions Étrangères, a position which he held for four years and a half. It was during this period that Gounod thought he had a vocation for the priesthood, and for two semesters attended the lectures on theology at the Seminary of Saint-Sulpice. In 1848 he resigned his position as choirmaster. This seems to have been the turning-point in the young musician's career. In his autobiography he takes us into his confidence: "For a composer, there is but one road to follow in order to make a name, and that is the theatre [the operatic stage]. The theatre is the place where one finds the

MICHAEL OTT.

Goulburn (Goulburnensis), Diocese of, one of the six suffragan sees of the ecclesiastical province of Sydney, New South Wales, Australia, the episcopal city (population in 1901, 10,612), is a busy town and a popular resort, and is served by the Sydney-Melbourne railroad at an elevation of 2071 feet above the sea. The diocese has an excellent climate, and a fertile soil, that is devoted to agricultural and pastoral pursuits, and to the cultivation of the vegetable and premature. It is bounded on the east by the three principal rivers of Australia, the Murrumbidgee, flowing through the middle of the diocese, and the Murray and the Lachlan on the southern and the northern boundaries respectively. The Barren Jack Reservoir (situated in the heart of the diocese) will, when completed, be among the largest bodies of conserved water in the world, with a capacity equal to that of Sydney Harbour, will be capable of irrigating several million acres of fertile land, and by promoting closer settlement and intensive cultivation, will in time make the Goulburn diocese the garden region of the great island-continent. The political and commercial importance of the region is also enhanced by the selection of the Yass-Canberra district, which is entirely within the diocesan borders, as the site of the future federal capital of the Australian commonwealth.

The two first resident priests of Goulburn were Fathers Fitzpatrick and Brennan, whose pastorate extended from the coast to the Murray River. Goulburn, formed part of the See of Sydney (q. v.) till 1864, when it was formed into a separate diocese. Dr. Bonaventure Geoghegan was translated thereto from Adelaide, but died in Ireland in 1864, without having taken possession of the newly-created see. His successor was Dr. William Lanigan (consecrated at Goulburn, Pentecost Sunday, 1867). He was the first Australian bishop consecrated in his own cathedral, and was an ardent promoter of Catholic education. He died 13 June, 1900. His successor (consecrated coadjutor to Dr. Landan, 7 July, 1895), is Dr. John Gallagher, the first priest ordained for the diocese. On 21 November, 1870, the first ordination of five priests. In November, 1908, there were 59 priests (51 seculars, 8 regulars), 24 parochial districts, 8 Catholic Brothers, 279 sisters (187 Sisters of Mercy, 49 Presentation Sisters, 43 Sisters of St. Joseph), 2 orphanages for girls and 1 for boys, 1 college for boys, 5 boarding-schools for girls, 64 primary Catholic schools (supported by voluntary contributions) with 4250 children in attendance, and a grand total of 5000 children receiving the benefits of religious education. There is a parochial school in every district throughout the diocese where over thirty children can be brought together. Catholics constitute one-third of the population of the diocese, which is one of the best equipped in Australia.

HENRY W. CLEARY.

Gounod, CHARLES-FRANCOIS, one of the most distinguished French musicians and composers of the nineteenth century, b. in Paris, on 17 June, 1818; d. there, 17 October, 1893. His father, a painter and architect of some distinction and a man of high character and sensitive nature, died when Charles was still in his childhood, and his education devolved upon his mother, a gifted pianist, who used her talents to provide for her two sons, Charles and Urbain. Gounod was sent early to the Lycée Saint-Louis, where he was one of the best scholars. His musical gifts, strikingly

GOUNOD
opportunity and the way to speak every day to the public; it is a daily and permanent exposition opened to the musician. Religious music and the symphony are certainly of a higher order, abstractly considered, than dramatic music, but the opportunities and the means of making one's self known along those lines are rare and appeal only to an intermittent public rather than to a regular public like that of the theatre. And then what an infinite variety for a dramatic author in the choice of subjects. What a field for fancy to imagine upon, and to romance! The theatre tempted me" (pp. 166-67). Gounod's main activity was, from now on, directed towards the operatic stage.

'The subjects he chose for his compositions, and which he successfully interpreted, were not calculated to preserve in his heart and mind the conditions requisite for an adequate interpretation of liturgical texts. His music, allied to the poetry of Émile Augier, Jules Barbier, and Michel Carré, who acted as his librettists at various times, became the most powerful and the most widely diffused expression of French Romanticism in its more lyrical, sentimental form. It was, indeed, his lyric, sentimental side of such works as Goethe's 'Faust', Shakespeare's 'Romeo and Juliet', Corneille's 'Polyeucte' which he seized upon than their heroic or metaphysical aspects. Among the operatic works which have made Gounod's name famous throughout the musical world are to be men- tioned: 'Sapho' (1851), 'La nonne sanglante' (1854), 'Le médecin malgré lui' (1858), 'La reine de Saba' (1862), 'Mireille' (1864), 'La Colombe' (1866), 'Roméo et Juliette' (1867), 'Cinq Mars' (1877), 'Polyeucte' (1878), 'Le triomphe de Zamora' (1881). The Franco-Prussian War caused Gounod to abandon Paris and reside in London for several years. After his return in 1875, he devoted himself more and more to religious music. In 1882 he brought out his oratorio "The Redemption", for which he himself wrote the text and which he styled opus vitae mee. Three years later, in 1885, appeared "Mors et Vita", his last great work, the text for which he selected from Holy Scripture. In spite of Gounod's activity in the operatic field he never ceased writing to liturgical texts. His compositions of this character are numerous and varied. His "Messe Solennelle de Sainte-Cécile", "Messe de Pâques", "Messe du Sacré Cœur", and "Messe des Orphéonistes" have enjoyed great success in France, Belgium, England, and the United States. The mass in honour of Joan of Arc and the one in honour of St. John Baptist de la Salle are less widely known than the first three mentioned. Although these two works come nearer to the spirit of the liturgy than any of the earlier masses, nevertheless they remain the general character of all his liturgical com- positions for the church. Gounod was a child of his time and of the France of the nineteenth century. His temperament, emotional to the point of sentimentality, his artistic education and environment bound him to the theatre and prevented him from permeating the spirit of the liturgy and from giving it adequate musical interpretation.

JOSEPH OTTEN.

GOULI, RENÉ, a Jesuit missionary; b. 1607, in Anjou; martyred in New York State, 23 September, 1642. Health preventing him from joining the Society regularly, he volunteered to serve it gratis in Canada, as a dominé. After working two years as a surgeon in the habitations of the Hurons, he left (1642) for the Huron mission with Father Jougneau, whose constant companion and disciple he remained until death. Captured by the Iroquois near Lake St. Peter, he resignedly accepted his fate. Like the other captives he was beaten, his nails torn out, and his finger-joints cut off. On the thirteen days' journey to the Iroquois country, he suffered from heat, hunger, and blows, his wounds festering and swarming with worms. Meeting half-way a band of 200 warriors, he was forced to march between their double ranks and almost beaten to death. Goupil might have escaped, but he stayed with Jougneau. At Ossernenon, on the Mohawk, they were greeted with jeers, threats, and blows, and Goupil's face was so scarred that it seemed to him the words of Isaiah (iii, 2) prophesying the disfigurement of Christ. He survived the fresh tortures inflicted on him at Andagaron, a neighbouring village, and, unable to instruct his captors in the faith, he taught the children the sign of the cross. This was the cause of his death. Returning one evening to the village with Jougneau, he was led to the ground by a hatchet-blow from an Indian, and he expired invoking the name of Jesus. He was the first of the order in the Canadian missions to suffer martyrdom. He had previously bound himself to the Society by the religious vows pronounced in the presence of Father Jougneau, who calls him in his letters "an angel of innocence and a martyr of Jesus Christ."}

LIONEL LINDSAY.

GOUSSET, THOMAS-MARIE-JOSEPH, French cardinal and theologian; b. at Montigny-les-Charlieu, a village of Franche-Comté, in 1792; d. at Reims in 1866. The son of a vine-grower, he at first laboured in the fields, and did not begin his studies till the age of seventeen. Ordained priest in 1817, he was a curate for several months, and was then charged with teaching moral theology at the Grand Séminaire de Besançon. He retained this chair until 1830, acquiring the reputation of an expert professor and confir- mante casuist. It was then he re-edited with accompanying notes and dissertations the "Conférences d'Angers" (26 vols., 1823), and the "Dictionnaire théologique" of Berger (1826), of which he published another edition in 1843. From these years of his professorship date his first exposition of the "Doctrine de l'Eglise sur le prét à intérêt" (1825), "Le Code civil commenté dans ses rapports avec la théologie morale" (1827), and the "Justification de la théologie du P. Ligouri" (1829). Summoned to the post of vicar-general of Besançon by Cardinal de Rohan, he fulfilled the duties of the post from 1830 to 1835. At this date he was named Bishop of Périgueux, and in the following year he presented to Villeneuve his "Observations sur la liberté d'enseigne- ment", a protest against the monopoly of the university. In 1840 he was called to the Archdiocese of Reims, but his episcopal duties did not prevent him from completing important theological works. In 1844 appeared in French his "Théologie morale à l'usage des curés et des confesseurs", which ran quickly through several editions. His treatise on dogmati
theology (2 vols., 1848) had no less success. The dignity of cardinal, for which he was fitted by his wide knowledge and the soundness of his doctrine and numerous works, was conferred on him in 1850. In virtue of the Constitution of 1852 he became senator of the empire, and in 1856 commander of the Legion of Honour. His last works were: "Exposition des principes du droit canonique" (1858); "Du droit de l'Église touchant le possession des grands de l'Église et la souveraineté temporelle du Pape" (1862).

A. FOURNET.

Government, Forms of. See State.

**Gower, John, poet; b. between 1327-1330, probably in Kent; d. October, 1408.** He was of gentle blood and well connected. He may have been a merchant in London, but this cannot be authoritatively affirmed. It seems certain from his writings that, even if trained to the profession of the law, he did not practise it. Leland's statements that he frequented the law courts and studied the laws of his country for gain, and that he was chief judge of the Common Pleas, are no longer accepted as correct. The latter statement was, as a matter of fact, subsequently withdrawn by Leland, but the revival of it by Fuller greatly agitated a long-continued persistence. The poet was undoubtedly wealthy, being an owner of landed property in the Counties of Norfolk, Suffolk, and Kent, and possibly also in Essex. That he was a man of some standing at court, as well as a writer of acknowledged eminence, may be inferred from his statement in the first version of his "Confessio Amantis", (ll. 43-53), that on one occasion King Richard II recognized him in a boat on the Thames, invited him into the royal barge, and charged him to write some new thing for the monarch's own inspection and detec- tion. John Gower, the poet, has been by some writers identified with one John Gower, clerk, who by grant from King Richard II held the manor of Great Braxed in Essex from 1390 to 1397. That the poet and the clerk were one and the same person may, however, reasonably be doubted. According to Gower himself he was not a clerk when he wrote the "Mirour de l'Omme" (l. 21772: *Pour ce que je ne suis pas un pasteur*). The fact that he never used the phrase "Confessio Amantis" he calls himself a "burel clerk", that is, a man of simple learning or a layman. At all events we may safely conclude that he was not in full Holy orders, for in January, 1397-8, when he was about seventy years of age, he married Agnes Ground- of- Kent, of whose fidelity he was informed from works that she was not his first wife. At that time he was living in the priory of St. Mary Overy (now St. Saviour), Southwark, to which he was a generous benefactor, and he continued to reside there after his marriage. About 1400 he became blind. He died in October, 1408, and was buried in the choir of St. John the Baptist in St. Mary Overy. His tomb is still to be seen. His effigy lies under a canopy, with the head resting on a pillow formed of three folio volumes inscribed with the titles of his three best-known works, namely, the "Speculum Meditantis", the "Vox Clamantis", and the "Confessio Amantis".

Gower wrote in three languages, French, Latin, and English. His French works are the "Mirour de l'Oemme", or "Speculum Hominis", which modern research has almost to a certainty identified with the "Speculum Meditantis", long supposed to be lost; the "Confessio Amantis", and the "Vox Clamantis". The "Mirour de l'Oemme", as we now have it, consists of 28,603 lines, but, as some leaves at the beginning, throughout the work, and at the end are missing from the manuscript, it probably consisted in its complete state of about 31,900 lines. It is written in twelve-line stanzas of octosyllabic verse, with two sets of rhymes in each stanza arranged aba bcb dcd eeo. It is divided into ten parts, treats of vices and virtues, and of the different grades of society, and endeavours to point out the path by which a sinner may return to God and obtain pardon through the aid of Our Lord Jesus Christ and of His sweet mother, the glorious Virgin. It concludes with a life of Our Lady, into which is also naturally introduced an account of the principal events in the life of Christ. It was probably written about 1376-1379.

The "Cinkante (i.e. Cinquante, Fifty) Balades" really contains fifty-two, or, if we count the two of the dedication, fifty-four. The first fifty-one deal in various ways with the passion of love; the last of the series is in honour of the Blessed Virgin, with a general dedication. The dedication to Henry IV comprises, besides the French verse, some Latin verse and two Latin prose quotations. Each *balade* contains normally either twenty-eight or twenty-five lines of ten-syllable verse, divided into three stanzas of eight or seven lines respectively, with an envoy of four lines; but there are occasional deviations from this model. There are different rhyming schemes in the work. It is likely that the "Balades" were written at various periods in the poet's life and that they were brought together, in the order and form in which we now have them, in 1399.

The "Traité" deals with the married state and seeks to show by precept and example the obligation of observing the marriage vow. It is written in ten-syllable verse, and consists of eighteen balades, each balade containing three seven-line stanzas. The rhymes are arranged thus: ab ab bcc. It concludes with one stanza in the nature of an envoi—"*Al université de tout le monde*"—appendied to the eighteenth and last balade, and this passo-stanza is in turn followed by thirty-six rhymed Latin hexameters and pentameters. There are also Latin marginal explanations of the different points discussed. The "Traité" was probably written in 1397.

The "Cinkante Balades" and the "Traité" were printed by the Roxburghe Club in 1818 (ed. Earl Gower), and by Dr. Edmund Stengel in 1886. All the French works were printed by G. C. Macaulay in 1889, the "Mirour de l'Oemme" for the first time.

The Latin works of Gower are the "Vox Clamantis", the "Cronica Tripertita", some eighteen shorter poems, the verses, and marginal and other summaries already mentioned or to be mentioned below, and probably a preface, found in several manuscripts, describing his three principal poems. The "Vox Clamantis" contains 10,265 lines of elegiac verse. It is in seven books, of which the first three have prologues, also in elegiac verses, prefixed to the whole there prose summary of each book. It deals with the rising of the peasants in 1381; the need of pure religious faith; the vices of the clergy of every degree, of the merchants, of the lawyers, and of the common people; and the duties of a king. It calls on Richard II to select wise counsellors, to avoid heavy and oppressive taxation, to abandon sensuality, to restore
In Praise of Peace. These manuscripts are to be found in various public and private libraries in London, Oxford, Cambridge, Glasgow, Lincoln, Dublin, Manchester, and elsewhere.

It is to be noted that while Gower on several occasions freely censures the vices of the clergy of every rank, secular and regular, he expressly dissociates himself from all sympathy with the Lollards, and strongly denounces them as heretics. He lived and died in full communion with the Catholic Church. It was unfortunate for Gower's reputation that for more than two centuries he was constantly associated with Chaucer and mentioned along with him, both being taken as typical writers of English verse of the fourteenth century. In point of originality and scope of invention he appeared in the latest writings of the Chaucerian school, but he is not a poet who should suffer from contrast with his great contemporary. Hence Gower has been generally relegated to an undeservedly inferior rank among poets. But in the "Cinkente Balades" at least he displays many true poetic qualities, and his art of telling a story in a natural way, as shown for example in the "Confessio Amantis", is by no means slender, and in some respects will stand comparison with Chaucer's admittedly great gifts as a narrator.

dred grandee, poets, scholars, and great ladies of the court sat to him. Notable among these canvases are those of Queen Maria Luisa, Charles IV and his family, Doña Maria Josefa, and Queen Isabella of Sicily, the last two celebrated for their beautiful and tender representation of maidenhood. In 1789 Goya was appointed pintor de cámara of Charles IV with an income of $2,800 a year, and in 1795 was unanimously elected director of the Madrid Academy.

Goya painted frescoes in the churches of Seville, Valencia, Saragossa, Toledo, and Madrid, those in S. Antonio de la Florida (Madrid) being especially notable for their grace and movement. His paintings, other than portraits and religious works, portray the life of Spain, and exhibit his immense vitality, vehemence, audacity, and unaffectedness. His technique was a complete overthrow of tradition. Impetuous and intolerant, he sought expression as a means of expression. The "Caprichoso", begun in 1792, appeared in 1795. In this series, dedicated to the king, he pilloried the prevailing vices and anomalies with a subtler and more bitter needle than Callot's and a spirit less commonplace than Hogarth's. He is often called the Spanish Rabelais. Goya almost invariably used aquatint to give "depth" and suggest planes in these etchings, and every one of these eighty plates Delacroix is said to have copied. The "Miseries of War" followed these and are far more serious in conception. Many of them suggest Rembrandt's methods. He began lithography in Madrid, and the first important artist in this medium, he made on stone was by Goya, and this, too, when he was seventy-three.

Ferdinand VII, at his restoration in 1814, invited Goya to his court; but, unhappy, totally deaf, and growing blind, he left Madrid on the completion of his most important ecclesiastical work, the Jesuit church of Carabanchel, for the church of S. Anton Abad, and settled in Bordeaux. Here in his eightieth year he lithographed the notable series of bull-fights. Goya was the strongest figure in the age of tumult and change in which he lived, the last link between tradition and the great movement in art of the nineteenth century, which he epitomized when he said: "a picture, the effect of which is true, is finished." He was buried in Bordeaux. One son, of all his children, survived him. His other works are: double portrait of La Maja, in the San Fernando Academy; portrait of Duchess of Alva, in the Louvre; a collection of etchings and aquatintes in the British Museum; equestrian portrait of Charles IV, in Madrid; sanguine drawing of Duke of Wellington, in the British Museum.

GOYA, Diocese of (Goyaiensius), co-extensive with the state of the same name, one of the twenty states which, with the Federal District, comprise the Republic of Brazil. It has an area of 288,456 square miles, or a little more than six times that of the State of New York. The longitudinal position of the capital (also called Goyai) corresponds to about twenty-five degrees east of New York City; and as regards its latitude, it is about as far south of the Equator as, say, Acapulco in Southern Mexico is north of it. The diocese is suffragan of Bahia (the primatial see), and was founded in 1626 by Leo X. The country is mountainous, one peak of the Sierra do Pireneus being about 9600 feet high. The soil is naturally fertile and rich in precious metals, but for various reasons the resources of the state are practically undeveloped. Cattails is at present (1909) the only town touched by a railway. Cattle-rearing is the chief industry. The population is about 400,000. Goyai, the capital town (12,000), founded in 1634, is the cathedral, a lyceum, schools of classics and philosophy, and various elementary schools. The legislative assembly of the state sit here. According to an article of the constitution, the future federal capital of Brazil must occupy an elevated site on a central plateau of the country, and it is suggested that the state of Goyai offers the most suitable location for the fulfilment of these conditions. The religious statistics are as follows: secular priests, 39; regular, 38; churches and chapels, 36; there is a mission-house of the Dominicans of Toulouse, and also a pension and school of the Dominican nuns.

THOMAS HUNTINGTON HOWARD.

GOSO, Diocese of (Goulos-Gaudianiensis), comprises the island of Goso in the Mediterranean Sea (seventeen miles west of the harbour of Valletta, Malta) and islet of Comino, and has a population of 22,700 souls. It is more picturesque than the sister island of Malta, and the country, covered as it is with conical hills, is more fertile in its plains and valleys. On a central plateau the ruined fortifications of an ancient town contain the cathedral church and public buildings, outside of which is a large suburb. Goso is famed for its grotto of Calypso, at a little distance from which are the ruins of a Cyclopean temple, a most conspicuous monument of antiquity.

Up to the year 1864, Goso formed part of the Diocese of Malta, but in that year the See of Goso (now Archbishop of Rhodes and Bishop of Malta), a diocesan seminary was established on the site formerly occupied by the San Giuliano Hospital, the revenues of which were appropriated to this new establishment. Through the efforts of Mgr. Pietro Pace, who was then rear-general of the order of Maltese, the new Archbishop of Rhodes and Bishop of Malta), a diocesan seminary was established on the site formerly occupied by the San Giuliano Hospital, the revenues of which were appropriated to this new establishment. This seminary was inaugurated 3 November, 1856, and, by the express desire of Pope Pius IX, was placed under the direction of the Jesuits. On the death of Mgr. Butzig, Father Maciello, Superior General of the Augustinian Order, was made Bishop of Città di Castello and appointed administrator of the Diocese of Goso. He left Goso in May, 1867, and in 1871 became Archbishop of Pisa. His successor to the administration of the diocese was Mgr. Antonio Grechi Delicata, titular Bishop of Claren- don, a native of Malta, who, in 1868, was appointed Bishop of Goso, and as such assisted at the Vatican Council. Mgr. Grechi Delicata's charity towards the poor went so far that he even divested himself of his own patrimony. This worthy prelate died on the last day of the year 1876.
On 12 March, 1877, Mgr. Canon Professor Pietro Pace, a native of Gozo, was appointed to succeed Mgr. Gresh Delicata, and was consecrated at Rome by Cardinal Howard. Under his administration the seminary was augmented by the installation of a meteorological observatory, which was inaugurated by the celebrated Padre Denza, Director of the Vatican Observatory. During this administration, an episcopal seminary for girls was also established, under the care of the Sisters of St. Vincent de Paul, to whom was also entrusted the direction of the annexed orphan asylum. The same bishop provided the diocese with a new episcopal palace and new monasteries, besides laying out large sums of money on the cathedral. In 1878 Mgr. Pace was appointed first Bishop of Gozo and Bishop of Malta. His successor in the See of Gozo (and actual bishop) is the Reverend G. M. Camilleri, O.S.A., a native of Valetta (b. 15 March, 1842). Under Mgr. Camilleri's administration the first dioecesan synod was celebrated, in October, 1903. This synod was of absolute necessity, as the diocese was still governed under the rules of the Synod of Malta of 1703, and consequently lacked a safe guide adapted to the times. Constitutional and decrees were also promulgated and published which gave new life to the working of the diocese. The cathedral Church of Gozo was built in 1697-1703, by Lorenzo Gafa. Its ground plan is in the form of a Latin cross. Its interior is adorned with fine paintings. The “Massagiere di Maria”, an Italian periodical, is recognized in the Diocese of Gozo as the official organ of the sanctuary of the Bl. Virgin la Pint.

ANTONIO VELLA.

GOZZI. CARLO, Italian author, b. at Venice, 1790; d. 1870. He served in military service the three years that ensued upon the completion of his school studies. Then impelled by real necessity, since the family means had been wasted away, he, like his brother Gasparo, directed his attention to literature. He became a member of the Accademia dei Granelleschi, whose conservative feelings with regard to the native literary traditions his character are long been the target of the attacks upon the dramatic methods of both of the leading playwrights of the time, Chiari and Goldoni. The ignorance and the bombast of the former had excited his ire, while the reform advocated by Goldoni seemed to him undesirable, inasmuch as it involved the abolishment of the Italian language. To illustrate his own views as to what was likely to be a popular form of the drama in Venice, he began the composition of his “Fiabe”, for whose improbable plots he derived inspiration from various collections of fantastic tales, such as those contained in the Italian “Cunto de li cunteti” of Bassi, and the Italian and Oriental compilations. From Spanish plays of the sixteenth and seventeenth centuries he also drew no little matter, and withal he freely used his own fancy and indulged lavishly his own satirical powers. There is little order, and hardly any subordination to rule in his “Fiabe”, which, it should be said, differ from the commedie dell’arte, whose manner they were intended to continue, in that they are often written out in full and are not merely sketchy scenarios. They preserve the stock characters of the commedie dell’arte, such as Truffaldino, Brihella, and Pantalone, and make them speak in dialect, a fact which stood in the way of their general adoption outside of the Venetian repertory, and they jumble together the heroic and the grotesque, the serious and the ridiculous, the real and the fantastic, bringing on the scene devils, necromancers, knights, fairies, monsters, and like figures. The high degree of popularity attained by the “Fiabe” in the author’s time, and it was enough to enable him to drive Goldoni from Venice, is explained by the presence in them of many elements of contemporaneous and topical interest. At home they later fell into oblivion in so far as theatrical repertories are concerned; for some time they continued to attract attention abroad, as is evinced by the consideration given to them by Goethe, by Schiller, who made a version of them, the “Turandot” of Schopenhauer in his “Wagner, by Mme de Staël, and others. As J. A. Symonds has said of them, and as Wagner seemed to apprehend, they have in them good material for operatic libretti. He prepared some plays based on Spanish dramas in opposition to the spread of the sentimental drama as represented by the drame larmoyant and the bourgeois theatre. In 1865, he composed an opera, “Zamora”, which he is said to have asked Wagner to write, and which is said to be still being produced. In the later years his operas and other compositions for the stage include “La Maltese”, “La Scapin”, “Rigoletto”, “Éclat d’amour”, “L’Abbaye”, “La Périchole”, “La Fille de Capri”, “La Jarreuse”, “La Goulue”, “La Scala”, “La Favorite”, “La Favorite”, “La Favorite”, “La Favorite”, and “Le Misanthrope”. His last works have from him a chivalrous and romantic poem of satiric import, practically a mock-heroic, the “Marisa bizzarra”; the almanac entitled “Tartana degli Influssi”, which has attacks on Goldoni and Chiari; and the autobiographical “Memorie della sua vita”. This last rather entertaining document was called forth by the strictures put upon him by a rival, Pietro Antonio Gratarol, whom he had previously forced from Venice by the ridicule which he had brought upon him in a comedy, the “Droge d’amore”. The “Memorie” have been translated into English by J. J. Lonigo (1890). The “Fiabe” have been edited by E. Masi (Bologna, 1885), with a bibliography of all Gozzi's writings, while his other works may be found in the edition published at Venice in 1802. 

MAGRINI, Tempi, la vita e gli scritti di Carlo Gozzi (Benevento, 1883). 

J. D. M. FORD.

GOZZOLI (BENNOZZO DI LESE DI SANDRO, surnamed GOZZOLI), painter; b. at Florence, 1420; d. at Pisa, 1497. He was a pupil of Fra Angelico, and assisted him in his work at Rome and at Orvieto. It was not until 1449 that Benozzo began to work independently. The principal centres of his artistic activity were Montefalco (1450–1452), Florence (1457–1463), San Gimignano (1464–1467), and Pisa (1469–1485). For the church of San Fortunato, near Montefalco in Umbria, he executed many frescoes, among them an Annunciation, a Madonna, and a few small pictures; the best-known are the “Glory of St. Fortunatus”, and the “Madonna of the Holy Girdle” (now in the Lateran Museum). Fra Angelico’s influence pervades all his work; but the pupil’s own personal traits are always in evidence. In 1452 we find him at Montefalco decorating the church of St. Francis, and frescoes in the choir are the most noteworthy. The ceiling contains grandiose figures of saints; the end wall, the “Glory of St. Francis”; the side walls, the “Life of the Seraphic Patriarch of Assisi” in twelve scenes. At Florence Piero de’ Medici commissioned Benozzo to paint frescoes in the chapel of the Bargello (afterwards known as the Ricciard Palace) which Michelozzo had designed. The altar had already been decorated by a “Nativity” from the hand of Filippo Lippi. On the three principal walls Gozzi depicted the "Procession of the Magi in quest of the new-born King". This work, which has kept all its original freshness of colouring, is one of the most successful of the Renaissance period, and furnishes a very striking picture of the sumptuous life led in the fifteenth century. All the personages in the caravans are portraits, and include the Medici and their court. Along the sides of its single window are clustered rows of angels so exquisitely graceful in design as to be worthy of Fra Angelico.

In the "city of the beautiful towers" (La città delle belle torri), San Gimignano, Gozzi painted for the Collegiale a "Martyrdom of St. Sebastian"; along the walls of the choir in San Agostino he set forth St. Augustine’s life in a series of seventeen frescoes, which he employed as a means of introducing the world of
MICHAEL PALÆOLOGUS AS ONE OF THE MAGI
BENOZZO GOZZOLI, PALAZZO RICCARDI, FLORENCE
Among the three fundamental ideas—sin, redemption, and grace—grace plays the part of the means, indispensable and Divinely ordained, to effect the redemption from sin through Christ and to lead men to their eternal destiny in heaven. Before the Council of Trent, the Schoolmen seldom used the term gratia actualis, preferring auxilium speciale, motu divino, and similar designations; nor did they formally distinguish actual grace from sanctifying grace. But, in consequence of modern controversies regarding grace, it has become usual and necessary in theology to draw a sharper distinction between the transient help to act (actual grace) and the permanent state of grace (sanctifying grace). For this reason we adopt this distinction as our principle of division in the following exposition of the Catholic doctrine.

I. ACTUAL GRACE.—It derives its name, actual, from the Latin actualis (ad actum), for it is granted by

God for the performance of salutary acts and is present and disappears with the action itself. Its opposite, therefore, is not possible grace, which is without usefulness or importance, but habitual grace, which causes a state of holiness, so that the mutual relations between these two kinds of grace are the relations between action and state, not those between actuality and potentiality. Later, we shall discuss habitual grace more fully under the name of sanctifying or justifying grace. As to actual grace, we have to examine: (1) its Nature; (2) its Properties. The third, and difficult, question of the relationship between grace and liberty shall be reserved for discussion in the article GRACE, CONTROVERSIES ON.

(1) Nature of Actual Grace.—To know the nature of actual grace, we must consider both the comprehension and the extension of the term. Its comprehension is exhibited to us by (a) its definition; its extension, by the complete enumeration of all Divine helps of grace; in other words, by (b) the logical division of the idea, inasmuch as the sum of all the particulars represents, in every science, the logical extent of an idea or term.

(a) The definition of actual grace is based on the idea of grace in general, which, in Biblical, classical, and modern language, admits of a fourfold meaning. In the first place, subjectively, grace signifies good will, benevolence; then, objectively, it designates every favour which proceeds from this benevolence and, consequently, every gratuitous gift (domum gratitum, beneficium). In the former (subjective) sense,
the king's grace grants life to the criminal condemned to death; in the latter (objective) sense the king distributes graces to his lieges. In this connexion grace also stands for the charm, which, as we speak of the three Graces in mythology, or of the grace poured forth on the lips of the bridegroom (Ps. xxiv, 3), because charm calls forth benevolent love in the giver and prompts him to the bestowal of benefactions. As the recipient of graces experiences, on his part, the result of a grateful attitude of his own towards the sentiments in thanks, the word gratia (plural of gratia) also stands for thanksgiving in the expressions gratias agere and Deo gratias, which have their counterpart in the English, to say grace after meals.

A comparison of these four senses of the word grace reveals a clear relationship of analogy among them, since grace, in its objective significance of "gratuitous gift" or "favour", occupies a central position around which the other meanings may be logically grouped. For the attractiveness of the recipient as well as the benevolence of the giver is the cause, whereas the expression of thanks which proceeds from the grateful disposition is the effect, of the gratuitous gift of grace. This last-mentioned meaning is, consequently, the fundamental one in grace. The characteristic idea of a free gift must be taken in the strict sense and exclude merit in every form, be it in the range of commutative justice, in sale and purchase, or in that of distributive justice, as is the case in the so-called reinforcements and gratuities. Hence St. Paul says: "If by grace, it is not now by works: otherwise grace is no more grace" (Rom., xi, 6).

True, even gratuitous Divine gifts may still fall within the range of mere nature. Thus we petition God, under the guidance of the Church, for mere natural graces, as health, favourable weather, deliverance from plague, famine, and war. Now such natural graces, which appear simultaneously as due and gratuitous, are by no means a contradiction in themselves. For, first, the whole creation is for mankind a gratuitous gift of the love of God, whom neither justice nor equity compelled to create the world. And secondly, the individual man can, in virtue of his title of creation, lay a rightful claim only to the essential endowments of his nature. Goods granted over and above this class, though belonging to the just demands of human nature in general, have no claim of an actual grace, or favour, as, for example, eminent talents, robust health, perfect limbs, fortitude. We would have omitted mentioning this so-called "grace of creation", had not Pelagius, by emphasizing the gratuitous character of such natural graces, succeeded, at last, in Duplapis and Lollard, in misleading the unsuspecting bishops in regard to the dangers of his heresy. The five African bishops, Augustine among them, in their report to Pope Innocent I, rightly called attention to the fact that Pelagius admitted only the grace through which we are men, but denied grace properly so called, through which we are Christians and children of God. Whenever Scripture and tradition speak simply of grace, reference is made to a supernatural grace which is opposed to natural grace as to its contrary and lies far beyond all rightful claim and strenuous effort of the creature that it remains positively undue to the already existing nature, because it includes goods of a Divine order, as, e.g., Divine sonship, indwelling of the Spirit, vision of God. Actual grace is of this kind, because, as a means, it stands in intrinsic and essential relation to these Divine goods which are the end. As a consequence, the most important element characteristic of its nature must be the supernatural.

As a further determining factor must be added its necessary derivation from the merits of Christ's redemption; for there is the question of Christian grace. In the Thomist theory of redemption, which considers not Christ, but the Trinity, as the cause of grace in the angels and in our first parents in Paradise, the addition of this new characteristic appears self-explanatory. As to the Scotists, they derive each and every natural grace immediately, as well as the three graces in mythology, or of the grace poured forth on the lips of the bridegroom (Ps. xiv, 3), because charm calls forth benevolent love in the giver and prompts him to the bestowal of benefactions. As the recipient of graces experiences, on his part, the result of a grateful attitude of his own towards the sentiments in thanks, the word gratia (plural of gratia) also stands for thanksgiving in the expressions gratias agere and Deo gratias, which have their counterpart in the English, to say grace after meals.

A comparison of these four senses of the word grace reveals a clear relationship of analogy among them, since grace, in its objective significance of "gratuitous gift" or "favour", occupies a central position around which the other meanings may be logically grouped. For the attractiveness of the recipient as well as the benevolence of the giver is the cause, whereas the expression of thanks which proceeds from the grateful disposition is the effect, of the gratuitous gift of grace. This last-mentioned meaning is, consequently, the fundamental one in grace. The characteristic idea of a free gift must be taken in the strict sense and exclude merit in every form, be it in the range of commutative justice, in sale and purchase, or in that of distributive justice, as is the case in the so-called reinforcements and gratuities. Hence St. Paul says: "If by grace, it is not now by works: otherwise grace is no more grace" (Rom., xi, 6).

True, even gratuitous Divine gifts may still fall within the range of mere nature. Thus we petition God, under the guidance of the Church, for mere natural graces, as health, favourable weather, deliverance from plague, famine, and war. Now such natural graces, which appear simultaneously as due and gratuitous, are by no means a contradiction in themselves. For, first, the whole creation is for mankind a gratuitous gift of the love of God, whom neither justice nor equity compelled to create the world. And secondly, the individual man can, in virtue of his title of creation, lay a rightful claim only to the essential endowments of his nature. Goods granted over and above this class, though belonging to the just demands of human nature in general, have no claim of an actual grace, or favour, as, for example, eminent talents, robust health, perfect limbs, fortitude. We would have omitted mentioning this so-called "grace of creation", had not Pelagius, by emphasizing the gratuitous character of such natural graces, succeeded, at last, in Duplapis and Lollard, in misleading the unsuspecting bishops in regard to the dangers of his heresy. The five African bishops, Augustine among them, in their report to Pope Innocent I, rightly called attention to the fact that Pelagius admitted only the grace through which we are men, but denied grace properly so called, through which we are Christians and children of God. Whenever Scripture and tradition speak simply of grace, reference is made to a supernatural grace which is opposed to natural grace as to its contrary and lies far beyond all rightful claim and strenuous effort of the creature that it remains positively undue to the already existing nature, because it includes goods of a Divine order, as, e.g., Divine sonship, indwelling of the Spirit, vision of God. Actual grace is of this kind, because, as a means, it stands in intrinsic and essential relation to these Divine goods which are the end. As a consequence, the most important element characteristic of its nature must be the supernatural.

As a further determining factor must be added its necessary derivation from the merits of Christ's redemption; for there is the question of Christian grace. In the Thomist theory of redemption, which considers not Christ, but the Trinity, as the cause of grace in the
GRACE

GRACE must come to the rescue of its incapacity and supply the deficient powers, without which no supernatural activity is possible. Actual grace thus becomes a special causal principle which communicates to impenitent nature moral, and especially physical, powers.

Grace, as a moral cause, presupposes the existence of evil. The consciousness of the necessity of moral influence may become so perfect that we beg of God the grace of a violent victory over our evil nature; witness the celebrated prayer of the Church: “Ad te nostras, etiam rebellis, compelle propitius voluntates” (Voucasafe to compel our wills to Thee, albeit they resist). In the ordinary course of things the Divine inspiration of joy in virtue and aversion from sin will, no doubt, methodically lead to the free performance of salutary acts; but the moral influence of grace can effect the temporary control of freedom in the sinner. The sudden conversion of the Apostle Paul is the soul of our subject, and we understand that the above-mentioned triumph over the obstacles to salvation demands in itself a grace which is natural only in substance, but supernatural in mode. Hence many theologians require even for the so-called state of pure nature (which never existed) such natural graces as are remedies against the grace receivings of natural concupiscence. The end of supernatural bliss and the consequently necessary endowment with supernatural means of grace would not have existed in this state (status naturae purae), but the disastrous results of an evil tendency unbridled would have been experienced to the same extent as a simple will.

More important than the moral causality of grace is its physical causality, for man must also receive from God the physical power to perform salutary works. Without it, activity in the order of salvation is not only more difficult and laborious, it is altogether impossible. The best of a child, to draw a comparison from actual life, may be so weak that a mere moral influence, such as the holding out of a beautiful toy, will not suffice to enable it to walk without the physical support of the mother—the use of the leading-strings. The latter situation is the one in which man is placed when speaking of supernatural operations.

From the question which is to be discussed later, and which regards the metaphysical necessity of grace for all salutary acts, whether of an easy or difficult nature, it follows, with irresistible logic, that the incapacity of nature cannot be ascribed solely to a mere weakened condition and moral difficulties resulting from sin, but that it must be attributed also, and principally, to physical inability. The communication of the physical power to the soul admits, theoretically, of only one interpretation, namely, that grace raises the faculties of the soul (intelligent and will) above their natural constitution into a supernatural sphere of being, and thus renders them capable of substantially supernatural operations. The reason why, through our inner consciousness, we can gain no psychological knowledge of this higher activity of the soul lies in the fact that our self-consciousness extends solely to the acts, and in no wise to the substance, of the soul. The reason arises not from the incapacity of proving the spirituality, the immortality, and the very existence of the human soul from the characteristic nature of its activity. Inexorable theological logic postulates the supernatural nature of the acts tending towards our salvation, because theological faith means among other things “the beginning source of all justification”; must certainly be of the same supernatural order as the intuitive vision of God to which it ultimately leads. The necessity of the physical causality of grace, as is readily seen, is nowise dependent on the existence of concupiscence, but remains just as imperative for our first parents in their state of innocence and for the angels subject to no evil tendency. Actual grace, therefore, considered under this aspect, bears the name of “eleemosynaric grace” (gracia eleemos), though not in a sense which would exclude from it the possibility of simultaneously fulfilling the moral function of healing grace in the present state of man. It is only after these considerations that the comprehension of the nature of actual grace in all its aspects, and that we may agree with Perrone: Actual grace is that unmerited interior assistance which God, in virtue of the merits of Christ, confers upon fallen man in order to strengthen, on the one hand, his infirmity resulting from sin and, on the other, to render him capable, by elevation to the supernatural order, of supernatural acts of the soul, so that he may attain justification, persevere in it to the end, and thus enter into everlasting life.

(b) The Logical Division of actual grace should enumerate all the kinds to which the definition is universally applicable. If we adopt the different faculties of the soul as the objects of division, we should have three kinds: graces of the intellect, of the will, and of the sensitive faculties. With regard to the consent of the will we distinguish two pairs of graces: first, preventing and co-operating; then efficacious and merely sufficient grace. It must be immediately known that all these graces are no artificially invented entities, but actually existing realities.

(a) Graces of the Different Faculties of the Soul.—The illuminating grace of the intellect (gratia illuminationis, illustrationes) first presents itself for consideration. It is that grace which in the work of salvation suggests good thoughts to the intellect. In this state, often in a twofold manner, either mediate or immediately. The existence of mediate graces of the mind is not only vouchèd for a priori by the presence of merely external graces, as when a stirring sermon or the sight of the crucifix forces the sinner to earnest reflection; it is also explicitly attested by Holy Writ, where the “commandment of the Lord” is represented as “enlightening the eyes” (Ps. xviii, 9), and the external example of Christ as a model for our imitation (I Pet., ii, 21). But, as this mediate grace need neither interrupt the psychological course of the law of the association of ideas nor be of a strictly supernatural nature, it may be unconsciously the way for a grace of greater importance and necessity, immediate illuminating grace.

In the latter, the Holy Ghost Himself through immediate elevation and penetration of the powers of the mind prompts the soul and manifests to it in a supernatural light the eternal truths of salvation. Although our sacred discourses be perfect masterpieces of eloquence, though our picture of the wounds of the crucified Saviour be ever so vivid and realistic, they alone can never be the first step towards the conversion of a sinner, except when God by a vigorous impulse stirs the heart and mind with a great impression of St. Fulgentius (Ep. xvii, De incarn. et grat., n. 67), “opens the ear of the interior man.” St. Paul acknowledges, also, that the faith which his own preaching and that of his disciple Apollo had sown in Corinth, and which, under their planting and watering (mediate grace of preaching), had taken root, had not God Himself given “the increase.” (See I Cor., iii, 6: “Ego plantavi, Apollo rigavit, sed Deus increamentum dedi.”) Among the Fathers of the Church none has more strongly emphasized the fruitfulness of preaching without interior illumination than the Doctor of Grace, Augustine, who says among other things: “I found my help in a source of help; the adjutus quaedam sunt et admonitiones; cathedram in celo habet qui corda tenet” (“Instruction
and admonition help somewhat externally, but he who reaches the heart has a place in heaven."—(Tract. XIII, 19, in I. Ioh.) But the more especial question to be asked: Whether the mediate and immediate grace of the mind affects the idea, the judgment, or the reasoning. There can be no doubt that it primarily influences the judgment (judicium), be the latter theoretical (e. g. on the credibility of revelation) or practical (e. g. regarding the matter of charity). But the reason of process and the idea (apprehensio) may also become a grace of the mind, firstly, because they both belong to the essence of human knowledge, and grace always operates in a manner conformable to nature; secondly, because ideas are in final analysis but the result and fruit of conditioned judgments and reasonings.

Besides the grace of the mind, the strengthening grace of the will (generally called gratia inspirations) plays not only the most important, but an indispensable, part, for no works of salvation are even thinkable without operations of the will. It may also be either mediate or immediate, according as the pious affections and wholesome resolutions are awakened in the soul by the immediately preceding illumination of the mind or by God Himself (by appropriation of the Holy Ghost). Owing to the psychological interpenetration of cognition and volition, every (mediate or immediate) grace of the mind is in itself also a grace affecting the will. This twofold action—on intellect and will—has therefore the significance of two different acts of the soul, but of only one grace. Consequently, immediate elevation and motion of the will by the Holy Spirit can alone be considered a new grace. The Pelagians logically denied the existence especially of this grace, even if, according to the improbable opinion of some historians of dogma, they were forced by Augustine in the course of the debate to admit at least the immediate grace of the mind. Augustine threw in the whole weight of his personality in favour of the existence and necessity of the grace of the will, to which he applied the names, delictatio celestis, inspiratio dictionis, cupiditas boni, and the like. The celebrated Provincial Council of Carthage (A. D. 418) confirmed his teaching when it declared that grace does not simply consist in the manifestation of the Divine precepts whereby we may know our power to execute the duties, but grants us the power to love and accomplish whatever we have recognized as righteous in things pertaining to salvation (cf. Denzinger, "Enchiridion", 10th ed., n. 104, Freiburg, 1908). The Church has never shared the optimistic optimism of Socrates, which made virtue consist in unqualified knowledge, and taught that mere knowledge was sufficient to inculcate it. If even natural virtue must be fought for, and is acquired only through energetic work and constant practice, how much more does not a supernatural life of virtue require the Divine help of grace with which the Christian must freely co-operate, and thus advance by slow degrees in perfection. The strengthening grace of the will, like the grace of the mind, assumes the form of vital acts of the soul and manifests itself chiefly in what are called affections of the will. Scholastic psychology enumerates eleven such affections, namely: love and hatred, delight and sadness, desire and aversion, hope and despair, daring and fear, finally, anger. This whole list of feelings has, with the sole exception of despair, which imperils the work of salvation, a practical significance in relation to good and evil; these affections may therefore develop into real graces of the will. But, inasmuch as all motions of the mind are ultimately reduced to love as fundamental feeling (cf. St. Thomas, "Summa", I-II, Q. xxv, a. 2), the functions of the grace of the will may be systematically focussed in love; hence the concise declaration of the above-mentioned Synod of Carthage (I. c.): "Cum sit utrumque donum Dei, et seire quid facere debeamus et diligere ut faciamus." (Since both are gifts of God—the knowing what we ought to do, and the desire to do it—we must first acquire the power to understand immediately, by this "love" the perfect love of God, which comes only at the end of the process of justification as the crowning-stone of the edifice, even though Augustine (De Trinit., VIII, 10, and frequently) honours with the name caritas the mere love for good and any good motion of the will whatsoever. But he (De theologia, II, 10-11) says, when he asserts that, according to Augustine, the only grace properly so called is the theological virtue of charity. Are faith, hope, contrition, fear, only graces improperly so called, or do they become graces in the true sense only in connexion with charity? It cannot be determined with certainty, and with any degree of faith whether to the graces of mind and will so far spoken of should be added special actual graces affecting the sensitive faculties of the soul. But their existence may be asserted with great probability. For if, according to an appropriate remark of Aristotle (De anima, I, viii), it is true that thinking is impossible without imagination, supernatural thought also must find its originator and point of support in a corresponding phantasm to which, like the ivy on the wall, it clings and thus creeps upward. At any rate, the harmonious agreement of the grace of the intellect and of the grace of the will in itself also is advantageous and favourable on the soul visited by grace. It is likewise clear that in the rebellious motions of concupiscence, which reside in the sensitive faculties, the grace of the will has a dangerous enemy which must be overcome by the infusion of contrary dispositions, as aversion from sin; before the will is aroused to make firm resolutions. Paul consequently thrice besought the Lord that the sting of the flesh might depart from him, but was answered: "Sufficient tibi gratia mea." (II Cor. xii, 9.).

(8) Graces regarding Free Will.—If we take the attitude of free will as the dividing principle of actual grace, we must first have a grace which precedes the free determination of the will and another which follows this determination and co-operates with the will. This is the first pair of graces, preventing and cooperating grace (gratia praevensionis et cooperans). Preventing grace must, according to its physical nature, precede the will, and it also forms the foundation of the co-operating grace, on the contrary, solely in free, deliberate actions of the will. The latter assume the character of actual graces, not only because they are immediately suggested by God, but also because they may become, after the achievement of success, the very principle of new knowledge, and that mere intension of the grace of God may simultaneously effect and, as it were, assure by itself the observance of the Divine commandments. The existence of preventing grace, officially determined by the Council of Trent (Sess. VI, cap. v.), must be admitted with the same certainty as the facts that the illuminating grace of the intellect belongs to a faculty not free in itself and that the grace of the will must first and foremost exhibit itself in spontaneous, indeliberate, unfree emotions. This is proved by the Biblical metaphors of the reluctant hearing of the voice of God (Jer., xxvii, 23; Ps. xcviii, 8), of the drawing by the Father (John, vi, 44), of the knocking at the gate (Apoc., iii, 20). The Fathers of the Church bear witness to the reality of preventing grace in their very appropriate formula: "Gratia est in nobis, sed sine nobis", that is, grace as a vital "ac" is in the soul, but as an unfree, salutary act it does not procce from the soul, but immediately from God. Thus Augustine understands a v. 33), Gregory the Great (Moral., XVI, 1), Bernard of Clairvaux (De grat. et lib. arbit., xiv), and others. As the unfree emotions of the will are by their very nature destined to elicit free salutary acts, it is clear that preventing grace must develop into helping of
co-operating grace as soon as free will gives its consent. These free salutary acts are, according to the Council of Trent (Sess. VI, cap. xvi), not only actual graces, but also meritorious actions (acta meritoria). There is just as little doubt possible regarding their existence as to the fact that many divine aboulic call of grace, work out their eternal salvation, and attain the beatific vision, so that the dogma of the Christian heaven proves simultaneously the reality of co-operating graces. Their principal advocate is Augustine (De grat. et lib. arbrit., xvi, 32). If the moral question is raised as to whether grace and liberty be raised, it will be easily perceived that the supernatural element of the free salutary act can be only from God, its vitality only from the will. The postulated unity of the action of the will could evidently not be safeguarded, if God and the will performed either two separate acts or mere halves of an act. It can exist only when the supernatural power of grace transforms itself into the vital strength of the will, constitutes the latter as a free faculty in actu primo by elevation to the supernatural order, and simultaneously co-operates as supernatural Divine concurrence in the free act, and therefore acts as actus secundus. This co-operation is not unlike that of God with the creature in the natural order, in which both perform together one and the same act, God as first cause (causa prima), the creature as secondary cause (causa secunda). For further particulars see St. Thomas, “Contra Gent.”, III, 1, 1.

A second pair of graces important for the understanding of the controversies on grace is that of efficacious and merely sufficient grace (gratia efficaez et mere suflicientia). By efficacious grace is understood that Divine assistance which, considered even in actu primo, includes with infallible certainty, and consequently in its definition, the free salutary act; for did it remain inefficacious, it would cease to be efficacious and would therefore be self-contradictory. As to whether the infallibility of its success is the result of the physical nature of this grace or of the ineffable foreknowledge of God (sciencia medius) is a much debated question between Thomists and Molinists which need not be further treated here. Its existence, however, is admitted as an article of faith by both sides and is established with the same firmness as the predestination of the elect or the existence of a heaven populated with innumerable saints. As to “merely sufficient grace,” as defined in the above, it eliminated it from their doctrinal system. They admitted only efficacious graces whose action overpowers the will and leaves no room for freedom. If Jansen (d. 1638) nominally admitted “sufficient grace,” calling it “little grace” (gratia parva), he understood by it, in reality only “insufficiens grace”; i.e., “one from which no action can result, except its insufficiency be removed by another grace” (De grat. Christ., IV, x). He did not shrink from reviling sufficient grace, understood in the Catholic sense, as a monstrous conception and a means of filling hell with reprobates, while later Jansenists discovered in it such a perverted philosophy as to let it into the prayer: “A gratia sufficiente, libera nos Domine” (“From sufficient grace, O Lord deliver us”).

-Cf. prop. 6 damn. ab Alex. VIII., a. 1690 in Densinger, n. 1296). The Catholic idea of sufficient grace is obtained by the distinction of a twofold element in every actual grace, its intrinsic efficacity (gratia efficax) and its extrinsic efficacity (efficiensia). Under the former aspect there exists between sufficient and efficacious grace, both considered in actu primo, no real, but only a logical distinction; for sufficient grace also confers full power for action, but is condemned to unfruitfulness to the free faculty (actus secundus), whereas, on the contrary, extrinsic efficacity be considered, it is evident that the will either co-operates freely or not. If it refuses its co-operation, even the strongest grace remains a merely sufficient one (gratia mere sufficientia), although by nature it would have been completely sufficient (gratia vero sufficientia) and with good will could have been efficacious. This ecclesiastical conception of the nature of sufficient grace, to which the Catholic systems of grace must be reduced by the Jansenists themselves, is nothing else but a reproduction of the teaching of the Bible. To cite only one text (Prov., i, 24), the calling and the stretching-out of the hand of God certainly signifies the complete sufficiency of grace, just as the obstinate refusal of the sinner “to regard it” is tantamount to the free rejection of the proffered hand. Augustine is in complete agreement, with the constant tradition on this point, and Jansenists have vainly claimed him as one of their own. We have an example of his teaching in the following text: “Grata Dei est que hominum adjuvat voluntates; qua ut non adjuvatus, in ipsis iudicis causa est, non in Deo” (“It is the grace of God that helps the wills of men; and when they are not helped by it, the reason is in themselves, not in God.”)—“De pecc. mer. et rem.”, II, xvii. On the Greek Fathers see Isaac Habert, Theologia Graecor. Patrum, II, 6 sqq. (Paris, 1846).

Properties of Actual Grace. — After the treatment of the nature of actual grace, we come logically to the discussion of its properties. These are three in number: necessity, gratuity, and universality.

(a) Necessity.—With the early Protestants and Jansenists, the necessity of actual grace may be so exaggerated as to lead to the assertion of the absolute and complete incapacity of mere nature to do good or, with the Pelagians and Semi-Pelagians, it may be so understood as to extend the capacity of nature to each and every thing, even to supernatural activity, or at least to its essential elements. The three heresies of early Protestantism and Jansenism, Pelagianism, and Semi-Pelagianism furnish us with the practical division which we adopt for the systematic exposition of the Catholic doctrine.

(a) We maintain against Early Protestantism and Jansenism the capacity of mere nature in regard to both religious knowledge and moral action. Fundamental for natural religion and ethics is the article of faith which asserts the power of mere reason to derive a certain natural knowledge of God from creation (Vatican., Sess. III, de revelat., can. i). This is a central truth which is most clearly attested by Scripture (Wisdom, xiii, 1 sqq.; Rom., i, 20 sq.; ii, 14 sq.) and tradition (see Greg. and Juxitus). According to this position, the Church has ever exhibited herself as a mighty defender of reason and its inherent powers against the ravages of scepticism so subversive of all truth. Through the whole course of centuries she has steadfastly clung to the unanswerable conviction that a faculty of perception constituted for vision, like human reason, cannot possibly be condemned to blindness, and that its natural powers enable it to know, even in the fallen state, whatever is within its legitimate sphere. On the other hand, the Church also erected against presumptuous Rationalism and Theosophism a bulwark for the defence of knowledge by faith; and on the one hand she ground the Church for the rights of reason and its true relation to faith explains historically her decidedly hostile attitude towards the scepticism of Nicholas de Ulricius (a. d. 1348), towards the Renaissance philosophy of Pomponatius (1513) defending a “twofold truth,” towards the so-called “Knotz-Schlick-Steintheorien” (Klotz-Schlick-Steintheorien) of Martin Luther and his followers, so inimical to reason, towards the doctrine of the complete powerlessness of nature without
grace defended by Baus and Jansen, towards the system of Hermes impregnated with Kantian criticism, towards traditionalism, which based all moral and religious knowledge on the authority of the Bible and instruction, finally, against the modern Agnosticism of the Modernists, which undermines the very foundations of faith, and which was only recently dealt so fatal a blow by Pope Pius X’s condemnation. Documentary evidence has thus been produced that the modern edifice far from being the product of a "scientific" and "enlightenment", has at all times fulfilled a powerful and far-reaching mission of civilization, since she took reason and science under her powerful patronage and defended their rights against those very oppressors of reason who are accustomed to bring against her the groundless charge of intellectualism. In reality, intellectualism is just as indispensable a condition of her life as the doctrine of a supernatural order raised above all the limits of nature. (Cf. Chastel, "De la valeur de la raison humaine", Paris, 1854.)

Not less reasonable an attitude was assumed by the Church respecting the moral capabilities of fallen man in the very domain of morality. Against Baumam, the forerunner of Jansenism, she adhered in her teaching to the conviction confirmed by healthy experience, that natural man is capable of performing some naturally good works without actual grace, and particularly without the grace of faith, and that not all the sins of the fallen, so long as they are not accomplished with the consent of the sinner, are sin according to the condemnation of two propositions of Baus by Pope Pius V in the year 1567: "Liberae arbitrium sine gratiae Deus adjutorem nonnisi ad peccandum valet" ("Free will without the aid of God’s grace avails for nothing but sin.").—Prop. xxvii.; and again: "Omnia opera inaedum sunt peccata et phanesorum virtutes sunt vitia" ("All the acts of infidels are sins, and their virtues are vices.").—Prop. 25.

The history of paganism and everyday experience condemn, moreover, with equal emphasis these extravagant exaggerations of Baus. Among the duties of the natural moral law some—as love for parents or children, abstinence from theft and drunkenness—are of such an elementary character that it is impossible to perceive why they could not be fulfilled without grace and faith at least by judicious, cultured, and noble-minded pagans. Did not the Saviour himself recommend those good works of charity, love and fraternal greeting, such as they exist also among the pagans and licans and pagans? He denied to them only a supernatural reward (mercedem, Matt., v. 46 sq.).

And Paul has explicitly stated that the Gentiles, who have not the [Mosaic] law, do by nature (naturaliter, gratus esse deo), that is, the law (Rom., ii, 14).

The Fathers of the Church did not judge differently. Baus, it is true, added Augustine as his chief witness, and in the latter’s writings we find, to be sure, sentences which seem to favour him. Baus, however, overlooked the fact that the former rhetorician and Platonic idealist of Hippo does not always weigh everything with the same critical weight in his work, but judges Thomas Aquinas, but consciously delights (cf. Enarr. in Ps. xcvi, n. 19) in antonomastically applying to the genus the designation which belongs only to the highest species. As he calls the least good motion of the will virtus, by anticipation, so he brands every unmeritorious work (opus steriler bonum) as sin (pecusum) and false virtue (alba virtus). In both cases it is an obvious use of the rhetorical figure called catachresis. With a strong perception for the ethically good, wherever it may be found, he elogizes elsewhere the chastity of his heathen friend Alypius (Confess., VI, x) and of the pagan Polemo (Ep. 12) admires the civil virtues of the Romans, the masters of the world (Ep. xxxviii, 3), and gives expression to the truth that even the most wicked man is not found completely wanting in naturally good works ("De Spiritu et litera", c. xxviii.; Cf. Ripalda, "De Ente supernaturali", tom. III: "Adversus Baixum et Baianum", Cologne, 1648; J. Ernst, "Werke und Tugenden der Un- gläubigen nach Augustinus", Freiburg, 1871.).

Moreover, the ethical edifice on the ground of fallen nature has undoubtedly also its determined limits which it cannot overlap. In a general manner, the possibility of the observance of the easier natural precepts without the aid of natural or supernatural grace may be asserted, but not the possibility of the observance of the more straining and prohibiting of the natural law. The difficulty of determining where the easy ends and the difficult begins will naturally lead, in some secondary questions, to great diversity of opinion among theologians. In fundamental points, however, harmony is easily obtainable and a stable place exists in fact. In the general question, all theologians are agreed on the proposition that fallen man cannot of his own strength observe the natural law in its entirety and for a long time without occasional errors and lapses into grievous sin. And how could he? For, according to the council of Trent (Sess. VI, cap. xiii), even the already justified man will be victorious in the "conflict with the flesh of the world, reigning the devil" only on condition that he co-operate with never-failing grace (cf. Rom., vii, 22 sqq.). Secondly, all theologians admit that the natural will, unaided by Divine assistance, succumbs, especially in the fallen state, with moral (not physical) necessity to the attack of temptation and paganism. For the Decalogue. For could it by its own strength decide the conflict in its own favour even at the most critical moments, that power which we have just eliminated would be restored to it, namely the power to observe unaided, through the prompt victory over vehement temptations, the whole natural law in all its extent. The practical significance of this second universally admitted proposition lies in the acknowledgment that, according to revelation, there is no man on earth who does not occasionally meet with this or that grievous temptation to mortal sin, and even the justified are no exception to this law; wherefor, even they are bound to constant vigilance in fear and trembling and to never-ceasing prayer for Divine assistance (cf. Council of Trent, I. c.). In the third question, whether natural love of God, even in its highest form (amor Dei naturatis perfectus), is possible without grace, the opinions of theologians are still very divergent. Divine dispensation in this possibility of the justified that, without any grace, a mere natural justification could in such a case be brought into being through the love of God. Sco- tus, on the contrary, spiritually defends the attainability of the highest natural love for God. A golden middle course will easily open to the one who accurately distinguishes between affective and effective love. The affective element of the highest love is, as natural duty, accessible to the mere natural will without grace. Effective love, on the contrary, since it supposes an unchanging, systematic, and active will, would entail the above-discarded possibility of triumphing over all temptation and of observing the whole moral law. (For further details on these interesting problems, see Pohle, "Lehrbuch der Dogmatik", 4th ed., II, 364-70, Paderborn, 1909.)

According to Jansenism, the mere absence of the state of grace and love (status gratiae et caritatis) branded as sins all the deeds of the sinner, even the ethically good ones (e.g., almsgiving). This was the lowest ebb in its dispersion and depreciation of the moral forces in man; and here, too, Baus had paved the way. The possession of sanctifying grace or theological love thus became the measure and criterion of natural morality. Taking as his basis the total corruption of nature (due to concupiscence) as taught by early Protestantism, Quenel, especially (Prop. xlv in Denninger, n. 1394), gave the above-expressed thought the alleged Augustinian form that there is no medium between love of
God and love of the world, charity and concordiance, so that even the prayers of the impious are nothing else but sins. (Cfr. Prop. xlvi, "Oratio impiorum est novum peccatum et quod Deus illis concedit, est novum testimonium veritatis."") Such severe exaggerations was the dogmatic Bull, "Unigenitus" (1713), of Pope Clement XI. The Council of Trent (Sess. VI, can. vii) had however already decried against Martin Luther: "Si quis dixit..." opera omnia que ante justificacionem sunt... unummodo Creata non est."

Moreover, what reasonable man would concede that the process of justification with its so-called dispositions consists in a long series of sins? And if the Bible, in order to effect the conversion of the sinner, freely arranges to make it fundamentally possible. Never before had a heretic dared to lay the axe so unsparingly to the deepest roots of Christianity. And never again did it occur in ecclesiastical history that one man alone, with the weapons of the mind and ecclesiastical science, could overthrow and annihilate in one generation an equally dangerous heresy. This man was Augustine.

In the short period between A.D. 411 and A.D. 413 no fewer than twenty-four synods were held which considered the heresy of Pelagius. But the death-blow was dealt as early as 415 at Mileve, where fifty-nine bishops, under the leadership of St. Augustine, laid down the fundamental error frequently (418) repeated at Carthage and received, after the celebrated "Tractoria" of Pope Zosimus (418), the value of definitions of faith. It was there that the absolute necessity of grace for salvation triumphed over the Pelagian idea of its mere utility, and the absolute incapacity of mere fallen nature or necessity. When Augustine died, in 430, Pelagianism was dead. The decisions of faith issued at Mileve and Carthage were frequently renewed by ecumenical councils, as in 529 at Orange, lastly at Trent (Sess. VI, can. ii).

The beautiful parable of the vine and its branches (John, xv, 1 sqq.) should have been sufficient to reveal to Pelagianism what a striking contrast there was between it and antecedent Christianity. Augustine and the synods time and again used it in the controversy as a very decisive proof out of the mouth of the Saviour Himself. Only when the supernatural vital union of the Apostles with the vine (Christ) planted by the Father is established, does it become possible to bring forth supernatural fruit; for "without me you can do nothing" (John, xv, 5). The categorical assertion of the necessity of grace for the holy Apostles and for themselves brings to the utmost the absolute incapacity of mere fallen nature in the performance of salutary acts. All supernatural activity may be concretely summed up in the three following elements: salutary thoughts, holy resolves, good actions. Now the Apostle Paul teaches that right thinking is from God (I Cor. iii, 5), that the righteous will must be based on Divine mercy (Rom., ix, 16), finally that it is God who works in us, "both to will and to accomplish" (Phil., ii, 13). The victorious struggle of St. Augustine, which earned for him the honourable title of "Doctor of Grace", was merely a struggle for the ancient Catholic truth. Pelagianism was immediately felt in the Christian community as a thorn in the flesh and as the poison of novelty. Before all the world Augustine could attest: "Talis est heresis pelagiana, non antiqua, sed ante non multum tempus exorta." (Such is the Pelagian heresy, not ancient, but having sprung up a short time ago.)—De grat., et lib. arbit., c. iv. In fact, the teaching of the most ancient Fathers of the Church, e.g. Ireneus (Adv. haer., III, xvii, 2), did not differ from that of Augustine, although it was less vigorous and explicit. The constant practice of prayer in the ancient Church showed significantly that the idea of grace, for prayer and grace are correlative ideas, which cannot be separated. And the celebrated axiom of Pope Celestine I (d. 432): "Ut legem credendi status lex suplicandi" ("That the law of prayer may determine the law of belief".—See Dem-
singer, n. 139). It is clearly evident that the Fathers of the Church wished the universally expressed necessity of grace to be understood not merely as a moral necessity for the strengthening of human weakness, but also as a physical one for the communio of physical powers. For in their comparisons they state that grace is not less necessary than are wings for flying, the eyes for seeing, the rain for the growth of plants, etc. In accordance with this, they also declare that, in as far as supernatural activity is concerned, grace is just as indispensable for the angel as it is for man before the fall, as it is for man after the sin of Adam.

There is need of special refutation of Pelagius's presumptuous contention that man is capable of avoiding unaided during his whole lifetime all sins; nay, this is an individual case, which would no longer be a sin if it could not be avoided in every instance. For the same reason the words, non posses, designate not a physical, but a moral impossibility of avoiding sin, e. g. a difficulty based on insuperable obstacles which only a special privilege could suppress. The meaning is, therefore: The observer of a long series of tenets of the Church finds that he has difficulties. From time to time, to-day or to-morrow, the will held captive by concupiscence will succumb with moral necessity. This may be due to negligence, surprise, weariness, or moral weakness—all of which factors that do not completely destroy the freedom of the will; it is rather the case that the conscience is in our reverence and humility, that God permits these falls into sin. Nothing incites us more powerfully to vigilance and perseverance in prayer than the consciousness of our sinfulness and infirmity. Even the greatest saint must, therefore, pray daily not out of hypocrisy or self-deception, but out of an intimate knowledge of his heart: "Forgive us our debts," (Matt., vi. 12). A holy Apostle had to acknowledge of himself and his intimate friends: "In many things we all offend" (James, iii. 2). Boldly could the biographer in the Old Testament raise the question: "Is the heart of man under the control of either the spirit of God or the spirit of man?" (Proverbs, xx. 9). This view, defended by the Bible, was also the constant sentiment of the Fathers of the Church, to whom the proud language of the Pelagians was unknown. To the latter's consideration Augustine (De lib. vel. cap. 5) precisely states: "Whence can we say that we are pure? Our heart is clean, I am pure from sin?" (Proverbs, xx. 9). This view, defended by the Bible, was also the constant sentiment of the Fathers of the Church, to whom the proud language of the Pelagians was unknown. To the latter's consideration Augustine (De lib. vel. cap. 5) precisely states: "Whence can we say that we are pure? Our heart is clean, I am pure from sin?" (Proverbs, xx. 9).

(7) Semipelagianism is an unsuccessful attempt to effect a compromise between Pelagianism and Augustinianism, attributing to mere nature its capabilities a somewhat greater importance in matters pertaining to salvation than Augustine was willing to concede. Several pious monks of Marseilles (hence the name of "Massileans"") (s. 1. 423) are contrasted to the "Pelagian head, held (about a. d. 428) the following opinion of the relationship between nature and grace: (1) A distinction must be established between the beginning of faith (initium fides) and increase in the faith (aumentum fides); the former may be referred to the natural power of free will, while the latter must be credited to grace. (2) Nature can merit grace through its own efforts, but this natural merit (merum natura) is only founded in equity, for of course, as Pelagius contended, a right in strict justice. (3) Final perseverance (durus perseverantia) specifically can be credited to the justified with their own strength, and is therefore not a special grace. (4) The bestowal or denial of baptismal grace in children is dependent on their conditional future merits or demerits, which the Omniscience of God foresaw not historically, but hypothetically from eternity. — Although this last proposition is philosophically false, the Church has never condemned it as heretical; the first three, on the contrary, have been rejected as opposed to Catholic teaching.

Informed by his disciples, Prosper and Hilary, of ecclesiastical at Marseilles, or, Augustine excommunicated, he set to work, in spite of his advanced age, and wrote his two books against the Semipelagians: "De Praedestinatione sanctorum" and "De dono perseverantiae." Simultaneously he humbly acknowledged that he had the misfortune of having professed similar errors previously to his episcopal consecration (a. d. 394). He attacked resolutely, though with mildness and moderation, all the positions of his adversaries, rightly looking upon their attitude as a relapse into the already defeated Pelagianism. After Augustine's death, his disciples resumed the struggle. They succeeded in interesting in their cause Pope Celestine I (422-432). In his papal edict (a. d. 431), laid down as a rule of faith the fundamental teaching of St. Augustine on original sin and grace. But as this so-called "Indulculus" was issued more as a papal instruction than as an ex cathedra definition, the controversy still continued for almost a century, until St. Cesarius of Arles convened the Second Synod of Orange (a. d. 529). This synod received the solemn confirmation of Pope Boniface II (530) and was thus vested with canonical authority. According to the opinion of Scheeben and Guthbier, this confirmation extended only to the first eight canons and the epistle. From now on Semipelagianism, also, was proscribed as heresy, and Augustinianism was completely victorious.

In the refutation of Semipelagianism, in so far as the necessity of actual grace is concerned, it will not
GRACE 697

be amiss to follow an adult through all the stages on the way to salvation, from the state of unbelieving and mortal sin to the state of grace and a happy death. With regard, first, to the period of unbelief, the Second Synod of Orange (can. v) decreed that government in grace must not be limited to the infidel only not for faith itself, but also for the very beginning of faith. By the “beginning of faith”, it intended to designate all the good aspirations and motions to believe which precede faith properly so called, as early dawn precedes sunrise. Consequently, the whole preparation for the faith is made under the influence of grace, e.g., the instruction of persons to be converted. The accuracy of this view is confirmed by the Bible. According to the assurance of the Saviour, external preaching is useless if the invisible influence of grace (the being drawn by the Father) does not set in to effect the gradual “coming” to Christ (John, vi, 44). Were faith rooted in mere nature, were it based on mere natural inclination to believe or on natural merit, nature could legitimately glory in its own achievement of the work of salvation in its entirety, from faith to justification—nay, to beatific vision itself. And if nature arrogates nothing so much as the “glorifying” of nature. Although Augustine could substantiate his doctrine by references to the anterior Fathers of the Church, as Cyprian, Ambrose, and Gregory of Nasianzus, he seems to have been embarrassed by the Semi- pelagian appeal to the Greeks, as Chrysostom. He pleaded the circumstances of the time (De pred. sanctor., c. xiv). In fact, difference of doctrine between the East and the West cannot be denied. With delight could the SemiPelagians quote from Chrysostom passages like the following: “We must first select good and then God adds what appropriates to his office; he does not act antecedently to our will so as not to destroy our liberty!” (Hom. xii in Hebr., n. 3). How must this attitude of the Eastern Church be explained?—“To gain a correct notion of the then existing circumstances, it must be remembered that the Greeks had to defend not only faith, but almost more so the freedom of the will. For the anti-Christian systems of Gnosticism, Manichaeism, and neo-Platonism—all products of the East—stood completely under the spell of the liberty-destroying philosophy of fatalism. In such an environment it was important to preserve intact the freedom of our will. Under the influence of the slothful nature from the fatalistic sleep, and to recommend the ascetical maxim: “Help yourself, and Heaven will help you.” It may have been imprudent to leave the necessity of prevenient grace altogether in the background because of false considerations of time, and to insist almost exclusively on the operating grace while silently presupposing the existence of prevenient grace. But was Chrysostom opposing a Pelagian or a Cassian? In fact he also knew and admitted prevenient grace, as when he writes: “You do not hold of yourself, but you have received from above.” Hence, you have received prevenient grace, not only not of yourself, but everything you have. For these are not your own merits, but the grace of God. Although you cite faith, you owe it altogether to call?” (Hom. xii in 1 Cor.). Chrysostom was always orthodox in the doctrine on grace.

After the triumph over unbelief, the process of justification to the faith of the justified with faith of free will, will proceed through the infusion of sanctifying grace and theological love. The question is whether, on this arduous road, grace must precede and co-operate with every salutary step of the believing sinner. The negative attitude of the SemiPelagians, who ascribed the dispositions for justification to the faith of free will, was partly described as heretical at Orange (can. vii) and again at Trent (Sess. VI, can. iii). Rightly so. For the thoroughly supernatural sonship of God (filiatio adoptiva), which ultimately terminates the process of justification, can be attained only through absolutely supernatural acts, for the performance of which nature without grace is physically incapable. Hence the Bible, besides faith, also refers to other dispositions, as “hope” (Rom., xv, 13) and “love” (1 John, iv, 7) explicitly to God as their author; and tradition has unwaveringly adhered to the priority of grace (cf. St. Augustine, “Enchir.”, xxxii). Once the adult has finally reached the state of grace after a happy termination of the process of justification, the obligation involves upon him of complying with many negative and positive duties in order to preserve sanctifying grace, persevere in virtue until the end, and gain heaven after a happy death. Will he be capable of accomplishing all this without a constant stream of actual graces? It might appear so. For the justified person is, through the possession of sanctifying grace and supernatural virtues, permanently maintained in the supernatural order. It is not unnatural, therefore, to admit, prescinding from final perseverance, that he is enabled by his supernatural habit to perform salutary actions. This is in reality the teaching of Bellarmine, Bolland, and others. The view Peronne (De gratiâ, n. 203) rightly objects that Holy Writ makes no distinction between the different degrees of the work of salvation, that Augustine (De nat. et grat., xxiv) proclaims the constant need of grace also for the “healthy” and “justified”, and finally that the Church requires an uncontrollable influence of grace even for the good works of the just, and puts in the mouths of all Christians without exception the prayer: “Actiones nostras, quasemus Domine, aspirando praeveni et adjuvando prosequere”, etc. And does not concupiscence, which remains also in the justified, stand in need of at least healing grace? Moreover, no passive habit puts itself in motion, but, like a well-tuned harp, must be, as it were, brought into play by some external agency. It might be added that nature, raised to a permanent supernatural state, still retains its natural activity and consequently requires a supernatural impulse for supernatural actions.

The most important concern, however, which the just man must take to heart is final perseverance, because it is a decided characteristic of the predestined and assures entrance into heaven with infallible certainty. The SemiPelagian delusion that this great grace may be due, thanks to the necessity of the just, was refuted, after the Second Synod of Orange (can. x), chiefly by the Council of Trent (Sess. VI, can. xxii) in the following proposition of faith: “Si quis dixerit, justificatum... sine speciali auxilio Dei in accepta justitia persevere posse... anathema sit.” Here, also, the explanation of some difficulties will facilitate the correct interpretation of the canon. Final perseverance, in its most perfect sense, consists in the unshriveled preservation of baptismal innocence until death. In a less strict sense it is the preservation of the state of grace from the last conversion of both senses that is called perfect perseverance (permanentia perfec.ta). By imperfect perseverance (perseverantia imperfecta) must be understood the temporary continuance in grace, e.g., for a month or a year, until the commission of the next mortal sin. We must distinguish also between passive and active perseverance, accordingly as the justified one is in the state of grace, independently of his will, as baptized children and the insane, or actively co-operates with grace whenever the state of grace is imperiled by grievous temptations. The Council of Trent had, above all, this latter case in view, since it speaks of the necessity of a special assistance (auxilium), which is nothing else but an actual grace or rather a whole series of these. This “special grace” is, consequently, not conferred with the possession of sanctifying grace,
nor is it to be confounded with ordinary graces, nor finally to be looked upon as a result of the mere power of perseverance (posse perseverare). Hence, as a new and special grace, it ultimately is but a continuous sense of inconceit (not merely sufficient) graces combined with a particular sense of God's presence. Hence, it is not the presence of God against fall into sin and with the final experience of a happy death. The Council of Trent (Sess. VI, can. xvi) is therefore justified in speaking of it as a great gift—"magnum donum". The Bible extols final perseverance, now as a special grace not included in the bare notion of just a holy life (e.g. 1 Pet., i, 8); now as the precious fruit of special prayer (Matt., xxvi, 41; John, xvii, 11; Col., iv, 12). Augustine (De dono pererv., c. iii) used the necessity of such prayer as a basis of argumentation, but added, for the consolation of the faithful, that, while this great grace could not be merited by good works, it could by persevering, genuine prayer be obtained with infallible certainty. Hence the practice of pious Christians to pray daily for a good death can never be too earnestly commended.

(4) Gratuity.—Beside the necessity of actual grace, its absolute gratuity stands out as the second fundamental question in the Christian doctrine on this subject. The very name of grace excludes the notion of merit. But the gratuity of specifically Christian grace is so great and of such a superior character that even mere natural petition for grace or positive natural merit not derivable to the bestowal of his supernatural assistance. A mere negative preparation or mere negative dispositions, on the contrary, which consist only in the natural removal of obstacles, are in all probability not essentially opposed to gratuity. Owing to its gratuitous character, grace cannot be earned by strictly natural merit either in strict justice (meritum de condigno) or as a matter of fitness (meritum de congruo). But it is not this assertion in conflict with the dogma that the just man can, through supernatural works, merit de condigno an increase in the state of grace and eternal glory, just as the sinner can, through salutary acts, earn de congruo justification and all graces leading up to it? That it is not, will be clearly evident if it be remembered that the merits springing from supernatural grace are no longer natural, but supernatural (cf. Council of Trent, Sess. VI, cap. xvi). The absolute gratuity of grace is, therefore, asserted if it is compared to the initial grace (prima gratia nocane), with which the work of salvation begins, and which is preceded by pure and mere nature. For it then follows that the whole subsequent series of graces, up to justification, is not and cannot be merited any more than the initial grace. We shall now briefl examine the gratuity of grace in its several degrees as indicated above.

(c) The gratuitous character of grace categorically excludes real and strict natural merit with a rightful claim to just compensation as well as merit improperly so called implying a claim to reward as a matter of fitness. The meritorious character of our actions in the former sense is defended by the Pelagians. The Semipelagians advocated it in the latter meaning. To this twofold error the infallible teaching authority of the Church opposed the dogmatic declaration that the initial grace preparatory to justification is in no wise due to natural merit as a determining factor (Cf. Second Synod of Orange, apologete; Council of Trent, Sess. VI, cap. v). The categorical synodal expressions, nullis praeceindibus meritis, wards off from grace, as a poisonous breath, not only the Pelagian condign merit, but also the Semipelagian congruous merit. The presupposition that grace can be merited by natural deeds involves a later temporal protection of it which would be attributing to nature the power to bridge over with its own strength the chasm lying between the natural and the supernatural order. In powerfully eloquent words does Paul, in the Epistle to the Romans, declare that the vocation to the faith was not granted to the Jews in consequence of the works of the Mosaic Law, nor to the pagans because of the observance of the natural moral law, but that the concession was entirely gratuiit. He inserts the harsh statement: "Therefore, he that believeth shall not be put to shame" (Rom., ix, 16). The Doctor of Grace, Augustine (De peccato orig., xxiv, 28), like a second Paul, advocates the absolute gratuity of grace, when he writes: "Non enim gratia Dei erit ullo modo, nisi gratia fuerit omni modo." (For it will not be the grace of God in any way, but it has been given in every way). He lays stress on the fundamental principle: "Grace does not find the merits in existence, but causes them", and substantiates it decisively thus: "Non gratia ex merito, sed meridum ex gratia. Nam si gratia ex merito, emisti, non gratia accepisti." (Not grace by merit, but merit by grace. For if grace by merit, thou hast bought, not received gratis.—Serm. 169, c. II). Not even Chrysostom could be suspected of Semipelagianism, as he thought in this matter precisely like Paul and Augustine.

(5) While natural merit suppresses the idea of gratuitous grace, the same cannot be affirmed of natural prayer (precept naturale, oratio naturalis), as long as we do not ascribe to it any intrinsic right to be heard and to God a duty to answer it—a right and duty which are undoubtedly implied in supernatural petitions (cf. John, xvi, 23 sq.). Prayer does not, like merks, approach the justice of God or his justice but the charity and mercy. The sphere of influence of prayer is consequently much more extensive than the power of merit. The gratuity of Christian grace is, nevertheless, to be understood so strictly that pure nature cannot obtain even the smallest grace by the most fervent prayer. Such is the doctrine asserted by the Second Synod of Orange (can. iii) against the Semipelagians. It is based on a positive Divine decree and can no longer be deduced from the intrinsic impossibility of the contrary. It is therefore permissible, without prejudice to the Faith, to adopt Ripaia's opinion (De deo supernat., disp. xix, sect. 3), which holds that, in an economy of salvation different from the present, natural prayer for grace would be entitled to be heard. How little this is the case in the present dispensation is best learned from the language of the Bible. We are told that in our infirmity we know not what we should pray for, but when we ask God for us with unspeakable groanings (Rom. viii, 26; cf. I Cor., xii, 3). The supernatural union with Christ is, moreover, represented as the indispensable condition of every successful petition (John, xv, 7). Every wholesome prayer being in itself a salutary act, it must, according to antecedent statements, spring from intrinsic merit in the sinner. Augustine (De dono pererv., xxiii, 64) in vivid descriptions brings home to the Semipelagians their delusion in thinking that true prayer comes from us and not from God who inspires it. On an almost identical level with natural prayer stand the positive prepossession and positive praeceindis (capaxia, praeceindus, praeceindia, praeceindus positive). It often occurs in human life that the positive disposition to a natural good includes in itself a certain claim to satisfaction, as, e. g. thirst of itself calls for quenching. This is still more the case when the disposition has been acquired by a positive preparation for the good in question. Thus the student has acquired by his preparation for the examination a certain claim to be sooner or later admitted to it. But about grace? Does there exist in man a positive disposition and a claim to grace in the sense that the withholding of this expected blessing would sensibly injure and block the happy soul? Or can man, unaided, actively dispose himself for the reception of grace, confident that God will reward his natural efforts with the bestowal of supernatural grace? Both suppositions are untenable. For, according to the express teach-
ning of the Apostle Paul and of the Fathers of the Church, the gratuity of grace is rooted solely in the supreme freedom of the Divine will, and the nature of mankind is no object of claim to it.

As a consequence, the relapse into Semipelagianism is unavoidable as soon as we seek in the positive disposition or preparation a cause for the bestowal of grace. It should be remembered, moreover, that nature is never found in its pure form, but that, from the beginning, sin affects the nature of man. This consideration still more forcibly puts before us the necessity of denying to sinful nature the power to draw down upon itself, like an arid region, the effusion of Divine grace, either by its natural constitution or its own endeavours.

The positive disposition or preparation (capacitas sine preparatio negativa) designates, in general, the absence or removal of obstacles which are an impediment to the introduction of a new form, as green wood is dried up to become fit for burning. The question arises, whether the requirement of such merely negative natural preparation is reconcilable with the absolute gratuity of grace. Some of the earlier Schoolmen cited in answer the celebrated much-debated axiom: Facienti quod in se est, Deus non denegat gratiam (To the one who does what in him lies, God does not deny grace). If among the proposed influences to which the Divine will is supposed to respond, we add the negation of things that stand in the way of original sin, we fall into the Semipelagian heresy refuted above. In order systematically to exclude this contingency, many Schoolmen thus interpreted the axiom with St. Thomas (Summa, I-II, Q. cix, a. 6): “To the one who accomplishes what he can with the help of supernatural grace God grants further and more powerful graces up to justification.” But, interpreted in this manner, the axiom offers nothing new and has nothing to do with the above-proposed question. There remains, therefore, a third interpretation: God, out of mere liberality, does not withhold His grace from the one who accomplishes what he can with his natural moral strength, i.e., from the one who, by deliberate abstention from offences, seeks to dispose God favourably towards him and thus prepares himself negatively for grace. Semipelagianists (e.g., Bonaventure) have declared even this most mitigated and mildest interpretation to be Semipelagian. Most modern theological authorities, however, with Molina, Suarez, and Leusius, see in it nothing else but the expression of the truth: To the one who prepares himself negatively and plans to remove the obstacles to the approach of grace, God in general is more inclined to offer his grace than to another who wallows in the mire of sin and thus neglects to accomplish what lies in his power. In this manner the cause of the distribution of grace is located not in the dignity of nature, but, conformably to orthodoxy, in the universal will of God to save mankind.

(c) Universality.—The universality of grace does not conflict with its gratuity, if God, in virtue of his will to save all men, distributes with sovereign liberty his graces to all adults without exception. But if the universality of grace is only a result of the Divine will to save all mankind, we must first turn our attention to the latter as the basis of the former.

(a) By the “will to save” (voluntas Dei salvifica) theologians understand the earnest and sincere will of God to free all men from sin and lead them to supernatural life. According to this will, God offers reward to human action as such, it is a merciful will, also called “first” or “antecedent will” (voluntas prima sine antecedentia). It is not absolute, but conditional, inasmuch as no one is saved if he does not will it or does not comply with the conditions laid down by God for salvation. The “second” or “consequent will” (voluntas secunda sive consequens), on the contrary, can only be absolute, i.e., a will of justice, as God must simply reward or punish according as one has deserved it or not.

Against the error of the Calvinists and Jansenists the ecclesiastical teaching authority (cf. Council of Trent, Sess. VI, Can. xxvii) and Pope Pius V (Serm. 105, in Denzinger, n. 237, 1096) proclaims in the name of the doctrine that God seriously wills the salvation not of the predestined only, but also of other men. As the Church obliged all her faithful to the recital of the prayer of the creed, “Qui propter nos homines et propier nostram salutem descendit de celis,” it is established with certainty that at least the faithful are included in the universality of salvation willed by God. Not to mention the touching scene in which Jesus weeps over the impotent Jerusalemites (cf. Matt., xxiii, 37), the following is the declaration of the Saviour himself respecting believers: “For God so loved the world, as to give his only-begotten Son; that whosoever believeth in him, may not perish, but may have life everlasting” (John, iii, 16). Far from limiting the will to save to these two classes of men, the predestined and believers, theologians adhere to the theological conclusion that God, without the restriction to original sin, wills the eternal salvation of all the posterity of Adam. The range of this will certainly extends further than the circle of believers, the eternal reprobation of many of whom is a notorious fact. For Pope Alexander VIII (1690) condemned the proposition that Christ died “for all the faithful and for them” (pro omnibus et soli redelibus.—See Denzinger, n. 1294). The foreknowledge of original sin is no reason for God to except some men from his will of redemption, as the Calvinist sect called Infra-lapsarians or Postlapsarians (from infra, or post, lapsum) asserted in Holland against the strictly Calvinist opinion of those called Supralapsarians or Antelapsarians (from supra, or ante, lapsum.—See ARMINIANS). In proof of the Catholic contention, the Council of Trent (Sess. VI, cap. ii) rested on the Biblical text which exhibits the propitiatory sacrifice of Christ as offered not only for our sins, “but also for those of the whole world” (I John, ii, 2). We possess, besides, the subsequent decrees of the Council of Trent, and it is without doubt. The Book of Wisdom (xi, 24 sqq.) eulogizes in stirring language the all-exceeding mercy of God and based its universality on the omnipotence of God (quia omnia potes), on his universal domination (quoniam tua sunt, diligit omnia, quia facitis), and on his love for man (quia amas homines) even though the Divine omnipotence and domination extend, wherever immortal souls are to be found, thither also the will to grant salvation extends, so that it cannot be exclusive of any human being. After St. Paul (I Tim., ii, 1 sqq.) has ordained prayers for all men and proclaimed them “acceptable in the sight of God our Saviour, who will have all men to be saved” (omnes homines null salutis fieri), he adds a threefold motivation: “For there is one God, and one mediator of God and men, the man Christ Jesus: who gave himself a redemption for all” (I. c.). Hence it is just as true that the will to grant salvation extends to all men, as it is that God is the God of all men, and that Christ as mediator assumed the nature of all men and redeemed them on the Cross. In regard to tradition, Passaglia, as early as 1551, brilliantly demonstrated the universality of this Divine intention from two hundred Fathers of the Church and ecclesiastical writers. Augustine alone regards some difficulty. It may be considered as certain to-day that the great Bishop of Hippo interpreted in the year 412 the Pauline text with all the other Fathers of the Church in the sense of a universal will to save all men without exception and that subsequently he never explicitly retracted this
view (De spir. et lit., xxiii, 58). But it is equally certain that from 421 onwards (cf. Enchir., xxvii, 103; Contr. Jod., IV, viii, 42; De corr. et grat., xv, 47) he attempted such tortuous and violent interpretations of the clear, unmistakable text that the Divine will regarding human salvation was no longer universal, but particular. The mystery can only be solved by the addition, as Augustine still believed in a pillar of literal senses in the Bible (cf. Confess., XII, xvii sqq.). To avoid the necessity of imputing to the Holy Ghost the inspiration of contradictions in the same text, he conceived in his third divergent interpretations the Divine will concerning salvation as the "secundum" or "consequent will", which, as absolutely will binding men to eternal happiness, must naturally be particular, no less than the consequent will affecting the reprobate (cf. J. B. Faure, "Note in Enchir. s. Augustini", c. 103, p. 195 sqq., Naples, 1847).

The most difficult problem concerning this Divine will to save all men, a real crus theologorum, lies in the mysterious attitude of God towards children dying without baptism. Did God sincerely and earnestly will the salvation also of the little ones who, without fault of their own, fail to receive the baptism of water or blood and are thus forever deprived of the beatific vision? Only a few theologians (e.g. Bellarmine, Vaghar, and others) have been bold enough to assert the affirmative. Either invincible ignorance, as among the pagans, or the physical order of nature, as in stillbirths, precludes the possibility of the administration of baptism without the least culpability on the part of the children. The difficulty lies, therefore, in the fact that God, the author of the natural order, eventually declines to remove the existing obstacles by means of a miracle. The well-meant opinion of some theologians (Arrubal, Kibler, Mannens) that the whole and full guilt falls in all instances not on God, but on men (for example, on the imprudence of the mothers), is evidently too dry an hypothesis to be entitled to consideration. The subterfuge of Klee, the writer on dogma, that self-consciousness is awakened for a short time in dying children, to render baptism of desire possible to them, is just as unsatisfactory and objectionable as Cardinal Cajetan's admission, disapproved of by Pius X, that the prayer of Christian parents, acting in a sense of grief, saves their children for heaven. We are thus confronted with an unsolved mystery. Our ignorance of the manner does not destroy, however, the theological certainty of the fact. For the above-quoted Biblical texts are of such unquestionable universality that it is impossible to exclude a particular and perfect grace even in the Divine will toward the child of humankind.—cf. Bolgeni, "Stato dei bambini morti senza battesimo" (Rome, 1787); Didiot, "Ungetaufte verstorbene Kinder, Dogmatische Trostbriefe" (Kempen, 1889); A. Seitz, "Die Heilsnotwendigkeit der Kirche" (Freiburg, 1905), pp. 301 sqq.

The universality of grace is a necessary consequence of the will to save all men. For adults this will transforms itself into the concrete Divine will to distribute "sufficient" graces; it evidently involves no obligation on God to bestow only "efficacious" graces. If it can be established, therefore, that God grants to the three classes of the just, sinners, and infidels truly sufficient graces for their eternal salvation, the proof of the universality of grace will have been furnished. Without prejudice to this universality, God may either await the moment of its actual necessity before bestowing grace, or He may, even in time of need (e.g. in vehement temptation), grant immediately only the grace required or the amount sufficient, if the adult has made a faithful use of the grace of prayer.

So far as the category of the just is concerned, the heretical proposition of Jansen, that "the observance of some commandments of God is impossible to the just for want of grace" (see Denzinger, n. 1092), had already been exploded by the anathema of the Council of Trent (see Council of Trent, Sess. VI, can. xviii). In fact Holy Writ teaches concerning the just, that the yoke of Jesus is sweet, and His burden light (Matt., xi, 30), that the commandments of God are not heavy (1 Cor., xii, 4), that "the one who is free from sin will be tempted above that which you are able: but will make also with temptation issue, that you may be able to bear it" (I Cor., x, 13). These statements warrant not only the full possibility of the observance of the Divine commandments and the triumph over vehement temptations; they virtually express unanimously the consciousness of the necessity, without which all these salutary acts are known to be absolutely impossible. It is true that in the polemical writings of some Fathers of the Church against the Pelagians and SemiPelagians we read the proposition: "The grace of God is not granted to all." But a closer examination of the passages immediately reveals the fact that they speak of efficacious, not of sufficient grace. This distinction is expressly stated by the anonymous writer of the fifth century whom Pope Gelasius commends as an "experienced ecclesiastical teacher" (probatus ecclesiast magister). In his De conditione gentium he states that the "general" (benignitas Dei generalis) and the "particular" (economy of grace (specialis misericordia)) refers the former to the distribution of sufficient, the latter to that of efficacious, graces. We come to the second class, that of Christian sinners, among whom we reckon apostates and formal heretics, as these can hardly be placed on a par with the heathen. In their valuation of the distribution of grace, theologians distinguish somewhat sharply between ordinary sinners (among whom they include habitual and relapsing sinners) and those sinners whose intellect is blinded, and whose heart is hardened, the so-called obdurate sinners (oboeati et indurati, impenderittes). The bestowal of grace on the former group is, they say, of a higher degree of certainty than its concession to the latter, although for both the universality of sufficient grace is beyond any doubt. Not only is it said of sinners in general: "I desire not the death of the wicked but that the sinner turn from his wickedness and live" (Exx., xxxiii, 11), and again: "The Lord ... dealeth patiently for your sake, not willing that any should perish, but that all should return to penance" (II Peter, iii, 9), but even the obdurate and impenitent sinners are energetically summoned by the Bible to conversion, and are so often reproved and remonstrated because of their wickedness (Is., lxv, 2; Rom., ii, 4; Acts, xvii, 31). Now where a duty of conversion exists, the necessary grace must be at hand without which no conversion is possible. For, as Augustine (De nat. et grat., xiii, n. 50) affirms: "Deus impossibilitatis neminem facit" (God does not give impossible orders). Obduracy, however, forms such a powerful obstacle to conversion that some ancient theologians embraced the untenable opinion that God finally completely withdraws from these sinners, a withdrawal due to His mercy, which desires to save them from a more severe punishment in hell. But St. Thomas Aquinas (De verit., Q. xxiv, a. 11) stated that "complete obduracy" (obstinatio perfecta), or absolute impossibility of conversion, begins only in hell itself; "incomplete obduracy", on the contrary, ever presents on earth in the enfeebled moral affections of the heart a point of contact through which the grace is given (cf. Aquinas, Summa, Q. xxxvii). Were the rigorous opinion of God's complete aband onment of the obdurate correct, despair of God's mercy would be perfectly justified in such souls. The Catholic catechism, however, presents this as a new grievous sin.

The third and last question arises: Is the grace of
GRACE

God also conceded to the heathen? The Divine readiness to grant assistance also to the heathen (see Denzinger, n. 1295, 1379) is a certain truth confirmed by the Church against the Jansenists Arnauld and Queenell. To question it is to deny the above-demonstrated intention of God to save all men; for the overwhelming majority of mankind would fall outside it. St. Paul, in his Epistle to the Galatians (Rom. ii, 6 sqq.), lays stress on God’s impartiality towards Jews and Greeks, without “respect of persons”, on the Day of Judgment, when he will reward also the Greek “that worketh good” with eternal life. The Fathers of the Church, as Clement of Rome (I. ep. ad Cor., vii. 2), Cyprian (Cor. Afr., xi), and Chrysostom (Hom. viii in John, n. 1), do not doubt the dispensation of sufficient graces to the nations “that sit in darkness and in the shadow of death”. Orosius (De arbitr. libert., n. 19), a disciple of St. Augustine, proceeds so far in his optimism as to believe in this distribution of grace “quotidie per temporas, per dies, per momenta, per orationes et exortus” (daily through the seasons, through the days, through the moments, through the smallest possible divisions of time, and to all men and every man). But the clearer the fact, the more obscure the manner. In what way specifically does God assist the salvation of the heathen? Theologians today generally give the following presentation of the process: It is presupposed that, according to Hebr., xi, 6, the two dogmas of the existence of God and of future retribution must be, in all instances, believed not only by necessity of means ( necessitates medi), but also with explicit faith (fides explicativa) before the process of justification can be initiated. As a consequence, God will not refrain in extraordinary cases from miraculous intervention in order to save a noble-minded heathen who conscientiously observes the natural moral law. He may either, in a miraculous manner, depute a mission for his own service (Rom. i, 15), or teach him the revealed truths through an angel (Cardinal Tolletus), or he may come to his assistance by an interior private revelation. It is clear, nevertheless, that these different ways cannot be considered as everyday ordinary means. For the multitude of heathen this assistance must be found in a universal means of salvation equally independent of wonderful events and of the preaching of Christian missionaries. Some modern theologians discover it in the circumstance that the two dogmas mentioned above were already contained in the primitive supernatural revelation made in Paradise. These truths have been spread over the world, survive, as a meagre remnant, in the traditions of the pagan nations, and are orally transmitted from generation to generation as supernatural truths of salvation. The knowability of these dogmas by unaided reason does not constitute an objection, for they are simultaneously natural and revealed truths. Once the condition of external preaching (cf. Rom. x, 17: “ fides ex auditu”) has thus been fulfilled, it only remains for God to hasten Io man’s assistance with his supernatural illuminating and strengthening grace and to initiate with the faith and God and retribution (which implicitly includes all else necessary for salvation) the process of justification. In this manner the attainment of the state of grace and of eternal glory becomes possible for the heathen who faithfully co-operates with the grace of vocation. However all this may be, one thing is certain: every heathen who incurs eternal damnation is found on the day of the honest confession: “It is not for want of grace, but through my own fault that I am lost.”

(For the relation between grace and liberty, see GRACE, CONTROVERSIES ON.)

II. SANCTIFYING GRACE.—Since the end and aim of all efficacious grace is directed to the production of sanctifying grace where it does not already exist, or to retain and increase it where it is already present, its excellence, dignity, and importance become immediately apparent; for holiness and the sonship of God depend solely upon the possession of sanctifying grace, wherefore it is frequently called simply grace without any qualifying word to accompany it as, for instance, in the phrases “to live in grace” or “to fall from grace.”

All pertinent questions group themselves around three points of view from which the subject may be considered:—

(1) The preparation for sanctifying grace, or the process of justification.

(2) The nature of sanctifying grace.

(3) The characteristics of sanctifying grace.

(1) Preparation for Sanctifying Grace, or the Process of Justification (for exhaustive treatment of justification see article on JUSTIFICATION).—The word justification (justificatio, from justum facere) derives its name from justice (justitium), by which is not merely meant the cardinal virtue in the sense of a constant purpose to respect the rights of others (suum cuique), nor is the term taken in the concept of all those virtues which go to make up the moral law, but connotes, especially, the whole inner relation of man to God as to his superhuman soul. Obviously God provides for the original sin or with actual mortal sin (children are of course excepted) must, in order to arrive at the state of justification, pass through a short or long process of justification, which may be likened to the gradual development of the child in its mother’s womb. This development attains its fullness in the birth of the child, accompanied by the anguish and suffering with which this birth is invariably attended; our rebirth in God is likewise preceded by great spiritual sufferings of fear and contrition.

In the process of justification we must distinguish two periods: first, the preparatory acts or dispositions (fides, fear, hope, charity, etc.), each having the element of the transformation of the sinner from the state of sin to that of justification or sanctifying grace, which may be called the active justification (actus justificationis); with this the real process comes to an end, and the state of habitual holiness and sonship of God begins. Touching both of these periods there is an existence, and still exists, in part, a great conflict of opinion between Catholicism and Protestantism. This conflict may be reduced to four differences of teaching. By a justifying faith the Church understands qualitatively the theoretical faith in the truths of Revelation, and actual faith in these truths over and above this faith in the preparatory acts for justification. Protestantism, on the other hand, reduces the process of justification to merely a fiduciary faith; and maintains that this faith, exclusive even of good works, is all-sufficient for justification, laying great stress upon the scriptural statement sola fides justificat. The Church teaches that justification consists of an actual obliteration of sin and an interior sanctification. Protestantism, on the other hand, makes of the forgiveness of sin merely a concealment of it, so to speak; and of the sanctification a forensic declaration of justification, or an external imputation of the justice of God. In the presentation of the process of justification, we will hereafter note this fourfold confessional conflict.

(a) The Fiduciary Faith of the Protestants.—The Council of Trent (Sess. VI, cap. vi, and can. xii) decrees that not the fiduciary faith, but a real mental act of faith, consisting of a firm belief in all revealed truths and the whole body of faith and justification and the “beginning, foundation, and source” (loc. cit., cap. viii) of justification. What did the Reformers with Luther understand by fiduciary faith? They understood thereby not the first or fundamental deposition or preparation for the (active) justification, but merely the spiritual grasp (instrumentum) with which we seize and lay hold of the external justice of Christ and with it, as with a
GRACE 702

GRACE

mantle of grace, cover our sins (which still continue to exist interiorly) in the infallible, certain belief (fiducia) that God, for the sake of Christ, will no longer hold our sins against us. Hereby the seat of justifying faith is transferred from the intellect to the will, and faith itself, in as far as it still abides in the intellect, is converted into a certain belief in one's own justification. The main question is: "Is this conception Biblical?"

Murray (De gratia, disp. x, n. 18, Dublin, 1877) states in his statistics that the word fides (σπέρμα) occurs eight times in the Epistle to the Romans and in the synoptic Gospels, and in only six of these can it be construed to mean fiducia. But neither here nor anywhere else does it ever mean the conviction of, or belief in, one's own justification, or the Lutheran fiduciary faith. Even in the leading text (Rom. iv, 6) the justification is real, not fiduciary, but fiducial, with the mental act of faith or belief in Divine truth; for Abraham was justified not by faith in his own justification, but by faith in the truth of the Divine promise that he would be the "father of many nations" (cf. Rom., iv, 9 sqq.).

In strict accord with this is the Pauline teaching that the faith of justification, which we must possess "in the heart and mouth," is identical with the mental act of faith in the Resurrection of Christ, the central dogmas of Christianity (Rom., x, 9 sqq.), and that the minimum expressly necessary for justification is contained in the two dogmas: the existence of God, and the doctrine of eternal reward (Rom., xi, 6).

The Church's historical position on the teaching of the Gospel as a necessary condition for salvation, when it solemnly commanded the Apostles to preach the Gospel to the whole world (Mark, xvi, 15). St. John the Evangelist declares his Gospel has been written for the purpose of exciting belief in the Divine Sonship of Christ, and links the act of belief to the possession of eternal life (John, xx, 31). Such was the mind of the Christian Church from the beginning. To say nothing of the testimony of the Fathers (cf. Bellarmine, De justific., i, 9), Saint Fulgentius, a disciple of St. Augustine, in his precious booklet, "De vera fide ad Petrum," does not understand by true faith a fiduciary faith, but the firm belief in all the truths contained in the Apostles' Creed, and he calls this faith the "Foundation of all good things," and the "Beginning of human salvation" (loc. cit., Prolog.). The practice of the Church in the earliest ages, as shown by the Catechism, going back to the catechumens (σταχτευομενα from σταχτοι, ναι νοειν ινευσερης) a verbal instruction in the articles of faith and of directing them, shortly before baptism, to make a public recitation of the Apostles' Creed, strengthens this view. After this they were called not fidulares but fidicis, in contradistinction to the mental act of faith or belief in Divine truth, but the firm belief in all the truths contained in the Apostles' Creed, and he calls this faith the "Foundation of all good things," and the "Beginning of human salvation" (loc. cit., Prolog.).

The practice of the Church in the earliest ages, as shown by the Catechism, going back to the catechumens (σταχτευομενα from σταχτοι, ναι νοειν ινευσερης) a verbal instruction in the articles of faith and of directing them, shortly before baptism, to make a public recitation of the Apostles' Creed, strengthens this view. After this they were called not fidulares but fidicis, in contradistinction to the mental act of faith or belief in Divine truth, but the firm belief in all the truths contained in the Apostles' Creed, and he calls this faith the "Foundation of all good things," and the "Beginning of human salvation" (loc. cit., Prolog.).

In answer to the theological question: How many truths of faith must one expressly (fide explicitit) believe under the command (ex officio stasi) of theology given as the only way of knowing and believe the most important dogmas and the truths of the moral law, for instance, the Apostles' Creed, the Decalogue, the six precepts of the Church, the Seven Sacraments, the Our Father. Greater things are, of course, expected from the educated, especially from catechists, confessors, preachers, wherefore upon these the study of theology rests as an obligation. If the question be put: In how many truths as a means (necessitate medit) must one believe to be saved? many catechists answer Six things: God's existence; an eternal reward; the Trinity; the Incarnation; the immortality of the soul; the necessity of Grace. But according to St. Paul (Heb., xi, 6) we can only be certain of the necessity of the first two dogmas, while the belief in the Trinity and the Incarnation could not of course be exactly from antecedent Christian Judaism or from Paganism. Then, too, belief in the Trinity may be implicitly included in the dogma of God's existence, and belief in the Incarnation in the dogma of the Divine providence, just as the immortality of the soul is implicit in the will; and faith in the dogma of an eternal reward. However, there arises for any one baptized in the name of the Holy Trinity, and entering thus the Church of Christ, the necessity of making an act of explicit faith (fides explicita). This necessity (necessitas medit) arises per se, and is not the only a Divine dispensation in cases of extreme necessity, where such an act of faith is either physically or morally impossible, as in the case of pagans or those dying in a state of unconsciousness. For further matter on this point see Pohle, "Lehrbuch der Dogmatik," 4th ed., II, 488 sqq. (Padueren, 1923).

(b) The sola fides doctrine of the Protestants.—

The Council of Trent (Sess. VI, can. ix) decrees that over and above the faith which formally dwells in the intellect, other acts of predisposition, arising from the will, such as hope, love, contrition, and good resolution (loc. cit., esp. vi), are necessary for the reception of the grace of justification and sanctification. The council made by the council as against the second fundamental error of Protestantism, namely that "faith alone justifies" (sola fides justificat).

Martin Luther stands as the originator of the doctrine of justification by faith alone, for he hoped that it was in his wisdom he might be able to sprinkle grace, which was in a state of great perturbation, and consequently he took refuge behind the assertion that the necessity of good works over and above mere faith was altogether a pharisaical supposition. Manifestly this did not bring him the peace and comfort for which he had hoped, if faith be a sufficient condition of salvation to his mind; for many times, in a spirit of honesty and sheer good nature, he applauded good works, but recognized them only as necessary concomitants, not as efficient dispositions, for justification. This was also the tenor of Calvin's interpretation (Institutes, III, 11, 19). Luther was surprised to find himself by his unprecedented doctrine in direct contradiction to the Bible, therefore he rejected the Epistle of St. James as "one of straw" and into the text of St. Paul to the Romans (iii, 28) he boldly inserted the word alone. This falsification of the Bible was certainly not done in the spirit of the Apostle's teaching, where does St. Paul teach that faith alone (without charity) will bring justification, even though we should accept as also Pauline the text given in a different context, that supernatural faith alone justifies, but the fruitless works of the Jewish Law do not.

In this statement St. Paul emphasizes the fact that grace is purely gratuitous; that no merely natural good works can merit grace; but he does not state that no other acts in their nature and purport predisposing are necessary for justification over and above the requisite faith. Any other construction of the above passage would be vicious; by the Apostle's interpretation were allowed to stand, then St. Paul would come into direct contradiction not only with St. James (ii, 24 sqq.), but also with himself; for, except St. John, the favourite Apostle, he is the most outspoken of all Apostles in proclaiming the necessity and excellence of charity over faith in the matter of justification (cf. I Cor., iii, 1, 2 sqq.). Whenever faith justifies it is not faith alone, but faith made operative and replenished by charity (cf. Gal., v, 6, fides, quae per caritatem operatur). In the plainest language the Apostle St. James says this: "ex operibus justificatur homo, et non ex fide tantum" (James, ii, 24); and hence by works the law is satisfied. Whether good works to which St. Paul refers in the Epistle to the Romans, or the works done in fulfilment of the Jewish Law, but the works of salvation made possible by the operation of supernatural grace, which was
recognised by St. Augustine (lib. LXXXIII, Q. lxvi, n. 2). In conformity with this interpretation and with this only is the tenor of the Scriptural doctrine, namely, that over and above faith other acts are necessary for justification, such as fear (Eccles., i, 29), and charity, (Acts, ii, 44). Faith alone does not justify. On the other hand, faith informed by charity (fides formata) has the power of justification. St. Augustine (De Trinit., XV, 18) expresses it pithily thus: "Sine caritate quippe fides potest quidem esse, sed non et proesse." Hence we see that from the very beginning the Church has taught that not only faith but that a sincere conversion of heart effected by charity and contrition is also requisite for justification—witness the regular method of administering baptism and the discipline of penance in the early Church.

The Council of Trent (Sess. VI, cap. viii) has, in the light of tradition, sanctioned the former. And, even when the only ransom was the status in the process of justification, inasmuch as the council, by declaring it to be the "beginning, the foundation, and the root," has placed faith at the very front in the whole process.

Faith is the beginning of salvation, because no one can come to God unless he first of all know his supernatural end and aim, just as a mariner without an objective and without a compass wanders aimlessly over the sea at the mercy of wind and wave.

Faith is not only the initiatory act of justification, but the foundation as well, because upon it all the other predisposing acts rest securely, not in geometric regularity or as the stones of a building rest upon a foundation, but organically and imbued with life as the branches and blossoms spring from a root or stem. Thus there is preserved to faith in the Catholic system its fundamental and co-ordinating significance in the matter of justification. A masterly, psychological description of the whole process of justification, which even Ad. Hermack styles "a magnificent work of art," will be found in the famous cap. vi, "Disponuntur" (Denzinger, n. 798). According to this the process of justification follows a regular order of progression in four stages: from faith to fear, from fear to hope, from hope to charity, from charity to contrition with purpose of amendment. If the contrition be perfect (contritio caritate perfecta), then active justification results, that is, the soul is immediately placed in the state of grace even before the reception of the sacrament of baptism or penance, though not without the desire for the sacrament (sacramentum). If, on the other hand, the contrition be only an imperfect one (attribuit), then the sanctifying grace can only be imparted by the actual reception of the sacrament (cf. Trent, Sess. VI, cc. iv and xiv).

The Council of Trent had no intention, however, of substituting sacramentalism for the process of justification, given above, inflexible; nor of making any one of the stages indispensable. Since a real conversion is inconceivable without faith and contrition, we naturally place faith at the beginning and contrition at the end of the process. In exceptional cases, however, for example in sudden conversions, it is quite possible for the sinner to overlap the intervening stages between faith and charity, in which case fear, hope, and contrition are virtually included in charity.

The "justification by faith alone" theory was by Luther, it is said, the article of the standing and falling church (articulus stantis et cadentis ecclesiae), and by his followers was regarded as the material principle of Protestantism, just as the sufficiency of the Bible without tradition was considered its formal principle.

Both of these principles are un-Biblical and are not accepted anywhere to-day in their original severity, save only in the very small circle of orthodox Lutherans.

The Lutheran Church of Scandinavia has, according to the Swedish theologian Krogh-Tonnigh, experienced a silent reformation which in the lapse of the several centuries has gradually brought it back to the Catholic view of justification, which view alone can be supported by Revelation and Christian experience (cf. Dornier, "Geschichte der protestantischen Theologie," 361 sqq., Munich, 1867; Köhler, "Symbolik," 16, Mainz, 1890; "Realencyk. für prot. Theol.," s. v. "Rechtfertigung").

(c) The Protestant theory of non-Imputation.—Embarrassed by the fatal notion that original sin wrought in man an utter destruction extending even to the annihilation of all moral freedom of election, and that it continues its existence even in the just man as sin in the shape of an ineradicable concupiscence, Martin Luther and Calvin taught very logically that a sinner is justified by fiduciary faith, in such a way, however, that sin is not actually removed but, being put up or not held against the sinner. According to the teaching of the Catholic Church, however, in active justification an actual and real forgiveness of sins takes place so that the sin is really removed from the soul, not only original sin by baptism but also mortal sin by the Sacrament of Penance (Trent, Sess. VI, can. v; Sess. VI, cap. xiv; Sess. XIV, cap. ii). This view is entirely consonant with the teaching of Holy Scripture, for the Biblical expressions: "blotted out" as applied to sin (Ps., i, 3; Is., xiii, 21; xvi, 22; Acts, iii, 19), "exhausting" (Heb., ix, 28), "taking away" II Kings, xii, 13; I Par., xxi, 8; Mich., vii, 18; Ps. x (Heb.), 15; cli., 12), cannot be reconciled with the idea of a mere covering up of sin which is supposed to continue its existence in a covert manner. Other Biblical expressions are just as irreconcilable with this Lutheran idea, for instance, the expression of "cleansing" and "washing away" the sin (Ps., i, 4, 9; Is., i, 18; Ezek., xxxvi, 25; I Cor., vi, 11; Apoc., i, 5), that of coming "from death to life" (Col., ii, 13; I John, iii, 14); the removal from darkness to light (Eph., v, 9). Especially these latter expressions are significant, because they characterize the justification as a movement from one thing to another, which is directly opposed to anything from which the movement is made. The opposites, black and white, night and day, darkness and light, life and death, have this peculiarity, that the presence of one means the extinction of its opposite. Just as the sun dispels all darkness, so does the advent of justifying grace drive away sin, which ceases from that on to have an existence at least in the ethical order of things, though in the knowledge of God it may have a shadowy kind of existence as something which once was, but has ceased to be. It becomes intelligible, therefore, that in him who is justified, there is a kind of abatement, a diminution in the concupiscence (Rom., viii, 1); and why, according to James (i, 14 sqq.), concupiscence as such is really no sin; and it is apparent that St. Paul (Rom., vii, 17) is speaking only figuratively when he calls concupiscence sin, because it springs from sin and brings sin in its train. Where in the Bible the expressions "covering up" and "not imputing" sin occur, as for instance in Ps. xxxii, 1 sq., they must be interpreted in accordance with the Divine perfections, for it is repugnant that God should declare any one free from sin to whom sin is still actually cleaving. It is one of God's attributes and a most substantial part of His declarations; if He covers sin and does not impute it, this can only be effected by an utter extinction or blotting out of the sin. Tradition also has always taught this view of the forgiveness of sins. (See Denifle, "Die abendländischen
Schriftausleger bis Luther über justitia Dei und justificatio" (Mainz, 1905).

(d) The Protestant theory of Imputation.—Calvin rested his theory with the negative moment, holding that justification ends with the mere forgiveness of sins in every other; but he hoped that Imputation of the Reformers (Luther and Melanchthon) demanded a positive moment as well, concerning the nature of which there was a very pronounced disagreement. At the time of Osianader (d. 1552) there were from fourteen to twenty opinions on the matter, each differing from every other; but they had this in common that they all denied the interior holiness and the inherent justification of the Catholic idea of the process. Among the adherents of the Augsburg Confession the following view was rather generally accepted: The person to be justified seizes by means of the fiduciary faith the exterior justice of Christ, and therewith covers his sins; this exterior justice is imputed to him as if it were his own, and he stands before God as having an outward justification, but in his inner self he remains the same sinner as of old. This exterior, forensic declaration of justification was received with general approbation of faith, but was not at the time, and was given wide and vociferous expression in the cry: "Justitia Christi extra nos".

The Catholic idea maintains that the formal cause of justification does not consist in an exterior imputation of the justice of Christ, but in a real, interior sanctification bestowed by the grace which abounds in the soul and makes it permanently holy before God (cf. Trent, Sess. VI, cap. vii; can. xi). Although the sinner is justified by the justice of Christ, inasmuch as the Redeemer has merited for him the grace of justification (causa meritoria), nevertheless he is formally justified and made holy by his own personal justice and holiness (causa formalis), just as a philosopher by his own inherent learning becomes a scholar, not, however, by any exterior imputation of the wisdom of God (Trent, Sess. VI, can. x). To this idea of inherent holiness which theologians call sanctifying grace are we safely conducted by the words of Holy Writ.

To prove this we may remark that the word justificare (Gr. Ἰσχίω, Heb. ἰδρύ in Hiphil) in the Bible may have a fourfold meaning:

(a) The forensic declaration of justice by a tribunal or court (cf. Is., v, 23; Prov., xvii, 15).

(b) The interior growth in holiness (Apol., xxii, 11).

(c) The passive, subjective, justificatio, the external law (Ps. cxviii, 8, and elsewhere).

(d) The inner, immanent sanctification of the sinner.—Only this last meaning can be intended where there is mention of passing to a new life (Eph., ii, 5; Col., ii, 12; I John, iii, 14); renovation in spirit (Eph., iv, 23 sq.); supernatural regeneration of God (Rom., viii, 29; II Cor., iii, 18; II Pet., i, 4); a new creation (II Cor., v, 17; Gal., vi, 15); rebirth in God (John, iii, 5; Tit., iii, 5; James, i, 18), etc., all of which designations not only imply a setting aside of sin, but express as well a permanent state of holiness. All of these terms denote not an aid to action, but rather a form of being; and this appears also from the fact that the grace of justification is described as being "poured forth in our hearts" (Rom., v, 5); as the "spirit of adoption of sons" of God (Rom., viii, 15); as the "spirit, born of the spirit" (John, iii, 6); making us "conformable to the image of the Son" (Rom., viii, 28); as a participation in the Divine nature (II Pet., i, 4); the abiding seed in us (I John, iii, 9), and so on. As regards the tradition of the Church, even Harnack admits that St. Augustine faithfully reproduces the teaching of St. Paul. Hence the Council of Trent professed the sense of St. Paul, but only to St. Augustine, for the purpose of demonstrating that the Protestant theory of imputation is at once against St. Paul and St. Augustine.

Moreover, this theory must be rejected as not being in accordance with reason. For in a man who is at once sinful and just, half holy and half unholy, we cannot possibly recognize a masterpiece of God's omnipotence, but only a wretched caricature, the deformity of which is exaggerated all the more by the introduction of the idea of a Christ. The logical consequences which follow from this system, and which have been brought by the Reformers themselves, are indeed appalling to Catholics. It would follow that, since the justice of Christ is always and ever the same, every person justified, from the ordinary everyday person to the Blessed Sacrament, in so far as he possesses precisely the same justification and would have, in degree and kind, the same holiness and justice. This deduction was expressly made by Luther. Can any man of sound mind accept it? If this be so, then the justification of children by baptism is impossible, for, not having come to the age of reason, they cannot have the fiduciary faith wherewith they must seize the justice of Christ to cover up their original sin. Very logically, therefore, the Anabaptists, Mennonites, and Baptists reject the validity of infant baptism. It would likewise follow that the justification achieved by faith on the day of the new creature is of the same kind, a most awful consequence which Luther (De Wette, II, 37) clothed in the following words, though he could hardly have meant them seriously: "Pecca fortior et crede fortius et nihil nocebunt centum homicidias et mille supras." Luckily this inexorable logic falls powerless against the decrees of God and good medicine, the Lutherans of our time, and is, therefore, harmless now, though it was not so at the time of the Peasants' War in the Reformation.

The Council of Trent (Sess. VI, cap. vii) defined that the inherent justice is not only the formal cause of justification, but as well the only formal cause (unica formalis causa); this was done as against the heretical teaching of the Reformer Bucer (d. 1551), who held that the inherent justice must be supplemented by the imputed justice of Christ. A further object of this decree was to check the Catholic theologian Albert Pighius and others, who seemed to doubt that the inner justice could be ample for justification without being supplemented by another favour of God (favor Dei externus) (cf. Pallavicini, Hist. Conc. Trident., VIII, 11, 12). This decree was well-founded, for the nature and operation of justification are determined by the infusion of sanctifying grace. In other words, without the aid of other grace, the soul itself possesses the power to effect the destruction of sin and the interior sanctification of the soul to be justified. For since both and grace are diametrically opposed to each other, the mere advent of grace is sufficient to drive sin away; and thus grace, in its positive operations, immediately brings about holiness, kinship of God, and a renovation of spirit, etc. From this it follows that in the present process of justification, the remission of sin, both original and mortal, is linked to the infusion of sanctifying grace as a conditio sine quid non, and therefore a remission of sin without a simultaneous infusion of grace is theoretically impossible. As to the interesting controversy whether the incompatibility of grace and sin rests on merely moral, or physical, or metaphysical contrariety, refer to Pohle ("Lehrbuch der Dogmatik", II, 511 sqq., Paderborn, 1909); Scheeben ("Die Myst. der Christentums", 548 sqq., Freiburg, 1898).

(2) The Nature of Sanctifying Grace. The real nature of sanctifying grace is, by reason of its direct invisibility, veiled in mystery, so that we can learn its nature better by a study of its formal operations in the soul than by a study of the grace itself. Indissolubly linked to the nature of this grace and to its formal operations are other matters, the present not being referable not to any intrinsic necessity but to the goodness of God; accordingly three questions present themselves for consideration:
The inner nature of sanctifying grace.

Its formal operations.

The Inner Nature.—(a) As we have seen that sanctifying grace designates a grace producing a permanent condition, it follows that it must not be confounded with a particular actual grace nor with a series of actual graces, as some anti-Trinitarian theologians seem to have the Council of Trent (Sess., ii. dist. xvi., n. 118) held, identical with the Holy Spirit, whom we may call the permanent, uncreated grace (gratia increata). It is quite impossible. For the person of the Holy Ghost cannot be poured out into our hearts (Rom., v., 5), nor does it cleave to the soul as inherent justice (Trent, sess. vi., can. xi.), nor can it be increased by good works (loc. cit., can. xxiv.), nor be removed from the being of the person of grace in Holy Writ is expressly termed a "gift [or grace] of the Holy Ghost" (Acts, ii., 38; x., 45), and as the abiding seed of God (I John, iii., 9). From this it follows that the grace must be as distinct from the Holy Ghost as the gift from the giver and the seed from the sower; consequently the Holy Spirit is our holiness, not by the holiness by which He Himself is holy, but by that holiness by which He makes us holy. He is not, therefore, the causa formalis, but merely the causa efficiens, of our holiness.

Moreover, sanctifying grace as an active reality, and not a merely external relation, must be philosophically either substance or accident. Now, it is certainly not a substance which exists by itself, or apart from the soul, therefore it is a physical accident inhering in the soul, so that the soul becomes the subject in which grace inheres; but such an accident is in metaphysics called quality (qualitas, substantiva), therefore sanctifying grace may be called a "permanent, supernatural quality of the soul," or as the Roman Catechism (P. III, cap. ii, de bap., n. 50) says, "divina qualitas in anima inherens".

Sanctifying grace cannot be termed a habit (habitus) with the same precision as it is called a quality. Many modern theologians if they write of quality in the way of substance and disposition; power and want of power; passion and passible quality, for example, to blush, pale with wrath; form and figure (cf. Aristotle, Catech., VI). Manifestly sanctifying grace must be placed in the first of these four classes, namely habit or disposition; but as dispositions are fleeting things, and habit has a permanence, theologians agree that sanctifying grace is undoubtedly a habit, hence the name: Habitual Grace (gratia habitualis). Habitus is subdivided into habitus entitutivus and habitus operativus. A habitus entitutivus is a quality or condition added to a substance by which condition or quality the substance is found permanently good or bad, for instance: sickness or health, beauty, deformity, etc. Habitus operativus is a disposition to produce certain operations or acts, for instance, moderation or extravagance; this habitus is called either virtue or vice just as the soul is inclined thereby to a moral good or to a moral evil. Now, since sanctifying grace is found in any such readiness, celerity, or facility in action, we must consider it primarily as a habitus entitutivus, not as a habitus operativus. Therefore, since the popular concept of habitus, which usually designates a readiness, does not accurately express the idea of sanctifying grace, another term is employed, i. e., a quality after the manner of a habit (qualitas per modum habitus) and this term is habitus. The Inner Nature.—(b) As we have seen that sanctifying grace designates a grace producing a permanent condition, it follows that it must not be confounded with a particular actual grace nor with a series of actual graces, as some anti-Trinitarian theologians seem to have the Council of Trent has refrained from applying the term habitus to sanctifying grace.

In the order of nature a distinction is made between natural and acquired habits (habitus in natus, and habitus acquisitus), to distinguish between natural instincts, such as, for instance, as the brute creation, and acquired habits such as we develop by practice, for instance skill in playing a musical instrument etc. But grace is supernatural, and can not, therefore, be classed either as a natural or an acquired habit; it can only be received, accordingly, by infusion from above, therefore it is a supernatural infused habit (habitus infused). (c) If theologians could succeed in establishing the identity sometimes maintained between the nature of grace and charity, a great step forward would be taken in the examination of the nature of grace, for we are more familiar with the justly infused virtue of charity than with the more mysterious nature of sanctifying grace. For the identity of grace and charity some of the older theologians have contended—Peter Lombard, Sotox, Bellarmine, Lessus, and others—declaring that, according to the Bible and the teaching of the Fathers, the process of justification may be at times attributable to sanctifying grace and at other times to the virtue-of-charity. Similar effects demand a similar cause; therefore there exists, in this view, merely a virtual distinction between the two, inasmuch as one and the same reality appears under one aspect as grace, and under another as charity. This similarity is confirmed by the further fact that the life or death of the soul is occasioned respectively by the presence in, or absence from, the soul of charity. Nevertheless, all these arguments may tend to establish a similarity, but do not prove a case of identity. Probably the correct view is that which sees a twofold distinction between grace and charity: one view is held by most theologians, including St. Thomas Aquinas and Suarez. Many passages in Scripture and patrology and in the enactments of synods confirm this view. Often, indeed, grace and charity are placed side by side, which could not be done without a twofold view. The idea of a mediate grace, whether of grace is a habitus entitutivus, and theological charity a habitus operativus: the former, namely sanctifying grace, being a habitus entitutivus, informs and transforms the substance of the soul; the latter, namely charity, being a habitus operativus, supernaturally informs and influences the will (cf. Ripalda, "De ente sup.", dispens. cxvii; Bihl. "De gratia", disp. iv, 4).

The climax of the presentation of the nature of sanctifying grace is found in its character as a participation in the Divine nature, which in a measure indicates its specific difference. To this undeniable fact of the supernatural participation in the Divine nature is our attention directed not only by the express words of Holy Writ: ut efficiamini divinae consortiae nature (II Pet., i., 4), but also by the Biblical concept of the "issue and birth from God," since the begotten must receive of the nature of the progenitor, though in this case it only holds in an analogical and analogical sense. Since this same idea has been found in the writings of the Fathers, and is incorporated in the liturgy of the Mass, to dispute or reject it would be nothing short of temerity. It is difficult to excogitate a manner (modus) in which this participation of the
Divine nature is effected. Two extremes must be avoided, so that the truth will be found.

An exaggerated theory was taught by certain mystics and quietists, a theory not free from pantheistic taint. In this view the soul is formally changed into God, an altogether untenable and impossible hypothesis, since conuneופשאֲנָה remains even after justifying actual participation in the divine power, which is, of course, absolutely repugnant to the Divine nature.

Another theory, held by the Scotists, teaches that the participation is merely of a moral-judicial nature, and not in the least a physical participation. But since sanctifying grace is a physical accident in the soul, one cannot help referring such participation in the Scotist theory to what is called the final imago or assimilation with God, by virtue of which we are permitted to share those goods of the Divine order to which God alone by His own nature can lay claim. In any event the participative divine nature is not in any sense to be considered a deification, but only a making of the soul "like unto God". To the difficult question: Of which special attribute of God does this participation partake? theologians can answer only by conjectures. Manifestly only the communicable attributes can at all be considered in the matter, whereas Goodness (Cyp. thomist., IV, ii, x) would clearly make the soul resemble the infinite love; justice would make the soul resemble the infinite wisdom; power, the infinite strength; and goodness, the infinite goodness. The participation was the aetas, absolutely the most incomunicable of all the Divine attributes. Ripalda (loc. cit., disp. xx, sect. 14) is more near the truth when he suggests Divine sanctity as the attribute, for the very idea of sanctifying grace brings the sanctity of God into the foreground.

The theory of Suarez (De grat., VII, i, xxx), which is also favoured by Scripture and the Fathers, is perhaps the most plausible. In this theory sanctifying grace imparts to the soul a participation in the Divine spirituality, which no rational creature can by its own unaided powers penetrate or comprehend. This, therefore, the office of grace to impart to the soul, in a supernatural way, that degree of spirituality which is absolutely necessary to give us an idea of God and His spirit, either here below in the shadows of earthly existence, or there above in the unveiled splendour of Heaven. If we were asked to condense all that we have thus far been considering into a definition, we would formulate the following: Sanctifying grace is "a quality strictly supernatural, inherent in the soul as a habitus, by which we are made to participate in the divine nature."

(b) Love of persons.—Sanctifying Grace has its formal operations, which are fundamentally nothing else than the formal cause considered in its various moments. These operations are made known by Revelation; therefore to children and to the faithful the splendour of grace best be presented by a vivid description of its operations. These are: sanctity, beauty, friendship, and union with God.

(c) The Sanctity of the soul, as its first formal operation, is contained in the idea itself of sanctifying grace, inasmuch as the infusion of it makes the subject holy and inaugurates the state or condition of sanctity. So far it is, as to its nature, a physical adornment of the soul: it is also a moral form of sanctification, which of itself makes baptised children just and holy in the sight of God. This first operation is thrown into relief by the fact that the "new man", created in justice and holiness (Eph., iv, 2), was preceded by the "old man" of sin, and that grace changed the sinner into a saint. Grace is possible for all who repent. The two moments of actual justification, namely the remission of sin and the sanctification, are at the same time moments of habitual justification, and become the formal operations of grace. The mere infusion of the grace effects at once the remission of original and mortal sin, and inaugurates the condition or state of holiness. (See Poble, Lehrb. der Dogm., 527 sq.)

(3) Although the beauty of the soul is not mentioned by the teaching office of the Church as one of the operations of grace, nevertheless the Roman Catechism refers to it (P. II, cap. ii, de bapt., n. 50). If it be permissible to understand by the spouse in the Canticle of Canticles a symbol of the soul decked in grace, then all the passages touching the ravishing beauty of the soul in ecstasy and in rapture as propitiously speaking a word in favor of the soul. Hence it is that the Fathers express the supernatural beauty of a soul in grace by the most splendid comparisons and figures of speech, for instance: "a divine picture" (Ambrose); "a golden statue" (Chrysostom); "a streaming light" (Basil), etc. Assuming that, apart from the material beauty of the body, the soul is decked in the supernatural beauty, we can safely state that grace, as the participation in the Divine nature, calls forth in the soul a physical reflection of the uncreated beauty of God, which is not to be compared with the soul's natural likeness to God. We can attain to a more intimate idea of the Divine likeness in the soul adorned with grace, if we refer the picture not merely to the absolute Divine nature, as the prototype of all beauty, but more especially to the Trinity whose glorious nature is so charmingly mirrored in the soul by the Divine adoption and the inhabitance of the Holy Ghost (cf. P. II. Krug, De grat., n. 1802). (y) The Friendship of God is, consequently, one of the most excellent of the effects of grace; Aristotle denied the possibility of such a friendship by reason of the great disparity between God and man. As a matter of fact man is, inasmuch as he is God's creature, His servant, and by reason of sin (original and mortal) he is God's enemy. This relation of service and enmity is transformed by sanctifying grace into one of friendship (Trent, Sess. VI, cap. vii: ex simili amicuo). According to the Scriptural concept (Wis., vii, 14; John, xv, 15) this friendship resembles a love between two persons, with the one of Divine spouse (Matt., ix, 15; Apoc., xix, 7). Friendship consists in the mutual love and esteem of two persons based upon an exchange of service or good office (Aristot., "Eth. Nicom.", VIII sq.). True friendship resting only upon virtue (amicitia honesta) demands undeniably a love of benevolence, which seeks only the happiness and well-being of the friend, whereas the friendly exchange of benefits rests upon a utilitarian basis (amicitia utilis) or one of pleasure (amicitia deleeditatis), which presupposes a selfish love; still the benevolent love of friendship must be understood as an act of love and, since it is due to one of silent admiration, which is not friendship by any means. But the strong bond of union lies undeniably in the fact of a mutual benefit, by reason of which friend regards friend as his other self (alter ego). Finally, between friends an equality of position or stature is demanded, and whereas it does not exist an elevation of the inferior's status (amicitia excellentiis), as, for example, in the case of a friendship between a king and noble subject. It is easy to perceive that all these conditions are fulfilled in the friendship between God and man effected by grace. For, just as God regards the just man with the pure love of friendship, He likewise prepares him by the infusion of theological Charity for the reception of a correspondingly pure and unselfish affection. Again, although man's knowledge of the love of God is very limited, while God's knowledge of love in man is perfect, this conjecture is sufficient—indeed in human friendship it is the reverse of case. The exchange of gifts consists, on the part of God, in the bestowal of supernatural benefits, on the part of man, in the promotion of God's glory, and partly in the performance of works of fraternal charity. There is, indeed, in the first instance, a vast difference in the usual positions of God and man; but by the infusion of grace man receives a patent of
nobility, and thus a friendship of excellency (amicitia excellentia) is established between God and the just. (See Schleierm., "De gratia divina", 305 sqq., Freiburg, 1915.)

(2) In the Divine filiation of the soul the formal workings of sanctifying grace reach their culminating point; by it man is entitled to a share in the paternal inheritance, which consists in the beatific vision. This excellence of grace is not only mentioned countless times in Holy Writ (Rom., viii, 15 sq.; 1 John, iii, 1 sq.; etc.) but is nowhere limited to a renewing and re-birth in God (cf. John, i, 12 sq.; iii, 5; Titus, iii, 5; James, i, 18, etc.). Since this re-birth in God is not effected by a substantial issuance from the substance of God, as in the case of the Son of God or Logos (Christus), but is merely an analogical or accidental coming forth from God, our sonship of God is only of an adoptive kind, as we find it expressed in Scripture (Rom., viii, 15; Gal., iv, 5). This adoption was defined by St. Thomas (III, Q. xxiii, a. 1): persona extranea in filium et herelem gratia assumptio. To the nature of this adoption there are four requisites: (i) the original unrelatedness of the adopted person; (ii) faith or an adopting parent for the person adopted; (iii) the absolute gratuitousness of the adoption, and the voluntary condescension of the one who casts off His friendship and becomes an enemy. In the case of human adoption the mutual love is presumed as existing, in the case of God's adoption the love of God effects the requisite disposition in the soul to be adopted. The great and unfathomable love of God, on the one hand, and the good will of the child who casts off His friendship and becomes an enemy, as in the case of worldly inheritance.

God does not impose His favours upon any one, therefore a consent is expected from adult adopted sons of God (Trent, Sess. VI, cap. vii, per voluntarium exceptionem gratia et donorum). It is quite in keeping with the excellence of the heavenly Father that He should supply for His children during the pilgrimage a fitting sustenance which will sustain the dignity of their position, and be to them a pledge of resurrection and glory. This is the Bread of the Holy Eucharist (see Eucharist).

(c) The Supernatural Retinue.—This expression is derived from the Roman Catechism (P. II., c. i, n. 51), which teaches: "Huic (gratia sanctificandi) additum nobilissimum omnium virtutum comitatus". As the concomitants of sanctifying grace, these virtues are not formal operations, but gifts really distinct from this grace, connected nevertheless with it by a physical, or rather a moral, indissoluble link—relationship. Therefore the Council of Vienne (1311) speaks of "informans gratia et virtutes", and the Council of Trent (1563) in a more general way, of "gratia et virtutes". The three theological virtues, the moral virtues, the seven gifts of the Holy Ghost, and the personal indwelling of the Holy Spirit in the soul are all considered. The Council of Trent (Sess. VI, c. vii) teaches that the theological virtues of faith, hope, and charity are in the process of justification infused into the soul as supernatural habits. Concerning the time of infusion, it is an article of faith (Sess. VI, can. xi) that the virtue of charity is infused immediately with sanctifying grace, so that throughout the whole term of existence sanctifying grace and charity are found as inseparable concomitants. Hence the acts of the infused faith and hope, Suarez is of the opinion (as against St. Thomas and St. Bonaventure) that, assuming a favourable disposition in the recipient, they are infused earlier in the process of justification. Universally known is the expression of St. Paul (1 Cor., xiii, 13), "And now there remain faith, hope, and charity, these three: but the greatest of these is charity." Since, here, faith and hope are placed on a par with charity, but charity is considered as diffused in the soul (Rom., v, 5), conveying thus the idea that the infused moral virtues can be reduced to the four cardinal virtues: prudence (prudentia), justice (justitia), fortitude (fortitudo), temperance (temperantia). The Church favours the opinion that along with grace and charity the four cardinal virtues (and, according to many theologians, their subsidiary virtues also) are communicated to the souls of the just as supernatural habitus, whose office it is to give to the intellect and the will, in their moral relations with created things, a supernatural direction and inclination. By reason of the opposition of the Scotists this view enjoys only a degree of probability, which, however, is supported by passages in Scripture (Prov., viii, 7; Ecclus., xi, 19; 11 Pet., i, 3 sqq.) as well as the teaching of the Fathers (Augustine, Gregory the Great, and others). Some theologians add to the infusion of the theological and moral virtues also that of the seven gifts of the Holy Ghost, though this view cannot be called anything more than a mere opinion. The difficulties in the way of the substance of this opinion which cannot be here discussed.

The article of faith goes only to this extent, that Christ as man possessed the seven gifts (cf. Is., xi, 1 sqq.; Ixi, 1; Luke, iv, 18). Remembering, however, that St. Paul (Rom., viii, 9 sqq.) considers Christ, as man, the mystical head of mankind, and the Augustinian exemplar of our own justification, we may possibly assume that God gives in the process of justification also the seven gifts of the Holy Ghost.

The crowning point of justification is found in the personal indwelling of the Holy Spirit. It is the perfection and the supreme adornment of the justified soul. Adequately considered, the personal indwelling of the Holy Spirit consists of a twofold grace, the created accidental grace (gratia creatae accidentalis), and the uncreated substantial grace (gratia creatae substantialis). The former is the basis and the indispensable assumption for the latter. Contrary to the idea that the Holy Spirit erects His throne, there must be found a fitting and becoming adornment. The indwelling of the Holy Spirit in the soul must not be confounded with God's presence in all created things, by virtue of the Divine attribute of Omnipresence. The personal indwelling of the Holy Ghost is a supernatural gift, based upon the teaching of Holy Writ and of the Fathers that to deny it would constitute a grave error. In fact, St. Paul (Rom., v, 5) says: "The charity of God is poured forth in our hearts, by the Holy Ghost, who is given to us". In this passage the Apostle distinguishes clearly between the supernatural charity and the Person of the Giver. From this it follows that the Holy Spirit has been given to us, and dwells within us (Rom., viii, 11), so that we really become temples of the Holy Ghost (1 Cor., iii, 16 sq.; vi, 19). Among all the Fathers of the Church (excepting, perhaps, St. Augustine) it is the Greeks who are more especially noteworthy for their rapturous utterances touching the infusion of the Holy Ghost. Note the expressions: "The replenishing of the soul with balsamic odours", "a glowing permeating the soul", "a gliding and refining of the soul". Against the Pneumáticasians, St. Thomas and St. Bonaventure maintain that only God can establish Himself in the soul; surely no creature can inhabit any other creatures. But clear and undeniable as the fact of the indwelling is, equally difficult and perplexing is it in degree to
explain the method and manner (modus) of this indwelling.

Theologians offer two explanations. The greater number hold that the indwelling must not be considered a substantial union, nor a hypostatic union, but that it really means an indwelling of the Trinity (John, xiv, 23), but is more specifically appropriated to the Father, the hypostatic personality, as the Hypostatic Holiness and Personal Love.

Another small group of theologians (Petravius, Scheeben, Hurter, etc.), basing their opinion upon the teaching of the Fathers, especially the Greek, distinguish between the inhabitation totius Trinitatis, and the theologic personae. St. Benedict must be regarded as a union (unio, fraus) pertaining to the Holy Ghost alone, from which the other two Persons are excluded. It would be difficult, if not impossible, to reconcile this theory, in spite of its deep mystical significance, with the recognized principles of the doctrine of the Trinity, namely the law of appropriation and Divine mission. Hence this theory is almost universally rejected (see Franzelin, "De Deo trino," thes. xiiii-xviii, Rome, 1881).

(3) The Characteristics of Sanctifying Grace. — The Protestant conception of justification boasts of three characteristics: absolute certainty, complete uniformity in all the justified (aequalitas), unforfeitability (inamissibilitas). According to the teaching of the Church, sanctifying grace has the opposite characteristics: uncertainty (incertitudine), inequality (inequalitas), and amissibility (amissibilitas).

(a) Uncertainty. — The heretical doctrine of the Reformers, that man by a fiduciary faith knows with absolute certainty that he is justified, received the attention of the Council of Trent (Sess. VI, cap. ix), in one entire chapter (De ianu fiduci hareticorum, three canones (loc. cit., can. xiii-xv) condemning the negated power of the fiduciary faith. The object of the Church in defining the dogma was not to shatter the trust in God (certitude fidei) in the matter of personal salvation, but to repel the misleading assumptions of an unwarranted certainty of salvation (certitude spei). In doing this the Church is altogether obedient to the instruction of Holy Writ, for, since Scripture declares that we must work out our salvation "with fear and trembling." (Phil., ii, 12), it is impossible to regard our individual salvation as something fixed and certain. Why did St. Paul (I Cor., x, 12) exhort us to be sober, lest having preached unto others, he might himself be "become a castaway?" He says expressly (1 Cor., iv, 4): "For I am not conscious to myself of anything, yet am I not hereby justified; but he that judgeth me, is the Lord." Traditions also rejects the Lutheran idea of certainty of justification. Pope Gregory the Great (lib. VII, ep. xcv) was asked by a pious lady of a court, named Gregoria, to say what was the state of her soul. He replied that she was putting to him a difficult and useless question, which he could not answer, because God had not vouchsafed to him any revelation concerning the state of her soul, and only after her death could she have any certain knowledge as to the forgiveness of her sins. No one can be absolutely certain of his or her salvation unless—as to Magdalen, to the man with the palsy, or to the penitent thief—a special revelation be given (Trent, Sess. VI, can. xvi). Nor can a theological certainty, any more than an absolute certainty, be claimed as a promise of eternal salvation, for the spirit of the Gospel is strongly opposed to anything like an unwarranted certainty of salvation. Therefore the rather hostile attitude to the Gospel spirit advanced by Ambrosius Catherinus (d. 1550), in his little work: "De certitudine gratiae", reveals itself as a gross attempt to obscure the truth of the Gospel. Since no metaphysical certainty can be cherished in the matter of justification in any particular case, we must content ourselves with a moral certainty, which, of course, is but warranted in the case of baptized children, and which, in the case of adults, diminishes more or less, just as all the conditions of salvation are complied with—not an easy matter to determine. Nevertheless any excessive anxiety and disturbance may be alloyed (Rom., viii, 37, 38 sq.) by the subjective conviction that we are probably in the state of grace.

(b) Inequality.— If man, as the Protestant theory of justification teaches, is justified by faith alone, by the external justice of Christ, or God, the conclusion which Martin Luther (Sermon de Nat. Mariae) drew must follow, namely, "that this last grace must be regarded as a union (unio, fraus) pertaining to the Holy Ghost alone, from which the other two Persons are excluded. It would be difficult, if not impossible, to reconcile this theory, in spite of its deep mystical significance, with the recognized principles of the doctrine of the Trinity, namely the law of appropriation and Divine mission. Hence this theory is almost universally rejected (see Franzelin, "De Deo trino," thes. xiiii-xviii, Rome, 1881).

Thepossibility of a distinction (certitudine) of grace, according as the grace would follow its inequality in individuals, finds its warrant in those Scriptural texts in which an increase of grace is either expressed or implied (Prov., iv, 18; Eccles., xviii, 22; II Cor., ix, 10; Eph., iv, 7; II Pet., iii, 18; Apoc., xxii, 11). Tradition had occasion, as early as the close of the fourth century, to defend the old Faith of the Church against the heretic Jovinian, who strove to introduce into the Church the Stoic doctrine of the equality of all virtue and all vice. St. Jerome (Con. Jovin., II, xxiii) was the chief defender of orthodoxy in this instance. The Church never recognized the function of the grace as taught by St. Augustine (Tract. in Jo., vi, 8): "Ipsi sancti in ecclesia sunt aliis aliis sanctiores, aliis aliis meliores." Indeed, this view should commend itself to every thinking man.

The increase of grace is by theologians justly called a second justification (justificatio secunda), as distinct from the first justification (justificatio prima), which is coupled with a remission of sin; for, though there be in the second justification no transit from sin to grace, there is an advance from grace to a more perfect sharing therein. If inquiry be made as to the mode of this increase, it cannot be explained by moral works, but by the supernatural maxims: "Qualitas est occasio incesis et decreas;" for instance, light and heat by the varying degree of intensity increase or diminish. The question is not a theological but a philosophical one to decide whether the increase be effected by an addition of grace to grace (additio gradus ad gradum), as most theologians believe, or whether it be by a deeper and firmer taking of root in the soul (major radicatio in subjacto), as many Thomists claim. This question has a special connexion with that concerning the multiplication of the habitual act.

But the last question that arises has decidedly a theological phase, namely, can the infusion of sanctifying grace be increased infinitely? Or is there a limit, a point at which it must be arrested? To maintain that the increase can go on to infinity, i.e., that man by successive advances in holiness can finally enter into the possession of an infinite endowment involves a most distressing contradiction of the moral law as an infinite temperature in physics. Theoretically, therefore, we can consider only an increase without any real limit (in indefinitum). Practically, however, two ideals of unattained and unattainable holiness have been determined, which, nevertheless, are real. The one is derived from other, the other the fulness of grace which dwelt in the soul of the Virgin Mary.
(e) Amissibility. — In consonance with his doctrine of justification by faith alone, Luther made the loss or forfeiture of justification depend solely upon infidelity, while Calvin maintained that the prerequisite could not possibly lose their justification; as to those not predestined, he said, God merely aroused them in a deceitful show of faith and justification. On account of the grave moral dangers which lurk in the assumption that outside of unbelief there can be no serious sin destructive of Divine grace in the soul, the Council of Trent was obliged to condemn (Sess. VI, can. xxiii, xxvii) both these views. The lax principles of the "evangelical liberty," the favourite catchword of the bond of grace, may be validated (Sess. VI, can. x-xii). But the synod (Sess. VI, cap. xi) added that not venial but only mortal sin involved the loss of grace. In this declaration there was a perfect accord with Scripture and Tradition. Even in the Old Testament the prophet Ezekiel (Ezech., xviii, 24) says of the godless: "All his justices which he hath done, shall not be remembered: in the previration, by which he hath prevailed, and in his sin, which he hath committed, in them he shall die." Not in vain does St. Paul (1 Cor., x, 12) warn the just: Wherefore he that thinketh himself standeth, take heed lest he fall. And state uncompromisingly: "The unjust shall not possess the kingdom of God. . . . neither fornicators, nor idolaters, nor adulterers, . . . nor covetous, nor drunkards, . . . shall possess the kingdom of God" (1 Cor., vi, 9 sqq.). Hence it is not by infidelity alone that the kingdom of Heaven will be lost. Tradition shows the legislature of the Church in the early Church proclaims the belief that grace and justification are lost by mortal sin. The principle of justification by faith alone is unknown to the Fathers. The fact that mortal sin takes the soul out of the state of grace, and that death does not immediately, nor from an absolute turn away from God, the supernatural end of the soul, and is an absolute turning to creatures; therefore, habitual mortal sin cannot exist with habitual grace any more than fire and water can co-exist in the same subject. But as venial sin does not constitute such an open rupture with God, and does not destroy the friendship of God, therefore venial sin does not expel sanctifying grace from the soul. Hence, St. Augustine says (De spir. et lit., xxviii, 48): "Non impedient una vitæ iustum quodem quodam pecatum veniale, una quibus habeat vitæ non diescitur."

Grace is the presence of God in us, even though it may be not expressible, not knowable, not apprehensible, not discernible. It is clear that both must stand or fall together, hence the expressions "to fall from grace" and "to lose charity" are equivalent. It is an article of faith (Trent, Sess. VI, can. xxviii, cap. xv) that theological faith may survive the commission of mortal sin, and can be extinguished only by its diametrical opposite, namely, infidelity, and that the Church teaching that theological hope also survives mortal sin, unless this hope should be utterly killed by its extreme opposite, namely despair, though probably it is not destroyed by its second opposite, presumption. With regard to the moral virtues, the seven gifts and the indwelling of the Holy Ghost, which invariably accompany grace and charity, it is clear that when mortal sin enters into the soul they come to exist (cf. Suarez, "De gratia," IX, 3 sqq.). As to the fruits of grace, they are always subject to the conditions of the grace and sin already mentioned.
GRACE

J. Pohle.

Controversies on. — These are concerned chiefly with the relation between grace and free will. How can the all-persuasive grace of God, which exercises such a potent influence on the human will and elicits therefrom such good works, reside harmoniously in the same subject with the simultaneous consent of the free will? Since merely sufficient grace, (gratia more sufficientia) in its very concept contains the idea of a withholding of consent on the part of free will, and is therefore at the very outset destined to inefficiency (gratia inefficax), the question in its last analysis reduces itself to the relation between free will and grace itself. (gratia efficientia), and, in connection with the very idea that by it and with it the free will does precisely that which this grace desires should be done. The most radical solution would be simply to cut the Gordian knot, and with the Pelagians set aside supernatural grace, or, with the Reformers and Jansenists banish entirely all free will. For whether we boldly set aside the first or the second alternative, in either case the great problem of the relation between grace and free will will have been disposed of, and the great mystery solved in the simplest manner possible. For if there be no grace, why, then, all things are accomplished by the liberum arbitrium; if there be no freedom, then grace reigns supreme. As against the Pelagians and Semipelagians the existence and necessity of efficacious grace for all meritorious acts was duly treated in the article Grace. Here we propose to defend briefly the preservation of free will with grace as against the systems of the Reformers and Jansenists, which are hostile to free will.

I. Heretical Solutions. — According to Luther's theory, man's free will was so impaired by original sin that like a horse it could perform good or bad acts only as "it was ridden either by God or the devil". Nor does the Church deny that the will, when the equilibrium of grace is restored, is again in a situation which it was in before. Consequently, this free will, influenced by grace and must be influenced by Norfolk, is necessary not in all the things of the will of God. Of all the Reformers, Calvin (Instit. lib. II) has given the most consistent and scholarly theory of the loss of free will under grace. He maintains that the sin of Adam annihilated the freedom of the will; that the Redemp tion did not restore this primitive freedom, though it released man from the bondage of Satan; that, however, the will influenced by grace does not remain entirely passive, but presumes the spontaneity of its unfree acts. The result, as well as the expression of the change of time, secondarily ever more as hardly as their master the moral impotence of nature in the domain of the ethical good, but the followers of Calvin still cling stubbornly to his teaching (cf. G. van Noort, "De gratia Christi," Amsterdam, 1908, p. 16). In opposition to both sects, the Council of Trent (Sess. VI, can. iv.—v) defined as domina not only the survival of original freedom in spite of original sin, but also the preservation of the freedom of the will acted upon and working with grace, especially efficacious grace.

The definition of Jansen (d. 1638) is not materially different from that of Luther and Calvin, save only that in its efforts to demonstrate the mutual relations between the two took as its starting-point respectively either grace or free will, two pairs of closely related systems were evolved: Thomism and Augustinivism, which take grace as the starting-point, and Molinism and Congruesism, which set out from free will. These are the extremes. The doctrine is held by Descartes, which may be regarded as an eclectic system making an effort at compromise.

(1) Thomism. — This system rests upon thoughts to which St. Thomas himself in his time gave expression. It received its most significant development from the middle of the 13th century between Paris and Bologna and was later given a remarkably clear and acute mind, who was the chief opponent of Molina. From the idea that God is the primal cause (causa prima) and the
prime mover (motor primus), it is concluded that every act and every movement of the thoroughly contingent secondary causes (causa secunda) or creatures must emanate from the first cause, and that by the application of their potentiality to the act. But God, respecting the nature of things, moves necessary agents to necessary, and free agents to free, activity—including sin, except that God is the originator only of the free and spontaneous, not of its formal malice. Inasmuch as the Divine influence precedes all acts of the creature, not in the order of time, but in that of causality, the motion emanating from God and seconded by free intelligent agents takes on the character of a physical promotion (praemotio physica) of the free act (actus librorum), and not a physical determination (pradeterminatio physica), because the free determination of the will is accomplished only by virtue of the divine predetermination.

In this promotion or predetermination is also found the medium of the Divine knowledge by which God's omniscience foresees infallibly all the future acts, whether absolute or conditional, of intelligent creatures, and which explains away at once the undeniable and imaginary scientia media of the Molinists. For just as certainly as God in His predetermined decrees knows His own will, so certainly does He know all ours. But it cannot be said to Him, will, or potentiality of the will of creatures, be they of absolute or conditional futurity. Now if we carry these philosophical principles from the domain of the natural to the supernatural, then efficacious grace (gratia efficax) must be regarded as a physical promotion of the supernaturally equipped will to the performance of a good act, for revelation undeniably refers back to grace not only the possibility, but also the willing and the actual performance of a good act. But the will predetermination to this free good act must with a metaphysical certainty correspond with grace, for it would be a contradiction of the most general idea of the efficacious grace, that the same time be an actual disensus. This historical necessity (necessitas consequentiae), involved in every act of freedom and distinguishable from the compelling necessity (necessitas consequentiae), does not destroy the freedom of the act.

For although it be true that a man who is freely sitting cannot at the same time be standing (sensus compositus), nevertheless his freedom in sitting is maintained by the fact that he might be standing instead of sitting (sensus diversus). So it remains true that grace is not efficacious because the free will consents, but only that the free will may efficaciously premoves it to the willing and performing of a good act. Hence gratia efficax is intrinsically and by its nature (ab intrinsecu a, per se) efficacious, and consequently intrinsically and essentially different from sufficient grace (gratia sufficiens), which imparts only the posses, not the agere. To make merely efficacious grace efficacious a new supplementary grace must needs be supplied. How then is such a grace really sufficient (gratia vera sufficiens)? To this most of the Thomists reply: If the free will did not resist the grace offered, God would not hesitate to supply the efficacious grace so that the failure of the grace is to be referred to the sinful resistance of the free will (cf. Limbourg, S.J., "Selbstzeichen der thomistischen Gnadenelehre" in "Zeitschrift für kathol. Theologie", Innsbruck, 1877).

A survey of the strictly regulated uniformity of this system, of the relentless and logical sequence of the ideas, as well as by its own freedom and spontaneous natural and supernatural activity of creatures, and lastly of the lofty and resolute defence of the inalienable right of grace to be considered the chief factor in the affair of salvation, must instil into the minds of impartial and dispassionate students a deep respect for the Thomistic system. Nevertheless the Molinists claim that there are certain gaps and crevices in this majestic structure, and, by inserting levers of criticism in these, they believe they can shake the foundations of the edifice and encompass its downfall. We shall here confine ourselves to the four greatest objections which Molinism marshals against Thomism:

The first objection is the danger that in the Thomistic system the freedom of the will cannot be maintained as efficaciously against God’s grace which difficulty by the way is not unpersuaded by the Thomists themselves. For since the essence of freedom does not lie in the contingency of the act nor in the merely passive indifference of the will, but rather in its active indifference—to will or not to will, to will this and not that—this also appears impossible to reconcile the physical promotion of a free act with the determination of the will and the active spontaneity of the determination by the will itself; nay more, they seem to exclude each other as utterly as do determinism and indeterminism, necessity and freedom. The Thomists answer this objection by making a distinction between sensus compositus and sensus diversus, but the Molinists insist that this distinction is not correctly applicable here. For just as a man who is bound to a chair cannot be said to be sitting freely as long as his ability to stand is thwarted by indissoluble cords, so the will predetermined by efficacious grace to a certain thing cannot be said to be free as long as the power to do this thing is not left to the will, especially since the will, predetermined to this or that act, has not the option to receive or disregard the promotion, since this depends simply and solely on the will of God. And does not the Council of Trent (Sess. VI, cap. v, can. iv) describe efficacious grace as a grace which man “can reject,” and from which he “can dissent?” Consequently, the very same grace, which de facto is efficacious, might under other circumstances be inefficacious. Herein the second objection to the Thomistic distinction between gratia efficax and gratia sufficiens is already indicated. If both graces are in the same nature and in the same act, then it is hard to see how a grace can be really sufficient which requires another grace to complete it. Hence, it would appear that the Thomistic gratia sufficiens is in reality a gratia insufficiens. The Thomists cannot well refer the inefficacy of this grace to the resistance of the free will, for this act of resistance must be traced to a praemotio physica as inevitable as the efficacious grace.

Moreover a third great difficulty lies in the fact that sin, as an act, demands the predetermining activity of the “first mover”, so that God would according to this system appear to be the originator of sinful acts. The Thomistic doctrine becomes impossible because sin, and its malice offers no solution of the difficulty. For since the Divine influence itself, which premoves ad usum, both introduces physically the sin as an act and entity, and also, by the simultaneous withholding of the opposite promotion to a good act, makes the sin itself an inescapable fatality, it is not easy to explain why sin cannot be traced back to God as the originator. Furthermore, most sinners commit their misdeeds, not with a regard to the depravity, but for the sake of the physical entity of the acts, so that ethics must, together with the wickedness, condemn the physical entity of sin. The Molinists deny that this objection affects their own system, when they postulate the concursus of God in the sinful act, and help themselves out of the dilemma by drawing the distinction between the entity and malice of sin. They say that the Divine co-operation is a concursus simulaneus, which employs the co-operating arm of God only after the free act, which is by its own free and spontaneous nature, the commission of the sinful act, whereas the Thomistic co-operation is essentially a concursus praevisus which as an inevitable physical promotion predetermines the act regardless of the fact whether the human wili can resist or not. From this consideration arises the fourth and last objection, to the claim of the Thomists, that they have only apparently found in
their physical promotion an infallible medium by which God knows in advance with absolute certainty all the free acts of his creatures, whether they be good or bad. Though the system, as has been shown above, must in their last analysis be considered the knell of freedom, they cannot well be considered as the means by which God obtains a foreknowledge of the free acts of rational agents. Consequently the claims and proper place of the *scientia media* in the system must be abjured.

(2) *Augustinianism.*—Just as Thomism appeals to the teaching of St. Thomas as its authority, Augustinianism appeals to St. Augustine. Both systems maintain that grace is intrinsically and by its very nature efficacious, but Augustinianism claims a priori a decretal act of Salamanca, and proceeds not from the concept of God as the first and universal cause and prime mover, but with Jansen builds upon the idea of a twofold delight in human nature. The exponent of this system are: Berti, Bellielli, Louis Habert, Bertieri, Brancatez de Lauria, and others. The greatest defender of this system is Laurentius Berti (1696-1766), who in his work *De theologis disciplinis* (Rome, 1739) propound the theory with such boldness, that the Archbishop of Vienna, Jean d’Yse de Saléon, in his work entitled *Le Bajansie et le Jansénisme ressuscités dans les livres de Bellielli et Bertieri* (s. 1, 1746), declares it to be nothing other than the revived Jansenism. In 1752 an official inquiry in France against this doctrine, however, Benedict XIV exonerated the system.

The foundation of the system is the same as that of Jansenism, though it claims to be thoroughly Augustinian. In Augustinianism also there is a ceaseless conflict between the heavenly delight and the evil delight of the flesh, and the stronger delight invariably gains the mastery over the will. Sufficient grace, as a weak delight, imparts merely the ability (posse), or such a feeble will that only the advent of the victorious delight of grace (delectatio celestis victoriae, caritas) can guarantee the will and the actual deed. Therefore, like Thomism, the system postulates an essential difference between sufficient and efficacious grace. The necessity of *gratia efficax* does not spring from the subordinate relation between *causa prima* and *causa secunda*, but from the inherited perversity of fallen human nature, whose evil inclinations can no longer, as in the case of the followers of Jansenism, be overcome by the simple infusion of grace (gratia versatilis; *ad hitiorium sine quo non*), but only by the intrinsically efficacious heavenly delight (*gratia efficax; adjutorium quo*).

Augustinianism differs, however, from Jansenism in its most distinctive feature, since it regards the influence of the victorious delight as not intrinsically coercive, nor irresistible. Though the will follows the relatively stronger influence of grace or concupiscence infallibly (infallibiliter), it never does so necessarily (necceätorio). Although it may be said with infallible certainty that a decent man of good morals will not walk through the public streets in a state of nudity, he nevertheless retains the physical possibility of doing so, since there is no intrinsic compulsion to the maintenance of decency. Similar to this is the efficacy of grace. We may refrain from a criticism of Augustinianism since it never really became a school, and since it has as little in common with true Augustinianism, as Jansenism has. (Cf. Schifini, "De gratia divina," Freiburg, 1901, p. 422 sqq.; also the article *Augustine, Saint*.)

(3) *Molinism.*—The famous work of the Jesuit Molina, *Concordia liberi arbitrii cum gratia donis* (Lisbon, 1688), brought in Spain the learned Dominicans, who, in the wake of the Valiant defense of Thomism. In 1594 the dispute between the Thomists and the Molinists roused a fever heat. Pope Clement VIII in order to settle the dispute convened in Rome a *Congregatio de Auxilii* (1598-1607), and to this the Dominicans and the Jesuits sent, at the pope’s invitation, their ablest theologians. After the congregation had been in session for nine years without reaching a conclusion, Paul V, at the advice of St. Francis de Sales, peremptorily dissolved the assembly, forbidding the Jesuits to call the Dominicans Calvinists, or the Dominicans to name the Jesuits Pelagians. The deliberations of the congregation are fully set out in the article *Congregatio de Auxilii*.

It seems fitting to say a few words here concerning the celebrated Spanish Jesuit, Peter Arrubal, who took a leading part in the controversy between the Dominicans and the Jesuits (from 22 Feb., 1599, to 20 March, 1600) as well as in the disputations held before Clement VIII (1602-1606). Peter Arrubal was born in 1559 at Cenicerio in the Diocese of Calahorra; he died in Seville, 21 Sept., 1579. On 21 April, 1579, he entered the Jesuit novitiate at Alcalá. Later on he taught theology at Alcalá, Rome, and Salamanca. During the disputations on Grace, he distinguished himself by refuting the *Apologia* of the Dominicans, composed by them against the teaching of Molina. In the public disputations held before the Holy Father, he distinguished himself as the most eloquent of the Jesuits. Successfully and impressively he demonstrated in these disputations that the teaching of Molina was altogether removed from Semipelagianism, and that he (Molina) merely taught the holdings of the Council of Trent and in no wise introduced into the Church any heretical doctrine. On 19 May, 1600, he was appointed by the Holy Father for the disputation of any work on the disputed question by reason of the intense excitement then prevalent, consequently Arrubal’s great work *De auxiliis gratiae divinae* remained unpublished. But two folio commentaries, "In primam partem Summe theolog. S. Thomas" (Madrid, 1619, 1622: 2nd ed., Coruna, 1630), were prepared by him and published through the agency of P. de Villegas and P. de la Paz, both Jesuits.

The fundamental principles of the Molinistic system of grace are the following: efficacious grace and sufficient grace, considered in *actu primo*, are not in natural and intrinsically different one from the other (as the Thomists hold), but only accidentally so and according to their external success, inasmuch as sufficient grace becomes efficacious just as soon as the free will corresponds with it. If the will withholds its consent then sufficient grace remains inefficacious and is called "merely as grace" (*gratia sola*) by the Molinists. Now since one and the same grace may in one instance be efficacious, and in another inefficacious, it follows that the so-called *gratia efficax* must be conceived according to its essence as *gratia ab extrinseco*. In this conception there is no lessening of the dignity and primacy of grace. On the contrary, the anticipatory grace in the created will, quite irrespective of its consent in *actu primo*, supernaturally with moral and physical powers, and since moreover, as a supernatural concursus, it influences the *actus secundus* or good act and thus becomes efficacious grace, it follows that the good act itself is the joint product of grace and free will, or *gratia et virtus* (*gratia et virtus in concursu*). For it is not the will which by its free consent determines the power of grace, but conversely it is grace which makes the free good act possible, prepares for it and co-operates in its execution. The infallibility of the success, which is contained in the very idea of efficacious grace, is not to be explained by the intrinsic nature of this grace, nor by a supernatural *praemoto physica*, but rather by the *Theologoumenon* of the *scientia media*, by virtue of which God foreknows from all eternity whether this particular will would freely co-operate with a certain grace or not. But since God by virtue of His *scientia media* has at His own disposal all the sufficient and efficacious grace, the infallibility of the successful outcome remains in perfect accord with the freedom of the will, and furthermore the dogma concerning final perseverance and predestination is entirely preserved.
It is apparent that above all Molinism is determined to throw a wall of security around the free will. The Thomists maintain that this is done at the expense of grace. Instead of making the free will dependent on the power of grace, it is will which freely determines the success or failure of grace. Thus in the last analysis it is human will which decides whether a particular good or evil happens. Molinism, on the other hand, holds that grace teaches us that it is God, who with His grace gives both the willing and the doing of a good act. Even friends of Molina, notably Cardinal Bellarmine (De grat. et lib. arbitr., I., 12), saw the force of this difficulty and declined to follow the extreme Molinism, yet they were not bold enough to put their views into practice. Thus, in spite of the Instruction issued by Claudio Acquaviva, the General of the Jesuits in the year 1613, directing all the teaching body of the Society to lay increased stress on the fact that efficacious grace differs from sufficient grace not only ab extra, not only in actus primo, inasmuch as efficacious grace being a special gift of God has a higher moral value than merely sufficient grace, which according to the infallible foreknowledge of God recoils ineffectively in consequence of the resistance of the will. Thus it remains true that God Himself effects what grace does not, not that He merely supplies the material of the act. In fact, He supplies the act.

(4) Congruism is based on an essentially modified form of Molinism, that is to say, that it takes more carefylly into account the fact that efficacious grace is not only the means of sufficiency but also the cause of sufficiency. It is not only the means of carrying out God's decree, but is the act of God himself, and hence is the cause of its efficacy in the circumstances, but conversely the congruity of the circumstances is shaped and brought about by grace. Like all the other systems Congruism is forced to the conclusion: "We are standing before an unsolved mystery."

(5) Syncretism.—In the conviction that in each of the four systems we have thus far considered there must be in spite of imperfections many grains of truth, the Syncretist system hopes by proceeding in an eclectic manner, by adopting the good points of the various systems and eliminating all that is improbable and contradictory, to evolve a new system, fifth in number, of which the Congruism is the starting point. Thus, congruity is the cause of sufficiency, but sufficiency is not the cause of congruity. The distinction between the two is that the one implies a kind of causality, while the other does not. The Congruism system is founded on the Augustinian principle of causa conorruae, that is, that it is a grace suited to the circumstances of the case where it is opposed to the grata in orruae, a grace which is not suited to the circumstances of a case. Both of these concepts are purely Augustinian, as a reference to Augustine (Ad Simplicianum, I., Q. ii, n. 13) will show.

It is quite obvious that grata congrua corresponds with efficacious grace, and grata incongrua with merely sufficient grace. Accordingly the efficacy of a grace depends upon its peculiar agreement or congruity with the interior and exterior disposition of the recipient, whereby a certain relationship of choice is established between grace and free will, which at the hand of God in the light of His scientia media becomes the means of carrying out all His decrees in general things and small with certain success and without violence. Even a small grace, which by reason of its congruity is attended with success, has an incomparably greater sanctifying value than an ever so much more powerful grace, which by reason of unfavourable circumstances of inclination, training, and environment fails in its purpose, and therefore as a grata incongrua appears to the Divine foreknowledge as merely sufficient. Concerning the method of operation of the efficacious, or the congruous grace, the Congruists like the Molinists make three divisions: the efficacy of power (efficacia virtutis); the efficacy of union (efficacia coniunctionis); the efficacy of infallibility (efficacia infallibiliatis). The efficacy of the power to will and to do is peculiar to the efficacious and sufficient grace, that is to say, it is derived neither from the human will nor from the Divine foreknowledge.

The efficacy of the union between act and grace depends upon the free will, because according to the dogma efficacious grace is not irresistible, but can be rejected at any time. The efficacy of infallibility springs not from the physical nature of grace but from the infallible foreknowledge of God (scientia media), which cannot be deceived. After due consideration of all the various phases of the Catholic doctrine of grace, it would seem that the congruistic remodelled Molinism comes fairly near the truth, because it is intelligently adjusted between the anti-grace Pelagianism and Semipelagianism on the one hand, and the anti-free-will Calvinism and Jansenism on the other. Nevertheless there are numerous critics who find much to criticize in Congruism, and who fail to see how suffic-.

For general literature, see article Grace, also: BELLARMINE,
De Gratia et libero arbitrio in Opp., ed. Fère (Paris, 1873), V; VI; Willkraft der Lehre des Verhältnisses von Freiheit und Freiheit bis auf Augustinus (Freiburg, 1860). The literature on special features is so vast as to be almost impossible of examination. I will give here only the leading works of each kind.

1. Thomists.—Bàres, Comment. in St. Thom. (Salamanca, 1564); Alvarez, De auxilia gratiae et humani arbitrii virtus (Rome, 1628); Servandoni, De tentativa libri IV (Louvain, 1865); Ledkern, De divina gratia auxiliis (Salamanca, 1811); Gonet, Chytrées de la vie (2 vols., Bordeaux, 1848-49); Contenson, Théologie morale et civile (Lyons, 1872); De Lemur, Psicologia divinae gratiae (4 vols., Liege, 1876); Gouin, Université divine des S. M. S. (new ed., Louvain, 1885); Gotti, Théologie scholasique-dogmatique justa mentem divi Thomae (Venice, 1760); Garibi, Thomistico dogmatika in equo sensu (2 vols., Bologna, 1857); Billaud, De gratia (ed., Lefèvre). III; Idem, Le Thomisme triomphant (Paris, 1742); Dom, Thomismus et Thomas doctrina, promovit (Paris, 1896); Idem, Defensio doctrina S. Thomae de promovitphantis (Paris, 1896); Father S., Paris, 1896; Manzoni, Gli usuali teoriche promovit del libri (Friburgo, 1895); Feldner, Die Lehre des M. Thomas über die Willensfreiheit der vernünftigen Wesen (Freiburg, 1890); Paoli, P. maestri della mente umana alla mente divina (Benevento, 1901); Ude, Doctrina Caspari de divi in acta voluntatis humanae (Gote, 1906); Del Prado, De gratia et libero arbitrio (3 vols., Freiburg im Br., 1907).

II. AUGUSTINIANS.—Norbu, Vida doctrina Augustiniana (Padua, 1877); Bert, De Theologia disciplinae (8 vols., Rome, 1739); Belloelli, Men. S. Augusti de modo reparationis humanae (Rome, 1773); Thomassin, Mémoire sur la grâce (Louvain, 1868).

III. MOLINISTS AND CONCORDERINS.—Molina, Concordia libertate et necessitate (Lisbon, 1585; new ed., Paris, 1870); Platell, Autoritas contra predeterminismum physican, pro scientia divino (Angers, 1655); Idem, Thesaurus medica theologica defensae (2 vols., Lyons, 1746-76); De Aranda, De Deo scientiae, predeterminant et auxiliata seu Schola scientiae moralis (Paris, 1779); von Kock, De concordantiia (Frankfort, 1711); Nemoi et auxilio Divi (new ed., Paris, 1856); Idem, De auxilio efficaci in Opp. (Paris, 1856); XI; Idem, De verò intelligibilj auxiliis efficiens in Opp. (Paris, 1857); XIV, App.: LeMure, De gratia efficaciae in Opusculum, tom. II (Paris, 1878); Sardagna, Thologia moralis solipsismophila (Ratisbon, 1771); Vincenzii (Klimes), De gratia (new ed., Paris, 1853); Mersut, De gratia (Dublin, 1877); Jungmann, De gratia (Hatzebin, 1894); Dreyer, Sa, De Diversitate Divinae Determinationis physicae (Louisiv, 1894); Frima, S. Thomas doctrine et coordinatione sui cum omnis natura creatad, presentem libertatem et predeterminas physicas determinations physicae (Paris, 1890); De Ragon, Bases et Moling. Historia, Doctrina, Crítica, éthique et physique (Paris, 1890); Forcé, Lehrbuch der dogmatik (Fulder, 1906), 452-83.

IV. SYNCRETISTS.—Over and above the works of St. ALPHONSO, the following may be consulted: Tournel, De gratia (Venice, 1755); Herzmann, De diviná gratia (Rome, 1904); 337-501. Portions of the following may be cited here: Pecci, Sentences de S. Tommaso circa l'infiisso di Dio sulle azioni delle creature ragionevoli e sulla scienza media (Rome, 1885); Anagnostos (pseudonym), J. Fesce, Schriften, analyzieren (Munich, 1883). For historical literature, see Conservatorio de Auxilis.

Grave, Thomas. See SACRAMENTO, DIACONE OF.

Grace, William Russell, philanthropist and merchant, b. at Cork, Ireland, 10 May, 1832; d. at New York, 21 March, 1904. His father was originally from Gloucester, Mass., where the Croke family left Ireland in the time of their ancestor, Raymond Le Gros, who went to Ireland with Strongbow; his mother, a Russel from Tipperary, was a convert to the Catholic Faith. James Grace, his father, went from Ireland to Peru in 1850, but not being successful there, returned to Ireland, while his son, William Russel, remained behind and in time became a partner with the firm of John Bryce at Callao. The firm became Grace Brothers & Co., and W. R. Grace & Co., with offices in New York, New San Francisco, and every city of importance on the west coast of South America. Grace also established, at New Orleans, a firm known as the New Orleans and Co. and other financial enterprises. In 1859 he married Lilias Gilchrist of Thomaston, Maine.

He left Peru in the year 1864 and for a time lived in Brooklyn, then in 1878 moved to New York. At the time of the famine in Ireland in 1878 and 1879 his firm contributed to the relief of the distressed condition of the people in the steamship Constellation for the famine stricken. This fact and others made him so popular that he was nominated for Mayor of New York, and, in spite of much opposition from bigoted sources, elected in 1880. He was the first Catholic to hold that office. He was re-elected in 1884 and served a second term. An attempt to induce him to accept a nomination for a third term was made but he declined to run.

A fact that best shows the Christian character of the man is that during his two terms as mayor he went to Mass every morning in the neighbouring church of St. Agnes before going to official work. His chief benevolent work was the foundation of the Grace Institute in May, 1897, which he dedicated to the memory of his parents. The object of this foundation was to give free tuition to women in Dressmaking, stenography, typewriting, book-keeping, and domestic science. The poor are also generally helped by this institution. He was prompt to respond and endow it after a study of the economic conditions of workmen's families during a strike among the employees of one of his enterprises. The institution is non-sectarian, and is under the charge of the Sisters of Charity.

Henry A. BRAN.

Grace at Meals.—In Apostolic times, St. Paul counsels the faithful: "Whether you eat or drink, or whatsoever else you do, do all to the glory of God" (1 Cor., x, 31). This precept did not cease to be observed. "Before taking nourishment," says Clement of Alexandria, "it is fitting to praise the Creator of all things, and it is fitting also to sing His praises when we eat as nourishment the things created by Him" (Ped., ii, iv).

Terrell, in a recent study of the apostolic custom, shows us the Christians of the beginning of the third century making the sign of the cross on taking their places at table (De cor. milit., iii). "Our reasts," says he, referring to the Apoll., "are not vile or immodest. We do not recline until we have stood and turned to Christ, and have made the sign of the cross. Then we make the sign the feast" (Apol., xxii).

Christian archaeology has collected a large number of cup-bases on which may be read a short prayer, e. g. "Drink in Christ," "Drink piously." To the worthiest of friends, drink and live with all thine and in thy turn make a toast.

One of the most ancient formulas of prayer at meals is found in a treatise of the fourth century, attributed without foundation to Saint Athanasius. Having made the sign of the cross, the prayer followed: "We give Thee thanks, our Father, for the holy Resurrection which Thou hast manifested to us through Jesus, Thy Son; and even as this bread is broken and distributed to Thy holy people, so also grant that we may be dispersed throughout the earth Thy holy people. Glorify Thy name in all the earth. Amen." And it was customary to recite the prayer at meals.

One of the most ancient formulas of prayer at meals is found in a treatise of the fourth century, attributed without foundation to Saint Athanasius. Having made the sign of the cross, the prayer followed: "We give Thee thanks, our Father, for the holy Resurrection which Thou hast manifested to us through Jesus, Thy Son; and even as this bread is broken and distributed to Thy holy people, so also grant that we may be dispersed throughout the earth Thy holy people. Glorify Thy name in all the earth. Amen." And it was customary to recite the prayer at meals.

Graceful.—A word that is called for in many of the writings of the Fathers of the Church, in the collections of canons, and in the liturgical books, notably in the Gelasian Sacramentary and the Bobbio Sacramentary (Muratori, 'Liturgy Romanus vetus', I, col. 745; II, col. 949).
In the Roman Liturgy the Benedicite and the Graces are compositions in which Psalms cxxxv and xxiii are utilized, several versicles being taken from the most ancient times Psalm xxiii has been pre-eminently the Communion psalm. At the midday meal Ps. 1 is recited, in the evening Ps. cxvi. The origin of these formulas is monastic, hence the pious commemoration of benefactors.

On the principal feasts: Easter, Pentecost, etc., a selection of verses recalling the solemnity of the day is substituted for the formula in use at ordinary times. See also Thanksgiving.

Grado, Diocese of. See Aquileia; Venice.

Gradual (Lat. Graduale, from gradus, a step), in English often called Grail, is the oldest and most important of the four chants that make up the choir's part of the Proper of the Mass. Whereas the three others (Introit, Offertory, and Communion) were introduced later, to fill up the time while something was being done, the Gradual (with its supplement, the Tract) represented the liturgical elocution, alternating with readings from the Bible, a custom that is as old as these readings themselves. Like them, the psalms at this place are an inheritance from the service of the Synagogue. Copied from that service, alternate readings and psalms filled up a great part of the history of the Liturgy in every part of the Christian world from the beginning. Originally whole psalms were sung. In the "Apostolic Constitutions" they are chanted after the lessons from the Old Testament: "The readings by the two (lectors) being finished, let another one sing the hymns of David and the psalms, sing the last words after him" (và áravés ópouályr, II, 57). This use of whole psalms went on till the fifth century. St. Augustine says: "We have heard first the lesson from the Apostle. Then we sang a psalm. After that the lesson of the gospel showed us the ten lepers healed..." (Serm. cxxvi, 1). These psalms were an essential part, which was much as much as the lessons. "They are sung for their own sake; meanwhile the celebrants and assistants have nothing to do but to listen to them" (Du Chesne, "Origines du Culte chrétiens", 2nd ed., Paris, 1896, p. 161). They were sung in the form of a psalmus responsorius, that is to say, the whole text was chanted by one person—a rule that was confirmed and lasted for a long time. [For some time before St. Gregory I, to sing these psalms was a privilege of deacons at Rome. It was suppressed by him in 595 (Ibid.).] The people answered each clause or verse by some acclamation. In the "Apostolic Constitutions" (above) they repeat his last modulations. Another way was to sing some ejaculation each time. An obvious model of this was Ps. cxxxv with its refrain: "quoniam in sterno misericordia eis"; from which we conclude that the Jews too knew the principle of the responsory psalm. We still have a classical example of it in the Invitatorium of Matins (and in the same Ps. xxiv in the third Nocturn of the Epiphany). It appears that originally, while the number of Biblical lessons was still indefinite, one psalm was sung after each. When three lessons became the normal custom (a Prophecy, Epistle, and Gospel) they were separated by two psalms. During the fifth century (Du Chesne, op. cit., p. 160) the lessons at Matins (and Alleluia) present a characteristic of singing psalms remain two, although both are now joined together between the Epistle and Gospel, as we shall see. Meanwhile, as in the case of many parts of the Liturgy, the psalms were curtailed, till only fragments of them were left. This process, applied to the first of the two, produced our Gradual; the second became the Alleluia or Triodion.

In the ordinary, as in the Gradual, the sequence was given the name Gradus; it originated from the place where it was sung. In the First Roman Ordo (10) it is called Responsorium; Amalarius of Metz (ninth century) calls it Cantus Responsorius; Isidore (seventh century) Responsorium, "quod uno canente chorus consonando respondet" ("De Eccl. Offic. I, 5; Ordo Rom. II, 2; Mabillon, "Museum sacrae historiae" 409). This name was also used, as it still is, for the chants after the lessons at Matins; so the liturgical Responsorium was distinguished later by a special name. The reader who chanted the psalm stood on a higher place, originally on the steps of the ambo. He was not to go right up into the ambo, like the deacon who sang the Gospel, but to stand on the steps, and the ambo was not used. Hence a reader of the Gospel did not read the Epistle (Ordo Rom. I, 10, 7; "he does not go up higher, but stands in the same place where the reader stood and begins the Responsorium alone; and all the choir answer and he alone sings the verse of the Responsorium." Cf. Ordo Rom. III, 9, VI, 5). Later in various local churches, when the ambo was disappearing, other places were chosen, but the idea of a high place, raised on steps, persists. At Reims, the steps of the choir were used, sometimes a special pulpit was erected. Beleth (twelfth century) says that on ordinary days the cantor stands on the altar-step, as presently, and on the solemn days on the ambo (Ordo, II, P. L., CClI); Durandus a little later writes: "Dictur Graduale a gradibus altaris, eo quod in festivis diebus in gradibus cantatur" (Gradual is so called from the steps of the altar, on which it was sung on holidays.—Rationale, IV, 19). There seems then to be no doubt that the name comes from the place where it was sung; Cardinal Bellarmine's idea that the gradus in question are those the deacon is climbing for the Gospel while the Gradual is being chanted (De Missá, II, 16) is a mistake. We have seen that this psalm was not sung to fill up time during the procession to the ambo. Originally the deacon and all the ministers would wait till it was over before beginning their preparation for the Gospel. The older name Responsorium lasted, as an alternative, into the Middle Ages. Durandus uses it constantly and gives a mystic explanation of the word ("Responsorium vero dicitur quod versus vel episcopus vel praebendarum debet," etc., loc. cit., i.e. "Responsory is so called because it ought to correspond to the verse or epistle").

It is difficult to say exactly when the Gradual got its present form. We have seen that in St. Augustine's time, in Africa, a whole psalm was still sung. So also St. John Chrysostom alludes to whole psalms sung after the lessons of Matins (cf. Ps. cxxxv in the first time of St. Leo I (d. 461), in Rome the psalm seems not yet to have been curtailed: "Wherefore we have sung the psalm of David with united voices, not for our honour, but for the glory of Christ the Lord" (Serm. ii in anniv. assumps.). Between this time and the early Middle Ages the process of curtailing brought about our present arrangement.

II. ORDER OF THE GRADUAL.—If we open a Missal, at most of the days in the year (the exceptions will be described below), we find between the Epistle and Gospel a set of verses with some Alleluias marked Graduale. Although the whole text follows this heading, although we usually speak of it all as the Gradual, there are here two quite distinct liturgical texts, namely the first part, which is the old psalmus responsorius (now the Gradual in the strictly correct sense), and the Alleluia with its verse, the Alleluianic verse (versus alleluianicus). We have seen that these remain two, although both are now joined together between the Epistle and Gospel, as we shall see. Meanwhile, as in the case of many parts of the Liturgy, the psalms were curtailed, till only fragments of them were left. This process, applied to the first of the
Tract. A number of Lenten Masses that have kept the old three lessons also keep the old arrangement, by which the Gradual follows the first, the Tract the second (e.g. Wednesdays in the Lenten Ember week and Holy Week), others (e.g. the Ember Saturday) that have more than three lessons have a Gradual and a Tract, each lesson of the former coming after the Tract or Epistle. There are again others (e.g. Tuesday in Holy Week), in which there is no Tract at all, but only a Gradual after the first lesson. And even when they are sung together their essential separation is still marked by the fact that they have quite different melodists in the former and this (on the first Advent Sunday the Gradual is in the first and second modes mixed, the Alleluia in the eighth; the next Sunday has a fifth-mode Gradual followed by a first-mode Alleluia, and so on). The Gradual itself always consists of two verses, generally from the same psalm. There are however many cases of their being taken from different psalms; some, of verses from other books of Scripture (e.g. those for the Immaculate Conception are from Judith); and a few in which the text is not Scriptural. The feast of the Seven Dolors has such verses, “Dolorosa et lacrymabilis es Virgo Maria” ... and “Virgo Dei Genitura” “Virgo Maria” for the Visitation (July 2) and other feasts of the B. V. M., and the first verse of the Gradual for Requiem (“Requiem aeternam ...”). The first of these two verses keeps the old name Responsorium, the second is marked V (for verse). It may be that the first represents the former acclamation of the people (like the Invitatorium of Matins), and that the second is the fragment of the psalm originally sung by the lector (Gühr, Messopfer, 410; and note 4 from Guyetus, Heorologi, Venice, 1726).

The second chant is normally the versus alleluia-ticus (in this case the shorter one). The use of the word Alleluia in the Liturgy is also a very old inheritance from the Synagogue. It became a cry of joy without much reference to its exact meaning in a language no longer understood (as did Hosanna). Its place in the Liturgy varied considerably. In the Byzantine Rite it comes as the climax of the Cherubim Hymn at the Great Entrance (Brightman, Eastern Liturgies, Oxford, 1896, p. 379); in the Gallican Rite it was sung at the Offertory (Duchesne, Origines du Culte Chrétien, Paris, 1898, p. 160, n. 1). Its place here before the Gospel is peculiar to the Roman Rite. It is, however, before the time of St. Gregory that we find the Alleluia (see C. X. 604) it was sung only during Eastertide (Ep. ix—see Duchesne, loc. cit.; Atchley, Ord Rom. I, 78–9). Sozomen goes further: “At Rome, Alleluia is sung once a year, on the first day of the Paschal feast, so that many Romans use this oath: may they hear and sing that hymn!” (Hist. Eccl., VII, xix). This connection with Easter (unknown in the East) afterwards led to additional Alleluias being scattered throughout the Mass in Eastertide (at the Introit, Offertory, Communion, etc.); but its old and essential place for the normal Liturgy is here, where it has displaced the psalm sung to the psalm respondents. It may be noticed that the three great Alleluias that usher in Easter on Holy Saturday come here in the place of the Gradual. The chant consists of two Alleluias sung to exactly the same melody. At the end of the second one its last sound (a) is continued in a long and complicated neum. This musical phrase (cum modus quattuor cantuum) ... and its prolongation, the neuma, a very old and essential element of the Alleluia. A great number of medieval commentators insist on it, and explain it by various mystic reasons. For instance Rupert of Deutz (Ruperti Tulliensis, O. S. B., twelfth century): “We rejoice rather than sing (jubilamus magis quam cantamus) ... and it is thought not only that the mind be surprised and filled with the joyful sound, and be carried thither where the saints rejoice in glory” (De Officiis, I). So also Sicardus of Cremona: “Congruo quoque in Alleluia jubemus [this means singing the neum] ut mens illuc rapiatur ubi Sancti exultabant ...” (Mitrale, III, 3, P. L., CCXIII); Durandus: “Est etiam Alleluia modicum in sermone et mutum in pune, quia gaudium illud carminis est quem magis quam vocem Cantum enim seu jubilus qui fit in fine exprimit gaudium et amorem credentium”, that is, “the Alleluia is short in word and long in neum, because that joy is too great to be expressed in words. For the neum or jubilus at the end denotes the joy and love of the faithful” etc. (Rationale, etc., see the whole chapter). The question of the neum is discussed and many authorities quoted in Pothier, “Les Mélodies Grégoriennes d’après la tradition” (Tournai, 1881), x, 170–9. It should certainly never be omitted. In the case of a figured Gradual a jubilus in figured music should be supplied. After the jubilus of the second Alleluia a verse follows. This verse is by no means so commonly taken from the psalms as the verses of the Gradual, and there are a great many cases, especially on feasts of saints, of a fragment of a Christian poem, or other verse not from the Bible. St. Lawrence’s feast (10 Aug.), for example, the Alleluiaic verse is “In te Domino operatus est, qui per signum crucis cecos illuminavit” (The Levite Bishop, who made the blind see by the sign of the Cross, worked a good work). This Alleluiaic verse is a kind of continuation of the jubilus with a text fitted to the long-drawn neums. Then a third Alleluia, the same as the second with its jubilus, ends the chant.

There are two exceptions to this order. The first is when the Alleluia is replaced by the Tract. Since this word began to be looked upon as a special sign of joy, most suitable for Eastertide, it followed, as an effusive corollary, that there should be no neum of penance or mourning. There is no such idea in the East, where they sing Alleluia always, even in the Office for the Dead, as was once done at Rome too (Atchley, Ordo Rom. I, 78–9). That Latins sometimes avoid it was one of their many preposterous grievances at the time of Cerularius’s schism (Card. Humbert’s Dialogus, LVI–LVII, in Will, “Acta et Scripta de Controv. Eccl. Graecae et Latinæ”, Leipzig, 1861, pp. 122–3). In the West, from Septuagesima to Easter (even on feasts), on Ember days, most vigils, and at Requiem, the Alleluiaic verse disappears. The Vigils in question are the first Vigil of Easter, that is, before the day of Holy Saturday (but some have the Alleluia, e.g. the eves of Epiphany Ascension, White Sunday). On the other days the Gradual is followed by the Tract. The Tract (tractus) is the second psalm sung between the lessons, which, although later displaced by the Alleluia on most days, has kept its place here. We find it as an alternative to the Alleluia in the First Roman Ordo: “Postquam legerit cantor cum cantatorio ascendent et dicit responsum. Ac deinde per alium cantorem, si fuerit tempus ut dicatur Alleluia, conceitum, sin autem tractum, sit minus tantummodo responsum cantatum”, i.e. after the reading (of the Epistle) the cantor proceeds with his book and chants the Responsory. Then, if it be the proper season, another cantor chants the Alleluia; but if the Alleluia have to be omitted [i.e. in times of penance] the Tract or at times [as still on vigils] only the Response is sung” (ed. Atchley, London, 1905, p. 130, supplemented by Ordo Rom. III). The name Tract (tractus), from tractus, tractus, meaning “a tract, a serious song”, was sung straight through without any answer by the choir (in uno tractu). This was the special note of the second psalm, that distinguished it from the first psalms respondoris (Amararius of Metz, De ecol. offic., III, 12; Duchesne, op. cit., 108). Later authors retain the word “tractus”, and along with it, the same sound and mournful way in which it was sung (“a trahendo, quia lente et lugubriter cantavat”), “from trahendo,
because it is sung slowly and mournfully".—De Caro,
"Bibl. liturg." Ps. I, a. 2, quoted by Gibr., op. cit.,
416). Durandus gives this, with other symbolic
reasons, for the name: "It is called tract from trahendo
because it is sung drawn out (qua tractum cantitum) and
with a harshness of voice and length of words; since it
implies the misery and labour of our present life
(Rationale, c. 24). See also above chapter.
The initials of the "Cantus Roman" I quoted above is that
it was sung from the steps of the ambo, like the
Gradual. We have still a few Masses in which the
Psalmus tractus has kept its original nature as a whole
psalm. On the first Sunday of Lent it is Ps. xxi; on
Sundays, Fss. xxi; on Good Friday, Ps. cxviii. On
Sundays too, the Tract too has been shortened to two or
three verses. It is nearly always taken from Scripture,
but not seldom from other books than the Psalm;
verses from various psalms or other texts often
follow one another, connected only by the common
idea that runs through them. Mondays, Wednesdays,
and Fridays in Lent are the old feria legitima, the
official days of penance, that still keep certain peculiarities,
(incumbent, on these days, the Office for the Dead,
the penitential and gradual psalms are said). Except
on Wednesday in Holy Week they have the same Tract,
a prayer for forgiveness from Ps. eiii and lxvi. All
feasts and holy days, in the time of the Gregorian
Easter and all common and votive Masses have a
Tract, to be used in that time. Good Friday has two
Tracts, one after the Prophecy and one after the lesson
from Exodus that takes the place of the Epistle; it
has no Gradual. The first Easter Mass on Holy
Saturday, among many other peculiarities, keeps so
much of the nature of a Lenten vigil that it has, after
the great Alleluia and its verse, a Tract. On Whitson
eve the characters of Eastertide and a vigil are com-
bined. It has no Gradual, but first an Alleluia, then a
Tract. It will be noticed that each verse in the Tracts
is marked V. This calls attention to the nature of the
old psalmus tractus that was sung straight through by
the cantor. There are no responses for the choir.
The second exception to the usual order is in Easter-
tide (from the first Easter Mass to the Saturday after
Pentecost). During this time the great Alleluia is
sung; it has displaced the Gradual altogether. "Rightly
during fifty days in memory of the joyful
and happy deed, we are accustomed to sing Alleluia
often and more joyfully" (St. Bede, II Hom., x). An
exception in this season is the Easter octave.
The greatest feasts have always kept older arrange-
ments, so on Easter Day and till the Friday following the
Epistle followed so two verses (and a sequence) has remained. From White Satur-
day to the end of paschal time, including all feasts,
instead of these two separate chants, one, the great
Alleluia, is substituted. Two Alleluias are sung first
as a sort of antiphon; the second has a jubilus. Two
verses follow, each with an Alleluia and jubilus at the
end. These last two Alleluiae have the same melody,
different from that of the first two. The verses are
taken from all parts of the Bible, in the Proprium
temporis chiefly from passages in the New Testament
about the Resurrection. In this case too feasts and
other Masses that may occur in Eastertide are pro-
vided with this great Alleluia, as an alternative to be
used then. Lastly, fifth occasions (Eastertide, Whitsun,
Corpus Christi, the Seven Dolours, and Requiem)
have a sequence after the Gradual. These five are all
that Plus V's reform left of the innumerable medieval
poems once inserted at this place (see Sequences).
In the Gradual in Eastertide, in Lent, and after Easter too, there are fragments of the psalms once sung be-
tween the lessons, that therefore correspond to our
Gradual. In the Byzantine Rite the reader of the
Epistle first chants "the Psalm of David" and then
the "Prokeimenon [psalmotauru] of the Apostle." Both
are short fragments of psalms. The Prokei-
menon only is now usually read. It is printed before
each Epistle in the "Apostolos." After the Epistle the
reader should sing Alleluia and another fragment of a
psalm (Brightman, op. cit., p. 370–1). This too is
now always omitted by both Orthodox and Melchites;
even the Prokeimenon seems to be said only on Sun-
days and feasts in many churches (Charon, Le Rite
byzantin, Rome, 1908, 89–94; but I have found some
masses where it is used every day). The
Armenian Rite, which is only a modified form of that
of Constantinople, has however kept the older arrange-
ment of three lessons. Before the Prophecy a frag-
mament called the Saghamos Jashu (Psalm of din-
time) is sung, before the Epistle the Mesedi (mesedas),
again a psalm verse or two from a psalm. The Gospel the Alevu Jashu (Alleluia of dinner-time)
consisting of two Alleluia and a verse (Brightman, op.
cit., 425–6). Of the two older rites, that of St. James
has the same arrangement as Constantinople (a Pro-
keimenon before and an Alleluia after the Epistle,
Brightman, 30), that of St. Mark has a verse and an
Alleluia after it (ibid., 118). The Nestorians have
hymns (not Biblical texts) before both Epistle and
Gospel which they call Turgama, and three verses of
psalms each followed by three Alleluia (this group is
called Zumara) after the Epistle (Brightman, 257–
8). The Gallican Rite at the time of the Gregorian
Reform (d. 570) had three lessons. The Benedicite
canticle (which he calls Benedicito) was sung after the
second, sometimes by boys, sometimes by a deacon
(Duchesne, Origines, 185–7). The place of this
canticle was not always the same. At times it fol-
lowed the first lesson (ibid.). The present Ambrosian
Rite sometimes has a Prophecy before the Epistle.
In this case there follows the Psalmellus, two or three
verses from a psalm. After the Epistle, Hallelujah
is sung (on feasts of Christ, except in Octaves, twice,
then a verse, then again Hallelujah. In Lent, on vigils and fast days, instead of this the Cantus (our
Tract) is used. After the Gospel follows the Ant-
phona post Evangelium, from various books of Scripture
(except in Lent and on fast days). And on certain
great feasts there is also an antiphon before the Gospel
Rite has three lessons. After the Prophecy a
chant marked Paschalus follows (and a sequence) has
remained. From White Satur-
day to the end of paschal time, including all feasts,
instead of these two separate chants, one, the great
Alleluia, is substituted. Two Alleluias are sung first
as a sort of antiphon; the second has a jubilus. Two
verses follow, each with an Alleluia and jubilus at the
end. These last two Alleluias have the same melody,
different from that of the first two. The verses are
taken from all parts of the Bible, in the Proprium
temporis chiefly from passages in the New Testament
about the Resurrection. In this case too feasts and
other Masses that may occur in Eastertide are pro-
vided with this great Alleluia, as an alternative to be
used then. Lastly, fifth occasions (Eastertide, Whitsun,
Corpus Christi, the Seven Dolours, and Requiem)
have a sequence after the Gradual. These five are all
that Plus V's reform left of the innumerable medieval
poems once inserted at this place (see Sequences).
In the Gradual in Eastertide, in Lent, and after Easter too, there are fragments of the psalms once sung be-
tween the lessons, that therefore correspond to our
Gradual. In the Byzantine Rite the reader of the
Epistle first chants "the Psalm of David" and then
the "Prokeimenon [psalmotauru] of the Apostle." Both
are short fragments of psalms. The Prokei-
the Alleluia of the verse, and the choir the last Alleluia. Or, all Alleluias are sung by the cantors, the choir only joining in the neum. Similar arrangements may be made easily for the Tract or the great Alleluia in Easter tide. Normally it is all sung to plain-song and, now that we have the Vatican edition, to the form in that book. But there is no law about this, and the Church is willing to let the clergy exercise the principles of the "Motu Proprio" of 22 Nov. 1903. There is a useful arrangement of all Propers of the Mass in simple figured music by Tozer (New York, 2 vols., 1906), against which the only objection is that the composer has ignored the jubilus at the end of the Alleluia.

V. GRADUAL-BOOK.—The name Gradual (Graduale Romanum) is also used for the book that contains the music sung by the choir at Mass. The name comes from this most important chant, but the book contains the plain-song music for the Ordinary (this part is also published alone with the title Ordinarium Missae or Kyriale) and all the Propers for the year. This book is one of the three parts of the old Roman Antiphonary. Originally all the chants of the choir were contained in that. But by the ninth century it was already divided into three, the Graduale or Cantatorium of the Responsoriae and Antiphonae, and the Graduale (in a stricter sense) for the Office (Ambrosian of Metz, De Ordine Antiphonarii, P.L., XCIX, in prolog.). The history of the book forms part of that of the development of plain-song. An authentic edition (the Medicae) was issued at Rome in 1614. It is now supplanted by the Vatican edition (1908), of which reproductions are being issued by various publishers.

ADRIAN FORTESCUE.

Gradual Psalms.—Fifteen psalms, viz. Ps. 119–133 (in Hebrew 120–134), bear the inscription in Hebrew הָעֵדֶּרֶנ; Ps. 120 (121) has וַתִּתְנַבֵּל; in the Vulgate canticum graduum, which is translated in the Daily Office as "a gradual canticle". The authorized Version calls them "songs of degrees"; the Revised Version, "songs of ascent." Of the various conjectural explanations, the most probable regards them as psalms recited when going up to the annual festivals in Jerusalem, pilgrim-songs (see Psalms). The reason why the Canticles were forgotten, but the obligation of reciting them was removed by St. Pius V.

JOHN CORBETT.

Gradwell, Robert, Bishop, b. at Clifton-in-the-Fylde, Lancashire, 26 Jan., 1777; d. in London, 15 March, 1833; went to Douai in 1791. The college being suppressed by the French revolutionists, he was confined for some time, and was not allowed to return to England till 1785. With most of the Douai refugees, he went to Crook Hall, Durham, where he was ordained priest in 1802. He taught poetry and rhetoric for seven years at Crook Hall, and at the new college at Ushaw. About this time, Pius VII decided to reopen the English College at Rome, and on Dr. Lingard's recommendation, Gradwell was appointed rector. Under his administration the establishment flourished exceedingly. He also acted as Roman agent for the English vicars Apostolic, exhibiting tact and diplomacy in this office. In 1821 the pope made him a doctor of divinity. In 1828 he was consecrated Bishop of Lydda, as coadjutor to Bishop Bramston, the vicar Apostolic of the London district, and he came to London soon afterwards to take up his new duties. His engaging personality soon endeared him to both clergy and people. Had he lived longer, he might have been one of the most eminent of English bishops, but unfortunately his constitution, undermined by the Roman summers, was unable to withstand the rigours of the English climate. After some years of ill-health, he died of dropsy. His writings include: "A Dissertation on the Character of the English Christians" (London, 1818); "A Winter Evening Dialogue . . . on Thoughts on the Rule of Faith" (London, 1818); and various journals, letters, and MSS. in connexion with his residence in Rome; his notes on the old archives of the English College there are of some historical interest; all are in the Westminster archbishopical archives.

C. F. WEMSS BROWN.

Graffiti, the term in common usage among archaeologists to designate a class of rude inscriptions engraved on the walls of ancient monuments, generally sepulchral, as distinguished from the official inscriptions engraved on the tombs of the deceased. The inscriptions of this order traced by pilgrims, between the fourth and ninth centuries, on the walls of the galleries, proved invaluable to De Rossi and later archaeologists in their explorations of the Roman catacombs. At an early stage in his career, De Rossi realized the importance of these graffiti. Their absence from the walls of a gallery signified that there was nothing of importance in the vicinity, whereas, on the other hand, their presence meant that the explorer was in the immediate neighbourhood of an important crypt or other sepulchral monument which once contained the relics of a martyr. Here it was that a pious pilgrim of old, before leaving the venerable tomb, would take advantage of the occasion to scratch on the adjoining wall his name, with sometimes the date of his visit, or a pious exclamation or prayer to the saint, as, e.g., that near the papal crypt of the catacomb of St. Callistus: "Sancta Sustina in mente habeas in orationes tuas Aurelii Repentinii" (Saint Sixtus, remember in thy prayers Aurelius Repentinus). Outside the catacombs the famous caricature of the Crucifixion found in the imperial palace on the Palatine is accompanied by graffito stating that the (supposed) Christian page, Alexander, was carrying his God, while, in a chamber adjoining, a second inscription of the same class proclaims Alexamenos a Christian (Alexamenos fidelis). In 1897 some Christian graffiti were discovered on the columns of the temple of Antoninus and Faustina, intermingled with pagan inscriptions of the third and fourth century. The great necropolis of the oasis in the Libyan desert also contains a number of interesting Christian graffiti (Kaufmann, Handbuch der christl. Arch., 250). Graffiti are also found on ancient Christian altars of the fifth and later centuries (Le Blant, Inscriptions Chrétiennes de la Gaule). KAUFMANN, Handbuch der christlichen Archäologie (Paderborn, 1905); LUCBERG, Manuel d'archéologie chrétienne (Paris, 1907); NORTHCOE and BROWLOW, Roma Sodieriana (London, 1878).

MAURICE M. HASSELT.

Gratton. See LISMORE (AUSTRALIA), DIOCESE OF.

Graham, Charles. See PLYMOUTH, DIOCESE OF.

Graham, Patrick, first Archbishop of St. Andrews and Metropolitan of Scotland, date of birth uncertain; d. 1478. He was a son of Mary, younger daughter of Robert III, by her third husband, Sir William Graham of Kincardine, ancestor of the dukes of Montrose. He was educated at the University of St. Andrews, where, in 1457, he held the position of dean of the Faculty of Arts. In 1463 he became Bishop of Brechin. In
1466 he succeeded his half-brother, the illustrious Bishop Kennedy, in the See of St. Andrews. He proceeded to Rome to receive the confirmation of Paul II, and remained abroad until 1469 to escape the avowed enmity of certain powerful nobles. While in Rome he obtained the erection of St. Andrews into an archbishopric, with an archepiscopal chapel, to which five other twelve sees were subjected as suffragans. This was announced to the king, bishops, and diocesan chapters of Scotland by a Bull of Sixtus IV, dated 27 Aug., 1472. The announcement aroused a storm of opposition. The See of York ineffectually appealed against the loss of Galloway. Its suffragan for more than five centuries, and the consequent deprivation of all future claim to jurisdiction in Scotland; that of Trondheim as ineffectually resented the transference of the Dioceses of Argyile and the Isles; the king and the whole episcopate of Scotland set themselves to resist the innovation, rendered still more odious by the nomination of the new archbishop as Apostolic nuncio to raise subsidies for a crusade. James III, bribed by the bishops with an offering of 12,000 marks (according to some writers), joined them in appealing to Rome against his cousin the archbishop. Sixtus IV, in view of the extraordinary charges brought against Graham, a nobleman John Haunch, to Scotland to investigate. The accusation included heresy, schism, simony, disobedience to the Holy See, with reviling and blasphemy against its authority; the claiming by the archbishop of the papacy, as imposed upon him by God for the reform of the Church; the appointment of legates, provosts, and suchlike officials; the revoking of papal indulgences, because granted for lucre; the selling of Mass, even thrice a day, when under the ban of excommunication, suspension, and interdict. The nuncio, after examining numerous witnesses, sent a report to Rome, and, after due consideration by a cardinal, pronounced Graham declared guilty of the alleged charges. He was deprived of all dignities, degraded from orders, and subjected to imprisonment for life. He died in the Castle of Lochleven in 1478, and was buried in the old priory there. Many historians regard him as a zealous and good bishop, a victim to the persecution of his enemies, though this scarcely explains his condemnation. Whether he lost his reason under the stress of trouble, or whether he had become imbued with Lollardism (as Dickson suggests, though the charge concerning Mass seems to contradict this), it is impossible to say, in the absence of any ecclesiastical records except the Bull of deposing, dated 9 Jan., 1478.

MICHAEL BARRETT.

Grail, The Holy, the name of a legendary sacred vessel, variously identified with the chalice of the Eucharist or the dish of the Paschal lamb, and the theme of a famous medieval cycle of romance. In the romances the conception of the Grail varies considerably; its nature is often but vaguely indicated, and, in the case of Chrétien de Perréveal's poem, it is left wholly unexplained. The meaning of the word has also been variously explained. The generally accepted meaning is that given by the Cistercian chronicles, about the year 1120, of about 717, mentions a vision, shown to a hermit concerning the dish used by Our Lord at the Last Supper, and about which the hermit then wrote a Latin book called "Gradaale." "Now in French," so Helinandus informs us, "Gradales or Gradaile means a dish, and costly viands are wont to be served to the rich in degrees (gradatim), one morsel after another in different rows. In popular speech it is also called 'gral', because it is pleasant (grata) and acceptable to him eating therein" etc. (Tiasier, Biblioth. Citencr., VII, 78 sq.). The medieval Latin word "gradaile" became in Old French "grail", and "gral", or "greel", whence English "grail". Others derive the word from "garaile", or from "enivraile", meaning a large dish or bowl, or bowl. It certainly means a dish, the derivation from "gral" in the latter part of the passage cited above or from "agree" (to please) in the French romances is secondary. The explanation of "San greal" as "sang real" (kingly blood) was not current until the later Middle Ages. Other etymologies, which have been advanced, may be passed over as obsolete.

When we come to examine the literary tradition concerning the Grail we notice at the outset that the Grail legend is closely connected with that of Perceval as well as that of King Arthur. Yet all these legends were originally independent of each other. The Perceval story may have a mythical origin, or it may be regarded as the tale of a simpleton (Fr., nïcet), who, however, in the end achieves great things. In all the versions that we have of it, it is a part of the Arthurian legend, and, in almost all, it is furthermore connected with the Grail. So the reconstruction of the original Grail legend shall be attempted by means of an analytical comparison of all extant versions, and is a task that has given rise to some of the most difficult problems in the whole range of literary history.

The great body of the Grail romances came into existence between the years 1180 and 1240. After the thirteenth century nothing new was added to the Grail legend. Most of these romances are in French, but there are versions in German, English, Norwegian, Italian, and Portuguese. These are of very unequal value as sources, some are mere translations or recasts of French romances. Now all these romances may be divided into two classes and a third. Those are mainly concerned with the quest of the Grail, and with the adventures and personality of the hero of this quest; and those that are mainly concerned with the history of the sacred vessel itself. These two classes have been styled respectively the Quest and the Early History versions.

Of the first class is the "Conte del Graal" of Chrétien de Troyes and his continuators, a vast poetic compilation of some 60,000 verses, composed between 1180 and 1240, and the Middle High German epic poem "Parzifal" of Wolfram von Eschenbach, written between 1205 and 1215. According to Wolfram's statement, on the French poem of a certain Kyiot (Guilom) of Provence, which, however, is not extant and the very existence of which is doubtful. To these may be added the Welsh folk-tales or "Mabinogion" known to us only from MSS. of the thirteenth century, though the material is certainly older, and the English poem "Sir Perceval", of the fifteenth century. In these latter versions only the adventures of Perceval are related; mention being made of the Grail. Of the Early History versions the oldest is the metrical trilogu of Robert de Boron, composed between 1170 and 1215, of which only the first part, the "Joseph d'Arminthe", and a portion of the second, the "Merlin", are extant. We have, however, a complete prose version, preserved in the so-called Didot manuscript. The most detailed history of the Grail is in the "Grand St. Graal", a bulky French prose romance of the first half of the thirteenth century, where it is told that the Grail is hidden under a waterfall, and the hermit the book containing this history. Besides these versions we have three French prose romances, also from the thirteenth century, which, though concerned chiefly with the quest, give also an account of the history of the sacred vessel. Of these the most notable is the "Queste del St. Graal", well known to English readers because it was embodied almost entirely in Malory's "Morte d'Arthur". The others are
the so-called "Didot Perceval" or "La petite queste", and the lengthy and prolix "Perceval le Gallois", also known as "Perlesvaus".

The poem of Chrétien, regarded by many as the oldest known Grail romance, tells of Perceval's visit to the Grail castle, where he seeks a Grail borne in by a dragon. For his knighthood, the Grail knight makes him a bleeding lance and a silver plate. It is a precious vessel set with jewels, and so resplendent as to eclipse the lights of the hall. All the assembled knights show it reverence. Mindful of an injunction not to inquire too much, Perceval does not ask concerning the significance of what he sees or thereby incurs guilt and reproach. Undaunted by Chrétien's reticence, the second visit to the castle, when he would have put the question and received the desired information. But the poet did not live to finish his story, and whether the explanation of the Grail, offered by the continuators, is that which Chrétien had in mind, is doubtful. As it is, we are not informed by Chrétien what the Grail signifies; in his version it has no pronounced religious character. On the other hand, in the Early History versions it is invested with the greatest sanctity. It is explained as the dish from which Christ ate the Paschal lamb with his disciples, which passed into possession of Joseph of Arimathaea, and was brought by him to gather the Precious Blood of Our Saviour, when His body was taken from the Cross. It becomes identified with the Chalice of the Eucharist. The lance is explained as the one with which Longinus pierced Our Lord's side, and the silver plate becomes the paten covering the chalice. The quest in these versions assumes a most sacred character, the atmosphere of chivalric adventure in Chrétien's poem yields to a militant asceticism, which insists not only on the purity of the quester, but in some versions (Queste, Perlesvaus) on his virginity. In the "Grand St. Graal" unaccomplished. Moreover, in this version is not Perceval but the maiden-knight, Galadad. But the other knights of the Round Table are also made to participate in the quest.

The early history of the Grail is intimately connected with the story of Joseph of Arimathaea. When he is cast into prison by the Jews, Christ appears to him and frees him from the death's embrace, which he miraculously sustained for forty-two years, until liberated by Vespasian. The Grail is then brought to the West, to Britain, either by Joseph and Josephes, his son (Grand St. Graal), or by Alain, one of his kin (Robert de Boron). Galadad (or Perceval) achieves the quest; he is granted the Grail, its secrets are revealed. According to the version of the "Perlesvaus" Perceval is removed, no one knows whither, by a ship with white sails on which is displayed a red cross. In the Guitt-Wolfram version we meet with a conception of the Grail wholly different from that of the French romances. Wolfram conceives of it as a precious stone, lapide exilit (i.e. lapide or lapis ex certis?) of special purity, possessing miraculous powers conferred upon it and sustained by a consecrated Host which, on every Good Friday, a dove brings down from heaven and lays down upon it. The angels who remained neutral during the rebellion of Lucifer were its first guardians; then it was brought to earth and entrusted to Titurel, the first Grail king. It is guarded in the splendid castle of Munsalvaesch (mons salvatoris or silvaticus?) by a special order of knights, the Templemen, chosen by itself and nourished by the food and power of the Grail. The relationship of the Grail versions to each other, especially that of Chrétien to those of Robert de Boron and the "Queste", is a matter of dispute. Nor is their relative chronology certain. But in all these versions the legend appears in an advanced state of development, the preceding phases of which are attested by literary monuments, and can, therefore, only be conjectured. The origin of the legend is involved in obscurity, and scholars are divided in their views on this point. An Oriental, a Celtic, and a purely Christian origin have been claimed. But the Oriental parallels, like the sun-table of the Ethiopians, the Persian cup of Jamshid, the Hindu paradise, Crisavanas, are not very convincing, and Wolfram's dream vision, which so much resembles a Grail manuscript of Toledo, is given to grave doubt. It is different with the Celtic theory. There are undoubtedly Celtic elements in the legend as we have it; the Perceval story is probably, and the Arthurian legend certainly, of Celtic origin, and both of these legends are intimately connected with the quest story. Taliesin, the Picts, and Caledonia, figures prominently in Celtic myths and folk-tales. According to this theory the "Mabinogion", with its simple story of vengeance by means of talismans and devoid of religious significance, would yield the version nearest to the original form of the legend. Back of the quest-story would be some pre-Christian tale of a hero seeking to avenge the injury done to a kinsman. The religious element would then be of secondary origin, and would have come into the legend when the old vengeance-tale was fused with the legend of Joseph of Arimathaea, which is essentially a legend of the conversion of Britain to Christianity.

Those who maintain the theory of a purely Christian origin regard the religious element in the story as fundamental and trace the leading motifs to Christian ideas and conceptions. It is derived from the apocryphal Gospel of Nicodemus, which is known to have had a great vogue in the twelfth century, particularly in Britain. There we read how Joseph, whom the Jews had imprisoned, is miraculously fed by Christ Himself. Additional traits were supplied by the "Vindicta Salvatoria", the legendary account of the destruction of Jerusalem. Furthermore, Joseph was confused with the Jewish historian Josephus, and Titus is narrated by Suetonius. The food-producing properties of the vessel can be explained, without resorting to Celtic parallels, by the association of the Grail with the Sacrament of the Eucharist, which gives spiritual nourishment to the faithful. The purely Christian legend which thus had arisen was brought into contact with the traditions of the evangelization of Britain, and then developed on British soil, in Wales, and thus the Celtic stamp, which it undeniably bears, is accounted for. In connection with the legendary conversion of Britain it is noteworthy that the literary accounts of this event are contemporary of the famous Abbey which is also intimately associated with the legend of Arthur, Glastonbury being identified in William of Malmsbury's account with the mystic Avalon. So scholars are inclined to connect this British society with the origin of the Grail romances. Possibly Walter Map, who died as Abbot of Oxford in 1210, and to whom is ascribed the authorship of a Grail-Lancelot cycle, got his information from that abbey. The first Grail romance was then probably written in Latin and became the basis for the work of Robert de Boron, who was an English knight under King Henry II, and a contemporary of Chrétien of Troyes.

The fully developed Grail legend was later on still further connected with other legends, as in Wolfram's poem with that of Lohengrin, the swan-knight, and also with that of Prester John, the fabled Christian monarch of the East. Here also the story of Klingsor, the magician, with his powers, is added. The Grail legend, together with some medieval legends, fell into oblivion, from which it was rescued when the Romantic movement set in at the beginning of the nineteenth century. The most famous modern versions are Tennyson's "Holy Grail" in the "Idylls of the King" (1889), and Wagner's music-drama, the "Parsifal", produced for the first time at Bayreuth in 1882.
to govern the house as superioress and continued to do so until her death in 1846. Mother de Gramont's remarkable intelligence and influence were of great value in the important work entrusted to her, and she established a position in which the only anxiety of the foundresses of the society concerning it was the success, almost too brilliant for her love of hiddenness and simplicity, which attended the work. She knew the weak side of Mother de Gramont's character as well as her great gifts, and she was not deceived as to the dangers of a mind which was too receptive of strong influences and very difficult to disillusion. In a time of trial, during the first year of her religious life at Amiens, when the existence of the Society of the Sacred Heart was in great danger, Mother de Gramont was one of those who were misled by the action of M. de St. Evremonde. In another critical moment in 1839, she took a line of conduct in opposition to the foundresses which she afterwards recognized and deplored to the end of her life; but her sorrow for her error, it is said, hastened her death. She died in the most perfect union of affection with the foundresses, Blessed Madeleine Sophie Barat, a long-pardon of her and of the whole of the errors of judgment into which she had been led—her personal devotedness to the mother general had never wavered.

**Gran.** Hungarian Esztergom; Lat. Strigoniun. Archidioecese of Strigoniensia in Hungary. From the earliest time of its existence (eighth century) up to the beginning of the eleventh century, the Diocese of Gran embraced the greater part of Hungary, but as early as the beginning of the twelfth century its extent was considerably diminished by the founding of the Archdiocese of Bács. Gran, however, retained the most important, and the Archbishop of Gran was looked upon as the Primate of Hungary. The jurisdiction of Gran extended originally over the whole of Upper Hungary to the territory of the Cumans beyond the Theiss. In 1766 two more dioceses were established in this territory, Neusohl (Beszterce-Bánya) and Rosenau (Rosznyó), and in 1804 the Diocese of Eriaul was separated from the Archdiocese of Gran, and raised to the rank of an archiepiscopal see. The suffragan sees of Rosenau, Szepes, Kassa (Kassau), and Szatmár. In 1776 the Greek Ruthenian Bishops of Eperies, Munkác, and Kreuz (Köröse) were placed under the jurisdiction of the Archdiocese of Gran; but in 1852 Kreuz was transferred to the Archdiocese of Gran, to which it had belonged originally. The Diocese of Gran extends to-day over fourteen counties, and has as suffragans Neutra (Nyitra), Vasprém, Wártzen (Vác), Steinamanger (Szombathy), Stuhlweissenburg (Székes-Fehérvár), Raab (Győr), Fünfkirchen (Pecs), and Neusohl (Beszterce-Bánya) (Latin Rite), also the larger part of the Northern Hungarian Church Provinces of Eperies and Munkác. There are three chapters, the metropolitan chapter of Gran with 23 members, the collegiate chapter of Pressburg with 13 members, and the chapter at Tynau (Nagy-Szombathely) with 6 members. The archiepiscopal see is divided into three vicariates, Gran, Tynau, and Budapest; 8 archdeaconries, the cathedral deanery of Gran and three territorial deaneries, numbered over a thousand, and as late as the middle of the sixteenth century exceeded nine hundred. Of account of the continued advance of the Turks and the spread of Protestantism, this number rapidly de-
On account of the part played by its archbishops, the history of the Archdiocese of Gran is closely connected with that of Hungary. Up to the sixteenth century the archbishop resided at Gran, but when the Turks overran Hungary after the battle of Mohács, in which the primates, Ladislaus Salis-Kán (1524-26), was slain, Paul Várdai (1527-49) removed the seat to Pressburg, and when Gran also fell into the hands of the Turks, to Tarnau, which remained the seat of the archdiocese until 1820. This period is one of the saddest epochs in the history of the see. Ecclesiastical discipline became relaxed, and notwithstanding the efforts of Nikolaus Oldi (1563-68), Protestantism gained more and more territory. After the death of Anton Veranotiuse (1669-73), the episcopal see remained vacant for twenty-three years. It was the greatest of all the archbishops of Gran, Peter Pázmány (1616-37), who stemmed the decline of Catholicism in Gran. He succeeded in reconciling with the

Church of the Primaz, Gran

Church many influential families of Hungary, and thus brought about the ecclesiastical reorganization of the country. A pulpit orator of distinction, he earned imperishable fame by his cultivation of the Hungarian language and won a lasting place in the history of Hungarian literature. For the advancement of the Catholic religion and the promotion of learning, he founded at Vienna the Pázmaneum, a seminary for the training of priests. The University of Tarnau was also founded by him, but was transferred to Budat (Ofen) by Maria Theresa. In 1791 Klaudius Vassary was appointed archbishop.

In virtue of his dignity as Primaz of Hungary, the Archbishop of Gran possesses a number of extraordinary privileges. Johann von Kanizsai (1587-1418) was the first to be mentioned as Primaz of Hungary, though the primacy was connected with the Archdiocese of Gran as early as 1279. The primiate is entitled to hold national synods, is Legatus Natus of the Holy Roman Church, has therefore the right, inside of his legislation, to have the cross carried before him, and deals directly with the Holy See. As primiate he has the right to visit the episcopal sees and the religious houses in Hungary, with the exception of the exempt Archabbey of Pannonhalma (S. Martinus in Monte

erased, so that it was reduced to one hundred at the beginning of the seventeenth century. Under the great Peter Pázmány, the zealous opponent of Protestantism, conditions were improved, and after his death there were 183 parishes. To-day the number is given as 480, and the total number of clergy in the archdiocese 923, of whom 729 are occupied with the cure of souls. There are 5 seminaries for the training of priests, the central seminary at Budapest, that of Gran, the Pázmaneum at Vienna, and the preparatory seminaries at Pressburg and Tarnau. There is also an archiepiscopal gymnasium connected with the Tarnau seminary. The students number about 262. There are in the archdioce 134 religious houses of men and women, whose members number collectively 2487. In the three vicariates of the archdioce (1909) there are 1,490,531 Catholics, and 1,057,282 members of other creeds.

The already existing See of Gran was raised to met-

ropolitam rank by St. Stephen (c. 1000-38), first King of Hungary, who converted the country to the Catholic Faith and organized the Church there. He chose for the metropolitan see Gran, at that time the richest and most important city in Hungary and the royal residence. St. Adalbert, Bishop of Prague and martyr, was chosen patron of the archdioce. It was Adalbert who converted the royal family to the Catholic Church and evangelized the country. The metropolitan church of Gran is dedicated to him, the titular patron being the Blessed Virgin. The first cathedral was begun by St. Stephen in 998. The foundation stone of the present building was laid by Alexander von Rudnay (archbishop 1819-31), and it was finished under Johann Simor (1866-92). In 1198 the royal palace at Gran was given to the archbishop for his residence. The first archbishop was Astericus Anastatius (Astrik-Anastat) (990-c. 1038), who was the most loyal co-operator of King Stephen in organising Catholic Hungary, and who was sent by Stephen to Rome to beg papal approval for the organisation of the Church in Hungary, and to ask for the crown. It was also Astericus who, in the year 1000, crowned Stephen as first King of Hungary with the crown sent by Pope Sylvester II.
Pannonia). Since 1715 the primate also has been a Prince of the Holy Roman Empire, having the title of Prince Primatus of Hungary, and therefore keeper of the great seal of the kingdom. Formerly he was also a member of the supreme court, and in still earlier times, governor, viceroy, and First Count (Erbőbergsypen) of the County of Gran. To the primate also belonged the right to preside over the court of justice through his deputy, and he received a certain sum out of its revenues (jus pisets).

According to an ancient custom, he has the right of crowning the king and of anointing the queen. By a gift of archiepiscopal property he was at one time able to confer nobility (Próciadallet). The right to take an oath before a court of justice through his deputy, and not personally, was another privilege of the Primate of Hungary. The primate is also chief priest and chancellor of the Order of St. Stephen, established in 1764. As first bannereu (berno reguni) of Hungary, he is a member of the Upper House.

Granada, Archdiocese of (Granatensis), in Spain, founded by St. Cecilia about the year 64, was made an archiepiscopal see by Alexander VI, 23 Jan., 1493. The history of this city, the long line of its prelates (untimetup the twelfth century and restored in 1437), its illustrious men, and its famous monuments can hardly be summarised within the limits of this brief article. In the Roman period the city appears as Municipium Florentinum Elibiritanum. On its Iberian coins, minted in the Roman republican period, the city is called Kurri; on Latin coins, Tibet and Elvintia; on Visigothic coins, Liberi, Eliiberri, and Liberi. Pliny calls it Eliberri; Ptolemy, *Διη βερίς;* Herodian, *Δίβερος.* Oloron and Elina, on the other side of the Pyrenees, were similarly called; the name seems derived from the Basque language, in which bi-berri, or ili-berri, signifies "new town." In the tenth century, by whatever name, this was changed to Granada, originally the name of that particular quarter of the city inhabited since the third century by the Jews, to whom the Musulman conquerors entrusted the custody of the city; it is worthy of note that several Palestinian peoples of Testamentary called Rimmon, "pomegranate" (in Spanish, *granada*).

The famous codex of San Millan (St. Emilian), written in the tenth century, and now preserved in the Escorial Library, supplies us with a catalogue of the bishops of Iliberri, sixty-two in number, from St. Cecilia to Agapius (d. 957). The names of many of these periods of their reigns are also established by the Acts of councils, by their own writings, and by other authors, native and foreign. St. Cecilia, whose feast was kept by the Visigothic and Mozarabic Church on 1 May, was one of the seven Apostolic men sent from Rome by St. Peter and St. Paul to preach the Gospel in Hispania Bética, where they suffered martyrdom. On 15 May, 301, the famous synod known as the Council of Iliberri assembled at Granada (see Elvira, COUNCILS), forty-three bishops being present, among them, besides Flavian of Granada, the great Hosius of Cordova, Liberius of Mérida, Melania of Toledo, and Valerius of Saragossa. The eighty-one canons of this council reflect the state of dogma and church discipline in a time when persecution and antagonism were aroused by Roman imperial authority, the Jews, heretics, and schismatics. St. Gregory, Bishop of Iliberri, who assisted at the Council of Sirmium and Rimini, and was the constant antagonist of the Arian heresy, bears witness to the purity of Catholic faith which this see always maintained. Bishop San Millan (Esebeau) assisted at the Third Council of Toledo (589), which excommunicated the Arian heresy in Spain; Bishop Bisinus at the Second of Seville (619); Bishop Felix at the Fourth of Toledo (633); the signatures of successive bishops of Eliberri in later councils attest the accuracy of the aforesaid San Millan catalogue. In 777 Bishop Egli was honoured by letters of praise from Adrian I. St. Leovigild, who, in the year 852, suffered martyrdom at Córdova, was a native of Granada; and, not long after (858), the See of Granada was occupied by the wise Recesmund, memorable for his astronomical and literary achievements, as well as for his embassies on behalf of Abd-er-Rahman III, Caliph of Córdova, to the Emperors of Germany and of Constantinople. It was to him that Liutprand dedicated his history of the kings and emperors of Europe.

The See of Granada remained inviolate until the middle of the twelfth century. The Christian (Mos- arabic) population having called to their aid Alfonso the Fighter (el Battallador), King of Aragon and Navare, and conqueror of Saragossa, he led his hosts within sight of Granada; but the expedition being defeated, some of the Christians departed with the king, and the Almohades carried off the remainder. Thereafter the Christian population consisted of captives and foreigners, and no bishop held the title of Granada. Games, in his "Series Episcoporum," makes St. Pedro Pascual (d. 6 Dec., 1300) a Bishop of Granada in the second half of the fourteenth century, an error which has been corrected since the publication of the "Regesta" of Boniface VIII (Paris, 1884). The new list of Bishops of Granada begins 13 Sept., 1437, and continues until 1492, according to the researches of Eubel in the Vatican registers.

With the surrender of the city to the Catholic sovereigns Ferdinand and Isabella (2 Jan., 1492), began a period of splendour for the See of Granada. A few days after that event, the Catholic sovereigns there ratified with Christopher Columbus the compact which was to result, before the end of that year, in the discovery of the New World. On 30 Jan. they issued the decree of expulsion of all Jews inhabiting their dominions in Spain and Italy.

It is to be noted that the first Archbishop of Granada, the queen's confessor, transferred from the See of Avila, was not hostile to Columbus, but his constant friend, as Don Antonio Sanchez Moguel, Member of his (Spanish) Royal Family, has it authorised to demonstrate. In this modern period of more than four centuries' duration, Granada has been ruled by many archbishops eminent for learning and virtue, e.g. Cardinal Gaspar de Avalos, who founded the university (1531), Pedro Guerrero, a distinguished member of the Council of Trent, and Manuel Bonel y Orbe, Patriarch of the Indies; it has given birth to innumerable writers, among whom the Dominican Luis de Granada and the Jesuit Francisco Suárez are conspicuous; it was the cradle of the Order of St. John of God. Indeed, it has long been a centre of vigorous spiritual life, proof of which is abundantly furnished by its churches, its conventual buildings, and the vast material resources there devoted to works of charity. Its cathedral contains the tombs of Ferdinand and Isabella, and of the Empress Isabella, wife of Charles V. Early in the present century, that famous monument of Spanish art, the Cartuja (Convent of Granada, from which name the ancient city had been driven by the barbarous decree of excommunication (1835), was acquired and restored by the Jesuits, who have established in it their novitiate for New Castile, Estremadura, and Andalusia, also a school of the sacred sciences, and a astronomical and astronomical observatory which publishes a periodical bulletin.

GRANOLAS

highly valued in scientific circles both in the Old and the New World.

F. Tita.

Granada, University of.—The origin of this university is to be traced to the Arab school at Cordova, when, which, when the city was captured by St. Ferdinand in 1236, was removed to Granada and there continued. When Granada in its turn fell into the hands of the Catholic sovereigns one of their earliest and chief cares was to secure the preservation of letters and the art of imparting knowledge, in which the Arabs had been so well versed, and the school was taken under their protection. However, it did not receive the status of a university until the reign of Charles V, when a Bull of 1535 was issued, giving it the title of University, by the Inquisition. The institution is endowed with privileges similar to those enjoyed by the Universities of Bologna, Paris, Salamanca, and Alcalá de Henares. The large building which it occupied was erected by the Jesuits and is admirably suited to its purpose. The curriculum covers a wide field, the faculties including those of law, medicine, social science, etc. The university has a seismological station in the observatory of Cartuja. The magnificent library contains 40,000 volumes, and includes a polyglot Bible, several valuable works of theology, and some Arabic MSS.

Blanche M. Kelly.

Grancolas, Jean, Doctor of the Sorbonne, theologian, liturgist; b. near Chateaudun, about 1660; d. at Paris, 1 August, 1732. Having received the degree of Doctor of Theology in the faculty of Paris in 1685, he became chaplain to the brother of Louis XIV. He pronounced the funeral oration of this prince, but his panegyric displeased the son of the deceased, the Duke of Orleans, future King of France, who dismissed him from his house. His unfortunate essay caused Grancolas to publish the next year a study of the custom of dipping the consecrated bread in the wine. However, the author was desirous of participating in less severe questions, and wished to engage in theological polemics. At that time the matter of Quietism was creating a great stir in the world, and Grancolas conceived the idea of devoting himself to the refutation of the heresy which he entitled "Le Quétisme contraire au doctrine des sacraments" (Quéticism contrary to the doctrine of the Sacraments), and which appeared in 1693.

This work contains a history of the life, doctrine, and condemnation of Molinos. Grancolas herein sets forth the principles of the Spanish mystic and of his followers, which principles he proceeds to refute from Scripture and the tradition of the Fathers. This new work attracted little attention, and shared the fate of so many other theological demonstrations made forth by the Quetists, and of which the modern world is so well acquainted to-day. However, from his own point of view, Grancolas is master of his subject and handles it firmly, but he displays the usual qualities and deficiencies found in his other works, namely, an erudition of the first order derived directly from original sources, a profound and wide acquaintance with the question he treats and German topics, a too evident rudeness of expression and lack of culture, as well as an obvious strain for composition. His works offend chiefly in this last particular. Grancolas had a great trouble to arrange and connect the points of an argument, being satisfied to throw them into a heap, and deprived them by this disorder of a part of their demonstrative value. Despite these defects all the works of Grancolas retain their value as books of reference. His collections of historical documents and the necessity of having recourse to originals, although the translations he gives are generally exact and very clear, but he is useful, inasmuch as he omits nothing essential and also, if necessary, in determining the sense of a word. An original mind, he belongs to the theological school of Thomas and Petau who readily replace discussion by the exposition of traditional opinions in chronological order, but he scarcely troubles to develop the sense of his texts. His real originality is as a liturgist, although even here he does not rise above the second rank. Ingenious without being profound, but acutely observant, the commentary in most of his works is valuable, especially in the "Ancien sacramentaire de l'Eglise" and in the "Commentaire sur le Breviaire romain".

His principal writings are: "Traité de l'antiquité des cérémonies des sacrements" (Paris, 1692); "De l'Intinction, ou de la coutume de tremper le pain consacré dans le vin" (Paris, 1693); "Le Quétisme contraire à la doctrine des sacrements" (Paris, 1693); "Instructions sur la religion tirées de l'Ecriture sainte" (Paris, 1693); "La Science des confesseurs ou la manière d'administrer le sacrement de Pénitence" (Paris, 1698); "Histoire de l'Eglise, de l'Église sacrée et ordinaire" (Paris, 1699); "L'ancienne discipline de l'Eglise sur la Confession et sur les pratiques les plus importantes de la Pénitence" (Paris, 1697); "Heures sacrées ou exercice du chrétien pour entendre la messe et pour approcher des sacrements, tiré de l'Ecriture Sainte" (Paris, 1697); "Tradition de l'Eglise sur le péché originel et sur la réprobation des enfants morts sans baptême" (Paris, 1698); "L'ancien périténial de l'Eglise ou les pénitences que l'on impose autrefois pour chaque péché et les devoirs de pénitence qui leur sont attachés" (Paris, 1699); "Les membres sacrées et les membres sacrés de l'Eglise, et par les conciles" (Paris, 1699); "Les anciennes liturgies ou la manière dont on a dit la sainte Messe dans chaque siècle dans les Eglises d'Orient et dans celles d'Occident" (Paris, 1697); "L'ancienne sacramentaire de l'Eglise, où sont toutes les pratiques qui s'étaient dans l'administration des sacrements chez les Grecs et chez les Latins" (2 vols., Paris, 1690-99); "La morale pratique de l'Eglise sur les préceptes du Déluge, ou la manière de conduire les amis dans le sacrement de pénitence" (2 vols., Paris, 1701); "La tradition de l'Eglise dans le soulagement des esclaves" (J. G. Outhus, 1700); "Traité de la Messe et de l'office divin" (Paris, 1713); "Disertations sur les messes quotidiennes et sur la confession" (Paris, 1715); "Le Breviaire des laïques et l'Office Divin abrégé" (Paris, 1715); "Les catechismes de Saint Cyrille de Jerusalem avec des notes et des dissertations" (Paris, 1719); "Commentaire sur le breviaire romain" (Paris, 1700, and Venice, 1734); "La critique abrégée des ouvrages des auteurs ecclésiastiques" (2 vols., Paris, 1716); "Instruction sur le Jubile avec des résolutions de plusieurs cas sur cette matière" (Paris, 1722); "Histoire abrégée de l'Eglise, de la Vérité et de l'Unité sacrée" (Paris, 1725); "Itinéraire de Jésus Christ, traduction nouvelle, précédée d'une Dissertation sur l'auteur de ce livre" (Paris, 1729).

Grancolas favours the claims of Ubertino of
GRANDERATH
Casale, a Franciscan who lived shortly before the fourteenth century, to the authorship of the Imitation.

Du Pre, Bibliothèque de l'auteur et (seventeenth century); Moerli, Grand dictionnaire, histoire, IV, 1764.

H. Leclercq.

GRANDERATH, Theodo, b. 19 June, 1839, at Giesen-
kirchen, Rhine Province; d. 19 March, 1902, at Val-
kenburg. After completing the course in the gymnasium at Neuss, he studied theology in the University of Tübingen, and entered the Society of Jesus at Münster, Westphalia (3 April, 1860). Be-
tween 1862 and 1874 he finished his studies in the classics, philosophy, theology, and canon law. In 1874 he was appointed professor of canon law in the college of Ditton Hall, England, where from 1876 to 1887 he taught dogma and apologetics. In 1887 he was sent to the college of the Society at Exaeten, Hol-
land, to succeed Father Schemm in the preparation of the “Acta et Decreta Concilii Vatican.” In 1893 he was called to Rome, where Leo XIII placed the archives of the Vatican Council at his disposal, with a view to a history of that council. In 1897 and 1898 he replaced the professor of apologetics at the Gregorian University. In 1901 failing health compelled him to retire to the college at Valkenburg, where he prepared the first two volumes of his history of the Vatican Council.

Grafterath’s name will live for ever among scholars in connexion with his monumental labours on the Vatican Council. In preparation for them he first edited the “Acta et Decreta sacrosancti oecumenici Concilii Vatican.” (Freiburg im Br., 1890), the seventh volume of the “Acta et Decreta sacrorum Conciliorum recensitorum” in the “Collectio Lacinii.” This was followed by “Constitutiones Dogmaticae ss. oecumenici Concilii Vatican ex ipsis ejus actis explicata atque illustrata” (Freiburg im Br., 1892). The publication of the “Archivische des viagischen Konzils, seiner ersten Ankündigung bis zu seiner Vertragung, nach den authentischen Dokumenten dargestellt” was continued after the author’s death by his fellow-collaborator, Jesuit Konrad Kirch. Two volumes of this work, which the author himself prepared for the press, were issued in 1903 at Freiburg in Breisgau, the first dealing with the preliminary history and the second with the proceedings of the council to the end of the third public session. The third and last volume was published in 1906 and treated of the final proceedings. A French translation is being issued at Brussels (1906—). The great merit of Granderath’s work consists in his refutation of biased accounts of the council, and the animating of hostility toward the Church; he opposes them a history based upon authentic material. For the first time the unbridged text of the acts of the council, especially of the discourses delivered in the general congregations, was laid before the public. Granderath was also the author of many apologetic, dogmati-
cal, and historical articles in the “Stimmen aus Maria-Lasch” (1874-99), the “Zeitschrift für kath. Theologie” (1881-96), and the “Katholik” (1898). The second edition of the “Kirchenlexikon” contains also several lengthy articles from his pen, among others that on the Vatican Council (XII, 607-33).

Friedrich Lauchert

GRANDDIER, Philippe-André, priest and historian, b. at Strasbourg, Alsace, 9 Nov., 1752; d. at the Abbey of Luntzel (Lucelles), Sundgau, 11 Oct., 1787. This gifted scholar was appointed archivist of the Diocese of Strasbourg at the early age of eighteen by the pro-
curators of the Diocese, on account of the high profession of fifty-two that had been admitted to twenty-one scientific societies in France and Germany. His forte was critical in-
vestigation, but his intense application soon undermined his health, and he died at the early age of thirty-

four. In recognition of his services he was made canon of Strasbourg, and, shortly before his death, royal historiographer for Alsace. We owe to him two volumes of the “Histoire, inédite de la royale princes de Strasbourg depuis la fondation de l’évêché jusqu’à nos jours” (Strasbourg, 1776-78), an account of the early ecclesiastical history of Alsace to 965. From the manuscripts of Granddier Libin continued this monumental work under the title: “Œuvres histo-
riques inédite de Ph.-A. Granddier” (Colmar, 1865-67), in six volumes. Pierre VI expresed his admira-

sion of Granddier’s work and encouraged the young savant to further labours. The other canons of Strasbourg therefore held themselves slighted and so opposed Granddier’s scientific methods—-even question-
ning the soundness of his faith—-that for a while he dropped all historical work. He soon yielded, however, to his love of science, and gave new evidence of his skill in historical research by the “Essais histo-
riques et topographiques sur l’église cathédrale de Strasbourg” (Strasbourg, 1782) and by the “Histoire ecclésiastique, militaire, civile et littéraire de la pro-
vince d’Alsace” (Strasbourg, 1787). Recently P. In-
gold edited in five volumes the correspondence of this savant: “Nouvelles œuvres inédites; Les Correspondants de Granddier” (Paris, 1895-97).

Saucli, “Revue historique de Granddier” (Colmar, 1851); Idem, “Letter Granddier dans ses mœurs et ses œuvres” (Colmar, 1863). See also Notice sur la vie et les œuvres de Granddier (Colmar, 1838).

Patriicus Schlager.

GRANDMONT, Abbey and Order of, in the department of Het-Vienne, France. The exact date of the foundation of the order is very uncertain. The tradition originates with serious chronological difficulties, and is based on a Bull of Gregory VII now shown to be a forgery (see Martène and Durand, Ampl. Coll., VI, Praef.). The founder, St. Stephen, is said to have settled in the valley of Siurêt near Limoges in 1076, but Martène considers that the origin of the order cannot be placed earlier than about 1100. The Order of Grandmont has been claimed by both Benedictines and Canons Regular as a branch of their respective institutes, although the Grandmontines always main-
tained that they formed a distinct order. Mar-
tène considers that St. Stephen modelled his insti-
tution upon the life of the mortui carthusiani. The “Rule of Stephen” was compiled at the request of the fourth prior, Etienne de Lecia, by Hugh of La-
certa, and embodies the customs of Grandmont some 20 or 30 years after St. Stephen’s death. The founder himself left no authentic writings. His maxim was: “There is no rule save the Gospel of Christ” as this was the basis of all rules, to practise its morality was to fulfil all the duties of a good religious. The early Grandmontines were noted for their extreme austerity. Poverty was most strictly observed; the rule forbade the possession of lands, cattle, revenue, or improper churches. Begging was only permitted when there was no food in the house, and then the local bishop was first to be informed of their state. The law of silence was also very severe, as were the rules of fasting and abstinence.

After the founder’s death in 1124 his disciples mi-
gated to the neighbouring rocky desert of Grandmont, owing to a dispute about the ownership of Muret. Under Etienne de Lecia the order spread rapidly, and in 1170 numbered sixty monasteries, mostly in Aquitaine, Anjou, and Normandy. Under his suc-
cessor, Bernard de Boschec, eighty new foundations were made, and the “bons hommes” were to be found in nearly every diocese of France. The influence of the Grandmontines reached its height in the twelfth century. Their holy austerity roused the admiration of all beholders, and the kings of England and France vied with one another in bestowing favours upon them. Henry II of England had the monastery rebuilt, and
Grand Rapids, Diocese of (Grandmormenhis), created 12 May, 1882, out of the Diocese of Detroit, and made to include the lower peninsula of the State of Michigan, U.S.A., north of the southern line of the Counties of Ottawa, Montcalm, Gratiot, and Saginaw, and west of the line of the Saginaw River, the City of Saginaw, Bay, and the adjacent islands, an area of 22,501 square miles. In this section there were then about 40,000 Catholics attended by 34 priests. There were 33 churches, 33 missions, 41 stations, 11 parish schools, and an orphan asylum. In the rural regions colonies of Belgians and emigrants from Holland had settled, with an admixture of Irish; to these Poles have since been added. Henry Joseph Richter, appointed the first bishop, was consecrated at Grand Rapids, 22 April, 1883. He was born at Neuenkirchen, Duchy of Oldenburg, Germany, 9 April, 1838, and ordained priest at Rome, 10 June, 1868. In 1849 he went to the United States, and his direction the diocese has progressed steadily in all directions. Several religious communities of men are located there: Franciscans (both Minorites and Conventuals), Fathers of the Holy Ghost, Redemptorists, and Premonstratensians. The religious communities of women are: Sisters of St. Dominic, Sisters of St. Mary, Little Sisters of September 19th (Mt. St. Joseph, Ohio), School Sisters of Notre Dame, Ursuline Sisters, Sisters of Charity (Emmitsburg), Sisters of Providence, Felician Sisters, Sisters of the Good Shepherd, Sisters of the Immaculate Heart of Mary, Franciscan Sisters of Christian Charity.

Statistics: Priests 133 (regulars 24); ecclesiastical students 60; churches with resident priests 91; missions with churches 92; stations 38; chapels 18; academies for girls 2; high schools 2, pupils 242; parish schools 66, pupils 13,565; orphan asylums 2, inmates 325; industrial schools 1, pupils 135; total being people under Catholic control 1,549; homes for aged poor 1; Catholic population 128,057.

Thomas F. Merhan.

Granjon, Henry. See Tucson, Diocese of.

Grant, Thomas, first Bishop of Southwark; b. at Ligny-les-Aires, Ardes, France, 25 Nov., 1816; d. at Rome, 1 June, 1870. He was the son of Bernard Grant, an Irishman who enlisted in the British army, became sergeant, and finally purchased a commission. His mother, Ann MacGowan, was also Irish by birth. In January, 1829, she was sent to Ushaw College, where he was educated until 1833, when he was sent to the Pius College at Rome. There he was ordained priest, 25 Nov., 1841, was created doctor of divinity and ap-
pointed as secretary to Cardinal Acton, a position in which he acquired a thorough knowledge of canon law, and an intimate acquaintance with the method of conducting ecclesiastical affairs at Rome. In October, 1844, at the early age of twenty-eight, he became rector of the English College, and was made agent for the English bishops. In this capacity he was of great assistance to Ullathorne, who was then negociating for the restoration of the English hierarchy. He also translated for Propaganda all English documents relating to the matter, and furnished the materials for the historical preface to the Decree of 1850. A year later, he was appointed to the new Diocese of Southwark, and was consecrated Bishop of London on 6 July, 1851. The step was considered by many as a strange one, but the new Bishop, as a stranger, was soon won over to the cause of Catholics and others. As the Government was shy of transacting business directly with Cardinal Wiseman, many negotiations were carried on by Dr. Grant, who was specially successful in obtaining from the Government the appointment of military and naval chaplains, as well as prison chaplains.

To the newly appointed hierarchy he was, as Bishop Ullathorne testified, most useful: "His acuteness of learning, readiness of resource and knowledge of the forms of ecclesiastical business made him invaluable to our joint committee at Rome, whether in his dispatches or in our yearly episcopal meetings; and his obligingness, his untiring spirit of work, and the expedition and accuracy with which he struck off documents in Latin, Italian, or English, naturally brought the greater part of such work on his shoulders." In the administration of his diocese, he proved himself to be the pioneer of organization, which was necessary in an age of rapid expansion, while the remarkable sanctity of his private life led to his being generally regarded as a saint, and caused Pius IX., when he heard of his death, to exclaim "Another saint in heaven!" The virtues of charity and humility in particular were practiced with a heroic degree. The last years of his life were spent in great suffering, caused by cancer, and when he set out to attend the Vatican Council at Rome in 1870, he knew that he would not return. He was appointed member of the Congregation for the Oriental Rites and the Apostolic Missions, but was too ill to take an active part in the proceedings. After death his body was brought back to England for burial. His works were a translation of the "Hidden Treasure" of Blessed Leonard of Port Maurice (Edinburgh, 1865), and "Meditations of the Sisters of Mercy before Renewal of Vows" (London, 1874).

EDWIN BURTON.

Granville, Antoine Perrenot de, known in history as CARDINAL DE GRANVILLE (Granville), was born in Orne in Franche-Comté, 20 August, 1517; d. at Madrid, 21 September, 1586. He was the son of Nicolas Perrenot, prime minister of Charles V., studied at Padua and Louvain, and at an early age was introduced by his father to political life. Ecclesiastical favours and benefices were showered upon the young man by his distinguished predecessor, who was archdeacon of Besançon, archdeacon of Cambrai, and was made Bishop of Arras in 1538 at the age of twenty-one. He resided very little in his diocese and lived at Bruges, where he had an active share in his father's political negotiations. He was charged with addressing the Council of Trent in the name of the emperor (9 Jan., 1543), and took an active part in all the important affairs of Charles V., e.g., the interview of Nice, the Peace of Crépy (1544), the Interim, and the marriage of Philip II with Mary Tudor of England. In 1550 he succeeded his father as keeper of the emperor's seal, but did not bear the title of chancellor. His influence continued to grow under Philip II. He was named Archbishop of Mechlin in 1559 and cardinal in 1561.

As member of the Council of State of the Low Countries he was the most valued counsellor of the regent, Margaret of Parma; apropos of this it must be remembered that when leaving the country Philip II recommended his sister to refer all important matters to one of his adherents, one of whom was Cardinal de Granville. He was in direct correspondence with the king, and freely judged and criticised the regent. So much power aroused the jealousy of the nobility, especially that of the Prince of Orange and the Comte d'Ergmont, the chief personages of the Low Countries, who were indignant at seeing Granville preferred before them. Every means was employed to stir up popular opinion against him, caricature, song, and pamphlet. The regent and even the king himself were besieged with protests. Finally the nobles declared that they would refrain from assisting at the Council of State as long as they should meet the cardinal there. The king, who believed it more to his advantage, made his favourite in the face of such stubborn and fierce hostility. Accordingly Granville was "authorized to visit his mother in Burgundy" (1564). He was never to see the Low Countries again, though on his departure he left behind his papers, books, and pictures, in the hope of a speedy return. He withdrew to his native Besançon, whence he continued to correspond with the king. By the latter he was sent to Rome in 1565, where he took an active part in the formation of the Holy League, which resulted in the celebrated victory of Lepanto. In 1571 the king named him viceroy of Naples, but he only held the post for a year and then returned to Rome. In 1577 Philip II offered to allow him to return to the Low Countries under Margaret of Parma, but the cardinal refused to return to a country which he had left under such humiliating circumstances, and where he could no longer be of use. The king then summoned him to Madrid (1579). At Madrid, as at Brussels, Besançon, Naples, and Rome, he was a faithful and valued counsellor, though towards the end his repute seems to have diminished. Having resigned from his Archdiocese of Mechlin, he received that of Besançon in 1584. He died at Madrid, and was buried in Besançon, but his remains were scattered during the French Revolution.

Comely of person, speaking seven languages, liberal, of an even disposition, unsavouringly faithful to his masters, possessing great political penetration, and of an astonishing activity, Granville was moreover a generous and enlightened patron of arts and letters. He has been reproached with avarice; in fact he was never satiated with riches and honours, but was unskilled in the art of gaining popularity. Exclusively preoccupied with the service of his masters, he scorned to win the affection of the multitude, and was as contemptuous of poverty as of wealth. His correspondence is an inexhaustible source of information concerning the history of the sixteenth century. It might almost be said, writes the celebrated archivist Gachard, that no minister ever wrote as much as the Cardinal de Granville. His historical influence has been edited partly in France by W. H. Le Sage, "Les papiers d'état de Granville" (9 vols., 1841-
52. partly in Belgium. "La correspondance du cardinal Granvelle" (12 vols., 4to, 1878-96), the first three volumes by E. Poullet, the remainder by Ch. Piat.

GODEFROID KURTH.

Grappi. See THEODORUS AND THEOPHANES.

Grasse, François-Joseph-Paul, Count and Marques de Grasse-Tilly, lieutenant-general of the naval forces; b. near Toulon, 1723; d. at Paris, 11 January, 1788. His family was one of the oldest of the French nobility. His father, François de Grasse-Rouvill, Marques de Grasse, was a captain in the army. At the age of eleven, François-Joseph entered the naval service of the Knights of Malta (1734), and served during the Turkish and Moorish wars. In 1739 he entered the French navy, and, after serving on several vessels, was, in 1747, captured and taken prisoner to England, where he remained two years. Returning to France, he was made a lieutenant, and placed on the seniour during the Seven Years War, and under D'Acce in the East Indies. Promoted to captain in January, 1762, he received the brevet of Knight of St. Louis in 1764.

The treaty of alliance between France and the United States was signed 6 February, 1778. The first naval engagement after the signing of the treaty took place off Ushant, 27 July, 1778, between the French fleet under Count D'Orvilliers and the English under Admiral Keppel. Count de Grasse was in command of the "Robuste," and was severely engaged during the action, but was undamaged. He was promoted to the rank of rear-admiral, a fleet under Count d'Estaing, who was subsequently succeeded in command by Count de Guichen.

Returning to France, he was promoted to lieutenant-general des armées navales (admiral), and sailed from Brest for the West Indies on 24 March, 1781, with a fleet of 23 ships of the line and a large convoy under his command. He arrived off Martinique, 28 April, 1781, and next day had an engagement with the English fleet under Admiral Hood, which resulted in their withdrawal. In June, 1781, he captured the Island of Tobago, and then proceeded to Cape Français (now Cap Haitien), where he found awaiting him a French frigate bearing dispatches from Washington and Rochambeau, urging his co-operation in the proposed movement, by which it was hoped to strike a decisive blow at the British forces in Virginia. De Grasse acted promptly; the frigate that brought the dispatches was sent back to Newport, Rhode Island, and, by 15 August, Washington and Rochambeau knew of the intended coming of the fleet. Three thousand five hundred soldiers under command of Marques St. Simon were made on board and also a large sum of money, urgently needed by the Americans. On 30 August, 1781, De Grasse anchored in Lynn Haven Bay, just within the Capes of the Chesapeake, with 28 ships of the line. Three days before (27 August, 1781), the French squadron at Newport, consisting of four frigates and a troop of 3,000 men, sailed for the rendezvous, making a wide detour to avoid the English fleet then at New York. Immediately on learning of De Barras' departure, the English fleet under Admirals Graves and Hood sailed for the Chesapeake to intercept De Barras before he could join De Grasse. The English fleet arrived off the Chesapeake, 5 September, 1781. De Grasse got under way, went out to meet them, and, without bringing on a general engagement, managed his fleet so admirably that many of the English ships were very severely damaged. De Grasse kept the English fleet engaged for five days, and then returning found De Barras safely at anchor.

Graves returned to New York, and with him disappeared all hope of relieving or capturing the English forces at Yorktown under Lord Cornwallis. The siege of Yorktown continued, but the control of the sea made only one issue possible, and with the surrender of Lord Cornwallis on 19 October, 1781, the independence of the United States was virtually decided. On receiving the news of the surrender, Congress met on 13 December, 1781, and, on 20 October, 1781, the thanks of Congress were tendered to Washington, to Rochambeau, and to De Grasse. It was also voted to present to Rochambeau and to De Grasse two pieces of the field ordnance taken from the British at the capitulation of Yorktown, to be engraved with a short memorandum. The day after the capitulation Washington wrote to De Grasse: "The surrender of Yorktown, the honour of which belongs to your Excellency, has greatly anticipated (in time) our most sanguine expectations." On 5 November, 1781, De Grasse sailed from the Chesapeake, arrived under Lord Cornwallis on the 26th, January, 1782, he captured the Island of St. Kitts. On 8 April, 1782, the fleet under De Grasse was attacked by Admiral Rodney off Martinique, with no advantage resulting to either. On 12 April, however, the greatest naval battle of the century (known as the Battle of the Saints, from the adjacent islands of Les Saints) was fought. Both fleets engaged in desperate action, which lasted from daylight until after 6 p. m., when De Grasse's flagship, the "Ville de Paris," struck her colours after a brilliant but hopeless defence; the other ships of the fleet, except those captured, scattered and fled for safety.

After the surrender, De Grasse was taken by Rodney to Jamaica, and thence a prisoner to England, where he received a great deal of flattering attention, which he accepted with such complacency as to irritate his countrymen, by whom he was accused of not having maintained the dignity and reserve becoming one who had been vanquished. While a prisoner on parole in London he published a defence of his conduct of the battle, and accused his captains of disobedience, etc., blaming them for his defeat. In 1783, after peace was proclaimed, he returned to France. A court martial was ordered (1784), which entirely exonerated every officer from blame. In June, 1785, De Grasse was identified with the finding of the court, protested against it, and demanded a new trial. The minister of marine, in acknowledging the receipt of his protest, replied in the name of the king: "His Majesty, dissatisfied with your conduct in this respect, forbids you to present yourself before him." Withdrawn with disgust from the court, De Grasse went into retirement, and his public career was closed. Four years afterwards he died, 11 January, 1788.

He was married three times. His surviving children were driven into exile during the Revolution, and reached the United States. His son, Count Alexander de Grasse, Marques de Tilly, was appointed by the United States Government engineer of Georgia and the Carolinas, and a pension of one thousand dollars a year was bestowed on his daughters. Two of the daughters died of yellow fever at Charleston, South Carolina, Co. Militiamen, b. at Mount Vernon, long a resident of New York. She left two sons and five daughters; the daughters married leading merchants of New York.

John Fury.

Grässl, Lorenz, Coadjutor-elect of Baltimore; b. at Riemannsfelden, Bavaria, 18 August, 1753; d. at Philadelphia, U. S. A., October, 1793. He was a novice of the Society of Jesus at the time of its suppression and was subsequently ordained priest. In 1787 he left his native land for the American mission at Father Farmer's invitation, and in March, 1787, he was given charge of the German members of St. Mary's congregation in Philadelphia, and of the Catholics scattered through New Jersey. He spent a year in Philadelphia and a year in Baltimore, that time becoming noted for his learning, zeal, and piety. When it became necessary, owing to the spread of the Faith, to appoint a coadjutor to Bishop Carroll of Baltimore, Father Grässl was chosen for the office and the petition for his appointment was formally made to Rome, 26 September, 1793. The petition was not granted by Pope Pius VI. Grässl thus being the first German-born Catholic appointed to a bishopric in the United States, but before the arrival of the Brief naming him titular Bishop of Samosota (8 Dec., 1793), Grässl had succumbed to yellow fever contracted while attending the victims of the plague which that year ravaged Philadelphia.

Blanche M. Kelly.

Grass, Paris de, master of ceremonies to Julius II and Leo X; b. at Bologna, about 1470; d. at Rome, 10 June, 1528. He was the nephew of Antonio de Grassi and Bishop of Tivoli. Cardinal Achille de Grassi, his brother, one of the confidential diplomats of Julius II, was appointed Archbishop of Bologna by Leo X, and died in 1523. In 1506 Paris de Grassi succeeded the famous Burchard, master of ceremonies to Alexander VI, and continued his function (ed. Thuanus, Paris, 1583–84). The portion of the diary written by de Grassi covers the closing years of Julius II and the pontificate of Leo X, and is a precious reference work for the historian. De Grassi was not a historian, merely a chronicler; with pedantic fidelity he jotted down the minutiae at all the pontifical ceremonies, trivial occurrences at the Court, the consistories and processions, the coming and going of ambassadors, journeys, etc. He had no political prejudices, though he shows that he had but small sympathy for France or for various curial dignitaries. His sole interest was ceremonial and court etiquette. Nevertheless his eye was alert to catch all that went on around him; in consequence we owe him quite a number of anecdotes that throw much light on the characters of the two popes. Moreover, being the almost inseparable companion of both popes on their journeys, e. g. of Julius II during his campaign against the Romans, he supplies us with many details that fill in or set off the narrative of the historian. Ordinarily his work offers more to the historian of Renaissance culture than to the student of ecclesiastico-political conditions. The sixteen manuscript copies of the “Diarium” are not all complete, the more important copies being those of the Royal Library at Vienna. Partial abbreviated editions are owing to Dörniger (Beiträge zur Geschichte der letzten sechs Jahrhunderte, 1882, 363) and to Frati (Bologna, 1886). Delicati (Il diario di Leone X, da P. de Grassi, Rome, 1884) edited a lengthy résumé of the work, with notes by Armellini. Some attribute to him an “Historia Leonis X” (Pott.

Grass Valley. See SACRAMENTO, DIocese OF.

Gratian, Roman Emperor, son of Valentinian I; b. at Sirmium, 359; d. at Lyons, 383. Before he attained his ninth year he received the purple robe and diadem, with the title of Augustus; and on the death of his father (375) he became Emperor of the West. His half-brother, Valentinian II, an infant, was associated with him in the title. He fixed his residence at Trier, and devoted himself to the advancement of the Alamanthe, whom he routed in the great battle of Colmar (378). His colleague in the east, Valens, was, however, defeated and slain by the Goths in the same year at the battle of Adrianople. Gratian, feeling himself unequal to the task of governing the whole realm alone, assigned the eastern provinces to Valens (382). Up to this time he had shown himself to be a wise ruler and a brave and skilful general, but now he began to neglect his duties and to devote himself to hunting and other sports. A rebellion which arose in Britain under Maximus, one of his generals, spread into Gaul. Gratian, who was residing at Paris, retired to Lyons, and was there treacherously slain (25 Aug., 383). Gratian's reign marks a distinct epoch in the transition of the empire from paganism to Christianity. At the time of his accession (375) he refused the insignia of pontifex maximus, which even Constantine and the other Christian emperors had always accepted. At the instance of St. Ambrose, who became his chief adviser, he caused the statue of Victory to be removed from the senate house at Rome (382). In this same year he abolished all the privileges of the pagan pontiffs and the grants for the support of pagan worship. In the year 385, during his absence in Gaul, the pagans struck the Consul Titus Flavius Theodoricus with a poisoned arrow. His skilful policy was one of toleration, he made apastophy a crime punishable by the State (383). It was for Gratian that St. Ambrose wrote his great treatise “De Fide”.

T. B. Scanell.

Gratian, Jerome, spiritual director of St. Teresa and first Provincial of the Discalced Carmelites; b. at Valladolid, 6 June, 1545; d. at Brussels, 21 Sept., 1614. The son of Diego Gracian de Aldorette, secretary to Charles V and Philip II, and of Jane de Antisco, daughter of the Judge of the Royal Court, he received his early education in his native town and at the Jesuit College in Madrid. He afterwards studied philosophy and theology at Alcalá where he took his degrees and was ordained priest in 1569. The position of his family, his talents and virtues would have opened for him the door to the highest dignities, but, having become acquainted with
some Teresian nuns, he took the habit of the Discalced Carmelites at Pastrana, 25 March, 1572, under the name of Jeromé of the Mother of God. Even during his novitiate he was employed in the direction of souls and the administration of the convent, and the immediately after his profession (28 March, 1573), was nominated pro-vice-apostolic of the Calced Carmelites of the Province of Andalusia. This province, which for many years had given trouble, resented the nomination of one who had only just entered the order, and offered a stubborn resistance to his regulations, ecclesiastical faculties, had been confirmed and almost entirely by the Nuncio Homaneto. In virtue of these same faculties Gratian founded a convent of Discalced Carmelites at Seville, of which he became prior, and approved of the establishment of several other convents of friars as well as of nuns.

The chapter of 1575, listening to the complaints of the Andalusians, decided to dissolve the reformed convents, but the nuncio gave Gratian fresh powers, and for a while the reform continued to spread. Homaneto was succeeded by Segúa (June, 1577), who, prejudiced by false rumors, turned against the followers of St. Teresa. Gratian's ecclesiastical censures and remonstrances were rejected by the bishop of Alcalá, and the other leading members of the reform suffered similar punishments, until at length Philip II intervened. The next chapter general (1580) granted the Discalced Carmelites canonical approbation, and Gratian became their superior. Ever since he had first met St. Teresa (1575), he had remained her disciple, to whom, at the command of Our Lord, she made a personal vow of obedience, while Gratian in all his works guided himself by the lights of the saint. In her books and in numerous letters she bears testimony to their agreement in spiritual as well as administrative matters; they were also at one in favouring the active life, the care of souls, and missionary work. After St. Teresa's death a party, calling themselves zelanti, came into prominence, with Nicholas Doria at their head, whose ideal of religious life consisted in a rigid observance of the rule to the exclusion of exterior activity. Although St. John of the Cross and other prominent men were on Gratian's side, the opposite party came into office in 1585, and Gratian was charged with having introduced mitigations and novelties. In order to give effect to his views Doria introduced a new kind of government which concentrated all power, even in details, in the hands of a committee under his own presidency, so that the opposition, greater still that of the nuns, who resented any interference in their affairs. Through the instrumentality of St. John of the Cross and Father Gratian, the nuns obtained from Rome approval of St. Teresa's constitutions, whereupon Doria resolved to exclude the nuns from the order. He also understood that so long as the opposition was being led by Gratian (St. John of the Cross having meanwhile died) the new government could never come into force. On pretext, therefore, that his writings reflected unfavourably on the superiors, Gratian was summoned to Madrid, and, although taken against him having been materially altered by a personal enemy, he—the director and right hand of St. Teresa, the soul of her reform, and for ten years its superior—was expelled from the order on 17 February, 1582. This sentence, based on falsified evidence, was confirmed by the nuncio, the nuncio, by the authorities at Rome, who commanded Gratian to enter some other order.

The Carthusians, Capuchins, and the Dominicans would not receive him, but the Augustinians consented to employ him in the foundation of some reformed convents. The ship, however, which was to carry him from Gaeta to Rome, was taken by pirates and made prisoner. Working among the Christian slaves in the bagnio at Tunis, he strengthened those who were wavering, reconciled apostates at the risk of his life, and liberated many with the alms he succeeded in collecting. After eighteen months' captivity he obtained his freedom and returned to Rome. Clement VIII, to whom on a former occasion he had revealed secrets made known to him in confidence, hearing of his works and sufferings, exclaimed: "This man is a saint", and caused the process of expulsion to be examined and the sentence to be rescinded (6 March, 1596). But, as his return to the Discalced Carmelites would have revived the former dissensions, Gratian was affiliated to the Calced Friars with all the honours and privileges, and took part in the trial of the Reform. He was sent to Ceuta and Tetuan to preach the Jubilee (1600–1605), proceeded afterwards to Valladolid to assist his dying mother, and was finally called to Brussels by his friend and protector, Archduke Albers (1606). There he continued a life of self-abnegation and apostolic zeal. Buried in the chapter-house of the Calced Carmelites at Brussels, his remains were repeatedly transferred, but finally lost during the Revolution.

The list of Gratian's writings in Latin, Spanish, and Italian fills eighteen columns in A. Asín Palacios, Catálogo (Madrid, 1783), 576 sq.; the works printed during his lifetime and immediately after his death have become exceedingly rare. Among them are the last years the Franciscan biography (Peregrinaciones de Anasástio, Burgo, 1605), and his Compendio de la vida y escritos de St. Teresa (Diálogos, 1647), while some other important manuscripts are ready for publication. Besides these sources see St. Teresa, Book of Foundations, nos. 279–302, 323, 326–336, 430, 436, 470, which show the connection of her writings and the annotations by various editors; Biblia et Carmel. I, 645; Gregorii de St. Joseph, Le P. Gratian et ses juges (Rome, 1903); also Homaneto, cited.

B. ZIMMERMAN.

Gratian (Gratianus), Johannes. —The little that is known concerning the author of the "Concordantia discordantiorum canounum", more generally called the "Decretum Gratiiani", is furnished by that work itself, its earliest copies, and its twelfth-century "summes" or abridgments. Gratian was born in Italy, perhaps at Chiusi, in Tuscany. He became a Carmelite monk (some say a Benedictine), and taught at Bologna in the monastery of St. Felix and Nabor. Later, it was said that he was a brother of Peter Lombard, author of the "Liber Sententiarum", and of Peter Comestor, author of the "Historia Scholastica". Medieval scholars united in this way, by a fictitious kinship, the three great contemporaries who seemed as the fathers of canon law, theology, and Biblical history. It is no less false to assert that he was a bishop. Nor is it certain at what time he compiled the "Decretum". It did not exist previous to 1139; it contains 1259 chapters of the Sentences, and was held in that year. A common opinion places its completion in 1151. Recent research, however, points to 1140, or to a date nearer thereto than to 1151. The "Decretum" was certainly known to Peter Lombard, for he makes use of it in his "Liber Sententiarum". Gratian died before the Third Lateran Council (1179), some say as early as 1160. It is not certain that he died at Bologna, though in that city a monument was erected to him in the church of St. Petronius. He is the true founder of the science of canon law. See Corpus Juris Canonici; Decretals, Papal.

A. VAN HOEY.

Gratianopolis, a titular see in Cessareas Mauratania, Africa. This city does not figure in the list of the bishoprics of the province preserved in a document of the sixth and seventh centuries, unless it be
Gratian (van Graafl, Oehtwin, humanist; b. 1475 at Holtwick, near Coesfeld, Westphalia; d. at Cologne, 22 May, 1542). He belonged to an impoverished noble family, and was accordingly received in the house of his uncle Johannes van Graafl at Deventer (wherefore he generally called himself Daventrensis), and was raised with the love and care of his wife. He received his first scientific instruction from the renowned Alexander Hegius. In 1501 he went to the University of Cologne to pursue his philosophical studies. As a member of the Kuyk Burse he became licentiate in 1505, magister in 1506, and professor artium in 1507. His salary as professor being insufficient, he accepted the position of skilled adviser and corrector in the world-famous Quintell printing establishment, where many classical authors of the Middle Ages were published under his direction. These, according to usage, he provided with introductions and rhymed dedications. As a disciple of Hegius he naturally took part in the factionalism and a devoted adherent of Peter of Ravenna; he also enjoyed the friendship of the most prominent scientific minds of his time. But things soon changed. He was attacked bitterly by the younger intellectual element, especially their leader, Hermann von dem Busche, on account of his taking the part of the Cologne University theologians and the Dominicans on the occasion of the Reuchlin controversy, as well as on account of his Latin translations of various writings of the Jewish convert, Pfefferkorn. Gratian had at that time just finished a literary tournament with von dem Busche, and had been the laughing-stock of the literary world by the venomous "Epistola obscurorum virorum", his adversaries succeeding in vilifying him from both the moral and scientific standpoint, denouncing him as a drunkard and guilty of other vices, and as an incompetent Latin and Greek scholar. This procedure was effective from the fact that he ignored attacks, and did not defend himself from the beginning. He only attacked his offenders when Leo X excommunicated the author, readers, and disseminators of the "Epistola" (1517). His defence, entitled "Lamentationes obscurorum virorum", was very weak and missed its mark, so that the portrayal of his character remained distored up to modern times and it is only of late that due credit is given. In 1520 he was ordained to the priesthood and devoted himself thenceforth entirely to literary work. The magnus opus of his literary activity is: "Fasciculus rerum expetendarum ac fugiendarum" (Cologne, 1535), a collection of sixty-six more or less weighty treatises of various authors on ecclesiastical and profane history, dogma and canon law, compiled to expose the noxious elements in the Church's organisation, and prepare a way for a future council to remedy them. It has been wrongly claimed that this work, put on the index on account of its anticlerical tendency, was not from the pen of Gratius.

Gratry, Auguste-Joseph-Alphonse, French priest and writer; b. at Lille, 30 March, 1803; d. at Montreux, Switzerland, 7 February, 1872. After brilliantly finishing his classical studies, he entered the polytechnic school at Paris. At the end of his course, (1828), he went to Strasburg, spent some months at the convent of Bischenberg, and decided to become a priest. He was ordained at Strasbourg on 22 December, 1832, and remained there for several years with Bautain. In 1841, Gratry became director of the Collège Stanislas in Paris, but, in 1846, accepted the position of chaplain of the "Ecole normale supérieure". It was then that he published his first work: "Demandes et réponses sur les devoirs sociaux". When Vacherot, director of studies at the Ecole normale, published the third volume of his "Histoire de l'Ecole d'Alexandrie", a polemic took place between him and Gratry; Vacherot was obliged to leave the school, and Gratry himself resigned his charge one year later (1851). After a year spent at Orléans as vicar-general of Bishop Dupanloup, Gratry united his purpose with Abbé Pélissot, in Paris, for the restoration in France of the Oratory under the name of Oratoire de l'Immaculée Conception. In 1863, Gratry was appointed professor of moral theology in the faculty of theology of Paris; and in 1867 he was elected a member of the French Academy, succeeding Barante. In the "fauteuil" occupied by Voltaire. At the time of the Council of the Vatican (1870), he declared himself against the papal infallibility in several letters, edited under the title: "Monseigneur d'Evêque d'Orléans et Monseigneur l'Archevêque de Malines". These were condemned by the Bishop of Strasbourg, and Gratry, who had already lived for almost ten years outside of his community and had been publicly reproved by his superior in 1869 for his participation in a certain association, formed under the name of the International League for Peace, had to sever his connexion with the Oratory. After the proclamation of papal infallibility, Gratry gave his full and sincere adhesion to the dogma, and, when Archbishop Guibert had taken possession of the See of Paris in December, 1870, he wrote him a character a public letter wherein he retracted all that he had written against the infallibility of the pope. He was then suffering from an abscess on the neck; he went to Montreux, near the Lake of Geneva, and died there in 1872. Among the chief works of Gratry, besides those already named are: "Une Etude sur la sophistique contemporaine, ou Lettre à M. Vacherot" (Paris, 1851); "De la Connaissance de Dieu" (2 vols., Paris, 1853); "Logique" (2 vols., Paris, 1855); "De la Connaissance de l'âme" (2 vols., Paris, 1858); "La Philosophie du Credo" (1861); "Les Sources" (1862); "Commentaire sur l'Evangile de Saint Matthieu" (2 vols., 1863); "Les Sophistes et la Critique" (Paris, 1864); "Henri Pereyve" (Paris, 1866); "La Morale et la Loi de l'Histoire" (2 vols., Paris, 1868); "Les Sources de la Régénération sociale" (a reprint with some changes of his first work); "Soubrements de ma Jeunesse" (1874); "Meditations inédites" (1874).

Gratry exercised a great influence during his life by his personality — distinguished for greatness of thought, generosity of heart, and optimistic enthusiasm — and, after his death, by his works. In the last twenty years his books have been frequently reprinted. Among those who came under his influence, we may mention especially, Charles and Adolphe (later Car.
Gratz, Peter Aloys, schoolmaster and exegete, b. 17 Aug., 1769, at Mittelberg, Allgäu, Bavaria; d. at Darmstadt, 1 Nov., 1849; received his elementary training in the monastic school at Füssen, studied classics in Augsburg, and in 1788 entered the clerical seminary at Dillingen, to take up the study of philosophy and theology. His student years were characterized by deep piety and an intense love of study. After his ordination to the priesthood, in 1792, he held the office of private tutor, and in 1796 was placed in charge of the church of Unterstahlheim, near Honau, on the Rhine. In spite of his manifold parochial duties he found time to prepare several textbooks and other small works on Christian instruction, for use in elementary schools. Besides, being of a literary turn of mind and urged, no doubt, by the spirit of the age, he at the same time turned his attention to other occupations, choosing for his special field of labour New Testament exegesis. In 1812 he published "Neuer Versuch, die Entstehung der drei ersten Evangelien zu erklären" (Stuttgart, 1812), in which he adopted the hypothesis of a Hebrew original as the basis of one of the synoptic Gospels. The learning and critical skill exhibited in this work attracted the attention of scholars, and won for him on 28 September of the same year the chairs of Greek language and Biblical hermeneutics in the University of Ellwangen. Recognizing his abilities and future usefulness, the University of Freiburg, in 1813, conferred on him the doctorate in theology.

During his professoriate in Ellwangen he published: (1) "Kritische Untersuchungen über Justins apostolische Denkwürdigkeiten" (Stuttgart, 1814); (2) "Ueber die Interpolationen in dem Briefe des Apostels Paulus an die Römer" (Ellwangen, 1814); (3) "Ueber die Gerechtigkeit der Freibier, die ehemaligen Katholiken in der Erklärung der Schrift nüsst man" (Ellwangen, 1817); (4) "Dissertatio in Pastorem Hermá", in "Constanzer Archiv", 1817, II, 224 sqq. On the amalgamation of the University of Ellwangen with that of Tübingen, in 1817, he accompanied the theological faculty thither, and continued his lectures on hermeneutics. Here he published his "Kritische Untersuchungen über Martin Luthers Evangelien" (1818), and was, in cooperation of his friends Drey, Herbst, and Hirscher, founded in 1819 the Tübingen "Theologische Quartalschrift", a publication which from its inception has enjoyed an uninterrupted existence.

The same year he received an invitation to the chair of Sacred Scripture in the newly created faculty of theology in the University of Bonn. His reputation attended him here, and he lectured with great success. This, however, was of short duration. The university, though now free from the Rationalism and Febronianism which characterized the first period of its existence, was gradually undergoing the influence of a new movement known as Hermeneuticism, the originator of which was Georg Hermes, professor of theology and an intimate friend of Gratz. The high reputation of Hermes, the popular character of his lectures, as well as the fact that they were devoted to the examination of the philosophical systems of Kant and Fichte, inclined him to retire with the latter and to become his friend and associate himself with the new movement. The step was a fatal one. He regretted it deeply and desired to abandon his position in the university. All efforts to this effect failed, however, and at the instance of his more trustworthy friends he continued to lecture at Bonn till 1822. He remained a member of its theological faculty till 1826, and in 1828 was called to Trier, there to become a member of the municipal council and also of the school board. His success in this new field of activity was remarkable. He devoted all his time and energy to the reorganization of the studies, and in placing the school on a higher and more economical ground than they had hitherto endured. While in Bonn he published: (1) "Apologet des Katholizismus, Zeitschrift für Freunde der Wahrheit und der Bruderliebe" (Mainz, 1820–24, 9 fasc.); (2) "Novum Testamentum graeco-latini" (Tübingen, 1820; Mainz, 1827); and (3) "Kritischer Commentar über das Evangelium des Matthäus" (Tübingen, 1821–23). This commentary, owing to the extensive use the author made of Protestant works, was severely attacked by Binterim and Görres. Gratz replied in the sixth fascicle of his "Apologeten", while his friends published in his defence "Drei öffentliche Stimmen gegen die Angrijfe des Pastors Binterims und des Professors Gratz, nebst drei Beilagen" (Bonn, 1825). He also undertook the continuation of the "Thesaurus juris ecclesiasticus" of Aug. Schmidt, S.J., which, however, remained unfinished.

Joseph Schroeder.
1700 he returned to the Illinois mission. In 1705 the ungrateful Peorias attacked and cruelly wounded the missionary. An arrow-head imbedded in his arm could never be extracted even by surgeons in Paris. In 1708 Gravier returned to Louisiana, where he died of his wound that same year.

LIONEL LINDSAY.

Gravin, DOMINIC, theologian; b. in Sicily, about 1573; d. in the Minerva, at Rome, 26 Aug., 1643. He entered the Dominican Order at Naples, and made his classical and sacred studies in the order's schools. As professor of theology in the Dominican college of St. Dominico in Naples, and later (1638) in the schools of his order, he became the most celebrated theologian of his time in Italy. He was made master of sacred theology by a general chapter of the order held at Rome in 1608, and then became dean of the faculty of the theological college of Naples. In the pulpit also he gained great renown, and was frequently called upon to conduct Lenten courses and to preach before Pope Paul V. He displayed, moreover, a tireless activity in the administrative offices of prior and provincial in his own province, and of procurator general and vicar-general of the entire order. During his time, the duties of these two offices, to the latter of which he was raised by Pope Urban VIII, who had caused the general to be removed, he was also Master of the Sacred Palace. Of his many writings on theological subjects, chiefly of an apologetic character, a large number have never been published. Of the published works the most important are: "Catholicae praescriptiones adversus omnes haereticos" (7 vols., Naples, 1619-39); "Pro sacro ordine sacramento vindicium orthodoxorum" (Naples, 1634; Cologne, 1638); "Apologeticus adversus novatorum calumnias" (Naples, 1629; Cologne, 1638); "Lapis Lydia ad discernendas vera et falsa revelationibus" (2 vols., Naples, 1638), a mystical writing.

ARTHUR L. McMahan.

Gravina, Giovanni Vincenzo, Italian jurist and titolare of the seventeenth and eighteenth centuries; b. at Rogliano, Calabria, 21 January, 1664; d. at Rome, 6 January, 1718. At the age of sixteen years he went to Naples to study Law at the Greek, but the following year he was expelled. He went to Rome in 1689, where he taught civil and canon law. He had just been called to an important chair of law at the University of Turin when he was attacked by the illness of which he died. The jurist studied to which he devoted himself with more ardour than taste did not cause him to forget poetry. In 1690 he was co-founder, under the name of Opico Erimanto, of the "Academia degli Arcadi" of Rome, specially devoted to poetry. Later he quarrelled with the members of this academy, and tried unsuccessfully to establish an "Anti-Arcadia". The freedom with which he spoke of those who were entertained of himself, and the scorn he exhibited for many literary persons, made him many enemies. But he had the merit of having been the patron of the poet Metastasio. His work on canon law: "Institutiones canonice" (Turin, 1732, 1742, etc.; ed., Rome, 1832) is a clear, but very elementary handbook. His chief work on civil law is "Origo juris civilis libri tres" (Naples, 1701, 1713; Venice, 1730). This was translated into French under the title "Esprit des lois romaines" (Paris, 1775). Another work is "De imperio Romanorum libri singularis", published in the editions of his "Origo juris civilis" from 1770 on, and preserving in its modern working form the desiderations of mention: "Delle antiche favole" (Rome, 1696); "Della Ragione Poetica libri due" (Rome, 1709; Naples, 1718); "Tra-

gedie cinque" (Naples, 1712); "Orationes et Opuscula" (Naples, 1715; Utrecht, 1717); "Della tragedia libro uno" (Naples, 1715).

A. VAN HOVE.

Gravina and Montepeloso, Diocese of (Gravinensis et Montis Pelusii)—Gravina is a town in the Province of Bari (Southern Italy) on a river of the same name, since the ninth century an episcopal see, suffragan of Acerra and Matera. In 1818 it was united to the diocese of Acerra, now called Montepeloso. It dates back to the twelfth century (some say the fourteenth) and was suffragan of Potenza. Montepeloso is situated on a hill in the Province of Potenza. In 1975 it was defended against the Saracens; in 999 Gregorio Tracomonte, a native of Bari, defeated there the Byzantines. The cathedral of Gravina treasures in a splendid reliquary an arm of St. Thomas of Becket obtained by Bishop Roberto in 1179. The first known Bishop of Gravina is Leo; other bishops of note are: Samaude (1215), who built at his own expense the church of the Madonna di Altamura, afterwards an archbishop of Benevento; G. a. ex. e. R. di Ercolano; Francesco Martino (1303), a Genoese nobleman, who founded the seminary, the church of the Madonna della Grazie, and the Capuchin convent; Domenico Cennini (1455), who built the episcopal residence; Fra Domenico Valvassori (1866), a patron of learning and founder of an "academia teologiae". The united dioceses, directly subject to the Holy See, contain 9 parishes and 28,000 souls, 7 convents for women, and 2 girls' schools.

U. BENIGNI.

Gras, UNIVERSITY OF, located in the capital of the Province of Steiermark, owes its establishment to the Count-Reformation and the efforts of Archduke Karl von Steiermark, who, in 1584, requested Pope Gregory XIII to grant autonomous university privileges to the city of Graz, which had been founded in 1326 and was already possessed of a theological and philosophical school. The documents of the archducal foundation and of papal recognition are dated 1 January, 1585. The latter, however, was not made public until 15 April, 1586, the occasion being the dedication exercises of the institution as a university, and it bore the signature of the new pope, Sixtus V. The letter of recognition of Emperor Rudolf II followed soon after. The archduke endowed the seat of learning with a yearly income and set aside for its benefit a certain proportion of the products yielded by Government lands. The papal Bull directed the Jesuits in charge to give public instruction in theology, philosophy, the liberal arts, as was customary in other advanced schools of a similar character. The first scholastic year of the university began in 1586.

Subsequent to the Count-Reformation, Archduke Ferdinand signed on behalf of the institution which his father had created a second document of foundation, in which he confirmed its purpose as set forth in the original decree, declaring it to be "the service of the Holy Roman Catholic Religion", and placed it on a solid material basis. He enriched it with new buildings, and provided for the ecclesiastical supremacy of Mühlstatt, in Carinthia, and of other estates of the Crown, including the right of independent jurisdiction and exemption from the
payment of duties and taxes. He obtained from Pope Clement VIII a confirmation of the Mühlstätt guild, on which the college of Graz had been given diocesan rights over the whole of that principality. He founded a bursa for poor students, which was called the Ferdinandeum. Another and similar foundation was the Josephinium, which was raised by private subscriptions (1743–49). It was not long before the cathedral chapter of Salzburg claimed for itself diocesan powers in the district of Mühlstatt; but a settlement was reached at a trial held in 1659, whereby on the one hand the ordinarie powers and independent jurisdiction of the college of Graz were recognized, while on the other certain concessions were made to the Diocese of Graz. Proceedings with the Kärnten authorities regarding the exemption of the Mühlstatt district from property taxes, which proceedings lasted more than one hundred years, resulted in a defeat for the Jesuit Order in 1755. This institution of Graz was the Jesuits' centre of activity in their labours for the reclaiming of Steiermark to Catholicity. Here was prepared all the material necessary for such a mission, here Catholic influence found a new source of strength in the founding of academic sodalities of Mary and other societies of like import. Its school festivals were celebrated with drama, oratory as well as profane oratorio, and with farces and comedies in Latin and German, which were produced in the college theatre. The chief aim of these plays was to awaken sentiments of faith and patriotism, and they formed a notable addition to the dramatic literature of the day.

As early as the year 1803, Georg Stobäus von Palmburg, Bishop of Lavant, advocated the further broadening of the University of Graz by the addition to its staff of a faculty of jurisprudence. But though negotiations were undertaken to this end between the institution and the Government, the former's insistence on this faculty should remain unimpaired caused these negotiations to be suspended until the dissolution of the Jesuit Order. After the establishment, in Graz, of private courses in jurisprudence outside of the university, and the execution of a reform in theological and philosophical studies by the appointment of State Directors of Studies and the altering of examination methods, the university was placed in 1760 under the supervision of a State Commission of Studies designated for this purpose, and therefore lost almost entirely its monastic character of the Josephine period. The year 1773 proved to be, owing to the reception of the Jesuits in the last school year, the last year of the Jesuit college at Graz. The university became a State institution, its material possessions were seized upon for the public treasury, and its course of instruction was remodelled to conform with that laid down by the newly-established imperial Commission of Studies for the University of Vienna. The winter of 1778 saw the inauguration of a faculty of jurisprudence which consisted of two professors, while higher instruction in medicine was likewise introduced, which received gradual development. At the end of 1782 Joseph II issued a decree converting the university into a lyceum with four faculties and the right to award degrees in theology and philosophy. The number of instructors was restricted to twelve. But the Lyceum of Graz recovered in the summer of 1827 its former rank and name as a university, through a grant of the Emperor Francis. Its faculty of philosophy grew steadily, and a duly organized faculty of medicine was established by an imperial decree of 1863. The Alma Mater Graecensia has since then occupied the third place among the institutions of learning in German-speaking Austria. The technical high school which had been founded in 1814 was taken over by the State in 1874.

Karl Hoeber, "Geschichte der Karl-Franzens-Universität in Graz" (1896).

Great Falls, Diocese of (Great-Fellsmen), created by Pope Pius X, 18 May, 1904, comprises the following counties in the State of Montana: Carbon, Cascade, Chouteau, Custer, Dawson, Fergus, Park, Rosebud, Sweet Grass, Valley, and Yellowstone. It is in the eastern part of the State of Montana, U. S. A. Total area is 361,418 square miles.

The titular city, Great Falls, is most appropriately named, as the Missouri River at this point falls 533 feet in a series of cascades, giving an equivalent of 340,000 h. p., and thus ranking next to Niagara, both in scenic beauty and mechanical value. This cheap power is utilized by large manufacturing plants—four mills, plaster mills, iron works, smelting and reduction works, etc. The annual output of one smelter alone is over 100,000,- 000 pounds of copper, with large quantities of gold, silver, and lead as by-products. Over 5,000,000 acres of rich farmland are tributary to the city; 1,000,000 acres being irrigated by the U. S. Reclamation Service and private enterprises.

The region adjacent to the city is also rich in minerals—copper, sapphires, gold, silver, lead, iron, gypsum, limestone, as well as bituminous coal (the output of this last for 1907 being 1,240,000 tons). Besides its importance as a manufacturing centre, Great Falls ranks next to Butte as the most populous city in Montana, and is generally regarded as pre-eminently the home city of the Rocky Mountain region.

In the year 1850 Father De Smet, S. J., and his companions were the first missionaries to celebrate the Holy Sacrifice of the Mass in the territory controlled by the Diocese of Great Falls. This notable event took place at Fort Benton, the head of navigation of the Missouri River, 2600 miles from its mouth, at its junction with the Mississippi. The Jesuit Fathers established missions to the Indians in Montana as early as 1841, and most of these missions are still in a flourishing condition. At St. Peter's Mission, which is now the mother-house of the Ursuline Order of Montana, 2732 baptisms of Indians were recorded in the Baptismal Register from 1855 to 1879. The early missionaries made many converts among the different tribes of Indians, and established among the white settlers a healthy Catholic influence the effects of which are still noticeable. The non-Catholics are respectful, and most generous in contributing towards the erection of churches and charitable institutions.

The Catholics are well represented in different sections of the city, in the social and commercial, as well as in the life of the community. The Very Rev. Mathias Clement Lenihan, vicar forane and missionary rector, of Marshalltown, Iowa, was appointed first Bishop of Great Falls, 20 May, and consecrated 21 September, 1904, at St. Raphael's Cathedral, Dubuque, Iowa. He was born 6 October, 1854, at Dubuque, Iowa, U. S. A., was educated at St. Joseph's College, Dubuque, where he

St. Ann's Cathedral, Great Falls, Montana
was a charter student and at St. John’s College, Prairie du Chien, Wisconsin, conducted by the Brothers of the Christian Schools, and made his theological studies at Sees Seminary, Montreal, Canada, where he was ordained priest 21 December, 1879. Bishop Lenihan was the first native of the State of Iowa to be raised to the priesthood. His first appointment was at Vail; his second, at Marshalltown, where he built, besides a school and church, the St. Thomas Hospital in memory of his brother, the late Rev. Thomas M. Lenihan, D.D., Bishop of Cheyenne, Wyoming. Immediately after his installation Bishop Lenihan devoted his energies to temperance reform, to the installation of a parochial school system, and to the erection of a cathedral. The fine cut-stone edifice which now serves as the cathedral of St. Thomas, was completed and dedicated, 15 December, 1907, to St. Anne, the mother of the Blessed Virgin. Two more churches are now building at Great Falls, as well as a large orphans’ home that will be conducted by the Sisters of Charity of Providence, who also have charge of Columbus Hospital and Maternity Home. The diocese is in a prosperous condition, both spiritually and materially. New parishes are being created and new churches are being erected in nearly every city.

Statistics.—At the creation of the diocese (1904) the Catholic population was 10,000; the number of the churches, 12 (12 diocesan, 8 regular). At present (1909) there is a Catholic population of 15,052; the number of clergy has doubled (24 diocesan, 8 regular); there are 45 churches, 44 stations, 9 chapels; 12 ecclesiastical students; 8 brothers; 98 religious women; 5 academies for young ladies (400 pupils); 5 parochial schools (630 pupils); 4 Indian schools (420 pupils); 4 hospitals (2,726 patients annually). The religious communities in the diocese include: Jesuit Fathers, four charges; Brothers of the Christian Schools (Province of Quebec); Sisters of Charity of Providence (Montreal, Canada), three charges; Sisters of Charity, Levant, Canada; Sisters of the Holy Humility of Mary (Ottumwa, Iowa); Daughters of Jesus; Ursuline Nuns, five charges.

JOSEPH MEDIN.

Greece will be treated in this article under the following heads: I. The Land and the People; II. The Church in Greece before the Schism; III. The Orthodox Church in Greece; IV. Constitution of the Church of Greece; V. The Catholic Church in Greece; VI. Protestants and Other Sects; VII. The Church in Eastern Asia Minor.

I. THE LAND AND THE PEOPLE.—The Greeks are a people who appear first in history as separated in various small States, but bound together by a common language, religion and civilization, in the south of the Balkan Peninsula, the islands around, and the coast of Asia Minor opposite. For about three centuries these States attained a perfection in every form of civilization that gives them the first place in the history of Europe. Then the Greek idea—Hellenism—spread over Asia, Egypt, and westward to Italy. The original race gradually sinks in importance; the States have disappeared. But the power of the Greek language, Greek learning, Greek art never exhausted; the magic of the old memories still works in every age; while political changes cause the rise and fall of other governments, Hellenism never ceases from its conquests. The great Roman Empire, having become too unwieldy, is divided, and Greece gradually swells, half for nearly ten centuries again Greece reigns from Constantinople. The flood of Islam sweeps over the lands she had moulded; instead of destroying her, this brings her to fresh conquests across the distant West. Last of all, chiefly because of the magic of her name, the land where Helenism was born has succeeded in shaking off the tyrant and we have again a free Greece. But Hellas means more than this small country. It is the mighty force, undying,就是要回答的问题。Hellenism has evolved its own ideals, and, unbroken in its continuity for nearly thirty centuries, has moulded to its own likeness nearly every race it met. The barbarous tribes of Asia, Arabs, Egyptians and Slavs, Phoenicians and Italians, Wallachians and even some branches of the great Turkish race—this ideal in turn, learned to talk Greek and to call themselves Hellenes. And at the knees of this mother all Europe has stood.

It is not the object of this article to tell again the long story of Greece. One or two salient points only will clear the ground for an account of Christianity among this people.

First of all, what is Greece?—The question may easily be answered now. The Conference of London, in 1831, and the Treaty of 1897 have arranged the frontier of the modern kingdom. In the past it is less easy to answer. Greece was not united as one State even in classical times; Alexander’s empire included all manner of nations; under Rome the scattered Greeks gradually learned to call themselves Romans. The only answer that can be given for any period is, that at any given time and in any given locality, any city where the people in the great majority spoke Greek, were conscious of being Greeks, was at that time at any rate a part of Hellas: Syracuse and Haliarnassos as much as Athens and Corinth. This only removes the question one step, since one now asks: What is a Greek? To demand evidence of pure descent from one of the original Dorian, Ionian, or Æolian tribes would be hopeless. It has been the special mission of Hellas to impose her language and ideals, even the consciousness of being a Greek, on other races. Of the enormous number of people since Alexander who spoke Greek and called themselves Greeks the great majority were children of Hellenised barbarians. Moreover districts were inhabited by mixed populations. The great towns—Antioch and Alexandria, for instance—were more or less completely Hellenised, while the peasants around kept the original language.

One must use the names Greek and Greece as comparative ones. Where a certain degree of Greek consciousness (shown most obviously in the use of the language) prevails, there we may call the people Greeks, more or less according to the measure of their absorption by Grecians. The objects covered by the term included in the modern kingdom and the islands, with colonies around the coast of Asia Minor, Sicily, Southern Italy, Northern Egypt, even Southern Gaul. Alexander (336–23 b. c.) upset these limits altogether. Himself a Hellenised Macedonian, descended from people whom the old Greeks certainly considered barbarians (though the Macedonians seem to have been akin to the Æolians), his empire spread the Greek ideal and language throughout Asia and Egypt. When Rome conquered Greece (146 b. c.) there was no longer any question of a Greek political nation. But the race goes on, and the language never dies. Constantine (A. D. 324–337) meant his new city to be Roman. But here, too, Hellenas gradually absorbed her conquerors. At least from the time of Justinian I (527–65) the Eastern Empire, in spite of its Roman name, must be counted a Greek State. The Byzantine period (roughly from 527 to 1453) is the direct continuation of the older Greek civilization. It is true that Byzantine civilization was influenced from other sides (from Rome and Asia Minor, for instance); but this would apply to the old Greek ideals too, on which Egypt, Persia, and Asia had their influence; it is the normal process of the
development of any civilisation to absorb foreign influences gradually, without breaking its own continuity. Only, in this period the centre of gravity has moved from Athens to Constantinople, and the characteristic of the Turkish conquest that it neither destroyed nor absorbed the races subject to the sultan. The difference of religion, involving in this case an entirely different kind of life and different ideals in everything, prevented absorption; and the subject Christians were too valuable to allow as tax-payers to be wiped out by the Arabs. So, after 1453, except for the loss of independence and the persecution in a more or less acute form that they suffered, the older European races in the Balkans went on as before. No doubt numbers of Greeks did apostatize, learn to speak Turkish and help to build up that artificial con- formity of the Turks and the Phanariot, but the enormous majority kept their faith in spite of grievous disabilities. They kept their language, too, and their consciousness of being Greeks. They never called themselves Turks (a word that in the Balkans is still commonly used for Moslem), nor thought of themselves as part of the Turkish State. They were Greeks (which is what their name Πρωταίοι really meant), their land was Greek still, though unhappily held by a foreign tyrant, for whose removal they never ceased to pray.

The real danger to the ideal of Greater Greece came, of course, the Balkans was not, is not now, the Turk, who remains always only an unpleasant incident in the history of these lands; it is the presence of other Christian races, Slavs, who dispute the Greek ideal with their languages and national feeling. Were it not for these Slavs we could count Greece as having absorbed Macedonia and Thrace by the time of Alexander, and as being nearly all the Balkans to the Danube ever since. But the Bulgars, the Serbs, the Wallachians—and Albanian too—are there with their languages and nations to oppose the "Great Idea" of which every Greek dreams. So we must still count Greece as a scattered and relative element among others. Under the Turk Constantinople was still the centre of this element. The oecumenical patriarch took the place of the emperor, his court, the Phanar, was the heart of Hellenism, where the purest Greek was spoken, the memory of the old Greek States most alive.

In the beginning of the nineteenth century the idea of Greece as a country, the other idea of Greece was the "phalanstereion", the Kephalaia and Aperiones, had kept up a ceaseless, if hopeless, rebellion against the pashas and kaimakams. In 1814 the "Hetairia Philike" was founded at Odessa, to work for the freedom of Asia Minor, in Constantinople and Salonica as much as in Attica and the Peloponnesus. The treaty that finally gave freedom only to the lower part of the peninsula was a bitter disappointment to thousands of Greeks still subject to the Turk. No doubt a more generous concession was impossible; but one must remember that the modern Kingdom of Greece is only a fraction of what has an equal right to the name of Hellas. The merchants of Smyrna and Salonica, the Phanariots of Constantinople, the peasants of Crete, and even of distant Cyprus, hang out the blue and white flag on feast days, talk Greek to their wives, and are justly jealous of any suggestions of other Greeks of Athens. Outside of "free Greece" (ἡ Δυνατὰ Ἐλλάδα), "captive Greece" (ἡ αγυμμάκεια Ἐλλάδα) waits and hopes. Of this scattered fatherland, considered as one country, whether now free or still capt-

ive, the real centre is still the Phanar at Constantinople. It is here, even more than at Athens, that the "Great Idea" of a Greece that shall cover the Balkans is cherished; and it was a time in the national spirit of the Phanariot, that the eyes of all Greeks are turned. King George, with his Danish family, takes his stipend and enjoys such slight authority as his turbulent Parliament allows him, but the head of the nation, as a Greek told Dr. Geiser in 1888, is not the king at Athens, but the ecumenical patriarch at Constantinople (Geiser, "Geistliches und Weltliches aus dem türk.-griech. Orient", Leipzig, 1900. See Fortescue, "The Orthodox Eastern Church", 240-244, 273-283.)

Something must be said about the name. The land and the people that we call Greece and Greeks are in their own language Hellas and Hellenes. "Greece" is a corruption of the Latin Hellenes and the Greek modifications (grieche, grece, grec, etc.) is used in all Western languages. Grecus is Γρακός, an older name for the people. Πρωταίοι was a mythical son of Thessalos. Or, since this should rather be understood as derived inversely (the person as an eponymous myth from the race), various other derivations have been proposed. Γρακός (a form Πρωταίοι also exists) is said to have meant originally "shaggy-haired", or "freeman", or "dweller in a valley" (W. Pape, "Wörterbuch der griechischen Eigennamen", 3rd ed., Brunswick, 1870, s. v. Πρωταίος). The first people so called were the inhabitants of Dodona in Epirus. After the common use of the other name, Helene, this one still survived. It occurs occasionally in classical writers; after Alexander it became common, especially among Greeks abroad (in Alexandria, etc.). From them it was adopted into Latin. But in Greek, too, it lasts through the Middle Ages as an alternative name for the Hellenes of classical times (Stephen of Byzantium, about A.D. 400: Πρωταίος, ἐ Ελλάς, quoted by Sophocles in "Greek Lexicon of the Roman and Byzantine Periods", New York, 1893, s. v. Πρωταίος). Latinists and other foreigners, as well as Greeks writing to such people, use it not seldom for any Greek, as "Grecus" in Latin.

The other names: Hellas (Ἑλλάς) and Hellenes (Ἑλλανες) are the classical ones. Hellas was a city of Pthiotis in Thessaly. From there the name Helene spread throughout Thessaly. Herodotus distinguishes in Thessaly the chief people, the "older Pe- roponnesians", the other Hellene. A modern telos of the Hellenes invaded that land under Dorus, son of Hel- len—another eponymous mythical hero (I, vi, cf. iviii). The elder Platys applies the name further: "From the neck of the Isthmus [going north] Hellas begins, which is called by our people Greca" ("Ab Isthis inter Hellenes ehoei, quos tiena "Greca" in ea prima Attice, antiquitus Acte vocata"—Nat. Hist., IV, vii). Long before the New Testament the names were used by every one in our sense of Greece and Greek. So in I Mach., viii, 9 and 18. Ελλάς occurs once (Acts, xx, 2), Ελλάνες many times (e. g., Rom., x, 12), in the New Testament. In the per- nomations of the Roman Empire neither Greca nor Hellen appears. The Peloponnesus and the land up to Thess- ally formed the Province of Achaea, then came Thess- salia and Epirus, then Macedonia and Thrace. But popular use kept the older name (e. g., Pausanias, VII, xvi); a Greek still called himself Ελλανες. As Christianity spread Helene began to suggest pagons—a worshipper of the Hellenic gods. Eventually this evil flavour absorbed the word altogether. In the Greek Fathers it always means simply "a heathen". St. Athanasius wrote a treatise against the heathen who called it "Ελλάς, not Ελλάνες; so all the others. Julian, in his hopeless attempt to revive the old gods, always uses it in this sense and makes the most of its honourable sound. But Christianity was stronger than the memory of Hellas, so from this time the name falls into discredit till quite modern times.
All through the Middle Ages Greeks called themselves 'Ῥωμαίοι,' meaning citizens of the Roman Empire brought by Constantine to his new capital. This strange adaptation of their conquerors' name lasted till the nineteenth century. Even now peasants call themselves 'Ῥωμαίοι,' and (except in towns and among schoolmasters) the Greek for "Do you speak Greek?" is Παλαιώνες; it was during the great revival of national feeling at the beginning of the nineteenth century that the classical name began to be used again, almost as a war-cry, by the people whose imagination was full of Pericles and Socrates. When the Morea, the islands, and part of the mainland succeeded in throwing off the Turk, the first provisional independent government naturally called its territory neither after the Turkish vilayets nor Roman province, but went back to the glorious name Hellas. And when things were settled by the London Conference, in 1832, the new kingdom was the Βασιλεία τῆς Ἑλλάδος, and Otto of Bavaria became (title unknown to history) Δῆμος τῶν Ἑλλήνων.

II. The Church in Greece Before the Schism (52-1054).—Greece possesses by the most undisputed right an Apostolic Church. St. Paul, in his second missionary journey (52-53, with Silas and Timothy), when he was at Troas in Asia Minor, saw the vision ("I pass over into Macedonia, and help us"); Acts, xvi, 9) that brought him for the first time to Europe. At Philippi in Macedonia he founded the first Christian Church on European soil (ibid., 12 sq.). Thence he came to Thessalonica (xvii, 1), Berea (xvii, 10), and, travelling southwards, to Athens (xviii, 15). Here he preached about "the unknown God" on the Areopagus (xvii, 22-31), and went on to Corinth (xviii, 1). At Corinth he was brought before Gallio, "proconsul of Achaia" (xviii, 12); from Cenchrea, the port of Corinth, he sailed back to Ephesus with Priscilla and Aquila (xviii, 18). In the third journey (54-58) he came again to Macedonia (about the year 57—Acts, xx, 1), thence "to Greece" (ἐν τῇ Ἑλλάδι, xx, 2), and stayed three months at Corinth (xx, 3), then back to Asia Minor (Troas) by Macedonia (xx, 4, 5). In all these places St. Paul preached, according to his custom, first to the colonies of Jews and then to Gentiles too; all he left Christian communities from which others in the neighbourhood were formed by his disciples: "I have planted, Apollo watered, but God gave the increase" (1 Cor., iii, 6). So that he could say: "From Jerusalem round about as far as unto Illyricum, I have replenished the gospel of Christ" (Rom., xv, 19). Among the Christian Churches of the East, Corinth stood out as the most important—those of Athens and Corinth. This is what one would expect from the Apostle's general practice of bringing his message first and most completely to the great cities. From these it would spread more easily to the country round. Athens, in St. Paul's time, no longer of first importance politically or economically, still held a great place through her immortal memories. A number of Romans had settled there, as T. Pomponius Atticus, Cicero's friend. These are apparently the "foreign dwellers" (οἱ ἐξωτικὸι ἀνθρώποι) of Acts, xvii, 21. There was also a colony of Jews, to whom St. Paul preached first. "He disputed, therefore, in the synagogue with the Jews, and with them that served God (τῆς ἑβαυλίας, and in the market-place, every day with them that were there") (the heathen—Acts, xvii, 17). Of far greater practical importance was Corinth, then one of the chief commercial centres of the empire, the chief town of Achaia (Acts, xxi, 12). Corinth became the centre of the Apostle's work, the chief centre of Christianity in Greece. It is supposed that he wrote here his Epistle to the Romans (J. Belser, "Einleitung in das Neue Testament," Freiburg im Br., 1901, p. 507), both those to the Thessalonians (ibid., 461 and 488), perhaps that to the Galatians (so Zahn). His care for the Church of Corinth is shown in his two Epistles to the Corinthians. For an account of this, the most typical of the Pauline Churches, see Belser, op. cit., V, xl (pp. 476-489).

The alleged mission of other Apostles to Greece rests on a less firm footing. St. Andrew is said to have preached in Scythia, Thrace, Epirus, Macedonia, and Achaia, and to have been crucified (on a cross of the shape to which he has given his name) at Patras, by order of the Proconsul Egeas. The story of his mission and martyrdom is as old as the second century. It formed part of a work on the Apostles written then by a heretic, Leuciatus Charinus (Leukios Chareinos.—cf. Epiphanius, "adv. Haer.", lxi, 1; lxxiii, 2). There is an alleged contemporary encyclical letter of the priests and deacons of Achaia which tells the story, including speeches made by the saint in verse:

Ö bona cruci diu desiderata,
Inam concupiscenti animo preparata,
Securus et gaudens venio ad te,
Et tu exulantem suscipias me,
Discipulum eius qui peperit in te.

The whole text is published by Tiischendorf, "Acta Apostolorum apocrypha" (Leipzig, 1851, p. 105-131), and Lipsius, "Die apokryph. Apostelgesichten" (1883, I, 543 sq.), where the question of its origin is discussed. The lessons, antiphons, and responses for St. Andrew's day (30 Nov.) in the Roman Breviary are taken from this document. On account of the tradition that St. Andrew preached in Thrace, the Patriarchs of Constantinople claim him as their first predecessor; the Russians have enlarged his mission in Scythia into the conversion of their country (he came and preached as far as Kiev). St. Thomas and St. Matthew are also said to have visited Greece on missionary journeys.

The Church spread rapidly in Greece. We hear of bishops in various cities during the persecution. Under the Emperor Hadrian (117-38), Publius, Bishop of Athens, was martyred (Euseb., H. E., IV, xxiii). A certain Philip was Bishop of Gortyna (ibid.). Eusebius writes of Dionysius of Corinth and his works (ibid.). Publius at Athens was succeeded by Quadratus the apologist (Bardenhewer, "Altkirchl. Literaturgeschichte," I). Aristides of Athens was also a famous apologist (ibid.).
In this first period in Greece, as everywhere, the bishops of the chief towns have a certain precedence, even in Rome, over their own-bishop of the Eastern Church," pp. 7–8). Heraclae was the ecclesiastical metropolis of Thrace, Thessalonica of Macedonia, Corinth of Achaia. Domitius of Heraclae, under Antoninus Pius (138–61), witnessed the martyrdom of St. Glyceria; his successor, Philip, was burnt to death at Adrianople under Diocletian (284–305). Pinytus, a native of Crete, or on the island of Cyprus, was a disciple of St. Paul and the first bishop of Corinth (Euseb., H.E., IV, xxii). After Constantine (324–337) the local Churches were organized more systematically, according to Diocletian's division of the empire (Ort. Eastern Church, pp. 21–23). Greece became part of the Prefecture of Illyricum, Thrace becoming "Eastern" (Prefecture of Orosia, "Oriens"). The Prefectures of Gaul, Italy, and Illyricum made up the Roman Patriarchate (ibid., p. 21), so that, legally, Greece became part of that patriarchate. Normally it should have used the Roman Rite and belonged to the Western Christendom. But Illyricum was an endless source of dispute between East and West, till the Great Schism (ibid., pp. 44–55, Duchesne, "L'Illiricum ecclésiasique," in "Eglises séparées" (Paris, 2nd ed., 1905, pp. 229–79). In Thrace, Constantineople succeeded in displacing the old metropolis, Heraclae, and then in becoming a patriarchate, eventually claiming even the second place. At this time, the four General Councils (Ort. Eastern Church, pp. 28–47). Since the Council of Ephesus (431) Cyprus has been an autocephalous Church (ibid., 47–50); Crete was part of Illyricum and shared in the disputes about it. In 379, under Gratian and Theodosius, Illyricum was divided politically into Eastern and Western Illyricum. The western half (Fannonia Primae et Secundae, Fannonia Ripariensis, Dalmatia and Noricum Primum et Secondum) remained joined to the Italian prefecture; the eastern part (Macedonia, Thessalia, old Epirus, Achaia, New Epirus, Crete, Prevalitania—which is now Albania—Dacia Mediterranea, and Dardania—i.e., our Servia) became part of the eastern half of the empire, then of the Eastern Empire. The Patriarchates of Constantinople claimed this Eastern Illyricum as part of their patriarchate, and eventually, in spite of the pope's protests, succeeded in asserting their jurisdiction over it. Eastern Illyricum then included part of what we consider Greece was occupied by the (civil) diocese of Thracia and Cyprus.

Lequien, in his "Oriens Christianus", I and II (Paris, 1740), gives lists of the Churches of these lands with their arrangement in provinces and the names of all their bishops, as far as they were known in his time. The Byzantine Patriarchate consisted of the (civil) dioceses of Pontus (I, 351–662), Asia (I, 660–1090), Thrace (I, 1091–1246), Eastern Illyricum (II, 1–26). Of these the diocese of Thrace, to some extent, and the diocese of Eastern Illyricum, entirely cover our Greece.

The diocese of Thrace had seven ecclesiastical provinces—(1) Europe, with Heraclae as metropolis (I, 1101–1154). This province once had twenty, in Lequien's time only five, sees; Rhodes, Patium, Metra-and-Athrys, Tauraces and Myriophyta. (2) Thracia (as distinct from the diocese) with Philippopolis as metropolis (I, 1156–1170). (3) Haemonius (not in the text) with St. Thessalonica. (4) Rhodopes, metropolis Trajanople (I, 1193–1210). (5) Scythia, metropolis Tomi (Thaw or Thous, now extinct, I, 1211–1216). (6) Mesia (or Myisa) Inferior, metropolis Marcianopole (Preslav Plovdiv), I, 1247–1251 (7) Walachia, metropolis Tergoviste, is no longer in any sense Greek. Compare with the map. See also the map. (7) Illyricum, the metropolis of Thessalonica, covered the seven sees (74) of the patriarchate, arranged in three classes, according to their place in the later, in Silberagni, "Verfassung u. gegenwärtiger Bestand sämtlicher Kirchen des Orients", Regensberg, 2nd ed., 1904, pp. 33–35. The title metropolis is now given to almost every bishop.

In Lequien's list the second metropolis, Eastern Illyricum, whose capital was Thessalonica (vol. II, 1–318), covers practically all Greece. Before the division of Illyricum its capital was Sirmium. We have seen that Western Illyricum remained part of the Roman patriarchate and was in no sense Greek. The eastern diocese had nine provinces (see above); these only the first two can be fixed and the rest are mere names, and in many of them the Slav element was very powerful. The Slav invasions of the empire began under Anastasius I (491–518) in 493; various Slav tribes and the non-Aryan Bulgars (who soon adopted a Slav language and became practically Slavs too) pressed onward into Thrace, Macedonia, Thessaly, even Achaia, in increasing numbers, throughout the whole period of the empire at Constantinople; so that always, and still in our own time, they form a rival influence to the Greeks throughout these lands. The old sees of these seven more or less Greek provinces are, according to Lequien: (1) Province of Macedonia (II, 27–102), metropolis Thessalonica, with suffragan Sees of Philippi, Beroe, Dium (Διος), Stobi (Στοβί), Parthicopolis, Doberus, Cassandria, Edessa, Pydna or Citrum, Heraclea Sintica, Amphipolis, Lemnos (the island), Thassus, Serr, Bargala, Thebrium, Campsia or after Rome, Ciconia, Diocesia, Sirmium, Rhetia, Dryopithea, Meliania, Areclaeus, Arechiae, Rhend. Isabellus, Hierasius, Lycostomius and Servia. (2) The Province of Thessaly (II, 102–132) had as metropolis, Larissae, as suffragan Sees, Demetrias, Zeumium (Ζεύσιμον or Ζεύσιμον), Chasarea in Thessaly, Gomphi (Γομψί), Echinus, Pharsalus Larnia, SCOPELUS, Trikes (today new Trikala), Hynata (neut. plur.), metropolis, Thebes of Phthisiot, Scathus, New Patras, Ezerus, Demonician and Elaeso, Stage, Thaumacius, Litza and Agraphorum, Phere, Ledoritius, Marmaritius, Bezina, Paparethi. (3) Old Epirus (II, 133–154) had for its metropolis Nicopolis, and for suffragan sees, Anchialus (or Onchianius). Phoinises, Dodona, Buthrotus, Anchialus (in Epirus), Photisa, Eutresia (Eutesia), Corelymus (the island, Corfu), Euthus, Ioannina (now Janina), Leuces, Achelous. (4) Hellen (II, 155–239) had as metropolis, Corinth, and for suffragan sees, Cenchreas (Vulc. Cenchres, Kremnos, port of Corinth), Old Patras, Argos, Nauplia, Megara in Achaia, Apeelas (today Apeleus, the island), Kephisia in Bocotia), Elis, or Elea, in Achaia, Tegea in Arcadia, Messene in the Peloponnese, Carysust in Euboea, Naupactus, Arta (now Larta, formerly Ambracia), Oreyus (Oreus), Porthous, Marathon, Elatea, Megara (neut. plur.), Opus (Ors), Platea, Thebes in Bocotia, Therape, Tanagra (both fem. sing. neut. plur.), Scarpia, Chalcis, Monemvasia (fem. sing.), Strategis, Pyrgus (or Pyrgium), Trozen, Elis in the Peloponnese, Eginia in the island, Aulon, or Solon (the old Delphi), Amyclae, Olen, Methone, Scyrus (Sciros, the island), Zancus, Zante, Cephalonia, Kefalonia, Fylus, Bresta, and the dioceses of Macedonias, Cusae (the island). (5) New Epirus (II, 240–255) had for metropolis, Dyrrhachium (Δυρραχιων), and for suffragan sees, Scampe, Apollonia and Bauldis, Amantia, Decatera (neut. plur. in Dalmatia), Aulon (Athos), Listra (neut. plur.), Driabos, Stephanieum. (6) Crete (II, 256–274) had for metropolis Gortys of which St. Titus is bishop. The sees of Arcadia, Hiera Petra, Lappa, Phoenix, Hieracleopolis, Subrilla, Apollonia, Eleutheria, Chersonesos, Cyrindia, Cissamus, Cantani.—Other provinces (Prevalitana, Dacia Mediterranea, and Dardania) do not concern Greece.

Remnants of those sees left to the ecumenical patriarch, after Turkish spoliation and the independence of the modern Greek Church, will be seen in Silberagni's III. THE ORTHODOX CHURCH IN GREECE. (The
Patriarchs of Constantinople had succeeded in asserting jurisdiction over all this vast territory, as well as over Asia Minor and the purely Slav lands to the North. After the schism of 1054, the patriarchs and bishops followed their patriarch by striking the pope's name from their diplomas. They, too, like their chief, learned to abhor Latin customs, to look on the Latin Church under the pope as a fallen branch and a synagoge of Satan. There is no trace of any independence on the part of these local Greek Churches. They all used the Byzantine Rite and followed the Byzantine Patriarch faithfully. During the short-lived unions of Lyons (1274) and Ferrara-Florence (1439) they became Uniates too. They cared for the union as little as did their leaders at Constantinople, and lived on the wealth made by their local Churches. The Latin conquest of their lands (after the Fourth Crusade, in 1204) brought about a rival Latin hierarchy and something very like persecution for the Greeks. Naturally, they hated and scourged the Latin bishops and groaned under the disabilities they suffered from the Frankish princes and from Venice. The Slavs invaded their lands, destroyed many of their cities, so that Greek dioceses disappear because there are no more Greeks left in great tracts of what they still affect to call Greece; but the remnant that maintain themselves still look to Constantinople for orders and still keep the Byzantine Rite in Greece. Their poverty and their poverty brought them ships. Invited in the first instance as allies by the fatal policy of the Emperor John VI (Catacuzenus, 1341–55), the Turks first took hold of European soil by seizing Gallipoli (in the Thracian Chersonese) in 1356. From this time they steadily advanced, taking city after city, ravaging and plundering what they could not keep. In 1361 they took Adrianople and made it their capital in Europe till the fall of Constantinople. Then, moving north, they conquered the remnants of Stephen Dushan's great Servian Empire (Battle of Kossova, 1389). Lastly, nearly a century after they had first landed in Europe, they finished their work by taking Constantinople (29 May, 1453). From this time till the nineteenth century the Greeks and the Orthodox Church in Greece were subject to a Moslem government. The Sultans applied the usual terms of Moslem law regarding non-Moslem Theists to the Christian population of their empire (Orth. Eastern Christians). There was persecution. Christians suffer certain disabilities. They may not serve in the army, and they have to pay a poll-tax; they must dress differently from their masters, may not have as high houses, may put no sign of their faith (crosses) outside their churches, nor ring church bells, nor bear arms, nor ride on horses. Their evidence may not be accepted in a court of law against a Moslem. To convert a Moslem to their faith, seduce a Moslem woman, speak openly against Islam, make any treaty or alliance with people outside the Moslem empire is punished with death. As long as they keep these laws they are not to be molested further, and there is no religious war. That course any Christian may turn Moslem at any time! if he does so it is death to go back. (During the last century the European Powers have forced the Porte to modify most of these laws.) The Orthodox were organized into a subject community under the name of Roman Orthodox Church and that of the name of the old Roman Empire which the Turks had destroyed. Their civil head was the ecumenical patriarch. During the century after the Turkish conquest this patriarch reached the height of his power; then, in 1591, Russia became an independent Church—except for the following later one branch of the patriarchate, the Moscow, and perhaps the shadow of what his predecessors were. During the centuries between the fall of Constantinople and the beginning of Greek independence the Greek Church (although it was certainly not happy) has no history, unless one counts as such the affairs of the patriarchate (Cyril Lucaris and the Synod of Jerusalem in 1672, for instance). The other Greek dioceses paid their heavy fees to the patriarch and the government; the pariah priests paid their heavy fees to the bishops. The hideous oppression of the Turk overshadowed all their lives. For the Turk has never kept his own fairly tolerant law. The tribute of children for the Janissary gendarmerie, the cruel local Grecian Churches. They all used the Byzantine Rite and followed the Byzantine Patriarch faithfully. During the short-lived unions of Lyons (1274) and Ferrara-Florence (1439) they became Uniates too. They cared for the union as little as did their leaders at Constantinople, and lived on the wealth made by their local Churches. The Latin conquest of their lands (after the Fourth Crusade, in 1204) brought about a rival Latin hierarchy and something very like persecution for the Greeks. Naturally, they hated and scourged the Latin bishops and groaned under the disabilities they suffered from the Frankish princes and from Venice. The Slavs invaded their lands, destroyed many of their cities, so that Greek dioceses disappear because there are no more Greeks left in great tracts of what they still affect to call Greece; but the remnant that maintain themselves still look to Constantinople for orders and still keep the Byzantine Rite in Greece. Their poverty and their poverty brought them ships. Invited in the first instance as allies by the fatal policy of the Emperor John VI (Catacuzenus, 1341–55), the Turks first took hold of European soil by seizing Gallipoli (in the Thracian Chersonese) in 1356. From this time they steadily advanced, taking city after city, ravaging and plundering what they could not keep. In 1361 they took Adrianople and made it their capital in Europe till the fall of Constantinople. Then, moving north, they conquered the remnants of Stephen Dushan's great Servian Empire (Battle of Kossova, 1389). Their evidence may not be accepted in a court of law against a Moslem. To convert a Moslem to their faith, seduce a Moslem woman, speak openly against Islam, make any treaty or alliance with people outside the Moslem empire is punished with death. As long as they keep these laws they are not to be molested further, and there is no religious war. That course any Christian may turn Moslem at any time! if he does so it is death to go back. (During the last century the European Powers have forced the Porte to modify most of these laws.) The Orthodox were organized into a subject community under the name of Roman Orthodox Church and that of the name of the old Roman Empire which the Turks had destroyed. Their civil head was the ecumenical patriarch. During the century after the Turkish conquest this patriarch reached the height of his power; then, in 1591, Russia became an independent Church—except for the following later one branch of the patriarchate, the Moscow, and perhaps the shadow of what his predecessors were. During the centuries between the fall of Constantinople and the beginning of Greek independence the Greek Church (although it was certainly not happy) has no history, unless one counts as such the affairs of the patriarchate (Cyril Lucaris and the Synod of Jerusalem in 1672, for instance). The other Greek dioceses paid their heavy fees to the patriarch and the government; the pariah priests paid their heavy fees to the bishops. The hideous oppression of the Turk overshadowed all their lives. For the Turk has never kept his own fairly tolerant law. The tribute of children for the Janissary gendarmerie, the cruel local Grecian Christians were always in a state of simmering rebellion and the Turks were always punishing their attempts by wholesale massacre. In Crete 50,000 Christian children, in the year 1670, were torn from their parents, circumsized, and brought up as Moslems; in Asia Minor thousands of Greeks had had their tongues cut out for not talking Turkish (op. cit., 237–238). Meanwhile the clergy celebrated the Holy Liturgy on Sundays, worked in the fields, and kept wine-shops on week-days. But for the komelaukon (or kalemoukon)—the tall hat without a brim—there was little to distinguish them from other peasants. But they kept their alive faith in Christ and Hella, prayed, by better days, were generally at the bottom of each attempt at resisting the pasha's abominations, and bore silent but heroic witness for Christ during those dark centuries. And who can reproach them for being poor and ignorant? The schism (not the fault of any nation) did not reappear, and Greece was taken ooff from the West. Europe had forgotten them. They had everything in the world to gain by turning Turk; and yet they kept the Christian faith alive among their people, in spite of pashas, and soldiers, and massacres. Their little dark, dirty churches were the centres not only of Christianity but of Hellenism too. And while their wives poured out the strong resinous wine for whispering conspirators, their sons were out on the hills, klephits and armatoloi keeping up the hopeless war for Greece.

The Greek War of Independence brought a great change to the Church of the free kingdom. The clergy had taken a leading part in the revolution. In 1821, at the beginning of the movement, when Alexander Hyspsilanti was making his abortive attempt to rouse the Vlachs, Gregory V of Constantinople, forced by the Turkish government, denounced the "Hetairia Philike" and excommunicated the rebels. But the Met. of Constantinople of Patras, Dikaios (Pappa Phelias), and other leading ecclesiastical persons openly took the side of the Greeks, helped them with their counsels, and in many cases even joined in the fighting. Dikaios made a heroic stand with 3000 men against Ibrahim Pasha's Egyptians at Maniaki on Mount Malia. In 1822 the Turks began their series of reprisals by barbarously murdering the Patriach Gregory V in his vestments, after the Liturgy of Easter Day (22 April), although he, so far from being responsible, had obeyed them by excommunicating his fellow-countrymen. Throughout the war the Greek Church showed the energy and devotion of her clergy. So enthusiastic and strong was the Greek enthusiasm for Gregory V (his relics were buried with great honour at Athens in 1871), the court of the patriarch (the Phanar) was too much under the power of the sultan for the free Greeks to submit to its jurisdiction. The example of Russia showed that a nation should not be ashamed of Orthodoxy and keep the communion of the patriarch while being itself independent of his authority. As soon as the affairs of free Greece began to be settled, one of the first acts of the national party was to throw off the jurisdiction of the Phanar. Alexander Koraes wrote at the time: 'The clergy of that nation can no longer submit to the authority of the Patriarch of Constantinople, who is under the power of the Turk; it must rule itself by a Synod of freely elected prelates.' (Pastoral Πατριαρχείον, quoted by Kyriakos,
GREECE

The first National Assemblies (at Epidauros and Trezen) in 1822 and 1827, while declaring that the Orthodox faith is the religion of Greece, had pointedly said nothing in regard to the authority of the Church. In July, 1835, the Greek Parliament at Nauplion drew up a constitution for the national church. Imitating Russia, they declared their Church autocephalous—indeed of any foreign authority—and proceed to set up a "Holy Directing Synod" to govern it. They also superseded the priests of almost deserted monas-
teries in Greece, all that had less than six monks as inmates. In 1844 the same thing was repeated, and copies of the law were sent to Constantinople and to the other Orthodox Churches. The patriarch was exceedingly indignant at what he, not unnaturally, disapproved of, and his government had put off the evil moment of announcing to him its new arrangement as long as it dared. Between 1822 and 1844 the Greek Church considered itself autocephalous, managing its own affairs by its synod, but had sent no notice of the change to the Phanar. So the patriarch affected to ignore the change. But he showed his anger plainly enough in 1841, when he received notice from the Greek Church that she had excommunicated for heresy Theophilos Kaires, the founder of the "Theoseismos" sect, an imitation of French Deism. The patriarch (Anthimos IV) refused to pay any attention to another false doctrine, and his successor, Germanos IV, refused to notice the declara-
tion of their independence that he received from his former subjects in 1844. In 1849 the Greek Synod made another attempt. James Rises, the Greek minister at Constantinople, had just died and the pat-
arch rued him with great honour. The Greek Government sent the Archimandrite Misael, then presi-
dent of the synod, to Constantinople with the new Order of the Holy Saviour and a message of thanks to the patriarch (Anthimos IV restored) from the au-
tocephalous Church of Greece. Anthimos took the order and then said that he knew nothing of an au-
tocephalous Greek Church. The Greek Synod sent another circular to him and to all the other Orthodox Churches, explaining what had been done and pro-
claiming their independence. At last, in 1850, Anthi-
mos IV summoned his synod to consider the matter. The result of its consultation was the famous Tomos. The synod declared that every other patriarch is sovereign in his own Church. The synod demanded independence of the Greek Holy Synod, but proceeded to lay down a number of rules for its guidance. Any sort of interference of the State is absolutely forbidden, there is to be no royal commissioner in the synod, the patriarch is to be named, as before, in the Holy Liturgy, the Church is to be paid. Tred from him, and all important matters must still be referred to his judgment. The tone of the Tomos is still that of absolute authority; each clause begins with the words: "We command that..."

This document produced an uproar in Greece. Aided by formalism, the Synod was at first dis-
posed to accept it. There was also a conservative party led by Oikonomos (d. 1857), who were opposed to any change and inclined to submit to the patriarch in everything. But the feeling of the majority was strong against any sort of submission. The free Greeks had determined to have nothing more to do with the Phanar at all. Pharmacides (d. 1860), the leader of the Liberal party (with a distinct Protest-
antizing tendency), answered the Tomos by an indig-
nant protest: "The [patriarchal] Synodical Tomos, or concernings Truth" (E Συνώνομος Τόμος ή ρείς Πραγματικά, Athens, 1858). When the Parliament (always a conservative body) reversed the decisions, the Byzantine Church, the Protestant Church, the Russian Church, and the Armenian Church showed great aversion to the Tomos. The Church of Greece had lost 50,000,000 and 50,000,000 Church members.

IV. CONSTITUTION OF THE CHURCH OF GREECE.—
The laws that fix the establishment, organization, and regulations of the Greek Church are those of 1852, in which the parliament, having finally rejected the pa-
trich's Tomos, restored and codified the arrange-
ments made by various governments since 1822:—
"The dominant religion in Hellas is the Eastern Orthodox Church of Christ. Every other known reli-
gion may be practised without hindrance and shall enjoy the protection of the laws, only Proselytism and all other attacks on the dominant Religion are forbidden."

The Orthodox Church of Hellas acknowledges as her Head our Lord Jesus Christ. She is indissolubly united in faith with the Church of Constantinople and with every other Church of Christ. The bishops of both Churches form a Council as Constantineople. She is autocephalous, uses her sovereign rights independently of any other Church, and is ruled by the members of the Holy Synod" (Arts. 1 and 2 of the Constitution of 1864).

There are now 22 sees in Greece of which the first is Athens, which includes the Nomos (political depart-
bryai and Aigialia, (28) Gortys and Megalopolis, (29) Kythera, (30) Hydra and Spetsai, (31) Thera, (32) Paros. This is called the "Attic Church," and is subject to the Metropolis (Metropolite), who is the "attic" Bishop of Athens.
by the Government as members from the hierarchy, in turn, according to the dates of their consecrations. They sit for one year, from the 1st of September, then return to their dioceses. But the Government may keep not more than two as members for a longer time. If the president is prevented from attending, the bishop who has the majority is to take his place. All members of the Synod must take an oath of fidelity to the king at their appointment. Besides these five bishops, the Synod is attended by a royal commissioner (a layman appointed by Government). He has no vote, but no act is valid unless he is present and signs the document. The Synod has two secretaries, two writers, and five Government officials. The secretaries and writers are clerks in Holy Orders. All affairs of the Synod with foreign Churches are controlled by the Government’s Minister for Foreign Affairs. In questions that are not purely religious (ecclesiastical seminars, marriage, divorce, etc.) the consent of the Government is required. The President of the Synod receives 3600 drachmai ($720), the other bishops 2400 drachmai ($480) yearly, besides their episcopal salaries. The first secretary has 4800 drachmai, the second 2880 a year, the first writer 1200 drachmai a month, the second 900 drachmai a month, a total of 1200 drachmai a year. The acts of the Synod are sealed with its official seal bearing a cross (practically the arms of the kingdom: Azure a cross couped argent) and the inscription: Αγία Σύνοδος τῆς Ἑκκλησίας Ελλάδος. Its jurisdiction is described as extending over questions of faith (only, of course, in the sense of preserving the Orthodox Faith of the Seven Councils), rites and canon law, religious instruction, duties of clerics in Holy orders, ecclesiastical discipline, examinations for ordination, consecration of churches, celebration of feasts and services. The Synod can appeal to the Government. Down to recent times these minor clergy (there have been cases of imprisonment for heresy among the Orthodox clergy), and dangerous books against faith or morals. Other matters, such as public processions, building of seminaries, extraordinary feasts on weekdays (involving public holidays), and all the points mentioned above that are described as “mixed” (ecclesiastical and political), must be arranged by the united action of the Synod and Government. In all services in the kingdom the Holy Synod is prayed for after the king and queen (instead of the patriarch). But when the Metropolitan of Athens celebrates in Synod, all the patriarchs are prayed for. The name of the Metropolitan is the Russian “Procurator of the Holy Synod.” The manner of appointing members to the Synod, the need of the Commissioner’s signature for its acts, its dependence on the Government generally, as well as the way of appointing bishops and deciding all really important matters, show that, in spite of Dumezil’s indignant protest (Εσθενήσια Ιερατεία, III, 155-156), the Greek Church is quite hopelessly Erastian.

Bishops are appointed by the king (advised, of course, by his ministers). The Synod presents three names, of which he chooses one. A bishop must be thirty-five years old, a doctor of theology, and must have taught theology or preached for some time. Before consecration he takes an oath of obedience (and of his episcopal duties) to the Synod, after it an oath of allegiance to the king. He can only be deposed by the Synod with the royal consent. TheMETHOD OF APPOINTING OF BISHOPS (to take care of archives), protektaikon (lawyer), sphylox (Sarcisla), sakkellion (responsible for the man-ners of the clergy), hypomnematonos (secretary), and hieromennon (master of ceremonies). These persons, who are all priests, form an advising council. All are paid by Government. When a see is vacant the Holy Synod recommends, and the State appoints, one of them to administer the diocese (vicar capitular). The consent of the Synod is always necessary. The bishop must be at least 50 and 20 years old, married, have had three children, and have not resigned from office or been permitted to resign from age or infirmity. He receives a pension of 200 drachmai a month. Parishes are divided officially into those of cities, small towns, and villages. Each group of from 25 to 70 families makes up a village parish, of 151 to 200 families form a parish of the second class, and those of 301 to 1000 families form one of the first class. Parishes of the first class are divided into a church and school class have at least one deacon and one parish priest. Larger areas are subdivided. The people elect, and the bishops appoint, the clergy. The priests have only their stole-foes as income, so that in the villages they nearly always have a trade or keep an inn as well. The last religious census, made in 1897, is published by Kophiniotis (Ο 'Εκκλησία της Ἑλλάδος, Athens, 1897). At that time there were 4025 parishes, with 5423 married and 242 unmarried priests. For their education there are four elementary seminaries: at Athens, Tri-polis, Corfu, and Larissa. These satisfy the not very great demands of the clergy, and the number of clerics in 1897 was 1118. In 1898 the number of clerics in Athens had received only this amount of education, according to the census of 1897. A smattering of classical Greek, a little general education, knowledge of the catechism (it can hardly be called theology), and enough liturgical knowledge to perform his functions is all that one expects of the village priest. They have a few books except their service-books and perhaps a New Testament. What they read is one of the endless number of newspapers, and what they care about is the change of ministry and the wretched local politics that excite the passionate interest of all Greeks.

On 4th March 1836 the Government established children’s high schools for the clergy at Syros, Chalcis and Tripolis, in 1875 a fourth was begun at Corfu. It appears that all these institutions came to an end for want of students (Kyrakio, op. cit., III, §50). Still higher in the scale is the Athenian seminary called the Rhizasorian (founded by the brothers Rhizars in 1843) whose students attend lectures at the university besides those of their own institution. This is the only seminary that in any way comes up to our standard. Its students form the aristocracy of the clergy and become archimandrites, professors, and bishops.

There are a great many monasteries in Greece. In 1830, after the suppression of the Turks, there were 800. There are now 250, with 1322 choir monks and 545 lay brothers, also 9 convenuts, with 152 nuns and 68 novices (census of 1897). The head of each monastery is the archimandrite, or hegumenos (abbot), elected by the monks and confirmed by the bishop of the diocese. He must be a priest-monk (ερημουμένος). He is assisted by two counsellors, also elected by the community from among the monks who made their religious profession not less than six years ago. There is a new election of counsellors every five years. Over each convent an oikonomos is placed, a priest not less than sixty years old, chosen by the Synod; he is the real superior of the convent, keeps its keys, and is responsible for its state. Under his presidency the nuns elect an abbes (γυναικομον). All monasteries and convents have endowments controlled and administered by consent of the Synod and Government. Monasteries whose revenues exceed 5000 drachmai a year have a five-clerics, and 4116 monks support of schools and preachers. Some monasteries are very rich. The first, the laura of the Falling Asleep of the Mother of God, at Pentelis, in the Diocese of Athens, has an income of 166,085 drachmai. A full list of the monasteries and convents is given by Silber, "Vrhassung u. gegenw. Bestand," 2nd ed., pp. 78-85.
The political census of 1896 was destroyed in the war of 1897. The former one of 1889 counted 2,173,148 Orthodox Greeks out of a total population of 2,217,000. Though this number is certainly very much exaggerated (the Catholics alone claim more than the difference between the two figures), the Orthodox are the overwhelming majority. Their Church does not need to concern itself with other churches for the instruction and moral improvement of the laity. In 1875, the professors of the theological faculty at Athens formed a society called the "Brotherhood of the Friends of Christ" (Διδάσκων τῶν φίλων Ἰησοῦ), for this purpose. Other societies of the same kind are the "Society of St. Paul" (H Εὐαγγελική Εκκλησία τῶν Φίλων Αὐτοῦ) and the "Reform" (Η Εκκλησία τῶν Φίλων Αὐτοῦ). They publish popular works of religious instruction, prayer-books, and cheap editions of the Liturgy in great numbers, books of controversy, religious newspapers; and they hold meetings with free lectures and instructions. Almost every publisher in Greece (where every bookseller is a publisher) produces such little books of religious knowledge, accounts of Church History, anti-Roman controversy, and so on. And every Greek has read some little pamphlet of 32 pages against the pope or the Bulgars, so as to garnish his conversation with very elegant platitudes to the use of the Empire Pho- tius, and Pope Joan. One of the best popular com- pendiums is Nicholas Ch. Ambrasias: "H Ορθόδοξη Εκκλησία (constantly reprinted, e.g., Athens, 1906, etc.). Demetrios S. Balanos (Μισαιλάν), H Εκκλησία ματ-νοῦ, πάνα και πάτε παρακάτω δὲ θεοῦ; (Athens, 1807), in the series "Useful Books," gives a good popular ac- count of the Liturgy and Church Service generally. Among the almost infinite number of Greek news- papers a great many are religious periodicals. The "Reform" society publishes a monthly with the same title: "H Αἰματίτις (edited by M. Galanos). Some of the best known are the Βεβαίων, Βενετίας, Βενετελία, Κρετίνος, Ομοτενός, Ευαγγελική, Ευαγγελική Εκκλησία, Η Ορθόδοξη, Χριστιανή Αλήθεια, etc. For the more prominent theologians and writers of the Greek Church since its foundation see Kyrion, op. cit., III, §§51, 52. The most important are the conservative Oikonomos (d. 1857) and the Liberal Theoklitos Pharmakides (d. 1880).

V. The Catholic Church in Greece.—With the exception of a very few scattered Uniat congregations, all Catholics in Greece are Latins. This is explained partly historically and also by the strictly legal position that all conversions from the Catholic Faith was made by the crusaders, the Frankish princes who ruled as their successors, and Venice. None of these authorities cared at all about the Byzantine Church or its rights. Wherever their power extended they set up Latin bishops, just as at Athens and tried to persuade the people to change their religion by harassing disabilities that often became real per- secution. Whatever native Catholic communities now exist are the successors of those set up by the Franks and Venetians. They are strengthened by foreigners (French and Italian merchants, etc.) who are natu- rally Latins too. The legal justification of what, hence an anomalous situation is that Greece is part of Illy- rium, and Illyricum, according to the ancient right never abandoned by the popes, belongs to the Roman patriarchate. According to the general (but by no means quite universal) principle, that rite follows patri- archate, all Greeks should be not only Catholics but also Latins on the other hand. It is clear that this circumstance is a great hindrance to the conversion of a Greek. It would be much easier to per- suade Greeks simply to return to the old allegiance of the first see, as Uniates have done elsewhere, than to make them go through so radical an upset of their lives as is involved in turning Latin. Throughout the East people are abnormally attached to their rites, the obvious visible things that they see mean more to them than remote questions of jurisdiction and the actual names that may occur (whether pope, or patri- arch, or synod) in the intercessory prayers. The for- eign character of all Catholic missions in Greece is the great difficulty always; the authorities of these mis- sions not only fail to make their teachings effective, but actually hinder them. Italians. Undoubtedly the institution of a separate Uniat hierarchy using the Byzantine Rite would be the first step towards converting Greece. Nor is the technical objection a really serious one. The Itali- GREECE 742 GREECE

to forbidding any proselytising. In 1833 a law was passed requiring all papal Bulls, Briefs, etc., to be submitted to the Minister for Foreign Affairs before their publication. Five Catholic bishops (of Syros, Tenos and Mykonos, Naxos, Thera, and Corfu) are recognised by the Government; no other sees may be established without the prior consent of the Archbishop of Athens is not recognised by the State.

The present Catholic hierarchy is: (1) Archdiocese of Athens, established in 1875, when Bishop Maranokes of Syros took up his seat there, in spite of the protest of the Government. By this act the metropolitan jurisdiction of Naxos was preserved in the See of Athens. In this diocese are 14 parishes, 13 priests, and about 18,000 Catholics. (2) Archdiocese of Corfu (Corcyra, Kerykyra), with 7 churches, 10 priests, and 4000 Catholics. (3) Zante (Zakynthos) and Cephalonia united (suffragan of Corfu), including the islands of Zante, Cephalonia, S. Maurs, Ithaca, Cepogo, with 3 parishes, 7 priests, 1000 Catholics. (4) Archdiocese of Naxos with 1 parish, 6 priests, 350 Catholics. (5) Andros (suffragan of Naxos), administered by the Bishop of Tenos and Mykonos. (6) Santorin (Thera), suffragan of Naxos, with which is united the administration of Melos, 1 parish, 9 priests, 460 Catholics. (7) Chios (Chio), suffragan of Naxos, 3 parishes, 25 priests, 2500 Catholics. (8) Syros (now suffragan of Naxos), 6 parishes, 25 priests, 7000 Catholics. (9) Tenos and Mykonos (suffragan of Naxos), 26 churches, 26 priests and 5000 Catholics (Werner, “Orbis Terrarum Catholicus”, Freiburg im Br., 1880, pp. 131–133).

These figures give a Catholic population of 36,110. Another census (quoted by W. Götz, “Griechenland, Kirchliche Statistik”, in “Reaellencyk. für prot. Theologie”, 3rd ed., Leipzig, 1899, VII, 168) gives 50,000 Catholics. On the other hand we have seen that the Government, in 1889, admitted only 14,898 of the “Orthodox” Christians of Athens as Catholics. The congregations of Byzantine Uniates in the kingdom, served by priests of their own rite, depend on the Latin bishops (Echos d’Orient, 1906, p. 336).

VI. PROTESTANTS AND OTHER SECTS.—There are a few small communities of Greeks who have left the Orthodox Church, either converted by Protestant missionaries or following some new protestantising or rationalising leader of their own. English and American missionaries have been at work here, disseminating bibles and holding prayer-meetings, since 1810. Protestant schools were opened by a certain Hildner in Syros in 1827, by King and Hill at Athens in 1832. A number of these schools or movements were continued without suspicion. The British and Foreign Bible Society had even arranged with the Patriarch of Constantinople for the sale of their bibles. But these were found to exclude the deuterocanonical books and to be done into Modern Greek from the Massorotic text without reference to the Pentateuch, the official text of the Orthodox Church. The missionaries also, not content with selling their bibles, held prayer-meetings in opposition to the liturgical services and preached against sacraments and ceremonies. So the Orthodox, led by the great conserva-
tives, became a new sect—of the “Free Church” they were denounced as disturbers of the public peace, and in some places their schools and conventicles were closed. King was expelled from Athens in 1832, but he soon came back and went on with his work. He formed a number of native Greek preachers and missionaries of his own, and his ideas of Kalpalaika, Sakellaris, Konstantinos, and so on, and died in 1859.

The end of this disturbance about the missionaries was that the Government granted entire toleration, but the Orthodox Church formally excommunicated them and their adherents. At first it had been a question of bibles and preaching to the Orthodox rather than of converting them; the issue is quite clear; the Orthodox are forbidden to attend the missionaries’ meetings, so these have built up regular congregations with ministers. People who join these leave the established Church and become Protestants. The first church of these Greek Protestants was opened at Athens in 1874. They call themselves Μετατροπικοί and Διασπορισμενοί. The church at Athens has about 200 members. After an attempt to build one at the Piræus ended in a riot in which the building was destroyed. A few scattered Greek Protestants attend foreign Protestant churches.

At Athens there is a Lutheran Church founded by King George to satisfy his religious needs and those of his Protestant Danish attendants (his personal physician, Hofprediger v. Schierstadt) preaches to about 200 Danes, Germans, and Swiss. There is an Anglican church with about 100 English and American attendants and another little meeting-house of an American sect nearly opposite Hadrian’s Arch; also a Salvationist meeting-house. The number of Greeks attracted by all these people put together is infinitesimal.

There are also a few small sects that have arisen out of the Orthodox Church without the help of foreign Protestants. Theophilos Kaires, a priest, founded a kind of Deism on the lines of the French Encyclopedists which he called “God-worship” (θεοτροπία). In 1848 he published his Goetheideistik und die Wahrheit. He was considerably persecuted for a time, and twice put in prison, where he died in 1853. Andrew Laskaratos and one or two other writers made a desultory campaign against the established Church in favor of what they considered to be primitive Christianity. A Papadianistopoulos started a Papadianist movement. The question of Darwinism brought about friction between the Holy Synod and the Government on one side, and certain university professors at Athens on the other. Plato Drakules wrote an amazing mystification of a Gnostic and Cabbalistic kind that he called “Drakules” (Δρακολέος). Except that of Kaires, these movements did not form organized sects. In the other direction a monk, Christopher Papulakis, and a layman, Makrakis, excited the people against the Holy Synod, the Government, and the university, in the name of the old faith. Papulakis (1852) was put into a monastery; Makrakis, after a long career of opposition, excommunicated by the Holy Synod (1879) and imprisoned for two years by the Government. He had opened a church served by priests of his way of thinking; this was shut up. As soon as he came out of prison he began again a propaganda of his own, composed of a formal sect and political movements. He was tried for heresy and sedition, and imprisoned. He has since his second release continued to form his sect and to lead a campaign of extreme opposition against the “apostate” State Church. His followers number about 6000; they follow lines very like those of the Russian Rasulins (q. v.)—the Orthodox Church has fallen, her priests have lost all power of administering sacraments, her rites are schismatic; they, the Makrakists, alone are the really orthodox.

There are about 6000 Sephardim Jews in Greece, and in 1899 the census counted 24,105 Moesians, living at Larissa and the town, it is to the credit of the Government that these Moesians have always been treated with perfect toleration. They are excused from serving in the army under a flag marked with the cross. They have their mosques wherever they want them, and the muzeeis still cries from the minaret, as loudly and friendly as ever. Right here, that Muezis is the prophet of God. Nevertheless, great numbers of Moesians crossed the frontier into Turkey when Greece became free; the addition of more territory in 1881 led to another great emigration, and the Moesian population of Greece is still steadily diminishing. Naturally, they find the changed conditions more or less, and in some one finds Turkish quarters with their mosque, as across the frontier, but many
more such villages are now deserted, and their mosques in ruins.

VII. The Church in Enslaved Greece.—Greeks outside the kingdom are practically all Orthodox. They form a great part of the Patriarchate of Constantinople, the aristocracy of the Patriarchates of Alexandria, Antioch and Jerusalem, and the whole Orthodox Church of Cyprus. In Constantinople, Antioch and Jerusalem, the Greek element is strong enough to make the churches important, and their bishops have a considerable influence. The Patriarchate of Jerusalem is the only one that has remained independent of Constantinople, and its bishops have long been recognized as heads of local churches.

Greeks in the Balkans. The Greeks in the Balkans are divided into two main groups: the Orthodox Greeks and the Catholics. The Orthodox Greeks are the majority, and they form the bulk of the population in the majority of the Greek-speaking areas. The Catholics are a minority, and they are concentrated in the areas where the Latin language is spoken. The Greek Catholics are found in the regions where the Latin language is predominant, such as Thrace and Macedonia.

Orthodox Christianity. The Orthodox Church is the most important religious institution in Greece. It has a long and rich history, and it plays a vital role in the cultural and social life of the country. The Orthodox Church is based on the teachings of the New Testament, and it is guided by the authority of the Holy Scriptures. The Church is organized according to a hierarchical structure, with the Supreme Patriarch of Constantinople as the leader. The Church is divided into several autocephalous churches, each with its own metropolitan and bishops. The Greek Orthodox Church is one of the autocephalous churches, and it has its own Patriarchate in Constantinople.

well-being and intellectual development as to be reckoned with as one of the factors of Catholic life in the United States. Other races have also brought the Greek Rite with them and established it where they have settled. The advent of the Slavs into the United States really commenced about 1879-1880. They reappear in the Greek Rite came first in Pennsylvania in 1871 to 1879, when the "Molly Maguires" terrorized the mining districts and practically defied the authority of the State, the various coal companies determined to look abroad for foreign labour to replace their lawless workmen, and so they introduced the Austrian Slav to the mining regions of Pennsylvania. His success in wage-earning induced his countrymen to follow, and the coal companies and ironmasters of Pennsylvania were quick to avail themselves of the new and less costly labour. This was before any of the present contract labour laws were enacted. They needed a labourer to work the long, deep, English-speaking labourer, to perform heavier work, and to stolidly put up with inconveniences which his predecessor would not brook. He came from a land in which he had originally been a serf (serfdom was abolished in Austria-Hungary in 1848, and in Russia in 1861), then a dejected poverty-stricken peasant with hardly anything to call his own, and it was no wonder that America seemed to offer him boundless opportunity to earn a living and improve his condition. At first he was a cheap man; but in the course of a very short time the Slav became not a mere pair of strong hands, but a skilled worker, and as such he climbed in the classification of his employers, until he was one of the best paid of his countrymen across the sea. In the anthracite coal region of Pennsylvania there were in 1858 but some 1900 Slavs; in 1880, over 40,000; and in 1900, upwards of 81,000. The same proportion holds good of the bituminous coal-mining districts and of the iron regions in that and other states. Taking simply the past four years (1905-1908), the immigration of the Slovaks and Ruthenians, both of the Greek Catholic Rite, has amounted to 215,972. This leaves out consideration the immigration (147,875) of the Croatians and Slavonians for the same period, though not a large proportion of the totals in this case, but the American Slav is in the Greek Rite. These Slovaks brought with them their Greek Catholic rites and practices, but they were illiterate, ignorant, the poorest of the poor, and knew nothing of the English language. Herding together in camps and settlements, and working like serfs at the most exhausting labour, they had but little opportunity to improve themselves or to learn the language, customs, and ways of the Americans around them, while both American and foreign-born Catholics failed to recognize in them fellow-Catholics, and so passed them scornfully by, and the American of the older stock and and-Catholics who had too often given in to the irere popularity. Yet as soon as they gathered some little substance and formed a settled community they sent for their clergy. When these arrived, they, too, were often imbued with national and racial prejudices, and knew too little of the English language and American ideas and customs to initiate immediately the people in the Greek Catholic Church. People yet other churches, schools, and a branch of their native literature upon American soil, and gradually brought them into touch with the people around them. In this they were seconded by many educated laymen who also followed their countrymen, and the result has been that the Greek Rite has now in the United States much more solidly and with greater virility than it is in many of the dioceses in southern eastern Europe. Other races and nationalities have also established themselves besides the Slavs; and there are in America also the Rumanians, the Syrians, and the Italians who follow the Greek Rite. But the people who have been foremost and most enthusiastic in the support and devotion to their Oriental Rite have been the Slavic people, the northeastern Ruthenian proper and also those Slovaks who are their immediate neighbours. In order to understand fully their position and relations in America, some of their history and peculiarities should be given.

I. RUTHENIAN GREEK CATHOLICS.—The word Rutheniain is derived from the Latin Ruthenses, the former name for Russia, and of course the Ruthenians might well be called Russians. Indeed, the present Ruthenians declare that they are the original Russians, and that the present Russia and Russians owe their name and nation to the accident of successful conquest and assimilation. Their own name for themselves is Rusini, and it is probable that Ruthenian was merely an attempt to put this word into Latin. The word Ruthenian is first found in the writings of the Polish annalist, Martinus Gallus (1190), and the Danish historian, Saxo Grammaticus (1236). The original word, Rutenia, the Russian fatherland or dwelling-place of the Slavic people; and the English word "Russian" may therefore mean a derivative from the word Rutenia, as denominating the race, or it may mean a subject of the Russian Empire. The former is russeky, the latter rossievskiy, in Russian and Ruthenian languages, and hence, while the first word is translated either as Russian or Ruthenian, it carries no special reference to the Russian Empire. These people are also called "Little Russians" (an expression chiefly used for them in the Russian Empire), originally an allusion to their stature as contrasted with the Muscovites. Their language is known as Ruthenian, Russian, or Rusyn, and is spoken in Northern Hungary, Galicia, Bukowina, and in the Provinces of Volhynia, Podolia, Chelm, and Kiev in Russia. It is quite similar to the Russian language of the Russian Empire (sometimes called Great Russian), bearing about the same relation to it as Lowland Scotch does to English, or Platt-deutsch to German, and rather closer than Portuguese does to Spanish. The Ruthenians (in Austria) and Little Russians (in Russia) use the Russian alphabet and write their language in almost the same orthography as the Great Russians of St. Petersburg and Moscow, and the Ruthenian and Russian, though as a matter of fact they differ more, are as a matter of speaking, quite as the French and English might pronounce differently a word written the same in each language. This fact has led in late years to a recension of the Russian alphabet in Galicia and Bukowina by the governmental authorities, and by dropping some letters and adding one or two more and then spelling all the words just as they are pronounced, they have produced a new language at least to the eye. This is the "phonetic" alphabet and orthography, and as thus introduced it differentiates the Ruthenian language of these provinces more than ever from the Russian. The phonetic system of orthography is still fiercely opposed at home and in America, and as an Austrian governmental measure it is regarded by many as an effort to detach the Ruthenians from the rest of the Russian race and in a measure to Polonize them. This battle of the reformed phonetic spelling rages as fiercely in the United States as in Austria. The Greek Catholic Church has already received the Russian Church and is necessary to issue its official documents in both the phonetic and the etymologic spelling (as the older form is called), so as to meet the views of both parties. The phonetic spelling has never been introduced among the Ruthenians in Hungary, and their section of the church established therein is as Greek Rite there and in the United States. Besides the Ruthenians there are also the Slovaks who live in Northern
and North-western Hungary, close neighbours to the
Ruthenians, who are Greek Catholics, and who speak
a language almost like the Bohemian, yet similar
to the Ruthenian. It is written, however, with Roman
letters, and the pronunciation follows the Bohemian
more than the Ruthenian. These people seem to have
been originally Ruthenian, but became gradually
changed and moulded by the Bohemians and their
language for a long time to their language of the
same manner as the Bohemian. The Bohemians,
however, are in the Austrian part of the empire, while
the Slovaks are in Hungary. They have emigrated
to the United States in large numbers, and are about
equally divided between the Greek and Roman Rites.
This again necessitates the publication of books,
journal, in the Slovak language. It illustrates the difficulties of the Greek
Catholic priests in the United States, since they are
likely to have in their parishes Ruthenians (of the old
and new orthographies), Slovaks, and even those who
speak only Hungarian, having lost their Slavic tongue.
It is no uncommon thing to find a Greek Catholic
priest capable of speaking five languages: Ruthenian,
Slovak, Hungarian, German, and English. It is these
people as a whole who are comprehended under the
term Ruthenian, although that term applies strictly
to those speaking Russian and using the Russian
tongue. The defection of the eleventh portion of Russians fell away from the unity of the
Church in the schism of Constantinople, while a minority continued
faithful to the Catholic Church, and later many
more returned to unity. The Holy See, therefore,
made use of the ancient word Ruthenian to designate
those Russians who followed the Greek Rite in unity
with the Holy See, in order to distinguish them from
the Northern Russians who adhered to the schism.
Later on, those Russians who joined the union under
the Polish kings received the same name, and the
word Ruthenian is to-day used exclusively to designate
the Russians of Austria-Hungary, who are Greek
Catholics, in contradistinction to the Russians of the Russian Empire, who are of the Greek Orthodox faith.
The language of the Mass and the other liturgical
services according to the Byzantine Rite is the ancient
Slavonic (staroslovianski), and the Greek Liturgy was
originally translated by Sts. Cyril and Methodius about
590, and has been used ever since. It is curious to notice that the
Ruthenian language is much closer, both in spelling
and pronunciation, to the church Slavonic than the
present Russian language of St. Petersburg and Mos
cow. The letters in which the church books are printed
are entirely strange to the Cyrillic, or Kirillitca, said to have been introduced or, rather, adapted by St. Cyril from the
Greek alphabet, together with some additional letters
of his own invention. It consists of forty-three letters
of archaic form as used in the church books, but has
been altered and reduced in modern Russian and
Ruthenian to thirty-five letters. In the year 1562 Pope
John VIII formally authorized the use of the
Slavonic language forever in the Mass and in the whole
liturgy and offices of the Church, according to
the Greek Rite, and its use has been continued ever since
by the Catholic and the Orthodox (schismatic) Greeks of the Slavic races. This is the language used in the
Shishelmik (Missa), Trebniik (Ritual), Chasoslov (Book
of Hours), and other church books of the Ruthenian
Greek Catholics in America.

After the schism of Constantinople (1054) most
of the Russians became estranged from the unity of
the Church. (See under GREEK CHURCH, Vol. VI,
p. 526.) After the death of the Polish King, John the
Determined and Little Russia determined to return to
unity with the Holy See, and held a council at
Breze-Litovsk, at which a decree of union was adopted,
and where they chose two of their num
ber, Ignatius Potsey and Cyril Terletzky, to go to
Rome and take the oath of submission to the pope.
They declared that they desired to return to the full
unity of the Church as it existed before the schism
of Photius and Cerularius, so as to have in Russia one
united Catholic Church again. No change in their
rites or their calendar was required by Rome, but the whole of the ancient Greek Liturgy, service, and disci
pline (excepting a few schismatic saints' days and
days of processions) was given up. In December, 1565,
Clement VIII solemnly ratified the union of the two
Churches in the Bull "Magnus Dominus". On 6
October, 1596, the union between the Eastern and
Western Churches was proclaimed and ratified in the
Russian part of the Kingdom of Poland. A large
number of the Russian bishops immediately went over
many of the pious and zealous clergy. Thus Russia
led the way with his whole diocese, and his successor,
Methodius Terletzky, was a valiant champion of the
Uniat Church. This Greek Uniat Church even pro
duced a martyr for the Faith, St. Josaphat, Archbishop of Polotsk, who was slain by the Orthodox
partisans in 1633. In Galicia, however, the union
was slower. While priests and congregations became
Uniat, the Bishops of Peremyshl and Lemberg stood out
for nearly a century. But on 23 June, 1691, Innocent Vinnitzi, Bishop of Peremyshl, joined the
union, and in 1700 Joseph Shumianski, Bishop of Lemberg, (it was an admixture of Polish and
dignity by the pope in 1807), also took the oath of
union with the Holy See. From that time till now
the Russians on the northern slopes of the Carpathian
Mountains and on both sides of the River Dniester have
been united with Rome. On the southern side of
the Carpathians the Russians also accepted the union. In
the year 1636 Vassili Tarasovitch, Bishop of Munka
cies, acknowledged the pope as the head of the Church and
for it he was persecuted, imprisoned, and forced
to resign his see. But union with the Holy See could
not be stayed by such means, and on 24 April, 1648,
it was accomplished in the city of Ungvar by Peter Di
toshinski, the then Bishop of Munka
cies, and George Yakusitch, Bishop of Agri (Erlau). These two bishops
in solemn council, with sixty-three priests, abjured
the schism and confessed themselves Greek clergy holding the
Faith of Sts. Cyril and Methodius in communion
with Rome. Since that time the Ruthenian people
on maintaining the independence of the Kingdom of
Ruthenian Hungary have acknowledged the pope as the visible head of the undivided Catholic Church.

These Ruthenians have continued to practise their
ancient Greek-Slavonic rites and usages, and their forms of worship introduced into the United States
from Basilea, and predominating among the
Roman Rite, and have made them objects of distrust
and even active dislike, so that a few of the most
salient differences may be pointed out, although a full
statement will be found in the various articles on the
Eastern rites, ceremonies, and vestments. The Mass
itself is said in ancient Slavonic, the altar is separated
from the body of the church by a high partition called
the iconostasis, upon which the pictures of Christ and
His Mother, as well as various saints, are placed, and
the vestments of the Mass are quite different. The
stole is a broad band looped around the neck and
hanging straight down in front, the chasuble is cut
away at the front and closely resembles the
Roman cope, and instead of the maniple two broad
cuffs are worn, while a broad belt takes the place of
the girdle or cincture. Married men may be ordained
to the diaconate and priesthood; but bishops must be
celibate, nor can a deacon or priest marry after or
ordination. Priests of the Ruthenian Church
administration to children immediately after baptism, and
Communion is given to the laity under both forms, the
consecrated species being mingled together in the
chalice and administered to the communicant with
a spoon. Organs are not used in their churches, and
their church year follows the Julian Calendar, which is now thirteen days behind the Gregorian Calendar in use in the United States and Western Europe. Besides this, the Ruthenians (and the Russian Orthodox alike), display the so-called “three-armed” (or Russian) cross fashioned in this manner on their churches and use it upon their missals, prayer-books, paintings and banners, as well as other objects. They make the sign of the cross in the reverse direction to the Roman method, and in the service the men and women are segregated from each other upon different sides of their churches.

It is from these people, inhabiting Galicia, Bukowina, and Hungary, that the Ruthenian Greek Catholic population has come. Their earliest immigration to the United States began in 1879, from the western portion of Galicia near the Carpathian Mountains, the so-called Lemkovshchini, and then spread throughout the Galician and Hungarian sides of the mountains. At first it was hardly noticed, but it grew year by year, the earliest immigrants coming from Grybow, Gorlice, Janów, Jeniav, Krosno, and elsewhere in Galicia, and from Szépes, Sáros, Abauj, and Ung in Hungary, until finally the governmental authorities began to notice it. At the post offices in many of the mountain places in the Ruthenian portion of Galicia it was observed that the peasants were receiving large sums of money from their fathers, sons, or brothers in America. The news spread rapidly, and the officials took it up, and so emigration was at once stimulated to the highest degree. Every year it has increased, and Ruthenian societies are formed here to assist their newly-arrived brethren to find employment and to give information to those at home about America. It is not possible to tell exactly how many Ruthenians and Slovak Greek Catholics have come to the United States, because no statistics have been kept by the United States Government in regard to religious faith of immigrants, and not always accurate ones in regard to race or nationality. Still the immigration reports show that immigration from Austria-Hungary from 1861 to 1868 was annually in the hundreds; and from 1869 to 1879 it ranged from 1500 to 8000 annually; and in 1880 it suddenly rose to 17,000. From 1880 to 1908 the total immigration from Austria-Hungary to the United States amounted to 2,780,000, and about twenty thousand of them are Ruthenians and Slovaks. Within the last four years (1905-1908) the immigration of the Slovaks and Ruthenians has amounted to 215,972. To this must be added the Croatians and Slavonians (117,995), a large proportion of whom are of the Greek Rite. It is estimated that there are at present in the United States between 350,000 and 400,000 Greek Catholic Ruthenians, including as such the Greek Catholic Slovaks and Croato-Slovians. The largest number (over one-half) are in Pennsylvania, while New York, New Jersey, and Ohio have each a very large number of them, and the remainder are scattered all through the New England and Western States. The best information obtainable in advance of the coming census of 1910 their distribution is as follows:

After the Ruthenian immigration had begun in considerable numbers, it was but natural that they should desire to establish a Church of their own rite. At Shenandoah, Pennsylvania, the Ruthenian settlement had so increased that towards the end of 1884 they sent a petition to Archbishop (afterwards Cardinal) Sylvestr Sembratovitch, Metropolitan of Lemberg, praying that a Greek Catholic priest might be found a parish of the Greek Rite at that place. The petitioners promised to build a church for him if he were sent. In the following year (1885) Rev. Ivan Volanski, of the Diocese of Lemberg, arrived in the United States, the first Greek Catholic priest to take up his work among them here, and at Shenandoah. He presented himself in Philadelphia with his letters, but, being a married priest, he encountered great difficulty in being recognized as a Catholic priest in good standing. However, he proceeded to Shenandoah, where under great difficulties and discouragements he organized his congregation and built it up into a very celebrated Mass and other services in a hired hall, for he was unable to obtain the use of the local Latin churches for Greek services. The matter of his regularity and his acceptance as a priest in Pennsylvania for the Ruthenians was finally arranged through Cardinal Sembratovitch. In the summer of 1886 he was able to dedicate a frame church dedicated to St. Michael the Archangel, the first Greek Catholic church in America. He then organized there the first Greek Catholic Society, that of St. Nicholas, built and organized a small parochial school, and then proceeded to form congregations and to found churches in other places where the Ruthenian population was thickly settled and needed religious instruction. Congregations and started churches at Hazleton (1887), Kingston (1888), and Olyphant (1888) in Pennsylvania, at Jersey City, New Jersey (1889), and at Minneapolis, Minnesota (1889). Finding his Ruthenian people without any reading-matter in their own language, he sent to Galicia for Russian type, and in the latter part of 1886 he obtained a few fonts from the Shevchenko printing office at Lemberg. He then commenced the publication in "phonetic" Ruthenian of a small paper issued every two weeks at Shenandoah under the name of "America." This paper lived until about 1890, but got involved in the labour troubles in the mining districts which destroyed much of its usefulness. In the spring of 1887 the Metropolitan of Lemberg sent him another priest, Rev. Zeno Lakovitch (unmarried), and a lay teacher, Volodimir Semenovitch from the University of Lemberg. Father Lakovitch laboured in Shenandoah and Hazleton, where he died a year later. In 1888 Rev. Constantine Andrukovitch was sent from Lemberg, and, in addition to his parochial work, he, with Father Volanski, undertook to establish a series of stores in several towns in Pennsylvania to sell goods to the Ruthenians and thus avoid the enormous prices for which the mining companies charged them. The business venture was unsuccessful, and, with other matters, it caused the recall of Father Volanski to Galicia. He remained there some time, then was sent as a missionary to Brazil, where his wife died, when he returned to Galicia, where he was a priest until his death in 1905. The business venture caused the recall of Father Andrukovitch, who returned to Galicia in 1892. The next three Greek clergymen were Rev. Theophan Obushkevitch (of Galicia), Rev. Cornelius Laurisciu, and Rev. Augustin Laurisciu (of Hungary), who took up their missionary work energetically. The first two are still Greek Catholic parish priests in the United States. Since their coming there has been a constant accession of Ruthenian Greek priests from Galicia and Hungary, and the building of churches and schools has gone on with increasing success. Even quite costly churches have been built. In Jersey City the old church has given way to a fine stone and brick church, which is an excellent specimen of Russe architecture. While at Homestead and Shamokin, Pennsylvania, there are quite costly churches erected. Many of the Greek Catholic churches are purchased from Protestant denominations.
altered and rearranged for the necessities of their rite, while one or two are churches brought over from the schismatics. The first Greek Catholic Mass in New York City was celebrated in the basement of St. Brigid's church on Avenue A (which was put at the disposal of the Greeks by the late Archbishop Corrigan), on 19 April, 1890, by the Rev. Alexander Druby, who is still in active parish work in America. This Greek congregation afterwards bought a church in Brooklyn (St. Elias, 1892), and there was no Ruthenian church in Manhattan until the Greek Catholic church of St. George was opened in 1905. In February, 1909, the Greek Bishop Soter bought a Protestant Episcopal church in Philadelphia, Pennsylvania, refitted it, and consecrated it as the Greek Cathedral of St. Mary of the Immaculate Conception, and in the adjoining parish house and rectory will also open a seminary for the education of American priests of the Greek Rite. Of course many Ruthenian settlements in various localities are too poor to build and maintain a church, nor are there just at present sufficient priests in America to attend to their spiritual needs. Still there are at present (1909) about 140 Ruthenian Greek Catholic churches in the United States, and there are also ten more new ones projected for waiting congregations. Their churches are distributed as follows:

Several of these priests are converts from the Orthodox Greek Church in the United States. As it has been said, men who are already married are ordained to the diaconate and priesthood in the Greek Church, and so it naturally followed that married priests were sent to America. While a married priesthood seems repugnant to a Catholic of the Latin Rite, yet it is strongly adhered to by the Greek Catholics as vaguely a part of their nationality and Eastern Rite. All American Greek Catholic priests will hereafter be ordained from celibate candidates only, according to the provisions of the Apostolic letter "Ea semper", which will be referred to later. The growing importance of the Greek Rite in America, the dissensions arising out of old-country political factions among the Ruthenians, which will be mentioned later on, and which occasioned serious interference with the normal growth of the Greek Church, and the increasing intensity of the efforts of the Russian Orthodox to detach the Ruthenians in America from their faith and unity (see GREEK ORTHODOX CHURCH IN AMERICA) caused the Holy Father in 1907 to provide a Greek Catholic bishop for America. Previous to this (1902) the Holy See had sent the Right Rev. Andrew Hodobay, titular abbot and canon of the Greek Diocese of Eperes, as Apostolic visitor to the Ruthenians in America, who examined the condition of the Catholics of the Greek Rite in all parts of the United States and returned to Europe in 1906 with his report. The choice of a bishop for the Ruthenian Greek Catholics fell upon the Right Rev. Stephen Soter Ortynaki, a Basilian monk, hegumenos of the monastery of St. Paul, Michalewka, Galicia. On 15 May, 1907, he was consecrated titular Bishop of Daulia by the Most Rev. Andrew Roman Ivanovitch Schepititsky, Greek Metropolitan of Lemberg, and the other Greek bishops of Galicia, and he arrived in America on 27 August, 1907. Shortly after his arrival (September, 1907) the Apostolic Letter "Ea semper" concerning the new bishop, but placed him as an auxiliary to the Latin bishops, and as it modified several of their immemorial privileges in various ways. The Sacrament of Confirmation was thereafter to be withheld from infants at baptism, and was not to be conferred by priests, but was reserved for the bishop only (as in the Latin Rite), and among the Greeks in Italy. The priests were not thereafter to be ordained in America or to be sent thither from abroad, while the regulations as to the marriage of persons of the two rites were also modified. The Greek Ruthenian laity saw in it an attack upon their Slavic nationality and Eastern Rite, and a reaction which the Russian Orthodox Church so long fostered and magnified. They were told by the Orthodox that the whole letter was a latination of their Greek Rite in regard to confirmation and Holy orders, and was a nullification in America of the Decrees of the popes that their rite should be kept intact. This resulted in some losses (about 10,000) from the Ruthenians to the Russian Church, but already many of them are coming back. Matters, however, adjusted themselves, and the work of the new bishop is having good results. The whole matter of a Greek bishop in America is so far in an experimental stage, and is not a solution of the current and future immigration, the stability and solidarity of the Ruthenians in their adherence to their faith and rite, as to what powers and authority their bishop shall ultimately have. Where there exists an evident and actual need for it the Holy See has always granted the request, but where a minority of a population seems bound to become assimilated with, and eventually absorbed into, the surrounding population the case may be entirely otherwise. The newly appointed bishop has had success in establishing churches and parochial schools and in inducing his Russian flock to become American citizens and identify themselves with American life while not abandoning their faith and their Eastern Rite. He aims to establish English-Ruthenian schools in each Greek parish and to open a Ruthenian-American seminary at Philadelphia for the education of American-born Ruthenians as priests of the Greek Rite. There is already one American-Ruthenian priest, lately ordained. In purely theological matters they will be educated as in Latin seminaries, if not actually sent there, but in the Oriental church rites, discipline, liturgical language, music, and customs the proposed seminary will fill a place for the Ruthenians which our present diocesan seminaries do not fill. The number of church or parochial schools of the Ruthenians is about fifty, where instruction in English, Russian, church catechism, and the elements of a general education is given.
Sunday-school system has as yet been established amongst them, nor are there any nuns or religious engaged in teaching in the United States.

In order to understand somewhat clearly the situation of the Ruthenians in America, account must be taken of their national home politics, which they bring with them and fight out often quite bitterly in this country for recognition or union in the nationalities of the western and southern slopes of the Carpathian Mountains.

The northern Ruthenians derisively call their southern brethren “Hungarians” (Magyars), while the latter return the compliment by calling the former “Poles” (Polack). The point of this lies in the fact that each of the nationalities named is primarily detected by the Ruthenians on either side. But these are merely surface divisions between the two bodies of the same race. Their actual factional differences are much deeper. There may be said to be, broadly speaking, three Ruthenian parties or factions in the United States: (1) The Moscoyphiles, or Moskalophiles (Mos-kal in the Little Russian word for a Great Russian), who aim at an imitation, if not an actual adoption, of all things Russian as found in the present Empire of Russia, looking towards Moscow as the seed and kernel of Russian or Slavic development, and who are strong in Pennsylvania and Ohio or Ukrainians (the Ukraine is the adjoining borderland provinces of Russia and Galicia), who stand for the interests of the Ruthenian people in Austria and of the Little Russians in Russia, as distinct and apart from the Great Russians, and who desire to develop the Ruthenian (Little Russian) language, literature, and race along their own lines, entirely distinct and apart from that of the present-day Russian Empire; and (3) the Ugro-Russki, or Hungarian Ruthenians, who keep all the old Russian racial traditions, reverencing their Russian language, literature, and ancestry as models to follow in their development, but at the same time following the politics of Moscow and St. Petersburg in such development, either in Hungary or in the United States. The first two parties are Galicians, the last one Slovaks and Hungarian Ruthenians. These parties are sometimes divided into smaller factions, perplexing for an outsider to understand, such as those who desire to introduce the Hungarian language and customs, even using Hungarian in the liturgy of the Church. It is needless to say that none of these larger parties ever agree upon any one subject other than their Slavic nationality and Greek Rite. The Moscoyphiles often unite with the Ukrainians in opposition while the Ugro-Russki separate them into the slightest pretext when Russo-Slavic ideals are to be proclaimed, and are fiercely against everything that does not look Russiaward, for Russia is their big brother. On the other hand the Ukraini will have nothing to do with modern Russia; it is behind the age and is in the march of civilization; and they have besides offended both the other parties by adopting the “phonetic” style of spelling. This offence seems to be intensified because the new Greek bishop is somewhat of their way of thinking. The Ugro-Russki are violently opposed to whatever does not accord with the racial traditional traditions of the Ruthenians, and Slovak people within the borders of Hungary, and do not agree with the views and actions of either of the other two parties. Consequently, the Greek Catholic bishop has to publish his official communications in Russian, both phonetic and old-style, and in Slovak in order to reach all his people.

In general the Greek Catholingo views have organized into societies. Each church has its own local religious and singing societies, but there are other and larger bodies known as "brotherhoods" or lodges (bratstva), which have been of great assistance in building up the Ruthenian churches. They are usually of the nature of mutual benefit societies, assist in finding work, helping in religious matters and the like, having always the Greek Rite and the Ruthenian race as their main inspiration. Some of them provide that their members must show that they have made their Easter communion or forfeit membership, and provide for the dropping of a member when he ceases to be a Catholic. These brotherhoods or lodges are combined into a general federation, of which there are three main bodies in the United States. It has an annual convention composed of delegates from the various brotherhoods, and always has some well-known Greek Catholic priest as its spiritual director. The largest and oldest of these federations is the "Soyedinennya Greko-Kaltochesceki Ruskikh Bratstev" (Russian Greek Catholic Union), which was founded in Pennsylvania in February, 1892. It is almost wholly composed of Slovaks and South-Carpathian Ruthenians. It now (1909) has 542 brotherhoods and 22,490 members, and has besides a junior organization for young people in which there are 163 brotherhoods and 5400 members, and is in a flourishing condition in every way. It also publishes a weekly Greek Catholic newspaper at Homestead, Pennsylvania—"the Amerikansky Russki Vietnik (American Russian Messenger)", printed both in the Russian and the Slovak languages. Another is the "Poloettsev" (the Ukranian) in the "Ukranian Russki Ugro-Russki party. The second of these federations is the "Russki Narodny Soys" (Russian National Union), which was founded in 1894, and is a Galician offshoot from the preceding society. It is chiefly composed of Galicians who are Ukranians, and who express themselves strongly against the Roman Empire and the Orthodox Church. It now has 249 brotherhoods and 12,760 members, and it likewise publishes a weekly newspaper, the "Sveboda" (Liberty), which is printed in New York City, in "phonetic" Little Russian. The third of these federations is the "Obozhestvo Russkikh Bratstev" (Brotherhood Union), which was founded 1 July, 1900. It is composed almost wholly of Galicians of the Moscoyphile party, and a small minority of its membership is also made up of Galicians who are either Greek Orthodox or of Orthodox proclivities, for it is quite pro-Russian and opposed to the Ukranians. It has now 120 brotherhoods and 6430 members, and publishes its weekly newspaper, Pravda (Truth) at Olyphant, Pennsylvania, in the Ruthenian old-style spelling. There is also the "Rimako a Greko Katolicka Jednota" (Roman and Greek Catholic Union) of Pennsylvania, a Slavic federation with some 175 brotherhoods of about 9000 members, and it is estimated that about one-third of these are Greek Catholic. This federation also publishes a weekly paper, "Bratstvo" (Brotherhood) in the Slovenian language. Besides these publications there is also the "Dushapsyri" (The Pastor), published in New York, which is exclusively a religious periodical and devoted solely to the affairs of the Greek Catholic Church in America. In it the official utterances of the Greek bishop are usually published. There are also many other American Ruthenian papers and periodicals which have nothing whatever to do with church matters, but are devoted to labour questions, national issues, and to Socialism. Unfortunately, many of these publications, even the Catholic ones, exhibit too much of a tendency to attack their opponents in strong language and to belittle the efforts of those not of their party, and their usefulness for good is thereby lessened. From this number of booklets on church and national topics have been published in Slovak and Ruthenian, and every year there are issued a number of year-books or calendars containing a variety of information and illustrations concerning the Ruthenian Greek Catholic Church in America and abroad.

The immigration of the Ruthenian Greek Catholic
into the United States and the organization of their churches and rite has been too recent to properly speak of a notable division of representatives of their clergy or laity. Nearly every one who took a prominent part in their settlement and development is still alive and engaged in active work, while a vigorous younger generation born on American soil is now growing up. Among the Greek priests here in America several who are authors of learned works upon the church language and ritual, representatives who have filled posts of considerable distinction in the dioceses in Hungary and Galicia whence they came, and many who have constantly employed their tongue and pen in the education and improvement of their fellow-countrymen in this country. There is, however, no reliable idea of the number or influence of women devoted to church service in the United States, nor has any attempt been made so far, either on the part of the clergy or laity, to establish here anything of the kind.

In addition to the Ruthenian Greek Catholics in the United States, there are a large number of them in Canada. They are principally settled in the provinces of Manitoba, Alberta, and Saskatchewan, where they have devoted themselves to agricultural pursuits. It is said that a Ruthenian often works hard in the United States, saves up his money, and emigrates to Canada, where he can obtain land under the homestead acts. There is besides a considerable direct immigration from Galicia and Hungary, but the majority of the Canadian Ruthenians are Galicians. Their first church (St. Nicholas) in Canada was built about 1900 at Winnipeg by the Basilian monks who are in charge of the Greek missions in the northwest. The Very Rev. Platonides Filas, O. S. B. M., who is now (1909) the superior of the order in Galicia, was the first missionary sent there. Afterwards, in 1905, another church (St. Joseph) was built at Edmonton. Later on a monastery was established in Winnipeg, with a bishop at Edmonton, Alberta. From these central points, there are now (1909) over sixty missionary stations established with small Greek chapels at Oaknook, Swan River, Barrows, Ethelbert, Garland, Grand View, Minatonas, Yorkton, Beaverdale, Rabbit Hill, Star, Lamont, Nundare, and Skaro. In this section the Ruthenians have their own bishop, the Right Reverend Father Monomach, who is well provided for, and with certain schisms from the Russian Orthodox known as the "Seraphimites", or independent Greco-Russian Church. There are three missionary communities of the Basilian monks: at Winnipeg, Edmonton, and Monaster. The Greek clergy in Canada consist of one monk in the French province, and the number of Ruthenian Greek Catholics is between 45,000 and 50,000, widely scattered through these northwest territories. In Canada there is a religious order of women of the Greek Rite, the Servants of Mary (14 in number), whose mother-house is in Lemberg, Galicia. They have schools at Winnipeg, Edmonton, Monaster, and in some outlying districts. The Canadian Ruthenians publish a small paper (Canadian Farmer) and have several societies on the pattern of those in the United States.

II. ROMANIAN GREEK CATHOLICS.—These people come from the eastern provinces of Hungary known as Transylvania. They are of a nationality which claims to come down from the Roman colonists who were settled there by the Emperor Trajan, and hence they still call themselves Romani. These Transylvanians are really of an older political order and settlement than the country known as Romania, which bounds Transylvania on the east. The inhabitants of both lands are of the same stock, but those in Hungary were organized and in possession of a fair amount of education and political rights under Hungarian rule whilst the present Kingdom of Romania was still oppressed under Turkish rule. The latter only obtained its independence after the Russo-Turkish war of 1878, and in turn began the education and enlightenment of its people.

The Rumanian language is a Latin tongue, somewhat similar to Italian, but with a considerable mixture of Slavic, Greek, and Turkish words in it. It is also the language of the Mass and liturgical offices according to the Greek Rite among the Romanians, and an instance where the Church has made a modern tongue the liturgical language. Owing to Slavonic influences, the Rumanian language was formerly written in Slavonic or Russian characters, and this continued until about 1825, when the Roman alphabet was adopted, first by the Catholic Romanians and then by the Orthodox, and it has been used ever since. The Rumanian church books the Slavonic letters (the Cyrillic alphabet) had to give way to the Latin letters, just as the Slavonic Liturgy in the church services had given away to the Rumanian, and now both the Catholic and the Orthodox Mass-books and Office-books are printed beautifully in Latin letters and modern Rumanian, whether for use in the churches of Transylvania or Rumania. The Rumanian Church, although Greek in rite, was originally under the jurisdiction of Rome up to the ninth century, when Constantinople assumed jurisdiction over it, and later on, when Transylvania fell into secular hands, the Greek Church went with it. Frequently, however, during the centuries that followed, partially successful attempts were made towards reunion. At the time of the so-called Reformation in Western Europe the Calvinists endeavoured to persuade a portion of the Rumanian clergy and their flocks to embrace the new doctrines. This naturally led to an examination of matters wherein the Roman Church differed from the Calvinists, and also to the points wherein it was in harmony with the Greek Church, and later to a desire for union with it. The union of the Rumanian Greek Church in Hungary (for the other Rumanians were subjects of Turkey) with the Holy See dates from 1700. The preliminaries for union had been in progress for several years before, and once or twice had been on the eve of success. In the year just mentioned the Metropolitan Athanasius held a general council of the clergy at Alba Julia (Gyulafehervar), which declared, on 5 September, 1700, that "freely and spontaneously moved thereto by the impulse of Divine Grace, we have entered upon a union with the Roman Catholic church". This decree was signed by the metropolitans, 54 arch-priests, and 1583 priests. The set of union was confirmed at the Council of Trent in 1567 (Council of Trent of 1563), and the Rumanian hierarchy was for a long time the only Greek hierarchy in Transylvania. Towards the middle of the last century the Greek Orthodox Rumanian hierarchy was also established. The Rumanian Greek Catholics are very proud of their union with Rome, and church documents are often dated not only by the year of our Lord (pro anul Domnului), but also by the year of the union (pro anul de la santa unire).

The Rumanian immigrant does not seem to have began to come to the United States until about the beginning of the present century. In the year 1900 Rumanian immigration from Transylvania and Northern Hungary began to flow towards the United States, and lately has been followed by immigration from Rumania itself. It has steadily increased until now (1909) there are between 60,000 and 70,000 Romanians in the United States. Nearly all these have come from Hungary; only a small number are from the Kingdom of Rumania. Those from Hungary are from the southern and western counties of Transylvania, chiefly the counties of Sattmar, Fălăc, Fogaras, Bihar, and Times. The Greek Catholics among them number about 45,000, and they are scattered through the United States from the Atlantic to
the Pacific. The chief places where the Rumanian Greek Catholics are settled are Cleveland, Youngstown, Columbus, Newark, and Cincinnati, Ohio; Sharon, Erie, Pittsburg, Windber, and Scalp Level, Pennsylvania; Grand Island, Indiana; and Terre Haute, Indiana; Trenton, New Jersey; St. Louis, Missouri; and New York City. They are all quite poor and are generally found, like all recent immigrants, in the humblest and poorest walks of life. They lack sufficient missionary priests of their own rite, and at present many and many parishes in Cleveland, The Rev. Dr. Epaminondas Lucaci was the first Greek Catholic Rumanian priest to come to this country. He was sent here in 1904 by the Greek Catholic Bishop of Lugos, at the request of the late Bishop Horstmann of Cleveland, who was asked for a priest of their own rite by the Rumanians settled in Cleveland. When he came, he set about forming a congregation and building a church for his people of the Greek Rite. His energy and ability among his countrymen led to the erection and dedication, on 21 October, 1906, of the church of St. Helena in Cleveland—the first Rumanian Greek Catholic church in America. His seal also led to the formation of congregations in other localities which he visited regularly. In 1908 the second Rumanian church was built and dedicated at Scalp Level, Pennsylvania, which serves as the central point for missionary work among the Rumanians of Pennsylvania. In the third church, completed and dedicated at Aurora, Illinois, and it serves in its turn as the centre of Greek Catholic work among the Rumanians of the Western States. A fourth has just been constructed at Youngstown, Ohio. There are now (1909) four Rumanian Greek Catholic priests in the United States, and more are expected to arrive. The Greek Catholic congregations have been formed in many localities, and they are regularly visited by the Greek Catholic priests who are here, and regular parishes will be formed and churches erected as soon as possible. A Rumanian Greek church is now in course of formation in New York City and awaits a priest from Transylvania. While they have a small Catholic church paper, "Catholic American", they also publish a fine eight-page weekly, "Romanul", at Cleveland and New York, which gives a great deal of church news, and they also publish a little monthly magazine and an illustrated yearly which many church societies, and progress are given. The weekly paper was originally founded by Father Lucaci to provide reading-material and general news for his people, but it has since passed into other hands. Their societies are not strictly speaking church organizations, but are rather mutual benefit societies, and some even have a limited membership of the Orthodox, for the Rumanians of Hungary, whether Greek Catholic or Greek Orthodox, are very closely united upon racial and national feelings, and do not exhibit the hostility sometimes shown between the two Churches. The principal societies are "Dacia Romana", "Ardealana", "Unirea Romana", and "Societatea Traian", numbering altogether about 3000 members, and generally identified with the church congregations.

III. SYRIAN (MELCHITE) GREEK CATHOLICS.—About 1856 the first immigration from the Mediterranean coast of Asia began to reach the shores of the United States, when the Armenians, Greeks, and Syrians began to swell the numbers of our immigrants. Among them came the Syrian Greeks, or those Syrians who were of the Byzantine Rite, whether Catholic or Orthodox. The name Melchite is not exact for Greek Catholics (Catholic Encyclopedia, vol. VI, p. 756), is occasionally used to designate a Syrian of the Greek Orthodox Faith, but now it rarely has that meaning, since the schismatics preferring to be known as Syro-Arabsians, at least in the United States, where they are largely under Russian influence, for it is nearly always applied to the Catholics. After the Council of Chalcedon the Melchites followed the fortunes of the Greek Church of Constantinople. When it was separated from Rome they also gradually became more and more inert. Occasionally a bishop became Catholic, and there were sporadic attempts to reunite them with the Holy See. Cyril V, who was elected Patriarch of Antioch about the year 1700, decided to come back to union and made his submission and profession of the Catholic Faith to Pope Clement XI. and his example was followed by the Archbishop of Tyre and Sidon, the Bishop of Beirut, and other prelates. From that time on the Syrian Greek Catholics have had a restored Catholic line of Patriarchs of Antioch. Strangely enough, the word Melchite, which had been used to designate those who adhered to the doctrines of the Church of Constantinople when it was Catholic and in unity, and who even followed it when it left the unity of the Church, came eventually to mean, after the union of Cyril V and his fellow-bishops, almost exclusively those Syrians of the Greek Rite who were Catholics and united with the Holy See. Their rite, of course, is the same as that of the other Greek Catholics, but the language used in the Mass and the administration of the sacraments and in the church offices is the Arabic, with the exception of certain prayer-endings and versicles of the Mass, which are still included. The right to appointment of a Melchite priest may celebrate entirely in Greek if he so desires, and the Catholic Missal is printed in parallel columns in each language as to the parts which are to be intoned or said aloud.

At first these Syrians were in small numbers and were not distinguished from the Arabic-speaking Maronites or from the Syro-Arabian Orthodox Greeks, all of whom began to come to this country about the same date. This Syrian immigration, as compared with that from other lands, has never been very large. The Greek Catholics came at first from the same localities as the Maronites—Beirut and Mount Lebanon; but now they come from Damascus and other parts of Syria as well. In 1891 Rev. Abraham Bechewate, a Basilian monk of the Congregation of the Holy Saviour, from Saida in the Diocese of Zahleh and Farzul, Mount Lebanon, was sent to this country by the Patriarch of Antioch to take up missionary work among his countrymen. After his death the Congregation was instrumental in establishing missions and congregations in various cities and in having other priests sent to assist him. His first efforts were confined to New York City, and at present the Melchites in New York City use the basement of St. Peter's church on Barclay Street. In 1896 another Syro-Arabsian priest, Father Gebran, erected a church in Chicago, and in 1899 there were fourteen Melchite churches or congregations in the United States and Canada. Besides these there are many mission stations which the Melchite Greek priests visit periodically. These churches are situated at the following places: New York City; Boston and Lawrence, Massachusetts; Omaha, Nebraska; Cleveland, Ohio; Dubois and Scranton, Pennsylvania; Chicago and Joliet, Illinois; Rookley, South Dakota; La Cross, Wisconsin; Pawtucket, Rhode Island; and Montreal and Toronto, Canada. So far they have erected four half-sired churches in Lawrence, Cleveland, Dubois, and La Crosse. The cost of land in the large cities has been large, and they have succeeded in raising funds in the other places as assembled either in the Latin churches or in rented premises. The number of the Syrian Greek Catholics in the United States (1909) is between 5000 and 10,000, and they are to be found chiefly in the New England States, Pennsylvania,
Ohio, and Illinois. For their spiritual needs there are thirteen Syrian Greek Catholic priests, seven of them Basilian monks of the Congregation of the Holy Savior. In addition to America and Fars, about half of the other Basilian monks of the Congregation of St. John (Soarite) from the Dioceses of Aleppo and Zahleh, and two secular priests from the Diocese of Beirut. Owing to the poverty of most Syrian congregations, they have not maintained any schools and have no publications. The Diocese in America has, however, managed to have Syrian children attend the nearest Latin parochial school, if there be one. They have a small Arabic paper “Al-Kown” (The Universe), published in New York City, and have the church society of St. George.

IV. ITALIAN GREEK CATHOLICS.—In the extreme southern part of Italy and in the Island of Sicily, the Greek Rite has always flourished, even from Apostolic times. Three of the popes (Sts. Eusebius, Agatho, and Zacharias) were Greeks from that region. Many of the Greek saints venerated by the Church were Southern Italians or Sicilians, and the great Greek monastery of Grottaferrata near Rome was founded by St. Nilus, a native of Rossano in Calabria. The Greek Rite in Southern Italy never fell into schism or separated from unity with Rome at the time of the great Schism of Constantinople. Although they held to their faith and rite, yet the fact that they were not thereafter closely tied with the Roman Church, and therefore the followers of their rite to diminish. After the schism an idea grew up among the Italians of the Roman Rite that the Greek language and ritual were in some indefinable way identified with the schism. This was intensified upon the failure of the Greeks after the Council of Florence (1439) to adhere to the union. Therefore, as the Greek language died out among the southern Italians, they gradually gave up their Greek Rite and adopted the Roman Rite instead. While the Greek Rite thus became gradually confined to monasteries, religious houses, and country towns, it might perhaps not have died out on Italian soil, yet it was reinforced in a singular manner by immigration from the Balkan peninsula in the period between 1450 and 1500. The Albanians, who were converted to Christianity and followed the Greek Rite, using the Greek language in their liturgy, were persecuted by the Turks, and, by reason of the fact for the Italo-Albanians under their chieftain, George Castriota, also known by his turkish name of Scanderbeg (Alexander Bey), were forced to leave their native land in large numbers. Scanderbeg applied to Pope Eugene IV for permission for his people to settle in Italy, so as to escape from persecution. On reaching Italy, they settled in Calabria and Sicily, and received among other privileges that of retaining their Greek Rite wherever their colonies were established. Since that time they, like the Greek inhabitants of Southern Italy, have become entirely Italianized, but, together with them, have retained their Greek Rite quite distinct from their Latin neighbours down to the present day. All the Italians who follow the Greek Rite in Southern Italy are known as Albanese (Albanians), although only the older generations of that race retain their knowledge of the Albanian tongue. The Mass and all the offices of the Church are of course said in Greek according to the Rite of Constantinople, although a few Latinizing practices have crept in. The smaller churches do not have the iconostasis, priests do not confer confirmation, but it is given by the bishop, and they follow the Gregorian calendar instead of the Julian calendar, as well as the other Gregorian calendars.

When the immigration to America from the south of Italy and from Sicily began in large proportions, the Italo-Greeks came also. They are from Calabria, Apulia, and Basilicata in Italy, and from the Dioceses of Palermo, Monreale, and Messina in Italy. They are settled in the United States chiefly in New York, Philadelphia, and Chicago, and throughout the States of Pennsylvania and Illinois. It is claimed that the Greek Catholic population of Italy has sent a third of its clergy to America, and that they have been enrolled in the parishes of the United States, assisting in the churches of the Latin Rite. They have been enrolled in the parishes of the United States, assisting in the churches of the Latin Rite. They have not shown themselves in any wise as devoted church-goers, but since the foundation of the Greek Catholic church, it is apparent that the number of converts has been in a measure neglected, for everyone assumes that an Italian must be of the Roman Rite and ought to go to a Latin church. They have neither the means to construct churches of their own rite nor do they care to frequent churches of the Latin Rite, although they have the necessities usually associated with the Italian Catholic churches and celebrate their festivals according to the Latin. In many places they attend the church of the Hellenic Greek Catholics, and in some few instances some have gone to the Hellenic churches of the Greek Orthodox, where the language of the ritual is Greek. During the year 1904 the first (and so far the only) Italian Greek Catholic priest (Pope Rev.) Ciro Pinola, was sent from Sicily by Cardinal Celesio of Palermo to the United States, to look after the scattered flock of Greek Catholics here, and he is now a priest of the Archdiocese of New York. He found all Greek-speaking people accustomed to the language and rites of the Greek Church, as well as the fact that the inertia of so many of the newcomers to these shores, had not attended the Latin Catholic churches, and that they had become the prey of all sorts of missionary experiments to draw them away from their allegiance to the Faith. Besides, they were among the poorest of the Italian immigrants and had been unable to establish or maintain a chapel or church of their rite. He took energetic steps to look after them and on Easter Day, 1906, had the pleasure of opening the first Italian Greek Catholic chapel on Broome Street in the City of New York. This has progressed so far that he has now a larger missionary chapel (Our Lady of Grace) on Stanton Street, with a congregation of about 400, where the Greek Rite in the Greek language is celebrated. He has also various missionary stations in Brooklyn and on Long Island, which he visits at regular intervals, but he has been unable to do anything for the Italo-Albanian Church except to educate them and elsewhere. Other priests of their rite are needed. There is a small school attached to the Greek Catholic chapel in New York where the Church Catechism and Greek singing is taught, as well as several Italian and English branches, and children are instructed in their religious duties. From time to time is founded the “Fraternita del Santissimo Crocifisso”, a society for mutual benefit, religious instruction, and the building of an Italian Greek church. There are some ten or twelve Italo-Albanese societies, having branches in various parts of the United States, but devoted mostly to secular objects. There is also a small weekly Italian paper, “L’Operaio”, for the Italo-Albanese and their Greek Rite, but it is also devoted to Socialism and the wildest labour theories, so that its usefulness is doubtful.

Nothing, except a few newspaper and magazine articles, has been written in English on the West of the Greek Catholics in America; their own publications must be consulted. American Russkii Kalendarev (New York and Pittsburgh, 1897–1905); Russko-Amerskii Kalendarev Soznan (Scranton, 1902); Matveev, Zovu umyshlenie (New York, 1893); Vizina (LVII. St. Petersburg, 1897); Kalendar dlya Amerikanskih Russkikh (New York, 1907–1909); Messianskie Vedomosti (Eng- lish, 1890–1900); Chairak (1890–1900); Chairakski Kalendarz Zlatoj Dniom Romanul (Cleveland, 1909); Annual Reports of Commissioner of Immigration (Washington, 1890–1905); Desfrees, XIX (29th, Deere), New York, and the files of Vizina, Przad, and Zobodas.

ANDREW J. SHIPMAN.

Greek Church.—This subject will be treated under the following heads: I. Explanation of Terms; II. The Greek Orthodox Church and Its Divisions; III. Greek Catholic Church.
The Greek Church is divided into: (1) The First Five Centuries; (2) Decay of the Greek Churches of the East and Rise of the Byzantine Hegemony (451-847); (3) The Greek Schism; Conversion of the Slavs (ninth to eleventh century); (4) Institutions Rome and Byzantium (twelfth to fifteenth century); (5) From 1453 to the Present Time—Relations with the Catholic Church, the Protestants, etc. Under (2) will be found: (a) Internal Organization of the Byzantine Churches; (b) The Emperor; Relations between East and West; Liturgy. Under (5) (c) External Organization; (d) Hesychasm.

I. EXPLANATION OF TERMS.—In the East, when a Church is spoken of, four things must be kept distinct: the race to which the adherents of the Church belong; the speech used in their everyday life, and in their public devotions; the ecclesiastical rite used in their liturgy, and their actual belief, Catholic or non-Catholic. It is because these distinctions have not been, and are not, even now, always observed that a great confusion has arisen in the terminology of those who write or speak of the Eastern (Oriental) Churches and of the Greek Church. As a matter of fact, the usual signification attached to the words Eastern Church, outside the Church, or of Byzantine Churches with a liturgical rite differing from the Latin Rite. Let them reject the authority of the pope or accept it, they are none the less Eastern Churches. Thus the Russian Church, separated from Rome, is an Eastern Church; in the same way the Greek Catholics who live in Italy, and are called Uniates, as well as the Greek-Catholic Church also. The expression Eastern Churches is therefore the most comprehensive in use; it includes all believers who follow any of the six Eastern rites now in use: the Byzantine, Armenian, Syrian, Chaldean, Maronite, and Coptic.

What, then, do we mean when we speak of the Greek Church?—Ordinarily we take it to mean all those Churches that use the Byzantine Rite, whether they are separated from Rome or in communion with the pope, whether they are by race and speech Greek or Slavs, Rumanians, Georgians, etc. The term Greek Church is, therefore, peculiarly inappropriate, though most commonly employed. For instance, if we mean to designate the rite, the term Greek Church is inaccurate, since there is really no Greek Rite properly so called, but only the Byzantine Rite. If, on the other hand, we wish to designate the nationality of the believers in the following sense, we have to use the term Orthodox Church. It is found that out of fifteen or twenty Churches which use that rite, only three have any claim to be known as The Greek Church, viz., the Church of the Hellenic Kingdom, the Church of Constantinople, and the Church of Cyprus. Again, it must be borne in mind that in the Church of Constantinople there are included a number of Slavs, Rumanians, and Albanians who rightly refuse to be known as Greeks.

The term Orthodox Greek Church, or even simply the Orthodox Church, designates, without distinction of speech, or race, or nationality, all the existing Churches of the East, separated from Rome. They claim to be a unit and to have the same body of doctrine, which they say was that of the primitive Church. As a matter of fact, the orthodoxy of these Churches is what we call heterodoxy, since it rejects the Papal Infallibility, and the Papal Supremacy, the dogma of the Immaculate Conception, that of Purgatory, etc. However, by a polite fiction, educated Catholics give them the name of Orthodox which they have usurped. The term Schismatic Greek Church is synonymous with the above; nearly everybody uses it, but it is at times inexpedient to do so, if one would avoid wound- ing the feelings of those whose conversion is aimed at. The term United Greek Church is generally used to designate all the Churches of the Byzantine Rite in communion with the See of Rome. Thus the Ruthenian Church of Galicia, the Rumanian Church of Austria-Hungary, the Bulgarian Church of Turkish Bulgaria, the Melchite Church of Syria, the Georgian Church, the Italo-Greek Church, and the Church of the Greeks in Turkey or in the Hellenic Kingdom—all of them Catholic—are often called the United Greek Churches. Again, the term is inappropriate, and belongs of right only to the last two Churches. As a matter of fact the Rumanians and Bulgarians are Slavs who follow the Byzantine Rite, but use a Slavonic translation; whereas the Rumanians are Latins who follow the Byzantine Rite, but in a Rumanian translation.

Instead of United Greek Church, the term Union (or Uniate) Church is often used; and in like manner the word Uniate is used instead of United Greeks. These words are by no means synonymous. Uniat Church, or Uniate, has a much wider signification than United Greek Church or United Greek Churches. It is therefore really synonymous with Eastern Churches united to Rome, and Uniate is synonymous with Eastern Christians united with Rome.

II. THE GREEK ORTHODOX CHURCH AND ITS DIVISIONS.—The Greek Orthodox Churches are Churches separated from Rome and following the Byzantine Rite, i.e. the rite developed at Constantinople between the fourth and tenth centuries. In the beginning, the only language of this rite was Greek. A few centuries later, however, it was introduced among the Georgians, or Iberians, of the Caucasus and was translated into the Georgian vernacular of the country. In the ninth century, through the efforts of Sts. Cyril and Methodius and their disciples, the Moravians and the Bulgarians were converted to Christianity, and as the missionaries were Byzantines they introduced their own rite, but translated the Liturgy into Slav, the mother tongue of those nations. From Bulgaria this Byzantine-Slav Rite spread among the Servians and the Russians. In recent times the Byzantine Rite has been translated into Rumanian for use by the faithful of that nationality. Lastly, the Orthodox Syrians of Syria, Palestine, and Egypt have adopted a hybrid Byzantine Rite in which, according to the whim of the celebrant, either Greek or Arabic is used. Hence we have five divisions of the Byzantine Rite, and consequently five divisions of the Orthodox Churches:

I. The Greek-Byzantine Rite, which includes the pure Greeks subject (a) to the Patriarchate of Constantinople, (b) to the Holy Synod of Athens, and (c) to the Archbishopric of Cyprus.

2. The Arabic-Byzantine Rite, which includes the Christians under the Patriarchates of (a) Antioch, (b) Jerusalem, and (c) Alexandria, and (d) the Archbishopric of Sinai.

3. The Georgian-Byzantine Rite, which, up to the beginning of the nineteenth century, included the Churches of the Caucasus now absorbed by the Russian Church, but being the Slavonic Liturgy instead of their own native Greek.

4. The Slavonic-Byzantine Rite, comprising (a) the Russian, (b) the Servian, and (c) the Bulgarian Churches.

5. The Rumanian-Byzantine Rite used by the Rumanian Churches.
country have been suppressed by the Bulgarians. Bosnia-Herzegovina had four metropolitans depending more or less on Constantinople, but since Austria-Hungary has annexed that country they will no longer be dependent. Lastly, the Islands of Crete is now, most independent of Turkey, and in consequence its metropolitan and his seven suffragan bishops have gone over to the Holy Synod of Athens. From the 101 dioceses, therefore, we may deduct 17, viz., 10 metropolitan sees and 7 suffragan sees, which leaves a total of 84 dioceses. 76 of these metropolitan and 8 suffragan. Of these 84 dioceses, not including Constanti

nople, 22 are in Asia Minor, 12 in the Archipelago, and 50 on European soil. For want of reliable statistics, it is difficult to form an estimate of their population. The Greeks in the Ottoman Empire constitute a group of 700,000. The Albanians and Bulgarians. These are, moreover, 600,000 Slavs, either Bulgarians or Servians, who belong to ecclesiastical patriarchates. All the rest constitutes a grand total of 3,500,000 souls. In consequence of the independence of Bulgaria, of the annexation of Bosnia by Austria-Hungary, and the secession of Crete to Greece, the eccumenical patriarchate has recently lost nearly a million subjects—namely, 700,000 in Bosnia, 200,000 in Crete, and from 70,000 to 80,000 in Bulgaria.

(2) The Church of Greece.—This Church dates back to 833, when 36 bishops proclaimed their independence of Constantinople and established a Holy Synod; its authority was not recognized until 11 July, 1850, by the eccumenical patriarch. At the present time this Church is controlled by a Holy Synod of five members: the Metropolitan of Athens as president and four bishops chosen in regular succession. The Hellenic Kingdom contains 32 dioceses, of which one—that of Athens—is a metropolitan see; it is not, however, rare to find one-third of the sees vacant for economic reasons. The Church of Greece numbers 2,500,000 members in Greece and many thousands of believers in other countries, especially in the United States. By an arrangement arrived at between Athens and Constantinople in 1908, all the Greek Churches of the dispersion, save that of Venice, must look to their borders for their head of Church. (3) Cypriots.—Ever since the Council of Ephesus, in 431, recognized its autonomy, which was confirmed in 488 by the Emperor Zeno, the Church of Cyprus has remained independent. The hierarchy consists of the Archbishop of Constantinople and his three suffragans, Bishop of Salamis, Bishop of Paphos, and Bishop of Tyre and Cyrenia. Nearly ten years ago the archbishop died, and so far his successor has not been agreed on. The Church has about 200,000 adherents.

(2) Arabic Byzantines.—(a) Patriarchate of Antioch.—The Orthodox population of this patriarchate is hardy Greek, and they are Syrian race whose speech is Arabic and whose offices are celebrated in Arabic. Since 1899 the Greek element, which had up to then monopolized the superior clerical positions, has been definitively driven out of Syria. The patriarch lives at Damascus and governs by the aid of a Holy Synod and a mixed council. At the present time this Church has 13 dioceses, all of metropolitan rank, and numbers 250,000 souls.

(b) Patriarchate of Jerusalem.—This patriarchate was cut off from that of Antioch in 451. If it were not for the sanctuaries of the Holy Places, which draw so many pilgrims, it would be a rather small see, but its importance would be nil. All the superior clergy are Greek, and, in accordance with a rule made in the early part of the eighteenth century, the clergy of Syrian birth and Arabic speech are eligible for the lower clerical positions only, although the whole membership of this Church is Syrian. There has been a revolt recently against this slavery, and it is not unlikely that before long the Greeks will be expelled from Jerusalem as they have already been driven from Antioch. The only extant dioceses are Jerusalem, Nazareth, and St. Jean d’Acre, but a number of titular metropolitans and archbishops lead the patriarch in the administration of his Church. The liturgical languages in use are Greek and Arabic; the number of subjects of this patriarchate cannot exceed 50,000 souls.

(c) Patriarchate of Alexandria.—This patriarchate is made up of only one diocese under the personal care of the patriarch. According to decisions arrived at in 1867 it ought to be assisted by a Holy Synod composed of four members who were to be holy metropolitans. The Metropolitans of Pelusium, the Thebaids, Pentapolis, and Lybia. This synod is being formed. Church membership numbers about 80,000 persons, made up mostly of strangers from Syria and Greece, among whom far from harmonious relations prevail. The liturgy is celebrated in both Greek or Arabic, but for the most part in Greek.

(d) Archbishopric of Sinai.—The titular of this see has jurisdiction over the convent of St. Catherine and about fifty Bedouins. Its autonomy was proclaimed in 1575 and confirmed in 1782. At the present time the tendency is to consider it rather as a diocese in the Patriarchate of Jerusalem.

(3) Orthodox Georgians.—The various national Churches of Iberia, Mingrelia, and Imerethia no longer exist since Russia has extended her dominion over the Caucasus provinces. In the liturgy the Georgian tongue has been replaced by the Slavonic. The number of dioceses was formerly twenty, but is now only four, all in the hands of the Russians. It has a metropolitan, with the title of Exarch of Georgia and three suffragan bishops. The number of the Orthodox in Georgia, including the Russian colonists, is reckoned at about 1,600,000.

(4) Orthodox Slavs.—(a) The Synodal Church of St. Petersburg.—This is but a continuation since 1721 of the Patriarchate of Moscow, which had been established in 1859 by the Greek Patriarch of Constantinople, Jeremias II, who up to that time had ruled the Russian Orthodox Church. The Holy Synod instituted by Peter the Great and headed by the Patriarch, is the head of this Church. The Russian Church counts 63 dioceses, ruled by 3 metropolitan, 13 archbishops, and 47 bishops. In many of the dioceses, where the distances are enormous, it is customary for the bishop to take one or more auxiliary bishops, known as episcopal vicars, for the governing of parts of the diocese. At the present time there are 44 of these episcopal vicars. The number of members of this Church must be about 70,000,000, or half the population of the Empire. There are about 25,000,000 more believers who separated from the official church in the seventeenth century and make up the Russian Raskol, or sect of Russia. The number of adherents to the population of Russia is made up of about 12,900,000 Catholics, together with Protestants, Armenians, Jews, Mussulmans, Buddhists, and even pagans.

(b) The Servian Church of Servia.—It was not until November, 1879, that this Church secured its independence of the (Ecumenical Patriarchate of Constantinople. Since then it has been governed by a Holy Synod comprising the Metropolitan of Belgrade and the four suffragan Bishops of Niš, Uchita, Timok and Chabats. Its members number about 2,500,000 souls, and its liturgical language is the Slavonic. It is ruled by the Servian Church of Montenegro.
divided. The membership is about 250,000.—The Servian Patriarchate of Carlovits in Hungary.—This Church was founded in 1691 by Servian emigrants from Turkey. It became a patriarchate in 1848. Besides the patriarchal diocese, there are six others: Brac, Herzegovina, and the Diocese of Bosnia. Its membership numbers about 1,880,000 souls. It is governed by a Holy Synod and a national Parliament, or Assembly, of which one-third of the members are clerics and the remainder laymen. It meets every three years.—The Servian Church of Bosnia-Hercegovina.—Theoretically this Church still belongs to the Greek Patriarchate of Constantinople, but since the annexation of these provinces by Austria-Hungary (6 October, 1908) it may be looked on as autonomous. It has four metropolitan sees, Seraiero, Mostar, Dolnja-Toula, and Banialouka, and numbers 700,000 souls.—Two other Servian groups have not yet acquired autonomy. That in Dalmatia belongs to the Rumanian Metropolitan of Tchernovitz; it has two dioceses, Zara and Cattaro, and numbers 110,000 souls. The other group, in Turkey, in the vilayet of Uskub, acknowledges the Greek Patriarch of Constantinople. It has two dioceses, Frizrend and Uskub, and numbers 250,000 souls.

(c) The Bulgarian Exarchate.—After having concurrently two patriarchates, one at Tarnovo, suppressed in 1393, and another at Ochrida, suppressed in 1767, the Bulgarians have organized an independent Church, recognized by the Holy See, 11 March, 1870. The exarch, head of all Bulgarians in Turkey and Bulgaria who may be disposed to admit his authority, resides in Constantinople. He has subject to him in Turkey 21 dioceses, of which about two-thirds are still waiting for the nomination of their bishops, and in Bulgaria 11 metropolitan dioceses. The faithful of the exarchate number about 4,000,000, of whom 2,900,000 are in the Kingdom of Bulgaria, and 1,000,000 in Turkey in Europe. The proclamation of Bulgaria as an independent kingdom will bring about modifications in the ecclesiastical domain, for it is hardly likely that Turkey will accept an outsider as spiritual head of its Ottoman subjects.

(5) Orthodox Rumanians.—(a) The Church of Rumania.—This church has existed since 1864, though it was not recognized by the Phanar as independent until 13 May, 1885. It obeys a Holy Synod composed of two metropolitans and six bishops—its whole episcopate is composed of an equal number. Its membership numbers 4,800,000 souls.

(b) The Rumanian Church of Sibiu.—This Church, formerly under the Servian Patriarchate of Carlovits, secured its independence in 1864. It is governed by a national Assembly composed of 90 members (30 ecclesiastics and 60 laymen) who meet every three years. The Metropolitan of Sibiu has two suffragans, the Bishops of Arad and of Karambes. Its computed membership is 1,750,000. (c) Servo-Rumanian Church of Tchernovitz.—This Church secured independence in 1873. It comprises three dioceses; Tchernovitz, the metropolitan see, situated in Bukovina (the three metropolitan sees are Bukovina, Transylvania, and Moldavia), and the other two dioceses of Lemberg and Przemysl. The population of this Church, which in Bukovina is mainly Servo-Rumanian and in Dalmatia Servian, is about 520,000 souls.

To sum up, there are seventeen Orthodox Churches of various tongues and nationalities, knitted together more or less by a common Byzantine Rite, and a vast base that becomes more and more imbued with Protestant ideas. Their total membership does not exceed 100,000,000 souls; the exact figure is 94,050,000, of whom about three quarters (70,000,000) are in the Russian dominions.

III. GREEK UNIAT CHURCHES.—Nearly every one of the Orthodox Churches of the Byzantine Rite has a corresponding Greek Catholic Church in communion with Rome. As we saw in the majority of the Orthodox Churches, so in the case of the Uniat Churches, they are Greek only in name. Altogether eight divisions are recognized: (1) Pure Greeks, (2) Italo-Greeks, (3) Georgians, (4) Greco-Arabs (or Melchites), (5) Ruthenians, (6) Servians, (7) Bulgarians, and (8) Rumanians. The total membership of these various Uniat Churches does not exceed 5,000,000 souls. The figure is computed at 5,564,809, of whom 4,097,073 belong to the Ruthenians and Servians, 8488 to the Bulgarians, 1,271,333 to the Rumanians, 135,735 to the Melchites, and 49,180 to the Italo-Greeks and Pure Greeks. The number of Catholic Georgians is unmistakable, but it is small. These are the figures furnished by the 1907 edition of "Missiones Catholicae", published at Rome (p. 743).

(1) Pure Greeks.—Their Church has not yet been organized, it is under the Apostolic Delegate at Constantinople. Parishes and missions exist at Constantinople, Cadi-Kouzi, Peramos, Callipoli, Malaga, and Cresarea in Capaccodia. The faithful number about 1000, under the care of a dozen priests, of whom seven are Assumptionists. There are also Catholics of this rite in Greece. They are subject to the Delegation at Athens.

The Italo-Greek Church.—These Churches are of Greek or Albanian origin, and use the Byzantine Rite. They live mainly in Sicily and Calabria, and have some fixed colonies in Malta, at Algiers, Marseilles, and Carphese in Corseca. Their number is not more than 50,000. Ecclesiastics in Calabria and Sicily are ordained by two Italo-Roman Bishops. Their liturgical language is Greek, but for the most part the vernacular of the faithful is Italian.

(3) Georgian Churches.—Russia, unwilling to tolerate within her dominions an Orthodox Georgian Church distinct from the Russian, is all the more opposed to the creation of a Catholic Georgian Church. Out of from 30,000 to 35,000 Georgian Catholics, about 8000 follow the Armenian Rite, the remainder having adopted the Latin Rite. The only Catholic Georgian organization in existence is at Constantinople.

(4) Greco-Arabes (or Melchites).—All these are under a patriarch who bears the titles of Antioch, Alexandria and Jerusalem, and who, moreover, has jurisdiction over all the faithful of his rite in the Ottoman Empire. Their number amounts to about 140,000 and they are subject to twelve bishops or metropolitans. The liturgical language is either Arabic or Greek.

(5) Ruthenians.—The Uniat Church of Ruthenia has disappeared. The two Bishops of Minak and Chelm, were suppressed in 1869 and in 1875 respectively. Since the disorders of 1905 many have availed themselves of the liberty of returning to the Catholic Church, but as a precautionary measure they have adopted the Latin Rite.

(6) Servians.—In Austria-Hungary the ancient Ruthenian Church has survived with a little more than 4,000,000 members. It has six dioceses, of which three are in Galicia (the Archbishopric of Lemberg, and the Bishoprics of Przemysl and of Stanislawow) and three in Hungary (the Bishoprics of Poznan, Przasnysz and Czempinis). Under it two Bishops have been consecrated, one by the Bishop of Grau, and the Bishop of Crisium, or Kreutz, in the archiepiscopal province of Agram, and of which the Catholic population is mainly Servian).

(7) Bulgarians.—The movement for union with Rome, very strong in 1850, was, owing to political reasons, not a success. To-day there are hardly 10,000 Catholics between the two Apostolic vicariates of Thrace and Macedonia. The seminary of Thrace is under the care of the Assumptionists, that of Macedonia under the Lazarists.

(8) Rumanians.—The Rumanian Catholic Church uses the Byzantine Rite, but the liturgical language is Rumanian. It is established only in Hungary and counts four dioceses, viz., the Archdiocese of Focsani with the suffragan Dioceses of Aradopolis, Gross-Wardein, and Lugos, having in all 1,300,000 members.
The Unit-Rumanians of the Kingdom of Rumania have no ecclesiastical organization. In this summary I have omitted the other Oriental Churches in communion with Rome, e.g. the Armenian, the Coptic, the Abyssinian, the Syriac, the Maronite, the Chaldean and Malabar Churches, because they do not use the Byzantine rite, and have no claim to be considered as Greek Churches, even in the wider meaning of the word.

IV. GREEK-CHURCH HISTORY.—(1) The First Five Centuries.—The Gospel, preached by the Apostles and by their disciples, who were converts from Judaism, spread first of all among the Jewish communities of the Roman Empire. These Jewish settlements were mainly in the towns, and as a rule spoke the Greek tongue. The Jews of Asia propounded the second frontier of the Christian communities were in the towns and used the Greek tongue in their liturgical services. Gradually, however, Christian converts from among the Gentiles began to increase and, as the author of the so-called Second Epistle of Clement says, "The children of the barbary outnumber the those of the fruitful one." The original differences between the Judeo-Christian and Helleno-Christian communities quickly disappeared, and soon there existed only Christians, with a certain number of heretical sects which either held aloof of their own accord or were constrained to do so. At the end of the fourth century, at least in the East, nearly all the cities were Christian, but the villages and country places, as in the West, offered a more stubborn resistance to the new religion. The government of the Church was monarchial; as a rule every city had its bishop, and the priests were his assistants; the deacons and sub-deacons were the clerks of the communal and charitable works. Even before the Council of Nicaea (325) ecclesiastical provinces had begun to appear, each having a metropolitan and several suffragan bishops. The size of these provinces generally corresponded to the extent of the civil provinces. The fourth council of Nicaea expressly refers to such provinces and the recognition of the bishops who exercised the highest jurisdiction was recognized by a number of ecclesiastical provinces, and did they correspond with the future patriarchates and exarchates? We must reach the third century before we find conclusive proof of this. At that time the Bishop of Alexandria was looked up to as the Primate or Patriarch of all Egypt. In a somewhat similar way, though in a lesser degree, the Bishop of Antioch had authority in the provinces of Syria and Asia Minor. For instance, at the end of the second century Serapion of Antioch exercised his authority at Rhoessos, a town of Cilicia, and this same Serapion appears to have ordained Palaut, the third Bishop of Edessa. During the latter half of the third century we see assembled at Antioch the bishops of all Syria and eastern Asia Minor, soon to become the civil diocese of Pontus. As early as 251 we know of a synod that was held to be at Antioch because Fabius, the bishop of that town, sent to Rome the synodal notice. The promoters of this meeting were the Bishops of Tarsus, Cæsarea in Palestine, and Cæsarea in Cappadocia. A few years later, in 256, Diognetus of Alexandria, treating of the Eastern Churches that had been disturbed by this quarrel, mentions Antioch, Cæsarea in Palestine, Ælia (Jerusalem), Tyre, Laodicea in Syria, Tarsus and Cæsarea in Cappadocia. Somewhat later, again, from 264 to 268, the affair of Paul the Gallican was the occasion of many meetings of bishops at Antioch, and in the interests of that Church. They came from all the same provinces, viz., those extending from Polemoniac Pontus (Neo-Cæsarea) and Lycaonia (Ioniaum) to Arabia (Bostra) and Palestine (Cæsarea and Ælia). Immediately after Paul the persecution of the Gallican Mission. Another celebrated council was held at Ankyra, presided over by the Bishop of Antioch, at which some fifteen bishops from the same countries, were again present; this time, however, the Provinces of Galatia, Bithynia, Phrygia, and Pamphylia are represented, but Asia, properly so, is not represented. Some of the bishops; Duchesne, "Christian Worship", London, 1901, p. 20. On the other hand, in Proconsular Asia no Church had yet succeeded in asserting authority over the others; Ephesus, the most famous of them, had merely a primacy of honour over its rivals in influence and wealth, Smyrna, Pergamus, Sardis, and others.

To sum up, then, during the opening years of the fourth century we find three principal ecclesiastical groups in the Eastern Empire: (1) that of Alexandria, with authority over the whole of Egypt; (2) that of Antioch, with a more or less recognized jurisdiction over the whole Greek world, with the exception of the provinces that the second frontier of the Roman Empire, e.g., Armenia and Persia; (3) Proconsular Asia, forming a group apart. The Councils of Nicaea (325), Constantinople (381), Ephesus (431), and Chalcedon (451) legalized the existing state of things, created new Churches and established the ecclesiastical hierarchy as it has remained ever since. But in order to understand the situation properly, we must first briefly review the civil organization of the Roman Empire, which had such an influence over early Church organization.

From Dioecletian to the accession of Theodosius the Great (379) the Empire of the East included nine civil dioceses of Egypt (after its separation from Antioch), Asia, Pontus, and the two Mysia, or Thrace. The remaining dioceses formed part of the Empire of the West. On 19 January, 379, Gratian, Emperor of the West, ceded to his colleague, Theodosius I, the Prefecture of the Eastern Illyricum, which included the provinces of Dacia and Macedon. Soon afterwards, between 424 and 437, Western Illyricum, or the diocese of Pannonia, became part of the Empire of the East.

Among the councils of Nicaea (325) that do not specifically deal with the ordinary ecclesiastical provinces, canons 6 and 7 confirm the rights accorded by the provincial councils. Certain great metropolitan archbishops, such as Alexandria, Antioch, Jerusalem, and the other eparchies. It is not easy at first sight to determine what the rights the council referred to. Nevertheless it is a general opinion that the sixth canon aimed at securing to the Bishop of Alexandria an exceptional rank, and at endowing him with powers over the metropolitans and bishops of the four civil provinces of Egypt, Thebaid, Libya, and Pentapolis, as ample as those exercised by the Bishop of Rome over the various provinces of the Patriarchate of the West. Thus the Bishop of Alexandria had the right to consecrate all the metropolitans and bishops of Egypt, and from this some historians and canonists would have us conclude that he was, as a matter of fact, the only metropolitan in Egypt, and that his entire patriarchate was a single diocese. This is an evident exaggeration. At the Council of Nicaea there were four Egyptian metropolitan archbishops who were excommunicated, or even exiles, for some time beyond the civil provinces; later their number rose to nine, or even ten, according as the emperors increased the number of civil provinces. The number of suffragan bishops rose at one time to a hundred. The organization of the Egyptian Church really followed the same lines as the others. But the Patriarch, or Bishop, of Alex-
andria had the right of consecrating all his bishops, once their election had been confirmed by the metropolitan, whereas in the other greater Churches the metropolitan himself discharged this function.

Although the sixth canon, in as far as it refers to Antioch, is not clear, it is seen that the Nicene Council recognized and granted to the Bishop of Antioch the same jurisdiction over the provinces of the civil diocese of the East (Diocesis Orientia) that it had recognized and granted to the Bishops of Rome and of Alexandria over the Provinces of the West and of the Mediterranean. Therefore, it is attributed to Antioch a supremacy over many provinces, each having its own metropolitan, in such a way as to constitute them into a patriarchate. It is thought that the jurisdiction of the Patriarchate of Antioch was coextensive with the aforesaid civil diocese of the East, but it may very likely have extended also over certain provinces in Pontus and Asia Minor.

The same canon requires that the rights of the other eparchies be maintained. The meaning of the word eparchies is not clear and has been variously interpreted. According to some, it refers to ordinary ecclesiastical provinces, but this is hardly probable, seeing that the jurisdiction of the aforesaid diocese of Asia Minor was attributed to Antioch a supremacy over many provinces, each having its own metropolitan, in such a way as to constitute them into a patriarchate. It is thought that the jurisdiction of the Patriarchate of Antioch was coextensive with the aforesaid civil diocese of the East, but it may very likely have extended also over certain provinces in Pontus and Asia Minor.

pastes and the famous schism of Antioch (330-415) to proclaim its own autonomy. Once the schism ended, the Patriarchs of Antioch tried to reassert their authority; Cyprus resisted and even took advantage of the absence of the Syrian patriarch to have its independence recognized by the Ecumenical Council. Later, this independence was reaffirmed by the Emperor Zeno and by a council held at Constantinople in 488. The head of the Cypriot Church has never had the title of Patriarch, but only that of Bishop. The acknowledgment of an independent Cypriot Church was a serious loss for the Patriarchate of Antioch; following on this blow came two others in quick succession, the one beyond the frontiers of the Roman Empire, the other within those boundaries, which greatly reduced the influence of Antioch and the extent of its jurisdiction. Beyond the frontier, in the Persian kingdom of the Sassanides, were many Christians of Syrian speech, governed by a number of bishops. The Gospel had come to them from many points, principally from Edessa and other Churches subject to Antioch. There was, therefore, a certain bond of unity and fraternal ties between these Churches of the Persian Empire and those of the Roman Empire. In order to impose his authority on all the bishops of Persia, Pape bar Agat, Bishop of Seleucia Ctesiphon, the capital of the kingdom, had recourse to the Syrian bishops of the Roman Empire during the Persian Church of the next century. He hastened to him, and by methods whose nature is unknown to us succeeded in placing the Bishop of Seleucia Ctesiphon at the head of the Persian Church, and in bringing that Church under the jurisdiction of Antioch. The bishops of the other important seats in Persia accepted very unwillingly the primacy of the Bishop of Seleucia, and there were continuous revolts against it. The Bishop of Seleucia always fell back on the support of the western Syrian bishops subject to Antioch, especially in 410, when Marutas of Maiphgerat in this way overcame all opposition. The Bishops of Seleucia had recourse to Antioch only as an expedient for imposing their supremacy upon their Persian brethren; that end once attained, they, in their turn, shook off the tutelage of Antioch. The Council of Seleucia, held in 424 laid down that the bishops of Persia "could bring no complaint against their patriarch before the patriarch of the Western (Antioch), and that he would not be subject to their own patriarch was to be reserved for the tribunal of Christ." That ended the matter. By this council the Church of Persia cut itself off definitively from the Greek Churches. The pity is that a few years later, by adopting Nestorianism as its national doctrine, it also cut itself off from the Catholic world.

In 451, at the Council of Chalcedon, another Church was set up to the detriment of Antiochene prestige, viz., that of Jerusalem. The bishop of the Holy City had obtained from the Council of Nicea (325) the purely honorary rights which his successors had endeavoured to turn into tangible benefits. St. Cyril of Jerusalem, and especially Juvenal, tried to shake off the yoke of Cesarea Maritima, the religious capital of Palestine, and, after Cesaras, the yoke of Antioch, the patriarchal see of the East. Juvenal, elected in 424, acted, indeed, as if he were already independent. Afterwards he sought official approbation for the usurpations he had been committed. He applied first to the Council of Ephesus (431) and put forward forged documents, which St. Cyril of Alexandria refused to admit. Next he turned to the "Robber Council" of Ephesus (449), and his demands were conceded. At the same time he extorted a decree from Theodosius II, which he had himself drawn up, whereby the Church of Jerusalem was given jurisdiction over three provinces of Palestine, also over Arabia, and a part of Phoenicia. Two years later, at Chalcedon, through fear of losing more, Maximus, Patriarch of Antioch, came to an understanding with Juvenal whereby the Church of Jerusalem was to remain in possession of the three provinces of Palestine. In consequence of this agreement, which was ratified by the Council, Juvenal took advantage of the absence of the Syrian patriarch to have its independence recognized by the Ecumenical Council. Later, this independence was reaffirmed by the Emperor Zeno and by a council held at Constantinople in 488. The head of the Cypriot Church has never had the title of Patriarch, but only that of Bishop. The acknowledgment of an independent Cypriot Church was a serious loss for the Patriarchate of Antioch; following on this blow came two others in quick succession, the one beyond the frontiers of the Roman Empire, the other within those boundaries, which greatly reduced the influence of Antioch and the extent of its jurisdiction. Beyond the frontier, in the Persian kingdom of the Sassanides, were many Christians of Syrian speech, governed by a number of bishops. The Gospel had come to them from many points, principally from Edessa and other Churches subject to Antioch. There was, therefore, a certain bond of unity and fraternal ties between these Churches of the Persian Empire and those of the Roman Empire. In order to impose his authority on all the bishops of Persia, Pape bar Agat, Bishop of Seleucia Ctesiphon, the capital of the kingdom, had recourse to the Syrian bishops of the Roman Empire during the Persian Church of the next century. He hastened to him, and by methods whose nature is unknown to us succeeded in placing the Bishop of Seleucia Ctesiphon at the head of the Persian Church, and in bringing that Church under the jurisdiction of Antioch. The bishops of the other important seats in Persia accepted very unwillingly the primacy of the Bishop of Seleucia, and there were continuous revolts against it. The Bishop of Seleucia always fell back on the support of the western Syrian bishops subject to Antioch, especially in 410, when Marutas of Maiphgerat in this way overcame all opposition. The Bishops of Seleucia had recourse to Antioch only as an expedient for imposing their supremacy upon their Persian brethren; that end once attained, they, in their turn, shook off the tutelage of Antioch. The Council of Seleucia, held in 424 laid down that the bishops of Persia "could bring no complaint against their patriarch before the patriarch of the Western (Antioch), and that he would not be subject to their own patriarch was to be reserved for the tribunal of Christ." That ended the matter. By this council the Church of Persia cut itself off definitively from the Greek Churches. The pity is that a few years later, by adopting Nestorianism as its national doctrine, it also cut itself off from the Catholic world.

(2) Decay of the Greek Churches of the East and Rise of the Byzantine Hegemony (451-847).—The definition of faith of the Council of Chalcedon (451) had curiously agitated the Byzantine Empire. The condemnation of Eutyches, Dioscorus, and their adherents amounted in the eyes of many to a condemnation of St. Cyril of Alexandria and of the Council of Ephesus, if not to a victory for Nestorius. It happened that these religious disturbances reached their climax in the remotest provinces of the empire, in those which, while willingly or unwillingly subject to the Byzantines, had still retained a lively memory of their former national independence and glory, together with their own language, race, and literature. St. Cyril thus, Syria, Egypt, Armenia became for the most part Monophysite; Palestine also. Even the episcopate of Asia Minor, with the Metropolitan of Ephesus, who resumed, about 474, the title of Patriarch, was bitterly opposed to the new definition; in the end, however, order and orthodoxy prevailed in Asia Minor. Until the reign of Justinian (527-56) the doctrine of Monophysitism was officially triumphant according as the emperor happened to be Monophysite or Dyophysite, and let to the accepted doctrine the support of his sword. Justinian, the Byzantine Louis XIV, finally caused Dyophysitism to triumph, and had to turn his attentions to the support of all the Eastern and African portions of the empire. The Church of Alexandria and that of Antioch nominated Monophysite patriarchs, and thus began the Coptic and Jacobite Churches which exist even
yet. In Egypt nine out of every ten of the faithful declared against the faith of the imperial Court; in Syria seven out of the eleven. It was said that about one-half of the subjects of Justinian accepted the faith of Chacondon. Efforts to impose a heterodox patriarch on Palestine were in vain; except in the region of Garsa, the monks were powerful enough to successfully resist the Monophysite. In the time of Constantine VI, the sixth century, of the Greek patriarchates in the East, one (Alexandria) had lost nearly all its subjects, another (Antioch) retained but one-half, while the third (Jerusalem) was too inconsiderable ever to dispute the primacy with Constantinople. The latter thus became the only real Greek patriarchate, to which the pope, in the name of the emperor, delegated the commission of the exhaust of the empire's business in the East. The patriarchs of Mesopotamia and Syria looked for favours and protection against Monophysite competition and later against the threatening domination of the Arabs.

This led us to a consideration of the second cause that completely ruined the hopes of the three Greek Churches of Alexandria, Antioch, and Jerusalem, namely, Islam. It came from Arabia and spread like an oil-stain over Palestine, Syria, Mesopotamia, Persia, and finally Egypt. It even made great efforts to cross the Taurus range and enter the Greek world, but in this it was everywhere defeated. For the moment its advance was checked at Calabria and Sicily, where the Byzantine folk had remained for the most part aloof from Hellenic speech and civilization. Thus the Syrian Jacobites gladly welcomed the Arab conquerors as their brethren in race and in speech, and, it would seem, often aided them in their conquests. Their complaisance towards the new régime brought them many favours not shown to the Melchites, who, because of their origin, or at least because of their relations with foreign Byzantium, were everywhere watched, hunted down, and proscribed. Without the help of Constantinople and Rome, from whom they begged help and assistance, it is very probable that these Melchite Churches would have disappeared. At the very time when the great Arab invasion and the spread of Islam was taking place, Byzantium was emerging from a disastrous war with Persia which had almost brought about the ruin of the Christian power, and its emperor was occupied in rallying the various parts of the empire to the support of the ad captandum formula of one will and one energy in Christ. The attempt failed owing to the splendid resistance set afoot by St. Sophronius of Jerusalem and St. Maximus of Constantinople; its net result was a fresh loss for the Melchite Patriarchate of Antioch, from the moment of the further partition of the Orient, as the Orontes seceded, to found, with the aid of the villagers of Syria and the Lebanon, the Maronite Church, Monothelite in doctrine, but which at a later date accepted Catholicism. The growing weakness of the three eastern patriarchates and of the Archbishops of Cyprus, whose titular had for a while to take refuge in Cyzicus, soon forced them to seek the moral and material support of Constantinople. It was eagerly granted, and Constantinople, thus freed from a rival in the East, turned its attention towards Rome in the West. As we have seen, the civil diocese of Thrace was the only one in Europe subject to the Patriarch of Constantinople; the provinces of Achaia, Macedonia, Thessalia, Epirus (old and new), which formed the civil diocese of Macedonia, Dacia, and Pannonia, were included in the Patriarchate of Rome. Over these remote provinces the pope exercised his spiritual supremacy through the Bishop of Rome, in his character of the Bishop of Rome, that of Bishop of Rome, and of Bishop of Rome, in the capacity of Bishop of Rome, and of Bishop of Rome. In about 380, and the Bishop of Justiniana Prima (Uskub), appointed in 535. Until the eighth century this arrangement worked without much opposition on the part of Constantinople, and the ecclesiastical provinces of Illyricum were considered as forming part of the Roman Patriarchate. The Emperor Leo III, the Isaurian, seems to have been the first to interfere with the constitution of the patriarchate of Constantinople. Such, at least, is the usual interpretation of an obscure text in the Chronicle of Theophanes (Hubert in "Revue Historique" (1899), I, 21-22); it is confirmed by an observation of the Armenian ecclesiastic Basil, who, in the ninth century, speaking of the metropolitan cities of Illyricum and Italy, asserts that they had been made subject to the authority of the patriarchate of Constantinople "because the pope of ancient Rome had fallen into the hands of the Barbarians" (Georgii Cyprii Descriptio Orbis Romani, ed. Gelzer, p. 27). The pope protested against this high-handed robbery, but no attention was paid to their protests, and since about 733 Illyricum has been attached to the Byzantine Patriarchate. In this way it gained about one hundred bishoprics, nor was this all: starting with the principle that no bishopric in the Byzantine Empire could be in any way dependent on an outside patriarchy, the Iconoclast emperors took away from the see in the place of the patriarch of Illyricum the subject of the Arab caliphs, the twenty-four episcopal sees of Byzantine Isauria, and from the pope of Rome the fifteen Greek bishoprics in Southern Italy. Consequently, the jurisdiction of the Patriarch of Constantinople became co-extensive with the limits of the Byzantine Empire.

Besides this increase of jurisdiction, the establishment of a permanent synod (συνόδος συμβούλευον) and the addition to his title of the adjective "Ecumenical" rapidly placed the Patriarch of Byzantium in the front rank. The permanent synod dates most probably from the patriarchate of Nestorius (381-97). It was a sort of ecclesiastical tribunal permanently in session at Constantinople, made up, as a rule, of many bishops whom business or ambition had called to the capital; the patriarch himself presided over the tribunal. It attended to the solution of all ecclesiastical affairs submitted to the judgment of the emperor, so that the Patriarch of Constantinople became ex officio arbitrator between the Court and the bishops of the empire; it was a privileged position due to the very force of circumstances, and in the last resort it subjected all the great metropolitan sees, and even the patriarchs, of the East, to the judicial authority of the Bishop of Rome. It was in the seventeenth century that Chacondon confirmed and consolidated this state of things, and the insertion of those canons in the Civil Code gave them thenceforward equal authority with any other imperial decrees. The title "Ecumenical" was granted for the first time at the Robber Council of Ephesus (449) to the Patriarch Dioscurus of Alexandria, and at the time it looked like a dangerous innovation, and was repudiated at the Council of Chalcedon. Soon afterwards we find it applied to Popes St. Leo I, Hormisdas, and Agapitus, and to the Patriarchs of Constantinople, John II (518-520), Epiphanius (520-535), Anthimus (536), Menas (535-552). It was in 588, on the occasion of a council, that the Patriarch John VI, surnamed the Faster, seems to have restricted the use of the honorary title to his own use. This gave rise to a fresh quarrel with Rome, which saw therein a new evidence of ambition. Pope Pelagius II annulled the acts of this council and annulled his own bull of the Church. This caused a lengthy correspondence on the matter with the Byzantine Patriarchs John IV and Cyriacus, but nothing ever came of it. The popes went on protesting, but the Byzantine patriarchs, supported by the Court, the bishops, and the clergy, also by the other Greek patri-
Greek arches, refused to forego the title, which they have borne ever since, and which has given them a colour of honorary supremacy over all the Churches of the East.

(a) The Organization of the Churches.—The superior hierarchy of a Greek Church at the period we are treating of, viz., from the fourth to the tenth century, was composed of a patriarch, a catholicos, the greater metropolitan, the autocephalous metropolitans, the archbishops and the bishops. The patriarch is at this period the highest prelate at the head of a whole Church; and, as we have seen, there were only four such: Constantinople, Alexandria, Antioch, and Jerusalem. The catholicos exercised jurisdiction over a portion of the Church on an equality with the patriarch, save for the fact that he must originally have been consecrated by the patriarch, in the went told, was the position of the Catholicos of Seleucia-Ctesiphon, and of the Catholicos of Armenia, with reference to the See of Antioch, and towards the same see, but at a later period, of the Catholicos of Romagaries, of Irenoupolis, and of Georgia. The other patriarchates, except perhaps Alexandria, never had under their authority the certain number of suffragan bishops. Their position was similar to that of the Latin archbishops. The number of these metropolitanas varied in the various patriarchates, but tended to the actual number of ecclesiastical provinces. For a long period Jerusalem had three, in the sixth century Antioch had twelve, in the sixth century Alexandria had ten, in that same century Constantinople had twenty-eight, which rose to thirty-two about 650, and to forty-nine about the beginning of the tenth century. The "autocephalous" metropolitanas had no suffragan bishops, and depended directly on the patriarch. Latin canon law knows no such dignity. These prelates had each his own diocese; they were not metropolitanas in partibus infidelium. The number of these prelates, small at first, increased in the East to such a degree that at the present time one rarely meets with any of another rank. In the sixth century there was only one, that of Chalcedon, in the Patriarchate of Constantinople; in the tenth century only two, those of Chalcedon and Ctesiphon. We have no documentary evidence as to how they held this respect in the Patriarchates of Alexandria and of Jerusalem. The archbishops do not differ from autocephalous metropolitanas, except as being inferior to them in the hierarchy. They depend directly on the patriarch, and have the real government of a diocese. This title, which corresponds to the exemplos (archbishops), was formerly very common in the Eastern Church. About 650 the Church of Constantinople reckoned thirty-four archdioceses of this sort; in the tenth century, we know, on the evidence of three documente, it had fifty-one; at the end of the eleventh century the number stood at thirty-nine, and since then it has gone on decreasing in the East, so that at present the Patriarchate of Jerusalem alone possesses this institution.

The position of suffragan bishops is too well known to require any explanation. In the sixth century there were fifty-six of them in the three provinces of the Patriarchate of Jerusalem, one hundred and twenty-five in the twelve provinces of Antioch. About 650 there were three hundred and fifty-two in the thirty-two provinces of the Patriarchate of Constantinople, and in the early part of the tenth century, when the number of its provinces rose to forty-nine, Constantinople had five hundred and twenty-two suffragan sees. As in the West, the number of suffragan sees in a province was not always the same in the same patriarchate. Thus, in 650 the provinces of Asia and of Syria had each thirty-six such sees, but the province of Europe, or Rhodope, had only two. In the sixth century, again, in the Patriarchate of Antioch, the Metropolitan of Dara had three suffragan sees, while the Metropolitan of Seleucia in Isauria had twenty-four. To gain a collective idea of this hierarchy it should be remembered that in Byzantium the Patriarch of Constantinople counted thirty-two metropoles, or capitals of ecclesiastical provinces, one autocephalous metropolis, thirty-four autocephalous archbishoprics, and three hundred and fifty-two bishoprics—a grand total of four hundred and thirteen dioceses. A century earlier the Patriarchate of Antioch could boast of twelve metropoles, five autocephalous metropolitanas, two exempt bishoprics (a peculiar institution of this Church), and one hundred and twenty-five bishoprics—a grand total of one hundred and forty-four dioceses. For want of accurate information it is impossible to give similar details for the Patriarchates of Alexandria, and Antioch, and the number of suffragan bishops for all of them was considerable. Below the bishops came the other ecclesiastical dignitaries—priests, deacons, desecases, subdecanes, lectors, canons, and others. Ecclesiastical functionaries were very numerous. After the patriarch in the capital, and in their dioceses after the metropolitanas and bishops, the chanters, the archdeacons, a sort of vicar-general having direct control over the clergy, if not over the faithful of the diocese. The title soon disappeared and was replaced by that of protoevangelist, which has remained to our own times. There were, moreover, referendaries, who carried important messages, and were answerable for the truth of the content of their messages in the diocese in the bishop's name; apocrisiarios (in the Latin Church responsabiles, i. e. nuncios), or representatives of the patriarchas at the emperor's Court, of the metropolitanas to their patriarchas, and of the bishops to their metropolitanas; economos, or bursars, who looked after church property and were entrusted with the administration of such property in outlying districts to delegates of various names and titles: a kimieliarchos, in charge of the church treasury and also known as the skopeophylax; a charitophylax or archivist; a chancellor, or master of ceremonies, etc.

During this period the Greek episcopate was, as a general rule, recruited by election. The notables united with the clergy drew up a list of three candidates which they submitted to the choice of the patriarch, the metropolitan, or the bishops, according as the see to be filled was a metropolitan see or a simple bishopric. In practice the patriarch and, more of all, the emperor interfered in the election. The decision of a patriarch belonged in the first instance to the clergy of Constantinople, then to a committee of metropolitanas and bishops; in reality the choice was always settled by the emperor. From the list of three candidates presented by the bishops he selected one as patriarch, and if none of the names presented was agreeable to him he put a new name before the ecclesiastical college, which the bishops could only confirm.

The status of the lower clergy was much the same as now. In the cities and populous centres there were many learned and often exemplary priests, who, for the most part, had been through the monastic schools; but in the rural districts they were generally ignorant and of evil repute. Because of their exemptions and their civil privileges, the clergy were numerous. Churches and chapels abounded everywhere, especially in the cities; every basilica (emperor), even the least religious-minded, was lavish with money for their construction. An idea of the personnel employed at this time in serving a church may be gathered from two churches in Constantinople. A law of Justinian (533) fixed the number of clerics at St. Sophia and its three adjacent churches at 425—viz., 60 priests, 100 deacons, 40 deaconesses, 90 subdeacons, 110 lectors, 25 canons, to which we must add 100 doorknobs. From Justinian's reign to that of Heraclius this number increased, and in 627 the latter emperor was obliged to put a limit to the number of clerics serving this church. Unless subsequent en
dowments authorised otherwise, the regular number was to be 325, viz., 80 priests, 150 deacons, 40 deaconesses, 70 subdeacons, and 100 for servants; the average number of 75 doorkeepers, 2 synecchi, 12 chamberlains, and 40 nataries. The little church of Blachernae had a person nel at this period of 75 members, viz., 12 priests, 18 deacons, 6 deaconesses, 8 subdeacons, 20 lectors, 4 cantors, and 7 doorkeepers. From these two examples alone, we may see what the smaller or larger churches must have required.

Benevolent institutions claimed a proportionate number of functionaries and titles; in Christian antiquity few social bodies were as much concerned with the diminution of social ills as that of Constantine. In its special capacity the institution was to succour every form of physical and moral suffering; from the emperor to the humblest citizen all were interested in their maintenance. Hospices and shelters were found everywhere; there were also xenodochia, or hostels for strangers; gerontiocoria, or homes for the aged; psichotropia, or asylums for the poor; nosocomia, or hospitals for the sick; orphanotrophia, or founding hospitals; brephotrophia, or crèches; and even lobo-
trophia, or homes for lepers. These institutions were mostly conducted by monks, which fact brings us to a consideration of the monastic system.

Their rules, the monks may be divided into two classes: solitaries and cenobites. The solitaries had various names, according to their habitations or the exercises they practised. They were known as hermits or recluse if they provided their own necessities of life or accepted them from strangers; sittites or dendrites, if they chose a pillar or a tree as the scene of their mortifications; laurites or kellites, if they lived together in a laura. These last belong rather to the Eastern world properly so called (Egypt, Palestine, Syria, Mesopotamia) than to the Greek, or Byzantine, world. On the other hand, the Greek Christian world was famous for its cenobites, who, as a rule, had evolved from the community life. Solitary and cenobite had each a special dress, the names and uses of which are well known. The laura, and convents, had each its own superior, sometimes called archimandrite, and sometimes hegumenos, terms synonymous in the beginning, but soon differentiating. Gradually the archimandrite came to mean the head of all the monasteries of a city or of a diocese. Below him came the deuterewon or prior, at least until the sixth century; after that the place was taken by the exacomos, or bursar. In the ninth century every diocese (presumably the cenobites of every diocese) formed a sort of federation under the presidency of a hegumenos known as the exarch or archimandrite. In the Archdiocese of Jerusalem this presidency over the laurites and hermits devolved on the Hegumenos of St. Sabas, and that of the cenobites on the Hegumenos of St. Theodosius. In the archdeacon of Constantinople, the superior of the convent, or monastery, of Dalmatia exercised this function. As soon as peace was definitively granted to the Church, and especially after the reign of Theodosius I (378-95), the religious life had its period of greatest splendour. Emperors, empresses, consuls, patricians, senators, patriarchs, bishops, private individuals vied in building conventual homes for "those who had put on the robe of the angels" and who had become "citizens of heaven". As early as 518, we find a petition to Pope Hormidas signed by fifty-four superior of monastic houses for men in Constantinople; in 538 no fewer than eighty Greek monasteries from the same city assisted at the council which deposed the patriarch Anthimos, while the neighbouring Diocese of Chalcodon alone sent forty more. In Palestine the Archdiocese of Jerusalem had at least 100 monasteries. And it must not be imagined that the number of their inmates was small. The land of St. Sabas had 190 inmates; the convent of St. Theodosius, 400; the New Laura more than 600. It is true that all of the monasteries were not so populous, but if we place the average number of 40 for a monastery, we shall not be far from the truth. Let it not be forgotten that 10,000 monks of Palestine assembled at Jerusalem in 516 to demand that the Council of Chalcedon be observed. "It is worth noting that there never existed a religious congregation, properly speaking, in the Greek world; this Western form of monasticism was unknown to the East. There every convent was independent of its neighbour, and where many convents had the same founder their union rarely lasted beyond his lifetime. Again, in spite of a still prevalent Western belief, the Greek monks never accepted a religious name in the common meaning of the word. Even the Rules of St. Basil, St. Anthony, and St. Pachomius were not canonical rules. The monks obeyed a whole series of precepts, or monastic regulations, either written or, more often, preserved by oral tradition, which were the same everywhere. But if they had no rule properly so called, they had an infinity of typical or regulations. In the liturgical offices the customs of St. Sabas at Jerusalem, i.e. the Palestine customs, were combined with those of the Studium at Constantinople or some other monastery, and thus all desired variations were obtained. For the monastic life itself the Studium, i.e. the constitutions or constitutions of the monastery, were the guide. The most ancient of these "Typics" known to us is that of St. Athanasius the Athonite (or of Mount Athos), which dates from 969. In matters of jurisdiction all Greek monasteries were subject to the bishop or to the patriarch; the latter known as metropolitan, because the patriarch asserted his rights over the monastery by placing a wooden cross (σταυρός) behind the altar. It was in the cloister almost exclusively that the more eminent ecclesiastics of all ranks were trained, and to it dethroned emperors and disgraced courtiers fled for solace. The historical figures, the poets of the time; the leaders of all heresies and their opponents were monks; councils were convened or prevented as the monks thought good. They assisted the bishops by their learning and disturbed the empire by their quarrels. In short, they held the whole foreground of the ecclesiastical stage, and absorbed all the intellectual and religious life of the Greek Church. And while their extensive possessions, exempt from taxes, drained the finances of the empire, the thousands upon thousands of young men who flocked to their monasteries robbed the land of its agricultural class and the army of its recruits. As it existed in the Greek world, this institution cannot perhaps be more evil than good, and it is undoubtedly to it we owe that narrow piety, that formalism and ritualism in devotion, consisting altogether in the externals of religion, which is even now so characteristic of the East.
b) The Emperor; Relations between East and West; Liturgy.—In the foregoing sketch of the ecclesiastical history of the Byzantine Empire, the emperor has not appeared. Yet no one has a greater right to a place in that body. Heir of the Roman emperors, the Basileus had inherited also the office of pontifex maximus, and, though after the fifth century that title no longer appears on public documents, yet every Greek looked up to the Basileus as the head of the national religion. Moreover, the emperor, being chosen of God, had raised him above humanity in order to draw him nearer to Himself. As Eusebius of Cesarea tells us, “His intelligence is a reflection of the Divine intelligence, he is a partaker of the power of the Almighty.” In his “Instruction” to the “most divine” Justinian, the deacon Agapetus reproduces under another form these ideas so prevalent at Byzantium: “It was a sign from God that pointed out the Basileus for the empire; he was predestined in the designs of God to rule the world, even as the eye is set within the head to control the body. God has need of no one; the emperor himself was chosen by God and therefore has no intermediary.” (P. G., LXXXV. 1177.) The Divine call to the empire gave the emperor a sacred character, and the anointing, the sign of priesthood, became his by Divine right. To take the life of the Basileus or attack his authority was to resist the will of God, and to commit a sin proverbially as great as to kill the person of Jesus. And this was the case, who did so happen to be, like David of old, also the chosen one and the anointed of the Lord. This anointing and the priesthood which it conferred gave the emperor a high place among the ministers of the altar. He became the ἱεραρχὴς, the equal of the Apostles, or even the thirteenth Apostle. Hence he held a special position between lay society and the ecclesiastical body. He dominated, and belonged to both, unifying in himself both elements of the social order, the civil and the ecclesiastical. Moreover, this special sacerdotium reserved for the emperor secured him special rights and powers. “I also am a bishop,” said Constantine to the priests of his day. “You are the bishops assigned to look after the domestic affairs of the Church; I am appointed by God to oversee all that lies outside.” And Leo III., the Isaurian, wrote to Gregory II.: “Do you not know that I am both priest and king?—Priest, bishop, ἱεραπόστολος, Apostle himself. The Basileus is the one who set up the power and the dogma; he gave legal sanction to the decisions of councils and inserted the canons in the public code. He convened general councils, was present at their sessions, or sent his representative to them; he controlled their discussions, and only permitted the bishops to leave when they had defined and legislated according to the Faith and the canons, or even according to his own wishes. If he frequently chose patriarchs and bishops, he was not remiss in deposing them as soon as they stood in his way. Orthodox and virtuous patriarchs were the victims of wicked emperors; Gal or heretic bishops were cast out by orthodox emperors. But it was always a matter of politics, and the Church was merely a pawn in the despotic hands of the State. This condition has been happily described by an expressive barbarism as the rule of Cesareopapism.

The relations that grew up between Rome and the Greek Churches during the long period from the death of Constantine the Great to the end of the Iconoclast persecutions (337–843) were far from cordial. In principle East and West were united; in fact they were separated during most of that time. During those 506 years the Greek Church was in open schism with Rome. It separated its disunion and schism 248 years. The sum total is reckoned thus: (1) The schism in connexion with St. Athanasius and Ariantism, from the Council of Sardica (343) to the accession of St. John Chrysostom to the See of Constantinople (398)–55 years; (2) in connexion with the condemnation of St. John Chrysostom by the episcopate of the East (404–15)–11 years; (3) in regard to the Byzantine patriarchs, from the Emperor Zeno’s “Henotoicon” edict (484–519)–35 years; (4) out of the Monothelite movement of Sergius and Hiero- actius (640–41)–41 years; (5) arising out of the first Iconoclastic conflict, begun by Leo III, the Isaurian (720–76)–61 years; (6) arising out of the adulterous marriage contracted by the Emperor Constantine VI. (795–811)–16 years; (7) in connexion with the second Iconoclastic persecution (814–29)–20 years. This gives a total of 248 years of schism and heresy out of a period of 506 years, i.e. nearly one-half the time. Again, it must not be forgotten that divisions veyed certain individual Churches—e.g., the Schism of Antioch (330–415), which had its effect not only on the Churches of the East but also on those of the West. It must also be confessed that when circumstances demanded strength of will and determination the Greek bishops were very often culpable. Of all these heresies and schisms they might at least have lessened the chance and the dilemma if, not of being saved, at least of being kept in being, and this is what some of them, had they better understood and realised their duty. In the patriarchal See of Constantinople, the premier see of the Greek Empire, we find nineteen heretical patriarchs, whom the first seven Ecumenical Councils, all held in the East, condemned by name, or reprobated in doctrine, unless the decision of consensum. These nineteen were: Eusebius of Nicomedia, Macedonius, Eudoxius, Demophilus, all four Arians; Nestorius, Acacius, Timotheus, Anthimus, of whom the last three were Monophysites; Sergius, Pyrrhus, Paul, Peter, John VI, all Monothelites; Anastasius, Constantine II, Nicetas, Theodotus Caucasites, Anthony, John VII Lecamemontes, all Iconoclasts. And this list might be increased, if we were to include the patriarchs who, though not formally heretics, would not condemn their heretical predecessors, and because of this weakness were unable to obtain communion with the Holy See. If in the two patriarchates of Alexandria and Antioch the number of excommunicated patriarchs is less, it is because there an almost immediate rupture took place between the Catholics and the Monophysites or Monothelites. Hence we meet fewer heretics in these patriarchal sees for the very good reason that in these places the heretics were subjected to the power of the Basileus. In Byzantium, the seat of the central power, both Catholics and heretics either could not or did not dare set up ecclesiastical bodies distinct from the State Church, but were constrained to accept orthodox or heterodox teaching according to the bias of the emperors. Often were the Greek bishops constrained to stifle the voice of conscience. Probably no Church can furnish so many examples of the kind. In 449 more than two hundred bishops at the Robber Synod of Ephesus defined Monophysitism as a dogma, while two years later, at the Council of Chalcedon, six hundred and thirty bishops approved the doctrine. In 476 the Basileus made five hundred bishops sign a retraction of the teaching of the Council of Chalcedon, while in 458 Emperor Leo I obtained an equal number of signatures in favour of that council. The same bishops said Yes and Nay within a few years of each other with a facility that, to say the least, is disconcerting. In 681 at the Synod of Six (Euchorius, Emperor), the whole Greek episcopate pronounced itself in favour of the two wills in Jesus Christ, yet, in 712, the same episcopate, with the exception of a few bishops, solemnly approved the condemnation of the former council pronounced by the Emperor Philippicus, and determined the the dogma of the double will. In 753, at the concilium of Hiéira, near Chalcedon, 388 Greek bishops applauded the Iconoclast edicts of Constantine Copronymus, and in 787, at the Seventh
General Council, they condemned his memory and restored the cultus of images.

Degradation of will, and slavery of the whole episcopate to the whims of the emperors—such are the main causes of these wretched tertagressions. No doubt there were some noble, though rare, exceptions among bishops; but in that age the Byzantine and the Gallican did not see eye to eye, and their knowledge is not in question. On this score bishops and monks, as a rule, were ahead of their brethren in the West. This is one of the things that startle the student of the ecclesiastical literature of the two Churches during this same period. In the East there is no such suspension of literary activity as we find in the West. We get from the period of the Germanic invasions to the magnificent efflorescence of the Middle Ages. But the Latin Church had one incontestable superiority over its rival: it had one centre of gravity, Rome, and always recognized the papacy as the visible head of the Church. The ecclesiastical doctrine of the Eastern Church, on the contrary, is very rudimentary; they do not appeal to Rome, and recognize its inexpressible rights only very rarely and in extreme cases. With the exception of St. Gregory of Nazianzus, St. Theodoret, and a few other rare examples, the bishops and liturgists of the Greek Church were never tonsured on the primacy of Rome, except when they are imploiring the pope's help to bring a dangerous adversary to reason. The danger past—the shock avoided—they have forgotten everything.

The primitive Church, Greco-Syriac in speech, as we have said, adopted the liturgy of the synagogue, which consisted of readings from the Bible, hymns, homilies on some subject furnished by the reading, and prayers. To this was added the sacred banquet of the Supper instituted by Christ, with prayers and ritual forms borrowed for the most part from the synagogue and from the liturgy of St. Basil, never taught on the primacy of Rome, except when they are imploiring the pope's help to bring a dangerous adversary to reason. The danger past—the shock avoided—they have forgotten everything. about for another issue. He took, one by one, the main causes for separation that had been in the five centuries and united them into a body of doctrine; then, confident in his learning and prestige, he decided to give battle. The insertion of the "Filioque" clause in the Creed, the procession of the Holy Ghost in the Creed, etc., were so many reasons which were bound to have their effect upon the leading minds when the question of the separation came up. Then again the popes' acknowledgment of the Frankish kings as Emperors of the West was bound to carry weight in Byzantine political circles. Moreover, it was evident by this time that between the Latin and Greek worlds there existed a chasm which must greatly lessen the influence of the Hellenic faith was arranged. Ignatius forgave his rival and, it appears, on his death-bed designated him as his successor. Pope John VIII sanctioned this choice, and if subsequent popes excommunicated Photius it was for special reasons not yet sufficiently known.

In 886, Photius was deposed by the Emperor Leo VI, who disliked him, and, between 893 and 901, a reconciliation of the two Churches was effected by Pope John IX and the Patriarch Antonios Caulea. During the entire tenth century, and the first part of the eleventh, relations between the Roman and the Greek Churches were henceforward of a very close character, no doubt, occasional difficulties, always unavoidable in societies different in customs, speech, and civilization, but we may almost go so far as to say that the union between the Churches was as deep and sincere as it was during the first three centuries of Christianity. Michael Cerularius, however, desired a schism for no other reason, apparently, than to satisfy his pride, and in 1054 he succeeded in making one at the very time when everything seemed to promise a lasting peace. For this purpose he brought forward, besides the theological reasons stated by Photius, many others that Photius had not even dreamed of, and which, judged particularly fitted to catch the popular fancy.

The use of asyms, or unleavened bread, in the liturgy, the celibacy imposed on all priests in the West, the warriorlike manners of Western bishops and priests, the shaven face and the tonsure, the Saturday fast, and other such divergencies of practice were used to discredit the Latin Church. Thoughtful men may not have been misled by these specious arguments, but the mass of the people and the monks were certainly influenced, and at Constantinople it was they who made up public opinion. For this very reason the patriarch of Constantinople, Cerularius, as he was called, was better fitted than that of Photius to bring about permanent results. Indeed, so thoroughly did it cut off the Greek peoples from Rome that since then she has never won them back.

Unfortunately, this movement of separation under Photius and Michael Cerularius was on foot at the very time when the Slavs were being converted to Christianity, a fact in the history of the evangelization of the nations second only in importance to the conversion of the Germanic races. The Servians and Croatians, settled by the Emperor Heraclius (610–41) on the lands that still inhabit, had adopted the Christian teaching of Roman priests and bishops. But the progress of the new religion was so slow that a second conversion was deemed necessary. It took place under the Emperor Basil the Macedonian (867–86) as it was entrusted to Byzantine missionaries the Greek Rite of Constantinople was adopted. This had no access, and it is interesting to note that these were formerly subject to it, and that these numerous Servian Churches broke away from Byzantium, it was to organize autonomous ecclesiastical bodies independent of both Rome and Constantinople. In this way a whole region was lost to Catholicism. The Bulgarians, who had crossed the Danube about the same time as the Servians, formed a more or less homogeneous nation with the Slavs and became a serf people, that more than once struck terror into the Byzantine of Basileus 864, or in the opening months of 865, their king, Boris, was baptized by a Greek bishop and took the name of Michael after his godfather, the Emperor of Byzantium. Photius, who was patriarch at the time, did not see his way to granting all the demands of King Boris, so, like a cunning politician, the latter took on Rome and succeeded in obtaining successively several missionaries to organize the new-born Church within his territory. His next step was to send away all the German and Byzantine missionaries whom he found there. His real ambition was to have a patriarch of his own who would put him in permanent possession of the See of Rome and succeed in obtaining successively several missionaries to organize the new-born Church within his territory. Whether he got his patriarch from Rome or from Constantinople mattered little; the main thing was to have one at any cost. Rome did not fall in with his plan, and Boris turned again to the Greek patriarch anointed the Basileus at Constantinople, and as the pope anointed the Germanic emperor of the West. Whether he got his patriarch from Rome or from Constantinople mattered little; the main thing was to have one at any cost. Rome did not fall in with his plan, and Boris turned again to the Greek patriarch anointed the Basileus at Constantinople, thereby initiating a serious misunderstanding between Rome and Constantinople which considerably added to the strain occasioned by the affair of Ignatius and Photius. Rome claimed the Bulgarians as inhabitants of ancient Illyricum (heretofore ecclesiastical territory), no doubt; the pope claimed that his missionaries; Constantinople claimed that its priests had converted the Bulgarians, that the land was once imperial territory, and that the Council of Chalcedon had given Constantinople the right to consecrate bishops for all barbarian countries. Between the two Churches the Bulgarians did not know which way to turn. They retained the Byzantine Rite, which, with its elaborate ceremonial, made a deep impression upon their child-like imaginations, and, formally, they submitted to Greek bishops, until they should have bishops and a patriarch of their own. Bishop Cyril of Scupi, who was a pupil of Photius, in 866, in 866, was expelled from Moravia by King Svatopolk, took refuge in Bulgaria, where they were received with open arms. The newcomers introduced into Bulgaria the Byzantine Liturgy, but in the Slavonic tongue, whereas hitherto the Bulgarian priests had used the Greek language. From Bulgaria this Byzantine-Slavonic Liturgy spread among the Servians, the Russians, and all the Slav peoples.

The first Bulgarian patriarchate was originally established at Pereiaslaf, then was transferred to various centres in Western Bulgaria, finally to Ocrida (see Actauna). In 1019 it was suppressed, when the Bishop of Ocrida fell into disfavour, or rather it was converted into an independent archbishopric. As such it lasted until 1707, when it was definitively suppressed. However, independent patriarchate or autonomous archidioecese, the Bulgarian Church was from its foundation powerfully influenced by Constantinople; the long series of its Greek or Hellenistic archbishops shared at all times the anti-Roman feelings of that city. The Russian Church is also a spiritual daughter of Constantinople (see Rtsia). We need not relate here the conversion of that nation; it probably took place about 853, perhaps a little earlier, and both Latin and Greeks probably participated in it. Progress was very slow, however, and when the Caesars Olga wished to become a Christian she had to go to Constantinople for instruction and baptism, on which occasion she took the name of Helen (c. 850 or 957). Olga's conversion had no influence whatever on her whole people, who were indolent to yield to her wishes that he should also be a Christian. It was not till 989 that Prince Vladimir allowed himself to be baptized, and ordered that his subjects should ever afterwards receive baptism.

The Russian Church was probably organized at this time, and a Greek metropolitan sent by the Byzantine patriarch was installed at Kiev, the Russian capital.
Unfortunately, we have no “Notitia Episcopatum” of the Byzantine Church contemporary with this event. The “Notitiae” of 980 naturally makes no reference to Kiev, and the next “Notitiae” extant goes from 1081 to 1118 only; in that year the metropolitan See of Kiev appears as number 25, and, in 1132, the bishop of Kiev is mentioned as metropolitan of Kiev, Novgorod, Pskov, Smolensk, Volhynia, Wolynia, and Kazan. Thus, the See of Kiev had been elevated to metropolitan rank as early as 1132. In this document Kiev appears as presiding over eleven suffragans, and this is the earliest information we have concerning the hierarchy of the Russian Church.

The head of this Church had a rather inferior position in the Byzantine hierarchy, but it held the position of the third rite (q. v.) and, once installed, administered freely its ecclesiastical province. It consecrated its bishops, crowned its czars, and he usually resided at Kiev. Generally, a Greek was chosen for the office, so that the medieval Russian Church was but an extension of the Byzantine Church, sharing the liturgy, the dogmatic teaching, and the ecclesiastical antipathies of the latter.

(4) Efforts towards Reunion; The Crusades (Eleventh to Fifteenth Century).—In spite of the emperor and the court, who favoured an understanding with Rome and the West, Michael Cerularius proclaimed his schism in 1054. He was followed by most of the clergy, also by the monks and the Greek people. Peter, the Patriarch of Alexandria, died of illness but died soon afterwards, and his successor went over to Cerularius. The Patriarch of Alexandria, usually resident at Constantinople, sided with the bishop of the capital; the Greek Archbishop of Ochrida was devoted to Cerularius and was one of the first to stir up the question of the azymes as a grievance against Rome. Lastly, the head of the Russian Church was only a metropolitan dependent on the Byzantine Church. Therefore, with the exception of the insignificant Patriarch of Jerusalem, who at first tried to agree with both parties, all the Greek Church had to remain shut out from the struggles of the eleventh century. In the years that elapsed from the death of Photius (891) to the fall of Constantinople (1453) the anti-Roman doctrine of the Greek Church took definite shape. Photius was the first who attempted to co-ordinate all possible reasons of complaint against the Latins. He enumerated seven chief reasons for the prosecution from the Father and the Son, the insertion of the “Filioque” clause in the Creed, the primacy of the pope, the reconfirmation of those confirmed by Greek priests, the Saturday fast, the use of milk foods during the first week of Lent, the obligation of celibacy on the priests, three of which were not in any way affected by dogma, and as much might be said of the second. The reconfirmation of those already confirmed seems to have been a false accusation, unless some Latin missionaries sinned through excess of zeal. The primacy of the pope had always been recognized by the patriarchs of the East, and by Photius himself, as long as the pope was willing to condescend to their wishes. The first letter of Photius to Pope Nicholas I does not differ from those of his predecessors, save for its more submissive tone and more humble diction. Appeals to the pope from the East between the second and ninth centuries are very numerous. And as for the Greek theory of the procession of the Holy Ghost, it was held by no author of the eighth century; St. John Damascene and St. Maximus of Chrysopolis had favoured this doctrine long before Photius and were never accused of heresy. It would, therefore, have been easy to find a common ground or compromise that would have harmonized the teaching of both schools. Failing from Photius to Michael Cerularius, we find only one new complaint directed against the Latins, and that liturgical: the use of unleavened bread (see Azymes). On this point the dispute was impossible of settlement, since each Church had been using its own particular kind of bread from time immemorial. Fresh differences in the meantime arose: the placing (about the thirteenth century) of the Consecration; Purification, which the Greeks would not admit, although they prayed for the dead and mortified themselves in their behalf; the full glorification of the just prior to the general judgment; the general judgment itself, which they rejected, as did also some Latin medieval theologians; the giving of communion to the laity under one species: baptism by infusion. To all these differences were to be added in the nineteenth century the dogma of the Immaculate Conception and that of Papal Infallibility. Merely for the sake of recording them, we may mention liturgical differences, as the manner of fasting in Lent, the adoration of a new ciborium, the use of leavened bread, the sign of the cross—causes of offence which the Greek clergy took pleasure in keeping alive, and which made a deep impression on a people devoted to trivets and, generally, very ignorant.

Papal Efforts at Reunion.—The breach declared in 1054 has never been repaired. Yet this has not been the fault of the popes. As early as 1072 we find Alexander II eager for reunion. This attempt failed because of the unflinching opposition of the philosopher Michael Psellus, the Patriarch Xiphilinos, and their fanatical friends. Thenceforth until the fall of Constantinople (1453) the pontiffs did not cease to use every means—diplomatic and paternal advice to win back the erring Greeks to the fold of orthodoxy, and to keep them there on their return. All in vain. The two reconciliations effected by the Councils of Lyons (1274) and of Florence (1439) were solely due to the efforts of the popes and the Byzantine emperors. At last, Michael VIII, Palaeologus, a clever politician, proclaimed himself and his people Catholics in order to save his crown and to stay the formidable armament of Charles of Anjou. At Florence John VII, Palaeologus, came to beg men and arms from Europe to save his capital from the threatening Turks. It would be difficult for an impartial historian to affirm the sincerity of their desires for religious union. One thing is certain, their clergy followed them with the greatest reluctance, and at Lyons the Greek clergy kept aloof from any union with Rome, and would not listen to it at any price. Michael Palaeologus was hardly able (1282) when his son Andronicus was summoned by the Holy Roman emperor for his various crimes and even denied religious burial to his father; moreover, the Catholic patriarch, John Voucas, was deposited together with all his friends.

John VII, Palaeologus, who had agreed to the union at Florence, either could not, or did not dare, proclaim his capitulation either in word or deed, though the intrigues of men like Mark of Ephesus, or George Scholarios. His brother, Constantine Dragases, the
last of the Byzantine emperors, died heroically for his country. He, also, feared at the beginning of his reign to impose the union on his clergy and people. He had to wait until 12 December, 1452, hardly six months before the entry of the Turks into the city; when Cardinal Isidore solemnly proclaimed the union of Florence in the church of Saint Sophia. Admiral Notaras cynically observed that the Greeks preferred the turban of the prophet to the tiara of the pope. It must, however, be acknowledged that the seeds of union were sown and the Oxford Conference of Rome have never been completely stifled. There have always been Greeks who were sincerely Catholics, even in the darkest days of their country's history. Among them some have always defended with their pens, and often at the risk of their lives, the unity of the Church and the primacy of Rome. Demetriopoulos, it is true, has published a lengthy list of the principal anti-Roman writers among the Greeks, but it would be easy to prepare another very large work of the same kind exhibiting the pro-Catholic activity of many Greeks. John Vecco (Beccos), George Acropolites, Isidore of Kiev, Bessarion, Arcadiou, perhaps another, are among the names of the unbaised historian, and they had many disciples and imitators.

With few exceptions the popes have always leaned to the religious policy of recovering the East by every means of pacification and, when necessary, by theological controversy. This led to the rule for the Eastern Church, the Eastern Church, the Eastern Church. If the Eastern Church was not to be united to Rome, it must be converted to Catholicism. The latter was not to be done by force, but by persuasion. The popes, however, were misled in their choice of weapons, or rather, if their representatives in the East abused controversy and polemic, it must be conceded that the popes stopped there. The violent solution of the Eastern question by the sword—the crusade which was to profit only the Westerns—was no doing of the popes. In his stirring appeal at Clermont-Ferrand that set about the first armed enterprise, Urban II exhorted the Christians of the West to save their brethren in the East, even before undertaking to free Jerusalem and the Holy Sepulchre. Moreover, it is not to be understood to mean that we are no longer dealing with Innocent III; the opening of the Fourth Crusade was, to use a phrase of the Byzantine historian, a concession of the Fourth Crusade to an attack on Zara and Constantinople for the almost exclusive profit of Venice. From 1261 to 1282 (the Sicilian Vespers) Charles of Anjou was hindered from making war on Michael Palaeologus and recapturing Constantinople solely by the influence of the Roman Curia. It would therefore be an injustice to blame the popes for the abortive issue of the Crusades. Had the popes been supported earnestly by East and West alike, Christendom would have fared immeasurably better. Unfortunately, the Catholic States, especially the Pope, were more interested in the political than the moral and religious significance of the conduct and aims of the popes. As a rule, the only success of contemporary politicians was in embarrassing the popes. The East, moreover, it must be admitted, did its share in frustrating the work of the Crusades. Far from assisting the generous West in its sublime effort to save Christendom, the Greeks saw in the Crusades only sources of profit for themselves or attempted to hinder their success. While their theologians and polemical writers showed more rudeness and spleen in controversy than did the Latin, their princes and emperors were likewise less disinterested than the leaders of the Crusades. It is to be carefully noted that the crusading movement was by no means a complete failure. At the time of the First Crusade, in the eleventh century, the Turks were in possession of Nicaea, within a stone's throw of Constantinople. Before the Frankish knights Islam retreated, or at least ceased its conquests, in Asia Minor, in Syria, and even in Egypt. And if in the fourteenth century it was enabled to resume the conquests into the heart of Europe, a menace to Christian civilization, it was in consequence of the cessation of the Crusades. Nor must the foundation of the many Catholic institutions in the East, which long outlasted the Crusades, be reckoned as useless. It was their slow but continuous effort that paved the way for the emancipation of many Christian peoples from the Turkish yoke, and brought about in those countries that increasing influence of the Catholic religion which we now behold. "More important perhaps", says M. Breheret in "L'Église et l'Orient au moyen âge: les Croisades" (Paris, 1907), "are the consequences which the Crusades nature dreams of and which sprung from the contact of Christendom and the Orient. The very complex question as to what European civilization owes to the East cannot be discussed here; yet every day we find traces of the charm which the culture of the East exercised on Europe before and during the Crusades. While we are more and more interested in the history of the Church, we must not forget that the most important work has been done in geographical knowledge and, in consequence, in the spread of European civilization by expeditions and travels in the East. Asia was really discovered in the thirteenth century by those Italian missionaries and merchants who were the guests of the Mongolian Khans. For the first time since the days of the Diadochi, the East, countries which until then had remained in the penumbras of legend appeared as a reality. Literature, finally, owes much to the Crusades, which, by the literary relations they established between the Latin and Greek worlds, called forth the magnificent movement of the Renaissance.

(a) Internal Organization of Byzantine Churches.—We have already spoken of the Bulgarian Patriarchate of Ohrid, which about 1020 was changed into an autonomous Graco-Bulgarian archbishopric with a see at Preslav. In 1185, when a pretender to the throne was driven into the town by the Serbs, an ecclesiastical convention was held in 1176; the bishop was elected in 1176; the bishop was elected in 1176, remained under the influence of Constantinople. Another Bulgarian patriarchate, that of Tarnovo, was established in 1204 by legates from Innocent III and remained Catholic for a long time. Gradually, however, it began to lean towards the Greeks, till it finally disappeared in 1395, and its bishops all passed under the authority of the ecumenical patriarch. Something similar happened to the Serbs. Up to about 1204 they were on the most cordial relations with Rome, although it is probable that they recognised the jurisdiction of Constantinople. In 1217, a local bishop was crowned in the name of his brother king in the pope's name, and established a Serb Church which was at first composed of six dioceses. It was recognised by the Byzantines in 1219. In 1346 King Stephen Douchan threw off all
ecclesiastical independence on Constantinople and set up the Servian Patriarchate of Ipek, which, after many changes of fortune, was suppressed in 1766 and incorporated in the Byzantine Church. The baptistery of the ancient patriarchal church of St. John on the banks of the Golden Horn was dedicated to the Holy Cross. It was the cathedral of the Servian Church and served as a model for the shrines of the Holy Cross in Russia and Poland. The Servian Church was the first in the Balkans to adopt Slavic script and was the first to produce Slavic literature.

Monasticism was more and more popular throughout the Greek world. In Constantinople there were hundreds of monasteries, and every provincial town tried to rival the capital. One of the most famous monasteries was that of the Holy Cross, which was established in the twelfth century. It was the home of many great scholars and was renowned for its scriptoria and libraries.

The Servian Church was composed of two main branches: the eastern branch, which was centered in the city of Thessaloniki, and the western branch, which was centered in the city of Saloniki. The two branches were divided by a schism in 1054, and the eastern branch was eventually absorbed by the Byzantine Church.

During the troubled period which saw the establishment of the Franks in the East, the Greek patriarchates of Alexandria, Antioch, and Jerusalem suffered especially. As long as the Latins remained undisputed masters of these regions, their Latin patriarchs stubbornly opposed the coexistence of Greek patriarchs, so that the latter had no choice left but to take refuge in Constantinople at the Byzantine Court and to govern their churches from there as best they could. This method soon became customary: and even after the patriarchs returned to reside at the Phanar. The Patriarch of Antioch alone returned soon afterwards to his own territory. In the seventeenth century the Patriarch of Jerusalem ventured into Palestine, but it was not till the nineteenth century that the Patriarch of Alexandria left the shores of the Bosphorus. It was not till then that Cyprus and Crete (the latter being directly under Constantinople) were able to have Greek bishops during the long centuries that those islands remained in the hands of the Latins. It would be impossible within the limits at our disposal to give an exact description of the hierarchy of the patriarchate of Constantinople from the tenth to the fifteenth century. A "Notitia Episcopatum" drawn up soon after 1453 reckons 72 metropolitan sees, 8 autocephalous archbishoprics, and 78 suffragan sees divided among 21 ecclesiastical provinces or a grand total of 158 dioceses. This relative stability is explained by the fact that Asia Minor was then but an immense ruin, and that in Europe, in the majority of the Venetian or Frankish possessions, the presence of Greek bishops was not tolerated.

Space forbids us saying more than a few words on the domestic history of the Greek Church. The election of the patriarch before the Holy Synod; de facto, as we have seen, it was the Basileus or emperor, who elected him. Limited as was the authority of the Holy Synod, it could not always exercise what authority it had, and, on the death of a patriarch, the Basileus often appointed his successor without any previous consultation with the Synod. Nicephorus Phocas attempted to nullify any ecclesiastical nomination not approved by him, an abuse of power which lasted during his lifetime only. The metropolitan was elected by the Holy Synod, the bishops by the metropolitan and his suffragans, if they were sufficiently numerous, and, if not, with the assistance of bishops from another province. The clergy had undergone no change: since the earlier period, except that after the twelfth century we hear of no more desecrations, though some religious women bear that title without any right to it. Moreover, the eremites and feminine orders, which no longer wore a lay habit or dress, "Commendation" and "charisticariate" were as common as in the West, with their train of simony and vices still more hideous. The mena episcopologia often found its way to the officials of the treasury or some other court functionary, and servility towards the State was the order of the day in all the ranks of the clergy. The patriarchs were obedient tools of the emperors. Yet there were numerous contestants for the vacant patriarchy who had the courage to defend their rights and the rights of the Church against the encroachment of the civil power.

Monasticism was more and more popular throughout the Greek world. In Constantinople there were hundreds of monasteries, and every provincial town tried to rival the capital. So that the Byzantine empire became one vast Thebaid. Outside of Byzantium the monasteries formed into groups which surpassed the fame of the ancient solitaries of Egypt and of Palestine. Without speaking of Southern Italy, rich in Greek convents, we must not omit to mention the famous monasteries of Mount Athos, of Holy Phocis, and of the Peloponnesus. On Mount Olympus in Bithynia (the neighbourhood of Brousse, Nicra, and Ghemlek) many religious centres sprang up. On a little corner of land, with a maximum length of 63 miles and a width of from 12 to 20 miles, a veritable oasis of monasticism came into existence, comprising at that time more than a hundred convents. These convents, usually very well built, sheltered a number of saints and ecclesiastical celebrities. Beginning from the tenth century the peninsula of Athos saw the rise of monasteries properly so called, and saw the monastic life take on a definite and definite significance. The famous monastery of Mount Cassius, the "cheese monastery," was founded at the beginning of the eleventh century by St. Epiphanius, who died in 1030. The monastery was built on a rocky height, and was surrounded by a wall about 2 to 3 miles long. The monastery was the seat of a bishop, who was elected by the monks, and was subject to the authority of the pope. The monastery was famous for its cheese, which was exported to Constantinople and other places. The monks lived a simple life, and were devoted to prayer and work. They were known for their strict discipline and their pious observance of the monastic rules. The monastery was a centre of learning, and many famous scholars and philosophers were associated with it. The monastery was a model of the ideal communal life of the early Christian era, and became a symbol of the monastic ideal in the Greek world.
Lascaris by Michael VIII, Palaeologus. Originally a personal affair, it grew eventually into a theological and canonical controversy.

With the fourteenth century we come upon Hesychasm (ἡσυχία, "quiet"), the greatest theological conflict of the Greek Church since the old times of Iconoclasm. Gregory Sinaiis first spread this doctrine, which he had learned from Arsenius of Crete. Intrinsically, it offers nothing very remarkable. It is but a well-known function between the practical religious life, which purifies the soul by cleansing it from its passions, and the contemplative life, which unites the soul to God by contemplation, and is thus the ideal and end of religious perfection. Four or five successive stages lead the disciple from the practical to the contemplative mode of life. But while there was nothing starting in the theological principles of the new teaching, the method pointed out for arriving at perfect contemplation recalled the practices of Hindu fakirs, and was no more than a crude form of auto-suggestion. The alleged Divine splendour which appealed to the hypnotized subject, and was mixed with an illusory light which surrounded the Apostles on Thabor, was really nothing but a common-place illusion. Yet this Thaboric brightness, and the omphalospychic method of inducing it, gave a widespread reputation to the Hesychasts. No doubt the leaders of the party held aloof from these vulgar practices taken individually, but on the other hand they scattered broadcast perilous theological theories. Palamas taught that by asceticism one could attain a corporal, i.e. a sense view, or perception, of the Divinity. He also held that in God there was a real distinction between the Divine Essence and its attributes, and he identified grace as one of the Divine propria making it something uncreated and infinite. These monstrous errors were denounced by the Calabrian Barlaam, by Nicephorus Gregoras, and by Aethynychus. The conflict began in 1338 and ended only in 1368, with the solemn canonization of Palamas and the official recognition of his heresy. He was declared the "holy doctor" and "one of the greatest among the Fathers of the Church!", and his writings were proclaimed "the infallible guide of the Holy Faith!". Thirty years of incessant controversy and discordant councils ended with a resurrection of polytheism.

The most famous are the ninth-century Photius, well-known for his anti-Latinism; Michael Psellus, in the eleventh century, an all-round capable writer, theologian, exegete, philologist, historian, scientist, poet, and, above all, philosopher; Euthymius Zigabenos, who composed the request of Aristophanes, "Dogmatic Panoply, or Armoury, Against all Errors!"; Nicholas of Methona, Andronicus Camerarius, anti-Latin polemical writers, particularly Nicetas Acominatus (Akominatos), noted for his "Treasure of Orthodoxy". John Vecco (Becoos) and George Acropolites tried to reconcile the teachings of both Latin and Greeks while other Greeks opposed the Latins with all their might. Among the opponents of Palamas were Barlaam, Gregoras, Akydinos, John the Cypriot, and Manuel Calecas. The theological conflict went on both before and after the Council of Florence (1439); Mark of Ephesus and George Scholarios repudiated the Roman theology, which on the other hand, was adopted and upheld by Bessarion, Isidore of Kiev, Joseph of Methone, and Gregory Mammas.

(5) From 1453 to the Present Time—Relations with the Catholic Church, the Protestants, etc.—The capture of Constantinople by the Turks marks the end of the Byzantine and the beginning of the ocumenical patriarchate and the Greek Churches subject to it. By establishing Gennadius Scholarius as the only patriarch of the Orthodox Church within the Ottoman Empire, Mohammed II placed all the other peoples—Servians, Bulgarians, Rumanians, Albanians, and Athonians under the exclusive domination of Greek bishops. No doubt the Servian and Bulgarian Churches of Ipek and Ochrid still existed, but, pending their final suppression in 1766 and 1767 respectively, they were helenized and under Greek control, so that they were in reality but an extension of the Greek Patriarchate of Constantinople. More noteworthy, the conquest of Egypt by Sultan Selim in the sixteenth century enabled the Greeks to control the honours and emoluments of the Patriarchates of Jerusalem and Antioch. In the seventeenth century the Patriarchate of Jerusalem was hellenized, and that of Antioch in the opening years of the eighteenth century. As for Alexandria, where the faithful were very few, its Greek titular always resided at Constantinople. In this way the Greek Church gained gradual possession of the immense Ottoman Empire; as the Turks extended their conquests the jurisdiction of the Greek patriarchs extended with them. This situation lasted until the first half of the nineteenth century. The whole Orthodox world was at that time Greek, save in Russia, whose religious autonomy had been recognized in 1870, and in the Austro-Hungarian Empire, where Servians and Rumanians constituted, from the end of the seventeenth century, autonomous Churches, either Catholic or Orthodox. During the greater part of the nineteenth century the principle of nationality—long cherished at Constantinople, which had employed it against the pope when robbing them of jurisdiction over Illyricum and at one time over Southern Italy—was turned against the Greeks themselves, especially in the Church of Rome. Every province or kingdom that shook off the Turkish suzerainty freed itself at the same time from the ecclesiastical yoke of the Phanar. Curiously enough, it was the Greeks of the Hellenic Kingdom who first set up, in the nineteenth century, an autonomous Church. The Servian and Bulgarian Churches, and the Athonian Church, wished to imitate them. The Bulgarians went further and, while remaining Ottoman subjects de jure until October, 1878, they established about forty years ago an exarchate of their own, independent of the Phanar, with jurisdiction not only over all Bulgarians in Bulgaria, but also over Bulgarians in Turkey. It is to be expected that the recent proclamation of a Bulgarian kingdom will modify this state of things. A Bulgarian Church may be established within the limits of that kingdom, and a second Bulgarian Church within the limits of Turkey in Europe. The creation of a Servian Church for the Servians in Turkey is also projected, so that the ocumenical patriarchate seems on the eve of dismemberment. In recent times, also, the rivalry of nationalities has passed over from Europe into Asia. In 1899 the Greeks were ejected by the Syrians from the Patriarchate of Antioch; in the same way they may soon lose Phanar. In Egypt, too, the power of the Greek and Athonian-speaking elements; the latter, aided by their Musulman fellow-countrymen, may eventually cast off the ecclesiastical control of the Greeks. In short, at no very distant date the Greeks, who have so long ruled the Orthodox world, will have to be content with the
Church of Athens, that of Cyprus, and the sadly weakened Church of Constantinople. If we look at the domestic situation of the Greek Church during the period from 1453 to 1901, the year of the present titular's accession, we find that, of a total of one hundred and two patriarchs, only twenty-three remained in their see, and that the seventy-three others either resigned or were deposed. It is a strange phenomenon, seldom met except among the Greeks, that, whereas a patriarch was nominated for life, as a rule he was deposed or forced to resign. It sometimes happened that the same man became patriarch um their own accord. In 1453 and 1901 there were only one hundred and two patriarchs, there were some one hundred and sixty patriarchal elections; thirty-five patriarchs having been elected several times (twenty-one twice, nine three times, two four times, two five times, and one seven times). The last of these records is that of Cyril Lucaris, the famous seventeenth-century Calvinistic patriarch. These continual changes gave rise to some amusing incidents. Thus on 19 October, 1484, Anthimus IV succeeded Anthimus VI, who was deprived of office the day before; at present Joachim III is consecrated for the third time in the last twenty-three years after the death of Joachim IV, who had succeeded him. This confusion is by no means peculiar to the Church of Constantinople. In the hallowed Church of Ochrida, we find between the years 1650 and 1700 no fewer than nineteen forced resignations, causes of these sudden changes are the cupidities of the Turks and the ambition of the Greek clergy covetous of the patriarchal throne. The cupidities of the Turks might never have been a factor, had it not been for the intrigues and cabals of the Greek clergy themselves, who are put at the forefront of their desire for elevation. On 26 November, 1726, Palaeo paid out 145,000 francs for the office of patriarch, and in 1750 the Sultan Mustapha III fixed the tax on the office at 120,000 francs. And yet in many instances the patriarchs did not remain even a year in office. Later, when the Turks had taken off the tax, depessions and resignations went on, and go on to this day as in the past, so much so that the laity now come forward and ask that the duration of a patriarch's term in office be limited, e. g. to three or four years. However, in the Kingdom of Greece, where the Church depends mainly on the State for its income, the suicides do not so often happen. The music of the bishops might be more truly said of the metropolitans and bishops. Though, according to Greek canon law, transfers from one diocese to another are forbidden or ought to be very rare, as a matter of fact every bishop has administered before his death four or five different dioceses. Either the bishops did not find their dioceses suited to their dignity or the people did not find the bishop suited to their taste. Of late the custom of lay interference in the nomination of bishops is growing, and hardly a year goes by in which seven or eight bishops are not consecrated at the request of their adherents. No must it be forgotten that the bishops busy themselves mainly with anti-Bulgarian or anti-Serbian politics and other secular affairs. The Turkish government often has to request the withdrawal of some over-compromised prelate.

It may be noted that the Greek bishops—those of to-day at least—have received a fairly good education in the secondary schools, followed by a very ordinary course of theology in the seminary of Halki or that of Santa Croce, near Jerusalem. Some of them have spent a few years in the Protestant universities of Germany, and have studied the ecclesiastical histories of Russia. Their theology is usually limited to a knowledge of points of controversy between Latins and Greeks from the beginning of their Church until recent times; they use it to bias the minds of their people against the missionary efforts of Catholics. They are more tolerant of Protestants. With the exception of the clergy in the towns, who aim at the higher offices, the Greek priesthood is very ignorant; the priests can hardly get through the Mass and the other services in a fitting manner. Although married, they retain great influence over the illiterate people, and are the heads of the flocks, who are attached to Christianity by tradition or patriotism, and whose ill-instructed religious sense shows itself mainly in ritual observances and superstitious practices. With the exception of two or three seminaries, having about fifty pupils in all, there is no school for the clergy at present.

The dioceses are divided, as with us, into parishes of various classes. Preaching is neglected and in many places is omitted altogether. For this reason, in 1893 some laymen at Smyrna founded the Eusebia Society for the diffusion and explanation of the Word of God. This example has been followed in other places, especially at Serre, Magnesia, and Constantinople, where laymen preach in the churches as is the custom in some Protestant seats. The higher clergy, far from favouring this movement, which is a reproach for them, do all they can to hinder it. Feast days are the most important in the Church; so live, the world is at a stand. The latter are rarely received, and rather as a matter of custom than of genuine conviction. Communion is received four times a year after the four great fasts: at Easter, on St. Peter's day, on the Assumption, and at Christmas. Confession ought to precede these solemn occasions, but as a rule it is rare. The bishops and priests teach the people that it is better not to speak of it. The priests and bishops do not go to confession. Mass is heard on Sundays and Feast-days, or, rather, on those days the people go and say some prayers before the icons, or holy images, the services being generally without liturgy and the sermon long. In any case there is no definite teaching on this point any more than on others, everything remaining vague and uncertain in the minds of the people.

(For Feasts and Fasts of the Greek Church, Service Books, Vestments, Church Furniture, etc., see, under CONSTANTINOPLE, The Rite of, Vol. IV, pp. 315 sqq.)

The music of the Greek Church began with the ephemonentic chant, a sort of recitative based on the laws of accent in prosody. Through the early melodies, or Syricon liturgical poets, this musical notation may reach back to the ancient liturgical chant of the Christians of Egypt or Asia Minor. The notation, known as that of St. John Damascene, is merely a development of ephemonentic notation. It increased the number of signs from nineteen to twenty-four. In medieval times a monk of Athos, John Koukoules, raised it to sixty or more; but in the early part of the nineteenth century Chrysanthos modified or simplified this excessively complicated notation; his "Theoretikon," a very instructive work, has become the basis or guide for all liturgical chants and scientific works thereon. Gregory Lampadarios and Chourmouzios added Chrysanthos in his reform, which is still hardly to be considered successful. It seems that all three misinterpreted certain old musical signs; moreover, they are responsible for the horrible nasal intonation so abhorrent to Europeans. However, musical reform is in the air; during the past thirty years it has been talked of, and plans have often been submitted, but so far without result. The religious music of the Russians is the only one that expresses any true piety. Its gravity, unctuous, and sweetness are beyond question. If a religious music truly Christian ever existed, the Russians have inherited it. Between Russian and Byzantine music there is no connexion whatever. (See also under CONSTANTINOPLE, The Rite of, Vol. IV, p. 316.)

LENSKOV, History of the Greek Oriental Church under Turkish domination since 1453 (Russian, See also, Rados, Geschichte der orientalischen Kirchen von 1453-1866 (Leipzig). VI.—49
Even after the taking of Constantinople by the Turks and the apostasy of the Greeks, the one aim of the popes was to drive back the Turks into Asia and to save the Byzantines in spite of themselves. Nicholas V, Callistus III, Pius II, Paul II, Sixtus IV, Innocent VIII, and Alexander VI all followed this policy. Julius II, if possible, the Shah of Persia, and turned him into an alliance against the Sultan; the struggle against the Turks was the great concern of the whole pontifical life of Leo X. If the plan to drive back the Turks into Asia finally failed, the fault lay not with the popes, but with the nations of Christendom, jealous of each other, and attentive to their own private gain rather than the interests of Christianity. It must not be forgotten that the victory of Lepanto (1571) was the work of a pope; that a pope worked for the preservation of Candia (1669), and that, had it not been for another pope, John Sobieski would never have relieved Vienna (1683).

From 1453 until the French Revolution the relations between the popes and the Greek patriarchs were very different from what we find to-day. Cordial letters passed frequently between them; priests of either rite were recommended to one another's care, and the Pope was often involved in the temporal affairs of the Greek Church. Many patriarchs of Constantinople—among others, Cyril II—and the Greek Archbishops of Ochrida, Porephryius about 1600, Athanasius in 1606, Abraham in 1629, Melecius in 1640, Athanasius about 1650, professed the Catholic Faith; at different times many Greek bishops did in like manner. It would be impossible to say how far their conversion was sincere. Possibly the need of monetary help or the wish to make a stand against Protestantism was the motive power. It must at least be acknowledged that their conduct and attitude towards Catholics gave evidence of genuine good will. Thus, to take some well-known examples, in the seventeenth and eighteenth centuries the Jesuits and Capuchins were allowed to preach and bear confessions in the Greek Churches, by the express permission of the patriarch and the bishops. That they made use of this privilege we learn from their correspondence. It is a matter of fact, missionaries of all religious orders and every nationality observe rigidly the rules of Propaganda concerning communicatio in sacris. They practically ignore the higher Greek clergy—not the best way, perhaps, to break down prejudice and win esteem. It is no doubt true that as a rule the higher Greek clergy are noted for their anti-Catholic fanaticism and are never weary of railing against Roman missionaries and of insulting Catholics. Then, too, the Greek people do not distinguish between religious and national interests, and the teaching of their clergy; consequently, a Greek will refuse to become a Catholic lest he should cease to be a Greek. Yet great progress has been made during the past twenty or thirty years, thanks to the schools of the French congregations which have been opened in nearly every town in Turkey. In spite of the taboos of the Greek clergy, boys and girls flock to these Catholic schools, and the consequence is a growing spirit of toleration and sympathy towards Catholics everywhere.

Pius IX and Leo XIII tried to reopen official relations with the Greeks, but unsuccessfully. The reply of the Patriarch Anthimos VI to the Enccyclicl of Pius IX (1848) was far from friendly; the invitation to assist at the Vatican Council the Patriarch Gregory VI refused even to accept. During his long pontificate Leo XIII was unceasing in his efforts to bring back the Greeks to unity, but this remained unaccomplished, and when, on 20 June, 1894, in the Encyclical “Prescrlara”, he invited the Greek Church in all charity to recognize the successor of Peter, the answering encyclical from the Patriarch Anthimos VII was remarkable for its rudeness. The present patriarch, Joaschim III, opened the way for a friendly theoretical consultation with his subjects on the matter a few years ago, but his attempt was not well received.

The first Protectors with whom the Greek Church sought to unite were the Lutherans. About 1560 the Greek deacon Demetrius Mysos visited Wittenberg to learn at first hand the doctrines of Luther, but his visit had no result. In 1573 two priests of Tullingen, Andree and Crusius, assisted by the chaplain, Gerhard, opened a correspondence with the Greek patriarch Jeremias II, which lasted until December, 1581. The patriarch and his theologians set forth over and over again very courteously and very fully the many dogmatic differences between their Church and that of the Reformers. At last Jeremias II refused to answer further letters, and wrote to Pope Gregory XIII in June, 1582, that he “detested those men and their like as enemies of Christ and of the Catholic and Apostolic Church.” Later the Calvinist doctrines found favour with the patriarch himself, Cyril Lucaris, who occupied the cenomical throne seven times between 1612 and 1638. The French and Austrian Embassies aided with the Orthodox Greeks; Geneva and Holland favoured the Calvinists. The conflict lasted through the greater part of the seventeenth century. The main quarrel was over Lucaris’s confession of faith, drawn up in Latin, which appeared at Geneva in March, 1629, and in the West stirred up both Catholics and Protestants. Many councils of the Greek Church, especially those of Constantinople in 1668 and 1682, of Jasus in 1642, and Jerusalem in 1665, extirpated the Calvinist heresy from the Orthodox Churches. Through Peter Mohila, Metropolitan of Kiev, the Russian Church took an active part in the controversy. The personalities that defaced these disputes embittered the whole of the seventeenth century, and made it the most repulsive in the existence of the Church of Constantinople. Four patriarchs at least were strangled, while in the space of one hundred years there were twenty-nine patriarchs and fifty-four patriarchal elections, i. e. an average of one election every twenty-two months.

After the Lutheran and Calvinists came the Anglicans, or that section of them known as the Nonjurors. Negotiations set on foot with the Greek and Russian Churches lasted from 1716 to 1725, but nothing ever came of them. Then came Zinzendorf, founder of the Moravian Brethren (1740). Finally, in
the nineteenth century we find the Protestant Episcopalian Church of England and of the United States coquetting with the Greeks. In several Anglican synods—e.g., 1866, 1867, 1868—a desire for union with the Greeks was expressed, and the Patriarch Gregory VI showed sympathy, but did not hint the way of Greek immediate realization. At the Synod of Bonn (1874) the Anglicans resolved to remove the “Filioque” from the Creed, to insert the formula “the Holy Spirit proceeds from the Father through the Son”, to recognize tradition as a source of revelation, to maintain that the Eucharist was a sacrifice, to combat among the Greeks the false trinitarian doctrine. But the Greeks would not make any concessions. In 1897 the 36th decision of the synod assembled at Lambeth Palace (London) charged the chief representatives of Anglicanism to seek an understanding with Constantinople. The Bishop of Salisbury, the Archbishops of Canterbury, and the Bishop of Gibraltar (who pays an annual visit to the oecumenical patriarch) were to be the principal negotiators. But the much-desired union is not yet a fact, the great drawback being the difficulty which both Churches find in deducing exactly what they hold to be of faith, and whether they hold it on the same divine authority. When the Russian Emperor in 1862, the Eastern Church Association, and others similar—but so far they have effected nothing. On the other hand, Evangelical societies of various countries have been very active in the East, and have often called forth protests from the higher Greek clergy. While the unionist movement among the Greeks is not yet equal, their success among the Armenians, their unceasing propaganda in Asia Minor has ended by creating Greek centres of Protestantism, something hitherto unheard of.

The Old-Catholics from the beginning aimed at union with the Orthodox Church. Theological conferences were held at Bonn in 1874 and 1875 with that object in view, and both parties made concessions, but nothing came of these efforts. Although frequent conferences have since been held, an Old-Catholic Committee instituted at Rotterdam, and the “Revue Int. des Théologiques” (1893), the negotiations for union have not made the slightest advance.

With all the Orthodox churches, except the Bulgarian exarchate and the Syrian Patriarchate of Antioch—both of them considered schismatic for substituting a native episcopate to a Greek one—the Greek Churches are on terms of union arising from a common faith and a common orthodoxy. By the canons of the oecumenical councils of 381 and 451 the Church of Constantinople enjoys a sort of pre-eminence over the other Churches. But this must not be understood to mean that the primary authority of the Eastern Orthodox Church may command authority the faithful of all other Churches. The Byzantine patriarch has a primacy of honour but not of jurisdiction; he is foremost among his equals—primus inter pares—and no more. This oft-repeated declaration was renewed at the Council of Jerusalem in 1867, which proclaimed that the Orthodox Churches recognized only an oecumenical council as their supreme master and sovereign judge. When Joachim III, in 1902, wished to consult the other Churches on matters concerning the whole Orthodox party—e.g., union with the Old-Catholics or Protestants or Old Catholics, either of the form of the calendar, and other matters—out of thirteen Churches five were not consulted, being in schism or manifestly unfavourable; two did not reply; six replied in the negative. Again in Cyprus, since 1900, the attempts of the oecumenical patriarch to put an end to the schism of that Church are repressed; at the present time (1909) his authority is being overthrown at Jerusalem, just as at Alexandria. There is therefore no unity of authority among the Orthodox Churches as a reality. Nor is there unity of faith or discipline. The Bulgarians and the Syrians of Antioch, who are looked on as schismatics by the various Greek Churches, are not such in the eyes of the other Orthodox Churches. The Russians uphold the validity of baptism administered by Catholics or Protestants; the Greeks say such baptism is invalid. The Russians do not admit the deuterocanonical books of the Old Testament, but the Greeks, until quite recently, accepted them. It would be easy to multiply examples. Formerly the Church of Constantinople claimed the right to send the chriam to all Orthodox Churches as a sign of Orthodox unity and of their dependence on Constantinople. But since the seventeenth century, at least, the Russian Church blesses its own chriam, and sends it in our day to the Churches of Montenegro, Bulgaria, and Antioch. The three Orthodox Churches within the Austro-Hungarian Empire bless their own chriams, as does also the Humanian Church since 1862. But since 1800, it is said that the only Patriarch that has come from Constantinople are those of Alexandria, Jerusalem, Cyprus, Greece, and Servia. The moral authority of the oecumenical patriarch over the other Churches is null; consequently it stands to reason he has no dogmatic privileges. The decrees of the first seven oecumenical councils have found their way into church law; as a rule, a number of creeds are also considered as instructive concerning faith, e.g., the confession of the Patriarch Gennadius, that of Peter Mohila, the decrees of the Council of Jerusalem in 1672, of the confession of Metephrenes Critopoulos. At present these confessions are not held to be infallible, but merely guides in matters of faith.

Greek religious literature since 1453 is mainly polemical, against Catholics and Protestants. Literary interests, once so popular at Byzantium, have long been quite secondary. Greek theologians re-edit continually the most fiery controversial treatises, accentuate the causes of separation between the two Churches, and on occasion invent others. Such, in the fifteenth century, are the writings of Maximus of Peleponnesus and George Scholarius; in the sixteenth century, of Maximus Margiuntius, Bishop of Cythara, and Archbishop of Artaxiad. The literature of the seventeenth century of the Calvinist, Cyril Lucaris, of George Corsesios, Theophilos Corydalseos, half pagan and half Protestant, Meletius Syrigos, Dorothesus of Jerusalem, Nicholas Karaman of Janina, and Paisios Ligerides; in the eighteenth century the writings of the brothers Jomnikios and Sophronius Lichoudes, who laboured especially in Russia, Chrysanthus of Jerusalem, Elias Miniates, Eustratius Argentis, etc. Apart from this turbulent school, always fairly numerous among the Greeks, there are but few historians and chroniclers, e.g., Manuel Malaxos, who wrote the history of the Patriarchate of Constantinople from 1458 to 1578; Dorotheus of Monemvasia, who drew up a chronological table from the creation to 1629, and Meletius of Janina or of Athens (d. 1714), their only historian of note. The monks were the most conscientious workers and tireless editors: Nico- demos the Hagiographer, of amazing productivity; Agapios Landos, his rival; Eugenios Bulgaris, the most learned Greek of the eighteenth century; Gkomos, Meletius Txpaldos, Gregory of Chios, and many others.

There are few living theological writers of note in the Greek church. Philotheos Brauns, Metropolitan of Nicomen, who rediscovered and edited the “Teaching of the Twelve Apostles”, is the only one deserving of mention. It is no less strange than true, that within nearly a century only one manual of dog-
matic theology has appeared in Greece, a volume of about 450 pages published at Athens in 1907 by a layman. M. Andreoli published a study of the external, ecclesiastical theology enjoys in the Greek Churches. They have, however, translations of Russian, German, or English works, and in this way Protestant ideas are creeping in. The same might be said of other branches of ecclesiastical knowledge. The only good manual of canon law is by a Serbian bishop, Mgr. Manoladis; the mission of church history by a Russian layman, Diomedes Kyriakos, and by Mgr. Philaretos, Metropolitan of Dimotika, are merely translations or adaptations of Protestant works. Among the laity there are some learned men, e.g., Spiridon Lambros, C. Sathas, A. Papadopoulos-Kerameus, and M. Gedeon. The internal life is not carried on in anything intellectual. Politics and dull personal intrigues are their only concern. In this respect the coming generation will perhaps differ from their predecessors. Two reviews have been started: the "Nea Sion∗" (New Sion) at Jerusalem, and the "Church Beacon" at Alexandria, but both are carried on in a spirit of controversy, and the impartiality and scientific honesty of many of the editors are not above question. The Phanar review, "Ecclesiastical Truth," is only a church weekly.

1 have not touched on the religious spirit of the Great Church; it appears to be dying; it is sadly deficient; nor on its missions, for there are none; nor its present monastic life, confined to Athos and no more than a recitation of endless prayers interspersed with local intrigues. Other religious houses exist only in name; they are now, for the most part, farms managed by a so-called monk, who collects funds for the support of a few, or even for the church. Owing to the energy of the lay element, who take an active interest in education, there are many well-conducted primary schools. We have only praise for the efforts of both sexes to create and support works of charity and of benevolence. On this score the Greek Church is to be praised.

Greek Empire. See Byzantine Empire.

Greek Orthodox Church in America. The name Orthodox Church is generally used to distinguish the Greek Rite, which is not in communion with the Holy See. It is a name common to the official designation of both Churches of the Greek Rite, but the schismatic or dissenting Churches lay great stress upon the word Orthodox, and its implied meaning of correctness of doctrine, while the Uniat Churches lay equal emphasis upon the word Catholic. Hence these divisions of the Greek Church are respectively called the "Greek Orthodox" and the "Greek Catholic," for convenience in designation. The Orthodox Church is now well established in America, and nearly every city of considerable size has one or more churches of the various nationalities belonging to that communion. There is no unity among them nor any obedience to a central authority; they conform to the general law and discipline of the Greek Rite, but look to their respective Holy Synods in their home countries for governing authority and direction. Seven nationalities have their churches here, using the Old Slavonic, the Greek, the Arabic, and the Rumanian as their liturgical languages; and of these the Russian is the oldest and best established. The Russian Orthodox Church is, next to the Greek, the largest denomination in the Greek Church. The Russian Church has been established upon American (formerly Russian) territory for over a century. In this connection the word Russian refers to rossiaiskiy (of the Empire of Russia), and not russkiy, which may be translated either Russian or Ruthenian. In 1793 a band of eight missionary monks was sent out from St. Petersburg to Alaska, and the first Russian church was built on Kodiak Island in 1794. In 1798 the first missionary bishop, Josaphat, was consecrated. In 1804 the fort and city of New Archangel (now Sitka) was founded on the island of Sitka. In 1812 the Russian colony, Fort Ross, near the mouth of Russian Hill, in San Francisco, is still a reminder of them. In Alaska they converted many of the Eskimo and Indians, and the success of their missions was such that in 1840 the monk Ivan Veniaminoff was made the first bishop of "Kamchatka, the Kuriles and Aleutians," and took up his see at Sitka. In 1867, just before Alaska was sold to the United States, he was made Metropolitan of Moscow, and in Russia his advice was of great assistance in the negotiations for the transfer of Alaska. After him the title of the see was changed to "Aleutia and Alaska." In 1872 the see was changed from Sitka to San Francisco, and a Russian cathedral built there. The Russian bishops in America have been Paul (1867–78), John (1870–79), Nestor (1879–82), Vladimir (1883–91), Nicholas (1891–97), and Tikhon (1897–1907). In 1900 the title of the see was changed to "Aleutia and North America," and since 1906 the see has been changed to "Alaska."

In 1905 Bishop Tikhon changed his see from New York to New City, and in the year 1906 the Russian Holy Synod raised him to the dignity of archbishop with the suffragan Bishop of Alaska and a new Bishop of Brooklyn. In 1907 he was succeeded by the present Archbishop Platon, a former member of the Russian Duma. Until within the last twelve years the Russian Church was hardly known in the United States, being wholly confined to its Pacific shores. In New York between 1870 and 1880 there was a Russian Orthodox chapel on Second Avenue, established by the Rev. Nicholas Bjerking; but it failed for lack of a congregation and support by the Russian authorities. Father Bjerking became a Catholic before his death. The first great impulse to the establishment of the Russian Church in the United States on a large scale was given in 1891, when the late Rev. Alexis Toth, then a Rutenian Greek Catholic priest in Minneapolis, disobeyed the instructions of Archbishop Ireland and, when threatened with a recall to his native country, left his parish, went to San Francisco, turned Orthodox, and submitted to Bishop Nicholas, and on returning to Minneapolis took over his whole parish to the Russian Orthodox Church. He afterward in 1892, to take over the entire congregation and church property of St. Mary's Greek Catholic church in Scranton, Pennsylvania. The transfer of the church property was prevented by the courts, but over half the congregation seceded. Toth became an able and energetic advocate of the Russian Orthodox
Greek Church among the Ruthenians of America, succeeded in arousing the Holy Governing Synod of Russia to the opportunity to spread Orthodoxy and Panslavism among the Ruthenians in America, and became a most bitter opponent of Catholicism among the Catholics and especially of the Greek Catholic Church in the United States. He was made a priest for his efforts and is said to have been the cause of nearly 10,000 secessions from the Greek Catholic to the Russian Orthodox Church. In 1900 the whole Orthodox movement was put under the direction of the Orthodox Missionary Society of All-Russia, which, together with the Holy Synod, supplies episcopal functions and episcopal priests for the development here. In 1902 a fine Russian cathedral (St. Nicholas) was built in New York City, and Russian churches have begun to spring up everywhere in the Atlantic States, particularly in Pennsylvania. Numerous priests and lower clergy were brought from Russia, a theological seminary opened in Minneapolis, a monastery in South Canaan, Pennsylvania, the rite of the Greek Church were celebrated with a magnificence and splendor before unknown in America, and the Church itself put on a solid basis. In 1908 the whole United States and Canada were divided into five archbishoprics, 84 dioceses, 18 metropolitan sees, 18 archbishops, 40 bishops, 500 priests, 60 nuns, and 3000 monks. They have (1909) churches in the following localities: Brooklyn and Glens Falls, New York; Boston, Worcester, and Lawrence, Massachusetts; Pittsburgh, Johnstown, and Wilkesbarre, Pennsylvania; Grand Rapids, Michigan; Kearney, Nebraska; Vancouver, Montana, Texas; and 13 Russian Orthodox Synods in the United States, but they are quite scattered. They have frequent dissensions and their fellow-Syrians, the Melchites and Maronites, who are under the Patriarch of Antioch, which just now is quasi-schismatic towards Constantinople but closely affiliated with Russia. They of course began to immigrate to the United States at the time that the other Syrians, Melchites, and Maronites, came. The Russians have greatly assisted them in building churches and establishing missions here, and their bishop, Raphael of Brooklyn, is a Syrian educated in Russia. The first Syro-Armenian church (St. Nicholas) was built in Brooklyn in 1902, and has since become their cathedral. Their clergy consist of the Syrian archbishop, bishop, and 500 priests; 50 nuns; 500 monks. They have (1909) churches in the following localities: Brooklyn and Glens Falls, New York; Boston, Worcester, and Lawrence, Massachusetts; Pittsburgh, Johnstown, and Wilkesbarre, Pennsylvania; Grand Rapids, Michigan; Kearney, Nebraska; Vancouver, Montana, Texas; and 13 Russian Orthodox Synods in the United States, but they are quite scattered. They have frequent dissensions with their fellow-Syrians, the Melchites and Maronites, who are under the Patriarch of Antioch. They publish two Arabic newspapers in the interest of the Orthodox Church, and have a number of societies in New York and elsewhere.

III. SYRO-ARMENIAN ORTHODOX CHURCH.—These are Syrians of the schismatic Greek Rite, who use the Arabic language in their liturgy. They are the native Syrians from the Patriarchate of Antioch, which just now is quasi-schismatic towards Constantinople but closely affiliated with Russia. They of course began to immigrate to the United States at the time that the other Syrians, Melchites, and Maronites, came. The Russians have greatly assisted them in building churches and establishing missions here, and their bishop, Raphael of Brooklyn, is a Syrian educated in Russia. The first Syro-Armenian church (St. Nicholas) was built in Brooklyn in 1902, and has since become their cathedral. Their clergy consist of the Syrian archbishop, bishop, and 500 priests; 50 nuns; 500 monks. They have (1909) churches in the following localities: Brooklyn and Glens Falls, New York; Boston, Worcester, and Lawrence, Massachusetts; Pittsburgh, Johnstown, and Wilkesbarre, Pennsylvania; Grand Rapids, Michigan; Kearney, Nebraska; Vancouver, Montana, Texas; and 13 Russian Orthodox Synods in the United States, but they are quite scattered. They have frequent dissensions with their fellow-Syrians, the Melchites and Maronites, who are under the Patriarch of Antioch. They publish two Arabic newspapers in the interest of the Orthodox Church, and have a number of societies in New York and elsewhere.

IV. SERBIAN ORTHODOX CHURCH.—This is composed of immigrants from Servia, Dalmatia, Hungary, and Montenegro. They all speak that southern Slavic language, the Servian, which is identical with the Croatian, except that it is written in the Russian alphabet to which are added two or three letters unknown to Russian, whilst the Croatian (used by the Roman Catholics) is written with Korean letters. The Russian, the Servian, and the Bulgarian Churches use the Old Slavonic language in the Mass and church offices. The Servians are mainly in Pennsylvania and the West, and the first church was built by the Archbishopiate Servia and Dalmatia in Jackson, Cal. (1894). The Servian Orthodox Church is closely affiliated to the Russian Orthodox Church in this country, except that some of their churches do not recognize the jurisdiction or authority of the Russian archbishop. There are about 70,000 or 80,000 Servians in the United States, from Pennsylvania to California, Wisconsin, and Washington. Their clergy consist of one archimandrite, five monks, and four secular priests, and they have churches in Chicago, Illinois; Pittsburgh, McKeesport, Wilmerding, Steelton, and Johnstown, Pennsylvania; Kansas City, Kansas; Denver, Colorado; Jackson; Sublette; Junction City, Kansas; Great Falls, Montana; St. Louis, Missouri. They also publish three Servian papers, and have several church societies, the chief one "Srbobrar".

V. ROMANIAN ORTHODOX CHURCH.—About half the Orthodox Rumanians in the United States come from Rumania and half from Transylvania in Hungary. Their immigration has been all within the past decade, both in the United States and in Canada. They are also under divided jurisdiction, those from Rumania being under the Holy Synod of Rumania and those from Transylvania under the Metropolitan of Hermannstadt. There are about 30,000 Orthodox Rumanians in the United States and about 20,000 in Canada. Their first church was St. Mary's, built in 1907 at Cleveland, Ohio. They have, besides several missionary stations, five churches situated at the
GREEK: 774

following places: Indiana Harbor, Illinois; Cleveland and Youngstown, Ohio; Sawyer, North Dakota; Regina, Canada. Of their clergy—one archimandrite and four secular priests—three are from Transylvania and two from Rumania. It is a noticeable fact that these two branches of the Greek Rite, Catholic and Orthodox, remain in close and intimate relations and attend all Rumanian celebrations together. where matters of their religious and language are concerned.

VI. BULGARIAN ORTHODOX CHURCH.—Bulgarian immigration into the United States has only recently been in any considerable numbers. While the majority come from the Kingdom of Bulgaria, a great many are also from Macedonia, in Turkey. They dislike the Greeks very much, and while the Turkish contingent of them is nominally under the Patriarch of Constantinople, they recognize only the Exarch of Bulgaria. Neither will they affiliate with the Russian Church authorities here. While there are considerable numbers in New York City, yet they have settled chiefly in Illinois and Missouri, and are scattered also farther westward. The first Bulgarian Church (Sts. Cyril and Methodius) was constructed in 1898 by the Bulgarian monk Theophylact at Granite City, Illinois. There is also another church in St. Louis, Missouri; built at Madison, Illinois, while there are several mission stations. There are about 20,000 Bulgarians and three priests in this country. They publish two papers in their language and have several church societies, but have no national organization.

VII. ALBANIAN ORTHODOX CHURCH. — The Albanians use the Greek language in their liturgy, having having been no version into their very difficult tongue. They come from Albania in the southern Balkans and from Epirus and northern Greece. They are also known as Arnautes and call themselves in their own language skëpetar, "mountaineers" (see ALBANIA). The history of the language is not the same as the history of the same name, the same name being emigrated into Italy, and whose descendents now form the majority of the Italian Greek Catholics. Albanian immigration to America has been quite recent, but there are now some 15,000 here, mostly settled in the vicinity of New York City and in New England. Although they use the Greek language in their liturgy and have attended the Hellenic Orthodox Church, they have no love for the Greeks. In February, 1908, the Russian Archbishop of Aeocia and North America ordained the Rev. F. S. Noli, a young Albanian, in New York City as an Orthodox priest and established him as missionary for the people of the United States. The Russian Holy Synod has taken steps on his initiative towards translating the Greek Liturgy into Albanian. They have a small chapel in Brooklyn and missions in New England, Pennsylvania, and Missouri. Endeavors have been made by them to attract the Italo-Greeks from their Union rite, on the ground of their being also of the Albanian race in America.

Praeslavsky Kalendar (New York, 1903-08); Matrosoff, Zaekhodnye Rus' in Interchurch Vestnik, LXVII (24, 1897); Seitz and Praeslavsky Viestnik (New York, 1902-08); Eglises-Amaricaannes Etoile (New York, 1908); Calendarul Zonisulor Americana, 1903; Messenger, XI (Eleftherios, New York, 1904), for December; Echo de Oriente, VII (Faria, 1904), for May and July.

ANDREW J. SHIPMAN.

Greek Rites.—(1) Rite, Language, Religion.—These are three things that must always be distinguished. A rite is a certain uniform arrangement of formule and ceremonies in the Church. The Holy Hours, the administration of other sacraments and sacramentals. These offices, as far as we know, have never been performed in the same way throughout Christendom. There are now, apparently there always have been, different rites, equally legitimate, used in different countries by Catholics and by Eastern Orthodox. Obviously each rite was originally composed in some language. But rite is not language; the various rites cannot be classified according to their languages. There are many different rites in the same language; on the other hand the same rite, remaining the same in every detail, is constantly translated. Thus, in the West, the Roman and Gallican Use are both written in Latin, but they are completely different rites. The Byzantine Rite is also an Old Slavonic version (written in Glagolitic letters), occasionally in Greek in Italy; but in any language it is always the Roman Rite. In the East this want of correspondence between rite and language is still more remarkable. Except those of the Armenians, the Ethiopians, and the Greeks, all eastern liturgies were originally written in Greek. Even the exceptions are only modified derivations from Greek originals. If, then, we take the language in which a rite was originally composed as our test, we must describe all Eastern liturgies as Greek. Indeed, the two great Western parent rites (of Rome and Gaul) represent, as a matter of fact, modified developments from Greek originals too. So we should come to the conclusion that every rite in the Church, every historic liturgy in Christendom is a Greek Rite. If, on the other hand, we make our test present use in the Greek language, we must say that the Greek liturgy is the result of a gradual development from what is word for word the same service said in Old Slavonic at St. Petersburg. It is clear that such liturgy is not to be ascribed to the Greek Church, but rather to the Greek Rite. By the head of all Eastern liturgies, foundations of two great classes, are the Liturgies of Alexandria and Antioch. They are not only different rites, their differentiation we believe the fundamental distinction by which we divide all others into two main groups; and both are Greek. And the same Byzantine Liturgy is used unchanged in about fourteen different languages. A second false criterion that must be eliminated is that of religion. It would be convenient for the classification of members of the Church with foreign rite in the same way as the presence of the same rite in one Church, makes one a member of any other Church. But this is by no means the case. The historic origin and legal position of the various rites is a much more complicated question. Catholics, joined of course entirely by the same faith, obeying the same laws (though in details there are different laws for different branches of the Church), united visibly to the same great hierarchy under the supreme rule of the pope at Rome, are divided according to rite, so that every Eastern liturgy is used by some of them. The same liturgies (but for a few modifications made by the Roman authorities in the interest of dogma) are used by the people of the Greek Orthodox Churches. Indeed, Catholics and Schismaticos often use the same books. The Orthodox Church, that has for many centuries aimed at an ideal of uniformity in the Byzantine Rite (in different languages), till the thirteenth century used those of Alexandria and Antioch too. Now she has restored the Alexandrine Liturgy for certain rare occasions, and there are signs that the Alexandrine Rite may soon be restored too. Other schismatical bodies have, it is true, each its own rite, though this rite generally contains alternative liturgies. It will be seen then that these three points are three quite different questions that must not be confused. In the case of any Christian bishop or priest, we may ask: what is his Church or sect, what rite does he use and in what language? And the answers may represent all kinds of combinations. A Catholic may use the Roman Rite in Old Slavonic, the Alexandrine Rite in Coptic, the Byzantine in Georgian. An Orthodox priest may use the Byzantine Rite in Arabic or Japanese.

(2) The Essential Note of a Rite.—We have seen then that neither its language nor the sect of people who use it can be taken as essential to a rite. The real note that defines it is the place where it was composed. The rites used by the British, on the other hand, were an ecclesiastical centre for the country round. After the service had been put together and used here.
by a natural process of imitation churches around began to copy the order observed in the great town. The greater the influence of the city where the rite arose, the more widely its form was spread. It was a question of inherent advantages. No one thought of choosing the rite that seemed most edifying or beautiful or suitable. People simply copied their chief. The rites were formed at first in the patriarchal cities: Rome, Alexandria, Antioch, Constantinople. Jerusalem had already been burnt to the ground. The bishops of each patriarchal naturally thought that they could not do better than celebrate the holy mysteries in the same way as their patriarch. We know in the East how, long before there were any laws on the subject, every one began to copy what was done at Rome. It seemed safest to follow Rome in the matter. The Franks, for their part, adopted the Gallican Rite, and adopted that of the patriarchal see.

The "Liber sacramentorum Romane Ecclesiae" spread throughout Western Europe till it had displaced all other uses, except in one or two remote districts. We see the same tendency at work still—uniformity in accordance with Roman customs, even in such details as the shape of vestments and the pronunciation of Latin. So it was in the East with regard to their patriarchal sees. Local customs are gradually suppressed in favour of the patriarch's way of doing things. Schisms and heresies accentuate this uniformity in both East and West. The Patriarchate of Alexandria and Gallia and many of the nations attached to the Catholic centre—Alexandria, Constantinople, or whichever it might be—to agree entirely with it in rite. Lastly come laws determining this tendency; and so we have the principle that (with exceptions) obtains still throughout Christendom, namely: "Rite follows Patriarchate". The Roman Rite is used throughout the Roman patriarchate, by the clergy subject to the pope as their patriarch, and only by them; the Alexandrine Rite belongs to Egypt—where the patriarch of Alexandria has jurisdiction; that of Antioch to Syria; that of Constantinople to the Byzantine territory. The National Nestorian (East-Syrian) and Armenian patriarchates have their own rites. Such was the principle for many centuries everywhere. Except for the two remnant of the Western rites at Milan and Toledo, it may still be taken as a fairly safe one in the Catholic Church; and among sects, especially in the thirteenth century, however, the Orthodox, regardless of the older tradition, use the Byzantine Rite everywhere, even in their Alexandrine, Antiochene, and Jerusalem patriarchates. In their case, then, the principle cannot be applied. But the exception is rather apparent than real. This spread of the use of the Rite of Constantinople was merely an assertion of the patriarch's jurisdiction throughout the Orthodox Church. In this case, too, rite really followed patriarchate; the disappearance of the Liturgies of Alexandria and Antioch among the Orthodox meant, as was intended, the practical disappearance of any real authority in those places save that of the prelate who nearly succeeded in justifying his pompous title of Ecumenical Patriarch. Now that his attempt has failed, and the other patriarchs are becoming more and more conscious of their independence of him, there are signs of a near restoration of their own liturgies, to be used, as before, where their jurisdiction extends.

But a rite in spreading out from the patriarchal city where it was composed does not itself change. Since the invention of printing, especially, and the later tendency to stereotype every detail of the sacred functions, each rite, wherever used, is made to conform rigidly with its standard form as used in the central church. The Liturgy of Jerusalem-Antioch contains, as the first member of its Great Intercession, a prayer for "the holy and glorious Sion, mother of all Churches", plainly a local touch intended originally for use in Jerusalem, where the rite was written (Brightman, "Eastern Liturgies", 54, 90). The Alexandrine Rite, even if used in far countries, makes the priest pray that God may "draw up the waters of the river of life to the nether world": But this seems to be an allusion to the inundation of the Nile on which fertility in Egypt depends. And the Roman Rite, too, used in every continent, still contains unmistakable evidence that it was composed for use in that one city. The lists of saints ("Communicantes" and "Nobis quoque Sancto") contain the Apostles and then local Roman saints, or those, like St. Cyprian, specially honoured at Rome; the Calendar with its Rogation and ember-days supposes the Italian climate; the special heroes of Rome, as St. Lawrence, are those that have the oldest great feats. Of course Rome, like all Churches, honours the Blessed Virgin, the Apostles, the Baptist, the Bishops, the martyrs, the Confessors, the Saints of the New Testament: After them she naturally honours first her own saints, whose relics hallow her basilicas. The stations at the Roman basilicas affect her year throughout; and on the feast of the Princes of the Apostles she remembers specially "happy Rome purple with their glorious blood". From all this, then, it is clear that the real distinction of rites is not by language nor by the religion of those who may use them, but according to the places where they were composed. The correct and scientific way of describing any rite, therefore, is always by the name of a place. Thus we have the Byzantine liturgy of the West, and the Byzantine liturgy of the East; the Rites of Alexandria, Antioch, Constantinople, etc.

This is the really essential note of any rite, that it keeps even when translated into other languages. 

(3) What is a Greek Rite?—An obvious corollary of what has been said is that we had much better never speak of a "Greek Rite" at all. Like the cognate expression "Greek Church" it is a confused and unscientific term, the use of which argues that the speaker has a mistaken conception of the subject. What is called a Greek Rite will always be the rite of some city—Alexandria or Constantinople, and so on. If one wishes to emphasize the fact that the Greek language is used for it, that statement may be added. At Athens and Constantinople they use the Byzantine Liturgy; it may be worth while to add that they use it in Greek, since at St. Petersburg and Sofia they follow exactly the same rite in Old Slavonic. When people speak of the "Greek Rite" or the "Greek Church" or the "Greek Orthodox Rite" or the "Greek Patriarchate" or the "Greek-Romano-Slavonic" Rites, the confusion is greater than ever. By these last terms they mean rites translated into Arabic and Slavonic out of the Greek. Now, the evidence on the whole tends to show that every ancient rite in Christendom was first used in the Greek language; those of the East, Syriac and Roman Rites, were the usual example. Thus it was the Egyptian rite of Alexandria and the Syriac of Antioch and the Coptic of the Abyssinian and the Slavonic of the Russians, that were the "Greek Rites", which were later, at least in the East, and the East, in the West, Latinized in the Eastern Church. Thus it was the Egyptian rite of Alexandria and the Coptic of the Abyssinian and the Slavonic of the Russians, that were the "Greek Rites", which were later, at least in the East, and the East, in the West, Latinized in the Eastern Church. Thus it was the Egyptian rite of Alexandria and the Coptic of the Abyssinian and the Slavonic of the Russians, that were the "Greek Rites", which were later, at least in the East, and the East, in the West, Latinized in the Eastern Church. Thus it was the Egyptian rite of Alexandria and the Coptic of the Abyssinian and the Slavonic of the Russians, that were the "Greek Rites", which were later, at least in the East, and the East, in the West, Latinized in the Eastern Church. Thus it was the Egyptian rite of Alexandria and the Coptic of the Abyssinian and the Slavonic of the Russians, that were the "Greek Rites", which were later, at least in the East, and the East, in the West, Latinized in the Eastern Church. Thus it was the Egyptian rite of Alexandria and the Coptic of the Abyssinian and the Slavonic of the Russians, that were the "Greek Rites", which were late.
second book, ib., 28–30), and the Liturgy of St. James (ib., 31–68). Its place of origin was not Antioch but Jerusalem. Till the thirteenth century, the Liturgy of St. James was used throughout both patriarchates. It reached the Greek and the Orthodox churches on various occasions in the year, on St. James’s feast (23 Oct.) at Zacynthus (Zante) and on 31 Dec. at Jerusalem. Translated into Syriac it is used by the Jacobites and Syrian Uniates (text in English in Brightman, 69–110); with further (Romanizing) modifications it forms the Monophysite Rite. A Latin version has been edited by Prince Max of Saxony: “Missae Syro-Maroniticae”, Ratibon, 1907). The Chaldean Rite, used by Nestorians and Uniat Chaldees (Brightman, 247–305), appears also to be derived, if remotely, from St. James’s Liturgy. The Byzantine Use is further derived from this, and the Armenian Liturgy from that of the Byzantines. So, except for the services of Egypt and her daughter-Church of Abyssinia, the Greek Liturgy of St. James stands at the head of all Eastern rites (see article ANTIQGENE RITE).

People who speak of the Greek Rite generally mean that of Constantinople. The name is an unfortunate example of false analogy. We have all learnt in school of Greek and Roman history, Greek and Roman classics and architecture, and we know the Roman Rite. It is tempting to balance it with a Greek Rite, just as Homer balances Virgil. How different the real situation is, this article shows. The Byzantine Rite to which we see be given its own name is the most widespread in Christendom after that of Rome. It was formed first in Cappadocia, then at Constantinople, by a gradual process of development from that of Antioch. The names of St. Basil (d. 379) and St. John Chrysostom (d. 407) are, not altogether wrongly, attached to the chief persons of rabid and Old Slavonic (Syriac is no longer used, Georgian only by a handful of Uniates). Then come Rumanian and a number of modern languages used chiefly by Russian missionaries in Siberia, China, Japan, and America (list in Brightman, pp. lxxxi–lxxxiii). Uniates recognize as liturgical languages for this rite only Greek, Arabic, Old Slavonic, and Georgian. It is these versions of the Byzantine Rite that people mean when they speak of "mixed Greek" rites. There are no charges of any importance in them. The Old Slavonic books contain some local feasts, and a few quite insignificant variants of the text; the same applies to the Arabic version. The Slavonic student of this rite (except in the case of very specialized study) should always turn to the Greek original. For further description see CONSTANTINOPLE, THE RITE OF.

For bibliography see ALEXANDRINE LITURGY; ANTIQGENE LITURGY; CONSTANTINOPLE, THE RITE OF; LITURGIE DE LA RITE SYR; Liturgie des Rituels des Évêques de Rouen et de Nancy; Liturgie dans les Pays de la Confédération Suisse, arrêté du Sénat de la Confédération Suisse (Revue d’Histoire de l’Église, 1893); ENGELHART, Beiträge zur Kenntnis der Byzantinischen Liturgie (Berlin, 1908, the Greek text and a Latin version of the Greek); FROM A MANUSCRIPT OF THE MONOPHYSITE RITE (from a manuscript of the Monophysite Rite of Syria, probably of the fifteenth century); PRINCE MAX OF SAXONY, Ritual Missae Ecclesiastae Orientalis S. Basii, Rituale Romanum (Ratiobon, 1907), i.e. Latin versions of Uniate liturgies.

ADRIAN FORTESCUE.

Green, Hugh, martyr; b. about 1584; martyred 19 August, 1642. His parents, who were Protestants, sent him to Peterhouse, Cambridge, where he took his degree in 1605, but was afterwards converted and entered Douai College in 1610. He left again in 1612 on his vocation among the Capuchins. From want of health or some other cause, he was unable to continue, and became a chaplain at Chideock Castle, Dorsetshire, the home of Lady Arundell of Lanherne. On 8 March, 1641, Charles I, to placate the Puritan Parliament, issued a proclamation banishing all priests from England. This was the beginning of his career of exiled service to his country. Unfortunately the news had been late in reaching him, and when he embarked the month of grace given for departure was just over. He was therefore arrested, tried, and condemned to death in August. In his prison constancy so affected his fellow-captives that two or three sometimes died with him. With him sent him words that they would ask his absolution before death. They did so after confessing their sins to the people, and were absolved by the martyr. A providential reward for his zeal immediately followed. A Jesuit Father, despite the danger, rode up in disguise on horseback, and at a given sign absolved the martyr’s deeds, of his life. From Constanti-

nople the rite then spread throughout by far the greater part of Eastern Christendom. As the power of the patriarchs of the imperial city grew, so did they gradually succeed in imposing their use on all bishops in communion with them. Now, except for the two insignificant exceptions noted above, the Byzantine Rite is used throughout the Orthodox Church. It seems that this abuse will not last much longer. Since the authority of the eccumenical patriarch outside of his own patriarchate has already come to an end, we may live to see the old rites restored in Egypt. According to the traditional principles of that rite follows patriarchate. The Use of Constantinople is also followed by a great number of Catholic Uniates, Melchites in Syria and Egypt and others in the Balkans, the Austro-Hungarian monarchy, Italy, etc. These people represent the old Patriarchate of Constantinople and the Latin Church; but the Church has never, like her Orthodox rival, set up a principle of uniformity in rite. There are, besides the Latins, Uniates of every rite. The text of the Byzantine Liturgy in Greek will be found in Brightman, 309–411. It is also used, translated into many languages. The Old Slavonic version of the traditional prayer of aaron and Old Slavonic (Syriac is no longer used, Georgian only by a handful of Uniates). Then come Rumanian and a number of modern languages used chiefly by Russian missionaries in Siberia, China, Japan, and America (list in Brightman, pp. lxxxi–lxxxiii). Uniates recognize as liturgical languages for this rite only Greek, Arabic, Old Slavonic, and Georgian. It is these versions of the Byzantine Rite that people mean when they speak of "mixed Greek" rites. There are no charges of any importance in them. The Old Slavonic books contain some local feasts, and a few quite insignificant variants of the text; the same applies to the Arabic version. The Slavonic student of this rite (except in the case of very specialized study) should always turn to the Greek original. For further description see CONSTANTINOPLE, THE RITE OF.

J. H. POLLEN.

Green, Thomas Louis, priest and controversialist; b. at Stourbridge, Worcestershire, 1799; d. at Newport, Shropshire, 27 Feb., 1883. He was the son of Francis Green of Solihull Lodge, Warwickshire, and as a boy was entrusted to the care of Bishop Milner, by whom he was sent to Sedgley Park School, and afterwards in 1813 to Oscott. Having completed his theological studies there, he was ordained priest in 1825, and remained at the college as proctor. In 1828 he succeeded the Rev. J. McDonnell at Norwich, where he became known as a controversialist. Challenged to a public disputation, Green declined on the ground that no real good would be effected, but harm would arise owing to the excited feelings prevalent. He, however, undertook to meet all charges in a course of sermons, which he did successfully. After two years he went to Tixall, Staffordshire, as chaplain to Sir Clifford Constable, Baronet, and while there was engaged in a controversy with the Anglican clergyman, in which he strove, though fruitlessly, to have the Anglican burial service omitted in cases of the interment of Catholics in the parish churchyard. In 1846 he went back to Oscott as prefect of discipline, a post which he held for two years before becoming chaplain to St. Mary’s Priory, Prince-thorpe, near Coventry. He was priest at Mawley, Shropshire, in 1855; at Madeley, Shropshire, in 1859, while in 1860 he became chaplain to Lord Acton at Aldenham Park, near Bridgnorth, Shropshire, where he remained for the rest of his active life. In 1868 Pius IX granted him the honorary degree of
Doctor of Divinity in recognition of his services. He retired shortly before he died to Salter's Hall, Newport, Shropshire.

His works were: "A series of Discourses on the principal controverted points of Catholic Doctrine delivered at... Norwicht" (Norwich, 1830), reprinted under the title "Argumentative Discourses" in 1837; "A Correspondence between the Protestant Rector of Tixall and the Catholic Chaplain of Sir Clifford Constable" (Stafford, 1834); "A Letter addressed to Rev. Clement Leigh" (London, 1836); "The Truth, the Whole Truth, and Nothing but the Truth" (London, 1838); "The Secular Clergy Fund of the late Midland District" (London, 1853, privately printed); "Rome, Purgatory, Indulgences, Idolatry, etc." (Bridgnorth, 1868); "Indulgences, Sacramental Absolutions and Tax Tables of the Roman Chancelery and Penitentiary considered in reply to the charge of Venality" (London, 1872, 1880). He also contributed to the "Orthodox Journal", "Catholic Magazine" and "True Tablet". The Occasion, new series, III, 48; GILLOWS BIBL. ENG. CATHEC., a. v.

EDWIN BURTON.

Green Bay, Diocese of (Sinus Viridus), established 3 March, 1868, from the territory of the Diocese of Milwaukee, comprises sixteen counties of the State of Wisconsin, U.S.A.; Brown, Calumet, Door, Florence, Forest, Kewaunee, Langlade, Manitowoc, Marinette, Oneida, Outagamie, Ozaukee, Shawano, Waupaca, Waushara, and Winnebago; an area of 15,387 square miles.

At that time there were in this district thirty-one churches and forty-two stations, with thirty-one priests and fifty-five ecclesiastical students; eleven parish schools and seven convents of the Sisters of Notre Dame, the Ursulines, Sisters of St. Agnes, the Third Order of St. Dominic, and the Third Order of St. Francis, with a Catholic population of about 50,000. It was mixed Irish-American, German, Belgian, and Dutch, with a few Indians. Poles and Bohemians are now to be added to this classification.

BISHOPS.-(1) JOSEPH MELCHER was appointed the first bishop, and consecrated at St. Louis, Missouri, 12 July, 1868. In 1865 he had been appointed Bishop of the proposed See of Quincy, Illinois, but declined the appointment. The See of Quincy was soon after suppressed and transferred to Green Bay. Melcher was born 19 March, 1806, at Vienna, Austria, and ordained priest at Modena, Italy, 12 March, 1830. He died at Green Bay, 20 Dec., 1873.

(2) FRANCIS XAVIER KRATZBAUER, second bishop, was consecrated 29 June, 1875, at Milwaukee, Wisconsin. A native of Bruck, Bavaria, where he was born 12 January, 1824, he was ordained priest 16 July, 1850, at Ratibosa. He died suddenly 17 December, 1885, at Green Bay.

(3) FREDERICK XAVIER KATZER, third bishop, had been vicar-general of the diocese. He was born 7 February, 1844, at Ebeneeze, Upper Austria, and in 1870, after collegiate studies at Freiburg, volunteered for the American mission. Arriving in the United States in May, 1864, he entered the Salesianum at St. Francis, near Milwaukee, where he completed his theological course and was ordained priest, December, 1866. He taught in the Milwaukee Seminary until 1875, when Bishop Kratzerbaumer made him his secretary, and three years later at Friedberg, volunteered for Green Bay. On 30 January, 1891, he was promoted archbishop and transferred to Milwaukee, where he died 20 July, 1903.

(4) SEBASTIAN GERHARD MESSMER, fourth bishop, was consecrated at Newark, New Jersey, 27 March, 1892. He was born in Berne, 6 August, 1847, at Zofingen, Switzerland, and ordained priest 23 July, 1871, at Innsbruck, Austria. He was professor of theology at Seton Hall College, New Jersey, from 1871 to 1889, and was professor of canon law at the Catholic University, Washington, when chosen bishop. He was promoted to the Archdiocese of Milwaukee, 28 November, 1903. Joachim J. Fox, fifth bishop, was consecrated 25 July, 1904. He was born in Green Bay, 2 August, 1855, and made his theological studies at Louvain.

He was ordained priest 7 June, 1870, and served as secretary to Bishop Krautbauer, vicar-general of the diocese, and pastor of Mariette, before he was appointed bishop, 27 May, 1903.

The religious communities located in the diocese are:

STATISTICS.—202 priests (47 regulars), 25 ecclesiastical students, 54 brothers, 48 churches, 65 missions, 3 stations, 3 chapels, 104 parish schools (16,482 pupils), 1 academy (55 pupils), 2 colleges (108 pupils), 2 boarding schools (224 pupils), 1 girls' school, 2 orphanages, 1 boy's school, 1427 school rooms, 1,741,84 young people under Catholic care, 8 hospitals, Catholic population 135,000.

Catholic Directory (Milwaukee, 1890); Catholic Home Almanac (New York, 1892); RAUMS, BISH. EVANG. CATH. HIERARCHIE U.S. (Milwaukee, 1888); Catholic Citizen (Milwaukee), files.

THOMAS F. MEHAN.

Greenland.—An island stretching from within the Arctic Circle south to about 50 degrees N. latitude, between 20 degrees and 76 degrees W. longitude. In shape it more or less resembles a triangle, its apex pointing south, its base facing north, in which direction its extent has not been precisely ascertained. It is bounded on the north by the Arctic Ocean; on the west, by Smith Sound, Baffin's Bay, and Davis Strait; on the east by the Arctic and the Atlantic Oceans. Its length has been estimated at about 512,000 linear miles. The interior of this huge island is a plateau rising gradually towards the east, above which a few mountain peaks tower to a height of more than 13,100 feet. Immense fields of ice, varying in thickness, are lodged on the island, and, on the coast here and there, form steep walls launching mighty glaciers towards the ocean, where, caught by the currents, they drift southwards. These ice-fields and the continually moving masses of ice, which are diminished only in the month of July, constitute the main difficulty in approaching the coast, which is indented with numerous fiords and lined with small islands. The mineralogical composition of Greenland is varied and comprises granite, sandstone, syenite, porphyrly, and some brown coal, tin, and iron. Tivigut is the only locality outside of Siberia which is known to produce the mineral kryolite (or kryolith) used in the manufacture of aluminum. The valleys in the interior, traversed by rivers, and the hills facing towards the south-west, are the only sections of the country where vegetation finds a soil to nourish it, hence, as well as by reason of the severity of the long winters, the flora is comparatively insignificant. In the north the only vegetation consists of lichens, mosses, and the milder regions of the south berries and various dwarfed plants are met with, while the most sheltered localities produce willow, alder, and birch trees, which, however, seldom
attain the height of twelve to fifteen feet. Farming is not to be thought of; even the hardy potato yields only here and there a small return. On the other hand, some vegetables, especially lettuce and cabbage, thrive comparatively well. The dog is the only domesticated animal. Chickens, sheep, goats, and horned cattle are introduced in summer. However, there are bears, wolves, reindeer, moose, and arctic hare, besides numberless bears and foxes which are constantly hunted for their valuable skins. Numerous species of birds furnish the inhabitants with food—the flesh of the ptarmigan and the eggs of the sea gull—while the eider duck yields its down, sealskin, and blubber. Naturally, fishing is of vital importance. Navigation on any considerable scale is possible only during the summer. Communication between the different settlements is maintained by means of the umiaq, a boat made of sealskin, generally about thirty feet in length. For hunting and fishing the Greenlander uses the kajak, a boat propelled by means of paddles. The staple exports of Greenland are whale-oil, the skins of seals, bears, and foxes, eiderdown, and kryolith, all amounting to about 500,000 kronen. The value of the imports—coal, foodstuffs, and articles of common use—is about double that of the exports.

The original inhabitants of Greenland, the Eskimos, belong to the Mongolian race and are for the most part at least nominal Christians, under the jurisdiction of the Bishop of Zealand. A number of the inhabitants residing on the east coast are still pagans. The creed of the latter shows pantheistic tendencies, and the exercise of their religion consists in certain forms of prayer and curious ceremonies. Without any clear conception of their responsibility to a supreme being they have, nevertheless, rude notions of heaven and hell. Their priests are at the same time teachers, judges, and doctors. Naturally amiable, though sometimes irascible and vindictive, and careless of cleanliness, the Christian Eskimos need constant guidance to prevent their relapsing into the general disregard for morality, which formerly obtained among them. The lords of the land are some 300 Danes. Politically, the country is divided into the North and South Inspectors. The most notable settlements are: Godthaab, Neuherrenhut, Christianehaab, Jakobsbavn, Fredrikshaab, Claushavn, Fiskernaa, Sukkertoppen, Ritenbenk, Sydbay, Noesoak, Holstenborg, Egedeminde, Upernivik.

Greenland can properly be said to possess any political history as the small number of its inhabitants precluded its exerting any influence on the destiny of other countries. Although many historians claim that the Norse colony, which flourished there during the Middle Ages, was destroyed by the Skravigs (Eskimos), proof is wanting, and, considering the pacific character of the Eskimos, it is more probable that the colonists, relatively few in number, lost their identity by intermarriage with the aborigines. It is, however, an established fact that the Eskimos were in Greenland (at least temporarily) at the time the Norsemen landed and when Eric the Red of Iceland settled there (983). Eric gave the island its name. In the "Islandingbog," written about a century later by Are Fröth, it is stated that there were found on the island numerous deserted huts, parts of boats, and various stone implements such as are in use even unto this day. It was only occasioned by the fact that there were no stone and the Umanak Fiord. Erik named his first settlement (the site is unknown) Brattahlid. Kinsmen and friends soon joined him, and in a short time the Norse population grew considerably. With Christianity a higher civilization entered the island. When Greenland was divided into parishes, there were more than three hundred farms, supporting a population of over three thousand, partly in Ostrabyg, partly in Westrybyg (both places on the western coast). The means of subsistence were practically the same as those of to-day, except that cattle-raising was more general.

Greenland was considered a possession of the Norwegian Crown as late as the time of the Union of Kalmar (see Styffe, Skandinavien under Unionsstiden, II, Stockholm, 1880, p. 352). The continued disturbances in the South largely in Flateyjarbók have not been conducive to remote colonies to be forgotten. Eventually, all relations between the Norse settlers and their mother country ceased, and Greenland kept only a shadowy existence in the European geographies. Tradition had it that the island was rich in game (reindeer, polar bear, walrus, musk-ox, and numerous birds), and that it abounded in marble, crystals, and so on. Its inhabitants were, unhappily, lost to Christianity. The efforts of Archbishop Wallendorn of Trondheim, to assist the lost Norse brethren, ended in failure. A general permission to settle there, granted by King Christian III, was also fruitless; the perils of the sea journey deterred his subjects.

The honour of having practically rediscovered Greenland belongs to the English. Commissioned by Queen Elizabeth, Frobisher made several voyages northwards, between 1576 and 1578, and at last succeeded in reaching his goal. The work of exploration was continued by his countryman, Davis. The Danish Kings, who, as sovereigns of Norway, claimed Greenland, also sent expeditions there, the most successful of which was that of Dannes (1652–54). In the beginning of the eighteenth century the settlement and Christianization of Greenland recommenced. Factories were erected in Christianehaab (1734), Jacobshavn (1741) and Fredrikshaab (1742). Commerce was developed partly by individuals (e.g. the merchant Severin, 1734) and partly by commercial companies (almundet Handelssellschaft, 1774). Since then the Government has assumed control of the Greenland trade. In addition to the settlements established by the Government, the Moravian Brethren have founded several stations. The eastern coast of Greenland was not properly explored and described until the nineteenth century—by Scoresby (1822), Clavering (1823), Graah (1829), the German expedition (1859), and the Danish expedition (1883–85).

The church history of Greenland naturally divides itself into two periods: the Catholic period, from about 1000 to 1450, and the Protestant period, since 1721.

Leif the Happy (Henni), son of Erik the Red, discovered the Norsemen in 985. It is uncertain to what extent Christianity by King Olaf Tryggvesson, who sent some missionaries to accompany him to his country. In a remarkably short time these missionaries succeeded in converting the Norse colonists, at least outwardly, and in establishing an organized Church. Sixteen parishes were founded successively, together with churches and even a few monasteries. As the distance to Europe made communication very difficult, Greenland, in spite of the small number of souls which it contained, was formed into the Diocese of Gardar, suffragan first to the Archbishopric of Hamburg-Bremen, and ultimately to Lund. The See of Gardar was, however, often divided by Gaards and by Eubel, and hardly be ascertained with certainty at present. But this much seems certain that, before the colony perished, sixteen to eighteen bishops of various nationalities occupied the See of Gardar or at least were nominated to it. Their successors in the Scandinavian churches were the Bishop Erik Gruppen joined an expedition in 1121 for the purpose of locating again the eastern coast of North America which had been discovered 100 years previously. During the reign of Bishop Arnars (1314–43) Greenland contributed its quota in natural products (walrus teeth, etc.) to the expense of the Crusades. It appears that no bishop visited Greenland after the beginning of the fifteenth century. The succession of titular bishops closes with
Gregorius Nicophonius. See Hesyacham.

Gregorian Chant.—The name is often taken as synonymous with plain chant (q. v.), comprising not only the Church music of the early Middle Ages, but also later compositions (elaborate melodies for the Mass and antiphons) in a similar style down to the sixteenth century and even in modern times. In a stricter sense Gregorian chant means the Roman form of early plain chant as distinguished from the Ambrosian, Gallican, and Mozarabic chants, which were akin to it, but were gradually supplanted by it from the thirteenth to the eighteenth century. Of the Gallican and Mozarabic chants, a few remains are extant, but they were probably closely related to the Ambrosian chant. Of the latter, which has maintained itself in Milan up to the present day, there are two complete manuscripts belonging to the thirteenth and fourteenth
According to this it was thought in Rome, less than forty years after the death of St. Gregory, that the greatest praise for a music-loving pope was to compare him to his predecessor Gregory. (b) The feast known to have been fixed by Pope Gregory in the main melodies borrowed from older feasts. See the detailed proof for this in Frere's "Introduction". (c) The texts of the chants are taken from the "Itala" version, while as early as the first half of the seventh century St. Jerome's correction had been generally adopted. (d) The Gregorian chant melodies of cædences moulded on the literary curans shows that they were composed before the middle of the seventh century, when the cursus went out of use.

Gregory I (The Great), Saint, Pope, Doctor of the Church; b. at Rome about 540; d. 12 March, 604. Gregory II "is certainly a personality of some importance in Ecclesiastical History. He has exercised in many respects a momentous influence on the doctrine, the organization, and the discipline of the Catholic Church. To him we must look for an explanation of the religious situation of the Middle Ages: indeed, if no such saint were, taken of himself, a form of medieval Christianity would be almost inexplicable. And further, in so far as the modern Catholic system is a legitimate development of medieval Catholicism, of this too Gregory may not unreasonably be termed the Father. Almost all the leading principles of the later Catholicism are found, at any rate in germ, in Gregory the Great!" (F. H. Dudden, "Gregory the Great", I, p. v.) This eulogy by a learned non-Catholic writer will justify the length and elaboration of the following article.

I. FROM BIRTH TO 574.—Gregory's father was Gordianus, a wealthy patrician, probably of the famous gens Aemilia, who owned large estates in Sicily and a mansion on the Caelian Hill in Rome, the ruins of which, apparently in a wonderful state of preservation, still await excavation beneath the Church of St. Andrew and St. Gregory. His mother Silvia appears also to have been of good family, but very little is known of her life. She is honoured as a saint, her feast being kept on 3 November (see Silvia, Saint). Portraits of Gordianus and Silvia were painted, by Gregory's order, in the atrium of St. Andrew's monastery, and a pleasing description of these may be found in John the Deacon (Vita IV, lxxxiii.). Besides his mother, two of Gregory's aunts have been canonized in St. Gregory's history, his mother's two sisters, Tarrella and Æmiliana, so that John the Deacon speaks of his education as being that of a saint among saints. Of his early years we know nothing beyond what the history of the period tells us. Between the years 546 and 552 Rome was first captured by the Goths under their king Theodoric, and then by his successor Totila; next it was garrisoned by Belisarius, and besieged in vain by the Goths, who took it again, however, after the recall of Belisarius, only to lose it once more to Narses. Gregory's mind and memory were both exceptionally receptive, and it is to the effect produced on him by these events that we attribute the tinge of sadness which pervades his writings and especially his clear expectation of a speedy end to the world. Of his education we have no details. Gregory of Tours tells us that in grammar, rhetoric, and dialectic he was so skilful as to be thought

---

The name Gregorian chant points to Gregory the Great (590-604), to whom a pretty constant tradition ascribes a certain final arrangement of the Roman chant. It is first met in the writings of William of Hirsau, though Leo IV (847-855) already speaks of the cunctus stil. Gregori. The tradition mentioned was questioned first by Pierre Guissigny, in 1875, and again, in 1870, by George, Baron d'Eccher, neither of whom attracted much attention. In modern times Gevaert, president of the Brussels music school, has tried to show, with a great amount of learning, that the compilation of the Mass music belongs to the end of the seventh or the beginning of the eighth century. Gevaert focuses on the question, and at present practically all authorities, including, besides the Benedictines, such men as Wagner, Gastoué, and Frere, hold that the large majority of plain-chant melodies were composed before the year 600.

The facts for the Gregorian tradition may be summarized thus: (a) The testimony of John the Deacon, Gregory's biographer (c. 872), is quite trustworthy. Amongst other considerations the very modest claim he makes for the saint, "antiphonarium centenem . . . . . . compilavit" (he compiled a patchwork antiphonary), shows that he was not improbable away by a desire to eulogize his hero. There are several other testimonies in the ninth century. In the eighth century we have Egbert and Bede (see Gastoué, "Les Origines", etc., 874 sqq.). The latter, in particular, speaks of one Putta, who died as bishop in 688, "magne modulandi in ecclesia more Romanorum purissimum, quem a discipulis beatum papa Gregory didicerat". In the seventh century we have the epitaph of Honorius, who died in 638 (Gastoué, op. cit., 93): . . . . divino in carne limine Ad vitam pastor duceo novit ovis

Namque Gregorii tanti vestigia iusti
Dum sequera cupiens meritumque genis
—that is: "Gifted with divine harmony the shepherd leads his sheep to life . . . . for while following the footsteps of holy Gregory you have won your reward."
second to none in all Rome, and it seems certain also that he must have gone through a course of legal studies. Not least among the educating influences was the religious atmosphere of his home. He loved to meditate on the Scriptures and to listen attentively to the conversation of his elders, so that he was "deep in thirty years old, filling the important office of prefect of the city of Rome. At that date the brilliant post was shorn of much of its old magnificence, and its responsibilities were reduced; still it remained the highest civil dignity in the city, and it was only after long prayer and inward struggle that Gregory decided to abandon everything and become a monk. This event took place most probably in 574. His decision once taken, he devoted himself to the work and austerity of his new life with all the natural energy of his character. His Sicilian estates were given up to found six monasteries there, and his home on the Cælian Hill was rented out to another layman under the protection of St. Andrew. Here he himself took the cowl, so that "he who had been wont to go about the city clad in the trabea and aglow with silk and jewels, now clad in a worthless garment served the altar of the Lord." (Greg. Tur., X, 1)

AND ABBEY, c. 574-590. — There has been much discussion as to whether Gregory and his fellow-monks at St. Andrew's followed the Rule of St. Benedict. Baronius and others on his authority have denied this, while it has been asserted as strongly by Mabillon and the Hollandists, who, in the Preface to the Life of St. Augustine (6 May), retracted the opinions expressed in the Preface to St. Gregory's Life (12 March). The controversy is important only in view of the question as to the form of monasticism introduced by St. Augustine into England, and it may be said that Baronius's view is now practically abandoned. For about three years Gregory lived in retirement in the monastery of St. Andrew, a period to which he often refers as the happiest portion of his life. His great austerities during this time are recorded by the biographers, and probably caused the weak health from which he constantly suffered in later years. He was soon drawn out of his seclusion when, in 578, the pope ordered him, much against his will, as one of the seven deacons (regionalis) of Rome. The period was one of acute crisis. The Lombards were advancing rapidly towards the city, and the only chance of safety seemed to be in obtaining help from the Emperor Tiberius at Byzantium. Pope Pelagius II accordingly dispatched a special embassy to Tiberius, and sent Gregory along with it as his apocrisiarius, or permanent ambassador to the Court of Byzantium. The date of this new appointment seems to have been the spring of 579, and it lasted apparently for about six years. Nothing could have been more uncongenial to Gregory than the way of life of the brilliant Byzantine Court, and to counteract its dangerous influence he followed the monastic life so far as circumstances permitted. This was made easier by the fact that several of his brethren from St. Andrew's accompanied him to Constantinople. With them he prayed and studied the Scriptures, one result of which remains in his "Morals," or series of lectures on the Book of Job, composed during this period at the request of St. Leander of Seville, whose acquaintance Gregory had during his stay in Constantinople. Much attention was attracted to Gregory by his controversy with Eutychius, Bishop of Constantinople, concerning the Resurrection. Eutychius had published a treatise on this subject, maintaining that the risen bodies of the elect would be "impalpable, more light than air." To this view Gregory objected the palpability of Christ's risen body. The dispute became prolonged and bitter, till at length the emperor intervened, both combatants being summoned to a private audience, where they stated their views. The emperor decided that Gregory was in the right, and condemned Eutychius by his bull De Trinitate. The strain of the struggle had been so great that both fell ill. Gregory recovered, but the patriarch succumbed, recanting his error on his death-bed. Mention should be made of the curious fact that, although Gregory's sojourn at Constantinople lasted for six years, he never learned to write in Greek. Possibly he found that the use of an interpreter has its advantages, but he often complains of the incapacity of those employed for this purpose. It must be owned that, so far as obtaining help for Rome was concerned, Gregory's stay at Constantinople was a failure. However, his period as ambassador taught him very plainly a lesson which was to be of great fruit later on when he ruled in Rome as pope. This was the important fact that no help was any longer to be looked for from Byzantium, with the corollary that, if Rome and Italy were to be saved at all, it must be done by the peoples themselves, and by the powers on the spot. Humanly speaking, it is to the fact that Gregory had acquired this conviction that his later line of action with all its momentous consequences is due.

In the year 586, or possibly 585, he was recalled to Rome, and with the greatest joy returned to St. Andrew's, of which he became abbot soon afterwards. The monastery grew famous under his energetic rule, producing many monks who won renown later, and many vivid pictures of this period may be found in the "Dialogues". Gregory gave much of his time to preaching on the Scriptures, and in expounding his monks the Heptateuch, Books of Kings, the Prophets, the Book of Proverbs, and the Canticle of Canticles. Notes of these lectures were taken at the time by a young student named Claudius, but when transcribed were found by Gregory to contain so many errors that he insisted on their being given to him for correction and revision. Apparently this was never done, for the existing fragments of such works attributed to Gregory are almost certainly spurious. At this period, however, one important literary enterprise was certainly completed. This was the revision of the Psalter, "Psalterium alia", or lectures on the Book of Job, undertaken in Constantinople at the request of St. Leander. In one of his letters (Ep. V, lii) Gregory gives an interesting account of the origin of this work. "To this period most probably should be assigned the famous incident of Gregory's meeting with the English youths in the Forum. The first mention of the event is in the Whitby life (c. ix), and the whole story seems to be an English tradition. It is worth notice, therefore, that in the St. Gall manuscript the Angles do not appear as slave boys exposed for sale, but as men visiting Rome of their own free will, whom Gregory expressed a desire to see. It is a Venusian work (Pseudo Silvius, lii) who first makes them slaves. In consequence of this meeting Gregory was so fired with desire to convert the Angles that he obtained permission from Pelagius II to go in person to Britain with some of his fellow-monks as missionaries. The Romans, however, were greatly incensed at the pope's act. With angry words they demanded Gregory's recall, and messengers were at once dispatched to bring him back to Rome, if necessary by force. These men caught up with the little band of missionaries on the third day after their departure, and at once returned with them, Gregory ordering no opposition. On their return, which appeared to him as a sign from heaven that his enterprise should be abandoned. The strong feeling of the Roman populace that Gregory must not be allowed to
Gregory leaves Rome as a sufficient proof of the position he now held there. He was in fact the chief adviser and assistant of Pelagius II., towards whom he seems to have acted very much in the capacity of secretary (see the Bishop of Rome, to Gregory, Ep. iii., xlvii., “Sedem apostolicem, quam antea (nunc etiam honore debito gubernatiss.”). In this capacity, probably in 586, Gregory wrote his important letter to the schismatic bishops of Istria who had separated from communion with the Church on the question of the Three Chapters (Ep. supra, Appendix, III.). The Bishop of Rome’s letter is almost a treatise in length, an admirable example of Gregory’s skill, but it failed to produce any more effect than Pelagius’s two previous letters had, and the schism continued.

The year 599 was one of widespread disaster throughout all the empire. In Italy there was an unprecedented inundation. Farms and houses were carried away by the floods. The Tiber overflowed its banks, destroying numerous buildings, among them the granaries of the Church with all the store of corn. Pestilence followed on the floods, and Rome became a very dirty and unclean city. The streets were deserted save for the wagons which bore forth countless corpses for burial in common pits beyond the city walls. Then, in February, 599, as if to fill the cup of misery to the brim, Pelagius II. died. The choice of a successor lay with the clergy and people, and it fell to Gregory, Abbot of St. Andrew’s. In spite of their unanimity Gregory shrank from the dignity thus offered him. He knew, no doubt, that its acceptance meant a final good-bye to the cloister life he loved, and he not only refused to accede to the prayers of his fellow-citizens but also wrote personally to the Emperor Maurice, begging him with all earnestness not to confirm the election. Germanus, prefect of the city, suppressed this letter, however, and sent instead of it the formal schedule of the election. In the interval while awaiting the emperor’s reply the business of the vacant see was transacted by Gregory, in commission with two or three other high officials. As the plague still continued unabated, Gregory called upon the people to join in a vast sevenfold procession which was to start from each of the seven regions of the city and meet at the basilica of the Blessed Virgin, and so bear the while for pardon and the withdrawal of the pestilence. This was accordingly done, and the memory of the event is still preserved by the name “Sant’ Angelo” given to the mausoleum of Hadrian from the legend that the Archangel St. Michael was seen upon its summit in the act of sheathing his sword as a sign that the plague was over. At length, after six months of waiting, came the emperor’s confirmation of Gregory’s election. The saint was terrified at the news and even meditated flight. He was seized, however, carried to the Basilica of St. Peter, and there consecrated pope on 3 September, 599. The story of Gregory’s negotiations for the city and country, hidden in a forest for three days, when his whereabouts was revealed by a supernatural light, seems to be pure invention. It appears for the first time in the Whitby life (c. vii.), and is directly contrary to the words of his contemporary, Gregory of Tours (Hist. Franc., X., i.). Still he never ceased to regret his elevation, and his later writings contain numberless expressions of strong feeling on this point.

III. As Pope, 590–604.—Fourteen years of life remained to Gregory, and into these he crowded work enough to have exhausted the energies of a lifetime. What he achieved was incomparable, and his constant ill-health. He suffered almost constantly from indigestion and, at intervals, from attacks of slow fever, while for the last half of his pontificate he was a martyr to gout. In spite of these infirmities, which increased steadily, his biographer, Paul the Deacon, tells us “he never rested” (Vita, xv). His work as pope is of so varied a nature that it will be best to take it in sections, although this destroys any exact chronological sequence. At the very outset of his pontificate Gregory published a short and pithy “Novella curse”, or book on the office of a bishop, in which he at length defines the lines he considers it his duty to follow. The work, which regards the bishop pre-eminently as the physician of souls, is divided into four parts. He points out in the first that only one skilled already as a physician of the soul is fitted to undertake the “superbium regem” of the second. In the second he describes how the bishop’s life should be ordered from a spiritual point of view; in the third, how he ought to teach and admonish those under him, and in the fourth how, in spite of his good works, he ought to bear in mind his own weakness, since the better his work the greater the danger of falling through self-confidence. This little work is the key to Gregory’s life as pope, for what he preached he practised. Moreover, it remained for centuries the textbook of the Catholic episcopate, so that by its influence the ideal of the great pope has moulded the character of the Churches appointed by him to rule over other Churchmen.

(1) Life and Work in Rome.—As pope Gregory still lived with monastic simplicity. One of his first acts was to banish all the lay attendants, pages, etc., from the Lateran palace, and substitute clerics in their place. There was now no magister militum living in Rome, so that the control even of the army was entirely in the hands of Gregory. The inroads of the Lombards had filled the city with a multitude of indigent refugees, for whose support Gregory made provision, using for this purpose the existing machinery of the ecclesiastical districts, each of which had its deaconry or “office of alms”. The cities thus distributed the charity first gratuitously and then eventually by the estates of the Church. The temporal needs of his people being thus provided for, Gregory did not neglect their spiritual wants, and a large number of his sermons have come down to us. It was he who instituted the “stations” still observed and noted in the Roman Massal (see StATIONS). He met the clergy and people at some church previously agreed upon, and all together went in procession to the church of the station, where Mass was celebrated and the pope preached. These sermons, which drew immense crowds, are mostly simple, popular expositions of the Bible’s necessary and the whole of the liturgy, the mystery of the Bible, which he quotes unceasingly, and his regular use of anecdote to illustrate the point in hand, in which respect he paves the way for the popular preachers of the Middle Ages. In July, 595, Gregory held his first synod in St. Peter’s, which consisted almost wholly of the bishops of the suburbanianas and the priests of the Roman titular churches. Six decrees dealing with ecclesiastical discipline were passed, some of them merely confirming changes already made by the pope on his own authority.

Much controversy still exists as to the exact extent of Gregory’s reform of the Church, but admit that he did make the following modifications in the pre-existing practice: (a) In the Canon of the Mass he inserted the words “disque nostros in tua pace disponas, atque ab eterna damnatione nos separa, et in electorum tuorum iubema greges seque numerari”; (b) he ordered the Pater Noster to be recited in the Canon before the breaking of the Host; (c) he provided that the Alleluia should be chanted after the Gradual out of paschal time, to which period, apparently, the Roman use had previously confined it; (d) he prohibited the use of the chasuble by subdeacona assisting at Mass; (e) he forbade the use of the chasuble by subdeacons assisting at Mass; (f) he forbade the use of the chasuble by subdeacona assisting at Mass; (g) he forbade the use of the chasuble by subdeacons assisting at Mass; (h) he forbade the use of the chasuble by subdeacons assisting at Mass; (i) he forbade the use of the chasuble by subdeacons assisting at Mass. Beyond these and some few minor points it seems impossible to conclude with certainty what changes Gregory did make. As to the much-disputed question of the Gregorian Sacramentary and the
also almost more difficult point of his relation to the plain song or chant of the Church, for Gregory’s connexion with which matters the earliest authority seems to be John the Deacon (V, xi, xxvii), see Gregorian Chant; Sacramentary. There is no lack of evidence, however, to illustrate Gregory’s activity as manager of the patrimony of St. Peter. By his day the estates of the Church had reached vast dimensions. Varying estimates place their total area at from 1300 to 1500 square miles, and there seems no reason for supposing this to be an exaggeration, while the income arising therefrom was probably not less than $1,500,000 a year. The land lay in many places—Campania, Africa, Sicily, and elsewhere—and, as their landlord, Gregory displayed a skill in finance and estate management that causes no admixture to amaze; and indeed he was the surprise of his tenants and agents, who suddenly found that they had a new master who was not to be deceived or cheated. The management of each patrimony was carried out by a number of agents of varying degrees and duties under an official called the rector or defensor of the patrimony. Gradually the rectors had usually been laymen, but Gregory established the custom of appointing ecclesiastics to the post. In doing this he probably had in view the many extra duties of an ecclesiastical nature which he named upon them to undertake. Thus examples may be found of such rectors being commissioned to undertake the filling up of vacant sees, holding of local synods, taking action against heresies, providing for the maintenance of churches and monasteries, rectifying abuses in the churches of their districts, with the enforcing of ecclesiastical discipline and even the reproof and correction of local bishops. Still Gregory never allowed the rectors to interfere in such matters on their own responsibility. In the minutes of estate management nothing was too small for Gregory’s personal notice, from the exact number of sextarii in a modius of corn, or how many solidi went to one golden pound, to the use of false weights by certain minor agents. He finds time to write instructions on every detail and leaves no complaint unattended to, even from the humbliest of his multitude of tenants. Throughout the large number of letters which deal with the management of the patrimony, the pope’s determination to secure a scrupulously righteous administration is evident. As bishop, he is the trustee of God and St. Peter, and his agents must show that they realize this by their conduct. Consequently, under his able management the estates of the Church increased steadily in value, the tenants were contented, and the revenues paid in with unprecedented regularity. The only fault ever laid at his door in this respect, by his agents, was that he emptied his treasury. But this, if a fault at all, was a natural consequence of his view that he was the administrator of the property of the poor, for whom he could never do enough. (2) Relations with the Suburbicarian Churches.—As patriarchs of the West the popes exercise a special jurisprudence over and above their universal primacy as successors of St. Peter; and, among Western churches, this jurisdiction extends in a most intimate manner over the churches of Venice and the isles adjacent. On the mainland much of this territory was now in the hands of the Lombards, with whose Arian clergy Gregory was, of course, not in communion. Whenever opportunity offered, however, he was careful to provide for the needs of the faithful in these parts, frequently uniting them to some neighbouring diocese, when they were too few to occupy the energies of a bishop. On the islands, of which Sicily was by far the most important, the pre-existing church system was maintained. Gregory appointed a vicar, usually the metropolitans of the province, who exercised a general supervision over them. He also insisted strongly on the holding of local synods as ordered by the Council of Nicaea, and letters of his exist addressed to bishops in Sicily, Sardinia, and Gaul, reminding them of their duties in this respect. The supreme instance of Gregory’s intervention in the affairs of these dioceses occurs in the case of Sardinia, where the behaviour of Janusus, the half-witted, aged Metropolitan of Cagliari, had reduced the church to a state of semi-chaos. A large number of letters relate to the reforms instituted by the pope (Epp. I, xi, xvi; III, xxv, IV, x, xxii, xxvii, xxix; V, ii, IX, i, xi, xii, cxxi; XIV, ii). His care over the election of a new bishop whenever a vacancy occurs is shown in many cases, and if, after his examination of the elect, which is always a searching one, he finds him unfit for the post, he has no hesitation in rejecting him and commanding another to be chosen (Epp. I, lv, lvi; VII, xlvii; VIII, vii). With regard to discipline the pope was specially strict in enforcing the Church’s laws as regards the conduct of the clergy (Epp. I, xlii; IV, v, xxvi, xxxiv; VII, i, IX, cx, cxxviii; X, xix, XI, lvi a; XIII, xxxviii, xxxix); the exemption of clerics from lay tribunals (Epp. I, xxxix a, VI, xi, IX, liii, lxxv, lxxvi, X, iv, XI, xxxii, XIII, i) and the deprivation of all ecclesiastics guilty of criminal or scandalous offences (Epp. I, xviii, xlii; III, xlix; IV, xxvi, V, v, xvii, xviii; VII, xxxix; VIII, xxiv, IX, xxv; XII, iii, x, xi; XIV, ii). He was also inflexible with regard to the proper application of church revenues, insisting that others should be as strict as he was in disposing of these funds for their proper ends (Epp. I, xli; IV, xiv; II, xx-xvii; III, xxvii; IV, xi, V, xii, xlvii; VIII, vii; XI, xxii, lvi a; XIII, xlv; XIV, ii). (3) Relations with Other Churches.—With regard to the other Western Churches limits of space prohibit any detailed account of Gregory’s dealings, but the following quotation, all boundless charities, he emptied his treasury. But this, if a fault at all, was a natural consequence of his view that he was the administrator of the property of the poor, for whom he could never do enough. (2) Relations with the Suburbicarian Churches.—As patriarchs of the West the popes exercise a special
manlike, but, at the same time, undoubtedly ultra-vores, being quite beyond any legal competency then possessed by the papacy. The papacy, in fact, had already strived towards complete independence". Gregory's independent action had the effect of raising up Romanus the exarch. Wholly ignoring the papal peace, he gathered all his troops, attacked and regained Ferugia, and then marched to Rome, where he was received with imperial honours. Nevertheless, however, he quitted the city and took away its garrison with him, so that both pope and citizens were now more exasperated against him than before. Moreover, the exarch's campaign had raised the Northern Lombards, and King Agilulf marched on Rome, arriving there promptly, and the terror aroused by his advance is still mirrored for us in Gregory's homilies on the Prophet Ezechiel, which were delivered at this time. The siege of the city was soon abandoned, however, and Agilulf retired. The continuator of Prosper (Mon. Germ. SS. Antiqu., IX, 339) relates that Agilulf met the pope in person on the steps of the Basilica of St. Peter, which was then outside the city walls, and "being melted by Gregory's prayers and greatly moved by the wisdom and religious gravity of this great man, he broke up the siege of the city", but, in view of the silence both of Gregory himself and of Paulinus on the Deeds of Theodulf, this seems scarcely probable. In Epp., V, xxiix, Gregory refers to himself as "the paymaster of the Lombards", and most likely a large payment from the papal treasury was the chief inducement to raise the siege. The pope's great desire now was to secure a lasting peace with the Lombards, which had been achieved by a proper arrangement between the imperial authorities and the Lombard chiefs. On Queen Theodelinde, a Catholic and a personal friend, Gregory placed all his hopes. The exarch, however, looked at the whole affair in another light, and, when a whole year was passed in fruitless negotiations, Gregory began once again to meditate a private treaty. Accordingly, in May, 595, the pope wrote to a friend at Ravenna a letter (Epp., V, xxxiv) threatening to make peace with Agilulf even without the consent of the Exarch Romanus. This threat was speedily reported to Constantinople, where the exarch was in high favour, and the Emperor sent a special officer to once more send off to Gregory a violent letter, now lost, accusing him of being both a traitor and a fool. This letter Gregory received in June, 595. Luckily the pope's answer has been preserved to us (Epp., V, xxxvi). It must be read in its entirety to be appreciated fully; probably very few readers would raise their heads at the beginning of such a subject. Still, in spite of seathing reply, Gregory seems to have realized that independent action could not secure what he wished, and we hear no more about a separate peace. Gregory's relations with the Exarch Romanus became continually more and more strained until the latter's death in the year 596 or early in 597. The new exarch, Callinicus, was a man of far greater ability and well disposed towards the pope, whose hopes now revived. The official peace negotiations were pressed on, and, in spite of delays, the articles were at length signed in 599, to Gregory's great joy. This peace lasted two years, but in 601 the war broke out again through an aggressive act on the part of Callinicus, who was recalled two years later, when his successor, Smaragdus, again made peace with the Lombards which endured until after Gregory's death. Two points stand out for special notice in Gregory's letters to the exarch: first, that, in spite of the apathy of the imperial authorities, Rome should not pass into the hands of some half-civilized Lombard duke and so sink into insignificance and decay; second, his independent action in appointing governors to cities, providing munitions of war, giving instructions to generals, appealing to the Lombard king, and even negotiating a peace
without the exarch’s aid. Whatever the theory may have been, there is no doubt about the fact that, besides his spiritual jurisdiction, Gregory actually exercised that of temporal power.

Of Gregory’s relations with the Franks there is no need to write at length, as the intercourse he established with the Frankish kings practically lapsed at his death, and was not renewed for about a hundred years. On the other hand he exercised a great influence on Frankish monasticism, which he did much to strengthen and reshape, so that the work done by the monasteries in civilizing the wild Franks may be attributed ultimately to the first monk-pope.

(5) Relations with the Imperial Government.—The reign of Gregory the Great marks an epoch in papal history, and this is especially the case in respect of his attitude towards the imperial Government centred at Constantinople. Gregory seems to have looked upon Church and State as co-operating to form a united whole, which acted in two distinct spheres, ecclesiastical and secular. Over this commonwealth were the pope and the emperor, each supreme in his own department, each being taken to keep these as far as possible distinct and independent. This latter point was the difficulty. Gregory definitely held that it was a duty of the secular ruler to protect the Church and preserve the “peace of the faith” (Mor., XXXI, viii), and so he is often found to call in the aid of the secular arm, not merely to suppress heresy, or idolatry, but even to enforce discipline among monks and clergy (Epp., I, lxii; II, xxix; III, lx; IV, vii, xxxvi; V, xxxii; VIII, iv; XI, xii, xxxvii; XIII, xxxvii). If the emperor interfered in church matters the pope’s policy was to acquiesce if possible, unless obedience was sinful, according to the principle laid down in Epp., XI, xxxvi; “Quod ipse [sec. imperator] fecerit, si canonicum est, sequimus; si vero canonicum non est, in quantum sine peccato nostro, portamus.” In taking this line Gregory was undoubtedly influenced by his deep reverence for the emperor, whom he regarded as the representative of God in all things secular, and who must still be treated with all possible respect, even when he encroached on the borders of the papal authority. On his side, although he certainly regarded himself as “superior in place and rank” to the exarch (Epp., II, xlv), Gregory objected strongly to the interference of ecclesiastical authorities in matters secular. As supreme guardian of Christian justice, the pope was always ready to intercede for, or protect, anyone who suffered unjust treatment (Epp., I, xxxv, xxxvi, xlvi, lx; III, v; V, xxxviii; IX, iv, xlv, iv, cxiii, clxiii; XI, iv), but at the same time he used the utmost tact in approaching the imperial officials. In Epp., II, xlv, he explained for the benefit of his Sicilian agent the precise attitude to be adopted in such matters. Still, in conjunction with all this deference, Gregory retained a spirit of independence which enabled him, when he considered it necessary, to address even the emperor in terms of startling directness. Space makes it impossible to do more than refer to the famous letters to the Emperor Phocas on his usurpation, and the allusions in them to the murdered Emperor Maurice (Epp., XIII, xxxiv, xii, xiii). Every kind of jurisdictional power, either spiritual or temporal, Gregory would be sure to claim for himself, and this he had the means of enforcing. In Epp., II, vi, it is easy to read the answer to truculent questions of imperial audacity, and therefore deservingly of imperial power.

(6) Missionary Work.—Gregory’s zeal for the conversion of the heathen, and in particular of theAngles, has been mentioned already, and there is no need to dwell at length on the latter subject, as it has been fully treated under Augustine of Canterbury, Saint. In justice to the great pope, however, it must be added that he lost no opportunity for the exercise of his missionary zeal, making every effort to root out paganism in Gaul, Donatism in Africa, and the Schism of Photius in Constantinople. He was pitiless in his treatment of heretics, schismatics, and pagans: his method was to try every means—persuasions, exhortations, threats—before resorting to force; but, if gentler treatment failed, he had no hesitation, in accordance with the ideas of his age, in resorting to compulsion, and invoking the aid of the secular arm therein. It is curious, therefore, to find him acting as a champion and protector of the Jews. In Epp., I, xlv, he expressly depricates the compulsory baptism of Jews, and many instances appear in which he insists on their right to liberty of action, so far as the law permitted, both in civil affairs and in the worship of the synagogue (Epp., I, xxxiv; II, vi; VIII, xxx; IX, xxxvi, cccxv; XIII, xv). He was equally strong, however, in preventing the Jews from exceeding the rights granted to them by the imperial law, especially with regard to the ownership by them of Christian slaves (Epp., II, vi; III, xxxvii; IV, xlv; VI, v; VII, xxxvi, xxi; VIII, xxi; IX, iv, ccciii, coccxv). We shall probably be right, therefore, in attributing Gregory’s protection of the Jews to his respect for law and justice, rather than to any ideas of toleration differing from those current at the time.

(7) Gregory and Monasticism.—Although the first
monk to become pope, Gregory was in no sense an original contributor to monastic ideals or practices. He took monasticism as he found it established by St. Benedict, and his efforts and influence were given to strengthening and enforcing the prescriptions of that greatest of monastic legislators. His position did indeed tend to modify St. Benedict's work by drawing it into a closer connection with the organization of the Church and the papacy in particular, but this was not deliberately aimed at by Gregory. Rather he was himself convinced that the monastic system had a very special value for the Church, and so he did everything in his power to diffuse and propagate it. His own property was consecrated to this end, he underwrote it financially, he established or strengthened existing monasteries, and he used the revenues of the patri- mony for the same purpose. He was relentless in correcting abuses and enforcing discipline, the letters on such matters being far too numerous for mention here, and the points on which he insists most are precisely those, such as stability and poverty, on which St. Benedict's recent legislation had laid special stress. Twice only do we find anything like direct legislation by the pope. The first point is that of the age at which a nun might be made abess, which he fixes at "not less than sixty years" (Epp., IV, xi). This point is a direct strengthening of the rule of St. Benedict had prescribed at least one year (Reg. Ben., viii); Gregory (Epp., X, ix) orders two years, with special precautions in the case of slaves who wished to become monks. More important was his line of action in the difficult question of the relation between monks and their bishop. There is plenty of evidence to show that many bishops took advantage of their position to oppress and burden the monasteries in their diocese, with the result that the monks appealed to the pope for protection. Gregory, while always upholding the spiritual jurisdiction of the bishop, never sanctioned the frequenting of illegal aggression. All attempts on the part of a bishop to assume new powers over the monks in his diocese were condemned, while at times the pope issued documents, called Privilegia, in which he definitely set forth certain points on which the monks were exempt from episcopal control (Epp., V, xix; VII, xii; VIII, xvii; XII, xi, xii, xiii). This action on Gregory's part undoubtedly began the long process by which the monastic bodies have come to be under the direct control of the Holy See. It should be mentioned that in Gregory's day the current view was that each monk, such as a hermit, in founding, administering the sacraments, etc., was not compatible with the monastic state, and in this view the pope concurred. On the other hand a passage in Epp., XII, iv, where he directs that a certain layman "should be tonsured either as a monk or as subdeacon", would suggest that the pope held the monastic state in some way equivalent to the ecclesiastical; for his ultimate intention in this case was to promote the layman in question to the episcopate.

(8) Death, Canonization, Relics, Emblem.—The last years of Gregory's life were filled with every kind of suffering. His health, naturally serious, was filled with despondent foreboding, and his continual bodily pains were increased and intensified. His "sole consolation was the hope that death would come quickly" (Epp., XIII, xxxvi). The end came on 12 March, 604, and on the same day his body was laid to rest in front of the door of the palace. Since then the relics have been moved several times, the most recent translation being that by Paul V in 1606, when they were placed in the chapel of Clement V near the entrance of the modern sacristy. There is some evidence that the body was taken to Soissons in France in the year 626, but probably only by the later reformer, Venerable Bede (Hist. Ecd. II, i) gives the epitaph placed on his tomb, which contains the famous phrase referring to Gregory as sacerdos Dei. His canonization by popular acclaim followed at once on his death, and survived a reaction against his memory which seems to have occurred soon afterwards. In art the great pope is usually shown in full pontifical robs with the tiara and double cross. A dove is his special emblem, in allusion to the well-known story told by Peter the Deacon (Vita, xxviii), who tells that when the pope was dictating his testament a veil was drawn between his secretary and himself. As, however, the pope remained silent for long periods at a time, the servant made a hole in the curtain and, looking through, beheld a dove seated upon Gregory's head with its beak between his lips. It was the dove which he had been telling his secretary to write down. His grace, his wisdom, his profound learning, not a philosopher, not a controversialist, hardly even a theologian in the constructive sense of the term. He was a trained Roman lawyer and administrator, a monk, a missionary, a preacher, above all a physician of souls and a leader of men. His great claim to remembrance lies in the fact that he is the real father of the medieval papacy (Milman). With regard to things spiritual, he impressed upon men's minds to a degree unprecedented the fact that the See of Peter was the one supreme, decisive authority in the Catholic Church. Die time of the monastic orders passed in close relations between the Church of Rome and those of Spain, Gaul, Africa, and Illyricum, while his influence in Britain was such that he is justly called the Apostle of the English. In the Eastern Churches, too, the papal authority was exercised with a frequency unusual before his time, and we find no less an authority than the Patriarch of Alexandria submitting himself humbly to the pope's "commands". The system of appeals to Rome was firmly established, and the pope is found to veto or confirm the decrees of synods, to annul the decisions of patriarchs, and inflict punishment on ecclesiastics, and even to depose or excommunicate princes as he thinks right. Nor is his work less noteworthy in its effect on the temporal position of the papacy. Seizing the opportunity which circumstances offered, he made himself in Italy a power stronger than emperor or exarch, and established a political influence which dominated the peninsula for centuries. From this time forth the varied populations of Italy looked to the pope for guidance, and Rome as the papal capital continued to be the centre of the Christian world. Gregory's work as a theologian and Doctor of the Church is less notable. In the history of dogmatic development he is important as summing up the teaching of the earlier Fathers and consolidating it into a harmonious whole, rather than as introducing new developments, new methods, new solutions of difficult questions. It was precisely because of this that his writings became to a great extent the compendium for the popular interpretation of Peter's doctrine, for which his work in popularizing his greater predeces- sors fitted him well. Achievements so varied have won for Gregory the title of "the Great", but perhaps, among our English-speaking races, he is honoured most of all as the pope who loved the bright-faced Angles, and taught them first to sing the English song.

His Writings.—Genuine, Doubtful, Spurious.
Of the writings commonly attributed to Gregory the following are now admitted as genuine on all hands: "Moralium Libri XXXV." "Regula Pastoralis Liber." "De Logoria Liber." "De Prima Primatam Libri II." "Homiluarum in Evangelia Libri II." "Epistolae Libri XIV." The following are almost certainly spurious: "In Librum Primum Regum Varia Compendium Expositionum Libri VI.; "Expositio super Cantica Canticaorum; "Expositio in Psalmo Pontifici; "Corpus Quodiam datum Stephanum Scripturat". Besides, the above there are attributed to Gregory certain liturgical hymns, the Gregorian Sacramentary, and the Antiphonary. (See Antiphonar: SACRAMENTARY.)

Chief Sources.—First of all come the writings of Gregory himself, of which a full account is given above, the most important from a biographical point of view being the fourteen books of his Enchiridion, the four books of his Gesta, and the History of the Holy Fathers. The chief authorities are St. Gregory of Tours (d. 594 or 595). Historia Francorum, Bk. X, and the Liber Pontificalis, both practically contemporaneous. To the seventh century belong St. Isidore of Seville, De Viris Illustribus, XI, and St. Eligius of Germany, De Viris Illustribus, II, De Vita Antonii, by an anonymous monk of Whitby, written probably about 715, and of special interest as representing an essentially English form of speech in regard to the Vest. Bed. Eccl., II, whose work was finished in 731; Paul the Deacon, who compiled a short Vita Gregorii Magni between 770 and 790, much of which may be supplemented by the same writer's important work Historia Longobardorum: lastly John the Deacon, who wrote his Vita Gregorii in the eighth century, 787–923, produced a full account of Gregory in answer to the complaint that no history of the saint had yet been produced in Rome. Besides these direct authorities, the background of St. Gregory's life has been gathered from the works of various contemporary chroniclers and historians.

GREGORY.

Gregory I, Saint, Pope (715–731), perhaps the greatest of the great popes who occupied the chair of Peter during the eighth century, a Roman, son of Marcellus and Honorata. To his contemporaries in the West he was known as Gregory Junior or the Younger;
to those in the East, who confounded him with Gregory I (author of the "Dialogues") as he was "Dialogus". His year of birth is not known, but while very young he showed a desire for the Church and was perhaps a deacon in the "cantonum I". He was made a subdeacon and *sacellarius* (paymaster and almoner) of the Roman Church by Sergius I. Then the care of the papal library was entrusted to him, and he was the honour of being the first papal almoner or librarian known to us by name. By the time he had become a deacon, he had acquired signs of character and superior intelligence that he was chosen by Pope Constantine to accompany him when he had to go to Constantinople to discuss the canons of the Quinqueviri Council with the turbulent tyrant, Justinian II. The pope's trust was not misplaced. The deacon Gregory, "by his admirable answers", solved every difficulty raised by the emperor. One of the first things which Gregory took in hand when he became pope (19 May, 715) was to put in repair the walls of Rome. Not for the last time had the Lombards, those old enemies of the Romans, attacked their city, and now a new foe had shown itself. The Mediterranean was fast becoming Saracen-like, and there were fears that the Saracens might make a descent upon the Eternal City itself. Gregory had made good progress with his work of repair, when various causes combined with a devastating flood of the Tiber to prevent him from completing it. But throughout all his pontificate, Gregory repeatedly showed a spirit of liberality and munificence towards the Lombards, and that by the exertions of the pope and the Venetians, it was recovered and continued to remain for a year or two longer a portion of the Byzantine empire. It is not, however, certain whether it was Gregory II or Gregory III who rendered this important service to Leo III. Probably, however, it was done by Gregory II about the year 727; though perhaps it is not quite equally probable that the two famouscondemnatory letters which Gregory II is said to have sent to Leo III are genuine. If they are genuine, then it is certain not only that Ravenna was captured by the Lombards about 727, but that the independent temporal authority of the popes which in fact began with Gregory II was consciously felt by him. But when later Greek historians asserted that Gregory "separated Rome and Italy and the whole West from political and ecclesiastical subjection to the Byzantine empire", then it is evident that Gregory was engaged in a more direct effort to put down a rebellion against the imperial authority.

In connexion with Gregory's struggle against the Iconoclast emperor and his Italian representatives, certain doubtful points have been hitherto passed over. For instance, it is certain that about the year 727, Ravenna fell into the hands of the Franks and the Lombards, and that by the exertions of the pope and the Venetians, it was recovered and continued to remain for a year or two longer a portion of the Byzantine empire. It is not, however, certain whether it was Gregory II or Gregory III who rendered this important service to Leo III. Probably, however, it was done by Gregory II about the year 727; though perhaps it is not quite equally probable that the two famouscondemnatory letters which Gregory II is said to have sent to Leo III are genuine. If they are genuine, then it is certain not only that Ravenna was captured by the Lombards about 727, but that the independent temporal authority of the popes which in fact began with Gregory II was consciously felt by him. But when later Greek historians asserted that Gregory "separated Rome and Italy and the whole West from political and ecclesiastical subjection to the Byzantine empire", then it is evident that Gregory was engaged in a more direct effort to put down a rebellion against the imperial authority.

Gregory died in February, and was buried in St. Peter's (11 Feb., 731). He is honoured as a saint in the Roman and other Martyrologies.
Gregory III, Saint, Pope (731–741), was the son of a Syrian named John. The date of his birth is not known. His reputation for learning and virtue was so great that the Romans elected him pope by acclamation, when he was accompanying the funeral procession of his predecessor, 11 Feb., 731. As he was not consecrated for more than a month after his election, it is presumed that he waited for the confirmation of his election by the exarch at Ravenna. In the matter of Iconoclasin, he followed the policy of his predecessor. He sent legates and letters to the emperor to persuade him, Leo III, I, and held two synods in Rome (731) in which the image-breaking heresy was condemned. By way of a practical test against the emperor's actions he made it a point of paying special honour to images and relics, giving particular attention to the subject in St. Peter's. Fragments of inscriptions, to be seen in the crypts of the Vatican basilica, bear witness to this day of an oratory he built therein, and of the special prayers he ordered to be there recited.

Leo, whose sole answer to the arguments and apologies for image worship which were addressed to him, was force, seized papal patrimony in Calabria and Sicily, or wherever he had any power in Italy, and transferred to the patriarch of Constantinople the ecclesiastical jurisdiction which the popes had previously exercised both there, and throughout the ancient Prefecture of Illyricum. Gregory III confirmed the decision of his predecessors as to the respective rights of the Patriarchate of Aquileia and Grado, and sent the pallium to Antoninus of Grado. In granting it also to Egbert of York, he was only following out the arrangements of St. Gregory I who had laid it down that York was to have metropolitical rights in the North of England, as Canterbury had to have them in the South. Both Tatwine and Nothelm of Canterbury received the pallium in succession from Gregory III (731 and 736). At his request Gregory III extended to St. Boniface the same support and encouragement which had been offered to Gregory II and he strengthened the work of conversion by the help of the affection of the Apostolic See, the saint joyfully continued his glorious work for the conversion of Germany. About 737 Boniface came to Rome for the third time to give an account of his stewardship, and to enjoy the pope's "life-giving" visit. At Gregory's death the monk and great traveller, St. Willibald, went to assist his cousin St. Boniface in his labours.

The close of Gregory's reign was troubled by the Lombards. Realizing the ambition which animated Liutprand, Gregory completed the restoration of the walls of Rome which had been begun by his predecessors, and bought back Gallesio, a stronghold on the Flaminian Way, from Transamund, Duke of Spoleto, which helped to keep open the communications between Rome and Ravenna. In 739, Liutprand was again in arms. His troops ravaged the exarcahe, and he himself marched south to bring to subjection his vassals, the Dukes of Spoleto and Benevento, and the Duchy of Rome. Transamund fled to Rome, and Gregory implored the aid of the great Frankish chief, Charles Martel. At length ambassadors from the viceroy (subregulus) of the Franks appeared in Rome (739). Their arrival, or the summer heats, brought a lull in hostilities. But in the autumn of that year Liutprand again took the field. This time the Romans left their walls, and helped Transamund to recover Spoleto. When, however, he had recovered his duchy, he would not or could not comply with Gregory's request, and endeavour to recover for the pope "the four cities of the Roman duchy which had been lost for his sake." In the midst of all these wars and rumours of war, Gregory died, and was buried in the oratory of our Lady within the church of St. Peter's. He died in 741, but whether in November or December is not certain. It is, however, on 28 November that he is commemorated in the Roman martyrology.

Horace Mann in J. C. Monumcnta Carolina (Berlin, 1897), or in Mon. Germ. Hist.: Epp., III (Berlin, 1892). See also bibliography of article Gregory II.

Horace K. Mann.

Gregory IV, Pope, elected near the end of 827; d. Jan., 844. When Gregory was born is not known, but he was a Roman and the son of John. Before his election to the papacy he had lived in the palace of the Basilia of St. Mark, which he adorned with marbles and mosaics. For his piety and learning he was ordained priest by Paschal I. This man, of distinguished appearance and high birth, was raised to the chair of Peter, despite his protestations of unfitness, mainly by the instrumentality of the secular nobility of Rome who were then securing a preponderating influence in papal elections. But the representatives in Rome of the Emperor Louis the Pious would not allow him to be consecrated until his election had been approved by their master. This interference caused such delay that it was not confirmed until about March, 828, that he began to govern the Church.

Throughout the greater part of his pontificate Gregory was involved in the quarrels between Louis and his sons which were to prove fatal to the domination of the Franks. Owing perhaps to a want of political insight or an over-sympathetic or sanguine temperament, or, it may be, to a want of firmness of character, his efforts to promote domestic peace in the imperial family were not attended either with success or with glory. By a solemn deed, confirmed by Paschal I, Louis had made a division of the empire in favour of the three sons of his first wife, Lothair, Pepin, and Louis the German (817). But on her death, he married the young and ambitious Judith, and was soon induced by her to devote himself wholly to furthering the interests of their son, afterwards known as Charles the Bald. Charles's half-brothers combined in arms against their father (830), seized and imprisoned him, and compelled him to confirm the Constitution of 817. The brothers, however, soon disagreed among themselves and Louis was restored to power by a diet at Nimwegen, and, by a decision of the pope, to his wife from whom he had been separated by force (Oct., 830). Untaught by experience, Louis continued his policy of force, and his half-brothers again flew to arms, and the eldest, Lothair (who was ruling Italy), by argument, by deception, and perhaps by gentle pressure, induced Gregory to accompany him across the Alps. The appearance of the pope in the camp of the rebels made it appear that he was in their favour: the bishops who remained faithful to the emperor, suspicious of the pope's good faith, would not come to him when he summoned them to his presence. It was to no purpose that Gregory repelled their accusations. When at length he met Louis himself, he found that Louis also did not trust him. While these negotiations were in progress, Lothair, who was false to everyone, was suborning the allegiance of his father's soldiers. Betrayed in consequence, Louis once again fell into the hands of his son. Lothair seized the empire, allowed Gregory to return to Rome a sadder and a wiser man, and degraded his father (835). But next year witnessed a second fraternal quarrel and a second restoration of Louis, who was weak enough to allow Lothair to retain the Kingdom of Italy. The result of his mistaken acts of clemency was not only that he had to protect the pope against Lothair's aggressions but that he had to face another rebellion of one of his sons. In marching to put it down, he died (June, 840).
His death put Lothair in possession of the imperial name. To be emperor in fact, he resolved to crush his brothers by force of arms. Detaining the legate whom Gregory despatched to try and make peace, Lothair crossed the Alps. The terrible battle of Gregory tenay (now Fontenoy-en-Puisaye) near Auxerre (841), resulted not only in the defeat of Lothair, but in the practical annihilation of the Frankish people, and in the end of their empire. While the empire was collapsing, the Saracens were pushing forward their conquests. During Gregory's pontificate they possessed themselves of Sicily, and had been invited into Italy to take part in the wars of the petty princes of South Italy. To do what he could for the safety of Rome, the pope fortified the ancient Ostia by the erection of a stronghold called after himself Gregoriopolis. Equally for the benefit of Rome and the “Patrimony of St. Peter” he had acquired aqueducts and churches and founded “farm colonies” in the Campagna. He seconded the heroic efforts which St. Anschar, the Apostle of the North, was making for the conversion of Sweden, authorizing his consecration as the first Archbishop of Hamburg, sending him the pallium, and “before the body and confession of Blessed Peter,” giving him “full authority to preach the Gospel” and making him his legate “among the Swedes, Danes and Slavs.”

Gregory gave the pallium to the Archbishops of Salzburg, Canterbury, and Grado, and favoured the latter against the encroachments of the Patriarch of Aquileia. He also supported Aldric, Bishop of Le Mans, who got into difficulties through his loyal support of Louis against his rebellious sons. To oblige Louis, Gregory caused some of his ecclesiastics to be trained in music in Rome, and he instructed him to proclaim the observance of the feast of All Saints throughout the empire. Gregory was buried in St. Peter's.

Gregory V, Pope, b. c. 970; d. 4 Feb., 999. On the death of John X, the Romans sent a deputation to Otto III and asked him to name the one he would wish them to elect in the place of the deceased pontiff. He at once mentioned his chaplain and relation, Bruno, the son of Duke Otto of Carinthia and of Judith. He was already (996) distinguished for learning, especially for his knowledge of the dialects which were to develop into the languages of modern Europe. If possessed of a somewhat hasty disposition, he was nevertheless a worthy candidate for the papacy, and his election did honour to the Romans who elected him. This first German pope was consecrated 3 May, 999; and he generally haled with satisfaction. One of his first acts was to crown Otto emperor (21 May, 996). Throughout the whole of his pontificate he acted in full harmony with his imperial cousin. Together they held a synod a few days after Otto's coronation, in which Arnulf was ordered to be restored to the See of Reims, and Gerbert, the future Sylvester II, was condemned as an intruder. Unfortunately for himself and the peace of the Church, he prevailed upon the emperor not to banish from Rome the turbulent noble Crescentius Numanitanus, “of the Marble Horse.” No sooner did Otto leave Rome than Crescentius roused his adherents to arms and Gregory had to fly to the north. Crescentius did not stop here, but caused an antipope to be proclaimed in the person of the crafty Italo-Greek John Philagathus of Rossano, who had artfully made a position for himself at the court of the Ottos and now took the title of John XVI (997).

At a synod which Gregory had ordered to meet at Favis, not only were Crescentius and his antipope anathematized, but King Robert of France was threatened with excommunication if he did not put away Bertha whom he had married though she was related to him not only by spiritual relationship but by blood. After some opposition, Robert finally yielded and, repenting of his misdeeds, repudiated Bertha and espoused Constance. Gerbert, too, after having been condemned by this synod also, abandoned the See of Reims, and was rewarded with the See of Ravenna. Furious that his authority had been so flouted, Otto marched upon Rome. Philagathus fled from the city and Crescentius shut himself up in the Castle of Sant' Angelo. The emperor's troops pursued the antipope, captured him, deprived him of his nose, ears, eyes, and tongue, and brought him back to Rome. There he was brought before Otto and the pope, and publicly degraded (998). Then, after being driven ignominiously through the streets of Rome on an ass, he was transported to Germany, where he seems to have died in the monastery of Fulda (1013). The castle of Sant' Angelo was next besieged, and, when it was taken, Crescentius was hanged upon its walls (998). About the year 997, Archbishop Ælfric came to Rome in order to procure his pallium, and to consult the pope about replacing the secular canons, who then held the cathedral of Canterbury, by monks, in accordance with the commission he had received from King Ethelred and the Witan. As a mark of special honour, Gregory put his own pallium on Ælfric, and bade him put it into his monastery at Canterbury “men of that order which the Blessed Gregory commanded Augustine therein to place”1. At the request of Otto, Gregory granted exceptional privileges to many German monasteries, and in his company held various synods for the regulation of ecclesiastical affairs. He had to threaten with anathema Ardin, Marquess of Ivrea, if he did not make amends for his ill-treatment of the property of St. Mary's of Ivrea, its serls, and its bishop. Gregory V was buried in St. Peter's “in front of the sacristy, i.e. on the Gospel side, near Pope Felix I.”

GREGORY VI, PONTIF EX (HILDEBRAND), SAINT, POPE, one of the
greatest of the Roman pontiffs and one of the most
remarkable men of all times; b. between the
tears 1020 and 1025, at Soana, or Raveuse, in Tuscany;
d. 25 May, 1085, at Salerno. The early years of
his life are involved in considerable obscurity. His
name, Hildebrand (Hildebrant)—signifying to those
of his contemporaries that loved him “a bright
flame”—to those that hated him “a brand of hell”—
would indicate some Lombard connexion of his
family, though at a later time, it probably also sug-
uggested the fiery nature of his exalted station. The
princ-
iples of Church reform of which he was afterwards to
to become the most fearless exponent. Early in life he
made his religious profession as a Benedictine monk at
Rome (not in Cluny); the house of his profession,
however, and the year of his entrance into the order,
both remain undetermined. As a cleric in minor
orders he entered the service of John Gratian, Arch-
priest of San Giovanni by the Latin Gate, and on
Gratian’s elevation to the papacy as Gregory VI, be-
came his chaplain. In 1046 he followed his papal
patron across the Alps into exile, remaining with
Gregory at Cologne until the death of the deposed
pontiff in 1047, when he withdrew to Cluny. Here he
resided for more than a year.

At Besançon, in January, 1049, he met Bruno,
Bishop of Toul, the pontiff-elect recently chosen at
Worms under the title of Leo IX, and returned with
him to Rome, though not before Bruno, who had been
nominated merely for no particular reason, had at
the instigation of the Electors met secretly in Genoa
and attempted the intention of submitting to the formal choice of
the Roman clergy and people. Created a cardinal-
subdeacon, shortly after Leo’s accession, and appointed
administrator of the Patrimony of St. Peter, Hilde-
brand at once gave evidence of that extraordinary
faculty for administration which later characterized
his government of the Church Universal. Under his
energetic and capable direction the property of
the Church, which latterly had been diverted into

GREGORY VI, ANTIPOPE.—On the death of Sergius
IV in June, 1012, “a certain Gregory”, opposed
the election of Benedict VIII, and got himself made
pope, seemingly by a small faction. Found,
when he came from Rome, he made his way to Germany, and
clawed
the support of King Henry II (25 Dec., 1012).
That
monarch, however, after promising him that his case
should be carefully examined in accordance with the
law and Roman custom, took away from him the papal
sacrament which he was of his mother’s bade him cease to
act as pope in the meanwhile. After this, history
knows the “certain Gregory” no more.

Chronicle of Thietmar, IV, lxi, in P. L., CXXXIX.

HORACE K. MANN.

GREGORY VI, POPE (JOHN GRATIAN), date of birth
unknown; elected 1 May, 1045; abdicated at Sutri, 20
Dec., 1046; d. probably at Cologne, in the beginning of
1048. In 1045 the youthful libertine Benedict IX
occupied the chair of Peter. Anxious, in order, so it
is said, that he might marry, to vacate a position into
which, though wholly unfit, he had been thrust by his
father, his godfather, John Gratian, the Archpriest of St. John “ad portam Latinam”, a man
of great reputation for uprightness of character, as to
whether he could resign the supreme pontificate.
When he was convinced that he might do so, he
offered to give up the papacy into the hands of his
godfather for a large sum of money. Desirous of ridding
the See of Rome of such an unworthy pontiff, John
Gratian in all good faith and simplicity paid him the
money and was recognized as pope in his stead.
Unfortunately the accession of Gratian, who took
the name of Gregory VI, though it was hailed with
joy even by such a strict upholder of the right as St.
Damasus, did not bring peace to the Church. When
Benedict left the city after selling the papacy, there
was already another aspirant to the See of Peter in the
field. John, Bishop of Sabina, had been saluted as
Pope Sylvester III by that faction of the nobility
which had driven Benedict IX from Rome in 1044,
and had then installed him in his stead. Though
the expelled pontiff (Benedict IX) soon returned,
and forced John to retire to his See of Sabina, that
pretender never gave up his claims, and through his
party contrived apparently to keep some hold on a
portion of Rome. Benedict, also unable, it seems,
to obtain the bride on whom he had set his heart, soon
repented of his resignation, again claimed the papacy,
and in his turn is thought to have succeeded in ac-
íquiring dominion over a part of the city.
With an empty exchequer and a clergy that had
largely lost the savour of righteousness, Gregory was
confronted by an almost hopeless task. Nevertheless,
with the aid of his “capellianus” or chaplain, Hilde-
brand, destined to be the great Pope Gregory VII,
he essayed to bring about civil and religious order. He
strove to effect the latter by letters and by councils, and
the former by force of arms. But the factions of the
antipope increased, and not only was the confusion of
the city in Rome, but the confused state of affairs in the
city. Convinced that nothing
would meet the case but German intervention, a number
of influential clergy and laity separated them-
selves from communion with Gregory or either of the
two would-be popes and entered the warlike King
Henry III to cross the Alps and restore order.
Nothing loath, Henry descended into Italy in the autumn
of 1046. Strong in the conviction of his innocence,
Gregory went north to meet him. He was received by
the king with all the honour due to a pope, and in accordance with the royal request, summoned a coun-
cl to meet at Sutri. Of the antipopes, Sylvester alone
presented himself at the synod, which was opened 20
Dec., 1046. Both his claim to the papacy and that of
Benedict were soon disposed of. Deprived of all
clerical rank and considered a usurper from the begin-
ing, Sylvester was condemned to be confined in a
monastery for the rest of his life. Benedict’s case also
prevented that little choice was left him, of claim own
the papacy, as he had voluntarily resigned it. But it
was different with Gregory. However, when the bishops
of the synod had convinced him that the act by which
he had become supreme pontiff was in itself simon-
ical, and had called upon him to resign, Gregory,
seatling that little choice was left him, of claim own
the papacy, as he had voluntarily resigned it. But it

hands of the Roman nobility and the Normans, was largely recovered, and the revenues of the Holy See, which they had depleted, speedily augmented. By Leo IX he was also appointed propiusitus or provisor (not abbot) of the monastery of St. Paul extra Muros. The unchecked violence of the lawless bands of the Campagna had brought great destitution upon this venerable establishment. Monastic discipline was so impaired that the monks would attend in their refectory by women; and the sacred edifices were so neglected that the sheep and cattle freely roamed in and out through the broken doors. By rigorous reforms and a wise administration Hildebrand succeeded in restoring the ancient rule of the abbey with the assistance of earlier benefactors. He carried throughout his life to manifest the deepest attachment for the famous house which his energy had reclaimed from ruin and decay. In 1054 he was sent to France as papal legate to examine the cause of Berengarius. While still in Tours he learned of the death of Leo IX, and on hastening back to Rome found that the clergy and people were eager to elect him, the most trusted friend and counsellor of Leo, as the successor. This proposal of the Romans was, however, resisted by Hildebrand, who set out for Germany at the head of an embassy to implore a nomination from the emperor. This embassy, which lasted for a year, ultimately resulted in the selection of Hildebrand's candidate, Gebhard, Bishop of Eichstätt, who was consecrated at Rome, 13 April, 1055, under the name of Victor II. During the reign of this pontiff, the cardinal-subdeacon steadily maintained, and even increased, the ascendency which he by his commanding genius he had acquired during the pontificate of Leo IX. Near the close of the year 1057 he went once more to Germany to reconcile the Empress-regent Agnes and her court to the (merely) canonical election of Pope Stephen X (1057-1058). His mission was not yet accomplished, when Stephen died at Florence; although the dying pope had forbidden the people to appoint a successor before Hildebrand returned, the Tuscan faction seized the opportunity to set up a member of the Crescentian family, John Mincius, Bishop of Velletri, under the title of Benedict X. With masterly skill Hildebrand succeeded in defeating the schemes of the hostile party, and secured the election of Gerard, Bishop of Florence, a Burgundian by birth, who assumed the name of Nicholas II (1059-1061).

The most important transactions of this pontificate—the celebrated decree of election, by which the pope seceded from the college of cardinals, and the alliance with the Normans, secured by the Treaty of Melfi, 1059—were in large measure the achievement of Hildebrand, whose power and influence had now become supreme in Rome. It was perhaps inevitable that the issues raised by the new decree of election should not be decided without a conflict, and with the passing away of Nicholas II in 1061, that conflict came. But when it was ended, after a schism enduring for some years, the imperial party with its Antipope Cadalus had been discomfited, and Anselm of Baggio, the candidate of Hildebrand, was declared by a general synod fully invested with the Lateran Palace as Alexander II. By Nicholas II, in 1059, Hildebrand had been raised to the dignity and office of Archdeacon of the Holy Roman Church, and Alexander II now made him Chancellor of the Apostolic See. On 21 April, 1073, Alexander II died. The time at length had come when Hildebrand, who for many years had been the most powerful figure in the Church, who had been chiefly instrumental in the selection of her rulers, who had inspired and given purpose to her policy, and who had been steadily developing and realizing, by successive acts, her sovereignty and purity, should assume in his own person the mastery and responsibility of that exalted power which his genius had so long directed.

On the day following the death of Alexander II, as the obsequies of the deceased pontiff were being performed in the Lateran basilica, the people of Rome, in a loud outcry from the whole multitude of clergy and people: "Let Hildebrand be pope!" "Blessed Peter has chosen Hildebrand the Archdeacon!" All remonstrances on the part of the archdeacon were vain, his protestations fruitless. Later, on the same day, Hildebrand was conducted to the church of San Pietro in Vincoli, and there elected in legal form by the assembled cardinals, with the due consent of the Roman clergy and amid the repeated acclamations of the people. That this extraordinary outbreak on the part of the clergy and people in favour of Hildebrand could be so easily and so quickly concerted, as is sometimes alleged, does not appear likely. Hildebrand was clearly the man of the hour, his austere virtue commanded respect, his genius admiration; and the promptitude and unanimity with which he was chosen would indicate, rather, a general recognition of his fitness for the high office. In the decree of election those who had chosen him as pontiff proclaimed him "a devout man, a man mighty in human and divine knowledge, a distinguished lover of equity and justice, a man firm in adversity and temperate in prosperity, a man, according to the saying of the Apostles, meek and humble in heart, modest, sober, chaste, given to hospitality, and one that ruled well his own house; a man from his childhood generously brought up in the bosom of this Mother Church, and for the merit of his life already raised to the archdiocesan dignity." "We choose thee," they said to the people, "our Archdeacon Hildebrand to be pope and successor to the Apostle, and to bear henceforward and forever the name of Gregory." (22 April, 1073), Mansi, "Conciliorum Collectio," XX, 605.

The decree of Nicholas II having expressly, if vaguely acknowledged the right of the emperor to have some voice in papal elections, Hildebrand deferred the ceremony of his consecration until he had received the royal sanction. In sending the formal announcement of his elevation to Henry IV of Germany, he took occasion to indicate frankly the attitude, which, as sovereign pontiff, he was prepared to assume in dealing with the Christian princes, and, with a note of grave personal warning besought the king not to bestow his approval. The German bishops, apprehensive of the severity with which such a man as Hildebrand would carry out the decrees of the Synod, endeavored to prevent the announcement of the election; but upon the favourable report of Count Eberhard of Nellenburg, who had been despatched to Rome to assert the rights of the crown, Henry gave his approval (it proved to be the last instance in history of a papal election being ratified by an emperor), and the new pope, in the meanwhile ordained to the priesthood, was solemnly consecrated on the Feast of Sts. Peter and Paul, 29 June, 1073. In assuming the name of Gregory VII, Hildebrand not only honoured the memory and character of his earliest patron, Gregory VI, but also proclaimed to the world the legitimacy of the papal throne. From the letters which Gregory addressed to his friends shortly after his election, imploring their intercession with heaven in his behalf, and begging their sympathy and support, it is abundantly evident that he assumed the burden of the pontificate, which had been thrust on him, only with the strongest reluctance, and not without a great deal of terror. To De-berius, Abbot of Monte Cassino, he speaks of his elevation in terms of terror, giving utterance to the words of the Psalmist: "I am come into deep waters, that the floods run over me"; "Fearfulness and trembling are come upon me, and darkness hath covered me. And in view of the appalling nature of the task that lay before him (of its difficulties no one indeed had a
clearer perception (than he), it cannot appear strange that even his intrepid spirit was for the moment overwhelmed. For at the time of Gregory’s elevation to the papacy the Christian world was in a deplorable condition. During the desolating era of transition—the period when society in Europe and all existing institutions seemed doomed to utter destruction and ruiny—the Church had not been able to escape from the general deluge. In the tenth century, the saddest perhaps, in Christian annals, is characterized by the vivid remark of Baronius that Christ was as if asleep in the vessel of the Church. At the time of Leo IX’s election in 1049, according to the testimony of St. Bruno, Bishop of Segni, “the whole world lay in wickedness, holiness had disappeared, justice had perished and truth had been buried; Simon Magnus lording it over the Church, whose bishops and priests were given to luxury and fornication” (Vita S. Leonis PP. IX in Watterich, Pont. Roman. Vite, 1, 96). St. Peter Damian, the fiercest censor of his age, unrolls a frightful picture of the decay of clerical morality in the lurid pages of his “Liber Gomorphanus” (Book of Gomorra). Though allowance must no doubt be made for the writer’s exaggerated and rhetorical style—a style common to all moral censors—yet the evidence derived from other sources justifies us in believing that the corruption was widespread. In writing to his venerable friend, Abbot Hugh of Cluny (Jan., 1075), Gregory himself laments the unhappy state of the Church in the following terms: “The Eastern Church has fallen away from the Faith and is now assaulted on every side by infidels. Wherever I turn my eyes—to the west, to the north, or to the south—I find everywhere bishops who have obtained their office in an irregular way, whose lives and conversation are strangely at variance with their sacred calling; who go through their duties not for the love of Christ but from motives of worldly gain. There are no longer princes who set God’s honour before their own selfish ends, or who allow justice to stand in the way of their ambition . . . . And those among whom I live—Romans, Lombards, and Normans—are, as I have often said, more than Jews or Pagans” (Greg. VII, Regist., 1. II, ep. xlix).

But whatever the personal feelings and anxieties of Gregory may have been in taking up the burden of the papacy at a time when scandals and abuses were everywhere pressing into view, the fearless pontiff felt not a moment’s hesitation as to the performance of his duty in carrying out the work of reform already begun by his predecessors. Once securely established on the Apostolic throne, Gregory made every effort to stamp out of the Church the two consuming evils of the age, simony and clerical incontinence, and, with characteristic vigour, laboured unceasingly for the assertion of those lofty principles with which he firmly believed the welfare of Christ’s Church and the regeneration of society itself to be inseparably bound up. His first care, naturally, was to secure his own position in Rome. For this purpose he made a journey into Southern Italy, a few months after his election, and concluded treaties with Landolfo of Benevento, Richard of Capua, and Gisilberto of Salerno, by which these princes agreed to contribute the person of the pope and the property of the Holy See, and never to invest anyone with a church benefit without the papal sanction. The Norman leader, Robert Guiscard, however, maintained a suspicious attitude towards the pope, and at the Lenten Synod (1075) Gregory solemnly excommunicated him for his sacrilegious invasion of the territory of the Holy See (Capua and Benevento). During the year 1074 the pope’s mind was also greatly occupied by the project of an expedition to the East for the deliverance of the Oriental Christians from the oppression of the Seljuk Turks. To promote the cause of a crusade, and to effect, if possible, a reunion between the Eastern and the Western Church—hopes of which had been held out by the Emperor Michael VIII in his letter to Gregory in 1073—the pontiff sent the Doge of Venice to Constantinople as his envoy. He wrote to the Christian princes, urging them to rally the hosts of Western Christendom for the defence of the Christian East. But in March, 1074, addressed a circular letter to all the faithful, exhorting them to come to the rescue of their Eastern brethren. But the project met with much indifference and even opposition; and as Gregory himself soon became involved in complications elsewhere, which demanded all his energies, he was prevented from giving effect to his intentions, and the expedition came to naught. With the youthful monarch of Germany Gregory’s relations in the beginning of his pontificate were of a pacific nature. Henry, who was at the time under pressure by Infidel Turks, had written to the pope (Sept., 1073) in a tone of humble deference, acknowledging his past misconduct, and expressing regret for his numerous misdeeds—his invasion of the property of the Church, his simoniacal promotions of unworthy persons, his negligence in punishing offenders; he promised amendment for the future, professed submission to the Roman See in language more gentle and lowly than had ever been used by any of his predecessors to the pontiffs of Rome, and expressed the hope that the royal power and the sacerdotal, bound together by a community of mutual assistance, might henceforth remain indissolubly united. But the passionate and headstrong king did not long abide by these sentiments.

With admiring discernment, Gregory began his great work of purifying the Church by a reformation of the clergy. At his First Lenten Synod (March, 1074) he enacted the following decree:

(1) That clerics who had obtained any grade or office of sacred orders by payment should cease to minister in the Church. (2) That no one who had purchased any church should retain it, and that no one for the future should purchase ecclesiastical rights. (3) That all who were guilty of incontinence should cease to exercise their sacred ministry. (4) That the people should reject the ministrations of clerics who failed to obey these in-
junctures. Similar decrees had indeed been passed by previous popes and councils. Clement II, Leo IX, Nicholas II, and Alexander II had renewed the ancient discipline, and had enjoined their lieutenants to have them enforced. But they met with vigorous resistance, and were but partially successful. The promulgation of Gregory's measures now, however, called forth a most violent storm of opposition throughout Italy, Germany, and France. And the reason for this was that the part of the moral and simoniacal clergies is not far to seek. Much of the reform thus far accomplished had been brought about mainly through the efforts of Gregory; all countries had felt the force of his will, the power of his dominant personality. His character, therefore, was a sufficient guarantee that his legislation would not be suffered to remain a dead letter. In Germany, particularly, the enactments of Gregory aroused a feeling of intense indignation. The whole body of the married clergy offered the most resolute resistance, and declared that the canon enjoining celibacy was wholly unwarranted in Scripture. In support of their position they appealed to the words of the Apostle Paul, I Cor., vii, 2, and 9: "It is better to marry than to be burnt"; and I Tim., iii, 2: "It behoveth therefore a bishop to be blameless, the husband of one wife." They cited the words of Christ, Matt., xix, 11: "All men take my bread, but thou hast not been offended." On this point a reference was made to the address of the Egyptian Bishop Paphnutius at the Council of Nice. At Nuremberg they informed the papal legate that they would rather renounce their priesthood than their wives, and that he for whom men were not good enough might go seek angels to meddle over the Churches. Siegfried, Archbishop of Mainz and Prince of Germany, when forced to promulgate the decrees, attempted to temporize, and allowed his clergy six months of delay for consideration. The order, of course, remained ineffectual after the lapse of that period, and at a synod held at Erfurt in October, 1074, he could accomplish nothing. Altmann, the energetic Bishop of Passau, nearly lost his life in publishing the measures, but adhered firmly to the instructions of the pontiff. The greater number of bishops received their instructions with manifest indiffidence, and some openly defied the pope. Otto of Constance, who had before tolerated the clergy, now refused to allow them the sanctuary of the Church. In France the excitement was scarcely less vehement than in Germany. A council at Paris, in 1074, condemned the Roman decrees, as implying that the validity of the sacraments depended on the sanctity of the minister, and declared them intolerable and irreconcilable with the Church. Archbishop of Reims, deeming it impossible to enforce the canon of celibacy at a provincial synod, was stoned and had to flee for his life; Walter, Abbot of Pontoise, who attempted to defend the papal enactments, was imprisoned and threatened with death. At the Council of Burgos, in Spain, the papal legate was insulted and his dignity outraged. But the zeal of Gregory knew no abatement. He followed up his decrees by sending legates into all quarters, fully empowered to depose immoral and simoniacal ecclesiastics.

Gregory had indeed been passed by previous popes and councils. Clement II, Leo IX, Nicholas II, and Alexander II had renewed the ancient discipline, and had enjoined their lieutenants to have them enforced. But they met with vigorous resistance, and were but partially successful. The promulgation of Gregory's measures now, however, called forth a most violent storm of opposition throughout Italy, Germany, and France. And the reason for this was that the part of the moral and simoniacal clergies is not far to seek. Much of the reform thus far accomplished had been brought about mainly through the efforts of Gregory; all countries had felt the force of his will, the power of his dominant personality. His character, therefore, was a sufficient guarantee that his legislation would not be suffered to remain a dead letter. In Germany, particularly, the enactments of Gregory aroused a feeling of intense indignation. The whole body of the married clergy offered the most resolute resistance, and declared that the canon enjoining celibacy was wholly unwarranted in Scripture. In support of their position they appealed to the words of the Apostle Paul, I Cor., vii, 2, and 9: "It is better to marry than to be burnt"; and I Tim., iii, 2: "It behoveth therefore a bishop to be blameless, the husband of one wife." They cited the words of Christ, Matt., xix, 11: "All men take my bread, but thou hast not been offended." On this point a reference was made to the address of the Egyptian Bishop Paphnutius at the Council of Nice. At Nuremberg they informed the papal legate that they would rather renounce their priesthood than their wives, and that he for whom men were not good enough might go seek angels to meddle over the Churches. Siegfried, Archbishop of Mainz and Prince of Germany, when forced to promulgate the decrees, attempted to temporize, and allowed his clergy six months of delay for consideration. The order, of course, remained ineffectual after the lapse of that period, and at a synod held at Erfurt in October, 1074, he could accomplish nothing. Altmann, the energetic Bishop of Passau, nearly lost his life in publishing the measures, but adhered firmly to the instructions of the pontiff. The greater number of bishops received their instructions with manifest indiffidence, and some openly defied the pope. Otto of Constance, who had before tolerated the clergy, now refused to allow them the sanctuary of the Church. In France the excitement was scarcely less vehement than in Germany. A council at Paris, in 1074, condemned the Roman decrees, as implying that the validity of the sacraments depended on the sanctity of the minister, and declared them intolerable and irreconcilable with the Church. Archbishop of Reims, deeming it impossible to enforce the canon of celibacy at a provincial synod, was stoned and had to flee for his life; Walter, Abbot of Pontoise, who attempted to defend the papal enactments, was imprisoned and threatened with death. At the Council of Burgos, in Spain, the papal legate was insulted and his dignity outraged. But the zeal of Gregory knew no abatement. He followed up his decrees by sending legates into all quarters, fully empowered to depose immoral and simoniacal ecclesiastics.

It was clear that the causes of the simony and of the incontinence amongst the clergy were closely allied, and that the spread of the latter could be effectually checked only by the eradication of the former. Henry IV had failed to translate into action the promises made in his penitent letter to the new pontiff. On the subjugation of the Saxons and Thuringians, he deposed the Saxons by a part of the clergy, now engaged in the own business. In 1075 a synod held at Rome excommunicated "any person, even if he were emperor or king, who should confer an investiture in connexion with any ecclesiastical office", and Gregory, recognising the futility of milder measures, deposed the simoniacal prelates appointed by Henry, anathetised several of the imperial counsellors, and cited the emperor himself to appear at Rome in 1076 to answer for his conduct before a council. To this Henry replied by convoking a council at Worms on 23 January, 1076. This diet naturally defended Henry against all the papal charges, accused the pontiff of most heinous crimes, and declared him deposed. These decisions were approved a few weeks later by two synods of Lombard bishops at Piacenza and Pavia respectively. A fast thorough and most offensive personal letter from Henry, was dispatched with this reply to the pope. Gregory hesitated no longer: recognizing that the Christian Faith must be preserved and the flood of immorality stemmed at all costs, and seeing that the conflict was forced on him by the emperor's schism and the violation of his solemn promises, he excommunicated Henry and all his ecclesiastical supporters, and released his subjects from their oath of allegiance in accordance with the usual political procedure of the age.

Henry's position was now precarious. At first he was encouraged by his creatures to resist, but his friends, including his abettors among the episcopate, began to abandon him, and the Saxons revolted once more, demanding a new king. At a meeting of the German lords, spiritual and temporal, held at Tribur in October, 1076, the election of a new emperor was forced on the meeting. In spite of a papal legate of Gregory's desire that the crown should be reserved for Henry if possible, the assembly contented itself with calling on the emperor to abstain for the time being from all administration of public affairs and avoid the company of those who had been excommunicated, but declared his crown forfeited if he were not reconciled with the pope within a year. It was further agreed to invite Gregory to a council at Augsburg in the following February, at which Henry was summoned to present himself. Abandoned by his own partisans and fearing for his throne, Henry fled secretly with his wife and child and a single servant to Gregory to tender his submission. He crossed the Alps in the depth of one of the severest winters on record. On reaching Italy, the Italians flocked around him promising aid and assistance in his quarrel with the pope, but Henry spurned their offers. Gregory was already on his way to Augsburg, and, fearing treachery, retired to the castle of Canossa. The emperor, not daunted by the rebuff, continued on his journey, mindful of his former faithlessness, treated him with extreme severity. Stript of his royal robes, and clad as a penitent, Henry had to come barefooted mid ice and snow, and crave for admission to the presence of the pope. All day he remained at the door of the citadel, fasting without food or drink, in the wintry weather, but was refused admission. A second and a third day he thus humiliated and disciplined himself, and finally on 28 January, 1077, he was received by the pontiff and absolved from censure, but only on condition that he would appear at the proposed council and submit himself to its decision.

Henry then returned to Germany, but his severe lesson failed to effect any radical improvement in his conduct. Disgusted by his inconsistencies and dishonesty, the German princes on 15 March, 1077, elected Rudolph of Swabia to succeed him. Gregory wished to remain neutral, and even strove to effect a compromise between the opposing parties. Both, however, were dissatisfied, and prevented the proposed council from being held. Henry's conduct towards the pope was meanwhile characterized by the greatest duplicity, and, when he went so far as to attempt to set up an antipope, Gregory renewed in 1080 the sentence of excommunication. At Brixen in June, 1080, the king and his feudal bishops, supported by the Lombards, carried their threat into effect, and selected Guibert, the excommunicated simoniacal Archbishop of Ravenna, as pope under the title of Clement III. Rudolph of Swa-
Gregory having fallen mortally wounded at the battle of Monsieur in 1089, Henry could concentrate all his forces against Gregory. In 1081 he marched on Rome, but failed to force his way into the city, which he finally accomplished only in 1084. Gregory thereupon retired into the castle of Monte Cassino, where his followers rallied to his support. Henry's overtures, although the latter promised to hand over Guibert as a prisoner, if the sovereign pontiff would only consent to crown him emperor. Gregory, however, insisted as a necessary preliminary that Henry should appear before a council and do penance. The emperor, while prepared to agree to these terms, found it hard to prevent the meeting of the bishops. A small number however assembled, and, in accordance with their wishes, Gregory again excommunicated Henry. The latter on receipt of this news again entered Rome on 21 March, 1084. Guibert was consecrated pope, and then crowned Henry emperor. However, Robert Guiscard, Duke of Normandy, with whom Gregory had formed an alliance, was already marching on the city, and Henry, learning of his advance, fled towards Città Castellana. The pontiff was liberated, but, the people becoming incensed by the excesses of his Norman ally, were compelled to seek the protection of his host. He pointed and sorrowing withdrew to Monte Cassino, and later to the castle of Salerno by the sea, where he died in the following year. Three days before his death he withdrew all the censures of excommunication that he had pronounced, except those against the two—Henry and Sepulchre.—Henry's last words were: "I have loved justice and hated iniquity, therefore I die in exile." His body was interred in the church of the Saint Matthew at Salerno. He was beatified by Gregory XIII in 1554, and canonized in 1729 by Benedict XIII. His writings treat mainly of the Councils of Rome with all governments of Sicily. They may be found under the title "Gregorii VII registri sive epistolam libri" in Mansi, "Sacrarium Conciliare nova et amplissima collectio" (Florence, 1759) and "S. Gregorii VII epistole et diplomata" by Horoy (Paris, 1577).

James F. Loughlin.

Gregory VIII, antipope, was Mauritius Burdinus (Bordino, Bourdin), who was placed upon the papal chair by Emperor Henry V, 8 March, 1118. Bourdin was a Frenchman, born probably at Limoges. He received a good education at Tours, and followed the career of Bishop Robert of Tours, Bishop of the Diocese of Limoges. He became an archbishop of Toledo and Primate of Spain, beyond the Pyrennes. At a time when Cluny stood for learning and reform, his advancement was assured. In 1098, he was made Bishop of Como (Gams); in 1111, he was raised to the Metropolitan See of Braga. Three years later, in consequence of a quarrel with the pope, he was suspended by Paschal II. Coming later to Rome, he so ingratiated himself with the pontiff, who was also a Cluniac, that he was retained at court and employed on weighty affairs. In 1117, when Henry came to Rome to force his terms upon the pope, Paschal, safe in Benevento, sent Bourdin with some cardinals to negotiate with the king. The mission proved to be the downfall of Bourdin. Seduced from his Gregorian principles, he openly espoused the cause of Henry, and, to emphasize his apostasy, placed the crown upon the emperor on Easter Day. He was promptly excommuni ed; but was marked out for the supreme dignity by his new associates. A few months later, when Henry, learning of Paschal's death, hastened to Rome, surrounded by jurists, only to find that he had been outwitted by the vigilance of the cardinals, failing to capture Galarius, he declared the latter's election null, and, after a discourse by the learned Innes of Bollogna on imperial rights, induced a bribed assembly of Romans to proclaim Bourdin pope, who with unconscious irony took the name of Gregory. The honours...
of the papacy turned to ashes in his hands. Repeatedly excommunicated and finally delivered as a prisoner into the hands of Callistus II, he was determined in several monasteries until his death on 1137. Thus ended the career of a prelate "whom," says William of Malmesbury (Gesta Regum Angl., V, 434), “everyone would have been obliged to venerate and all but adore on account of his prodigious industry, had he not preferred to seek glory by so notorious a crime. One of the canons of the Ninth General Council, 1123, declared that it was made by him after his condemnation, or by any bishop by whom consecrated, to be irreparable.

JAMES F. LOUGHLIN.

Gregory IX (Ugolino, Count of Segni), Pope; b. about 1145, at Anagni in the Campagna; d. 22 August, 1241, at Rome. He received his education at the Universities of Paris and Bologna. After the accession of Innocent III to the papal throne, Ugolino was consecrated Bishop of Innocent III, was successively appointed papal chaplain, Archpriest of St. Peter's, and Cardinal-Deacon of Sant'Eustachio in 1198. In May, 1206, he succeeded Octavian as Cardinal-Bishop of Ostia and Velletri. A year later he and Cardinal Brancalone were sent as papal legates to the maritime republics against Otto of Brunswick, both of whom laid claim to the German throne subsequently to the death of Henry VI. By order of the pope the legates freed Philip from the ban which he had incurred under Pope Celestine III on account of invading the Pontifical States. Though the legates were unable to induce Otto of Brunswick to give up his claims to the throne, they succeeded in effecting a truce between the two claimants and returned to Rome in 1208 to treat with the pope concerning their future procedure. On their way back to Germany early in June, 1208, they were arrested at Verona that Philip had been murdered, and again returned to Rome. Early in January, 1209, they again proceeded to Germany with instructions to induce the princes to acknowledge Otto of Brunswick as king. They were successful in their mission and returned to Rome in June of the same year. After the death of Pope Innocent III, 16 July, 1216, Ugolino was chosen in the election of Pope Honorius III on 18 July. In order to hasten the election the College of Cardinals had agreed to an election by compromise and empowered Cardinals Ugolino and Guido of Prene to appoint the new pope.

In January, 1217, Honorius III made Ugolino pleni-potentiary legate for Lombardy and Tuscia, and entrusted him with preaching the crusade in those territories. In this capacity he became a successful mediator between Pisa and Genoa, in 1217, between Milan and Cremona in 1218, and between Bologna and Pistoia in 1219. At the coronation of Frederick II in Rome in 1220, 1220, Ugolino was chosen in the election of Pope Honorius III on 18 July. In order to hasten the election the College of Cardinals had agreed to an election by compromise and empowered Cardinals Ugolino and Guido of Prene to appoint the new pope.

The important diplomatic positions which Gregory IX had held before he became pope had acquainted him thoroughly with the political situation of Europe, and especially with the guileful and dishonest tactics of Emperor Frederick. At his first visit to the emperor, on 11 February, he sternly ordered the emperor at last to fulfill his long delayed vow to embark for the Holy Land. Apparently obedient to the papal mandate, Frederick II set sail from Brindisi on 8 September, 1227, but returned three days later under the plea that the Landgrave of Thuringia, who was accompanying him, was on the point of death; and that he himself was seriously ill. Gregory IX, knowing that Frederick II had on eight or nine previous occasions postponed his departure for the East, distrusted the emperor's sincerity, and on 29 September, 1227, placed him under the ban of the Church. He tried to justify his measures towards the Pope as protective of the Christian princes, while, on the other hand, the emperor addressed a manifesto to the princes in which he condemns the action of the pope in very bitter terms. The imperial manifesto was read publicly on the steps of the Capitol in Rome, whereupon the imperial party in Rome, under the leadership of the Frangipani, stirred up an insurrection, so that when the pope published the emperor's excommunication in the basilica of St. Peter, 23 March, 1228, he was openly insulted and threatened by a Ghibelline mob, and fled first to Viterbo, and then to Perugia.

In order to placate the Swabians and restore the papal influence over the German emperors. Gregory IX distrusted the advances of the emperor, especially since Rainald, the imperial Governor of Spoleto, had invaded the Pontifical States during the emperor's absence. But the papal anathemas did not have the effect which Gregory IX had hoped. In fact, Gregory IX had only one bishop, Berthold of Strasbourg, published the Bull of excommunication, and nearly all the princes and bishops remained faithful to the emperor. Cardinal Otto of San Nicolo, whom Gregory IX had sent to Germany to publish the emperor's excommunication, was entirely unsuccessful, because the Emperor Henry, his representative in Germany, forbade the bishops and abbots to appear at the synods which the cardinal attempted to convene. Equally futile were Gregory's efforts to put Duke Otto of Brunswick on the German throne. In June, 1229, Frederick II returned from the Holy Land, routed the papal army which Gregory IX had sent to invade Sicily, and made new overtures of peace to the pope. Gregory IX, who had been a fugitive at Perugia since 1228, returned to Rome in February, 1230, upon the urgent request of the Romans, who connected an overwhelming flood of the Tiber with their harsh treatment of the pontiff. He now opened negotiations with Hermann of Salza (q. v.), the Grand Master of the Teutonic Order, and the emperor had sent as his representative. On 20 July, 1230, a treaty was concluded at San Germano between the pope and the emperor, by force of which that part of the Papal States which was occupied by imperial troops and the papal possessions in Sicily were restored to the pope. After the ban was removed from the emperor by Cardinals John of Sabina and Thomas of Capua in the imperial camp near Ceperano on 28 August, 1230, pope and
emperor met at Anagni and completed their reconciliation during the first three days of September.

The peace concluded between the pope and the emperor was, however, to be only temporary. The papacy as conceived by Gregory IX was the empire as conceived by Frederick. It could not exist if one were to interfere with the other. The emperor aimed at supreme temporal power with which the pope should have no right to interfere. At least in Italy he attempted to establish a rule of absolutism by suppressing all municipal liberty and holding the cities in subjection by a revived sort of feudality. The pope, on the other hand, cited the example of Constantine, who exchanged Rome for Constantinople in deference to the pope, thought that the pope should be the supreme ruler in Italy and by force of his spiritual authority over the whole Christian world the papacy should hold the supremacy over the empire. For a time the emperor assisted the pope in suppressing a few minor revolts in the Pontifical States, as was stipulated in the conditions of peace. Soon, however, he began again to disturb the peace by impeding the liberties of the church in Sicily and by making war upon Lombardy. The freedom of the Lombard cities was a strong and necessary bulwark for the safety of the Pontifical States and it was only natural that the pope should use all his influence to protect these cities against the imperial designs. As arbiter between the emperor and the Lombard cities the pope had a few times decided in favour of the latter. The emperor, therefore, no longer desired the mediation of the pope in open hostilities against the Lombard League. He gained a signal victory at Cortenuova on 27 November, 1237. To save Lombardy from the despotic rule of the pope and to protect the Pontifical States, the pope entered into an alliance with the Tuscan, Umbrian, and Lombard to impede the imperial progress. The continuous victories of the emperor spurred his pride to further action. He declared his intention to unite with the empire not only Lombardy and Tuscany, but also the Patrimony of St. Peter and practically the whole of Italy. On 20 March, 1239, the pope again communicated the emperor and another disastrous struggle between the papacy and the empire ensued. Henceforth the pope was convinced that as long as Frederick was emperor there was no possibility of peace between the papacy and the empire, and he let nothing undone to bring about his downfall. He ordered a crusade against him in Germany, instructed his German legate Albert of Behaim, the Archdeacon of Passau, to urge the election of a new king upon the princes, and to place under the ban all those that continued to side with the excommunicated emperor. Despite papal anathemas many bishops and princes remained loyal to the emperor who, encouraged by his large following, decided to humiliate the pope by making himself master of the Pontifical States. In this great distress the pope ordered all bishops to assemble in Rome for a general council at Easter (31 March), 1241. But the emperor and the most influential bishops refused to obey the order. Frederick, therefore, ordered them to be excommunicated and to depart Rome and by capturing all those that undertook the journey despite his prohibition. He himself marched towards Rome with an army and lay encamped near the city, when Gregory IX suddenly died at the age of almost one hundred years.

The mendicant orders which began to shed great lustre over the Christian Church in the first half of the thirteenth century found a devoted friend and liberal patron in Gregory IX. In them he saw an excellent means for counteracting by voluntary poverty the love of luxury and splendour which was possessing many ecclesiasticas; a powerful weapon for suppressing heresy within the Church; and an army of brave soldiers of Christ who were ready to preach His Gospel to the pagans even at the risk of their life. When still

Cardinal-Bishop of Ostia, Gregory IX would often don the dress of St. Francis, walk barefoot with the saint and his disciples, and talk of holy things. Saint Francis loved him as his father and in a prophetic spirit addressed him at times as "the bishop of the new world and the father of all nations.

In special request of Saint Francis, Pope Honorius III appointed him protector of the order in 1220. He was also a devoted friend of St. Dominic and promoted the interests of his order in many ways. At the death of St. Dominic he held the funeral services and buried the saint, citing the example of Constantine, who exchanged Rome for Constantinople in deference to the pope, thought that the pope should be the supreme ruler in Italy and by force of his spiritual authority over the whole Christian world the papacy should hold the supremacy over the empire. For a time the emperor assisted the pope in suppressing a few minor revolts in the Pontifical States, as was stipulated in the conditions of peace. Soon, however, he began again to disturb the peace by impeding the liberties of the church in Sicily and by making war upon Lombardy. The freedom of the Lombard cities was a strong and necessary bulwark for the safety of the Pontifical States and it was only natural that the pope should use all his influence to protect these cities against the imperial designs. As arbiter between the emperor and the Lombard cities the pope had a few times decided in favour of the latter. The emperor, therefore, no longer desired the mediation of the pope in open hostilities against the Lombard League. He gained a signal victory at Cortenuova on 27 November, 1237. To save Lombardy from the despotic rule of the pope and to protect the Pontifical States, the pope entered into an alliance with the Tuscan, Umbrian, and Lombard to impede the imperial progress. The continuous victories of the emperor spurred his pride to further action. He declared his intention to unite with the empire not only Lombardy and Tuscany, but also the Patrimony of St. Peter and practically the whole of Italy. On 20 March, 1239, the pope again communicated the emperor and another disastrous struggle between the papacy and the empire ensued. Henceforth the pope was convinced that as long as Frederick was emperor there was no possibility of peace between the papacy and the empire, and he let nothing undone to bring about his downfall. He ordered a crusade against him in Germany, instructed his German legate Albert of Behaim, the Archdeacon of Passau, to urge the election of a new king upon the princes, and to place under the ban all those that continued to side with the excommunicated emperor. Despite papal anathemas many bishops and princes remained loyal to the emperor who, encouraged by his large following, decided to humiliate the pope by making himself master of the Pontifical States. In this great distress the pope ordered all bishops to assemble in Rome for a general council at Easter (31 March), 1241. But the emperor and the most influential bishops refused to obey the order. Frederick, therefore, ordered them to be excommunicated and to depart Rome and by capturing all those that undertook the journey despite his prohibition. He himself marched towards Rome with an army and lay encamped near the city, when Gregory IX suddenly died at the age of almost one hundred years.

The mendicant orders which began to shed great lustre over the Christian Church in the first half of the thirteenth century found a devoted friend and liberal patron in Gregory IX. In them he saw an excellent means for counteracting by voluntary poverty the love of luxury and splendour which was possessing many ecclesiasticas; a powerful weapon for suppressing heresy within the Church; and an army of brave soldiers of Christ who were ready to preach His Gospel to the pagans even at the risk of their life. When still
dealt more severely with heretics than other rulers did. Death by fire was the common punishment for heretics and traitors in those times. Up to the time of Gregory IX the duty of searching out heretics belonged to the bishops in their respective dioceses. The so-called Monastic Inquisition was established by Gregory IX, who in his Bulls of 13, 20, and 22 April, 1233, appointed the Dominicans as the official inquisitors for all dioceses of France (Ripoll and Bremond, "Dictionnaire d'Ordains Fratrum Predicatorum", Rome, 1729, 1, 47).

For a time Gregory IX lived in hope that he might effect a reunion of the Latin and Greek Churches. Germans, Patriarch of Constantinople, after a conversation on the religious differences between the Greeks and the Latins, in which he had had with some Franciscans at Nica, in 1229, addressed a letter to Gregory IX, in which he acknowledged the papal primacy, but complained of the persecution of the Greeks by the Latins. Gregory IX sent him a cordial answer and commissioned four learned monks (two Franciscans and two Dominicans) to treat with the patriarch concerning this reunion. The papal messengers were kindly received both by the Emperor Vatatzes and by Germans, but the patriarch said that he could make no concessions on matters of faith without the consent of the Patriarchs of Jerusalem, Antioch, and Alexandria. A symph of the patriarchs was to be called in Bologna, to which the Greek messengers were invited. But the Greeks stubbornly adhered to their doctrine concerning the procession of the Holy Ghost and asserted that the Latins could not validly consecrate unleavened bread. Thus Gregory IX failed, like many other popes before and after him, in his efforts to reunite the two Churches. In 1227 the Patriarch of the Syrian Monophysites and many of his bishops and monks renounced their heresy and submitted to the pope (Raynulphus ad annum 1237, n. 87 sq.), but their conversion was only temporary.

During the thirteen years and four months of his pontificate he created about fourteen cardinals, many of whom were members of religious orders. The best known among them were Sinibald of Fiesco, a learned canonist, who afterwards ascended the papal throne as Innocent IV; Raynald of Segni, a nephew of Gregory IX, who succeeded Innocent IV as Alexander IV; Oderisio, who seemed to have been of a slighter rank (he died 1240) as papal legate in England; Jacob of Vitry, an author, confessor of Bl. Mary of Oignies, whose life he wrote (Acta SS., June, IV, 636–66); St. Francis Nonnatus; and the learned and pious Englishman, Robert of Somereto, who, it is said, would have succeeded Gregory IX if he had lived, is called the saint, the conclave (26 Sept., 1241). Gregory IX was also a man of learning, which he encouraged in various ways. He bestowed many privileges upon the University of Paris, his Alma Mater, but also watched carefully over its professors, whom he warned repeatedly against the growing tendency of subjecting theology to philosophy by making the truth of the mysteries of faith dependent on philosophical proofs. He also possessed the great merit of having again made Aristotelianism the basis of scholastic philosophy, after the Physics of Aristotle had been prohibited in 1210, and his Metaphysics in 1215. The prohibition of Aristotle was meant only for the perverted Latin translation of his works and their Averroistic commentaries. Gregory IX commissioned William of Auvergne and other learned men to purge the works of Aristotle of their errors and thus made them again acceptable. All documents of Gregory IX must be counted the collection of papal decretals, a work with which he entrusted Raymond of Pennafort and which was completed in 1234 (see DECRETALS). The numerous letters of Gregory IX were first collected and published by Pamelius (Antwerp, 1572). Rodenburg edited 485 letters of

A Life of Gregory IX, Vito Gregorii IX, was written by a contemporary of Gregory IX, perhaps John of Rome. It was published by Muratori in "Rerum Italicarum Scriptores", VI, 400–419. The best modern references are: BALAN, "Storia de Gregorio IX Papa" (Milan, 1709), III, 4, 577–796; see also P. MARTINI, "Gregorius Pius IX", in "Lexikon der christlichen Kirche" (Freiburg, 1886); see also KOBEL, "Verhältnisse Friedrichs II. zu den Papsten seiner Zeit" (Breslau, 1888); HULS, "Gregorius IX", in "Handbuch der Historiker" (Leipzig, 1905); R. MICHAEL OTT.

Gregory X, Pope; b. 1210; d. 10 January, 1276. The death of Pope Clement IV (29 November, 1268) left the Holy See vacant for almost three years. The cardinals assembled at Viterbo were divided into two camps, the one French and the other Italian. Neither of these parties could poll the two-thirds majority and nor was either willing to give way to the other for the election of a candidate to the papacy. In the summer of 1270 the head and bourgeois of the town of Viterbo, hoping for a fight, resorted to the expedient of confining the cardinals within the episcopal palace, where even their daily allowance of food was later on curtailed. A compromise was finally arrived at through the combined efforts of the French and Sicilian kings. The Sacred College, which then consisted of fifteen cardinals, designated six of their body to agree upon and to cast a final vote in the matter. These six delegates met, and on 1 September, 1271, united their ballots in choice of Teobaldo Visconti, archdeacon of Lègne, who, however, was not a cardinal himself, nor even a priest. The new pontiff was a native of Pienza and had been at one time in the service of Cardinal Jacopo of Palestrina, had become archdeacon of Lègne, and accompanied Cardinal Ottoboni on his mission to England, and at the time of his election happened to be in Ptolemais in Syria with Prince Edward of England, on a pilgrimage to the Holy Land. Receiving a summons from the cardinals to return immediately, he began his homeward journey on 19 November, 1271, and arrived at Viterbo on 12 February, 1272. He declared his acceptance of the dignity and not until 15 February did he take the name of Gregory X. On 13 March he made his entry into Rome, where on the nineteenth of the same month he was ordained to the priesthood. His consecration as pope took place on 27 March. He plunged at once with all his energies into the task of solving the weighty problems which then required his attention: the restoration of peace between Christian nations and princes, the settlement of affairs in the German empire, the amendment of the mode of life among clergy and people, the union of the Greek Church with Rome, the deliverance of Jerusalem and of the Holy Land. As early as the fourth day after his coronation he summoned a general council, which was to open at Lyons on 1 May, 1274 (see LYONS, COUNCILS OF). In Italy the pope sought to make peace between the Guelphs and Ghibelines, whose factional war raged chiefly in Tuscany and Lombardy. Against the city of Florence, the burgesses of which gave him the greatest trouble in efforts to bring about a reconciliation, he issued a decree of excommunication. After the death of Richard of Cornwall (1272) Gregory advised the German princes to select a new sovereign and refused the demand of Alfonso of Castile, rival of Richard, for recognition as emperor. Rudolf of Hapsburg having been elected on 29-Sep
tember, 1273, Gregory X immediately recognized him and invited him to Rome to receive the imperial crown. The pope and the emperor met at Lausanne in October of 1273. Gregory was then returning from the Council of Lyons. Rudolf took here the customary oaths for the defence of the Roman Church, took the cross, and postponed until the following year his journey to Rome. The pope obtained from Alfonso of Castile the renunciation of his claims to the German crown.

From the very beginning of his pontificate Gregory sought to promote the interests of the Holy Land. Large sums were collected in France and England for this crusade. A resolution adopted at the Council of Lyons, which opened on 7 May, 1274, provided that one-tenth of all benefices accruing to all churches in the course of six years should be set aside for the benefit of the Holy Land, the object being to secure the means of carrying on the holy war. This tithe was successfully raised, and preparations were at once made in France and England for the expedition, which unfortunately was not carried out. The ambassadors of the Grecian emperor, having arrived in Lyons on 24 June, swore, at the fourth sitting of the council (July 6) that the emperor had renounced the schism, and had returned to the allegiance due the Holy See. But this union, entered into by Michael Paleologus for purely political reasons, was in no sense destined to endure. At the close of this council, over which Gregory had presided in person, he travelled by way of Lausanne, Milan, and Florence as far as Arezzo, where he died on 10 January, 1276. Though his pontificate proved so short, the results which he achieved were of far-reaching consequence, and he succeeded in maintaining unimpaired peace and harmony. On account of his unusual virtues he is revered as a saint in Rome and in a number of dioceses (Arezzo, Piacenza, Lausanne), his feast being 16 February.

RETURN OF GREGORY XI FROM AVIGNON TO ROME
Benvenuto di Giovanni, Siena

made in France and England for the expedition, which unfortunately was not carried out. cember, 1370. He chose the name of Gregory XI, had himself ordained priest on 4 January, 1371, and was crowned pope on the following day. Immediately upon his accession he attempted to reconcile the Kings of France and England, but failed. He succeeded, however, in pacifying Castile, Aragon, Navarre, Sicily, and Naples. He also made efforts towards the union of the Greek and Latin Churches, the undertaking of a crusade, and the reform of the clergy. Soon, however, he had to give his entire attention to the turbulent affairs of Italy. Duke Bernabò Visconti of Milan, an inveterate enemy of the papacy, had in 1371 made himself master of Reggio and other places that were feudatory to the Holy See. When all other means to bring him to terms had failed, Gregory XI placed him under the ban. Bernabò compiled the legates that brought him the Bull of excommunication to eat the parchment on which his excommunication was written, and heaped many other insults upon them. Hereupon Gregory XI declared war upon him in 1372. Success was at first on the side of Bernabò, but when Gregory XI obtained the support of the emperor, the Queen of Naples, the King of Hungary, and bought into his service the English condottiere John Hawkwood, Bernabò sued for peace. By bribing some of the papal councilors he obtained a favourable truce on 6 June, 1374.
Like the preceding popes of Avignon, Gregory XI made the fatal mistake of appointing Frenchmen, who did not understand the Italians and whom the Italians hated, as legates and governors of the ecclesiastical provinces in Italy. The Florentines, moreover, feared that a strengthening of the papal power in Italy would impair their own prestige in Central Italy and allied themselves with Bernabò in July, 1375. Both Bernabò and the Florentines did their utmost to stir up an insurrection in the pontifical territory among all those that were dissatisfied with the papal legates in Italy. They were so successful that within a short time the entire Patrimony of St. Peter was up in arms against the pope. Highly incensed at the seditious proceedings of the Florentines, Gregory XI imposed an extremely severe punishment upon them. He put Florence under interdict, excommunicated its inhabitants, and outlawed them and their possessions. The financial loss which the Florentines sustained thereby was inestimable. They sent St. Catherine of Siena to intercede for them with Gregory XI, but frustrated her efforts by continuing their hostilities against the pope. In the midst of these disturbances Gregory XI, yielding to the urgent prayers of St. Catherine, dec. led to remove the papal see to Rome, despite the protests of the French King and the majority of the cardinals. He left Avignon on 13 September, 1376, boarded the ship at Marseilles on 2 October, and came by way of Genoa to Corneto on 6 December. Here he remained until arrangements were made in Rome concerning its future government. On 13 January, 1377, he left

Corneto, landed at Ostia on the following day, and sailed up the Tiber to the monastery of San Paolo, from where he solemnly made his entrance into Rome on 17 January. But his return to Rome did not put an end to the hostilities. The notorious massacre of Cesena, which was ordered by Cardinal Robert of Geneva (afterwards Antipope Clement VII), embittered the Italians still more against the pope. The continuous riots in Rome induced Gregory XI to remove to Anagni towards the end of May, 1377. He gradually quelled the commotion and returned to Rome on 7 Nov., 1377, where he died while a congress of peace was in progress at Sarzana. Gregory XI was the last pope of French nationality. He was learned and pious, though not free from nepotism. In 1374 he approved the Order of the Spanish Hermits of St. Jerome, and on 22 May, 1377, he issued five Bulls in which the errors of Wyclif were condemned. He was so disgusted with the conditions at Rome that only death prevented him from returning to Avignon. The Great Schism began after his death.
