FRIARS MINOR IN AMERICA.—The very discovery of America is due, under God, to the children of St. Francis, inasmuch as Christopher Columbus, the discoverer, who furnished the means, were members of the Third Order, and Father Juan Perez, the counsellor of both, was the superior of the Franciscan monastery of La Rábida in Andalusia. Father Juan Perez, with other Franciscan friars, moreover, accompanied his illustrious friend on the second voyage in 1493. A few months later, most probably on 8 December, he celebrated the first Mass in the New World in a chapel constructed of boughs. At the town of Isabella he erected the first convent. In 1496 the place was abandoned, and a monastery of stone was ordered built by Columbus at Nueva Isabella, afterwards replaced by Santo Domingo. It was finished in 1502. A second Franciscan convent arose in the interior at La Vega about the same time. In connection with both houses the first schools in America were opened, where Indian boys were taught reading, writing, and singing. While the secular clergy attended to the spiritual needs of the Spaniards, the Franciscans and a few Hieronymites devoted themselves to the conversion of the natives. Cardinal Ximenes, himself a Franciscan, sent thirteen of his brethren to Hispaniola in 1502. They took with them the first bells and the first organ. Before the landing of Columbus, the S. Clare Franciscan Minor had landed on the Isle of Hispaniola. About the year 1500 the Franciscans passed over to the island of Cuba, and founded the first monastery in honour of St. James (Santiago) for the conversion of the Indians. At the general chapter of the order held at Tours, France, in 1505, the convents of Hispaniola and Cuba were united in a province under the title of Santa Cruz. It was the first organization of its kind in the Western Hemisphere. At the request of the king, Pope Julius II, on 15 November, 1504, appointed the Franciscan Friar Garcia de Padilla first Bishop of Santo Domingo, the first diocese in the New World. The church was consecrated on 10 May, 1512, but died on 12 November, 1515, before reaching his see. In 1511 the king sent twenty-three Friars Minor to the island of San Juan or Porto Rico. Before the end of the same year the Indian missions of the Greater Antilles and most of the Lesser Antilles were in charge of the Franciscans. Their first martyrs fell victims to apostolic zeal among the cannibal Caribes in 1516, when Fathers Fernando Sacedo and Diego Botello, with an unknown lay brother, were captured, killed, and devoured by the savages.

The Franciscans were also the first religious on the mainland of America, as they landed on the Isthmus about the year 1512. When King Ferdinand heard of it, he named the Franciscan Father Juan de Quevedo Bishop of Santa María de la Antigua (Darien) and sent him with a band of his brethren to the newly erected diocese. Pope Leo X, on 28 August, 1513, approved the nomination. Quevedo reached the scene of his future activity on 12 April, 1514.

Fathers Juan de Aera and Juan de Techo entered Honduras with Cortés about 1519, and the diocese of Trenchon was erected there in 1526 or 1527. Father Toribio de Benavente (Motolinia) reached Guatemala about 1533. Thereafter missions and convents arose at various places, until in 1550 they were organized into a custody under the title of Núméro de Jesús. In 1565 the custody, called the Holy Franciscan friars, was made a province. During the years 1571-1573, 66 friars arrived from Spain, and in 1600 the province reported 22 convents. Father Motolinia is said to have visited Nicaragua before 1530. The first bishop of the country was the Franciscan Pedro de Sáñiga. The twelve convents of Nicaragua, Costa Rica, and Talamancu were organized into the province of San Jorge (St. George) in 1576. Yucatan received the first Friars Minor in 1534. The custody of San José was established in 1550, and it became a province in 1565. In 1600 the report showed the existence of 6 regular monasteries and 16 minor houses. The first bishop of Yucatan, Juan de la Puerta, was a member of the Franciscan order.

In 1516 the King of Spain sent fourteen Friars Minor to the northern coast of South America, later called New Granada and now known as Colombia. In 1550 the convents of this district were united in a custody, which was erected in 1563, and the first Bishop of the province reported 25 convents and 44 Indian missions. In 1587, the general chapter of the order established at Santiagito in 1553, the Bishop of Santiago, Martín Robleda, of the Friars Minor, was the founder. A custody was organized in 1553, and in 1565 the twelve convents of the country were united into the province of Santisima Trinidad. A convent of tertiaries existed at the same time. The territory along the coast of South America and the Andes was the scene of Franciscan activity as early as 1538. The Franciscan Juan Barrott was appointed first Bishop of Rio de la Plata in 1554. In 1592 a custody was organized, and in 1612 it was raised to the rank of a province under the invocation of Nuestra Señora de la Asunción. Brazil is said to have been visited by Portuguese Franciscans as early as 1499 or 1501. Certain it is that three Friars Minor reached that country in April, 1584, and a custody was organized in the same year. In 1657 it became a province under the protection of San Antonio. In 1678 the province of the Immaculate Conception was established in the same territory. At present the order there is in a most flourishing condition. Bolivia was entered by the Friars Minor in 1606. A monastery was founded at Tarjia in
honour of St. Francis. A missionary college for the training of missionaries for the Indians was erected in the same city in 1755. Distant Patagonia saw the first Friars Minor in 1575. There are no reports extant.

The Franciscans first landed in the Philippines on 24 June, 1577. Nine years later they had erected six monasteries and reported fourteen missions among the natives. These houses were united in the province of San Gregorio in 1586.

Father Pedro Melgarejo appears to have been the first Franciscan to enter Mexico. He arrived during the siege of the capital in 1521, but returned to Spain in the next year to defend Cortés. The first missionary work among the Indians was done by the three Flemish Franciscans, Fathers Juan de Tecto and Juan de Aora and Brother Pedro de Gante, who arrived in 1523. Father Martín de Valencia, with eleven friars, came from Spain to the Mexican capital on 13 May, 1524. These are known as the Twelve Apostles of Mexico. The impression they made all over New Spain was so deep that the natives were accustomed to date occurrences from the arrival of these twelve friars, under the caption "the first Mexicas in the country." After landing, Father Martín, as Apostolic delegate, convoked the first ecclesiastical council in the New World. Five secular priests, seventeen Franciscans, six secular doctors of canon law, and Hernando Cortés himself took part in the deliberations which opened on 2 July, 1524. On the same occasion the first religious organized in America, the Holy Gospel, the first on the mainland, and the whole country divided into four missionary districts, which were Mexico, Tuxcoo, Huetzocingo, and Tlacas. To each of these Father Martin assigned four friars. These secular priests as usual confined themselves to the spiritual needs of the Spaniards. In connexion with the principal converts the Fathers conducted the first schools in Mexico for Indian boys. A part of the buildings was generally set apart for the boys who made their home with the friars. Sometimes as many as 600 and 800 children received instruction, food, and clothing from these religious.

The instruction, besides Christian doctrine, comprised reading, writing, singing, instrumental music, and mechanical arts. These institutions were the first free boarding and manual labour schools on the American continent. One of the Franciscan pupils, Father Alonso de Molina, O.F.M., who afterwards was Superior General, published the "Vocabulario Castellano-Mexicano." This work, containing 518 folio pages, is still regarded as a standard. Father de Gante himself translated hymns into the language of the Aztecs. The spiritual fruit was so abundant that Solórzano y Pérez, according to Father Harold, claims that every one of the original twelve friars baptized no fewer than 100,000 Indians. Down to the year 1631, according to a report sent to the general chapter at Toulouse, one million natives had been baptized. The first high school for Indian youths was erected by the Franciscans at the Indian town of Tlatelolco, now a part of the capital. In the course of the year 1524 the friars reported over Mexico that about the close of the sixteenth century the following fully organized provinces existed: Santo Evangelio of Mexico, established in 1534; San José de Yucatan, organized in 1559; San Pedro y San Pablo of Michoacán, formed in 1555; San Francisco de Zacatecas, organized in 1603; San Diego de México (Acapulco), established in 1606; and Santiago de Xalisco, organized in 1608. Fifty years later these provinces together reported two hundred monasteries and convents.

The peculiar character of the natives demanded missionaries specially trained. For this reason Apostolic visitations were made among the natives, and jurisdiction of the provinces but with the sanction of the Holy See. The first missionary college established and governed under rules approved by the pope was opened in the grand monastery of Santa Cruz at Querétaro, which for that purpose was set apart by the province of Michoacán in 1682. Another was founded at Guadalupe, Zacatecas, in 1707, by the indefatigable Antonio Marroquín, the Apostle of Guatemala, and a third at the monastery of San Fernando in the City of Mexico in 1734. These three colleges furnished the heroic men who Christianized the Indians of Texas, Arizona, Sonora, and California. Other missionary colleges were those of Orizaba, Puebla, Pachuca, Michoacán, Sonora, San Luis Potosí, and Cholula in the State of Puebla. At the present time, owing to the anti-Christian laws prevailing in Mexico, which forbid religious to live in community, the Franciscan provinces and colleges have dwindled so that the number of friars scarcely exceeds the number of convents in the days of religious freedom. Mexico enjoys the distinction of having possessed the first nuns in America. The first convent of Tertiary Sisters was founded at the capital as early as 1625 for the purpose of teaching Indian girls. The Poor Clares were brought over from Spain in 1530 by the wife of the governor of Vera Cruz. They occupied convents in the City of Mexico, Texcoco, and Huehuetoca. The Sisters conducted academies for the education of young girls, who in turn made themselves useful as teachers or Tertiary Sisters, or in taking care of altars in their native villages. The first Bishop of Mexico was the learned Juan de Zumárraga of the Franciscan Order, who had been consecrated at Toledo by Charles V on 12 December, 1527, and approved by Pope Clement VII. It was he who, late in 1537 or early in 1538, brought the first printing press to Mexico. The first book, a compendium of the Christian doctrine in both the Mexican and Spanish languages, was printed by his order in 1539. From that date to the close of the year 1600, 118 books were published in Mexico. Of this number the Franciscans alone brought out forty-one, comprising works on Christian doctrine, morals, history, and Indian-Spanish vocabularies or dictionaries. The remainder were published by Dominicans, Augustinians, secular priests, and others. Mexico also produced two Franciscan saints: St. Philip of Jesus, martyred in Japan, and Blessed Sebastian, whose remains are venerated at Puebla.

From the earliest days the numerous Friars Minor were engaged in literary work. The most noted Francis of the Franciscans was Toribio de Benavente, Michoacán (Molino), who published in 1556 the "Doms de los Nativos de México, Bernardino de Sahagún, and Gerónimo de Mendieta in the sixteenth century; Augustín de Vetancurt, Antonio Tello, Juan de Torquemada (the Livy of New Spain), Baltasar de Medina, and Pablo de Beaumont in the seventeenth century; Francisco de Ayeta, Iñaco Felix de Espinoza, José Artigas, Hernández de Villaplana, Juan Domingo Arcizivela, and Francisco Palou in the eighteenth century.

Father Juan Suárez (Juárez, Xúarez), one of the Twelve Apostles of Mexico, was the first Franciscan to set foot within the present territory of the United States. He had been named Bishop of Florida and Texas, but never took possession of the lands over Mexico, and on 14 April, 1626, landed on the northwestern coast of Florida with three companions, for the purpose of converting the Indians. The whole expedition, which consisted of six hundred men under Pánfilo de Narváez, was destroyed, and only four men are known to have escaped. The bishop-elect and his companions were most probably drowned in the gulf. In 1538 the Franciscan Juan de Torres, who had joined De Soto with eight secular priests, two Dominicans, and one Trinitarian, perished in the same territory like the others of that unhappy expedition. The Dominicans and Jesuits by turns made heroic efforts to convert the Indians, but after repeated massacres and injuries at the hands of the savages, they abandoned the task as hopeless. The Friars Minor, beginning
with the year 1673, made renewed attempts and laboured with such success that in 1610 the numerous missionary houses were united with those of Cuba in a custody, which two years later was elevated to the rank of province under the title Santa Helena de la Florida. It was the first organization of its kind in America. In 1613 Juan de Copila was chosen first provincial. In 1634 there were reported 35 friars in charge of 44 Indian missions and mission stations, around which gathered as many as 30,000 converted Indians. This result was not achieved without much hardship and loss of life. Five of the Fathers were killed at their post by the savages, and one was held as a slave by the Indians. In 1646 there were 106 friars scattered over Florida. In 1702 and 1704 Governor Moore of the English Protestant colony of Georgia fell upon the flourishing missions, destroyed the buildings, killed or scattered the converts, or carried them into slavery, and butchered seven of the devoted missionaries in such a horrible manner that the historian John Gilmary Shea exclaims: "The martyrdom of the Franciscans of Ayubale has no parallel in our annals, except in the deaths of Fathers Brébeuf, Lalemant, Daniel, and Garnier in the Huron country; but the butcheries perpetrated there were not enacted before the very eyes of the convert of the governor of the colony." In 1763 Spain ceded Florida to England to recover Havana. The destruction of the Indian missions, which "under the rule of the Franciscans had been the diadem of the Church in Florida," as Shea declares, and the subsequent cession of the territory to the hostile English, forced the Franciscans to leave the country along with most of the Spanish colonists. A few reappeared later, but no permanent settlement was again established. Their principal monastery in the city of St. Augustine had been confiscated, and is now a United States Government barracks. The last friar seems to have resided in Florida about the year 1797. The missions there were few historical notations. It is not known that one of their number, Francisco Pareja, in 1612 published a catechism in the language of the Timuquana Indians. A "Confesario" by him was printed in the next year; a grammar in the Indian tongue followed in 1614, and an abridgment of Christian doctrine in 1627; the first books printed in the language of North American Indians, with the exception of Fr. Zum Bradford's Compendium mentioned above.

In 1685 three French Franciscans and three Sulpicians accompanied Robert de la Salle into Texas as the first missionaries; the friars came exclusively for the Indians. With the exception of Father Anastasius Douay, the Rev. Cavalier, and a few of the men who escaped to Canada, all the members of this expedition were massacred, and the buildings destroyed. In 1689 the Spanish Franciscan Damian Mazanet arrived with a guard of soldiers. In the course of time a large number of missions were established on the Gulf coast, in the region of San Saba, and notably on the Río San Antonio, but the War of Mexican Independence put an end to these establishments. The most noted among the friars were Antonio Margil, declared Venerable by Pope Gregory XVI, in 1836, and Isidro Espinosa, the author of the "Crónica Seráfica y Apostólica," the standard work on the missions of Texas. Altogether about 160 Fathers and lay brothers toiled among the Texans under the most disheartening circumstances down to the beginning of the nineteenth century. Six of the friars were killed by the savages, and six are said to have perished in prairie fires. Since then the mission buildings have been deserted or turned to the use of parishes, and the Indian converts have disappeared.

Father Marcos de Niza, the same who founded the missions of Peru, discovered the territories of Arizona and New Mexico in the very heart of the continent in 1539, eighty-eight years before any English settlement was made on the sea-coast. One year later the same Father, in company with Fathers Juan de Padilla, Juan de la Cruz, and Brother Luis de Escalona, led Francisco Vásquez de Coronado to Zuñi and to the Río Grande del Norte near the present city of Santa Fé. When Coronado and his soldiers, disgusted at not finding the precious metal in quest of which they had come, abandoned the country in 1542, Padilla, La Cruz, and Escalona remained to preside over missions near Bernalillo and Pecos. Father Padilla after some success proceeded to the north-east and was killed by savages, possibly on the banks of the Platte River. Father Juan de la Cruz and Brother Escalona were murdered at the instigation of medicine men, who feared their influence. Twelve years later other friars of the same province of the Holy Gospel, Mexico, succeeded in restoring most of the destroyed missions, but not till six of their number had been martyred by the treacherous savages. In all thirty-eight of the friars were killed for the Faith in New Mexico and northern Arizona. Their efforts were lost and probably suffered the same fate. From 1539 to about 1840 upwards of three hundred Franciscans laboured among the Indians in that territory. In October, 1897, at the request of the Most Rev. Peter Bourgade, the Cincinnati province accepted mission work. The friars have been stationed among the Navaho Indians, among the Pueblos of Cochiti, Santo Domingo, San Felipe, and Jemez. In addition they have charge of parishes at Peña Blanca, Carlsbad, and Roswell. In southern Arizona the Fathers of the missionary college of Santa Cruz, Querétaro, took charge of the Indian missions after the expulsion of the Jesuits in 1767. In 1780 the famous Father Francisco Garces with three companions founded two missions near the mouth of the Gila River on the California side of the Rio Colorado; but all four were horribly butchered by the savages in July, 1781. In 1846 Father Burgos, continued the missions across the Papago below Tucson, and towards the close of the eighteenth century erected the beautiful church at Del Bae which still commands the admiration of travellers. When Mexico won independence, the leaders, who hated the religious and more particularly the Franciscans, instigated on the expulsion of the friars and church, and thus wrecked the missions, as nearly all the missionaries were Spaniards. The Franciscan province of St. Louis towards the close of 1895 agreed to the urgent appeal of the Right Rev. Peter Bourgade, Vicar Apostolic of Arizona, and accepted the parish in the city of Phoenix with all the surrounding missions among the Pima and other Arizona tribes. They conduct a large and flourishing school on a reservation near the Salt River.

California after the secularization (see CALIFORNIA MISSIONS) retained most of the Fathers until their death. The missions fell into ruins or later came into the hands of the secular clergy. In 1846 the Bishop of the two Californias was appointed in the person of the Franciscan Garcia Diego y Morena. In 1884 only the mission of Santa Bárbara was still in charge of the friars who conducted a college there. To prevent the community from dying out it was incorporated into the province of the Sacred Heart of St. Louis. Since then the houses and friars have multi-
plied so that on the Pacific Coast the commissariat, which was organised in 1898, comprises 3 monasteries, 8 residences, 1 classical college for aspirants to the order, 1 orphanage for boys, 50 Fathers, 15 professed clerics, 45 lay brothers, and 4 novices.

The bigotry of some of the English settlers prevented the Franciscans from securing a foothold in the Thirteen Colonies, though in the interval of rest, several friars came from England between the years 1672 and 1699. Persecutions at home made it impossible to train and supply successors. Individual friars found their way to New York, Pennsylvania, and Kentucky, but no permanent foundation was effected. It now has 4 monasteries, 10 residences. Bishop John Carroll, of Philadelphia, arrived from Ireland in 1803 and tried to establish a house, but failed for want of subjects. A convent of Poor Clares enjoyed a short life at Pittsburg early in the thirties. In the great North-West and West, Belgian Franciscans penetrated to Michigan, Minnesota, and Illinois, but they too disappeared after a time, except at Detroit, where they continued until the close of the eighteenth century, and where one became a martyr.

Not till near the middle of the nineteenth century did the sons of the seraphic saints find it practicable to branch out from Austria, Germany, and Italy into the States of the U.S. Some Italian friars, resolved to grant the petition of the Right Rev. J. B. Pirocell, Bishop of Cincinnati, and sent Father William Unterthiener. He was given charge of the newly organised German parish of St. John the Baptist. Many other Fathers and Brothers joined him, so that on the 26th of July, 1853, the first mass was celebrated, in charge of Father John St. Francis, and 5 parish schools attended by 2400 pupils. The most noted of these Fathers was the Father Pampilo da Magliano, the author of "St. Francis and the Franciscans". He also founded the Missionary Sisters of St. Francis, who follow the Rule of the Third Order of St. Francis. The Province of the Province of St. Francis, in Wisconsin is composed of 8 Fathers, 2 professed clerics, 20 lay brothers, and 3 novices, who occupy 1 monastery and 2 residences. The Fathers have charge of 3 parishes, 1 mission station, 1 college attended by 25 students, and 4 parish schools frequented by 650 children.

The Franciscans (Recollects) first appeared in Canada in June, 1615, when the French Fathers Joseph le Caron, Denis Janet, Jean d'Olbeau, and Brother Pacifique du Plessis arrived at Quebec. They were devoted themselves to mission work among the Algonkins and Wyandots or Hurons along the Great Lakes. For commercial reasons the French traders were opposed to the Christianization of the Indians and the Franciscans frequently became entangled in picketing parties of the Mohawks, and were delivered over to the French traders, who sold them back to the Indians. Some Franciscans in 1619 started a mission in Acadia or Nova Scotia. A few were still serving there in 1633, but nothing more is on record. Near the middle of the seventeenth century several French-Belgian Franciscans arrived in Canada, the last to arrive was Father Louis Hennepin, pastor of Niagara Falls in December, 1673, and it is said he was the first to describe them in his "Description de la Louisiana" (Paris) and "Nouvelle Découverte" (Amsterdam). Hennepin penetrated beyond the Mississippi and in 1680 discovered St. Anthony's Falls. Father Emanuel Crepel and others came to Canada in 1726. He passed Great Falls and travelled as far as Fox River in Wis-
Fribourg (Switzerland), University of.—From the sixteenth century, the foundation of a Catholic university in Switzerland had often been canvassed among the Catholic cantons. The need of such an institution was with the passage of time ever more keenly felt, as the fact that higher educational institutions existed only in the Protestant cantons excited the Protestant cantons to protest against the episcopal intervention and ascendancy. In spite of the pressing nature of the case, however, the want of the necessary means and the jealousy among the Catholic cantons combined to prevent any solution of the question being arrived at. From the very beginning, the inhabitants of Fribourg had laboured most zealously for the establishment of a university in their town. Out of their own resources, they founded in 1763 a school of law, which was continued till 1889 and then merged in the juristic faculty of the university. During the nineteenth century, the Catholic movement in Switzerland, making the Swiss "Plus-Verein" its rallying-centre, reinaugurated the project of a Catholic university. The Conservative Government of Fribourg finally took the matter in hand, and George Python, State Councillor for Fribourg and from 1886 Director of Public Education, who enjoyed the fullest confidence of the people, effected the foundation of the university. It was a bold step to undertake for a little state of only 119,000 (in 1909, 130,000) inhabitants, but the energy and political acumen of Python coupled with the unselfish liberality of the legislative council were a certain guarantee of success. The conversion of the public debt under favourable conditions in 1886 resulted in a saving of 2,500,000 francs (500,000 dollars), and on 24 December of the same year the supreme council resolved to set aside this sum as a foundation fund for the proposed university. On 4 October, 1889, a second resolution was passed, appropriating the interest on this capital to the foundation of the first faculties, which were opened in the following November in the extended school building, with nine professors and the philosophical (for philosophy, literature, and history) with eighteen.

The town of Fribourg, seat of the university, contributed half a million francs towards the funded capital of the university, and in the autumn of 1890 the theological faculty was instituted with seven professors. In accordance with an agreement between the Government of Fribourg and Father Larocca, General of the Dominicans, this faculty was with the sanction of Leo XIII entrusted to the Dominican Order, and placed directly under the care of the Holy See. Many secular priests, however, have held chairs in the theological faculty, which has received from Rome the privilege of granting academic degrees (baccalaureate, licentiate, doctorate) in theology. The other faculties confer only the degrees of licentiate and doctorate. By the appropriation to the university of the profit on the public supply of water and electricity, and of a fixed annual sum from the newly-formed state bank, the further development of these three faculties and the establishment of the faculty of mathematical physics were made possible. The new faculty was opened in 1895 with eleven professors, and, as the institution of infernaries has already been some years in progress, the establishment of the medical faculty—the only story now needed to crown the academic edifice—may be expected at an early date. Meanwhile, chairs of physiology and bacteriology have been instituted in connexion with the faculty of mathematical physics.

Despite many difficulties, including the crisis caused by the wanton dismissal of eight German professors in 1898, the development of the university of Fribourg has been steadily maintained. As a cantonal public institution, it stands on the same legal footing as the other universities of Switzerland. The supreme authority is vested in the Cantonal Department of Public Education (i.e. the State Council), practically all the expenses being borne by the canton. The general constitution of the university is regulated by the Charter of 1 December, 1899. Leo XIII viewed its foundation with a great satisfaction to which he gave personal expression in many letters to the authorities of the Canton, to the university itself, and to the Swiss republic. The main sources of revenue, according to the cantonal budget for 1909, are as follows: Interest on foundation fund, 125,000 francs; yearly contributions from state bank, 80,000 francs; profits arising from the electric and water works, 150,000 francs; less, 2,500 francs. To this sum of 357,500 francs must be added 7700 francs for the legal chair, and other in giving incomes (especially the "Gragei" and the "Westermaier"). Many funds have been established for the assistance of students, and the institution of prizes.

In accordance with the wishes of its founder, the university has always maintained an international character, which consists not alone in the appointment of a considerable number of professors from foreign countries, but also in the differences in the native lands, but also in the various nationalities of the students attracted to the university. The lectures are delivered in Latin, French, and German. In the winter term of 1908-9, the teaching staff consisted of 70 lecturers from ten different lands, 14 of them from Switzerland, 6 from Austria, 3 from France, 2 from England, 1 from Canada, 1 from Germany, 1 from Italy, 1 from Russia, 1 from Spain, 1 from Sweden, and 1 from Turkey. Their distribution among the faculties was as follows: Theology, 13 ordinary and 2 extraordinary professors; Law, 14 ordinary and 4 extraordinary professors; Philosophy, 19 ordinary and 3 extraordinary professors; Mathematical Physics, 10 ordinary and 3 extraordinary professors with 2 Privatdozenten. The total in attendance at the university may be judged from this table of matriculated students:

Of the 565 students in the winter term of 1908-9, 181 were Swiss, 90 Germans, 86 Russians (Poles and Lithuanians), 32 Bulgarians, 31 Italians, 23 from the United States, 21 from Austria-Hungary, and the remainder from eleven other lands.

The university is governed by the rector, elected each year at the general meeting of the ordinary professors attended by the deans of the rector, pro-rector, and the deans and assistant deans of the separate faculties. At the head of each faculty stands the dean, who also holds office for a single year. The professors are appointed by the Council of State on the recommendation of the members of the faculty concerned, except that the appointment of professors of theology due attention is always paid to the requirements of ecclesiastical law and the terms of the agreement with the Dominican Order. Candidates are recognized as matriculated students on the production of a certificate which can be procured by following a certain course of academic studies in their native towns. Since 1905, women are allowed to matriculate, and, in addition to the regular students, permission may be given by the rector to other persons to attend particular lectures. As such persons numbered 119 in the winter term 1905-9, the total number of students who attended lectures during this period was 687. All the matriculated students are enrolled in a general association, called the "Akademia," and also contribute to an academic sick-fund. Many societies have been founded by the students of various lands for the promotion of social and intellectual intercourse. Thus the "Columbia" has been instituted by the students from the United States, and publishes its own bulletin "The Columbia." There are three colleges for theological students: the Albertinum, Saisalanum, and Canisianum. A special university society has been inaugurated to aid the study of the classics. The university library is associated with that of the canton (which contains 140,000 volumes, 16,000 brochures, 534 manuscripts, and 350 incunabula), a new building for the accommodation of both libraries having been opened in 1908. The library expends an annual sum of 16,500 frs. in the purchase of books and journals. There are separate libraries for the different academical courses and institutes, 7650 frs. being spent annually on those in connection with the theological, legal, and philosophical faculties, and 30,000 frs. for those of the faculty of mathematical physics. The university has its own scientific publica- tions such as "Fridericiana," for which only contributions from professors are accepted, and in which twenty-five works have already appeared in three series. The list of the publications of the university lecturers, which is appended to the rector's annual report, gives one a good idea of the activity of the professors in other directions.

J. P. KIRSCH.

FRIDOLIN, Good See Good Friday.

FRIDOLINI (properly FRIEDEL), XAVER EHNERT, Jesuit missionary and cartographer, b. at Lins, Aus- tria, 11 March, 1673; d. at Peking, 4 June, 1743. He entered the Society of Jesus in 1658 and in 1705 arrived in China. Fridelii was an important contribu- tor to the cartographical survey of the Chinese Em- pire, began in 1708 and completed in 1718 (according to others, 1715). Baron Richthofen says that this work is "the most comprehensive cartographical feat ever performed in so short a space of time" ("China," Berlin, 1877, I, 661, see 631 sq.). Together with Fathers Hélie, Jartoux, and others, he designed the maps of Chi-ki, the Amur districts, Kahlkhas (Mongolia), Sze- chwan, Yun-nan, Kwei-chou, and Hu-kwang (Hu-nan and Hu-pe), for which purpose they traversed the whole empire from south to north. At the time of his death Fridelii had been a rector for many years of the Southern or Portuguese church (Nan-t'ang), one of the four Jesuit churches at Peking.

A. Huender.

FRIDESWIDE (FRIDESWIDA, FREDOSWIDA, FF. FR. FRISIUS, Old Eng. Frius), SAINT, virgin, patroness of Oxford, lived from about 650 to 735. According to her legend, in its latest form, she was the child of King Winfrith and Safrida, and was born at Aliga. She refused the proffered hand of King Algar, a Mercian, and fled from him to Oxford. It was in vain that he pursued her; a mysterious blind- ness fell on him, and he left her in her cell. From this eventually developed the monastery, in which she died on 30 October (her principal feast), and was buried. The earliest written life now extant was not composed until four hundred years after her death, but it is generally admitted that the substance of the tradition has every appearance of verisimilitude. From the time of her translation in 1180 (commemorated 12 October from her original final resting-place in the church, her fame spread far and wide; for the university was now visited by students from all parts, who went twice a year in solemn procession to her shrine and kept her feasts with great solemnity. Cardinal Wolsey transformed her monastery into Christ Church College, King Henry made her church into Oxford cathedral, but her shrine was dismantled, and her relics, which seem to have been preserved, were rele- gated to some out-of-the-way corner. In the reign of Edward VI, Catherine Catholic was buried near the site of her shrine. She was a runaway nun, who had been through the form of marriage with Peter Martyr, the ex-friar. The Catholics, as was but natural, ejected her bones in the reign of Queen Mary. But after Elizabeth had reinstated Protestantism, James Calfhill, appointed Canon of Christ Church in 1561, dug up Catholic's bones once more, mixed them up (in dersion of the Catholics) with the alleged remains of the saint, and buried them both in the chancel of the plaudits of his Zwinglian friends in England and Germany, where two relations of his exploit, one in Latin and one in German, were published in 1562. The Latin relation, which is conveniently reprinted in the Bollandists, is followed in the original by a number of epitaphs on the theme "De faces religiosum superia- tione," but it does not seem that these words were inscribed on the tomb, though it is often said that they were. The episode strikingly illustrates the character of the continuity between the ancient faith and the reformed religion of England.

J. H. Pollen.

FRIDOLIN, SAINT, missionary, founder of the Monas- tery of Säckingen, Baden (sixth century). In accordance with a later tradition, St. Fridolin is venerated as the first Irish missionary who laboured among the Alamanni on the Upper Rhine, and the time of the Merov- ingians. The earliest documentary information we possess concerning him is the biography written by Balther, a Säckinger monk, at the beginning of the eleventh century (Mon. Germ. Hist.; Script. rer. Merov., III, 330-69). According to this life, Fridolin (or Frisoli) belonged to a noble family in Ireland (Scotia inferior), and at first laboured as a missionary in his

nately decided. In 1175 he was in Italy, and again in
1186 in the suite of Henry VI. The year next present when Frederick I (Barbarossa) and Philip
Augustus met between Mouson and Yvois, and in 1188
he was at Worms in the company of Count Baldwin V
of Hennefau. He accompanied the Emperor Fre-
drick, by whom he was held in high esteem, on the
 crusade of 1189, and met his death at the battle of
 Philomelium, where he fell to the bound in the
firing the enemy. His popularity was great; the
whole army, we are told, mourned his death.

Friedrich von Hausen is one of the earliest of the
minnesingers who are known to have imitated French
models, with which he became acquainted on his
journey through Flanders. In the beautiful island of
Sâckingen, where in his youth he had been articled
for their cattle, mistook Fridolin for a cattle-
robber and expelled him. On his production of
Clovis’s deed of gift, he was allowed to return, and to
found a church and monastery on the island. He then
resumed his missionary labours, founded the Scottish
monastery in Constance, and extended his mission to
Augsburg. He died on 6 March, and was buried at
Sâckingen. The writer of this legend professed to
have derived his information from a biography, which
he discovered in the cloister of Helers on the Moselle,
also founded by Fridolin, and which, being unable to
be extant, he had learned by heart.

This statement sounds very suspicious, and makes
one conclude that Baithor was compelled to rely on
verbal tradition for the information recorded in his
work. Not a single ancient author mentions Fridolin,
the life has no proper historical chronological arrange-
ment, and the enumeration of so many wonders and
visions awakens distrust. Consequently, most mod-
ern historians justly reject the life as unauthentic, and
as having no historical foundation for the facts rec-
corded, while the older historians believed that it
came near the truth. In the early Middle Ages, there
was certainly some connection between Sâckingen
and Poitiers, from which the former monastery
received its relics, and this fact may have made the
author connect Fridolin with the veneration of St.
Hilarus of Poitiers, and the churches erected in his
honour. The only portion of the life that can be
recorded as historically tenable, is that Fridolin was
an Irish missionary, who preached the Christian reli-
gion in Gaul, and founded a monastery on the island
of Sâckingen in the Rhine. Concerning the date of
these occurrences, we have no exact information.

The monastery, however, was of great importance in
the earliest extent desire concerning, it states that on 10 February, 878, Charles the
Fat presented to his wife Richardia the Monasterys
of Sâckingen, of St. Felix and of Regula in Zurich.

times bordered on despair. He sought counsel from
renowned professors”; but their advice that he
should take a wife, or sing psalms, or make tobacco,
not calculated to solve the problems which per-
ished his soul. Finding no food or consolation in
the teachings of the Church of England or of the innumera-
ble dissenting sects which flooded the land, he was
thrown back upon himself and forced to accept his
own imaginations as "revelations". "I fasted much," he tells us in his Journal, "walked abroad in solitary places, and often took my Bible and sat in hollow trees and lonesome places until night came on; and frequently in the night walked mournfully about by myself. For I was a man of sorrows in the first working of the Lord in me." This anguish of spirit continued, with intermissions, for some years; and it is not strange that such exercises and sacrifices as the Lord had enjoined on his people in Massachusetts, who spared no cruelty to rid the colony of this "cursed sect of heretics", and hanged four of them, three men and a woman, on Boston Common. What marked them out for persecution was not so much their theory of the inward light or their rejection of the outward forms, as their refusal to accept the oaths prescribed by law, or to have anything to do with the army; these offences being aggravated in the estimation of the magistrates by their obstinacy in refusing to uncover their head in court and "thouing and theeing" the judges. The suffering Friends found at last a protector in the person of their most illustrious convert, William Penn, who defended his coreligionists in tracts and public disputes, and, through his influence with the last two Stuart kings, was frequently successful in shielding them from the violence of the mob and the severity of the magistrates. Penn further secured for them a safe refuge in his great colony of Pennsylvania, the proprietorship of which he acquired from Charles II in liquidation of a loan advanced to the Crown by his father. With the accession to the throne of James II the persecution of the Friends practically ceased; and by successive Acts of Parliament and Proclamations the Friends' disabilities were removed; their scruples about paying tithes and supporting the army were respected; and their affirmation was accepted as equivalent to an oath.

Meanwhile, Fox, in the intervals between his frequent imprisonments, had laboured to impart the semblance of an organization to the society: whilst the excesses of some of his followers compelled him to enact a code of discipline. His efforts in both these directions encountered strong opposition from many who had been taught to regard the inward light as the all-sufficient guide. However, the majority, sacrificing consistency, acquiesced; and before the death of Fox, 13 Jan., 1691, Quakerism was established on the principles which it has since substantially preserved.

Although the Friends repudiate creeds as "external" and "human", yet they, at least the early Quakers and their orthodox successors, admit the fundamental dogmas of Christianity as contained in the Apostles' Creed. Rejecting as non-Scriptural the term Trinity, they confess the Godhead of the Father, the Son, and the Holy Ghost; the doctrine of the Redemption and salvation through Christ; and the sanctification of souls through the Holy Spirit. Their spiritual apologists, as Robert Barclay, and William Penn, have not been able to explain satisfactorily in what respect the "inward light" differs from the light of the individual reason; neither have they reconciled the doctrine of the supreme authority of the "inner voice" with the "external" claims of Scripture and the historic creeds. These doctrinal weaknesses were fruitful germes of dimensions in later times.

Though one of the earliest of Fox's "testimonies" was in reprobation of "steeple-houses", that is, the stately edifices with which Catholic piety had covered the soil of England, nevertheless, as his adherents grew in numbers, he was forced to gather them into congregations for purposes of worship and business. These "particular meetings" assembled on the first day of the week. They worshipped without any form of liturgy and in silence until some man, woman, or child was moved by the Spirit to "give testimony", the value of which was gauged by the common sense of the congregation. The term of membership, that is, the form of church government came into being, which has been described as follows:

"The whole community of Friends is modelled somewhat on the Presbyterian system. Three gradations of meetings or synods—monthly, quarterly, and
yearly—administer the affairs of the Society, including in their supervision matters both of spiritual discipline and secular policy. The monthly meetings, composed of all the congregations within a definite circuit, judge of the fitness of new candidates for membership, supply certificates to such as move to other districts, choose fit persons to be elders, to watch over the ministry, attempt the reformation or pronounce the expulsion of all such as walk disorderly, and generally seek to stimulate the members to religious duty. They also make provision for the poor of the Society, and secure the education of their children. Overseers are also appointed to assist in the promotion of these objects. At monthly meetings, and such decisions are sanctioned previous to their solemnization at a meeting for worship. Several monthly meetings compose a quarterly meeting, to which they forward general reports of their condition, and at which appeals are heard from their decisions. The yearly meeting holds the same relative position to the quarterly meetings that the latter do to the monthly meetings, and has the general superintendence of the Society in a particular country." (See Rowntree, Quakerism, Past and Present, p. 60.) All the yearly meetings are supreme and independent, the only bond of union between them being the circular letters which pass between them. The annual letters of the London Yearly Meeting is particularly prized. With the passing away of its founders and the cessation of persecution, Quakerism lost its missionary spirit and hardened into a narrow and exclusive sect. Instead of attracting new converts, it developed a mania for enforcing "discipline," and "disowned" that is, expelled, multitudes of its members for trifling matters in which the ordinary conscience could discern no moral offence. In consequence, they dwindled away from year to year, being gradually absorbed by other more vigorous sects, and many drifting into Unitarianism.

In the United States, where, in the beginning of the last century, they had eight prosperous yearly meetings, their progress was arrested by two schisms, known as the Separation of 1828 and the Wilburite Controversy. The disturbance of 1828 was occasioned by the preaching of Elias Hicks (1748-1839), an eloquent and extremely popular speaker, who, in his later years, put forth unsound views concerning the Person and work of Christ. He was denounced as a Unitarian; and, although the charge seemed well founded, many adhered to him, not so much from partaking his theological heresies, as to protest against the power and influence as claimed by the preachers and overseers. After several years of wrangling, the Friends were split into two parties, the Orthodox and the Hicksite, each disowning the other, and claiming to be the original society. Ten years later the Orthodox body was again divided by the opposition of John Wilbur to the epistolary methods of an English missionary, Joseph John Gurney. As the main body of the Orthodox held with Gurney, the Wilburite faction set up a schismatic yearly meeting. These schisms endure to the present day. There is also a microcosmical sect known as "Primitive" Friends, mainly offshoots from the Wilburites who claim to have eliminated all the later additions to the faith and practice of the early founders of the society.

In the fields of education, charity, and philanthropy the Friends have occupied a place far out of proportion to their numbers. There exist in the United States many important colleges of their foundation. They are exemplary in the aid that they give to those who are weak and infirm. Long before the other denominations, they denounced slavery and would not permit any of their members to own slaves. They did not, however, advocate the abolition of slavery by violent measures. They have also been eminently solicitous for the welfare and fair treatment of the Indians.

According to Dr. H. K. Carroll, the acknowledged authority on the subject of religious statistics (The Christian Advocate, Jan., 1907), the standing of the various branches of Friends in the United States is as follows:—

JAMES F. LOUGHLIN.

Friends of God (Ger. GOTTESFREUNDE), an association of pious persons, both ecclesiastical and lay, having for its object the cultivation of holiness; its name is derived from the Hebraic "El Gadelus" (Deut. xxvii, 11). The word is derived from the Hebrew word meaning "to be exalted." The modern name for the association is "Freunde," and its object is the promotion of the mystic life and the study of the life of holy men. It is an organization of individuals who are united in their efforts to counteract the many evil influences of the time, by applying themselves zealously to the practices of the interior life, and working diligently for the conversion of sinners. From this group of ascetics, whose sole bond of union was their common desire for holiness, the great school of German mystics took its rise, and the mysticism of the coming saints, and at giving edification at Catholic devotion, not heterodox enthusiasm; at affective contemplation, not arid speculation. Their great leaders were two Dominicans, the eloquent preacher John Tauler (c. 1300-1361), and the contemplative writer Blessed Henry Suso (c. 1300-1365); to these must be added Henry of Nördlingen, Conrad of Kaiserheim, and the Dominicans John of Tambach (a celebrated theologian), John of Sternengassen, Dietrich of Colmar, and Nicholas of Strasburg. Among those whom they directed in the path of perfection were several communities of nuns, chiefly Dominican (c. in Unterlinden, Engtalh). Of these Dominicanesses, the most renowned for sanctity are the mystical writers Christina and Margaretha Ebner. Among their disciples living in the world, the following may be mentioned: Rulman Merswin, a wealthy merchant of Strasbourg (1382), Henry of Rheinfeld, and the knight of Landenberg. The sermons, treatises, and letters of the "Friends of God" are remarkable for beauty of style, those of Suso constituting the best prose of the fourteenth century, the correspondence of Henry of Nördlingen and Margaretha Ebner being the earliest examples of epistolary literature in the German language, and the sermons of Tauler being masterpieces of eloquence.

As long as the association remained under the guidance of men like Suso and Tauler, masters in the spiritual life, it was preserved from blemish. Suso was the founder of the Children of Mary, and, in an age that witnessed the decadence of scholasticism or scientific theology, both friends based all their mysticism on Catholic doctrine, particularly on the solid system of St. Thomas. As Suso's "Book of the Eternal Wisdom" was composed for spiritual reading, so was his "Book of Truth" written to refute the errors and fanatic excesses of the Boghards and the Brethren
of the Free Spirit. On his part, Tauler opposed the false mysticism of the Fraticelli and the scholasticism of the Bavarians. His "Gottesfreunde" soon came to an end. A lay member of the association, Rulman Merswin, through either ignorance or fraud, brought the whole group of German mystics into disrepute. The doctrine of his alleged guide and master in the spiritual life—the mystic, Basian laman of the Oberland (Herrenknecht, Kirschberg, Freiburg, 1894, II, 790 sqq.; Denyse in Zeitsschr. f. deut. Merswin, in particular, see Strauss, Geschichte der Weihnachtsfeiern, and Merswin.}

FRINGENTO. See Avellino, Diocese of.

Fringolet, Abbey of.—The monastery of St. Michael was founded, about 960, at Frigolet, by Conrad the Pious, Count of Flanders. It was originally to lie between Tarascon and Avignon, France. Successively occupied by the Benedictines of Montmajour, the Augustinians, the Hieronymites, and finally by the Reformed Augustinians, it was, together with all the monasteries in France, suppressed and sold by the French Republic. From that time it changed hands frequently, and was acquired, at length, by Rev. Edmund Boulbon, who purchased it from Rev. T. DeLestrac. Edmund Boulbon, b. 14 January, 1817, entered the Abbey of Our Lady of La Trappe at Briquebec, in 1850. Of a robust faith, and burning with zeal for souls, he wished to lead a monastic life. Acting on the advice of his superiors, he left the Trappists and undertook the restoration, in France, of the Order of St. Norbert, the constitution of which seemed to be better adapted to his active disposition. On 6 June, feast of St. Norbert, he received the white habit from the hands of Mgr de Passigny, Bishop of Soissons. On 9 November, 1850, in the presence of the President of the local project in an audience which he granted to Father Edmund, 4 December, 1866. With the consent of Mgr de Chalandon, Archbishop of Aix, Father Edmund took possession of Frigolet, and, having admitted several novices, he commenced the community life there. In honour of Our Lady Conceived without Sin he erected a magnificent church, which was solemnly consecrated on 6 Oct., 1866. The Benedictine monastery was canonically erected as a priory on 28 August, 1868; and as an abbey in Sept., 1889, the Right Rev. Edmund Boulbon being its first abbot. On 8 Nov., 1880, the abbey of Frigolet was seised and the religious expelled. Eventually, however, they were permitted to return. At that time the abbey of Frigolet was a small priory of the Greek order of the second expansion, for he died 2 March, 1883.

His successor, Paulinus Boniface, named abbot on 10 June, 1883, undid by his bad administration the good work so nobly begun by Abbot Boulbon; but after a canonical visitation by Mgr Gouthe-Sould, the new bishop of Aix, he was deposed, and the direction of the abbey entrusted to the care of a prior of Madelaine, then prior of the Abbey of Montfaucon, Calvados, France, the distinguished author of "L'histoire de S. Norbert" and other books. Meanwhile the French Republic had framed new laws against all religious institutions, and in 4 April, 1903, the religious, expelled from their abbey, took refuge in Belgium. There, having bought what was left of the former Norbertine Abbey of Leffe near Dinant, they restored it; and continued in the conventual life, in the hope that some day the fathers might be permitted to return to France. The Abbey of Frigolet had founded the priories of Cornques and Etiole in France, and of Storrington and Bedworth in England. It has also sent missionaries to Madagascar.

REGINALD WALSH.

FRINGES (in Scripture).—This word is used to denote a special kind of trimming, consisting of loose threads of wool, silk, etc., or of the material, along the edge of a piece of cloth. The English Bible uses it to designate a particular appendage of the Jewish costume. In the Mosaic legislation, which is embodied in the Pentateuch, mention is made of a peculiar ordinance. The Lord also said to Moses: "Give the children of Israel these charges, that after their habit they make to themselves fringes in the corners of their garments, putting in them ribbons of blue: that when they shall see them, they may remember all the commandments of the Lord" (Num., xvi, 30-39).

"Thou shalt make strings [A. V., and R. V. : fringes] in the hem at the four corners of thy cloak" (Deut., xxii, 12). The description contained in these two passages is anything but clear, at least in the English Bibles; but it may be supplemented by a close reading of the original text, a knowledge of Eastern customs, and the details to be found in the rabbinical literature.

The word "fringes" is here an inaccurate rendering of the Hebrew; "strings" is slightly more exact. The Hebrew word gadolin means literally "twisted cords"; pikketh would be best translated by "tassel". It is indeed an ornament of this description, fastened to the four corners of the upper garment, which is the object of the above regulation. This upper garment of the Hebrews was a large square piece of cloth, resembling the 'abab of the modern bedouin, and worn like the pallium or lathanon of the Greeks, the four corners sometimes hanging in front (παλίλαθος), and sometimes one of the corners cast over the left shoulder (παλίλαθος). It was very
likely the tassel of the corner thus thrown over Our Lord's shoulder that the woman with the issue of blood touched ("behind him"), in the circumstance recorded in Matt., ix. 20, and Luke, viii. 44. We should perhaps go back to a very ancient custom, the significance of which was last sighted to, to account for the wearing of these ornaments. At any rate, a new meaning was attached to them by the lawyer of Israel.

Of these "fringes", or tassels, nothing more is said in the O. T., than that they should contain "ribbons of blue," more exactly, a "thread of blue," or thread of "purple". But the rabbinical literature contains most minute prescriptions with regard to these ornaments. Owing to the difficulty of procuring the purple dye, the custom prevailed of using only white threads of wool. They should be four in number, one being considerably longer than the others, spun expressly for the purpose, passed through an eyelet at the corner of the cloak, twisted a certain number of times, and tied by five knots. According to Deut., the p’shith were intended to remind the people of the commandments of the Law. We may easily understand, therefore, why they were also called "enlarged fringes" (Matt., xxiii. 5). This connection led people to attach to the p’shith and its various parts mystic significations, and to the statement that the wearing of it is the most important precept of the Law; nay more, is of equal merit with the observance of the whole Law.

The practice of wearing the p’shith is still scrupulously followed by the Jews. The tassels are a part of the large t’lichoth, or prayer-shawl, used universally during religious services: this garment is worn in such a way that the p’shith are visible in front. Pious Jews, moreover, devise, since the Dispersion, an article of clothing, the small square p’tlichoth, that would enable them to observe the Law at all times. This t’lichoth is similar in shape to a large scapular, with the tassels fastened to the four corners, and is worn as an undergarment.

Men only are to wear the t’lichoth and the p’shith.

*talmud* of Jerusalem, Tract. P’shith (Venice, 1522–1523; French transl. by Schwab, Paris, 1871–1890); MAIMONIDES, Yad Ha-hanukkah (1st ed. without place or date; 2d ed., Constantinople, 1509); BUKOVR, Lexicon Talmudicum, s. v. CHARLES L. SOUVAY.

FRIELANS, CONVERSION OF THE. — See WILLIBRORD, SAINT.

Froissart, Jean, French historian and poet, b. at Valenciennes, about 1337. d. at Chimay early in the fifteenth century. The exact dates of his birth and death are unknown, as well as the family from which he sprang. In 1361, after receiving ecclesiastical tonsure, he went to England to present to Queen Philippa of Hainault an account in verse of the battle of Poitiers. This marked the beginning of the wandering life which led him through the whole of Europe and made him the guest of the chief personages of the end of the fourteenth century. His travels lasted till 1367. Queen Philippa received him well and inspired him with the idea of writing his chronicles. He travelled through England and visited Scotland where he met David Bruce. In 1367 he accompanied the Black Prince to Bordeaux, returned to London, and in 1368 accompanied the Duke of Clarence to Milan where the duke was to wed the daughter of Galeazzo Visconti. From Italy Froissart returned to Valenciennes where he learned of the death of Queen Philippa in 1369. He was then successively under the protection of Duke Wenceslaus of Brabant (1369–1381), and of Guy de Duras and Jeanne de Beaumont, who bestowed on him the parish of Leusines-au-Mont and a canonicate at Chimay (1384). Froissart accompanied Count Guy into Flanders and to Blois. Then, to secure information concerning the Spanish wars, he visited the court of Gaston Fébus, Comte de Foix, and quitted it in 1389 in the company of Jeanne de Bouligne, the affianced bride of the Duke of Berry. In 1390 and 1391 he wrote his history at Valenciennes. He was at Paris in 1392, whence he went again to London, where he offered his poems to Richard II. Having quarrelled with Guy de Blois he found a new protector in Philip the Bold, Duke of Burgundy. In the latter years, which were possibly passed at Chimay. Froissart composed many poems of love and adventure, such as "l’Epinetre Amoureuse", in which
he relates the story of his own life, and "Méliador". a poem in imitation of the Round Table cycle, etc. His chief work is the "Chroniques de France, d'Angleterre, d'Écosse, de Bretagne, de Gascogne, de Flandre et Liege", an account of European wars from 1328 till 1400. In the numerous manuscripts of the "Chronicles" three recensions of the first book are recognisable. The first, written between 1369 and 1379 brings the narrative to 1378 (the beginning is borrowed from the "Chronicle" of Jean le Bel, a canon of Nantes). One of this recension is favourable to the English. The second recension, represented by the Amiens and Valenciennes MSS., was written under the inspiration of Guy de Blois and is favourable to the French. The third recension (Vatican MS.), written after 1400, is frankly hostile to England, but the MS. stops with the year 1340. The second, third, and fourth books of the "Chronicles" were written between 1387 and 1400. The "Chronicles" contain many errors and are very partial, but despite these faults no work conveys so lively an impression of the men and things of the fourteenth century as this history of Froissart. His graceful and naive style and the picturesque turn which he gives to his recollections make him the king of chroniclers. The "Chronicles" were much copied; one of the most beautiful manuscripts of Froissart is at Breslau, copied in 1469 by Aubert de Hesdin, and admirably illustrated with miniatures (S. Reinach, Gazette des Beaux Arts, May, 1905). Among the modern editions are those of: Buchon, "Panthéon littéraire", 3 vols. (Paris, 1835 and 1846), defective in the first book; Keménove, 50 vols. (Brussels, 1867-1877), gives the various recensions of each chapter; Siméon Luce began to publish in 1869 the edition of the Société de l'Histoire de France, 8 vols. (Paris, 1869-1888); G. Raymond, commissioned to continue this undertaking, published volumes IX to XI, which contain part of Book II (Paris, 1897-1898). The poem "Méliador" was edited by A. Longnon for the Société des Anciens Textes Français (Paris, 1895).  

LOUIS BÉHIER.

Fromentin, Étienne, French writer and artist; b. at Le Rochelle, 24 October, 1820; d. at Saint-Maurice, near Le Rochelle, 26 August, 1876. His father, a distinguished physician and art connoisseur, intended him for the bar. After a brilliant course of studies, the young man came to Paris, in November, 1839, to follow the lectures in law. In 1843 he became associated with Maître Demormand, an attorney-at-law. But his literary and artistic inclinations gradually rendered his profession insupportable. Marihat's exhibition of 1844 definitely decided him to devote himself to painting. He became a pupil of Cabat, who was, with Flers, Hue, Corot, and Rousseau, one of the restorers of modern landscape painting. A short journey to Algeria, in 1846, showed him more clearly the line he was to follow. In 1847 and 1852 he again visited that country, to gather material for his work. He exhibited at the Salon in 1847. In 1850 he sent in eleven paintings, and was awarded a second-class medal. The only other notable events in his life were a voyage to Egypt, in the autumn of 1869, in the company of Napoleon III, at the time of the opening of the Suez Canal; and a short stay in Holland, in July, 1875, where he obtained matter for his book, "Les Maîtres d'autrefois". He was made chevalier of the Legion of Honour in 1859, and officer in 1869. He married in 1861. 

In his lifetime, it was as a painter rather than as writer that he became renowned. Orientalism was then in vogue. It suited the romantic writer, the artist, the student of the arts. It satisfied the general curiosity for exotic customs. Great painters like Decamps, Delacroix, and Marilhat, had already made a specialty of it. Moreover, all thought was now turned towards Algeria, a new, mysterious country, only half-conquered, which had just been the scene of a long colonial war. The public were never weary of hearing about it. Since the land has become so well known, this interest has ceased; and it must be admitted that Fromentin's reputation has suffered in consequence. Such is the penalty of a success partly based on the informative and teaching qualities of the painter's art. The actuality has ceased to interest us; and the glory of the artist has disappeared, or necessarily fade. But Fromentin is far from deserving the obscurity into which he is now relegated. His work, as a painter, is that of a charming artist, the work of a landscapist and a painter of customs, who had the secret ambition of becoming an historical painter, and who, wisely enough, selected in the modern world subjects and plan best accommodated to his ambition and his ability. Fromentin's art, either by the nature of his paintings or the dimensions, rarely surpasses the "genre" properly so called; and yet there is something naturally impressive in the beauty of the Arab life and manners, in that nomadic, feudal, warlike existence, the majestic simplicity of the deserts and open country, the immutable tranquillity of the Orient. Finally, one cannot fail to recognize the distinctive mark of Fromentin's art. He is not a faultless painter, but he is one of exquisite delicacy. After 1860, especially, under the influence of Corot, he becomes one of the cleverest modern "harmonistes". His blue slate and coloured Algerian pictures, with their remarkable greyish tints, have not been excelled. As a painter of the Arab horse, in the "Curé" of the Louvre, he has no rival. Sometimes he is eloquent, as in the "Sicmoun", the "Soffi", or the famous "Rue d'El Aghouat". But the works that show his art at its best are those that depict both customs and things, as in the "Petit Gue" (New York), the "Chasse au Faucon" (Chantilly): in these he is a kind of modern Wouverman, more elegant and poetic than the former. And one
may anticipate the day when, Africa in its turn having been subjected to civilization, industry, and uniformity, these pictures will be the sole witness of its ancient customs, and will then assume their historic significance.

As, however, as a writer that Fromentin is rising more and more to fame. His work is very varied. As a result of his travels, he published, under the titles of: "Un été dans le Sahara" (Paris, 1856); and "Une année dans le Sahel" (Paris, 1858), the souvenirs of his two last sojourns in Algeria. In these he inaugurates a new method of description, much less "literary" that that of Gattier's, a method which, in French tradition, marks the transition from Bernardin de Saint-Pierre to Lott. "Dominique" appeared later (Paris, 1862). This autobiography and transparent history of a pure youthful love is, together with "Adolphe" and the "Princesse de Clèves", one of the masterpieces of the French "roman d'analyse". But the work that will transmit Fromentin's name to posterity is his "Mémoires d'autrefois" (Paris, 1870). This book is composed from the notes made during a journey through Belgium and Holland to study the old painters; or rather, the early phases of the work. For the author, in connexion with the paintings he saw, discusses, in passing, the questions of aesthetic moment which he raises. It may be said that this book really originated artistic criticism. As a critic Diderot is purely literary, Hegel metaphysical, Ruskin religious, moral, or apocalyptic, Taine historical, or philosophical; but Fromentin made criticism strictly "artistic", that is to say, he seeks the secret of the significance, value, and beauty of a picture solely in an examination of the work, its style, and its methods of execution. It is through the painting thus understood and examined that he succeeds in determining the personality and the moral characteristics of the artist. Here Fromentin is a great creator and a great writer, who really invents everything: methods, systems, and terminology. Some of his descriptions of paintings are the last word in the art of writing. Certain of his analyses, such as those of Rubens and Rembrandt, are definitive, and fix, forever, both the rules of the style or class, and the portraits of these great men. If to understand is to equal, it is by such pages that this distinguished writer, who has won a place among the first prose-writers of the last century, has really added something to the art of painting—that is to say, by expressing it by writing.

LOUIS GILLET.

Frontal. See Altar, sub-title Altar-Frontal.

Frontenac, COUNT LOUIS DE BUDE, a governor of New France, b. at Paris, 1822; d. at Quebec, 28 Nov., 1898. His father was captain of the royal castle of St-Germain-en-Laye; his mother née Phelippeaux, was the daughter of the king's secretary of state; Louis XIII was his godfather. By his valour and skill he won the rank of marshall of the king's camps and armies. He served in Holland, France, Italy, and Germany, and also in Canada where Turrenne had served and a contingent against the Turks. A brilliant military reputation, therefore, preceded him to Canada. During his first administration (1672-1882) he built a fort at Tatareacou (now Kingston) to awe the Iroquois and facilitate communications with the West. To explore the course of the Mississippi, preoccupied by a sent of the Jesuits, he sent the Cavaliere de la Salle, who named the country watered by that river Louisianas, in honour of Louis XIV. Although intelligent and magnanimous, brave and unfinchning in peril, he was proud, imperious, and ready to sacrifice all to personal animosity. He quarreled with most of the officials of the colony over petty questions: with his counsellors, with the intendant (Duchenneau), with the Governor of Montreal (Perrot), and with Mgr de Laval, whose prohibition of the liquor traffic with the Indians he judged harmful to commercial interests. The king, after vainly trying to curb his haughtiness, recalled him in 1682.

In 1689, when the uprising of the Iroquois and the Lachine massacre, in retaliation of Governor Denonville's treacherous dealing, threatened to destroy the existence of the colony, Frontenac was sent to the rescue and was hailed as a deliverer. He had to fight the allied Iroquois and English; but his bravery and ability were equal to the task. After d'Iberville's brilliant exploits in Hudson Bay, Frontenac divided his forces into three corps, which captured Corlar (Scheneeclad), Salmon Falls (N. H.) and Casco (Me.). When, to avenge these disasters, Boston sent a fleet against Quebec (1690), Frontenac's response to the summons of Phipps's envoy was: "Go tell your master that we shall answer him by the mouths of our guns"—a threat which was made good by the enemy's defeat. In 1696 Frontenac wisely disregarded the instructions of France to evacuate the upper country, which would have ruined the colony, and merely observed a defensive attitude. He dealt the Iroquois power a severe blow, burned the villages of the Ommontagues and Onanautous, and devastated their country. By his orders d'Iberville razed Fort Penquid in Acadia, captured St John's, Newfoundland, and nearly the entire island, and took possession of all Hudson Bay Territory. Frontenac died sincerely regretted by the whole colony which he had saved from ruin. His character was a mixture of good and bad qualities. The latter were less evident during his second administration and his talents rendered eminent services. He found Canada weakened and attacked on all sides; he left it in peace, enlarged, and respected. He has been justly called "savior of the country". In spite of his Jansenist education and prejudices against the bishop, the Jesuits, and even the Suplicians, he possessed a rich fund of faith and piety. He was a faithful friend of the Recollets, and was buried in their church.

LIONEL LINDSEY.

Frowin, Blessed, Benedictine abbot. d. 11 March, 1178. Of the early life of Frowin nothing is known, but it is certain that he is the Master of the community by the historians of the two great Benedictine abbies of Einsiedeln in Switzerland and St. Blasius in Baden. The first authentic fact in his career is his election as...
bbot, about the year 1142, to succeed St. Adelhelm in the newly established monastery of Engelberg (q.v.) in the Canton of Unterwalden, Switzerland. As bbot Frowin was conspicuous for sanctity, learning, and sound administrative ability. Through his efforts the abbey was greatly increased, while its renown as a centre of learning, art, and piety spread far and wide. Himself a man of great intellectual endowments, thoroughly versed in all the science, sacred and profane, of his time, he established a famous school in his monastery where he taught philosophy and theology. The idealist, the Platonist, and the Aristotelian schools were alike taught. The library which he collected possessed, for those days, vast numbers of manuscripts. According to a list of the manuscripts, about 2700, which he had left us, it contained Homer, Cicero, Plato, Ovid and other authors of antiquity. This collection, which became the nucleus of the famous library of the abbey, was destroyed by fire. Blessed Frowin not only copied books for his library, but composed several. Two of these, a commentary on the Lord's Prayer, and a treatise in seven books, "De Laudo Liberi Arbitrii" ("In Praise of Free Will"), but in reality a discussion of the chief theological questions of his day, directed against the errors of Abelard) are still extant. He has been canonized as a saint and is venerated in the Church. The name "Blessed" is granted to the clerics (see Acta SS., March, X, 683). Pétin ("Dictionnaire Hagiographique", III) gives 7 March as his feast day, and credits him with many miracles.

P. L. CXXIX, 1861; GOTTWALD in Kirchenlex., s. v.; KURTEN, Nomenclator.

JOHN F. X. MURPHY.

Fructuosus of Braga, Saint, Archbishop, d. 464. He was the son of a Gothic general, and was a hermit in Galicia. Numerous relics gathered around him, and thus originated the monastery of Complutum, over which he himself at first presided; later, he appointed an abbot. At the time he founded nine other monasteries, also one of 80 Virgins under the saintly abbess Benedicta. In 64, Fructuosus was called to the Bishopric of Dumbroidum, and on 1 December, 665, to the Archdiocese of Braga. The life of this greatest of Spanish monastic sickles was not without its adventures and accounts of his pupils. In 1102, his relics were transferred to Compostela. The feast day is 16 April. Fructuosus is depicted with a stag, which was his emblem. He is invoked, because he had been saved by Fructuosus from the hunters. There are still extant two monastic rules written by Fructuosus. The first (25 chapters) is for the monastery of Complutum; it has an appendix (called pactum), containing the form of consignment of the vows. The second, called the "common" rule, which consists of 20 chapters and refers to a union of monasteries, governed by an abbot-bishop, is addressed chiefly to superiors of monasteries.

GABRIEL MEIER.

Fructuosus of Tarragona, Saint, Bishop and martyr; d. 21 Jan., 259. During the night of 16 Jan., he gathered with deacons Augurius and Eulogius, two deacons, and bishop and martyr, in a house, not as many as 10. He confessed that he was a Christian and a bishop, whereupon all three were sentenced to be rnt alive. They underwent the ordeal courageously, and, praying and with outstretched hands, gave up the ghost. In this position they are also depicted. St. Augustine mentions them in one of his sermons (cxxxiii), and the Spanish poet Prudentius has celebrated them in a hymn (Parastosophon, hymn 6).

GABRIEL MEIER.

Frumentius, Saint. See EDESUS AND FRUMENTIUS.

Fuchs, Johann Nepomuk von, chemist and mineralogist; b. at Mattenzell, near BREMEN, Lower Bavaria, 15 May, 1774; d. at Munich, 5 March, 1856. He was born in a family of patrician origin. For the year 1801 devoted himself to chemistry and mineralogy. Following the custom of his country, he pursued his studies at various universities: Heidelberg, Berlin, Freiburg, and Paris. In 1805 he taught chemistry and mineralogy at the University of Landshut, and at Munich in 1826. In 1823 he was nominated a member of the Academy of Sciences, and in 1834 conservator of the Museum of Minology of Munich; two years before his death, the honour of nobility was conferred upon him by the King of Bavaria. He received many other honours. His memoirs, which are numerous, and play an important part in the development of the sciences of mineralogy and chemistry, are given in the collections of the Munich Academy, in Kastner's "Archives", Poggendorf's "Annalen", Dingler's "Journal", and other publications.

He wrote several books, among others one "On the Present Influence of Chemistry and Mineralogy" (Munich, 1824); one on the "Theories of the Earth" (Munich, 1824); "Natural History of the Mineral Kingdom" (Kempen, 1842); and a work on the preparation, properties, and uses of soluble glass (Munich, 1857). His name is to this day associated with soluble glass, an alkaline silicate used in a special kind of fresco painting, called stercoroscopy, so much so that sometimes it is called Fuchs' soluble glass. To-day soluble glass is also used in the application of bandages in surgery. His discovery of water glass was published in 1823. He pursued his researches in other departments of technical knowledge, his work on cement being particularly valuable. He retired from active life in 1852.

His collected works, produced by the committee of the central administration of the polytechnic union in the Kingdom of Bavaria, were edited, with his necrology, by Kaiser (Munich, 1856). His work included investigations on the nature of gold and the composition of chemical group by another in minerals: the discovery of the amorphous state of several bodies; the artificial production of ultramarine and improvements in the dyeing industry, in the manufacture of beet-root sugar, and in brewing. A variety of muscovite, containing nearly four per cent of chromium (chromous mica), is named "Fuchsite" after him. Fuchs, who owed his early education to Fruenzell and the suppressed Jesuits at Ratisbon, was throughout his life a practical and earnest Catholic.

KESSLER, Das Christentum u. die Verbreitung der neueren Naturwissenschaft, 244-244; RUDABERG, Memorial oration on Johann Nepomuk von Fuchs, read in the public meeting of the Royal Academy of Sciences, 29 March, 1856 (Munich, 1856); Catalogue of Scientific Papers of the Royal Society (London, 1866).

T. O'CONOR SLOANE.

Führich, Joseph, b. 1800; d. 1876, was a Catholic in his art as in his life. He was fond of avowing his principles on art with great emphasis; he declares that religion, art, and nature are harmoniously combined in his mind, that he does not admit that ecclesiastical art is the end, but that its end is to be serviceable in God's decoration, but a means of instruction, in order to manifest to the heart as far as possible by means of the senses the life of faith. As a painter his works, like Overbeck's, were inspired
by piety, while in his conceptions and their expression he resembles Cornelius. As the son of a poor painter in the Bohemian town of Kratzau, he learned the elements of his trade; hands, after his workshop and became a painter. Two of them were actually bought, and several art patrons procured for him the funds necessary to attend the academy. The reading of Romantic poets soon made a Romanticist of him. Cornelius's illustrations of "Faust" and Overbeck's sketch of Tasso confirmed this tendency. On his journeys to Dresden and Vienna he became fond of Dürer's creations. He illustrated the Lord's Prayer in nine etchings and Tieck's "Genoveva" in fifteen. To the recommendation of some Romanticists he was indebted for the means for a journey to Rome, which he began towards the end of 1826. In Italy he studied the works of different periods of art, above all acquired the historical style, studied the representation of the great Christian mysteries, and modified his method by the study of the works of Raphael and Michelangelo. Of course he did not fail to become acquainted with Fra Angelico, a spirit who, to his own opinion, he emulated, joined the Nazarene School, learned monumental technique, and completed the Tasso cycle in the Villa Massimi by adding three frescoes: "Armida and Rinaldo", "Armida in the Enchanted Forest", and "The Crusaders at the Holy Sepulchre." The year 1829 saw him again in Prague, but in 1834 he went to Vienna, where he lived till his death.

It is noteworthy that two of his early pictures, painted shortly after his return, viz. "Jacob and Rachel" and "Mary's Journey over the Mountains", sold for five times the original price, even during his lifetime. In 1841 he became professor in the academy of Vienna and was raised to the order of knighthood in 1854, and was henceforth commonly called Ritter von Führich. Executed with the same care as the paintings just mentioned, are "Booz and Ruth", "St. Gudula", "Christ in Limbo", "Christ on His Way to the Garden". He painted religious pictures almost exclusively. New Testament subjects we may multiply. "God writes the Commandments upon the Tables of Stone", "Joseph and the Destruction of Jericho", "The Borrowing Jews", of New Testament pictures: "Joseph's Dream", "Joseph and Mary on their Way to Jerusalem", "The Birth of Christ", "The Storm on the Sea", "The Miraculous Draught of Fishes", etc. These pictures prove the grandeur and loftiness of religious themes and testify to the moral and mystical conception of the artist. Purity in form and energy in expression, a simple beauty in movement and dress, without pretension and affectation, are his unimpeachable excellences. The artist's desire to apply the monumental fresco-technic in his native country was fulfilled twice. In 1844-46 he painted the Stations of the Cross in the church of St. John Nepomucene in Vienna. The work was appreciated on all sides, and copies of it have reached America and the most distant missions.

In 1854-61 he painted, together with others, the church of Altlerchenfeld in Vienna. The artist himself has explained to us the plan of this Christian epoch. Christ's activity as the Saviour before, during, and after his earthly life, is presented here to the eye of the faithful as in a great picture Bible; in the vestibule, what conceives the creation of man; on the walls of the entrance and in the aisles, the prototypes of the Old Testament; in the nave, scenes from the New Testament; the pictures in the transept represent the proximate preparation for the redemption; over the main altar, the Crucifixion, and in the choir, Christ's life in His Church. The plan, as well as the composition, is magnificent; in the execution he was aided by less prominent hands, as is the case in most of the works of the Nazarenes. But Führich acquired his greatest fame as a draughtsman. Though we may miss at times individuality, characters drawn from life, and dramatic movement, a fact which will not astonish us, considering the ideal character of his subjects, still he meets the essential requirements of his theme, as such are set by his piety and piety, by his noble lines and thoughtful invention. His cyclical pictures have become the joy of the Christian people. The master here achieves his ideal of the artist's work. The artist must be a man of meditation and a man of enthusiasm, who can translate the element of instruction from the purely intellectual sphere into that of the imagination, turn mere inspection into contemplation. The Christmas cycle or "The Way to Bethlehem" in its twelve numbers contains the most beautiful pictorial idylls. Full of charm and touching is the symbolical figure of the human soul, whose attention is first called by the personification of Christian art to the mystery of the Incarnation and which then follows the events with the light of meditation and the inspiration of art. The fifteen pictures of the Easter cycle, "He Is Risen", surprise us by the fertility of ideas, by the astonishing freedom and lightness of the figures he employs. His earnestness and deep truth. Equally inimitable works of art are the eleven drawings and etchings entitled "Christ's Triumph." In "Thomas a Kempis" (to the text of Guido Góre), Führich found an opportunity to throw the principal tene of our religion into poetical form, and at the same time to reveal the breadth of his Christian heart.

To these works must be added "The Life of Mary", "The Legend of St. Wendelin", "The Peater", "Poor Henry", and "Memorials for Our Time". Most of these drawings were made for woodcuts, "The Prodigal Son" and "Ruth" for copperplate engravings. Führich's Catholic principles of aesthetics are laid down in his beautiful booklet "Von der Kunst", also in "Kunst und ihre Formen". Moreover, we have from his pen "Briefe aus Italien" and an autobiography; a new edition of the latter, prepared by friends and enriched with additions, appeared in 1875 in Vienna.

Lukas Führich, the son of the artist, in the Histor.-polit. Blätter, vol. XIII, 825 seqq., wrote an account of the master's chief works in Vienna and of his life. See also: Idee, a biography in Graphische Künstler, VIII (Vienna, 1895), I-3; VALENTEI IN DOMINE, Kunst und Künstler (Leipzig, 1885); BRUNNER in Frankfurter Bräutmönch (1887).

G. GIEHMANN.

Fulbert of Chartres, bishop, b. between 952 and 962; d. 10 April, 1028 or 1029. Mabillon and others think that he was born in Italy, probably at Rome; but Pfister, his latest biographer, designates as his birthplace the Diocese of Laudun in the present department of Gard in France. He was of humble parentage and received his education at the school of Reims, where he had as teacher the famous Gerbert who in 999 ascended the papal throne as Sylvester II. In 990 Fulbert opened a school at Chartres which soon became the most famous seat of learning in France and drew scholars not only from the remotest parts of France, but also from Italy, Germany, and England. Three years later, 997, Fulbert was also chancellor of the church of Chartres and treasurer of St. Hilary's at Poitiers. So highly was he esteemed as a scholar that his pupils were wont to style him "venerable Socrates". He was a strong opponent of the rationalistic tendencies which had infected some dialecticians of his times, and often warned his pupils against such as extol their dialectics above the teachings of the Church and the testimony of the Bible. Still it was one of Fulbert's pupils, Berengarius of Tours, who went farthest in subverting...
In 1007 Fulbert succeeded the deceased Rudesl as Bishop of Chartres and was consecrated at Meaux, Archbishop of Paris, before September 7. He owed the episcopal dignity chiefly to the influence of King Robert of France, who had been his ablest student at Reims. As bishop he continued to teach in his school and also retained the treasurership of St. Hilary. When, about 1020, the cathedral of Chartres burned down, Fulbert at once began to rebuild it in greater splendour. In this undertaking he was financially assisted by King Canute of England, Duke William of Aquitaine, and other European sovereigns. Though Fulbert was neither abbot nor monk, as has been wrongly asserted by some historians, still he stood in friendly relation with Odilo of Cluny, Bishop of St. Vannes, Abbe of Vannes, and other monastic celebrities of his times. He advocated a reform of the clergy, severely rebuked those bishops who spent much of their time in warlike expeditions, and inveighed against the practice of granting ecclesiastical benefices to laymen.

Fulbert’s works include 140 epistles, treatises, 27 hymns, and parts of the ecclesiastical fisc. His epistles are of great historical value, especially on account of the light they throw on the liturgical discipline of the Church in the eleventh century. They are two treatises in the form of homilies. The first has as its subject: “Missa Hierodez rex manus et lignis condiconge sacrum” (Acta, xii. 1); the second is entitled “Tractatus contra Judaeos” and owes the prophecy of Jacob, “Non aeternum epterum de Judá” (Gen., xlix, 10), had been fulfilled in Christ. Five of his nine extant sermons are addressed to the Blessed Virgin Mary, towards whom he had a deep devotion. The life of St. Aubert, Bishop of Avranches (d. 667), which is sometimes ascribed to Fulbert, was probably not written by him. Fulbert’s writings were first edited by Papire le Masson (Paris, 1853). His complete works were edited by Charles de Tillyers (Paris, 1893), then inserted in “Bibl. magna camarum” (Cologne, 1618), XI, in “Bibl. maxima Patr.” (Yona, 1677), XVIII, and with additions, in Migne, L., CXLII, 189-368.

Fulcran, Saint, Bishop of Lodève; d. 13 February, 868. According to the biography which Bernard Gui, Bishop of Lodève (d. 1209), wrote of the saint, Fulcran came of a distinguished family, consecrated himself at an early age to the service of the Church, became a priest, and from his youth led a pure and holy life. When in 949 Theobich, Bishop of Lodève, died, Fulcran, notwithstanding his unwillingness, was chosen as his successor and consecrated by the Archbishop of Narbonne on February of the same year. He was uniriting in his charity to conserve the moral life within his diocese, especially among the clergy and the religious orders; rebuilt many churches and convents, among them the cathedral dedicated to St. Genesius, and the church of the Holy Redeemer with the Benedictine monastery attached to it. The poor and the sick were the objects of special care; for their support he founded hospitals and endowed others already existing. The foundation of his diocese is worth of mention. A sop of Gaul had fallen away from the faith and accepted Jewish teachings. When the news reached Fulcran, he exclaimed in an excess of zeal: “His bishop should be burned!” Shortly afterwards a renegade prelate was actually seized by his incensed judge and delivered up to death by fire. Fulcran was filled with remorse that by his utterance he had been the cause of the apostate’s death, and, after doing severe penance, he made a pilgrimage to Rome, there to receive absolution for his supposed guilt. After his death he was buried in the cathedral of Lodève and honoured as a saint. His body, which had been preserved intact, was burned by the Huguenots in 1572, and only a few particles of his remains were saved. He is the second patron of the Diocese of Lodève, and his feast falls on 13 February.

Fulda, Diocese of (Fuldensis).—This diocese of the German Empire takes its name from the ancient Benedictine abbey of Fulda. To systematize the work of evangelizing Germany, St. Boniface organized a hierarchy on the usual ecclesiastical basis; in Bavaria the Dioceses of Salzburg, Freising, Ratzeburg, and Passau; in Franconia and Thuringia, Würzburg, Echstätt, Burghausen near Fritzdorf, and Erfurt. To facilitate missionary work farther north, especially among the Saxons, he sought a suitable spot for the erection of a monastery for the instruction of St. Sturmius, who, after journeying far and wide, found an appropriate place in the great forest of Buchonia, in the district of Grabfeld on the Fulda. Boniface sanctioned this choice of a location, and petitioned Carlemann, to whom the country round about belonged, to grant him the site for a monastery. Carlemann yielded to the saint’s request, and also induced the Frankish nobles who had estates in the vicinity to bestow a part of them on the Church. On 12 March, 744, St. Sturmius took solemn possession of the land, and raised the cross. The wilderness was soon cleared, and the erection of the monastery and church, the latter dedicated to the Most Holy Redeemer, begun under the personal direction of St. Boniface. He appointed St. Sturmius first abbot of the new abbey, which he intended to surpass in greatness all existing monasteries of Germany, and to be a nursery for new bishops. The rule was modelled on that of the Abbey of Monte Cassino, as St. Sturmius himself had gone to Italy (748) for the express purpose of becoming familiar with it. To secure absolute autonomy for the new abbey, Boniface obtained from Pope Zachary a privilege, dated 4 November, 751, placing it immediately under the Holy See, and removing it from all episcopal jurisdiction. The authenticity of this document has frequently been called into question, but on the whole it is considered as well established. (For further details see Tandl in “Mit- teilungen des Instituts für österreichische Geschichtsforschung”, 1899; and B. Sepp, “Die Fulder Privilegienfrage”, Ratibon, 1893). After the death of Pepin, the royal sanction to this exemption from episcopal jurisdiction. Boniface showed his love for Fulda when he charged that his remains should be laid to rest there. Under the prudent administration of St. Sturmius (d. 779), the monastery soon rose to greater splendour; from an early period the tomb of St. Boniface made it a national sanctuary for Christian Germany. Great success crowned the agricultural work of the monks, and small colonies which were established in different places gradually became the centres of villages and civil communities. Soon Fulda was the mother-house of a number of smaller monasteries, which were later administered by the monks of Fulda under the superiorship of the abbot. The gifts of German princes, nobles, and private individuals increased the landed possessions of the abbey so rapidly that they soon extended over distant parts of Germany; there were estates in Thuringia, Saxony, Hesse, Bavaria, Lorraine, Swabia; possessions along the Rhine, in
East Friæa, and even at Rome (the church of Sant' Andrea). Even in artistic and literary lines Fulda rose to great importance. On the site of the first church, which had been artistically decorated by Sturmus, there rose under Abbots Baugulf (779–802), Ratgar (802–17), Eigil (815–29), and Rabanus Maurus (822–42) a magnificent edifice which roused the admiration of contemporaries, and even of posterity, and exerted a lasting influence on architectural and artistic activity in distant places. In addition to architecture, sculpture and painting were zealously cultivated. The monastic school established by Sturmus began to attract the learned of the time of Sturmus and Alcuin, and, under Rabanus Maurus, particularly, was the chief nursery of civilization and learning in Germany, and became celebrated throughout Europe. It was open not only to theological students, but also to young men desiring to embrace secular careers. The curriculum embraced the subjects usually taught during the Middle Ages: the seven liberal arts (grammar, rhetoric, dialectics, arithmetic, geometry, physics, and astronomy), the different branches of theology, and the German language. Among the most renowned pupils of this school were: Rabanus Maurus, Willigis of Liéden, Ludwig of Salmberg, Rudolfus Fuldensis, William, Probus, and Meginhard; among the laity: Einhard, Bernhard, King of Italy, and Ulrich von Hutten. Rabanus also founded a library to familiarize the Germans with religious and classical literature, and the zeal of the monks produced rich treasures of valuable manuscripts. Unfortunately the greater part of this library disappeared during the looting of the abbey by the Hessians in 1631, and has not since been discovered.

Gradually the monastery rose to a commanding position in the German Empire. From 968 the abbots were granted all the benefits of German and Gaul; from the time of Otto I, archchancellor of the empress, whom he crowned jointly with the Elector of Mainz; from the twelfth century he was a prince of the empire; from 1184 had the privilege of sitting at the left of the emperor; and from 1350 the imperial banner was borne before him by a knight. This glory, however, was not wholly without shadows. The monastic discipline was relaxed to such a degree that Abbot Marquard (1150–65) undertook to carry out a reform by introducing the regulations in force at Hirsau (Conventuines Hirsau). The importance of the monastery as a centre of learning also declined. The great wealth of the abbey in landed possessions, tithes, revenues, and regalia drew an increasing number of nobles to the monastery. By the twelfth century the monks of noble birth had monopolized the seats of the chapter, and, in the course of time, practically all the important offices of the abbey itself, as well as the provostships of the dependent houses, were held by members of the German nobility. The difficulty of administering the vast landed possessions caused the abbots to grant certain sections in fief, which eventually resulted in great losses to the abbey; for the feudatories frequently turned their positions to their own personal interests, and sought to convert the fiefs into private property. One of the most notable illustrations of the greed of these monastic stewards is shown by the action of Count Johann von Ziegenhain in the fourteenth century, who, in an insurrection of the burgesses of Fulda against the abbot, took possession of the abbey and its possessions and thus caused a separation of the abbeys and the conventual tables, which was put into effect in 1300 under Abbot Heinrich V von Weilnau (1288–1313) (cf. Rubsam, “Heinrich V. von Weilnau, Fürstabt von Fulda”, Fulda, 1879). Imperial capitulations, of which there are records as early as the time of Heinrich VII von Kranlucken (1533–72), especially those of Johann von Merlau (1526–46) and Rabanus Maurus (1592–95), restricted to a considerable degree the authority of the abbots over the convent, and raised correspondingly the independent status of that institution. In the mother-house the dean eventually replaced the abbots for all practical purposes. For centuries the chapter preserved this independence, which involved the complete extinction of the abbots from the ecclesiastical organization of his monastery.

At a comparatively early date the teachings of the Reformers found access to the chapter of Fulda, with which, in 1513, the Abbey of Hersfeld had been united; and Abbot Johannes III von Henneberg (1521–41) was forced to consent to a decree of reform favouring the spread of the new doctrines. The zealous Abbot Balthasar von Dernbach (1570–1606) proved an earnest restorer of discipline in the chapter, vigorously inaugurating the work of the Counter-Reformation. Banished by the members of the chapter and the city council, he was restored and allowed to remain in possession of the abbey until 1602, great progress having been made meanwhile by the imperial administrators in restoring the Catholic Faith. The foundation of a Jesuit college in 1571 was the signal for the reflorescence of the school, which had sunk to comparative insignificance. In addition to a Jesuit gymnasium, Gregory XIII founded (1584) a papal seminary, which he endowed under the direction of the Jesuits. Both of these institutions have contributed largely to the maintenance and spread of the Catholic Faith in Germany. A similar zeal for reform was displayed by Balthasar’s second successor, Johann Bernhard Schenk von Hessen (1625–75), who was received with the several papal visitors, particularly Pietro Luigi Caraffa (1627), restored to the abbey a certain measure of his proper authority, over against that of the chapter and the professors of noble birth. The decrees of reform issued by Caraffa, against which the provosts rebelled after the municii’s departure, were repeatedly confirmed by the Holy See. The capitulars and provosts of noble birth still retained the privilege of admitting into the chapter only such as could show a certain number of noble ancestors, and this prerogative received papal confirmation in 1641. During the Thirty Years War the chapter was again menaced; in 1631, Landgrave Wilhelm V of Hesse, by virtue of a treaty with Gustavus Adolphus, received the abbey in fief to Sweden, and sought gradually to make Protestantism predominant. After the battle of Nördlingen, however, he no longer had power over Fulda. When the turmoil of the war had ceased, the abbey experienced a period of peace and prosperity. In 1732 the Jesuit and Benedictine schools were united, enlarged, and converted into a university. Benedict XIV raised the abbey to the rank of a bishopric (5 Oct., 1752), with the retention of its monastic organization. The last prince-bishop, Adalbert III von Hasse (1727–56), the collegiate chapter of one dean and fourteen capitulars being now the cathedral chapter.

By the Imperial Delegates’ Enactment (Reichsdirenktionsbeschluss) of 1802 the abbey was secularized, and bestowed on the Prince of Oranien as a sect, or pensioned to whose estates, to 90 sq. miles, with a population of 100,000. Under Napoleon, in 1809, it was ceded to the Grand Duchy of Frankfort: in 1815, to Hassl-Kassel, with which, in 1866, it passed to Prussia. The university was closed under the law of secularisation, and the papal seminary was converted by Pope Pius VII into an episcopal seminary. The last prince-bishop, Adalbert III von Harstall (1788–1802), died in 1814.
In accordance with the Bulls "Provida solerisque" of 1821 and "Ad dominici gregis custodiam" of 1827, the Diocese of Fulda was re-established in 1829, and made suffragan to the ecclesiastical province of the Upper Rhine, the first bishop being Johann Adam Rieger (1829–31). In 1871 the boundaries of the new diocese were so altered as to define the territory now embraced within it. It was seriously affected by the Kulturkampf, the see being vacant from 1873 to 1881, and the seminary closed between 1873 and 1886; some of the religious communities suppressed at that time have not been re-established. The present bishop (1909) is Joseph Damian Schmidt, consecrated in 1907.

**Statistics.** — The Diocese of Fulda embraces the Prussian administrative district of Kassel of the province of Hesse-Nassau, Bockenheim (a section of the civic circle of Frankfort-on-the-Main in the administrative district of Wiesbaden), the Grand Duchy of Saxo-Weimar, and one parish of the Grand Duchy of Hesse; Catholic population in 1900 was 167,306, in 1900 about 200,000. It comprises the exempt civic district of Fulda, with 3 parishes and 14 deaneries; for the care of souls, 150 parishes and curacies; 40 chaplaincies and posts as assistants; 53 administrative and administrative offices. The bishop is the cathedral chapter, which consists of a dean, 4 canons and 4 prebends. The clergy employed in the care of souls in 1900 number 226 secular and 26 regular priests, giving a total of 252 active clergy, including pastors, curates, chaplains, and assistant priests, as well as priests engaged in the work of teaching and administrative offices. The following orders and congregations are represented in the diocese: Franciscans, at Fulda and Salzmitlach, with (1907) 35 fathers, and 40 brothers; Oblates of Mary Immaculate, at Ilsefeld, with 28 fathers, and 29 brothers; Brothers of Mercy, at Fulda, with 6 brothers. Communities of women are: 1 abbey of Benedictine nuns at Fulda, with 35 sisters; 1 monastery of the English Ladies at Fulda, with 36 sisters; Ursulines at Fritzlar, 32 sisters; Sisters of Mercy of St. Vincent de Paul, 44 communities, with 363 sisters; Poor Servants of Christ, at Frankfort-Bockenheim, 18 sisters; Grey Nuns of St. Elizabeth, at Eisenach, 6 sisters; Geminians at Kassel, 27 sisters; School Sisters of Divine Mercy at Kassel, 26 sisters.

The diocesan institutions are: the episcopal seminary at Fulda, with eight professors of theology; the episcopal gymnasia or preparatory seminary at Fulda for Latin schoolboys; the public school for boys at Geiss, Hunfeld, and Orp; the school for orphaned boys at Sanner; a similar institution for girls at Mammesel, near Fulda; the reform school for young women at Horas near Fulda; St. Joseph's House for Orphans and First Communicants at Hunfeld; the Liebke Hospital for tuberculars at Fulda and the asylum for imbeciles at Fulda. The most important church of the diocese is the cathedral at Fulda, in the style of the Renaissance, erected by Prince-Abbot Adalbert von Schleifar (1704–12) on the site of the church built by Abbot Baulgul and his successors. It contains precious altars, a rich treasury, and, as its most important shrine, the tomb of St. Boniface, at which the bishops of Prussia, Baden, and Württemberg gather once a year (cf. Pfaff, "Der Dom zu Fulda", 2nd ed., Fulda, 1855). Mention should also be made of the church of St. Michael at Fulda, dating from Carolingian times; the church on the Petersberg near the cemetery of Fulda, Bishop of Trier in the thirteenth century; and the Protestant church of St. Elizabeth at Marburg, a noble specimen of the thirteenth century Gothic. The most popular place of pilgrimage in the diocese is the tomb of St. Boniface.

**Fulgentius, Saint.** Bishop of Ecija (Astigi), in Spain, at the beginning of the seventh century. Like his brothers Leander and Isidore, two holy Archbishops of Seville, of whom the first was older and the second younger than Fulgentius, he consecrated himself to the service of the Church. A sister of the three was St. Florentina (q.v.). Their father Severianus lived at first in Cartagena; he was a Roman, and, according to Isidore (Etym. XIV, 1), the king of Astigii elected him bishop of Ecija, and appointed him his chaplain. Exact data regarding the life of Fulgentius are wanting, as he is mentioned only occasionally in contemporary sources. Leander, in his "Libellus" on the religious life written for his sister Florentina, states that he has sent Fulgentius back to his native town of Cartagena, which he now regrets as he fears that harm may befall him, and he requests Florentina to pray for him. What the danger was to which Fulgentius was exposed we have no means of knowing. Probably through the influence of Leander, who was made Archbishop of Seville in the year 584 and who played an important part in the affairs of the Visigothic kingdom, Fulgentius became Bishop of Astigi (Ecija), in the ecclesiastical province of Seville. As Leander died in 600 and Pegasus is shown to have still been Bishop of Ecija in 590, we may safely assume that Fulgentius was chosen bishop between 590 and 600; at all events, he already occupied the see in 610. Isidore, who succeeded to the Archdiocese of Seville upon the death of his brother Leander, dedicated to Fulgentius, "his lord, the servant of God", his work on the offices of the Church, "De ecclesiasticis officiis". In fact it was at the solicitation of Fulgentius that he wrote this account of the origin and authors of the Church services, i.e., of the Lusoricæ, Iunicæ, Geiss, Hunfeld, and Orb; the school for orphaned boys at Sanner; a similar institution for girls at Mammesel, near Fulda; the reform school for young women at Horas near Fulda; St. Joseph's House for Orphans and First Communicants at Hunfeld; the Liebke Hospital for tuberculars at Fulda and the asylum for imbeciles at Fulda. The most important church of the diocese is the cathedral at Fulda, in the style of the Renaissance, erected by Prince-Abbot Adalbert von Schleifar (1704–12) on the site of the church built by Abbot Baulgul and his successors. It contains precious altars, a rich treasury, and, as its most important shrine, the tomb of St. Boniface, at which the bishops of Prussia, Baden, and Württemberg gather once a year (cf. Pfaff, "Der Dom zu Fulda", 2nd ed., Fulda, 1855). Mention should also be made of the church of St. Michael at Fulda, dating from Carolingian times; the church on the Petersberg near the cemetery of Fulda, Bishop of Trier in the thirteenth century; and the Protestant church of St. Elizabeth at Marburg, a noble specimen of the thirteenth century Gothic. The most popular place of pilgrimage in the diocese is the tomb of St. Boniface.

Fulgentius, Fabius Claudii Gordianus, Saint, b. 468; d. 533; Bishop of Ruspe in the province of Byzacena in Africa. Eminent among the Fathers of the Church for saintly life, eloquence and theological learning. His grandfather, Gordianus, a senator of Carthage, was deposed by his possessors by the invasion of the Vandals and forced to Italy. His two sons returned after his death, and, though their house in Carthage had been made over to Arian priests, they recovered some property in Byzacena. Fulgentius was born at Telepte in that province. His father, Claudius, soon died, and he was brought up by his mother, Mariana. He studied Greek letters before Latin and facilius posset, victorius inter Aistros, locutionem Graecam, servatis aspirationibus, tamquam ibi nutritus exprimere. We learn from these words of his biographer that the Greek aspirates were hard for a Latin to pronounce. We are told that Fulgentius at an early age committed all Homer to memory, and throughout his life his pronunciation of Greek was excellent. He was also well trained in Latin literature. As he grew older, he governed his house wisely in subjection to his mother. He was favoured by the provincial authorities, and made procurator of the fiscus. But a desire of all the world to serve him overcame him: he spent privately in the world for a time, until he was moved by the "Enarrationes" of St. Augustine on Psalm xxxvi to betake himself to a monastery which had been founded by a bishop named Faustinus near his episcopal city, from which like other Catholic bishops he had been exiled by the Vandal king, Hunneric. The frequent appeal of the youth won his admission from Faustinus, to whom he was already well known. His mother clamoured with tears at the door of the monastery to see her son; but he gave no sign of his presence there. He became ill from excessive abstinence, but recovered without renouncing it. His worldly goods he made over to his mother, leaving his younger brother dependent on her.

But Faustinus was obliged to fly from renewed persecution, and by his advice Fulgentius sought a small monastery not far off, whose abbot, Felix, had been his friend in the world. Felix insisted upon resigning his office to Fulgentius, in the assurance that he would not carry on the monastery. The view that the humble ambition of the holy bishop was not the only characteristic of his vocation. Fulgentius then had a vision, and he was told that the king of the Vandals was about to make a journey to Carthage. His appearance at the court was not the only cause of rejoicing to the king, who desired to establish a monastery in his city. When Felix arrived at Syracuse, he was welcomed by the bishop of that city, Eulalius, and told him, "The lands to which you wish to travel are separated from the communion of Peter by an heretical quarrel." Fulgentius therefore stopped a few months with Eulalius, and then sought further advice from an exiled bishop of his own province, who was living as a monk on a tiny island off the coast of Sicily. He was recommended to return to his own monastery, but "not to forget the Apostles." In consequence, he made a pilgrimage to Rome, where he was present at a speech made by Theodoric before the senate, and had an opportunity of seeing all the magnificence of the court of the Gothic king could show. His return was hailed with joy in Africa, and a nobleman of Byzacene gave him fertile land on which he established a new monastery. But Fulgentius retired from his position as superior in order to live a more hidden life in a large and strict abbey which flourished on a rocky island. Here he worked, read, and contemplated. He was an accomplished scribe, and his manuscripts are famous.

At this time the Arian King Thrasimund (496–523), though not yet converted, sent a request to his bishop. Eutychianus, that he might receive him into the Arian Church. The bishop refused, and the king, in retaliation, exiled the bishop. Thrasimund then demanded of Fulgentius that he should accept the Arian faith, but he refused, and was exiled. Thrasimund then sent an envoy to the bishop, asking him to come to a common place of meeting where they might discuss the matter. The bishop refused, and the king then offered to send a portion of the clergy to him; but he refused again, and the king then ordered the consistory to be dissolved, and the bishop was exiled.

It was perhaps about the year 515 that Thrasimund issued a series of ten questions as a challenge to the Catholic bishops. The first was, "What is the nature of the Holy Trinity?" The second was, "What is the nature of the Holy Spirit?" The third was, "What is the nature of the body of Christ?" The fourth was, "What is the nature of the soul of Christ?" The fifth was, "What is the nature of the soul of the Virgin Mary?" The sixth was, "What is the nature of the soul of the Virgin Mary?" The seventh was, "What is the nature of the soul of the Virgin Mary?" The eighth was, "What is the nature of the soul of the Virgin Mary?" The ninth was, "What is the nature of the soul of the Virgin Mary?" The tenth was, "What is the nature of the soul of the Virgin Mary?"

The king then proposed further questions, but was anxious to avoid a second reply as effective as the former one. He took the unfair and tyrannical course of having the new questions, which were expressed at great length, read aloud once to Fulgentius, who was not allowed to have a copy of them, but was expected to give direct answers; though the public would not know whether he had really replied to the point or not. When the bishop pointed out that he could not even recollect the questions after hearing them but once, the king demanded that he should explain all the magnificence of the Gothic king could show. Fulgentius was therefore obliged to write a larger work, "De Trasimundum regem Vandalorum libri tres," which is a very fine specimen of careful and orthodox theological argument.
Thrasimund seems to have been pleased with this reply. An Arian bishop named Pinta produced an answer which, with Fulgentius's refutation of it, is lost to us. The work now entitled "Advenus Pintam" is spurious. The king wished to keep Fulgentius at Carthage, but the bishop said: "O Lord, the memory of the influence and his power of converting, and therefore obtained his exile. He was put on board ship at night, that the people of Carthage might not know of his departure. But contrary winds obliged the vessel to remain several days in port, and nearly all the city was at first among the bishops of the provine, and select a Holy Communion from his hand. To a religious man who was weeping he privately prophesied his speedy return and the liberty of the African Church.

Fulgentius was accompanied to Sardinia by many of his monastic brethren. Instead, therefore, of proceeding to his former abode, he obtained permission from the Bishop of Calariss to build an abbey hard by the Basilica of St. Saturninus, and there he ruled over forty monks, who observed the strictest renunciation of private property, while the abbots saw to all their wants with great charity and discretion; but if any monk asked for anything, he refused him at once, saying: "I should be like David, who was full and yet he did not say: 'Blessed is the man who has not sinned.'" Fulgentius, who was always the last to be forgiven, and that true religious have renounced their own will, "parati nihil velle et nolle." This severity in a particular point was no doubt tempered by the saint's sweetness of disposition and charm of manner, with which it was associated a peculiarly winning and moving effect. He wrote much during his second exile. The Scythian monks, led by John Maxentius at Constantinople, had been trying to get their formula approved at Rome: "One of the Trinity was crucified." At the same time they were attacking the traces of Semipelagianism in the works of Faustus of Ries. On the latter point they had full sympathy from the Saint. Fulgentius, who was also well acquainted with St. Augustine, has written a work with which he was in harmony: "Gaudent Maiorum," in seven books, which is now lost. It was just completed when, in 523, Thrasimund died, and his successor, Hilderic, restored liberty to the Church of Africa.

The exiles returned, and new consecrations took place for all the vacant seats. When the bishops landed at Carthage, Fulgentius had an enthusiastic reception, and his journey to Ruspe was a triumphal progress. He returned to his beloved monastery, but insisted on his abbot, St. Gregorius; and he was received first among all the bishops of the province, asked leave in the monastery for the least things from the abbot Felix. He delivered in writing to the abbey a deed by which it was perpetually exempted from the jurisdiction of the bishops of Ruspe. This document was read in the Council of Carthage of 529. It was in fact the custom in Africa that monasteries should not of necessity be subject to the local bishop, but might choose any bishop at a distance as their ecclesiastical superior. Fulgentius now gave himself to the care of his diocese. He was careful that his clergy should not wear fine clothes, nor devote themselves to secular occupations. They were to have houses near the church, to cultivate their gardens with their own hands, and to be particular about correct pronunciation and sweetness in singing the psalms. He corrected some with words, others with scourging. He ordered fasting on Wednesdays and Fridays for all clergy and widows, and for those of the clergy who could bear it. In the last period of his life he published some sermons, and ten books against the Arian Fabianus, of which only fragments remain. A year before his death he was moved to great compunction of heart; he suddenly quitted all his work, and even his monastery, and sailed with a few companions of the faith, who gave himself to reading, prayer, and fasting in a monastery which he had previously caused to be constructed on a small rock. There he mortified his members and wept in the presence of God alone, as though he anticipated a speedy death. But complaints were made of his absence, and he returned to his labours. He shortly fell into a grievous sickness. In his sufferings he said to his attendants: "O Lord, be merciful to me, and forgive me the sins I have committed hereafter." He refused, as too luxurious, the warm bath which the physicians recommended. He summoned his clergy and in the presence of the monks asked pardon for any want of sympathy or any undue severity he might have shown. He was sick for several days, continued to pray, beg, and do penance for the sins of the last. His possessions he gave to the poor, and to those of his clergy who were in need. He died on 1 January, 533, in the sixty-fifth year of his life and the twenty-fifth of his episcopate.

Besides the works already mentioned, we still possess of St. Fulgentius some fine treatises, sermons, and letters. The best known is the book "De Fide," a description of the true Faith, written for a certain Peter, who was going on a pilgrimage to the schismatic East. The three books "Ad Monimentum," written in Sardinia, are addressed to a friend who understood St. Augustine to teach that God predestinates evil. St. Fulgentius is estimated with wise and devout argumentation, and way of thinking, and he defends him from the charge of making God predestinate evil. He himself makes it a matter of faith that unbaptized infants are punished with eternal fire for original sin. No one can by any means be saved outside the Church; all pagans and heathens are infallibly damned. "It is to this unworthiness of grace, to suppose that it is given to all men," since not only not all have faith, but there are still some nations which the preaching of the Faith has not yet reached. These harsh doctrines seem to have suited the African temperament. His last work against Semipelagianism was written at Ruspe and sent to the monks of St. Augustine, who were then led by St. Germanus and Venerius: "De veritate predestinationis et gratiae Dei," in three books. To these we may add the two books, "De remissione peccatorum." He wrote much on the Holy Trinity and the Incarnation: "Liber contra Arianos," "Liber ad Victorem," "Liber ad Scarclem de incarnatione." To St. Augustine's doctrine of the Trinity, Fulgentius adds a thorough grasp of the doctrine of the Person of Christ as defined against Neostorianism and Eutychianism. His thought is always logical and his exposition clear, and he is the principal theologian of the sixth century, if we do not include the letters and treatises on local interest, but are theological treatises on chastity, virginity, penance, etc. His sermons are eloquent and full of fervour, but are few in number.

The chief authority for the life of St. Fulgentius is the biography by a disciple, almost certainly Ferraundo, the canonist; it is prefixed to his works, and is also in Acta SS., i Jan. See REYNOLDS in Diet. of Christ. Biog., who refers also to SCHNEIDER, Kirchengeschichte, xvi, 1191; KLOSTERMANN, Augustinianismus und Pelagianismus, ii; there is an excellent summary of his works in FEILDENER/JOMANNI, Patrologia, iii; WINTER, Zur Dogmengeschichte des Semipelagianismus, HHM (Münster, 1900); FICHEP, Zur Würdigung der Vita Fulgentii (Zeltbähr, ii, Kirchengeschichte, vii, 1945); FULGENTIUS IDENTIFIZIERT, Fabius Furius Fulpetinus Plancatenses (Rhein. Mus. Philol., 1897, 177; Philologus, 1897, 253; see TROCHUT-SCHMEND, Gesch. der röm. Lit., 5th ed., p. 1236 [1880]). On the subject of the 80 sermons appended to St. Fulgentius's works (first published by Raynaud, G. Louis), several of them are MS., des domand. du Pseudo-Fulgence (in Revue Blanche, April 1899). The best edition of St. Fulgentius is that of DEPRES (1854), reprinted in LXV, 16. BARDENBERGER, Patrologie (tr., St. Louis, 1898).

JOHN CHAPMAN.

Fulgentius Ferrandus, a canonist and theologian of the African Church in the first half of the sixth century. He was a deacon of Carthage and probably accompanied his master and patron, Fulgentius of Ruspe, to exile in Sardinia, when the bishops of the African Church were banished by the Arian King of the Vandals, Thrasamund. After the death of Thrasamund and the accession of Hilderic, in
523, the exiles were permitted to return, and Fulgentius, although only a deacon, soon gained a position of great importance in the African Church. He was frequently consulted in regard to the complex theological problems of the time and was known as one of the most resolute champions of orthodoxy in Western Christendom. His works are mostly of a doctrinal character. He defended the Trinitarian doctrines against the Arians and dealt besides with the question of the two natures in Christ, with baptism, and with the Eucharist. He drew up a "Brevisco Canonum Ecclesiasticorum" in which he summarized in two hundred and thirty-two canons the teaching of the orthodox Church, Rome, Sardica, Carthage, concerning the manner of life of bishops, priests, deacons and other ecclesiastics, and of the conduct to be observed towards Jews, heathens and heretics. He also wrote at the request of the Comes Reginus (who was probably military governor of North Africa) a treatise on the Christian rule of life for soldiers, in which he laid down seven rules which he explained and inculcated, and in which he gave evidence of his piety and practical wisdom. Through no desire of his own, he was forced to take an active part in the controversy brought about through the condemnation of the "Donatist" by the Emperor Justinian. The request of Pope Vigilius the Roman deacons Pelagius and Anatolius submitted the questions involved in the emperor's censure of the works of Theodore of Mopseustia, Theodoret of Cyrus, and Ibas of Edessa, to their Cathaginian confreire, requesting him at the same time to lay the matter before the African bishops. Ferrandus at once declared himself in the most emphatic manner against yielding to the schemes of the emperor (Ep. vi, ad Pelagium et Anatolium discos). His decision met with the approval of Rusticus, Archbishop of Carthage, and was subsequently ratified by the council of African bishops over which Rusticus presided and in which it was agreed to hold all relations with Pope Vigilius. Ferrandus died shortly after this event and before the Council of Constantinople was convened. [For his works see P. L., LXVII.

AUGOLLET, Cartage Romaine (Paris, 1901), 555 sqq.; MAERTEN, Gesch. d. Quellen und L. des kanon. Rechts (Graz, 1870); 2, 799-802; BADENHUEVER, Pathologie, tr. SHAHAN (Freiburg im Br.; St. Louis, 1908), 816.

P. J. HEALY.

Fullerton, Lady Georgiana Charlotte, novelist, b. 23 September, 1812, in Staffordshire; d. 19 January, 1892. She was the youngest daughter of Lord Granville Leveson Gower (afterwards first Earl Granville) and Lady Harriet Elizabeth Cavendish, second daughter of the first Duke of Devonshire. She was chiefly brought up in Paris, her father having been appointed English ambassador there when she was twelve years old. Her mother, a member of the Anglican Church, was a woman of deep religious feeling and Lady Georgiana was trained to devotion. In 1833 she married in Paris an attaché of the embassy, Alexander George Fullerton, who was of good Irish birth and had previously been in the Guards. In 1841, when Lord Granville retired from the embassy, Lady Georgiana and her husband travelled for some time in France, Germany, and Italy. Two years later, Mr. Fullerton was received into the Church, after long and thoughtful study of the religious questions involved in this step. In 1844 his wife published her first book, "Ellen Middleton," a tragic novel, of some power and showing markedly "High Anglican" religious views, so that Lord Brougham pronounced it "rank Popery." It was well received, and was criticized by Mr. Gladstone in "The English Review." Two years after, in 1846, the author placed herself under the instruction of Father Brownhill, S. J., and was received by him into the Church on Passion Sunday. In 1847 she published her second book, "Granite Manor," which is largely a study of character, and is usually considered an advance, from a literary point of view, upon the first. There was then a pause in her published work, which was continued, in 1852, with the story of "Lady Bird." In 1855 her only son died, a loss she never quite recovered from, and henceforth she devoted herself to works of charity. In 1863 she joined the Order of the Grey of St. Francis. She and her husband eventually settled in London and her literary work became a large part of her life. She not only wrote novels, but a good deal of biography, some poetry, and made translations from French and Italian. All her books have distinction and charm. Some of her chief works are: "Ellen Middleton" (London, 1854); "Granite Manor" (London, 1854); "Lady Bird" (London, 1865); "Les Comtesse de Bonneval," written in French (Paris, 1857); the same translated into English (London, 1858); "Laurentia," a tale of Japan (London, 1904); "Constance Sherwood" (Edinburgh and London, 1908); "Seven Stories" (London, 1896).

KATE M. WARREN.

Fullo (The Fuller). See Peter Fullo.

Fumo, Bartolommeo, theologian, b. at Villon near Piacenza; d. 1545. By an early age he entered the Dominican Order and made great progress in all the theological sciences. He was distinguished as an inquisitor at Piacenza, but is best known for his work, "Summa casuum conscientiae, aurea armilla dicta." This work, which was dedicated to Bishop Catelan of Piacenza, went through many editions, the two most important and best known being those of Antwerp (1591) and Lyons (1594). It is held in high esteem by bibliographers because it exists in the manuscript of the time, especially because it contained, in brief and copious form, a digest of all similar explanations since the thirteenth century. In one or two places, by a series of clear and clean cut sentences, he refutes all the errors of probabilism. The authorship of the work has been disputed by one or two, but without reason. He is also the author of "Expositio compendiosa in epistolas Pauli et canonicals," and a book entitled, "Poemata quaedam." His first work, "Philosothia, opus immortalis animi dignitatem continens," was dedicated to Catalan before he became bishop.

H. J. SMITH.

Funchal, Diocese of (Funchalensis), in the Madeira Islands. Both in neo-Latin and in Portuguese the name of the town signifies "fennel" (Lat. famicus). Madeira, the Purpura of the Romans, situated in the extreme west of the ancient world, about 440 miles from the coast of Morocco, was discovered in 1414 by the famous Bristol lovers (Amanas de Bristol), Anna Dorset and Robert O'Machin; later it was abandoned. In 1419 Joan Gonçalves and Tristan Vas took possession of the island. In 1446 were first planted the vines (brought from Crete) that have since rendered Madeira so famous. The Christian inhabitants were subject at first to the Bishop of Tangier, until Leo X (16 June, 1514) made Funchal an episcopal see. In the interest of the vast territories in Africa and Asia then subject to Portugal, Clement VII (8 July, 1530) raised Funchal to an archiepiscopal see and gave it for suffragans Angra, Cabo Verde, Goa, and Santo Thome. In 1551, however, it was reduced to simple episcopal rank, and in 1670 was made a suffragan of Lisbon, which it is to the present.

Funchal is delightfully situated on the south side of the Madeira Islands, and was therefore the first halting place for Portuguese and Spanish ships on their way to
the New World. Owing to this natural advantage the island soon became a great centre of wealth and for- ever afterwards known to the Portuguese as the capital of the Gospel whose missionaries found the islands con- venient as a resting-place going and coming. Funchal was once to the Portuguese what Gibraltar, St. Heleas, and Malta now are to the English. Therefore they garrisoned the city, though naturally defended by its rugged cliffs, and built there four impregnable for- tresses. These five or more do not ex- hibit their former architectural splendour, though, as late as the beginning of the nineteenth century, the lintels and jambs of the windows in many houses were of massive silver, and the church vessels of solid gold (chalices, pyxes, monstrances) were thickly studded with precious stones and pearls, according to the wealth of the owners. Funchal has long been a favourite resort of invalids, especially those suffering from diseases of the lungs. Its white villas and edifices, embowered in rich tropical vegetation, charm the traveller as he approaches from the sea. The roads and streets are quite steep and the usual means of transportation is by ox-eled. The population of the city is (1909) about 20,000. According to the “Annuaire Pontifical” for 1906, the diocese contains about 150,000 Catholics, with 50 par- ish churches, 80 public and two conventual chapels, all ministered to by 93 priests.

F. Fitte.

Fundamental Articles.—This term was employed by Protestant theologians to distinguish the essential parts of the Christian faith from those non-essential doctrines, which, as they believed, individual churches might accept or reject without forfeiting their claim to rank as parts of the Church universal. During the seventeenth century, the view that doctrines might be thus distinguished into two classes was widely current in the various reformed bodies; and several well- known divines endeavoured to determine the principle of the division. In some cases their aim was mainly practical. They hoped in this way to find a dogmatic basis for union between the separated churches. Moreover, the system was used controver- tially to defend the position of the Protestant bodies against the arguments of Catholics.

The first to advance the theory seems to have been George Casander (1513–60), a Catholic by religion, but apparently little versed in theology. In his work “De officio pii ac publice tranquillitatis vere amantis viri in his rebus religionis dissidio” (1551), he maintained that in the articles of the Apostles’ Creed we have the true foundations of the Faith; and that those who accept these doctrines, and have no desire to sever themselves from the rest of Christendom are part of the true Church. He believed that thus it might be possible to hold a means of transtion from Rome to the Church of England, and Protestants. But the proposal met with no favour on either side. The Louvain professors, Hesse- lius and Ravesteyn, showed that the theory was irreconcilable with Catholic theology; and Calvin no less vehemently repudiated a system so little hostile to Rome. Among Protestants, however, the view soon spread that there were articles of the Faith on which it was impossible to accept any other doctrines than their own. These were the articles of the Apostles’ Creed and the Confessions of the Reformed churches. In the end, therefore, the division of the Church was complete, and the division of the Christian world was almost as complete as it was in the days of the Reformation. The division of the Christian world was complete, and the division of the Christian world was almost as complete as it was in the days of the Reformation.
as the rule and Law of Christians” (Système, p. 53). Yet among the various portions of the Church we must, he tells us, distinguish four classes: (1) the sects which have retained all the truths taught in the Scrip-
tures; (2) those which, while retaining the most important truths, have mingled with them superstitions and errors; (3) those which have retained the fundamental truths, but have added doctrines which are incompatible with them; and (4) those which have set the fundamental verities altogether aside. This last class are dead members of the mystical body (ibid., p. 53). Those who have retained the central articles of the faith are, one and all, living parts of the Church. When he comes to define precisely which doctrines are, and which are not, fundamental, Jurieu bids us fall back on the rule of Vincent of Lérins: \textit{Quod semper, quod ubique, quod ab omnibus.} Where-
ever all bodies of Christians still existing, and possessing some importance in the world, agree in accepting a dogma, we have, in that agreement, a criterion which may be considered infallible. Among truths so guar-
teed are, e. g., the doctrine of the Trinity, of the Divinity of Jesus Christ, of the Redemption, the satis-
faction, original sin, eternal generation, the immortality of the soul, the eternity of punishment (ibid., 236–237). This work was followed, in 1688, by another entitled “Traité de l’unité de l’Église et des articles fondamentaux”, written in reply to Nicole’s criticisms. In the same year appeared Bossuet’s famous “Histoire des Variations des Églises protestantes”: The Bishop of Meaux showed how all the difficulties of the different theory of the Church advanced by Protestant theologians to defend their position. The first reformers had accepted the Scriptural doctrine of an indefecti-
ble visible Church. When it was demonstrated that this doctrine was totally incompatible with their do-
nouncements of pre-reformation Christianity, their suc-
cessors took refuge in the theory of an invisible Church. It had been made patent that this was con-
trary to the express words of Scripture; and their con-
troversialists had, in consequence, been compelled to look for a new position. This Jurieu had provided in his theory of a Church founded upon fundamental articles. Bossuet’s polemic was the death-blow of the new theory. Jurieu, it is true, replied; but only in-
volved himself in yet further difficulties. He argued against the main thesis of the “Variations” by con-
tending that changes of dogma had been characteristic of the Christian Church from its earliest days. Bossuet, in his “Avertissement aux Protestants commen-
tes lettre de M. Jurieu”, was not slow in pointing out that if this were true, then the principle, \textit{Quod semper, quod ubique, quod ab omnibus}—according to Jurieu the criterion of a fundamental article—had ceased to pos-
sess the smallest value. (Avertissement, I, n. 22.)

In regard to the relation of the fundamental doc-
trines to salvation, Jurieu is in agreement with the English divines already quoted. “By fundamental points”, he says, “we understand certain general principles of the Christian religion, a distinct faith and be-
lief in which are necessary to salvation” (Traité, p. 49, note 43). Only the same words occur in his “Reasonableness of Christianity”. After enumerating what he regards as the fundamental ar-
ticles of faith, he says: “An explicit belief of these is absolutely required of all those to whom the Gospel of Jesus Christ is preached, and salvation through his name is promised” (Works, ed. 1740, I, 623). Walter

law’s doctrine of Fundamentals should perhaps be mentioned, since it is the only work by an Anglican

divine explicitly devoted to this subject. Its professed aim is to determine a basis for intercommunica-
tion among various Christian bodies. But the whole treatment is quite academic. It had become patent that the basis for the task of determining which articles were fundamental. No one could decide what should be the principle of selection. Waterland enumerates no less than ten different views on this point, which he rejects as inadequate. “We have”, he says, “almost as many different rules for determining fundamentals as there are different sects or par-
ties.” Yet he concludes, his own principle having as little

to-day that still think that while the differences be-
tween the various bodies of Christians are unessential, there is a residuum of fundamental truth common to all the principal groups of believers. From time to time, this view has taken effect in efforts after partial reunion among certain of the sects. These events, however, fall outside our scope: for they stand in no historic connexion with that doctrine of fundamental articles, which in the seventeenth century filled so important a place in Protestant theology.

It remains briefly to notice the manner in which the theory conflicts with the modern idea of a Church. As the difficulties are many, it is the revealed word of God. The conscious rejec-
tion of a single article of this deposit is sufficient to render a man guilty of heresy. The question is not as to the relative importance of the article in question, but solely as to whether it has been revealed by God to man. This is clearly put by St. Thomas Aquinas in the “Summa Thol.”, I-II, Q. v, a. 3: “In a heretic who rejects a single article of the faith, there remains not the virtue of faith whether as united with charity \textit{formata}, or as severed from charity \textit{infor
disce}... The formal object of faith is the Supreme Truth in so far as revealed in the Holy Scriptures and in that doc-
true of the Church which proceeds from the Supreme Truth. Hence if anyone does not hold to the doc-
ture of the Church as to an infallible and divine rule, ... he does not possess the virtue of faith.” The

Church does not deny that certain truths are of more moment to man than others, but the moment which it is important that all the faithful should pos-
sess explicit knowledge. In regard to others explicit knowledge is not necessary. But it denies emphat-
ically that any Christian may reject or call in question any truth, small or great, revealed by God. On the

other hand, the system of Fundamental Articles, in each and all of its forms, involves that while some truths are of such importance that they must of neces-
sity be held, there are others of less importance which an individual Christian or body of Christians may freely deny without forfeiture of grace. (2) No less complete is the disagreement as to what is requisite in the ac-
ceptance of a Church. The Church must be the true Church of Christ. In the system under review it is maintained that all the sects which accept the funda-
mental articles of the faith are partakers in this privilege. The Catholic Church knows of one and

only one test to determine this question of membership in Christ’s body: this test does not rest on the

acceptance of this or that particular doctrine, but in

conjunction with the Apostolic hierarchy. Such is the unanimous teaching of the Fathers from the earliest times. By way of illustration the words of Saint Irenæus may here be cited: “They who

are in the Church”, he writes, “must yield obe-

dience to the succession from the Apostles, and who with the succession of the episcopate have received ... the sure gift of truth.
Let them hold in suspicion those who sever themselves from the succession. These have all of them fallen from the truth" (Adv. Haer., IV, xxvi, 2). The theory which finds the one requisite in the acceptance of a series of fundamental articles is a novelty without warrant in Christian antiquity. (3) It is manifest that the theory is destructive of that unity in faith and in corporate communion, which Christ Himself declared should for ever be the guarantee of the Divine origin of the Church (John, xvii, 21), and which the Catholic Church has ever exemplified as truth and may be now. It is manifest, that on his theory the separate sects might be in a position of mutual excommunication, and yet remain members of the Church.

To sum up: the system of fundamental articles is repugnant to the religion of Christ. It is a stage in the disintegration of religion, consequent on the admission of the principle of private judgment in matters of faith; and it is a stage which is necessarily destined to lead on to the complete rejection of revealed truth.

G. H. JOYCE.

Funeral. See Burial.

Funeral Dues, the canonical perquisites of a parish priest receivable on the occasion of the funeral of any of his parishioners. This right of the parish priest is twofold: first, the right to an offering when a parishioner is buried within the limits of the parish to which he belonged; second, the right to a fourth (quarta funeraria) of the dues when a parishioner is buried outside the limits of the parish. (The ancient episcopal quarta funeraria has fallen into desuetude.) The right to the quarta funeraria is founded on the obligations of a parish priest to his parishioners during life, and the correlative duties of those to whose care he ministers; since the labourer is worthy of his hire, it is but just that should the parishioner elect to be buried in a parish other than that to which he canonically belongs, the parish priest should not altogether be deprived of the emoluments for his past services. The Council of Trent (see XV, xxv, c. xxi) grants the rights of the deceased. The "fourth portion" is the name of "quarta funeraria"; but other designations were common in earlier times, e.g. "portio canonica" (canonical portion), "quarta portio" (fourth share), "justitia" (justice) since it was considered a just reward for the work of a parish priest in his care of souls. That these funeral dues are not of recent origin is clear from ancient ecclesiastical enactments (Cap. Cum Quis, II, De sepulchris, in VI°). Leo III (Nos instituta) refers to this ancient discipline of the Church: "Do not break away from the old rules which our forefathers have laid down for us. In 680, in the first council, we find that there were four payments which the Church could legally claim; and among them was the payment called "soul-shot". This payment was the mortuary charge ordered to be fixed for the dead, while the grave was yet open, or to be reserved for the church by which the deceased belonged, if his body was buried in any place out of his "shriftshires", i.e. his proper parish (Lingard, "Antiquities of the Anglo-Saxon Church", I, iv).

As a price for burial, the parish priest can demand nothing without incurring the suspicion of simony. Burial is a spiritual right belonging to the faithful; and the parish priest has no right to perform this duty for his parishioners. Nevertheless, if there is a legitimate custom which allows offerings to be made, or if the bishop should have established a fixed scale of offerings, the parish priest may demand such fees provided he in no way incurs suspicion of extortion. Also, in case of funerals with more than the ordinary burial service, a demand for payment for extra labour or to cover expenses for payment with canon law. The Roman Ritual (tit. vi, De exequiis, n. 6) lays down that the amount to be charged for funeral services is to be fixed by the bishop; but it also insists that in all cases of the poor who die with little or no property the parish priest is bound to bury them without charge (ibid. n. 7). This burden may be relieved by the immemorial affection of the Church for the poor (Tert., "Apol.", xxxix; Ambrose, "De Off.", II, exilii; Schultze, "De Christ. veter. rebus sepulchris.", Gotth., 1879, 24). Emperor Constantine created at Constantinople a special association for the burial of the poor (Lec. "Begräbnisrecht", 208). The medieval Church granted indulgences for the burial of the poor, and her synods and bishops frequently inculcated the same as a work of mercy. While the parish priest is not bound to offer Mass on that occasion, he is warmly recommended to do so by Benedict XIV (Instr. 36) and other ecclesiastical authorities (Lec. op. cit., 208-11).

The Council of Trent (Sess. XXII, c. xxvii) laid down the rule that funerals were to be associated with the mass of the dead person, and that the bishop was to have the right to impose such expenses as his discretion might seem to require. If the parishioner is buried outside his parish, the parish priest, as has already been said, is entitled to a fourth of the burial fees. This fourth has to be paid by the church of the parish in which the burial takes place, and it includes that proportion of all the emoluments that come to the church by reason of the funeral up to the thirtieth day after the funeral. In the case of the funeral of a canon, the "quarta funeraria" is due, not to the parish priest of the cathedral, but to the parish priest of the deceased canon's domicile. As a matter of practice at the present day there are many churches exempt from the payment of the quarta funeraria, such exemption having been obtained either by papal privilege or by prescription. Many monasteries, and indeed whole orders, have been exempted by pontifical privilege (St. Pius V, Etsi Mendicantium, 16 May, 1567; Paul V, Decret. Romana, 20 Aug., 1605). Benedict XIII, in 1725, annulled all exemptions, so far as Italy and the adjacent islands were concerned. By custom or prescription the obligation of paying the quarta funeraria has been done away with in most places, although it still exists, for instance, in the Diocese of Paris (France). With regard to the fees for burial in our own time, there is no customary uniform fee, and the fees charged vary very much. Although the fees are not very definite on the matter. Generally speaking, if a church has a cemetery attached a scale of fees is drawn up and approved by the bishop for that church, the charges varying according to the degree of solemnity with which the funeral is carried out. In cemeteries not attached to a church, and which are wholly Catholic, the administrator may fix a fee for each funeral, or more commonly a yearly stipend to the cemetery chaplain. Where the cemetery is controlled by secular authority, the funeral fees are arranged for and paid by the local authority; but the amount of the fee varies according to the locality.

Teston. The Laws of Divorce (Paris, 1904); Ferrand, Bibliae praecepta, n. 4, Sepulcrum; Mamy, De Locis Sacris (Paris, 1904); Bouill, De paroeha; Vachette, Institutiones canonicae; Alberti, De Sepulcrarum eccles. (1205), Hydrop.
his services in defending the Church against the Paturini, which was permitted by Clement III to wear the pallium and to have the cross borne before him, a custom which led to many difficulties with the Archbishops of Gran, but was nevertheless confirmed by Benedict XIV (1754); Wilhelm (1360-1374), during whose episcopate the cathedral school was raised to the rank of a university (1367), which flourished for a time, but which ceased to exist after the defeat in battle of Louis II by Solymon I in 1526; Anton Vranckes (1553-1557) and Georg Draskovich (1557-1683) who worked zealously for the reform of the religious life and were elevated to the cardinalate. After the conquest of the city by the Turks in 1543, the cathedral was transformed into a mosque, and it was only

in 1667, after the expulsion of the Turks, that it was again opened for Christian worship. Under Bishops Franz Nesselrode (1703-1732) and Georg Girk (1553-1586), diocesan synods were held. Bishop Ignatius von Szepessy (1828-1869) founded a lyceum with a faculty of theology and law. A restoration of the cathedral in approved style was made by Ferdinand Dulanovsky. The cathedral chapter numbers ten canons, six honorary canons and two prebendaries. The diocese is divided into two archidiaconates and twenty-two vice-dioceses; it embraces 175 parishes, with 258 dependent churches and stations, and six curacies. Of the parishes 33 are German, 54 Magyar and the rest composed of mixed nationalities. The number of Catholics in the diocese amounted in 1906 to 503,981. In the same year, there were 306 secular priests and 40 religious. The following orders of men exist in the diocese: Cistercians (1 monastery, with a college); Franciscans (7 monasteries); Brothers of Mercy (1 convent); Orders and congregations of women: Canonesses of Our Lady (1 convent); Sisters of Charity of St. Vincent de Paul (11 convents); Sisters of Providence, of the Holy Redeemer, of the Holy Cross (1 convent each). The territory of the diocese embraces the counties of Baranya and Tolna, and part of the counties of Somogy and Verőce.

FUNK, Franz Xaver von, church historian, b. in the small market-town of Aßgäumünd in Württemberg, 12 October, 1840; d. at Tübingen, 24 February, 1907. The son of an inn-keeper, Franz first attended the gymnasium at Ellwangen, and, on finishing his course of secondary studies, proceeded in 1859 to the University of Tübingen. Residing at the theological house of studies called Wilthemstift he studied philosophy and theology, and also found time to attend courses on classical philology and political economy with such profit that in 1858 he gained the prize offered by the
fakultät of political science for the best essay on the theme: "Was verstand man im 18. Jahrhundert unter Polizei?" (What signification had the word police in the eighteenth century?) ed. F. X. von Kugelgen, his research treated subjects connected with political economy.

Having received his doctorate of philosophy in 1863, he devoted a year in the ecclesiastical seminary to moral theology and preparation for the priesthood.

He was ordained at Rottenburg, 10 August, 1864, and his first work was in the care of souls; he felt, however, that the whole bent of his mind lay in the direction of intellectual labour.

In October, 1865, he obtained permission to proceed to Paris to pursue further the study of political economy; the journey through France and his residence at Paris acted as a great master to his scientific career.

He was appointed tutor at the Wilhemstifft, where his duty was to direct the personal studies and preparation for examinations of the theological students. When Hefele, then professor of church history at Tübingen, was called to Rome in 1868 as consultant during the preparation for the Vatican Council, Funk acted as substitute.

Hefele did not return to his chair, being appointed Bishop of Rottenburg on 17 June, 1869, and Funk was appointed his successor.

In 1870 Funk was named extraordinary, and in 1875 ordinary professor of church history, patrology, and Christian archaeology, an office which he filled till his death.

His life was devoted entirely to his studies, to his professional duties and historical researches, especially to the various branches of the history of the early Church.

His first important publications belong to the sphere of political science and the history of economics, and include the two treatises, "Zins und Wucher, eine moraltheologische Abhandlung" (Tübingen, 1868), and "Geschichte des kirchlichen Zinsverbotes" (Tübingen, 1878).

Other articles on the same subject written by him either during this or a later period are: "Klemens von Alexandrien über Familie und Eigentum" (Theolog. Quartalschrift, 1871, 427-449; reprinted in "Kirchengeschichtliche Abhandlungen und Untersuchungen", II, 45 sqq.); "Handel und Gewerbe im christlichen Altertum" (Theolog. Quartalschrift, 1876; reprinted in "Kirchengesch. Abhand. u. Untersuch.", II, 60 sqq.); "Über Reichtum und Handel im christlichen Altertum" (Ibid., III, 150 sqq.); and "Das politische System des Kaiserreiches der Römer" (Ibid., IV, 42 sqq.).

Funk's professorial duties and his early study of classical philology soon led him into the province of early Christian literature and church history, and in this department he accomplished his most important work as a scholar. In the former department his task was the conviction of the then novel effort to prepare new editions of texts, prepared in accordance with the rules of historical and textual criticism.

His predecessor Hefele had issued a scholarly edition of the works of the Apostolic Fathers, "Opera patrum apostolorum", but the last edition was that of 1855, and the discovery of important manuscripts rendered a new edition necessary.

Funk undertook the task, and the "Opera patrum apostolorum" appeared in two volumes (Tübingen, 1878-1881), the first containing the authentie and the second the apocryphal writings. After the discovery of the Didache, a new edition of the first volume was issued in 1887; a fresh edition (the second) of the whole work appeared in 1901.

The "Sammlung von Quellenschriften" (Tübingen, 1901; 2nd ed., 1906) contains a synopsis with the text of the authentic writings. Funk also published separately the Didache and certain of the early writings connected with this work ("Docetica XII apostolorum", "Catholicum, religio de duabus vis expositiones vetere", Tübingen, 1887). His studies of the "Apostolic Constitutions" led Funk to the conviction that the existing editions of the "Constitutiones apostolorum" and of the Syrian "Didascalia apostolorum" were unsatisfactory.

He devoted many years to the preparation of a new edition, which was given to the public in 1865 ("Didascalia et Constitutiones Apostolorum", ed. F. X. von Kugelgen, published by the Didascalia, the Apostolic Constitutions, the "Canaones Hippolyti", the Egyptian Church Order, and the "Testamentum Domini nostri Jesu Christi" discovered by Rahmani. In opposition to the somewhat different views of other investigators, Funk sought to establish the connection between these writings, and from the date of their origin. The two works, which Funk devoted to this object, are: "Die Apostolischen Konstitutionen" (Tübingen, 1891), and "Das Testament unseres Herrn und die verwandten Schriften" (Mainz, 1901). Similar investigations in the field of literary history and numerous questions touching the history, discipline and life of early Christianity formed the subject of the numerous articles which Funk contributed to various periodicals during the many years of his academic activity. Most of these articles were published in the "Tübingen theologische Quartalschrift", the "Historisch Jahrbuch der dörflichen Geschichte", the "Historisch-politische Blätter" or in the "Revue d'histoire ecclésiastique".

Funk's best-known works are "Abhandlungen" (II, 108 sqq., 236 sqq., 359 sqq., III, 64 sqq., 216 sqq., 275 sqq., 350 sqq., 362 sqq., 381 sqq.); the early Christian penitential discipline and the catechumenate (Ibid., I, 155 sqq., 182 sqq., 351 sqq., III, 42 sqq.), "Bischöfe der Klasse in den großen Ordens" (Ibid., I, 121 sqq.) the Agape and the Eucharistic Sacrifice (Ibid., I, 278, 293 sqq., III, 1 sqq., 65 sqq., 134 sqq.).

One subject to which he often returned and which involved him in a long controversy with other scholars, especially with Father Knealer, was the so-called "ordo ecclesiae". Funk returned to the subject again in the "Zeitschrift für katholische Theologie" (1900), 75-99.

Of the various contributions to later Church history, which flowed from Funk's industrious pen, may be mentioned the "Abhandlungen zur Geschichte der altbrittenischen Kirche" (Abhand., I, 421 sqq.), "Gerson und Gerson" (Ibid., II, 473 sqq.), "Der Verfasser der Nachfolge Christi" (Ibid., II, 408 sqq.), "Zur Gallei-Frage" (Ibid., II, 434 sqq.). Funk was an industrious contributor to the second edition of Herder's "Kirchenlexikon", in which are found no less than 136 articles, some of considerable length, from his pen. For Kraus's "Real-Encylopädie der christlichen Altertumer" he also wrote several articles.

The excellence of his "Lehrbuch der Kirchengeschichte", as a general church history, is universally recognized, the first edition appeared in 1865, and the 1907 edition before his death, the tireless worker being suddenly cut down in the midst of his labours by an apoplectic stroke. The Tübingen "Theologische Quartalschrift" for 1907 (p. 236 sqq.) contained a posthumous article of Funk's on the reputed writings of St. Hippolytus.
Furness, John, a well-known children’s missioner, b. near Sheffield, England, 19 June, 1809; d. at Clap-ham, London, 16 Sept., 1865. His father was a wealthy master-cutter. He was educated at Sedgley Park, Oscott, and Ushaw College, where he became a priest in 1834. He was resident priest at Doncaster for five years, but his health having given way, he travelled during eight years through Europe and the East, rather as a pilgrim than a tourist. After his return home, 1847, he spent some time at Islington, London, working for the welfare of the waifs and strays, for “Suffer little children to come to me” was his motto then as in after years. He became a professed member of the Congregation of the Most Holy Redeemer at St. Trond, Belgium, 1851, and afterwards gave missions in England and Ireland; but from 1855 until his death he devoted himself wholly to giving missions to children. He was the founder of children’s missions and “the children’s Mass”, and by his writings systematized the philosophy of religious training. These missions lasted sometimes three weeks, and were given not only to school-children, but to working boys and girls. His maximal was that “nothing so disgusted children as monotony”, and therefore he had the praise of Mass and the Rosary sung to simple airs, and his sermons seldom lasted more than twenty minutes. He entered fully into the mode of thought of the child-mind, and, speaking quietly but with great dramatic power from a platform, he always riveted their attention. He was a wonderful story-teller, seldom moving to laughter but often to tears. He spent his spare time writing books for children which, though written with the utmost simplicity of language, are models of good English. His chief works are “The Sunday-School Teacher” and “God and His creatures”, which has been published in French. He wrote a series of answers in an attack on his works by the “Saturday Review”, which was then the great organ of unbelief in England. His writings were assailed as “infamous publications” by the rationalist historian Lecky in his “History of European Morals”, chiefy on account of the somewhat lurid eschatology of the children’s books. More than four millions of his books have been sold throughout English-speaking countries. [Liy, Father Furness and His Work for Children (London, 1861); Bampoe, Bishops and Paragons (London, 1900); Durville, Le Moinnart des enfants (Tournai, 1846).] ALBERT BARRY.

Fursey, Saint, Abbot of Lagny, near Paris, d. 16 Jan., about 660. He was the son of Finan, son of Finloga, prince of South Munster, and Gelgisa, daugh-
letter of Aedhfin, prince of Hy-Bruin in Connaught. He was born probably amongst the Hy-Bruin, and was baptised by St. Brendan the Traveller, his father's uncle, who then ruled a monastery in the island of Ochruin, by miracles born in Luichborg Corrib. He was educated by St. Brendan's monks, and when of proper age he embraced the religious life in the same monastery under the Abbot St. Meldan, his "soul-friend" (anam-chara). His great sanctity was early discerned, and there is a legend here, that through his prayers, twin children of a Church-bell were restored to life after they had been raised from the dead. After some years he founded a monastery at Rathmat on the shore of Lough Corrib which Colgan identifies as Kilkurre, in the deanery of Annadown. Aspirants came in numbers to place themselves under his rule, but he wished to secure also some of his own relatives for the new monastery. For this purpose he set out with some monks for Munster, but on coming near his father's home he was seized with an apparently mortal illness. He fell into a trance from the ninth hour of the day to cook-crow, and while in this state he was favoured with the first of the ecstatic visions which had distinguished his progenitor. In this vision he was revealed to the state of man in sin, the remedies for sin, the beauty of virtue. He heard the angelic choirs singing "The saints shall go from virtue to virtue, the God of Gods will appear in Sion." An injunction was laid on him by the two angels who revealed to him the import of the more solemn labours of the harvest of the Lord. On the third night following, the ecstasy was renewed. He was rapt aloft by three angels who contended six times with demons for his soul. He saw the fires of hell, the strife of demons, and then heard the angel hosts sing in four choirs "Holy, holy, holy Lord God of hosts! Among the spirits of the just made perfect he recognised Sta. Meldan and Becon. They entertained him with much spiritual instruction concerning the duties of ecclesiastics and monks, the dreadful effects of pride and disobedience, the heinousness of spiritual and internal sins. They also predicted famine and pestilence. As he returned through the fire the demon hurled a tortured sinner at him, burning him, and the angel of the Lord said to him: "because thou didst receive the mantle of this man when dying in his sin the fire consuming him hast scarred thy body also." The body of Fursey bore the mark even in this life; for thirty days Fursey joined the community at Rathmat, but Fursey seemed to have renounced the administration of that monastery and to have devoted himself to preaching throughout the land, frequently exorcising evil spirits. Exacty twelve months afterwards he was favoured with a third vision. The angel remained with him a whole day, instructed him for his preaching, and prepared him for twelve years of apostolic labour. This he faithfully fulfilled in Ireland, and then stripping himself of all earthly goods he retired for a time to a small island in the ocean. Then he went with his brothers and other monks, bringing with him the relics of Sts. Meldan and Becon, through Britain to East Anglia where he was honourably received by King Siegbert in 633. The latter gave him a tract of land at Cnotheresburg on which he built a monastery within the enclosure of a Roman fort—Burgh Castle in Suffolk—surrounded by woods and overlooking the sea. Here he laboured for some years converting the Picts and Saxons. He also received King Siegbert into the religious state. Three miracles are recorded of his life in this monastery. Again he retired for one year to live with Ullan the life of an anchorite. When war threatened East Anglia, Fursey, disbanding his monks until a quiet time should come, sailed with thirteen brothers and six other monks to Ireland. He arrived in Normandy in 648. Passing through Ponthieu, in a village near Meserelles he found grief and lamentation on all sides, for the only son of Duke Haymon, the lord of that country, lay dead. At the prayer of Fursey the boy was restored. Pursuing his journey to Neustria he cured many infirmities on the way. He worked miracles by blessing the women who attacked the monks in the wood near Corbie, and also the inhospitable worldling Ermelinda, who had refused to harbour the weary travellers. His fame preceded him to Paris, where he was joyfully received by Erkinoald, the Mayor of the Palace to Clovis II, who was then a minor. He baptised the son of Erkinoald, and through his prayers obtained the reprieve of six criminals. He was offered any site in the king's dominions for a monastery. He selected Latiniacum (Lagny), close to Chelles and about six miles from Paris, a spot beside the Marne, covered with shady woods and abounding in fruitful vineyards. Here he built his monastery and three chapels, one dedicated to the Saviour, one to St. Peter, and the third, an unpretending structure, afterwards dedicated to St. Fursey himself. Many of his countrymen were attracted to his rule at Lagny, among them Emilian, Eloiquis, Mombulus, Adalgisius, Etto, BerTuria, and other siegels, laetantiae in poenis. In this region the visions were revealed to him the state of man in sin, the remedies for sin, the beauty of virtue. He heard the angelic choir singing "The saints shall go from virtue to virtue, the God of Gods will appear in Sion." An injunction was laid on him by the two angels who revealed to him the import of the more solemn labours of the harvest of the Lord. On the third night following, the ecstasy was renewed. He was rapt aloft by three angels who contended six times with demons for his soul. He saw the fires of hell, the strife of demons, and then heard the angel hosts sing in four choirs "Holy, holy, holy Lord God of hosts! Among the spirits of the just made perfect he recognised Sta. Meldan and Becon. They entertained him with much spiritual instruction concerning the duties of ecclesiastics and monks, the dreadful effects of pride and disobedience, the heinousness of spiritual and internal sins. They also predicted famine and pestilence. As he returned through the fire the demon hurled a tortured sinner at him, burning him, and the angel of the Lord said to him: "because thou didst receive the mantle of this man when dying in his sin the fire consuming him hast scarred thy body also." The body of Fursey bore the mark even in this life; for thirty days Fursey joined the community at Rathmat, but Fursey seemed to have renounced the administration of that monastery and to have devoted himself to preaching throughout the land, frequently exorcising evil spirits. Exacty twelve months afterwards he was favoured with a third vision. The angel remained with him a whole day, instructed him for his preaching, and prepared him for twelve years of apostolic labour. This he faithfully fulfilled in Ireland, and then stripping himself of all earthly goods he retired for a time to a small island in the ocean. Then he went with his brothers and other monks, bringing with him the relics of Sts. Meldan and Becon, through Britain to East Anglia where he was honourably received by King Siegbert in 633. The latter gave him a tract of land at Cnotheresburg on which he built a monastery within the enclosure of a Roman fort—Burgh Castle in Suffolk—surrounded by woods and overlooking the sea. Here he laboured for some years converting the Picts and Saxons. He also received King Siegbert into the religious state. Three miracles are recorded of his life in this monastery. Again he retired for one year to live with Ullan the life of an anchorite. When war threatened East Anglia, Fursey, disbanding his monks until a quiet time should come, sailed with thirteen brothers and six other monks to Ireland. He arrived in Normandy in 648. Passing through Ponthieu, in a village near Meserelles he found grief and
and through his influence warded off many a calamity from the city and principality of Münster.

After the death of Clemens August, Elector of Cologne, Prince-Bishop of Münster, on 6 February 1761, it was chiefly through the influence of Fürstenberg that Maximilian Friedrich von Königseck-Rothfels, who had succeeded Clemens August at Cologne (6 April, 1761), was also elected Prince-Bishop of Münster in September, 1762. In recognition for these services the new prince-bishop of Münster which had suffered severely during the Seven Years War. Everybody was deep in debt and all trade and commerce was at a standstill. To restore prosperity to the people he improved agricultural conditions by dividing the land into marks, draining marshes and reclaiming much soil which hitherto had lain idle or in pastureage. He ameliorated the condition of the serfs and gave an impulse to the entire abolition of serfdom. In order to liquidate the public debt he placed a duty on such imported goods as could be easily dispensed with, and for a space of six years levied a moderate capital tax from which the privileged were exempt. He improved the military and the sanitary system, the former by founding a military academy in Münster and by introducing the "Landwehr," the latter by founding a college of medicine (1773) and inducing its director, the learned Christopher Ludwig Hoffmann, to draw up a code of medicinal regulations which was justly admired throughout Germany as a model of its kind.

The greatest achievement of Fürstenberg was his reform of the educational system. During the latter half of the eighteenth century the higher educational institutions of Germany had become veritable hotbeds of rationalism and irreligion, and not infrequently pronounced freethinkers were engaged to instruct the candidates for the priesthood. These conditions were not only permitted but often directly favoured by a few unworthy but influential prelates, among whom must be numbered Fürstenberg's superior, Max Friedrich, the Elector of Cologne and Prince-Bishop of Münster. In order to react this state of affairs, Fürstenberg planned a reform of the educational institutions in the Diocese of Münster. Luckily he was not hampered in this by his superior, the prince-bishop. He began his reform with the gymnasium, as the basis of the education of the future Catholic priest, whom he considered the best and teacher of the people. After consulting with acknowledged educators, especially the Jesuits who then directed the gymnasia of Münster, he drew up a tentative plan for the gymnasium in 1770, which, after a few changes, was enforced by his famous school ordinance of 1776. According to the new plan great stress was laid on a thorough training in the moral and practical Christianity, and a study in Catholic philosophy was added to the curriculum. In the same year he turned the recently suppressed convent of Ueberwasser at Münster into a seminary where the hitherto neglected candidates for the priesthood could receive the requisite moral training. Fürstenberg then directed his attention towards the completion of the new University of Münster (approved in 1773) where, as an effectual safeguard against rationalistic tendencies, he appointed to professorial duties only men who had been educated at the schools of his diocese and whom he knew to be firmly grounded in their Faith. To the most talented he offered every opportunity to prepare for professorial positions and even gave them the means to pursue special courses at foreign universities. Fürstenberg's political activity came to a close in 1780, when Maximilian Franz, the brother of Emperor Joseph II of Austria, was elected condottier to Maximilian Friedrich as Archbishop of Cologne and Prince Bishop of Münster. Fürstenberg himself had applied to this position and undoubtedly would have been elected if it had not been for the great influence of the Court of Vienna which favoured the election of Maximilian Franz. Fürstenberg was obliged to resign the ministry but was allowed to retain the office of vicar-general and curator of the cathedral. He now turned his entire attention towards the remodelling of elementary education. Through his ordinances for elementary schools in 1782, 1788, and 1801, he freed the system of elementary education of at least the most striking abuses. In order to obtain zealous and competent teachers he founded a normal school in 1783, which he put in charge of the famous educator, Bernard Overberg. After Prussia had taken possession of Münster in 1803, Fürstenberg's influence over the educational system began to decline, and when in 1805 he protested against the appointment of a professor of Protestant theology at the Catholic University of Münster, he was consequently expelled as a profane from the city and deprived of education on the plea of age. In 1807 he also resigned the position of vicar-general. Fürstenberg's renown as an educator had drawn some of the greatest minds of Europe to Münster, among them the Princess Amelia von Galliain, in whose return to the Catholic Faith he himself had become a convert. In her youth, be was greatly interested in the Eises, Franz von Fürstenberg (Münster, 1842); Esch, Franz von Fürstenberg in Bibliothek der kath. Pädagogik (Freiburg in 1889), IV, 50-51; Gallia, LXXXIII, LXXXV, LXXXVI; Nordhoff in Allgemeine Deutsche Biographie s. v.; Enkol, Das Tätigwerden des Ministers Franz Friedrich von Fürstenberg auf dem Gebiete der unruh Politik des Fürstaumtes Münster 1763-1780 (Münster, 1905).

M. Ott.

Fuschi, Michael. See Michael of Chernia.

Fusola, a titular see in Numidia. It was a fortified town, inhabited for the most part by Donatists and situated forty miles from Hippo. St. Augustine appointed as its first Catholic bishop, about 416, a young man named Antonius, who afterwards caused him much anxiety (Ceilier, Historia Generalis des Gracies et ecclésias, I, 247 sqq.). A certain Melior is known to have been bishop in 484 (Gams, 465, col. 3), and the see still existed in the seventh century (Byzantische Zeit- schrift, 11, 25). The fortress of Fossula completed the defences of Hippo.

S. Vainh.

Fust (or Fauser), John, a partner of Gutenberg in promoting the art of printing, d. at Paris about 1488. He belonged to a wealthy family of Mains, but very little is known of his early life. In 1450 he became a partner of Gutenberg in the establishment of a printing plant at Mains, Fust furnishing the capital and taking a mortgage on the tools and materials as security. The partners carried on the business for several years, but the partnership was dissolved in 1455, when Fust brought suit against Gutenberg for the money that he had advanced and obtained possession of the printing apparatus. The business was then continued by Fust with his son-in-law, Peter Schoffer, of Germersheim, as partner. In 1462, when Mains was secured, Fust's workmen were scattered, and they carried with them to various countries the printing process which had been guarded as a secret in Mains. Fust continued the business, however, until about 1466, when he is thought to have gone to Paris and to have died there of the plague. Among the books that were issued from the press of Fust and Gutenberg the best known is the magnificent Latin "Bible of forty-two lines" (see illustration s. v. EDITIONS OF THE BIBLE), so called because it was printed forty-two lines to the page. It is known also as the Masarim Bible, because the first
known copy of it was discovered in Cardinal Mazarin's library at Paris. It is a fine specimen of the early printer's art. They also printed an indulgence granted by Pope Nicholas V to the King of Cyprus (1454–5). In partnership with Schöffer Fust published a Psalter (1457), the first printed book with a complete date; the "Rationale Divinorum Officiorum" of Durandus (1459); and Cicero's "De Officiis" (1465), the first printed edition of a classical author. Several other books that were printed by Fust and his partners are still extant, some of them very beautiful in their execution.

De Vitræ, The Invention of Printing (New York, 1878); Von der Linde, Gesch. der Erfindung der Buchdruckerkunst (Berlin, 1880), I.

EDMUND BURKE.

Fytch, William Benedict, an English Franciscan friar of the Capuchin Reform, whose family name was Filch; b. at Canfield, Essex, in 1583; d. 1610. His parents were of the Puritan party, and he himself professed Calvinism until he was sent to study in London, where he embraced the Catholic faith. He went over to Paris and entered the Capuchin Order. In 1599 he was at his own request sent to England; he had hardly landed when he was seized and cast into Wiscasset prison. Here he remained for three years, and whilst there held conferences with the heretics concerning the true Faith. He was at length released through the intervention of the French Ambassador and sent back to France, where he was appointed master of novices. He was held in great reverence at the French Court, and amongst the people on account of his gift of miracles and spirit of prophecy. He wrote several ascetical works, the most famous being his treatise "The Will of God", which was written in English, but speedily translated into various European languages. In 1625 this treatise was translated into Latin by order of the Minister General of the Order.

FATHER CUTHBERT.
Gabala, a titular see of Syria Prima. Ten bishops of this city are known between 325 and 653, the most famous being St. Hilary, writer and martyr (fourth century), and Severian, first the friend but later the enemy of St. John Chrysostom (see Echoes d'Orient, IV, 15–17; IX, 220). Since the sixth century Gabala has been an exempt archdiocese directly dependent on the Patriarch of Antioch. The diocese is again noticed in the tenth century (Echoes d’Orient, X, 97 and 140). When the Arabs took possession of the city in 639, they found there a Byzantine fortress, beside which the Caliph Moaviah erected a second. According to the Arabian geographer Yaqout, the Greeks recovered the city from the Mussulmans in 969, who recaptured it in 1081. The crusaders entered Gabala in 1109, and it was henceforth the seat of a Latin diocese. For the Latin titulars see Le Quien, III, 1169; Ducange, “Les familles d’outre-mer”, 795–796, and especially Eubel, I, 267; II, 173. Saladin took the city in 1187, and in 1517 it fell into the hands of the Sultan Selim. Gabala, at present called Djebeleh, is a caza of the vilayet of Beirut, and numbers 3000 inhabitants, all of whom are Mussulmans. There are to be seen here a small harbour, numerous ruins, sepulchral chambers, and ancient Christian chapels hewn in the rock, a Roman theatre, baths and mosques, one of which, formerly the cathedral, contains the tomb of the Sultan Ibrahim-Eddem, who died in 778.

S. VAILHÉ.

Gabatha (Aramaic גָּבָתָה) is the Aramaic appellation of a place in Jerusalem, designated also under the Greek name of Lithostrotos. It occurs only in John, xix, 13, where the Evangelist states that Pontius Pilate "brought Jesus forth, and sat down in the judgment seat, in the place that is called Lithostrotos, and in Hebrew Gabatha." The name "Gabatha" is certainly an Aramaic word, for by "Hebrew" St. John, like other New Testament writers, denotes the Aramaic language which was spoken commonly at the time in Judea. It is not a mere translation of "Lithostrotos", which properly means the tessellated or mosaic pavement whereon stood the judgment-seat, but which was extended to the place itself in front of Pilate's prætorium, where that pavement was laid. This is proved by the practice of St. John, who elsewhere gives Aramaic names as distinctly belonging to places, not as mere translations of the Greek. This is proved also by the fact that "Gabatha" is derived from a root (גָּבָתָה "back", "elevation"), which refers, not to the kind of pavement, but to the "elevation" of the place in question. It thus appears that the two names "Lithostrotos" and "Gabatha" were due to different characteristics of the spot where Pilate delivered Our Lord to death. The Aramaic name was derived from the configuration of that spot, the Greek name from the nature of its pavement. Efforts have been made by commentators to identify "Gabatha" either with the outer court of the Temple, which is known to have been paved, or with the meeting-place of the Great Sanhedrin, which was half within, half without the Temple's outer court, or again with the ridge at the back of the House of the Lord; but these efforts can not be considered as successful. The only thing that can be gathered with certainty from St. John's statement (xix, 13) is that "Gabatha" designates the local place in Jerusalem, where Pilate had his judicial seat, and whither he caused Jesus to be brought forth, that he might deliver in His hearing, and in that of the Jewish multitude, his formal and final sentence of condemnation.

FRANCIS E. GIGOT.

Gaboon (Gabun), Vicariate Apostolic of, formerly called the Vicariate Apostolic of the Two Guineas.—The name Gaboon (Gbabao) was originally given by the Portuguese to the estuary on which stands the town of Libreville, and to a narrow strip of territory on either bank of this arm of the sea. In the days of the slave trade it was merely a trading station on the Coast of Guinea which at that time extended from the Senegal to the mouth of the Congo River. At the present time the name of Guinea for this territory and the ecclesiastical title "The Two Guineas" have gone out of use both in the civil and the religious sense, and Gaboon designates the northern portion of French Congo, south of the Equator and lying between the Atlantic ocean and longitude 12 east of Paris. It is coextensive with the basin of the Ogowai River, to which should be added several small subsidiary streams as the Muni, the Kome, and the Rembo-Nkomi. Its surface though broken and uneven is at no point of great elevation, and is covered by a great dense, tropical forest interrupted only by some rocky plains in the south. The only roads are the tracks used by the natives, along which caravans travel on foot. The rivers are often blocked by rapids, so that navigation is both uncertain and hazardous. The climate is sultry, humid, and subject to storms, but the temperature remains almost stationary; the rainy season lasts from September to May. On the whole it is a healthy climate for men of temperate lives, and the mortality there is one of the lowest on the West-African coast. The population of Gaboon is very mixed, Gaboon being the geographical terminus of the migration drawn from the interior by trade. No doubt many of the races become broken up on the way, but those that reach the coast are slowly absorbed among the earlier settlers there. Indeed many of these tribes are semi-nomadic by habit, and change the sites of their villages as soon as the lands in their vicinity have become exhausted by crop-growing. It thus comes to pass every four or five years a new ethnographical map of the country is necessary. However it is possible to divide the peoples into several groups. Under the first group may be included the old slave-trading races that have been established a long time on the Coast. Of these the most important people are the Mpungwe, dwelling along the Gaboon estuary; they are mentioned in the eighteenth century by Dutch navigators. As a race they are intelligent and keen and enjoy an undoubted ascendency over the other black races. They are, moreover, gentle and hospitable, too hospitable perhaps. They easily fall victims to European vices.
and immorality and alcohol have almost wiped them out. Not more than a few hundred of them remain, many of whom go as traders far into the interior. The point of the Gaboon peninsula is occupied by the Bengas; the creeks or inlets of the Manda and the Muni by the Baseki, usually known as the Boulous (Bulu); both tribes live by fishing and are dying out from want. Their language is different from that of the Mpongwe. However the three tribes settled towards the South in the delta of the Ogowai, the Orongous (Orongu), the Galous, and the Nkomis use a slightly modified form of Mpongwe, follow the same customs, have the same female slave of the same kind, and engage in the rubber trade as well as in fishing. The second group is made up of one single tribe, the Fans or Pahouins (Pawin) who inhabit all the northern portion of Gaboon as far as the Ivindo, and in places are to be found along the left bank of the Ogowai. They are true barbarians and are an invading race, whose progress towards the coast goes on unceasingly. They do not deserve all that former travellers have said as to their ferocity, but they are very fierce-looking, muscular, warlike, and above all vindictive. They are not, however, slave-dealers, nor do they, properly speaking, own slaves; their wives are really their own personal property. Polygamy is more beastial among them than elsewhere. Nevertheless they are not victims to the grosser forms of immorality, in the same measure as other tribes are, but along the great rivers and at the coast alcoholism works terrible havoc among them. Those of them who dwell in the interior still practise cannibalism on their prisoners of war.

A third group of peoples is to be found in the southern part of the country; in this territory live tribes given over to slavery. Thus, for instance, the Esteiras and the Balkalis, who act as middlemen in trading with the tribes living on the coast, the Bayakas, Bapunus, Ndjavis, Ishogos, Mboteas, Shakés, Adumas, who in exchange for articles of commerce sell their children as slaves. These slaves are brought secretly to the coast, but are no longer shipped to the Antilles or Brazil, instead they are bought by the Mpongwe and Nkomis who are thus enabled to lead lives of idleness. All these groups of tribes are fetichism. They believe in a God who made the world, in an immortal soul and in retribution for evil; they worship spirits and ghosts, and are under the sway of sorcerers and secret societies, to which even the authoritie of their chiefs must yield.

The Catholic mission of the country by Capuchins from Italy left no permanent traces. About 1840 an American priest, Monsignor Barron, was the first to answer the appeal made for a priest of the Catholics among the freed negroes that the United States Government had shipped back to the coast of Africa. Monsignor Barron gave up an important post which he held under the Archbishop of Philadelphia and made two voyages to the Guinea Coast between 1840 and 1843. The Venerable Père Liber mann had just at this date founded at Amiens his new congregation of the Sacred Heart of Mary, which later was united with that of the Holy Ghost; he furnished the first missionaries to Monsignor Barron. In the first year six out of seven of the missionaries died as much of starvation as of sickness; the seventh, after incecidatable adventures, succeeded in reaching Cape Palms on the Gaboon. This was Père Bessieux and in September, 1843, Père Le Berre had set up a small fort there intended as a lookout for vessels engaged in the slave trade, and consequently Père Bessieux was able to erect the first station at this spot. The following year brought him many helpers, and among them Père Le Berre. In 1848 a slave dhow was captured by the French and forty-nine slaves were located near the mission station on a little plateau which was thereupon called Libreville (Freetown). Père Le Berre was given the official title of "Professor of Morals" and began instructing them. The next year the first nuns arrived, the French Sisters of the Immaculate Conception. In 1849 Père Bessieux was recalled to Europe, consecrated bishop, and sent back to Gaboon as Vicar Apostolic of the Free Indies. Guines, with full jurisdiction over a coastline 2000 leagues long, where to-day there are twenty-five ecclesiastical divisions.

About this time the Libreville mission made many attempts to set up stations elsewhere; only one was a success, that among the Bengus of Cape Esteiras, and was known as Mission Delta. They were near 4000, and nearly all of this small tribe are Catholics. While the Libreville mission was in process of organization, building a suitable church, enlarging its schools, and clearing its grounds, the little government station about a mile away was gradually becoming a small town. In 1860 it became necessary to erect a parish there, and thus was founded the mission of Saint-Pierre, having for special object the conversion of the Mpongwe. The work of the sisters was transferred to this place as well as the school for girls and a native hospital; later the colony built a church and at present the parish contains about 3000 faithful. Monsignor Bessieux died in January, 1876 after having served the Church for 35 years, succeeded by his early companion, Monsignor Le Berre. Under the new bishop new stations were rapidly founded, and the Congregation of the Holy Ghost continued to supply the necessary missionaries. In 1879 a mission to the Pahouins of the Congo was attempted for the first time, and the Station of Saint-Paul de Donghilu was opened; after great hardships it now a flourishing mission counting more than 1000 Catholics. Soon afterwards the missionaries began to move inwards from the coast and the estuary and in 1883 the mission of Saint-François-Xavier was founded on the Ogowai, the mission of Saint-Pierre-Claver among the Adumas, which was afterwards moved to Franceville near the source of that river. In 1886 at Fernando Vaz in the Nkomi country the mission of Sainte-Anne was organized. These three places are now great mission centres and are thoroughly equipped. It would be only fitting to add to this list Monsignor Le Berre's new town in the Kamerun and in Spanish Guinea; but they now form part of new ecclesiastical divisions. In 1891, after 45 years of missionary life, the Holy bishop died. His works had increased tenfold and his memory is revered. He was succeeded by Monsignor Le Roy. During the three years which the new bishop spent at Gaboon three new stations were created. One arose on the banks of the Rio Muni, first at Kogo, then at Butikis, at the present frontier of Spanish Guinea, among the Fans of the north. Another was established below the first rapids of the Ogowai, also in the Fans country. This mission was Saint-Michel of Ndopole. The third station, Sainte-Croix, is surrounded by the Esteiras peoples of the south-west. At the same time a fresh impulse was given to the evangelising movement, for this was the period of the principal labour on the languages, of translations, of relations, of very useful journeys of exploration, of ordinances favouring the work of the catechists, of agreements with the tribes concerning the reform of their family customs, etc.

The active direction of Monsignor Le Roy ceased in 1896 when he was elected Superior General of the Congregation of the Holy Ghost. The Bishop of Gaboon by Monsignor Adam, the present bishop, who has established three new stations: Notre-Dame-des-Trois-Épis, at Samba on the Ngume, a tributary of the left bank of the Ogowai, and Saint-Martin, a little further up the same river, both of them in the midst of the mixed populations of the south. The third post, of quite recent foundation, is Okano near
Gabriel, 534, "Fortitudo Dei", one of the three archangels mentioned in the Bible. Only four appearances of Gabriel are recorded: (a) In Dan. viii, he explains the vision of the horned ram as portending the destruction of the Persian Empire by the Macedonian Alexander the Great, after whose death the figure Tau on the foreheads of the elect (Ezech., 4). In later Jewish literature the names of angels were considered to have a peculiar efficacy, and the British Museum possesses some magic bowls inscribed with Hebrew, Aramaic, and Syriac incantations in which the names of Michael, Raphael, and Gabriel occur. The taken from the house at Hilla, the site of Babylon, and constitute an interesting relic of the Jewish captivity. In apocryphal Christian literature the same names occur, cf. Enoch, ix, and the Apocalypse of the Blessed Virgin.

As remarked above, Gabriel is mentioned only twice in the New Testament, but it is not unreasonable to suppose with Christian tradition that it is he who appeared to St. Joseph and to the shepherds, and also that it was he who "strengthened" Our Lord in the garden (cf. the Hymn for Lauds on 24 March). Gabriel is generally termed only an archangel, but the expression used by St. Raphael, "I am the archangel Raphael, one of the seven, who stand before the Lord" (Tob., xii, 15) and St. Gabriel's own words, "I am Gabriel, who stand before God" (Luke, i, 19), have led some to think that these angels must belong to the highest rank; but this is generally explained as referring to their rank as the highest of God's messengers, and not as placing them among the Seraphim and Cherubim (cf. St. Thomas, I, Q. cxii, a. 3; III, Q. xxx, a. 2, ad 4am).

In addition to the literature under ANGEL and in the bibliographies, see Pouyat, The Prophet Gabriel, (Edinburgh, 1880; London and New York, 1890). Appendix XIII; H. Cadoux, Michael and Gabriel in Homiletic Review (1890), 19, 160 et seq.; R. Bardaghi, Maria-Vorkundigung in Bib. Studien, X, 496 sqq.

Gabriel, Brothers of Saint.—The Congregation of the Brothers of Christian Instruction of St. Gabriel was originally founded by Blessed Louis Grignon de Montfort in 1705, but it did not spread much till it was amalgamated with one founded in 1835 by Monsignor Deshayes, Vicar-General of Remiremont. It took the anomalous title of the Brothers of St. Gabriel, because the first chapel of the congregation was dedicated to St. Gabriel; this was at Boulogne. The object of the congregation is the Christian education of the young and also of the blind, the deaf, dumb, and the care and education of orphans. The members take no vows, but after making a novitiate of three years they promise to obey the superior and to devote themselves to the works of their institute; they are generally men of sufficient means to support themselves. They are governed by a superior elected by the votes of the whole community for three years: he is assisted by four councilors. The congregation in 1851 had as many as ninety-six houses mostly in France and in the Diocese of Frankfort in Germany. Later it had 122 schools in France besides two for the blind and eight for deaf-mutes. The French mother-house was at St. Laurent-sur-Sevre in Vendée; in 1880 it had 700 members. Recent statistics give the congregation 170 schools and colleges, eight asylums for the deaf and dumb, three for the blind, and several homes for orphans. The novitiate for Canada is at Saint-Au-Recollet near Montreal. The brothers have a college at Montreal and four schools in the archdiocese, besides three schools in the Diocese of Three Rivers and one at St. Curs in the Diocese of St. Hyacinth.

The Archangel Gabriel

the kingdom will be divided up among his generals, from one of whom will spring Antiochus Epiphanes.

(b) In chapter ix, after Daniel had prayed for Israel, we read that "the man Gabriel . . . flying swiftly touched me" and he communicated to him the mysterious prophecy of the "seventy weeks" of years which should elapse before the coming of Christ. In chapter x, it is not clear whether the angel is Gabriel or not, but at any rate we may apply to him the marvellous description in verses 5 and 6. (c) In N. T. he foretells to Zachary the birth of the Precursor, and (d) to Mary that of the Saviour. Thus he is throughout the angel of the Incarnation and of Consolation, and in Christian tradition Gabriel is ever the angel of mercy while Michael is rather the angel of judgment. At the same time, even in the Bible, Gabriel is, in accordance with his name, the angel of the Power of God, and it is worth while noting the frequency with which such words as "great", "mighty", "power", and "strength" occur in the passages referred to above. The Jews indeed seem to have dwelt particularly upon this feature in Gabriel's character, and he is regarded by them as the angel of judgment, while Michael is called the angel of mercy. Thus they attribute to Gabriel the destruction of Sodom and of the host of Sennacherib, though they also regard him as the angel who buried Moses, and as the man deputed to mark
The two Maronites were Gabriel Sionita and John Hesronita. Gabriel, however, was by far the more prominent of the two. They received an annual stipend of 600 livres, and Gabriel was appointed to the chair of Semitic languages at the Sorbonne. Unfortunately both de Thou and his associate died within four years, and serious financial difficulties arose. In 1619, it is true, the assembly of French clergy at Blois voted 8000 livres to support the undertaking; but through some malversation of funds, this money was never actually paid; at least such is the accusation brought by Gabriel in his Preface to the Syrian Psalter which he published. The Maronites seem to have become involved in pecuniary embarrassments, which led to unseemly feuds with the leaders of the undertaking. In 1619, however, by royal diploma, Gabriel's stipend had been raised to 1200 livres; the following year he received the doctor's degree and two years later the priesthood. Evidently all had been done to honour and support these Eastern scholars; and the blame probably lies largely with Gabriel, who can hardly be excused from idleness and thriftlessness.

In 1626, as Gabriel held no classes owing to lack of students, his stipend was curtailed. After some time, however, he was paid again in full; and in 1629, his salary was increased to 2000 livres. In 1630, he recommenced work on the polyglot; but, as he did not apply himself industriously, and was even accused, apparently with some show of reason, of carelessness in the work, he again found himself in difficulties. In the quarter which followed that of 1629, he practised all the virtues in an heroic degree; and he was beatified and raised to the honours of the altar, by special privilege of the supreme pontiff before he was fifty years dead.

His solemn beatification took place on 31 May, 1635, in the presence of the cardinals then in Rome, of the Patriarchs' fathers resident in Rome, and of representatives from all the provinces of the congregation. Among those present were many who had known the beatified during his life, including one of his brothers, Father Norbert, C.P., his old spiritual director and confessor and Signor Domenico Tiberi, who had been miraculously cured through his intercession.

The Mass and Office in honour of Blessed Gabriel are allowed to the whole Passionist congregation, and his feast day is celebrated on 31 May. It is the express wish of Leo XIII and Pius X that he should be recognised as the patron of all students and especially of young religious, both men and women, and in all that concerns their interior life.

Bonacchi, Memorie storiche sopra il vescovo e le vescovi del giovane Franciscus Poussin, (1880, 1888) and 1894, Raccolta delle lettere ed altri scritti, in Vescovo di Dio, (Rome, 1900). A life of Blessed Gabriel, written by Eusebius Haux, C.P., was published in America in 1891 and re-published later in Dublin. The latest and most important of all the biographies is that published at the time of his beatification: Vita et Miracula dei Fratelli di S. Stanislaus Kostka; Bianchini, in The Tablet (London, June, 1868).

Gabriels, Henry. See Odensburg, Diocese of.

Gabriel Sionita, a learned Maronite, famous for his share in the publication of the Parisian polyglot of the Bible; b. 1577, at Eddon on the Lebanon; d. 1648, at Paris. Though he came to Rome at the age of seven, he always looked upon Arabia as his mother tongue. At Rome he learnt Latin, Syriac, and acquired a slight knowledge of Hebrew; he studied theology, but did not receive the priesthood till much later, in Paris, at the advanced age of 45. Savary de Brêves, once French ambassador to Turkey and interested in Oriental studies, when recalled from Rome, took Sionita with him to Paris to assist in the publication of the polyglot under the auspices of de Thou, the royal librarian, and Cardinal Duperron.

Gabriel, however, was by far the more prominent of the two. They received an annual stipend of 600 livres, and Gabriel was appointed to the chair of Semitic languages at the Sorbonne. Unfortunately both de Thou and his associate died within four years, and serious financial difficulties arose. In 1619, it is true, the assembly of French clergy at Blois voted 8000 livres to support the undertaking; but through some malversation of funds, this money was never actually paid; at least such is the accusation brought by Gabriel in his Preface to the Syrian Psalter which he published. The Maronites seem to have become involved in pecuniary embarrassments, which led to unseemly feuds with the leaders of the undertaking. In 1619, however, by royal diploma, Gabriel's stipend had been raised to 1200 livres; the following year he received the doctor's degree and two years later the priesthood. Evidently all had been done to honour and support these Eastern scholars; and the blame probably lies largely with Gabriel, who can hardly be excused from idleness and thriftlessness.

In 1626, as Gabriel held no classes owing to lack of students, his stipend was curtailed. After some time, however, he was paid again in full; and in 1629, his salary was increased to 2000 livres. In 1630, he recommenced work on the polyglot; but, as he did not apply himself industriously, and was even accused, apparently with some show of reason, of carelessness in the work, he again found himself in difficulties. In the quarter which followed that of 1629, he practised all the virtues in an heroic degree; and he was beatified and raised to the honours of the altar, by special privilege of the supreme pontiff before he was fifty years dead.

His solemn beatification took place on 31 May, 1635, in the presence of the cardinals then in Rome, of the Patriarchs’ fathers resident in Rome, and of representatives from all the provinces of the congregation. J. P. Arendzen.

Gad (גד, fortune, luck).—A proper name which designates in the Bible, (I), a patriarch; (II), a tribe of Israel; (III), a prophet; (IV), a pagan deity.

I. Gad, a patriarch, to wit, the seventh son of Jacob, and the first by Zelpha, Liah’s handmaid. He was born to Jacob in Mesopotamia of Syria (Aram), like his full brother, Aser (Gen., xxxix, 25). On his birth Liah exclaimed: Happily (יהוד) and therefore called his name Gad (Gen., xxx, 11). The exclamation and the
name given therupon bespeak a real relation between the name of this son of Jacob, and that of the pagan deity which was also called "Gad"; although the exact nature of the relationship between the two cannot be given with perfect exactness. On the west, the portion of Gad abutted on the Jordan, and ran up the Arabah or Jordan valley, in a narrow strip, from the northern end of the Dead Sea to the southern extremity of the lake of Genesareth; but on the other three sides, its boundaries cannot be described with equal certainty. Thus, on the east, the Bible assigns to Gad no distinct limit. On the north, it gives, in one place (Deut., iii, 16), the river Jeboe as the extreme limit of that tribe, while, in two other places (Jos., xiii, 26, 30), it treats as such the locality of Manaim (Heb. Mahanaim) which was to the north of the Jeboe. In like manner, on the south, the sacred text represents in Jos., xiii, 15 sqq., as the boundary between Gad and Ruben, a straight line drawn eastwards from the Jordan and passing exactly northward of Hesebon, a town which it ascribes to Ruben; whereas, it assigns elsewhere (Num., xxxii, 34, xxiv, 37), to Ruben several towns north of Hesebon, and to Gad, the very town of Hesebon. From these apparently conflicting biblical data it is natural to infer that the extent of the tribe of Gad varied at different times in Hebrew history, and to consider as simply conventional the definite limits ascribed to Gad on the ordinary maps of Palestine divided among the twelve tribes of Israel. The following are the principal towns mentioned in Jos., xiii, 25 sqq. and Num., xxxii, 34-36, as belonging to the descendants of Gad: Jazer, Ramoth, Maaphe, Betonim, Manaim, Betharan, Bethhemmur, Socoeth, Saphon, Jeggusa, Elroth, Sophan. During the journey through the wilderness, the tribe of Gad counted upwards of 40,000 men and marched with Ruben and Simeon on the south side of Israel. Allowed by Moses to settle on the east side of the Jordan, on condition of aiding in the conquest of western Palestine, the Gadites complied with that condition, took possession of the territory ascribed to them, and devoted all their pursuits, and formed for centuries the most important Israelite tribe beyond Jordan. They were a warlike race whose valour is highly praised in the parting blessing of Moses (Deut., xxxii, 20, 21) and in the prophecy of Jacob (Gen. xlix, 19), and were able to hold their own in the struggle against the enemies of Israel, who were the Ammonites and the Moabites (Gen. xxxii, 3). Upon the disruption of Solomon's empire, they formed a part of the northern kingdom, and shared with varying success in the subsequent wars against northern Israel. Their name appears on the Moabite stone (line 10). They were carried into captivity at the same time as the other tribes beyond Jordan by Tiglathphalasar (734 B.C.), and in the time of the prophet Jeremiah their cities were inhabited by the Ammonites. Their territory comprised the land of Galaad, the fertility and beauty of which are still praised by western travellers.

III. Gad, a Hebrew prophet, contemporary with King David. He came to that prince when the latter was hiding in the cave of Obeddolam (I Kings [Samuel], xxii, 5), and was probably one of the Gadites who joined David there (I Par. [Chronicles], xii, 8). He then began under God's guidance his career of counselor, which eventually won him the name of the seer of God. His son, Gad II, par. xxii, 9), is represented in the Bible as announcing to the king the divine punishment for numbering the people, and advised him to erect an altar to God on Ornans's threshing-floor (II Kings, xxiv, 11 sqq.; I Par., xxxi, 9 sqq.). He is referred to as the author of a book narrating part of David's reign (I Par., xxix, 5) and as having assisted that king in arranging the musical services of the House of the Lord (II Par., xxxvii, 7, 15). He is estimated to have lived at the present day. The patriarch Gad begot seven sons (Gen., xlii, 16). Nothing more is said in Holy Writ concerning him personally.

IV. Gad, a pagan deity explicitly mentioned in Isa., lxv, 11, where the Hebrew name גָּד, "Gad," is rightly rendered "Fortune" in the Vulgate. As far as is known in the present day, Gad is a word of Cha- maanite origin, which, long before the passage of Ismael just referred to was written, had, from a mere appellative, become the proper name of a deity. Biblical testimony to the ancient worship of Gad in Chanaan is certainly found in the names of such places as Baal- gad (Jos., xi, 17; xii, 7; xiii, 5), and Magdalgal "tower of Gad" (Jos., xv, 37). A trace of Gad's worship in Syria may perhaps be found in Lxx's explanation γὰς μέγας of the birth of her first son whom she also called "Gad" (Gen., xxx, 11): this was admitted of old by St. Augustine (Questiones in Heptateuchum, in P., XXXIV, col. 571), and at a much more recent date by Dom Calmet, in his Commentary on Genesis.

FRANCIS E. GHOT.

Gadara, a titular see of Palestine Prima; there were two sees of this name, one in Palestine Prima, the other in Palestine Secunda; it is therefore difficult to ascertain to which of the two cities the known bishops belonged (Le Quien, III, 597). Gadara in Palestine Secunda is to-day known as Oum-Keis, beyond the Jordan, while Gadara in Palestine Prima, the subject of this article, has not been identified. There was a Gader (Jos., xii, 13) whose king was defeated by Josue, a place which is also mentioned in I Par., ii, 51; Jos., xv, 55. It is to-day called Djeder, half-way between Bethelim and Hebron. A Genebra (Greek Πατράς) is mentioned as being in the plain of Bethsaphelah (Jos., xvi, 36; I Par., iv, 23) and is to-day called Khirkhet-Djedireh, south-west of Amwas, or rather Qatrak, a village of the plain of Sephelah. Perhaps neither of these cities is our Gadara, and it can hardly be identified, as is often done, with Gazer or Gaser, a well-known Scriptural city, now Tell-Djeser, near Amwas.

S. VAILLÉ.

Gaddi, Agnolo, Giovanni, and Taddeo, Florentine artists, Taddeo being the father of Agnolo and Giovanni. The dates of their birth are very uncertain. Taddeo was probably the pupil of Giotto; Agnolo and Giovanni after 1333. The father died in 1368, Giovanni in 1383, Agnolo in 1396, and all three are buried in Santa Croce in Florence. Taddeo was the godson of Giotto, lived with him twenty-four years, and became the most eminent of his numerous school. The fact that he "shared the same house, the same table, the same bed, and the same colour", and, in some of his works, "even in expression", two paintings signed by him are in existence—one in Berlin, dated 1333, and another in the church of Megognano, dated 1355. The best of his extant frescoes are those in the Giugn Chapel, formerly belonging to the Baroncelli family, in the church of Santa Croce, but his most extensive works, in the churches of San Spirito and the Serviti, have all disappeared. Many of his frescoes and several of his most celebrated altar-pieces have entirely disappeared. His principal work was in Florence, but he also executed several examples in Arezzo and in the Casentino. Perhaps he is best known for the fact that he was a distinguished architect, and designed the present Ponte Vecchio in Florence, and also lower down the river a still finer bridge (Ponte Trinita), which was destroyed in the sixteenth century. He was very successful, and amassed great wealth.

His son Agnolo (I Par., xxi, 4) entered the studio of Giovanni da Milano and Jacopo del Casentino; his best work is in the cathedral at Prato, where there are thirteen frescoes illustrating the story of the Holy Girdle, and in the church of Santa Croce at Florence, where there are
PONTE VECCHIO, FLORENCE
DESIGNED BY TADEO GADDI (C. 1345)
eight panels by him, commemorating the legend of the Cross. His earliest work, according to Vasari, illustrated the story of Christ raising Lazarus, and was regarded as the most wonderful painting of a dead body that had ever been seen. He was the master of

an even more celebrated man, Cennino Cennini, the author of an important treatise on painting in fresco, distemper, and other media, which is the chief source of our information respecting the technique of the early Florentine artists, and also of a book, the importance of which, especially with regard to tempera painting and the application of gold, can hardly be over-estimated. Giovanni Gaddi, the brother and pupil of Agnolo, was a man of much less importance, and hardly any works now remain which can be attributed to him with certainty, as in the rebuilding of San Spirito at Florence most of his work was destroyed.

George Charles Williamson.

Gaeta, Archdiocese of (Caetetana), in the province of Caserta in Campania (Southern Italy). It is the ancient Caesa, situated on the slopes of the Torre di Orlando, a promontory overlooking the Mediterranean. Gaeta was an ancient Ionian colony of the Samians according to Strabo; legend, however, derives its foundation from Caieta, the nurse of Aeneas or Ascanius. Among the ancients it was famous for its lovely and temperate climate. Its port was of great importance in trade and in war, and was restored under Antoninus Pius. Among its antiquities is the mausoleum of Lucia Munatius Planus. As Byzantine influence declined in Southern Italy the town began to grow. In the ninth century (840) the inhabitants of the neighbouring Formia fled to Gaeta through fear of the Saracens. Though under the suzerainty of Byzantium, Gaeta had then, like Naples and Amalfi, a republican form of government under a “dux” or lord. It was a strong bulwark against Saracen invasion, and in 847 aided Leo IV in the naval fight at Ostia. Later, however, looking rather to local safety, its dux, Docibilis, entered into treaties with the Saracens. From the end of the ninth century the principality of Capua claimed it, as a title for the younger son of the prince. In 1039, with Amalfi and Naples, acknowledged the rule of Guaimario, Duke of Salerno; about forty years later with the whole duchy of Salerno it became part of Robert Guiscard’s new Norman territory.

In the many wars for possession of the Kingdom of the Two Sicilies, Gaeta, owing to its important strategic position, was attacked as often and as bravely as it was defended. In 1194 the Pisans, allies of Henry VI in the conquest of the kingdom, took possession of the town and held it as their own. In 1228 it rebelled against Frederick II and surrendered to the pope, but after the peace of San Germano (1230) it was given back to the Sicilian kingdom. In 1289 Don Jaime of Sicily tried to gain possession of it, but failed. In 1435 Alfonso V of Aragon (Alfonso I of Naples) besieged it, and displayed great generosity, to his own disadvantage, by succouring those unable to bear arms who had been driven out from the besieged town. After a disastrous naval battle he captured it, and gained control of the kingdom. In 1501 Gaeta was retaken by the French, who, after the defeat of Garigliano (3 Jan., 1504), abandoned it to Gonsalvo de Cordova, Ferdinand the Catholic’s general. In the War of the Spanish Succession it was captured (1707) by the Austrian general Daun, after a stubborn resistance made by the Spanish viceroy. In 1806 Masséna took it; finally it became the last refuge of Francis II of Naples. After an heroic defence it capitulated 13 Feb., 1861, thus sealing the annexation of the Kingdom of Naples to the Kingdom of Italy. Caldini, the Piedmontese general, received the title of Duke of Gaeta.

This city has often been the refuge of illustrious personages: among others, of Gelasius II, who was born there: of Margaret, Queen of Naples (1387); of Gregory XII (1410) after the capture of Rome by Alexander V; finally, of Pius IX (1848), during the Roman revolution. The cathedral contains the relics of St. Erasmus, transferred from Formia, and is a handsome building dating from the twelfth century: the campanile, in Norman style, dates from 1279. The church of St. Francis, built by Frederick II, is in

very fine Gothic-Italian style, and contains paintings and sculpture by many of the most famous Neapolitan artists. The Chapel of the Crucifix is a curiosity. It is built on a huge mass of rock that hangs like a wedge between two adjoining walls of rock. Legend tells how the rock was thus split at the moment of our Saviour’s death. The episcopal see dates from 846, when Constantine, Bishop of Formia, fled thither and
Gagarin, Ivan Sergeevitch, of the princely Russian family which traces its origin to the ancient rulers of Starodub, b. at Moscow, 1 Aug., 1814; d. at Paris, 19 July, 1882. Ivan (Johannes) was the son of the Russian state-councillor, Prince Sergius Gagarin, and Barbara Pushkin. He entered the service of the state at an early age, and was first named attached to his uncle, Prince Gregory Gagarin, at Munich, on which to Vienna, he acted as secretary to the Russian legation at Vienna. He was afterwards transferred to the Russian embassy at Paris, where his services were requisitioned in a similar capacity. He frequented the salon of his near relation, Madame Sophie Switchine, and was on terms of familiar intercourse with Ravignan, Lacordaire's successor in the pulpit of Notre-Dame. Probably this dual influence assisted in bringing about his conversion to Catholicism, in 1842. On 19 April of that year Gagarin made his profession of faith, and was received into the Church by Ravignan, thereby, according to Russian law, putting an end to his diplomatic career, and forever all rights to his inheritance. In the latter half of 1843 he entered the Society of Jesus, and passed his novitiate at Saint-Achel. He was afterwards employed in professorial work at Bruges, where he taught church history and philosophy, at the College of Vaugirard, and the College of Daunouville, and at Bordeaux. He spent some time in Versailles, and, in 1855, was back at Paris, from which date onward his pen was ever actively employed in the interests of religion and learning. Gagarin's literary output was considerable; many of his articles which appeared in current reviews and periodicals were afterwards collected and published in book form.

As a polemist Gagarin was thorough, and his work as a religious propagandist was of great importance. His grand object was to extinguish dissension and schism among the Slavonic peoples and win over Russia to the Church Universal. In conjunction with Fr. Daniel Fradet (1850) the editor of the "Études de théologie, de philosophie et d'histoire" (merged into "Études religieuses, historiques et littéraires", 1886); he re-established the "Œuvre de Prop. des Sts. Cyrille et Méthode" (1858), to promote corporate union amongst the Churches; and contributed to the "Contemporain" and "Univers". "Ami de la Religion", "Précis historiques", "Correspondant", "Revue des questions historiques", etc. The "Polybiblion" (Paris, 1882), another review in which articles appeared from the pen of Gagarin, exhibits (XXXV, 186-188) a long list of his writings. These include: "De l'Eglise orientale et l'Eglise russe" (1856); "Un document inédit sur l'expulsion des Jésuites de Moscou" (1857); "Les Staroërèves, l'Eglise russe et le Pape" (1857); "De la Réunion de l'Eglise orientale avec l'Eglise romaine" (1858); "Réponse d'un Russe à un Russe" (1860); "Tendances catholiques et schismatiques en Russie" (1860); "L'avenir de l'Eglise grecque unie" (1862); "La primauté de Saint-Pierre et les livres liturgiques de l'Eglise russe" (1863). Gagarin also spent several years in Constantinople, where he founded the Society of St. Dionysius the Areopagite, which aims at reuniting the Greek and Latin Churches. With this object too, he published "L'Eglise romaine", etc. (1865); "Constitution et situation présente de toutes les Eglises de l'Orient" (Paris, 1865); "Les Eglises orientales unies" (1867), scholarly and comprehensive studies on the Oriental Churches. Amongst works of his on his own native land, were "Les Russes d'Europe et l'Eglise russe" (1868); and the very interesting and discursive "Le Clergé Russe" (new ed. Brussels, 1871; tr. London, 1872). The latter is a collection, in book form, of a series of articles published in the "Études religieuses" under the title "La réforme du clergé russe", an indictment of the encroachments of civil and military influence upon the clergy. The "Théologie d'Archetti" (Paris, Brussels, 1872—"Les Jésuites de Russie" (1738-1875)); and "Religion et Mœurs des Russes", edited by Gagarin (Paris, 1879), are further proofs of his great activity. Almost all the above were published at Paris. A portion of his works were reissued by Brugès, in a series of studies on "Theologie et Geschichte" (Münster, 1857); and by Hulttler, in "Katholische Studien" (Augsburg, 1865). When the religious orders were expelled from France, Gagarin went to Switzerland, but soon returned to Paris, where he died.

P. J. Macaulay.

Gagliardi, Achille, ascetic writer and spiritual director; b. at Padua, Italy, in 1537; d. at Modena, 6 July, 1607. After a brilliant career at the University of Padua he entered the Society of Jesus in 1559 with two brothers younger than himself. He taught philosophy at the Roman College, theology at Padua and Milan, and succeeded in raising several houses of his order in Northern Italy. He displayed indefatigable zeal in preaching, giving retreats and directing congregations, and was held in great esteem as a theological and spiritual guide by the Archbishop of Milan, St. Charles Borromeo, whom he accompanied on his pastoral visitations, and in which he wrote his popular handbook of religion, "Catechismo della fede cattolica" (Milan, 1584). He is the author of various works on asceticism and mysticism, some of them still unedited. Others were printed; shortly after his death, appeared the "Breve compendio intorno alla perfesione cristiana" (Brescia, 1611), which has been translated into five languages, and more recently the valuable "Commentarii in Exercitia spiritualis S. P. Igisiasi di Loyola" (Bruges, 1682), in which he explains very lucidly the author's suggestions for distinguishing between the good and evil external influences or internal motives which inspire or control human conduct.

Paul Deubuchy.
parochial clergy at the time being insufficient, he was asked by Archbishop Lincoln, and was permitted by his brother to take up the work of a curate in St. Paul's Parish. After three years in this capacity he returned to his convent in St. John's Street, where, in the leisure intervals of an ever-active missionary life, he composed the well-known "Sermons and Moral Discourses", on which his literary reputation chiefly rests.

These "Sermons" have gone through several editions (7th ed., Dublin, 1873); they are characterized not so much by exceptional eloquence as by solid learning and genuine piety. Dr. Gahan held the office of prior from 1776 to 1778, and also from 1803 until his death in the following year. In 1783 he made himself of the order, and office which he continued to hold for some years. In 1786-7 he travelled through England, France, and Italy. About 1783 he made the acquaintance of Dr. John Butler, Bishop of Cork, who afterwards turned Protestant on his succession to the title and estates of Dunboyne. A frequent and friendly correspondence took place between these two, and the grief which Dr. Gahan felt for the fall of his friend (1787) was turned into joy when he attended Lord Dunboyne on his deathbed, and received him back into the Church (1800). For this, however, he was to suffer. In spite of Dr. Gahan's advice and the latter's influence with the Archbishop, Lord Dunboyne insisted on willing his County Meath estate to the trustees of Maynooth College, recently founded (1795) by the Irish Parliament. But as the will was disputed, and the issue of its validity, according to the law then in force, depended on whether or not the testator had died "a relapsed Papist", Dr. Gahan was compelled to appear as a witness, and was asked to reveal the nature of his misinterpretations to the noblemen. He refused, of course, to do so, and after undergoing six painful examinations in the Chancery office in Dublin, he was committed to jail at the Tram asmsses, 24 Aug., 1802, to which the case had been referred for final judgment, his persistent refusal to testify as to the religion in which Dunboyne had died being ruled by the presiding judge, Lord Kilwarden, to constitute contempt of court. This imprisonment, however, lasted only a couple of days, and the remainder of Dr. Gahan's useful life was passed in peace in his convent in Dublin, where he died holding the office of prior. As there were no Catholic cemeteries at the time, his remains were laid to rest in the graveyard attached to St. James's Protestant Church.

Besides the "Sermons" already spoken of, Dr. Gahan published the following works: "A History of the Christian Church"; "The Christian's Guide in Heaven; or, a Complete Manual of Catholic Piety"; "A Short and Plain Exposition of the Catechism"; "Catholic Devotion"; "A Short and Easy Method to Discern the True Religion from all the Sects which Undeservingly assume that name"; "Youth Instructed in the Grounds of the Christian Religion"; "The Devout Communicant" (a revision of Father Baker's original); "The Spiritual Retreat, translated from the French of Bourdoule"; "An Abrigment of the History of the Old and New Testament", i.e., of Reeve's translation from the French of Royamount.

Galliard, Claude-Ferdinand, a French engraver and painter; b. at Paris, 7 Jan., 1834; d. there, 27 Jan., 1857. His early studies were probably with Hopwood and Leclercurier; but his chief master was Cogniet, with whom he began engraving in 1850. In this year, he entered the Ecole des Beaux-Arts. At first he had to engrave fashion-plates to make enough to support himself, but his determination and enthusiasm brought him the Prix de Rome for engraving, in 1856. At his first public showing in 1856, his prints were called laboured, soft, and flaccid, more like deep-point etchings than burin work, and he was advised to adhere to the established rules of his art. Galliard had already created a new method, and his work was a shock because not done according to the formulae that trammeled engravers of that day. He was such an innovator that in 1853 he was among the "refuses", but in their exhibition his portrait of Bellini was hailed by Burty as the work of a master, "who engraved with religious care and showed a high classical talent". Galliard's method—"the new manner"—was to engrave with soft, delicate lines, drawn closely together but not crossing, and to render with vapid delicacy every fold, wrinkle, or mark on the skin with Van Eyck-like care. Henceforth Galliard was represented by engravings and paintings at every Salon. He is best known by his "L'Homme à l'Œillet", which brought him only $100. This masterpiece was completed in eight days—the face in one.

His admirable portraits of Pius IX and Leo XIII, broad in general effect although worked with microscopic zeal and realism, raised "the insubordinate term" to the realm of art. Lord Dunboyne insisted on willing his County Meath estate to the trustees of Maynooth College, recently founded (1795) by the Irish Parliament. But as the will was disputed, and the issue of its validity, according to the law then in force, depended on whether or not the testator had died "a relapsed Papist", Dr. Gahan was compelled to appear as a witness, and was asked to reveal the nature of his misinterpretations to the noblemen. He refused, of course, to do so, and after undergoing six painful examinations in the Chancery office in Dublin, he was committed to jail at the Tram assailstes, 24 Aug., 1802, to which the case had been referred for final judgment, his persistent refusal to testify as to the religion in which Dunboyne had died being ruled by the presiding judge, Lord Kilwarden, to constitute contempt of court. This imprisonment, however, lasted only a couple of days, and the remainder of Dr. Gahan's useful life was passed in peace in his convent in Dublin, where he died holding the office of prior. As there were no Catholic cemeteries at the time, his remains were laid to rest in the graveyard attached to St. James's Protestant Church.

Besides the "Sermons" already spoken of, Dr. Gahan published the following works: "A History of the Christian Church"; "The Christian's Guide in Heaven; or, a Complete Manual of Catholic Piety"; "A Short and Plain Exposition of the Catechism"; "Catholic Devotion"; "A Short and Easy Method to Discern the True Religion from all the Sects which Undeservingly assume that name"; "Youth Instructed in the Grounds of the Christian Religion"; "The Devout Communicant" (a revision of Father Baker's original); "The Spiritual Retreat, translated from the French of Bourdoule"; "An Abrigment of the History of the Old and New Testament", i.e., of Reeve's translation from the French of Royamount.

Gal, Saint.—Of the ninety-eight bishops who have occupied the see of Clermont-Ferrand (Auvergne) the sixteenth and the twenty-third bore the name of Gal, and both are numbered among the twenty-nine bishops of this church who are honoured as saints. The first and most illustrious was bishop from 527 to 551, the second, from 640 to 650. Born of a senatorial family of Auvergne, the first St. Gal early embraced the monastic life, and then became councillor to St. Quintianus, whom he was to succeed in the see of Clermont. Thiry i, King of Austrasia, having invaded Auvergne, took Gal prisoner and attached him to the oratory of his palace. He regained his liberty some years later and returned to Clermont. Quintianus having died, Gal was chosen as his successor in 527. As bishop he was the intrepid defender of the rights of the Church against Savignac, the governor appointed by Thiry, and after Savignac's death, protector of his children from the prince's wrath. The chief event of his episcopate was the Council of Clermont in 538. Fifteen prelates of the kingdom of Austrasia assisted at it under the presidency of Honoratus, Bishop of Bourges. They drew up seventeen canons.

P. J. TONER.
of which the first sixteen are contained in the Decretum of Gratian, and have become laws of the universal Church. The following is a summary of the most remarkable: bishops are prohibited from submitting to the deliberations of councils any private or temporal affairs, before having dealt with matters regarding discipline; clerics are forbidden to appeal to seculars in temporal matters with bishops. The communication is pronounced against bishops who solicit the protection of princes in order to obtain the episcopacy, or who cause forged decrees of election to be signed. The council also declares itself forcibly against the marriages of Christians with Jews; marriages between relatives, and the misconduct of the clergy. In 541 Gal- tus, the fourth Council, promulgated energetic decrees for the abolition of slavery, and in 549 the fifth, which condemned the errors of Eutyches and Nestorius. His feast is celebrated on 3 July.

The second St. Gal succeeded St. Cesaris; he was a man of great sanctity, and was one of the most eminent bishops in Gaul. Little, however, is known of his life. His feast is kept 1 November.

A. FOURNERT.

Galatians, Epistle to the.—Galatia.—In the course of centuries, Galatian tribes, related to those that invaded Italy and sacked Rome, wandered east through Illyricum and Pannonia. At length they penetrated through Macedonia (279 b.c.), and assembled in great numbers under a prince entitled Brennus, for the purpose of invading Greece and plundering the rich temple of Delphi. The leaders disagreed and the host soon divided, one portion, under Brennus, marching south on Delphi; the other division, under Leonorius and Luterius, turned eastward and overran Thrace, the country round Byzantium. Shortly after wards they were joined by the small remnant of the army of Brennus, who was repulsed by the Greeks, and killed himself in despair. In 278 b.c., 20,000 Gauls, under Leonorius, Luterius, and fifteen other chief tetrarchs, crossed over to Asia Minor, in two divisions. On reuniting they assisted Nicomedes I, King of Bithynia, to defeat those people who were Gauls (and not Germans as has sometimes been suggested) is proved by the testimony of Greek and Latin writers, by their retention of the Gallic language till the fifth century, and by their personal and place names. A tribe in the west of Gaul in the time of Cesar (Bell. Gall., VI, xxiv) was called Tectosages. In Tolistoibo we have the root of the word Toulouse, and in Boii the well known Gallic tribe. Brennus probably meant prince; and Strabo says he was called Prausus, which in Celtic means terrible. Lutetius is the same as the Celtic Lucterius, and there was a British town called Leonorius. Other names of chief tetrarchs are of undoubted Gallic origin, e.g. Belgiius, Achiorhios, Cesarato-Dia tus, Brogoris (same root as Brogitarus, Allobroges), Bitovitius, Eposognatus (compare Cesar’s Bodognatus, etc.), Combolomarus (Cesar has Virdomarus, Indutiamus), Adiorix, Albiorix, Ateporix (like Caesar’s Dumnonaris, Ambiorix, Vercingetorix), Brogi- tarus, Deiotarus, etc. Place names are of a similar character, e.g. Drynemeton, the “temple of the oak” or The Temple, from nemed, “temple” (compare Augustonemetum in Auvergne, and Verneuton, “the great temple”, near Bordeaux), Eoccubris, Roso logiacum, Teutobodiacum, etc. (For a detailed discussion of the question see Lightfoot’s Galatians, dissertation 1, 4th ed., London, 1870, p. 233.) As soon as these Gauls, or Galatians, had gained a firm footing in the country assigned to them, they began to send out marauding expeditions in all directions. They became the terror of their neighbours, and levied contributions on the whole of Asia Minor west of the Tauros. They fought with varying success against Antiochus, King of Syria, who named Soter from his having saved his country from them. At length Attalus I, King of Pergamum, a friend of the Romans, drove them back and confined them to Galatia about 235-232 b.c. After this many of them became mercenary soldiers; and in the great battle of Magnesia, 180 b.c., a body of such Galatian troops fought against the Romans, on the side of Antiochus the Great, King of Syria. He was utterly defeated by the Romans, under Scipio Asiacicus, and lost 50,000 of his men. Next year the Consul Manlius entered Galata, and defeated the Galatians in two battles graphically described by Livy (XXIX, 11, 33-41), and other events are referred to in I Mach., viii. On account of ill-treatment received at the hands of Mithradates I, King of Pontus, the Galatians took the side of Pompey in the Mithridatic wars (64 b.c.). As a reward for their services, Deiotarus, their chief tetrarch, received the title of king, and his dominions were greatly extended. Henceforward the Galatians were under the protection of the Romans, and were involved in all the troubles of the civil war that followed. They supported Pompey against Julius Caesar at the battle of Pharsalia (48 b.c.). Amyntas, their last king, was set up by Mark Antony, 39 b.c. His kingdom finally included not only Galatia Proper but also the great plains to the south, together with parts of Lyco nia, Pamphylia, Pisidia, and Phrygia, i.e. the country containing the towns Antioch, Iconium, Lystra and Derbe. Amyntas went to Actium, 31 b.c., to support Mark Antony; but like many others he went over, at the critical moment of the battle on the side of the victorious Augustus. Augustus confirmed him in his kingdom, which he retained until he was slain in ambush, 25 b.c. After the death of Amyntas, Augustus made this kingdom into the Roman province of Galatia, so that this province had been in existence more than 75 years when St. Paul wrote to the Galatian church.

The North and the South Galatian Theories.—St. Paul addresses his letter to the churches of Galatia (Gal., i, 2), and calls them Galatians (Gal., iii, 1); and in I Cor., xvi, 1, he speaks of the collections which he ordered to be made in the churches of Gal a tia. But there are two theories as to the meaning of these terms. It is the opinion of Lipsius, Lightfoot, Davidson, Chase, Findlay, etc., that the Epistle was addressed to the people of Galatia Proper, situated in the centre of Asia Minor towards the north (North Galatian Theory). Others, such as Renan, Ferret, Weitzacker, Hauserh, Zahn, Pfeiderer, Gifford, Rendall, Holtzmian, Clemen, Ransay, Cornely, Page, Knowling, etc., hold that it was addressed to the southern portion of the Roman province of Galatia, containing Pisdian Antioch, Iconium, Lystra, and Derbe, which were visited by Saints Paul and Barnabas during the mission on which they joined St. Paul (South Galatian Theory). Lightfoot was the chief upholder of the North-Galatian theory; but a great deal has become known about the geography of Asia Minor since he wrote, more than fifty years ago, and the South-Galatian Theory has proportionately gained ground. A German Catholic professor, Steinmahn (Der Lese-
GAELIANS, has, however, recently (1908) given Lightfoot his strong support, though it must be admitted that he has done little more than emphasize and extend the arguments of Chase. The great ex-

ponent of the South-Gaelian theory is Prof. Sir W. M. Ramsay. The following is a brief summary of the principal arguments on both sides. (1) The fact that the Gaels were being changed so soon to another gospel is taken by Light-

foot as evidence of the characteristic fickleness of the Gauls. Books on matters of religion has ever been characteristic of the Celts. Be-

sides, it is precarious to argue from the political mobi-

lity of the Gauls, in the time of Caesar, to the religious inconsistency of Gaels, whose ancestors left the West four hundred years before. The Gaels re-

ceived St. Paul as an angel from heaven (Gal., iv. 14). Lightfoot sees in this enthusiastic reception proof of Celtic fickleness of character. In the same way it may be proved that the 6000 converted by St. Peter at Jerusalem, and, in fact, that nearly all the converts of St. Paul, were Celts. Acts (xxi.-xxiv) gives sufficient indication of fickleness in St. Peter's time, but one instance: at Lystra the multitude could scarcely be restrained from sacrificing to St. Paul; shortly afterwards they stoned him and left him for dead.

(2) St. Paul warns the Gaels not to abuse their liberty from the obligations of the Law of Moses, by following the flesh. His Galatian catalogue of vices. From this Lightfoot selects two (μυθα, κηδεμον) as evidence pointing to Celtic fallings. Against this may be urged that St. Paul, writing to the Romans (xiv. 13), exhorts them to avoid these two very vices. St. Paul, in giving such an enumeration here and elsewhere, evidently does not intend to paint the peculiar failings of any race, but simply to repro-

bate the works of the flesh, of the carnal or lower man; "they who do such things shall not obtain the king-

dom of God" (Gal., v, 21).

(3) Witchcraft is also mentioned in this list. The extravagant devotion of Deiotarus, says Lightfoot, "fully bears out the character ascribed to the parent race".

But the Emperor Tiberius and many officials in the empire were ardent devotees of augury. Sor-

cery is coupled by St. Paul with idolatry, and it was its habitual ally not only amongst the Gauls but the pagan world-wide.

(4) Lightfoot says that the Gaels were drawn to Jewish observances; and he takes this as evidence of the innate Celtic propensity to external ceremonial, "appealing rather to the senses and passions than the heart and mind". This so-called racial character-

istic may be questioned, and it is a well-known fact that the whole of the aboriginal inhabitants of Asia Minor were given over heart and soul to gross pagan ceremonial. We do not gather from the Epistle that the Gaels were naturally attracted to Jewish ceremonies. They were only puzzled or rather dazed (iii. 1) by the specious arguments of the Judaizers, who were so insistent that they made of St. Paul an ideal Christian as if they adopted circumcision and the Law of Moses.

(5) On the South-Gaelian theory it is supposed that the Epistle was written soon after St. Paul's second visit to Derbe, Lystra, Iconium, etc. (Acts, xvi.) Lightfoot makes use of a strong argument against this early date. He shows, by a detailed ex-

amination, that the Epistle bears a close resemblance, both in argument and language, to parts of the Ep. to the Romans. This he thinks can be accounted for only on the supposition that both were written about the same time, and, therefore, several years later than the date on which the South-Gaelian theory (Rendall (Expositor's Greek Test., London, 1903, p. 144) replies that the coincidence is not due to any similarity in the circumstances of the two communi-

ties. "Still less can the identity of language be fairly urged to prove an approximation of the two epistles. For these fundamental truths formed without doubt the staple of the teaching of the one and the other; years of continuous transition from Jewish to Christian doctrine, and his language in regard to them could not fail to become in some measure stereotyped."

(6) The controversy has raged most fiercely round the two verses in Acts, xvi, 6, and xviii, 23, the only places where there is any reference to Galatia in Acts: (a) In Acts (xvi, 6) comes the phrase "[ἡς τοῦ πρυγίαν καὶ Γαλατίας χώρας]; (b) he departed, and went through the Galatian region and Phrygia; [or 'Phrygian'] [τὴν Γαλατίας χώραν καὶ Φρυ-

γιαν]. Lightfoot held that Galatia Proper was meant in the first passage, and Galatia Proper and Phrygia in the second. Other supporters of the North-Gaelian theory think that the countries of North Galatia and Phrygia are meant in both cases. Their opponents, relying on the expressions of contemporary writers, maintain that South Galatia was intended in both places. The former also interpret the second part of xvi, 6 (Gr. text), meaning that the apostle passed through Phrygia and Galatia after they had passed through South Galatia, because they were forbidden to preach in Asia. Ramsay, on the other hand, main-

tains that after they had passed through the portion of Phrygia which had been added to the southern part of the province of Galatia (and which could be called independently Galatia or the Galatian region), they then went north because they were forbidden to preach in Asia. He holds that the order of the verb in the passage is in the order of time, and he gives examples of similar use of the sorit participle (St. Paul The Traveller, London, 1900, pp. ix, 211, 212). The arguments on both sides are too technical to be given in a short article. The reader may be referred to the following: North-Gaelian: Chase, "Expositor", Dec., 1893, p. 401, May, 1894, p. 331; Steinmann, "Der Leserkreis des Galaterbriefes" (Münster, 1908), p. 191. On the South-Gaelian side: Ramsay, "Expositor", Jan., 1894, p. 42, Feb., p. 137, Apr., p. 288, "St. Paul The Traveller", etc.; Knowling, "Acts of the Apostles", Additional Note to ch. xviii (Expositor's Greek Test., London, 1900, p. 399); Gifford, "Expositor", July, 1894, p. 1.

(7) The Galatian churches were evidently important ones. On the North-Gaelian theory, St. Luke char-

acterized their conversion in a passage (Acts, xvi, 6). "They went through the Phrygian and Galatian region". This is strange, as his plan throughout is to give an account of the establishment of Christiani-

ty by St. Paul in each new region. Lightfoot fully admits the force of this, but tries to evade it by sug-

gesting the question: "Can it be that the historian gladly drew a veil over the infancy of a church which swerved so soon and so widely from the purity of the Gospel?" But the subsequent failings of the Corinthians did not prevent St. Luke from giving an account of their con-

version. Besides, the Galatians had not swerved so far from the belief of the Gospel as the Corinthians. Many of the Judaizers made some of them waver, but they had not accepted circumcision; and this Epistle con-

firmed them in the Faith, so that a few years later St. Paul writes of them to the Corinthians (I Cor., xvi, 1): "Now concerning the collections that are made for the saints, as I have said in order to the churches of Galatia, so do ye also." It was long after the time that St. Paul could thus confidently command the Galatians that Acts was written.

(8) St. Paul makes no mention of this collection in our Epistle. According to the North-Gaelian theory, the Epistle was written after the instructions were given for the collection (Acts, xx, 4). On the South-Gaelian theory it is quite natural, because the Epistle was written several years before the collection was made. In Acts, xx, 4.
etc., a list is given of those who carried the collections to Jerusalem. There are representatives from South Galatia, Achaia, Macedonia, and Asia; but there is no deputy from North Galatia—from the towns of Ancyra, Pessinus, Tavium. The following went to Jerusalem on this occasion, the majority probably meeting at Corinth, St. Paul, St. Luke, and Sopater of Berea (probably representing Phrygia and Achaia; see II Cor. i, 25; 18—22); Aristarchus and Secundus of Macedonia; Gaius of Derbe, and Timothy of Lystra (S. Galatia); and Tychicus and Trophimus of Asia. There is not a word about anybody from North Galatia, the most probable reason being that St. Paul had never been there (see Rendall, Expositor, 1893, vol. iv, p. 47). (d) St. Paul, the Roman citizen, invariably employs the names of the Roman provinces, such as Achaia, Macedonia, Asia; and it is not probable that he departed from this practice in his use of “Galatia.” The people of South Galatia could with propriety be styled Galatians. Two of the towns, Antioch and Lystra, were Roman colonies; and the other two boasted of the Roman names, Claudius-Ionicum, and Claudia-Derbe. “Galatians” was an honourable title when applied to them; but they would be insulted if they were called Phrygians or Lycaonians. All admit that the name of the Roman provinces were written “to the elect strangers dispersed through Pontus, Galatia, Cappadocia, Asia, and Bithynia” (I Pet., i, 1). (10) The manner in which St. Paul mentions St. Barnabas in the Epistle indicates that the latter was known to those for whom the Epistle was primarily intended. St. Barnabas had visited South Galatia with St. Paul (Acts, xiii, xiv), but he was unknown in North Galatia. (11) St. Paul states (ii, 5) that the reason for his course of action at Jerusalem was “that the truth of the gospel might continue with” the Galatians. The text appears to imply that they were already converted. He had visited the southern part of the Galatian province before the council, but not the northern. The view favoured above receives confirmation from a consideration, as appended, of the persons addressed. The Kind of People Addressed.—The country of South Galatia answers the conditions of the Epistle admirably; but this cannot be said of North Galatia. From the Epistle we gather that the majority were Gentile converts, that many were probably Jewish proselytes from their acquaintance with the Old Testament, that Jews who persecuted them from the first were among among them; that St. Paul had visited them twice, and that the few Jews appeared amongst them only after his last visit. We know from Acts, xiii, xiv (and early history), that Jews were settled in South Galatia. During the first missionary journey unbelieving Jews made their presence felt everywhere. As soon as Paul and Barnabas returned to Syrian Antioch, some Jewish converts came from Judea and taught that circumcision was necessary for salvation (Acts, xv, 1). Paul and Barnabas opposed them, and went up to the council, where it was decreed that circumcision and the Law of Moses were not necessary for the Gentiles; but nothing was determined as to the attitude of Jewish converts regarding these things. In Judea they continued to observe them, following the example of St. James, though it was implied in the decree that they were matters of indifference. This was shown, soon after, by St. Peter’s eating with the Gentiles. On his withdrawing from them and when we come, for example, St. Paul publicly vindicated the equality of the Gentile Christians. The majority agreed; but there must have been “false brethren” amongst them (Gal., ii, 4) who were Christians only in name, and who hated St. Paul. Some of these, in all probability, followed him to South Galatia, soon after his second visit. But they could no longer teach the necessity of circumcision, as the apostles, who had been delivered there by St. Paul (Acts, xiii, 1), These decrees are not mentioned in the Epistle because they did not settle the point now insisted on by the Judeans, viz. the advisability of the Galatians accepting circumcision and the Law of Moses, for their greater perfection. On the other hand, there is no evidence that Jews from any other Galatian towns visited North Galatia (see Ramsay, St. Paul The Traveller). It was not the kind of country to attract them. The Gauls were a dominant class, living in castles, and leading a half pastoral, half nomadic life, and speaking their own Gallic language. The country was very thinly populated by the subjugated Gaulish inhabitants. During the long winter the ground was covered with snow; in summer the heat was intense and the ground parched; and one might travel many miles without meeting a human being. There were some fertile tracts; but the greater part was either poor pasture land, or barren undulating hilly ground. The bulk of the inhabitants in the few towns were not Gauls. Trade was small, and that mainly in wool. A decree of Augustus in favour of Jews was supposed to be framed for those at Ancyra, in Galatia. It is now known that it was addressed to quite a different region than Galatia. Why Written.—The Epistle was written to counteract the influence of a few Judeans who had come amongst the Galatians, and were endeavouring to persuade them that in order to be perfect Christians it was necessary to be circumcised and observe the Law of Moses. Their arguments were sufficiently serious to puzzle the Galatians, and their object was likely to gain the approval of unbelieving Jews. They said that what St. Paul taught was good as far as it went; but that he had not taught the full perfection of Christianity. And this was not surprising, as he was one of the great Apostles who had been taught by Christ Himself, and received their commission from Him. Whatever St. Paul knew he learned from others, and he had received his commission to preach not from Christ, but from men at Antioch (Acts, xiii). Circumcision and the Law, it is true, were not necessary to salvation; but they were essential to the full perfection of Christians. This was proved by the example of St. James, of the other Apostles, and of the first disciples, at Jerusalem. On this very point this Paul, the Apostle, placed himself in direct opposition to Cephas, the Prince of the Apostles, at Antioch. His own action in circumcising Timothy showed what was consistent with his character. He was probably teaching the good of circumcision in other places. These statements puzzled the Galatians, and made them wander. They felt aggrieved that he had left them, as they thought, in an inferior position; they began to observe Jewish festivals, but they had not yet accepted circumcision. The Apostle refutes these arguments so effectively that the question never again arose. Henceforth his enemies confined themselves to personal attacks (see II Cor.). Contents of the Epistle.—The six chapters naturally fall into three divisions, consisting of two chapters each. (1) In the first two chapters, after the general introduction, he shows that he is an Apostle not from men, nor through the teaching of any man, but from Christ; and the gospel he taught is in harmony with the teaching of the great Apostles, who gave him the right hand of fellowship. (2) He next (iii, iv) shows the inefficacy of circumcision and the Law, and that others follow the teaching of Christ. He appeals to the experience of the Galatian converts, and brings forward proofs from Scripture. (3) He exHORTS them (v, vi) not to abuse their freedom from the Law to indulge in crimes, “for they who do such things shall not obtain the kingdom of God.” It is not for love of them, he admonishes, that the Judeans.
zero wish the Galatians to be circumcised. If there is virtue in the mere cutting of the flesh, the inference from the argument is that the Judaizers could become still more perfect by making themselves eunuchs—mutilating themselves like the priests of Cybele. He wants nothing with his own hand.

Importance of the Epistle.—As it is admitted on all hands that St. Paul wrote the Epistle, and as its authenticity has never been seriously called in question, it is important, not only for its biographical data and direct teaching, but also for the teaching implied in it; being known as the apostolic teaching, we indirectly, to have worked miracles amongst the Galatians, and that they received the Holy Ghost (iii, 5), almost in the words of St. Luke as to the events at Iconium (Acts, xiv, 3). It is the Catholic doctrine that faith is a gratuitous gift of God; but it is the teaching of the Church, as it is of St. Paul, that the faith that is is of no avail is "faith that worketh by charity" (Gal., v, 6); and he states most emphatically that a good life is necessary for salvation; for, after enumerating the works of the flesh, he writes (v, 21), "Of the which I foretell you, as I have foretold to you, that they who do such things shall not inherit the kingdom of God." In vi, 8, he writes: "For what things a man shall sow, those also shall he reap. For that sowing in his flesh, of the flesh also shall reap corruption. But he that soweth in the spirit, of the spirit also shall reap everlasting." The same teaching is found in others of his Epistles, and it is in perfect agreement with St. James: "For even as the body without the spirit is dead; so also faith without works is dead" (James, ii, 26). The Epistle implies that the Galatians were well acquainted with the doctrines of the Trinity, the Divinity of Christ, Incarnation, Redemption, Baptism, Grace, etc. As he had never to defend his teaching on these points against Judaizers, and as the Epistle is so early, it is clear that his teaching was identical with that of the Twelve, and did not, even in appearance, lend itself to attack.

Date of the Epistle.—(1) Marcion asserted that it was the first of St. Paul's Epistles. Prof. Sir W. Ramsay (Expositor, Aug., 1889, etc.) and a Catholic professor, Dr. Valentin Weber (see below), maintain that it was written from Antioch, before the council (a. d. 49-50). Weber's arguments are very plausible, but not quite convincing. There is a good summary of them in a review by Gayford, "Journal of Theological Studies," July, 1906. Galatia and Galatia are the double journey to Derbe and back. This solution is offered to obviate apparent discrepancies between Gal., ii, and Acts, xv. (2) Cornelv and the majority of the upholders of the South-Galatian theory suppose, with much greater probability, that it was written about A. d. 53 when Paul and the Galatians theory place it as late as A. d. 57 or 58.

Difficulties of Gal., ii and i.—(a) "I went up ... and communicated to them the gospel ... lest perhaps I should run, or had run in vain." This does not seem to be a pardon of his teaching, but rather an explanation of it, then, and he wanted to neutralize the opposition of the Judaizers by proving he was at one with the others. (b) The following have the appearance of being ironical:—"I communicated ... to them who seemed to be some thing" (ii, 2); "But of them who seemed to be something ... for to me they that seemed to be something added nothing" (ii, 6). But attention is called to the fact that James and Cephas and John, who seemed to be pillars. Here we have three expressions τοις δοκιμοις in verse 2; τοις δοκιμοις είλα τι, and δοκιμοις τοις δοκιμοις in verse 6; τοις δοκιμοις είλα τι, and δοκιμοις δοκιμοις in verse 9. Non-Catholic scholars agree with St. John Chrysostom that the words are elsewhere used in a technical sense, and the verbs are in the present tense, the translations should be: "those who are in repute," "who are (rightly) regarded as pillars." It is better to understand, with Rendall, that two classes of persons are meant: first, the leading men at Jerusalem; secondly, the three Apostles. St. Paul's argument was to show that his teaching had the approval of the great men. St. James is mentioned first because the Judaizers made the greatest use of his name and example. "But of them who are in repute (what they were some time, it is nothing to me. God accepteth not the person of man") verse 6. St. Augustine is almost alone in his interpretation that it made no matter to St. Paul that the Apostles were those great men. Others hold that St. Paul was referring to the privilege of being personal disciples of our Lord. He said that that did not alter the fact of his Apostolate, as God does not regard the person of men. Most probably this verse does not refer to the Apostles at all; and Cornely supposes that St. Paul is speaking of the elevated position held by the presbyters at the council, and insists that it did not derogate from his Apostolate.

(c) "I withstood Cephas."—But when Cephas was come to Antioch, I withstood him to the face, because he was blamed (busywrwpov, perf. part.—not, "to blame") on account of things done from James, he did eat with the Gentiles; but when they were come, he withdrew and separated himself, fearing them who were of the circumcision. And to his dissimulation the rest of the Jews consented, so that Barnabas also was led by them into that dissimulation. But when I saw that they walk not uprightly, according to the truth of the gospel, I said to Cephas before them all: If thou, being a Jew, livest after the manner of the Gentiles, and not as the Jews do, how dost thou compel the Gentiles to live as do the Jews?" (ii, 11-14). Here St. Peter was found fault with, probably by the Greek converts. He did not withdraw on account of bodily fear, says St. John Chrysostom; but as his special mission was at this time to the Jews, he was afraid of shocking them who were still weak in the faith. His usual manner of acting, to which he was led by his vision many years previously, shows that his exceptional withdrawal was not due to any error of doctrine. He had motives like those which induced St. Paul to circumcise Timothy, etc.; and there is no proof that in acting upon them he committed the slightest sin. Those who came from James probably came for no evil purpose; nor does it follow they were sent by him. The Apostles in their first Epistle, and in Galatians, do not say anything about the quarrel. "You have heard, that some going out from us have troubled you ... to whom we gave no commandment." We need not suppose that St. Peter foresaw the effect of his example. The whole thing must have taken some time. St. Paul did not at first object. It was only when he saw the result that he spoke. The silence of St. Peter shows that he must have agreed with St. Paul; and, indeed, the argument to the Galatians required that this was the case. St. Peter's exalted position is indicated by the manner in which St. Paul says (i, 18) that he went to behold Peter, as people go to royal persons. He makes some remark of great importance, that in the midst of the preaching of St. Paul and Barnabas for a long time at Antioch, his mere withdrawal was sufficient to draw all after him, and in a manner compel the Gentiles to be circumcised. In the expression "when I saw that they walked not uprightly," they do not necessarily include St. Peter. The incident is not mentioned in the text. Since the discourse of St. Eusebius (Hist. Eccl., I, xii) that St. Clement of Alexandria, in the fifth book of the "Pseudo-Clementine (Outlines)", asserts that this Cephas was not the Apostle, but one of the seventy disciples. Clement here has few followers.

A very spirited controversy was carried on between St. Jerome and St. Augustine about the interpretation of this passage. In his "Commentary on the Galatians", St. Jerome, following earlier writers
such as Origen and St. Chrysostom, supposed that the matter was arranged beforehand between St. Peter and St. Paul. They agreed that St. Peter should withdraw and that St. Paul should publicly reprove him, for the instruction of all. Hence St. Paul says that he withstood him in appearance (Acts vii. 58) and, with that face could St. Paul, who became all things to all men, who became a Jew that he might gain the Jews, who circumcised Timothy, who shaved his head, and was ready to offer sacrifices at Jerusalem, blame St. Peter for acting in a similar manner? St. Augustine, laying stress on the words “with a face” (kerypseis), says that they walked not up right, etc., maintained that such an interpretation would be subversive of the truth of Holy Scripture. But against this it may be said that it is not so very clear that St. Peter was included in this sentence. The whole controversy can be read in the first vol. of the Venetian edition of St. Jerome’s works, Epp., Ivi, lvii, civ, cv, cxii, cxxv, cxxvi.

(d) Apparent Discrepancies between the Epistle and Acts.—(1) St. Paul says that three years after his conversion (after having visited Arabia and returned to Damascus) he went up to Jerusalem (1, 17, 18). Acts states that after his baptism “he was with the disciples that he was John” (Acts, i, 19), and immediately began to preach in the synagogue (ix, 20). He increased more in strength, and confounded the Jews (ix, 22). “And when many days were passed, the Jews consulted together to kill him” (ix, 23); he then escaped and went to Jerusalem. These accounts are not contradictory, as has been sometimes objected; but were written from different points of view and for different purposes. The time for the visit to Arabia may be placed between Acts, ix, 22 and 23; or between “some days” and “many days”. St. Luke’s “many days” (πολλάς ημέρας) may mean as much as three years. (See III. 11.) St. Paul, on the other hand, “went up to Jerusalem” (Gal., i, 19) to censure the first Christians, to confirm the catechumens, to settle the question of the Gentiles, and to receive the eucharistic instruction from the apostles. Peter, “other of the apostles I saw none, saving James the brother of the Lord”. Those who find a contradiction here are not satisfied. St. Luke employs the word Apostles sometimes in a broader, sometimes in a narrower sense. Here it meant the Apostles who happened to be at Jerusalem (Peter and James), or the assembly over which they presided. The objection can be pressed with any force only against those who deny that St. James was an Apostle in any of the senses used by St. Luke (see BRETHREN OF THE LORD).

Of the best critical commentaries on Galatians is Con- nely, Commentarius in S. Pauli Epistolam ad Galatas in the Curzeri Scriptura Sacra (Paris, 1862). Other useful Catholic commentaries are the well known works of a Lapidus, Esquirol, Birmin, Palmieri, MacEvilly.

CONCLUSION: There are commentaries on the Epistle by Auberbach, St. Augustine, St. Chrysostom, St. Jerome, Gomme, Philotheus, Primarius, Tholuck, Thau, Theophylact, (all in Migne), and by St. Thomas Aquinas (many editions of St. Paul’s Epistles).

Editorial Emendation in English: LIGHTFOOT, Galatians (4th ed., London, 1874); RAMSTAD, Historical Commentary on Galatians (London, 1900); RENDALL, Galatians in Expositor’s Greek Testament, volume VII. CHETHAM in Classical Review, vol. III (London, 1894); SCHMIDEL, Galatia in Encyc. Bibl.; BESER, Die Geschichtsbedeutung des heiligen Paulus (Freiburg, 1898); STEEN-
Galien, JOSEPH, Dominican, professor of philosophy
and theology at the University of Avignon, meteorologist,
physicist, and writer on aeronautics; b. 1699, at
Saint-Paulien, near Le Puy, in Southern France; d.
1752 in the Dominican monastery at Le Puy—or,
according to other accounts, at Avignon. He entered
the order at Le Puy. He studied theology and
philosophy at the Dominican institution in Avignon
with such success that he was sent to Bordeaux as
professor of philosophy as early as 1726. From
the year 1746 on he held the chair of theology at
Avignon, and from 1747 the chair of philosophy.
He seems to have resigned his professorship in 1751
to devote his energies entirely to the study of meteorology
and physics. He published: "Les études thérologiques
touchant l'état de pure nature, la distinction du naturel
du sur-naturel, et les autres matières qui en
résultent" (Avignon, 1745); also the
"Explication des voyages disputée avec les savans de
Avignon, (Avignon, 1747). But Galien's most important
contribution was a booklet that he issued anonymously
in 1755 at Avignon under the title: "Mémoire tou-
chant la nature et la formation de la grêle et des
autres météores qui y ont rapport, avec une consé-
quence ultérieure de la possibilité de naviger [sic] dans
l'air à la hauteur de la région de la grêle. Amusant
physique et géométrique". The second edition of
this booklet, this time with the name of its author,
appeared as early as 1757. The change in its
rendered it easy to discern what made the monograph
so interesting. It was entitled "L'art de naviguer
dans les airs, amusement physique et géométrique,
predicté d'un mémoire sur la formation de la grêle." After
propounding his theory regarding hail storms,
Galien calculates how large an air-ship would have to
be in order to transport an entire army with its equip-
ment to Africa. His scheme was to construct a gigan-
tic cubic-shaped vessel of good, strong canvas of
double thickness plastered with wax and tar, covered
with leather and reinforced in places with ropes and
rigging; its edge was to be 1000 loises (roughly 6,500
feet), and each surface 1,000,000 sq. loises (approx.
45,250,000 sq. feet) in area. In both length and
breadth it would be larger than the mountains,
and would resemble a fair-sized mountain. This vessel
would have to float in the atmospheric strata of the
hail belt, as the atmosphere there is a thousand times lighter
than water, while in the strata above this, into which
the top of the cube would extend, the air is two thou-
sand times lighter than water. For he scientific
principles of his proposal Galien relied on Lana, S.J.,
perhaps also on Schott, S.J. His chief claim to
importance lies in the fact that the Montgolfier brothers
were acquainted with him, or at least his booklet.
His birthplace was very near to theirs, and like Galien the
Montgolfiers began with meteorological observations;
moreover, the elder of the brothers made a first ascen-
sion at Avignon in 1782. In aeronautical works
Galen is, for the most part, unfairly treated; as the
writers assume that his scheme was meant seriously,
contrary to his statement given on the title page.

G. B. WILHELM.
time. The simple term Gaal (Galilee) occurs first in Jos., xx, 7 (cf. Jos., xxxi, 32; and I Par., vi, 76), where it denotes that portion of Nephtali lying to the north-east of Lake Merom, in which lay Cedes, one of the six cities of Nephtali. In III Kings, x, 11, the expression "land of Galilee" is used to designate the northern part of Palestine, that embraced the twenty cities given by Solomon to Hiram, King of Tyre. Isaías (ix, 1) gives to "the land of Zabulon, and the land of Nephtali, the name "Galilee of the Nations" (D. Y. Galilee of the Gentiles) on the boundary of a very large and considerable part of the great Gentile population in that region. As early as the Machabean period, the limits of Galilee had extended to Samaria (I Mach., x, 30), without however including the plain of Jezreel and the territory of Poelmas (I Mach., xii, 47, 49). The New Testament frequently divided the province of Samaria and Judea, all of Western Palestine. Josephus and, more accurately, the Talmudists (cf. Neubauer, "La Géographie du Talmud," Paris, 1888) give its boundaries at this period, as Phoenicia and Coele-Syria on the north; the Jordan valley on the east; the sea of Galilee (modern Jénine) on its frontier, on the south; the Mediterranean and Phoenicia on the west. The territory thus described is naturally divided by a high ridge, at the eastern extremity of which was Caphar Hanan (Kefr 'Andn), into Upper Galilee, embracing ancient Nephtali and the northern part of Aser, and Lower Galilee, embracing Zabulon and the eastern part of Aser and of the "Gentiles" at the Machabean period. Although mountain ranges extend throughout the territory, rising to a height of 4000 feet in Upper, and to 1800 feet in Lower Galilee, the land is very productive, especially in the southern division where the valleys and plains are greater, and is capable of sustaining a very large population.

Josue (xii, 10-39) names 69 important Canaanite towns and cities, existing in the conquered territory allotted to the Hebrew tribes of Nephtali, Zabulon, Aser, and Issachar. Josephus ("Vita," 45) counted 204 prosperous villages and 15 fortified cities in the Galilee of his time. Now its population is small, and for the most part scattered among miserable villages and mud huts. Saffed, one of the four sacred cities of Palestine revered by Jews, which has a population of about 15,000, of whom 9000 are Jews, is the principal city in the north. Nazareth, a Christian city (about 10,000 inhabitants), is in the south. The distribution of Jews by Tsiglathphalasar (Tiglath-Pileser), 734 B.C., gave an overwhelming predominance to the Gentile elements noted in the population by Isaías. Although the Jews multiplied rapidly in Galilee after the Babylonian exile, they were oppressed by the heathen as late as the Machabean period (I Mach., v, 45-54), and did not prevail until the first century before Christ. As results of their long intercourse with the conquered Canaanites, and Phenicians, Syrian, and Greek immigrants, and their separation from their brethren in Judea by interlaying Samaria, they spoke a dialect and had peculiarities in business, fashion, and customs that brought upon them the contempt of the inhabitants of Jerusalem. Under the Roman Empire both Christianity and Judaism flourished there, as is evidenced by the ruins of numerous synagogues, churches, and monasteries belonging to that period that were destroyed by the Moesems. There are also notable ruins of churches and monasteries erected by the Crusaders, who restored Christianity in Palestine in the twelfth century, and were not finally overcome until 1291, when Acre in Galilee, their last stronghold, was taken by the Moesems. The territory is now a Turkish possession belonging to the vilayat of Beirut. The people are divided in their religious beliefs. Catholics of the Latin, Greek, and Maronite Rites, Orthodox Greeks, and Druses live side by side with Moesems. Near Saffed there are several modern Jewish colonies.

A. L. McMAHON.

Galilei, ALEKSANDRO, an eminent Florentine architect, b. 1691; d. 1737. Having attained some distinction, he was invited by several nations to send architects to them in England, where he resided seven years. Afterwards he returned to Tuscany and was appointed state architect by the Grand Dukes Cosimo III and Giovanni Gastone. He does not seem to have erected anything remarkable either in England or Tuscany. His abilities, however, were acknowledged by his appointment at Rome, to which place he had been invited by Clement XII. He designed the façade of S. Giovanni de' Fiorentini (1734), and the great façade of S. Giovanni in Laterano. The latter was the result of a competition set on foot by Clement XII. Of twenty-one designs sent in, that of Galilei was accepted and carried out. He also designed the Corsini chapel in the same edifice. Galilei has been much criticised on the ground that his arrangement of the orders was not correct, but his treatment of the ornamental parts is considered admirable. He was well versed in mathematics and possessed many other valuable acquirements.

THOMAS H. POOLE.

Galilei, GALILEO, generally called Galileo, b. at Pisa, 18 February, 1564; d. 8 January, 1642. His father, Vincenzo Galilei, belonged to a noble family of Straited men, and had gained some distinction as a musician and mathematician. The boy at an early age manifested his aptitude for mathematical and mechanical pursuits, but his parents, wishing to turn him aside from studies which promised no substantial return, destined him for the medical profession. But all was in vain, and at an early age the youth had to be left to follow the bent of his native genius, which speedily placed him in the very first rank of natural philosophers.

It is the great merit of Galileo that, happily combining experiment with calculation, he opposed the prevailing system according to which, instead of going directly to nature for investigation of her laws and processes, it was held that these were best learned by authority, especially by that of Aristotle, who was supposed to have spoken the last word upon all such matters, and upon whom many erroneous conclusions had been fathered in the course of time. Against such a superstition Galileo resolutely and vehemently set himself, with the result that he not only soon discredited many beliefs which had hitherto been accepted as indisputable, but aroused a storm of opposition and indignation amongst those whose opinions he discredited; the more so, as he was a fierce controversialist, who, not content with refusing adversaries, was bent upon confounding them. Moreover, he wielded an exceedingly able pen, and unsparingly ridiculed and exasperated his opponents. Undoubtedly he thus did much to bring upon himself his downfall, which even he is now chiefly remembered. As Sir David Brewster (Martyrs of Science) says, "The boldness, may we not say the recklessness, with which Galileo insisted on making proselytes of his enemies, served but to alienate them from the truth."

Although in the popular mind Galileo is remembered chiefly as an astronomer, it was not in this characteristic that he made really substantial contributions to human knowledge, as is testifyed by such authorities as Lagrange, Arago, and Delambre, but rather in the field of mechanics, and especially of dynamics, which
science may be said to owe its existence to him. Before he was twenty, observation of the oscillations of a swinging lamp in the cathedral of Pisa led him to the discovery of the isochronism of the pendulum, which theory he utilized fifty years later in the construction of an astronomical clock. In 1588, a treatise on the centre of gravity of solids obtained for him the title of the Archimedes of his time, and secured him a lectureship in the University of Pisa. During the years immediately following, taking advantage of the celebrated leaning tower, he laid the foundation experimentally of the theory of falling bodies and demonstrated the falsity of the peripatetic maxim, hitherto accepted without question, that their rate of descent is proportional to their weight. This at once raised a storm on the part of the Aristotelians, who would not accept even facts in contradiction of their master's dicta.

Galileo, in consequence of this and other troubles, found it prudent to quit Pisa and betake himself to Florence, the original home of his family. By the influence of friends with the Venetian Senate he was nominated in 1592 to the chair of mathematics in the University of Padua, which he occupied for eighteen years, with ever-increasing renown. He afterwards took himself to Florence, being appointed philosopher and mathematician extraordinary to the Grand Duke of Tuscany. During the whole of this period, and to the close of his life, his investigation of Nature, in all her fields, was unceasing. Following up his experiments at Pisa with others upon inclined planes, Galileo established the laws of falling bodies as they are still formulated. He likewise demonstrated the laws of projectiles, and largely anticipated the laws of motion as finally established by Newton. He studied the properties of the cycloid and attempted the problem of its quadrature; while in the "infinitiesimals" which he was one of the first to introduce into geometrical demonstrations, was contained the germ of the calculus. In statics, he gave the first direct and entirely satisfactory demonstration of the laws of equilibrium and the principle of virtual velocities. He proved a true principle of flotation. He invented a thermometer, though a defective one, but he did not, as is sometimes claimed for him, invent the microscope.

Though, as has been said, it is by his astronomical discoveries that he is most widely remembered, it is not these alone that constitute his most substantial title to fame. In this connection, his greatest achievement was undoubtedly his virtual invention of the telescope. Hearing early in 1609 that a Dutch optician, named Lipperhey, had produced an instrument by which the apparent size of remote objects was magnified, Galileo at once realized the principle by which such a result could alone be attained, and, after a single night devoted to consideration of the laws of refraction, he succeeded in constructing a telescope which magnified three times, its magnifying power being soon increased to thirty-two. This instrument being provided and turned towards the heavens, the discoveries, which have made Galileo famous, were made at once to follow, though undoubtedly he was quick to grasp their full significance. The moon was shown not to be, as the old astronomy taught, a smooth and perfect sphere, of different nature to the earth, but to possess hills and valleys and other features resembling those of our own globe. The planet Jupiter was found to have satellites, thus displaying a solar system in miniature, and supporting the doctrine of Copernicus that these planets were transparent and the sun's rays passed through them. But with his telescope Galileo found that Venus did actually exhibit the desired phases, and the objection was thus turned into an argument for Copernicus. Finally, the spots on the sun, which Galileo soon perceived, served to prove the rotation of that luminous sphere, and that it was not incorruptible as had been assumed.

Prior to these discoveries, Galileo had already abandoned the old Ptolemaic astronomy for the Copernican system, but, as his letter to Kepler in 1597, he had refrained from making himself its advocate, lest like Copernicus himself he should be overwhelmed with ridicule. His telescopic discoveries, the significance of which he immediately perceived, induced him at once to lay aside all reserve and come forward as the avowed and strenuous champion of Copernicus, and, appealing as these discoveries did to the evidence of sensible phenomena, they not only did more than anything else to recommend the new system to general acceptance, but invested Galileo himself with the credit of being the greatest astronomer of his age, if not the greatest who ever lived. They were also the cause of his laboured controversies with ecclesiastical authority, which raises questions of graver import than any others connected with his name. It is necessary, therefore, to understand clearly his exact position in this regard.

The direct services which Galileo rendered to astronomy are virtually summed up in his telescopic discoveries, which, brilliant and important as they were, contributed little or nothing to the theoretical perfection of the science, and were sure to be made by any careful observer provided with a telescope. Again, he wholly neglected discoveries far more fundamental than his own, made by his great contemporary Kepler, the value of which he either did not perceive or entirely ignored. Since the first and second of his famous laws were already published by Kepler in 1609 and the third, ten years later, it is truly inconceivable, as Delambre says, that Galileo should not have made any mention of these discoveries, far more difficult than his own, which finally led Newton to determine the general principle which forms the very soul of the celestial mechanism thus established. It is, moreover, undeniable, that the proofs which Galileo adduced in support of the heliocentric system of Copernicus, as against the geocentric of Ptolemy and the ancients, were far from conclusive, and failed to com-
vinced such men as Tycho Brahe (who, however, did not live to see the telescope) and Lord Bacon, who to the end remained an unbeliever. Milton also, who visited Galileo in his old age (1638), appears to have suspended his judgment, for there are passages in his great poem which seem to favour both systems. The proof from the phenomenon of the tides, to which Galileo appealed to establish the rotation of the earth on its axis, is now universally recognized as a grave error, and he treated with scorn Kepler's suggestion, foreshadowing Newton's establishment of the true doctrine, that a certain occult influence of the moon was in some way responsible. In regard to comets, again, he maintained no less erroneously that they were atmospheric phenomena, like meteors, though Tycho had demonstrated the falsity of such a view, which was recommended only as the solution of an anti-Copernican difficulty.

In spite of all deficiency in his arguments, Galileo, profoundly assured of the truth of his cause, set himself with his habitual vehemence to convince others, and contributed in no small degree to create the troubles which greatly embittered the latter part of his life. In regard to their history, as in so many other main points to be considered. It is in the first place constantly assumed, especially at the present day, that the opposition which Copernicanism encountered at the hands of ecclesiastical authority was prompted by hatred of science and a desire to keep the minds of men in the darkness of ignorance. To suppose that men could deliberately adopt such a course is ridiculous, especially a body which, with whatever defects of method, had for so long been the only one which concerned itself with science at all. It is likewise contradicted by the history of the very controversy with which we are now concerned. According to a popular notion the point, upon which beyond all others churchmen were determined to insist, was the geocentric system of astronomy. Nevertheless it was a churchman, Nicholas Copernicus (q. v.), who first advanced the contrary doctrine that the sun and not the earth is the centre of our system, round which our planet revolves, rotating on its own axis as do the stars. His great work, "De Revolutionibus orbium caelestium," was published at the earnest solicitation of two distinguished churchmen, Cardinal Schönberg and Tiedemann Giese, Bishop of Culm. It was dedicated by permission to Pope Paul III in order, as Copernicus explained, that it might be thus protected from the attacks which it was sure to encounter on the part of the "mathematicians" (i.e. philosophers) for its apparent contradiction of the evidence of our senses, and even of common sense. He added that he made no account of objections which might be brought by ignorant wiseacres on Scriptural grounds. Indeed, for nearly three quarters of a century no such difficulties were raised on the Catholic side, although Luther and Medanchthon condemned the work of Copernicus in unmeasured terms. Neither Paul III, nor any of the nine popes who followed him, nor the Roman Congregations raised any alarm, and, as has been seen, Galileo himself in 1597, speaking of the risks he might run by an advocacy of Copernicanism, mentioned ridicule only and said not a word of punishment. Even after he had made his famous discoveries, no change occurred in this respect. On the contrary, coming to Rome in 1611, he was received in triumph; all the world, clerical and lay, flocked to see him, and, setting up his telescope in the Quirinal Garden belonging to Cardinal Borghini, he exhibited to the sun-spots and other objects to an admiring throng.

It was not till four years later that trouble arose, the ecclesiastical authorities taking alarm at the persistence with which Galileo proclaimed the truth of the Copernican doctrine. That their opposition was grounded, is as constantly assumed, upon a few select men should be enlightened by the diffusion of scientific truth, it is obviously absurd to maintain. On the contrary, they were firmly convinced, with Bacon and others, that the new teaching was radically false and unscientific, while it is now truly admitted that Galileo himself had no clear intention of enthusiastically advocating, and Professor Huxley after examining the case avowed his opinion that the opponents of Galileo "had rather the best of it". But what, more than all, raised alarm was anxiety for the credit of Holy Scripture, the letter of which was then universally believed to be the supreme authority in matters of science, as it was in all others. All there were spoke of the sun staying his course at the prayer of Juse, or the earth as being ever immovable, it was assumed that the doctrine of Copernicus and Galileo was anti-Scriptural, and therefore heretical. It is evident that, since the days of Copernicus himself, the Reformers contended against the new doctrine, which was startling even for the learned, amongst the masses who were incapable of forming any sound judgment concerning it. There was at the time an active sceptical party in Italy, which aimed at the overthrow of all religion, and, as Sir David Brewster acknowledged (Martyrs of Science), there is no doubt that this party lent Galileo all its support.

In these circumstances, Galileo, hearing that some had denounced his doctrine as anti-Scriptural, presented himself at Rome in December, 1615, and was courteously received. He was presently interrogated before the Inquisition, which after consultation decided that the system must be universally condemned as false and anti-Scriptural or heretical, and that he must renounce it. This he obediently did, promising to teach it no more. Then followed a decree of the Congregation of the Index dated 5 March, 1616, prohibiting various heretical works to which were added any advocating the Copernican system. In this decree no mention is made of Galileo, or of any of his works, neither is the name of the pope introduced, though there is no doubt that he fully approved the decision, having presided at the session of the Inquisition, wherein the matter was discussed and decided. In thus acting, it is undeniable that the ecclesiastical authorities committed a grave and deplorable error, and sanctioned an altogether false principle as to the proper use of Scripture. Galileo and Foscarini rightly urged that Holy Writ is intended to teach men to go to...
heaven, not how the heavens go. At the same time, it must not be forgotten that, while as yet no sufficient proof of the Copernican system, no objection was made to it on this ground. It was taught as a hypothesis, which explained all phenomena in a simpler manner than the Ptolemaic, and might for all practical purposes be adopted by astronomers. What was objected to was the assertion that Copernicanism was in fact true, "which appears to contradict Scripture." It is clear, moreover, that the authors of the judgment of the Holy Office themselves did not consider it to be absolutely final and irreversible, for Cardinal Bellarmin, the most influential member of the Sacred College, writing to Foscarini, after urging that he and Galileo should be content to show that their system explains all celestial phenomena—an exceptional proposition, and one sufficient for all practical purposes—but should not categorically assert what seemed to contradict the Bible, thus continued: "I say that if a real proof be found that the sun is fixed and does not revolve round the earth, but the earth round the sun, then it will be necessary, very carefully, to proceed to the explanation of the passages of Scripture which appear to be contrary, and we should rather say that we have misunderstood these than pronounce that to be false which is demonstrated."

By this decree the work of Copernicus was for the first time prohibited, as well as the "Epitome of Keplar"—but in each instance only "donec corrigatur," the corrections prescribed being such as were necessary to exhibit the Copernican system as an hypothesis, not as an established fact. We learn further that with permission these works might be read in their entirety, by "the learned and skilful in the science" (Remus to Kepler). Galileo seems, says von Gebler, to have treated the decree of the Inquisition pretty coolly, speaking with satisfaction of the trifling changes prescribed in the work of Copernicus. He left Rome, however, with the evident intention of violating the promise extracted from him, and, while he pursued unmolested his researches in other branches of science, he lost no opportunity of manifesting his contempt for the astronomical system which he had promised to embrace. Nevertheless, when in 1624 he again visited Rome, he met with what is rightly described as "a noble and generous reception". The pope now reigning, Urban VIII, had, as Cardinal Barberini, been his friend and had opposed his condemnation in 1616. He conferred on his visitor a pension, to which as a foreigner in Rome Galileo had no claim, and which, says Brewer, must be regarded as an endowment of Science itself. But to Galileo's disappointment Urban would not annul the former judgment of the Inquisition. On his return to Florence, Galileo set himself to compose the work which revived and aggravated all former animosities, namely a dialogue in which a Ptolemaist is utterly routed and confounded by two Copernicans. This was published in 1632, and, being plainly inconsistent with his former promise, was taken by the Roman authorities as a direct challenge. He was therefore again cited before the Inquisition, and again failed to display the courage of his opinions, declaring that since his former trial in 1616 he had never held the Copernican theory. Such a declaration, naturally, was not taken very seriously, and in spite of it he was condemned as "vehemently suspected of heresy" to incarceration at the pleasure of the tribunal and to recite the Seven Penitential Psalms once a week for three years.

Under the sentence of imprisonment Galileo remained till his death in 1642. It is, however, untrue to speak of him as in any proper sense a "prisoner". As his Protestant biographer, Weber, tells us: "One glance at the truest historical source for the famous trial, would convince any one that Galileo spent altogether twenty-two days in the buildings of the Holy Office (i.e. the Inquisition), and even then not in a prison cell with barred windows, but in the handsome and commodious apartment of an official of the Inquisition." For the rest, he was allowed to use as his places of confinement the houses of friends, always comfortable and usually luxurious. It is wholly untrue that he was—as is constantly stated—either tortured or blinded by his persecutors—though in 1637, five years before his death, he became totally blind—or that he was refused burial in consecrated ground. On the contrary, although the pope (Urban VIII) did not allow a monument to be erected over his tomb, he sent his special blessing to the dying man, who was interred not only in consecrated ground, but within the church of Santa Croce at Florence. Finally, the famous "E pur si muove", supposed to have been uttered by Galileo, as he rose from his knees after renouncing the motion of the earth, is an acknowledged fiction, of which no mention can be found till more than a century after his death, which took place 3 January, 1642, the year in which Newton was born.

Such in brief is the history of this famous conflict between ecclesiastical authority and science, to which special theological importance has been attached in connexion with the question of papal infallibility. Can it be said that either Paul V or Urban VIII so committed himself to the doctrine of geocentricism as to impose it upon the Church as an article of faith, and so to teach as pope what is now acknowledged to be untrue? That both these pontiffs were convinced anti-Copernicans cannot be doubted, nor that they believed the Copernican system to be unscriptural and desired its suppression. The question is, however, whether either of them condemned the doctrine ex cathedra. This, it is clear, they never did. As to the decree of 1616, we have seen that it was issued by the Congregation of the Index, which can raise no difficulty in regard of infallibility, this tribunal being absolutely incompetent to make a dogmatic decree. Nor is the case altered by the fact that the pope approved the Congregation's decision in forma communi, that is to say, to the extent needful for the purpose intended, namely, to prohibit the circulation of writings.
which were judged harmful. The pope and his ass- 
essors may have been wrong in such a judgment, but this does not alter the character of the pronounce- 
ment, or convert it into a decree ex cathedra.

This trial in 1733 was on the doctrine of Galileo and his manifest breach of contract in not ab- 
staining from the active propaganda of Copernican doctrines. The sentence, passed upon him in conse- 
quence, clearly implied a condemnation of Copernican- 
ism, not only in general, but also, for the sublunary 
world, failed to receive the pope's signature. Nor is this only an 
opinion of theologians; it is corroborated by 
writers whom none will accuse of any bias in favour of 
the papacy. Thus Professor Augustus De Morgan (Budget of Paradoxes) declares "It is clear that the 
absurdity was the act of the Italian Inquisition, for the 
private and personal pleasure of the pope—who knew 
that the course he took could not convict him as pope—
and not of the body which calls itself the Church." 
And von Geber ("Galileo Galilei"): "The Church never 
condemned it (the Copernican system) at all, for the 
Qualifiers of the Holy Office never mean the Church". 
In 1665 John Locke, in the interest of other-continent 
figures of Galileo, were permitted, after 1616, to 
declare that no anti-Copernican definition had issued from 
the supreme pontiff.

More vital at the present day is the question with 
which we commenced: "Does not the condemnation 
of Galileo prove the impossibly opposition between 
the Church to scientific progress and enlightenment?" It 
may be replied with Cardinal Newman that this 
instance serves to prove the opposite, namely that 
the Church has not interfered with physical science, for 
Galileo's case is "the one stock argument" (Apologia, 
11. v.). So too Professor De Morgan acknowledges 
("Motion of the Earth" in "English Cyclopaedia":) 
"The Papal power must upon the whole have been 
moderately used in matters of philosophy, if we may 
judge by the great stress laid on this one case of Gal-
leio. It is the standing proof that an authority which 
had lasted a thousand years was all the time occupied 
in checking the progress of thought."—So Dr. Whewell 
speaking of this same case says (History of the Induc-
"lating Sciences): "I would not be understood to assert 
the condemnation of new doctrines to be a general or 
characteristic practice of the Romish Church. Cer-
tainly the intelligent and cultivated minds of Italy, 
directly or indirectly, the most eminent of her ecclesiastics 
among them, have been the foremost in promoting and 
welcoming the progress of science, and there were 
found among the Italian ecclesiastics of Galileo's time 
the earliest and most enlightened adherents 
of the Copernican system.

The influence of Galileo is abundant. In particular 
may be mentioned: De Morgan, Motion of the Earth in 
English Cyclopaedia; Cours in Compendium to the British Almanach, 1865; 
Ibán, 'Budge of Paradoxes' (London, 1872); Wechell, History of the 
Inductive Sciences (3 ed., London, 1857); Bremo, Master of 
Science (London, 1877); von Geber, Galileo Galilei 
and die römische Curie (St., London, 1879); Bihlar, Galilei 
studien (Ratslin, 1882); Choupin, "Valor des Décisions 
Décisives" (Paris, 1890); Jacquet, "Le Cours 
de Galilei" (Paris, 1888); L. E. Jonina, "La question de Galilei 
(Paris, 1879); Vachandam, "Le pays du Galilei en Revue du cagre 
Humain" (Paris, 1882); Wöhrmann, "Rechen 
Monti, Venice, April 1771; The History of Galileo in The Month, Sept., 1887; 
Gall, The second trial in 1633. Ibrn, Galilei Galilei 
and the kopernikanische 
Wissenschaft in Stimm aus Maria-Looch, suppl. 101.

John Gerard.

Galizin, Elizabeth, Princess, religious of the 
Sacred Heart; b. at St. Petersburg, 22 February, 
1797; d. in Louisiana, 8 December, 1843. Her father 
was Prince Alexiev Andreivitch, her mother Countess 
Protaseva, the friend and "second conscience" of 
Ma- 

deia. She was a devoted and loyal member of the 
Russian "Orthodox" Church and embrac- 
ed the Catholic faith (a step to which the penalty 
of exile or death was still adhered by Russian law), 

Princess Elizabeth was roused to bitter hatred of the 
Catholic Church, and bound herself by oath never to 
change her religion. But after four years, the influ-
ence of her mother's consistency of life and the con-
version of others, she decided to examine the question, 
and finally she too made her submission. Her vocation followed soon after her 
conversion, and she left it to Father Rosaven to find 
her "an austere order devoted to education". 
His choice was the Society of the Sacred Heart. Eliza-
abeth Galizin received the habit at Meta, in 1833, her 
first vows were taken in Rome at the Trinité dei 
Monti, 1828, and her profession took place in Paris, 
1832. In 1834, she was named secretary general to 
the foundress, Blessed Madeleine Sophie Barat, and, in 
1839, was elected assistant general and named visitor 
of the convents of the Sacred Heart in the United 
States.

Mother Galizin carried out her duties of assistant 
general and visitor in a characteristic spirit. Though 
burning with ardour to attain the best in all reli-
gious perfection, her strict ideas of government, and 
the tendency to dissimulation, which autocratic na-
ture sometimes presented, in the end, prevented her from achieving fully the spirit of the 
constitutions of her order. She made grave mistakes, 
but the Blessed foundress, always willing to make 
allowances for others, excused them and ever recog-
nised that Mother Galizin's heart was true to the 
spirit of the Constitutions.

Cloquet, "Life of Blessed Madeleine Sophie Barat" (Rocham- 
pton, 1909).

Janet Stuart.

Gall, Saint (Gallicus; in the most ancient manu-
script he is called Gallo, Gallonis, Gallicus, and 
sometimes also Callo, Chellis, Gallus, etc.). An Irishman by birth, he was one of the twelve disci-

ples who accompanied St. Columbaus to Gaul, and 
established themselves with him at Luxueil. Gall 
again followed his master, in 610, on his voyage on 
the River Bregens but his life on the island, when Columbaus left for Italy; and he remained in 
Swabia, where, with several companions, he led the 
life of a hermit, in a desert to the west of Bregens, near 
the source of the river Steinhach. There, after his 
death, was erected an "eclesia Sancti Galli" gov-

ted by a "prieur et pasteur". Before the middle 
of the eighth century this church became a real monas-
tery, the first abbott of which was St. Otnaar. The 
monastery was the property of the Dioecese of 
Constance, and it was only in 818 that it obtained from 
the Emperor Louis the Piou the right to be number-

ed among the royal monasteries, and to enjoy the privilege 
of immunity. At last, in 824, it had the privilege of a 
obligation whatever towards the See of Constance, 
and henceforth was attached only by ties of canonical 
dependence. Called "Abbaye of St. Gall", not from 
the name of its founder and first abbott, but of 
the saint who had lived in this place and whose relics 
were honoured there, the monastery played an illustrious 
part in history for more than a thousand years.

Apart from this authentic history, there exists an-
other version or tradition furnished by the Lives of St. 
Gall, the most ancient of which does not antedate 
the end of the eighth century. A portion of the incidents 
related in these Lives is perhaps true; but another 
part is certainly legendary, and in formal contradiction 
to the most ancient charters of the abbey itself. Ac-

cording to these biographies, Gall was ordained a 
priest in Ireland before his departure for the Continent,
therefore before 590. Having reached Bregenz with Columbanus, he laboured in the country as a missionary, and actively combated the pagan superstitions. However, from following Columbanus to Italy, he was placed under interdict by the displeased Columbanus, and in consequence could not celebrate Mass until several years later, after the death of his old master. Gall delivered from the demon by which she was possessed Fridiburga, the daughter of Cunso and the betrothed of Siegbert, King of the Franks; the latter, moved by this miracle, offered the hermit his estate near Arbon, which belonged to the royal treasury, that he might find a monastery there. Naturally the monastery was exempt from all dependence on the Bishop of Constance; moreover, Gall twice refused the episcopal see of that city, which was offered to him, and hence he lived in seclusion after his election of a secular clerical, the deacon John, the latter and his successors placed themselves in every way at the service of the abbey. Gall also declined the abbatial dignity of Luxeuil, which was offered him by the monks of the monastery after the death of St. Etienne, and it was afterwards offered him, at the age of ninety-five, at Arbon during a visit; his body was brought back to the monastery, and God revealed the sanctity of his servant by numerous miracles. His feast is celebrated on 16 October, the day ascribed to him in some very ancient martyrologies, while Adon, it is not known for what reason, makes it occur on 20 February. Gall is venerated in a number of churches in the bear; for a legend, recorded in the Lives, relates that one night, at the command of the saint, one of these animals brought wood to feed the fire which Gall and his companions had kindled in the desert.

The most ancient Life, of which only fragments have been discovered till the present day, but otherwise very important, has been remodeled and put in the better style of the ninth century by two monks of Reichenau: in 816-24 by the celebrated Wettinmus, and about 833-34 by Walafrid Strabo, who also revised a book of the miracles of the saint, written somewhat earlier by Gosbert the Younger, monk of St. Gall. In 850 an anonymous monk of the same abbey wrote, in verse, a Life which he published under the name of Walafrid; and others after him further celebrated the holy patron in prose and verse.

ALBERT PONCELOT.

GALL, ABBEY OF SAINT, in Switzerland, Canton St. Gall, 30 miles S. E. of Constance; for many centuries one of the most prominent monasteries in Germany. It was founded about 613, and named after Gallus, an Irishman, the disciple and companion of St. Columbanus in his exile from Luxeuil. When his master went on to Italy, Gallus remained in Switzerland, where he died about 640. A chapel was erected on the spot occupied by his cell, and a priest named Othmar was placed there. The Church of St. Gallen was founded in 788, under the rule of Ethelwold, Bishop of Exeter. Under his direction a monastery was built, many privileges and benefactions being bestowed upon it by Charles Martel and his son Pepin, who with Othmar as first abbot, are reckoned its principal founders. By Pepin's persuasion Othmar substituted the Church of St. Gallen for that of St. Gall and also founded the famous schools of St. Gall, and under him and his successors the arts, letters, and sciences were assiduously cultivated. The work of copying manuscripts was undertaken at a very early date, and the nucleus of the famous library gathered together. The abbey gave hospitality to numerous Anglo-Saxon and Irish monks who came to copy manuscripts for their own monasteries. Two distinguished guests of the abbey were Peter and Romanus, chanters from Rome, sent by Pope Adrian I at Charlemagne's request to propagate the use of the Gregorian chant. Peter went on to Metz, where he established an important chant-school, but Romanus, having fallen sick at St. Gall, stayed there, and Gallican chant was sent. To the copies of the Roman chant that he brought with him, he added the "Romanian signs," the interpretation of which has since become a matter of controversy, and the school he started at St. Gall, rivaling that of Metz, became one of the most frequented in Europe.

The chief MSS. produced by it, still extant, are the "Antiphonale Missarum" (no. 339), the "Antiphonarium Sti. Gregorii" (no. 350), and Hartker's "Antiphonarium" (nos. 390-391), the first and third of which have been reproduced in facsimile by the "American fathers in the field of graphic art." The other schools of the abbey—-for the younger monks and for lay scholars attracted thither by the fame of the monastic professors—were founded as early as the ninth century, for the well-known, but unrealized plan of 820 provides separate accommodation for both schools. The domestic history of the abbey community during those centuries of congenial life was not altogether free from troubles. Even during the lifetime of Othmar, the monks had to defend themselves against the bishops of Constance, who, having already secured jurisdiction over the neighbouring Abbey of Reichenau, refused to recognize the exemption and other privileges of St. Gall. For many years the monks had to fight for their independence, but it was not until the time of Louis the Pious that their efforts were crowned with success and their rights confirmed. From that time up to the end of the tenth century was the golden age of the abbey, during which flourished many celebrated scholars—the three Notker, Eckhart, Hartker and others. The decrees of the Council of Aachen (817) for the furtherance of discipline and the religious spirit were loyally carried into effect by Abbot Gotzbert (815-837), under whom the monks built a new and magnificent church and by whom also the library was greatly enlarged. He published many fresh MSS. and made a beginning of compiling copies of them. His successor Grimmel (841-872) carried on the work, and a catalogue drawn up in his time, still extant, shows the wide range of subjects represented. Of four hundred of the MSS. mentioned in that catalogue are still at St. Gall during the abbacy of Engelbert II (924-933) an incursion of the Huns threatened the abbey, and most of the valuable books and MSS. were removed to Reichenau for safety, some never being returned. In 937 a disastrous fire almost entirely destroyed the monastery, but the library fortunately escaped. The abbey remained in peace and tranquility throughout the eleventh and twelfth centuries, and Gall maintained its place in the front rank of monastic establishments. With the thirteenth century, however, came a period of decline. Various causes contributed to this, one of them being the fact that the neighbouring feudal lords took to quartering themselves and their retainers in the abbey, which was often than was good for monastic discipline. The abbeys also were frequently called upon to settle their quarrels, and a spirit of worldliness thus crept into the cloister. About the same time the abbey and town became an independent principality, over which the archbishops ruled as territorial lords for the Prince of the Empire. Ulrich VI (1204-1220) was the first to hold that dignity. Records as to the library during this period are scanty. In the four-
teenth century Humanists were allowed to take away some of the rarest of the classical MSS. and in the sixteenth the abbey was raided by the Calvinists, who scattered many of the most valuable books. In 1530 Abbot Diethelm inaugurated a restoration with such success that he has been called the third founder of St. Gall. The library of his chief caucasian, and his successors zealously followed his good example. Through their efforts the monastic spirit, the schools and the studies all revived and attained to something of their former greatness. In 1602, when the Swiss congregation of the Order of St. Benedict was formed, the Abbey of St. Gall took precedence as the first house of the congregation, and many of its abbeys subsequently held the office of president.

A printing-press was started under Pius I (1630-1674), which soon became one of the most important in Switzerland. In 1712 a great change came over the fortunes of the monastery. It was pillaged by the Swiss, who spared nothing. Most of the books and MSS. were carried off to Zurich, Berne and other places, and only a portion of them were afterwards restored to St. Gall. The abbots of the time, Leodogar by name, was obliged for security to place his monastery under the protection of the townsmen whose ancestors had been of the abbey, but who, since the Reformation, thrown off the yoke of subjection. When these disturbances were over, a final attempt was made to revive the glories of the abbey. The monastery was rebuilt for the last time under Abbots Celestine II and Bede, but the resuscitation was slight. In 1709 the Swiss directorate of the abbey was under the spirituals of the congregation, and the ecclesiastical principality and secularized the abbey, and in 1805 its revenues were sequestrated. The monks took refuge in other houses of the congregation, the last abbots, Pancras Forster, dying in 1829 at Muri. When the Diocese of Constance was suppressed in 1821, that portion of it in which St. Gall was situated, it was united to the Diocese of Basel. In 1846 a rearrangement made St. Gall a separate see, with the abbey church as its cathedral and a portion of the monastic buildings being assigned for the bishop's residence. The church, rebuilt 1755-65 in the rococo style, contains some finely-carved choir-stalls and a beautiful wrought iron screen. The conventual buildings, besides the bishop's palace, now accommodate also the cantonal offices and what remains of the library—about thirty thousand volumes and MSS. The town of St. Gall has a population of over 30,000 and is one of the principal manufacturing centers in Switzerland, muslin and cotton being its chief industries.

GALLA, SAINTE, a Roman widow of the sixth century; feast, 5 October. According to St. Gregory the Great (Dial. IV, ch. xiii) she was the daughter of the young Symmachus, a learned and virtuous patrician of Rome, whom theodoric had unjustly condemned to death (522). Being a widow she lived for the first year of her married life, and, still very young, founded a convent and hospital near St. Peter's, there spent the remainder of her days in austerities and works of mercy, and ended her life with an edifying death. The letter of St. Fulgentius of Rupia, de statu vitatum, is supposed to have been addressed to her. Her church in Rome, near the Piazza Montanara, once held a picture of Our Lady, which according to tradition represents a vision vouchsafed to St. Gall. It is considered miraculous and was carried in procession in times of pestilence. It is now over the high altar of Santa Maria in Campitelli.

GALLA, VICARIATE APOTOLIC OF, embraces the territory of the Gall or Oromo tribes in Abyssinia. In its widest extent the vicariate lies between 34° and 44° long. E. of Greenwich, and 4° and 10° N. lat. The Oromo or Galla, doubtless slightly European in descent, are the original inhabitants, lying between the junction of the two Niles and the River Bar. Eventually, about the fourteenth century, they began to invade Abyssinia, where they soon became so powerful that they shared the power with the Negus of Ethiopia. The Galla are divided into two principal branches, the Borana or Western Galla, and the Barentouma or Eastern Galla, both of them subdivided into numerous tribes. There exist among the Galla other important tribes, also genuine negro tribes and tribes of Musulman origin. The vicariate dates from 4 May, 1846. The Capuchin, Right Rev. Guglielmo Masaia, was the first vicar Apostolic. He was born at Plovà, province of Ancona, in 1809, and had been a member of the aforesaid order twenty-one years when he was consecrated Bishop of Cassia, 24 May, 1846, and sent to the Galla tribes. It was then very difficult to gain access into the interior of Africa; only after five years of incessantly renewed attempts and at the cost of great hardships and many perils he was able to reach the region of Galla Assandabo, 20 November, 1852. Having evangelized the districts of Goudrou, Lagamara, Limmou, Nonna, and Guera, this valiant apostle entered, 4 Oct., 1859, the Kingdom of Kaffa, where conversions were abundant. With apostolic foresight he provided the converted tribes with priests, so that when persecution obliged him to flee, Christianity did not disappear. In 1868 he was at Choa, where he laboured with success until 1879, and enjoyed the confidence of King Menelik, who made him his confidential councillor and paid him great respect. In the interval the missions of Kaffa and Guera were administered by his coadjutor Bishop Felicissimo Coceno, who died 26 February, 1878. In 1879 Negue John of Abyssinia compelled his vassal Menelik to order Bishop Masaia to return to Europe. The venerable Prelate, who had already been banished seven times, and was now more than ever hated by labour and suffering, died over the government of the vicariate to his coadjutor Bishop Taurin Cahague, since 14 Feb., 1875, titular Bishop of Adramittium. Bishop Masaia was created cardinal by Leo XIII, 10 Nov., 1894; he died 6 Aug., 1889. He left valuable memoirs (see below), the publication of which was rewarded by the Italian government with the nomination to a high civil order, not accepted, however, by the missionary veneration. The mission of Harar was founded by Bishop Taurin, who from 1880 to 1889 sustained a glorious combat in this hot-bed of Islam and opened the way to the present quite prosperous mission. He has written a catechism and valuable works of Christian instruction in the Galla language. His name is held in veneration throughout these regions. The vicariate now includes the three great districts of Choa, Kaffa and Harar. There are 15 principal stations and an equal number of secondary ones. The Christians number more than 18,000. The mission possesses a seminary for priests and a preparatory seminary. It maintains 3 principal and 12 secondary schools, 3 dispensaries, 1 leper-hospital, 1 printing house, and important cultural works. The vicar Apostolic has under his jurisdiction 125 European Capuchin missionaries from the province of Toulouse, France. There are also 8
five priests, 10 catechists, 35 seminarians, 17 Franciscan Sisters (Calais), and 12 Frères Gabriélistes I. Louis-Marie Grignon de Montfort.

ANDRÉAS JACOBSENB.:

Gallagher, John. See GOULBURN, DIOCESE OF.

Gallagher, Nicholas A. See GALVESTON, DIOCESE OF.

Gallait, Louis, Flemish painter; born at Tournai, May, 1810; died in Brussels, 20 Nov., 1887. He excelled melodramatic and sentimental pictures, very rich on the lines of those of Ary Scheffer, with a lean toward the pathetic and emotional side. Gallait was, however, a more accomplished painter than his father, with whom his works have frequently been compared. His colouring was superior, and his drawing more accurate, but the two men were possessed of similar devotional fervour, and poetic emotion of a sentimental type. Gallait was a youthful prodigy, and produced his first picture when ten years old, on which occasion he was awarded the principal local prize for it. One of his best performances was purchased by the municipal authorities of Tournai and presented to the Cathedral, if it was owing to the generosity of his own townspeople that he was enabled in 1855 to go to Paris and study under Hennequin. He became a member of the Institute of France, and honorary foreign Royal Academicians. Several of his pictures were exhibited at the Royal Academy in 1872, and at the Royal Academy in 1872, when he was residing at 51 Bedford Square, painted in water-colours as well as in oil, and was de an honorary member of the Royal Institute.

CHARLES GEORGE WILSON.

Galland, Antoine, French Orientalist and numismatist, b. at Rollet, near Montdidier, in Picardy, 6, d. at Paris, 1715. When he was four years old his father died leaving him in poverty, but through diligence and industry he won protection which bled him to pursue his studies at Noyon and later at Paris. He was already known as a scholar at the age of twenty-four, when de Nointel, the French ambassador to Constantinople, invited him to the East to study the faith of the Greeks, several articles of which he wrote in a controversy between Arnaud and Protestant minister Claude. In 1675 Galland accompanied Nointel to Jerusalem, and in 1679 he was appointed by Colbert, and, after his death by Louis XIV, with scientific researches in the Levant, with the object of Egypt's antiquity. He profited from these journeys to become familiar with modern Greek, and to study the Turkish, Persian, and Arabic. In 1701 he was made a member of the Academy of Inscriptions and Arts, and in 1709 he was appointed to the chair of Arabic at College de France, and honorably appointed to him for his services. He observed letters, notes, observations and remarks on coins and inscriptions of Greek, Latin, and Arabic, many of which have been inserted in Banduri's "Bibliotheque nummara". He collaborated in Hert's "Bibliotheque Orientale", which he brought out after the death of its author. He was very famous for his translation of the eastern tales, "Arabian Nights" (Paris, 1704-08). This successful and inaccurate translation, the first which had appeared in Europe until that time, brought great fame to its author. At his death he left many manuscripts, a number of which have been published, e.g. "History of the princes of the line of Tamerlane", dated from the work of the Persian historian Abd-el-reader; "Ottoman History", translated from the Turkish of Naim Effendi; "History of Ghengis Khan", from the Persian history of Nur-khoud; "Numismatic Dictionary", etc.

GALLAUDET, Biographie universelle de l' Ecole de l'Académie royale des Inscriptions et Belles-Lettres, depuis son établissement, avec les dix ans des Académiciens morts depuis son dernier Séminaire (Paris, 1740); MARTIN, De l'ancienne école des Inscriptions et Belles-Lettres (Paris, 1802).

A. FOURNET.

Gallandi, Andrea, Oratorian and patriotic scholar, b. at Venice, 7 December, 1709; d. there 12 January, 1779, or 1789. Gallandi was descended from an ancient Venetian family. He procured himself by theological and historical studies under such excellent teachers as the two Dominicans, Daniello Concina, a renowned moralist, and Bernardo de Rossi (de Rubis), a noted historical scholar and theologian. With both of these instructors he kept up a warm friendship after he had joined the Oratory of St. Philip Neri. He established his reputation as a scholar by compiling the still valuable work of reference: "Bibliotheca veterum patrum antiquorumque scriptorum ecclesiasticorum Graeco-Latina" (Venice, 1765-81, 14 vols.; 2nd ed., 1788). The work was dedicated to the Venetian Senate, but Gallandi did not live to see its completion. It is a collection of 380 ecclesiastical works of the first three centuries; its special merit is that instead of compiling important works already accessible in print, Gallandi gathered together the smaller and less known writings. Greek originals were printed in good type with Latin translations, and copious notes relative to the author and their works were added. He also published a collection of the treatises of famous canonists (Consent of St. Maur, the Ballerini, etc.) on the origin and development of canon law, which was entitled, "De vetustissim canonum collectiom dissertationum sylloge" (Venice, 1778, 1 vol. folio; Mainz, 1790, 2 vols.). At his death Gallandi left the following work which has never been published: "Thesaurus antiquitatis ecclesiasticorum historio-apoloptico-criticorum complectens SS. patrum gentis et scripta doctissimorum virorum dissertationibus asserta et illustratae ac jurta seriis XII sec. digesta".

PATRICK SCHLAGER.

Galle, DIOCESE OF (GALLINSENS), in Ceylon, created by Leo XIII 23 Aug., 1893, by detaching two civil provinces, the Southern (2146 sq. miles) and Sabaragamuwa (1901 sq. miles), from the Archdiocese of Colombo. The total population is about 900,000, of whom 10,160 are (1900) Catholics. Besides a few Europeans and burghers of mixed descent, the population includes Singalese, Moors, and Tamils. There is a still greater religious diversity: Sivites, Parsees, Mohammedans, Protestants of various denominations, mostly, however, Buddhists of the Southern type. For these reasons the conversion of the non-Catholic population is difficult; the racial and religious differences have been seriously the instruction of the faith scattered over a large area. Leo XIII entrusted the new diocese to the Belgian Jesuits, and appointed as first bishop the Very Rev. Joseph Van Reeth, rector of the novitiate at Tronchiennes (Belgium). The bishop-elect (b. 6 Aug., 1843) was consecrated on 19 March, 1895 in Antwerp, his native town, and accompanied by three priests and one lay brother, he took possession of his see 9 Nov., 1895, since when progress has been slow but steady. The clergy comprises 22 Jesuits and 5 secular priests (4 natives and 1 European), residing in eleven centres, each having its church, mission-house, and school. The Catholic population has doubled; the number of professionists has risen from 6381 (1897) to 27,956 (1908), and that of Communionists from 7196 to 48,000. In 1897 only
GALLEGO

335 boys and 376 girls attended the 14 Catholic schools, of which 9 had been opened that year; there are now (1909) some 2140 boys and 1000 girls in 39 schools. In 1901 it was opened St. Aloysius's College, under the Jesuit Fathers, with 300 pupils. Belgian Sisters of Charity of Jesus and Mary render beneficial work. They have a convent in Gallego (1890) and one in Matara. The latter was established by Dominicans. The Gallego convent is attached to a house for making work from which won a gold medal at the St. Louis Exhibition (U.S.A.) in 1904. A similar institution has been started at Matara.

Coq, Jo. Compagno de Jesus (monthly, Brussel); Misiones Catholico (Rome, Propaganda, 1907).

GALLEGO, JUAN NICARIBI, priest and poet; b. at Zamora, Spain, 14 Dec., 1777; d. at Madrid, 9 Jan., 1853; received his training at Salamanca; entering into Holy orders, he soon went to Madrid, where he was given a post in the royal palace, being made director of the royal pages. His feelings as a patriot and his love for pseudo-classicism very naturally led him to associate himself with the coterie about the poet Quintana. Imitating the latter's metres, he surpassed him in perfection of form, but remains somewhat his inferior in respect of inspiration. It is by virtue of only seven odes and elegies that Gallego attained the rank which he certainly occupies among Spanish poets. Of these the first was the "La defensa de Buenaventura" (1807), directed against the English, who, taking advantage of Spain's naval weakness, and the uneasiness in the colonies, had seized for the moment the capital of the Argentine region. With intensified liberal tendencies, Gallego presented himself for election, and was returned a deputy to the Cortes. He had consistently opposed the French invaders of the Spanish soil, with both pen and voice, yet the despot Ferdinand VII, after his return in 1814, imprisoned him because of his liberalism. During the second constitutional period, now free again, he was appointed Archbishop of Valencia. The Royal Spanish Academy took him into its membership, and made him its perpetual secretary. The most famous of the few compositions left by Gallego is the elegy "El Doo de Mayo", which commemorates the events of May 2, 1808, when the hero and devoted opposition presented to the French troops by the valiant citizens, Daños and Valdivia, led to the rising of the whole land against the Napoleonic usurper. The effect of Gallego's stirring strains upon his countrymen, urging them to resist unto the death, can hardly be exaggerated. Excellence of form characterizes this poem, as it does his elegy on the death of the Duchess of Frias. His poems are in the Biblioteca de autores espanoles, LXXVII. Blanco Garcia, Historia de la literatura espanola en el siglo XIX.

J. D. M. FORD.

GALILEE, See CIVITÀ CASTELLANA, ORTE, AND GALILEE, Dioceze OF.

GALILETTI, PIETRO LUIGI, Benedictine, historian and archæologist; b. at Rome in 1724; d. there, 13 December, 1790. He was educated in Rome where he entered the Order of St. Benedict. While a monk in the Abbey of St. Paul Without the Walls, he made a collection of the numerous ancient inscriptions used in the pavement of the floor of the famous basilica or scattered among the cloister buildings and in the surrounding vineyards. These became soon the nucleus of the Studiologia Museum of Christian antiquities. Later on he became keeper of the archives and librarian of the Benedictines in Florence. Plus vii bestowed various benefits on him and made him titular Bishop of Cyrene.

As a historian Galiletti displayed great erudition and diligence. Some of his writings are still authoritative, notably his collection of inscriptions and his works on the higher papal officials of the old Lateran Palace. His literary activities were directed to widely divergent periods and spheres of historical and archæological research. On Roman antiquity he wrote: "Capena, municipio dei Romani" (Rome, 1786), and "Gabbio, antica città di Sabina, scoperta ove era Roma" (Rome, 1788. This last was dedicated to the senario della romana chieza" (Rome, 1758), and "Del Principio della S. Sede Apostolica e di altri Ufiziali Maggiori del Sacro Palazzo Lateranense" (Rome, 1776) deal with the early history of the Roman Curia. The latter work is especially thorough and important. Among his contributions to the history of the religious orders the following may be quoted: "Lettera intorno alla vera e sicura origine del ven. ordine di S. Girolamo" (Rome, 1755), and "Ragionamento dell'origine e de' primi tempi dell'abbadia Florentina" (Rome, 1773). He was the author of a biography of the bishops of Viterbo: "Lettera a Giannantonio Bertetta sopra alcuni vescovi di Viterbo" (Rome, 1759), and of Cardinal Passione: "Memorie per servire alla storia della vita del card. Domenico Passione" (Rome, 1762). His work on the early churches of Rieti is of value for Christian archæology: "Memoria di tre antiche chiese di Rieti, S. Michele Arcangelo, S. Agata, e S. Croce" (Rome, 1757). He wrote also about Galletti that is due the first great collection of medieval inscriptions, treated as a source of historical information. His "Inscriptiones Venetiae invii av Rome exstantes" (Rome, 1757) was followed in the same series by the inscriptions found in Rome concerning Bologna, Rome itself (5 vols.), the March of Ancona, and Piedmont, in all seven volumes (1757-66).

HURTER, Nomenclator, s. v.; Biographie universelle, s. v.; Frenk, Le notiure espantatii a Mona. F. Luigi Gailettii (Rome, 1793). J. P. KIRCH.

GALLIA CHRISTIANA, a documentary catalogue or list, with brief historical notices, of all the dioceses and abbeys of France from the earliest times, also of their occupants. In 1621 Jean Chenu, an avocat at the Parlement of Paris, published a book entitled "Archiepiscoporum et episcoporum Galliae chronologia hist". Nearly a third of the churches and metropolitans of France were added by Claude Robert, a priest of Lagnes, published with the approbation of Baronius a "Gallia Christiana", in which he even entered a large number of churches outside of Gaul, and gave a short history of the metropolitans and the abbots. Two brothers de Sainte-Marte, Sevole (1571-1650) and Louis (1571-1656), appointed royal historiographers of France in 1620, had assisted Chenu and Robert. At the Assembly of the Clergy in 1646 a number of prelates commissioned these brothers to compile a more definitive work. They died before the completion of their work, and it was issued in 1658 by the three sons of Sevole de Sainte-Marte, Pierre (1618-90), himself historiographer of France, Abel (1620-71), theologian, and later general of the Oratory, and Nicolas-Charles (1623-82), prior of Cluny. On 13 September, 1658, the Sainte-Marthe brothers were presented to the Assembly of the French Clergy, who had accepted the dedication of the work on condition that a passage suspected of Jansenism be suppressed. The work formed four volumes in folio, the first for the archidioceses, the second and third for the dioceses, and the fourth for the abbies, all in alphabetical order. The title was "Gallia Christiana, seu series omnium archiepiscoporum, episcoporum et abbatiatum Franciae vicinarum et dintonum ab origine ecclesiarum ad notam aetatem per quatuor saeculaudes et aetatem Franciae vicinarum et dintonum ab origine ecclesiarum ad notam aetatem per quatuor saeculaudes et hodie掂etur, et probatur ex antiquis fidei manuscriptis Vaticani, regum, principum, tabularium omnium Gallicae cathedraliae et abbatiariarum". Such as it was,
the work possessed considerable value at the time, especially for the fullness of its lists and for the reproduction of a large number of valuable manuscripts. The Agricultural Inhabitants to form a very important part of the work of Gallienus, as the brothers and their successors are often called.

The edition promised by the Sainte-Marthe brothers did not appear. In 1710 the Assembly of the French Clergy offered four thousand livres to Denys de Sainte-Marthe (1650–1725), a Benedictine of Saint-Maur renowned for his polemics against the Abbé de Rancé. In the middle of his campaign to this end, he decided to request his successors to publish a new edition of the "Gallia Christiana," that he should bring the revision of the "Gallia Christiana" to a successful conclusion, so that the first volume should appear at the end of four years, and that his congregation should continue the undertaking after his death. In 1715 through his efforts the first volume appeared, devoted to the ecclesiastical provinces of Albi, Aix, Arles, Avignon, and Auch. In 1720 he produced the second volume, dealing with the provinces of Bourges and Bordeaux, and in 1725 the third, which treated of Cambrai, Cologne, and Embrun. After his death the Benedictines issued the fourth volume (1728) on Lorraine, volume "Ultramontane" of Mâcot, Mainz. Between 1731 and 1740 on account of the Bull "Unigenitus" Dom Félix Hodin and Dom Etienne Briot, who were preparing the last volumes of the "Gallia Christiana," were expelled from the Abbey of Saint-Germain-des-Prés. They returned to Paris in 1739 and issued the sixth volume, dealing with Narbonne, also (1744) the seventh and eighth volumes on Paris and its suffragan sees. Père Duplessis united his efforts with theirs and the ninth and tenth volumes, both on the province of Reims, appeared in 1761. The eleventh volume (1759) dealing with the province of Rouen was issued by Père Pierre Henri and Dom Jacques Taschereau. In 1770 the twelfth volume on the provinces of Sens and Tarentaise appeared, and in 1785 the thirteenth on the provinces of Toulouse and Trier. At the outbreak of the Revolution four volumes were lacking, Tours, Besançon, Utrecht, and Vienne. Barthélemy Hocquard (1756–1808), bishop of the province of Toulouse, Besançon, and Vienne, respectively, and according to the Benedictine method, the fourteenth, fifteenth, and sixteenth volumes of the "Gallia Christiana." The province of Utrecht alone has no place in this great collection, but this defect has been remedied by the Benedictines in a "suffrage," edited by Gisbert Brom and extending from the earliest times to 1378 (The Hague, 1891–96). The new "Gallia Christiana," of which Volumes I to V and XI and XIII were reprinted by Dom Piolín between 1870 and 1877, and Volumes VI to IX and XII by the publishers H. Weltzer after each metropolitan sees its suffragan sees, and after each sees the abbey belonging to it. The documents, instead of encumbering the body of the articles, are inserted at the foot of each column under the title "Instrumenta." This colossal work does great justice to the Benedictines and to the Sainte-Marthe family. "The name of Sainte-Marthe," wrote Voltaire, "is one of those of which the country has most reason to be proud."

In 1774 the Abbé Hugues du Temps, vicar-general of Bordeaux, undertook in seven volumes an abridgment of the "Gallia," under the title "Le clergé de France," of which only four volumes appeared. About the year 1790 the "Foncier" in the "Historien of an episcopal history of France (La France Pontificale)," in which for the early period he should utilize the "Gallia," at the same time bringing the history of each diocese down to modern times. Twenty-two volumes appeared and then the work ceased. Some years ago Canon Albanès projected a complete revision of the "Gallia Christiana," each ecclesiastical province to form a very important part of the work of Gallienus, as the brothers and their successors are often called.

The edition promised by the Sainte-Marthe brothers did not appear. In 1710 the Assembly of the French Clergy offered four thousand livres to Denys de Sainte-Marthe (1650–1725), a Benedictine of Saint-Maur renowned for his polemics against the Abbé de Rancé. sance] must also be regulated in accordance with the canons made by the Spirit of God and consecrated by the respect of the whole world. The rules, customs, and constitutions received within the kingdom and the Gallican Church must have their force and their efficacy; and the usages of our fathers remain inviolable, since the dignity of the Apostolic See itself demands that the laws and customs established by consent of that august see and of the Churches be constantly maintained.

(4) Although the pope have the chief part in questions of faith, and his decrees apply to all the Churches, and to each church in particular, yet his jurisdiction is not irremovable, at least pending the consent of the Church.

According to the Gallican theory, then, the papal primacy was limited, first, by the temporal power of princes, which, by the Divine will, was inviolable; secondly by the authority of the general council and in that of the bishops, who alone could, by their consent, give to his decrees that infallible authority which, of themselves, they lacked; lastly, by the canons and customs of particular Churches, which the pope was bound to take into account when he exercised his authority.

But Gallicanism was more than pure speculation. It reacted from the domain of theory into that of facts. The bishops and magistrates of France used it, the former as warrant for increased power in the government of dioceses, the latter to extend their jurisdiction as to revenue matters. Moreover, there was an episcopal and political Gallicanism, and a parliamentary or judicial Gallicanism. The former lessened the doctrinal authority of the pope in favour of that of the bishops, to the degree marked by the Declaration of 1682; the latter, affecting the rights of the temporal and spiritual powers, tended to augment the rights of the State more and more, to the prejudice of those of the Church, on the grounds of what they called “the Liberties of the Gallican Church” (Libertés de l'Église Gallicane).

These Liberties, which are enumerated in a collection, or corpus, drawn up by the jurisconsults Guy Coquille and Pierre Pithou, were, according to the latter, eighty-three in number. Besides the four articles cited above, which were incorporated, the following may be noted as among the more important: The Kings of France had the right to assemble counsils in their dominions, and to make laws and regulations ecclesiastical, the Cardinals legates could not be sent into France, or exercise their power within that kingdom, except at the king’s request or with his consent. Bishops, even when commanded by the pope, could not go out of the kingdom without the king’s consent. The royal council could not be communicated for any act performed in the discharge of their official duties. The pope could not authorize the alienation of any landed estate of the Churches, or the diminishing of any foundations. His Bulls and Letters might not be executed without the Paréxis of the king or his officers. He could not issue decretals to the prejudice of the laudable customs and statutes of the cathedral Churches. It was lawful to appeal from him to a future council, or to have recourse to the “appeal as from an abuse” (appel comme d’abus) against acts of the ecclesiastical power.

Parliamentary Gallicanism, therefore, was of much wider scope than episcopal; indeed, it was often disavowed by the bishops of France, and about twenty of them condemned Pierre Pithou’s book when a new edition of it was published, in 1638, by the brothers Dupuy.

Origin and History.—The Declaration of 1682 and the work of Pithou codified the principles of Gallicanism, but did not create them. We have to inquire, then, how there came to be formed in the bosom of the Church of France a body of doctrines and practices which tended to isolate it, and to impress upon it a physiognomy somewhat exceptional in the Catholic body. Gallicans have held that the reason of this phenomenon is to be found in the very origin and history of Gallicanism.

For the more moderate among them, Gallican ideas and liberties were simply privileges concessions made by the popes, who had been quite willing to divest themselves of a part of their authority in favour of the bishops or kings or France. It was thus that the latter could lawfully stretch their powers in ecclesiastical matters, and even in temporal ones. The latter made its appearance as early as the reign of Philip the Fair, in some of the protests of that monarch against the policy of Boniface VIII. In the view of some partisans of the theory, the popes had always thought fit to show especial consideration for the ancient customs of the Gallican Church, which in every age had distinguished itself by its exactitude in the preservation of the Faith and the maintenance of ecclesiastical discipline. Others, again, assigned a more precise date to the granting of these concessions, referring their origin to the period of the earliest Carlovingians, and explaining them thus. It is said that the popes had found it impossible to recall to their allegiance and to due respect for ecclesiastical discipline the Frankish lords who had possessed themselves of episcopal sees; that these lords, in spite of censures and anathemas, rude and untaught, recognized only authority in secular affairs. The popes accordingly granted to the latter, that of former Gallican lords, and thus it happened that the popes had, therefore, granted to Carolman, Pepin, and Charles the Great a spiritual authority which they were to exercise only under papal control. It was this authority that the Kings of France, successors of these princes, had inherited. This theory comes into conflict with difficulty in its normal form, and it has caused its rejection as well by the majority of Gallicans as by their Ultramontane adversaries. The former by no means admitted that the Liberties were privileges, since a privilege can be revoked by him who has granted it; and, as they regarded the matter, these Liberties could not be touched by any pope. Moreover, they added, the Kings of France have at times received from the popes certain clearly defined privileges; these privileges have never been confounded with the Gallican Liberties. As a matter of fact, historians could have told them, the privileges accorded by popes to the Kings of France in the course of the Middle Ages are known. From this it is plain that no authentic collection could be compiled, and there is nothing in them resembling the Liberties in question. Again, why should not these Gallican Liberties have been transmitted to the German Emperors as well, since they, too, were the heirs of Pepin and Charles? Besides, the Ultramontanes pointed out, there are some privileges which the pope himself could not grant. Is it conceivable that a pope should allow any group of bishops the privilege of calling his infallibility in question, putting his doctrinal decisions upon trial, to be accepted or rejected?—or grant any kings the privilege of placing his primacy under tutelege by suppressing or curtailing his liberty of communication with the faithful in a certain territory?

Most of its partisans regarded Gallicanism rather as a revival of the most ancient traditions of Christianity, a persistence of the common law, which law, according to some (Pithou, Quesnes), was made up of the conciliar decrees of the earliest centuries or, according to others (Marca, Bossuet), of canons of the general and local councils, and the decretals, ancient and modern, which were received in France or conformable to their usage. “Of all Christian countries”, says Pleury, “France has been the most free, the most liberal liberty of her Church and oppose the novelties introduced by Ultramontane canons.” The Liberties were so called, because the innovations constituted
conditions of servitude with which the popes had burdened the Church, and their legality resulted from the fact that the extension given by the popes to their own primacy was founded not upon Divine institution, but upon the false Decretals. If we are to credit these authors, what the Gallicans maintained in 1692, namely, that the body of beliefs as old as the Church, the discipline of the first centuries. The Church of France had upheld and practised them at all times; the Church Universal had believed and practised them of old, until about the tenth century; St. Louis had supported, but not created, them by the Pragmatic Sanction of Constance; the Councils had taught them with the pope's approbation. Gallican ideas, then, must have had no other origin than that of Christian dogma and ecclesiastical discipline. It is for history to tell us what these assertions of the Gallican theorists were worth.

To the similarity of the historical vicesistutes through which they passed, their common political allegiance, and the early appearance of a national sentiment, the Churches of France owed it that they very soon formed an individual, compact, and homogeneous body. From the end of the fourth century the Church in France recognized as the "Gallican" bishops of Pope Damasus I. as M. Babut seems to have demonstrated recently—that is the most ancient decretal which has been preserved to our times. Two centuries later, St. Gregory the Great pointed out the Gallican Church to his envoy Augustine, the Apostle of England, as one of those whose customs he might accept as of equal stability with those of the Roman Church or of any other whatsoever. But already—if we are to believe the young historian just mentioned—a Council of Turin, at which bishops of the Gauls assisted, had given in the first manipulation of Gallic sentiment. Unfortunately for M. Babut's thesis, all the significance which he attaches to this council depends upon the date, 417, ascribed to it by him, on the mere strength of a personal conjecture, in opposition to the most competent historians. Besides, it is not at all plain how a council of the Province of Milan is to be taken as representing the ideas of the Gallican Church.

In truth, that Church, during the Merovingian period, testifies the same deference to the Holy See as do all the others. Ordinary questions of discipline are in the ordinary course settled in councils, of which the papal signature is in all cases—whether at the Councils of Epagne (517), of Vaison (529), of Valence (530), of Orleans (538), of Tours (567)—the bishops do not fail to declare that they are acting under the impulse of the Holy See, or defer to its admonitions; they take pride in the approbation of the pope; they cause his name to be read aloud in the churches, just as is done in Italy and in Africa; they cite his decreets as a source of ecclesiastical law; they show indignation at the mere idea that anyone should fail in consideration for them. Bishops condemned in councils—like Salonius of Emburon, Sigibert and his Contemplant of Baiers—have no difficulty in appealing to the pope, who, after examination, either confirms or rectifies the sentence pronounced against them.

The accession of the Carolingian dynasty is marked by a splendid act of homage paid in France to the pope, and by the sanctification of Pepin the Short as king. Pepin makes a point of securing the assent of Pope Zachary. Without wishing to exaggerate the significance of this act, the bearing of which the Gallicans have done every thing to minimize, one may be permitted to see in it the evidence that, even before Gregory VII, France was not only a portion of the ancient canons and the privileges of the Churches; that his decreets must not be placed upon the same footing as the canons of the councils. But it appears that we should see here the expression of passing feelings, inspired by the particular circumstances, much higher than a deliberate opinion intentionally conceived and conscious of its own meaning. The proof of this is in the fact that Hincmar himself, when his claims to the metropolitan dignity are not in question, condemns very sharply, though at the risk of self-contradiction, the opinion of those who think that the king is subject only to God, and he makes it his boast to "follow the Roman Church, whose teachings," he says, quoting the famous words of Innocent I, "are imposed upon all men". His attitude, at any rate, stands out as an isolated accident; the Council of Troyes (867) proclaims that no bishop can be deposed without reference to the Holy See, and the Council of Orleans (871), although held under the influence of Hincmar, condemns the Bishop of Laon only under reserve of the rights of the pope.

With the first Capets the secular relations between the pope and the Gallican Church aspeared to be momentarily strained. At the Councils of Saint-Basile de Verzy (991) and of Chelles (993), in the discourses of Arnoul, Bishop of Orleans, in the letters of Gerbert, afterwards Pope Sylvester II, sentiments of violent hostility to the Holy See are manifested, and an evident determination to elude the authority in matters of discipline which had until then been recognized as belonging to it. But the nostrum of that period, given over to the tyranny of Crescentius and other local barons, was undergoing a melancholy obsequation. When it regained its independence, its old authority in France came back to it; the work of the Councils of Saint-Basile and of Chelles was undone; princes like Hugh Capet, bishops like Gerbert, held no attitude but that of submission. It has been said that during the early Capetian period the pope was more powerful in France than he had ever been. Under Gregory VII the pope's legates traversed France from north to south, they convoked and presided over numerous councils, and by a variety of sporadic and incoherent acts of resistance, they deposed bishops and excommunicated princes just as in Germany and Spain.

In the following two centuries Gallicanism is even yet unborn; the pontifical power attains its apex in France as elsewhere; St. Bernard, then the standard-bearer of the University of Paris, and St. Thomas outlines the theory of that power, and their opinion is that of the school in accepting the attitude of Gregory VII and his successors in regard to delinquent princes, St. Louis, of whom it has been sought to make a patron of the Gallican system, is still ignorant of it— for the fact is now established that the Pragmatic Sanction, long attributed to him, was a wholesale fabrication put together (about 1445) in the purloins of the Royal Chancellery of Charles VII to lend countenance to the Pragmatic Sanction of Bourges.

At the opening of the fourteenth century, however, the conflict between France and Rome becomes more acute—Gregory XII. VIII brings out the first glimmerings of the Gallican ideas. That king does not confine himself to maintaining that, as sovereign, he is sole and independent master of his temporalities; he haughtily proclaims that, in virtue of the concession made by the pope, with the assent of a general council, to Charlemagne and his successors, he has the power of vacating ecclesiastical benefices. With the consent of the nobility, the Third Estate, and a great part of VI.—23
the clergy, he appeals in the matter from Boniface VII to a future general council—the implication being that the council is superior to the pope. The same idea and others still more hostile to the Holy See occur in the treatises of patristic authors and of Bavaresian and John XXII; they are expressed by the pens of William Occam, of John of Jandun, and of Marsilius of Padua, professors in the University of Paris. Among other things, they deny the Divine origin of the papal primacy, and subject the exercise of it to the good pleasure of the temporal ruler. Following the pope, the University of Paris condemned these views; but for all that they did not entirely disappear from the memory, or from the disputations, of the schools, for the principal work of Marsilius, "Defensor Pacis," was translated into French in 1375, probably by a professor of the University of Paris. The Great Schism reawakened them suddenly. The idea of a council naturally suggested itself as a means of terminating that melancholy rending asunder of Christendom. Upon that idea was soon grafted the "conciliary theory," which sets the council above the pope, making it the sole representative of the Church, and the only authority with which a man must come to terms. Two professors of the University of Paris, Conrad of Gelhausen and Henry of Langenstein, this theory was completed and noisily interpreted to the public by Pierre d'Ailly and Gerson. At the same time the clergy of France, disgruntled with Benedict XIII, took upon itself to draw from its own resources the assembly which voted on this measure (1398) that for the first time there was any question of bringing back the Church of France to its ancient liberties and customs—of giving its prelates once more the right of conferring and disposing of benefices. The same idea comes into the foreground in the claims put forward in 1406 by another assembly of the French clergy; to win the votes of the assembly, certain orators cited the example of what was happening in England. M. Haller has concluded from this that these so-called Ancient Liberties were of English origin, that the Gallican Church really borrowed them from its neighbour, only imagining them to be a revival of its own past. This opinion does not seem well founded. The precedents cited by M. Haller go back to the parliament held at Carlisle in 1307, at which date the tendencies of reaction against papal reservations had already made themselves felt. Assisted by Philip the Fair in 1302 and 1303. The most that we can admit is, that the same ideas received parallel development from both sides of the channel.

Together with the restoration of the "Ancient Liberties" the assembly of the clergy in 1406 intended to maintain the supremacy of the French council over the bishopric of Rome, and the fallibility of the latter. However widely they may have been accepted at the time, these were only individual opinions or opinions of a school, when the Council of Constance came to give them the sanction of its high authority. In its fourth and fifth sessions it dealt with the council of the Church; it decreed that every person, no matter of what dignity, even the pope, was bound to obey it in what concerned the extermination of the schism and the reform of the Church; that even the pope, if he resisted obstinately, might be constrained by process of law to obey it in the above-mentioned points. This was the birth of, or we may prefer to call it so, the legitimation of Gallicanism. So far we had encountered in the history of the Gallican Church recriminations of malcontent bishops, or a violent gesture of some prince discomforted in his aversive designs; but these were only fits of resentment or ill-accidents with very transient consequences; this time the provisions made against exercise of the pontifical authority took to themselves a body and found a fulcrum. Gallicanism has implanted itself in the minds of men as a national doctrine and it only remains to apply it in practice. This is to be the work of the Pragmatic Sanction of Bourges. In that instrument the clergy of France inserted the articles of Constance repeated at Basle, and upon that point a warrant assumed authority over the collection of benefices and the temporal administration of the Churches on the sole basis of the common law, under the king's patronage, and independently of the pope's action. From Eugene IV to Leo X the popes did not cease to protest against the Pragmatic Sanction, until it was replaced by the Concordat of 1516. But, if its provisions disappeared from the charters of France, the principles it embodied for a time none the less continued to inspire the schools of theology and parliamentary jurisprudence. Those principles even appeared at the Council of Trent, where the ambassadors, theologians, and bishops of France repeatedly championed them, notably when the questions for decision were as to whether episcopal jurisdiction comes immediately from God or through the pope, whether or not the council ought to ask confirmation of its decrees from the sovereign pontiff, etc. Then again, it was in the name of the Liberties of the Gallican Church that in 1548 the council of the French nobility and orateurs opposed the publication of that same council; and the crown decided to detach from it and publish what seemed good, in the form of ordinances emanating from the royal authority.

Nevertheless, towards the end of the sixteenth century, the reaction against the Protestant denial of all authority to the pope and, above all, the triumph of the League had enfeebled Gallican convictions in the minds of the clergy, if not of the parliament. But the assassination of Henry IV, which was exploited to move public opinion against Ultramontanism and the restrictions that was imposed by the Sorbonne, brought about, at the beginning of the seventeenth century, a strong revival of Gallicanism, which was thenceforward to continue gaining in strength from day to day. In 1663 the Sorbonne solemnly declared that it admitted no authority of the pope over the king's temporal dominion, nor his superiority to a general council, nor infallibility apart from the Church's consent. In 1682 matters were much worse. Louis XIV having decided to extend to all the Churches of his kingdom the régale, or right of receiving the revenue of vacant sees, and of conferring temporal jurisdiction, Pope Innocent XI strongly opposed the king's designs. Irritated by this resistance, the king assembled the clergy of France and, on 19 March, 1682, the thirty-six prelates and thirty-four deputies of the second order who constituted that assembly adopted the four articles recited above and transmitted them to all the other bishops and archbishops of France. Three days later the king commanded the registration of the articles in all the schools and faculties of theology; no one could even be admitted to degrees in theology without having maintained this doctrine in one of his theses, and it was forbidden by Edmond Richer, synod of the Sorbonne, brought about, at the beginning of the seventeenth century, a strong revival of Gallicanism, which was thenceforward to continue gaining in strength from day to day. In 1663 the Sorbonne solemnly declared that it admitted no authority of the pope over the king's temporal dominion, nor his superiority to a general council, nor infallibility apart from the Church's consent. In 1663 the Sorbonne solemnly declared that it admitted no authority of the pope over the king's temporal dominion, nor his superior
been decreed in that assembly in regard to the ecclesiastical power and the pontifical authority. The king himself wrote to the pope (14 September, 1693) to announce that a royal order had been issued against the execution of the edict of 23 March, 1682. In spite of these disavowals, the Declaration of 1682 remained thereafter the lifting emblem of Gallicanism possessed by the great majority of the French clergy, obligated by the faculties of theology, schools, and seminaries, guarded from the lukewarmness of French theologians and the attacks of foreigners by the inquisitorial vigilance of the French parliaments never failed to condemn to suppression every work that seemed hostile to the principles of the Declaration.

From France Gallicanism spread, about the middle of the eighteenth century, into the Low Countries, thanks to the works of the jurist consult Van-Espen. Under the pseudonym of Febronius, Honthem introduced it into Germany, where it took the forms of Febronianism and Josephism. The Council of Pistoia (1786) even tried to acclimatize it in Italy. But its diffusion was sharply arrested by the Revolution, which took away its chief support by overturning the throne of kings against which that doctrine had clashed. Then the royalists wrecked their sees, nothing was left to the bishops of France but to link themselves closely with the Holy See. After the Concordat of 1801—itself the most dazzling manifestation of the pope's supreme power—French Governments made some pretense of reviving, in the Organic Articles, the "Ancient Gallican Liberties" and the obligation of teaching the articles of 1682, but ecclesiastical Gallicanism was never again resuscitated except in the form of a vague mistrust of Rome. On the fall of Napoleon and the Bourbons, the work of Lamennais, of "L'Avenir" and other publications devoted to Roman ideas, the "Defensio del Doctrina" of Don Diego of religious teaching ever increasingly deprived it of its partisans. When the Vatican Council opened, in 1869, it had in France only timid defenders. When that council declared that the pope has in the Church the plenitude of jurisdiction in matters of faith, morals, discipline, and administration, that his decisions ex cathedra are of themselves, and without the assent of the Church, infallible and irrefutable, it dealt Gallicanism a mortal blow. Three of the four articles were directly condemned. As to the remaining one, the first, the council made no specific declaration; but an important indication of the Catholic doctrine was given in the declaration fulfilled by Pius IX against the 24th proposition of the Syllabus, in which it was asserted that the Church cannot have recourse to force and is without any temporal authority, direct or indirect. Leo XIII shed more direct light upon the question in his Encyclical "Immaculata Dei" (12 November, 1885), where we read: "God has apportioned the government of the human race between two powers, the ecclesiastical and the civil, the former set over things divine, the latter over things human. Each is restricted within limits which are perfectly determined and defined in conformity with its own nature and special aim. There is therefore, as it were, a circumscribed sphere in which each exercises its functions "jure proprio". And in the Encyclical "Sapiantia Christianæ" (10 January, 1890), the same pontiff adds: "The Church and the State have each its own power, and neither of the two powers is subject to the other."

Stricken to death, as a free opinion, by the Council of the Vatican, Gallicanism could survive only as a heresy; the Old Catholics have endeavored to keep it alive under this form. Judging by the paucity of the adherents whom they have recruited—daily becoming fewer in Germany and Switzerland, it seems very evident that the historical evolution of these ideas has reached its completion.

Critical Examination. — The principal force of Gallicanism always was that which it drew from the external circumstances in which it arose and grew up: the difficulties of the Church, torn by schism; the encroachments of the civil authorities; political turmoil; the interested support of the kings of France. But the less does it excuse Gallicanism's paralyzing influence to exist, and to legitimize its attitude towards the theories of the schools. There is no denying that it has had in its service a long succession of theologians and jurists who did much to assure its success. At the beginning, its first advocates were Pierre d'Ailly and Passerat, whose mandate was to strengthen the then prevalent disorder of ideas, to secure its triumph in the Council of Constance. In the sixteenth century Almain and Major make but a poor figure in contrast with Torquemada and Cajetan, the leading theorists of pontifical primacy. But in the seventeenth century the Gallican doctrine takes its revenge with Richer and Launoy, who throw as much passion as science into their efforts to shake the work of Bellarmine, the most solid edifice ever raised in defence of the Church's constitution and the papal supremacy. Pithou, Dupuy, and Marcæ edited texts or disinterred from archives the judicial movements best calculated to support parliamentary Gallicanism. After 1662 the attack and defence of Gallicanism were concentrated almost entirely upon the four Articles. Whilst Charles, in his anonymous treatise on the Liberties of the Catholic Church, d'Aguire, in his "Auctoritas infallibilis et summa sancti Petri", Rocaert, in his treatise "De omnibus pontificum auctoritate", Sfondrato, in his "Gallia vindicata", dealt severe blows at the doctrine of the Declaration, Alexander Natalie and Ellies Dupin searched ecclesiastical history for titles on which to support it. Bossuet carried on the defence at once on the ground of theology and of history. Lalande, in "Defensio du Doctrina", and then Dupin, in the light of day until 1730, he discharged his task with equal scientific power and moderation. Again, Gallicanism was ably combatted in the works of Mazzarelli, Bianchi, and Ballerini, and upheld in those of Durand de Maillane, La Luzerne, Marett, and Dillenger. But the strife is prolonged beyond its interest; except for the bearing of some few arguments on either side, nothing that is altogether new. After all, so adduced for or against, and it may be said that with Bossuet's work Gallicanism had reached its full development, sustained its sharpest assaults, and exhibited its most efficient means of defence.

These means are well known. The absolute independence of the civil power, affirmed in the first Article, Gallicans drew their argument from the proposition that the theory of indirect power, accepted by Bellarmine, is easily reducible to that of direct power, which he did not accept. That theory was a novelty introduced into the Church by Gregory VII; until his time the Christian peoples and the popes had suffered injustice from princes without asserting for themselves the right to revolt or to excommunicate. As for the superiority of councils over popes, as based upon the decrees of the Council of Constance, the Gallicans essayed to defend it chiefly by appealing to the testimony of history which, according to them, shows that general councils have never been dependent on the popes, but had been considered the highest authority for the settlement of doctrinal disputes or the establishment of disciplinary regulations. Supported by the decrees of councils or the edicts of the popes, a third Article was based upon the declarations or upon the declarations of the popes. It is true that that Article made respect for the canons a matter rather of high propriety than of obligation for the Holy See. Besides, the canons alleged were among those that had been established with the consent of the pope and of the Churches, the plentitude of the pontifical jurisdiction was therefore safeguarded, and Bossuet pointed out that this article had called
forth hardly any protests from the adversaries of Gallicanism. It was not so with the fourth Article, which implied a negation of papal infallibility. Resting chiefly on history, the whole Gallican argument reduced to the position that the Doctors of the Church—St. Cyprian, St. Augustine, St. Basil, St. Thomas, and the rest—had not known pontifical infallibility; that pronouncements made by them had been submitted to examination by councils; that popes—Liberus, Honorius, Zosimus, and others—had promulgated erroneous dogmatic decisions. Only the line of popes, the Apostolic See, was infallible; but each pope, taken individually, was liable to error.

This is not the place to discuss the line of decision, or set forth the replies which it elicited; such an enquiry will more appropriately form part of the article devoted to the primacy of the Roman See. Without involving ourselves in technical developments, however, we may call attention to the weakness of the Scriptural scaffolding upon which Gallicanism supported its fabric. Not only was it opposed by the luminous clearness of Christ's words—"Thou art Peter, and upon this rock will I build My Church"; "I have prayed for thee, Peter, that thy faith fail not . . . confirm thy brethren"—but it finds nothing in Scripture which could warrant the doctrine of the divine council or pastoral institution in the church. The line of popes and the individuals—the Sedes and the Sedens. Supposing there were any doubt of Christ's having promised infallibility to Peter, it is perfectly certain that He did not promise it to the council, or to the See of Rome, neither of which is named in the Gospel.

The pretension implied in Gallicanism—that only the schools and the churches of France possessed the truth as to the pope's authority, that they had been better able than any others to defend themselves against the encroachesments of Rome—was insulting to the sovereign pontiff and invidious to the other churches. It does not belong to one part of the Church to decide what council is eccumenical, and what is not. By what right was this honour refused in France to the Councils of Florence (1439) and the Lateran (1513), and accorded to that of Constance? Why, above all, should we attribute to the decisions of the latter Church the power which was only intended to escape from a deadlock, the force of a general principle, a dogmatic decree? And moreover, at the time when these decisions were taken, the council presented neither the character, nor the conditions, nor the authority of a general synod; it is not clear that the majority of its members thought they possessed any intention of formulating a dogmatic definition, nor is it proved that the approbation given by Martin V to some of the decrees extended to these. Another characteristic which is apt to diminish one's respect for Gallican ideas is their appearance of having been too much influenced by the spirit of the age and evolutionally by interested motives. Suggested by theologians who were under bonds to the emperors, accepted as an expedient to restore the unity of the Church, they had never been more loudly proclaimed than in the course of the conflicts which arose between popes and kings, and then always for the advantage of the latter. In truth they savoured too much of a courtly bias.

"The Gallican Liberties", Joseph de Maistre has said, "are but a fatal compact signed by the Church of France, in virtue of which she submitted to the outrages of the Parliament on condition of being allowed to pass them on to the sovereign pontiff". The history of the Gallican liberties should be written in the light of this severe judgment. It was a Gallican—no other than Baille—who wrote: "The bishops who served Philip the Fair were upright in heart and seemed to be actuated by a genuine, if somewhat too vehement, zeal for the rights of the Crown; whereas among those whose advice Louis XIV followed there were some who, under pretext of the public welfare, only sought to avenge themselves, by oblique and devious methods, on those whom they regarded as the censers of their conduct and their sentiments."

Even apart from every other consideration, the practical consequences to which Gallicanism led, and the way in which the State turned it to account should suffice to warn Catholics from it. The whole Gallican philosophy was Gallicanism which allowed the Jansenists condemned by popes to elude their sentences on the plea that these had not received the assent of the whole episcopate. It was in the name of Gallicanism that the kings of France impeded the publication of the Holy Scriptures, and by force of this pretension of the councils to write against Jansenism—or, at any rate, to publish charges without endorsement of the chancellor. Bossuet himself, prevented from publishing a charge against Richard Simon, was forced to complain that they wished to put all the bishops under the yoke in the essential matter of their ministry, which is the Faith. Alleging the Liberties of the Gallican Church, the French Parliaments admitted appelles comme d'abus against bishops who were guilty of condemning Jansenism, or of admitting into their Breviaries the Office of St. Gregory, sanctioned by Rome; and on the same general principle they could be suspended and placed by the common executioner, or condemned to imprisonment or exile priests whose only crime was that of refusing the sacraments and Christian burial to Jansenists in revolt against the most solemn pronouncements of the Holy See. Thanks to these "Liberties", the juridical and the disciplinary power of the Church is almost entirely in the hands of the civil power, and Fénélon gave a fair idea of them when he wrote in one of his letters: "In practice the king is more our head than the pope, in France—Liberties against the pope, servitude in relation to the king—The king's authority over the Church devolves upon the lay judges; The daily dominate the bishops." And Fénélon had not seen the Constituent Assembly of 1790 assume, from Gallican principles, authority to demolish completely the Constitution of the Church of France. For there is not one article of that melancholy Constitution that did not find its inspiration in the writings of Gallican fathers and theology experts. The task of here entering into any lengthy proof of this; indeed the responsibility which Gallicanism has to bear in the sight of history and of Catholic doctrine is already too heavy.

Gallican Rite, The.—This subject will be treated
under the following six heads: I. History and Origin; II. MSS. and Other Sources; III. The Liturgical
Year; IV. The Divine Office; V. The Mass; VI. The
Occasional Services.

I. History and Origin.—The name Gallican Rite
is given to the rite which prevailed in Gaul from the
earliest times of which we have any information until
the middle or end of the eighth century. There
is no information before the fifth century and very
little then; and throughout the whole period there was,
to judge by existing documents and descriptions, so
much falsity and uncertainty. If the Mass in the
rite were of the same pattern, the name must not
be taken to imply more than a very moderate amount
of homogeneity. The Rite of Spain, fairly widely
used from the fifth century to the end of the eleventh,
and still lingering on as an archæological survival in
chapels at Toledo and Salamanca, was so nearly allied
to the Gallican Rite that the term Hispano Gallican
is often applied to the two. But this Spanish Mosar-
able Rite has, like the allied Celtic, enough of an
independent history to require separate treatment, so that
though it will be necessary to allude to both by way of
illustration, the article will be chiefly devoted to
the rite once used in what is now France. Of the
origin of the Gallican Rite there are three principal
theories, between two of which the controversy is not
yet settled. These may be termed (1) the Ephe-

(2) the Ambrosian, and (3) the Roman theories.

The first has been almost universally under
Ambrosian Rite and Celtic Rite. This theory, which was first put forward by Sir W. Palmer in his
"Origines Liturgiae", was once very popular among
Anglicans. According to it the Gallican Rite was re-
ferred to an original brought to Lyons from Ephesus by St. Pothinus and St. Laurence, who had received it
through St. Polycarp from St. John the Divine. The
idea originated partly in a statement in the eighth-
century tract in Cott. MS. Nero A. II in the British
Museum, which refers the Gallican Divine Office (Cur
sus Gallorum) to such an origin, and partly in a state-
ment of Colman at the Synod of Whitby (664) respect-
ing the Johannine origin of the Celtic Easter. The
Cottonian tract is of little or no historical value;
Colman's notion was disproved at the time by St.
Willfrid; and the Ephesine theory has now been given
up by all serious liturgiologists. Mgr Duchesne, in his
"Origines du culte chrétien", has finally dismissed the
whole idea. He fixes (1) the completion of the
liturgy of the Rite, as it is found in the Gallican,
Ambrosian, or Roman, a very large proportion
of the priest's part varies according to the day.
(2) The second theory is that which Duchesne
puts forward in the place of the Ephesine. He holds
that Milan, not Lyons, was the principal centre
of Gallican development. He lays great stress on the
incontestable importance of Milan and the Church of
Milan in the late fourth century, and conjectures that
a liturgy of Oriental origin, introduced perhaps by
the Cappadociad Aunctentius, Bishop of Milan from 355 to
374, spread from that centre to Gaul, Spain, and
Britain. He points out that the Gallican Liturgy, in
the features which distinguish it from the Roman,
betray all the characteristics of the Eastern liturgies,
and that "some of its formularies are to be found
word for word in the Greek texts which were in use
in the churches of the Syro-Byzantine Rite either in
the fourth century or somewhat later", and infers from
this that the Gallican Liturgy is an Oriental liturgy,
introduced into the West towards the middle of the
fourth century". He does not, however, note that
in certain other important peculiarities the Gallican
Liturgy agrees with the Roman where the latter
differs from the Oriental. Controverting the third or
Eastern theory of origin, he lays some stress on the
fact that Pius St. Innocent I (416) in his letter to
Decentius of Gubbio spoke of usages which Mgr
Duchesne recognizes as Gallican (e. g. the position of
the Diptyche and the Pax), as "foreign importations"
and did not recognize in them the ancient usage of
his own Church, and he thinks it hard to explain why
the African Church should have accepted the Roman
reforms, while St. Ambrose, himself a Roman, refused
them. He assumes that the Ambrosian Rite is not
essentially Roman, but Gallican, and that it was fostered
in a later period, and that the Gubbio variations of which
St. Innocent complained were borrowed from Milan.

(3) The third theory is perhaps rather complicated
to state without danger of misrepresentation, and
has not been so definitely stated as the other two by
Contemporary writers. It is that much of the Roman
rite, as preserved by such Fathers and Doctors as
Lucas, the Milanese liturgiologists, and many others
whose opinion is of weight. In order to state it clearly
it will be necessary to point out first certain details
in which all the Latin or Western rites agree with one
another in differing from the Eastern, and in this we
speak only of the Mass, which is of far more import-
ance than either the Divine Office or the occasional
services in determining origins. The Eastern Euca-
ristic offices of whatever rite are marked by the in-
variance of the priest's part. There are, it is true,
alternative anaphoras which are used either ad hoc, or
the Rite, or used the Syro-Jerusalem Rite, or on the
in Byzantine and East Syrian, but they are complete
in themselves and do not contain passages appro-
priate to the day. The lections of course vary with
the day in all rites, and varying antiphons, troparia,
etc., are sung by the choir; but the priest's part re-
mains fixed. In the Western rites, whether Latin,
Gallican, Ambrosian, or Roman, a very large propor-
tion of the priest's part varies according to the day,
and, as will be seen by the analysis of its Mass in this
article, these variations are so numerous in the Galli-
can Rite that the fixed part even of the Prayer of
Consecration is still very limited. Certain of the varying prayers of the Hispano-Gallican Rite have a tendency
to fall into couples, a Bidding Prayer, or invitation to
pray, sometimes of considerable length and often
partaking of the nature of a homily, addressed to the
congregation, and a collect embodying the suggestions
of the Bidding Prayer, addressed to God. These
Bidding Prayers have survived in the Roman Rite of
today in the Good Friday intercessory prayers, and
they occur in a form borrowed later from the Gallican,
in the ordination services, but in general the invitation
to prayer is reduced to its lowest terms in the word
Oratio. Another Western peculiarity is in the form
of the Instituion as the Institution as the Galli-
can liturgies follow St. Paul's words in I Cor., xi, 23-
25, and date the Institution by the betrayal, ἐν τῇ πρωτερίᾳ, ἐν ταξιδίῳ (in the night in which He was
betrayed), and of the less important anaphoras, most
either use the same expression or paraphrase it. The
Western liturgies date from the Fathers, Qui pridie et
quam pateret, for which, though of course the fact is
found there, there is no verbal Scriptural warrant.
The Mozarabic of to-day uses the Pauline words, and
no Gallican Recital of the Institution remains in full;
but in both the prayer that follows is called (with
alternative name-calls) in the Gallican, St.
Pridie and the catchwords "Qui pridie" come at the
end of the Post-Sanctus in the Gallican Masses, so
that it is clear that this form existed in both. These
variations from the Eastern usages are of an early
date, and it is inferred from them, and from other
considerations more historical than liturgical, that a
liturgy with these peculiarities was the common pro-
erty of Gaul, Spain, and Italy. Whether, as is most
likely, it originated in Rome and spread thence to the
countries under direct Roman influence, or whether
it originated elsewhere and was adopted by Rome,
there is no means of knowing. The adoption must
have happened when the Empire was in a state of
chaos. The Gallicans may have carried to an extreme
the changes begun at Rome, and may have retained
some archaic features (now often mistaken for Orientalism) which had been later dropped by Rome. At some period in the fourth century—it has been conjectured that it was in the pontificate of St. Damasus (366–84)—reforms were made at Rome, the position of the Great Intercession and of the Pax were altered, the latter, perhaps because the form of the dismissal of the catechumens was disused, and the distinction between the missa catechumenorum and the missa flderum necessitates neither. The want was felt of a position with some meaning to it for the sign of Christian unity, and the long and diffuse prayers were made into the short and crisp collect of the Roman type. It was perhaps then that the variable Post-Sanctus and Post-Friodie were altered into a fixed Canon, similar to the Collect for the day, though perhaps this Canon began with the clause which now reads "Quam oblationem", but according to the pseudo-Ambrosian tract "De Sacramentis" once read "Fac nobis hane oblationem". This may have been introduced by a short variable Post-Sanctus. This reform, possibly through the influence of St. Ambrose, was adopted in the West, and Spain. At a still later period changes were again made at Rome. They have been principally attributed to St. Leo (440–81), St. Gelasius (492–96), and St. Gregory (590–604), but the share these popes had in the reforms is not definitely known, though they were certainly more important than their respective names. These later reforms were not adopted at Milan, which retained the books of the first reform, which are now known as Ambrosian.

Hence it may be seen that, roughly speaking, the Western or Latin Liturgy went through three phases, which may be called for want of better names the Gallican, the Ambrosian, and the Roman stages. The holders of the theory do not recognize quite clearly that the line of demarcation between these stages is rather a vague one, and that the alterations were in many respects gradual. Of the three theories of origin the Ephesine may be dismissed as practically disproved. To both of the other two the same objection may be urged, that they are largely founded on conjecture and on the critical examination of documents of a much later date than the periods to which the conjectures relate. But at present there is little else to go upon. It may be well to mention also a thought suggested by Mr. W. C. Bishop in the "Quarterly" for July, 1908, to the effect that the Gallican Liturgy was not introduced into Gaul from anywhere, but was the original liturgy of that country, apparently invented and developed there. He speaks of an original independence of Rome (of course liturgically only) followed by later borrowings. This does not seem to exclude the idea that Rome and the West may have had the germ of the Western Rite in common. Again the theory is conjectural and is only very slightly stated in the article.

The later history of the Gallican Rite until the time of its adoption as a separate Rite is obscure. In Spain there was a definite centre in Toledo, whose influence was felt over the whole peninsula, even after the coming of the Moors. Hence it was that the Spanish Rite was much more regulated than the Gallican, and Toledo at times, though not very successfully, tried to give liturgical laws even to Gaul, though probably only to the Visigothic part of it. In the greater part of France there was liturgical anarchy. There was no capital to give laws to the whole country, and the rite developed there variously in various places, so that among the scanty fragments of the service-books that remain there is a marked absence of uniformity, though one main outline of the services are of the same type. Several councils attempted to regulate matters a little, but only for certain provinces. Among these were the Councils of Vannes (463), Agde (506), Vaison (529), Tours (567), Auxerre (578), and the two Councils of Mâcon (581, 623). But all along there went on a certain process of Romanizing, due to the constant applications to the Holy See for the adoption of the Rite of St. Denis. The confusion and the complication in the probable introduction during the seventh century, through the Columbanian missionaries, of elements of Irish origin. The changes towards the Roman Rite happened rather gradually during the course of the late seventh and eighth century, and seem concurrent with the rise of the Abbaye de la Défense, and their development into kings of France. Nearly all the Gallican books of the later Merovingian period, which are all that are left, contain many Roman elements. In some cases there is reason to suppose that the Roman Canon was first introduced into an otherwise Gallican Missal, and the primitive Gallican Sacramentary, the principal MS. of which is in the library of the Abbey of St.-Denis and to the early eighth century, is an avowedly Roman book, though containing Gallican additions and adaptations. And the same may be said of what is left of the undoubtedly Frankish book known as the "Missale Francorum" of the same date. Mgr. Duchesne attributes a great deal of this eighth-century Romanizing tendency to St. Boniface, though he shows that it had begun before his day. The Roman Liturgy was adopted at Metz in the time of St. Chrodegang (742–86). The Roman chant was introduced about 789, and by a decree of Primate, quoted to be Charlemagne in Charles the Bald's "Caurils" in 789, the Gallican chant was abolished in its favour. Pope Adrian I between 784 and 791 sent to Charlemagne at his own request a copy of what was considered to be the Sacramentary of St. Gregory, but which certainly represented the Roman use of the end of the eighth century. This book, which was far from complete, was edited and supplemented by the addition of a large amount of matter derived from the Gallican books and from the Roman book known as the Gallican Sacramentary, which had been gradually supplanted the Gallican. It is probable that the editor was Charlemagne's principal liturgical adviser, the Englishman Alcuin. Copies were distributed throughout Charlemagne's empire, and this "composite liturgy", as Mgr. Duchesne says, "from its source in the Imperial chapel spread throughout all the churches of the Frankish Empire and at length, finding its way to Rome gradually supplanted there the ancient use" in the eleventh century. When Charles the Bald wished to see what the ancient Gallican Rite had been like, it was necessary to import Spanish priests to celebrate it in his presence. It should be noted that the name Gallican has also been applied to two other uses: (1) a French use introduced by the Normans into Aquitaine, and (2) the Rhineland. This was only a variant of the Roman Rite. (2) The reformed Breviaries of the French dioceses in the seventeenth to mid-nineteenth centuries. These have nothing to do with the ancient Gallican Rite.

II. MSS. AND OTHER SOURCES.—There are no MSS. of the Gallican Rite earlier than the seventh century, though the descriptions in the letters of St. Germanus of Paris (555–76) take one back another century. The MSS. are:

(1) The Reichenau Fragments (Carlsruhe, 283), described (no. 8) in Delisle's "Mémoire sur d'anciens Sacrémentaires." These were discovered by Mon. Moreau in 1850 in a palimpsest MS. of the Abbey of Reichenau in the library of Carlsruhe. The MS., which is late seventh century, had belonged to John II, Bishop of Constance (760–81). It contains eleven Masses of purely Gallican type, one of which is in honour of St. Germanus of Auxerre, but the others do not specify the place of celebration, though all are written in Latin, which is in prose, is entirely in hexameter verse. Mone published them with a facsimile in his "Lateinishe und Griechische Messe aus dem selben us sechsten Jahrhundert" (Frankfort, 1850). They were
reprinted in Migne’s “Patrologia Latina” (Vol. CXXXVIII), and by Neale and Forbes in “The Ancient Liturgy of the Gallican Church” (Burns-land, 1855-67).

From, Mai, and Bunsen Fragments.—Of these disjointed palimpsest leaves, those of Mai and Peyron were found in the Ambrosian Library at Milan, and those of Bunsen at St. Gall. Peyron’s were printed in his “M. T. Ciceronis Orationum Fragmenta inedita” (Stuttgart, 1824), Mai’s in his “Scriptores Veterrimae Galliae Liturgiae et Bunsen’s in his “Analecta Ante-Nicene.” All these were reprinted by C. E. Hammond: Peyron’s and Bunsen’s in his “Ancient Liturgy of Antioc” (Oxford, 1879), and Mai’s in his “Ancient Liturgies” (Oxford, 1878). The last are also in Migne’s “Patrologia Latina” with Mone’s Reichenspurg fragments. The Peyron fragment contains part of what looks like a Lenten Contestatio (Preface) with other prayers of Gallican type. The Bunsen fragment contains part of a Mass for the Dead (Post-Sancus, Post-Pridie) and several pairs of Bidding Prayers and collects, the former having the title “Exhortatio” or “Exhortatio Matutina.” The May fragment also contains with the insertions of Bidding Prayers and contain a fragment of a Contestatio, with that title, and fragments of other prayers, two of which have the title “Post Nomina,” and two others which seem to be prayers “Ad Pacem.”

(3) The Missale Gothicum (Vatican, Queen Christina, described by Walcha, Nov. 5. 3. The MS. of the end of the seventh century, which once belonged to the Petu Library. The name is due to a fifteenth-century note at the beginning of the book, and hence it has been attributed to Tomas and Mabillon to Darbonne, which was in the Visigothic Kingdom. Mgr. Duchesne, judging by the inclusion of Masses for the feast of St. Symphorian and St. Léger (d. 680), attributes it to Autun. The Masses are numbered: the MS. beginning with Christmas Eve, which is numbered “III.” Probably there were once two Advent Masses, as in the “Missale Gallicanum.” There are eighty-one numbered sections, of which the last is the first prayer of “Missa Romaeus corditiana,” with which the MS. breaks off. The details of the Masses in this section are given in the section of the present article on the liturgical year. The Masses are all Gallican as to order, but many of the actual prayers are Roman. The “Missale Gothicum” has been published (Codex 36, Amsterdam, 1860), Mabillon (De Liturgia Gallicanæ, Paris, 1865), Muratori (Liturgia Romana Vetus, Venice, 1748), Neale and Forbes (op. cit.), and in Migne’s “Patrologia Latina” (Vol. LXXII).

(4) Missale Gallicanum Vetus (Vatican, Palat. 493).—Described by Walcha, Nov. 5. 5. The MS., which is of the end of the seventh, or the early part of the eighth, century is only a fragment. It begins with a Mass for the feast of St. Germanus of Auxerre (9 Oct.), after which come prayers for the Blessing of Virgins and Wives, two Advent Masses, the Christmas Eve Mass, and the Missae Etiam et Tres Symbols, and other ceremonies preparatory to Baptisms; the Maundy Thursday, Good Friday and Easter Sunday ceremonies and the baptismal service, Masses for the Sundays after Easter up to the Rogation Mass, where the MS. breaks off. The Masses, as in the “Gothicum,” are Gallican in order with many Roman prayers. The Gallican prayers are, as usual, verbatim a facsimile of exactly those of the Roman Missal. The MS. has been published by Tommasi, Mabillon, Muratori, and Neale and Forbes (op. cit.), and in Vol. LXXXII of Migne’s “Patrologia Latina.”

(5) The Luxeuil Lectorium (Paris, Bibl. Nat., 947).—One of the coarsest of the seventh century was discovered by Mabillon in the Abbey of Luxeuil, but from its containing among its very few saints days the feast of St. Genevieve, Dom Morin (Revue Bénédictine, 1883) attributes it to Paris. It contains the Prophetical Lessons, Epistles, and Gospels for the year from Christmas Eve onwards (for the details of which see the section of this article on the liturgical year). At the end are the Masses, for the burial of a bishop, for the dedication of a church, when a bishop preaches, “et plebs decimas reddat,” when a deacon is ordained, when a priest is blessed, “in professione initeris,” and “lectiones cotidiana.” This Lectorium is purely Gallican with no apparent Roman influence. The MS. has not been reprinted in its entirety, but Mabillon in “De Liturgia Gallicanæ” gives the references to all the lessons and the beginnings and endings of the text.

(6) The Letters of St. Germanus of Paris.—These were printed by Marténe (De Antiquis Ecclesie Ritibus, Bassano, 1788) from a MS. at Autun, and are given also in Vol. LXXII of Migne’s “Patrologia Latina.” There appears to be no reason to doubt that they are genuine. They contain mystical interpretations of the ceremonies of the Mass and of other services. Mgr. Duchesne says of the descriptions, on which the interpretations are based, that “We may believe that we have the Gallican Mass” (De Liturgie Gallicana). (See section of this article on the Mass.)

Much side light is thrown on the Gallican Rite by the Celtic books (see Celtic Rite), especially by the Stowe and Bobbio Missals. The latter has been called Gallican and attributed to the Province of Osanpon, but it is now said to be Irish in a much Romanized form, though of Continental provenance, being quite probably from the originally Irish monastery of Bobbio, where Mabillon found it. A comparison with the Ambrosian books (see Ambrosian Liturgy and Rite) may also be of service, while most lacunae in our knowledge of the Gallican Rite may reasonably be conjecturally filled up from the Mosan- natic books, which even in their present form are those of substantially the same rite. There are also liturgical allusions in certain early writers: St. Hilary of Poitiers, St. Sulpicius Severus (d. about 400), St. Cesarins of Arles (d. about 542), and especially St. Gregory of Tours (d. 595), and some information may be gathered from the decrees of the Gallic councils above mentioned.

The above are all that exist as directly Gallican sources, but much information may also be gleaned from the books of the transition period, which, though substantially Roman, were much Gallicanized and contained a large amount which was of a Gallican rather than a Roman type. The principal of these are:

(1) The Gelasian Sacramentary, of which three MSS. exist, one in the Vatican (Queen Christina MS. 316), one at Zurich (Rh. Main 301), and one at St. Gall (MS. 348). The MSS. are of the early eighth century. The groundwork is Roman, with Gallican additions and modifications. Evidence for the Gallican rites of Ordination and some other matters is derived from this book. The Vatican MS. was published by Tommasi and Muratori, and a complete edition from all these MSS. was edited by H. A. Wilson (Oxford, 1894).

(2) The Missale Francorum (Vatican, Q. Christina MS. 257, Delisle No. 4).—A fragment of a Sacramentary of a similar type to the Gelasian, though not identical with it. Printed by Tommasi, Mabillon, and Muratori.

(3) The Gregorian Sacramentary.—Of this there are many MSS. It represents the Sacramentary sent by Pope Adrian I to Charlemagne, after it had been rearranged and supplemented by Galesan and Gallican additions in France. One MS. of it was published by Muratori. In this, as in many others, the additions form a supplement, but in some (e.g. the Anglo-Gaul Sacramentary) Bibl. Nat. Lat. 816) the Galician additions are interpolated throughout.
III. THE LITURGICAL YEAR.—The Luxueil Lectionary, the Gallician Missals, and the Gallican adaptations of the Hieronymian Martyrology are the chief authorities for the liturgical calendar of the Gallican Church. The text that follows may be used as a basis for the liturgical calendar of the Gallican Church, with some adaptations to fit the liturgical calendar of the Roman Church.

The principal feast days of the Gallican Church are observed on the same day as in the Roman Church, except for the following:

- Simultaneously with the third Sunday of Advent, the Gallican Church observes the feast of John the Baptist, who is commemorated on the Saturday before Christmas. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the first Sunday of Lent, the Gallican Church observes the feast of the Annunciation of the Virgin Mary. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the fifth Sunday of Lent, the Gallican Church observes the feast of the Nativity of the Virgin Mary. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the seventh Sunday of Lent, the Gallican Church observes the feast of the Ascension of the Lord. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the eleventh Sunday of Lent, the Gallican Church observes the feast of the Pentecost. This is similar to the Roman Church, which commemorates the same saint on the same day.

These feast days are observed in the Gallican Church in accordance with the liturgical calendar of the Roman Church, with some adaptations to fit the specific traditions of the Gallican Church. The Gallican Church observes the feast days of the liturgical calendar of the Roman Church, with some adaptations to fit the specific traditions of the Gallican Church. The principal feast days of the Gallican Church are observed on the same day as in the Roman Church, except for the following:

- On the Sunday after the first Sunday of Advent, the Gallican Church observes the feast of Saint Andrew. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the second Sunday of Advent, the Gallican Church observes the feast of Saint John the Baptist. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the third Sunday of Advent, the Gallican Church observes the feast of Saint John the Evangelist. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the fourth Sunday of Advent, the Gallican Church observes the feast of Saint Matthew. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the fifth Sunday of Advent, the Gallican Church observes the feast of Saint Mark. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the sixth Sunday of Advent, the Gallican Church observes the feast of Saint Luke. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the seventh Sunday of Advent, the Gallican Church observes the feast of Saint Peter. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the eighth Sunday of Advent, the Gallican Church observes the feast of Saint Paul. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the ninth Sunday of Advent, the Gallican Church observes the feast of the Annunciation of the Virgin Mary. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the tenth Sunday of Advent, the Gallican Church observes the feast of the Nativity of the Virgin Mary. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the eleventh Sunday of Advent, the Gallican Church observes the feast of the Epiphany. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the twelfth Sunday of Advent, the Gallican Church observes the feast of the Baptism of the Lord. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the thirteenth Sunday of Advent, the Gallican Church observes the feast of the Transfiguration of the Lord. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the fourteenth Sunday of Advent, the Gallican Church observes the feast of Saint Peter. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the fifteenth Sunday of Advent, the Gallican Church observes the feast of Saint Paul. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the sixteenth Sunday of Advent, the Gallican Church observes the feast of the Annunciation of the Virgin Mary. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the seventeenth Sunday of Advent, the Gallican Church observes the feast of the Nativity of the Virgin Mary. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the eighteenth Sunday of Advent, the Gallican Church observes the feast of the Epiphany. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the nineteenth Sunday of Advent, the Gallican Church observes the feast of the Baptism of the Lord. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the twentieth Sunday of Advent, the Gallican Church observes the feast of the Transfiguration of the Lord. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the twenty-first Sunday of Advent, the Gallican Church observes the feast of Saint Peter. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the twenty-second Sunday of Advent, the Gallican Church observes the feast of Saint Paul. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the twenty-third Sunday of Advent, the Gallican Church observes the feast of the Annunciation of the Virgin Mary. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the twenty-fourth Sunday of Advent, the Gallican Church observes the feast of the Nativity of the Virgin Mary. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the twenty-fifth Sunday of Advent, the Gallican Church observes the feast of the Epiphany. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the twenty-sixth Sunday of Advent, the Gallican Church observes the feast of the Baptism of the Lord. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the twenty-seventh Sunday of Advent, the Gallican Church observes the feast of the Transfiguration of the Lord. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the twenty-eighth Sunday of Advent, the Gallican Church observes the feast of Saint Peter. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the twenty-ninth Sunday of Advent, the Gallican Church observes the feast of Saint Paul. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the thirtieth Sunday of Advent, the Gallican Church observes the feast of the Annunciation of the Virgin Mary. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the thirty-first Sunday of Advent, the Gallican Church observes the feast of the Nativity of the Virgin Mary. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the thirty-second Sunday of Advent, the Gallican Church observes the feast of the Epiphany. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the thirty-third Sunday of Advent, the Gallican Church observes the feast of the Baptism of the Lord. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the thirty-fourth Sunday of Advent, the Gallican Church observes the feast of the Transfiguration of the Lord. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the thirty-fifth Sunday of Advent, the Gallican Church observes the feast of Saint Peter. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the thirty-sixth Sunday of Advent, the Gallican Church observes the feast of Saint Paul. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the thirty-seventh Sunday of Advent, the Gallican Church observes the feast of the Annunciation of the Virgin Mary. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the thirty-eighth Sunday of Advent, the Gallican Church observes the feast of the Nativity of the Virgin Mary. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the thirty-ninth Sunday of Advent, the Gallican Church observes the feast of the Epiphany. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the fortieth Sunday of Advent, the Gallican Church observes the feast of the Baptism of the Lord. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the forti-first Sunday of Advent, the Gallican Church observes the feast of the Transfiguration of the Lord. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the forti-second Sunday of Advent, the Gallican Church observes the feast of Saint Peter. This is similar to the Roman Church, which commemorates the same saint on the same day.
- On the Sunday after the forti-third Sunday of Advent, the Gallican Church observes the feast of Saint Paul. This is similar to the Roman Church, which commemorates the same saint on the same day.
what, without any intention of levity, one may call "lighting-up time". The Ambrosian and Mosarabic Vespers are constructed on this principle, and so is the Byzantine "Begovosius."

A great blessing being given by the bishop at the end of Lucernarium, "cumque expleto Lucernario benedictionem populo dedisset"; and the following is an order of the Council of Agde (canon 30): "Et quia convenit ordinem ecclesiae ab omnibus aquarilis custodiri studendum est ut ubique fit et post antiphonas collectio; potest, ut ad Sanctos sacrificii dicatur et hymni matutini vel vesperae diebus omnibus decantetur et in conclusione matutinarum vel vesperinarum missarum post hymno capitella de psalmis decantur et plebs collecta oratione ad vesperam et Episcopo cum benedictione dimitatur". The rules of Cassarius and Aurelian both speak of two nocturns with lessons, which include on the feasts of martyrs lessons from their passions. They order also Magnificat to be sung at Lauds, and during the Paschal days; and on Sundays and greater festivals Gloria in Excelsis. There is a short passage which throws a little light upon the liberal use of the office of the fifth tone by the Council of the Council of Lyons in 499, quoted by Mabillon. The council assembled by King Gundobad of Burgundy began on the feast of St. Just. The vigil was kept at his tomb. This began with a lesson from the Pentateuch ("a Mosé"), in which occurred the words "Sed ego indurabo cor ejus", etc. (Ex. xvi, 25). The Epistle ("ex Apostolo") which contained the words "An divitiae bonitatis ejus", etc. (Rom. ii, 4). St. Agobard in the ninth century mentions that at Lyons there were no canticles except from the Psalms, no hymns written by poets, and no lessons except from Scripture. Mabillon says that though in his day Lyons agreed with Rome in many things, especially in the distribution of the Psalter, and admitted lessons from the Acts of Saints, there were still no hymns except at Compline, and he mentions a similar rule as to hymns at Vienne. But canon 23 of the Council of Tours (767) allowed the use of the Ambrosian hymns. Though the Psalter of the second recension of St. Jerome was in all the offices of the Rite except the Vatican Basilica, it is called the "Gallican", while the older, a revision of the "Vetus Italica", used now in St. Peter's at Rome only, is known as the "Roman", it does not seem that the Gallican Psalter was used even in Gaul until a comparatively later date, though it spread thence over nearly all the West. At present the Mosarabic and Ambrosian Psalters are variants of the "Roman", with peculiarities of their own. Probably the decadence of the Gallican Divine Office was very gradual. In the eighth century tract in Cott. MS. Nero A. II. the "Cursus Orientalis" distinguished from the "Cursus Romanus", the "Cursus Scotorum" and the Ambrosian, all of which would seem to have been going on then. The unknown writer, though his opinion is of no value on the origin of the "Cursus", may well have known about some of these of his own knowledge; but through the seventh century there are indications of a transmission from the Roman to the Gallican Rite" instead of the Gallican, or to mix them up, a tendency which was resisted at times by provincial councils.

V. THE MASS.—The chief authorities for the Gallican Mass are the Letters of St. Germanus of Paris (553) and a synod of these with the Roman and the Mosarabic Sacramentaries, not only of Gaul but of the Celtic Rite, with the Irish tracts on the Mass, with the books of the still existing Mosarabic Rite, and with the descriptions of the Spanish Mass given by St. Isidore, one may arrive at a fairly clear general idea of the service, though there exists no Gallican Ordinary of the Mass and no Antiphoner. Mgr. Duchesne, in his "Origines du rite chrétien", has given a very full account constructed on this basis, though some will differ from him in his supplying certain details from Ambrosian books, and in his claiming the Bobbio Sacramentary as Mosarabic rather than Celtic.

The Order of this Mass is as follows:

1. The Entrance.—There are an Antiphon (Introit) was sung. Nothing is said of any Preparatio Sacerdotis (see Celt. Rites); and the Irish tracts describe a preliminary preparation of the Chalice, as does also the Mosarabic Missal. As no Antiphoner exists, we have no specimen of a Gallican Officium, or Introit. Duchesne gives a Mosarabic one, which has something of the form of a Roman Responsory. The Antiphon was followed by a proclamation of silence by the deacon, and the salutation Dominus sit semper vobiscum by the priest. This is still the Mosarabic form of Dominus vobiscum.

2. The Canticles.—These, according to St. Germanus, were: (i) The Ajus (Ὑσσος) which may be the Greek Trisagion (Ἁγιος Ἡσυς, κ.λ.) or the Greek of the Sanctus, probably the latter, which is still used elsewhere in the Mosarabic, and seems to be referred to in the Ajus, ajus, ajus of the Life of St. Céry of Cambrai in the Sanctus, psalm of the Mass at Vaison (529). In the Bobbio there is a prayer Post Ajus.

3. The Kyrie Eleison, sung by three boys. This has disappeared from the Mosarabic. It is mentioned by the Council of Vaison (529). (iii) The Canticle of Zacharias (Benedictus). This is called Prophetria and there are collect post Prophetiam in the Reichenau fragments, the Gothicum, and the Bobbio. The Mosarabic and Celtic books have Gloria in Excelsis here, but in the former the "Benedictus" is used instead on the Sunday before the Nativity of St. John Baptist, called Dominica pro adventu S. Johannis. A different Canticle, Sanctorum Deus Archangeli, was used, according to St. Germanus, in Lent.

4. The Lessons.—These were the Lectio Prophetica from the Old Testament, and the Lectio Apostolica or Epistle. In Paschal time the Apostolicae took the place of the Lectio Prophetica, and a lesson from the Acts of the Apostles that of the Epistle. In Lent the Acts of the Martyrs and Acts of the Church were read, the Prophetic Lesson, and on Saints' Days the Acts of the Saints. This agrees with the present Mosarabic, except in the Acts of the Saints, and with the Luxeuil Lectionary, and the Bobbio. The Acts of Saints were used as Mass Lessons in the Ambrosian Rite as late as the twelfth century. According to St. Germanus the second lesson followed immediately on the first, but in the Mosarabic the Benedictus and a Psallendo (Responsory) come between them. In the Gallician the Benedictus and a Responsorium followed the Epistle. The Bobbio has a fixed collect, Post Prophetiam, which is that which follows Benedictus (Daniii, iii) on Ember Saturdays in the Roman Missal.

5. The Gospel.—This was preceded by a procession in tribunal analogi, i.e. to the ambo. The word ανάβησις is still the Byzantine term for the desk from which the Gospel is read. A clerk again sang the "Ajus", and several readers carried the ciborium. The clerks cried out Gratia tibi, Domine. Sanctus was sung as they returned. Nothing is said about Alleluia preceding the Gospel, nor is there any in the Mosarabic. The Celtic Rite, as shown by the Stowe Missal, included an Alleluia at that point, as do most other_rites of these with the Roman and Tottum Sacramentaries.

6. The Prex.—The passage of St. Germanus is
GALLICAN

James of Edessa it had got into the Syrian Liturgy, but the Roman did not adopt it till much later (see Credo, Liturgical Use of). The Mosarabic puts it after the Consecr. St. Germanus mentions three veils, the "palla litostima" [litostima is defined by St. Isidore (Orig., 19, 22) as a material woven of flax and wool] "corporalis palla" of pure linen, "super quam oblatio positur", and a veil of silk adorned with gold and gems with which the oblation was covered. Probably the "litostima" covered the chalice, like the modern pall.

(9) The prayer that follows is not mentioned by St. Germanus, but is given in the Gallican books. It is preceded by a Bidding Prayer. The titles of the two are Praeclatio Missae and Collectio (the usual expression "Collectione" is omitted). The prayer begins thus, and is found in the Gothic, Gelasian, Ambrosian, Bologna, and some of the Reichenaus fragments. St. Isidore mentions them as the first two of the prayers of the Mass. In the Mosarabic the Bidding Prayer is called Missa, and is followed by "Agios, agios, agios, Domine Deus Rex eterno tibi laudes et gratias", sung by the choir, and an invitantio to the people. The variable prayer which follows is called Alia Oration.

(10) The Diptych.—St. Germanus says "Nomina defunctorum ideo hor illa recitatur quia pallium tollitur". The Gallican books and the Bobbio have variable prayers Post Nomina, and the Reichenaus fragments have also prayers Ante Nomina, which are sometimes Bidding Prayers, as are sometimes the prayers Post Nomina in the Gothic. The form of the Intercession is given in the Stowe, but moved to its Roman positions in the Gelasian Canon. The Mosarabic retains the old position, and has a prayer Post Nomina, which St. Isidore calls the third prayer. The position of the Great Intercession at this point exactly is peculiar to the Hispano-Gallican rite, but it comes very near to the Alexandrian position, which is in the middle of the Preface, where a rather awkward break is made for it. The West Syrian and Byzantine Liturgies place the Great Intercession after the Epiklesis, the East Syrian before the Epiklesis, and the Ethiopic did the same at least as early as the letter of St. Innocent I (416) to Decentius of Gubbio. The Ambrosian now follows the Roman, as did the Celtic Rite when the Stowe Missal was written; but the Bobbio retained the collect Ad Pacem in its original place, though it was probably not used with the Gelasian Canon.

(11) The Pax.—St. Germanus mentions that the Kiss of Peace came next, as it does now in the Mosarabic. St. Isidore associates it with the fourth prayer, which in the Gallican and Mosarabic books is called Ad Pacem. The Roman Rite, which has completely obliterated all distinction between the Missae Catechumenorum and the Missae Fidelium, associates this sign of unity, not with the beginning of the latter, but with the Communion, and this inversion is described in the letter of St. Innocent I (416) to Decentius of Gubbio. The Ambrosian now follows the Roman, as did the Celtic Rite when the Stowe Missal was written; but the Bobbio retained the collect Ad Pacem in its original place, though it was probably not used with the Gelasian Canon.

(12) The Anaphora.—St. Germanus merely mentions the Susurrum Corda, and says nothing about what follows it. The dialogue was probably in the usual form, though the curious variation in the present Mosarabic Rite makes that somewhat uncertain. Then follows the Contestatio or Immolatio, called by the Mosarabic books Ilatio, which is in the Roman Rite the Praefatio. St. Isidore calls it the fifth prayer and uses the word Ilatio for it. The Gallican books, the Bobbio, and the Mosarabic Missal give a variable one for every Mass, and the Gallican books often give
two. The general form is the same as the Roman, perhaps more diffuse in its expressions. Usually the words Per quem alone at the end of the proper section indicate the conclusion. The Mozarabic Ilations end in varying ways, always of course leading up to the Sanctus.

(13) The Sanctus.—The Gallican wording is not found, but there is no reason to suspect any variations unless the Mozarabic "gloria majestatis tuæ" was also Gallican.

(14) The Post-Sanctus.—This takes up the idea of the Sanctus and amplifies it, leading on to the Recital of the Institution. It generally, but not always, begins with "Vere Sanctus, vere Benedictus". There is a variable Post-Sanctus for every Mass. In the Gallican books this passage ends with some expression, generally simply "per Christum Dominum nostrum", which serves as the antecedent to "Qui pridie", etc. In the Mozarabic the usual ending is "Ipse Dominus ac Redemptor eternus", which also seems to anticipate "Qui pridie"; but, owing to the interpolated prayer "Adesto, adesto Jesus", etc., the Recital of the Institution begins a fresh sentence with no relative. All Liturgies except the Roman have some form of Post-Sanctus. The Commissio of the Mass, the Easter Eve, and the Celtic Stowe Missal seems to use one with or without the Roman Canon. The Bobbio, completely Romanized from the Preface onwards, does not include one among its variables. In one Mass in the Gothicum (Easter Eve) the Post-Sanctus (a little better than the Chacob) and the Bobbio contains the definite Epilepsis, but the prayer which follows is called ad factionem panis, so it may be really a Post-Pridie.

(15) The Recital of the Institution.—"Qui pridie quas pro nostris omnium salute pateretur" is all that exists of the Gallican form, as stare voro soro speak. This is not that "et" comes there before "omnium", is the Ambrosian. The Stowe and Bobbio have the Roman "Qui pridie quam pateretur", etc., but the corrector of the Stowe has added the Ambrosian ending "passionem meam predictaebat", etc. The Mozarabic, though Post-Pridie is the name of the prayer which follows, has (after an invocatory prayer to our Lord) "D. N. J. C. in quæ nocte tradebat", etc., following St. Paul's words in I Cor., xi, in which it agrees with the principal Eastern Liturgies. This is probably a late alteration.

(16) The Post-Pridie, called also Post Mystrium and Post Missae, these two being the most usual Gallican names, while Post-Pridie is the universal Mozarabic name. This is a variable prayer, usually addressed to Christ or to the Father, but occasionally in the Mozarabic in the form of a Bidding Prayer. The petitions often include something of an oblation, like in Unde et memores, and often a more or less definite Epilepsis. Of the eleven Masses in the Reichenau fragment four contain a definite Epilepsis in this prayer, one has a Post-Pridie with no Epilepsis, one is unfinished, but has no Epilepsis as far as it goes, and in the rest this prayer is wanting. In the Gothicum there is generally no Epilepsis, but nine of the Masses, all of one sort, are more or less vague. In the Mozarabic this prayer is usually only the oblation, though rarely there is an Epilepsis. It is followed there by a fixed prayer resembling the clause Per quem haec omnia in the Roman Canon.

(17) The Fraction.—Of this St. Germanus says only that the people, and as stare voro soro speak, the only rite which now retains this antiphon always is the Ambrosian, where it is called Confractorium. The Mozarabic has substituted for it the recitation of the Creed," preter in locis in quibus erat antiphona propria ad conjunctionem panis", which is chiefly due to the influence of the Masses, there is a long responsory, apparently not variable. No Gallican Confractorium remains. The fraction is not described, but in the Celtic Rite (q. v.) there was a very complicated fraction, and in the Mozarabic the Sacred Host is divided into nine particles, seven of which are arranged in the form of a cross. The Council of Tours (567) directs that the particles shall be arranged "non in imagine vel in signo vel titulo", so that it is probable that the Gallican fraction was similarly elaborate. The Stowe Gaelic tract speaks of two fractions, the first into two halves with a re-uniting and a commixture, the second into a number of particles varying with the rank of the day. The "Leabhar Breac" only mentions the first fraction. Dom L. Gougau ("Les rites de la Consécration et de la Fraction dans la Liturgie Celtique") in "Report of the 19th Eucharistic Congress" (p. 359) conjectures that the first was the Host of the celebrant, the second for the communicants.

(18) The Pater Noster.—This was preceded by a variable introduction after the plan of Præceptor salutaris monitis and was followed by a variable Embolism. These are entitled in the Gallican books Ante Orationem Dominicam and Post Orationem Dominacam. In the Mozarabic the introduction Ad orationem Dominac is variable, the Embolism is not. The Commixion of the Mass, the Mass, the Mass, the Mass of the evening of Easter Eve, and the Celtic Stowe Missal seem to use one with or without the Roman Canon. The Bobbio, completely Romanized from the Preface onwards, does not include one among its variables. In one Mass in the Gothicum (Easter Eve) the Post-Sanctus (a little better than the Chacob) and the Bobbio contains the definite Epilepsis, but the prayer which follows is called ad factionem panis, so it may be really a Post-Pridie.

(19) The Recital of the Institution.—"Qui pridie quas pro nostris omnium salute pateretur" is all that exists of the Gallican form, as stare voro soro speak. This is not that "et" comes there before "omnium", is the Ambrosian. The Stowe and Bobbio have the Roman "Qui pridie quam pateretur", etc., but the corrector of the Stowe has added the Ambrosian ending "passionem meam predictaebat", etc. The Mozarabic, though Post-Pridie is the name of the prayer which follows, has (after an invocatory prayer to our Lord) "D. N. J. C. in quæ nocte tradebat", etc., following St. Paul's words in I Cor., xi, in which it agrees with the principal Eastern Liturgies. This is probably a late alteration.

(20) The Benediction.—This when pronounced by a bishop was a variable formula, sometimes of considerable length. St. Germanus gives a form which was said by priests "Fax, fides et caritas et communicatio corporis et sanguinis Domini sit semper vobiscum." There is a very similar form in the Stowe Missal and in the Ambrosian, but in both these it is connected with the Pax which comes at this point, as in the Roman Rite. In the Mozarabic, the deacon proclaims "Humiliate vos benedictionem". This is alluded to by St. Cassarius of Arles, and is very like τοσομά παραπά της ευλογίας εις της Βυζαντινής Rite. Then follows a long variable Benediction of four clauses, pronounced by the priest, the people responding "Amen". None of these Benedictions were of the same type. The practice of a Benediction before Communion continued in France long after the extinction of the Gallican Rite, and survives to this day at Lyons. It was also the practice of the Anglo-Saxon Church. Dom Cabrol ("Benediction Episcopale" in "Report of the 19th Eucharistic Congress") considers that the Anglo-Saxon Benedictions were not survivals of Gallican (Celtic) usage, but were derived from the ancient practice of Rome itself, and that the rite was a general one which traces are found nearly everywhere.

(21) The Communio.—St. Germanus gives no details of this, but mentions the singing of the Vivitarum. His description of this is not very clear. "Sic enim prima in secundæ, secunda in tertìa, et rurum tertia in secundâ rotatur in primâ." But he takes the threelfold chant as an emblem of the Trinity. The Mozarabic on most days has a fixed anthem, Fa- smaria, a variable formula, sometimes of considerable length. The Mozarabic on most days has a fixed anthem, Fasmaria, a variable formula, sometimes of considerable length. The Mozarabic on most days has a fixed anthem, Fasmaria, a variable formula, sometimes of considerable length. The Mozarabic on most days has a fixed anthem, Fasmaria, a variable formula, sometimes of considerable length.
in the form of a cross with a triple insufflation, and an exorcism, which here is in an unusual place.

The Baptismal formula “Baptizò te in nomine, . . . in remissionem peccatorum, ut habēas vitam aeternam”.

The Chrismation. The formula “Perungi te christisma sanctitatis” seems to have been mixed up with a form for the bestowal of the white garment, for it goes on “tunicam immortalitatis, quam D.N.I.C. traditam a Patre primus acceptit ut eam integram et inlibatam preferas ante tribunal Christi et vivas in saeculum . . .”. Probably the omission is “ . . . in Nomine”, etc., in the Missale Romanum: and “Accipe vestem candidam”, or possibly “Accipe” alone, in the other. Mgr. Duchesne’s suggestion of “a special symbolism, according to which the chrism would be considered as a garment” does not commend itself, for want of a verb to govern “tunicam”. Still there is another formula for the white garment farther on.

The Feet-washing. The form here is similar to that in the Gallicanum, the Bobbio, and the Stowe: “Ego te lavo pedes. Sicut D.N.I.C. fecit discipulis suis, tu facias hospitibus et peregrinis ut habes vitam aeternam.” This ceremony is only found in Gaul, Spain, and Ireland, and seems to have become more or less fixed through a sort of priestly custom. An order was made that it should be performed by clerks and not by priests. This limitation, of which the wording is quite clear, has been unaccountably interpreted to mean that it was then forbidden altogether.

The Vesting with the white garment. This has a form similar to the Roman and Celtic, but not quite the same.

Two final Bidding Prayers with no collect. The Gallicanum has a much fuller form, with the Traditio and Expositio Symboli, etc. It is—

1. “Ad fæcilium Post-Precem. (18) Confractorium I (19) Ante Oratom Dominicum. (20) Post Oratiorum Dominicum. (21) Benedictio. (22) Trecanum H (23) Communio H (24) Post Communio. (25) Collectio or Consummatio Missæ. Of these nos. 2, 8, 10, 11, 12, 13, 14, 15, 16, 17, 18, 20, 21, 24, 25 belong to the priest’s part and are therefore found in Sacramentaries; 1, 5, 6, 8, 9, as well as 18, 22, and 23, if these last were variable, belong to the part of the choir, and would be found in Antiphonaries, if any such existed; and 3, 4, 6 are found in the Lectionary. No. 12 is only found among the Reichenaus fragments, but it is found there in every Missale Gallicanum, and it is not found at that time in the service. Therefore the fixed parts of the service would only be: (a) The three Canticles. (b) The Ayus and Sanctor. (c) the Gospel. (d) The Pref. (e) The Dismissal. (f) The priest’s prayers at the Offertory. (g) The Great Intercession. (h) The Puz formula. (i) The Sanctor. (j) The Recital of the Institution. (k) The Pater Noster, and possibly the Confractorium, Trecanum and Communio, with probably the priest’s devotions at Communion. Most of these are very short, and the only really important passage wanting is the one fixed passage in the Prayer of Consecration, the Recital of the Institution.

VI. THE OCCASIONAL SERVICES.—A. The Baptismal Service.—The authorities for the Gallican Baptismal Service are the Gothicum and the Gallicanum, both of which are incomplete, and a few details in the second Letter of St. Germanus of Paris. The forms given in the Gallicanus and Bobbio are too much the same to illustrate the Gallican Rite very much. The form given in the Gothicum is the least complete. It consists of—

1. “Ad Christianum facendum.” A Bidding Prayer and collect, with the form of signing on eyes, ears, nose, mouth.

2. The Blessing of the Font. A Bidding Prayer, a collect, a Contestatio (Preface), the infusion of chrism
trine veritas una manente substantia Deum esse perfectum? R. Credo."

10. The Baptismal formula: "Baptizo te credenterim in Nomine, etc., ut habeas vitam aeternam in saecula saeculorum." In the modern rite, this is sometimes altered.

11. The Chrismation. The formula is the same as in the modern Roman.

12. The Feet-washing. The words are slightly different in the Gothischum, Boppio, and Stowe, but to the same effect.

I. The Feast of the Baptism. A single prayer (without Bidding Prayer) beginning "Deus ad quem robur sibi hominum in fonte depositas." It will be seen that there is no giving of the white robe in the Gallicanum, and that the signing of the hand, found in the Celtic Rite (q.v.), is absent from both it and the Gothi.

The Holy Week ceremonies which are mixed with the Baptismal service in the two books are not very characteristic. The couplets of invitational and collect which occur in the Roman Good Friday service are given with verbal variations in the Gallicanum, but not in the Gothi; in both, however, there are other forms of similar type for some of the Hours of Good Friday and Easter Eve. The Blessing of the Paschal Candle consists of a Bidding Prayer and collect (in the Gothi only), the "Exulter" and its Preface nearly exactly as in the Roman, a Collect post benedictionem cerei, and "Collectio post benedictionem cerei." There is no ceremony of the New Fire in either.

B. The Ordination services of the Gallican Rite do not occur in any of the avowedly Gallican books, but they are found in the Galasian Sacramentary and the Missale Francorum, that is to say, a mixed form which does not agree with the more or less contemporary Roman form in the Leonine and Gregorian Sacramentaries, though it contains some Roman prayers, is found in these two books, and it may reasonably be inferred that the differences are of Gallican origin. Moreover, extracts relating to ceremonial are given with them from the Statuta Ecclesiae Antiqua, formerly attributed to the Fourth Council of Carthage, but now known to be a Gallican decree "promulgated in the province of Arles towards the end of the fifth century" (Duchesne). The ceremonial therein contained agrees with that described in De Officiis Ecclesiasticis by St. Ilaire of Seville. The forms for minor orders, including episcopal ordination, are very short, and consist simply of the delivery of the instruments: keys to porters, books to lectors and exorcists, cruets to acolytes, chalice, paten, basin, ewer and towel to subdeacons, with appropriate words, followed by a Bidding Prayer and collect of the usual Gallican type, the whole being preceded by addresses. These forms, with considerable additions in the case of subdeacons, occur, Bidding Prayers and all, in the Roman Pontifical of to-day. In the ordination of deacons there is a form which is found in the Byzantine Rite, but has not been adopted in the Roman, the recognition by the newly ordained of an address of the type of "Let him cast!". This is used for priests and bishops alike (cf. "Ages", in the Byzantine ordinances). The Bidding Prayer and collect which follow are both in the present Roman Pontifical, though separated by much additional matter. The ordination of priests was of the same type as that of deacons, with the addition of the anointing of the hands. The address, with a varied end, and the collect (but not the Bidding Prayer), and the anointing of the hands with its form are in the modern Pontifical, but with very large additions. The consecration of bishops began, after an election, with a presentation and recognition, neither of which is found in the Roman Rite. Then followed the Bidding Prayer, also not adopted in the Roman Rite, and the Consoling Prayer Deum omnium honorum, part of which is embodied in the Preface in the Leonine and Gregorian Sacramentaries, and in the present Pontifical. During this prayer two bishops held the Book of the Gospels over the candidate, and all the bishops laid their hands on his head. Then followed the anointing of the hands, but apparently not of the head as in the modern rite, with a formula which is not in the Roman books.

C. The Consecration of a Church does not occur in the recognized Gallican books, and the order of it has to be inferred from later books and from prayers in the Gregorian Sacramentary and Missale Francorum. It would seem, as Msgr. Duchesne has in his outline analysis of both rites (Origines du culte christien), that at a time when the Roman Rite of Consecration was exclusively funerary and contained less else but the deposition of the relics, as is shown in the Ordines in the St. Amand MS. (Bibl. Nat. Lat. 974), the Gallican Rite resembled more closely that of the modern Pontifical, which may be presumed to have borrowed from it. The commentary of Remigius of Auxerre (late ninth century), published by Martene, and the Sacramentary of Angoulême (Bibl. Nat. Lat. 816, about 800) which is mixed Galasian and Gregorian, and the Sacramentary of Gellone (Bibl. Nat. Lat. 12048) are the other authorities from which Duchesne derives his details. The order of the Celtic Consecration given in the Leabhar Breac is very similar (see CELTIC RITE). The order is:

1. The Entrance of the bishop, with "Tollite portas, principes, vestrae," etc., which exhibits the outward form of the present rite. (2) The line of the present. (3) The Exorcism, Blessing and mixing of water, salt, ashes and wine. (4) The Lustration of the altar and of the inside of the church. (5) The Consecration Prayers. These are the Prayers "Deus, qui loca nominis tuo" and "Deus sanctificationum, omnipotentis dominator." which occur at the same point at present. The latter prayer in the Gallican Rite is worked into a Preface (in the Roman sense of the word). (6) The anointing of the altar with chrism, with the five crosses as at present. The Celtic Rite had seven, (7) The anointing of the church with chrism. Nothing is said about crosses on the walls. (8) The Consecration of the altar, with the burning of a cross of incense thereon, and a Bidding Prayer and collect. (9) The Blessing of linen, vessels, etc. (10) The Translation of the relics which have been kept in a separate place and a night watch kept over them. This service, which is clearly the modern elaborate consecration in germ, has an almost parallel in the "Ενασκλαβία του Βυζαντίου Ναού in the Byzantine Euchologion, which is still simpler. The three are evidently three stages of the same service.

HENRY JENNER.

Gallicanum, Saints.—The following saints of this name are commemorated on 25 June:—
(1) Gallicanus, Saint, Roman Martyr in Egypt, 382-383, under Julian. According to his Acts (in "Acts SS.", June, VII, 31), which are not very reliable, he was a distinguished general in the war against Julian. His remains were once with Symmuthius, 538 (perhaps also once before with Bassus, 517). After his conversion to Christianity he retired to Ostia, founded a hospital and endowed a church built by Constantine. Under Julian he was banished to Egypt, and lived with the hermits in the desert. A small church was built in his honour in the "Treasury of Rome". His relics are at Rome in the church of Sant' Andrea della Valle. The legend of his conversion was dramatized by Roswitha.

(2) Gallicanus I, Saint, seventh Bishop of Embrun, was represented at the Fourth Council of Arles in 524, assisted in person at that of Carpentras in 527; perhaps also at the Second Council of Orange in 529, and at the Third Council of Vaison in the same year.

(3) Gallicanus II, Saint, ninth Bishop of Embrun, assisted at the Fourth Council of Orleans, 541, and was represented by Probus at the fifth of Orleans. In 549 he consecrated the church of the Spanish martyr Vincent, Orontius, and Victor, built at Embrun by Palladius. It is probable, however, that Palladius never existed (he is not known except from some hagiographical documents of little value), and that Gallicanus governed the diocese from 518 to 549 inclusive, possibly at 554.

Francis Mershman.

Gallicius, Publius Licinius Egnatius, Roman emperor; b. about 218; d. at Milan, 4 March, 268; appointed regent by his father Valerian when the Germans threatened the boundaries of the empire on the Rhine and the Danube. Gallicius took the western half of the empire and his father the eastern portion, in 255. Gallicius was by nature indolent and fond of pleasure. He was cruel to the vanquished, and was unable to repel the attacks of the Frankish invaders of Gaul, but bribed their chieftains to undertake the wardenship of the Rhenish borderline. When the Rhine burst through the times Rheingau or Rheanian barrier, and invaded Upper Italy, the senate armed the Roman burgesses for the first time in thirty years and raised a force of troops on its own responsibility. Gallicius defeated the enemy at Milan, but made an alliance with one of the chiefs of the Marcomanni, and gave him Upper Pannonia. He forbade the senators to enter the military service, to have anything to do with the army, and excluded them from the administration of the provinces. In consequence of this decree, the former distinction between imperial and senatorial provinces disappeared. During the wars against the Germans many distinguished Roman officers were proclaimed emperors in the various provinces. The most successful of these was Aurelian, who later became sole emperor. In consequence of the withdrawal of the troops from the eastern boundaries, the countries near the Boeotianus and the Black Sea were laid open to pillage at the hands of the Goths. Simultaneously the Persians under Sapor I swooped down on Asia Minor. Valerian led an army against them, but was betrayed and captured. His servitude lasted until his death in 260.

Gallicius thereupon became sole ruler. A bloody persecution of the Christians broke out in 257-258, instigated by imperial edicts; they were accused of failure to take up arms in defence of the empire from its invaders. Whoever refused to take part in the Roman pagan rites was first exiled, then slain. One of the first victims was St. Cyprian, Bishop of Carthage, who was executed 14 September, 258; at Rome Sixtus II and his deacon St. Lawrence suffered martyrdom. After the death of his father, Gallicius granted liberty of worship to the Christians. He recognized as his son-in-law the Western Emperor, Jovianus, the commercial city of Palmyra and energetic conqueror of Sapor I, King of Persia. Afterwards he made him emperor. In the course of the wars against the enemies of the empire, the soldiers at various times proclaimed eighteen of their generals provincial emperors. At the Battle of Magnesia, the "Tyrrant", among them were Postumus in Gaul, and Ingenuus in Pannonia, over whom Gallicius won a partial victory, with the help of Aurelius the commander-in-chief of the imperial armies. When the troops in Italy acclaimed Aurelius "imperator", he sent a message to make himself known to Gallicius in Rome, but was defeated by Gallicius on the Adda and shut up in Milan. Gallicius was assassinated by his officers while this siege was going on.

Carl Hoepner.

Gallicia, Joseph de, b. near Aix, France, 2 May, 1663; d. at Lyons, 1 Sept., 1749. He entered the Society of Jesus at the age of fifteen, and on taking up his studies came under the direction of Father de la Colombière, the confessor of Bl. Margaret Mary Alacoque. It is not surprising that from such a director he should acquire that love of the Sacred Heart which he cultivated with so much fervour as to merit the title of the Apostle of the devotion to the Sacred Heart. While on a mission of charity during his third year of probation at Lyons, he caught a fever which brought him to death's door. So distressed were his brethren at the fear of losing him that a certain father made a vow in his name that, if he were spared, Father de Gallicia would spend his life in the cause of the Sacred Heart. From that time he began to recover. He ratified the vow, and never slackened in his efforts to fulfil it. His superior realized his fitness for government, advanced him to three successive rectories—at Vesoul, at Lyons, and at Grenoble. The last-named appointment was followed by the provincialship of the Province of Lyons. In 1723, he was chosen assistant for France, an office which brought him to Rome. Here he found in his power to work more effectually for the Sacred Heart devotion that was dearest to his heart. Returning from Rome in 1732, he again became rector at Lyons, where he passed his declining years, a model of meekness, humility, and charity. He wrote an admirable book on the Blessed Virgin, and one on the chief virtues of the Christian religion; his greatest work, "De Cultu Sacramenti Cordis Dei ac Domini Nostri Jesu Christi", appeared in 1726. The main purpose of this book met with much opposition at first, and its well-supported plea for the establishment of a feast of the Sacred Heart was not crowned with victory till 1765. The zealous apostle had in the meantime gone to his reward, though he lived to see the establishment of over 700 confraternities of the Sacred Heart.

Joseph H. Smith.

Gallipoli, Diocese of (Gallipoliensia), in the province of Lecce (Southern Italy). The city is built on a high rock in the Gulf of Taranto and joined to the mainland by a bridge over the Goath. It is surrounded by a bastioned wall and crowned by a castle; has also an important trade in wine, oil and fish. Drinking-water is brought to the town from the mainland by means of an aqueduct. The harbour is...
natural one, and not particularly safe. It is thought that the place owes its origin to the inhabitants of Gallipoli in Sicily. In 450, it was laid waste by the Vandals; in the days of St. Gregory the Great (590–604) Gallipoli belonged to the Roman Church. During the Norman invasion it resisted stubbornly. Roger I gave it to his brother Bohemund, who had been made Count of Tarentum, the city shared the lot of the Kingdom of the Two Sicilies.

Charles of Anjou besieged it in 1284 and destroyed it, driving the inhabitants from their homes; in 1327 Robert the Good gave them permission to return, within a short time the town again became prosperous. In 1429, the Turks dismembered it. In 1484, the Venetians, under the leadership of Scipione de' Conti, drew his troops from the pontifical states, blockaded the port with a fleet of 60 vessels. Despite the death of their leader, Giacomo Morello, they overcame the stubborn resistance of the citizens, and sacked the town ruthlessly. It was quickly restored; but in 1496, the Venetians, in revenge for the assistance given to Ferdinand II by the town, took possession of Gallipoli; even the French blockade in 1501 did not succeed in driving them out. In 1509 Gallipoli was given back to the Kingdom of Naples, at that time under Spanish rule. A very remarkable feat of arms occurred in 1698. 600 Gallipoli picked men fought against 4000 French infantry and 300 cavalry. The last blockade occurred in 1809 when the English attacked the place and were repulsed.

Among its famous citizens are: the painters Giovanni Andrea Coppola, Giovanni Domenico Catalano, Giuseppe Ribera (Spagnoletto); the sculptor Venanzio Genuino; the poets Giovanni Coppola, Bishop of Muro, and Onofrio Orlandini; the juristsconsulats Tommaso Briganti (1762) and Filippo Briganti (1804); the physicanaturalist Giovanni Presta (1797). The earliest bishop we know of is one Benedict, who lived in the days of St. Gregory the Great. The Greek Rite, which was introduced probably in the tenth century, remained in use until the year 1513. Among other bishops are: Melchisedech, present at the Second Council of Nicaea (787); Alessio Caleconio (1493), one of the Bessariano's disciples; Alfonso Herrera (1576), a generous and charitable man; Vincento Capponi (1516), a man of extreme holiness; Antonio Perez de la Lasca (1679), philosopher and theologian. The cathedral, built in 1629, has a famous façade; it is the work of Francesco Bisicentini, and Scipione Lachibari. The frescoes of the cupola (made by the silvan ambassador) and on the walls are the work of Carlo Malinconico. The see is a suffragan of Otranto; it has 3 parishes and 20,100 souls, a convent of Carmelites nuns, and a foundling hospital.

U. BENIGNI.

Galliztin, Demetrius Augustine, prince, priest, and missionary, b. at The Hague, Holland, 22 December, 1770; d. at Loveno, near Varese, Italy, 8 July, 1840. He was a scion of one of the oldest, wealthiest, and most illustrious families of Russia. His father, Prince Demetrius Galliztin (d. 16 March, 1803), Russian ambassador to Holland at the time of his son's birth, had been previously for fourteen years at the French Court, and he provided for the acquaintance of Diderot, Voltaire, d'Alembert, and other rationalists of the day. Though nominally an Orthodox Russian, he accepted and openly professed the principles of an infidel philosophy. On 28 August, 1778, he married in Aachen the Countess Amalie, only daughter of the then count of Westphalia, Hesper von Schmettau. Her mother, Baroness von Ruffett, being a Catholic, Amalie was baptized in the Catholic Church, but her religious education was neglected, and it was not until 1786 that she became a fervent Catholic, which she remained until her death, 27 April, 1806.

Little attention was paid to the religious education of Demetrius, who was born and baptized in the Greek Orthodox Church. In youth his most constant companion was Frederick William, son of William V, then reigning Stadtholder of the Netherlands. This friendship continued even after Frederick William became crown prince of Prussia and Duke of Brunswick, as Frederick William, as William I. Almost from his infancy the young prince was subjected to rigid discipline, and his intellectual faculties, trained by the best masters of the age, reached their fullest development. When about seventeen he became a sincere Catholic, and to please his mother, whose birth (1748), marriage (1768), and
First Holy Communion (1786) occurred on 28 August, the feast of St. Augustine, assumed at confirmation that name, and thereafter wrote his name Demetrius Augustin. After finishing his education he was appointed aide-de-camp to the Austrian General von Lillien, but as there was no opportunity for him to continue a military career his parents resolved that he should spend two years in travelling through America, the West Indies, and other foreign lands. Provided with letters of introduction to Bishop Carroll of Baltimore, and accompanied by his tutor, Father Brosius, afterwards a prominent missionary in the United States, he embarked at Rotterdam, Holland, 18 August, 1792, and landed in Baltimore, 28 October. To avoid the inconvenience and expense of travelling as a Russian prince, he assumed the name of Schmet, or Smith, and for many years was known in the United States as Augustine Smith. Soon after arriving at Baltimore, he was deeply impressed with the needs of the Church in America. He resolved to devote his fortune and life to the salvation of souls in the country of his adoption. Despite the objections of his relatives and friends in Europe, he, with the approval of Bishop Carroll, entered St. Mary’s Seminary, Baltimore, as one of its first students, it having been founded the previous year (1791) by Bulpinian priests, refugees from France. On 18 March, 1795, he was ordained priest, being the first to receive in the limits of the original thirteen of the United States all the orders from tonsure to priesthood.

In 1788 Captain Michael McGuire, an officer in the Revolutionary army, purchased about 1200 acres of land near the summit of the Alleghenies, in what is now Cambria County, Pennsylvania, and was the first white man to establish a residence within the limits of that county. He brought his family from Maryland and built his log-cabin in the valley below the site of the present town of Loretto, in the midst of a dense forest which covered all that portion of the State. His nearest neighbours were fully twenty miles distant. Soon relatives and friends followed from Maryland, established themselves in the vicinity, and formed what came to be known far and wide as McGuire’s Settlement, later called Clearfield, the lands lying on the headwaters of Clearfield Creek. Some years after his arrival Father Gallitzin named it Loretto, after the city of Loreto in Italy; but it was not until 1816 that he laid out the town and caused the plan of lots to be recorded in the county archives. Captain McGuire died in 1793, bequeathing to Bishop Carroll four hundred acres of his land in trust for the benefit of the resident clergy who, he hoped, would be appointed to provide for the spiritual wants of his growing colony. He was the first to be buried in the portion of this land set aside for a cemetery, which Father Brosius consecrated on one of his early visits to the settlement.

Father Gallitzin first exercised his ministry at Baltimore and in the scattered missions of southern Pennsylvania and northern Maryland and Virginia. In 1796, while stationed at Conewago, Pennsylvania, he received a sick-call to administer to Mrs. John Burgoo, a Protestant, who lived at McGuire’s Settlement, about one hundred and fifty miles distant, and who ardently desired to become a Catholic before her death. Father Gallitzin immediately started on the long journey, instructed Mrs. Burgoo, and received her into the Church. During this visit to the Alleghenies he conceived the idea of forming there a Catholic settlement. In preparation therefor, he invested his means (considerable at that time) in the purchase of land adjoining the four hundred acres donated to the Church, and at the urgent request of the little mountain colony obtained from Bishop Carroll permission to fix his permanent residence there with jurisdiction extending over a territory with a radius of over one hundred miles. In the summer of 1799 he commenced his career as pioneer priest of the Alleghenies. His first care was to erect a church and house of logs, hewn from the immense pine trees of the surrounding forest. In a letter to Bishop Carroll, dated 9 February, 1800, he writes: “Our church, which was only begun in harvest, got finished fit for service the night before Christmas. It is about 44 feet long by 25, built of white pine logs with a very good shingle roof. I kept service in it at Christmas for the first time. There is also a house built for me, 16 feet by 14, besides a little kitchen and a stable.” While the church and house were being constructed, he said Mass for the few Catholics of the settlement in the log-house, erected two years previously by Luke McGuire, the elder son of the captain. That house is still standing (1909) and serves as a residence for the descendants, in direct male line, of the founder of McGuire’s Settlement. To accommodate the increasing influx of Catholic colonists, Father Gallitzin in 1808 enlarged the log church to almost double its former capacity, and as the population continued to increase, he took down the log building in 1817, and on the same site erected a frame church, forty by thirty feet, which served as the parish church until 1853.

Chapel and Home of Father Gallitzin
Loretto, Pennsylvania

Father Heyden, one of Father Gallitzin’s biographers, writes (1908): “In three years Gallitzin was the apostle of Pittsburg, Erie, and a large part of the Harrisburg new ecclesiastical see, was then the missionary field of a single priest, Rev. Prince Gallitzin. If we except the station at Youngstown, Westmoreland County, where the Rev. Mr. Bowers had settled a few years before, there was not, from Conewago in Adams County to Lake Erie—from the Susquehannas to the Potomac—a solitary priest, church, or religious estab-
lishment of any kind, when he closed his missionary career. From this statement we may conceive some idea of the incredible privations and toils which he had to encounter in visiting the various widely remote points where some few Catholics happened to reside."

As early as 1800, and frequently thereafter, he wrote to Bishop Carroll, begging that one or more priests be sent to share his burdens. And so for more than twenty years he was obliged to labor in a desolate work which would have proved onerous for several.

He was not only the good shepherd of his multiplying flock; he was also in a particular manner their worldly benefactor. Following out his idea of establishing a Catholic colony at the place which he named Loretto, and which has become the center of Catholicity in Western Pennsylvania, he, by means of remittances from Germany and loans contracted on the strength of his expectations, purchased large portions of land adjoining the settlement, which he sold in small tracts to the incoming colonists at a very low rate and on easy terms. For much of this land he was never repaid. Moreover, he built, at his own expense, saw-mills, grist-mills, and tanneries, and established other industries for the material benefit of his flock. In accomplishing all this he necessarily burdened himself with a heavy personal debt; not imprudently, however, for he had received solemn assurance from his father's estate that the bulk of his wealth would, as his share of his father's bequest. The Russian Government, nevertheless, disinherited him for becoming a Catholic and a priest, and the German prince who had married his sister squandered both his and her inheritance. In these circumstances, he was compelled, in 1827, to appeal to the charitable public; the appeal was endorsed by Charles Carroll of Carrollton, who headed the list with a subscription of one hundred dollars; on the list stands the name of Cardinal Cappellari, afterwards Pope Gregory XVI, who subscribed two hundred dollars. Yet it was not until the close of his life that the burden of debt was finally lifted. During the forty-one years of his pastorate in the Alleghenies, he never received a cent of salary; he maintained himself, his household, and the many orphans whom he sheltered, and abundantly supplied the wants of the needy among his flock out of the produce of his farm, which by his intelligent management of business and management of business was carefully managed. It is estimated that he expended $150,000 of his inheritance, a small portion of the amount that should rightfully come to him, but an immense sum for the times in which he lived, in the establishment of his Catholic colony on the Alleghenies. For some years (1803–1808) he was rewarded for his exertions; his actions were misconstrued, his words and writings misinterpreted, his character vilified, his honour attacked, and even violent hands were laid on his person, and all this by members of his own flock. But, with the encouragement of his bishop and the aid of the civil courts, he brought his enemies to justice, and in some degree their guilt, for which they voluntarily and publicly made full reparation before their fellow Catholics in the Loretto church.

For fourteen years after his ordination Father Gallitzin was known to the general public as Augustine Smith. This was the name which he subscribed to all his legal papers and to his entries in the parish register of baptisms and marriages. But, fearing serious difficulties in the future, at his request, on 16 Dec., 1809, the Pennsylvania legislature validated the acts and purchases made under that assumed name, and legalized the resumption of his real name. Notwithstanding these legal labors, Father Gallitzin found time to publish several valuable tracts in favor of the Catholic cause. He was the first in the United States to enter the lists of controversy in defense of the Church; he was provoked thereto by a sermon delivered on Thanksgiving Day, 1814, in Huntington, Pennsylvania.

GALLOWAY, Diocese of (Gallowdiana), situated in the south-west of Scotland. It comprises the Counties of Dumfries, Kirkcudbright, and Wigtown, with about four-fifths of the County of Ayr, thus embracing a territory of 3347 square miles and a general population of 373,670, of which Catholics form only a small fraction. From an historical point of view, a singular interest is attached to this diocese since it is certain that the most ancient ecclesiastical foundation in Scotland, its founder and first bishop, St. Ninian, being “the first authentic personage that meets us in the succession of Scottish missionaries” (Bellesheim). This illustrious saint, a Briton, born on the Solway shore, educated at Ravenna and consecrated bishop by St. Siricius, founded his episcopal see at Whithorn and dedicated his cathedral to St. Martin of Tours, in 397; and, having evangelized the country as far north as the Grampian mountains, died about 432. The dates here given are on the authority of the majority of Scottish writers.

The original title of the see was “Whithern” (Quhitherne), latinized “Witerna” and (more frequently) “Candida Casa”, signifying the White House, so called, St. Bede tells us, from the structure and appearance of the church erected by St. Ninian “in a style unusual among the Britons”. At what precise date the name “Galloway” came into use is not quite clear. It is obviously improbable that the area of the diocese was at all defined in St. Ninian’s time, but from the eighth till the end of the sixteenth century it was limited to the district of Galloway, i.e., the two Counties of Kirkcudbright and Wigtown. The succession of bishops in this see was three times interrupted in the course of its history, for periods averaging three hundred years’ duration each. The last Catholic bishop in the sixteenth century, Andrew Durie, died in 1558, and the see was vacant three hundred and twenty years.

It was restored, for the third time, by Leo XIII in 1878, and the Right Rev. John McLauchlan, D.D., Vicar-General of the Western Vicariate of Scotland, was appointed the first bishop. From the extent of territory it would be perhaps more accurately described as a new diocese, for it was formed out of two outlying portions of the former eastern and western vicariates and has more than double the area it had at either previous restoration. The Catholic population, small in number and thinly dispersed over the whole territory, belonged chiefly to the poorer labouring class and, excepting the larger burghs, such as Ayr, Dumfries, and Kilmarnock, was very poorly provided for in respect of ordinary religious and educational needs. But the new bishop was a man of great energy and zeal, with a wide missionary and administrative experience, and in a comparatively short time he not only thoroughly organized the diocese but also furnished it abundantly with churches, schools, presbyteries, and an efficient clergy. He engaged in this great work he received generous encouragement and support from many of the wealthier members of his flock, e.g., the third Marquess of Bute; Rev. Sir David Oswald Hunter-Blair, Baronet; Captain R. D. Barre Cunninghame, and others. Bishop McLauchlan died 16 Jan., 1893, and was succeeded by the Right Rev. William Turner, the present bishop; b. at Aberdeen, 12 Dec., 1844; cons. 25 July, 1893. The diocesan statistics for 1908 show a Catholic population of 17,625 souls, 21 missions, 41 churches or chapels, 30 priests in active work, 28 elementary schools, 10 religious communities (all since 1879), and various educational and charitable institutions. The diocese was a suffragan of York (England) previous to 1472; from that date until 1492 it was subject to St. Andrews; and from then until the extinction of the ancient hierarchy it was transferred to Glasgow. It is now a suffragan of the new Archbishopric of St. Andrews and Edinburgh.

GALLWEY, Peter; b. at Killarney, 13 Nov., 1820; d. in London, 23 Sept., 1906; one of the best-known

WILLIAM TURNER.

Galluppi, Pasquale, philosopher, b. at Tropes, in Calabria, 2 April, 1770; d. at Naples, 13 Dec. 1846, where from 1831 he was a professor in the university. His principal works are “Saggio filosofico sulla critica della conoscenza umana”, 4 vols.; “Lettere sulla scienza della filosofia da Cartesio a Kant”; “Elementi di Filosofia”; “Lezioni di Logica e Metafisica”; “Filosofia, della volonta”; “Considerazioni filosofiche sull’ idealismo trascendentale”. Of his “Storia della Filosofia” he completed only the first volume. His philosophy is a mixture of assimil to and dissent from Descartes, the French and English sensists, Kant, and the Scottish school of Reid. Cartesianism tempered by the modifications introduced into it by Leibniz, Wolf, and Gassendi, and a substratum of which Galluppi’s mind was trained. The problem of human knowledge was his chief preoccupation. He maintained the objective reality of our knowledge, which he based on the testimony of consciousness, making us aware not only of our internal experience, but also of the external causes to which it is due. His object was aimed at Kant, though Galluppi agreed with him that space and time are a priori forms in the mind. Against the sensists, he denied that the mind was merely passive or receptive, and held that like a builder it arranged and ordered the materials supplied it, deducing therefrom truths which sensation alone could never reach. He threw no light, however, on the difference between sensory and intellectual knowledge. This was the great weakness of his argument against the Scottish school, that the soul perceives not only its own affections or the qualities of bodies, but also its own substance and that of things outside itself. It was also natural that Galluppi should be foremost in attacking the theories of Rosmini concerning the idea of God as the first object of our knowledge: and it was this polemic (quiet enough in itself) which drew public attention to the Roveretan philosopher.

The morality of our actions, according to Galluppi, depends on the notion of duty which springs from the very nature of man. He never made use of the phrase “categoric imperative”, but everything goes to show that on that point he did not completely escape Kant’s influence: and although he asserted as the only great moral commandments “Be just” and “Be efficient”, he none the less approved of Kant’s moral principle. Hence we do not find in him any hint as to the connexion between the moral law and God, beyond the statement that God must reward virtue and punish vice. Against the Scottish school, on the other hand, he maintained that morality is found on the earth. His theodicy is well within the limits of that of Leibniz, and therefore admits not only the possibility of revelation, but also the divinity of Christianity. The care and clearness of his style made his works very popular; but when the Hegelianism of the Neapolitan school became the fashion in non-Catholic circles of thought, and Scholasticism regained its hold among Catholics, Galluppi’s philosophy quickly lost ground. He always kept aloof from political questions; and his works were planned and written in his own home, amidst the noise and bustle of a large and happy family.

WEINER, Kant in Italien, 1880 (Naples, 1897).

U. BENIGNI.
London priests in his time. He was educated at Stonyhurst, joined the Society of Jesus at Hodder, 7 Sept., 1836, was ordained priest in 1852, and professed of four vows in 1854. As prefect of studies at Stonyhurst, 1855-57, he made important improvements in the methods of study. In 1857 he was sent to the Jesuit church in London, where—except for an interval of eight years during which he held the presidency of the Pari là and other offices—he spent the remainder of his life. He was a man of deep spirituality, much venerated as a preacher, spiritual director, and giver of retreats; he was also noted for his love of the poor and his earnest advocacy of almsdeeds. So great were his energy and enterprise that he set his stamp on all he touched. Several London parishes and Catholic institutions owe largely to his zeal and encouragement both their first foundation and their successful subsequent development. His writings comprise among others: "Salvage from the Wreck," sermons preached at the funerals of some notable Catholics (1860); "Watches of the Passion" (1868); a series of meditations on the Passion, embodying the substance of his retreats; a number of sermons, tracts, and other small publications, mostly of a topical kind. No life of Father Gallwey has so far been written, except a sketch by JEREMY FRYER (London, 1860).

SYDNEY F. SMITH.

Galtelli-Nuoro, Diocese of (Galtelliensis-Nuorenensis), in the province of Sassari (Sardinia), on a hill at the foot of the village of Cagliari. In the neighbourhood there are quarries of red jasper. The ancient cathedral contains some good paintings. Nuoro, the Nora of the ancients, is a sub-prefecture of the same province, and stands about 2000 feet above sea-level. Near it are seen large quarries of granite and argenticiferous lead, and a curious irregular ruin, apparently of early Roman origin. In the vicinity are twenty-four of the so-called Nuraghi (known locally as the Gia Gia Tomba), huge stone buildings in the shape of truncated cones. These belong to the neolithic age, and were a source of wonder even to the ancients. Here also are the Virgenes or Domos de Janas, communicating rooms which were excavated out of the granite rock. Galtelli was an episcopal see in 1138, when Innocent II made it a suffragan of Pisa; later, it was directly subject to the Holy See. In 1495, it was suppressed by Alexander VI, and its territory united to Cagliari. In 1767, at the request of King Victor Emmanuel III, it was re-established, but the bishop continued to live at Nuoro. Among its bishops of note was Fra Arnolfo de Bassalis (1366), renowned for his learning and eloquence. In the diocese are 25 parishes, 56,900 Catholics, 1 Franciscan monastery, 2 nunneries, 1 boys' boarding-school, and 3 girls' schools.

GALVANI, BERNHARD, Prince-Bishop of Brixen; b. 21 August, 1764, at Herbolzheim, Breisgau; d. 17 May, 1856. After he had completed his classical studies in his native town he entered the convent of the Friars Minor at Altebrissach, but because of its suppression by Emperor Joseph II, his stay here was of short duration. In 1783 he entered the seminary of Freiburg where, after a brilliant course in the ecclesiastical sciences, he was honoured with the doctorate of theology. He was ordained priest in 1788 in the seminary of Vienna, which he had gone to following a course of practical theology. In the same year he returned to the seminary of Freiburg, and after acting as prefect of studies for two years he took up parochial work, first at Alteoberndorf and later in the cathedral of Freiburg. Recognizing in him a man of learning and sound judgment, Emperor Francis appointed him in 1805 spiritual referee at Günsburg, but owing to political changes he lost his position here, and ten years later was assigned to the same duty at Innsbruck. In 1819 he became Vicar-General of Vorarlberg. On 30 January, 1820, he was consecrated auxiliary bishop of Brixen, and nine years later took formal possession of the chair of St. Cassian as Bishop of Brixen.

Like his distinguished predecessors, Galvani directed all his efforts towards safeguarding the unity of the Faith in his diocese. By the establishment of missions and educational institutions and by the introduction of religious orders, especially the Jesuits (who had been banished from there) and the Sisters of Mercy (in 1838), he succeeded in restoring much of what the secular power had destroyed during the administration of his predecessor. He was highly respected by the civil authorities, and his deeply religious spirit, his charity towards the poor, and his administrative abilities have made him an ornament to his church and country. Besides numerous ascetical, homiletical, and catechetical works, he wrote also: (1) "Christ Katholische Religion" (5 vols., Augsburg, 1796-1800); (2) "Neue Theologie des Christenthums" (Augsburg, 1800-1805); (3) "Lehrbuch der Christlichen Wohlgemogenheit" (Augsburg, 1841).

JOSEPH SCHRÖDER.

Galvani, Luigi, physician, b. at Bologna, Italy, 9 September, 1737; d. there, 4 December, 1798. It was his original intention to study theology and to enter a monastic order. His family, however, persuaded him to abandon that idea. He took up the study of the natural sciences from the point of view of the anatomist and physiologist. After maintaining his thesis on the nature and formation of the bones, he was appointed public lecturer at the University of Bologna and at the age of twenty-five taught anatomy at the Institute of Sciences.

He became especially noted as a surgeon and accoucheur. In 1790, after thirty years of wedded life, he lost his wife Lucia, the daughter of Dr. Galeazzi, one of his teachers. He kept his chair at the university until 20 April, 1798, when he resigned because he would not take the civil oath demanded by the Cisalpine Republic, it being contrary to his political and religious convictions. As a result he had to take refuge with his brother Giacomo and broke down completely through poverty and discouragement. Soon after this his friends obtained his exemption from the oath and his appointment, on account of his scientific fame, as professor emeritus. He died before the decree went into effect.

Galvani's work in comparative anatomy and physiology initiated study of the kidneys of birds and of their sense of hearing. He is famous more especially on account of his experiments concerning "the electrical forces in muscular movements" leading up to his theory of animal electricity. This began with the accidental observation, in 1780, of the twitching of the legs of a dissected frog when the bare crural nerve
was touched with the steel scalpel, while sparks were passing from an electric machine nearby. He worked diligently along these lines, but waited for eleven years before he published the results and his ingenious and simple theory. This theory of a nervous electric fluid, secreted by the brain, conducted by the nerves, and stored in the muscles, has been abandoned by scientists on account of later discoveries, but Galvani was led to it in a very logical manner and defended it by clever experiments, which soon bore fruit. Thus he discovered that the muscle, when two similar metals in contact with each other, a contraction of the muscle takes place; this led ultimately to his discussions with Volta and to the discovery of the Voltaic pile. The name Galvanism is given to the manifestations of current electricity.

It was by nature courageous and religious. It is reported by Albert that he never ended his lessons "without exhorting his hearers and leading them back to the idea of that eternal Providence, which develops, conserves, and circulates life among so many diverse beings". His works (Opere di Luigi Galvani) were collected and published by the Academy of Sciences of the city of Bologna (1842), and are some of the titles, with the original dates of publication in the "Antichi Commentarii" of the Bologna Institute: "Thesis: De Ossibus" (1762); "De Renibus atque Uteribus Volatilium" (1767); "De Volatilium Aure" (1768-70); "De Viribus Electricitatis in motu musculari" (1775), and "De Arantii" (1776). He dined with a note and dissertation by Gino Alldini; translated by Mayer into German (Prague, 1783), and again published as a volume of Ostwald's "Klassiker" (Leipzig 1884); "Dell' uso e dell' attività dell' arco conduttore nelle contrazioni de' muscoli" (1779); "Memorie sulla elettricità animale" (1797). Popular Science Monthly, July, 1892. WALKER IN: Catholic World (June, 1904); ALBERT, Éloges Historiques (Paris, 1806); VENTURIOLI, Elagio (Bologna, 1802).

William Fox.

Galveston, Diocese of (Galveston-Houston).—It was established in 1847 and comprises that part of the State of Texas, U. S. A., between the Sabine River on the east, the Colorado River on the west, the Gulf of Mexico on the south, and the northern line of the counties of Limestone, Coryell, McLennan, Limestone, Freestone, Anderson, Cherokee, Navogoches, and Smith, north, an area of 16,000 square miles. The French Recollects with La Salle attempted in 1685 to found the first missions among the Indians in Texas, and they were followed by Spanish Franciscans from Mexico sent in 1689 to build a barrier to French occupation. These efforts met with reverses, but early in the eighteenth century the missionary zeal of the Franciscans re-established many of the old missions and extended them in numerous new directions. They remained in a flourishing state until 1812 when they were suppressed by the Spanish Government. The colonisation of Texas from the United States and the declaration of its independence as a republic in 1836 checked any further efforts to reopen the mission. After a period of several years, and then the Rev. John Timon, afterwards Bishop of Buffalo (q. v.), and the Rev. John M. Odin, two Lazarists from the community in Missouri, visited the state and aroused the long-neglected religious sentiments of the people. Measures were taken for the promotion of Catholic immigration, and that only public officials of the new republic gave every encouragement to their work. In 1841 Father Odin was named Coadjutor Bishop of Detroit, but refused the bull. Texas was then made a vicariate Apostolic and Father Odin was consecrated titular Bishop of Claudipolis, 6 March, 1844. There were then only four priests in Texas. Bishop Odin set to work vigorously to build up his charge. The Texan Congress returned several of the ancient churches to their original uses, schools were opened, and the Ursuline nuns, the first religious community in Texas, were introduced to care for them. In 1847 the pope erected the state into a bishopric with Galveston as its episcopal see, and Bishop Odin was consecrated and transferred to its chair. In addition to the Ursulines he secured the services of communities of the Sisters of the Incarnate Word, the Brothers of Mary, and the Oblates, to the latter of whom he gave charge, in November, 1854, of the College of the Immaculate Conception. He visited Europe twice to secure priestly material help for his diocese. On the death of Archbishop Blaine of New Orleans, Bishop Odin was promoted, 15 Feb., 1861, to be his successor. During his incumbency of the See of Galveston he increased the number of priests to forty-two and the churches to fifty, and left the diocese with a college, four academies for girls and five schools for boys. He was born at Amherst, France, 25 Feb., 1801, and died there, 25 May, 1870.

Claude Mary Dubuis, C.S.C., an indefatigable missionary, who had served long and unselfishly for the Church in Texas, was his successor. He was born 10 March, 1817, at Coutouvre, Loire, France, and ordained priest at Jut. The following are some of the dates: 1842, he was also consecrated bishop, 23 November, 1862. After years of hardships in Texas he resigned, 12 July, 1881, but kept the title of Bishop of Galveston, and retired to France. Here he lived at Vennain in the Diocese of Lyons, receiving in 1884 promotion to the titular Archdiocese of Ariccia. He died in Naples, 18 December, 1884. He was educated in the seminary of the Des Irlandais in Lyons in episcopal work until his death, which took place 22 May, 1895. Peter Dufal, C.S.C., had been named coadjutor to Bishop Dubuis with the right of succession on 14 May, 1878. He was then Vicar Apostolic of Eastern Bengal and titular Bishop of Deleus, having been consecrated at Le Mans, France, 25 November, 1880. He was born 8 Nov., 1822, at Lomme, Puy-de-Dôme, France, and ordained priest in the Diocese of Blois, 8 Sept., 1852. On translation to Galveston he retained his titular see; he resigned the Texas diocese on account of ill health, 18 April, 1880, and retired to the house of his Congregation of the Holy Cross at Neully, near Paris, France, where he died in 1889. Nicholas Aloysius Gallagher, fourth bishop, was appointed administrator of Galveston in the absence of Bishop Dufal, having been consecrated at Galveston, 30 April, 1882, titular of Canopus. In 1894 he succeeded to the title of Galveston. He also acted as administrice of Diocese and had an area of 45,000 square miles, for the care of Bishop Rosecrans in 1878. Born 19 Feb., 1846, at Temperanceville, Belmont County, Ohio, he was ordained priest, 25 Dec., 1868, at Columbus, Ohio.

The religious communities of men represented in the diocese are: the Jesuits who have charge of St. Mary's University, Galveston; the Basilians (from Canada) managing St. Thomas's College, Houston, St. Mary's Seminary, La Porte, and St. Basil's College, Waco; the Fathers of the Congregation of the Holy Cross at Austin; the Paulist Fathers at Austin.

The religious communities of women are: Sisters of Charity of the Incarnate Word; Sisters of Charity of the Incaltzamburg; Sisters of St.分布, Sisters of the Holy Cross; Sisters of St. Mary; Sisters of Divine Providence; Ursuline Sisters; Sisters of the Holy Family. Statistics (1909): Priests 82 (53 seculars, 29 religious); churches 82 (missions with churches 35); stations 35; chapels 16; brothers 6; women religious 375; ecclesiastical students 12; colleges for boys 4; students 375; academies for girls 9; parochial schools 32; pupils in academies and parish schools 5000; hospitals 7; Catholic population 56,000.

Thomas F. Mehan.
Galway and Kilmacduagh, Diocese of (Galvensi
e et Ducontinuous), in Ireland; an amalgamation of two distinct ancient sees; excepting the parish of Shrule (County Mayo) entirely in County Galway. Kilmacduagh, covering 137,630 acres, includes the whole Borough of Killarney, and part of Dunkellin and Lougheen. Galway diocese includes the barony of Galway and part of Moycullen and Clare. Its extent is less than Kilmacduagh, the united dioceses covering about 250,000 acres. Kilmacduagh coincides with the ancient territory of Hy Fisochadh Aithne. On Póilénic's map the district was called the district of the Gangan, later occupied by the Firbóg, and in the sixth century by the descendant of Flachrach, brother of Niall of the Nine Hostages and uncle of Dathi. The time of its conversion to Christianity is uncertain. Probably it was Christian before the end of the sixth century, and it is certain that St. Colman was the first bishop. A near relative of King Guaire of Connaught, and a native of Kiltartan, he was born after the middle of the sixth century and educated at Arran, after which he lived for years a hermit's life in the Burren mountains.

Drawn from his retreat by the persuasions of his friend, he founded a monastery at Kilmacduagh (610), becoming its abbot, and subsequently bishop of the whole Hy Fisochadh territory. He died in 632, and was buried at Kilmacduagh. In the five centuries following, the annals make mention of only three bishops of Kilmacduagh. At the Synod of Kells, the diocese was made a suffragan of Tuam. Among the subsequent bishops we find men with the distinctively Irish names of O'Ruan, O'Shaughnessy, O'Murray, O'Felán, O'Bríon, and O'Moloney. In the reign of Henry VIII the bishop was Christopher Bodkin, a time-server who earned the goodwill of Henry and of Elizabeth, and who through royal favour was permitted to the See of Tuam. Persecution had to be faced by his successors. One of these, Hugh De Burgo, was a prominent figure in the Confederation of Kilkenny (1642-50), and a prominent opponent of the Nuncio Rinuccini; when the war ended in the triumph of Cromwell, exile was his fate, imprisonment or death the fate of the priests, and confiscation that of the Catholic landholders. After 1653 the See of Kilmacduagh was ruled by vicars, but after 1720 the episcopal succession was regularly maintained. In 1750 Kilmacduagh was united with the smaller Diocese of Kilfenora, the latter situated entirely in County Clare, and corresponding in extent with the Bishopric of Derry, Clare, and Limerick. At first the Bishop of Kilmacduagh was Apostolic Administrator of Kilfenora, his successor Bishop of Kilfenora and Apostolic Administrator of Kilmacduagh, and so on alternately.

Contemporary with the monastery of Kilmacduagh was that of Annaghdown, on Lough Corrib, founded in the second half of the sixth century by St. Brendan. In process of time, Annaghdown became an episcopal see extending over the territory ruled by the O'Flaherty's. In this district was the town of Galway. Placed where the waters of the Corrib mingle with the sea, it is a port but a fishing village. In the ninth century it was destroyed by the Danes; subsequently it was rebuilt and protected by a strong castle; in the twelfth century again destroyed by the King of Munster; and towards the end of that century wrested from the O'Flaherty's by the powerful Anglo-Norman family of De Burgo. Other Anglo-Norman families also settled there; these three peoples are occasionally the Tribes of Galway. Loyal to England and despising the old Irish, whom they drove out, the settlers made progress, and Galway in the first half of the seventeenth century, with its guilds of merchants, its mayor, sheriff, and free burgesses, was in trade, commerce, and wealth little inferior to Dublin itself. The Diocese of Annaghdown was joined to Tuam in 1324, and Galway town became in consequence part of the latter diocese. But the Galway men, regarding the surrounding people as little better than savages, were reluctant to be associated with them, and in 1484 obtained from the Archbishop of Tuam exemption from his jurisdiction; his demand, sanctioned by a Bull of Innocent VIII, was to have the church of St. Nicholas, at Galway, a collegiate church, governed by a warden and eight vicars; these having jurisdiction over the whole town, as well as over a few parishes in the neighbourhood. And warden and vicars were to be presented and solely elected by the inhabitants of the town. It was a peculiar arrangement. The warden exercised episcopal jurisdiction, appointed to parishes, visited the religious institutions, but did not, of course, confer orders. The eight vicars resembled somewhat the canons of a cathedral church. In 1486 Galway obtained a new royal charter subjecting the town to a mayor, bailiffs, and corporation. In 1551 the warden and vicars were dispossessed of their church and lands, which were given to a lay warden and vicars, all Protestants. Just a century later the Catholics were driven from the town by the Cromwells. Gradually they came back, and having been tolerated during the reign of Charles II and favoured under his successor, James II, had again to face persecution during the penal times. In 1731 the town contained about 5000 inhabitants. In 1747 the Protestant governor complained of the insolence of the Catholics, and of the number of priests coming there from abroad; in 1762 out of its 14,000 inhabitants all were Catholics except 350.

During the seventeenth and eighteenth centuries there were frequent disputes between the warden and the Archbishop of Tuam as to the latter's rights in Galway. There were troubles also attending the election of the warden and vicars. Driven from the corporation, the Catholics had no legally existing free burgesses, and had been compelled to meet by stealth, and constitute a mayor and corporation, so as to have the necessary electoral body. But the Galway Tribes insisted on keeping the wardenship in their own hands. When the repeal of the penal laws allowed a Catholic corporation to come into existence, in 1824 the inhabitants insisted on exercising their right to vote, and conflicts with the Tribes arose. These disputes were finally ended in 1831 by the extinction of the wardenship and the erection of Galway into an episcopal see. In 1866 the Bishop of Kilmacduagh being unable to discharge his duties, the Bishop of Galway was appointed Apostolic Administrator of Kilmacduagh and Kilfenora, "durante beneplacito Sancte Sedis". In 1888 the union of the three dioceses was made permanent by papal Bull. Since that date the bishop is "Bishop of Galway and Kilmacduagh and Apostolic Administrator of Kilfenora". Among those connected with the diocese several have acquired fame.
St. Cellassagh, who died about 550, is still venerated in Kilchrie, St. Sourney in Ballindereen, St. Foila in Clarebridge, St. Colga in Kileoglan. In the ninth century lived Flan MacLoney, chief poet of Ireland. In the seventeenth and eighteenth centuries lived John Lowry of Liskeard, author of "O’Fiaich’s History of the "Oggys"; Dr. Kirwan, Bishop of Killala; MacFirbis, the annalist; Dr. Fahy, whose history has become a standard work; Dr. O’Dea, Bishop of Clonfert, and others.

Statistics (1869): parish priests, 29; administrator, 1; curates, 20; churches, 253; houses of regulars, 4; convents, 10; college, 1; monasteries, 3; Catholic population in 1901, 70,674; non-Catholic, 1951.

E. A. D’Altzon.

Gama, Vasco da, the discoverer of the sea route to the East Indies; b. at Sines, Province of Alemtejo, Portugal, about 1469; d. at Cochin, India, 24 Dec., 1524. His father, Estevão da Gama, was Alcâide Mór of Madeira and commanded the Portuguese fleet important at court under Alfonso V. After the return of Bartolomeu Dias, Estevão was chosen by João II to command the next expedition of discovery, but, as both died before the project could be carried into execution, the commission was given to Emanuel I. Vasco da Gama had already distinguished himself at the beginning of the year 1490 by defending the Portuguese colonies on the coast of Guinea against French encroachments. Bartolomeu Dias had proceeded as far as the Great Fish River (Rio do Infante), and had in addition established the fact that the coast of Africa on the other side of the Cape extended to the northeast. Pedro de Covilho on his way from India had descended the east coast of Africa as far as the twentieth degree of south latitude, and had become cognizant of the old Arabic-Indian commercial association. The nautical problem, therefore, to be solved by Vasco da Gama was clearly outlined, and the course for the sea route to the East Indies designated. In January, 1497, the command of the expedition was solemnly conferred upon Vasco da Gama, and on 8 July, 1497, the fleet sailed from Lisbon under the leadership of Vasco, his brother Paulo, and Nicolão Coelho, with a crew of about one hundred and fifty men. At the beginning of May, they entered St. Helena Bay and, on the 25th of the same month, in Mossel Bay. On 16 December, the fleet arrived at the furthest landing-point of Dias, gave its present name to the coast of Natal on Christmas Day, and reached by the end of January, 1498, the mouth of the Zambesi, which was in the territory controlled by the Arabic maritime commercial association. Menaced by the Arabs in Mozambique (2 March) and Mombasa (7 April), who feared for their commerce, and, on the contrary, received in a friendly manner at Melinda, East Africa (14 April), they reached under the guidance of a pilot on 20 May, their journey’s end, the harbour of Calicut, India, which, from the fourteenth century, had been the principal market for trade in spices, precious stones, and pearls. Here also, as elsewhere, Gama skillfully surmounted the difficulties placed in his way by the Arabs, in league with the Indian rulers, and won for his country the respect needful for the founding of a new colony.

On 5 October, 1498, the fleet began its homeward voyage. Coelho arrived in Portugal on 10 July, 1499; Paulo da Gama died at Angra; Vasco reached Lisbon in September, where a brilliant reception awaited him. He was appointed to the newly created post of Admiral of the India Ocean, which carried with it a high salary and a number of other rights and privileges as well as the rank of Knight of the Order of Christ. In 1502 Gama was again sent out, with his uncle Vicente Sodré and his nephew Estêvão, and a new fleet of twenty ships, to safeguard the interests of the commercial enterprises established in the meantime in India by Cabral, and of the Portuguese who had settled there. On the outward voyage he visited Sofala (East Africa), exacted the payment of tribute from the Sheik, and bought a quantity of ivory, which he carried to Europe. He proceeded to Malacca, using with unscrupulous might, and even indeed with great cruelty, against the Arabian merchant ships and the Samudran (or Zamarim) of Calicut. He laid siege to the city, annihilated a fleet of twenty-nine warships, and concluded favourable treaties and alliances with the native princes. His commercial success was especially brilliant, the value of the merchandise which he brought with him amounting to more than a million in gold. Again high honours fell to his share, and in the year 1519 he received instead of Sines, which was transferred to the Order of Santiago, the cities of Vidiageira and Villa dos Frades, resigned by the Duke Dom Jayme of Braganza, with jurisdiction and the title of count. Once again, in 1524, he was sent to India by the Crown, under João III, to supersede the Viceroy Eduard de Menezes, who was no longer master of the situation. He re-established order, but at the end of the year he was caught in a storm, and died in 1524. In 1593, his remains, which up to that time had lain in the Franciscan church there, were brought to Portugal and interred at Vidiageira. To commemorate the first voyage to India, the celebrated conven of the Hieronymites in Belem was erected. A large part of the Lustosa of Camões deals with the voyages and discoveries of Vasco da Gama.

The oldest and most reliable sources of the history of the voyage of discovery, whose authors were participants in it, are the Centro da viagem, of a monograph by Gago Coutinho, 2nd ed., revised by Herculano and da Paiva (Lisbon, 1861); also a navaria primaria, servita per gentilum litorum, of A. Pires, in Rarissimi, Delic. Navigantium, . . . (Lisbon, 1840), 1, 119 sqq. Among the earliest are Castanheda, de Barros, Gene, Oncin, and others. Castanheda was the first to give positive information regarding the third voyage only.

Otto Hargitz.

Gamlid (Gamaidia, Greek form of the Hebrew גמלל, "reward of God").—The name designates in the New Testament and in the Talmud a Jewish doctor of the Law. Gamlid is represented in Acts, xxii, 34 sq., as advising his fellow-members of the Sanhedrin not to put to death St. Peter and the Apostles, who, notwithstanding the prohibition of the Jewish authorities, had continued to preach to the people. His advice, however unwelcome, was acted upon, so great was his respect for his contemporaries. We learn from Acts, xxii, 3, that he was the teacher of St. Paul; but we are not told either the nature or the extent of the influence which he exercised upon the future apostle of the Gentiles. Gamlid is rightly identified with an illustrious Jewish doctor of the Law, who bore the same name and who flourished towards the end of the destruction of Jerusalem. In the Talmud, this Gamlid bears, like his grandfather Hillel, the surname of "the Elder", and is the first to whom the title "Rabban", "our master", was given. He appears therein, as in the book of the Acts, as a prominent member of the highest tribunal of the Jews. He is also treated as the originator of many legal ordinances; as the father of a son, whom he called Simeon, after his father’s name, and of a daughter who married the priest Simon ben Nathanel. The Jewish accounts make him die a Pharisee, and state that: "When he died, the honour of the Torah (the law) ceased, and purity and piety went out of the earth to an extinct fire." At the same time this tradition has supposed that Gamlid embraced the Christian Faith, and remained a convert of the Sanhedrin
for the purpose of helping secretly his fellow-Christians (cf. Recognitions of Clement, I, ix, iv). According to Photius, he was baptized by St. Peter and St. John, together with his son and with Nicodemus. His body, miraculously preserved and discovered in the 15th century, is said to be preserved at Pisa, in Italy.

FRANCIS E. GIGOT.

GAMANS, JEAN, b. 8 July, 1606, at Ahrvaller (according to other sources at Neuenahr, about two miles from Ahrviller; there does not appear to exist any documentary evidence to show that he was born at the little town of Eupen, as stated in the "Bibliothèque des écrivains de la Compagnie de Jésus"); d. at the College of Aschaffenburg near Frankfurt, 23 Nov., 1684. He entered the Society of Jesus at Trier on 24 April, 1623, having studied the humanities for five years and philosophy for two years at Cologne, where he had received the degree of Master of Arts. After making his novitiate, he devoted several months to a revision of astronomical and mathematical studies, and subsequently, from 1626, spent five years teaching in the College of Würzburg, conducting his pupils through the five classes which comprised the complete course in humanities. He then studied theology for a year at Mains (1631), after which, the houses of his province of Middle Germany being thereby established during the troubles with Sweden, he continued his theological studies for three years at Douai, where he was ordained priest on 26 March, 1634. These studies having come to an end in 1634, and being followed doubtless by the third year of probation, he discharged for several years the duties of chaplain to the land and naval troops in Belgium and Germany. We find him mentioned under this title (Castrensis) in the catalogue of the Flandro-Belgian province for 1641 as being attached to the professed house at Antwerp, where he made his profession of the four vows on 26 December of the same year. He lived here with the first two Bollandists, Jean Bolland and Godfried Henschen, became inflamed with zeal for their work and was henceforth their assiduous collaborator, whithersoever his duty called him, but especially at Baden-Baden, where he resided for some time in order to direct the studies of the young princes of the House of Baden. He was named prior in 1641 and at the end of this latter year he resided in a missionary capacity at Ettlingen near Karlsruhe. Here we lose all sight of him until 1681, when he was attached to the College of Aschaffenburg near Frankfurt, where he died 25 November, 1684.

For more than thirty years, it is stated in the death notice inserted in the Annual letters of the College of Aschaffenburg for that year, he was so immersed in the hagiographical researches which he had undertaken in behalf of his associates at Antwerp that he devoted to them even the hours of the night, taking only a short rest on the floor or a strip of matting; insomuch that he was the "Ary" of the household, at the head of documents transcribed by his hand, and even of commentaries written entirely by him (cf. "Bibl. des écriv. de la C. de J.", s. v. "Gamans"). A large number of papers of this description is to be found in the vast manuscript collection of the early Bollandists preserved at the Royal Library of Brussels, and in the modern Bollandist library, although the largest part of his papers, dispatched to the Bollandists after his death, were engulfed in the war, the vessel bearing the precious freight having unfortunately sunk. Gamans had also collected a mass of material for a "Metropolis Moguntina", which he had almost finished and of the "Metropolis Salisburgensis" published by Hund in 1682, and also for a history of the grand ducal House of Baden. As many as eight manuscripts of the latter work are known to exist, but no portion of it or of the "Metropolis Moguntina" has been printed.

Calendrier annuel et Civil de la Province du Haut-Rhin, conservés dans les archives de la Compagnie de Jésus, F (1877), p. 209; Der Geschichtsforcher J. Gamans in Kobolz, new vol. XI, 300 seqq. (Mainz, 1879); Bibl. des écrivains de la C. de J.

CH. DE SMEDT.

GAMBLING. Gambling, or Gaming, is the staking of money or other thing of value on the issue of a game of chance. It thus belongs to the class of allier contracts in which the gain or loss of the parties depends on an uncertain event. It is not gambling, in the strict sense, if a bet is laid on the issue of a game of skill like billiards or football. The issue must depend on chance, as in dice, or partly on chance, partly on skill, as in whist. Moreover, in ordinary parlance, a person who plays for small stakes to give zest to the game is not said to gamble; gambling connotes playing for high stakes. In its moral aspect, although gambling usually has a bad meaning, yet we may apply to it what was said about betting (see BETTING). On the other hand, there is nothing immoral in the act itself; it is not sinful to stake money on the issue of a game of chance unless any more than it is sinful to insure one's property against risk, or deal in futures on the produce market. As I may make a free gift of my own property to another if I choose, so I may agree with another to hand over to him a sum only if the result of a game of cards is other than I expect, while he agrees to do the same in my favour in the contrary event. Theologians commonly require four conditions so that gambling may not be illicit. What is staked must belong to the gambler and must be at his free disposal. It is wrong, therefore, for the lawyer to stake the money of his client, or for anyone to gamble with what is necessary for the maintenance of his wife and children. The gambler must act freely, without unjust compulsion. There must be no fraud in the transaction, although the usual ruses of the game may be allowed. It is unlawful, accordingly, to mark the cards, but it is permissible to conceal carefully from an opponent the number of trump cards one holds. Finally, there must be some sort of equality between the parties to make the contract equitable; it would be unfair for a combination of two expert whist players to take the money of a couple of mere novices at the table. If any of these conditions is not fulfilled, gambling becomes more or less wrong; and, besides, there is generally an element of danger in it which is quite sufficient to account for the bad name which it has. It is a common occupation and is a serious waste of time, and usually of money; to an idle and useless life spent in the midst of bad company and unwholesome surroundings; and to scandal which is a source of sin and ruin to others. It pander to the craving for excitement and in many countries it has become so prevalent that it rivals drunkenness in its destructive influence on the lives of the "Ary". As to the moral aspect of the question, it is not essentially different if for a game of chance is substituted a horse-race, a football or cricket match, or the price of stock or produce at some future date. Although the issue in these cases seldom depends upon chance, still the moral aspect of betting upon it is the same, so far as the issue is unknown or uncertain to the parties who make the contract. Time bargains, difference transactions, options, and other speculative dealings on the exchanges, which are so common nowadays, add to the melée of gambling special evils of their own. They lead to the disturbance of the natural prices of commodities and securities, and to the increase of dealers and consumers of those commodities, and are frequently attended by such unlawful methods of in-
fluencing prices as the dissemination of false reports, cornering, and the fierce contests of "bulls" and "bears" i.e. of the dealers who wish respectively to raise or lower prices.

It has not been prescinded from positive law in our treatment of the question of gambling. It is, however, a matter on which both the civil and the canon law have much to say. In the United States the subject lies outside the province of the Federal Government, but many of the States make gambling a penal offense when the bet is upon an election, a horse-race, or a game of chance. Betting contracts and securities given upon a bet are often made void. In England the Gaming Act, 1845, voids contracts made by way of gaming and wagering; and the Gaming Act, 1892, renders null and void any promise, express or implied, to pay any person any sum of money under, or in respect of, any contract or agreement rendered null and void by the Gaming Act, 1845, or to pay any sum of money by way of commission, fee, reward, or otherwise, in respect of any such contract or agreement, or of any services in relation thereto or in connexion therewith. From very early times gam- bing by the canon law was one of much a scandal. Two of the canons (41, 42) among the so-called canons of the Apostles forbade games of chance under pain of excommunication to clergy and laity alike. The 79th canon of the Council of Elvira (306) decreed that one of the faithful who had been guilty of gambling might be, on amendment, re-admitted to communion. A homily to St. Cyprian, but by modern scholars variously attributed to Popes Victor I, Callistus I, and Melchades, and which undoubtedly is a very early and interesting monument of Christian antiquity, is a vigorous denunciation of gaming. The Fourth Lateran Council (1215), by a decree subsequently inserted in the "Corpus Juris", forbade clerics to play or to be present at games of chance. Some authorities, such as Aubespine, have attempted to explain the severity of the ancient canons against gambling by supposing that idolatry was often connected with it in practice. The pieces that were played with were small-sized idols, or images of the gods, which were invoked by the players for good luck. However, as Benedict XIV remarks, this can hardly be true, as in that case the penalties would have been still more severe. Profane writers of antiquity are almost as severe in condemnation of gambling as the councils of the Christian Church. Tacitus and Ammianus Marcellinus tell us that by gambling men are led into fraud, cheating, lying, perjury, theft, and other enormities; while Peter of Blois says that dice is the mother of perjury, theft, and sacrilege. The old canons, and those of today, remark that those who play at chance play for nothing. The canons generally mention only dice by name, yet under this appellation must be understood all games of chance; and even those that require skill, if they are played for money.

The Council of Trent contented itself with ordering all canons on the subject to be observed, and in general prescribed that the clergy were to abstain from unlawful games. As Benedict XIV remarks, it was left to the judgment of the bishops to decide what games should be held to be unlawful according to the different circumstances of person, place, and time. St. Charles Borromeo, in the first Synod of Milan 1571, drew up a list of games which were forbidden to the clergy, and another list of those that were allowed. Among those which he forbade were not only dice in various forms, but also games something like our croquet and football. Other particular councils declared that dice were not to be played at all, and forbidden to clerics, and in general they forbade all games which were unbecoming to the clerical state. Thus, a council held at Bordeaux in 1683 decreed that the clergy were to abstain altogether from playing in public or in private at dice, cards, or any other forbidden and unbecoming game. The council held at Aix in 1685 forbade them to play at cards, dice, or any other games of the like kind, and even to look on at the playing of such games. Another, held at Nantes in 1699, decreed that clerics were not to play at dice, cards, or other unlawful and unbecoming games, especially in public. There was some doubt as to whether chess was to be considered an unbecoming, and therefore an unlawful, game for clerics. In the opinion of St. Peter Damian it was certainly unlawful, and if some occasion he caught the Bishop of Florence playing chess, he would immediately order the bishop to leave the game. He advanced this argument by himself saying that chess was not dice. The saint, however, refused to admit the distinction, especially as the bishop was playing in public. Scripture, he said, does not make express mention of chess, but it is comprised under the term dice. And Baronius defends the saint's doctrine. Some scholiasts, he remarks, may say that St. Peter Damian was under a delusion in classing chess under dice, since chess is not a game of chance but calls for the exercise of the mind. In the first place, he says, the bishop proceeds; priests must at any rate be guided in their conduct by the words of St. Paul, who declared that what is not expedient, what is not edifying, is not allowed. Modern ecclesiastical law is less exacting in this matter. The penal Council of Paris (1763) is content with prescribing that clerics must abstain from unlawful games. The Plenary Synod of May- nooth, held in 1900, says that since not a little time is occasionally lost, and idleness is fostered by playing cards, the priest should be on his guard against such games, especially where money is staked, lest he incur the reproach of being a gambler. He is also exhorted to deter the laity by word and example from betting at horse-races, especially when the stakes are high. The Second Plenary Council of Baltimore made a distinction between games which may not suitably be indulged in by a cleric, even when played in private, and games like cards which may be played for the sake of innocent recreation. It repeated the prohibition of the First Plenary Council of Baltimore that clerics are not to indulge in unlawful games, and only in moderation are to use those that are lawful, so as not to cause scandal. Nowadays, it is commonly held that positive ecclesiastical forbidding of a game is even given even to the clergy, when in themselves or for some extrinsic reason, such as loss of time or scandal, they are forbidden by the natural law.

T. SLATER.

GAMES, PIUS BONIFACIUS, ecclesiastical historian, b. at Mittelbach, Württemberg, 20 January, 1816; d. at Munich, 11 May, 1892. His classical studies were made at Biberach and Rottweil (1826–1834), he studied philosophy and theology at Tubingen (1834–38), entered the seminary of Rottenburg in 1838, and was ordained priest on 11 September, 1839. He filled various posts as tutor, vicar, parish priest, and professor, until 1 May, 1847, when for twenty-one years he occupied the chairs of philosophy and general history by the theological faculty of Hildesheim. Finally he entered the Abbey of St. Boniface at Munich, which belonged to the Bavarian congregation of the Order of St. Benedict, and pronounced the monastic vows, 5 October, 1868, by which he submitted to that of Boniface. Games filled several monastic offices, being successively master of novices, sub-prior, and prior. He is best known for his Kirchengeschichte von Spanien, 3
vols. (Ratibon, 1862–1879), and his "Series episcoporum Ecclesiae catholicæ quotquot innotuerunt a beato Petro apostolo" etc. (Ratibon, 1873–86, with two supplementes). The "Kirchengeschichte von Spanien" is a consecutively written episcopal history, also, to a certain extent, in dealing with the earliest period of Spanish ecclesiastical history, though the author rarely abandons the aid which unreliable sources seem to furnish. The "Series episcoporum" has rendered useful service and is yet very helpful. It is a collection of the knowledge of all ancient and modern times known to the author. Gaps are frequent in the lists of ancient sees, especially those of the Eastern Church. It was, of course, impossible to draw up a critical list (names and dates) for such remote times, and larger information must be sought in extensive documentary works, e. g. "Italia Sacra" and the like; as a rule, however, the author has ignored a number of scattered dissertations which would have rectified, on a multitude of points, his uncertain chronology. In 1850 Gams founded with his colleague Alsog, F. W. Koch, Matthias, and G. J. Müller a "Theologische Monatschrift", which lasted two years (1851), and in which he published a number of essays.

Works:—"Geschichte der Kirche Jesu Christi im neunzehnten Jahrhunderte mit besonderer Rücksicht auf Deutschland", 3 vols. (Innsbruck, 1854–1858); "Johannes der Taucher im Gefängnisse" (Tübingen, 1857); "Paulus der Apostel. Der heiligen Bonifacius", etc. (Mainz, 1858); "Die Kirchengeschichte von Spanien", 3 vols., in five parts (Ratibon, 1862–79); "Spanische Briefe" in "Historisch-politische Blätter", LVI, 134 sq., 203 sq., 311 sq., 415 sq.; "Wetterleuchten auf der pyrenäischen Halbinsel", ibid., LVI, 67 sq.; "Series episcoporum Ecclesiae catholici quotquot innotuerunt a beato Petro apostolo" (Ratibon, 1873); Supp. I: "Hierarchia catholica Pio IX Pontifici Romano" (Munich, 1879); Supp. II: "Series episcoporum Ecclesiae quæ series quæ apparuit 1783 completur et continuatur ab anno circa 1870 ad 20 Febr. 1886" (Ratibon, 1886); "Das Jahre des Martyrtodes der Apostel Petrus und Paulus" (Ratibon, 1887).

H. LECLERCQ.

Gand, Dioecese op. See GHENT, Dioecese op.

Gandolphi (or Gandolph), Peter, Jesuit preacher; b. in London, 26 July, 1779; d. at East Sheen, Surrey, 7 July, 1821; son of John Vincent Gandolphi of East Sheen, and grandson of Count Pietro Gandolphi, of the ancient nobility of Genoa. Father Gandolphi's brother, John Vincent, married Teresa, eldest daughter of Thomas Hornby, of Blackmore and Hanley. His only son succeeded to the Blackmore and Hanley estates and assumed the name of Royal by Royal License in 1809. Gandolphi was an ancient Catholic family in Worcestershire, and Blackmore Park (recently pulled down) was a fine example of an old English manor house, with numerous priests' hiding places. The present representative of the family, Alfonso Otto Gandolphi Hornby, bears the title of Duke Gandolphi (a papal creation of 1899) as well as the old Genoese titles.

Father Gandolphi was educated in the Jesuit College at Liége, and also at Stonyhurst, where he was appointed as teacher of humanities in 1801. He was ordained priest about 1804, and his first charge was at Stonyhurst. He was then transferred to the Spanish chapel at Manchester Square, London (now known as St. James's, Spanish Place), where he soon attained great fame as a preacher; and as a worker among Protestants he made many converts.

His methods, however, were somewhat infelicitous, and speedily incurred the censure of his ordinary, Bishop Poynter. It appears that he wrote too rapidly to be theologically exact, but there were certainly no heretical principles in his writings. As a Jesuit, it seems strange to read of a Catholic manual entitled the "Book of Common Prayer . . . for the use of all Christians in the United Kingdom" which he brought out in 1812. On account of this, and of his "Sermones in defence of the Ancient Faith", Bishop Poynter felt it his duty to suspend him and to depose the offending monk. Gandolphi went to Rome in person to defend himself, and in 1816 he obtained official approbation of the two censured works from S. P. Damiani, master of theology and Apostolic penitentiary at St. Peter's, and F. J. O'Finnan, prior of the Dominican convent of St. Sixtus and St. Clement. The Congregation of Propaganda, being anxious for a peaceable settlement of this unfortunate affair, required (1 March, 1817) that Gandolphi should be restored on his apologising to Bishop Poynter for any unintentional disrespect which might have occurred in his address to the public, of which address also the bishop had complained. On 15 April Gandolphi accordingly wrote an apology, but the bishop in a pastoral letter on 24 April stated that the apology was inadequate, so that on 8 July, Gandolphi made an unreserved apology; but this long drawn out public humiliation was too much for him. He resigned his appointment to his benefice in the parish of East Sheen, where he died in a year or two. His principal works were: "A Defence of the Ancient Faith" (London, 1813–14); "Liturgy, or A Book of Common Prayer, and Administration of Sacraments, with other Rites and Ceremonies of the Church. For the use of all Christians in the United Kingdom" (London, 1812; Birmingham, 1815); "Lessons of Morality and Piety, extracted from the Sapiential Books" (London, 1822); and a number of controversial letters and sermons.

Ganganelli, Lorenzo. See CLEMENT XIV, Pope.  

GANG-DAYS. See ROGATION DAYS.

Gangra, a titular see in the province of Paphlagonia; in the native tongue the word signifies goat, and even now large numbers of goats are seen in this region. It belonged originally to Galatia, and was then the capital of King Dionysus, who founded his city, and the seat of Mithridates, and the friend of the Romans. Later the city became the metropolis of Paphlagonia. It never had more than five suffragan sees. Le Quien (I, 549–554) mentions twenty-two of its archbishops from the fourth to the twelfth century, none of whom is especially noteworthy. The metropolitan see must have been suppressed in the fourteenth century after the conquest of the country by the Turks. Captured by Tamerlane, in 1402, it was recaptured, in 1423, by Sultan Murad II; since that time it has always been Turkish. The most memorable event of its Christian history is the council held there, probably in 343, to condemn Eustathius of Armenia and his exaggerated asceticism. More than twenty canons of this council defend the legitimacy of Christian marriage against the disobeditions of Eustathius and especially of his disciples (Hefele-Leclercq, Histoire des conciles, Paris, 1907, I, (2), 1029–45). It is now well known that Tchiang, "is a sandjak of the Ottoman Empire, situated at the foot of Mt. Ölgassus and numbers 16,000 inhabitants, 800 of whom are Greeks and 500 Armenians, all schismatical. The ancient cathedral of St. Demetrius has been converted into a mosque.

VACHER, Asie-Mineure, 827; COUJOT, La Turquie d'Asie, IV, 558 sq.
the first prelates to recognize the supernatural voca-
tion of Joan of Arc; Giulio de’ Medici (1510–11), later
pope under the name of Clement VII; Cardinal Fran-
çois de Tournon (1517–26), employed on diplomatic
missions by Francis I, and founder of the Collège de
Tournon; Cardinal de Tencin (1724–40), who in Sep-
tember, 1727, caused the condemnation by the Council
of the Archbishop of Aix, the bishop of the diocese of
Senez. St. Vincent Ferrer preached several
missions against the Vaudois in the Diocese of
Embrun. Besides the bishops named the following are
honoured as saints in the present Diocese of Gap: Vin-
cent, Orontius, and Victor, martyrs in Spain in the
fourth century; the anchorite Veranus (sixth century),
afterwards Bishop of Cavaillon, and the anchorite St.
Donatus (sixth century).

The Diocese of Gap possesses two noted places of
pilgrimage, Notre-Dame d’Embrun at Embrun, where
Charlemagne erected a basilica, visited by Pope Leo
III and Kings Henry II and Louis XVIII. Louis XVI
was wont to wear in his cap a leaden image of Notre-
Dame d’Embrun. The other is that of Notre-Dame du
Laus, where during fifty-four years (1664–1718) the
blessed Virgin appeared “an innumerable number of
times” to a shepherdess, Venerable Benoîte Rencurel.
Three orders of women had their origin in the diocese.
The Sisters of Providence, a teaching and nursing
order, established in 1823 from the Sisters of Portieux
(Vosges) and after 1837 an independent congregation;
the Sisters of Saint Joseph, founded in 1837 for
teaching and nursing; the Sisters of the Sacred Heart
of Mary, founded in 1835 for teaching. The Diocese
of Gap, numbering 109,550 inhabitants (1911), was
at the cessation of the Concordat, 26 parishes, 218
missions, and 15 curacies, paid by the state. During
the Middle Ages there were in the mountainous region
which forms the present diocese more than seventy
hospitals, maladreries, lazarettos, or houses of refuge,
administered by two congregations of the virgin,
the Brothers of La Madeleine and the Brothers of Holy
Penitence. About half of these asylums disappeared
during the religious wars of the sixteenth century.
The others with the exception of half a score were
suppressed by royal command about 1080, and their goods
given to the large hospitals of Gap, Embrun, and Bri-
ançon. In 1900, before the Law of Associations was
enforced, there were in the Diocese of Gap five ma-
ternity hospitals, a school for deaf mutes, one orphan-
age for boys and two for girls, seven hospitals or asy-
lums, two institutions for the care of the sick in their
homes, all under the direction of religious orders.

GEORGES GOTAY.

GARCIA, ANNE, better known as Venerable Anne of
St. Bartholomew, Discalced Carmelite nun, companion of
St. Teresa; b. at Almedral, Old Castile, Oct.,
1526, d. at Antwerp, 7 June, 1626. She was of humble
origin and spent her youth in solitude and prayer
tending the flocks. When she first went to Avila to
enter the Carmelite convent, she was refused, being too
young; for several years after, she suffered much at the
hands of her brothers. Finally, overcoming all obsta-
cles, she entered the convent at Teguise on the Cana-
rian islands and professed her vows on 15 August, 1572.
For the next ten years she filled the post of infirmarian; her spirit of prayer and
humility endeared her to St. Teresa, whose almost
inseparable companion and secretary she now became.
St. Teresa died in her arms at Alba de Tormes in
1582. Anne afterwards returned to Avila, took part in the
foundation of a convent at Ocaña (1592), and was one

PORCH AND NORTH Portal, CATHEDRAL OF EMBRUN.
of the seven nuns selected for the introduction of the order into France (October, 1604). The French superiors, desirous of sending her as prioress to Pontoise, obliged her to pass from the state of lay sister to that of choir sister. So unusual a step met with the disapproval of her companions, but as St. Teresa had foretold it many years previously Anne offered no resistance and at the same time she felt that the same step would cause her great sufferings, and indeed her priorship at Pontoise (January to September, 1605), Paris (October, 1605, to April, 1608), Tours May, 1608, to 1611) brought her heavy trials, not the least of which were differences with her superiors. At the expiration of that term she returned to Paris, but warned by a vision, she proceeded to Belgium (October, 1611), where she founded and became prioress of a convent at Antwerp (27 Oct., 1612), which she governed to the end of her life. Twice she was instrumental in delivering the town from the hands of the enemy. In 1735, Anne of St. Bartholomew was declared Venerable; her process of beatification is not yet completed. Her writings include a number of letters still preserved, an autobiography now at Antwerp, edited by M. Bouix (Paris, 1869-72), and several treatises on spiritual matters, which appeared at Paris in 1646.

**B. ZIMMERMAN.**

_Garcia, Gonzalo, Saint_; b. of a Portuguese father and a Canarese mother in Bassein, East India, about the year 1556 or 1557; d. 5 Feb., 1597. His early training was entrusted to the Jesuits, who brought him up in their college in Bassein Fort. At the age of twenty-four or twenty-five he went to Japan in the company of some Jesuit fathers who were ordered, in 1580, toleave Bantam, and join the mission in the former country. He quickly acquired a knowledge of the language; and as he was of an amiable disposition he won the hearts of the people and did great service as a catechist for eight years. He then left this kind of work and betook himself to Alacao for trading purposes. His business soon flourished and branches were opened in different places. During his frequent visits to Manila he made the acquaintance of the Franciscans, and being drawn more and more towards them he finally joined the Seraphic Order as a lay brother. He sailed from the Philippines Islands with other companions in religion under Petrus Beply, b. 1519, d. 1592, on an embassy from the Governor to the Emperor of Japan. After working zealously for the glory of God for more than four years, the Emperor Taiko-Sama, suspecting the missionaries were aiming at the overthrow of his throne, ordered St. Garcia and his companions to be guarded in their Convent at Matsunaga. On 8 December, 1596. A few days afterwards, when they were singing vespers, they were apprehended and with their hands tied behind their backs were taken to prison. On 3 January, 1597, the extremities of the left ears of twenty-six confessors, St. Garcia amongst the number, were cut off; but were with great respect collected by the Christians. On 5 February of the same year, the day of the martyrdom, St. Garcia was the first to be extended on, and nailed to, the cross, which was then erected in the middle of those of his companions. Two lances piercing the body from one side to the other passed through the heart, while the wounds they had put an end to his sufferings and won for Garcia the martyr's crown. In 1627 these twenty-six servants of God were declared venerable by Urban VIII; their feast occurs on 5 February, the anniversary of their sufferings; and in 1629 their veneration was permitted throughout the Universal Church. The people of Bassein practised devotion towards the saint; after the severe persecution to which Christianity was subjected in that region, from about 1730 he was gradually entirely forgotten until a well-known writer recently undertook to write the history of the place, and drew the attention of the public to St. Garcia Gonzalo. Owing to the praiseworthy endeavours of a secular priest, and the great interest evinced by the present Bishop of Damaum in the promotion of the devotion towards the saint, the feast of St. Garcia is now annually celebrated with great solemnity; and pilgrims from all parts of Bassein, Salsette, and Bombay flock to the place on that occasion.

The Bull of Canonisation; Bibliotheca Historica Filipina; Supplement to Ritombreria, History of the Eastern Archipelago; Guerin, Lives of the Saints; Fernandez, Life of Saint Gonzalo Garcia; Da Monte Alverne, Paseo de St. Gonzalo Garcia; Bombay Catholic Examiner for 1903, 1904; O Anglo Luiziano for 1903, 1904.

**MANOEL D’SA.**

_Garcia Diego, Francisco_. See DIEGO Y MORENO, FRANCISCO.

_Garcia Moreno, Gabriel, Ecuadorian patriot and statesman_; b. at Guayaquil, 24 December, 1821; assassinated at Quito, 6 August, 1875. His father, Gabriel Garcia Gomez, a native of Villaverde, in Old Castle, had been engaged in commerce at Callao before removing to Guayaquil, where he married Dolia Mercedes Moreno, the mother of the future Ecuadoran martyr president. Gabriel Garcia Gomez died while his son was still young, and the boy’s education was left to the care of his mother, who appears to have been a woman of unusual ability for her task; she was, moreover, fortunate in securing as her son’s tutor Fray Jose Betancourt, the famous Mercedarian, under whose tuition young Garcia Moreno made rapid progress. A great part of his father’s fortune having been lost, it was not without some considerable sacrifices that the youth was able to attend the university course at Quito. These material obstacles once overcome, he passed brilliantly through the schools, distilling all his contemporaries, and on 26 October, 1844, received his degree in the faculty of law (Doctor en Jurisprudencia) from the University of Quito.

In less than a year after his graduation young Garcia Moreno had begun to take an active part in Ecuadorian politics, joining in the revolutionary movement which eventually replaced the Flores administration by that of Roca (1846). He soon distinguished himself as a political satirist by contributions to “El Zurriago,” but what more truly pressed the achievements of his riper life was his good and useful work as a member of the municipal council of Quito. At the same time he was studying legal practice, and on 30 March, 1848, was admitted advocate. Immediately after this the deposed Flores, supported by the Spanish government, made an attempt to regain the presidency of Ecuador; Garcia Moreno unhesitatingly came forward in support of the Roca administration, and when that administration fell, in 1849, he entered upon his first period of exile. After some months
spent in Europe he returned to his native republic in the employ of a mercantile concern, and it was then that he took the first decisive step which marked him completely for the party of the anti-Catholics, as they preferred to call themselves, the Liberals. At Panama he had fallen in with a party of Jesuits who had been expelled from the Republic of New Granada and wished to find an asylum in Ecuador. García Moreno constituted himself the protector of these refugees, and for the defense of the town of Guayaquil, but on the same vessel that carried the Jesuits and their champion, an envoy from New Granada also took passage for the express purpose of bringing diplomatic influence to bear with the dictator, Diego Noboa, to secure their exclusion from Ecuadorian territory. No sooner had the vessel reached the port of Guaya-
quil than García Moreno, slipping into a shore boat, succeeded in landing some time before the New Granada
envoy; the necessary permission was acquired from the Ecuadorian government, and the Jesuits obtained a foothold in that country. How soon the report of this exploit spread among the anti-Catholics of South America was evidenced by the fact that within a year Jacobo Sánchez, a New Granadan, had attacked García Moreno in the pamphlet "Don Félix Frias en París y los Jesuitas en el Ecuador"; to which García Moreno's reply was an able "Defensa de los Jesuitas".

1853 he began to publish "La Nación", a periodical which, according to its prospectus, was intended to combat the then existing tendency of the government to exploit the masses for the material benefit of those who happened to be in power. At the same time García Moreno's programme aimed distinctly and professedly to defend the rights of the people. He was already known as a friend of the Jesuits; he now assumed the rôle of friend of the common people, to which he adhered sincerely and consistently to the day of his death. The Urbina faction, then in power, were quick to recognize the importance of "La Nación", which was suppressed before the appearance of its third number, and its proprietor was exiled, for the second time. Having been, meanwhile, elected senator by his native province of Guayaquil, he was prevented from taking his seat, on the ground that he had returned to Quito without a passport. After a sojourn at Pata, García Moreno once more visited the capital. He had, in the three years of his exile, and his experience of political life in Ecuador had deeply convinced him of his people's need of enlightenment. It was undoubtedly with this conviction as his guide and incentive that he spent a year or more in Paris, foregoing every form of pleasure, a severe, indefatigable student not only of political science, but also of the higher mathematics, of chemistry, and of the French public-school system. On his return home, under a general amnesty in 1856, he became rector of the central University of Quito, a position of which he availed himself to commence lectures of his own in physical science. Next year he was elected to a sensible vitality of the ambitious, which he considered the necessity of the Church and of the State in the education of the public at large. García Moreno was on principle an advocate of orderly processes of government, and that his aversion for the Masonic party, which had gained control of the government, while at the same time he persistently and forcibly, though unsuccessfully, struggled for the passage of a law establishing a system of public education modeled on that of France. In 1858 he once more established a paper, "La Unión Nacional", which became obnoxious to the government by its fearless exposure of corruption and its opposition to the arbitrary employment of authority; and once more a political crisis ensued.

García Moreno was on principle an advocate of orderly processes of government, and that his aversion for the Masonic party, which had gained control of the government, while at the same time he persistently and forcibly, though unsuccessfully, struggled for the passage of a law establishing a system of public education modeled on that of France. In 1858 he once more established a paper, "La Unión Nacional", which became obnoxious to the government by its fearless exposure of corruption and its opposition to the arbitrary employment of authority; and once more a political crisis ensued.

García Moreno was on principle an advocate of orderly processes of government, and that his aversion for the Masonic party, which had gained control of the government, while at the same time he persistently and forcibly, though unsuccessfully, struggled for the passage of a law establishing a system of public education modeled on that of France. In 1858 he once more established a paper, "La Unión Nacional", which became obnoxious to the government by its fearless exposure of corruption and its opposition to the arbitrary employment of authority; and once more a political crisis ensued.

García Moreno was on principle an advocate of orderly processes of government, and that his aversion for the Masonic party, which had gained control of the government, while at the same time he persistently and forcibly, though unsuccessfully, struggled for the passage of a law establishing a system of public education modeled on that of France. In 1858 he once more established a paper, "La Unión Nacional", which became obnoxious to the government by its fearless exposure of corruption and its opposition to the arbitrary employment of authori
ista party at home with the provisions of that instrument gave Mosquera an excellent pretext for encroaching upon his neighbour's rights. The Regalistas were, without knowing it, a kind of Eristas, who claimed the appointment to ecclesiastical benefices as an inalienable right of the President of the Republic, and when Ecuadur was charged with "casting Colombia, manacled, at the feet of Rome"; Urbina issued "manifestos" from Peru in the sense of "South America for the South Americans"; while the proclamation of President Mosquera recited, with others which seem to have been introduced merely for the sake of appearances, his three really significant grounds of complaint against Garcia Moreno: that the latter had ratified the concordat; that he maintained a representative of the Holy See at Quito; that he had brought Jesuits into Ecuador. It may be remarked here, in passing, that if Mosquera had added to this catalogue of offences those of insisting upon free primary education for the masses, upon strict auditing of the public accounts, and a considerable bona fide outlay upon roads and other public utilities, his proclamation might have served adequately as the indictment upon which Gar-
cia Moreno was condemned and eventually put to death by those whom Pius IX ironically called "the valiant sectaries".

Mosquera was determined to have war, and all the efforts of the Ecuadorean government were of no avail to prevent it. At the battle of Guasipud all but two battalions of the troops of Ecuador fled ignominiously. It is a matter for wonder, considering the grounds upon which he had declared war, that Mosquera, in the Peace of Pinaquiri, which followed this victory, should have left the Concordat of 1852, the delegate Apostolic, and the Jesuits just as they were. In March, 1863, Garcia Moreno tendered his resignation to the National Assembly, who insisted upon his remaining in office until the expiration of his term. Nevertheless he had to face, during the next two years, repeated seditions and filibustering raids. After sparing the lives of the leaders in one of these movements, though they had by all law and custom incurred the penalty of death, he was severely criticised for ordering the execution of another such when it had become evident that an example was necessary for the peace of the republic. In a naval battle at Jambeli (27 June, 1865) at which Garcia Moreno was personally present, the defeat of the Urbina forces was complete, and tranquillity returned. The constitutional term expired on the 27th of the following August.

In the following year began what may be considered as a connected series of attempts which terminated, nine years later, in the assassination of Garcia Moreno. The dispute between Spain and Peru over the Chinchas islands had been resolved in 1864, which, following Garcia Moreno's advice, his successor Jerónimo Carrión had cast in the lot of Ecuador with that of the sister republic and its then ally, Chile. The ex-pre-
sident was sent as minister plenipotentiary to Chile, with a commission to transact business with Presi-
dent Vidal on his way. On his arrival in Lima an attempt was made to assassinate him, but it ended in the death of his assailant. His diplo-
matic mission resulted excellently for the friendly relations between Ecuador and its neighbours; the so-
journ at Santiago also inspired Garcia Moreno with a high admiration for Chile, and he even made up his mind to attempt a change of the Ecuadorean constitution so as to make it more like that of Chile, a project which he carried into effect in the National Convention of 1869. On his return to Ecuador he found himself a second time in the unconfessional position of leader of a revolution, this time the plot which the Lima papers led by one of Urbina's relations, were known to be form ing, the conservatives of Ecuador had risen, de-
carried Carrión deposed, and made Garcia Moreno head of the provisional government. The justice of the

grounds on which this extreme action was taken was established by the attempt of Veintemillas, at Guaya-
quill, only two months later, in March, 1869.

Having been duly confirmed as president ad interim by the National Convention of May, 1869, Garcia Mo-
reno resumed his work for the enlightenment and religious well-being of his people. It was in these last years of his life that he did so much for the teaching of physical sciences in the university by introducing there the German Fathers of the Society of Jesus. The medical schools and hospitals of the capital benefited vastly by his intelligent and zealous efforts. In September, 1870, the troops of Victor Emmanuel occupied Rome; and on 18 January, 1871, Garcia Moreno, alone of all the rulers of the world, addressed a protest to the King of Italy on the apostilation of the Holy See. The pope marked his appreciation of this outburst of loyalty by conferring on the President of Ecuador the decoration of the First Class of the Order of Pius IX, with a Brief of commendation dated 27 March, 1871. It was, on the other hand, notorious that certain lodges had formally decreed the death of Garcia Moreno, who, in a letter to the pope, used about this time the following almost prophetic words: "What riches for me, Most Holy Father, to have lived and am

luminated for my love for our Divine Redeemer! What happiness if your benediction should obtain for me from Heaven the grace of shedding my blood for Him, who being God, was willing to shed His blood for us upon the Cross! The object of numberless plots against his life, Garcia Moreno pursued his way with unruffled confidence in the future—his own and his country's. "The enemies of God and the Church can kill me", he once said, "but God does not die" (Dios no muere).

He had been re-elected president, and would soon have entered upon another term of office, when, towards the end of July, 1875, the police of Quito were apprised that a party of assassins had begun to dog Garcia Moreno's footsteps. When, however, the chief of police warned the intended victim, the latter so discouraged all attempts to hedge him about with precautions, as to almost excuse the carelessness of his official guardians. It came out in evidence that within the fortnight preceding the finally successful attempt, the same assassins had at least twice been foiled by the president's failing to appear on occasions when he had been expected. Finally, on the evening of 6 August, the assassins formed a ring at the door of the house where the government was held in the palace, demanding entrance, and, being refused, attacked the house with a machete, inflicting six or seven wounds, while the other three assisted in the work with their revolvers.

On hearing of the death of Garcia Moreno, Pope Pius IX ordered a solemn Mass of Requiem to be cele-
brated in the Church of Santa Maria in Trastevere. The same sovereign pontiff erected to his memory, in the Collegio Pio-Latino, at Rome, a monument on which Garcia Moreno is designated:

Religionis integerrimum custos
Auctor studiorum optimos protegit
Obequentissimus in Petri sedem
Justitiae cultor; seclorum vindex.

The materials for this article have been derived from a biog- raphy, now extremely rare, written by a personal friend and personal associate of Garcia Moreno, HARRER. GARDELLINI

Early history of the Incas, he finished in 1604, and published at Lisbon in 1606. In 1612, he finished the second part, dealing with the conquest of Peru by the Spaniards, and published it at Cordova in 1616. As a historian of Peru and the Incas, he made use of sources that were not available to his contemporaries. His works included detailed accounts of the Incas and their civilization, and he was the first to call attention to the importance of the Incas in the history of South America.

Gar
dellini, Aloisio, b. at Rome, 4 Aug., 1750; d. there, 8 Oct., 1829. He is famous chiefly for his collection of the decrees of the Congregatio de Rites. Until 1857, the celebration of the Sacrament of the Mass and the administration of the sacraments had been subject to regulations made by various popes. Nece-
sarily, in the course of time, these regulations became somewhat confused by reason of overlapping, amplification, and abolition. In the year mentioned above, Sixtus V, in the Constitution "Immensae eterni Deli" called into being a body of cardinals, bishops, and clerics, whose work was to guard and guide the de-
corous celebration of the church offices. A collection of papal regulations and congregational decrees was published in 1730 by John Baptist Pithoni, a Vene-
tian priest, the title of his book being "Constitutiones pontificiae et Romanorum Congregatum decisiones ad sacros Ritus spectantes". This work had somewhat imperfect, and it was not until 1857 that Gardel-
lini published the first two volumes of his well-known collection of the decrees of the Congregation of Rites, to which was prefixed "Sacrorum rituum studiorum monimentum". Gardellini was a very profound student, especially of the liturgy and kindred subjects, and in diligence, piety, and learning, was unparalleled.

His collection of decrees gives evidence of most pains-taking labour, and comprises all the decrees from 1602. Three further volumes were published in 1816, and a sixth volume was brought out in 1819. This volume contained more recent decrees down to the date of publication, and also suggested to the Clementine Inquisition regarding the devotion of the Forty Hours. There were a few slight errors in the complete work, and the exacting love of perfection, so characteristic of Gardellini, would not allow him to leave these errors uncorrected. Accordingly, a new and corrected edition was published in 1857, and in this edition he included certain answered questions given between the years 1558 and 1599. In recognition of his great services, Gardellini was appointed assessor of the Congregatio de Rites. Other editions of the decrees have been issued subsequently, but the collection of Gardellini is the foundation of them all; the latest of

David Dunford.
Gardiner, Stephen, Bishop of Winchester; b. at Bury St. Edmund's between 1483 and 1490; d. at Whitehall, London, 12 Nov., 1555. His father is believed to have been John Gardiner, a clothworker. It is a story attributed to his parentage that Lionel Wolsey was being a later invention. He was educated at Trinity Hall, Cambridge, and became doctor of civil law in 1520, and of canon law in 1521. He was also elected fellow of his college. In 1524, he became one of Sir Robert Rede's lecturers in the University, and the Duke of Norfolk chose him as the head of his legal studies; it was through the duke that he was introduced to the notice of Cardinal Wolsey, who, immediately appreciating his talents and scholarship, made him his own private secretary. In 1525, he was elected master of Trinity Hall, and held that office till 1549. In 1527 he accompanied Wolsey to France, where he made the acquaintance of Erasmus. He was selected in the following year as ambassador to the pope with instructions to pursue the action of the divorce. He delighted the king by his success in inducing the pope to appoint a second commission, and from this time he becomes a figure of mark at court. He was rewarded with the Archdeaconry of Norwich on 4 March, 1529, and immediately afterwards was sent again to Rome, but on this occasion he was unsuccessful. He became secretary to the king on 28 July, 1529, and soon gained great influence, especially after the fall of Wolsey, his former master, to whom he was now able to be of service, especially in the preservation of his foundation of Christ's College, Oxford.

His new power brought quick advancement. In 1531 he was made archdeacon of Leicester, while Oxford University conferred the doctorate of laws upon him, and later in the year he was elected Bishop of Winchester. He was consecrated on 27 Nov., and from this time began to show more independence of action, though he still remained high in the royal favour. Shortly after his consecration he spent two months in France as ambassador, but on his return he began to preach in his diocese and to administer the see with more personal interest than had been expected from a courtier-prelate. That he was now less at court was thought to be due to the fact that he had formed definite opinions against the king on the divorce question. Pope Clement certainly believed this ("De Sacro, Patris, et Hen. VIII", V, 561), but notwithstanding such reports Gardiner acted as assessor in the Court which declared the marriage of Henry and Catherine null and void, and he also took an active part in the coronation of Anne Boleyn.

By 1534, in which year he resigned the post of secretary to the king, he was in a difficult position. He was antagonistic to Cromwell and Cranmer, both of whom were then high in the royal counsels, and he strongly disapproved of the attack on the religious orders which was already contemplated. But his attachment to the king prevented him from taking up the firm attitude which Fisher and More had adopted, so that early in 1535 he not only accepted the royal supremacy, but he wrote his treatise "De vera obediencia", in which he argued that the pope had no legitimate power over other churches, and that kings are entitled to supremacy in their respective churches. The book was received with delight by the Protestant party, while Catholics succeeded in having it banned. The book was reprinted in 1535 under compulsion and fear of death. Dr. S. R. Maitland ("Essays on Subjects connected with the Reformation", London, 1849) shows some ground for doubting the authenticity of this work as we have it, and in particular he makes a strong case against the genuineness of the scandalous preface attributed to Cranmer. However, it is one of the most important pieces of evidence in the confidence of the king, and he was again appointed ambassador to France (1538), but, owing to the machinations of Cromwell, he was recalled in 1538.

In the following year he was sent on an embassy to Germany, and on his return he published Six Articles of the whip with six monographs, which are thought to have been his work—was issued by the king. Their tendency was so opposed to the policy of Cromwell, that a struggle for life between these two men became inevitable. Cromwell succeeded in obtaining the dismissal of Gardiner from the Privy Council, but his own position was at an end, and in 1541, he left Gardiner in possession of supreme political influence. This position he retained until the death of Henry, and, though he was actually in schism, he remained the chief support of the old religion and was looked on by the reformers as their most dangerous enemy. During this period his own nephew, Blessed German Gardiner, underwent martyrdom rather than take the oath of royal supremacy. At the funeral of Henry VIII in 1547, Gardiner took the chief place and was celebrated at the Mass, but his name had been omitted from the royal roll, and he was excluded from the new Council of State. He immediately opposed both the protector and the archbishop in their attempts at religious changes, whereupon he was committed a prisoner to the Fleet, where he remained till Christmas. On his release he returned to his see, only to be recalled in May, 1548, to deliver a public sermon, so as to satisfy the Council. He preached at Paul's Cross on 29 June, maintaining the doctrine of the Real Presence, and was promptly sent to the Tower. Here he was kept for over three years in spite of his repeated protests against the illegality of his detention. At length, in December, 1551, he was brought to trial, and, on 18 April following, he was deprived of his bishopric, into which he had been elected in 1541.

From this time till the accession of Queen Mary he remained a close prisoner in the Tower. She not only restored him to liberty, but raised him to the highest honours, and on 23 Aug., 1553, he was made Lord High Chancellor, and, being restored to his diocese, he crowned the Queen on 1 Oct. He tried vainly to save both Cranmer and Northumberland; and other Protestants, such as Peter Martyr and Roger Ascham, experienced his kindness. He now made amends for his previous fall by taking a leading part in restoring England to communion with the Holy See. Another task entrusted to him was the rehabilitation of the English finances, and it is believed that his integrity were successful. On the important subject of the queen's marriage, Gardiner boldly opposed any foreign alliance, though by doing so he courted the enmity of both the Spanish and French ambassadors besides losing to some extent the confidence of the queen herself. His policy was not followed, and, in 1554, he himself blessed the marriage of Mary and Philip in his own cathedral at Winchester. The unpopularity of the marriage in London led to riotous scenes and much religious controversy, to meet which the statute "De hæretico comburendo" was re-enacted in December, 1554. About the same time Gardiner obtained from the pope a Bull confirming in their possessions all who hold Church property seized during the reign of Henry VIII and Edward VI, it being felt that the surrender of this property would be
Garesché, Julius Peter, soldier; b. 26 April, 1821, near Havana, Cuba; killed at the battle of Stone River, Tennessee, U. S. A., 31 December, 1862. He was sent to Georgetown College, Washington, in 1838, and remained there four years. He then was apponted to the U. S. Military Academy, at West Point, and graduated with the class of 1841, receiving his commission as a second-lieutenant in the Fourth Artillery. The five subsequent years were spent on the frontier and in garrison duty. During the Mexican War he was a 1st lieutenant, and in 1847 was appointed assistant adjutant-general, with the rank of captain in 1855. Wherever he was stationed, Garesché always took an active part in the affairs of the Church. In Washington he organized the first local conference of the St. Vincent de Paul Society, and during his residence in the capital acted as its president. He contributed frequently to Catholic periodicals and newspapers, and answered polemical questions, to the New York "Freeman's Journal" and "Brownson's Quarterly Review", and in September, 1851, in recognition of his services to the Church, received from Pius IX the decoration of a Knight of St. Sylvester. When the Civil War broke out, he declined a commission as brigadier-general of volunteers, and was made chief of staff, with the rank of lieutenant-colonel in the regular army, to General William S. Rosecrans. In this capacity he participated in the operations of the Army of the Cumberland. At the battle of Stone River, he was killed by a cannon-ball, while leading a column in a gallant attempt to regain a lost day.

Garet, Jean, Benedictine of the Congregation of Saint-Maur, b. at Havre about 1627; d. at Jumièges, 24 September, 1694. He was professed in 1647 when he was twenty years old, and lived in the Abbey of Saint-Ouen at Rouen. While there he prepared an edition of Cassiodorus which was published at Rouen in 1679. Monmics's criticism on his edition of the "Varia", which was included in the above work, is very severe: "A work without either skill or learning, Garet took Fournier's text (Paris, 1579) as a basis, and inserted alterations of his own rather than corrections." (Mon. Germ. Hist.: Auct. antiqu., XII, cvi.) As a preface to his edition Garet wrote a dissertation in which he tried to prove that Cassiodorus was a Benedictine. Migne followed the Garet edition in P.L., LIX-LXX, and it remains the most complete and modern edition. Nevertheless contain the "Complexions" discovered later by Maffei.

Paul Lejay.

Gargara, a titular see in the province of Asia, suffragan of Ephesus. The city appears to have been situated on Mt. Gargaron, the highest peak (1690 feet) of Mt. Ida, celebrated in Grecian mythology and the Homeric epic. It was at first inhabited by a colony from Assos, who were followed by people from Miletus. The grammarians Diodorus and Timaeus conducted a festival here which was still observed by the uncultivated inhabitants of Gargara. Three of the ancient bishops of Gargara were John, 518; Theodore, 553; and Ephrem, 878. Mt. Gargara is now known as Dikeli-Dagh, forming part of Kas-Dagh, the ancient Ida. It has been thought that the city itself was discovered in the ruins of Akrili in the casa of Aivadjik and the sanjik of Bigha. Gargara must not be confused with the Jacobite bishopric of Gargar or Birta of Gargar, to-day Gerger, situated in the mountains west of the Euphrates and south of Malatia.

Garin, André, an Oblate missionary and parish priest, b. 7 May, 1822, at Côte-Saint-André, Ière, France; d. at Lowell, Massachusetts, 16 February, 1895. He received his education at the lesser seminary of his native town, and entered the Order of the Oblates of Mary immaculate, 1 November, 1842; as he was still a young man he was admitted to the priesthood he was sent to Canada, where he was ordained 25 April, 1845, by Bishop Bourget of Montreal. During a period of twelve years he devoted himself to the Indian missions of Eastern Canada, after which he occupied the post of superior successively at Plattsburg and at Buffalo. Though his labors were peculiarly valuable in his early years of labour as he had mastered both the Montagnais and the English languages, yet an able man being needed to organize parish and mission work among the French Canadians at Lowell, Father Garin was ordered thither and in a short time his remarkable good sense, courteous manner, and kind-heartedness won for him a wonderful influence over his people. During a pastorate of some twenty-five years he built costly churches and commodious school edifices; he also established several religious confraternities among...
Garland, John, an English poet and grammarian, who lived in the middle of the thirteenth century. He was born in England and studied at Oxford with John of London, one of Roger Bacon's masters. He went on to add that he was "fostered" in France and cherished that land above the land of his birth. The greater portion of his life was spent there. At one time he studied at the University of Paris, and then taught grammar and belles-lettres at Toulouse, and later at Paris. He went to Toulouse at the close of the Albigensian war. Hence it was about 1229 that he composed the "Epithalamium Beatae Virginis Mariæ", dedicated to Cardinal Romano Bonaventura, Cardinal-Deacon of Sant' Angelo, who, as legate, was trying to win back the Male of Languedoc to the orthodox Faith. The "De triumphis Ecclesiae" belongs to this period also. It is an epic poem in diatess, celebrating the victories of the crusades, the crushing of heresy, and the glories of the Faith. In 1234 he was back in Paris and wrote his "Accentarium", a poem in 1420 hexameter verses on the laws of accent. A little later, at Paris also, he composed his "Carmen de Ecclesia", a poem on the liturgy, dedicated to Fulk, Bishop of London (1244–59). In it the poet laments the recent death of his fellow-countryman, Alexander of Hales, who died on 21 August, 1245. After the manner of the schoolmasters of his day, he wrote a daish to this poem. For his own use as a tutor he wrote a "Disquisition" or "Cornutus" in forty-two hexameter verses, grouped in pairs, to assist in remembering unusual Latin words or Latinized Greek words; a "Dictionarium cum commento", or glossary; a compendium of grammar, in verse; and an "Equivocorum" or list of homonyms, also in verse; a treatise on rhetoric with the odd title "Moral Examples" (Exempla honeste vitae); a "Commentarius curialium", intended to explain to the children of nobles the meaning of such Latin words as might interest them; a "Poetria", or collection of examples in every style of versification.

In the "Exempla" he tells us he got his name from the Rue Garlande (now the Rue Galande), a main thoroughfare in the neighbourhood of the university where he taught. It was for his pupils in Paris that he composed the "Miroir de la Gauderie", wherein he tells us that he worked at it in the library of Ste-Geneviève, which goes to prove that it was open to the public. It is the earliest reference to this library. Other works are attributed to John Garland, some of them erroneously, as the various poems called "Facetus", "Facetus II", "Falcetus", "Cornutus", "Cornutus novus": a treatise on chemistry; a treatise on interest. Many of the above have never been edited. John Garland's verses are very faulty, being merely bad prose versified. The style is designedly obscure and absurdly pedantic. The sarrasms of Erasmus with reference to the pedagogical methods of medieval teachers are often supported by quotations from Garland's writings. For men of the Renaissance, he was held up as a type of the scholastic turning to literature.

Garlick, Nicholas, Venerable, priest and martyr, b. at Dinting, Derbyshire, c. 1555; d. at Derby, 24 July, 1588. He studied at Gloucester Hall, now Worcester College, Oxford, matriculating in 1575, but did not take a degree, perhaps because of the Oath of Supremacy thereto attached. Next year, in 1576, he left the high school at Tideswell in the Peak, where he exercised such a holy influence over his pupils that three of them eventually went with him to Reims and one at least, Christopher Burton (q. v.), became a martyr. He went to Reims in June, 1581, was or-
dained, and returned to England in January, 1583. After a year of labour, probably in the Midlands, he was arrested, and in 1585 sent into exile, with the knowledge that he would find no mercy if he returned. Nevertheless he was soon back at work in the same neighbourhood. He was arrested by the infamous Topcliffe at Padley, the home of John Fitsherbert, a member of a family still surviving and still Catholic, the arrest being made through the treachery of a son of the house. Topcliffe obtained the house and lived there till he died in 1604. With Garlick was arrested another priest, Robert Ludlam, or Ludham, who had, like Garlick, been at Oxford and had absconded in 1568. His case could be heard at the same time, and the two were committed to the gaol at Derby. In the summer of 1581, he was sent to Oxford, and here, with the assistance of two of his friends, the Jesuit O'Sullivan and the Dominican Fr. Fagan, he was permitted to write. He was accused of being a Jesuit, and was committed to Oxford gaol. Some say he was arrested in 1578.

Garneau, François-Xavier, a French Canadian historian, b. at Quebec, 15 June, 1809, of François-Xavier Garneau and Gertrude Amiot; d. 2 February, 1866. After a short elementary course, he studied law, having succeeded by private effort in supplying the lack of classical instruction. He held the office of city clerk from 1844 till his death. In 1845 appeared the first volume of his "Histoire du Canada," an heroic venture, considering the restoration to France after the Conquest of nearly all the civil and military archives. When, through Dr. O'Callaghan, the United States Government had secured copies of the correspondence of the French colonial governors, Garneau went to Albany to study these documents and gather materials for his future volumes, which appeared successively in 1846 and 1848, the third volume recording events to 1792. The work was favourably received by both English and French. A second edition includes the period from 1792 to the Union (1840). A third edition, 1859, had an English translation, which, however, is not reliable.

Garneau's history must be judged according to the spirit of his time. Its first pages were written shortly after the troubles of 1837 and 1838, at the dawn of the Union of the Canadas, which was the outcome and penalty of the Rebellion. The prospect was gloomy for Lower Canada, and a patriot like Garneau, however imperially, could not easily repress his feelings. More reprehensible are his opinions on certain points of the Constitution and his unjust criticism of church activity and influence. These may be explained by the nature of the books he had studied without proper guidance and the antidote of a sound philosophical training. These blemishes are not found in the last edition, revised at his request by a competent ecclesiastic. In fact, Garneau was ever a practical Catholic and died a most edifying death. The title of "national historian" rightly belongs to this pioneer in the field of Canadian history, who spent twenty-five years of patient research and patriotic devotion on a work destined to draw the attention of Europe and the United States to the glories of his country.

Morgan, Bibliotheca Canadensis (Ottawa, 1867); Carabine, Œuvres complètes (Quebec, 1873); Chalouir, Notice biographique de F.-X. Géroux (Montreal, 1883); Géroux, Essai de bibliographie Canadienne (Quebec, 1885), 189-99. Lionel Lindsay.

Garrett (GARNETT), Henry, English martyr, b. 1553; d. 1606, son of Brian Garrett, Master of Nottingham School. Henry was elected on 24 Aug., 1587, to a scholarship at Winchester School, then noted for its Catholic tendencies. He was, however, presumably a conformist until his twentieth year, when he courageously broke with all ties, retired abroad, and became a Jesuit in Rome 11 Sept., 1575. Here he enjoyed the company of Persons, Weston, Southwell, and many others, with whom in future he was to be so closely allied, and made a brilliant university course under the celebrated professors of those days—Bellarmine, Suarez, Scaliger, Planck, Gravina, etc. He subsequently taught for some time Hebrew and mathematics; a treatise on physis in his hand is still preserved at Stonyhurst, and he had with the honour, whilst Clavijus was sick, of filling his chair. He was then summoned to England, where Father Weston was the only Jesuit out of prison, and he left Rome, 8 May, 1586, in company with Robert Southwell. Next year Weston himself was arrested, whereupon Garnet became superior and remained in office till his death.

As an indication of his prudent management it may be mentioned, that under his care the Jesuits on the English mission increased from one to forty, and that not a single letter of complaint, it is said, was sent to headquarters against him. Though he generally lived in London, the hotbed of persecution, neither he nor any of his subordinates, who often came to see him, were captured in his lodgings, though perilous adventures were numerous. He was a prolific correspondent, and his extant letters show him to have been in sympathy with the patriotic touch with Catholics all over the country. He was also a generous distributor of alms, and sent to Rome relics and curiosities, amongst others the letters of Henry VIII to Anne Boleyn, now in the Vatican Library; he wrote a "Treatise of Christian Renunciation," and he translated, or caused to be translated, Cassianus's "Catechism," to which he added interesting appendices on "Pilgrimages," "Indulgences," etc. These books, now extremely rare, were perhaps secretly printed under his care in London. "A Treatise of Equivocation," believed to have been composed by Garnet, was edited by D. Jardine in 1851. In 1596 and 1598, Garnet became involved in unpleasant clerical troubles. Some thirty-three English Catholics, almost all priests, had been shut up in Wisbech Castle. Of this number, eighteen, besides two Jesuits, Father Weston and Brother Pounde, desired in the winter of 1594-5 to separate themselves from the rest and adopt a regular collegiate life. But it was impossible to do this without appearing at least to reflect unfavourably on those who did not care for the change. Furthermore, the number of the latter was considerable, and the prison was so small that any division of chambers and tables was out of the question. The minority certainly had a right to protest, but they did so in such a rough, unruly way, that they seemed to justify the separation, which was in fact
carried out with Father Garnet's approval in February, 1395. An earnest attempt to settle the differences that ensued was made in October, and, though it was not immediately successful, the division was given up in November, and a reconciliation effected so far as to permit that, henceforth, no further scandalous quarrel on a different matter, the "Wisbech Stirs" might have been chiefly remembered as a felix culpa. The letters to and from Garnet over the happy settlement do him the greatest credit (Dodd-Tierney, Church History of England, III, App. pp. civ-cxxvii).

The stormy ship of state, however, was not to have a smooth voyage. A new and more serious difficulty had come to light, which was soon to become an embroilment in which Garnet's name was prominently involved. It took the form of the "Appellant Priests" of 1598-1602. To understand it one must remember that Elizabeth's government had rendered the presence of a bishop in England impossible. Cardinal Allen (see Allen, William, Cardinal) had governned the mission of the priests first from Douai, then from Rome, but after his death in 1594, a new form of government had to be essayed. As usual in missionary countries the first beginning was made with a sacerdotal hierarchy. Prefects of the Mission were appointed for the clergy in Belgium, in Spain, and in Rome, while those in England were put under an archbishop, no less, but at the presence of a Catholic Queen, Henrietta Maria, allowed of a bishop being sent to England without seriously endangering the flock (see Bishop, William). But George Blackwell, the man selected for the post of archbishop, proved a failure, and had eventually to be deposed. After his qualifications seemed, excellent; in practice his successes were few, his mistakes many. Difficulties arose with his clergy, over whose missionary faculties he exercised a somewhat brusque control. Hence anger, sharp letters on both sides, and two appeals to Rome. In the end his authority was maintained and even strengthened, but his manner of government was reprehended. Part of the censure for this should perhaps fall on Garnet, with whom Blackwell sometimes took counsel. As to this serious misunderstanding needs correction. It has been alleged that the archbishop received "secret orders to follow the advice of the Superior of the Jesuits in the affairs of the clergy on all points of special importance." (The italicized words, which are erroneous or misleading, will be found in Dodd-Tierney, III, 51; Lingard (1883), VI, 640; or Taunton, "Black Monks", (London, 1901), I, 250.) One of the appellant clergymen wrote in still stronger terms, which merit quotation as an instance of the extremes to which they sometimes carried: "All Catholics must hereafter depend upon Blackwell, and he upon Garnet, and Garnet upon persons, and Persons on the Devil, who is the author of all rebellions, treasons, murders, disobedience and all such designments as this wicked Jesuit hath hitherto contemned." (Dodd-Tierney, ibid.) The son in Law's "Jesuits and Seculums", London, 1889, p. lxxv). All that Cardinal Cajetan's "Instruction" really said was, "The archbishop will take care to learn the opinion and advice of the Jesuit superiors in matters of greater importance." One of the difficulties of finding advisers of any sort in that time of paralyzing persecution, the obvious meaning of the words is surely perfectly honourable, and becoming both to the cardinal and to the archbishop. After they had been objected to, however, they were withdrawn by a papal brief, which added that "the Jesuits themselves thought this was unnecessary" under the changed circumstances.

The conclusion of Garnet's life is closely connected with the Gunpowder Plot, under which heading will be found an account of his having heard from Catesby in general terms that trouble was intended, and from Fassher Greenway, with Catesby's consent, the full details of the plot. But if the plot were otherwise discovered, he was to be at liberty to disclose the whole truth. After the plot had been discovered, and Garnet had been arrested, he thought it best in his peculiar circumstances to confess the whole truth about his knowledge, and for this he was tried and executed at the west end of old St. Paul's, 3 May, 1606.

Garnet is thus described in the proclamation issued for his arrest—"Henry Garnet, alias Walley, alias Darcy, alias Farmer, of a middling stature, full faced, fat of body, of complexion fair, his forehead high on each side, with a little thin hair coming down upon the midst of the for part of his head; the hair of his head and beard grissled. Of age between fifty and three score. His beard on his cheeks cut close, and his chin very thinne and somewhat short. His gait upright, and comely for a feeble man."

The execution was watched so closely that very few relics of the martyrdom were secured by Catholics, but a head of straw stained with his blood fell into the hands of a young Catholic, John Wilkinson. Some months later he showed it to a Catholic gentleman, who noticed that the blood had congealed upon one of the husks in the form of a minute face, resembling, as they thought Garnet's own portrait. The matter was much talked of, and the Protestant Archbishop of Canterbury personally conducted an examination of several witnesses, who had seen the strange phenomenon. Their evidence abundantly proves the reality of the lineaments which might be discerned in the husk. But to what extent the imaginations of the onlookers (which were undoubtedly excited) contributed to the recognition of Garnet's features in particular, can hardly be decided now, for the straw, though carefully preserved by the English Jesuits at Liége, was lost during the troubles. Indeed the truth is discussed in an unfriendly spirit by non-Catholic writers (e.g. Jardine and Gardiner). On the other hand, the great Catholic theologians, who opposed King James in the matter of the Oath of Allegiance have spoken in Garnet's defence (especially Bellarmine "Apologia" XII, xiii, 186, and Suarez "Defensio Fidei Catholici", VI, xi, §6)—a matter of good omen, considering the theological intricacies that beset his case. It is a matter of regret that we have as yet nothing like an authoritative pronouncement from Rome on the subject of Garnet's martyrdom. His name was indeed proposed with that of the other English Martyrs and Confessors in 1874, and his cause then based upon the testimonies of Bellarmine and the older Catholic writers, was the correct plea for the proof of Fama Martyrii, then to be demonstrated (see Beatification and Canonization). But these ancient authors were not acquainted with Garnet's actual confessions, which were not known or published in their time. The consequence was that, as the discussion proceeded, their evidence was found to be inconclusive, and an open verdict was returned.
thus his martyrdom was held to be neither proved nor disproved. This of course led to his case being "put off" (dissuasi) for further inquiry, which involves in Rome a delay of many years.

Gerard, Contributions to a life of Fr. H. Garnet (London, 1866). Also see also June and July, English and Welsh (1874), IV, I. London, Nova et Aevi, 1865. A formal contemporary defense was a Cremer Jesuit, Euclidenon-Il-Jeannin, Apropos de R. P. H. Garnet (1610), and much will be found as well in the Jesuit historian, Bartoli, More, etc. in Life of Father John Gerard (London, 1861). See also Gillow, Dict. Enc. Cath., II, 5921; Stanton, The Trip (London, 1892). See also literature under Gunpowder Plot.

J. H. Pollien.

Garnet, Thomas, Venerable, protomartyr of St. Omer and therefore of Stonyhurst College; b. at Southwark, c. 1575; executed at Tyburn, 23 June, 1608. Richard Garnet, Thomas's father, was at Balliol College, Oxford, at the time when greater severity began to be used against Catholics in 1569, and by his constancy gave great edification to the generation of Oxford men which was to produce Campion, Persons and so many other champions of Catholicism. Thomas attended the Horsham grammar school and was afterwards a page to one of the half-brothers of the Ven. Philip Howard, Earl of Arundel, who were, however, conformists. At the opening of St. Omer's College in 1580, he was sent there. By 1595 he was considered fit for the new English theological seminary at Valladolid, and started in January, with five others, John Copley, William Worthington, John Iverson, James Thomson, and Henry Monopossom, from Calais. They were lucky in finding, as a travelling companion, a Jesuit Father, William Baldwin, who was going to Spain in disguise under the name Ottavio Fuiseinelli, but misfortunes soon began. After severe weather in the Channel, they found themselves obliged to run for shelter to the Downs, where their vessel was searched by some of Queen Elizabeth's ships, and they were discovered hiding in the hold. They were immediately made prisoners and treated very roughly. They were sent round the Nore up to London, and were examined by Charles, second Lord Howard of Effingham, the lord admiral. After this Father Baldwin was sent to Bridewell prison, where he helped the confessor James Atkinson (q. v.) to obtain his crown. Meantime his younger companions had been handed over to Whitgift, the Archbishop of Canterbury, who, having found that they encouraged one another, sent them one by one to different Protestant preachers or doctors. Only the youngest, Monpesson, conformed; the rest eventually escaped and returned to their colleges beyond seas after many perils. We are not told where befell young Garnet, but it seems likely that he was the youth confined to the house of Dr. Richard Edes (Dict. Nat. Biog., XVI, 364). He fell ill and was sent home under bond to return to custody at Oxford by a certain day. But his jailer not appearing in time, the boy escaped, and to avoid trouble had then to keep away even from his own father. At last he reached St. Omer again, and thence went to Valladolid, 7 March, 1596, having started on that journey no less than ten times.

After ordination in 1599, "returning to England I wandered," he says, "from place to place, to reduce souls which went astray and were in error as to the knowledge of the true Catholic Church." During the excitement caused by the Gunpowder Plot in 1605 he was arrested near Warwick, going under the name Thomas Rokewood, which he had no doubt assumed from Ambrose Rokewood of Coldham Hall, whose chivalry and nature already a century before impelled him to implicate in the plot. Father Garnet was now imprisoned first in the Gatehouse, then in the Tower, where he was very severely handled in order to make him give evidence against Henry Garnet, his uncle, superior of the English Jesuits, who had lateley admitted him into the Society. Though no connexion with the conspiracy could be proved, he was kept in the Tower for seven months, at the end of which time he was suddenly put on board ship with forty-six other priests, and a royal proclamation dated 1606, which was read to them, threatening death if they returned. They were then carried across the Channel and set ashore in Flanders.

Father Garnet went now to his old school at St. Omer, thence to Brussels to see the superior of the Jesuits, Father Baldwin, his brother, and in the adventures of 1595, who sent him to the English Jesuit novitiate, St. John's, Louvain, in which he was the first novice received. In September, 1607, he was sent back to England, but was arrested six weeks later by an apostate priest called Rousse. This was the time of King James's controversy with Bellarmine about the Oath of Allegiance. Garnet was offered his life if he would take it, but steadfastly refused, and was executed at Tyburn, protesting that he was "the happiest man this day alive." His relics, which were preserved at St. Omer, were lost during the French Revolution.

J. H. Pollien.

Garnet, Charles, a Jesuit Missionary, b. at Paris, 1600, of Jean G. and Anne de Garass; d. 7 December, 1649. He studied classics, philosophy, and theology at the Jesuit college of Clermont, joining the order in 1624. He begged to be sent to the Canadian mission, and sailed in 1636 on the same fleet as Governor Montmagny. He was sent forthwith to the Huron country, where he was to spend the fourteen years of his heroic apostolate without once returning to Quebec. In six months he mastered the difficult language, and began a career of unceasing charity which was to be crowned by martyrdom. His zeal for the conversion of infidels brooked no hindrances nor delay. Neither distance nor weather, nor danger of death could prevent him from hastening to the stake to baptize and exhort captives of war. Filth, vermin, fever and loathsome disease could not deter him from tending and redeeming dying sinners. His frail frame miraculously reposed the intense strain of these endless trials won him the title of "lamb" of the mission, whereof Brébeuf was styled the "lion." Several times—first in 1637, then in 1639 with Jougis, and later with Pijar—he strove to convert the Tobacco nation. His constancy finally overcame their King. They asked for the blood of his brother, and Garnet went to dwell with them until death. After the martyrdom of Fathers Daniel (1648), Brébeuf, and Lalemant (March 1649), he calmly awaited his turn. After decimating the Hurons, the Iroquois attacked the Tobacco nation. During the massacre of St. John's village, Garnet went about exhorting his neophytes to be faithful. Mortally wounded he dragged himself towards a dying Indian to absolve him, and received the final blow in the very act of charity (1649) on the eve of the Immaculate Conception, a dogma he had vowed to defend. His letters to his brother, a Carmelite, reveal his sanctity. Rigaud's painting testifies to his heroic spirit of sacrifice. Parkman compares his life to that of St. Peter Claver among the blacks and styles it a voluntary martyrdom.

Jesus at the age of sixteen, and, after a distinguished course of study, taught at first the humanities, then philosophy, at Clermont-Ferrand (1643-1653), and theology at Bourges (1653-1651). In 1651, he was sent to Rome, on business of his order, fell ill on the way, and died at Bologna. Garnier was considered one of the most learned Jesuits of his day, was well versed in Christian antiquity, and much consulted in difficult cases of conscience. In 1648, he published for the first time the "Libellus fidei," sent to the Holy See during the Pelagian controversy by Julianus, Bishop of Eclaneatum in Apulia. Garnier's work on this subject, fell heir to the commentary. The Libellus also found a place in Garnier's later work on Mercator.

In 1655, he wrote "Regulae fidelis catholicae de gratia Dei per Jesum Christum," and published the work at Bourges. In 1673, he edited at Paris all the works of Marius Mercator (d. at Constantinople after 451). The edition contains two parts. The first gives the writings of Mercator against the Pelagians, and to these Garnier adds seven dissertations: (1) "De primis auctoribus et principiis defensoribus heresies quae a Pelagio nomen acceptam"; (2) "De syndosis habitus in causa Pelagianorum"; (3) "De constitutionibus imperatorum in eadem causa 418-430"; (4) "De subscriptio in causa Pelagianorum"; (5) "De libellis fidei scriptis ab auctoribus et principiis defensoribus heresies Pelagianae"; (6) "De ine quae scripta sunt a defensoribus fidei catholicae adversus heresiem Pelagianorum et qui sunt in anti-christianos"; (7) "De etiam in ordine Pontificum". Cardinal Noris (op. 3, 1176) considered these dissertations of great value, and says that, if he had seen them in time, he would have put aside his own writings on the subject. In the second part, Garnier gives a good historical sketch of Nestoriusianism from 428 to 432, then of the writings of Mercator on this heresy, and adds two treatises on the heresy and writings of Nestorius, and on the synods held in the matter between 429 and 433. Much praise is bestowed on Garnier by later learned writers for the great amount of historical knowledge displayed in his dissertations, but he is also severely blamed for his arbitrary arrangement of the writings of Mercator and for his criticism of the original (Tillemont, "Memoires ecclési." XV, 142; Cotetille, "Monum. eccl. graec." III, 602).

Garnier edited in 1675 at Paris the "Brevarium causae Nestoriorum et Eutychianorum" (composed by Garnier) and an almanac of Calendar, correcting many mistakes and adding notes and a dissertation on the Fifth General Council. In 1678 he wrote "Systema bibliothecae collegii Parisiensis S. J." a work considered very valuable for those arranging the books in a library. In 1689, he edited the "Liber diurnarius Romanorum," from an authentic manuscript, and added three essays: (1) "De indiculo ab ecumenico epistolare"; (2) "De ordinatione summi pontificis"; (3) "De usu pallii" (see Liber Diurnarius). In the second essay he treat the case of Pope Honorius, whom he considers free of guilt. In 1692, Sirmonde, in his "Thesaurus hagiographicus," mentions the Theodoret, Bishop of Cyrus (d. 455); Garnier added an "Auctarium," which, however, was not published until 1684. It consists of five essays: (1) "De ejus vate"; (2) "De libris Theodoreti"; (3) "De fide Theodoreti"; (4) "De quinta synodo generali"; (5) "De Theodoreti et orientali causa." In these he is rather severe on Theodoret and condemns him underhandedly. Another posthumous work of Garnier's, "Tractatus de officiiis confessarii erga singula pontificium generas," was published at Paris in 1685.

Garigan, Philip Joseph. See Sioux City, Diocese of.

Garuccio, Raffaele, historian of Christian art, b. at Naples, 23 January, 1812; d. at Rome, 5 May, 1885. He belonged to a wealthy family, entered the Society of Jesus at the age of fifteen, and was professed on 19 March, 1833. He devoted himself to the study of the Christian Fathers, also to profane and Christian antiquities; and, the celebrated De Rossi became the principal disciples of Father Marchi. On his many journeys through Italy, France, Germany, and Spain, he collected much valuable material for his archaeological publications. In 1854 he wrote for Father Cahier's "Mélanges d'Archéologie" a study on Phrygian syncretism. Soon after he edited the notes of Jean L'Heureux on the Roman catacombs (in manuscript since 1605); later an essay on the gilded glassed of the catacombs (1858), and another on the Jewish cemetery at the Villa Randanini. In 1872 he began the publication of a monumental history of early Christian antiquities, entitled "Storia dell' arte cristiana." It is destined to be a history of sculpture, painting, and the minor and industrial arts, during the first eight centuries of the Christian Era. It is, in fact, a general history of early Christian art, and contains five hundred finely engraved plates and ex-
plenary text. Five of the six volumes contain, respectively, the catacomb-frescoes—and paintings from other quarters—gilded glasses, mosaics, sarcophagi, and non-sepulchral sculptures. The first volume is devoted to the catacombs of St. Mark, i.e. to a history of Christian art properly so called.

In this vast collection Garrucci re-edited to some extent materials taken from earlier works. For hitherto unedited materials he used photographs or reproductions of some other kind. His engravings are not always very accurate, and the conceptions and methods are inferior to those obtained by more modern processes. His reproductions of catacomb-frescoes, in particular, have lost much of their value since the publication of the accurate work of Mgr. Wilpert (Pitture delle catacombe romane, Rome, 1903). On the whole, however, it must be said that the “Storia dell’arte cristiana” is yet far from being superseded by any similar work. Father Garrucci had more erudition than critical judgment; in this respect his fellow-student De Rossi was far superior to him. Hence the text of Garrucci’s publications is now of doubtful authority.

The list of his publications covers 118 numbers. Among these is “Bibliotheca de la compagnie de Jésus” (Brussels, 1902).III. Among them are the aforementioned “Storia dell’ arte cristiana nei primi secoli della cristianità” (6 vols., Prato, 1870–81); “Dissertazioni archeologiche di vario argomento” (2 vols., Rome, 1864–65); “Le monete dell’ Italia antica, dalla conquista romana” (Rome, 1864). After his ordination (31 July, 1908), he obtained a canonry at St. Mark’s, and soon instituted with Gae- tano Bonani a nocturnal oratory. He assisted Francesco Albertini in founding the Archiconfraternity of the Most Precious Blood, and worked with great zeal in the poorer districts of Rome, preaching frequently in the market-places. In 1910 he succeeded General Miollis to swear allegiance to Napoleon. But neither threats nor promises could induce him to do so, because Pius VII had forbidden it. The words with which he announced his final decision have become famous: “Non posso, non debo, non voglio” (I cannot; I ought not; I will not). In consequence he suffered banishment, and later on imprisonment in the jail dungeons of Imola and Rocca (1810–1814). After Napoleon’s fall he returned to Rome, intending to enter the re-established Jesuit Order. But obeying his spiritual adviser, Albertini, he founded a congregation of secular priests to give missions and spread devotion to the Most Precious Blood. Through Cardinal Cristaldi he obtained the pope’s sanction and, as a mother-house, the former convent of San Felice in Giano. Of this he took solemn possession, 11 August, 1815. The Bull of beatification says, through Cardinal Spera, Emilia, Pi. Crispin, San Samnium, in short all the provinces of Middle Italy, he wandered, giving missions”. The very titles acceded to him by his contemporaries speak volumes: “Il Santo”, “Apostle of Rome”, “Il martello dei Carbonari” (Hammer of Italian Freemasonry).

How arduous some of his missions were may be gleaned from the fact that he frequently preached five times a day, sometimes even oftener. At Sameverino fifty priests were not sufficient to hear confessions after his sermons. Though idolised by the people, he was not without enemies. His activity in converting the “briganti”, who came in crowds and laid their guns at his feet after he had preached to them in their mountain hiding-places, excited the ire of the officials who profited from brigandage through bribes and in other ways. These enemies almost induced Leo XII to suspend del Bufalo. But after a personal conference, the pope dismissed him, remarking to his courtiers, “Del Bufalo is an angel”. His enemies next tried to remove him from his post by procuring his promotion as “internuncio to Brazil”. In vain, however, for his humility triumphed. A last attempt under Pius VIII (1830) met with temporary success. Del Bufalo was deprived of his official rank and his congregation threatened with extinction. But his wonderful humility again manifested itself, and, though himself misjudged and his life-work menaced by the very authority that should have supported him, he showed no signs of resentment.

GARVEY, EUGENE A. See ALTOONA, DIOCESE OF.

GARZON, DIOCESE OF (GARZONENSIS), suffragan of Popayán in the Republic of Colombia. It comprises the provinces of Neiva and Sur, and lies east of Popayán. It is about 140 miles in length, and its breadth varies from 40 to 100 miles. It extends from 13° to 15° north latitude, and lies between the 75° and 77° west longitude. The episcopal see is at Neiva, a town of 11,500 inhabitants situated 150 miles S.W. of Bogotá, at a height of 1500 feet above sea-level, on the river Magdalena. Its fortress is on one side. The diocese originally formed part of that of Tolima, which lay in the midst of the Cordilleras. As the territory was so extensive, the population very numerous, and the taxation too great, the bishop petitioned the Holy See to divide the diocese. This was done by a decree of Leo XIII, 20 June, 1900. The northern half was erected into a new diocese—Ibagué, suffragan of Bogotá—and the southern half formed the Diocese of Garzón. Mgr. Esteban Rojas, born at Hato in the Diocese of Popayán, 15 January, 1859, had been raised to the See of Tolima, 18 March, 1895. He was transferred to Neiva as first Bishop of Garzón. The cathedral is dedicated to the immaculate conception of Our Lady. The population, of which a large part is of mixed origin, is almost entirely Catholic. Till recent years the public authorities neglected education and threw the whole burden on the clergy, but of late government schools are being established. (See COLOMBIA, REPUBLIC OF.)

GASCOIGNE, THOMAS. See POPISH PLOT.

GASPAR DEL BUFALO, BLESSED, founder of the Missionaries of the Most Precious Blood (C.P.P.S.); b. at Rome on the feast of the Epiphany, 1786; d. 28 December, 1837. His parents were Antonio del Bufalo, chief cook of the princely family of Altieri, and his wife Annunziata Quartieroni. Because of his delicate health, his pious mother had him confirmed at the tender age of one and a half years (1787). As he was suffering from an uff of the stomach, which threatened to leave him blind, prayers were offered to St. Francis Xavier for his recovery. In 1787, he was miraculously cured, wherefore he cherished in later life a special devotion to the great Apostle of India, and selected him as the special patron of the mission which he founded. From his earliest years he had a great horror of even venial sins, and showed deep piety, a spirit of mortification, remarkable control over his evil inclinations (especially his innate irascibility and strong self-will), and also heroic love for the poor and the miserable. Having read the Collection of Lives which he founded, he received in 1800 first tonsure, and one year later the four minor orders. As a catechist he was able to save others, his zeal won for him the name “The Little Apostle of Rome”, and when but nineteen years old, he was appointed president of the newly instituted catechetical school of Santa Maria del Pianto. After his ordination (31 July, 1808), he obtained a canonry at St. Mark’s, and soon instituted with Gaetano Bonani a nocturnal oratory. He assisted Francesco Albertini in founding the Archiconfraternity of the Most Precious Blood, and worked with great zeal in the poorer districts of Rome, preaching frequently in the market-places. In 1910 he succeeded General Miollis to swear allegiance to Napoleon. But neither threats nor promises could induce him to do so, because Pius VII had forbidden it. The words with which he announced his final decision have become famous: “Non posso, non debo, non voglio” (I cannot; I ought not; I will not). In consequence he suffered banishment, and later on imprisonment in the jail dungeons of Imola and Rocca (1810–1814). After Napoleon’s fall he returned to Rome, intending to enter the re-established Jesuit Order. But obeying his spiritual adviser, Albertini, he founded a congregation of secular priests to give missions and spread devotion to the Most Precious Blood. Through Cardinal Cristaldi he obtained the pope’s sanction and, as a mother-house, the former convent of San Felice in Giano. Of this he took solemn possession, 11 August, 1815. The Bull of beatification says, through Cardinal Spera, Emilia, Pi. Crispin, San Samnium, in short all the provinces of Middle Italy, he wandered, giving missions”. The very titles acceded to him by his contemporaries speak volumes: “Il Santo”, “Apostle of Rome”, “Il martello dei Carbonari” (Hammer of Italian Freemasonry).
forgave his enemies, and excused his unmerited condemnation. The storm soon passed, Gaspare was restored to honour, and resumed his work with renewed energy. He was sent to Genoa, and though his strength was almost exhausted, he laboured on. He was then in the midst of his labours on 28 Dec., 1837. He was beati ed by Pius X on 29 Aug., 1867.

KONRADI AND JUNSEL, Lebens des sel. Kaspare del Bufalo; SARDI, Notizie intorno alla vita del celeste Kaspare del Bufalo.

ULRICH F. MUELLER.

Gaspé, Philippe-Aubert de, a French Canadian writer, b. at Quebec, 30 Oct., 1876, of a family ennobled by Louis XIV in 1693; d. 29 Jan., 1871. His grandfather fought under Montcalm at Carillon (Ticonderoga). He studied at Quebec Seminary, and after a brief practice of the law, was appointed sheriff.

Forced by misfortune to retire to his ancestral home at Saint-Jean-Port-Joli, on the St. Lawrence, he there spent thirty years in study. At the ripe age of seventy-five, he produced a work, "Les Anciens Canadiens" (Quebec, 1861), which is a household word through all Canada. This historical novel, almost entirely based on fact, illustrates Canadian manners, tradition, character, and manners. The author has interwoven the events of his own chequered life with the tragic tale of the struggles and fall of New France, and of the change of regime, the eyewitnesses of which he had personally known. In 1866, Gaspé published his "Tableau concordant et amplifié" of the "Mémoires". As an excellent specimen of anecdotal history. The author's standing and experience, the latter embracing directly or indirectly the space of a century, from the Conquest, constitute him an authentic chronicler of an obscure yet eventful period of history. MORGAN, Bibl. Can. (Ottawa, 1887); CABRAN, Gérits complets (Ottawa, 1873). LIONEL LINDSAY.

Gassendi (GASSENDY, GASSEND), Pierre, French philosopher and scientist; b. at Champtercier, a country near Digne in Provence, 22 January, 1592 (or 1591) (two old cal. Feb.). He was educated at Paris, 24 October, 1655. He studied Latin and rhetoric at Digne, and philosophy at Aix, whence his father, Antoine, called him back to take charge of his sons' property. He was appointed to succeed his former teacher of rhetoric and logic. He taught at Aix at the age of 16, and his teacher of philosophy at Aix at the age of 19. His friends and patrons at Aix, Prior Gautier and Councillor Peyrenc, recognized his character and talents from his first publication and helped him to enter the ecclesiastical state. He became doctor of theology at Aix and attained proficiency in Greek and Hebrew literature. To allow him leisure for his studies, he was appointed a canon (c. 1622) and provost (c. 1625) at the cathedral of Digne. Until 1645, his studies were interrupted only by a journey to the Netherlands in 1628—his only trip outside of France. In 1645, on the recommendation of Cardinal Richelieu, he was appointed by the king to a professorship of mathematics at the College Royal of France, which he reluctantly accepted, being granted the rare privilege of returning to his native soil whenever his health required it. On 23 November, he delivered his inaugural address in presence of the cardinal. His lectures before a numerous and learned audience were astronomical rather than mathematical, and resulted, two years later, in the publication of his "Institutio Astronomiae". Meanwhile an inflammation of the lungs had obliged him to return to Provence. In 1653, he went back to Paris and was received in a friendly manner at the Château de Montmort, where a year later he fell seriously ill with intermittent fever. He was bled nine times, and, although he declared himself too weak for another bleeding, he submitted to the decision of the best doctors in Paris. He underwent the same operation five times more, after which his speech became mere whispering, and he expired quietly at the age of 63.

Gassendi, "the Bacon of France", is specially noteworthy for his opposition to the Aristotelian philosophy, and for his revival of the Epicurean system. He wished the aprioristic methods then prevailing in the schools replaced by experimental proofs. His cosmology, psychology, and ethics are epicurean, except that he maintains the doctrine of the Creator and of Providence, and the spirituality and immortality of the soul. He thus attempts to build up a Christian philosophy upon Epicurus—an inconsistency, which is attacked by non-Christian, as well as Christian, philosophers. His views on the constitution of matter and his merits in regard to modern kinetic atomism are explained by Lasswitz. That Gassendi was neither "the father of materialism" nor a sceptic in the proper sense is shown by Kieff (see Baldwin, op. cit. below). He corresponded with Hobbes, Mersenne, Christina of Sweden, and engaged in controversy with Fludd, Herbert, and Descartes.

That as an amateur astronomer, Gassendi was a persevering, attentive, and intelligent observer, is evident from his notebook carefully kept from 1618 until 1652 and filling over 400 pages. With a Galilean telescope he observed the transit of Mercury in 1631, predicted by Kepler, by projecting the sun's image on a screen of paper. His instrument was not strong enough, however, to disclose the occultations and transits of Jupiter's satellites, or the true shape of Saturn's ring. The results of his astronomical work are analyzed in Delambre's "Histoire de l'Astronomie Moderne" (Paris, 1821, II). Other works of minor importance refer to biographies, physics, and anatomy. Gassendi was in correspondence with Cassini, Galilei, Hevel, Kepler, Kircher, Scheiner, Vallis, and other scientists. As to the Copernican system, he maintained that it rested on probabilities, but was not able "to demonstrate" it as a necessary consequence of his theory. To those whose conscience forbade them to accept Copernicanism, he said that the Tychonian system recommended itself as the most probable of all (Op. V, De Rebus Coelestibus, V).

In character, Gassendi was retiring and unpretentious. With friends, he would give way to a humorous and ironical vein; in controversy, he observed the Socratic method. On Sundays and feast days he never omitted celebrating Mass; and when in Paris, he went to the church of his friend, Père Mersenne. In his last illness he asked for the Vaticum three times, and for extreme unction, and his aspirations were found in the Psalms. Gassendi was esteemed by all, and loved by the poor, for whom he provided in lifetime and in his last will. He founded two anniversaries for himself, one to be said in the
cathedral of Digne, and one in the chapel of his friend, Monmort, at St-Nicolas-des-Champs, Paris, where he was buried. The accompanying picture represents his marble bust in that mausoleum. The assertion that he was a Minorite is without foundation.

J. G. HAGEN.

Gasser von Valhorn, Joseph, an Austrian sculptor, b. 22 Nov., 1816, at Prag, Tyrol; d. 28 Oct., 1900. He was first instructed by his father, a wood-carver, and later studied at the Academy, Vienna. In 1846 he went to Rome, where a government stipend enabled him to remain several years. On his return he settled in Vienna (1852), and executed five heroic figures for the portal of the cathedral at Speyer: Our Lady, St. Michael, St. John, and the Baptist, St. Stephen, and St. Bernard of Clairvaux, completed in 1856. Also in Speyer he carved seven reliefs for the Kaiserhalle. The marble statue of Rudolph IV on the Elizabeth bridge over the Danube Canal, Vienna, is by him. Other works are the statues of Maximilian I, for the Imperial Palace, and of the Emperor Franz, for the Museum of the Arsenal; the marble statues of the Seven Liberal Arts in the staircase of the Opera House; twenty-four figures for the Cathedral of St. Stephen; the relief of Duke Rudolph the Founder for the New Townhall; the "Prometheus" and the "Genie" for the Court Theatre; a number of statues for the Altherrenpfalz Church; busts of Herodotus and Aristarchus for the university; and portraits of Maximilian of Mexico and of his wife the Empress Charlotte. He also made a bust of the Emperor Francis Joseph for the Hôtel de Ville, Paris, and sculptures for the new cathedral, Lins. Most important among his works are the subjects for the Votive Church, Vienna, modelled around the year 1873: the Coronation of Mary, the group of the Trinity, a figure of Christ the Redeemer, statues for the high and side altars, nine angels, and the tympan relief for the three main portals. Gasser was professor at the Academy from 1865 to 1873, and was inscribed among the nobility in 1879. In spite of his long life, and much good work, he had but small influence on the development of modern sculpture in Austria.

M. L. HANDLEY.

Gasser, Johann Joseph, a celebrated orator, b. 22 Aug., 1727, at Brix, Vorarlberg, Austria; d. 4 April, 1779, at Pondorf, on the Danube (Diocese of Ratisbon); studied at Prague and Innsbruck; ordained priest, 1751; after serving various missions, canonized priest and dean of Pondorf May, 1779. A few years after his appointment to Klosterle in the Diocese of Chur, Switzerland (1758), his health began to fail, so that he was scarcely able to fulfill the duties of his ministry; he consulted various physicians in vain; suddenly he conceived the idea that his infirmities might be due to the influence of the evil spirit, and might be cured by spiritual means. His experiment was successful. He applied this method also to others, and soon thousands came to him to be healed. The fame of these cures spread far and wide; he was invited to the Diocese of Constance, to Ellwangen, Ratisbon, and other places; everywhere he had the same success.

He was convinced that the evil spirit could harm the body as well as the soul; and hence that some infirmities were not the result of natural agencies, but were caused by the Devil. Only cases of the latter kind were taken up; he applied the exorcisms of the Church, and commanded the evil one to depart from the afflicted, in the name of the Lord Jesus. To find out whether the disease was caused naturally or not, he applied the "probativum exercise," i. e. he commanded the spirit to indicate by some sign his presence in the body. And only then he made use of the "expulsive exercise." His proceedings were not secret; he sometimes gave public demonstrations before heretics and the Jews were admitted. People of all classes, nobles, ecclesiastics, physicians, and others often gathered around him to see the miracles they had heard of. Official records were made; competent witnesses testified to the extraordinary happenings. The character of the work made many enemies for him, but also many staunch friends and supporters. One of his bitterest opponents was the rationalistic professor Johannes Semler of Halle. Also the physician Mesmer pretended that the cures were performed by the animal magnetism of his invention, but he was afraid of confronting Gasser. Among his friends were the Calvinistic minister, Lava- ter of Zurich, and especially Count Fugger, the Prince-Bishop of Ratisbon.

Official investigations were made by the ecclesiastical authorities; and all were favourable to Gasser, except that they recommended more privacy and decorum. The University of Ingolstadt appointed a commission to investigate the matter, and when the report was ready, they ended with the approval of Gasser's procedure. In fact, he never departed from the Church's teaching or instructions concerning exorcism, and always dis- claimed the name of wonder-worker. He was an exemplary priest, full of faith and zeal, and altogether unfish in his works of mercy.

ZIMMERMANN, Johann Joseph Gasser, der berühmte Exorzist (Kempten, 1878); MAST in Kirchenlex., s. v.

FRANCIS J. SCHAEFER.

Gaston, William, jurist; b. at Newbern, North Carolina, U. S. A., 19 Sept., 1778; d. at Raleigh, North Carolina, 23 January, 1844. His father, Dr. Alexander Gaston, a Presbyterian native of Ireland, formerly a surgeon in the British Navy, was killed at Newbern by British soldiers during the Revolution, and his education devolved on his mother Margaret Sharpe, a Catholic Englishwoman. She sent him to Georgetown College in 1791, his name being the first inscribed on the roll of the students of that institution. After staying there four years, he entered Amherst College, New Jersey, where he graduated with first honours in 1796. He then studied law, and was admitted to the bar in 1798. In August, 1800, Gaston was elected to the Senate of his native state, although its constitution at the time contained a clause excluding Catholics from office. Elected to Congress in 1813 and 1815, his career in Washington was active and brilliant, as one of the influential leaders of the Federal party. Resuming the practice of law, he was elevated in 1833 to the bench of the Supreme Court of North Carolina, an office which he held for the remainder of his life. He was the inventor of the ornamental iron-work which was so generally instrumental in securing the repeal of the article of the North Carolina State Constitution that practically disfranchised Catholics. He was one of the most intimate friends of Bishop England, and his splendid gifts of intellect were always devoted to the promotion of the Faith and the welfare of his fellow- Catholics.

SHUR, History of Georgetown University (Washington, 1911); FINOTTI, Bibliografia Catolica Americana (New York, 1872); METROPOLITAN (Baltimore), No. 7, 1868; MURRAY, Catholic Pioneers of America (New York, 1882).

THOMAS F. MEEHAN.

Gatianus, Saint, founder and first Bishop of Tours; b. probably at Rome; d. at Tours, 20 December, 301. He came to Gaul during the consulate of Decius and
Gratus (250 or 251), devoted half a century to the evangelization of the third Lyonnaise province amid innumerable difficulties, which the pagans raised against him. But he overcame all obstacles, and at his death the Church of Tours was securely established. The "traditional school," relying on legends that have hitherto not been traced back beyond the twelfth century, have claimed that St. Galienus was one of the seventy-two disciples of Christ, and was sent into Gaul during the first century by St. Peter himself. This assertion, which has been refuted by learned and devout writers, is untenable in the face of the testimony of Gregorius of Tours. To this great writer, who lived in the sixth century, we are indebted for the only details we possess concerning his holy predecessor.

C. CHVALIER. Origines de l'Église de Tours and SEBASTIEN DE SAINT-CLAUDE. Saint Gaufin, premier évêque de Tours in Mém. de la Soc. archéol. de Touraine (Tours, 1871), XVI: d'ÉPIZAP. La controverse sur l'origine de la mission de Saint-Galin dans les Gaulois in Mém. de la Soc. d'agric., sciences et arts d'Angers (Angers, 1873), 376-444.

LEON CLUGNET.

GAU, FRANZ CHRISTIAN, architect and archaeologist, b. at Cologne, 15 June, 1790; d. at Paris, January, 1854. In 1809 he entered the Académie des Beaux-Arts, Paris, and in 1815 visited Italy and Sicily. In 1817 he went to Nubia, and while there he made drawings and measurements of all the more important monuments of that country, his ambition being to produce a work which should supplement the great work of the French expedition in Egypt. The result of his labours appeared in a folio volume (Stuttgart and Paris, 1822), entitled "Antiquités de la Nubie, ou monuments incivilisés des trois siècles suivant la première et la seconde cataracte, dressins et mesurez en 1819." It consists of sixty-eight plates, of plans, sections, and views, and has been received as an authority. His next publication was the completion of Mazois's work on the ruins of Pompeii. In 1826 Gaullier was made a French citizen, and later became architect to the city of Paris. He directed the restoration of the churches of Saint-Julien-le-Pauvre, and Saint-Sévérin, and built the great prison of La Roquette. With his name, also; is associated the revival of Gothic architecture in Paris, he having commenced in 1846, the erection of the church of Saint-Clotilde, the first modern church erected in the capital in that style. Illness compelled him to relinquish the care of supervising the work, and he died before its completion.

H. POOLE.

GAUBIL, ANTOINE, a French Jesuit and missionary to China, b. at Gaillac (Aveyron), 14 July, 1869; d. at Peking, 24 July, 1759. He entered the Society of Jesus 13 Sept., 1704, was sent to China, where he arrived 28 June, 1722, and thenceforth resided continuously at Peking until his death. His Chinese name was Sung Kiu-yung. He had taken Parennin's place as head of the school in which Manchus were taught Latin, to act as interpreters in Russian affairs. Gaubil, the Latinizer and historian of the Jesuits in China during the eighteenth century, carried on an extensive correspondence with the savants of his day, among them Fréret and Delisle. His works are numerous and are even yet highly prized. Among them is "Traité de l'Astronomie Chinoise," in the "Observations mathématiques," published by Père Soisson (Paris, 1729-1732). From Chinese sources Gaubil translated the history of Jenghis Khan (Histoire de Genghis Chouan, Paris, 1739) and part of the annals of the T'ang Dynasty (in "Mémoires concernant les Chinois," vols. XV and XVI); he also wrote a treatise on Chinese chronology (Traité de la Chronologie Chinoise, Paris, 1814) and executed a good translation of the second of the Chinese classics, the "Book of History" (Shoo-king), edited by De Guignes (Paris, 1770).

Gaubil left a great number of manuscripts now kept in the Observatory and the Naval Depot (Paris), and in the British Museum (London). From three manuscripts volumes kept formerly at the École Sainte-Geneviève (Paris) the present text of Paremout, written by Gaubil in 1794, "Holin en Tartarie" (T'oung Pao, March, 1893), and "Situation du Japon et de la Corée" (T'oung Pao, May, 1898). Abel Rémusat, in " Nouveaux Mélanges Asiatiques," (II, p. 289), wrote of Gaubil: "More productive than Paremout and Gerbillon, less systematic than Prémare and Fauquet, more like Amiot, less light-headed and enthusiastic than Cibot, he treated thoroughly, scientifically, and critically, every question he handled." His style is rather fatiguing, as Gaubil, in studying the Chinese and Manchus languages, had forgotten much of his native tongue.

HENRI CORBIER.

GAUDENTIUS, SAINT, Bishop of Brescia from about 387 until about 410; he was the successor of the writer on heresies, St. Philastrius. At the time of that saint's death Gaudentius was making a pilgrimage to Jerusalem. The people of Brescia bound themselves by an oath that they would not receive another bishop than Gaudentius; and St. Ambrose and other neighbouring prelates, in consequence, obliged him to return, though against his will. The Eastern bishops also threatened to refuse him Communion if he did not obey. We possess the discourse which he made before St. Ambrose and other bishops on the occasion of his consecration, in which he excuses, on the plea of obedience, his youth and his presumption in speaking. He had brought back with him from the East many precious relics of St. John Baptist and of the Apostles, and especially of the Four Martyrs of Sebaste, relics of which he had received at Cesarea in Cappadocia from some pieces of St. Basil. These and other relics from Milan and elsewhere he deposited in a basilica which he named Concilium Sanctorum. His sermon on its dedication is extant. From a letter of St. Chrysostom (Ep. clxxxiv) to Gaudentius it may be gathered that the two saints had met at Antioch. When St. Chrysostom had been condemned to exile and had appealed to Pope Innocent and the West in 405, Gaudentius warmly took his part. An embassy to the Eastern Emperor Arcadius from his brother Honorius and from the pope, bearing letters from both and an Italian bishop, who was appointed both Gaudentius and two other bishops. The envoys were seized at Athens and sent to Constantinople, being three days on a ship without food. They were not admitted into the city, but were shut up in a fortress called Athyra, on the coast of Thrace. Their credentials were seized by force, so that the thumb of one of the bishops was broken, and they were offered a large sum of money if they would communicate with Atticus, who had supplanted St. Chrysostom. They were consoleyed by God, and St. Paul appeared to a deacon amongst them. They were eventually put on board an unseaworthy vessel, and it was said that the captain had orders to throw the three into the sea. However, they arrived safe at Lampseucus, where they took ship for Italy, and arrived in twenty days at Otranto. Their own account of their four months' adventures has been preserved to us by Palladius (Dialogues, 4). St. Chrysostom wrote them several grateful letters.

Gaudenius possesses twenty genuine sermons by Gaudentius. The first ten are a series of Easter sermons, written down after delivery at the request of Benivolus, the chief of the Brescian nobility, who had been prevented by ill health from hearing them delivered. In the preface Gaudentius takes occasion to disown all unauthorized copies of his sermons published by shorthand writers. These pirated editions seem to have been known to Rufinus, who, in the dedication to
St. Gaudensius of his translation of the pseudo-Clementine "Recognitions", praises the intellectual gifts of the Bishop of Brescia, saying that even his extemporaneous speaking is worthy of publication and of preservation by posterity. The style of Gaudensius is simple, and his language, forbidden to his bishop in the Church of St. John Baptist, on the site of the Concilium Sanctorum. His figure is frequently seen in the altar-pieces of the great Brescian painters, Montori, Moreto, Suvolfo, and Romanino. The best edition of his works is by Galeardi (Padua, 1720, and in P. L., XCV.). His book "De sanctis" is also imitated by Romagnolani, who is quoted by Minor: Boscari., Acta SS., 25 Oct.; Tillemont, Memoriae, X. C. Cellier, Hist. des auteurs eccl. (Paris, 1838-69), X, xii. eq.; Hirsch, Lehrb. der Patrolog., II.

John Chapman.

Gaudensius of Brescia (Gaudenzius Bruxelensis or Brusseius), theologian of the Order of Friars Minor Capuchins: b. at Brescia in 1612; d. at Orano, 25 March, 1672; descended from the noble Brescian family of Bontempi; having entered the Capuchin Order, was assigned to the duties of lector of theology. In this capacity he visited the several convents of his own province of Brescia, as well as other houses of the different Capuchin provinces of Italy. He was taken suddenly ill at Orano, and died there while engaged in preaching a course of Lenten sermons. His remains were later removed to the Capuchin church at Verola, where they now rest. His fame as a theologian rests mainly on his "Palladium Theologicum" in which he subtitled a reflection ab intesta- mon mentem d. Bonaventura Seraph. Doc. cujus eximie doctrinae raptae restituturn, sentientem impugnate propugnatur," a work in which elegance of style, depth of thought, and soundness of doctrine are admirably combined, and which ranks the author among the foremost exponents of the Franciscan school. Gaudensius's pupil and countryman, Gian-francesco Duranti, undertook the publication of the work after the death of the author; and under the patronage of Louis XIV of France, who subjected the manuscript to the examination of a special commission of doctors of the Sorbonne, it was published at Lyons, in seven folio volumes, in 1676.

Stephen M. Donovan.

Gaudete Sunday, the third Sunday of Advent, so called from the first word of the Introit at Mass (Gaudete, i.e. Rejoice). The season of Advent originated as a fast of forty days in preparation for Christmas, commencing on the day after the feast of St. Martin (12 November), whence it was often called "St. Martin's Lent"—a name by which it was known as early as the fifth century. The introduction of the Advent fast cannot be placed much earlier, because there is no evidence of Christmas being kept on 25 December before the third or fourth century. "Odesseos du culte chrétien", Paris, 1889), and the preparation for the feast could not have been of earlier date than the feast itself. In the ninth century, the duration of Advent was reduced to four weeks, the first allusion to the shortened season being in a letter of St. Nicholas I (658-657) to the Bulgarians, and by the tenth century it is the usual season for the observance of the fast. St. Gregory the Great was the first to draw up an office for the Advent season, and the Gregorian Sacramentary is the earliest to provide masses for the Sundays of Advent. In both Office and Mass provision is made for five Sundays, but by the tenth century four of these, with the usual three churches of France observed five as late as the thirteenth century. Notwithstanding all these modifications, however, Advent still preserved most of the characteristics of a penitential season, which made it a kind of counterpart to Lent, the middle (or third) Sunday corresponding with Letare or Mid-Lent Sunday. On it, as on Letare Sunday, the organ and other organs, forbidden in the rest of Advent, were permitted to be used; rose-coloured vestments were allowed instead of purple (or black, as formerly); the deacon and subdeacon resumed the dalmatic and tunicle at the chief Mass, and cardinals wore rose-colour instead of purple. All these distinguishing marks have continued, and are still part of the present discipline of the Latin Church. Gaudete Sunday, therefore, makes a break, like Letare Sunday, about midway through a season which is otherwise of a penitential character, and signifies the nearness of the Lord's coming. Of the "stations" kept in Rome on the four Sundays of Advent, that at the Vatican basilica is assigned to Gaudete, as being the most important and imposing of the four. In both Office and Mass throughout Advent, continual reference is made to our Lord's second coming, and this is emphasized on the third Sunday by the additional signs of gladness permitted on that day. Gaudete Sunday is further marked by the new Invitatory, "Adveniunt..."; and the antiphons at Vespers rehearse the same prophetic promises. The joy of expectation is emphasized by the constant Alleluias, which occur in both Office and Mass throughout the entire season. In the Mass, the Introit "Gaudete in Domino semper" strikes the same note, and gives its name to the day. The Epistle again incites us to rejoicing, and bids us prepare to meet the coming Saviour with prayers and supplication and thanksgiving, whilst the Gospel, in the words of St. John Baptist, warns us that the Lamb of God is even now in our midst, though we appear to know Him not. The spirit of the Office and Liturgy all through Advent is one of expectation and preparation for the Christmas feast as well as for the second coming of Christ, and the penitential exercises suitable to that spirit are thus on Gaudete Sunday suspended, as it were, for a while in order to symbolize that joy and gladness in the promised Redemption which should never be absent from the hearts of the faithful.

G. Cyriac Altton.

Gaudier, Antoine Le, writer on ascetic theology; b. at Château-Thierry, France, 7 January, 1572; d. at Paris, 14 April, 1622. About the age of twenty he entered the Society of Jesus at Tournay. Later on he was rector at Liége, professor of Holy Scripture at Pont-à-Mousson, and of moral theology at La Flèche. In these two last-named posts he did also change with the spiritual direction of his brethren, and showed such an aptitude for this branch of the ministry that he was named master of novices and tertians. His appointment to these offices shows that Gaudier, since he died at the age of fifty, must have evinced an early intellectual maturity and an exceptional talent for the guidance of others. In the various functions to which he was replaced by his superiors, he found an opportunity of developing before a domestic audience the principal matter of asceticism, which he elaborated little by little into a complete treatise. The eagerness shown to possess his spiritual writings led him at last to publish them. The treatise then appeared, though in a form "inmississimo Christi Jesu amore opusculum" (Pont-à-Mousson, 1619), translated into English by G. Tickell,
GAUDIOSUS

Saint of the Church of Gaul. The Church of Gaul first appeared in history in connexion with the persecution at Lyons under Marcus Aurelius (177). The pagan inhabitants rose up against the Christians, and forty-eight martyrs suffered death under various tortures. Among these was Saint Gregory, a layman, who was later canonized at the Church of Gaul. The Church of Gaul was represented by Saint Blended, Ponticus, a youth of fifteen. Every rank of life had members among the first martyrs of the Church of Gaul: the aristocracy were represented by Vettius Epagathus; the professional class by Attalus of Pergamus, a physician; a neophyte, Maturus, died beside Pothinus, Bishop of Lyons, and Sanctus, deacon of Vienne. The Christians of Lyons and Vienne in a letter to their brethren of Smyrna give an account of this persecution, and the letter, preserved by Eusebius (Hist. Eccl., V, i-iv), is one of the gems of Christian literature. In this document the death of Blended and Ponticus seems to have been organized at the time in Gaul. That of Vienne appears to have been dependent on it and, to judge from similar cases, was probably administered by a deacon. How or where Christianity first gained a foothold in Gaul is purely a matter of conjecture. Most likely the first missionaries came by sea, touched at Marseilles, and progressed up the Rhone till they reached the religious city of Lyons, the metropolis and centre of communication for the whole country. The firm establishment of Christianity in Gaul was undoubtedly due to missionaries from Asia. Pothinus was a disciple of St. Polycarp, Bishop of Smyrna, as was also his successor, Irenaeus. In the time of Irenaeus Lyons was still the centre of the Church in Gaul. Irenaeus speaks of letters of St. Peter to the Church of Gaul of which Irenaeus is bishop (Hist. Eccl., V, xxiii). These letters were written on the occasion of the second event which brought the Church of Gaul into prominence. Easter was not celebrated on the same day in all Christian communities; towards the end of the second century Pope Anicetus received the Roman usage and communicated the Churches of Asia. Irenaeus intervened to restore peace. About the same time, in a mystical inscription found at Autun, a certain Pectorius celebrated in Greek verse the Ilethus os fish, symbol of the Eucharist. A third argument in which the bishop of Autun took part was the Novatian controversy. Faustinus, Bishop of Lyons, and other colleagues in Gaul are mentioned in 254 by St. Cyprian (Ep. lxviii) as opposed to Novatian, whereas Marcianus of Arles was favourable to him.

No other positive information concerning the Church of Gaul is available until the fourth century. In two works of narrative, however, we gain glimpses of the life of the Church of Gaul. On the one hand a series of local legends trace back the foundation of the principal sees to the Apostles. Early in the sixth century we find St. Cæsarius, Bishop of Arles, crediting these stories; regardless of the anachronism, he makes the first Bishop of Vaison, Daphnis, whose signature appears at the Council of Arles (314), a disciple of the Apostles (Lejay, Le rôle théologique de Cæsare d'Arles, p. 5). One hundred years earlier one of his predecessors, Patrocles, based various claims of his Church on the fact that St. Trophimus, founder of the Church of Arles, was a disciple of the Apostles. Such claims were no doubt flattering to local vanity; during the Middle Ages and in more recent times many legends grew up in support of them. The evangelization of Gaul has often been attributed to missionaries sent from Rome by St. Clement—a theory, which has inspired a whole series of fallacious narratives and histories, with which his historical faith can be placed in a statement of Gregory of Tours in his "Historia Francorum" (I, xxvii), on which was based the second group of narratives concerning the evangelization of Gaul. According to him, in the year 250 Rome sent seven bishops, who founded as many dioceses in Gaul: Ouenus the Bishop of Tours, Trophimous that of Arles, Paul that of Narbonne, Saturninus that of Toulouse, Denis that of Paris, Stremonius (Astroemus) that of Auvergne (Clermont), and Martialis that of Limoges. Gregory's statement has been accepted with more or less reservation by serious historians. Nevertheless even the existence of a Council of Narbonne is to some extent a matter which have had access to information on the beginnings of his church, it must not be forgotten that an interval of three hundred years separates him from the events he chronicles; moreover, this statement of his involves some serious chronological difficulties, of which he was himself aware, e. g. in the case of the bishops of Paris. The most we can say for him is that he echoes a contemporary tradition, which represents the general point of view of the sixth century rather than the actual facts. It is impossible to say how much legend is mingled with the reality. By the middle of the third century, as St. Cyprian bears witness, there were several churches organized in Gaul. They suffered little from the great persecution. Constantius Chlorus, the father of Constantine, was not hostile to Christianity, and soon after the cessation
of persecution the bishops of the Latin world assembled at Arles (314). Their signatures, which are still extant, prove that the following sees were then in existence: Vienne, Arles, Orange, Vaison, Nimes, Lyon, Autun, Cologne, Trier, Reims, Rouen, Bordeaux, Gabala, and Eauze. We must also admit the existence of the Sees of Toulouse, Narbonne, Clermont, Bourges, and Paris. This date marks the beginning of a new era in the history of the Church of Gaul. The town had been33 too early won over to the new faith; the work of evangelization was now extended and continued during the fourth and fifth centuries. The cultured classes, however, long remained faithful to the old traditions. Ausonius was a Christian, but gives so little evidence of it that the fact has been questioned. Teacher and humanist, he lived in the memories of the Church of Gaull the religious life, at which, however, the world of letters was deeply scandalized; so much so, indeed, that Paulinus had to write to Ausonius to justify himself. At the same period there were pagan rhetoricians who celebrated in the schools, as at Autun, the virtues and deeds of the Christian emperors. By the close of the fifth century, however, the majority of scholars in Gaul were Christians. Generation by generation the change came about. Salvianus, the fiery apologist (died c. 492), was the son of pagan parents. Hilary of Poitiers, Sulpicius Severus (the historian), Paulinus of Nola, and St. Ambrose, Apollinaris strove to reconcile the Church and the world of letters. Sidonius himself is not altogether free from suggestions of paganism handed down by tradition. In Gaul as elsewhere the question arose as to whether the Gospel could really adapt itself to literary culture. With the intruders of the barbarians the discussion came to an end.

It is none the less true that throughout the Empire the progress of Christianity had been made chiefly in the cities. The country-places were yet strongholds of idolatry, which in Gaul was upheld by a twofold tradition. The old Gallic religion, and Graeco-Roman paganism, still had ardent supporters. More than that, among the Gallo-Roman population the use of spells and charms for the cure of sickness, or on the occasion of a death, was much in vogue; the people worshipped springs and trees, believed in fairies, on certain days clothed themselves in skins of animals, and sought health and beauty in magic. Some of these customs were survivals of very ancient traditions; they had come down through the Celtic and the Roman period, and had no doubt at times received the imprint of the Gallic and Graeco-Roman beliefs. Their real origin must, of course, be sought further back in the same obscurity in which the beginnings of folk-lore are shrouded. This mass of popular beliefs, fancies, and superstitions still lives. It was the principal obstacle encountered by the missionaries in the rural places. St. Martin, a native of Pannonia, Bishop of Tours, and founder of monasteries, undertook especially in central Gaul a crusade against this rural idolatry. On one occasion, when he was felling a sacred tree in the neighbourhood of Autun, a peasant attacked him, and he had an almost miraculous escape. Besides St. Martin other popular preachers traversed the rural districts, e.g. Vetricius, Bishop of Rouen, another converted soldier, also Martin’s disciples, especially St. Martin of Brives. But their scattered and intermittent efforts made no lasting effect on the minds of the peasants. About 359 a Gallic rhetorician depicts a scene in which peasants discuss the mortality among their flocks. One of them boasts the virtue of the sign of the cross, “the sign of the true God ... which is held in the large cities” (Riese, Anthologia Latina, no. 893, v. 105). This expression, however, is too strong, for at that very period a single church sufficed for the Christian population of Trier. Nevertheless the rural parts continued the more refractory.

At the beginning of the fifth century, there took place in the neighbourhood of Autun the procession of Cybele’s chariot to bless the harvest. In the sixth century, in the first half of the period, one of the regions where Christianity had gained its earliest and strongest hold, Bishop Cassius was still struggling against popular superstitions, and some of his sermons are yet among our important sources of information on folklore.

The Christianization of the lower classes of the people was greatly aided by the newly established monasteries. In Gaul as elsewhere the first Christian ascetics lived in the world and kept their personal freedom. The practice of religious life in common was introduced by St. Martin (died c. 397) and Cassian (died c. 435). Martin established near Tours the "grand monastere," i.e. to outline the small life, which thus lived in separate groves or wooden huts. A little later Cassian founded two monasteries at Marseilles (415). He had previously visited the monks of the East, and especially Egypt, and had brought back their methods, which he adapted to the circumstances of Gallo-Roman life. Through the influence of Eremitici or "hermiti," and the "Collationes XXIV," he became the doctor of Gallic asceticism. About the same time Honoratus founded a famous monastery on the little isle of Lérins (Lerinum) near Marseilles, destined to become a centre of Christian life and ecclesiastical influence. Episcopi of Nola was an object of competition and greed, and were rapidly becoming the property of certain aristocratic families, all of whose representatives in the episcopate were not as wise and upright as Germanus of Auxerre or Sidonius Apollinaris. Lérins took up the work of reforming the episcopate, and placed many of its own sons at the head of places: Honoratus, Hilary, and Cassian at Eucreius at Lyons, and his sons Saloni and Veranius at Geneva and Vence respectively; Lupus at Troyes; Maximus and Faustus at Riez. Lérins too became a school of mysticism and theology and spread its religious ideas far and wide by useful works on dogma, polemics, and hagiography. Other monasteries were founded in Gaul, e.g. Grigny near Vienna, Ile Barbe at Lyons, Réome (later known as Moutier-Saint-Jean), Morvan, Saint-Claude in the Jura, Chinon, Loches, etc. It is possible, however, that some of these foundations failed to receive the bounties due to the succeeding period. The monks had not yet begun to resort to a fixed and codified rule. For such written constitutions we must await the time of Cassarius of Arles.

Monasticism was not established without opposition. Rutilius Namatianus, a pagan, denounced the monks of Lérins as a brood of night-owls; even the efforts of God to make Christian virtues of them met with much resistance, and the adversaries of Priscillianism in particular were imbued with this hostility to a certain degree. It was also one of the objections raised by Vigilantius of Calagurris, the Spanish priest whom St. Jerome denounced so vigorously. Vigilantius had spent much time in Gaul and surely knew what had happened there. The law of ecclesiastical celibacy was less stringent, less generally enforced than in Italy, especially Rome. The series of Gallic councils before the Merovingian epoch bear witness at once to the undecided state of discipline at the time, and also to the continual striving after some fixed disciplinary code.

The Church of Gaul passed through three dogmatic crises. Its bishops seem to have been greatly occupied with Ariasism; as a rule they clung to the teaching of Nicea, in spite of a few temporary or partial defections. Those who adhered to Trier (336-38), exerted a powerful influence on the episcopate of Gaul; one of the great champions of orthodoxy in the West was Hilary of Poitiers, who also suffered exile for his constancy. Priscillianism had a greater hold on the masses of the faithful.
GAULI

It was above all a method, an ideal of Christian life, which appealed to all, even to women. It was conducted by the bishops of Bordeaux and Agen were present; none the less it spread rapidly in Central Gaul, Eauze in particular being a stronghold. When in 385 the usurper Maximus put Priscillian and his friends to death, St. Martin was in doubt how to act, but repudiated with horror the community with which he had concluded the treaties, the unfortunate. Priscillianism, indeed, was more or less bound up with the cause of asceticism in general. Finally the bishops and monks of Gaul were long divided over Pelagianism. Proculus, Bishop of Marseilles, had obliged Leporius, a disciple of Pelagius, to leave Gaul, but it was not long before Leporius, Lascaris, Vincius, and Faustus, became hotbeds of a teaching opposed to St. Augustine's and known as Semipelagianism. Prosper of Aquitaine wrote against it, and was obliged to take refuge at Rome. It was not until the beginning of the sixth century that the teaching of Augustine triumphed, when a monk of Lérins, Cassarius of Arles, an almost servile disciple of Augustine, caused it to be adopted by the Council of Orange (529).

In the final struggle Rome interfered. We do not know much concerning the earlier relations between the bishops of Gaul and the pope. The position of Imperial Council shows a considerable degree of independence; yet Irenaeus proclaimed the primacy of the See of Rome. About the middle of the third century the pope was appealed to for the purpose of settling difficulties in the Church of Gaul and to remove an erring bishop (Cyprian, Epist. lvii). At the Council of Arles (314) the bishops of Gaul were present with those of Brittany, Spain, Africa, even Italy; Pope Sylvester sent delegates to represent him. It was in way a Council of the West. During all that century, however, the episcopate of Gaul had no head, and the bishops grouped themselves according to the ties of friendship or locality. Metropolitan did not exist as yet, and when advice was needed Milan was consulted. "The traditional authority," says Duchene, "in all matters of discipline remained always the ancient Church of Rome; in practice, however, the Council of Milan decided in case of conflict."

The pope then took the situation in hand, and in 476 Pope Leo I wrote a letter to Ariovaric or delegate in Gaul, and provided that all disputes should be referred to him. Moreover, no Gallic ecclesiastical could have access to the pope without testimonial letters from the Bishop of Arles. This primacy of Arles waxed and waned under the succeeding bishops, who played a considerable part in the life of Gaul, but after his time it conferred on the occupant merely an honorary title. In consequence, however, of the extensive authority of Arles in the fifth and sixth centuries, canonical discipline was more rapidly developed there, and the "Libri canones" which were a work in various in Southern Gaul were modelled on those of the Church of Arles.

Towards the end of this period Cassarius assisted at a series of councils, thus obtaining a certain recognition as legat of the Merovingian Church.

The barbarians, however, were on the march. The great invasion of 407 made the Goths masters of all the country to the south of the Loire, with the exception of Bourges and Clermont, which did not fall into their hands until 475; Arles succumbed in 480. Then the Visigothic kingdom was organized, Arian in religion, and at first hostile to Catholicism. Gradually the necessity of maintaining a certain degree of uniformity made the Council of Agde, really a national council of Visigothic Gaul (506), and in which Cassarius was dominant, is an evidence of the new temper on both sides. The Acte of this council follow very closely the principles laid down in the "Breviarium Alaricorum"—a summary of the Theodician Code drawn up by Alaric II, the Visigothic king, for his Gallo-Roman subjects—and met with the approval of the Catholic bishops of his kingdom. But at Inzwel the bishops of Bourgogne had settled near Mains; in 475 they had come farther south along the Rhone, and about this time became Arians. The Franks, soon to be masters of all Gaul, left the neighbourhood of Tournai, defeated Syagrius in 486, and established their power as far as the Loire, defeated the Bishop of Tours, and took the Kingdom, and in 534 that of the Burgundians; in 536 by the conquest of Arles they succeeded to the remnants of the great state created by the genius of King Theuderic; with them began a new era (see FRANKS).

The transition from one regime to another was made possible by the bishops of Gaul. The bishops had frequently played a beneficent rôle as intermediaries with the Roman authorities. Before the barbarian invasions they were the true champions of the people. Indeed it was long believed that they had been invested with special powers and the official title of "archontes civilium," a kind of sacerdotal dignity. While this title was never officially borne by them, the popular error was only formal and superficial. Bishops like Sidonius Apolinarius, Avitus, Germanus of Auxerre, Cassarius of Arles, were truly the defenders of their fatherland. While the old civic institutions were tottering to their fall, they upheld the national fabric. Through their efforts the barbarians became amalgamated with the native population, introducing into it the germs of a new and vigorous life. Lastly the bishops were the guardians of the classical traditions of Latin literature and Roman culture, and long before the appearance of monasticism had begun the mediacy of learning. Throughout the sixth and seventh centuries manuscripts of the Bible and the Fathers were copied to meet the needs of public worship, ecclesiastical teaching, and Catholic life. The only contemporary buildings that exhibit traces of classical or Byzantine styles are religious edifices. For all this, and for much more, the bishops of Gaul deserve the title of "Makers of France".

After the writings of EUGÈNIE DE CAMARA, Sulpitius Severus, PAULINUS OF NOLA, SALVIANUS, Gregory of Tours, etc., our principal source of information is the "Apostolite" (3rd ed.) which with its "Histoire étoilée" published by LE BLANT. Inscriptions chrétiennes de la Gaule antérieures à l'AGNUS DEI siècle (1897, 1898); IDRÉM. Les sarcophages chrétiens de la Gaule (Paris, 1890); SIROMON AND LALANDE. Concilia antica Gallice (4 vols., 1829-66); also the calendars giving information for many dioceses and edited by Delisle in Histoire littéraire de la France, XXIII.

General works devoted to the history and study of Christianity have chapters on the Church in Gaul. Special reference works: DUCHENNE. Païens épiscopaux de l'ancienne Gaule, I (1907); II; IV, 2nd ed. (1917); IV, 3rd ed. (1890). All published in 1905-9; IDRÉM. Histoire littéraire de la France avant la XIIe siècle, I and II (Paris, 1893); RODER. L'enseignement des lettres classiques en Gaule d'A la fin du XIVe siècle (Paris, 1886); BARRIGON. Les anciennes églises de France au XVe siècle (Paris, 1901); ANACHET. Bollandiana, LIX, 354; MORIN. Saint Lazare et saint Martin in Mémoires de la société des antiquaires de France, LX (Paris, 1898); AUBRÉ IN Histoire littéraire, VII (1878), 152-62; HAVET. Les origines de saint Denis in Bibliothèque de l'École des Chartes (Paris, 1890), p. 25; DUFOUR. him in design and colouring. Early in life he went to Rome and became a pupil of Bernini and Mario Nuzzi da Fori, whose assistance and recommendation later brought him fame and reputation. A considerable part of his life was given over to portrait painting. He is said to have executed paintings of seven pontiffs—from Alexandria VII to Clement X—and of all the cardinals of his time. His paintings of children show much grace and vivacity. His greatest merit, however, lies in his historical compositions, which show good arrangement, agreeable colouring, and a spirited touch. Sometimes his work was incorrect and heavy, and his draperies too stiff. He understood the art of foreshortening his figures in a marked degree, as shown by his work in the angles of the dome of S. Agnese, in the Palazzo Nuovo. His chief work is the painting of the "Assumption of St. Francis Xavier", in the vault of the church of the Gesù, Rome. This picture is celebrated for the boldness and truth of the foreshortening, and the brilliancy of the colouring. Another celebrated work is the "Virgin and Child, surrounded by angels, with St. Anne kneeling in front"; it is in the church of S. Francesco a Ripa; and in the church of Sant' Andrea there is an altarpiece by Gaudioli of the "Death of St. Francis Xavier". Gaudioli's facility of composition, rapidity of hand, and clear bright style rendered his pictures very attractive to his contemporaries, but these works are now considered as belonging to an essentially superior style of art. He is one of the painters called by his countrymen Macchinisti. His works are obscure in his easel pictures, and his manner more varied.

Gaultier, Aloisius-Edouard-Camille, priest and schoolmaster; b. at Asti, Piedmont, about 1745, of French parentage; d. at Paris, 18 Sept., 1815; began his studies in France, and completed them in Rome, where he was ordained; upon his return to France (1780) he devoted himself to the work of education and in 1786 opened a school in Paris, wherein he applied his principle of instructing children while amusing them. The French Revolution obliged him to seek refuge in England, and finding at his disposal his former pupils of the French nobility, he opened a course for the education of French refugees. His principles were greatly admired and his methods commended by the Universities of Oxford and Cambridge. He came back to France in 1801, and continued to teach his English and French, and in 1803, another journey to London was undertaken for the purpose of studying the monitory system of teaching, practised by Bell and Lancaster, a system which he wanted to introduce into the French schools. During the Hundred Days, Carnot appointed him a member of the commission for the reorganization of public instruction, and later Gaultier was one of the founders of the "Société pour l'enseignement élémentaire".

To give a complete list of Gaultier's works is impossible here. They include text-books for every branch of primary instruction, reading, writing, arithmetic, geometry, geography, history, logical and grammatical analysis, composition, politeness, etc., and they apply his method of instructive plays, that is, a system of questions and answers in which, according to the correctness or incorrectness of the answers, a scheme of loss and gain in credits constantly stimulates the interest of the pupils. While, from the point of view of modern pedagogy, this method has many defects, especially that of being too mechanical and of insisting too much on mere memory, it was nevertheless an advance on methods previously used, and it acknowledged, though carrying it to excess, the great importance of the principle of interest in education.

It must be supplemented by the application of the psychological principles of adaptation, reflection, and assimilation.

C. A. DUMRAY.

Gauze, Jean-Joseph, French theologian and author, b. at Fuentes (Franche-Comté) in 1802; d. in 1876. While attached to the Université de Nevers, he was successively professor of theology, rector of the petit séminaire, canon, and vicar-general of the diocese, and had already published several works, when he left for Rome in 1841. Gregory XVI made him a knight of the Reformed Order of St. Sylvester. A doctor of the Université de Paris, a member of several societies of scholars, among them vicar-general of several dioceses, he received from Pius IX in 1854 the title of prothonotary apostolic. Abbé Gauze is the author of numerous books treating of theology, history, education. Some of these are still esteemed; those of the second have fallen into oblivion, and those of the third have led to the famous question of the classics. These last writings are all inspired by one and the same thought; vividly struck by the religious and moral deterioration of his age, the author seeks its remote causes, and believes it finds it in the Renaissance, which was for society a resurrection of the paganism of antiquity, prepared the way for the Revolution, and was, in fine, the primal source of all the evil. Such is the dominating idea of the works "La Révolution" (8 vols., 1856) and "Histoire de la société domestique" (12 vols., 1857). It is again met with in "Les Trois Rome" (1857). But to cure the ills of society it was necessary to devise a new method of moulding childhood and youth; this was to consist in catechetical instruction and the exclusion of pagan authors from classical studies. In support of this method he composed his "Catechisme de l'Épiscopat, ou Exposé de la Religion depuis l'origine du monde jusqu'à nos jours" (8 vols., 1854); "La Religion et l'Éternité" (1859); "Traité de l'Esprit Saint" (1864). To this series of works belong his "Manuel du Confesseur" (1854) and "L'Hortie de la Passion" (1857), which he translated from St. Alphonse Liguori.

The word "Renaissance" is the REVOLUTION in the word is his—which he deemed necessary in classic instruction he indicated as early as 1835 in his book "Le Catholicisme dans l'éducation", without arousing much comment. He returned to the subject in 1851 in a work entitled "Le Ver rongeur des sociétés modernes et l'Eglise" (Paks. "L'Universalisme de la société moderne", a work of the author, still more the patronage of two influential prelates—Mgr. Gousset, Archbishop of Reims, and Mgr. Paris, Bishop of Arras—and above all the articles of Louis Veuillot in "L'Univers", which supported Abbé Gauze from the first, gained for his views a hearing which they had previously failed to secure, and provoked a lively controversy among Catholics. After having shown that the intellectual formation of youth during the first centuries of the Church and throughout the Middle Ages was accomplished through the study of Christian authors (ch. i-ix), Gauze proceeds to prove that the Renaissance of the sixteenth century perverted education throughout Europe by the substitution of pagan writers for Christian authors. In support of his thesis, he brings forward the testimony of men (vii-ix) and of facts (x-xxi), indicating the influence of classical paganism on literature, speech, the arts, philosophy, religion, the family, and society. The method of this last work was the exaggeration of his thesis was evident. It was the condemnation of the method held in honour in the Church for three centuries; Benedictines, Jesuits, Oratorians, the secular clergy themselves had, with-out opposition from the Holy See, made the pagan
authors the basis of the curriculum in their colleges. Gaume did not go so far as to exclude the pagan texts; he allowed them some place in the three highest classes (the course comprised eight), but banished them from the first five years.

The second year of his petit séminaire as to the course to pursue, the Bishop of Orléans, Mgr. Dupanloup, addressed them a letter on classical teaching, in which he boldly declared himself in favour of the existing regulations and methods, thus preserving for the ancient authors the rank they had hitherto held, but at the same time assigning an important place to Holy Scripture, the Fathers, and modern authors. Sharply attacked by Veuillot in "L'Univers", the bishop retorted by issuing a pastoral on the classics and especially on the interference of lay journalism in episcopal administration, and concluded by enjoining on the professors of his petits séminaires to receive no longer "L'Univers". Then the question became even more burning; newspaper articles, brochures, pamphlets, even books succeeded one another on this question which created a general commotion among educationists. Gaume published in 1840 the thesis for his doctorate on "L'Éducation dans l'éducation". For a time it seemed as though the diocese were on the point of division. At this juncture Mgr. Dupanloup drew up a declaration which was signed by forty-six prelates. It contained four articles, two of which dealt with journalism in its relation to episcopal authority, and two with the use of the classics. It was therein stated: (1) that the employment of the ancient classics in secondary schools, when properly chosen, carefully expurgated, and explained from a Christian point of view, was neither evil nor dangerous; (2) that, however, the use of these ancient classics should not be exclusive, but that it was useful to join to it in becoming measure as is generally done in all houses directed by the clergy, the study and explanation of Christian authors. Abbé Gaume and his partisans lost no time in reducing their claims to the three following points: (1) the more comprehensive expurgation of pagan writers; (2) the more extensive introduction of Christian authors; (3) the Christian teaching of pagan authors. Nevertheless it required instructions from Rome to put an end to this controversy. The Abbé Gaume published further: "Bibliothèque des classiques chrétiens, latins et grecs" (30 vols., 1852-55); "Poesies et Prochains poèmes dans la collection des Prébendaires" (3 vols., 1853-54); "L'Univers; Vie de Mgr. Dupanloup, II; vii; E. Veuillot; Vie de Louis Veuillot, II, xvii; L. Veuillot, Mélanges, Series I, vol. II; Series II, vol. I; Le Correspondant (1852) articles.

Gauthier, Charles HUGH. See KINGSTON, ARCH.

DIOCESE OF.

Gavantus (GAVANTO), BARTOLOMEO, liturgist, a member of the Barnabite Order; b. at Monza, 1569; d. at Milan, 14 August, 1638. Gavantus devoted himself early to liturgical studies, and with such success that his fame spread far beyond Rome, where he was recognized as having a most accurate knowledge of the sacred rites. His chief work is entitled "Thesaurus sacrorum rituum seu commentaria in rubricas Missalis et Breviarii Romani" (Milan, 1628; revised ed. by Merati, Rome, 1736-38). In this work the author traces the historical origin of the sacred rites themselves, treats of their mystical significance, gives rules as to the observance and obligation of the rubrics, and adds decrees and brief explanations bearing on the subject-matter of the work. The book was examined and approved by Cardinals Millino, Muto, and Cajetan, and was dedicated to Pope Urban VIII. Gavantus was governor of his order, and in recognition of his great services, was named perpetual consultor to the Congregation of Rites by Pope Urban VIII 1623-1644.

DANIEL DUNFORD.

GAZATÉ, CHARLES ETIENNE ARTHUR, American historian and writer of fiction, grandson of Etienne de Boré, the first successful sugar-planter of Louisiana; b. in New Orleans, January, 1805; d. 11 February, 1855. Pére Antoine (Antonio de Sedella), famed in Louisiana history, baptized the cathedral, where also, ninety years later, the funeral rites were performed over his remains. Having received his early education in his native city, he went to Philadelphia in 1826 to study law, was admitted to the Pennsylvania Bar in 1829, and to that of Louisiana in 1829. Entering the political arena he was elected to the State legislature in the same year, and subsequently, in 1835, was sent to the Senate of the United States. However, ill-health prevented him from ever performing his duties as senator, and the dictate of his physician kept him in France for eight years. The natural bent of his mind, the historical environment of his youth (Louisiana having just emerged from her colonial existence into American statehood), and personal acquaintance with many of the men who were chief actors on the historical stage, all combined to determine the character of his life-work, which later proved to be "Histoire de la Louisiane". Having obtained material from public and private archives in France, he published (1846-47) the result of his researches in "Histoire de la Louisiane"—a work which, based as it is on original documents, cannot but be of great value to the student of history. The "Histoire de la Louisiane" has been followed by a more comprehensive "Histoire de Louisiana", which is the great work of his life (4th ed., 4 vols, New Orleans, 1903).

In the "History of Louisiana" the author includes an earlier work, "Poetry and Romance of the History of Louisiana", in which, he explicitly states, he intends to weave "legendary, the romantic, the traditional, and historical elements" into one narrative, and which contains such flights of imagination as to leave it devoid of critical value. The other parts of the work are more strictly historical in scope and value; yet the vivid style coupled with much personal observation precludes the analytical, dispassionate method, which the modern writer is wont to apply to the treatment of historical subjects. However, inasmuch as Gayarre's book represents an intelligent and systematic compilation of documentary evidence, it is a remarkable achievement for his time, and is even today indispensable for an understanding of the history of Louisiana. Other works of his are: "Fernando de Lemos" (1872); "Aubert Dubayet, or the Two Sister Republics" (1882), a historical romance; both works are of local interest. He also contributed a number of historical articles to various magazines.

ANTHONY F. IBNEERG.

GAZ (Heb. 'Azrâ, the strong), a titular see of Palestine Prima, in the Patriarchate of Jerusalem. Gaza is one of the oldest cities in the world. Its first inhabitants were the Hevites (Deut. ii, 23). The Rehphaim and the Enamim, expelled later by Josue, inhabited the surrounding mountains (Josue xi, 22). The Hevites were driven forth by the Philistines who came from Caphtor (I. V, Cappadocia; Deut. ii, 20). Gideon, a son of Amos, ix, 7; Jer., xlvi, 4). Little else is known as to the origin of this warlike people, who occupied the whole Mediterranean coast between Phoenicia and Egypt, and whom the Hebrews could never wholly subdue. It is agreed, however, that they came from Caphtor, the island of Kephal. Amos (ix, 7; Jer., xlix, 4) speaks of the island of Caphtor, the island of Cappadocia in D. V. According to Stephen of Byzantium ("De Urbibus", s. v. Gaza,
Minoa) the city of Gaza was a colony from Crete (cf. Soph., ii, 5). This statement is in accordance with the "Romana", which tells of reprisals made by the "Cerethi" (Cretans), a Philistine tribe. 

Philistines were established in the vicinity of Gaza as early as the time of Abraham; their leader, Abimelech, who bore the title of king, resided at Gerar (Gen., xxii, 33; xxvi, 1). Some critics, however, hold that the title of "king of the Philistines" was given to Abimelech, not because he was himself a Philistine, but because he dwelt in the country afterwards inhabited by that people. In any case the Philistines certainly possessed Gaza when Moses and the Hebrews arrived in the Holy Land. Though it was assigned to the tribe of Judah, the city could never be conquered by Joshua, according to its high wall (Gen., xi, 18; Josh. xv, 47; Amos, i, 7). The tribe of Judah possessed the city by right but not in fact.

Gaza appears to have been the metropolis of the five satrapies which formed the territory of the Philistines; and like the four other cities, Ascalon, Accaron, Azotus, and Geth, it had a king whose power extended to all the cities and villages of the region. Samson, to escape from the hands of the Philistines, bore the gates of the city away on his shoulders during the night to the neighboring mountain (Judges xvi, 3); it was at Gaza that, blind and a prisoner of the Philistines, he met the woman who became his wife and his enemies (Judges xvi, 21-30). Dagon was not the special deity of Gaza. He is to be met with also at Ascalon, Azotus, and the other Philistine cities to which the term "Beth-dagon" is applied. To a certain extent the Philistines had transformed into a national deity this god of Assyrian origin, a monster having in part the shape of a fish, in part also the form of a man. The Israelites, who had captured Gaza shortly before the time of Samson (Judges i, 18), were still in possession of it in the time of Solomon (I Kings, iv, 24). It is probable, however, that at this later date the city merely paid tribute, retaining its autonomy.

The people of Gaza continued to manifest their hatred for the Jews, and carried on a brisk commerce in Jewish slaves (Amos, i, 6), which drew upon them the terrible maledictions of the prophets of Israel (Amos, i, 6-7; Zach., ix, 5; Jer., xxx, 26; xxxvii, 6). The king of Gaza, in common with most of those of Assyria or Chaldea engaged in their long and eventful struggle for the domination of Asia and world-supremacy. Being on the great highway of the conquering armies, Gaza was destined to special suffering. About 734 B.C., Thelathaphallas III, king of Assyria, annihilated only one city, the city of Gaza, who had joined Rasin and Pachee, Kings of Syria and Israel, in revolt against the Assyrian monarch. On the approach of the Assyrian army Hanon fled to Egypt and the city was taken and sacked. But the victors had scarcely departed when Hanon returned to Gaza; and in 720 we find him on the battlefield of Raphia, among the allies of Pharaoh Shabaka, where he was defeated and taken prisoner. Shortly after this the Philistines of Gaza were defeated by Eschinas, King of Judah (IV Kings, xviii, 8), and were forced to revolt with him against the Assyrians; the latter, however, returned and again compelled the Philistines to submit. Asarhaddon and Asurbanipal numbered among their tributaries Telibel, King of Gaza. When the Assyrian empire had been destroyed Egypt sought to enrich itself from the spoils, and Pharao Nehbo II captured Gaza (Jer., xlvii, 1; Jerobodus II, clx) on his way towards Carchemish, where he was defeated by the Babylonians, and was driven from the island of Nabuchodonosor (Nebuchadnezzar), took the offensive and recaptured Gaza. The city was especially ill-treated, and had afterwards to pay tribute to King Nabonides for the building of the great temple of Sin at Haran. Later the Babylonians gave way to the Persians. Cambyses, on the occasion of his expedition to Egypt in 525, besieged Gaza, which alone of its cities submitted, nevertheless, and under the Persian domination, according to Herodotus (III, xv), who compares it to Sardis, one of the most beautiful cities of Asia, it enjoyed great prosperity. The people of Gaza, who seem to have been very courageous and very loyal to their masters, were permitted to open the gates of the army of Alexander the Great (332). He was forced to begin a regular siege, which lasted two months and cost him many men. After storming the city, Alexander laid waste to Gaza, put the men to the sword, and sold the women and children into slavery. He afterwards allowed the place to be re-populated; but the new settlers were a drab stock from the old inhabitants. The Philistine stronghold made way for an Hellenic city (Diodorus Siculus, XVII, xlviii, 7; Arrian, II, xxxvi; Quintus Curtius, IV, xxxiii). Henceforth there is little peace for Gaza. For several centuries it was the battlefield for Egyptian, Syrian, and Jewish armies. It was taken three times by Ptolemy I, King of Egypt (320, 312, and 302 B.C.), and twice by Antigonus (315 and 306). Finally it fell to the Lagidae, who retained it for almost a century. In 219 Antiochus of Syria took possession of it, and organized there the invasion of Judea; but he was forced to flee by Roman intervention, and was compelled to abandon his conquest to the Egyptians. In 198 he again took Gaza, routed the Egyptians in the following year, and this time was able to retain his conquest. Jonathan Machabees appeared with his army before Gaza, which refused to open its gates; so the suburbs were burnt, and the inhabitants compelled to give hostages, 145-146 B.C. (i Mach., xi, 60-62).

Alexander Janneus besieged the city for a whole year (98) and finally captured it through treachery, sacked it and slew a large number of the inhabitants (Josephus, "Ant. Jud.", XIII, xiii, 5; "Bel. Jud.", I, iv, 2). It was rebuilt later by Pompey and by Gabinius (Josephus, "Ant. Jud.", XIV, iv, 4; Appian, "Syria.", 51). Anthony ceded to Cleopatra the whole of the Mediterranean coast between Egypt and Phenicia, and Augustus gave Gaza to Herod the Great (30 B.C.). At Herod's death it became subject to the governor of Syria. In A.D. 60 the province of the island of Gaza, which was of course soon recaptured by the Romans (Josephus, "Bel. Jud.", II, xviii, 1). The era of Gaza, found on its coins and on numerous pagan and Christian inscriptions, dates from a journey of Pompey through Palestine, 28 October, 61 B.C. Gaza is mentioned in the Book of Judges, as the capital of the tribe of Dan (Judges xiv, viii, 26), in connexion with the route followed by the eunuch of Queen Candace. The Hellenistic city had transformed its Oriental deities into Graeco-Roman gods, and was long hostile to Christianity, which as late as the first quarter of the fourth century had scarcely secured a foothold there. It is true that Philemon, to whom St. Paul addressed an epistle, is spoken of as its first bishop; but this is merely an unreliable tradition. St. Sylvanus, its first bishop, martyred (310) at the mines of Pheno, is called "bishop of the churches about Gaza" (Eusebius, "Hist. Eccl.", VIII, xiii, "De Mart. Pal.", xiii, iv); Asclepas, his successor, is also called "bishop of the churches about Gaza". He assisted at the Council of Nicea in 325, and was one of the Catholic bishops most feared by the Arians. He is always found among those who suffered the most severely in the Arian conflict, with men like St. Athanasius, Marcellus of Ancyra, and others. For example, in 217, and others.

Constantine the Great forcibly introduced Christianity into Gaza, but such was the hostility of the pagan population that Bishop Asclepas deemed it prudent to build the church outside the city. Near the church, but likewise without the walls, arose later
the oratory of the martyr St. Timothy; in the same place were relics of the martyrs St. Major and St. Thea. Christianity, however, spread especially in the port of Gaza, between two and three miles from the city and owing dependence to it. The citizens of the port obtained from Constantine the privilege of municipal independence for their city, under the name of Constancia, with the right to have its own bishops. When, later, Julian the Apostate withdrew its civil rights from its inhabitants, the most famous of whom were Peter the Iberian, a Monophysite ascetic, and St. Cosmas, foster brother and friend of St. John Damascene. In the neighbouring cities, e.g. Anthedon, Bethelia, and Menoil, Christianity was also introduced with difficulty by Eusebius, Nestabos, and Zeno, were put to death at Gaza by the populace. St. Hilarion, born in the neighbouring Thabatha, a small village, was compelled to flee to Sicily to escape persecution by the pagans (Soros., Hist. Eccl., V, ix; Greg. Naz., "Invent. I in Jul.", 66-67). The first church built in Gaza itself was the work of St. Irenon (d. 393) whose feast is 16 December. He was succeeded by Eneas, and later by St. Porphyry (395-420), the true restorer of Christianity in Gaza. This holy bishop first sent Marcus, his deacon and historian, to Constantinople to obtain a charter to close the pagan temples. He then intensely numbered 200 in Gaza; though the rest of the empire was gradually abandoning its idols, Gaza was stubborn in its opposition to Christianity. The decree was granted by the emperor, and the temples closed, with the exception of the Maeronian, the temple sacred to Zeus Marmas, which had replaced that of Dagon. There was no great change, however, in the sentiments of the people; so St. Porphyry decided to strike a decisive blow. He went himself to Constantinople during the winter of 401-402 and obtained from Arcadius a decree for the destruction of the pagan temples, which Cynegius, a special imperial envoy, executed in May, 402. Eight temples, those of Aphrodite, Hecate, the Sun, Apollo, Core, Fortune, the Herocion, and even the Maeronian, were either pulled down or burnt. Simultaneously soldiers visited every house, seizing and burning the idols and books of magic. On the ruins of the Maeronian, he ordered the enormous large church called the Eudoxiana in her honour, and dedicated 14 April, 407. Paganism had thus ceased to exist officially.

Gaza, now a Christian city, became rich and prosperous; and during the fifth and sixth centuries was the seat of a famous school of Christian rhetoricians. His Excellency of the Copts recognizes as sainte many religious of Gaza, e.g. Dorotheus, Dosithes, Baranap sustaining, and John the Prophet; the Monophysite monks were also, for a time, actively engaged in its environs. At the Arab invasion, about 637, the city fell before General Amr. The Eudoxiana was converted into a mosque, and the Roman garrison, consisting of sixty soldiers under the command of Caliniclus, having refused to apostatize, was slain at the Euphrates, and Jerusalem ("Analecta Bollandiana", XXIII, 280-307; "Echos de Orient", VIII, 1905, 40-43). The Arabs venerate the city as the burial-place of Hachem, the grandfather of Mahomet. When the Crusaders came, Gaza was almost in ruins; owing, however, to its situation on the way from Egypt to Syria, it soon regained prosperity. Baldwin III built a fortress there (1149) and confided it to the Templars. Saladin pillaged the city in 1170, but the fort remained until 1187. Richard the Lionhearted held it for a brief time. In 1244 the combined forces of Christians and Saracens were defeated by the Khazarians. The Turks finally took Gaza in 1516; and in 1799 Bonaparte held it for a few days. It is now known as Ghazzeh, and is a kaimakamat in the sandjak of Jerusalem. It numbers over 40,000 inhabitants, nearly all Musulmans. There are 1,500 Greek schools, 150 Moslem and 150 Catholics. The latter have a Catholic pastor under the Patriarch of Jerusalem. The Greek Church contains the tomb of St. Porphyry. Mosques are very numerous, among the most remarkable being Djamia-el-Kebr, the ancient cathedral of the crusaders, dedicated to St. John the Baptist; also Noemin Moskam, in the town itself. It is the tomb of the great father of Mahomet. The city is unclean, and its streets narrow and crooked. But seen from a distance, amid its surrounding vegetation, it appears magnificent. The entire district is well irrigated and cultivated; the soil is extremely rich, and the trade of the city rather prosperous. "Commentaria in Epistolae S. Pauli" (Leipzig, 1895); Sibbe, "De Gaza Palatinis oppido ejusque episcopio" (Leipzig, 1715); La Quenin, "Græcia Christiana", II, 410-422; Scharf, "Gaza und die philistinische Küste" (Jena, 1855); Seiffert, "Die Schule von Gaza" (Heidelberg, 1892); Roussea, "Travaux de Gaza" (Paris, 1893); Schille, "Der Kalender und die Aera von Gaza" (Berlin, 1896); Gatt in Via., Dict. de la Bible, s. v.

Gebhard, See Gellians.

GEBHARD

(III) of Constance, bishop of that city, and strenuous defender of papal rights against imperial encroachments during the Investitures conflict; b. about 1040; d. 12 November 1100. He was a son of Duke Bertold I and a brother of Bertold II, of Zähringen. For some time he was prostrate at Xanten, then entered the Benedictine monastery at Hirschau and on 22 December, 1084, was consecrated Bishop of Constance by the cardinal-legate, Otto of Ostia, the future Urban II. The see of Constance was then occupied by the imperial anti-Bishop Otto I, who, though excommunicated and deposed by Gregory VII in 1080, retained his see by force of arms. At an imperial synod held at Mainz, in April, 1085, Gebhard and fourteen other German bishops who remained faithful to Gregory were excommunicated. Otto I was deposed, and the lawful Bishop of Constance. Luckily, Otto I died in the beginning of 1086, and Gebhard was able to take possession of his see. One of his first acts as bishop was the reform of the Benedictine monastery of Petershausen near Constance, which he recruited with monks from Hirschau. In 1089 he consecrated the new cathedral of Constance, to replace the old one which had fallen into ruins in 1052.

On 18 April, 1089, Pope Urban II appointed him and Bishop Altmann of Passau, Apostolic vicars for Germany. Arnold, a monk of St. Gall, whom Henry IV had appointed anti-Bishop of Constance on 29 March, 1089, was deposed and Gebhard from the direction of Constance. The latter had powerful friends in his brother Bertold II, Duke Welf IV, the monks of Hirschau and Petershausen, and the citizens of Constance. In 1094 Gebhard held a synod of reform at Constance, and in 1095 he attended the Synod of Piacenza. Soon, however, the influence of Henry IV began to increase in Germany. In 1103 Gebhard was driven from his see, and the imperial anti-bishop, Arnold, usurped the bishopric. With the assistance of Henry V, Gebhard regained his see in 1105, freed the king from the ban by order of Paschal II, and accompanied him on his journey to Saxony. Gebhard attended the Synod of Nordhausen on 27 May, 1105, the diet at Mainz on Christmas, 1105, was sent as imperial legate to Rome in the spring of 1106, and was present at the Council of Guastalla in October of the same year. In the fresh dispute that arose between Paschal II and Henry V, Gebhard seemed to stand with the emperor, but, after being severely reprimanded by the pope, withdrew from public life and devoted his whole attention to the welfare of his diocese.

Deutsche u. Neugart, Episcopatus Constantiensis (St. Blasien, 1803), I, 467-502.

MICHAEL OTT.

GEBHARD, EMILE, a French professor and writer, b. 19 July, 1839, at Nancy; d. 22 April, 1908, in Paris. He was the grand-nephew of General Drouet, one of the heroes of the French revolution, and the first to have the honor of the title of 'Colonel' bestowed upon him. HAVING finished his studies in the Lycée of Nancy, he was admitted to the Ecole Francaise of Athens, where he imbibed the Hellenic spirit and gathered a rich harvest of facts and anecdotes for his future works. When he returned to France he was sent to the Lycée of Nancy and soon after appointed professor of modern letters at the University of Nancy. He was so successful that a chair of Southern European literatures was instituted specially for him at the Sorbonne, in 1880. For the twenty-six years during which he held that position, he was the most popular professor in the Sorbonne, his course of lectures being always attended by both students of men and women of the world. In 1895 he was elected to the Academy of Moral and Political Sciences, and in 1905 to the French Academy. He was fond of travelling, and every summer, for twenty-five years, he spent three months in Italy, visiting Rome, Milan, Florence, Venice, seeking rare and antique books in libraries, staying in monasteries and talking with the monks, and gathering information concerning popular legends from the common people on the streets and in the cottages of the poor. All the materials so collected were afterwards used in his books. His favourite subjects were Greek antiquity and the Italian Renaissance, in which he explored the monasteries and talked with monks in a masterly manner, showing a thorough but unpretentious knowledge. His style is clear, slightly sarcastic at times, but extremely agreeable. His principal works are: "Praxitèle" (1864), "La Renaissance et la Réforme" (1877), "Les Origines de la Renaissance en Italie" (1879), "L'Italie mystique" (1880), "Le secours des Cloches, contes et légendes" (1888), "Mémoires et Papiers" (1896), "Autour d'une table" (1894), "Cloches de Noël et de Pâques" (1900), "Comtes et contes du moyen-âge" (1901), "Jules II" (1904), "Florence" (1906). The last days of his life were dimmed by sadness. As he had always been fond of mysticism, which he held to be all classical in his faith, and as he disliked the rationalistic doctrines of the time, the attacks of the Radicals on his religious and patriotic ideals wounded him deeply.

Louis N. Delamarre.

Gedeon [GIDEON (Heb. גִּדֵּה, "hewer")], also called Jerobaal ( Judges, vi, 32; vii, 1; etc.), and Jerobebeth (II Kings, xi, 21, in the Hebrew text), was one of the judges of Israel. He belonged to the tribe of Manasses, and to the family of Abinadab (Judges, vi, 34). Gedeon's father was Joas, and lived in Ephra ( Judges, vi, 11). The following is in substance the account of Gedeon's judgship as related in Judges vii-viii: Israel, having forsaken Yahweh's worship, had been for seven years exceedingly humbled by the inroads of the Midianites and other Eastern tribes. At length, they turned to God who sent them a deliverer in the person of Gedeon. In a first theophany, granted him by day while he was threshing wheat, Gedeon received the difficult mission of freeing his people; whereupon he built an altar to the Lord ( Judges, vi, 24). In a second theophany during the following night, he was directed to destroy the village-altar to Baal, and to erect one to Yahweh. This he did with the result that the people clamoured for his death to avenge his insult to their false god. Joas, however, saved his son's life by the witty taunt, which secured for the latter the name of Jerobaal: "Let Baal revenge himself!" (vi, 25-32). Thus divinely commissioned, Gedeon naturally took the lead against Midian, and Amalek, and other Eastern tribes who had crossed the Jordan, and encamped in the valley of Jericho. Comported by the famous signs of the fleece wet by dew but dry by heat, and the shaking ears of grain at Joha, Gedeon dismissed his officers of war, Aser, Zabulon, and Naphtali, he took up his position not far from the enemy. But it was God's intention to show that it was His power which delivered Israel, and hence He reduced Gedeon's army from 32,000 to 300 (vii, 1-8). According to a divine direction, the Hebrew commander paid a night visit to the enemy's camp and overheard the telling of a dream which prompted him to act at once, certain of victory (vii, 9-15). He then supplied his men with trumpets and with torches enclosed in jars, which, after his example, they broke, crying out: "The sword of Yahweh and not of Gedeon." Panic seized the sudden appearance of his foes, and Israel's enemies turned their arms against one another, and broke up in flight towards the fords of the Jordan (vii, 16-23). But, summoned by Gedeon, the Ephraimites cut off the Midianites at the fords, and
captured and slew two of their princes, Oreb and Zeb, whose heads they sent to the Hebrew leader, rebuking him at the same time for not having called earlier upon their assistance. Gedeon appeased them by an Eastern proverb, and pursued the enemy beyond the Jordan. Pursued by the men of Zaccoth and Phanuel on his way, and finally put to death Zeeb and Salmana (viii. 10-21). Grateful for this glorious deliverance, Gedeon's countrymen offered him the dignity of an hereditary king, which he declined with these noble words: "I will not rule over you, neither shall my son rule over you, but Yahweh shall rule over you" (viii. 22-23). He nevertheless asked and obtained from his soldiers the golden rings and other ornaments which they had taken from the enemy; and out of this spoil he made what seems to have soon become an object of idolatrous worship in Israel. Gedeon's peaceful judgeship lasted forty years. He died of natural causes in his old age, and was buried in the sepulchre of his father in Ephraim (viii. 24-32). His victory is alluded to in Isaiah, x. 26, and in Ps., lxxxi, 12 (Heb. lxxxiii, 11), where the whole number mentioned in Judges, vii, viii, are distinctly named—a fact which shows that, at the time when this psalm was composed, the narrative of Gedeon's exploits was commonly known in its present form. The various literary features exhibited by the text of Judges, vi-viii., have been minutely examined and differently appreciated by recent scholars. Several commentators look upon these features—such for instance as the two names, Gedeon and Jeroabael; the two theophanies bearing on Gedeon's call; the apparently twofold narrative of Gedeon's pursuit of the routed enemies, etc.—as proving conclusively the composite origin of the sacred record of Gedeon's judgeship. Others, on the contrary, see their way to reconcile all such features of the text with the literary unity of Judges, vi-viii. However this may be, one thing remains perfectly sure, to wit, that whatever may be the documents which have been utilized in framing the narrative of Gedeon's exploits, they agree substantially in their description of the words and deeds of this Master Judge of Israel.

Catholic commentators from the 16th century by Claire (Paris, 1880); von Hümmler (Paris, 1888); Labouze (Paris, 1865); von Maculay (New York, 1885); Moullonde (Freiburg im Breisgau, 1897); Nowack (Göttingen, 1900).

Francis E. Gigot.

Gédoy, Nicolas, a French translator and literary critic; b. at Orleans, 17 June, 1667; d. 10 August, 1744, at Port-Pertuis, near Beaupré. After studying in the College of the Jesuits, he entered their novitiate in 1684, becoming later professor of rhetoric at Blois. Ill-health, afterwards, obliged him to resign this position, and leave the Society of Jesus, for which, however, retaining his affection. A connected with the Sainte-Chapelle (Paris) and two abbeys gave him the means of devoting himself to educational works. In 1711, he was elected to membership in the Académie des Inscriptions et Belles-Lettres, and in 1718 his free translation and adaptation of Quintilian, containing many allusions to contemporaries, was the occasion of his election to the Académie. He also translated Pauwensia (1731), and wrote "Réflexions sur le goût", published by d' Olivet in "Recueil d'opuscules littéraires" (Amsterdam, 1677). Several other memoirs and essays were collected under the title of "Œuvres diverses de M. Gédoy" (Paris, 1758), in which he maintained a life of Epaminondas, an apology for translations, essays on the education of children, Roman urbanity, the ancients and the moderns, etc. In education, Gédoy is an advocate of progress, and deplores the routine and the tradition which make parents and educators conform blindly to received methods and usages without realizing that circumstances change and that methods of education should be adapted and modified in consequence. By Socinians, he opposed education: knowledge, virtue and good manners; the constant endeavour of the master should be to develop these in his pupils. Since money spent by parents for the education of their children is an invested capital of the greatest importance, great care should be taken in the selection of tutors to complete education: knowledge, virtue and good manners. C. A. Dubray.

Gegenbauer, Josef Anton von, an accomplished German historical and portrait painter, b. 6 March, 1800, at Wangen, Württemberg; d. 31 January, 1876, at Rome. He studied first at the Royal Academy in Munich under Robert von Langer, remaining in that city from 1815 to 1823. Among his productions there were two idyllic works which were much admired, a "Madonna and Child" and a "Madonna and Child" altar-piece for his native town. In 1823 the painter went to Rome, where he remained until 1826, studying especially the works of Raphael. He became notably successful as a fresco painter, and, on his return to Württemberg, the king made him court painter and commissioned him to decorate the Erzählfassung of Rosenstein. In 1829 Gegenbauer went again to Rome and worked on frescoes. During his later residence at Stuttgart he was employed from 1836 to 1854 in decorating the Royal Palace with sixteen scenes in fresco from the history of Württemberg. These include incidents in the life of Count Eberhard of Württemberg. In the same building, he painted his oil paintings, among them being "Two Shepherds", "Adam and Eve after their Expulsion from Eden", and "Moses Striking the Rock". In the Stuttgart Gallery is also his "Hercules and Omphale". His other paintings in oil, ranging in date from 1829 to 1860 include many on mythological subjects: "Sleeping Venus and Two Satyrs", "Leda and the Swan", "Apollo and the Muses", "Bacchus and Ariadne", "Venus and Cupid", "Ceres and Jason", "Æolus and Eolus", "Pluto and Proserpine", "Neptune and Theis", several Genii and Amorettes, and some portraits. Among Gegenbauer's frescoes, in addition to those already mentioned, are "Jupiter giving Immortality to Psyche", "The Marriage of Cupid and Psyche", four scenes from the life of Psyche, "The Four Seasons", an "Aurora"—all at the Villa Rosenstein. In addition to these works, we may mention, as well as various Madonnas, "The Ascension of the Virgin", "The Crucifixion", the "Hercules and Omphale", the last in the Thorwaldsen Museum at Copenhagen.

Gehenna. See Hell.

Geller von Kaysersberg, Johann, a celebrated German pulpit orator, b. at Schaffhausen, Switzerland, 16 March, 1445; d. at Strasburg, 10 March, 1510. Until a scientific presentation of the history of the development of the Catholic sermon appears, an appreciation of even the most important aspects of this, although based on careful investigation, can only be a preliminary labour, for the picture, however elaborate, will lack the proper background. This is true in the case of the celebrated medieval preacher to the common people, Berthold of Ratisbon, and it applies no less to the greatest pulpit orator of the 15th century, Geller von Kaysersberg. More fortunate is the treatment of the subject in its relations to purely literary history, for the importance of Geller in literature can
be exactly determined. According to this history he was closely connected with those humanists of Strasburg of whom the leader was the well-known Jacob Wimpeling (1450–1528), called "the educator of Germany". Like Wimpeling, Geiler was a secular priest; both fought the ecclesiastical abuses of the age, but not in the spirit of Luther and his adherents. They looked, instead, for salvation and preservation only in the restoration of Christian morals in Church and State through the faithful maintenance of the doctrines of the Church. The scene of Wimpeling’s fruitful labours was the school, that of Geiler’s the pulpit.

The surname "von Katnersberg", given to Geiler by his contemporaries, was taken from the name of the place where his grandfather, Johann Geiler von Katnersberg, lived. The father was killed by a hunting-accident when Geiler was three years old; and the excellent grandfather, who lived in Katnersberg, took charge of the education of the child, sending him to school at Ammersweiler, near Kayserberg in Alsace, when he was eight years old. When the talented boy was fifteen years old he went to the University of Freiburg in the Breisgau, which had just been opened; two years later he received the baccalaureate, and after two more years was made master of arts. He now gave lectures on various writings of Aristotle in the next semester, and in the following half-year filled the office of dean of the philosophical faculty for a brief period. In May, 1471, he went to the University of Basle, founded but a short time before, in order to study theology, and obtained the doctorate in 1475. At Basle he became acquainted with Sebastian Brant, with whom he formed a lasting friendship. While at Basle, Geiler preached his first sermons in the cathedral and greatly enjoyed his public labours; the latter, however, caused him many difficulties of conscience. Basle, nevertheless, was not to be the place where his powers were to find their permanent employment.

At the entreaty of the students of Freiburg, the magistracy and citizens of that city obtained his appointment to the Freiburg University, of which he was elected rector the next year. But lecturing to students was not congenial to him; his inclinations was always for preaching, and in this latter office his talents found a life-work suited to them. For a time he preached in the cathedral of Würzburg, in which city he thought of making his permanent home, but a fortunate accident changed his plans. Peter Schott, senator of Strasburg, an important and influential citizen who had charge of the property of the cathedral, urged strongly upon Geiler, now a well-known preacher, that his first duty was to the people of Alsace; accordingly Geiler resolved, notwithstanding the entreaties of the citizens of Würzburg, to settle in Strasburg, and pursuant to this decision he remained there the rest of his life.

Before this date the mendicant orders had supplied the pulpit of the cathedral of Strasburg. On account, however, of the frequent change of preachers and, above all, owing to some friction between the mendicants and the parish priests, the cathedral chapter, together with the bishop and the city authorities, desired to have a secular priest appointed to fill the vacancy permanently. Consequently a special position as preacher was made for Geiler, and he filled this appointment with apostolic courage and intense zeal for souls for over thirty years. He not only preached, as required, every Sunday and feast day in the cathedral, and even daily during fasts, but also, on special occasions, in the monasteries of the city and often outside of the city. His daily life, passed in this simple round of duties, was only broken by occasional short journeys for which he apparently used his monthly holiday. Thus he frequently visited Frederick of Zollern, Bishop of Augsburg, who was very friendly to him; once he was called to Füssen on the River Lech by his special patron the Emperor Maximilian, who desired his advice. He seems to have taken his short intervals of rest, when possible, for making pious pilgrimages, generally in the vicinity of his home, sometimes to distant spots. At Einsiedeln in Switzerland he met the Blessed Nikolaus of Flue, who was even then well known; another time he journeyed to Sainte-Baume, near Marseilles, in order to pray in the grotto of St. Mary Magdalene. At home he lived very plainly, even austerely. It was only natural that a life of such incessant labour, in which his energies were constantly exerted to the utmost and none of the comforts of ease were enjoyed, should soon wear out the bodily frame. A kidney trouble developed, to relieve which he was obliged to visit annually the hot springs of Baden; droopy finally appeared, and he passed away on Lactare Sunday of the year above mentioned. The next day, in the presence of an immense multitude of people, he was buried at the foot of the pulpit which had been especially built for him, and of which he had been for so many years the greatest ornament.

The numerous volumes of Geiler’s sermons and writings which have been published do not give a complete picture of the characteristic qualities of the preacher. God’s grace had made Geiler an orator, and the aim Geiler sought, without regard to other considerations, was to produce the most powerful effect on his hearers. He prepared himself with great care for the pulpit, and in no case was his preparation slighter than in his practical hand, as his contemporary Beatus Rhenanus reports; these preparatory compositions, however, were drawn up, not in German, but in Latin. Only a very small part of the sermons that have been issued under his name are directly his. At a very early date his addresses were taken over by other preachers. The best critic of Geiler’s works, the well-known writer on literary history, Prof. E. Martin of Strasburg, has made the attempt, in the "Allgemeine deutsche Biographie", to give a summary of Geiler’s genuine writings; according to him the authenticated writings number thirty-five. Notwithstanding this rich material, a proper appreciation of the extraordinary preacher is very difficult, because it is not certain that any of the extant works give exactly what Geiler said. One thing, however, is evident from them, that the Strasburg preacher was a widely read man not only in theology, but also in the secular literature of the day. This is shown by the sermons having Sebastian Brant’s “Ship of Fools”, which appeared in 1494, for their theme; these sermons attained the greatest popularity. Geiler displayed, also, exceptional facility in using public events to attract and hold the attention of his hearers. In originality of speech Geiler is in form, as in time, between Berthold of Ratibor and Abraham a Sancta Clara, and perhaps the shortest and best characterization of the greatest preacher of the early Reformation period is indicated by this intermediate position; Berthold’s homeliness of address showed only occasional lapses from the proprieties of
speech, Geisel yielded oftener to the coarseness of his age, Abraham exceeded his contemporaries in unfortunate errors as to form and content.

According to the testimony of contemporaries, the effect of Geisel’s forcible and unusual sermons was at times very marked; but the decay of morals was by now too great for them to have a permanent effect. Geisel was more religiously inclined, but his absence from public affairs was more pernicious.

One of the foremost German bishops of the nineteenth century. His services in behalf of the Catholic Church in Prussia and throughout Germany are of permanent value. Discretion and a sense of justice on the part of the government of Frederick William IV made it possible for the cardinal to regulate and ameliorate the conditions of the archdiocese in harmony with the necessities of the State. He ended the religious persecutions created by the Hermesian school by suspending the refractory Hermesian professors Braun and Achtterfeld of Bonn; and he reorganized the theological faculty of that university by calling in as professors Dieringer and Martin, men of unsuspected orthodoxy. He led the way to the revival of Catholicism in Prussia and established two seminaries for boys at Neusse and Münsterfelde. To instill new zeal into the spiritual life of his people he encouraged popular missions, introduced religious orders and congregations into the archdiocese, instituted the Perpetual Adoration, and stimulated devotion to the Blessed Virgin by celebrating with unusual splendour the declaration of the dogma of the Immaculate Conception. Of still greater importance for the Church in Germany was his convocation of the German episcopate to a meeting at Würzburg, 1848. The result of this meeting of the hierarchy was a number of decrees for the future prosperity of the Church. In 1860 he held a provincial council at Cologne. Another matter which the cardinal had at heart during his life, was the completion of Cologne cathedral, the preparations for which had commenced in 1842. Geisel lived long enough to see the edifice completed and dedicated in October, 1863.

In the years preceding his elevation to the episcopal dignity, Geisel also displayed notable literary activity. During the first two decades of its existence (1821–37) he contributed numerous anonymous essays of either serious or humorously-satirical character on questions and occurrences of the day to the "Katholik" and became one of the foremost contributors to that periodical. His unusual poetical talent is shown by a number of poems, mostly of a religious character, and published partly in that periodical, partly issued singly, as the occasion offered. After his death there appeared a special edition of his "Festgesicht auf die Grundsteinlegung zum Fortbau des Kölner Doms" (Cologne, 1865), his best most marked effort as a writer is his historical work, "Der Käiser—Dom zu Speyer. Eine topographisch-historische Monographie" (3 vols., Mainz, 1828); 2nd ed. in one volume, as von V of his "Sehnsucht der Kölner" He was called the "Kaiserdom zu Speyer." Other historical writings of less significance are: "Der Kirchensprengel des alten Bisthum Speyer" (Speyer, 1832); "Die Schlußlamt am Hasenbüdl und das Königsreiter zu Gölheim" (Speyer, 1835). Of other separate writings are to be mentioned "Sammlung aller Gesetze und Verordnungen über das Kirchen- und Schulwesen im bayerischen Rheinkreise vom Jahre 1796–1830" (Speyer, 1830); "Die religiöse Erziehung der Kinder aus gemischten Ehen. Eine geschichtlichen-rechtliche Erörterung" (Speyer, 1837); first published in the "Katholik," vols. LXIII, LXIV (1837). His pastoral letters, memoirs and addresses, composed by him during his episcopacy, show a great mind and heart. They have been collected with other dispersed and minor writings of earlier days, and various poems, in "Schriften und Reden von Johannes Cardinal von Geisel, Erzbischof von Köln, herausgegeben von Karl Theodor Dumont" (Vols. I–III, Cologne, 1869–70). The last mentioned, added, "Der Kaiserdom zu Speyer," 2nd ed. (1876).

REBLING, Cardinal von Geisel, Bischof zu Speyer and Erzbischof zu Köln, im Leben und Wirken (Speyer, 1873); BAUER, Der Erzbischof von Köln, Johannes Cardinal von Geisel (Colonne, 1881); PETERS, Cardinal von Geisel, Aus seinem handeislichen und Nachlass geschriebene (Munich, 1896); DUMONT, Diplomatique Correspondance über die Berufung des Bischofes Johannes von Geisel von Speyer zum Coedjutor des Erzbischofes Clemens August Freiherr von Droste zu Vischerking.
GELASIUS

FRIEDRICH LAUCHERT.

GELASIUS I, SAINT, POPE; d. at Rome, 19 Nov., 496. Gelasius, as he himself states in his letter to the Emperor Anastasius (Ep. xi, n. 1), was Romanus natus. The assertion of the Liber Pontificalis that he was natione Afer, consequently taken by many to mean that he was of African origin, though Roman born. Others, however, interpreting natione Afer as "African by birth," explain Romanus natus as "born a Roman citizen." Before his election as pope, 1 March, 492, Gelasius had been much employed by his predecessor, Felix II (111), especially in drafting ecclesiastical documents, which has led some scholars to confuse the writings of the two pontiffs.

On his election to the papacy, Gelasius at once showed his strength of character and his lofty conception of his position by his firmness in dealing with the adherents of Acacius (see Acacius, Patriarch of Constantinople). Despite the efforts of the otherwise orthodox patriarch, Euphemius of Constantinople (q. v.), and the threats and wiles by which the Emperor Anastasius tried to obtain recognition from the Apostolic See, Gelasius, though hard-pressed by difficulties at home, would make no peace that compromised or impaired the rights and privileges of the Chair of Peter. The constancy with which he combated the pretensions, lay and ecclesiastical, of the New Rome; the resolution with which he refused to allow the civil or temporal pre-eminence of a city to determine its ecclesiastical rank; the unfailing courage with which he defended the rights of the "second" and the "third" sees, Alexandria and Antioch, are some of the most striking features of his pontificate.

It has been well said that nowhere at this period can be found stronger arguments for the primacy of Peter's See than in the works and writings of Gelasius. He is never tired of repeating that Rome owes its ecclesiastical præcedent not to an ocumenical synod nor to any temporal importance it may have possessed, but to the Divine institution of Christ Himself, Who conferred the primacy over the whole Church upon Peter and his successors. (Cf. especially his letters to Eastern bishops, in the Syriac and Armenian manuscripts.) In his dealing with the emperor he is at one with the great medieval pontiffs. "There are two powers by which chiefly this world is ruled: the sacred authority of the priesthood and the authority of kings. And of these the authority of the priest is so much the weightier, as they must render before the tribunal of God an account even for the kings of men." Gelasius's pontificate was too short to effect the complete submission and reconciliation of the ambitious Church of Byzantium. Not until Hormisdas (514–23) did the contest end in the return of the East to its old allegiance. Troubles increased with the only occasional efforts to draw the energy and strength of Gelasius. The Lupercalia, a superstitious and somewhat licentious vestige of paganism at Rome, was finally abolished by the pope after a long contest. Gelasius's letter to Andromachus, the senator, covers the main lines of the controversy.

If, adhering to the old traditions, Gelasius nevertheless knew when to make exceptions or modifications, such as his decree obliging the reception of the Holy Eucharist under both kinds. This was done as the only effective way of detecting the Manichæans, who, though present in Rome in large numbers, sought to divert attention from their hidden prophecies by feigning Catholicism. As they held wine to be impure and essentially sinful, they would refuse the chalice and thus be recognized. Later, with the change of conditions, the old normal method of receiving Holy Communion under the form of bread alone reappeared in vogue. To Gelasius we owe the ordinance on the ember days (Ep. xiv), as well as the enforcement of the fourfold division of all ecclesiastical revenues, whether income from estates or voluntary donations of the faithful, one portion for the poor, another for the support of the churches and the splendid Divine service, a third for the bishop, and the fourth for the minor orders. Some have ascribed the origin of this division of church funds to Gelasius, still the pontiff speaks of it (Ep. xiv, n. 27) as dudum rationabiliter decreatum, having been for some time in force. Indeed, Pope Simplicius (475, Ep. i, n. 2) imposed the obligation of restitution to the poor and the Church upon a certain bishop who had failed in this duty; whether this had been already regarded as at least a custom of the Church. Not content with one enunciation of this charitable obligation, Gelasius frequently inculcates it in his writings to bishops. For a long time the fixing of the Canon of the Scriptures was attributed to Gelasius, but it seems now more probably the work of Damasus (367–85). As Gelasius, however, in a Roman synod (494), published his celebrated catalogue of the authentic writings of the Fathers, together with a list of apocryphal and interpolated works, as well as the proscribed books of the heretics (Ep. xiii), it was but natural to prefix to this catalogue the list of the Scriptures as determined by the earlier pontiff, and thus in the course of time the Canon itself came to be ascribed to Gelasius. In his zeal for the beauty and majesty of Divine service, Gelasius composed many hymns, psalms, and canons, and arranged a standard Missal-book, though the Missal that has commonly gone by his name, the "Sacramentarium Gelasiianum," belongs properly to the next century. How much of it is the work of Gelasius is still a moot question. Though pope but for four years and a half, he exerted a deep influence on the development of church polity, of the liturgy and ecclesiastical discipline. A large number of his decrees have been incorporated into the Canon Law.

In his private life Gelasius was above all conspicuous for his spirit of prayer, penance, and study. He took great delight in the company of monks, and was a true father to the poor, dying quietly, as the result of a lavish charity. Dionysius Exiguus in a letter to his friend, the priest Julian (P. L., LXVII, 231), gives a glowing account of Gelasius as he appeared to his contemporaries.

As a writer Gelasius takes high rank for his period. His style is vigorous and elegant, though occasionally obscure. Comparatively little of his letters has come down to us, though he is said to have been the most prolific writer of all the pontiffs of the first five centuries. There are extant forty-two letters and fragments of forty-nine others, besides six treatises, of which three are concerned with the Acacian schism, one with the heresy of the Pelagians, another with the errors of Nestorius and Eutyches, while the sixth is directed against the senator Andromachus and the advocates of the Lupercalia. The best edition is that of Thiel.

The feast of St. Gelasius is kept on 21 Nov., the anniversary of his interment, though many writers give this as the day of his death.

JOHN F. X. MURPHY.
Gelasius II, Pope, b. at Gaeta, year unknown; elected 24 Jan., 1118; d. at Cluny, 29 Jan., 1119. No sooner had Paschal II ended his stormy pontificate, than the cardinals, knowing that the emperor, Henry V, had concerted measures with a faction of the Roman populace to force the election of a planeta, a man of his own choosing, met secretly in a Benedictine monastery on the Palatine. Having dispatched a messenger to Monte Cassino, to summon the aged chancellor, Cardinal John of Gaeta, they turned a deaf ear to his entreaties and unanimously declared him pope. He took leave fast enough from the Gaetani. Early in life he entered the monastery of Monte Cassino, where he made such progress in learning and became so proficient in Latin, that, under successive pontiffs, he held the office of chancellor of the Holy See. He was the trusted adviser of Paschal II; shared his captivity and shielded him against the zeal of those who charged the pope with heresy for having, under dire compulsion, signed the "Privilegium," which constituted the emperor lord and master of papal and episcopal elections (see Paschal II and Investitures). When the news spread that the cardinals had elected without his knowledge, and while the imperialist party broke down the doors of the monastery; and their leader, Cenzo Frangipani, seized the new pontiff by the throat, cast him to the ground, stamped on him with spurred feet, dragged him by the hair to his neighbouring castle, and threw him, loaded with chains, into a dungeon. Indignant at this brutal deed, the Romans rose in their might; and, surrounding the robber's den, demanded the instant liberation of the pontiff. Frangipani, intimidated, released the pope, threw himself at his feet, and begged and obtained absolution. A procession was formed, and amidst shouts of joy, Gelasius II (so he termed himself) was conducted to the Lateran and enthroned.

The triumph was of short duration; for, 2 March, the formidable figure of Henry V was seen in St. Peter's. As soon as he had heard of the proceedings at Rome, he left his army in Lombardy and hastened to the capital. Gelasius immediately determined upon flight. On a stormy night, the pope and his court proceeded in two galleys down the Tiber, pelted by the imperialists with stones and arrows. After several mishaps Gelasius at length reached Gaeta, where he was received by the Normans with open arms. Being once more in safety, he received suffrage of the ordination and episcopal consecration. Meanwhile, the emperor, ignoring the action of the cardinals, placed on the throne of St. Peter a senile creature of the royal power, Maurice Burdinus, Archbishop of Braga in Portugal, who had the audacity to take the venerated name of Gregory (see Gregory VIII, 1104–1118). Gelasius pronounced a solemn excommunication against both of them; and as soon as the emperor, frustrated of his prey, left Rome, he returned secretly; but soon took the resolution of taking refuge in France. He went by way of Pisa, where he consacrated its splendid marble cathedral, and Genoa. He was received with the utmost reverence. The powerful minister of Louis VI, the Abbot Suger, conducted him to the monastery of Cluny. Gelasius was perfecting plans for the convocation of a great council at Reims, when he succumbed to pleurisy, leaving the consummation of the fifty years' war for freedom to his successor, Callistus II.

Baronius and Reumont agree in pronouncing that no historical personage ever compassed so many misfortunes into the short space of a year and five days. There seems to be no reason why the Benedictine Order should not take up his case for canonisation. Benedict XIV tells us ("De Ecc. et Canon.‖, I, xli, n. 30) that the mistreatment was expected for one reason or another, it was overlooked. The life of Gelasius was written by his intimate friend, Pandulph of Pisa, an eye-witness to what he narrates; it is in Muratori, "Rer. Ital. Scrit.‖, III, 1 sqq.

arius, Ann. Eccl. ad annum, 1118, 1119; Gardiani, Vita del pontefice Gelasio II (Rome, 1682, 1681); histories of medieval Rome by Gregorovius; von Reumont.

JAMES F. LOUGHLIN.

Gelasius of Cyprus, ecclesiastical writer. He was the son of a priest of Cyprus, and wrote in Bithynia, about 475, to prove against the Euchthians, that the Nicene Fathers did not teach the planeta; a teaching imparted to them by the Syriac church. These details he gives us in his preface (Labbe, II, 117). Beyond that nothing is known about his personality. His "Syntagma" or collection of Acts of the Nicene Council, has hitherto been looked upon as the work of a sorry compiler; recent investigations, however, point to its being of some importance. It is divided into three books (Labbe, II, 117–296); bk. I treats of the Life of Constantine down to 323; bk. II of History of the Council in thirty-six chapters; of bk. III only fragments have been published. The whole of book III was discovered by Cardinal Mai in the Palatine Library, and is the same that is des-

dcribed by Oehler. The serious study of the sources of Gelasius may be said to have begun with Turner's identification of the long passages taken from Rufinus (X, 1–5) in bk. II. A complete analysis of the sources (the Hist. Eccl. of Eusebius, Rufinus (in the Greek version of Gelasius of Cesarea, d. 350), Socrates, Theodoret, "John," and Dalmatius), will be found in Löschcke, whose efforts it would appear, have restored to Gelasius a place among serious Church historians, of which he has been wrongly deprived, and have also lent weight to the hitherto generally rejected idea that there was an official record of the Acts of the Council of Nicæa; and further that it was from this record that Dalmatius derived the opening discourse of Constantine, the confession of Hosius, the dialogue with Phædo, and the nine dogmatic constitutions, which Hefele had pronounced "most certainly spurious". The "John" to whom Gelasius refers as a forerunner of Theodoret, is still unidentified; from him were de-

dived the published portions of bk. III, the letters of Constantine to Arius, to the Church of Nicomedia, and to Theodotus, all of which Löschcke contends are authentic. He also proves that a comparison of Con-

stantine's letter to the Synod of Tyre (338), as given by Gelasius and Athanasius (Apologet. n. 86), shows Gelasius to give the original, Athanasius an abbreviated version.

Text of Gelasius in Labbe-Comte, Conc., II, 117–296; Orzechowicz, in Zeitschr. f. Ethnologie, 1905, 5 vols.; Casavant, "Gelasius" (1824, IV, 432); Turner, On Gelasius of Cyprus in Journal of Theological Studies (1899), I, 126-7; Löschcke, Das Syntagma des Gelasius fromus (Bonn, 1894); Joly de la Rive, "Dictionnaire d'Histoire et de Lit-

Gellée, Claude. See Lorrain, Claude.

Gemara. See Talmud.

Gembloirs (Gemblois, Gemblicum), a suppressed Benedictine monastery about nine miles north-west of Namur on the river Orneau in Belgium, founded c. 945 by St. Guibert (Wibert) and dedicated to St. Peter the Apostle and the holy martyr Exuperius. St. Guibert was assisted in the erection of the monastery and the selection of the abbot by Emperor Otto II. Guibert resigned a canony to become a monk. Some of Guibert's relatives impugned the legality of the monastic foundation on the plea that the monastery was built on fiscal land which had been given in fief to Guibert's ancestors and could not be alienated without the imperial authority. Emperor Otto II summoned Guibert and Erluin to his court, but was so favourably impressed with the manner in which they defended their pious undertaking that on 20 September, 946, he
issued an imperial diploma approving the foundation of Gemblours and granting it various privileges. Guibert appointed his friend Erluin first Abbot of Gemblours, while he himself became a monk at the monastery of Gorce near Mâcon. Twice he returned to the abbey once in 956 when the Hungarians threatened to pillage the monastery, on which occasion he not only preserved it from injury, but also converted some Hungarians to the true Faith; and a second time in 957, when his brother-in-law Heribrand of Mawolt had seized the revenues of the monastery. He persuaded Heribrand to leave the monastery and to reside elsewhere in the future. On 23 May, 962, St. Guibert died at Gorze and his remains were brought to Gemblours. When monastic discipline was well established at Gemblours, Erluin attempted, at the suggestion of Count Regnier of Hainaut, to reform the monastery of Lobbes in 965. But on the night of 20 October, 965, three of the monks of Lobbes, who hated reform, assaulted Erluin in his cell, dragged him outside of the monastery, and inflicted on him serious bodily injuries. Erluin died at Gemblours on 10 August, 966, after Pope Benedict VII had granted his monastery exemption and papal protection.

The first abbot of Gemblours, successor Heribert (987–990), the monks voluntarily relinquished their right of exemption in favour of Bishop Notger of Liège, who was friendly disposed towards the monastery. Heribert succeeded by Erluin II (990–1012), under whose weak administration monastic discipline greatly relaxed. His successor Erlebert (1012–1048), a pious and learned abbot, restored discipline, built a new abbey church in 1022, organized a rich library, and by encouraging sacred and profane learning gave the first impulse to the subsequent flourishing condition of Gemblours. During the period of its greatest spiritual and cultural activity Gemblours was ruled over by Myssach (1048–1071); Thietmar (1071–1092); Liehard (1092–1115); and Anselm (1115–1136). Under Thietmar flourished the famous chronicler Sigebert (1030–1112), who in a neat Latin style wrote a chronicle of the world from 381–1111, a history of the Abbots of Gemblours, and other historical works of great value. His chronicle was continued by Abbot Anselm till 1136, and his history of the Abbots of Gemblours by the monk Gottschalk, a disciple of Sigebert. The learned Prior Guerin, who was a famous teacher at the school of Gemblours, was a contemporary of Sigebert. In 1136, after the monastery was destroyed by fire, and, though rebuilt, it began from this period to decline in importance. In 1505, under Abbot Arnold II of Solbreg (1501–1511), it became affiliated with the Bursfeld Union (see BURSFELD, ABBEY OF).

It was pillaged by the Calvinists in 1598, and was partly destroyed by fire in 1676 and again in 1712. It was just beginning to recover from these heavy misfortunes when in 1793 the Government suppressed it. The buildings are now used for a state agricultural college.

**Gemistos.** See PLETHERON.

**Genealogy (in the Bible).**—The word genealogy occurs only twice in the New Testament: I Tim., i, 1, and Tit., iii, 9. In these passages commentators explain the word as referring to the Gentile theogonies, or to the Essene generation of angels, or to the emanation of spirits and souls as conceived by the Gnostics, or to the genealogies of Jesus Christ, or finally to the genealogies of the Old Testament construed as a source of an occult doctrine. Some even appeal to Philo in order to refer St. Paul's expression to the various stories and fables told about Moses and the Patriarchs. In the Old Testament the phrase genealogia occurs only in a few manuscripts of the Septuagint, in I Par., iv, 33; v, 7, 17; ix, 22; I Esd., viii, 1, where the commonly received text reads καταλογυσμος or καταλογισμος. In the Vulgate article, therefore, we shall not dwell upon the term genealogy, but consider the parts, usually genealogical lists, introduced by the phrase "these are the generations" or "this is the book of the generation"; we shall investigate the meaning of the introductory phrase, enumerate the principal genealogical lists, indicate their sources, draw attention to their interconnections, and discuss their deficiencies. Special genealogical lists, for instance those of Christ, found in the Gospels of St. Matthew and St. Luke, must be studied separately.

I. Introductory Phrase.—The introductory formula, "these are the generations" or "this is the book of the generation", is the heading to the ten parts of the Book of Genesis. It occurs also in Num., iii, 1; Ruth, iv, 18; I Par., i, 29. Similar expressions are found frequently, especially in the Books of Paralipomenon. What is their meaning? They do not denote any genealogy or genealogical table in our sense of these words. The phrase can be translated either by the word σημειωσις in Gen., ii, 4: "these are the generations of the heaven and the earth," as τοιαυτα, the Hebrew equivalent of "generations", seems to imply. In Gen., vi, 9, the introductory formula is followed by the history of the Flood; hence it cannot point forward to a genealogical table. If we keep in mind, on the other hand, that primitive history was only genealogy adorned with various anecdotes and stories of incidents, we begin to realize that the genealogical portions of the Book of Genesis are abbreviated and rudimentary biographies. The proper meaning of our introductory formula is, therefore, simply, "this is the history".

II. Genealogical Lists.—The peculiar character of primitive history accounts for the numerous genealogical lists found in the books of the Old Testament. We shall enumerate only the principal ones: Gen., v, 1–31, gives the Patriarchs from Adam to Noah; Gen., x, 1–32, the ethnography of the sons of Noah; Gen., xi, 10–26, the Patriarchs from Sem to Abraham; Gen., xi, 27–32, the posterity of Thare; Gen., xxi, 20–24, the posterity of Nachor; Gen., xxv, 1–4, the descendants of Abraham by Keturah; Gen., xxv, 12–18, the posterity of Isaac; Gen., xxv, 23–29, the sons of Jacob; Gen., xxvi, 35, the genealogy of the princes of Edom; Gen., xlvi, 8–27, the family of Jacob going into Egypt; Num., iii, 14–39, the list of the Levites; Num., xxxvi, 1–51, the heads of the tribes; Ruth, iv, 18–22, the genealogy of David; I Esd., vii, 1–5, the genealogy of Ezechas; II Esd., xi–xii, the genealogy of a number of persons. I Par., i–ix, is replete with genealogical lists which either repeat, or are abreviate, or again develop the foregoing genealogies, adding at times other documents of an unknown origin. For instance, there is a brief genealogy of Benjamin in I Par., vii, 6–12, a longer one in I Par., viii, 1–40; similarly a brief genealogy of Judah in I Par., iv, 1–23, a more complete in I Par., ii, 3; iii, 2–24. The inspired historian makes no effort to harmonize these striking differences, but seems only to careful to reproduce his sources.

In order to appreciate the foregoing lists properly, four of their peculiarities must be kept in mind: (1) In the primitive language developed out of the primitive, the proper names often underwent a similar change, so as to assume a Semitic, and at times even a Hebrew, colouring. This does not destroy the historical character, or of the known names under these changed appellations; the martyr St. Adaeuctus does not become a mere fiction simply because his real name is unknown. Leonormant has left
Before the introduction of writing, two devices were employed to aid the memory; either history was verified, or the facts were reduced to certain standard numbers. This second form was in use among the Scriptural nations. There were ten antediluvian Patriarchs, ten postdiluvian; seventy descendants of Jacob are named on the occasion of Israel's going into Egypt, though some of them were dead when others had not yet been born; of Genesis enumerates seventy nations, though it gives some names of little importance and omits others of great importance; I Par., ii, 3–55, gives seventy descendants of Juda; I Par., vii, 1–28, seventy descendants of Benjamin. A further difficulty is also against arbitrary insertion or omission of any name, though it did not fully exclude the substitution of one name for another. A possible exception against such an arrangement will be considered in the last section.

IV. Importance of the Genealogies.—The Hebrews shared the predilection for genealogies which prevailed among all the Semitic races. Among the Arabs, for instance, no biography is complete without a long list of the hero's ancestors. They register even the lineage of their horses, esteeming their nobility according to their extraction (Cf. "Revue des deux mondes" 15 May, 1845, pp. 1776–78). Causse writes: "Essai sur l'histoire arabe, l'Arabe et l'Islamisme," Paris, 1844–48. Among the Hebrews such genealogical lists were of still higher importance for the following reasons: (1) According to the Mosaic enactments, the Palestinian soil was given over to definite tribes and families. In order to recover, in the year of the jubilee, these family possessions, the claimant had to prove his legal descent. (2) The nearest kinship conferred among the Hebrews the rights of the so-called Geel. Lev., xxxv, 25, and Ruth, iv, 1–6, show some of the advantages implied in this right. The term Geel is rendered in the Latin Vulgate progenitus or progenies; in the English version it is translated "kinsman." (3) Again, the priests and Levites had to prove their legal descent in order to fulfil the authoritative and remunerative functions of their respective offices. On returning from the Babylonian Captivity several were excluded from the priestly class because they could not prove their Levitical pedigree (1 Esd., ii, 62; II Esd., vii, 64). Josephus, Vit., 1 appeals to the priestly registers and is proud of the royal descent of his mother; he shows that even the priests residing in Egypt had their sons registered authentically in Jerusalem, so as to safeguard their priestly prerogatives. (Cf. Apion, I, 270). (4) Finally, we learn from Josephus that the Messiah was to be born of the tribe of Juda and the house of David rendered the genealogy of this family most important. Eusebius (Hist. Eccl., III, xix, 20) relates on the authority of Hegesippus that Domitian (A. D., 81–96) put to death all the descendants of David, excepting the relatives of Christ on account of their loyal condition.

V. Deficiencies of the Genealogies.—It cannot be denied that some of the genealogical links are omitted in the Biblical lists; even St. Matthew had to employ this device in order to arrange the ancestors of Christ in three series of fourteen each. At the sight such omissions may seem to be at variance with Biblical inerrancy, because the single members of the genealogical lists are connected by the noun son or the verb beget. But neither of these links creates a real difficulty: (1) The wide meaning of the noun son in the genealogies is shown in Matt., i, 1: "Jesus Christ, the son of David, the son of Abraham." This prepares the reader for the view that the noun son may connect a person with any one of his ancestors, however remote. (2) As to the verb beget, some writers maintain that the Hiphil form of its Hebrew equivalent refers to the immediate offspring, while its Qal form may denote a more remote generation. But this contention does not rest on any solid foundation. It is
true that the Hiphil form occurs in Gen., v, and xi; it is also true that the successive links of the genealogies in these two chapters appear to exclude any intermediate generation. But this is only apparent. Until it be certain from other sources that the Hebrew word in question signifies the begetting of an immediate offspring, Gen., v, 15, for instance, may just as well mean that Malaleel at the age of sixty-five beget the grand-father of Jared as that he beget Jared immediately. The composer holds true of the other Patriarchs mentioned in the above two chapters. Nor can it be urged that such an interpretation would destroy the chronology of the Patriarchs; for the inspired writer did not intend to transmit a chronology.

A. J. MAAS.

Genealogy of Christ.—It is granted on all sides that the Biblical genealogy of Christ implies a number of undemonstrated facts; but rationalists have no solid reason for refusing to admit any of the attempted solutions, nor can we agree with those recent writers who have given up all hope of harmonizing the genealogies of Christ found in the First and Third Gospels. The true state of the question will become plain by studying the Biblical genealogies of Christ first separately, then in juxtaposition, and finally in their relation to certain exceptions to their harmony.

1) St. Matthew's Genealogy of Christ.—The genealogy of Christ according to the First Evangelist descends from Abraham through three series of fourteen members each; the first fourteen belong to the patriarchal order, the second to the royal, and the third to that of private citizens. Matt., i, 17, shows that this arrangement was intended; for the writer expressly states: "So all the generations, from Abraham to David, are fourteen generations. And from David to the transmigration of Babylon, are fourteen generations; and from the transmigration of Babylon to Christ are fourteen generations."

The list of the First Evangelist omits certain members in Christ's genealogy: (1) The writer gives only three names for the time of the Egyptian exile (Ezron, Aram, and Aminadab), though the period lasted 215 or 430 years; this agrees with Gen., xx, 16, where God promises to lead Israel back in the fourth generation. But according to Gen., xv, 13, the stranger shall afflict Israel for four hundred years. (2) The three names Booz, Obad, and Jesse cover a period of 366 years. Omitting a number of other less probable exceptions, the difficulty is solved mostly by the admission of a lacuna between Obad and Jesse. (3) According to I Par., iii, 11–12, Ochosias, Joas, and Amsias intervene between Joram and Azarias (the Ozias of St. Matthew); these three names cannot have been unknown to the Evangelist, nor can it be supposed that they were omitted by transcribers, for this conjecture would destroy the Evangelist's computation of fourteen kings. (4) According to I Par., iii, 15, Joakim intervenes between Jonas and Jeconias. We may waive the question whether St. Matthew speaks of only one Jeconias or of two persons bearing that name; nor need we state here all the doubts and difficulties connected with either answer. (5) St. Matthew places only nine links between Zorobabel and St. Joseph for a period covering some 550 years; so that each generation must have lasted more than 50 years. The genealogy as given in St. Luke enumerates eighteen generations for the same period, a number which harmonizes better with the ordinary course of events. As to the omission of members in genealogical lists see Genealogy.

2) St. Luke's Genealogy of Christ.—The genealogy in Luke, iii, 23–38, ascends from Joseph to Adam or rather to God; this is the first striking difference between the genealogies as presented in the First and Third Gospel. Another difference is found in their collocation: St. Matthew places his list at the beginning of his Gospel; St. Luke, at the beginning of the public life of Christ. The artificial character of St. Luke's genealogy may be seen in the following table:

<table>
<thead>
<tr>
<th>First Series</th>
<th>Second Series</th>
<th>Third Series</th>
<th>Fourth Series</th>
</tr>
</thead>
</table>

The artificial structure of this list may be inferred from the following peculiarities: it contains eleven septenaries of names; three septenaries bring us from Jesus to the Captivity; three, from the captivity to the time of David; two, from David to Abraham; three, from the time of Abraham to the race of man. St. Luke does not explicitly draw attention to the artificial construction of his list, but this silence does not prove that its recurring number of names was not intended, at least in the Evangelist's source. In St. Luke's genealogy, too, the names Jesse, Obed, Booz, cover a period of 366 years; Aminadab, Aram, Ezron fill a gap of 430 (or 215) years, so that here several names must have been omitted. In the fourth series, which gives the names of the antediluvian and postdiluvian patriarchs, Caiman has been inserted according to the Septuagint reading; the Hebrew text does not contain last name.

3) Harmony between St. Matthew's and St. Luke's Genealogy of Christ.—The fourth series of St. Luke's list covers the period between Abraham and the creation of man; St. Matthew does not touch upon this time, so that there can be no question of any harmony. The third series of St. Luke agrees name for name with that of St. Matthew; only the order of names is inverted. In this section the genealogies are rather identical than merely harmonious. In the first and second series, St. Luke gives David's descendants through his son Nathan, while St. Matthew enumerates in his second and third series David's descendants.
through Solomon. It is true that the First Gospel gives only twenty-eight names for this period, against the forty-two names of the Third Gospel; but it cannot be expected that two different lines of descendants should exhibit the same number of links for the period of a thousand years. Abstraction from the inspired character of the sources, one is disposed to regard the number of the Third Evangelist as not being in harmony with the length of time than the number of the First Gospel; but we have pointed out that St. Matthew consciously omitted a number of names in his genealogical list, in order to reduce them to the required multiple of seven.

(4) The Concealments and Insertions in the Two Gospels.—Three main difficulties are advanced against the foregoing harmony of the genealogies: First, how can they converge in St. Joseph, if they give different lines from David downward? Secondly, how can we account for their convergence in Salathiel and Zoroabel? Thirdly, what do we know about the genealogy of the Blessed Virgin?

(1) The convergence of the two distinct genealogical lines in the person of St. Joseph, has been explained in two ways: (a) St. Matthew's genealogy is that of St. Joseph; St. Luke's, that of the Blessed Virgin. This contention implies that St. Luke's genealogy only internally includes the name of Joseph. It is based on the Greek text, εν ουδε έτων τινς ἠγνωστος Ἰωάννης, "being the son (as it was supposed, of Joseph, but really) of Helio". This parenthesis really eliminates the name of Joseph from St. Luke's genealogy, and makes Christ, by means of the Blessed Virgin, directly a son of Helio. This view is supported by a tradition which names the father of the Blessed Virgin "Joseph", a variant form of Eliacim or its abbreviation Eli, a variant of Helio, which latter is the form found in the Third Evangelist's genealogy. But these two considerations, viz. the received text and the traditional name of the father of Mary, do not favor the view that St. Luke gives the genealogy of the Blessed Virgin, are offset by two similar considerations, which make St. Luke's list terminate with the name of Joseph. First, the Greek text preferred by the textual critics reads, εν ουδε έτων τινς ἀγνωστος Ἰωάννης, "being the son, as it was supposed, of Joseph, son of Helio", so that the above parenthesis is rendered less probable. Secondly, according to Patriarch, the view that St. Luke gives the genealogy of Mary began to be advocated only towards the end of the fifteenth century by Annius of Viterbo, and acquired adherents in the sixteenth. St. Hilary mentions it as adopted as many, but he himself rejects it (Mai. "Nov. Bibli. Patr.", t. I, 477). It may be safely said that patristic tradition does not regard St. Luke's list as representing the genealogy of the Blessed Virgin.

(b) Both St. Matthew and St. Luke give the genealogy of St. Joseph, the one through the lineage of Solomon, the other through that of Nathan. But how can the lines converge in St. Joseph? St. Augustine suggested that Joseph, the son of Jacob and the descendant of David through Solomon, might have been adopted by Helio, thus becoming the adoptive descendant of David through Nathan. But Augustine was the first to abandon this theory after learning the explanation offered by Julius Africanus. According to the latter, Estha married Mathan, a descendant of David through Solomon, and became the mother of Jacob; after Mathan's death she took for her husband, a descendant of David through Nathan, and by him became the mother of Helio. Jacob and Helio were, therefore, uterine brothers. Helio married, but died without offspring; his widow, therefore, became the levirate wife of Jacob, and gave birth to Joseph, who was the natural son of Jacob, but the legal son of Helio, thus combining in his person two lineages of David's de-

ascendants. The explanation will appear clearer in the following diagram:

<table>
<thead>
<tr>
<th>Mathat</th>
<th>2nd husband of Estha</th>
<th>widow of Mathat</th>
</tr>
</thead>
<tbody>
<tr>
<td>Heli</td>
<td>left a childless widow</td>
<td>later levirate</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Wife of Joseph (levirate son)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Joseph</td>
</tr>
</tbody>
</table>

(2) The second difficulty urged against the harmony between the two genealogies is based on the occurrence of the two names Zorobabel and Salathiel in both lists; here again the two distinct lineages of David's descendants appear to converge. And again, two answers are possible: (a) It is more commonly admitted that the names in St. Matthew's list are identical with the two in St. Luke's list; for they must have lived about the same time, and the names are so rare, that it would be strange to find them occurring at the same time, in the same order, in two different genealogical series. But two levirate marriages will explain the difficulty. Melchi, David's descendant through Nathan, may have been begotten Neri by a widow of the father of Jechnias; this made Neri and Jechnias uterine brothers. Jechnias may then have contracted a levirate marriage with the widow of the childless Neri, and begotten Salathiel, who was therefore the leviatical son of Neri. Salathiel's son Zorobabel begat Abiud; but he also may have been obliged to take a levirate marriage with the widow of a childless legal relative belonging to David's descendants through Nathan, thus begetting Reza, who legally continued Nathan's lineage. (b) A more simple solution of the difficulty is obtained, if we do not admit that the Salathiel and Zorobabel occurring in St. Matthew's genealogy are identical with those in St. Luke's. The above proofs for their identity are not cogent. If Salathiel and Zorobabel distinguished themselves at all among the descendants of Solomon, it is not astonishing that about the same time two members of Nathan's descendants should be called after them. The reader will observe that we suggest only possible answers to the difficulty; as long as such possibilities can be pointed out, our opponents have no right to deny that the genealogies which are found in the First and Third Gospel can be harmonized.

(3) How can Jesus Christ be called "son of David", if the Blessed Virgin is not a daughter of David? (a) If by virtue of Joseph's marriage with Mary, Jesus could be called the son of Joseph, he can for the same reason be called "son of David" (Aug., De cons. evang., II, i, 2). (b) The tradition calls Jesus a descendant of David. According to Num., xxxvi, 6-12, an only daughter had to marry within her own family so as to secure the right of inheritance. After St. Justin (Adv. Tryph. C.) and St. Ignatius (Eph. XVIII), the Fathers generally agree in maintaining Mary's Davidic descent, whether they knew this from an oral tradition or from the House of David in Scripture, e.g. Rom., i, 3; II Tim., ii, 8. St. John Damascene (De fide orth., IV, 14) states that Mary's great-grandfather, Panther, was a brother of Mathat; her grandfather, Barpanther, was Heli's cousin; and her father, Joachim, was a cousin of Joseph, Helio's levirate son. Here Mathat has been substituted for Melchi, since the text used by St. John Damascene, Julius Africanus, St. Irenæus, St. Ambrose, and St. Gregory of Nazianzus omitted the two generations separating Heli from Melchi. At any rate, tradition presents the Blessed Virgin as descending from David through Nathan.

Knaabauer in Haagen, Lexicon Biblicum (Paris, 1907). II, 389 sq.; Pathe in Dictionnaire de la Bible (Paris, 1903). III, 160 sq. The question is also considered in the Dictionnaire de la Bible by Fouard, Didon, Grimm, etc. The reader will find the subject treated also in the commentaries on the Gospel of St. Matthew or St. Luke, e.g. KNAABAUER, SCHNEID, FISDON.
MacEvlly, etc. DAWK. Historia revolutionis divinae Novi Testamenti (Vienna, 1807), 180–192; gives all the principal publications on the question up to 1865.

A. J. MAAS.

Génébrard, GILBERT, a learned Benedictine exegete and Orientalist, b. 12 December, 1535, at Riom, in the department of Puy-de-Dôme; d. 16 Feb., 1597, at Semur, in the department of Côte-d'Or. In his early youth he entered the Cluniac monastery of Mauzac near Riom, later commencing studies at the monastery of Saint-Allyre in Clermont, and completed them at the Collège de Navarre in Paris, where he obtained the doctorate in theology in 1562. A year later he was appointed professor of Hebrew and exegesis at the Collège Royal and at the same time held the office of Privy Chamberlain of St.-Denis de la Chartreuse in Paris. He was one of the most learned professors at the university, and through his numerous and erudite exegetical works became famous throughout Europe. Among his scholars at the Collège Royal was St. Francis de Sales, who in his later life considered it an honour to have had Génébrard as professor (Traité de l'Amour de Dieu, XI, 11). About 1578 he went to Rome, where he was honourably received by Sixtus V and stood in close relation to Allen, Baronius, Bosio, and other ecclesiastical celebrities. Upon his return, in 1588, he became one of the chief supporters of the Holy See in France. On 3 May, 1591, he was appointed Archbishop of Aix by Gregory XIII, but accepted this dignity only after the express command of the pope. He was consecrated by Archbishop Beaton of Glasgow on 10 April, 1592. As archbishop he remained a zealous leaguer, even after Henry IV became reconciled with the Church in July, 1593. The new king, however, became daily more federalist, and gained over to his side most of the Catholics. Génébrard saw that further opposition would be useless and, on 15 Nov., 1593, sent his submission to the king ("Revue des questions historiques", Paris, 1866, I, 416). This, however, did not prevent the Provençal Parliament from banishing him on 26 Sept., 1596. For a short time he stayed at Avignon, but, being allowed by the king to return, he retired to the priory of Semur, which he held in commendam. Génébrard translated many rabbinic writings into Latin; he was one of the best commentators on the Paris "Pardes", 1589–1594; editor of a Davids, calendar hebrewo, syro, graeco, latino, hymnus, argumentis, et commentariis, etc. instituit" (Paris, 1577); is the author of "De Sancta Trinitate" (Paris, 1569); "Joel Propheta cum chaldaica paraphrasi et commentariis", etc. (Paris, 1569); "Chronographie libri IV" (Paris, 1566); "De historiis et annis Celestii". He also edited the works of Origen (Paris, 1574).

MICHAEL OTT.

General Chapter (Lat. capitulum, a chapter).—The daily assembling of a community for purposes of discipline and administration of monastic affairs has always included the reading of a chapter of the rule, and thus the assembly itself came to be called the chapter and the place of meeting the chapter-house. The qualifying word conventual, provincial, or general, explains the nature of the meeting, and a general chapter, therefore, is one composed of representatives of the whole order, congregation or other group of monasteries. Historically, general chapters were general, from which they developed, can be traced back to St. Benedict of Aniane in the beginning of the ninth century. Although his scheme of congregation did not outlive its originator, the idea was revived a century later at Cluny. The example of Cluny produced imitators, and abbeys like Fleury, Dijon, Marmoutier, St.-Denis, Cluse, Fulda, and Hirsaui (or Hirsau), became centres of groups of monasteries in which a more or less embryonic system of general chapters was introduced. Later, on, Clites, Camaldoli, Monte Vergine, Savigny, and other reforms, elaborated the idea, which resulted eventually in the congregational system inaugurated by the Fourth Lateran Council in 1215, and since that date it has been the almost invariable custom of every order or congregation. The constitutions, times of meeting, and powers of a general chapter, however, vary so much in the different religious orders that it is impossible to generalize on these points. At Clites, for instance, the chapter met at the mother-house every year, and was, in theory, attended by all the abbots of the order. In other orders the meeting of chapters was held every three or four years, and this has remained the more general usage till the present day. In those that are divided into provinces, the provincial superiors, and sometimes some other officials as well, presided over by the general, if there be one, form the chapter; in others, the superiors of all the houses. Amongst Benedictines, each congregation has its own separate chapter, which is composed usually of the abbot and an elected delegate from each monastery, with the president of the congregation at their head. A general chapter (Synod) elects the general of the order or congregation, sometimes appoints the various superiors and other officials, settles matters of business and discipline, hears appeals from its subjects, and in some cases also has the right to draw up or sanction changes in its constitutions. Subject of course to the Holy See, it represents the highest authority in its own particular order or federation. For more detailed descriptions as to the composition and powers of general chapters, the separate articles on the various religious orders must be consulted.

G. CYPRIAN ALSTON.

Generation (Lat. Vulgate, generatio).—This word, of very varied meaning, corresponds to the two Hebrew terms: dōr, tōleleōth. As a rendering of the latter, the Vulgate plural form, generationes, is treated in the article GENEALOGY. As a rendering of the former, the word generation is used in the following principal senses: (1) It denotes a definite time, either hebreo, syro, graeco, latino, hymnus, argumentis, et commentariis, etc. instituit" (Paris, 1577); is the author of "De Sancta Trinitate" (Paris, 1569); "Joel Propheta cum chaldaica paraphrasi et commentariis", etc. (Paris, 1569); "Chronographie libri IV" (Paris, 1566); "De historiis et annis Celestii". He also edited the works of Origen (Paris, 1574).

GENEVIEVE

(4) GENESIUS, Count of Clermont, d. 725. Feast, 5 June. According to the lessons of the Breviary of the Chapter of Camaleria (Acta SS., June, I, 497), he was of noble birth; his father's name is given as Audastrius, and his mother's as Tranquilla. Even in his youth he is said to have wrought miracles—have given sight to the blind and cured the lame. He built and richly endowed several churches and railway stations. He was a friend of St. Bonitus, Bishop of Clermont, and of St. Meneleus, Abbob of Milan. He was buried at Combronde by St. Savinian, successor of Meneleus.

(5) GENESIUS (or GENESTUS), thirty-seventh Archbishop of Lyons, d. 679. Feast, 1 November. He was a native of France, not of Arabia or Armenia as is sometimes stated, and became a religious and abbob (not of Fontenelle, but) attached to the court and camp of Clovis II, where he acted as chief almoner to the queen, St. Bathildis. He succeeded St. Chamond (Annemundus) in the See of Lyons, and was consecrated in 657 or 658. His name is found for the first time as bishop in a signature of 6 Sept., 664, attached to a charter drawn up by Bertfred, Bishop of Amiens, for the Abbey of Corbie. On 26 June, 667, he subscribed another charter framed by Drausius, Bishop of Soissons, for a convent of the Blessed Virgin founded by Ebrouin, mayor of the palace, and his wife Leutride. In the conflict between Ebrouin and St. Leger (Leodegarius), Bishop of Autun, Genesius (675-76) took the part of the bishop and was in consequence attacked by an armed band sent by Ebrouin to expel him from Lyons; but Genesius collected a force and successfully defended his city. In September, 677, he assisted at an assembly held at Mailay. He was succeeded at Lyons by Landebertus. His body remained in the church of St. Nicetius till the beginning of the fourteenth century, when it was transferred to Chelles.

GENEVIEVE, SAINT, patroness of Paris, b. at Nante

terre, c. 410 or 422; d. at Paris, 512. Her feast is kept on 3 January. She was the daughter of Severus and Gerontia; popular tradition represents her parents as poor peasants, though it seems more likely that they were wealthy and respectable township people. In 429 St. Germain of Auxerre and St. Lupus of Troyes were sent across from Gaul to Britain to combat Pelagianism. On their way they stopped at Nant

terre, a small village about eight miles from Paris. The inhabitants flocked out to welcome them, and St. Germain preached there. It is said that the pious demeanour and thoughtfulness of a young girl among his hearers attracted his attention. After the sermon he caused the child to be brought to him, spoke to her with interest, and encouraged her to persevere in the path of virtue. Learning that she was anxious to devote herself to the service of God, he interviewed her parents, and fore

told them that their child would lead a life of sanctity and by her example and instruction bring many virgins to consecrate themselves to God. Before parting next morning he saw her again, and on her renewing her consecration he blessed her and gave her a medal embossed with a cross, telling her that by the

GENESARATH (Terra Sancta).—This is the name given to the Lake of Tiberias in Luke, v. 1; called Terræ Sanctæ in 1 Mach., xi, 67. (See TIBERIAS, LAKE OF.)

GENESIS, the name of the first book of the Penta
tech (q.v.).

GENESIUS, (1) a comedian at Rome, martyred under Diocletian in 286 or 303. Feast, 25 August. He is invoked against epidemxy, and is honoured as patron of theatrical performers and of musicians. The legend (Acta SS., Aug., V, 119) relates: Genesius, the leader of a theatrical troupe in Rome, performing one day before the Emperor Diocletian, and wishing to expose Christian rites to the ridicule of his audience, pretended to receive the Sacrament of Baptism. When the holy oil was poured upon him he proclaimed himself a Christian. Diocletian at first enjoyed the realistic play, but, finding Genesius to be in earnest, ordered him to be tortured and then beheaded. He was buried on the Via Tiburtina. His relics are said to be partly in San Giovanni della Pigna, partly in S. Susanna di Pinti and in the chapel of St. Lancers. The legend was dramatized in the fifteenth century; embodied in later years in the oratorio "Polus Atella" of Loe (d. 1689), and still more recently in a work by Weingartner (Berlin, 1892). The historic value of the Acta, dating from the seventh century, is very doubtful, though defended by Tillmont (Memoires, IV, §v, Genesius). The very existence of Genesius is called into question, and he is said to be a Roman counterpart of St. Galarius (or Galenus) of Hierapolis (d. 297). He was venerated, however, at Rome in the fourth century; a church was built in his honour very early, and was repaired and beautified by Gregory III in 741.

LCLCROQ, Les Martyrs., II, 428; Anal. Bulland., XVIII, 188.

(2) GENESIUS OF ALES, a notary martyred under Maximinianus in 303 or 308. Feast, 25 August. He is honoured as patron of notaries, and invoked against chills and scurvy. The Acta (Acta SS., Aug., V, 102 and Rautul, 550), attributed to St. Paolus of Nola, state: Genesius, native of Ales, at first a soldier, became known for his proficiency in writing, and was made secretary to the magisterate of Ales. While performing the duties of his office the decree of persecution against the Christians was read in his presence. Outraged in his ideas of justice, the young catechumen cast his tablets at the feet of the magistrate and fled. He was captured and executed, and thus received baptism in his own blood. His veneration must be very old, as his name is found in the ancient martyrlogy ascribed to St. Jerome. A church and altar dedicated to him remain to this day in the cathedral.

(3) GENESIUS, twenty-first Bishop of Clermont, d. 682. Feast, 3 June. The legend, which is of a rather late date (Acta SS., June, I, 315), says that he was descended from a senatorial family of Auvergne. Having received a liberal education he renounced his worldly pro
decessor for the service of God, and went to Rome in the year of a pilgrim. The bereaved flock sent a deputation to the Holy See. Genesius was found and induced to return. He then built a con

vent at Chantoin. He was buried in the church which he had built at Clermont in honour of St. Symphorian, and which later took his own name. In the life of St. Prix (Prebretius), Genesius is mentioned as one of the protectors of his childhood.

FRANCIS E. GIOOT.
instead of her pearls and golden ornaments. There seem to have been no convents near her village; and Genevieve, like so many others who wished to practise religious virtue, remained at home, leading an innocent, praise-filled life. It is uncertain when she formally received the religious veil. Some writers assert that it was on the occasion of St. Gregory’s return from his mission to Britain; others say she received it about her sixteenth year, along with two companions, from the hands of the Bishop of Paris. On the death of her parents she went to Paris and lived with her godmother. She devoted herself to works of charity and practiced severe corporal austerities, abstaining completely from flesh meat and breaking her fast only twice in the week. These mortifications continued for over thirty years, till her ecclesiastical superiors thought it their duty to make her diminish her austerities.

Many of her neighbours, filled with jealousy and envy, accused Genevieve of being an impostor and a hypocrite. Like Blessed Joan of Arc, in later times, she had frequent communion with the other world, but her visions and prophecies were treated as frauds and deceptions. Her enemies conspired to drown her; but, through the intervention of Germain of Auxerre, their animosity was finally overcome. The bishop of the city appointed her to look after the welfare of the virgins dedicated to God, and by her instruction and example she led them to a high degree of sanctity. In 591 Attila and his Huns were sweeping over Gaul; and the inhabitants of Paris prepared to flee. Genevieve encouraged them to hope and trust in God; she urged them to do works of penance, and added that if they did so the town would be spared. Her exhortations prevailed; the citizens recovered their calm, and Attila’s horde turned north to Orkla, leaving Paris untouched. Some years later Merowig (Mérovée) took Paris; during the siege Genevieve distinguished herself by her charity and self-sacrifice. Through her influence Merowig and his successors, Childeric and Clovis, displayed unwonted charity to the citizens. It was she, too, who first formed the plan of erecting a church in Paris in honour of Saint Peter and Paul. It was begun by Clovis at Mont-lès-Paris, shortly before his death in 511. Genevieve died the following year, and when the church was completed her body was interred within it. This fact, and the numerous miracles wrought at her tomb, caused the name of Sainte-Geneviève to be given to it. Kings, princes, and people enriched it with their gifts. In 847 it was plundered by the Normans and was partially rebuilt, but was completed only in 1177. This church having fallen into decay once more, Louis XV began the construction of a new church in 1764. The Revolution broke out before it was dedicated, and it was taken over in 1791, under the name of the Panthéon, by the Constituent Assembly, to be a burial place for distinguished Frenchmen. It was restored to Catholic purposes in 1821 and 1852, having been secularized as a national mausoleum in 1831 and, finally, in 1885. St. Genevieve’s relics were preserved in her church, with great devotion, for centuries, and Paris received striking proofs of the saint’s intercession. She saved the city from complete inundation in 834. In 1129 a violent plague, known as the mal des ardents, carried off over 14,000 victims, but it ceased suddenly during a procession in her honour. Innocent II, who had come to Paris to implore the king’s help against the Lollards in 1130, examined personally into the miracle and was so convinced of its authenticity that he ordered a feast to be kept annually in honour of the event on 26 November. A small church, called Sainte-Geneviève des Ardents, commemorated the miracle till 1747, when it was pulled down to make room for the Foundling Hospital. The saint’s relics were carried in procession yearly to the cathedral, and Mme de Sévigné gave a description of the pageant in one of her letters.

The revolutionaries of 1793 destroyed most of the relics preserved in St. Genevieve’s church, and the rest were swept away by the mob in 1871. Fortunately, however, a large relic had been kept at Verneuil, Oise, in the eighteenth century, and is still extant. The church built by Clovis was entrusted to the Benedictines. In the ninth century they were replaced by secular canons. In 1148, under Eugene III and Louis VII, canons from St. Victor’s Abbey at Senlis were introduced. About 1619 Louis XIII named Cardinal François de La Rochefoucauld Abbot of St. Genevieve’s. The canons had been lax and the cardinal selected Charles Faure to reform them. This holy man was born in 1594, and entered the canons regular at Senlis. He was remarkable for his piety, and, when ordained, succeeded after a hard struggle in reforming the abbey. Many of the houses of the canons regular adopted his reform. He and a dozen companions took charge of Sainte-Geneviève-du-Mont, at Paris, in 1634. This became the mother-house of a new congregation, the Canons de la Bégue, of St. Genevieve, which spread widely over France. Another institute called after the saint was the Daughters of St. Genevieve, founded at Paris, in 1636, by Françoise de Blosset, with the object of nursing the sick and teaching young girls. A somewhat similar institute, popularly known as the Miramiones, had been founded under the invocation of the Holy Trinity, in 1611, by Marie Bonneux de Rubes Béharnaux de Miramion. These two institutes were united in 1665, and the associates called the Canonesses of St. Genevieve. The members took no vows, but merely promised obedience to the rule, and long continued to reside in the institute. Suppressed during the Revolution, it was revived in 1808 by Jeanne-Claude Jacquot under the name of the Sisters of the Holy Family. They now have charge of over 150 schools and orphanages.

GENEVE, DAUGHTERS OF SAINT. See Holy Family, Religious Congregations of.

GENESARETH, LAND OF.—By this name is designated in Mark, vi, 53, a district of Palestine bordering on the Sea of Galilee, and which in the parallel passage of Matthew (xiv, 34) is called "the country of Genezareth." The two forms of the name are obviously cognate, but their origin and signification are disputed points among Biblical scholars, nor is there unanimity of opinion as to whether the name was given first to the land and afterwards to the lake or vice versa. The traditional signification: "Garden of the Princes" (as if the land were originally a coastland or a plain), as contrasted with the "Sea," or "Lake," Jerome and the Talmud. Several modern scholars, however, prefer the derivation of the name from the Hebrew word קֶנֶרֶת, kinnereth; or from the plural form kinneroth, cognate with kinner, signifying a harp or siren. This name, according to them, would have belonged to the region of the lake on account of the supposed harp-like shape of its contour; but it seems more probable that the name was first used to designate the district, and was derived from the ancient fortified city within the borders of Nephtali, mentioned in the Book of Josue as Ceneroth in xi, 2, and as Ceneroth in ix, 35. According to the Gospel narrative (cf. Matt. xiv, 13-36; Mark, vi, 31-56; Luke, ix, 10-17), it is confirmed by the description found in Josephus (Bel. Jud., III, x), the land of Genezareth lay to the west, and partly to the north, of the lake of the same name, and bordered thereon. These sources do not determine the exact boundaries of the district, but it is probable from other incidental indications that it comprised the entire west coast of the lake, extending westward as far as the boundary separating Nephtali and Zabulon from Aser, and northward probably as far as the plain of Huleh and the mountains of Safed. Physically the district resembles somewhat a section of a large, semi-alpine plateau, and it is bounded on the south and more abruptly on the west, toward the low basin of the lake, and terminating in the plain now called Ghueir.

From the historical and religious standpoint the land of Genezareth is one of the most interesting localities in all Palestine, chiefly because of its connection with the public ministry of Our Lord. Within its boundaries were located Cafarnaum, Korazin, Arbel, Magdala, and Tiberias, as well as the more ancient Cenereth. Of these once famous towns nothing remains at present except a few ruins, and the two wells mentioned by Josephus: Ophiath and of Magdala. According to the descriptions found in the Talmud, this region was a marvel of richness and fertility, a veritable paradise; and the same is affirmed by Josephus (loc. cit.), who describes it as "wonderful in fertility as well as in beauty." He adds, "Its soil is so fruitful that all sorts of trees can grow upon it... for the air is so well tempered that it agrees with all sorts. Thus the palm-tree, which requires a warm atmosphere, flourishes equally well with the walnut, which thrives best in a cold climate... One may say that this place accomplishes a marvel of nature, for those plants which in many countries are the business of one another to agree together." It was noted for its delicious fruits of all varieties, and the climate was such that they flourished in nearly all the seasons of the year. Centuries of neglect have completely obliterated all this richness and luxuriance; and at present, except a few scattered palms and wild fig-trees, the slopes of the land of Genezareth are barren and lifeless as are most of the other regions of Palestine.

The land of Genezareth was also the home of the four Evangelists, Matthew, Mark, Luke, and John. Saint Peter and Saint Andrew, the sons of the Commercial, were from Tiberias. Saint John was born at Capernaum, where, according to tradition, he resided until his arrest by Herod. The place is mentioned in the Gospels of Saint Matthew and Saint John as the residence of Saint Peter, and in the Gospels of Saint John and Saint Luke as the residence of Saint Andrew. The name of Saint Peter is given to a town situated on the western shore of the Sea of Galilee, about a mile from Capernaum. It is probable that the town was built upon the site of the ancient city of Capernaum. The name of Saint Andrew is given to a town situated on the eastern shore of the Sea of Galilee, about a mile from Tiberias. It is probable that the town was built upon the site of the ancient city of Tiberias. The name of Saint John is given to a town situated on the western shore of the Sea of Galilee, about a mile from Capernaum. It is probable that the town was built upon the site of the ancient city of Capernaum. The name of Saint John is given to a town situated on the eastern shore of the Sea of Galilee, about a mile from Tiberias. It is probable that the town was built upon the site of the ancient city of Tiberias. The name of Saint John is given to a town situated on the western shore of the Sea of Galilee, about a mile from Capernaum. It is probable that the town was built upon the site of the ancient city of Capernaum. The name of Saint John is given to a town situated on the eastern shore of the Sea of Galilee, about a mile from Tiberias. It is probable that the town was built upon the site of the ancient city of Tiberias.

GEORGES, GIROLAMO, painter, born at Urbino in 1478; died at the same place, 1551. This talented craftsman was apprenticed in his fifteenth year to Luca Signorelli, whom he assisted in many of his works, especially at Orvieto. He then attached himself to Perugino, in whose school he was for three years, becoming the intimate friend of Raphael. After a residence in Florence and Siena, he returned to Urbino to carry out some work for the duke, Guidobaldo II. Later on he resided at Rome, where he painted an altar-piece for the church of St. Catherine of Siena, but, in 1512, returned to Urbino at the request of the then duke, Francesco Maria, with whom eventually he went into banishment at Cassino, and for whose benefit he painted there a chief altar-piece, "God the Father, the Virgin, and Four Fathers of the Church", now in the Brera at Milan. He was not only a painter and sculptor, but a modeller in wax, clay, and terra-cotta, and some of the drinking-cups he executed in wax were used as models for innumerable works of goldsmiths and jewellers. His taste for ornament, his love of invention, and his conception of the ideal, are seen in all his pictures; nowhere are figures more richly clothed, or more varied, or more thoughtfully arranged. His engraving of the Resurrection is a notable example of his work. His frescoes at Gubbio are masterpieces of his art. He is also well known for his engravings of the Resurrection and the Assumption, both in the Galeries des Arts, Paris, and in the British Museum, London. A. A. MacEwan.

GENIOT, Géneral, moral theologian, b. at Antwerp, Belgium, 18 June, 1856; d. at Louvain, 21 February, 1900. After making a brilliant course of studies at the Jesuit college in his native city, he entered the Society of Jesus, 27 September, 1872. He was successively professor of humanities and of rhetoric at Ghent and Antwerp, and after being ordained priest and sustaining a public defence in all theology, taught first canon law and then moral theology at the Jesuit college in Louvain from 1889 until his comparatively early and unexpected death. Father Génicot was a professor well liked by all his classes because of the solidity and clearness of his teaching. In 1895 he published his "Theologie Morale Institutiones," in which the sixth edition, in harmony with recent decrees of the Holy See, appeared in 1909 (Brussels). Father Génicot drew his inspiration chiefly from the large work of Ballerini-Palmieri. His own work is characterized by a great clearness of exposition, firm and straightforward judgment, avoidance of subtleties, and rejection of defective arguments; also by marked intellectual honesty that dares to follow principles to their utmost conclusions and set down the conduct confessors may legitimately follow in the confessional. Confessors have no reason to fear the broadness of his conclusions, if they do not actually pass beyond the limits prescribed by the author. Another work, "Casus Conscientiae," was published after the author's death. The third edition (1906) appeared with additions and corrections in 1909 (Louvain). These Casus, gathered in large part from actual experience, are remarkable for their presentation of real life and are something more than a mere repetition of theory. J. SALEMS.
GENNADIUS I, Saint, Patriarch of Constantinople (458–471), has left scarcely any writings. Facundus (Defensaio, I, iv) states that he wrote against St. Cyril of Alexandria, probably in 431–2, and quotes a passage to show that his style was very much like that of Ibas. If St. Cyril's letter of 434 (Ep. Ivi) is to the same Gennadius, they were friends in that year. Gennadius succeeded Anatolius as Bishop of Constantinople in 458. On 17 June, 460, St. Leo wrote to him (Ep. clxx) warning him against Timothy of Eulurus, the man who had made himself Patriarch of Alexandria. Not later, it seems, than 459 St. Gennadius celebrated a great council of eighty-one bishops, many of whom were from the East and even from Egypt, including those who had been dispossessed of their sees by Eulurus. The letter of this council against simony is still preserved (Mansi, VII, 912). About the same time St. Daniel the Stylite began to live on a column near Constantinople, apparently without the patriarch's leave, and certainly without the permission of Gelasius, the owner of the property where the pillar stood, who strongly objected to this strange invasion of his land. The Emperor Leo protected the saint, and some time later sent that St. Gennadius should ordain him priest, which is said to have been done standing at the foot of the column, since St. Daniel objected to being ordained, and refused to let the bishop mount the ladder. At the end of the rite, however, the patriarch ascended to give Holy Communion to the stylite, and the latter, when he received it from the hands of the hierarch, imposed his hands on him is not said. Possibly he considered it sufficient to extend them from below towards the saint. According to Theodorus Lector, Gennadius would allow no one to become a cleric unless he had learned the Psalter by heart. He made St. Marcus (arcum of the Church of Constantinople, 464–471.)

St. Gennadius is said by Joannes Moschus to have been very mild and of great purity. We are told by Gennadius of Marseilles that he was lingua mitutis et ingenio acer, and so rich in knowledge of the ancients that he composed a commentary on the whole Book of Daniel. The continuation of St. Jerome's Chronicle by Marcellinus Comes tells us (according to some manuscripts) that Gennadius commented on all St. Paul's Epistles. Some fragments are collected in Migne, P. G., LXXVII, chiefly from the two catena of Cramer on Romans; a few passages are found in the catena of Athenagoras, and some in the Venerable Bede (cfr. Beda, Hist. Eccles., I, 166 (46). Some fragments in the catena of Nicephorus show that Gennadius also commented on Genesis. He is seen to have been a learned writer, who followed the Antiochene school of literal exegesis. He is celebrated in the Greek Menia on 25 Aug. and 17 Nov.; and on the former day in the Roman Martyrology.

JOHN CHAPMAN.

GENNADIUS II, Patriarch of Constantinople (1454–1456).—His original name was George Scholarius (Geórgios Kουρτθος Σχολάρας). He was born about 1400. He was a teacher of philosophy and then judge in the civil courts under the Emperor John VIII (1425–1448). In this capacity he accompanied his master to the Council of Ferrara-Florence (1438–1449) and was at that time in favour of the union. He made four speeches at the council, all exceedingly conciliatory, and wrote a refutation of the first eighteen of Marcus Eugenius's sylvicritic chapters against the Latins. But when he came back to Constantinople, like most of his countrymen, he changed his mind. Marcus Eugenius converted him on this point to anti-Latin Orthodoxy, and from this time till his death he was known (with Marcus) as the most uncompromising enemy of the union. He then wrote many works to defend his new convictions, which differ so much from the earlier conciliatory ones that Allatius thought there must be two people of the same name ("Diatribe de Georgius" in Fabricius-Herz, Bibliotheca Graeca, X, 700–786); to whom Gibbon, "Renaudot was warned not to trust to S. Gennadius." Before the fall of the city he was already well known as a bitter opponent of the union. He and Marcus Eugenius were the leaders of the anti-Latin party. In 1447, Marcus on his death-bed praised Gennadius's irreconcilable attitude towards the Latins and the union (P. G., CLXXV, 529). He was canonized by Gennadius II (1450). On 1 June, 1453, the new patriarch's procession passed through the streets that were still reeking with blood; Mohammed received Gennadius graciously and himself invested him with the signs of his office—the crozier (θεοφάνως) and mantle. This degrading ceremony has continued ever since, except that now (since the Turks hanged Parthenius III in 1657) the sultan thinks it beneath his dignity, so that it is performed by the grand vizier (Патракис, "L'Eglise Orientale", Rome, 1855, III, 83). Mohammed also ordained with Gennadius the condition of Orthodox Christians (the so-called "Roman nation") in the Turkish Empire, made the patriarch their acknowledged civil head before the sultans, and granted them a share in the sultan's rights and duties. This is still given to every patriarch before his consecration (or enthronement). Gennadius, who was not in Holy Orders, was then ordained to each grade. Although he so disliked Latins, he seems to have kept good relations with the sultan. One of the symbolic books of the Orthodox Church is the Confession (Οπαλομυ), made by him to Mohammed, by which he is said to have secured a certain measure of tolerance for his people (see below). As the Sultan's wedding was made into a week, he was used as his patriarchal church, first of the Apostles (where the emperors were buried), then of the All-Blessed (της Παναγίας Ανεγερτης). But after two years, in 1456 (Gedeon in his Πατραχουμ Πολεμή, Constantinople, 1890; others say it was in 1459), he resigned. It is difficult to give the full reason for this step. It is commonly attributed to his disappointment at the sultan's treatment of Christians. On the other hand, Mohammed seems to have kept the fairly tolerant conditions he had allowed them; various writers hint darkly at other motives (see Michalceuce, op. cit. infra, 13). Gennadius then, like so many of his successors, ended his days as an ex-patriarch and a monk. He lived in the monastery of St. John Baptist at Seres in Macedonia (north-east of Saloniki), and wrote books to his death in 1468 (Papageorgiu in the "Byzantische Zeitschrift", III, 315). Gennadius Scholarius fills an important place in Byzantine history. He was the
last of the old school of polemical writers and one of the greatest. Unlike most of his fellows he had an intimate acquaintance with Latin controversial literature, especially with St. Thomas Aquinas and the Schoolmen. He was as skillful an opponent of Catholic theology as Marcus Eugenius, and a more learned one. He knew the ancient writers of Western philosophy but of controversy with Jews and Mohammedans, of the great Hesychast question (he attacked Barlaam and defended the monks; naturally, the Barlaamsites were λατεινοφόροι), in short, of all the questions that were important in his time. He was another kind of importance as the first Patriarch of Constantinople, consecrated in the Turk. From this point of view he stands at the head of a new period in the history of his Church; the principles that still regulate the condition of Orthodox Christians in the Turkish Empire are the result of Mohammed II's arrangement with him.

WORKS.—Gennadius was a prolific writer during all the periods of his life. He is said to have left from 100 to 120 works (Michaelsee, op. cit. infra, 13). Of these a great number are still unedited. P. G., CLX, 320–773, contains the chief collection of what has been published. To this must be added the works in Simonides, loc. cit., the other in P. G., CLX, 665; also a number of letters addressed to various friends, bishops, and statesmen, mostly unedited. An "Apology for five chapters of the Council of Florence", edited first (in Latin) at Rome in 1577, and again in 1628, is doubtful (in P. G., CLX, 665 sqq.), also a number of books addressed to various friends, bishops, and statesmen, mostly unedited. A "Dialogue between two Turks about the divinity of Christ", and a work about the "Adoration of God", Jahn (Anecdota greca) has published a "Dialogue between a Christian and a Jew", and a collection of "Prophecies about Christ" gathered from the Old Testament. A treatise on the Church in three, against Athanasii and Polytheists" (P. G., CLX, 567 sqq.), is chiefly directed against the theory that the world may have been formed by chance. Five books, "About the Foreknowledge and Providence of God", and a "Treatise on the manhood of Christ", are in P. G., CLX, 567 sqq., all written by Gennadius, most of which exist only in manuscript at Athens ("Cod. Athous", Paris, 1289–1298). A critical edition of Gennadius' collected works is badly needed.

Gennadius of Marseilles (Gennadius Scholasticus), a priest whose chief title to fame is his continuation of St. Jerome's catalogue "De Viris illustribus". Nothing is known of his life, save what he tells himself in the last (xxvii) of the biographies in question: "I, Gennadius, presbyter of Massilia, wrote eight books against all heretics; five books against Nestorius, ten books against Eutyches, three books against Pelagius, a treatise on the thousand years of the Apocalypse of John, this work, and a letter about my faith sent to blessed Gelasius, bishop of the city of Rome" (ed. Bernardii, 95). This fixes his period more or less; Gelasius reigned from 492–496, so Gennadius must have lived at the end of the fifth century.

Internal evidence shows that he was a Semipelagian, as indeed the name of his city would make one suspect. Of all the works to which he refers, only the "De Viris illustribus"—"this work"—is certainly extant. He tells us further that he translated and restored to their authentic form Evagrius Ponticus' works (xi, 65), and those of Timothy Eligius (lxixii, 86). These translations are also lost. He twice mentions a "catalogue of heretics" that he means to write (xxvii, 74, and liii, 79). Presumably this is the work "against all heresies" referred to above. There is an Augustinian treatise, "De ecclesiasticis dogmatibus".
Gennings, Edmund and John, the first, a martyr for the Catholic Faith, and the second, the restorer of the English province of Franciscan friars, were brothers and converts to the Church. Edmund Gennings was born at Lichfield in 1567; died in London, 13 Oct., 1591. John was b. about 1570; d. at Douai, 12 Nov., 1660.

Edmund, even in his boyhood, exhibited an unusual gravity of manner and a mystical turn of mind; when about sixteen years of age, he was converted to the Catholic Faith, and immediately afterwards entered the English College at Reims. He was ordained priest in 1586, being then only twenty-three years of age, and at once returned to England under the assumed name of Ironmonger. But his missionary career was of short duration, for he was seized whilst saying Mass in London on 7 Nov., 1591, and executed at Gray's Inn Fields on 10 Dec. His martyrdom was the occasion of several remarkable incidents, chief of which was the conversion of his younger brother John. On his return to England, Edmund Gennings had at once gone to Lichfield to seek out his kindred in the hope of bringing them to the true faith, but he found that all his relatives were dead except this one brother, who had, however, retained his native position in the city of London. Thither Edmund proceeded and for a whole month searched the city, visiting every place where he thought his brother might be found. Eventually, when he was about to give up the search, he achieved his purpose, but the younger brother, far from being won over to Edmund's faith, only sought to have him go away, lest he himself should become suspect; and when after awhile Edmund was seized and condemned John "rejoiced rather than bewailed the untimely and bloody end of his nearest kinman, hoping thereby to be rid of all persuasions which he possessed". He was then sent to prison and thence to his death.

Undoubtedly at this time John Gennings was bent on pleasure, but one must make allowances for the spirit of remorse with which he looked back on those days in after years, and not accept his own estimate of his youth too readily. However, about ten days after his brother's execution, a change came over him. He began one night to think of his brother's death and contempt of the world, and to compare his own life with that of the martyr. He was struck with remorse and wept bitterly, and next prayed for light. Instantly he felt an exceeding great reverence for the saints and, above all, our Blessed Lady, and it seemed to him that he saw his brother in glory. He thereupon made a vow to forsake friends and country and seek a true knowledge of his brother's faith. Being received
into the Church, he entered Douai College, was ordained priest in 1607, and the following year was sent upon the English mission. Here he conceived a desire for the restoration of the English province of Fransiccaeus, and sought out Father William Staney, the commissary of the English friars, and from him received the habit, either in 1610 or 1614 (the date is uncertain). After this, he went for a time to a convent of the order at Ypres, in Flanders, where he was joined by several English companions, amongst whom was Christopher Davenport, known in religion as Franciscus Sancta Clara, afterwards a famous controvertist. Thus was the foundation of a new English province of friars, and Father William Staney, recognizing the zeal of John Gennings, now gave into his hands the seal of the old province of the English Observants.

Gennings next proceeded to procure a house for the English friars at Gravelines, but in 1618 he obtained leave from the minister general to establish a settlement at Douai. As a matter of fact, most of the friars who had joined Gennings were alumni of Douai College, and in transferring their residence to that town he hoped to obtain a continuous supply of recruits. The work of restoring the English province was not easily confided to him, and he was granted imports in 1617, and he was nominated "Vice of England". To assist him in the work of restoration, the commisary general of the Belgian nation was empowered to gather together all the English and Scotch friars from any province in the order. A decree of the same general chapter placed the English Poor Clares of Gravelines under the jurisdiction of the English friars. In 1625, the number of English friars having greatly increased, Gennings sent Father Franciscaeus & Sancta Clara to Rome to plead that the English province be canonically established. The request was granted with the simple restriction that the superior of the province should not assume the title of prior, local, but that of custos; but, in 1629, this restriction was taken away and Friar John Gennings was appointed minister provincial. The first chapter of the new province was held at Brussels in Advent of the same year, in the convent of the English sisters of the third order, which Gennings had himself founded in 1610. This community of tertiary sisters has continued to the present time, and is now established at Taunton, in England, with a branch house at Woodchester. Father John Gennings was re-elected provincial in 1634, and again in 1643.

FATHER CUTHBERT.

GENOA, ARCHDIOCESE OF (JANUENSIS), in Liguria, Northern Italy. The city is situated on the gulf of the same name, extends along the lowest ridges of the Ligurian Apennines, which sweep around the gulf, between the mouths of the Pocevera and the Bisagno, and is protected from the inroads of these waters by the Punta della Lanterna and the Punta del Carignano. The town forms a natural harbour protected against storms by the headland of Portofino, which acts as a breakwater. Two piers (the smaller one begun in 1133) were necessary to break the force of the tide during storms. Its favourable position has made Genoa the largest trade centre on the Mediterranean. It is a naval fortress with a chain of defences about ten miles in length.

In 205 B.C., Mago the Carthaginian landed there with a large army, and sacked the town for its sympathy with Rome, the rest of Liguria supporting the Carthaginians. From the end of the Second Punic War, Genoa belonged to Rome. After the Lombard invasion, it remained under Byzas and the Genoese, as the maritime towns of Italy. In A.D. 641 King Rotari, in his expedition along the coast of Liguria, sacked Genoa, and carried off immense booty. It was later incorporated in the Lombard kingdom, probably under Charlemagne, becoming part of the March of Obertenga. In 935, it was surprised and sacked by the Saracens, but the Genoese fleet followed up the enemy and defeated them in 935. In 996, the Saracens came for the third time. meanwhile the trade and enterprise of Genoa had steadily increased, and now rivaled that of Pisa, in those early times its friendly neighbour. In 1016, they drove the Arab chief Magdalin from Sardinia. In 1052, the town organized itself into a commune, and was governed by consuls and aldermen. In 1248, however, the control was divided between the podestà and a "captain of the people", a condition which lasted till 1310. From 1339 to 1797, except when the rule was in the hands of foreigners, the city was governed by doges chosen from the principal families, at first for life, but after 1528 for periods of two years.

In 1087, the Genoese and Pisans captured Almadia and Subelia in Africa. In the First Crusade their fleet transported the crusading armies to the Holy Land, secured many ports in Syria and Palestine for the Christians, and, in return for their services, they were granted general jurisdiction over the Christian principalities of the East. Together with the Pisans they aided Innocent II to put down the schism of Anacletus, and, as a reward, the pope divided between the two municipalities the islands of Sardinia and Corsica, retaining, however, his own overlordship. In 1147, they took Almeria and Tertossa, in Spain, from the Moors. The threatening attitude of Genoa forced Frederick Barbarossa to recognize all its liberties and possessions; hence, until the reign of Frederick II, it remained friendly to the imperial cause, and even assisted in the attack on Sicily. In 1240, however, the Genoese refused to do homage to FrederickII, and, in 1242, they sent the northern prelates to Gregory IX, but were pursued and defeated between the islands of II Giglio and Monte Cristo by the Pisans, the allies of the emperor. In 1244, Innocent IV took refuge in Genoa. The commercial favour shown by the Latin Empire of Constantinople (1204-60) towards the Venetians enabled the latter to defeat the Genoese at St-Jean d'Acre and on the high seas, in 1257 and 1258 respectively. In 1261, the Genoese took their revenge by assisting Michael Palaeologus to reconquer Constantinople, and obtained from him Apulia and Pera, and the island of Cyprus, in the Black Sea. They developed markets rapidly on the shores of this sea, the principal one being Caffa, and carried on a brisk trade, exporting mainly wine, oil, woolens, and silks, and importing skins, furs, corn, Persian stuffs, etc. For the government of these colo

Naples. A little later, Robert of Anjou (1318-1335) was called in by the Guelphs in opposition to the Visconti of Milan, favoured by the Ghibellines. When the Venetians, together with the Greeks and Catalonians, wished, in 1342, to occupy the island of Scio as an outpost against the Turks, the Genoese, profiting by a quarrel among the allies, forestalled them. This, amongst other causes, led to a fresh outbreak of war in 1350. In the Bosphorus (1352), a fierce but indecisive battle was fought; while at Alghero in Sardinia (1353) the Genoese were defeated by the Venetians and their allies. Genoa then chose Giovanni Visconti, Archbishop of Milan, as its ruler or “Signore”. In 1354, year following Andrea succeeded in ridding himself of his French allies. The “Signoria” was offered him, but he prudently refused the title, though in reality he exercised its powers. This brought about the Fieschi Plot (1456), which proved abortive owing to the death of its leader. Noteworthy events in the subsequent history of Genoa are the attempts of the French to take off Genoese authority (1553; 1737, King Theodore), its annexation by France in 1768, and the two conspiracies for the annexation of Genoa by Savoy (Vachero, 1628; Della Torre, 1672). In 1684, Louis XIV, without any just cause, had the town bombarded. A hundred years later (1797) the French set up there a democratic republic. In 1800, Masséna sustained a famous siege and blockade on the part of the Austrians and English. In 1805, the duchy was annexed to France, but in 1814 was provisionally, and in 1815 definitely, annexed to the Kingdom of Sardinia.

Genoa owes to the magnificence of its architecture its title of “La Superba” (the Proud). Among its best-known churches are: San Lorenzo, rebuilt in the twelfth century, the lower part of the façade dating from 1100, the remainder from 1523. The spandrils over the door are decorated with bas-reliefs of various periods. The cupola dates from 1567. The altarpieces by Barocci, Ferrari, Cambiaso, and sculptures by Montorsoli, Sansovino, Guglielmo della Porta and others. Near by is the little church of St. John the Baptist, formerly the baptistery of the city. The church of Saints Andrew and Ambrose (600) has paintings by Guido Reni and Rubens. Santissima Annunziata has beautiful Composizioni, and the Last Supper by Procaccino. In the church of St. Catherine of Genoa (with the saint’s room adjoining) may be seen her body preserved in a silver urn. The church of Saints Cosmas and Damian antedates the year 1000; that of St. Donatus, consecrated in 1188, is built of old Roman materials. St. Philip Neri was born in Genoa from 1604; the Jesuit Maria from 1487. The latter has paintings by Paggi, Cambiaso, and Salimbeni. St. George’s has two bronze doors, a part of the booty of Almeria (1418). The altar of St. John’s was erected after the victory at Pola. On the façade of St. Mark’s (1173) is a marble lion captured from the Venetians at Pola.

Other churches are: Santa Maria in Castello (columns of oriental granite); Santa Maria del Carmine (rich tabernacle); San Siro (the cathedral till 995); San Stefano, which existed in 493, and has a painting by Giulio Romano. San Matteo, containing the war trophies of the Dorias, was founded in 1125 by Doria, and restored by Andrea Doria from plans by Fra Giovanni Angelo Montorsoli; on the façade is the sarcophagus of Lamba Doria, the victor at Curzola; under the high altar is the tomb of Andrea Doria by Montorsoli, and several inscriptions recall the triumphs of this noble family of seamen and rulers. Santa Maria in Carignano (sixteenth century), one of the handsomest churches in the world, is, in the form of a Greek cross; its cupola is the work of Galeazzo Alessi (q. v.) of Perugia. The Campo Santo, or public cemetery, is also greatly admired for its beautiful statuary. Among Genoa’s public edifices are the Albergo dei Poveri, or home for the poor (1655), with a church attached; the Loggia dei Banchi, or exchange, built by Galeazzo Alessi. The Palazzo Ducale (1291) is crowned with a row of stucco statues of the various princes and kings defeated by the Genoese; its spacious halls were adorned by famous artists. The Palazzo Nuovo (1397), restored in 1529, is the residence of the doges of the fifteen century. Worthy of notice also are the university, founded in 1471 by Bartolomeo Bianco, the Palazzo Reale, and the Municipio or Town Hall. Genoa has many famous private palaces, e.g. the Adorno, with paintings by Rubens, Guido Reni, Titian, and Giulio Romano; the Palazzo Doria, with a representation of St. George and the Dragon over the doorway. Besides the university, there is a
merchant-marine school, a Catholic high school, an academy of fine arts and other institutions of a similar nature.

The line of bishops is usually dated from St. Solomon or Solomonus, said to have been martyred in 269. Other bishops are mentioned in the third and fourth centuries, the first known with any certainty being Diogenes, a member of the Council of Aquileia in 381. Blessed Jacobus a Veragine, author of the Legenda Aurea (Golden Legend) and Bishop of Genoa (1292–1298), tells us that till the tenth century he found no mention of a Bishop of Genoa, thus proving that in his time nothing was known of the legendary martyred bishops. The St. Syrus I assigned to the beginning of the fourth century may therefore be a double of St. Syrus II (1139–1163). When the Lombards captured Milan (568), its bishop, Laurentius, and many of his clergy took refuge in Genoa; five other Milanese bishops took up their residence there. It was this same Laurentius who dedicated the church of St.

Gentile da Fabriano, Italian painter; b. probably about 1378 in the District of the Marches; d. probably 1427. The history of this artist has for a long time been involved in mystery, and even Vasari’s statements concerning him have to be accepted with caution. Of his early life we still know nothing, but thanks to the investigations of Milanesi, Amico Ricci, and later on of Venturi and Corrado Ricci, we have a few definite facts concerning him. The earliest mention of him is concerned with the decoration of the large council hall in the doges’ palace at Venice, which, it seems clear, must have been carried out between 1411 and 1414, probably in the former year, as the theory set up by Wickhoff, placing the work at a much later date, has now been proved to be untenable. In 1408, however, Gentile is known to have painted a large altar-piece in Venice for Francesco Amadi, and this date implies that he must have been resident in the city for some years previously, because it was not possible for an artist, who had not been

Ambrose built for the Milanese refugees. About 617, Bishop Appellinus became involved in the schism of Agrestius. In 634, Bishop Asterius ordained St. Byrsinus, who was to be one of the apostles of Northumbria.

Councils were held at Genoa in 773 (?), 1216, and 1292. Innocent IV and Adrian V were natives of the city. It was originally a suffragan of Milan, but, in 1133, Innocent II made it a metropolitan see. Its first archbishop was the St. Syrus mentioned above. Its suffragan sees are Albenga, Bobbio, Brugnate and Luni-Saranza, Chiavari, Savona and Noli, Tortona, Ventimiglia. It has 200 parishes and 470,000 souls (161,000 in the city); there are 33 religious houses for men in the city, and 19 throughout the diocese; also 62 convents for women in the city, and 82 throughout the diocese. The archdiocese supports 2 Catholic daily newspapers, 3 weekly papers, and 13 other periodicals."

M. MAGDALEN, ST. NICHOLAS, JOHN THE BAPTIST, AND ST. GEORGE

Gentile da Fabriano, San Nicolò, Florence

born in Venice, to be accepted as a member of its school or guild, unless resident in the city for some considerable time before he made his application. Between April, 1414, and September, 1419, we know that he was painting in Brescia, decorating a chapel for Pandolfo Malatesta, and it was on the occasion of the visit which Pope Martin V made to Malatesta, when he was received at Chiari, that the pope invited Gentile to pay him a visit in Rome. We have evidence of the date on which he set out, because on the 15 September, 1419, he applied for a safe-conduct. There were serious difficulties, however, connected with the early days of the pontificate of Martin V, and Gentile only got as far as Florence, and could not proceed to Rome.

Of Gentile’s residence in Florence we have evidence from the two applications he made, dated 23 March, and 6 April, 1420, that he might be relieved from the payment of tribute, inasmuch as he was only temporarily sojourning in Florence, and was on his way to his native city; but he could not have remained very long in Fabriano, because on 21 November, 1422, he figures in the deeds of matriculation connected with the doctors and painters of Florence,
and in the following year he signs and dates his picture executed to the order of Palla Strozzi for the church of Santa Trinita in that city. The evidence that he continued in Florence in 1423 is found in some deeds relating to a curious quarrel which took place between one of Gentile's pupils and a certain Bernardo, who threw some stones into the courtyard of the house where Gentile was, breaking some small pieces of sculpture, and the latter was punished by the medici of the picture. It is dated 22 July, and at the end of August of the same year Gentile was in Orvieto, painting in the Duomo, as the archives of the cathedral prove. That work completed, he was at length able to leave for Rome, and in 1427 was at work in the church of San Giovanni in Laterano, and the records of his engagement and stipend have been printed. By 22 November, 1428, he was dead, because on that day, according to the evidence of the commune of Fabriano, his niece Maddalena took possession of the property of her uncle, who was declared to have died in Rome intestate. Further evidence of this date is found later dated to a day in October, 1427, in which the master is spoken of as deceased, and these documents prove the inaccuracy of the statements of Vasari both as regards the date of Gentile's decease and the place where Vasari says he died, Città di Castello. Amico Ricci and Milanese were in error in stating that Gentile died after 1450, as they were misled by a phrase "autore requisito" which occurs in a document representing the visit of Roger von der Weyden to Rome, when he visited San Giovanni in Laterano, and saw the paintings of Gentile. He expressed the greatest admiration for the work, and, according to Ricci and Milanese called the author of the paintings before him. Inasmuch as the visit took place in 1450, these two authors placed Gentile's decease after that date, but the phrase refers to the author having died, and this is proved by the two documents just cited.

These facts practically embrace all that we definitely know respecting this artist. He is said to have learned his art under Allegretto Nuzzi. His family name is by some writers given as Maso or Massi, and his burial is said to have taken place in Santa Francesca Romana in the Campo Vaccino, but all these statements are for the present matters of conjecture. He was probably born at Fabriano in the March of Ancona, according to the evidence of his name, but Nuzzi is believed to have died when Gentile was fifteen years old, and therefore he could have derived very little instruction from Nuzzi. Two of his pictures are dated, the "Adoration of the Kings" in the Academy at Florence, 1425; and the group of saints in San Nicolo in the same city, 1425. His best work in Rome and Venice has perished, but he is well represented in the Brera Gallery in Milan, the galleries of Perugia, Paris, and Berlin; and important pictures in the Heugel collection in Paris and the Stroganoff collection in St. Petersburg are now accepted as being from his hand. Of his work in Rome there is a representation of the miracle of St. Nicholas to be seen in the Vatican Gallery, and part of his work in Orvieto still remains. A picture in the royal collection at Buckingham Palace is attributed to him, with considerable favor: it is also to be seen at Settignano, in the municipal gallery at Pisa, and in the Jæves collection at Newhaven in the United States, but his most important work is the large picture in the Academy in Florence, a painting of remarkable excellence and extraordinary beauty. In his birthplace there is one picture representing St. Francis, which is probably a genuine work. His paintings are distinguished by great magnificence of colour and mass and most of his works are in relief in gesso work, and by the remarkable use he made of small portions of the most brilliant colour, applied in conjunction with masses of gold. He may be accepted as one of the greatest masters of his period, and as a man exceedingly skilful in composition, and full of grand ideas as regards colour and effect, for in the combination of rich colour with gold he has seldom if ever been equalled amongst decorative painters.

Gentiles (Heb. גלטים; Gr. ἔγινον, ἔγινον, ἔγινον, "ἔγινον; Vulg. Gentes, Gentiles, Graci), a word of Latin origin and usually employed in the plural. In the English versions of both Testaments it collectively designates the nations distinct from the Jewish people. The conception of this term varies. In the time of Abraham, the Jews considered themselves, and were in fact, before the coming of Christ, the chosen people of God. As the non-Jewish nations did not worship the true God and generally indulged in immoral practices, the term גלטים "Gentiles" has oftentimes in the Sacred Writings, in the Theod. etc., a disparaging meaning. Since the spread of Christianity, the word Gentiles designates, in theological parlance, those who are neither Jews nor Christians. In the United States, the Mormons use it of persons not belonging to their sect. See PROSELYTES.

FRANCIS E. GIOOT.

Gentili, Aloisius, b. 14 July, 1801, at Rome; d. 26 September, 1848, at Dublin. He was proficient in poetry, displayed considerable musical aptitude, had a taste for mechanical and electrical science, and was devoted to the cultivation of modern languages, the study of the dead languages, anatomy, and the language of English. His early life was that of a brilliant young man of the world, full of ambition of a noble kind, a pet of society, and an evident favourite of fortune. He sought admission into the Society of Jesus, and would have been accepted, but his health seemed broken, and the Society did not venture to receive him. He became more and more impressed with the conviction that God called him to the priesthood and to labour for the conversion of England. He made the acquaintance of Father Rosmini, who, at his earnest entreaty, accepted him as a postulant of the newly-founded Institute of Charity. He remained in Rome, attending theological lectures, whilst residing at the Irish College, in order, at the same time, to improve his English, and after his ordination to the priesthood, in 1830, proceeded to Dom o'Dossola to make his novitiate.

Whilst Gentili was living at the Irish College, a young English gentleman, who had been converted whilst a student at Cambridge, arrived in Rome. This was Mr. Ambrose Philips de Lisle (q. v.). This zealous convert applied to the rector of the Irish College, to obtain for him a priest to preach the Catholic Faith in the neighbourhood of his ancestral home. The rector suggested the Abate Gentili as in every way
suited to the purpose. This led to a great friendship between the young priest and Mr. de Lisle, the submis-
sion of the whole project to Rosmini, and eventually to the coming of Gentilli and other fathers to England in 1835. It was not merely the invitation of Mr. Philip-
des de Lisle that brought the Rosminians to England. In the meantime, one of the vicars Apostolic, Bishop Baines, who then ruled over the Western District, had been sent to obtain the services of the fathers for his college of Prior Park. Though Rosmini gave his consent as early as 1831, the period of preparation for the English Mission was a long one; for the little band did not sail from Civitá Vecchia till 22 May, 1835. They set forth with a more powerful and missionary mind than the Holy Land had given even St. Augustine and his companions received from St. Gregory the Great; for Pope Gregory XVI actually came on board the vessel and blessed the three "Italian missioners" just before they sailed, probably a unique event in missionary history. Gentilli and his companions arrived in London on 15 June, and no time was lost in getting to work. A few days later Gentilli preached his first sermon in England, at Trelawney House, in Cornwall, whether they had been invited by Sir Henry Trelawney, Bart., a zealous con-
vert. He took for his text, "Thou art Peter, and upon this rock I will build my church and my church will make a remarkable impression on the many Prote-
stants who came to hear it. Soon after, the mission-
aries were settled at Prior Park, where early in the following year (1836) Gentilli gave a retreat to the whole college; and this was one of the first, if not the first public retreat according to the method of St. Ignatius ever given in a secular college in England. For this reason it excited among some no little criticism and opposition as a "novelty".

For two years Gentilli was made president of Prior Park; but Bishop Baines' plan of combining secular and regular professors on his staff was an ill-advised one, and it was only when both, the Society and the College, were almost completely reunited that the entire withdrawal of the fathers from Prior Park College. This step left them free to devote their energies and their increasing numbers to the real work for which they came—preaching the Faith to the English people. In 1840 was opened the missionary settle-
ment at Bath, and the seat of Father Mr. Phillips de Lisle, from which as a centre they evangelized much of the surrounding country, the total population of which region was reckoned at 6000, of whom only twenty-seven were Catholics. Notwithstanding the unpro-
mising surroundings, the bitter hostility of the neigh-
bouring Anglicans, and the general absence of incident, his ceaseless labours were rewarded in a space of some two years, by the reception of sixty-one adult converts, the baptism of sixty-six children under seven years of age and of twenty other children condition-
ally, and the conversion of an Anglican clergyman, Rev. Francis Weare. These converting souls were secured by incessant toil, daily instructions, vis-
tis, and religious services of every kind, sometimes in inns or hired rooms, sometimes in a poor cottage, or even in the open air. In the meantime the numbers of the Fathers had much grown. Among the Italians are now to be mentioned Fathers Pagani, Ringu, and a Signini; whilst some Englishmen and Irishmen had joined their ranks, notably the afterwards celebrated Fathers Furlong and Hutton. In 1842 Gentilli visited Oxford, where it is probable, but not certain, that he met Newman. At any rate the visit had important consequences, for Gentilli did not make one of Newman's chief and best-beloved followers. William Lockhart, the young Scotch graduate. The result was that during August of the following year, "Mr. lockhart, feeling it impossible to resist his conviction that the Anglican Church had fallen into fatal schism in separating from the Holy See, came to visit Father Gentilli at Lough-
borough. After making a few days retreat under him in the chapel house at Loughborough, he was received into the Catholic Church, and a little later entered as a postulant of the Order." This conversion was the very first-fruit of the Oxford Movement, preceding the reception of Newman himself by no less than two years.

The first public mission was given at Loughborough by Fathers Gentilli and Furlong, and had an extraordi-
nary success. Sixty-three converts were instructed and received at it. From this time forward, the work of the fathers takes a new and far wider development. Great public missions all over the country alternate with innumerable spiritual retreats to colleges and communities for the next five years. It was a stirring of the whole of the mission to the Catholic Church of England, and a gathering into the net of converts from Protestantism, on a scale which astonishes us as we read of it at this distance of time. Some idea may be given of the labours and zeal of the fathers from what has been recorded of various great public missions. They usually gave four or five discourses daily, at fixed intervals, taking the sermons alternately, treating both dogmatic and moral Gospel doctrines, especially the great truths, the mystery of the Redemption, the Divine precepts, the Life of Christ. And the whole of the time intervening between the discourses was devoted to the exercise of piety and meditation. So great usually was the concourse of penitents, that the fathers were kept occupied for eight or ten hours a day. Sometimes they even remained in church all night long, hearing confessions, and had absolutely no time either to say Mass, or recite the Divine Office, much less take any sleep, or any nourishment, except in a hasty manner. Such wearisome labours were not interrupted, but only varied, for weeks and even months together. They had to prepare children for their First Communion, instruct converts, restore peace in families, see to the restitution of ill-gotten goods. They also introduced processions, evening Benedictions, and other solemn functions at the close of missions.

The years 1844 to 1848 were fully occupied with an incredible number of popular missions and retreats all over England. At Newcastle 250 adult Protestants were received into the Church; at Manchester mis-
sions in three of the principal churches produced no less than 378 converts. It was in 1848 that Gentilli gave his great mission in Dublin, where, in spite of the political excitement of that year, the confessionalists were so few, that the Fathers often sat there without a break from the last instruction at night till the first Mass of the following morning. But a sudden and altogether unexpected blow brought to a sudden end the labours of this great mission. Father Gentilli, the pioneer missioner, was suddenly seized with a fatal fever, and died after only a few days' illness. His mortal remains still repose in Glasnevin Cemetery.

Gentilli, Charles Joseph. See Agra, Archdio-
ce of.

Genuflexion.—To genuflect [L. genu flexere, geniculare (post-classic), to bend the knee; Gr. γυνή 
kleistos or klystos] expresses (1) an attitude (2) a ges-
ture; involving, like prostration, a profession of de-
dedication or subjection, and the most solemn act of adoration adopted for praying and for worship in general. "The knee is made flexible by which the offence of the Lord is mitigated, wrath appeased, grace called forth" (St. Ambrose, Hexem., VI, ix). "By such posture of the body we show forth our humbleness of heart" (Alcuin, De Parasece). The bending of the knee is an expres-
of penitence and sorrow for sins committed” (Rabanus Maurus, De Lusit. Cler., II, xii).

I. An Attitude or Posture at Prayer.—To kneel while praying is now usual among Christians. Under the Old Law the practice was otherwise. In the Jewish Church it was the rule to pray standing, except in time of mourning (Scudder, Notit. Eucharist., 182). Of the Christians who pray standing a passage to Heli: “I am that woman who stood before thee praying to the Lord!” (I Kings, i, 26; see also II Esd., ix, 3–5). Of both the Pharisees and the publican it is stated in the parable that they stood to pray, the attitude being emphasized in the case of the former (Luke, xi, 3). Christian statues that stand would be the ordinary posture in prayer of those whom He addressed: “And when you shall stand to pray”, etc. (Mark, xvi, 25). “And when ye pray, you shall not be as the hypocrites, that love to stand and pray in the synagogues”, etc. (Matt., vi, 5). But when the occasion was one of special solemnity, or the petition very urgent, or the prayer made with exceptional fervour, the Jewish suppliant knelt. Besides the many pictorial representations of kneeling prisoners, and the like, left us by ancient art, Gen., xvi, 43 and Esth., iii, 2 may be quoted to show how universally in the East kneeling was accepted as the proper attitude of suppliants in prayer. Thus Ps. 51:2: “Have mercy on me, O God, for I have sinned against you!” (LXX, ekteles). Esdras too: “I fell upon my knees, and spread out my hands to the Lord my God” (I Esd., ix, 5); and Daniel: “opening the windows in his upper chamber towards Jerusalem, he knelt down three times a day, and adored, and gave thanks before his God, as he had been accustomed to do before” (Dan., vi, 10), illustrate this practice. Of Christ’s great prayer for His disciples and for His Church we are only told that “lifiting up his eyes to heaven, he said”, etc. (John, xviii, 1). The same of His Agony in the Garden of Gethsemani: “kneeling down, he prayed” (Luke, xxii, 41). The lepers, beseeching the Saviour to have mercy on them, kneel (Mark, i, 40; cf. x, 17).

Coming to the first Christians, of St. Stephen we read: “And falling on his knees, he cried with a loud voice, saying”, etc. (Acts, vii, 59); of the Prince of the Apostles: “Peter kneeling down prayed” (Acts, ix, 40); of St. Paul: “kneeling down, he prayed with them all” (Acts, xx, 36; cf. xxi, 5). It would seem that the kneeling posture for prayer speedily became habitual among the faithful. Of St. James, the brother of our Lord, there is no doubt that from his time regular kneeling was in use. Votive offerings of the faithful to the temple (Euseb., Hist. Eccl., II, xxiii; Brev. Rom., 1 May). For St. Paul the expressions “to pray” and “to bow the knee” to God are complementary (cf. Phil., ii, 10; Eph., iii, 14, etc.). Tertullian (Ad Scap., iv) treats kneeling and praying as practically synonomous. And when forgiveness of offences has to be sought, Origen (De Orat., 31) goes so far as to maintain that a kneeling posture is necessary.

It is remarkable that the “orantes” (praying figures) of early Christian art are in the catacomb frescoes invariably depicted as standing with arms extended. Some remarks of Leclercq (Manuel d’Archéologie chrétienne, I, 153 sqq.) suggest that a probable explanation may be found in the view that these “orantes” are merely conventional representations of prayer and of suppliants in the abstract. They are symbols, not pictures of the actual. Now, conventions of this kind, which originate in the signs of detail, not so much by manners and customs prevalent at the date of their execution, as by an ideal conserved by tradition and at the place and time accepted as fitting. Ancient art has left us examples of pagan as well as of Christian “orantes”. The attitude (standing with arms extended or upraised) is substantially the same in all. This, then, is the attitude symbolical, among the ancients, of prayer. In reality, however, suppliants have, as a matter of course, very generally knelt. Hence such classical phrases as: “Genu ponere aliqui” (Curtilis); “Inflecto genu adorare” (Seneca); “Nixi genuis” (Livy); “Genibus minor” (Horace). On the other hand, examples are not wanting of Christian art which regards kneeling as merely the maniera, carnis, expansae manibus orabit”, which the Church has adopted as her memory of the holy martyr, St. Agatha, is an illustration. And as late as the end of the sixth century, St. Gregory the Great describes St. Benedict as uttering his dying benediction upon the altar (CSEL 58, p. 211, c. xxvii). Nor is it likely that since standing has always been a posture recognized, and even enjoined, in public and liturgical prayer, it may have survived well into the Middle Ages as one suitable, at least in some circumstances, for even private devotion. Yet, from the fourth century onwards, to kneel has certainly been the rule for private prayer. Eusebius ( Vita Constant., IV, xxii) declares kneeling to have been the customary posture of the Emperor Constantine when at his devotions in his oratory. At the end of the century, St. Augustine tells us: “They who pray do with the members of their body that which belts support, and the legs hold; they fix their eyes in one point or even prostrate themselves on the ground” (De curâ pro mortuis, v). Even for the ante-Nicene period, the conclusion arrived at by Warren is probably substantially correct:—“The recognized attitude for prayer, liturgically speaking, was standing, but kneeling was early introduced for penitential and private prayer, not as a matter of standing in the ordinary ferial seasons, and was frequently, though not necessarily, adopted in private prayer” (Liturgy of the ante-Nicene Church, 145).

It is noteworthy that, early in the sixth century, St. Benedict (Reg., c. 1) enjoins upon his monks that when the Mass is being celebrated they are to pray with their backs to the Divine Office as a private prayer, they should not stand as when in choir, but kneel throughout. That, in our time, the Church accepts kneeling as the more fitting attitude for private prayer is evinced by such rules as the Missal rubric directing that, save for a momentary rising while the Gospel is being read, all present kneel from the beginning to the end of a Low Mass; and by the recent decrees requiring that the celebrant recite kneeling the prayers (though they include collects which, liturgically, postulate a standing posture) prescribed by Leo XIII to be said after Mass. It is well, however, to bear in mind that there is no liturgical obligation that from this time onwards kneeling, unless conditioned on that particular posture being taken, the indulgence attached to a prayer is gained, whether, while reciting it, one kneel or not (S. Cong. of the Index, 18 Sept., 1862, n. 398). The “Sacro-sanctae”, recited by the clergy after saying the Divine Office, is one of those prayers where it must be said kneeling, except when illness makes the doing so physically impossible. Turning now to the liturgical prayer of the Christian Church, it is very evident that standing, not kneeling, is the correct posture for those taking part in it. A glance at the attitude of a priest officiating at Mass or Vespers, or using the Roman Ritual, will be sufficient proof. The clergy in attendance also, and even the laity assisting, are, by the rubrics, assumed to be standing. The Canon of the Mass designates them as “cunctantes”. The practice of kneeling during the Consecration was introduced during the Middle Ages, and is in relation with the Elevations. It is a rule in the Roman Ritual that while directing that while the celebrant and his ministers recite the Psalm “Judica”, and make the Confession, those present who are not prelates should kneel, is a mere reminiscence of the fact that these introductory devotions were originally private prayers of preparation, and therefore outside the liturgy properly so
called. It must not, in this connexion, escape attention that, in proportion as the faithful have ceased to follow the liturgy, replacing its formulæ by private devotions, the standing attitude has fallen more and more from favor among the laity of the Church. In many places it is quite usual for the congregation at a high Mass to stand for the Gospel and Creed; and, at all other times either to remain seated (when this is permitted) or to kneel. There are, nevertheless, certain liturgical prayers to kneel during which is obligatory, the reason being that it is the proper attitude of those especially prietic to the supplications of penitents, and is a characteristic attitude of humble entreaty in general. Hence, litanies are chanted, kneeling, unless (which in ancient times was deemed even more fitting) they can be gone through by a procession of mourners. So, too, public penitents kneeling during such portions of the liturgy as they were allowed to assist at. The modern practice of an Solemn Exposition of the Blessed Sacrament for public adoration has naturally led to more frequent and more continuous kneeling in church than formerly. Thus, at a Benediction service it is obligatory to kneel from beginning to end of the function, except during the chanting of the Te Deum and the hymns of the Epistle.

It has been remarked that penitents kneel during public prayer, the rest of the faithful standing. A corollary easily drawn from this was that in Lent and other penitential seasons, when all Christians without distinction professed themselves to be “penitents,” the whole Church would far more likely be found in kneeling in the invocation of the Divine Mysteries and during other liturgical prayers. This has given occasion to the Missal rubric, requiring the clergy and by implication the laity, to kneel in Lent, on vigils, ember-days, etc., while the celebrant recites the collect and post-communions of the Mass, and during the whole of the Canon, that is, from the Sanctus to the Agnus Dei. In early times an attempt was made to insist yet more emphatically on the character of penitents as that most befitting ordinary Christians. A practice crept in of posing in church as penitents, that is, of kneeling, on all days alike. It was a principle akin to that which deemed it a great virtue to fast even on Sundays and feast days. In both cases the exaggeration was condemned and severely repressed. In the twentieth canon of the Council of Nicaea (a.d. 325) the fathers lay down (the canon, though passed over by Rufinus, is well known as having been among the evidence of the Church in Alexandria (can. xxv): with others. For post-Nicene times, see St. Hilary (Prolog. in Psalm.); St. Jerome (Dialog. contra Lucif., c. iv); St. Epiphanius (Expos. Fidei, 22 and 24); St. Basil (De Spir. Sacet., can. xxvii); St. Maximus (Hom. iii, De Pentec.; etc.; Note, however, with Hefele (Councils, II, ii, sect. 42) that St. Paul is expressly stated to have prayed kneeling, during paschal time (Acts, xx, 36; xxi, 5). Moreover St. Augustine, more than fifty years after the Council of Nicaea, writes: “Ut autem stantes in illis diebus et omnibus dominicio oremus utrumque ubique vestrum servet noctis” (Ps. 119, 8a); but I do not know whether there is still observed everywhere the custom of standing after the prayers, on those days and on all Sundays). Ep. eexx ad Januar. By canon law (II Decretal., bk. IX, ch. II) the prohibition to kneel is extended to all principal festivals, but it is limited to public prayer, “ nisi alius ex devotione illud facere velit in secreto,” i.e. (unless anyone, from devotion, should wish to do that in private). In any case, to have the right to stand during public prayers, one must be noted as a sort of privilege—an “immunitas” (Tertull., loc. cit.)

On the other hand, to be degraded into the class of the “genulectentes,” or “prostrati,” who (Fourth Council of Carthage, can. lxxvii) were obliged to kneel during public services even on Sundays and in paschal time, was deemed a severe punishment. It was only when kneeling the lesser penance (μηδένια μεγάλην) as opposed to prostration, the greater penance (μεδόνια μεγάλην). Standing, on the contrary, was the attitude of praise and thanksgiving. St. Augustine (loc. cit.) considers it to signify joy, and therefore to be the fitting posture for the weekly commemoration by Christians of the Lord’s Resurrection, on the first day of the week (see also Cassian, Coll., XXI). Hence, on all days alike, the faithful stood during the chanting of psalms, hymnus, and canticles, and more particularly during the solemn Eucharistic or Thanksgiving prayer (our Preface) preliminary to the consecration in the Divine Mysteries. But the standing posture (2 Macc. ix. 25) was Aramaic (Arab. Uhrū; Armen. urchi) is frequent at this point of the liturgy. Nor have we any grounds for believing, against the tradition of the Roman Church, that during the Canon of the Mass the faithful knelt on weekdays, and stood only on Sundays and in paschal time. The standing posture was, however, used in Lent and other seasons of penance. What precisely were the prayers which the Fathers of Nicaea had in view when insisting on the distinction of days is not at once evident. In our time the decree is observed to the letter in regard to the Salve Regina or other antiphon to Our Lady with which the Divine Office is concluded, and also in the recitation of the Angelus. But both these devotions are of comparatively recent origin. The term prayer (έξαρτι) used at Nicaea, has in this connection always been taken in its strict signification as meaning supplication (Probst, Drei ersten Jahrhund., 1, art. 2, ch. xlix). The dioscan litany, general in the East, in which all conditions of men are prayed for, preparatory to the offering of the Holy Sacrament, comes under this head. And in fact in the Clementine Liturgy (Brightman, 9; Funk, Didascalia, 488) there is a rubric enjoining that the deacon, before proceeding to the altar, should kneel and turn to all who kneel with him, and terminate by bidding all to rise up again however unexplained why the exception for Sundays and paschal time is not expressly recalled. In the Western or Roman Rite, traces of a distinction of days still exist. For instance at the end of the Complin of Holy Saturday there is the rubric: “Et non flectuntur genua tota tempore Paschali,” which is the Nicene rule to the letter. The decree has likewise (though slightly varied in wording) been incorporated into the canon law of the Church (Dist. iii, De consecrat., c. x). It may be added that, both in the East and in the West, certain extensions of the exemption from the necessity of kneeling appear to have been gradually insisted upon. “The 29th Arabic Canon of Nicaea extends the rule of not kneeling, but only bending forward, to all great festivals of Our Lord” (Bright, Canons of Nicaea, 86). Consult Mansi, xiv, 89, for a similar modification made by the Third Council of Toledo, a.d. 581. See also the c. Quoniam (II Decretal., bk. 9, c. 2) cited above.

To fix with some precision the import of the Nicene canon, as it was understood and reduced to practice by the ancients, the supplications, to which the name “bidding prayers” has sometimes been given, merit careful notice. They are the Western analogues of the Eastern diocesan liturgical great frequency in the old Gallican and Mozarabic uses. In their full form they seem peculiar to the Roman Rite. The officiating bishop or priest invites the faithful
present, who are supposed to be standing, to pray for some intention which he specifies. Thereupon, the deacon in attendance subjoins: "Flectamus genuum, et levem praelium, in pace omnium sermone, silent prayer, ensued. This ended at a sign given by the celebrant, or for him by some inferior minister, who, turning to the people with the word "levate", bade them stand up again. They having done so, the celebrant summed up, as it were, or collected the silent petition just passed, and then said a collect.

"Cum is qui orationem collecturus est e terra surrexerit, omnes pariter surgant" (Cassian, Inst., II, vii). The stress put in the early Church upon the due performance of this ceremonial explains why, before receiving baptism, a catechumen was required to recite it publicly. It was standing before the bishop who addresses him: "Ora, electe, flecte genua, et dic Pater noster". This is the "Oremus, flectamus genua" of the liturgy. The direction to say the Lord's Prayer in preference to any other, or at least previously to any other, is very natural. A glance at the Roman liturgical books will show what other pieces were usually added—Kyrie eleison (repeated several times) and certain Psalm verses concluding, as a rule, with "Domine exaudi orationem meam. Et clamor meus ad te veniat" (Ps., cx, 1). Then the catechumen is told: "Leva, comple orationem tuam, et dic Amen". The celebrant prayer in Oremus will collect his supplications and those of the rest of the faithful are omitted, as it is only the catechumen's part in the common prayer which is being dealt with. The catechumen rises and says "Amen". This is gone through three times and the catechumen having shown that he has learned how to comport himself during the "oratio fidelium" of the liturgy in which he will henceforth take part, the baptismal ceremony is proceeded with (See Roman Ritual, De Baptismo Adultorum; and Van der Stappen, IV, Q. cxvii).

Of silent kneeling prayer the characteristic example is the group of prayers for all conditions of men in our Good Friday liturgy. They have retained the name "Oraciones solemnes" (usual prayers) because, in primitive ages, gone through in every public Mass. They are the Latin "Oratio Fidelium", and their place in the daily liturgy is still marked by the "Oremus" invitation at the Offertory (Duchesne, Origins du chant liturgique, VI, art. 2). The same prayer obtains at ordinations and in some few other rites. But it has long since been shorn of its most striking feature. The faithful are indeed bidden to kneel down; but straightway follows the order to stand up again, the impressive pause being suppressed. And the object, the object of the prayer, is no longer announced. The single word "Oremus" uttered by the celebrant is followed immediately by "Flectamus genua", with its momentary genuflexion, "Levate", and the collect (see, in the Roman Missal, the Ember-day Masses, etc.). The learned Bishop Van der Stappen (Sacra Liturg., II, Q. lxv) is of opinion that anciently on all days alike, there was a pause for silent prayer after every "Oremus" introducing a collect; and that on Sundays and other non-pentential days this same silent prayer was made by all standing and with hands raised to Heaven. The invitation "Flectamus genua" merely reminded the faithful that the day was one of those on which, by the custom of the Church, they had to pray kneeling. The rubrics for the Pentecost ember-days which occur in paschal time, and that prefixed to the last collect in the blessing of candles on the feast of the Puriﬁcation, strengthen this view. Another instance of kneeling prayer is repeated: (as Sundays and in paschal time) is that of the benedicions or short collects which, in early ages, it was usual to add after the recitation of each psalm, in public, and often in private, worship. The short prayers called "absolutions" in the Office of Matins are a survival of this discipline. (For a complete set of these prayers see Mozarab Breiviary in F.L., LXXXV). These collects were said when a pause of a few minutes long, spent by each one in private and silent prayer, ensued. This ended at a sign given by the celebrant, or for him by some inferior minister, who, turning to the people with the word "levate", bade them stand up again. They having done so, the celebrant summed up, as it were, or collected the silent petition just passed, and then said a collect.

The kneeling collect is that at which the priest engaged for the receiving of the sacraments, or at least henceforward, called a collect.

"Cum is qui orationem collecturus est e terra surrexerit, omnes pariter surgant" (Cassian, Inst., II, vii). The stress put in the early Church upon the due performance of this ceremonial explains why, before receiving baptism, a catechumen was required to recite it publicly. It was standing before the bishop who addresses him: "Ora, electe, flecte genua, et dic Pater noster". This is the "Oremus, flectamus genua" of the liturgy. The direction to say the Lord's Prayer in preference to any other, or at least previously to any other, is very natural. A glance at the Roman liturgical books will show what other pieces were usually added—Kyrie eleison (repeated several times) and certain Psalm verses concluding, as a rule, with "Domine exaudi orationem meam. Et clamor meus ad te veniat" (Ps., cx, 1). Then the catechumen is told: "Leva, comple orationem tuam, et dic Amen". The celebrant prayer in Oremus will collect his supplications and those of the rest of the faithful are omitted, as it is only the catechumen's part in the common prayer which is being dealt with. The catechumen rises and says "Amen". This is gone through three times and the catechumen having shown that he has learned how to comport himself during the "oratio fidelium" of the liturgy in which he will henceforth take part, the baptismal ceremony is proceeded with (See Roman Ritual, De Baptismo Adultorum; and Van der Stappen, IV, Q. cxvii).

The short prayers called...
of comparatively recent introduction, though in some cases they replace a proscription that was usual, in ancient times, when the same sacred words were solemnly uttered (see, for instance, in regard to the "Et incarnatus"). The curious passage in the work of Hesychius of 1448 he too, who is particularly noted for his colloquy concerning the errors of Gilbert de la Porée. In 1169 he was made abbot of the monastery of Igny in the Diocese of Reims, and in 1162 he became the fourth Abbot of Clairvaux. Owing to difficulties with the monks, he was forced to resign in 1165; but in 1170 he was appointed to the abbey of Fossanova in the Diocese of Terracina, Italy, and in 1176 to that of Haute Combe, Savoy. In the political events of the time he had only a small share; thus, in 1167 and 1168, he took part in the negotiations tending towards the reconciliation of Alexander III (1159-81) with the Emperor Frederic Barbarossa (1152-90) and King Henry II of England (1154-89).

Most of the literary activity of Geoffrey has reference to the life and work of St. Bernard. Thus, while still notarius of the saint, he collected the letters of his abbot, variously estimated at 243 or 310 (P. L., CLXXXII, 67 sqq.). He was the chief author of a new edition of the letters of St. Bernard; this was published in 1191, and the new editor, he says, "accepto vercasque se, deinde procumbens" (Suet., Vit., ii. The liturgical rules for genuflection are now very definite. (1) All genuflect (bending both knees) when adorning the Blessed Sacrament unveiled, as at Expositions. (2) All genuflect (bending the right knee only) when adorning the Blessed Sacrament enclosed in the Tabernacle, or lying upon the corporal during the Mass. Mass-servers are not to genuflect, save when the Blessed Sacrament is at the altar where Mass is being said (cf. Wapelhorst, Infra). The same honour is paid to a relic of the True Cross when exposed for public veneration. (3) The clergy in liturgical functions genuflect on one knee to the cross over the high altar, and likewise in passing before the bishop of the diocese when he presides at a ceremony. From these genuflections, however, an officiating priest, as also all prelates, canons, etc., are dispensed, bowing of the head and shoulders being substituted for the genuflection. (4) On Good Friday, after the ceremony of the Adoration of the Cross, and until Holy Saturday, all, clergy and laity alike, genuflect in passing before the unveiled cross upon the high altar.

Geoffrey of Clairvaux, a disciple of St. Bernard, was b. between the years 1115 and 1120, at Auxerre; d. some time after 1188, probably at the abbey of Haute Combe, Savoy. At an early age he entered the ranks of the clergy, and followed for some time the course of lectures given by Abelard. In 1140 St. Bernard of Clairvaux came to Paris, and before the assembled scholars preached a sermon "De conversione ad clericos" (P. L., CLXXXII, 835 sqq.), in which he dwelt on the vanities of a life in the world, on the necessity of a sincere conversion, and on the peace to be found in the monastic profession. Geoffrey was so struck by this forcible discourse that, with several others, he followed St. Bernard and joined the monastic community of Clairvaux. Soon he won the special confidence of the saintly abbot, became his chaplain, or secretary, and his permanent companion. In 1145 he accompanied him to Toulouse and other cities of Southern France, where the saint preached against

the Manichean or Albignian heresy of a certain Henry and his partisans. During the years 1146-47 he travelled with St. Bernard through France and Germany, where the saint aroused the people for a crusade to the Holy Land. At the council held at Reims in 1148 he took an active part in the discussions concerning the errors of Gilbert de la Porée. In 1159 he was made abbot of the monastery of Igny in the Diocese of Reims, and in 1162 he became the fourth Abbot of Clairvaux. Owing to difficulties with the monks, he was forced to resign in 1165; but in 1170 he was appointed to the abbey of Fossanova in the Diocese of Terracina, Italy, and in 1176 to that of Haute Combe, Savoy. In the political events of the time he had only a small share; thus, in 1167 and 1168, he took part in the negotiations tending towards the reconciliation of Alexander III (1159-81) with the Emperor Frederic Barbarossa (1152-90) and King Henry II of England (1154-89).

(4) On Good Friday, after the ceremony of the Adoration of the Cross, and until Holy Saturday, all, clergy and laity alike, genuflect in passing before the unveiled cross upon the high altar.

Geoffrey of Dunstable, also known as Geoffrey of Gorham, Abbot of St. Alban's, d. at St. Alban's, 26 Feb., 1146. He was a scholar from the province of Maine, then annexed to the Dukedom of Normandy, who was invited by Richard, Abbot of St. Alban's, to become master of the abbey school. On his arrival, he found that owing to his long delay another had been appointed, whereupon he opened a school at Dunstable. Having borrowed some copies from St. Alban's Abbey for a miracle play to be acted by his scholars, he had the misfortune to lose his house and all its contents by fire on the evening after the performance. To make up to God and the saint for the loss of the copies, he promised to the monk of St. Alban's Abbey. Here he rose to be prior, and finally was elected abbot on the death of Richard, in 1119. He ruled firmly for twenty years, and the abbey prospered under his wise admini-
Geoffrey of Monmouth (Gafridus Arturus, Galfridus Monemutensis, Galfray or Grautud an Arthure), Bishop of St. Asaph and chronicler; b. at Monmouth about 1100; d. at Llandaff, 1154. He was the son of Arthur, a priest, and was educated by his uncle Uchtred, afterwards Bishop of Llandaff. It has been surmised that he became a Benedictine monk, but this is uncertain. At Oxford he met Walter the Archdeacon, who suggested the idea of his great work, "Historia Regum Britanniae". About 1140 he accompanied Uchtred to Llandaff, where he became archdeacon of St. Teilo's, and opened schools in which many clerics and chieftains were educated. The "Historia" had appeared before 1139, but Geoffrey continued it, and in 1152 completed it in its final form. In 1151-2 he was elected Bishop of St. Asaph and was consecrated at Lambeth by Theobald, Archbishop of Canterbury, on 24 Feb., having been ordained priest a week before; but he died without having entered his diocese. Geoffrey's "History" has been one of the great influences in English literature, making itself especially felt in the national romance from Layamon to Tennyson. Shakespeare, Milton, Dryden, Pope, and Wordsworth have all used his legends, while many of the earlier chroniclers followed him as an historian. But the twelve books of his "History", recounting how Brut, great-grandson of Aeneas, founded the kingdom, and narrating the adventures of subsequent kings, are in truth not history at all but the beginning of English story-telling. Among his legends is that of King Arthur, which became the most famous of the great cycles of romance so popular in the Middle Ages. Geoffrey's legend has received a new form from Sir Thomas Malory in the fifteenth century has again been given fresh life by Tennyson in the "Idylls of the King". Geoffrey claimed that his work was founded on a "most ancient book"—probably a collection of British legends no longer extant. Geoffrey also wrote a Latin version of the "Cymric Prophesies of Merlin" and a life of Merlin is attributed to him. His stories exercised a wide influence in Germany, France, and Italy, while in England they contributed to the unification of the English people by spreading belief in a common origin of Briton, Saxon, and Norman. The "Historia Britonum" was first printed at Paris, 1508; the best editions being those of Giles (London, 1844) and Schulz (Halle, 1854).

Geoffrey of Vendôme, (Goffridus Abbas Vindocinensis), cardinal, b. in the second half of the eleventh century of a noble family, at Angers, France; d. there, 26 March, 1132. At an early age he entered the Benedictine community of the Blessed Trinity at Vendôme in the diocese of Chartres; and in 1193, while still very young and only a deacon, was chosen abbot of the community. During all his lifetime he showed a great attachment to the Holy See. Thus, in 1194, he went to Rome in order to obtain a dispensation for himself in Bedfordshire, for his friend and counsellor, Christina the recluse. He also opened a leper hospital near St. Alban's. Finally, he succeeded in saving the abbey when it was threatened with destruction during the Civil War in the reign of Stephen.

Edwin Burton.

Francis J. Schaeffer.

Geography, Biblical.—With the exception of the didactic literature, there is no book in the Bible which, to greater or less extent, does not contain, or allusions to, the geography and topography of the Holy Land. In early times, when the perusal of the Sacred Books was confined within the limits of the country in which they had come to light, there was little need of any special attention to geographical details. Palestine has a small area, and every one of its inhabitants was acquainted with almost every boulder and nook in it. Not so, however, the outside reader—the Jew of the Diaspora, for instance. But little did he care, in many cases, for such trifles as topographical niceties; God's message was all he was looking for in Holy Writ. But those who longed for a fuller knowledge of the land of their forefathers, an occasional pilgrim thither, at a time when local traditions were still alive, afforded ample opportunities. After a.D. 70, Jewish pilgrims ceased to flock to Palestine; on the other hand, zealous Christians, whilst at times casting a glance towards the land whence the light of the Gospel had come, would rather "point forth themselves to the things that are before", and direct their conquering steps to new shores. It thus happened that when the Church obtained her long-delayed freedom from the thrones of persecution, and her scholars turned their minds to a searching study of
MAP OF PALESTINE IN THE OLD-TESTAMENT PERIOD

NOTE: THE PORTION WEST OF THE RIVER JORDAN IS TAKEN FROM THE SURVEYS OF THE PALESTINE EXPLORATION FUND
the Bible, they realized that much of the book would remain sealed to them unless they were acquainted with the Holy Land. To this deeply felt need Biblical geography, or to the study of the geographical and historical sense of the Scriptures. The study of Biblical geography is pursued more than ever in our time, and it may not be amiss to mention here the principal sources and means at its disposal.

First of all, of course, stands the Bible, some parts of which, however, must be singled out, owing to their importance in the presentation of Biblical ethnographical list in Gen. xx, is a valuable contribution to the knowledge of the old general geography of the East, and its importance can scarcely be overestimated. The catalogues of stations of the Hebrew people in their journeys from Egypt to the bank of the Jordan supply us with ample information concerning the topography of the Sinaitic Peninsula, its southern and eastern borders of the Dead Sea. In the Book of Josue is to be found a well-nigh complete survey of Palestine (especially of Southern Palestine) and the territory allotted to Juda in particular. Later books add little to the wealth of topographical details given in Josue but the given data have become engraven upon early maps and plans of Palestine, and have been used by cartographers and geographers in surveys of the Holy Land. The centuries following the Exile were for the adventurous Israelites a period of expansion. Colonies of thrifty merchants multiplied wonderfully East and West, above all throughout the Greek and Roman worlds, and the Greek and Roman lands had to train their ears to many new, “barbarous” names of places where their kinsmen had settled. The Church at Jerusalem, therefore, was well prepared to listen with interest to the accounts of Barnabas’s and Paul’s missionary abroad (Acts, xv, 12; xxi, 19).

While the authors of the English Authorized Version (A. V.) have made efforts to preserve proper names in their old Hebrew mould, our Douay Version (D. V.) adheres, as a rule, to the Latin transliteration. This imperfection is, however, by no means to be compared with that which arises from the omission or translation of the Greek text in the Revised Version. The Greek textus receptus was printed. To cite at random a few instances, Bahurim has become Baalham; Debbaeth, Heb. Dabbatheh, Dabatha; Eglon, 'Oklom or Admah; Gethemmon, Gelath, etc., not to speak of the frequent confusion of the sounds of s and r or of the proper names wrongly translated, as ’En Shemesh by ِهِ شِمْش ِتُوِ دَلُوُ، etc. Thanks to a systematic correction of the whole text, such divergences are not to be found in the Codex Alexandrinus. Biblical information is in a good many instances paralleled, and not unfrequently supplemented, by the indications gathered from the documents of the subsequent age. No fewer than 119 towns of Palestine are mentioned in the lists of Thothmes III (about 1600 B.C.); the names of some 70 Canaanite cities occur in the famous Tell-el-Amarna letters (about 1450 B.C.); on the walls of Karnak the boastful records of the conquests of Sheshonk I (Sessu) exhibit a list of 156 names of places, all in Central and Southern Palestine (935 B.C.); the inscriptions of the Assyrian kings Tukulti Napir-Sarse III (Teghaphalsar, 745–72), Sarru-kinu (Sargon, 722–05), and Sin-akhi-erba (Sennacherib, 705–681) add a few new names. From the comparison of all these lists, it appears that some hundreds of the Palestinian cities mentioned in the Bible have also been identified.

“*The immovable East*” still preserves under the present Arabic garb a goodly proportion (three-fourths, according to Col. C. R. Conder) of the old geographical vocables of the Bible; in most instances the name still clings either to the modern city which has supplanted the old one (e.g. Bet-Lakhm for Bethlehem, or the site it occupied (e.g. Tell Jeser for Jazer; Tell Ta'anun for Taanaah); sometimes it has shifted to the neighboring village, spring, well, or hill (as Wady Yabis). The history of the Palestinian cities and of the changes which some local names have undergone in the intervening centuries, as well as the many old names which were in use, are known to a certain extent from the records preserved in the Arab custom, and helped, by the information supplied by geographers, historians, and travelers. In this regard, parts of the works of classical geographers, such as Strabo and Ptolemy, are consulted with profit; but they cannot compete with Buseblius’s “Onomasticon,” the work of which was already recognized by St. Jerome, and more than the Ptolemy Table, however useful, can rival the Madaba Mosaic Map (dating probably from Justinian’s time) discovered in the autumn of 1897. The “Peregrinatio Silvia” (whatever the true name of the author), the description of the Bordeaux pilgrim, the accounts of those whom the piegy of the Middle Ages brought to the Holy Land, the histories of the Crusades and of the Latin Kingdom of Jerusalem, and, lastly, the Arab geographers afford valuable material to the student of Biblical geography.

The topography, as well as the history, of Palestine is a favourite study of the present day. Governments and universities have given to the question of the history of the district the importance of a great subject, masters of archæology; schools have been founded at Jerusalem and elsewhere to enable Biblical students, as St. Jerome recommended (in lib. Paralip., Pref.), to acquire a personal acquaintance with the sites and the natural conditions of the country; and all—diplomats, scholars, masters, and students—encourage the land, survey it, search its innermost recesses, copy inscriptions, make excavations, sift on the spot the evidences furnished by the Bible and all available authorities. The results of their labours are published in periodicals founded for that particular purpose (such as the “Palestine Exploration Fund Quarterly Statement,” the “Zeitschrift,” and the “Mittheilungen und Nachrichten des deutschen Palästina-Vereins,” the “Palästinajahrbuch”) or appear as important contributions in reviews of a wider scope (like the “Revue Biblique,” the “Mélanges d’Archéologie orientale” or the “American Journal of Archæology”). In the bibliography given at the end of this article there is a list of the works of scholars who, especially in the last fifty years, have earned fame in the field of Biblical geography, and a right to the gratitude of all students of Sacred Scripture.

The name Palestine, first used to designate the territory of the Philistines, was, after the Roman period, gradually extended to the whole southern portion of Syria. It applies to the country stretching from the Lebanon and Anti-Lebanon to the Sinaic Desert, and from the Mediterranean to the Arabian Desert. Politically, the limits varied in the course of Biblical times. The boundaries of the territory which David and Solomon possessed were incomparably small: it included the region west of the Jordan between a line running from the foot of the Hermon Range to Sidon, and another line from the southern end of the Dead Sea to Gaza. David’s and Solomon’s possessions were considerably larger; they probably extended north-eastward into the Syrian, and eastward to the Arabian Desert. Two other expansions occur frequently in the Bible to designate the whole length of the land in historical times: “from the entrance of Emath [i.e., probably, the Merj Ayyan] to the river of Egypt [Wady el-Arish],” or “to the sea of the Wilderness [Dead Sea]” and “from Dan to Beersheba.” This last phrase, used by the Chronicler, and by St. Jerome, about 160 Roman miles (141 Engl. m.). As to the breadth of the country, the same Father declared himself ashamed to state it, lest heathens might take occasion from his assertions to blaspheme (Ep.
ad Dardan, (120). According to the measurements of the English surveyors, the area of the Holy Land is about 9700 square miles, a trifle over that of the State of Vermont. These figures are humble indeed compared to those found in the Taimud, where (Talm. Babyl., "Sotah," 49) Palestine is given an area of 2,250,000 Roman square miles—more than half the area of the United States.

The land was a "land of hills and plains" (Deut., xi, 11). To the north, two great ranges of mountains, the Lebanon and the Anti-Lebanon, or Hermon, separated by the deep valley of Celesyria (El-Beq'a), raise their summits to a height of 9000 or 10,000 feet. The Lebanon was never within the borders of the Zor, as this did not include the territory of the Libanians and of their Syrian successors; but the Hebrews liked to speak about its majestic grandeur, its slopes covered with oaks, firs, and cedars, its peaks capped with nearly perennial snow. Glistening closer on the northern frontier, Mt. Hermon—Sirion of the Sidonians, Semir of the Amorrites, Jebel esh-Sherok—was perhaps more familiar. On both sides of the Jordan the mountains of Palestine prolong these two ranges. West of the upper course of the river, the mountains of Galilee gradually decrease towards the plain of Esdrelon which alone divides the highland. Only a few of the peaks which stretch across it remain higher than the level of the Jordan. "Mounts of Seir" and "Mounts of Seir," the heights of Gelboe (A.V. Gilboa; J. Fuqu'da), bordering the plain to the east, connect the lesser ranges of Galilee with the mountains of Ephraim. The country then rises steadily, studded with rounded hills—among them Ebal and Gerizim (A.V. Gerizim)—riven east and west by torrents, and is continued in the "Mountains of Juda" (3000 ft.), to decrease farther south (Bersabee, 700 ft.) and be connected through the "Mountains of Seir" (Jebel Madera, J. Moqara, J. Aradif) and the J. et-Tu, with the first approaches of Sinai. The mountains of Ephraim and those of Juda descend gradually towards the Mediterranean Sea, the last western hillocks bordering on the rich plain of Saron (A.V. Sharon), south of Mount Carmel, and on the Sephelah (A.V. Shephelah). As the Jordan Valley sinks while the plateau rises, the eastern ravines are the deeper (the Cedron falls 4000 ft. between Jerusalem and the Dead Sea), and west of the Dead Sea, the wilderness of Juda becomes a labyrinth of rugged and precipitous gorges, the favourite haunt of outlaws at all times (cf. I Sam., D.V. I Kings, xxii, xxxii, xxxiv), the last stronghold of Jewish independence (Masada, April, a.d. 73), and the time-honoured retreat of the early Christians. The Dead Sea, 1225 feet below the level of the Mediterranean, is much narrower than its celebrity might lead one to suppose. A few miles below Lake Huleh, its width is only 75 feet; about twenty miles, as the crow flies, north of the Dead Sea, it measures some 115 feet; but as it goes down towards the Sea, the river broadens to 225 feet. Before the Roman period no bridges existed over the Jordan; communications were active, nevertheless, between both banks, thanks to the shallowness of the water, which is fordable in five or six places (Jos., ii, 7; Judges, iii, 23; vii, 24; xii, 5, 6, etc.). Early in the spring, however, this is utterly impossible, for the river, swollen by the melting snow of Mount Hermon, overflows its banks and spreads over the whole area of the Zor (Jos., iii, 15; I Par., xii, 15; Eclesius, xxiv, 36). The Jordan is formed by the union of three springs, respectively known as Nahr el-Hasbani, N. el-Leddah, and N. Banlyas, which meet nine miles north of Lake Huleh. The river, over 300 miles long, has many tributaries, very few of which are explicitly mentioned in Scripture. We may mention, on the west side, the N. el-Bireh, which comes down from Mount Thabor, the N. el-Jalud, bringing down from Nehel Dahli the waters of Ain Jalud, possibly the site of the trial of Gideon's companions (Judges, vii, 4, 6), the Wady Farah, which originates near Mount...
belong to Western Palestine. Going from north to south, and leaving aside those in the neighbourhood of cities to which they gave their names (Engannim, En-Adar, etc.), we meet with the "fountain of Daphnis" (Num., xxxiv, 11, in the Vulgate only: other texts have merely: "the fountain") identified by Robinson with 'Ain el-'Asy, the main spring of the Orontes in Cilicia; the "fountain which is in Jerusal" (I Kings, xxix, 1) generally recognized in the 'Ain Jalud, near the Greek wall of Jerusalem, the name of which recalls that of the city of Jabaal-Galaad (I Kings, xi; xxxi, 11-13), the Jaboc (N.ez-Zerqa), the Nimrin (cf. Bethemra, Num., xxxii, 36; Jos., xiii, 27), and, a few miles from the Dead Sea, the united waters of the W. Kefren and W. Heshban (cf. Hesebon, A.V. Hesebon, Num., xxx, 26; Jos., xxii, 6; etc.), very likely the "torment of the willows" of Is., xv, 7.

In the Mediterranean watershed, from the extreme north of Phoenicia, the most famous rivers are the Eloutherus (I Mach., xi, 7; xii, 30.—Nahr el-Kebr, the N. el Qasimye (Leontes of the Greeks), the N. el-Mugattâ (Cason; A.V. Kishon), the N. es-Zerqa, very likely the "Ifmuns Crocodile" of Pliny (Hist. Nat., V. xvii) and the Sichor Labannah of the Bible (Jos., xix, 26.—A.V. Shihor-libnath), the N. el-Falej, possibly the Nahal Qana (D.V. "valley of reeds"; A.V. Kanah) of Jos., xvi, 8 and xvii, 9, the N. Rabbin, one of the confluents of which, the W. es-Sarraf, runs through the famous "valley of Sore (A. V. Sorek.—Judges, xvi, 4, etc.), the N. Sukreir, into which opens the "valley of the terebinth" (A.V. "valley of Elah")—I Kings, xvii, 2, 19; xxxi, 9—probably the W. es-Sun), the W. el-Haey, the main branch of which passes at the foot of Lachis (Tell el-Haey), which inundates nearly every year at the site of Siceleg (A.V. Ziklag.—Jos., xv, 31, etc.); the W. Ghasseh, into which flows the W. es-Sheer, possibly the "torment Besor" (I Kings, xxx, 9, etc.), and the W. es-Beersa, which recalls to mind the city of Beserab (Beer-Sheba), both being the names of townlets among all the many that are mentioned in the Negeb; finally, the W. el-Arsel, or "torment of Egypt"), Shihor of the Hebrews and Rhinoceros of the Greeks, which drains all the northern and north-eastern portions of the Sinaitic Peninsula. The Scriptures mention likewise a few inland rivers, particularly two in the territory of Damascus: the Abana (N. Barak), which, after watering the city of Damascus, loses itself some twenty miles east in the Bahr el-'Ateibeh, and the Pharpar, which feeds the Bahr el-Hijaneh.

Besides the two lakes just mentioned, which are on the side of Palestine proper, and the lakes Huleh and Tibersias, in the course of the Jordan, the Holy Land possesses no other lakes of any extent except the Birket er-Ram (the Lake Phiala of Josephus—Bell. Jud., III, x, 7) to the south of Banyas; but ponds and marshes are numerous in certain parts of the land. Marshes near the lower Jordan, at a short distance from the Dead Sea, are mentioned in I Mach., ix, 46.

Deut., viii, 7, describes Palestine as "a land of brooks and of waters and of fountains." Many springs are mentioned in Scripture, and nearly all its rains generally fall after the beginning of November; the "latter rain", in the month of April. Plenty or famine depend particularly on the April rains. On clear nights, all the year round, there falls a copious dew; but in summer time there will be no dew if no westerly breeze, bringing moisture from the sea, springs up towards the evening. Snowfalls are only occasional during the winter, and usually they are light, and the snow soon melts; not seldom does the whole winter pass without snow (as an average, one winter in three). Owing to the neighbourhood of the dead sea, the country of Upper Galilee enjoys a more temperate climate; but in the lowlands the mean temperature is much higher. Along the coast, however, it is relieved almost every evening by the breeze from the sea. In the Ghôr, the
climate is tropical; harvesting, indeed, begins there in the first days of April. During the winter months, the temperature is warm in the daytime, and may fall at night to 40°; in summer the thermometer may rise in the day to 120° or 140°, and little relief may be expected from the night. "The valley concentrates the full radiance of an eastern sun rarely mitigated by any cloud, though chilled at times by the icy north wind. From the plateaus herded Lebanon and Hermom are parched by the south wind from the deserts of the South, yet sheltered from the moist sea breezes from the West that elsewhere so greatly temper the climate of the Holy Land" (Aids to the Bible Student). The flora and fauna of the lowest postions are accordingly similar to those of India and Ceylon. The hills of the Dead Sea, sunken deeper than the Ghôr, has a deadly equatorial climate, perhaps the hottest in the world.

These orographic, hydrographic and climatic conditions of the Holy Land explain the variety—wonderful, if we consider the size of the country—of its fauna and flora. It is "a good land... A land of wheat, and barley, and vineyards, wherein fig trees, and pomegranates, and oliveyards grow: a land of oil and honey. Where without any want thou shalt eat thy bread, and enjoy abundance of all things" (Deut., vii., 7—9). Palestine, indeed, even now, but much more in Biblical times, may be said to be the repository of the labour of its inhabitants. The north, on both sides of the Jordan, is a most fertile region; the plains of Esdrelon and of Saron (A.V. Sharon, except in Acts, ix., 35), the Sephelah and the Ghôr were at all times considered the granaries of the country. Even the land of Judah contains Lebanon's pleasant dales, an ideal home for gardens, olive-groves, vineyards, and fig trees; and the high country, with the exception of the sun-baked and wind-parched desert, affords goodly pastures. (See ANIMALS IN THE BIBLE; PLANTS IN THE BIBLE.)

Palestine seems to have been inhabited about the fourth millennium b.c. by a population which may be called, without insisting upon the meaning of the word, aboriginal. This population is designated in the Bible by the general name of Nephilim, a word which, for the Hebrews, conveyed the idea of dreadful, monstrous giants (Num., xiii., 33, 34). We hear occasionally of them also as Rephaim, Enacim, Emin, Zusim, Zamzummim, and Horites, these last, whose name means "cave-dwellers," being confined to the deserts of Idumea. But what were the ethnological relations of these various peoples, we are not able to state. At any rate, the land must have been inhabited for a very long time, and the inhabitants for early times for about 3000 B.C. it was styled by the Egyptians "an empty land". Towards the third millennium B.C., a first Semitic Canaanite element invaded Palestine, followed, about the twenty-fifth century, by a great Semitic migration of peoples coming from the marshes of the Persian Gulf, and which were to constitute the bulk of the population of Canaan before the occupation of the land by the Hebrews. From the twentieth century B.C. onwards, Aram continued to pour on the land some of its peoples. Palestine had thus, at the time of Abraham, become thickly inhabited; its many cities, united by no bond of political cohesion, were then moving in the wake of the rulers of Babylon and Assur, although the influence of Egypt, fostered by active commercial communications, is manifest in the Canaanite civilization of that period. As a result of the battle of Megiddo, the land of Canaan was lost to Babylon and added to the possessions of Egypt; but this change had no general effects on the internal conditions of the country: administrative reports continued to be written, and business transacted, in the Cananeo-Assyrian dialect, as is shown from the Tell el-Amarna and the Taannak discoveries. About the same epoch the Hethites came in from the North and some of their settlements were established as far south as the borders of Judah, while the Amorrites were taking hold of the trans-Jordanic highlands. Some time later, when the Hebrews appeared on the banks of the Jordan and the Philistines on the Mediterranean shore (c. 1200 B.C.), the Amalecites held the Negeb, the Amorrites the highlands east of the river, the Canaanites dwelt in the valleys and plains of the west, and the Hittites were resident in Asia Minor. Phoenicians, the aborigines. The Philistines drove the Canaanites from the coast and occupied the Sephora, whereas the Zakallosa settled on the coast near Mount Carmel. We know in detail from the Bible the progress of the Hebrew conquest of the rest of the land: the remnant of the former settlers were absorbed little by little into the new race.

Needless to tell here how the different tribes, at first without any other bond of unity than that of a common origin and faith, gradually were led by circumstances to join under a common head. This political unity, however, was ephemeral and split into two rival kingdoms—that of Israel in the north, and that of Judah in the south. The vicissitudes of these two tiny kingdoms fill several books of the Old Testament. But they were doomed to be merged into the mighty empires of the Egyptians and to share their fate. A Babylonian proverb, "As a Persian satrapy after Cyrus's victories, Palestine became for a time part of Alexander's vast dominion. At the division of his empire the land of Israel was allotted to Seleucus, but for fifteen years was a bone of contention between Syria and Egypt, the latter finally annexing it, until, in 186 b.c., it passed by right of conquest to King Antiochus III of Syria. A short period of independence followed the rebellion of the Machabees, but finally Rome assumed over Palestine a protectorate which in time became more and more effectual and intrusive. Josephus narrates how Palestine was divided at the death of Herod; St. Luke (iii, 1) likewise describes the political divisions of the country at the beginning of Christ's public life. West of the Jordan and the Dead Sea, Palestine included Galilee, Samaria, Judea, and Idumea (Edom); east of that river, Gaulanitis corresponded to the modern Jolan; Auranitis was the administrative name of the plateau of Jebel-Hauran; north-west of it, the Lejah formed the main part of Trachonitis; Itrura must have been the country south-east of Hermom; north of Itrura, on the banks of the upper Barada, at the foot of the Anti-Lebanon, was situated the small, but rich, tetrarchy of Abilene; south of Itrura, between Gaulanitis and Auranitis, was extended Batanaea; finally, under the name of Perea was designated the land across the Jordan from Pella to Moab, and westwards to the limits of Arabia, determined by the cities of Gerasa (Jerash), Philadelphia (Amman), and Hesebon.

It is very difficult to form an estimate of the population of Palestine, so extensive are the indications supplied by the Bible. We are told in II Kings, xxiv, 9, that in the census undertaken at David's command, there were found 1,300,000 fighting men. These figures, which may represent a total population of from 4,000,000 to 5,000,000, undoubtedly overshoot the mark. From what may be gathered in various places of Holy Writ, the figures given in II Kings might fairly represent the whole population at the best epochs.

In the foregoing portions of this article Palestine alone has been spoken of and described. However, as has been intimated above, Genesis, Joshua, Judges, Samuel, in the Old Testament, the Acts, the Epistles, and the first chapters of the Apocalypse, in the New, contain geographical indications of a much wider range. To attempt a description of all the countries mentioned would be to engage in the whole geography of the Assyrian, Babylonian, Egyptian, and Persian empires, a task which the allusions made—with the
MAP OF PALESTINE IN THE TIME OF CHRIST

NOTE: THE PORTION WEST OF THE RIVER JORDAN IS TAKEN FROM THE SURVEYS OF THE PALESTINE EXPLORATION FUND
GEOGRAPHY

exception of the detailed description of the Israelites' journey from Egypt to the Jordan—would hardly justify. On the other hand, it is certain that Palestine is the range of geographical knowledge possessed by the Biblical writers, and acquired by them, either from personal experience or by hearsay.

Geographical Names in Holy Scripture.—Many of the more important places mentioned below are subjects of special articles in the Catholic Encyclopedia, and the title of such an article is identical with the local name given in the list, the reader will be referred to that article simply by the letters "q. v." (quod vide); where the special article is headed with a different name or a modified form of the same name, the cross-reference gives that name in CAPITALS and SMALL CAPITALS. Cross-references to other titles in the list itself are given in the ordinary type.

Abana: river of Damascus. See Lebanon.

Abarim (q. v.): mountains in N. Moab.

Abdon (Jos., xxii, 30, etc.): Khirbet 'Abdeh, N. of the Wady el-Karn.

Abel (type-genet: I Kings, vi, 18) is a common name, "stone", as the D.V. suggests in the parenthesis.—Abel (Judges, vi, 33; Heb. 'Abel Keremmin), —Abela (IV Kings, xx, 14) — Aboldomum Maacha (III Kings, xv, 20; IV Kings, xv, 29) — Abelmakim (II Par., vii, 4) — Abelmehula (Judges, vii, 23, etc.) — Abeselenim (Num., xxxiii, 49), where the Israelites were enticed into the impure worship of Beelphegor; in the Ghôr, E. of the Jordan, at a short distance from the Dead Sea.

Aben-Boen (Jos., xviii, 18), also "the stone of Boen" (Jos., xv, 6) is a conspicuous rock marking the limit of Juda and Benjamin between Beth Haiga and the Ascent of Adommin.

Abes (Jos., xix, 20; Issachar): prob. Kh. eb-Beidâ, in the plain of Es'dron, between Nazareth and the plain of Carmel.

Abila (not mentioned in the Bible), after which Abil was named: Sîk Wady Barâda, S. of Anti-Lebanon.

Abiran (Jos., xix, 28; Aser): perhaps a mistake for Abdon. Unknown.

Accad (Achad; Akkad). See BABYLONIA.

Acacon (Jos., xxv, 57): mtn. of Juda, Kh. Yaqlin.

Accon (q. v.).

Accho. See Acre.

Achazib, 1 (Jos., xix, 21; Aser): Ez-Zib, betw. Accho and Tyre.—2 (Jos., xv, 44; Mich., i, 14; W. Juda): 'Ain el-Kesheb.

Achzib. See Achazib 2.

Acabatone: 1. Toparchy of Judea, including region betw. Neapolis (Napûlis) and Jericho.—2 (I Mach., vi, 3), region of the Ascent of Acrabim.

Acrôn (Jos., xix, 43). See ACCARON.

Adada (Jos., xxv, 22; S. limit of Juda): 'Adada, E. of Jerusalem.

Adammon (Zach., xii, 11): in the plain of Es'dron; in later times, Maximianopolis (St. Jerome): Rômânâneh, S. of Lejân.

Adama (Deut., xxiii, 23): city of the Pentapolis.

Adami (Jos., xiv, 35): also Adam: Damleb, S.W. of the L. of Tiberias. The Jordan may be forded there.

Adar (Num., xxxv, 4; Jos., xv, 3), also Addor and Adder: S. limit of Juda, N.W. of Cades. There is in that region a Jebel Hadhâreim.

Adar (Mach., xvi, 40), also Adaer (I Mach., vii, 45): Kh. 'Aqseb, N. of Jerusalem and E. of El-Jib.

Adiada (I Mach., xii, 38), also Addus, in the Sephela: Hadîch, E. of Lydda.

Adibham (Jos., xv, 36)—text perhaps corrupt; as it stands, designates a place, hitherto unidentified, in the neighbourhood of Galilee possessioned by the Biblical writers, and acquired by them, either from personal experience or by hearsay.

Adom (Jos., iii, 16): Tell-Damleb, a little S. of the confluence of the Jâboc and the Jordan.

Adommin: (Ascent of): Jos., xv, 7; xviii, 18), limit of Benjamin and Juda; seems to correspond to Tal'sût-ed-Dûmm, on the road from Jerusalem to Jericho, a place notorious for the thieves who lurked round about (Luke, x, 30–35).

Adon (I Esd., ii, 59), also Addon (II Esd., vii, 61): a city of Chaldea, the same as Eden in Is., xxvii, 12; Ezech., xxviii, 23.

Adrumetum (Acts, xxvii, 2): city and seaport in Mycia, over against the island of Lesbos; mod. Adra-miti or Edremid, also Ydremid.

Adullam (q. v.).

Adon (q. v.).

Ager's Well (Gen., xvi, 14), "between Cades and Barad": Bîr Mâyîn.

Ahalab (Judges, i, 31; Aser): pos. the same as Mehebel (Jos., xix, 20; D.V. "from the portions"), the Makkhilîba of the third campaign of Sennacherib, Unknown.

Ahava: stream, or perhaps canal, in Babylonia, possibly not far W. of Babylon.

Ahion (III Kings, xv, 20, etc.), also Aion (IV Kings, xv, 29): the name seems to be preserved in Merj 'Ayun, between the valley of the Leontes and that of the Upper Jordan. The site was possibly Tell-Dibbôn, or Khâm, a near-by place.

Ai: D.V. for Hai.

Aïdah (Is., x, 28): the same as Hai.

Aila, Ailath: the same as Elath.

Aim (Jos., xix, 7; Juda), also called En-Rimonon: Kh. 'Umûn er-Rûmûnnûm, N. of Bersabea, on the road to Beit-Jibrîn.

Alexandria (q. v.).

Alinath (I Par., vi, 60; Heb. 45) also Almon (Jos., xxi, 18), in Benjamin: Kh. 'Almîth, N.E. of Jerusalem, between Jebâ and 'Anâôt.

Amanad (Jos., xii, 26; Aser): Kh. el-'Amud, N. of Aye, or 'Umm el-'Amed, W. of Bethlehem of Zabulôn.

Amam (Jos., xv, 26; S. Juda). Unidentified.

Amanon (Cant., iv, 8): poss. the same as Mt. Hor of the N.

Amma (Jos., xii, 30; Aser): Perhaps 'Alma esh-Shâ'b, W. of the Scala Territorum (Râs en-Nagûra).

Amanô (Ezech., xxxii, 6): if we should see in it the name of a town, might stand for Legio-Mageddo, mod. el-Lejân.

Amos (Jos., xviii, 26; Benjamin): either Kolonieh (so Talmud), or Beit-Mizzech, N. of Kolonieh.

Amphipolis (Acts, xviii, 1): in Macedonia, 30 m. from Philippi; mod. Kenikei.

Amthar (Jos., xix, 13; Zabulôn): prob. not a proper name, seems to mean "turns towards".

Ana: a town in Babylonia, on the Euphrates, possibly 'Anah.

Anab (Jos., xi, 21): mount. of Juda, once belonging to the Enaim: Kh. 'Anâb, S. of Beit-Jibrîn.
Geography

Anaharath (Jos., xix, 19; Issachar); Egypt.: Anu hepatā: En-Na'a's, N.E. of Zerārān.

Anathoth (Jos., vii, 32; Benjamin): Beit-Jananna, N. of Jerusalem.

Anathoth (q. v.).

Anem (I Par., vi, 73, Heb., 58; Issachar), perhaps a contraction for Engannim, which stands in the same place, Jos., xix, 21. However, possess. Anem, S. of Lejim. Aner (I Par., vii, 70; Heb. 55; W. Manasseh), perhaps a corruption for Thannach of Jos., xvi, 25; poss. also 'Ellar, N.W. of Sebasteiyeh.

Ange (Judith, ii, 12), a mount. in Cappadocia: Erjia's.

Anim (Jos., xv, 50; mount. of Juda): Kh. Ghuwein.

Antioch: 1. Of Pisidia.—2. Of Syria (q. v.).

Antioch (q. v.), Apadno (Dam., vi, 45): doubtful as a proper name.

Apamea (Judith, iii, 14), country and city of Syria: Qal 'at el-Madhiyyah.

Aphraemā (1 Mach., xi, 34; not in the Vulg.), one of the toparchies of Juda: see Ephraim.

Aphra (Jos., xviii, 25; Benjamin), commonly identified with Tell el-Farāb, S.E. of Beith.

Aphec 1 (Jos., xii, 18; N.W. Juda): poss. Merj, Fikke (Conder).—2 (Jos., xii, 30, etc.; Aser). Unknown.—3 (1 Kings, iv, 1; Benjamin): perhaps Qustul.—4 (1 Kings, xxiv, 1; Issachar): El-'Aftiheh, N.W. of Zerārān.—5 (1 Kings, xxiv, 26, etc.) Assyry: Apgūr: prob. El-Farāb, S.E. of Tiberias.

Apollonia (Acts, xvii, 1), in Mygdonia, a prov. of Macedonia: mod. Pollinā.

Aquiforum (Acts, xviii, 15), 43 m. S.E. of Rome, on the Appian Way, on the edge of the Pontine Marshes.

Ar, Ar Moab (Num., xvi, 15), etc.) N. of Moab, and S. of the river Arnon; some suggest Rabba; others Ùmm ar-Refāsah, others Māṭāt el-Hajj.

Arab (Jos., xv, 52; mount. of Juda), also Arī (II Kings, xxv, 23): Kh. er-Rabīyyeh, W. of Ziph.

Arach (Gen., x, 10), cuneif. Arktē, a town in Babylonia. Warka, on the left bank of the Euphrates, 125 m. S.E. of Babylon.—2. See Archi.

Arad (q. v.), Arad, a station of the Israelites in their journey between Sinait and Cades. Unknown.

Ararat. See Ark.

Arbatas (1 Mach., v, 23): doubtful whether it is a district or a city. Unknown.

Arbee. See Hebron.

Arbellas (1 Mach., ix, 2), according to Josephus, in Galilee, in the neighbourhood of Sepphoris; prob. Kh. 'Irbid, W. of the L. of Tiberias.

Archā, seems rather a gentile name, derived from Arneh, Erekh, or Erechh, 'Ayn Arīk, between Beith and Beith Ur.

Arēba (Jos., xv, 60; mount of Juda): Kh. Rebbā, S.W. of Jerusalem, near Beit Nētilf (q.

Areecon (Jos., xix, 46; Dan): Tell er-Raqqa't, N. of Jaffa.

Arōpolis, Greek name of Ar Moab.

Arīel (Jos., xxix, 1, 2), symbolical name of Jerusalem: "city of God".

Arimathe: See Rama.

Arōn, river of Moab: Wādē el-Mūjāb.

Arōro, 1 (Deut., ii, 36, etc.; Moab, s., l, 26): 'Arā'ir, N. of the Arōn river.—2 (Judges, xi, 33), "over against Rabba", i.e. E. Ùmm Aminān. Unknown.—3 (2 Kings, xxv, 23; Judah), Egypt.: Hur-horah: ‘Arārāh, E.S.E. of Bersabah.

Arpad (A V. for Arphad.

Arphad (I Kings, xviii, 34, etc.), Assyry: Arpadah: Tell 'Erfa'īd, 12 m. N. of Aleppo.

Aruboth (III Kings, iv, 10), poss. Wady 'Arrā'b, near Bersabee.
**Geography**

**Baalath** (Par., iv, 33), probably identical with Baalah Beer Ramath (Jos., xix, 8; Simeon), poss. Bât Mâyên, or Tell el-Lekîleh, N. of Bersabe.

**Baalâ, I (Jos., xv, 9, etc.; Judah) old name of Carshuhim (Gen. xix, 20, 24).** Also Bala, perhaps Kh. 'Umm-Baghale, N.E. of Bersabe.

**Balaâm** (I Par., vi, 70; Heb. 55; W. Manasses), also Balaam; possibly Jebraam (Jos., xvii, 11): Bir Bel-ameh, S. of Jenfn.

**Balah** (Jos., xix, 44; N. Dan), also Balaath (II Par., viii, 6), prob. Beit Kain, N.W. of Beit Ur.

**Baalath Beer Ramath.** See Bâlaam.

**Baalâq** (q.v.).

**Baalgalad** (Jos., xi, 17, etc.), at the foot of Mt. Hermon: Banîlyas.

**Baal Hamon (Cant., viii, 11; D.V. "that which hath people")** with Balamon (Judith, viii, 3), perh. Kh. Bel'meh, S. of Jenfn.

**Baalathᾱ (II Kings, xii, 23), poss. Tell 'Asîr, N.E. of Beîthn.**

**Baal Hermon (Judges, iii, 3, etc.).** Whether it is a city or a mountain is doubtful; supposed to be the same as Baalath. 'Ammari (Jos., xvi, 17, etc.), also Baalmaa, Beer- naemon, Bethmaon: Tell Mâtn, S.W. of Madâba.

**Baal Peor, A.V. for Beelphogor.**

**Baal Phar'âsh (II Kings, v, 20), in the neighborhood of the Valley of Raphaim, S. of Jerusalem.**

**Baal Salsîs (IV Kings, iv, 42): prob. Kh. Sarsît, 15 m. N.E. of Lydda.**

**Baalthamars (Judges, xx, 33; Benjamin), N.W. of Gabaa, about Kh. 'A'dase.**

**Babylon.** See Babylonia.

**Bakurim (II Kings, vii, 16, etc.), on the slope of Mt. Olivet, poss. Kh. ez-Zambi, or Kh. Bâqel'dan.**

**Baal (I Gen., xvi, 20; II Sam. vii, 17), 2. See Baals.**

**Baalâm, S.W. of Madâba.**

**Baalat.** See Baalath. **Baloôl (Jos., xv, 24; S. Juda), poss. identical with Baalath Beer Ramath. Otherwise unknown.**

**Bamôth (Num., xxii, 19; Moab). Site unknown, between Dîbân and Ma'mân.**

**Bamothba'al (Jos., xii, 17), prob. the same.**

**Bane (Jos., xiv, 45; Dan), also Bane Barach; Assyr.: Banaabârga; prob. 'Ibn-Tôràk, E. of Jaffî.**

**Banias.** See Casarea Philippi.

**Barach.** See Bane.

**Barâzon (Gen., xvi, 20), Ûm'm el-Bàred, S.E. of Cades.**

**Baraza (I Mach., v, 26): Bògàr, in the Hauran.**

**Basan (Deut., ii, 4), a region S. of the Plain of Damascus; at first the Kingdom of Og, then given to the tribe of Manasseh.**

**Basãçama (I Mach., xii, 23), perh. Tell-Bâstûk, in Jolan.**

**Basáçam (Jos., xvii, 23), plain of Juda, somewhere around Lachish. Unknown.**

**Bashân, A.V. for Basan.**

**Bathuel (I Par., iv, 30; Simeon). See Bethul.**

**Bâzishtôa (Jos., xv, 28; S. Judah), an unidentified city in the neighborhood of Bersabe—unless the text is corrupt.**

**Beer (Jos., xix, 20, 24; D.V. "the well")** in the Wady Themed, S.E. of Madâba.

**Beer Shim (Jos., xv, 8; D.V.: "the well of Elim"); the same as Beer.**

**Belmon.** See Baal Hamon.

**Belma.** See Baal Hamon.

**Belmen (Judith, iv, 4, omit. in Vulg.), between Bethoron and Jericho.**

**Benejascon (Num., xxxiii, 31), Bleurin, north of Cades.**

**Benemnon (II Par., xvi, 3), valley S. of Jerusalem.**

**Bor (Num., xxxii, 3). See Baalmeen.**

*Bera (Judges, ix, 21), prob. El-Birneh, N. of Jerusalem.

*Berdan (Gen., xxi, 32; D.V.: "well of oath") Tell el-Qady, W.S.W. of Bersabe.

*Berâ'â (I Mach., ix, 4), commonly identified with El-Bireh.***

*Berea (q.v.).

*Beromî (II Kings, xxi, 31), the same as Bahurim.

*Berôth (q.v.).

*Berôthâ (II Kings, viii, 8), Beerétân, S. of Baalbek Bersabe (q.v.).

*Besacat (IV Kings, xxi, 1). See Bascath.

*Besor, a river S.W. of Gaza, prob. Wady esh-Sherfa.**

*Bessor (Jos., xv, 58). See Bethur.

*Betane (Judith, i, 9; omit. in Vulg.), a name poss. misspelled, points to a place S. of Jerusalem.

*Bile (II Kings, viii, 8; I Par., xvii, 8, has Thebath), possibly Taybe, on the road from Hamath to Aleppo; or more prob. Tâyibeh, S. of Baalbek.

*Betân (Jos., xix, 25; Aser): El-Bânêh, E. of Acre.**

*Bethabbara. See Bethany Beyond the Jordan.

*Bethacchat (IV Kings, xix, 12; D.V.: "shepherd's cubin") more prob. a proper name: Beit Qâd, betw. Mt. Gelboe and Jenfn.

*Bethaccharem (Jer., vi, 1; II Esd., iii, 14; Juda), also Bethacharam. Unknown; supposed to be some place on the Jubel el-Foreidis, S.E. of Bethlehem.

*Bethàn (III Kings, iv, 9; Benjamin), perhaps Beit 'Anân, W. of Nebi Samwil.

*Bethanath (Jos., xix, 38; Nephtali), prob. 'Aînta, near Cades of Nephtali.

*Bethany (q.v.).

*Bethannath (Jos., xv, 59; mount of Juda), Kh. Beit-'Antûn, N.E. of Hebron.

*Betharobâ (Jos., xv, 6, etc.; E. of Juda), unknown; must have been in the neighborhood of Jericho.

*Betharom (Jos., xii, 27). See Betharam.

*Betharon (q.v.).

*Beth Arbâl (Osee, x, 14; D.V.: "the house of him that judgeth Baal"), prob. the same place as Arbeela.

*Bethaven (Gen., xii, 8): poss. Kh. Hâlyân, also called El-Jir, E. of Beîthn.—I Kings, xiii, 5; Bethoron should probably be read instead of Bethaven.

*Bethazmôth (I Esd., ii, 24). See Azmaveth.

*Beth Baal Mean (Moabite Stone, line 30). See Baalmeen.

*Bethbera (Judges, vii, 24, a ford of the Jordan, either N. of the confluence of the W. Jalûd, or in the neighborhood of Jericho.

*Bethberá (I Par., iv, 31; Simeon), poss. Birlein, betw. Cades and Khalkasa.

*Bethbëssen (I Mach., ix, 62), prob. the same place as Beth Hagla.

*Bethbchar (I Kings, xvii, 11), an unknown place in the neighborhood of Maspha of Benjamin.

*Bethdagon (q.v.).

*Beth Deblathaim (Jer., xvi, 22; D.V.: "the house of Deblathaim") Moabite Stone, line 30. See Baalmeen.

*Beth Edom (Amos, i, 5; Lebanon). Some: Jôshieh el-Kadimeh; others: Beït el-Jaune, between Banîlyas and Damascus.

*Bethel, see s.n.—2 (Jos., xii, 16; Simeon) another name for Bethul.

*Bethemec (Jos., xix, 27; Aser), prob. 'Amqâ, N.E. of Acre.

*Bethera (Cant., ii, 17: mount, of Juda), Kh. Bettrir, S.W. of Jerusalem, the last stronghold of the Jewish rebels in the second century.

*Beth Ela (Mich., i, 11: D.V.: "the house adjoining") perhaps the same place as Asal (Zach., xiv, 5); some place it E. of Mt. Olivet; some others S. of Jerusalem; some, finally, in the Sephela.

*Bethgader (I Par., ii, 31). See Geder.

*Bethgâmol (Jer., xvi, 23; Moab), Kh. Jemâel, N.E. of Dîbân.

*Beth-Hoggar (IV Kings, ix, 27; D.V.: "garden-house") prob. the same as Engelannim, i.e. Jenfn.
Bophorus (Abd., 20). So Vulg. and the versions thereof, for Sepharad.
Bubastus (Ezech., xxx., 17), Egypt.: Pi-Beset, Tell el-Basta, N.E. of Cairo.

Cabul (Jos., xix., 27; Aser): Kabûl, S.E. of Acre.
Cademoth (Deut., ii., 26, etc.), also Cedemoth. Seems to have been N. of the Arnon; poss. Umâ Râsâs.
Cades (q.v.).
Cademum (Judges, v., 21), perhaps not a proper name; possibly also a corrupt of the text for Cades: "torrent of Cades" (of Nephtali), another name for the Cisnon.
Caeraea. See CAESAREA PALESTINE; C. PHILIPPI.
Calano (Gen., x., 10; Is., x., 9; Amos, vi., 2), in S. Babylonia, perhaps mod. Zerghîl.
Caleb Ephraim (II Par., ii., 24). So Heb.; most probably Sept. and Vulg. are right in translating: "Caleb went to Ephraim".
Camon (Judges, x., 5), a town E. of the Jordan, in the neighbourhood of Pella: Qimeim or Tabekat-Fakl.
Cana (q.v.).
Canath (Num., xxxi., 42). See CANATHA.
Caphara-Jos. (Jos., ix., 17, etc.; benjamin), also Caphira.
Cephira: Kh. Kelrâh, W. of Nebi Samwil.
Cipharathon (Matt., iv., 13, etc.), on the L. of Tiberias; identified by some with Tell Âsn, on the W. shore; by others with Minieh, S.W. of Tell Âsn.
Ciphasalma (I Mach., viii., 31) was likely near Jerusalem. Unknown.
Carea (Jos., xv., 3; S. Juda); W. of Cades. Unknown.
Carehim (I Par., xii., 6) is not, as would seem at first sight, a place-name, but a gentile name.
Carem (q.v.).
Cariath (Jos., xviii., 28; Benjamin), prob. for Cariahthir.
Cariathaim, 1 (Gen., xiv., 5, etc.): Qereyât, 10 m. S.W. of Madaba.—2 (I Par., vi., 76; Nephtali). Unknow.
Cariathaim, 32, has Carthan, instead of Cariahaim.
Cariatharba. See HEBRON.
Cariathbaal. See Cariathiarim.
Cariath Chuzoth (Num., xxi., 39), a place between the Arnon and Bamatbaal. Unidentified.
Cariathiarim (N.W. Juda), also called Cariathbaal, Cariath: Qaryet el-Enâb, or Abd-Gosh, W. of Jerusalem.
Cariathittim. (Jos., xv., 49). See Dabir 1.
Carioth, 1 (Jos., xv., 25; S. Juda), rather Carioth Hebron, the birthplace of Judas, "the man of Carioth": Kh. el-Qeritein, S. of Hebron.—2 (Amos, ii., 2; Jer., xiv., 24, 41; Moabite Stone, i., 13; Moab): prob. Er-Rabûb.
Carnaim (I Mach., v., 26, etc.; Transjord.), the same, according to some, as Astarothcharnain; others identify it with Sheikh-Sâ'id, near Astarothcharnain.
Carnion (I Mach., xii., 21, 26). Many identify it with Carnaim; some with Qreiyn, in the Ledjah.
Cartha (Jos., xxxi., 34; Zabulon), poss. Kh. Qareh.
Carthan (Jos., xxxi., 26), perhaps another name for Cariathaim 2.
Cedesoloth (Jos., xii., 8; Issachar), most probably the same as the Ceseleth-Thabor.
Cesalon (I Mach., v., 36), very likely identical with Caspin (I Mach., vii., 13): Khiafn, N. of the Yarmûk, and E. of the L. of Tiberias.
Caspin. See Casbon.
Casphor (I Mach., v., 26), the same as Ceson.
Chene (Ezech., xxvii, 23). The Heb. has Kalneh. See Calano.

Chereb (I Esd., ii, 59; II Eзд., vii, 61); the complete name was Chereb Addon-Immer. Unknown.

Chelolon (Jos., xv, 10; N.W. Judah). Keslā.

Chobar, a river in "the land of the Chaldeans," commonly identified with the mod. Chabur; but the names have roots absolutely different, and the position seems unsatisfactory. Perhaps we should see here one of the canals with which Babylonia was joined, poss. the Nahal Malecha, or King's Canal, of Nabuchodonosor. See JERUSALEM.

Chorazin, A.V. for Corazain.

Chub (Ezech., xxx, 5). Great divergences exist as to its identification. Some suggest Cobe, near the Indian Ocean; others Chobat, in Mauretania, or Cbozin, in Mauretica; both of these opinions are most unlikely. It has also been proposed to correct the text and read Lub (Libya); not probable. One Heb. MS. has Kend (Egypt, Keneb, i.e. S. Egypt). Nothing can be said with certainty.

Chun (I Par., xviii, 8). In the parallel text of II Kings, viii, 8, instead of Chun, we find Berothai. If Chun was a distinct city, it might be recognised as Dān, S.W. of Baalbek.

Chus (Judith, vii, 8; omitt. in Vulg.): poss. Qazā, 5 m. S. of Naplōs.

Cisanim (Jos., xxii, 22; Ephraim), perhaps the same as Jeemma (I Par., vi, 68). Tell el-Qabans, near Bethel, has also been suggested, but the identification is very doubtful.

Cina (Jos., xv, 22; S. Judah). Unknown.

Cines (Gen., xv, 19,Jer. 9, 19), a clan closely allied to Israel, perhaps also to the Medes. Its home seems to have been in S. of Judah; however, we see no evidence of the Cinaean dwelt in the plain of Edreelon.

Cldada (A.V.).

Corton (q.v.).

Cos (I Mach., xv, 23; Acts, xxi, 1), an island in the Aegean Sea: mod. Stanko.

Cyprus (q.v.).

Cyrene (q.v.).

Dobeth (Jos., xix, 21, etc.; Zabulon), Debúrēyn, W., and at the foot of Mt. Thabor.

Dobir, 1 (Jos., xi, 22, etc.; S. Judah) the same as Cariathaim and Cariathsepher; most prob. Darahyeh, S.W. of Hebron.—2 (Jos., xv, 7; N. Judah): poss. Toghet ed-Debr.

Damasnuma (Mark, viii, 10): perhaps El-Damlamleh, S. of the L. of Tiberias, on the left bank of the Jordan.

Damazos (q.v.).

Danger (Jos., xxi, 35; Zabulon); in the parallel passage, I Par., vi, 77, Heb. 62, Remmono). The true name is doubtful; poss. Rūmmāneh, N. of Nazareth.

Dar (q.v.).

Danma (Jos., xv, 49; mount. of Judah). Unknown.

Dapho (Num., xxxiii, 12, 13), station of the Israelites on their journey from the Red Sea to Sinai; poss. Tabbaa, near the Wady Lebew.

Daphne (II Mach., iv, 33), a sacred grove and shrine near Antioch of Syria.

Dathmna (I Mach., v, 9; Transjord.), either Er-Remeth, or El-Hosn, S.W. of the Yarmūk.
Debath (Jos., xix, 11; Zabulon). Some: Jebäta, S.W. of Nazareth; others: Kh. ed-Dabseleh, or Zebabdale. (Debath means, 'house of God,' but the name is not given in the Bible.)

Debath (Ezech., vi, 14), in the land of Emath; prob. the same as Rebathla (Jer., xxxix, 5, 6).

Deblathaim (Jer., xlvi, 22; D.V.: 'house of Deb'lahaim'; Moabit Stone, l. 30: Diblational): Ed-Dieleet el-Gharbiyyeh (Musul), doubtful.

Decapolis (q.v.).

Delean (Jos., xv, 38; Plain of Judah). Unknown.

Delos (I Mach., xv, 23), an island in the Ægean Sea.

Denaba (Gen., xxxvi, 32; I Par., i, 43; Edom). Unidentified.

Derr (Acts, xiv, 6, etc.), a town in Lycaonia; not identified.

Dibon (q.v.).

Dimona (Jos., xv, 22; S. Judah; the same is called, prob. by a copyist's mistake, Dibon, in II Esd., xi, 25): Kh. ed-Tebeh.

Diospolis, Greek name of Lod. See Sebaste, Dioecese of.

Dizahab (Deut., i, 1; D.V.: 'where there is very much gold'). The name of a station of the Israelites: poss. Ed-Djehebeh.

Domnæum (q.v.).

Dor (Jos., xi, 2, etc.; Aser); Assy., Dûrâ; Tanfârûn, on the Mediterranean shore, S. of Mt. Carmel.

Dora (I Mach., xv, 11). See Dor.

Dothain, Dothan (Gen., xxxvii, 17, etc.), Tell Dohân, betw. Sebastiyeh and Jenin.

Dura (Dan., iii, 1), plain S.E. of Babylon; the name is preserved in the Tellul (hills) of Nahr Dûrâ. See Dura.

Edema (Deut., ix, 23; Nephthal), prob. Kh. 'Admah, on the right bank of the Jordan, below the confluence of the Yarmûk. Some, however, identify it with Damlyeh, W. of the L. of Tiberias.

Eder (Jos., xv, 21; S. Judah), either Eh. el-'Adar, or Kh. Ümm el-Adheh. See Edom.

Edom, See IDUMEA.

Eglon (Jos., x, 3, etc.; plain of Judah): Kh. 'Alian, W. of Beith-Birin.

Ekron, A.V. for Accaron. See Elamon.

Elam (q.v.).

Elath (Deut., ii, 8, etc.), seaport on the 'Aqaba Gulf: mod. 'Aqaba.

Elæis, or rather Elæob, birthplace of the prophet Nahum. Some deem it to be El-Kauze, in Nephthal; others, Qesleyeh, S.E. of Beit-Jibrin, in the Sepheria.

Eleph (Jos., xviii, 18; Benjamin). Unknown.

Eleutheropolis (q.v.), Greek name of Beit-Jibrin.

Eleutherus, river dividing Syria from Phoenicia: Nahr el-Kebir.

Elm (Ex., xvi, 1, etc.), station of the Israelites on their journey from the Red Sea to Sinai: somewhere about the Wady Gharrandeh.

Elmalech (Jos., xix, 26; Aser): Egypt. Retemaraka probably in the neighbourhood of Wady el-Mâlek, a tributary of the Cison (A.V. Kishon).

Elmon (Jos., xix, 43; Dan): either Beit-Ello, or more probably, Elmon.

Edbon, Elimon (Jos., xv, 59; mount. of Judah), Thecæ, birthplace of Amos, according to St. Jerome (little prob.). See Edbon.

Eltho (Jos., xix, 44, etc.; Dan); also Elthecos: Assy., Altapûn, in the neighbourhood of Accaron. Not identified.

Eltholad (Jos., xv, 30; S.W. Juda). Unknown.

Eltho (I Mach., ix, 2), not a town, but the prov. Elmena is meant; although a city, poss. Susa, is alluded to in the context.

Emath Suba (II Par., viii, 3), possibly the country of Emath 1.

Emer. See Cherub.

Emassa (q.v.).

Emnosa (Jos., xviii, 24; Benjamin), poss. Kh. Kefr Anâ, N. of Beitin.

Emnus (Gen., xxxviii, 14, etc.; plain of Judah), near Odollam; but unknown.

Enan, rather Hasar Enan, "the village of Enan" (D.V., Num., xxxiv, 9, etc.). Some: Qiryatein, on the road from Damascus to Palmyra; others, and more prob.: Hazdreh, near Banias.

Endor (I Kings, xxviii, 7; Issachar): 'Endor, S. of Mt. Thabor.

Engaddi (q.v.), W. shore of the Dead Sea, towards the middle: Ain Jidl.

Engelîm (Ezech., xlvii, 10); poss. 'Ain el-Feshkhâh, N.W. shore of the Dead Sea; or 'Ain Hajîlah.

Eron (Valley of). See JERUSALEM.

Ennon. See ZEON.

Ennon. See EAN.

Enosem (Jos., xv, 7; xviii, 7), generally recognized in 'Ain el-Hâd, or "Apostles' Spring" of the Christians on the road from Jericho to Jerusalem.

Epsa (Isa., lx, 6), a branch of the Madianites, prob. settled in N. Arabia.

Epheus Damnim (I Kings, xvii, 1). See Phedostummim.

Epheus (q.v.).

Epheus, 1 (Judges, vi, 11, etc.; W. Manassees), birthplace of Gideon: perhaps El-Taybebeh, between Mt. Thabor and Besan—2 (Jos., xviii, 23; I Kings, xii, 17; etc.); prob. El-Taybebeh, N.E. of Beitin.

Ephrata (Gen., xxxv, 16, etc.), surname of Bethlehem, poss. the name of the surrounding region.

Ephrem. See Ephra 2.

Ephron, 1 (Jos., xv, 9). A mountain district on the N. border of Judah, between the spring of Nephias and Caristhiahim.—2 (II Par., xiii, 19). See Ephra 2—3. (I Mach., v, 46; II Mach., xii, 27; Transjord), a city probably identical with Geprhus of Polby. (V. Ixx, 12). The city is unknown, but was likely in the Wady el-Abar, or the streams of the Schari'at el-Mand-hûr.

Erech. See Archi.

Erezen (Jos., xv, 22; mount. of Judah). The text is corrupt and should be read Samma, as I Par., ii, 43: Es-Samijyeh seems to be intended.

Escol. A valley with vineyards and pomegranates near Hebron, prob. the Wady Beis Iskall, N.W. of the city.

Edcrodon: large plain in the watershed of the Cison (A.V. Kishon).

Es-em. See ASEM.

Essam (Jos., xv, 43; plain of Judah): 'Iddnah, between Beit-Jibrin and Hebron.

Esora (Judith, iv, 4, omit. in Vulg.) seems to be identical with Hasar of Nephthal.
GEOGRAHY

Estoa. See Esthoal.
Eutham (1 Kings, xxvi, 28, etc.; mount. of Juda), also Jetham (Jas. Semâ'as, S. of Hebron.
Etam, 1 (Jos., xx, 60, etc.; mount. of Juda): prob. near 'Ain 'Etân, S.W. of Bethlehem, perhaps Kh. el-Khökli. — 2 Cave of Etam (Judges, xx, 5), very likely in the neighbourhood of Jerah, poss. the cave of Marmita, near Deir Aban. — 3 (1 Par., iv, 32; Simeon), Kh. 'Aïtn, S. of Beit-Jibrin.
Ethem (Ex., xiii, 20; Num., xxxiiii, 6), station of the Israelites on their journey from Egypt to Sinai: somewhere E. of El-Garr.
Ezra (Numb., xxxiii, 35; Transjord.), prob. in the neighbourhood of Jebel 'Attarâs, S. of the W. Zerqā Mâ'n, in Moab.
Euphrates. See PEREZ.
Ese (1 Kings, xx, 19). An unknown conspicuous rock; perhaps the text is corrupt.
Fair Havens, A. V. for Good-havens.
Ga'aa (Jos., ii, 9; Ephraim), a mountain N. of which was Josue’s tomb: Jebel el-Ghassânah.
Gabaa, also Gaba, Gabe, Gaba, Gaba, Geva, 1 (Jos., xvii, 24, etc.; Benjamin): Jeba, N.E. of Jerusalem.—2 (Jos., xv, 57, etc.; mount. Jebba, S.W. of Bethlehem.—3 (Judges, xix, 20, etc.; Benjamin): poss. Tell el-Föl, or Kh. es-Sikkeh.—4 (Judith, iii, 14; Samarria): perh. Jebba, S. of Tell Dothan.
Gabba of Benjamin. Gabaa 3.
Gabba of Saul. Gabaa 3.
Gabe, the Sichem (Jos., xxiv, 33; Ephraim), burial place of Eleasar, Aaron’s son: perh. Jib’â, N.W. of Jîbeh.
Gabba (Jos., xxi, 17). See Gaba 3.
Gabaon (Jos., ix, 3, etc.; Benjamin): El-Jib, N.N.W. of Jerusalem.
Gabaon (Jos., xxi. 23, etc.; Dan), also Gobhethon: poss. Qibbâtay, E. of Lydda.
G的情形 (Jos., xvii, 24; 1 Par., vi., 60). See Gabaa 3.
Gabin (Is., x, 31), wrongly interpreted as a proper name: seems to mean houses scattered in the country, outside of villages.
Gad (q.v.).
Gader (Jos., xii, 13; S. Palestine), identical with Bethgadher, 1 Par., ii, 51; also identified by some with Gedor; by others with Gederah. Otherwise unknown.
Gaderoth (Jos., xiv. 41; 1 Par., xvi, 18; plain of Juda), poss. Qârâth, S.E. of Yebna (doubtful).
Gadgad (Num., xxxiii, 24; D.V.: Mount Gadgad), is not a mountain; the Wâdy Ghâdâhâghy, S. of Qur‘eyyah, on the road from ‘Ain Kedies to the Aqâbâ Gulf, has been proposed, and the identification does not lack probability.
Gador (Jos., xxv, 58; mount. of Juda): Jedûr.
Galaad, 1. Country on the E. of the Jordan.—2 (Judges, xii, 7) should probably be composed, according to several Gr. MSS: Maspha of Galaad.
Galgal, Galgal, Place of the encampment of the Israelites in the Ghôr, commonly recognized in Tell Jalîlya, E., S. and W. (1 Kings, xxii, 23; 1 Mach, ix., 2), a Canaanite royal city: Jalîlya, N.E. of Jaffa, or Qalîlya, a little to the N.—3 (IV Kings, ii, 1, etc.) Jalîlya, between Beitin and Naplûs.
Galilee (q.v.).
Galîm (1 Jos., xv, 59; omitt. in Heb. and Vulg.) El Qamâ, over Beitâr and Bethlehem.—2 (1 K., xxv, 44; Is., x, 30; Benjamin) Kh. el-Adasî, or Beit Léjâ, N. of Jerusalem.—3 (Is., xxv, 8; Mos.H) Unknown; located by the Onomasticon S. of Aræopolis.
Gamos (I Par., xxviii, 18): Jinjû, S.E. of Lydda.
Gareb (Jer., xxxi, 39), a hill in or near Jerusalem. From the text it would seem the Jebel Nebî Davûd is intended; many, however, identify it with J. Abû Tôr. Garseim, mountain in the neighbourhood of Sichem: J. el-Tûr, S. of Naplûs.
Gaulon (Jos., xx, 8, etc.; E. Manasses), also Golan: probably Sâhêm el-Jolân, N. of the Wady el-Elheir.
Gaza (q.v.).
Gazara (I Mach., vii, 45, etc.), later name for Gazer I. Gazër, 1 Tell Jezer, S. of Lydda.—2 See Jazer.
Gebal. See BYBLOS.
Gebbûr (I Esd., ii, 20), for Gabaon.
Gebethon. See Gebathôn.
Gederâ (Jos., xv, 36; Sephela): poss. Kh. Jedir, S.E. of Lydda, or Qârâ, S.E. of Jâbneh.
Gederôkahim (Jos., xv, 36), poss. another reading for Gederâ.
Gedor, 1 (Jos., xv, 58; mount. of Juda) Kh. Jedôr, between Bethlehem and Hebron.—2 (1 Par., xii, 7) Perhaps Gedor—1—3 (1 Par., iv, 39) Unknown. Some think Gerara is intended.—4 (1 Mach., xv, 39). See Cedron 1.
Genesr. See GENESARETH.
Genesareth (q.v.).
Gerara (Gen., x, 19, etc.). A city on the S.W. border of Palestine, commonly identified with Kh. Úmm Jerêr, S. of Gaza.
Gerasa, 1 (Transjord.), Jerash. See Gerasa.—2 A city supposed by Matt., viii, 28, etc. (original text somewhat doubtful): poss. Kûren Jeráfeî, N. of the Wâdy Flk, E. of the L. of Tiberias.
Gerêsim, A.V. for Gerazim.
Gesson. Region in Lower Egypt, between the Pelusian arm of the Nile and the wilderness.
Gessur (1 Kings, xxvii, 8, etc.), a region the location of which is much disputed. Some think it to have been in the S. of Palestine (Cheyne); others locate it in the N. Jîlân, even in the Ledjâh.
Gethaim (1 Kings, iv, 3; 11 Esd., xi, 33; in or near Benjamin), identified by some with Ramleh.
Gethheker (Jos., xii, 13, etc.; Zalulon): El-Meshhbad, N.E. of Nazareth.
Gethremmon, 1 (Jos., xii, 45, etc.; Dan) possibly identical with Gethaim.—2 (Jos., xxi, 25; W. Manasses): —1 Par., vi., 70, Heb. 55, Ballam). If the text of Jos., be preferred, Gethremmon might possibly be Keîf Râmâm, N.W. of Sebaistîyeh.
Gethsemânî (q.v.).
Gazer, Gezeron. See Gazer.
Gibeon, A.V. for Gabaon.
Gideroth. See Guderôth.
Gihon, See JERUSALEM.
Gilo (Jos., xv, 51; mount. of Juda), birthplace of Achitophel; unlikely supposed by some to be Kh. Jélâ, or Beit Jálâ, near Bethlehem; really unknown.
Gnûdus (1 Mach., xv, 23; Acts, xxvii, 7), a city in Caria.
Gob (II Kings, xxi, 18, 19). Unknown. Perhaps the text is corrupt.
Golon. See Gaulon.
Golgotha. See JERUSALEM.
Gomorrha (Gen., xiv, 2, etc.), a city of the Pentapolis. Site unknown.
Good-havens (Acts, xxvii, 8), Kalo Limniones, E. of C. Malata, on the S. coast of Crete.
Gortyne (1 Mach., xv, 23), a city in Crete.
Gosen (Jos., xv, 51; mount. of Juda). Unknown.
Gullath (Judges, i, 15; D.V. “the Upper and the Nether watery ground”); proper names, poss. referring to Sel el-Dibeh.
Gurbâa (II Par., xxi, 7): Tell el-Ghûr, N. of Bersabe.
Habor (q.v.).

Haceldama. See Jerusalem.

Hachila (I Kings, xxiii, 19, etc.), a hill on the S. of the wilderness of Ziph (Judg.) to be the city of Rahel (Ko"eh), although the identification is by no means certain.

Hadassa (Josh., xv, 37; plain of Juda), perhaps 'Eddis, or 'Eddis, of Eschalon.

Hadid (I Esd., ii, 33), identical with Adiaida.

Hadrach (Zach., xi, 1; Asyr.: šatarika, šataraka), a town in Syria, unknown.

Halha (IV Kings, xvii, 6; xviii, 11), a place of exile of the Israelites in Assyria; Asyr.: Ḥalḥā, prob. Gla or Khalab, near the source of the Khabur.

Halhah (Jos., xix, 23; xxvi, 31; Jerkâ, N.E. of Acre. Halhul (Jos., xv, 58; mount of Juda); Halḥâl, N. of Hebron, near Beit Sûr.

Halicianus (q.v.).

Hammon Dor (Jos., xxii, 32). See Hamon 1.

Hamon, 1 (I Par., vi, 76, Heb. 61; Nephthal), El-Hammâm, on the W. shore of the L. of Tiberias.—2 (Jos., xix, 28; Asyr), poss. Kh. el-Awâmīd, S. of Tyre.

Hanathôn (Jos., xiv, 14; N. Zabulon) prob. Kerfânân.

Hanes (Is., xxx, 4), Egypt. Hînînâša; Asyr.: hinîša, a city in the Delta of the Nile, prob. Heracleopolis Parva of the classics; Aminâ el-Meligha, Egypt, Hapârâma; Kh. el-Fârîyêbeh, between Mt. Carmel and Lejôn.

Haran. A town in Mesopotamia; Asyr.: Harraanâ, on the river Balikh, a confluent of the Euphrates.

Hare (Judges, i, 35). The exact name is doubtful; moreover Hare is equivalent to Shamesh (Sun), hence Har Hare, on the E. of Shamesh, and Beth Shamesh might be three forms of one name. After all, the name might not indicate a hill, but a village: 'Ain Shemas.

Harra. See Harma 1.

Haroseth (Judges, iv, 2). El-Harîîtîyeh, on the right bank of the Kison, between Haifa and Nazareth.

Hasarap (Jos., xv, 28; S. Juda). Unknown.

Hasarum (Jos., xix, 5; S. Simeon); might be Sûsh or Beit Sûsh, on the road from Gaza to Egypt.

Hasir (Deut., ii, 23), a common name meaning "the villages"; Arab. Dwar.

Hasroth (Num., xi, 35), a station of the Israelite in the desert from Mt. Sinai to Cades: 'Ain Ḥâdâ, about eighteen hours N.E. of Mt. Sinai.

Hebron (q.v.).

Hebron (Num., xxxiii, 34), a station of the Israelite on their journey from Egypt to the Holy Land: near Asiongaber.

Hebron (II Kings, x, 16, 17), an unknown Ammonite city.

Helba (Judges, i, 31). See Ahlabah.

Helbon (Essekh, xxvii, 18), a town in Syria renowned for its wine; Helbûn, on the E. slope of Anti-Lebanon, 12 m. N.W. of Damascus.

Helca. See Halcah.

Heleph (Jos., xix, 33; Nephthal), poss. Beit Lîf, halfway between L. Hûleh and the sea.

Helipolis, See Baalbek.

Helmondhalsbakim. See Debaltimah.

Heli (I Par., vi, 58, Heb. 43, Gr. 57). See Hâlî, xix, 31; Hâleph (I Par., vii, 39, Heb. 54), for Ailamon.—3 (Jer., xlvii, 21; Ruben). Unknown.

Hemath (I Par., xviii, 3, 9). See Emath.

Hemach (Gen., iv, 17), the first city built by Cain and called after his first-born son; of course, entirely unknown.

Herma. See Hora 1.

Hermon. Mountain range on the N. border of Israel: Jebel el-Sheikh, or J. el-Telj. Hesebon (Num., xxii, 31; Moab), Hephan. Hezer (III Kings, ix, 15), the same as Asor 1.

Heshbon, A.V. for Hesebon.

Hemôna (Num., xxxii, 29; xxxiv, 4), station of the Israelites on their way from Cades to Asiongaber, in the neighbourhood of ‘Ain Kûshem.

Hebron, 1 (Jos., xvi, 3; S. Juda), prob. some Hasar. Unidentified.—2 (Jos., xv, 25). See Asor 3.

Hethon (Esszech, xvii, 15; xviii, 1), either Heitla, N. of Tripoli of Syria; or more prob. Adîwân, N. of the Leontes, on the road from Tyre to Sidon.

Hethites (q.v.).

Hever. One of the petty clans of Canaanites possessed by Israel and the Philistines. The Gabaonites were Hevites. Hevelâh, Hevelâth. Country watered by the Phion.

Unknown.

Hierapolis (q.v.).

Hieromon, Greek name of the Sherif el-Menadhir, or Yarmûk.

Hirames. See Bethames.

Hoba (Gen., xiv, 15), N. of Damascus; the identifications proposed are very unsatisfactory.

Hodîn (II Kings, xxiv, 6), probably a cottage's mistake for Cades.

Holom (Jos., xv, 51; xxi, 15; mount of Juda). Unknown.

Hor, 1. A mountain by which Israel had their encampment in the desert, and the place of Aaron's death; commonly identified with Jebel Nebî Harâm, S.W. of Petra, a most unlikely location; must be looked for in the neighbourhood of Cades, possibly Jebel Meleîch, N.W. of Cades.—2. According to common interpretation, another mountain at the N. limit of the Promised Land, and variously identified, although the Jebel esh-Shuqîq seems to be the most suitable location; perhaps not a proper name, but an expression to be translated: "the rising up of the mountain", i.e. S. Lebanon.

Horâh (q.v.).

Horam (Jos., xix, 38; Naphthal), Kh. el-Hûrâth, W. of L. Hûleh.

Horma, 1 (Num., xiv, 45 etc.), formerly called Saphath; prob. Shaiteh, N.E. of Cades.—2 (Jos., xix, 29; Asyr) Râmîh, S.E. of Tyre.

Hosa (Jos., xix, 29; Asyr. text doubtful), poss. Ez'îyâv, S. of Tyre.

Huc. See Hâlcah.

Hucqua (Jos., xiv, 34; Nephthal), Yaquq, W. of Capharnaum, S.S.W. of Sâsêdi.

Huis (Job, i, 1; Jer., xxi, 20; Lam., iv, 21; perhaps different regions are intended). From what may be gathered concerning the "land of Huis" in Job, it was in Arabia, N. of Saba, W. of Chaldea, N. of Edom. See Jos.

Icônia (q.v.), in Lycaonia; Konieh.

Idumea (q.v.).

Ijebarim (Num., xxi, 11; xxxiii, 44), station of the Israelites in Moab: Kh. ’Ai, S.E. of Kerak.

India, I. (Esth., 1, 1) the region on the right bank of the Indus.—2. The text (I Mach., viii, 8) seems to be at fault, and should perhaps be read Ionia.

Ilands, refers to the islands and coasts of the Mediterranean Sea.

Itoura (Luke, iii, 1), originally the country of Jetur (I Par., i, 51; v, 19), on the E. slope of Anti-Lebanon, N. of Damascus.

Jabes (II Par., ii, 55; Juda). Unknown.

Jabes Galaad (I Kings, xi, 1 etc.), poss. Ed-Deir near which there is a Wâdi Yûbâl.

Jabnia (II Par., xxvi, 6). See Jannia.

Jabok: Nahr es-Zarqûq, between the regions called Belqâ and ’Ajûn, E. of the Jordan.
Jaacan. See Benejaacan.

Jachanan (Jos., xii, 22), an unknown place about Mt. Carmel.

Jehum (Jos., xv, 21; S. Juda). Unknown.

Jamnia (I. Mach., xiv, 15, etc.), a town of the Sephela: Yebnā.

Janoe (Jos., xv, 6; xvi, 7; Ephraim): Yānûn, S. E. of Naplōs.—2 (IV Kings, xv, 29; Nephtali): Yānth, E. of Tyre, according to some; more probably Ḥūndān, S. of the Merj Aiyān. Janām (Jos., xv, 63; mount of Juda), poss. Beni Naim, E. of Hebron.

Japhis (Jos., xix, 12; Zabulon): Yaffā, S. W. of Nazareth.

Jaramoth (Jos. xxi, 29; Issachar), called Ramoth in 1 Par., vi, 73, Heb. 58. Unidentified.

Jareb (Jos., xvii., 27; Benjamin): Raphāṭ, N. of El-Ījib.

Jasa (Num., xxxi, 23; Jer., xlvi, 21; Moab, S., 1, 19); Onomasticon: “between Madaba and Dibon”: ʻUmm el-Weld (Tell Musil).

Jazer (Jos., xxxi, 36). See Jasa.—2. See Jazer.

Jaza’ (Jos., xxxi, 36). See Jaza.

Jazer (Num., xxxi, 1, etc.; Transjord.), prob. Kh. Sār, W. of Ammān.

Jebned. See Jamnia.

Jeboc: the same as Jaboc.

Jebus. See JERUSALEM.

Jecama (1 Par., vi, 68, Heb. 53), also Jecamān (III Kings, iv, 12). In the parallel list of Jos., xxxi, 22, Cēbdāim is to be found. Text doubtful.

Jecnam (Jos., xix, 11). See Jecnam.

Jeezehel (IV Kings, xiv, 7), name given to Petra by Amazia, King of Juda. See Petra.

Jechel (Jos., xv, 38; Sephela). Unknown.

Jegua (Judges, viii, 11; Transjord.). Aṣebēh, E. of Es-Salt.

Jehoshaphat, A. V. for Josaphat.

Jemnaa. See Jamnia.

Jephthah (Jos., xv, 43; plain of Juda). An unidentified place, S.E. of Beisp Jrībīn.

Jericho (q.v.).

Jerimoth (Jos., x, 23, 35; Sephela): Kh. Yāmūk, 6 m. N.E. of Beisp Jrībīn.

Jerimith (II Esd., x, 29). See Jerimoth.

Jerom (Jos., xix, 38; Nephtali): Yārnā, W. of L. Hūleb.

Jerusalem (q.v.).

Jerusaim (III Kings, xv, 17): ‘Ain Sinīyā, N. of Beispīn. Perhaps should be read also instead of Sen, I Kings, vii, 12.

Jesimon, 1 (Num., xxxi, 20; xxiii, 28; Moab) desert N. of the Dead Sea, and E. of the lower Jordan.—2 (I Kings, xxii, 15 etc.) country between the deserts of Ziph and of Maon, and Engaddi.

Jesse (Judith, i, 9), for Gessen.

Jesu (II Esd., x, 26; S. Juda): Kh. Sā’weh, E. of Bersabeab.

Jeta (Jos., xxi, 10; Juda-Simeon): Yūṭṭā, S. of Hebron.

Jethba (IV Kings, xxi, 19), birthplace of Messalemah, Manasseh’s wife, poss. in Juda, but unknown.

Jethbahat (Q. E. S., x, 7), section of the Israelites between Cades and Asingaberg. Unknown.

Jethela (Jos., xix, 42; Dan): Beit Tōl, S.E. of Yābūl.

Jeth (Jos., xvii, 48; mount of Juda): ‘Attār, between Hebron and Bersabeab.

Jethnum (Jos., xxxi, 36). So Vulg., prob. by mistake; in other texts, Cademoth.

Jizer. See Jazer.

Jezreel (Jos., xvi, 16, etc.; Issachar): Zerā’an, S.W. of Jebel Nebh Dahl (Little Hermon).—2 (Jos., xvi, 66; I Kings, xxvii, 7; Juda), in the neighbourhood of Carmel and Ziph. Unknown.

Job. See JAFFA.

Jordan (q.v.).

Joseph (Jos., iii, 2, 12), prob. an allegorical name: “the valley wherein Yahweh shall judge”.

Jota (Jos., xv, 55). See Jeta.

Jucad (Jos., xv, 55; mount of Juda): apparently S.E. of Hebron. Unidentified.

Jud (Jos., xix, 45; Dan): El-Yehūdīyeh, N. of Lydda.

Juda (q.v.).

Judea (q.v.).

Laban (Deut., i, 1), station of the Israelites in their journey from Sinai to Cades. Unknown.

Labanath (Jos., xix, 26), is separated in Vulg. from preceding word, to which it should be joined: Sihor Labanath. See Sihor.

Leuedemon (II Mach., v, 9). See SPARTA.

Lahela (1 Par., v, 26), a mistake for “to Hala”, a region of Assyria.

Laheem (1 Par., iv, 22; the text is not clear). Unknown.

Leai. See DAN.

Lampasacus (I Mach., xv, 23), a city of Mysia, on the Hellespont, possibly a mistake for Sampsamze: Samson, a little seaport between Sinope and Trebizond, on the Black Sea.

Laodicca (Col., ii, 1, etc.; q.v.).

Leboath (Jos., xv, 32). See Beth Leba‘oth.

Lebna, 1 (Num., xxxiii, 20) a station of the Israelites in their journey from Sinai to Cades. Unknown.—2 (Jos., x, 31; Sephela): poss. Kh. el-Benwāy, 10 m. S.E. of Lachis.

Lebōn (Judges, xxi, 19): El-Lōbḥān, S. of Naplōs. Lehi (Jos., xv, 17; D.V. “jawbone”): Kh. ‘Ain el-Leḥt has been proposed, but is very doubtful; the above Arab. name seems to be rather ‘Ain Allek.

Lecum (Jos., xxxii, 33; Nephtali): site unknown, probably in the neighbourhood of L. Hūleb.

Lechem (Jos., xv, 40; plain of Juda), Kh. el-Lāhūm, S. of Beit Jrībin.

Lesem (Jos., xix, 47). See DAN.

Lobna (Jos., xxi, 13), the same as Lebna 2.

Loth (I Par., vii, 12, etc.): El-Lūd. See SEBASTE.

Loubar (II Kings, ix, 4, etc.; Transjord.). Greek has Doibon: text unsettled.

Luith (Is., xv, 5; Jer., xlviii, 5; Moab): Kh. Ḫāz (Moab); ‘Nūchtin (de Saulcy); hardly identified.

Luza, 1 (Gen., xxviii, 19, etc.), an old name for Beisel.—2 (Judges, 2, 29), city of the Hethites, perh. Lūqayyēth, N.W. of Tell el-Qādr.

Lyda (I Mach., xvi, 54), Lydda (Acts, ix, 32, etc.). Lod.

Lystra, 1 (Acts, xiv, 8, etc.), a city of Lycaonia: Khālīn Sera’it.—2 (Acts, xxvii, 5), in some MSS., a mistake for Myra in Lycia.

Maara of the Sidonians (Jos., xiii, 4): possibly the “cave” of Jezzin, about 9 m. E. of Sidon; but the text seems corrupt and should perhaps be read: “from Gāza to Sidon”.

Maccæ (III Kings, iv, 9; Dan). Unknown.

Maceda (Jos., x, 10, etc.), poss. El-Maghār, in the neighbourhood of Accaron.

GEOGRAPHY

Machbena (II Par., ii, 49), prob. the same as Chebbon.

Machmas (I Kings, xxii, 2, etc.; Benjamin): Mikhmáš N. of Jerusalem.

Machmethath (Jos., xvi, 7, etc., limit of Ephraim and W. Manasses); perhaps not a city, but a region, prob. the Plat. of El-Makhmákh (Guthrie).

Machtesh (Sopher, i, 11; D.V. "the Mortar"); a place near Jerusalem, "the Valley of Siloe" (St. Jerome).

Medmena (I Par., ii, 49). See Medmena.

Medon (Jos., xi, 1, etc.) perh. should be read Maron: poss. Kh. Madín, W. of Tiberias, or Meiron, N.W. of Safed.

Magala (I Kings, xvii, 20; xxvi, 57), wrongly interpreted by Vulg. as a proper name; means a fenced encampment.

Magdal (I Ex., xxv, 2), etc.; perh. See Saphehum.-2 (Jer., xxiv, 1, etc.) perh. the same; poss. Tell es-Semût, near Pelusium.

Magdala (Matt., xv, 39; Mark, vii, 10; text not certain): El-Mejdel; on the W. shore of the L. of Tiberias.

Magdalèl (Jos., xiii, 38; Nephtali): poss. El-Mejdel; according to the Onomasticon, Athlit.

Magdäla (Jos., xv, 37; Sephele), Assy., Magdâl: either El-Mejdel, near Ascalon, or El-Mejleh, S. of Beit Jibrin.

Magedan (Matt., xv, 39). See Magdala, Dalmanutha.

Magdella, Magdedom. See Mageodo.

Mageth (I Mach., v, 26; 36; Transjord.): prob. Kh. el-Mukattïyeh, W. of the confines of the Rûqqâd and the Yarmûk.

Magron, I (I Kings, xiv, 2); prob. a common name indicating the top of the hill on the slope of which Jebus is built.—2 (1s., x, 28): poss. Makrûn, N.W. of Ma'ân.

Mahane Dan (Judges, xii, 25; xviii, 12), a place W. of Cariathiarim.

Mallos (I Mach., iv, 30), a city of Cilicia.

Malba (q.v.).

Mambre. See Hebron.

Manaim (Jos., xii, 26, etc.). See Mahanaïm.

Manasses (q.v.).

Mam, 1 (Jos., xv, 55; S. Juda): Kh. Ma'tm.—2 (Judges, x, 12), perhaps Ma'ân, E. of Petra; text corrupt.

Mar (Ex., xxv, 23), station of the Israelites between Egypt and Mt. Sinai, perh.'Ain Hawâra, or Wady Mereira.

Maresa, a city in the Sephele; the name is preserved in Kh. Maresh, near Beit Jibrin; the site was prob. in Tell Sandahanna, a little S.E. of Kh. Maresh.

Mareth (Jos., xv, 59; mount. of Judá), poss. Beit Úmmár, S.S.W. of Bethlehem.

Maroth (Mich., i, 12). Unknown, although some deem it to be identical with Mareth.

Masoel (I Mach., ii, 2), a common name meaning "the steps"—i.e. the steps of the caves of Arbella.

Masëphë (Jos., xv, 38; Sephele): Tell es-Safâyeh, 7 m. N.W. of Beit Jibrin.

Masserethoth (Jos., xi, 8; xiii, 6). Unknown. Perh. Ain Mâcheri, on the Meditarranean shore, S. of Ras en-Naqûn.

Maspha, Masphath, 1. Of Benjamin: site much disputed; Shâfat. Nebi Samwil, El-Btreh, and Tell Nazbeh, all N. of Jerusalem, have been proposed with more or less probability.—2. Of Galaad: see Ramoth Galaad.—3. Of Judá: prob. Tell es-Safâyeh.—4. Of Moab (I Kings, xxxii, 3, 4). Unknown.

Maspe. See Maspha of Galaad.

Masee (Gen., xxxvi, 36; I Par., i, 47), N. of Idumea.

Mathana. Station of the Israelites in their journey through Moab; possibly Mechatta.

Meddin (Jos., xv, 61), wilderness of Juda. Unknown.

Medemena, 1 (Jos., xv, 31; S. Juda). Unknown.—2 (Is., x, 31; Benjamin): Kh. el-Qâramî, N. of Jerusalem.

Megiddo. See Mageddo.

Megjaron (Jos., xiv, 46; Dan), poss. the Nahar el-'Aujeh, betw. Joppê and Acreon.

Melita, A.V. for Malta (q.v.).

Melothi (Judith, ii, 3, Vulg. only), perhaps Melitine of Cappadocia.

Memphis (q.v.).

Mennith (Judges, xi, 33). Onomasticon: at a short distance from Hesebon; poss. Umm el-Qanâfîd.

Meophath (Jos., xiii, 18): Nefâ, S.S.E. of Ammân.

Mera (Jos., xi, 19, Zabulon): poss. Ma'lûl, S.W. of Nazareth.

Merom (Water of). Lake Hûleb.

Meroz (Judges, v, 23); poss. El-Mahrûneh, between Dothân and Kûbâtîyeh; or El-Mâragas, near Beisan.

Merrha (Bar., iii, 23). Unknown. Perhaps we should read Madian.

Mesopotamia (q.v.).

Mesphe (Jos., xviii, 26), for Maspha of Benjamin.

Messa (Gen., x, 30), in Arabia. Unknown.

Messaal (Jos., xiv, 26). See Masal.

Methca (Num., xxxii, 28), station of the Israelites in the journey from Sinai to Cades. Unknown.

Miletus (q.v.).

Misor (Jos., xxxi, 36), not found in the Hebr.; poss. a mistake.

Mitylene (Acts, xx, 14), in the island of Lesbos: Metelin.

Mochama (II Esd., x, 28; Juda): Kh. el-Mqâenâ.

Mohân, the birthplace of the Machabees; generally admitted to be El-Medîeh, E. of Lydda.

Molada (Jos., xv, 26; S. Juda), perh. Tell el-Mîh, between Bersabea and the Dead Sea.

Moresheeth Gath (Mich., i, 1, etc.), birthplace of Michaeas, E. of Eleutheropolis. Unidentified.

Mortar (Sopher, i, 11). See Machtesh.

Mosel (Ezech., xvii, 19). As such, not a proper name; should be understood: "from Uzal".

Mosera (Deut., x, 6). See Moseroth.

Moseroth (Num., xxxii, 30), station of the Israelites in the journey from Cades to Asiagouber. Unidentified.

Myundas (I Mach., xxv, 23), a city in Caria, between Miletus and Halicarnassus.

Myra (Acts, xxvii, 5), not in the Vulg., but should be read instead of Lystra.

Naalol (Jos., xix, 15, etc.; Zabulon), poss. Ma'lîl, E. of Nazareth.

Naama, 1 (Jos., xix, 41; Sephele): perh. Na'âmeh, S. of Lydda and E. of Jabneh.—2 (Job, ii, 11); there was prob. a city of that name in Nabathaea. Unknown.

Naarath (Jos., xvi, 7; E. Ephraim), poss. Tell Tahání, N. of Jericho.

Naas (I Par., iv, 12, Juda), perh. Deir Nâhâs, N.E. of Beit Jibrin.

Naasson (Tob., i, 1), poss. Assur 2.

Nahaliel (Num., xxi, 19), station of the Israelites in the Dead Sea, near the Arnon. Wady Enkeile (?) Robinson.

Naïoth (I Kings, xix, 18, etc.), "in Ramatha". Otherwise unknown.

Nazareth (q.v.).

Neapolis (Acts, xvi, 11; xx, 6), a city in Macedonia: Kavalla.

Nebb, 1 Mountain N. of Moab: Jebel Nebá.—2 (Num., xxxii, 3; Moabite Stone, i, 14), a town about the Jebel Nebb. Nebó (Jos., xv, 62; desert of Judah, near the Dead Sea). Unknown.

Nebo (Jos., xix, 33, in the Vulg.; Nephthal). See Adami.

Nehelehal. See Escol.

Nemára (Num., xxxii, 3). See Bethnemra.

Nemér (Is., xv, 6; Jer., xlvii, 34): Wády Nemeira, S.E. of the Dead Sea; there is a Kh. Nemeira.

Nepheath Dor. See Dor.

Nephyal (q.v.).

Nephthas (Jos., xv, 9; Juda-Benjamin): Lifá, N.W. of Jerusalem.

Nésib (Jos., xv, 43; Sephela): Beit Násib, E. of Eleutheropolis.

Netophath (II Esd., xii, 28). See Netupha.

Nicothas (Titius, iii, 12), a city in Epirus: Paleoppréva.

Nineveh, A.V. for Nineive.

Ninevah (q.v.).

Nó, No Amon (Nahum, iii, 8; Ezech., xxx, 14): not the Nahum of Egypt, but Thebes in the Delta (Dioscurus): Tell Balmám.

Noa (Jos., xix, 23; Zabulon). Unknown.

Nob (II Esd., xi, 32; Benjamin): Beit Nóbá, between Anatu and Jerusalem.

Nobe (I Judges, viii, 11; Transjord.). Unknown.—2 (I Kings, xxii, 1, etc.). See Nob.—3 (Num., xxiii, 42). See Canath.

Noph (Num., xxi, 30; Moab): text doubtful.

Nopheth (Jos., xvi, 11), a town, according to Vulg.; the clause should be rendered: "three villages".

Noran. See Naarath.

Oboth (Num., xxxii, 43). Station of the Israelites in the journey from Asiongaber to the frontiers of Moab; prob. Wády Weibeh, N. of Penán.

Odollam. prob. Kh. Aid el-Mleeh; the cave is near the summit of the S. hill. See ADDULLAM.

Oddilam. See ADDULLAM.

Olan (Josh., xvi, 51). See Holon.

On. See BAALEEB.

* Ono (I Par., viii, 12; Dan; Egypt.; Amoua; Kefr 'Aná, between Lydda and Jaffa.

Ophiel (II Par., xxvii, 3), a part of Jerusalem.

Opher (IV Kings, xiv, 25). See Gezetherph.

Ophel (Jos., xvi, 23). See Epgth.

Ophi (Jos., xxiv, 24); Benjamin: perhaps Jífneh, N.W. of Beithin.

Oreb (Judges, vii, 25, etc.); poss. Os'h el-Ghúbrá, between the Jebel Qaranit and the Jordan.

Oromin (Is., xv, 5; Jer., xlvii, 3, etc.; Moabite Stone, l. 33): Wády Ghóweir (Conder) would seem rather S. of the Arnon.

Orontes, great river of Syria: Nahar el-'Ast.

Orthokias (q.v.—I Mach., xv, 37).

Oxensara (I Par., vii, 24): perhaps Beit Sfrá, W.S.W. of Lower Bethoron.

Palmrya (q.v.).

Paphos (q.v.—Acts, xiii, 6, etc.), in Cyprus: Baffo.

Paros. I Par., xxi, 2; Esth., i, 6, speak of "marble of Paros"; but this is not to be found in the original; only "white stone".

Patoán (Neá, xxi, 3), a city in Lycia: Jleemiah.

Patmos. One of the Sporades, S. of Samos, W. of Mileitus: Patino.

Pelusium (Ezech., xxx, 15, 16); Copt.: Peremín, Pélisir, a city N.E. of the Delta of the Nile, on the branch called, after the name of the city, Pelusiac: Sä el-Haggár.

Persia (q.v.).

Persepolis. Whether it is spoken of in II Mach., xix, 2, is doubtful.

Petra (q.v.).

Philisi. See Bethpasha.

Phanuel (Gen., xxxii, 30, etc.; Transjord.), Egypt.: Penitable, on the banks of the Jaboc. Site uncertain.

Phara (I Mach., ix, 60): the text seems uncertain; perhaps the same as Pharaton.

Pharah. General term to designate the wilderness between Sinai and Palestine.

Pharaton (Judges, xii, 23, etc.): birthplace of Abdon, one of the Judges of Israel. Prob. Feráta, 7 m. S.W. of Naplús.

Pharpar, river of Damascus: Nahr el-'Awaì.

Phezelis (I Mach., xv, 23): a city of Asia Minor on the borders of Lycia and Pamphilia.

Phasa. Whether this is a common or a proper name is doubtful. At any rate, it indicates a place connected with Mt. Nebb, prob. Ras Sílághwá, and at a very short distance of the Jebel Nebb.

Phatthes (Is., xi, 11; Jer., xlv, 1, etc.): Egypt.: Pátarí. Upper Egypt.

Phau (Gen., xxxvi, 59; I Par., i, 50): Phu’áhrás has been proposed.

Phaëthommin (I Kings, xvii, 11; I Par., xi, 13): poss. Dímím, on the road from Jerusalem to Beit Jibrín, N. of Shóweikh.

Philhárioth (Ex., xiv, 29; Num., xxxii, 7); Egypt.: Píchezech. A station of the Israelites in their flight from Egypt. Unidentified.

Philadelphia (q.v.).

Philippi (q.v.).

Phnon. See Phunon.

Phthom, a town in Lower Egypt: Tell el-Máshkhitá, W. of Lake Tímas.

Phenicia (q.v.).

Phogor. 1 Mountain N. of the Abarim range; variously identified: El-Mareiqáth, Tell-Mántákah, El-Ábtáh.—2 See Béthphogor.—3 (Jos., xv, 60, Greek): one of the 11 cities added in the Greek to the list of the Hebrew: Kh. Beit Fóghehr, S.W. of Bethlehem.

Phygia. See Asia Minor.

Phunon (Num., xxxii, 42), a station of the Israelites on the journey from Asiongaber to Moab: Kh. Penán, on the edge of the 'Araba.

Pisidia (q.v.).

Pontus, territory N.E. of Asia Minor, on the shore of the Black Sea.

Polemeais (I Mach., xii, 48, etc.): Greek name of Acre.

Puteoli (Acts, xxviii, 13), a seaport near Naples: Pozzuoli.

Qibroth Hathaváh (Num., xi, 3; D.V.: "graves of lust"), station of the Israelites on their journey from Sain to Cade: possibly in Wády Khbebeh.

Qir Moab (Is., xv, 1; D.V.: "the wall of Moab"), a proper name: Kérak.

Qir Heres (Is., xvi, 7, etc.; D.V.: "brick walls"; Moabite Stone, i, 3). See Qir Moab.

Rabbath Moab. See AÔ.

Rabbath (Jos., xix, 20; Issachar): Rábá, 7 m. S.E. of Jenín.

Rachal (I Kings, xxx, 29; Septuag.: "in Carmel"), A city in S. Judá; the text, however, is doubtful, and several commentator: prefer the Greek reading.

Rogau (Judith, i, 5, 15): a prov. in Media.
Rages (Tob., i, 14, etc.): principal city in Raguia; Ragi, S.E. of Tekheran.
Ramah, birthplace of Samuel. See Rama 5.
Ramah of Samoim. See Rama 5.
Ramesses (Gen., xlvi, 11; Lower Egypt). The site has not yet been identified; some see it in Sân, the Tanais of the ancient On in Es-Sallîheh.
Rameth. See Jaromoth.
Ramoth, 1. Of Galada, usually called in the Bible Ramoth Galsad: perhaps Reimûn (Conder); more probably Es-Salt.—2 See Jaramoth.
Ramoth Masphel. See Ramoth of Galsad.
Raphaim. (Num. 11) Generic term designating the early population of Palestine: the Emim, Enamim, Horam, Zizim, were Raphahim.—(2 Valley of). A valley which seems to have been S. of Jerusalem, perhaps the plain El-Bûge'a. Raphidim (Ex., xvii, 8, etc.). A station of the Israelites in their journey from the Red Sea to Sinai; corresponds to Wady 'Erphihid.
Raqâ (1 Par., iv, 37; Transjord.): poss. Es-Râfe, E. of the Jerb el-Hiâji.
Reba, 1 (Num., xxxiv, 11): N. boundary of Israel; its site is much disputed: 'Arbin, N.E. of Damascus; Rebêleh, between Basibek and Boms; Halibna or Zor Ramleh being proposed, the latter with perhaps more probability. —2 Also called Reiblah (IV Kings, xxx, 6, etc.): Rebêleh, in the Bgev'â.
Reccath (Jos., xix, 35; Nephtali): an old name of Tiberias, according to the Talmud.
Recom (Jos., xviii, 27; Benjamin). Unidentified.
Rechab (1 Par., iv, 12). Unknown.
Rechoboth (Gen., xxxvi, 37), a well near Bersabee: Naqb er-Rûbâi (?).
Remmon, 1 (Jos., xv, 32; etc.): S. Judah: prob. Kh. Umm er-Rûmmâmin, N. of Bersabee.—2 (Jos., xix, 13; Zabulon): Rûmmâneh, N. of Nazareth.
Remmon or Reimûn (Jer., vi, 77, Herod.): see Remmon 2.
Remmonophares (Num., xxxiii, 19), station of the Israelites on their journey from Sinai to Cades. Unknown.
Raphidim, A.V. for Raphidim.
Resen (Gen., x, 12), one of the four cities which must be given by his son. See Saa.
Reseph (IV Kings, xix, 12; Assyria): Assyr.: Rasappa: identified with Rusafà, between Palmyra and the Euphrates.
Resoa (Num., xxxiii, 21), station of the Israelites, between Sinai and Cades: Wâdy Süweiqâ (?).
Rhesim (Num., xxxiii, 18), another station in the same neighbourhood. Unknown.
Rhodes (q.v.—1 Mach., xv, 23; Acts, xxii, 1).
Rogetim (1 Kings, xvii, 27, etc.): Galsad). Unknown.
Rohoboth. See Rechoboth.
Rome (q.v.).
Ruben (q.v.).
Erez (Jos., x, 52; should be Duma; S. Judah): Ed-Dôme, S. E. of Eleutheropolis.—2 (IV Kings, xxxiii, 36). Unknown.
Suartim (Jos., xv, 36; S. Simeon): poss. identical with Sarothen.
Sabâma (Jos., xiii, 19; Ruben): poss. Shânâb, N.W. of Heebân.
Sabon. See Sabama.
Sabririm, 1 (Jos., vii, 5; D.V.: "quarries"), on the descent from Hai towards the Ghôr. Unknown. —2 (Ezech., xlvi, 16), a town in Syria: "between the border of Damascus and the border of Emath."
Sabee (Jos., xix, 2; Simeon); text not certain.
Salelim (Jos., xix, 42, etc.): Dan: Kh. Selbit, N.W. of Yâlod.
Salecha (Deut., iii, 10, etc.; E. limit of Basan): Sallkhâd, S. of Jebel Hauran.
Samem, 1 (Gen., xvi, 18), commonly identified with Jerusalem; this identification, however, is far from certain.—2 (Gen., xxxiii, 18), perhaps not a proper name; if one, Salim, E. of Naplós.
Salim (John, iii, 23). See ΑΣΩΝ.
Salmona (Num., xxxiii, 41), station of the Israelites in the journey from Asiongaber to Moab; must be between the Gulf of Aqaba and Kh. Petên. Unidentified.
Salmone (Acts, xxvii, 7), a promontory at the N.E. end of Crete: C. Sidero.
Sama (Jos., xix, 2; S. Judah): perhaps Saba should be read; might be Tell es-Sabah, E. of Bersabee.
Samaraim (Jos., xvii, 22; Benjamin): prob. Kh. es-Sümârâ, 5 m. N. of Jericho.
Samaria (q.v.).
Samir, 1 (Jos., xv, 48; mount, of Juda): poss. Kh. Sómerâli, S.W. of Hebron.—2 (Judges, x, 1, 2), the home and burial place of Tola: Sanûr (?), between Samaria and Engannim.
Samos (q.v.).
Samothracia, an island in the Ægean Sea, S. of the Coast of Thracia, N.W. of Tros.
Samar (Jos., xv, 37; Sephela): perhaps the same city as indicated in Mich., i, 11 (D.V.: "pass away"); Sûmâ.
Samir. Name given to Mt. Hermon by the Amorheans.
Saroa (Jos., xv, 33, etc.; Dan): Šûr'âh, W. of Jerusalem.
Saraim (Jos., xv, 36; plain of Juda): Kh. Salâre, N.E. of Zanû'a.
Saratbasar (Jos., xiii, 19; Ruben): Šârêh, a little S. of the Zerqâ.
Sara (Apoc., iii, 1), principal city of Lycia. e Euseb. See Sarea.
Sare. See Sarid.
Saredatha. See Sarthan.
Sarephtha, Sarepta (III Kings, xvii, 9, etc.): Şarsîf, about 8 m. S. of Sidon.
Sarid (Jos., xix, 10; Zabulon): poss. Tell Shîhid. S.W. of Nazareth.
Sarion. Name given by the Sidonians to Mt. Hermon.
Saron, 1 Maritime plain between Jaffa and Mt. Carmel.—2 Country between Mt. Tabor and the L. of Tiberias.—3 (I Par., v, 16): either some region E. of the Jordan, or 1.
Scythopolis (II Mach., xii, 30): Beisân. See BEMIS.
Secherna (Jos., xv, 11; N. Juda): Kh. Sūkērei? (7).
Sedada (Num., xxxiv, 8): prob. Kh. Şerēdā, E. of the Merj Aiyūn.
Seidah (xxv, 10), generally identified with Es-Safieh, in the Għor of the same name, S.of the Dead Sea.
Seheima (Jos., xix, 22; Issachar), prob. E. of Mt. Thabor. Unknown.
Selir, 1 (Gen., xxxvi, 8, etc.), practically synonymous with Edom: the mountainous region between the S. end of the Dead Sea, the Wādy el-Emās and the Wādy Arāsh. —2 (Jos., xv, 10), a point defining the limit of Juda, S.W. of Cariathiarim.
Seira (IV Kings, viii, 21; Edom), poss. Ez-Zāwēreh, W. of the S. end of the Dead Sea.
Seirath (Judges, iii, 26), likely in the hill-country of Ephraim, and not far from Gālgala. Site unknown.
Selecha. See Salecha.
Selebim. See Seilebim.
Seleucia (q.v.—Mach., xi, 8; Acts, xiii, 4).
Selim (Jos., xv, 32; S. Juda), prob. the same as Sarohen.
Selmon, 1 (Judges, ix, 48): prob. Shelkh Selman, S.W. of Mt. Garizim.—2 (Ps. lixiv, 14): the text is not altogether certain; perhaps the Asalmanas of Ptolemy: Jebel Hauran.
Sennacherib (2 Kings, xix, 15, etc.; Zabulon): perh. Semūnye, 5 m. W. of Nazareth; or Es-Seemīreth, 3 m. N. of Acre.—2 (II Par., xiii, 4): a hill S. of Beithin.
Sennae. Unknown.
Sene (I Kings, iv, 4), one of two conspicuous rocks on the way from the Wādy Sūweint, which seems to have retained the name, to Machmash.
Senna. See Sin 2.
Sennaar: prob. Upper and Lower Baby lonia.
Sennam. See Saanamim.
Sensannah (I Par., iv, 31); Jos., xix, 5, has Hasara- suam, prob. identical.
Seom (Jos., xix, 19; Issachar): ‘Ayūn esh-Shā’in (7), N.W. of Mt. Thabor.
Septapho (Judges, i, 17; S. Juda): prob. Sabaite.
Sepahama (Num., xxxiv, 10, 11), N. limit of the Holy Land; prob. Ofānī, S.E. of Banlyas.
Sephamoth (I Kings, xxx, 28; S. Juda), near Aror. Unknown.
Sephar (Gen., x, 30), limit of the country of the sons of Jocan, commonly identified with Ṣaphar, in S. Arabia.
Sepharad (Abd., 20; D.V.: "Boophorus"): some prov. in the Persian empire.
Sepharvaim (IV Kings, xviii, 24, etc.): poss. Sippar, in Babylonia: moğ. Abū Habba; more prob. a city in Syria, poss. Sabarim 2.
Sephele: maritime plain from Jaffa to the "torrent of Egypt".
Sepher (Num., xxxiii, 23), a station of the Israelites in their journey between Sinai and Cades: prob. the defiles of the Jebel Arāfīf.
Sephet (Tob., i, 1; Aser): poss. Ṣafed, in Upper Galilee.
Seer (Jos., xix, 35; Nephthal). Unknown.
Senach (Jcr., xxv, 26; Ll, 41), cryptographic name of Babylon, according to the system called the Athbash (i.e.: Aleph=Tau; Beth=Shin; etc.).
Sēsim, Sētīsim. See Abel.
Sēsim, Sētīsim (Jer., xxv, 10; Ose, S. Simeon): prob. Kh. Zābēltā, N. of the Wādy es-Sherfa.
Sēthkar (John, iv, 5), very prob. Sahel Ṭaskar, E. of Naplōs.
Sēthım (q.v.).
Sēyom (I Mach., xv, 23), a town N.W. of Corinth, on the Gulf of Corinth.
Sūdiyy (Gen., xvi, 3, etc.; D.V.: "Woodland Vale"): plain of the Pentapolis, believed to be about the Dead Sea, perhaps towards the S. end.
Sūdeh (1 Mach., xv, 23), a city on the coast of Pamphlia: Eski Adalia.
Sidon (q.v.).
Sīlo (Jos., xvii, 1, etc. Ephraim). A famous place of worship of the Israelites in early times; the Ark of the Covenant was kept there until the last days of Hell. Sīlo was situated "on the N. of the city of Bethel, and on the E. side of the way that goeth from Bethel to Sichem, and on the S. of the city of Lebona" (Judges, xxi, 19); See Ark.
Sīlō. See Sīlō; JERUSALEM.
Sīnāi (q.v.).
Sīōm, 1. See JERUSALEM.—2. Another name for Mt. Hermon.
Sīr (Jos., xv, 44; mount of Juda): Šāṭir, N.N.E. of Hebron.
Sīs (II Par., xx, 16), a steepy passage from Engaddi up to the desert above: prob. Wādy Ḥāṣāšā.
Smūnna (q.v.).
Sobā, Assyr.: Šūbi’ti: a region in Syria, possibly S. of Damascius, in the neighbourhood of the Jebel Hauran.
Sobol (Judith, iii, i, 14; Ps. lix, 2), for Soba.
Socchoth, 1. (Ex., xii, 3, etc.): first station of the Israelites on leaving Ramesses, poss. about Ismailiya or El-Gisr.—2 (Gen., xxxix, 17, etc.; Gad): prob. Tell Darāla, N. of the Nahār ez-Zerqā.
Socchot, Socchoth. See Socchoth 2.
Sor (q.v.).
Sorēa (Judges, xvi, 4, etc.): a valley famous in the story of Samson; prob. the Wādy es-Sarār; the name has been preserved in the neighbouring Kh. Shārāq.
Sparta (q.v.).
Suada (I Kings, xiii, 17), a place which seems to have been in the N. of Benjamin.
Saba. See Soba.
Sūna, Sūnem (Jos., xix, 18, etc.; Issachar): Sūn, at the foot of Jebel Dāby, 4 m. N. of Zerā’in.
Sur, 1. Desert E. of Egypt, also called Desert of Etham, perhaps around Tahur, which the Egyptians considered their E. frontier.—2 (Judges, ii, 28), perhaps another form of the name Tyre (Hebr. _CALR_).
Susa, Susan. See Sasa.
Syene (q.v.).
Syracuse (q.v.).
Syria (q.v.).
Taberah (A.V.). See Qibbroth Hattawah.
Tana, a city in the Delta of the Nile: Zoan.
Taphna, a town in Lower Egypt, in the neighbourhood of Tanis and Pelusium: Tell Defneen.
Taphna, 1 (Jos., xv, 34; Sephera). Unknown.—2 (Jos., xii, 17): "between Bethel and Epherr".
Unidentified.—3 (Jos., xvii, 8, etc.), on the borders of Ephraim and Manasses, perh. the same as Taphna 2.
Tarce (q.v.).
Tebbah (Judges, vii, 22), a city in the Ghor, near Abelmelehu. Unidentified.
Telaim (I Kings, xxv, 4; D.V.: "as lambs"): prob. Telem.
Telem (Jos., xv, 24; S. Juda), S. of Tell el-Milh, there is a tribe of Arabs whose name, Dhałām, bears analogy with the present Biblical name; moreover, all the district of Moladā is called Ṭūlām (Schwartz), possibly also a relic of the old name.
Temptation (Ex., xvii, etc.). See Raphidim.
Terebinth (Valley of): I Kings, xvi, 2, etc.): between Socho and Aza, most prob. Wādy es-Sanā. 
Thabor. 1. Mountain (q.v.).—2 (Jos., xix, 22; Judges, viii, 18; Issachar). Unknown.—3 (I Par., vi, 77; Zabulon); in Jos., xxi, 28, instead of Thabor, we read Daberath: Debúryeh. Thacasas (Jos., xix, 13; Zabulon): possibly Corozain. Thaïmlor. See CAMLOR.

Thammar (Num., xxiii, 20), given as a station of the Israelites in their journey from Sinai to Cades; poss. a gloss added to the text. Thallas (Acts, xvii, 8), a city in Crete, near Good-havens.

Thallasar (Is., xxxvii, 12), a region in W. Mesopotamia; poss. prob. along the Euphrates, between Balis and Birejik.

Thale (Jos., xix, 19, 7, Septuagint, for Ether.

Thamar (Ezech., xlvi, 19; xlviii, 28): poss. Thamaras of the classics, and Thamaro of the Peutinger Table, on the road from Hebron to Elath.

Thamos, 1 (Judges, xiv, 1, 25; Benjamin) Kh. Tibneh, W. of 'Ain Shems.—2 (Gen., xxxviii, 12—14; Jos., xvi, 67; N. Juda); Asyr.: Tammun; perh. Tibeon, N.W. of Jeb's; more prob. Tibrné, S.E. of Deir Aban. Thannata (1 Mach, ix, 50), between Bethel and Pharanos; poss. El-Tayyebat, or Tamann, in the Wady Fara's Thannathsera, Thannathasre, burialplace of Josue: prob. Kh. el-Fakhkhdir, in Ephraim.

Thanae, Thonah (Jos., xxii, 35, etc.): Tell Ta'annak, S.W. of Lejün.

Thanathselo (Jos., xvi, 6; N. Ephraim): Ta'anas, S.E. of Napliss.

Thapso, 1 (III Kings, iv, 24), N. limit of Solomon's kingdom: Thapsosse, on the Euphrates, above the confluence of the Belik. Kala'at Dibese.—2 (IV Kings, xv, 6), city taken by Manahem, after he had overthrown Sennach: prob. a mistake for Thersa.

Thath (Num., xix, 27), supposed to be a station of the Israelites on the journey from Sinai to Cades; poss. a gloss.

Tharela (Jos., xviii, 7; Benjamin). Unknown.

Tharsis, 1. A maritime country far to the W. of Palestine, and on the location of which there is much variance of opinions, some deeming it to be Spain (Tartessos); others Carthagena, in Spain (Tarsetion); others, the Tyrrhenians (Tiras of Gen., x, 12), or Etruscans.—2 (Judges, ii, 13), poss. Tarsus of Cilicia.

Thebuth (1 Par., xvii, 8), city of Egypt.

Thebes (Judges, ix, 50; II Kings, xi, 21; Samaria): Tafs, S. of Napliss.

Theoua, Theooe (Amos, i, 1), birthplace of Amos: Kh. Teq'ata, S. of Bethlehem.

Thelassar. See Thallasar.

Themar (Jcr., xlix, 7, etc.): poss. Chobak, in the Wady Qharandol, S. of the Dead Sea.

Themmel. See Thelmala.

Themna. See Thannu.

Thene. See Tanne.

These (Jos., xxii, 24, etc.; Samaria), the capital of Jeroboam's kingdom: poss. Tullizah, N. of Mt. Hebal, or El-Treh, near Mt. Garism.

Thesbe, birthplace of Elias; whether Thesbe of Galilee (see below), or Thesbon of Galad (Kh. el-Iiltib, near the Wady Aljun, 10 m. N. of the Jaboe), is not absolutely certain, although the Greek favours the latter opinion.

Theesalónica (q.v.).

Thiste (Tob., i, 2), birthplace of Tobias, S. of Cedea of Nephtali.

Thochen. See Ether.

Thophon (Gen., x, 3, etc.): Phrygia, according to Josephus and Targum; others generally identify it with Armenia, and especially W. Armenia. Cf. Assyr.: Tûl-Garmînû.

Tholad. See Eltholah.

Thophel (Deut., i, 1): poss. Tefelah, S.E. of the Dead Sea.

Thopo (1 Mach., ix, 50; Judea), perh. identical with Taphus.

Thoum (Acts, xxviii, 15), a place likely near the road. Catena on the Appian Way.

Thautiria (Apoc., ii, 20), a city in Lydia: Ak-Hissar. Tibersias. See GALILEE.

Tichon (Ezech., xlvii, 16; D.V. : "the house of Tichon"): possibly El-Hadir, E.N.E. of Binlyas, on the Nahr Mughantzeh.

Tieh. A country E. of the Jordan; Geographers are at variance as to its location: some place it S.W. of Soba; others, S. of Gadara; others E. of the bridge called Jisr Benât Yákûb.

Tipheth. See JERUSALEM.

Tiridot (q.v.).

Tissa (Acts, xvi, 6—8), a seaport in Mysia: Eski Stambûl.

Trogylitis (Acts, xx, 15, accord. to MS.D;omit. in the principal other MS.S), a promontory in Asia Minor, over against the E. end of Samos: C. Mycale. Tůbin (1 Mach., v, 13). See Tob.

Tyre (q.v.).

Ur (Gen., xi, 28, etc.); Assyr.: Ūrâ: el-Mughâhir, on the right bank of the Lower Euphrates. Vale Casus (Jos., xviii, 21), a place in the Ghôr, in the neighborhood of Jaffa.

Yadan (Ezech., xxvii, 19), poss. Egypt.: Uthên, a city E. of Egypt; the text is not clear.

Zabulon (q.v.).

Zanoo, Zanoé, 1 (Jos., xv, 34, etc.; Sephelae): Zana.—2 (Jos., xv, 50, etc.; mount. of Juda): Kh. Zannâtah.

Zïzhad, A.V. for Siceleg.

Zoèleth (III Kings, i, 9), a rocky place near Jerusalem; the name seems preserved in the mod. Ez-Zâwehleibeh.

The bibliography of Biblical Geography is very extensive. In the Bibliotheca Geographica Palestinae (Berlin, 1880), Rücik ers attempted a classification of the whole literature of the subject, from 353 to 1878. Torles had already paved the way by a similar work, some twenty-five years before. A systematic enumeration has been undertaken by Prof. Thrommen, of the German Palestinian Institute. We must limit ourselves here to a selection of: I. Serials and periodicals; II. Studies on old sources; III. General works; IV. Special subjects.

First and foremost, the publications of the Palestine Exploration Fund, since 1885. Besides the maps of E. and W. Palestine (1 inch to the mile), seven volumes of Memoirs on W. Palestine, Moáb, Jerusalem, special papers, name-laws, three volumes of studies on natural history, botany, geology, have been issued, and others are forthcoming. The Palestine Exploration Fund Quarterly Statement announces the progress of the work accomplished by the society. Germany has likewise her Palestine Association, issuing the Zeitschrift des Deutschen Palästina-Vereins (abbreviated ZDPV), the Mittheilungen und Nachrichten des DPF. The Imperial Palestinian Institute began in 1903 the publication of a Palästinazahr. The Etablissement d'études Bibliques of the French Dominicans at Jerusalem started in 1883 the excellent Revue Biblique; the Faculté Orientale of the St. Joseph University at Beirut has been issuing yearly since 1906 a stout volume of Mélanges; while the members of the American School of Oriental Research in Palestine publish their contributions mostly in the Biblical World and The American Journal of Archaeology. Valuable articles on Biblical geography are likewise to be found in Clairmont-Gannau, Mélanges d'Archéologie Orientale, also in the Oriens Christianus, and the Revue de l'Orient Latin.
our planet in relation to cosmic and physical phenomena. For the fulfilment of its first and more important task, the accumulation of geographic information, the prerequisites were at hand even in the days. It needed only intrepid men to penetrate from known areas into uncharted ones, and the powerful incentive of a purely scientific interest was still lacking. The motives that led to geographical progress at that time were greed and lust of conquest, as well as a far nobler motive than these—the spread of Christianity. To this mission the most intelligent, the most upright, and the most persevering of all explorers devoted themselves. Consequently, it was they who achieved the greatest success in the field of discovery during the Middle Ages and far into later days, right up to the time when modern scientific research became its successor. The second purpose, geographical theory, commonly called universal geography, could only be profitably attempted after adequate progress had been made in the auxiliary sciences of astronomy, mathematics, and physics. But herein, too, medieval clerical scholars were the first to show their clear-sightedness. For them there was no more attractive field for the contemplation of the attributes of the Creator in all the marvellous harmony of the universe. How, then, was it possible that the laws governing this globe of ours could escape their search for truth? Of course, they could only have a presentiment of these laws, but frequently enough these ideas came very close to those of many of the great modern scientists, equipped with the best of modern instruments. Again, one of the greatest of them all was a theologian—Copericus.

Under these circumstances it was inevitable that the part contributed by the Church to this branch of human knowledge should be of great importance, as the most distinguished geographical bearers witnessed. We may therefore rightfully present a coherent picture there. To this end we have divided the subject according to the following aspects: I. The Influence of the Activity of the Church on the Discoveries of New Lands and Races during the Middle Ages; II. The Views and Statements of Medieval Theologians; III. The Opening up of Foreign Lands by Missionaries from the Age of Discovery down to the Present Day, and the Part Borne by Catholic Scholars in Modern Geographic Research.

I. —The confines of the world as known to geography at the beginning of the Christian Era are shown in the famous geography of the Alexandrian, Claudius Ptolemaeus (150 a. d.). Southwards they extended to the White Nile and the northern boundary of the Sudan; in the west they included the Canary Isles and the British Isles; to the north they reached as far as the German Seas and thence over the Low Countries of Russia and the Aral Sea to the sources of the Indus and the Ganges. In the Orient they took in Arabia and the coasts of India and Indo-China as far as the Archipelago. Their certain knowledge, however, did not extend beyond the boundaries of the Roman Empire when it was at its height, and at any time when this empire was falling to pieces, it was overrun by the peaceful missionaries of the new spiritual power, Christianity. Even in the first few hundred years they found their way to the Far East. According to tradition, the Apostle Thomas himself reached Meliapur. In any case Christianity had been spread in Malabar, on the coast of Coromandel, in Scocotra and Ceylon as early as the fourth century, as Cosmas Indicopleustes informs us in his "Christian Topography", a very important work from a geographic standpoint. Even in Abyssinia and in Southern Arabia the Faith found a foothold, and simultaneously the frontier lands on the Rhine and the Danube were opened up. The subsequent centuries were spent in exploring the North. To this end a centre of operations was established which, for the pur-
pose of the scientific discoverer, could not have been more wisely selected in the conditions then prevalent. Then followed the foundation of monasteries in the British Isles. To secure the direction of the monks, well equipped with learning and well fitted to become the pioneers of culture. To these missionaries we owe the earliest geographical accounts of the northern countries and of the customs, religions, and languages of their inhabitants. They had to define the boundaries of the newly established dioceses of the Church. Their notes, therefore, contained the most valuable information, though the form was somewhat crude, and Ritter very justly traces the source and beginning of modern geography in these regions back to the "Acta Sanctorum." The world is indebted to them for the first faith that Scandinavia existed. They also gave the first description of Scandinavia. The material in them was employed later on by Adam of Bremen in his celebrated work "De situ Daniæ." The accounts of these countries that Archbishop Axel of Lund (d. 1201), the founder of Copenhagen, furnished to the historian Saxo Grammaticus were also of great value. Reports brought in by monks enabled Alfred the Great (901) to compile the first description of Slavic lands. Then followed the Chronicle of Regino of Prüm (907–968)—a work equally important for the historian and the geographer, as it contains the reports of St. Adalbert, and especially more substantial, and far superior in value. Of similar merit are the historical works of the monk Nestor of Kiev (d. 1100) and the country pastor Helmod (d. 1170). Bishops Thietmar of Merseburg (d. 1019) and Vincent Radulbeck of Cracow (1206–18) bring us the earliest information regarding the geography of Poland, while the letters of Bishop Otto of Bamberg contain the earliest description of Pomerania. In like manner the geography of Prussia, Finland, Lapland, and Lithuania begins with the evangelization of these countries. And even if it be difficult to-day to estimate at their proper value the discoveries of these regions, now so familiar to us, the first voyages of civilized Europeans on the high seas, which started from Ireland, will always challenge our admiration. Groping from island to island, the Irish monks reached the Faroe Isles in the seventh century and Iceland in the eighth. They thus showed the Northmen the regions which were destined to bring about the communication between Europe and America, and finally set foot on Greenland (1112). The earliest accounts of these settlements, with which, owing to unpropitious political and physical conditions, permanent intercourse could not be maintained, owe to Canon Adam of Bremen, to the reports sent by the bishops of Coppenhagen and Drontheim (Trondhjem), and to the Vatican archives.

Meanwhile, communication with the East had never ceased. Palestine was an object of interest to all Christians, to the eyes of the West had been turned ever since the days of the Apostle. Thousands and thousands of pilgrims flocked thither in bands. Not a few of them possessed sufficient ability to describe intelligently their experiences and impressions. Thus the so-called "Itineraries," or guide-books, by no means confined themselves to a description of the Sacred Places. Besides giving exact directions for the route, they embraced a great deal of information about the neighbouring countries and peoples, about Asia Minor, Egypt, Arabia, Persia, and even India. These works were very popular reading and undoubtedly infused an entirely new element into the study of geography in those days. A still greater stimulus was given by the Crusades. The Church undertook expeditions which, inspired and supported by the Church, brought huge masses of people into contact with the Orient. They made a knowledge of the lands they sought to conquer, a commonplace in Europe. They were the means of spreading the geographic theories and methods of Arab scholarship, at that time quite advanced, thereby placing the research of Western scholars on entirely new bases, and putting before them new aims and objects. Finally, in the efforts to secure the new alliance for the liberation of the Holy Land, they brought about intercourse with the rulers of Central Asia. This intercourse was of the utmost importance in the history of medieval discoveries.

Stray communities of Christians were scattered throughout the interior of Asia, even in the early centuries, thanks to the zeal of the Nestorians. It is true that they were separated from Rome and were suppressed by rigorous persecutions in China as early as the eighth century. But even during the Crusades some Mongolian tribes showed such familiarity with the new faith that St. Regnemar 867 personally investigated their alliance with these nations. The general council held at Lyons in 1245 under Innocent IV decided to send out legates. Men duly qualified for these missions were found among the newly established Orders of St. Francis and St. Dominic. The Dominican Ascelinus in 1245 reached the court of the Khan of Persia on the eastern shore of the Black Sea after a voyage of fifty-nine days, but his errand was fruitless. His companion, Simon of St-Quentin, wrote an account of the voyage, as did also his great contemporary, Vincent of Beauvais. The enterprises of the Franciscans were financially more successful, and for a time excited great scientific interest. Under the leadership of John de Plano Carpini of Perugia, they travelled through Germany, Bohemia, Poland, and Southern Russia as far as the Volga, and thence to the Court of the Grand Khan at Karakorum (1246). Their reports embrace the political conditions, ethnography, history, and geography of the Tartar lands. They were excellently supplemented by Friar Benedict of Poland of the same order in regard to the Slav countries. Both these works, however, are surpassed by the Franciscan William Rubruck (Rubraquis) of Brabant, whose reportwelcomed pronounces it to be "the greatest piece of master-piece of the Middle Ages." He was the first to settle the controversy between medieval geographers as to the Caspian Sea. He ascertained that it was an inland lake and had not, as was supposed for a long while, an outlet into the Arctic Ocean. He was the first to bring about a geographical error concerning the position of China and its inhabitants. He knew the ethnographic relations of the Hungarians, Bashkirs, and Huns. He knew of the remains of the Gothic tongue on the Tauric Chersonese, and recognized the differences between the characteristics of the different Mongolian tribes. Among the pictures he drew of the wealth of Asia first attracted the attention of the seafaring Venetians and Genoese to the East. Merchants followed in the path he had pointed out, among them Marco Polo, the most renowned traveller of all times. His book describing his journeys was for centuries the sole source of knowledge for the geographical and cartographical representations of Asia. Side by side with Marco Polo, friars and monks pursued untiringly the work of discovery. Among them was Hayton, Prince of Annanias (Armenia), afterwards Abbot of Poitiers, who in 1307 made the first attempt at a systematic geography of Asia in his "Historia orientalis." Also the Franciscans stationed in India who followed the more convenient sea route to China at the end of the thirteenth century. Special credit is due to John of Monte Corvino (1291–1328), Odoric of Pordenone (1317–31), whose work was widely circulated in the western world. Of India, also, the missionaries gave fuller information. Menenillius was the first to prove the peninsular shape of the country and, in contradiction to Ptolemy, described the Indian Ocean as a body of water open to the South. The Dominican Jordanus Catalani (1228) records his observations on the physical peculiarities
and natural history of India. At the same time more frequent visits were made to Northern Africa and Abyssinia; and towards the middle of the fourteenth century settlements were made in the Canary Isles.

However, the immense tracts of land in the interior of Asia were soon closed again to scientific investigation and the mission of St. John of Damascus, who had been favourably disposed to Christians, China became forbidden ground to Europeans. But the East remained the goal of Western trade, to which the missions had shown the way. The rich lands on the Indian Ocean remained open, and henceforth they were the object of all the expeditions, undertaken by the sea-loving Portuguese, which culminated in the discovery of America by Columbus. It is well known how much these undertakings were furthered by the all-pervading idea of spreading Christianity. The main object of Henry the Navigator in equipping his fleet with the revenues of the Order of Christ was the conversion of the heathen. He was working to the same purpose on the continent of Africa, where he sought to establish communications with the Christian ruler of Abyssinia. His efforts led to the circumnavigation of Africa by his successors, the Cabrillo Orbis terrarum, and the highland states of East Africa begun by Portuguese missionaries in the sixteenth century. Columbus, too, was regarded in his time as pre-eminently the envoy of the Church. Furthermore, the strange results expected from his expedition and his own projects were not lost on all the Christian methods of discovery of Christendom, which contemplated a way to the Kings of Cathay (China) whose disposition to embrace Christianity had been repeatedly emphasized by Toscanelli, as well as the discovery of the Earthly Paradise, which Columbus placed somewhere near the gulf of Paria, the recovery of the Holy Sepulchre by means of the treasures he expected to find, and, finally, the extension of the Kingdom of God over the entire earth before the approaching end of the world.

II.—Philosophical speculation also had a share in the magnificent success that crowned the practical work of the Middle Ages. Although geography as a science for its own sake was no more the chief purpose of this speculation than exploration for its own sake was that of the missionaries, it had arrived at truths that are admitted to-day, even when tested by the light of modern research—truths that must be recognized as results perhaps a little more remote in time from the centuries of the Church men strove above all things to reconcile deductions from the observation of the facts of nature with the beliefs that were then supposed to be taught in Holy Scripture. The earliest Christian literature was so predominantly exegetical that the teachings of the ancients were always tested in order to see whether they were in harmony with Holy Writ. Hence it was that several of the Fathers pronounced in favour of the theory of the flatness of the earth's surface which had been put forward in later Roman cosmographies. Among the advocates of this error were Theon of Alexandria, Sabin Chrysostom, Severian of Gabala, Ptolemy of Aegypt, and others. Cosmas Indicopleustes advanced an especially grotesque elaboration of this doctrine. In his exaggerated narrow interpretation of the phraseology of Holy Writ he claimed that the world was constructed in the shape of the Tabernacle of the Covenant in the Old Testament. But long before his day there were men who believed in the sphericity of the earth. It was recognized by Clement and Origen; Ambrose and Basil also upheld it. Gregory of Nyssa even sought to explain the origin of the earth by means of a physical experiment, and advanced hypotheses that, according to modern ideas, would have been fantastic. Augustine declared that the doctrine of the sphericity of the earth in no way conflicted with Holy Writ, and later authors, especially the Venerable Bede, also attempted to prove it on scientific grounds. For a considerable period the question of the Antipodes was beset with controversy. It was absolutely denied by Lactantius and several others, principally on religious grounds, as the people of the Antipodes could not have been saved. The learned Irishman, Bishop Virgilius, who expressed the opinion that there were men living beyond the ocean. Individual physiographical phenomena also began to come under the observation of the learned, such as the influence of the moon on the tides, the erosive action of the sea, the circulation of water, the origin of canals and vales, the division of land and water, the position of the sun at different latitudes. The learning and opinions of the first few hundred years were comprehensively set forth in the tremendous work of Isidore of Seville (d. 638), the "Etymologiae" or "Origines," which for a long time enjoyed unlimited authority. During the next few centuries, which were comparatively barren of literary achievements, the only men to attain any celebrity, besides Bede and Virgilius of Salzburg, were the anonymous geographer of Ravenna (c. 670), the Irish monk Dieul, author of the well-known "Liber de Origo Mundi," and the Englishman Sylvestre (999-1003), otherwise known as Gerbert of Aurillac, the most illustrious astronomer of his century. The oldest cartographic documents which we have also date from the same period. They rely for their information on the earth's surface substantially on the conjectural methods of observation. The world as known to the Romans can now be reconstructed only by means of the medieval Mappa mundi; consequently, they exhibit all the deficiencies of the model they followed; they are circular in plan and drawn are not on projection nor according to any other system, the boundaries being marked by straight lines. The central point was in the Aegean Sea; at the time of the Crusades it was transferred to Jerusalem, the East being at the top of the maps. In addition to adhering to the Roman form, these maps have preserved for us also the contents of the Roman maps and therein lies the principal value of these interesting documents. They were often drafted with the greatest and most artistic care. Special importance attaches to the map of the world made by the Spanish monk Beatus. Numerous copies of this show the entire area of the globe as known in his time; modelled in the cathedral at Hereford and the nunnery at Ebodaro have survived. Both of them are of the latter half of the thirteenth century and are representative of the ancient type of map. Small atlases were largely circulated in cosmographical codices. These are known as Macrobius atlases, Zenon atlases, Ranulph atlases, and so forth. Special maps have also come down to us: two of them, showing south-eastern Europe with Western Asia and Palestine are even attributed to St. Jerome. There is a representation of Palestine in mosaic in the church at Madaba; this dates from the middle of the sixth century. The English monk, who drew the Paris, drawn in the thirteenth century which were quite free from the influence of Ptolemy and the Arabians. But geographical problems made great and unexpected progress when they received a more scientific basis. This basis was provided by the scholastics when they made the Aristotelian system the starting-point of all their philosophical researches. Their thorough logical training and their strict critical method gave to the work of these commentators on Aristotle the value of original research, which strove to comprehend the entire contemporary science of nature. As at the same time of great importance was brought to light again by the prebendar, Gerard of Cremona (1114-87), there was not a single problem of modern physical and mathematical geography the
solution of which was not thus attempted. The fact that the writings of Aristotle and Ptolemy, on which they founded their investigations, had already passed through the hands of Arabian scholars, who, however, probably received them at some time from Syrian priests, proved of advantage to the consequent geo-

graphical advance. The most prominent representative of physical studies was Albertus Magnus; of mathematics, Roger Bacon. Their precursor, William of Conches, had already given evidence of independent conception of the facts of nature in his "Philosophia Mundi". Also Alexander Neckham (1150 to about 1227), Abbot of Cirencester, whose "De natura rerum" contains the earliest record of the use of the mariner's compass in navigation and a list of remarkable springs, rivers, and lakes. Blessed Albertus Magnus (1193–1280), a master with whom in the universality of his knowledge only Alexander von Humboldt is comparable, opened up to his contemporaries the entire field of physiography, by means of his admirable exposition of Aristotle, laid the foundations of climatology, botanical geography, and, in a certain sense, even of comparative geography. His work "De excolre et mundo" treats of the earth as a whole; his Moria monstrorum includes meteorology, hydrography, and seismology. In the "De natura locorum" he enlarges upon the system of the zones and the relations between man and the earth. He furnished proofs of the sphericity of our planet that are still popularly repeated to-day; he calculated accurately the duration of the day and the seasons in the different quarters of the globe. Ebb and flow, volcanology, the formation of mountain ranges and continents—all these subjects furnish him material for clever deductions. He carefully recorded the shifting of coastlines, which men at that time already associated with the secular upheaving and subsiding of the earth. He noticed the frequency of earthquakes in the neighbourhood of the ocean. He closely observed fossilized animals. He knew that the direction of the axes of mountain ranges influenced the climate of Europe, and, on the authority of Arabian writers, he was the first to refute the old error that the intertropical surface of the earth must necessarily be quite parched. His fellow-friar, Vincent of Beauvais (d. 1264), also proved himself to be a very keen observer of nature. A great mass of geographical material is stored up in his "Speculum naturale". Among other things he recognized that mountainous regions are the centres of the climate of and are, and that in high altitudes the temperature falls because of the decrease in atmospheric density. Finally, we must mention the original views of St. Thomas Aquinas on geography, as well as those of the laymen Ristoro of Arezzo, Brunetto Latini (1210–94), his great disciple Dante (1265–1321), and, lastly the "Book of Nature" by Conrad of Megescberg, canon of Ratisbon (1300–1378). For all of these Albertus Magnus had opened the door to the rich treasure-house of Greek and Arabian learning. Still more far-reaching in their results were the investigations of the scholars themselves principally to mathematical geography. At the head of them all stands Roger Bacon, the "Doctor Mirabilis" of the Order of St. Francis (1214–94). Columbus was emboldened to carry out his great project on the strength of Bacon's assertion that India could be reached by a westerly voyage—a claim based on mathematical computation. Even before Ptolemys "Geography" had been rediscovered, Bacon attempted to sketch a map, determining mathematically the positions of places, and using Ptolemy's Almagest, the descriptions of Alfraganus, and the Al-

phabeticgeography. The Benedictine Andreas Walpole (1448) made a map of the world in the medieval style. That of the Camaldolese Fra Mauro (1457) is the most celebrated of all monuments of medieval cartography. It was already enriched by data furnished in Ptolemy's work. The map of Germany designed by Cardinal Nicholas of Cusa (1401–64), a pupil of Toscanelli (1387–1492), was printed in 1491. This prelate was the teacher of Peuerbach (1432–61), who in turn was the master of Regiomontanus (1436–67), the most illustrious astronomer since Ptolemy. His passion for observation enabled Regiomontanus to study Greek, and Ptolemy, and after his death, in 1474, reformed the calendar under the direction of the Emperor to him. We must also mention the Eneas Sylvius (afterwards Pope Pius II) and the papal secretaries Poggio and Flavio Biondo, who made several valuable contributions to the science of geography, and Cardinal Berno and the Carthusian Hiesch (1467–1525).

III.—In order to set forth properly the achievements in discovery and research in modern times by Catholic scholars, we adopt Peschel's arrangement. He divides this period of the development of geography into two main epochs: (1) That of discovery, up to the middle of the seven-teenth century; (2) That of geographical measurement, from 1650 down to the present periods. Their chief usefulness lay in their contributions to the general knowledge of various countries and races. But they also made contributions of the greatest value to the theoretical development of our science. They were the first and foremost promoters of many studies auxiliary to geography that sprang up in the course of time, such as ethnology, meteorology, volcanology, and so forth.

Even on their earliest voyages the great discoverers took with them learned priests. These men wrote glowing accounts of the wonders they saw in the newly discovered lands to their brethren at home, so that they might spread the information broadcast. In a short time monastic settlements sprang up in the great colonial possessions of Spain and Portugal. The Dominicans were the first missionaries to America, and Franciscans are heard of in India as early as 1500, while the Augustinians accompanied Magellan to the Philippines in 1521. They were equipped with the best available aids and assistants. Among the Jesu-

ites especially these received thorough and systematic training. The Jesuits established missions on the Congo, in 1547, in Brazil, in 1549, in Abyssinia, 1555, in South Africa, 1559, in Peru, 1568, in Mexico, 1572, in Paraguay, 1686, and in Chile, 1691. They even penetrated into the old heathen civilizations of Japan (1549) and China (1653).

Soon after the discovery of the West Indies, the Hieronymite Fray Roman wrote a valuable study of the mythology of their inhabitants, which Ferdinand Columbus incorporated in his "Vida del Almirante". It became the corner-stone of American ethnology. In the Dominicans this was followed by Antonio de la Madre de Dios of Massaya in Nicaragua, in 1538, which Oviedo also visited and described later. The much-admired work "De rebus oceanici et novo orbe" was written by

Bacon's works. It is to him and Cardinal Filaster that Western civilization owes the first Latin translation of Ptolemy's "Geography", which Jacobus Angelus finished and dedicated to Pope Alexander V (1409–10). The circulation of this book created a tremendous revolution, which was particularly beneficial to the development of navigation. The first new chart made after, as early as 1427 the Danile Claudius Clavus added to Filaster's priceless manuscript of Ptolemy's work his map of Northern Europe, the oldest map of the North which we possess. Domnus Nicolaus Germanus, a Benedictine (of Reichenbach) (1486), was the first to publish Ptolemy's work by means of new maps and made him generally accessible. The Benedictine Andreas Walpole (1448) made a map of the world in the medieval style. That of the Camaldolese Fra Mauro (1457) is the most celebrated of all monuments of medieval cartography. It was already enriched by data furnished in Ptolemy's work. The map of Germany designed by Cardinal Nicholas of Cusa (1401–64), a pupil of Toscanelli (1387–1492), was printed in 1491. This prelate was the teacher of Peuerbach (1432–61), who in turn was the master of Regiomontanus (1436–67), the most illustrious astronomer since Ptolemy. His passion for observation enabled Regiomontanus to study Greek, and Ptolemy, and after his death, in 1474, reformed the calendar under the direction of the Emperor to him. We must also mention the Eneas Sylvius (afterwards Pope Pius II) and the papal secretaries Poggio and Flavio Biondo, who made several valuable contributions to the science of geography, and Cardinal Berno and the Carthusian Hiesch (1467–1525).

III.—In order to set forth properly the achievements in discovery and research in modern times by Catholic scholars, we adopt Peschel's arrangement. He divides this period of the development of geography into two main epochs: (1) That of discovery, up to the middle of the seventeenth century; (2) That of geographical measurement, from 1650 down to the present periods. We cannot set down all the names of priests and missionaries which we find in both these periods. Their chief usefulness lay in their contributions to the general knowledge of various countries and races. But they also made contributions of the greatest value to the theoretical development of our science. They were the first and foremost promoters of many studies auxiliary to geography that sprang up in the course of time, such as ethnology, meteorology, volcanology, and so forth.

Even on their earliest voyages the great discoverers took with them learned priests. These men wrote glowing accounts of the wonders they saw in the newly discovered lands to their brethren at home, so that they might spread the information broadcast. In a short time monastic settlements sprang up in the great colonial possessions of Spain and Portugal. The Dominicans were the first missionaries to America, and Franciscans are heard of in India as early as 1500, while the Augustinians accompanied Magellan to the Philippines in 1521. They were equipped with the best available aids and assistants. Among the Jesuits especially these received thorough and systematic training. The Jesuits established missions on the Congo, in 1547, in Brazil, in 1549, in Abyssinia, 1555, in South Africa, 1559, in Peru, 1568, in Mexico, 1572, in Paraguay, 1686, and in Chile, 1691. They even penetrated into the old heathen civilizations of Japan (1549) and China (1653).

Soon after the discovery of the West Indies, the Hieronymite Fray Roman wrote a valuable study of the mythology of their inhabitants, which Ferdinand Columbus incorporated in his "Vida del Almirante". It became the corner-stone of American ethnology. In the Dominicans this was followed by Antonio de la Madre de Dios of Massaya in Nicaragua, in 1538, which Oviedo also visited and described later. The much-admired work "De rebus oceanici et novo orbe" was written by
FRA MAURO'S MAP OF THE WORLD (1459)
ORIGINAL IN THE BIBLIOTECA MARCIANA, VENICE

IN THIS REPRODUCTION THE ORIENTATION OF THE ORIGINAL IS REVERSED; THE CONTOURS ARE REPRODUCED WITH EXACTNESS, BUT THE MOUNTAIN-RANGES ONLY APPROXIMATELY; CITIES ARE DENOTED BY NAME AND NOT BY BIRD'S-EYE VIEW AS IN THE ORIGINAL.
Peter Martyr d’Anghiera (1475–1558), prior of Granada, and a friend of Columbus. It is especially noteworthy for its intelligent observations on ocean currents and volcanoes, which its author doubtless derived from missionaries. A most signal contribution was the "Historia natural y moral de las Indias" (1588), by the Jesuit José d’Acosta (1539–1600), who lived in Peru from 1557 to 1569 and proved himself one of the best brilliant writers on the natural history of the New World and the customs of the Indians. The first thorough exploration of Brazil was made by Jesuit missionaries, under Father Ferre (1599–1632) and others. Starting from Quito, Francisci visited the region around the source of the Amazon in 1562. Father Juan de la Cruz was a Jesuit missioned as far as the River Napo in 1647, and in 1650 made a journey by boat as far as the Pará River.

To missionaries, also, we owe important information concerning the interior of Africa during the sixteenth, and at the beginning of the seventeenth century. The Portuguese priest S. Alvarez and Bermudes accompanied the embassy of King Emanuel to King David III of Abyssinia. They sent home valuable reports regarding the country. They were followed by the Jesuit, A. Ternández, crossed Southern Abyssinia, as far as Melinde, in 1615, and set foot in Portuguese territory, being the first European to enter the Abyssinias. Father Paez (1603) and Father Lobo (1623) were the first to reach the source of the Blue Nile. As early as the middle of the seventeenth century the Jesuits drew a map of Abyssinia on the information supplied by these two men and by Fathers Almeida, Móndes, and Téolis. It was the best map of Abyssinia until the time of Abbadie (1810–97). At the request of Bishop Migliore of S. Marco, the Portuguese Duarte Lôpes (1591) wrote an important description of the Congo territory. The "Étiope Oriental" (1609) by the Dominican Jesus dos Santos was an authority on the lake country and eastern Central Africa until Livingstone's transcontinental expedition. The Jesuit missionaries Machado, Affonso, and Paiva in 1630 even thought of establishing communication between Abyssinia and the Congo territory. The Arabian Leo Africanus, whom Pope Leo X had edified, who was the first to publish a map of ancient Asia, who wrote a book describing the Sudan. It was published by Ramusio in 1552 and was considered the only reliable authority on this country till the nineteenth century. More careful research led to the sending of missionaries to Central Asia. The Augustinian Gonzales de Mateo, who was the first to make a map of China in 1586, and Father Benedict Goes opened the land route thither, after a perilous journey from India, in 1602. Thereupon the Jesuit Ricci and Schall, both learned mathematicians and astronomers, prepared the cartographic survey of the country. Ricci (1553–1610), as the "geographer of China", is justly compared to Marco Polo, the "discoverer of China". Using his notes, Father Trigault issued an historical and geographical treatise on China in 1615. Father Andrades visited Tibet in 1624, and published, in 1628, a book describing it which was afterwards translated into five languages. Borus and Rhodes published reports on Parthia.

The science of cartography now made a quite unexpected advance, due to the frequent and repeatedly enlarged editions of Ptolemy's work that were issued by the Benedictine Ruych (1508), by Bernardus Sylvanus in 1513, and by the English Antony in 1558. The Canon Martin Waldseemüller's map of the world (St-Dié, 1507) was his most distinguished achievement. It was the first to give to the New World the name of America. Bishop Olaus Magnus, one of the most illustrious geographers of the Renaissance, made a map of Norway in 1539. He went on a long journey in the North in 1518–19 and was the first man to propound the idea of a north-east passage. The great map-makers Mercator and Ortelius also received direct help and encouragement in the completion of their work. Map-making was a step in the direction of the heliocentric system by Copernicus, canon of Königsberg (1473–1543). Cielo Calegarni (1479–1541) had prepared the way for this theory. In spite of the fact that his hypothesis was wrong, he made contributions to the hitherto accepted interpretations of Holy Writ, such high dignitaries of the Church as Schomberg, Giese, Dantiscus, and others encouraged Copernicus to make public his discovery. Moreover Pope Paul III graciously accepted the dedication of the work "De revolutionibus orbium coelestium" of Copernicus dated in 1543. Among the foremost astronomers was the Jesuit Scheiner (1575–1650). He and his assistant Cysatus were the first to notice the spots on the sun (1612), and founded the science of heliographic physics, of which Galileo had not even thought. The Capuchin monk Scheydl (Scheydrus) de Rheita built a terrestrial telescope in 1645 and drew a chart of the moon. Nor did isolated physical phenomena pass unnoticed; attempts had already been made to classify them systematically. Giovanni Botero (1500–1617), secretary to St. Charles Borromeo, ranked with Peter Martyr as a real scientist and was interested in astronomy, and is considered to be the founder of statistical science. His "Relazione del mare" (1599) is the earliest known monograph on the subject of the ocean. He was followed by the Jesuit Fournier, whose significant "Hydrographie" (1641) treated encyclopaedically of oceanic science. At Ingolstadt (Eck and Scheiner) and Vienna (Celtès, Stabius, Tannstätter) geography was treated with especial care. The first professor of geography at Wittenberg was Barthel Stein, who entered a monastery at Breslau in 1511 and completed a description of Poland in 1512–13. Cochleus (1473–1556), humanist and theologian, sought to make the scientific study of ancient authors (Meteorology of Aristotle, Geography of Mela) a part of higher education. He instilled a knowledge of geography into his pupils which at that time was without equal. Johann Eck, Luther's opponent, wrote a treatise in which he praised the physical geography of mountains and rivers for his lectures at Freiburg. The Jesuit Borus was the forerunner of Halley the astronomer. He drew up a chart showing the magnetic variations of the compass in 1620.

(2) About the middle of the seventeenth century it was left almost an altogether new field of work for such men as Sir William_
Kino (1644–1711), Sedlmayer (1703–1779), and Baerg (1717–1777). We find that between 1752 and 1768—eighty years before Meyer, the celebrated circumnavigator of the globe—the Jesuit Wolfgang Mayer reached Lake Titicaca. Father Manuel Ramon sailed up the Casiquaire from the Rio Negro to the Orinoco in 1744 and anticipated La Condamine, who did the same thing in 1745. Father Lebreton also created a map of these streams. Father Samuel Frits, from 1684 on, recognized the importance of the Marañon as the main river and source of the Amazon. He drew the first reliable map of the entire course of the stream. The Jesuits Techo (1673), Harques (1687), and St. Marie (1687) wrote about Paraguay, and d'Ovaggio (1646) about Chile. Abyssinia, the most interesting country in Africa, was suddenly closed to missionaries about 1630. It was not until 1699 that the Jesuit Father Brévedent, with the physician Ponsett, once more ventured up the Nile and into the interior of the country; but in so doing he lost his life. The Capuchins Cavazzi (1654), Carli (1660), Merolla (1662), and Zuechelli (1698) accomplished remarkable results in the Congo region. Even as late as the year 1862 the geographer Petermann made use of their writings to construct a map of that region.

But the greatest scientific triumphs extended the work of the missionaries in Asia. Especially remarkable were the successful attempts to penetrate into Tibet, a feat which Europeans did not repeat until our times. After Andrada, whom we have already mentioned, followed Fathers Grueder and d'Orville, who reached Lhasa from Pekin in 1661 and went down into India through the Himalaya passes. The Jesuit Desideri (1716–29) and the Capuchins Della Penna (1719–1746) and Beligatti (1738) spent considerable time in this country.

To these travels must be added the splendid achievements in cartography and astronomy of the Jesuits, which, about 1700, caused a complete revolution in the development of geography. It was due chiefly to them that one of the most powerful States of that time, France, lent its support to this science, thus offering an example that resulted in a series of governmental subventions giving the development of geography here its full power and impetus. In the Jesuit Martin Martini (1614–61) landed in China. During his sojourn he acquired a personal knowledge of most of the provinces of that immense empire and collected his observations in a complete work, that appeared in 1651, entitled “Atlas Sinensis”. In Richthofen's opinion it contains the fullest geographical description of China that we have”. Moreover, it contains the first collection of local maps of that country. Athanasius Kircher further drew the attention of scholars the world over to the Celestial Empire in his “China monumentis illustrata” (1667). He, too, had at his disposal information received by missionaries. And finally, the Belgian Jesuit Verbiest succeeded in arousing the interest of Louis XIV by the advices he sent home to Europe. At his request, six of the most learned Jesuits went to China in 1687; they were Fathers Bouvet, Fontaney, Gerbillon, Le Comte, and Viselieu. They bore the title of “royal mathematicians” and at the expense of the French Crown were equipped with the finest instruments. From 1691 to 1698 Gerbillon, court astronomer to the emperor, made several excursions to the hitherto unknown region on the northern boundary of China. He prepared the map of China (1628–29) and in 1734, who then ordered the survey of the Great Wall, which was completed by Fathers Bouvet, Régis, and Jartoux. This achievement was followed in the succeeding years by the mapping of the entire empire. Fathers Jartoux, Friderici, Cardoso, Bonjour, and Fehrmeier, de M. Hinderer, and Régis undertook the work. By 1718 the map was finished. In addition to China proper it embraced Manchuria and Mongolia, as far as the Russian frontier. Simultaneously, a delineation of Tibet as far as the sources of the Ganges was begun. The map ranks as a masterpiec e even to-day. It appeared in China itself in 120 sheets and since that time has formed the basis of all the native maps of the country. Fathers Espinosa and Hallerstein extended the survey to Tibet. The Jesuit in 1730 went up to Yarkhoto and worked on the map with him by his brethren and published them in 1736 in his “Description geographique, historique, chronologique, politique et physique de l'empire de la Chine et de la Tartarie chinoise” (4 vols.). The material for the maps in this work was prepared by d'Anville, the Jesuit in 1709. His maps and descriptions of Indian maps can be traced back to his “Atlas de la Chine”. Still later, there were published in fifteen volumes the “Memoires concernant l'histoire... des Chinois, par les missionnaires de Pekin” (Paris, 1776–91).

Many of the missionaries belonged to the learned societies of Paris, London, and St. Petersburg. They exchanged letters on scientific topics with such renowned scholars as Leibniz, Linnæus, John Ray, Duperon, Delille, Marinoni, Simonelli, and others. The influence of widely read periodical publications is also noteworthy. Among them were the “Lettres édificantes et curieuses contenant diverses missions et voyages dans diverses parties de l'Asie, et contenant de nombreuses volumes et répétées éditions de la Chine”, which were published in the eighteenth century. They contained a mass of geographical material. The science of geography profited by this intercourse between the Jesuits and the European scientists. The greatest need at that time was the definite determination of astronomical positions in order to construct a really faultless map of the world. Thanks to the sound training in astronomy of the Jesuit missionaries before they went abroad, their missionary stations soon gathered many excellent determinations of latitude and longitude. As early as the middle of the seventeenth century, and especially in the eighteenth, there was a great mass of new raw data from China. Between 1684 and 1686 they determined the exact position of the Cape of Good Hope, of Goa and Louvau (Siam). This enabled them to make a correct map of Asia, which had until then shown an error of nearly 25 degrees of longitude towards the east. By order of the Pope, Father Louis Feuillé, the learned Franciscan, and pupil of Cassini, revised uncertain positions in Europe and America. He made surveys in Crete, Salonica, Asia Minor, and Tripoli, in 1701–02, in the Antilles and Panama, 1703–05, in South America, 1705–12, and in the Canary Islands, 1718–21. Thus Desor, of the Jesuit order, who was the first to introduce the method of map-making, built up their work on the scaffolding furnished them by the Jesuits. In the attempts to determine the length of a degree of longitude made in the seventeenth century, the Jesuits took a very prominent part. As early as 1643 Fathers Riccioli and Grimaldi tried to determine the length of a degree on the meridian. Similar work was done in 1702 by Father Thoma in China; in 1755, by Fathers Bosovich and Maire in the Papal States; in 1762, by Father Liesgang in Austria, and in the same year by Father Christian Mayer, in the Palatinate, also by Father Bertarizia and Canavesio in northern Italy (1774).

Besides the Jesuits engaged in geodetic work in Abyssinia, South America, and China, we meet with Father Velarde (1696–1753), who published the first approximately accurate map of the Philippines about 1734. G. Matthias Vischer, parish priest of Leonstein, near Graz, also played an important part in the field of cartography. In 1699 that was republished as recently as 1806. Father Liesgang, in conjunction with Fathers von Marburg and Guesmann, designed maps of Galicia and Poland. Father Christian Mayer drew a map of the Rhine from Basle to Mainz, and Father Andrian, a chart of Carinthia. Father Gramatica furnished his readers with maps of Bohemia, and Dechales, and Weinhard must also be mentioned.

In view of the lively intercourse between the mis-
sionaries and the members of their orders in Europe it is not surprising that the latter also compiled voluminous geographical summaries. Such are the works of the Jesuit Riccioli (1596-1671), the "Almagestum Novum" and "Geographia et Hydrographia reformata" (1661). Riccioli was a worthy contemporary of the great Varenius, and was really entitled to rank as a rival to that great cartographer in cartography. Ignatius Kircher (1602-90) among other things devoted himself to physics. His most original observations are set down in his "Magnes, sive de arte magnetica" (1641) and his "Mundus subterraneus" (1644). He made the ascent of Vesuvius, Etna, and Stromboli, at the request of Pope Urban VIII, to measure their height. On the basis of his observations he advanced a theory concerning the interior of the earth which was accepted by Leibniz and, after him, by an entire school of geologists, the Neptunists. He also was the author of the first attempt at a physical map, to wit, the chart of ocean currents (1665).

The Jesuit Father Heinrich Scherer (1628-1704), professor at Dillingen, devoted his entire life to geographical study. He incorporated in his works all that was then known of the earth. His "Geographia hierarchiae" contains the earliest mission atlas. The science of mapping owes much to him. His "Geographia universalis" contains the first geographical and hydrographical synoptic charts. His "Geographia artificialis" recommends a system of chartographic projection which the geographer Bonne, in 1725, accepted and carried out as one of the best. Alongside of these mighty works, which, in imitation of the great encyclopedic works of the Middle Ages, attempt to give a survey of the whole geographical knowledge of a period, we now meet in increasing numbers the equally important treatises on special subjects which resemble the works of our modern scientists. The name of the Dane Nicholas Steno is one of the foremost in the history of geology. He was tutor to the sons of Duke Cosmo III and later vicar-general of the Northern Missions (1638-87). In the opinion of Zittel he was far in advance of his time. He was the first scientist to attempt the solution of geological problems by induction. He was also the first scholar who clearly conceived the idea that the history of the earth could be inferred from its structure and its component parts. His little monograph "De solido intra solidum naturaliter contento" (1669) was the foundation of crystallography and stratigraphy, or the science of the earth's strata. One of the most painless and picturesque of the eighteenth century was Abbatte Lazzaro Spallanzani (1729-99). With him rank Fathers de la Torre (Storia e fenomeni del Vesuvio, 1755), Fortis (1741-1803), Palassou (La minéralogie des Monts Pyrénées, 1782), Torrubia (1754, in America and the Philippines), Canon Recupero, at Cadiz (d. 1787), and many others.

The history of meteorology tells the same story as that of mathematical geography. This science also depended on widely scattered observations which could only be obtained from the monasteries scattered over Europe. Raineri, a pupil of Galileo, made the first records of the fluctuations of the thermometer. The first meteorological society, the "Societas Meteorologica Palatina" (1780-95), accomplished splendid results. Its founder was the former Jesuit and court chaplain Johann Jacob Hemmer. Almost all of its correspondents belonged to the various religious orders of Geography and Cosmography, in the last years of the century. From that time the rapid growth of ethnography and linguistics was rendered possible solely by the vast accumulation of materials made by the missionaries in the course of the centuries. There was hardly a writer of travels who did not to some extent contribute to them. While making an enumeration of the science, we mention here only the "pioneers of comparative ethnography", Fathers Dohrnz huger (1718-91), in Paraguay, and Lafitau in Canada; the noted Sanskrit scholars Fathers Hanxleden (1681-1722), Coeurdeux (1767), and Paulinus a Santo Bartholomeo (1776-89, in India), and, finally, the able Father Hervais (1733-1809). The latter's chief work, the "Catalogo de las lenguas" (1800-03), was published in Rome, where all the members of the suppressed Jesuit Order met. Father Hervais.

Since the beginning of the nineteenth century the progress of geographical science, as was to be expected, is due chiefly to laymen, who, without religious aims, have continued the work on the foundations already provided. The co-operation of the clergy was of secondary importance. The entire scientific and, true to its great traditions, it has won a place of honour even amid the stupendous achievements of modern research. By way of proof, we close with the names of the theologian Moigno (1804-84), the founder and publisher of the natural science periodicals "Le Cosmos" (1852-65) and "Les Mondes" (1863-65); of the astronomer Seechi (1818-78), who, among other things, invented the meteorograph in 1858; also of the Lazarist Fathers Hue (1839-90), Gabet, and Armand David (d. 1900). The last-named made themselves famous by their explorations in China, Manchuria, and Tibet. Finally, we should remember the astro-nautical, meteorological, and physical observatories established by the Society of Jesus all over the world (Rome, Stonyhurst, Kaloosa, Granada, Tortosa, Georgetown near Washington, Manils, Belen in Cuba, Ambobehimona in Madagascar, Calcutta, Zi-ka-wei, Boroma, and Bulawayo on the Zambezi, etc.) and their contribution to the science.

GEORGE, Saint, martyr, patron of England, suffered at or near Lydd, also known as Diospolis, in Palestine, probably before the time of Constantine. According to the very careful investigation of the whole question recently instituted by Father Delehaye, the date of the martyrdom of George is not known with any certainty. The greatest part of the evidence which tends to the contrary is based on an attempt to determine the correct date of the Christian "Acts" which was most likely to preserve traces of a primitive and authentic record. Delehaye rightly
points out that the earliest narrative known to us, even though fragments of it may be read in a palimpsest of the fifth century, is full beyond belief of extravagances and of quite incredible marvels. Three times is George put to death—chopped into small pieces, buried deep in the earth and consumed by fire—but each time he is resuscitated by the power of God. But still it is obvious that the dead men were brought to life to be baptized, wholesale conversions, including that of "the Empress Alexandra," armies and idols destroyed instantaneously, beams of timber suddenly bursting into leaf, and finally milk flowing instead of blood from the martyr's severed head. There is, it is true, a narrative of the same type in the case of St. Procopius as detailed in Delehaye, "Legends", ch. v) we are fairly safe in assuming that the Acts of St. George, though ancient in date and preserved to us (with endless variations) in many different languages, afford absolutely no indication at all for arriving at the saint's authentic history. This, however, by no means implies that the martyr St. George never existed. An ancient cultus, going back to a very early epoch and connected with a definite locality, in itself constitutes a strong historical argument. Such we have in the case of St. George. The narratives of the early legends, according to Dr. Arthur, Antiochus, and Arcan, from the sixth to the eighth century, all speak of Lydda or Diospolis as the seat of the veneration of St. George, and as the resting-place of his remains (Geyer, "Itineraria Hierosol.", 139, 176, 288). The early date of the dedications to the saint is attested by existing inscriptions of ruined churches in Syria, Mesopotamia, and Egypt, and the church of St. George at Thessalonica is also considered by some authorities to belong to the fourth century. Further, the famous decree "De Libris recipiens", attributed to Pope Gelasius in 496, attests that certain apocryphal Acts of St. George, newly in existence among those saints "whose names are justly reverenced amongst men, but whose actions are only known to God". There seems, therefore, no ground for doubting the historical existence of St. George, even though he is not commemorated in the Syrian, or in the primitive Hieronymian Martyrology, but no faith can be placed in the attempts that have been made to fill up any of the details of his history. For example, it is now generally admitted that St. George cannot safely be identified with the nameless martyr spoken of by Eusebius (Hist. Eccles., VIII, v), who tells the Christian's edict of persecution at Nicomedia. The version of the legend in which Diocletian appears as persecutor is not primitive. Diocletian is also a rationalized form of the name Dadianus. Moreover, the connexion of the saint's name with Nicomedia is inconsistent with the early cultus at Diospolis. Still less is St. George to be considered, as suggested by Gibbon, a model Castor, or a disreputable bishop, George of Cappadocia, the Arian opponent of St. Athanasius. "This odious stranger," says Gibbon, in a famous passage, "disguising every circumstance of time and place, assumed the mask of a martyr, a saint, and a Christian hero, and the infamous George of Cappadocia has been transformed into the renowned St. George of England, the patron of arms, of chivalry, and of the Garter." "But this theory", says Professor Bury, Gibbon's latest editor, "has nothing to be said for it..." The cultus of St. George is too ancient to allow of such an identification, though it is not improbable that the apocryphal Acts have borrowed some incidents from the story of the Arian bishop. Again, as Bury points out, "the connexion of St. George with the dragon-slaying legend does not delege him to the region of the army of the Eastern Empire, but the fabulous Christian dragon-slayer Theodore of the Bithynian Hercules, we can set Agapetus of Symmada and Arsacius, who, though celebrated as dragon-slayers, were historical persons..." This episode of the dragon is in fact a very late development, which cannot be traced further back than the sixteenth century. It is found in the Golden Legend (Historia Lombardica) of James de Voragine and to this circumstance it probably owes its wide diffusion. It may have been derived from an allegorisation of the tyrant Diocletian or Dadianus, who is sometimes called a dragon (dißiber básaros) in the older text, but despite the researches of Vetter (Reinbot von Durme, pp. lxxxv-cix) the origin of the dragon story remains very obscure. In any case the late occurrence of this development refutes the attempt made to derive it from pagan sources. Hence it is certainly not true, as stated, for example, in George's "Church has converted and baptized the pagan hero Perseus" (The Legend of Perseus, iii, 38). In the East, St. George (Δ Μ εγάλημπρον), has from the beginning been classed among the greatest of the martyrs. In the West also his cultus is very early. Apart from the ancient origin of St. George in Velauro at Rome, Clovis (c. 512) built a monastery at Baralle in his honour (Kurth, Clovis, II, 177). Aeculphus and Adamnan probably made him well known in Britain early in the eighth century. His Acts were translated into Anglo-Saxon, and English churches were dedicated to St. George, and in Georgia, "the Church has converted and baptized the pagan hero Perseus" (The Legend of Perseus, iii, 38). The crusades no doubt added to his popularity. William of Malmsbury tells us that Saints George and Demetrius, "the martyr knights", were seen assisting the Franks at the battle of Antioch, 1098 (Gesta Regum, II, 420). It is conjectured, but not proved, that the "arms of St. George" (argent, a cross gules) were introduced about the time of Richard Coeur de Lion. What is certain is that in 1284 in the official seal of Lyme Regis a ship is represented with a plain flag bearing a cross. The large red St. George's cross on a white ground remains still the white ensign of the British Navy and it is the emblem of the order of the Knights of the Thistle which go to make up the Union Jack. Anyway, in the fourteenth century, "St. George's arms" became a sort of uniform for English soldiers and sailors. We find, for example, in the wardrobe accounts of 1345-49, at the time of the battle of Crécy, that a charge is made for 96 penancells of the arms of St. George intended for the king's ship, and for 800 others for the men-at-arms (Archeologia, XXXI, 119). A little later, in the Ordinances of Richard II to the English army invading Scotland, every man is ordered to wear "a signe of the arms of St. George" both before and behind, while the death of the death is threatened against any of the enemy's soldiers who "do bear the same cross or token of Saint George, even if they be prisoners". Somewhat earlier than this Edward III had founded (c. 1347) the Order of the Garter, an order of knighthood of which St. George was the principal patron. The chapel dedicated to St. George in Windsor Castle was an official chapel of the order, and a badge or jewel of St. George slaying the dragon was adopted as part of the insignia. In this way the cross of St. George has in a manner become identified with the idea of knighthood, and even in Elizabeth's days, Spenser, at the beginning of his Faerie Queene, tells us in his poem that:—

But on his breast a bloody Cross he bore,
The dear remembrance of his dying Lord,
For whose sweet sake that glorious badge he wore
And dead (as living) ever him adored.
We are told also that the hero thought continually of
wreaking vengeance:—

Upon his foe, a dragon horrible and stern.

Ecclesiastically speaking, St. George’s day, 23 April,
was ordered to be kept as a lesser holiday as early as
1222, in the national synod of Oxford. In 1415, the
Constitution of Archbishop Chichele raised St. George’s
day to the rank of one of the greatest feasts and or-
dered it to be observed like Christmas day. During
the seventeenth and eighteenth centuries St. George’s
day remained a holiday of obligation for English
Catholics. Since 1778, however, it has been kept,
like many of these older holidays, as a simple feast of
devotion, though it ranks liturgically as a double of
the first class with an octave.

SAINT GEORGE AND THE DRAGON.—The best-
known form of the legend of St. George and the Dragon
is that made popular by the “Legenda Aurea,” and
translated into English by Caxton. According to this,
a terrible dragon had ravaged all the country
round a city of Libya, called Selena, making its lair
in a marshy swamp. Its breath caused pestilence
whenever it approached the town, so the people gave
the monster two sheep every day to satisfy its hunger,
but, when the sheep failed, a human victim was neces-
sary and lots were drawn to determine the victim. On
one occasion the lot fell to the king’s little daughter.
The king offered all his wealth to purchase a sub-
titute, but the people had pledged themselves that
no substitutes should be allowed, and so the maiden,
dressed as a bride, was led to the marsh. There St.
George chanced to ride by, and asked the maiden what
she did, but she bade him leave her lest he also might
perish. The good knight stayed, however, and, when
the dragon appeared, St. George, making the sign of
the cross, bravely attacked it and transfixed it with
his lance. Then asking the maiden for her girdle (an
incident in the story which may possibly have some-
thing to do with St. George’s selection as patron of
the Order of the Garter), he bound it round the neck of
the monster, and thereupon the princess was able to lead
it like a lamb. They then returned to the city, where
St. George bade the people have no fear but only be
baptized, after which he cut off the dragon’s head and
the townfolk were all converted. The king would
have given George half his kingdom, but the saint re-
plied that he must ride on, bidding the king mean-
time take good care of God’s churches, honour the
clergy, and have pity on the poor. The earliest refer-
ence to any such episode in art is probably to be found
in an old Roman tombstone at Conisborough in York-
shire, considered to belong to the first half of the
twelfth century. Here the princess is depicted as
already in the dragon’s clutches, while an abbot
stands by and blesses the resurer.

Carpaccio, Hospitai del San Giorgio de' Schiavoni, Venice
George of Trebizond, a Greek scholar of the early Italian Renaissance: b. in Crete (a Venetian possession from 1206-1699), 1395; d. in Rome, 1486. He assumed the name "of Trebizond" because his family came from there. He was one of the foremost of the Greeks to arrive in Italy (c. 1420) before the fall of Constantinople. Vittorino da Feltre (1378-1446) taught him Latin, and in return he taught Greek in the famous school at Mantua. After teaching for a time at Venice and Florence, he came as "the Symeonts" of Toltusy and the "Preparatio Evangelica" of Eusebius. His incompetence, arrogance, and quarrelsomeness led to difficulties with Bessarion, Theodore Gaza, Perrotti and Poggio, and he was obliged to leave Rome, and take refuge with Alfonso, King of Naples. Under the pontificate of his former pupil, Paul II (1464-1471), he returned to Rome and was appointed a papal abbe, but became involved in fresh quarrels; in 1463 he visited Crete and Byzantium, and then returned to Rome, where he wrote the account of the martyrdom of Bl. Andrew of Chios (in his Commentaries on the Holy Fathers (1535-1450)). His onslaught on Plato lost him the friendship of Bessarion and led to the latter writing (1464) his great work, "In calumniatorum Platonica", in the fifth book of which he points out 259 mistakes in Trebizond's translation of the "Laws" of Plato. His numerous translations included the "Rhetoric" and "Problems" of Aristotle, and St. Cyril's "Commentary on St. John", but, as Pastor notes, they are almost worthless (II, 198, note). A list of some forty-six works will be found in Migne, P. G., CLXI, 745-908.

EDWARD MYERS.

George of Pisaides (of the Pisdian), a Byzantine poet, lived in the first half of the seventh century. From his poems we learn he was a Pisidian by birth, and a friend of the Patriarch Sergius and the Emperor Heraclius, who reigned from 610 to 641. He is said to have been a deacon at St. Sophia's, Constantinople, where he filled the posts of archivist, guardian of the sacred vessels, and reader of the psalms. He evidently accompanied Heraclius in the war against the Persians (622), in which campaign the true Cross, which the enemy had captured some years before at Jerusalem, was recovered. His works have been published in the original Greek with a Latin version and are to be found in P. G., XVII, 1167-1208.

About five thousand verses of his poetry, mostly in imitative metres, have come down to us. Some of the poems treat of theology and morals, others being a chronicle of the wars of his day. They are: (1) "De expeditione Heretici imperatoris contra Persas, libri tres"—an account of the Persian war, which shows him to have been an eyewitness of it; (2) "De morte Avaricum" descriptive of the defeat of the Avars—a Turkish horde, that attacked Constantinople in 628,
George and were defeated, during the absence of the emperor and his army; (3) "Herselius" or "De extremo Chosroes Persarum regis excidio"—written after the death of Chosroes, who was assassinated by his mutinous soldiery at Ctesiphon, in 628; this poem treats mostly of the deeds of the emperor and contains but little concerning Chosroes; it is valued not so much for any literary merit, as for being the brother's final source for the history of the reign of Herselius; (4) "In sanctam Jesu Christi, Dei nostri resurrectionem," in which the poet exults Flavius Constantinus to follow in the footsteps of his father, Herselius; (5) "Hexameron," or "Opus sex dierum seu Mundi opificium," this is his most elaborate and elaborate effort, and is dedicated to Sergius; (6) "De vanitate vitæ"; (7) "contra im- pium Severum Antiochius," written against the Mono- phyrite heresy; (8) "In templum Deiparae Constantinopoli, in Blachernissimum"; and finally (9) one piece in prose, "Encomium in S. Anastasium martyrum". From references in Theophanes, Suidas, and Isaac Tzetzes, we know he wrote other works which have not reached us. George's verse is considered correct and elegant, but he is sometimes dull and frigid. He was greatly admired by his countrymen in succeeding ages and preferred even to Euripides. But later critics are not so laudatory. Finlay in his History of Greece says: "Theusius law court was evidently one of the noblest in the whole range of literature to point to poetry which conveys less information on the subject which he pretends to treat than that of George the Pisidian. In taste and poetical inspiration he is as deficient as in judgment and he displays no trace of any national characteristics. But to be just we must remember that he was a courtier and wrote with the intention of winning the favour of the emperor and the patriarch. Literature, if we except the production of religious controversy, was practically extinct in Europe and George stands forth as its sole exponent, the only poet of his kind.

A. A. MacEyre.

George Scholarius. See Gennadius II.

George the Bearded, also called the Rich, Duke of Saxony, b. at Dresden, 27 August, 1471; d. in the same city, 17 April, 1539. His father was Albert the Brave of Saxony, founder of the Albertine line of the ancient Saxon dynasty. His mother was Sidonia, daughter of George of Podiebrad, King of Bohemia. Elector Frederick the Wise, a member of the Ernestine branch of the same family, known for his protection of Luther, was a cousin of Duke George. Albert the Brave had a large family and George, a younger son, was originally intended for the Church; consequently he received an excellent training in theology and other branches of learning, and was thus much better educated than most of the princes of his day. The death of his elder brother opened to George the way to the ducal power. As early as 1488, when his father was in Flanders fighting on behalf of the emperor, George was regent of the ducal possessions, which included the Margravates of Meissen with the cities of Dresden and Leipzig. George was married at Dresden, 21 November, 1496, to Barbara of Poland, daughter of King Casimir IV of that country. George and his wife had a large family of children, all of whom, with the exception of their father. In 1498, the emperor granted Albert the Brave the hereditary governorship of Friesland. At Maastricht, 14 February, 1499, Albert settled the succession to his possessions, and endeavoured by this arrangement to prevent further partition of his domain. He died 12 September, 1500, and was suc- ceeded in his German territories by George as the head of the Albertine line, while George's brother Heinrich became hereditary governor of Friesland. The Saxon occupation of Friesland, however, was by no means secure and was the source of constant revolts in that province. Consequently Heinrich, who was of a rather inert disposition, relinquished his claims to the governorship, and in 1505 an agreement was made between the Saxon and the Friesland nobility, by which the duchy was divided between Heinrich and George, with George receiving the larger share. In 1507, however, he developed decided ability as a ruler; on entering upon his inheritance he divided the duchy into governmental districts, took measures to suppress the robber-knights, and regulated the judicial system by defining and readjusting the jurisdiction of the lower courts. In this way he introduced order, security, and the amelioration of the condition of the people, he sometimes ventured to infringe even on the rights of the cities. His court was better regulated than that of any other German prince, and he bestowed a paternal care on the University of Leipzig, where a number of reforms were introduced, and Humanism, as opposed to Scholasticism, was encouraged.

From the beginning of the Reformation in 1517, Duke George directed his energies chiefly to ecclesiastical affairs. Hardly one of the secular German princes held the Church as firmly as he did, and his rights and vigorously condemned every innovation except those which were countenanced by the highest ecclesiastical authorities. At first he was not opposed to Luther, but as time went on and Luther's aim became clear to him, he turned more and more from the Reformer, and was finally in 1525, by his change of attitude, drawn in by a Jacobin correspondence in which Luther, without any justification, shamefully reviled the duke. The duke was not blind to the undeniable abuses existing at that time in the Church. In 1519, despite the opposition of the theological faculty of the university, he originated the Di- tation of Leipzig, with the idea of finding a way forward the cause of truth, and was present at all the discussions. In 1521, at the Diet of Worms, when the German princes handed in a paper containing a list of "grievances" concerning the condition of the Church, George added for himself twelve specific complaints referring mainly to the abuse of mediaeval art and the arts and letters. In 1525 he combined with his Lutheran son-in-law, the Landgrave Philip of Hesse, and his cousin, the Elector Frederick the Wise, to suppress the revolt of the peasants, who were defeated near Frankenhausen in Thu- ringia. Some years later, he wrote a forcible preface to a translation of the New Testament, and was presented with the manuscript of his private secretary, Hieronymus Emser, as an offset to Luther's version. Lutheran books were confiscated by his order, wherever found, though he refused the cost of the books. He proved himself in every way a vigorous opponent of the Lutharians, de- creeding that Christianity should be removed from the schools, and recreant ecclesiastics were to be delivered to the bishop of Merseburg. For these, however, who merely held anti-Catholic opinions, the punishment was only expulsion from the duchy. The duke deeply regretted the constant postponement of the arduously desired council, from the action of which so much was expected. While awaiting its convocation, he thought
to remove the more serious defects by a reform of the monasteries, which had become exceedingly worldly in spirit and from which many of the inmates were departing. He vainly sought to obtain from the Curia the right, which was sometimes granted by Rome, to make official visitations to the conventual institutions of his realm. His reforms were confined mainly to uniting the monasteries more closely to the see, and to making the control of the economic management, the control of the property being entrusted in most cases to the secular authorities. In 1525, Duke George formed, with some other German rulers, the League of Dessau, for the protection of Catholic interests. In the same year he was the author of the 'Dekret' of the League of Halle, formed in 1533, from which sprang in 1538 the Holy League of Nuremberg for the maintenance of the Religious Peace of Nuremberg.

The vigorous activity displayed by the duke in so many directions was not attended with much success. Most of his political measures, indeed, stood the test of experience, but in ecclesiastico-political matters he witnessed with sorrow the gradual decline of Catholicism and the spread of Lutheranism within his dominions, in spite of his earnest efforts and forcible prohibition of the new doctrine. Furthermore, during George's lifetime, his heir released some of his sons-in-law, Philip of Hesse, and his brother Heinrich, joined the Reformers. He spent the last years of his reign in endeavours to secure a Catholic successor, thinking by this step to check the dissemination of Lutheran opinions. The only one of George's sons then living was the weak-minded and unmarried Frederick. The intention of his father was that Frederick should rule with the aid of a council. Early in 1539, Frederick was married to Elizabeth of Mansfeld, but he died shortly afterwards, leaving no prospect of an heir. According to the act of settlement of 1499, George's Protestant brother Heinrich was now heir prospective; but George, considering his father's will, sought to dissolve his brother and to bequeath the duchy to Ferdinand, brother of Charles V. His sudden death prevented the carrying out of this intention.

George was an excellent and industrious ruler, self-sacrificing, high-minded, and unwearying in the furtherance of the highest interests of his land and people. As a man he was upright, vigorous and energetic, if somewhat irascible. A far-seeing and faithful adherent of the emperor and empire, he accomplished much for his domain by economy, love of order, and wise direction of activities of his state officials. The grief of his people on the death of his great monarch was considerable. The family of the old faith. Of a strictly religious, although not narrow, disposition, he sought at any cost to keep his subjects from falling away from the Church, but his methods of attaining his object were not always free from reproach.

H. A. CREUTZBERG.

Georgetown University, Washington, District of Columbia, "is the oldest Catholic literary establishment in the United States. It was founded immediately after the Revolutionary War, by the incorporated Catholic Clergy of Maryland, who selected from their Body Trustees, and invested them with full power to choose his assistants and appanage Professors. Since the year 1805, it has been under the direction of the Society of Jesus" (The Laity's Directory, 1822).

Origin—Founder.—In treating of the origin of Georgetown University, its chroniclers and historians are wont to refer to earlier schools in Maryland, projected or carried on by the Jesuits. It is true that Father Ferdinand Poulton, a few years after the settlement of St. Mary's, wrote to the general of the society about the prospects of founding a college in the infant colony; and the general answered, in 1640: "The hope held out of a college I am happy to entertain; and, when it shall have matured, I will not be backward in extending my approval." But the times were not yet favourable to the negotiations of Catholic educators and educators were so stringent during the greater part of the Maryland colonial period that it was only at intervals, for brief spaces of time, and by stealth, that the Jesuits, always solicitous for the education of youth, were able to conduct a school. Such a school was at St. Mary's College, founded in 1544, among its scholars John Carroll, the founder of Georgetown College. He is the link, moral and personal, between Georgetown and earlier schools; and with his name the history of Georgetown College is indissolubly connected. He had a large share in its foundation and upbuilding, and the sons of Georgetown, to honour his memory, have formally instituted the observance of "Founder's Day", in January of each year. His life and character are detailed elsewhere (see Carroll, John). Even before he became the first bishop of the United States, he saw and impressed upon the Jesuits the urgent need of a Catholic college. Having secured their co-operation, he drew up the plan of the institution and issued a prospectus appealing to his friends in England for financial assistance. It was he who selected the site; and, although unable to give personal supervision to the undertaking, he engaged as he was with the solicitude of all the churches, he watched with paternal interest over the early growth of the college. Georgetown still possesses his portrait, by Gilbert Stuart, relics from his birthplace at Upper Marlborough, the manuscript of his course in theology, the Missal which he used when a rural missionary at Arbutus Creek, the alms which he left at the hospital, a bishop at Lulworth Castle, the circular which he issued detailing the plan and scope of the college, and many letters, original or copied, relating to its standing and prospects.

In 1889 the college celebrated with befitting pomp the hundredth anniversary of its foundation. Georgetown, in 1789, was the chief borough of Montgomery County, Maryland. Father Carroll selected it for the site of the academy, influenced, no doubt, by a knowledge of the locality acquired during his missionary excursions. In speaking of the present site, he described it as "one of the most lovely in Cecil County. It is the imagination can frame". The first prospectus says: "In the choice of Situation, Salubrity of Air, Convenience of Communication, and Cheapness of Living have been principally consulted, and Georgetown offers these united advantages". In regard to the salubrity of Air, it is interesting to note that the college records show the first death among the students to have occurred in 1845. In 1784, Father Carroll was appointed prefect-Apostolici, or superior, of the Church in the United States. In 1788 he wrote to his friend, Father Charles Flouden, in England: "The object nearest my heart now, and the only one that can give consistency to our religious views in this country, is the establishment of a school, and afterwards of a Seminary for young clergymen." At a meeting of the clergy, held at White Marsh, in 1786, he presented a detailed plan of the school, and recommended the site which he had inasmuch so favourably. The clergy thereupon appointed the prefect and appanage Professors. Since the year 1805, it has been under the direction of the Society of Jesus" (The Laity's Directory, 1822).
GEORGETOWN

proceeded slowly, from want of funds, and 1789 is considered to be the year of the foundation of the college, as the deed of the original piece of ground was dated 23 January of that year. The land—one and a half acres—was acquired by purchase, for the sum of £75 current money. The “Old Building,” as it was called, was not ready for occupancy until 1791; it was removed to the way for the new Hall.

In its material growth the college has expanded from the solitary academic structure of early days into the clustering pile that crowns the ancient site, consisting of nine distinct constructions, known in order of erection as the North Building (begun 1791, completed 1798), the Information (1818-1848), the McAdows Building (1831), the Observatory (1843), the Magnolia Building (1854), the Healy, or Main, Building (1879), the Dahlgren Chapel (1863), the Ida M. Ryan Hall (1905), and the Ryan Gymnasium (1908). To the original classical academy have been added, as opportunity arose or expediency prompted, the astronomical observatory, in 1843; the medical school, in 1851; the law school, in 1870; the university hospital, in 1898; the dental school, in 1901; the training school for nurses, in 1903.

Since 1805, when the Society of Jesus was restored in Maryland, Georgetown has been a Jesuit College, with the associated institutions and methods of instruction which the name implies. Until 1860 the Superior of the Mission and Provincial of Maryland generally resided at the college; the novitiate was there for some years; and it was the provincial house of higher studies for philosophy and theology, during the greater part of the period preceding the opening of Woodstock Scholasticate, in 1869. Naturally, under such conditions, the college exercised considerable influence upon the religious development of the country and Catholic progress in the early days. The first three Archbishops of Baltimore had intimate relations with it. Carroll, as founder, Neale, as president; and Marvich, as professor. Bishop Dubourg of New Orleans was president; the saintly Bishop Flaget of Bardstown, was professor; as also Bishop Van develde of Chicago. Bishops Carrell of Covington and O'Hara of Scranton were students. Bishop Benedict J. Fenwick, of Boston, one of the first students at Georgetown, went back to Rome as professor, and founded the College of the Holy Cross, at Worcester, Mass., a direct offshoot of Georgetown. The Rev. Enoch Fenwick, S. J., president, had a large share in building the cathedral of Baltimore. Bishop Neale founded the Visitatin Order in America. Fathers James, Bernard A. McGinley, presidents, were distinguished pulpit orators. Father Anthony Kohlmann, president, was a profound theologian, and his work, “Unitarianism Refuted,” is a learned contribution to controversial literature. Father Camillus Mazzella, afterwards Cardinal, is famous as a dogmatic theologian. Father John J. Heneghan, in a modest way, promoted astronomical science; the renowned Father Secchi was for a time connected with the observatory, as was also Father John Hagen, now Director of the Vatican Observatory. Georgetown has exerted its influence on education and morals indirectly through various other colleges that have sprung from it, and directly by the host of its own alumni, nearly five thousand in number, many of them distinguished in every walk of life.

Upon the opening of the college, in 1791, the first name upon the Register is that of William Gaston of North Carolina, who, despite the constitutional disabilities imposed by the State, was admitted to Congress, and rose to its Supreme Bench. The number of students enrolled in 1792 was 66; on the opening day of 1793, 47 new students entered. This was a promising beginning, but growth was slow, and for several years following there was even a falling off. In 1813 the boarders numbered 42; the average for the proceeding ten years had been 25. The century mark (101) was reached for the first time in 1818; the highest number (317) in 1859. The majority of the students at that period were from the Southern States, and the breaking out of the Civil War caused a rapid exodus of young men from class-room to camp. There were only 120 registered in 1862.

The printed prospectus here issued by Rev. Wm. Dubourg (president, 1796-99), furnishes details of the studies pursued at that date, and holds forth promise of an enlarged course. This promise was fulfilled under his immediate successor, Bishop Leonard Neale (president, 1799-1806). In 1801, there were seven members of a senior class studying logic, mathematics, and ethics. Father John Granoff, president, (1812-17) infused new life into the administration of the college: he promoted the study of mathematics and secured the necessary apparatus for teaching the natural sciences. During his term of office, the power to grant degrees was conferred by Act of Congress, March 1, 1816, the bill being introduced by Georgetown's protean alumnus, a member from North Carolina. This power was first exercised in 1817. The formal incorporation of the institution was effected by Act of Congress in 1844, under the name and title of "The President and Directors of Georgetown College". By this Act the power to confer degrees and the time of courses were vested in the board of directors, which thus empowered the college, in 1833, to confer in its name degrees in philosophy and theology. Degrees have been conferred, from 1817 to 1908 inclusive, as follows: Doctors—D.D., 27; LL.D., 101; Ph.D., 42; M.D., 950; D.D.S., 59; Phar.D., 3; Mus.D., 7; total 1,189. Licensiates, Ph.L., 9. Masters—L.L.M. 743; A.M., 432; M.S., 2; total, 1,177. Bachelors—LL.B., 1,708; A.B., 872; Ph.B., 13; Phar.B., 6; B.S., 14; Mus.B., 1; total, 2,614.—Grand total of degrees conferred, 4989.

The Rev. Robert Plunket was chosen to be the first president. The corporation delayed the expenses of his passage from England to America. He entered upon his duties in 1791, served for two years, and was succeeded by Father Robert Molyneux, who became the first superior of the restored society in Maryland, and held the presidency of the college for a second term at the time of his death, in 1808. The school began with very elementary classes, but the original plan contemplated a rounded academic course, and gradually the standard of classes was raised, and their number increased. Some of the assistant teachers were aspirants to Holy orders, and a class in theology was formed. In 1808, four of this class were elevated to the priesthood, Benedict Fenwick, Enoch Fenwick, Edward Edelen, and John Spink, the first members of the Society of Jesus to be ordained in the United States.

Present Status.—Georgetown University consists of the college, the school of medicine, the school of dental surgery, and the school of law. The number of students at present (1906) is: college, 1,153; medical school, 82; dental department, 54; hospital training school, 17; law school, 495. Total, 749. The faculties, including officials, professors, special lecturers, assistants and associates, are distributed as follows: college, 25; medical school, 65; dental school, 27; law school, 24. Clinical instruction is given in the University Hospital; the amphitheatre accommodates over 180 students. The hospital is in charge of the Sisters of St. Francis, and has a training school for nurses attached. The hospital staff numbers 8 physicians in chief, with 9 associates and 18 assistants. Post-graduate courses of study are carried on in the law and medical schools, and are offered in the State, or classical high school, attached to the college and in 1909 had 97 students. The college grounds comprise 78 acres, a large part of which is occupied by "The Walks," famous for their woodland scenery. The hospital is in close proximity to the college; the law and medical schools are in the heart...
of the city. The Riggs Memorial Library contains more than 95,000 volumes, among which are many rare and curious works, early imprints, and ancient MSS. Among the special libraries incorporated in the Riggs is that of the historian, Dr. J. Gilmary Shea, who was long an assistant to the Hirst Library. It is for the use of the students of the undergraduate school; it contains about 5000 volumes. There are also special libraries for the post-graduate course, for the junior students, and for Maryland colonial research. The Coleman Museum is a large hall with light and display of various collections of three thousand specimens which make the museum one of the most interesting institutions of its kind. The College Archives are deposited in a spacious fire-proof vault, well lighted and ventilated. Connected with the archives, there is a hall for the exhibition of Missals, chalices, vestments, bells, and other memorials of the early Jesuit missions of Maryland. Gaston Hall, where commencement and other exercises are held, overlooks the Susquehanna and has a view to the locality of the Alumni Association. The Philodemic Debating Society Room is decorated with portraits of distinguished graduates and college worthies. The College Journal and the literary and scientific societies furnish opportunity for mental improvement; the Society of the Blessed Virgin, which is the oldest in the United States, helps to piety. The Athletic Association encourages sport and promotes physical training by means of the gymnasium, ball clubs, boat clubs, etc. The spirit of loyalty towards Alma Mater is fostered by the National Society of Alumni and by the various societies of New York, Philadelphia, Northeastern Pennsylvania, the Pacific Coast, Wilmington, and the Georgetown University Club of New England. The Triennial Graduate List gives in alphabetical order the names of all those who have received degrees from the university, together with information concerning the present occupation and residence of living graduates. The General Catalogue, and the Circular of Information, Georgetown University publications issued annually, furnish detailed information in regard to courses of studies, requirements for admission and graduation, fees, expenses, etc., in all departments.

Georgia.—Statistics.—The area of Georgia is 59,475 sq. m., and it is the largest of the original thirteen United States; bounded on the north by Tennessee and North Carolina, on the east by the Savannah River and the Atlantic Ocean, on the south by Florida, and on the west by Mississippi. The population in 1790, 82,548; in 1820, 516,823; in 1870, 1,184,109; and in 1900, 2,216,331, including 1,034,813 negroes, 204 Chinese, 1 Japanese, and 19 Indians. The population of Savannah, the largest city, was, in 1900, 54,244. The present Constitution was adopted in 1877. The State is divided into 10 congressional districts, 44 senatorial districts, and 137 counties. No State in the American Union has such a variety of agricultural products. Cotton is the chief. Before the Civil War one-sixth of the total cotton crop of the United States was raised in Georgia. In 1883, 824,250 bales were produced; in 1907, 1,920,000. Georgia now ranks as the second cotton-producing State. Manufacturing industries, Georgia produced in 1907, 5,010,000 bushels of oats, 57,538,000 bushels of corn, and 2,073,000 bushels of wheat. Georgia is likewise remarkable for the extent and variety of its woodland, its pine being world-famous. It possesses coal, iron, and gold mines, as well as silver, copper, and lead. In 1905 the value of its products of manufactures was $151,040,000, the capital employed being $155,211,551. Its favorable location, extensive railroads, and numerous navigable streams give Georgia excellent commercial advantages. Situated between the North and the South-West, the West and the Atlantic, trade between these sections passes through the State. Atlanta and Savannah are important commercial centres. The value of foreign commerce is estimated at $30,000,000. There is no Southern State equal to Georgia in the number of its railroad enterprises. Atlanta, Columbus, Macon, Savannah, and Augusta are the principal railroad centres. The mileage of railroads in 1907 was 6786.33.

Georgia.—Education.—The Constitution provides for a "thorough system of common schools", maintained by taxation "or otherwise", and free for "white and colored races". The State school commissioner is appointed by the governor for a term of two years. Every county has a board of education and a superintendent, and is provided with free schools. Atlanta, Savannah, Augusta, Macon, and Columbus are separately organized under local laws. The State university, at Athens, founded in 1785, is non-sectarian and in 1908 had 199 instructors and 3375 students. Connected with it are agricultural colleges, a law school, and a medical school in various parts of the State. The other prominent institutions of learning are Atlanta University at Atlanta, founded in 1869, non-sectarian, with 20 instructors and 340 students; Clark University at Atlanta, founded in 1870, Methodist Episcopal, with 25 instructors and 532 students; Morris Brown College at Oxford, founded in 1836, Methodist Episcopal, with 14 instructors and 265 students; Morris Brown College at Atlanta, founded in 1881, Methodist, with 28 instructors and 940 students; Shorter College at Rome, founded in 1877, Baptist, with 30 instructors and 250 students; and Wesleyan Female College at Macon, the first institution of learning for women in America, founded in 1836, Methodist Episcopal, with 33 instructors and 474 students. In the common schools of Georgia there were enrolled in 1907 499,103 pupils and 10,360 teachers.

Civil History.—The swamps and pine lands of Georgia, the last colonized of the original thirteen colonies of America, were all occupied by the feet of white men before the eighteenth century. Tradition has it that De Soto, in his ill-starred march to his
grave in the Mississippi, camped for a while in 1540 near the present city of Augusta; a more unreliable tradition asserts that Sir Walter Raleigh, on his initial voyage, "landed at the mouth of Savannah River, and planted a board of trust on which they laid claim to the Atlantic seaboard; by the settlement of St. Augustine, in 1565, Spain established its authority over the southern coast. The vastness of the new world deferred the inevitable clash of these overlapping claims until the settlement of South Carolina in 1670, when Spain, alarmed at this territorial encroachment of the Protestant English colonies, began, by intrigues with Indians and negro slaves, to harass the safety of the latter colony. At the beginning of the eighteenth century Parliament began to feel that a military colony on the southern frontier was imperative, and this conclusion was felicitously complemented by the belief that the mulberry and the vine could be successfully cultivated on the southern hills and savannas; while a third great philanthropic consideration contributed to the final adoption of the scheme. James Oglethorpe, who had followed up a brilliant military career as aide-de-camp to the Prince Eugene, who had never been broken in heart, had conceived the plan of settling a colony in the New World with worthy, though unfortunate and economically unproductive, inmates of the wretched English prisons. With this threefold purpose in view, a petition was presented and accepted by the Privy Council and the Board of Trade, and the charter of the Colony of Georgia, named after the king and embracing the territory lying between the Savannah and the Altamaha Rivers, received the great seal of England on 9 June, 1732. This charter created a board of trustees for twenty-one years, who were to possess entire rights in the governing and the financing of the project, but who were not to profit, either directly or indirectly, by the venture. The board thus created, composed of many leading noblemen, clergymen, and members of Parliament of the day, met forthwith and drew up one of the most remarkable governmental documents in English colonial history. A board of trustees was appointed. Transportation, food, and land were given settlers for the feudal returns of labour and military service; but tenure of land was to descend only along the line of direct male issue. Other salient limitations in these by-laws were the prohibition of liquor, as well as of negro slaves, and freedom of worship was to be granted to all prospective colonists "except papists". With this document and 126 passengers, carefully selected for the most part from the more worthy inmates of English prisons, Oglethorpe himself, who had been appointed "general" of the new colony, embarked on the "Anne" on 12 November, 1732, and arrived at St. Augustine on 2 January, and in the spring of that year founded Savannah, which took its name from that of the river above which the little cabins of the settlers were first reared.

During the twenty-one years of its proprietary government, Georgia struggled along, rather in spite of the remote designs and impractical restrictions of its trustees than because of their indefatigable labour, sterilizing integrity, and single-minded philanthropy. As a frontier settlement against the Catholic colonies of Spain, Georgia speedily justified its existence. War between the rival countries was declared in 1739. Oglethorpe invaded Florida in 1740, and with an insufficient force unsuccessfully besieged St. Augustine. Two years later Spain retaliated, attempting by land and sea the complete annihilation of the English colony. By a splendid bit of strategy on Oglethorpe's part the invasion was repulsed, and the last blow had been struck by Spain against the English colonies in the New World. Less successful was the attempt of the board of trustees to plant a Portuguese vignoire and the vine in the new colony. The warfare with Spain, the lack of adequate skilled labour, and the general thriftlessness of the colonists made the cultivation of such products practically impossible. The vine, which was to have supplied all the plantations, and to cultivate the mulberry and the vineyard, resulted in only a few gallons and was then abandoned. The hemp and flax, which were to have sustained the linen manufactures of Great Britain and to have thrown the balance of trade with Russia into England's favour, never came to a single ship-load; and the cultivation of the mulberry seems to have expired with its crowning achievement when, on the occasion of His Majesty's birthday in 1735, Queen Caroline appeared at the levee in a complete court dress of Georgia silk. Least successful of all was the philanthropic attempt to colonize Georgia with non-productive inmates from English prisons. It was this class that early began to cry for reformed slavery; and had it not been for the settlement of Ebenezer, in 1734, with industrious Salzburgers, expelled from Germany by reason of their religious beliefs; that of Port Argyle, in 1735, with a colony of Swiss and Moravian immigrants; and that of New Inverness, in 1736, with a band of thirty Jedidahs, the philanthropic plans of Oglethorpe would have been speedily wrecked. As it was, the energies of the general were mainly directed towards placing Savannah upon an economically self-sufficient basis.

One of the restrictions that acted most forcibly against labour and thrift, the tenure of land along the line of male descent, was repealed in 1739. Another, the prohibition of slavery, a restriction which served to make restless and impermanent an unskilled and thriftless population settled so close to the slave-holding settlements of South Carolina, was removed in 1747. Even the attempt to rouse up spiritual energy in Savannah proved too great a task for the Wesleys, although in 1738 the eloquent Whitfield seems to have won at least a hearing for his strenuous moral code. But neither an energetic general governor, a concessive board of trustees, nor the zealous bearers of a fresh and fierce spiritual code governmental or philanthropic or commercial success of the proprietary colony of Georgia. Mutiny was widespread. Oglethorpe's life was threatened and actually attempted. The trustees were disheartened. Letters of dissent and charges against Oglethorpe, written under the pseudonym of "The Plain Dealer", reached London. In 1743 Oglethorpe returned to England to face a general court martial on nineteen charges. He was entirely exonerated from charges, which were pronounced "false, malicious and without foundation". But he had done with the colony and never returned to Savannah; while the board of trustees, in June, 1744, at the expiration of their charter, more or less surrend ered their right of government to the Lords of the Council, and Georgia became a royal province.

In the generation before the Revolution Georgia steadily increased in population under royal governors. The cultivation of rice by slaves made the colony economically self-supporting. A better class of colonists were induced to immigrate to its woodlands and rice fields from England and the Carolinas. On 11 January, 1758, the Assembly passed an Act "for constituting the several Divisions and Districts of this Province into Parishes, and for establishing Vehicular, Rites, and Ceremonies of the Church of England". This was designed not to interfere with other classes of worshippers, but to provide by law for supplying the settlements with
the ministrations of religion, by which Act a salary of £25 per annum was allowed every clergyman of the Established Church. The law excluding Roman Catholics resulted in a series of decrees and regulations by which the Roman Catholic Church was forced to close many of its parishes, and the Protestant Episcopal Church was left almost in control of religious affairs. The religious differences resulted in a series of laws and regulations which put to the test the loyalty of a Georgian Tory governor when four hundred Acadian refugees sought shelter at Savannah, bringing letters from the governor of Nova Scotia to the effect: "That, for the better security of that province, and in consequence of a resolution of his Council, he had sent these people to Georgia." Governor Reynolds distributed them about the colony for the succeeding winter and maintained them at the public expense. But in the spring, "by leave of the Governor, they built themselves a number of rude boats, and in March most of them left for Nova Scotia." The doctrine of the South was "going off at one time, indulging the hope that they might thus work their way along to their native and beloved Acadie." No other form of civic or religious exclusiveness, however, hampered the steady growth of the colony. Aside from spasmodic Indian incursions, incited by the French, Georgia developed the arts of peace, immigrants continued to flock in, and between 1763 and 1773 the exports of the colony increased from £27,000 to £121,000.

The preponderating Tory element in the colony at the outbreak of the Revolution, made up for the most part of a generation of wealthy landowners and their 14,000 slaves, who spelt commercial ruin in revolution and who persuaded a second generation of parasitic idlers to share their views, allowed the British Parliament to boast throughout the Revolution that Georgia was a royalist province. The distance of the colony from the centre of operations, the blundering inaptitude of such provincial generals as Howe, the early capture and long retention by the British of both Savannah and Atlanta, and the hostility of the Indians to the colonial cause gave some historical warrant to such a point of view. But if the fervour of the revolutionary spirit was not restricted to but a few, it gained, in consequence, in expressive momentum. In spite of British military successes along the coast; in spite of the disheartening and devastating guerilla incursions of Indians and Florida Rangers to the south and west; in spite of Washington's enforced neglect of the frontier colony's safety; the spirit of the Georgia American Americans ebbed freely under an intense repression, bursting forth in sporadic flames of personal heroism and stoical fortitude. Nancy Hart is as heroic a heroine, if a coarser one, as Molly Pitcher, and Savannah is hallowed by the life-blood of Pulaski. Georgia served by waiting, and when her turn came she went to the army of the South, the recapture of Savannah followed closely upon that of Atlanta, and the last British post had been abandoned in the colony before the surrender at Yorktown.

In the meantime, in 1777, Georgia had passed its first State Constitution. A second was adopted in 1789 and a third in 1798, which, several times amended, endured up to the time of the passage of the present Constitution. The fifty-sixth article of the first Constitution established religious toleration. The second Constitution closed the membership of both houses against clergymen, but the test of Protestantism, in respect to office-holding, required by the first Constitution, was dispensed with, and the elective franchise was extended to all male tax-paying freemen. On 2 June, 1788, the National Constitution was ratified, and Georgia was the fourth State to enter the Union. In the War of 1812 Georgia was embroiled in difficulties with the Indians, following the Yassoo land scandals and the treaty of 1802, by which Georgia ceded all its claims to lands westward of its present limits, and the Creeks ceded to the United States a tract afterwards assigned to Georgia and now forming the southern western counties of the State. Triangular difficulties between a State jealous of its rights, a government jealous of its federal power, and Indians jealous of their tribal possessions, continued until all but the extermination of the Creeks by General Floyd's Georgian troops in the War of 1812. Indeed these difficulties were not finally settled until the removal of the Cherokees by the Union to a Western reservation in 1838, by which Georgia came into possession of the full quota of land she now holds.

The relation between State and Government in these Indian affairs during the first three decades of the century induced in Georgia, in particular, that spirited endeavours to safeguard the rights of local government which later characterized the State's policy towards the South before the outbreak of the Civil War; and upon the election of Lincoln to the presidency of the nation, the politicians of Georgia took active measures towards accomplishing the secession of their State from the Union. The delegates to the Confederate convention at Montgomery, Alabama, were conspicuously energetic, and a Georgian, Alexander H. Stephens, was made Vice-President of the Confederacy. In the war that followed the State reaped a rich harvest of havoc and devastation, the culmination of its suffering being Sherman's March to the Sea, through its territory, in 1864. After the termination of hostilities the Georgia Reconstruction Act by refusing to allow negroes, upon election, a seat in the Legislature; but the Supreme Court of the State decided that negroes were entitled to hold office; a new election was held; both houses were duly reorganized; the requirements of Congress were acceded to, and by Act of 13 July, 1869, Georgia was readmitted to the Union. Since the close of the war the material development of Georgia has been remarkable, principally along the lines of manufactured industries. At present its cotton mills are among the largest in the world. The Cotton Exposition in 1881 and The Cotton States and International Exposition in 1895, both held in Atlanta, were eloquent of the fact that Georgia has been the first of the seceding States to recognize the spirit of the new commercial life of the South.

RELIGION.—Church History.—The Diocese of Savannah, which comprises the State of Georgia, was established in 1850. As late as the period of the American Revolution there was scarcely a Catholic to be found in the colony or State of Georgia, nor was there a priest in the State for many years thereafter. Bishop England states that there were not twenty-five priests in all the colonies at that time. About 1793 a French priest, Abbe Brems, came to Savannah and settled in the vicinity where the church of Locust Grove was subsequently built. Previous to their removal these earliest Georgian Catholics had applied for a clergyman to accompany them, but were unable to obtain their request. Shortly after the French Revolution Catholic Emigrés from the French colony of Santo Domingo, then enduring the horrors of a negro revolution, settled at Augusta and Savannah. One of their priests began to discharge the duties of his ministry at Maryland, a little colony fifty miles above Augusta, a fact which is recorded as 'the commencement of the Church in Georgia.' In a few years this settlement was abandoned; Savannah became the fixed residence of a priest; the congregation was incorporated by the Legislature of the State; the city council gave a grant of land, and a wooden edifice with a small steeple was erected. In the year 1810 the congregation incorporated its church by the appointment of an Augustinian friar, Rev. Robert Browne, became pastor, and the brick church of the Holy Trinity, fifty feet in length and twenty-five wide, was erected from funds raised by subscription. In 1820 Georgia and the Carolinas were separated from the See of Baltimore, the Rev. Doctor England being appointed
to the newly formed see. At that time there were about five hundred Catholics in Savannah, with fewer still in Augusta. In 1839 Bishop England announced that there were but eleven priests in the State.

The most salient feature of the work of the Church in Georgia has been the present time. The evangelical direction towards the conversion of the negroes, a task which is being undertaken by the Society of the African Missions. The population of the State is about equally divided between white and coloured, and of the million negroes not above five hundred are Catholic; but there is no mission with church and school and two resident priests in Savannah, with about four hundred Catholic people. In the school 110 children are taught by Franciscan Sisters. In Augusta a new mission has been established with a church and a school with twenty pupils. Among the 30,000 coloured in the city of Augusta, there are not above twenty Catholics.

Church Statistics.—In the Diocese of Savannah there are, according to the census of 1908, 23,000 Catholics, 18 secular priests, 41 priests of religious orders, 13 churches with resident priests, 18 missions with churches, 81 stations, and 14 chapels.

Charity Education.—In Georgia there are three Catholic colleges in the State: the College of Mariav Fathers at Atlanta, the College of the Sacred Heart at Augusta, and the Stanislaus of the Society of Jesus at Macon. There are ten academies, one seminary for small boys, while twelve parishes in the diocese possess parochial schools in charge of Sisters and Brothers. The State furnishes these schools no financial support.

Church Charitable Institutions.—There are in Georgia 2 Catholic hospitals owned by and in charge of the Sisters of Charity, one of which secures aid from the county for the care of the poor—a per capita assignment. There are 170 orphans cared for at St. Joseph's Orphanage, Washington, in charge of 6 Sisters of St. Joseph; St. Mary's Home for Female Orphans, Savannah, in charge of 7 Sisters of Mercy; and 2 coloured orphanages. In addition to these there is a Home for the Aged, at Savannah, in charge of 10 Little Sisters of the Poor, with 94 inmates.

Religious Polity.—Under the Constitution of the United States, as well as under the State Constitution, full liberty of conscience in matters of religious opinion and worship is granted in Georgia; but it has been held that such is not to legalize wicked school and school, or stand in the way of legislative enactment for the punishment of such acts. It is unlawful to conduct any secular business, not of an imperative nature, on Sunday. There are no specific requirements for the administration of oaths; such may be administered by using the Bible to swear upon, by the uplifted hand, or by affirmation, the form being: "You do solemnly swear in the presence of the ever living God" or "You do sincerely and truly affirm, etc." The sessions of the Legislature are opened with prayer, those of the courts are not. Georgia recognizes State holidays 1 January and 25 December; no church Holy Days, and special, are recognized as holidays. The law allows the same privileges to communications made to a priest under the seal of confession as it does to confidential communications made by a client to his counsel, or by a patient to his physician. The statutes contain no provisions making any exception between the just cause of the corporation, the property of the Church in the diocese is held by the bishop and his successors in office.

Excise and Wills.—Georgia from the very beginning seems to have steadily pursued a restrictive policy in the granting of excise privileges. The initial steps in legislation on this subject are:-The chronic, called by its author, "Extract of Chronography" ('Εκτίθη χρονογραφία), contains the history of the world from the Creation to the death of Diocletian (316). It is arranged strictly in order of

JARVIS KEELEY.

Georgius Synelus (Gr. Γεώργιος Συνελύς); d. after 810; the author of one of the more important treatises on Byzantine law. He lived many years in Palestine as a monk; under the Patriarch Tarasius (784-806) he came to Constantinople to fill the important post of synkellos. The synkellos is the patriarch's private secretary, generally a bishop, always the most important ecclesiastical person in the capital after the patriarch himself, often of great political importance. George did not succeed Tarasius. Instead, when his patron died he retired to a monastery and there wrote his chronicle. The only date we know at the end of his life is 810 (6302 an. muni.), which he mentions (Dindorf's edition, 389, 20, see below) as the current year.
GERACE, Diocease of (Hieracienae), in the province of Reggio in Calabria (Southern Italy), on a lofty site overlooking the Ionian Sea, not far from Cape Spartivento. The city probably owes its origin, or at least its importance, to the ruin of the town of Locri Epizephyri, one of the earliest Greek colonies in Lower Italy, founded by the Ossolian Locrians (684-680), who were allowed to maintain laws by the Greeks. Through its advanced civilization and its trade, Locri Epizephyri was brought into prominence. It suffered much during the wars of Dionysius the Younger and of Pyrrhus, and in the Second Punic War, when it passed into the hands of the Romans, remaining, however, the ancient constitution of Zaleucus. Its desolate dates from this period. Before its total ruin, Locri Epizephyri had a bishop of its own; but in 709, under Bishop Gregory, the see was transferred to Gerace.

The name Gerace is probably derived from Saint Cuculma, whose church was destroyed by the Saracens in 915. They captured the town in 986, but in 1059 it fell into the hands of the Normans. Until 1467 the Greek Rite was in use at Gerace, and such had probably been the custom from the beginning. As early as the thirteenth century efforts were made to introduce the Latin Rite, which accounts for the schism between Latins and Greeks about the Emperor Alexius. At the Lateran Council XII, apropos of the union of the two Churches, Barlama at one time had opposed the idea, but later recognized his error, and Clement VI bestowed on him the See of Gerace. He taught Greek to Petrarch, Boccaccio, and others, and was thus one of the first of the Italian humanists. Bishop Ottaviano Pasqua (1574) wrote a history of the diocese. Another bishop, Giovanni Maria Belletti (1625), wrote "Disquisitiones Clericales"; Giuseppe Maria Pellicano (1815) rebuilt the cathedral, destroyed by the earthquake of 1823. The diocese of Gerace is a suffragan of Reggio; it has 69 parishes, and 132,300 souls; 1 religious house for men, and 3 for women.

U. BENIGNI.

Gerald, Saint, Bishop of Mayo, an English monk, date of birth unknown; d. 13 March, 731; followed St. Colman, after the Synod of Whithby (684), to Ireland, and settled at Innisbofin, in 688. Dissensions arose, after a time, between the Irish and the English monks, and St. Colman decided to found a separate monastery for the thirty English brethren. Thus arose the Abbey of Mayo (Magh Eo, the yew plain), known as "Mayo of the Saxons," with St. Gerald as first abbot, in 670. St. Bede writes: "This monastery is to this day (731) occupied by English monks... and contains an exemplary body who are gathered there from England, and live by the labour of their own hands (after the manner of the early Fathers), under a rule and a canonical abbot, leading chaste and single lives." Although St. Gerald was a comparatively young man, he proved a wise ruler, and governed Mayo until 697, when, it is said, he resigned in favour of St. Adamnan. Some authors hold that St. Adamnan celebrated the Roman Easter at Mayo, in 703, and then went to Skreen, in Hy Fiachnach, and that after his departure the monks prevailed on St. Gerald to resume the abbacy. The English saint continued in the abbacy of Mayo till his death. His feast is celebrated on 13 March. Mayo, though merged in Tuam for a time, remained a separate see until 1579.

Geraldton, Diocease of (Geraldtonensis), in Australia, established in 1898, comprises the territory lying between the southern boundary of the Kimberley district and a line running eastward from the Indian Ocean along the 30th parallel of south latitude until it reaches the 120th degree of longitude, whence it follows the 29th degree of latitude to the south Australian border. It is a suffragan of Adelaide. There are 28 churches in the diocease, attended by 10 regular and 4 regular priests; 5 boarding and 12 primary schools with 747 pupils in charge of 51 sisters. The Presentation nuns, who made a foundation from Ireland in 1890, have 28 sisters in 6 communities; Dominican nuns from Dunedin, New Zealand, arrived in 1899, and have 4 communities with 24 sisters.

The first bishop of the diocese, Bishop Bernard Kelly, was consecrated 14 August, 1898. The Bishop of Geraldton also has jurisdiction over the Vicariate of Kimberley.

THOMAS F. MEEHAN.

Géramb, Baron Ferdinand de, in religion, Brother Mary Joseph, Abbot and procurator-general of La Trappe, came of a noble and ancient family in Huns- terberg, in Lyons (1739). He was born 14 Jan., 1772; and entered the monastery of La Trappe, 12 Aug., 1784. Some historians wrongly call in question both the place and date of his birth, as also his noble

GÉRARD

descend. Being of a fiery and chivalrous disposition, he took an active part in the struggles of the struggles in Europe against the French Revolution, and rose to the rank of lieutenant-general. In 1808 he fell into the hands of Napoleon, who imprisoned him in the fortress of Vincennes until 1814, the time when the allied powers entered Paris. After bidding farewell to the Tsar and Emperor, he resolved to leave the world. It was at this time that he providentially met the Rev. Father Eugene, Abbé of Notre Dame du Port du Salut, near Lavil (France), of whom he begged to be admitted as a novice in the community. He pronounced his vows in 1817. After having rendered great services to that monastery, he was sent, in 1821, by the Abbot, to the Court of Rome. During the Revolution of 1830 de Gérand displayed great courage in the face of a troop of insurgents that had come to pillage the monastery; though the religious had been dispersed, the abbey was at least, by his heroic action, spared the horrors of pillage. It was at this time that Brother Mary Joseph made his pilgrimage to Jerusalem. On his return in 1833, he went to Rome, where he held the office of procurator-general of La Trappe. He soon gained the esteem and affection of Gregory XVI, who, though he was not a priest, named him titular abbé with the insignia of the ring and pastoral cross, a privilege without any precedent. Abbé de Gérand is the author of many works, the principal of which are: "Letters to Eugene on the Eucharist:"; "Eternity is approaching:"; "Pilgrimage to Jerusalem:"; "A Journey from La Trappe to Rome," besides many others of less importance and of an exclusively ascetical character. They were often reprinted and translated. His style is easy and without affectation. The customs, manners, incidents of the journey which he describes, are all vividly and attractively given, and the topographical descriptions are of an irreproachable accuracy. Even under the most favorable circumstances, the cheaper classes could occasionally be seen distributing in alms considerable sums of money which he had received from his family to defray his expenses. In 1796, Baron de Gérand married his cousin Theresa de Adda, who died, in 1808, at Palermo. Six children were born to his marriage, of whom number three died in youth. On his entrance into La Trappe he confided the surviving children to the care of his brother, Léopold de Gérand, after having put them under the protection of the Tsar and the Emperor of Austria.

EDMONT M. ORBECHT.

Gérando, Joseph-Marie De, a French statesman and writer; b. at Lyons, 2 February, 1772; d. at Paris, 10 November, 1842. After completing his studies with the Oratorians at Lyons, he took part in the defence of the city against the besieging armies of the French Convention. Wounded and taken prisoner, he barely escaped being put to death, and later took refuge in Switzerland and at Naples. He enlisted again in the army and was at Colmar when the French Institute announced the offer of a prize for the best essay on "The influence of signs on the formation of ideas". Gérando sent a paper, which was awarded the first honours. This was a turning-point in his life; for, having come to Paris, he was appointed to secretarial functions, administrative, political, administrative, and educational. In 1815, he was one of the founders of the Société pour l'instruction élémentaire, which introduced into France the monitory system, established in England by Lancaster, and thus made education possible for the poor classes. He was a member of the state-council under Napoleon and under Louis XVIII, a member of the Académie des Inscriptions et Belles-Lettres, and of the Académie des Sciences morales et politiques, and officer of the Légion of Honour. In 1819, he opened a course in the faculty of law in Paris; and, in 1837, became a member of the Chambre des Pairs. He consecrated his talent to the causes of education and charity, taking part in the foundation and administration of hospitals, and charitable institutions of all kinds. His works are very numerous; among the most important must be mentioned the following: Philosophical: "Des signes et de l'art de penser considérés dans leurs rapports naturels" (Paris, 1800), a development of his prize-essay in which the author follows Condillac, but not entirely without influence from him on his "Histoire comparée des systèmes de philosophie considérés relativement aux principes des connaissances humaines" (Berlin, 1802), awarded a prize by the Academy of Sciences of Berlin; "Histoire comparée des systèmes de philosophie considérés relativement aux principes des connaissances humaines" (Paris, 1803). Educational: "Du perfectionnement moral, ou de l'éducation de soi-même" (Paris, 1824); "Cours normal des instituteurs primaires" (Paris, 1832); "De l'éducation des sourds-muets de naissance" (Paris, 1832); "Instituts du droit administratif français" (Paris, 1830). Charitable: "Le visiteur du pauvre" (Paris, 1820); "De la bien-\n
C. A. DUBRAY.

Gérard, Saint, Abbé de Brogne, b. at Stavves in the county of Namur, towards the end of the ninth century; d. at Brogne or St-Gérard, 3 Oct., 959. The son of Stance, of the family of the dukes of Lower Austria, and of Plectude, sister of Stephen, Bishop of Liége, the young Gérard, like most men of his rank, followed at first the career of arms. His piety, however, was admirable amid the distractions of camp. He transformed into a large church a modest chapel situated on the estate of Brogne which belonged to his family. About 917, the Count of Namur charged him with a mission to Robert, younger brother of Eudes, King of France. He permitted his followers to reside with him, but himself went with the monks to St-Denis, where he was so struck by the edifying lives of the monks that, at the conclusion of his embassy, with the consent of the Count of Namur and Bishop Stephen, his maternal uncle, he returned to St-Denis, took the religious habit, and after eleven years was ordained priest. He then requested to be allowed to return to Brogne, where he replaced the lax clerics with monks animated by a true religious spirit. Thereupon he himself retired to a cell near the monastery for more austere mortification. From this retreat he was summoned by the Archbishop of Cambrai who appointed him to the see of Chauny in Hainault. Here also he established monasteries instead of the canons, whose conduct had ceased to be exemplary, and he enforced the strictest monastic discipline. Gradually he became superior of eighteen other abbeys situated in the region between the Meuse, the Somme, and the sea, and through his efforts the Order of St. Peter was completely restored throughout this region. Weighed down by age and infirmities, he placed vicars or abbots in his stead, in the various abbeys with which he was charged, and retired to that of Brogne. He still had courage to take a journey to Rome in order to obtain a Bull confirming the privileges of that abbey. On his return he paid a final visit to all the communities which he had reorganized, and then awaited death at Brogne. His body is still preserved at Brogne, now commonly called St-Gérard.

LÉON CLIGNET.

Gerard, Saint, Bishop of Toul, b. at Cologne, 935; d. at Toul, 23 April, 994. Belonging to a wealthy and noble family, he received an excellent education in the cathedral school of his native city, and throughout his youth was a model of obedience and piety. He was eventually ordained to the priesthood, in which office his virtues were a source of edification to the city of Cologne. At the death of Gauzelin, Bishop of Toul (963), he was appointed to succeed him by the Archbishop of Cologne, was received by the bishop and people of Toul, and bore the burdens of his episcopal office without any of its comforts. Although he avoided paying long visits to the court of the Emperor Otto II., who was desirous of keeping Gerard near him, he nevertheless obtained from the emperor the confirmation of the privilege of virtue of which Toul, although united to the empire about 925, formed an independent state of which the Emperor Henry the Fowler reserved to himself only the protectorate, abandoning to Gerard's predecessor, Gauzelin, the suzerainty of the city and the county. Gerard is therefore rightly considered as the true founder of the temporal power of the bishops of Toul. He was not genet in his opposition to powerful personages who were inimical to his authority, and governed his county wisely, promulgating administrative measures, traces of which subsisted to the time of the French Revolution. He died at the age of fifty-nine, and was buried with pomp in the choir of his cathedral. Leo IX., one of his successors in the See of Toul, canonized him in 1050.

LÉON CLIGNET.

Gerard, Archbishop of York, date of birth unknown; d. at Southwell, 21 May, 1108. He was a nephew of Walkelin, Bishop of Winchester, of Simon, Abbot of Ely, and connected with the royal family. Originally a precentor in Rouen cathedral, he became clerk in the chapel of William Rufus, who employed him in 1095 on a diplomatic mission to the pope. His success was rewarded with the Bishopric of Hereford, and was consecrated by St. Anselm 8 June, 1096, having been ordained deacon and priest on the previous day. On the accession of Henry I., in 1100, he was named bishop of York, and he set out to protest with St. Anselm, in which he claimed equal primacy with Canterbury and refused to make his profession of canonical obedience before him. When he journeyed to Rome for the pallium, he was entrusted with the mission of representing the king against Anselm in the controversy about investitures. The pope's decision was against the king, but Gerard professed to have received private assurances that the decrees would not be enforced. This was denied by the monks who represented St. Anselm; and the pope, when appealed to, repudiated the statement and communicated Gerard till he confessed his error and made satisfaction.

Eventually he professed obedience to St. Anselm, but continued to assert the independence of York. When Anselm refused to consecrate three bishops, two of whom had received investiture from the king, Gerard attempted to do so, but the refusal of consentation at his hands. The pope reprimanded him for his opposition to the primate, and finally the two prelates were reconciled. Gerard carried out many reforms in York, though by his action against St. Anselm he incurred great unpopularity, and the writers of the time charge him with immorality, avarice, and the practice of magic. He died suddenly on the way to London to attend a council, and his death without the sacraments was regarded as a Divine judgment. The canons refused to bury him within the cathedral, and the people pelled the hearse with stones. Some Latin verses by him are preserved in the British Museum (Tutus, D. XXXIV. 3).

EDWIN BURTON.

Gerard, John, Jesuit; b. 4 Oct., 1564; d. 27 July, 1637. He is well known through his autobiography, a fascinating record of dangers and adventures, of captures and escapes, of trials and consolations. The narrative is all the more valuable because it sets before us the kind of life led by priests, wherever the peculiar features of the English persecution occurred. John was the second son of Sir Thomas Gerard of Brym, for a time a valiant confessor of the Faith, who, however, in 1589, tarnished his honour by giving evidence against the Ven. Philip Howard, Earl of Arundel (q. v.). Different opinions are held (by Morris and Gillow) as to the permanence of his inconstancy. John left his father's house at Newbury and went first to Douai seminary; matriculated at Oxford (1579), and thence proceeded to the Jesuits' College at Paris (1581). Having come to England for his health's sake, he was arrested on 5 March, 1584, and suffered two years' imprisonment in the Marshalsea. He was bailed out in 1586, and, with the consent of his sureties, once more made his way to the Continent, and was received at the English College, Rome, 5 August, 1586. At first he paid for himself, but in April, 1587, he became a scholar of the pope. Next year, 15 August, 1588, he entered the Jesuit novitiate; but so great was the dearth of missionaries in England that he was dispatched thither in the ensuing September.

His romantic adventures began on landing, for he was set ashore alone on the Norfolk coast at a moment when the country was in a turmoil of excitement after the defeat of the Armada, and when feeling against Catholics ran so high that fifteen priests had been butchered in two days in London, and twelve others sent to the provinces for the same purpose, though half of these eventually escaped death. Gerard, being an accomplished sportsman and rider, succeeded in making his way about the country, now as a horseman and again as a huntsman; and once his hawk had strayed. Ere long he had won the steadfast friendship of many Catholic families, with whose chief he was able to make frequent conversions, to give retreats and preach, and to send over many nuns and youths to the convents, seminaries, and religious houses on the Continent. Dr. Jessopp, a Protestant, writes:

"The extent of Gerard's influence was nothing less than marvellous. Country gentlemen meet him in the street and forthwith invite him to their houses; high-born ladies put themselves under his direction almost as unreservedly in temporal as in spiritual things. Scholars and courtiers run serious risks to hold interviews with him, the number of his converts of all ranks is legion; the very gogols and turnkeys obey him; and in a state of society where treachery and venality were pervading all classes, he finds servants and agents who are ready to live and die for him. A man of gentle blood and gentle manners, of commanding stature, great address, and a strong voice, his power of organisation and of conducting a religious movement was never better seen.

His powers of endurance of fatigue and pain were
almost superhuman; he could remain in hiding days and nights in a hole in which he could not stand upright, and never sleep, and hardly change his position: he could jounce on the gyves that were ulcerating his legs. He seems never to have forgotten a face or a name or an incident. Writing his autobiography twenty years after the circumstances he records, there is scarcely a name or a place which he has not proved to be absolutely correct. As a literary effort merely, the Life is marvellous.” (“Academy”, 9 July, 1881.)

In those times of danger, no prudence could always effectually ensure a priest against capture. Gerard was arrested on 17 July, 1594, by his own servant, whose secret treachery was not suspected. He passed two years in smaller prisons, and was then sent to the Tower, where he was cruelly tortured, being hung up by his hands, of which torment he has left a very vivid description. His courage and firmness, however, were such, that his examination out of hope of extracting secrets from him, and he was relegated to the Salt Tower, where he cleverly contrived to say Mass. In 1597, he managed to escape by means of a string thrown one night by a friend from Tower Wharf into the Cradle Tower. By this string a rope was drawn across the moat, and with its assistance he managed eventually to reach it, but with great difficulty, as his hands were still helplessly from the torture.

Until the discovery of the Gunpowder Plot (q. v.), at the end of 1605, he continued his adventurous life as a missioner in England, but he was then obliged to slip away disguised as a footman in the train of the Spanish Ambassador. The rest of his life was spent in the English colleges on the Continent. He wrote, in 1607, “A Narrative of the Gunpowder Plot”, and afterwards his autobiography, “Narratio P. Joannis Gerardi de Rebus a se in Anglia gestis”. He strongly befriended Mary Ward (q. v.) in her attempt to found an amino religious order for women, and passed the last ten years of his life as spiritual director of the English College at Rome.

J. H. POLLEN.

Gerard, Miles, Venerable, martyr; b. about 1550 at Wigan; executed at Rochester 13 (30) April, 1590. Sprung perhaps from the Gerards of Ince, he was, about 1576, tutor to the children of Squire Edward Tyldesley at Morleys, Lancashire. Thence in 1579 he went to the seminaries of Douai and Reims, where he was ordained 7 April, 1583, and was made professor until 31 August, 1588 (O. S.), when he started for England with five companions. At Dunkirk the sailors refused to take more than two passengers; so the missionaries tossed for precedence, and Gerard and Francis Dicconson, the eldest (it seems) and youngest of the party, won. Though bound for London, they were driven out of their course into Dover harbour, where they were examined and arrested on suspicion (24 Nov., N. S.). A contemporary news-letter says that they were wrecked, and escaped the sea only to fall into the hands of persecutors on shore, but this is not consistent with the official records. These show that the prisoners at first gave feigned names and ambiguous answers, but soon thought it better to confess all. After many tortures in the worst London prisons under the infamous Topcliffe, they were condemned as traitors, and “taken to Rochester, where they were hanged and quartered”, says Father J. S. J., and afterwards, “and gave a splendid testimony to the Catholic Faith”.

J. H. PolLEN.

Gerard Majella, Saint, b. in Muro, about fifty miles south of Naples, in April, 1626; d. 16 Oct., 1675; beatified by Leo XIII, 29 January, 1893, and canonised by Pius XI, 11 December, 1904. His only ambition was to be like Jesus Christ in His sufferings and humiliations. His father, Domico Majella, died while Gerard was a child. His pious mother, owing to poverty, was obliged to apprentice him to a tailor. His
master loved him, but the foreman treated him cruelly. His reverence for the priesthood and his love of suffering led him to take service in the house of a prelate, who was very hard to please. On the latter's death Gerard returned to his trade, working first as a journeyman, and to do this he earned his living by teaching singing. He divided his time between his mother and the poor, and in offerings for the souls in purgatory. After futile attempts to become a Franciscan and then a hermit, he entered the Congregation of the Most Holy Redeemer in 1749. Two years later he made his profession, and so he bound himself to do always that which seemed to him more perfect. St. Alphonsus considered him a miracle of obedience. He not only obeyed the orders of superiors when present, but also when absent knew and obeyed their desires. Although weak in body, he did the work of three, and his great charity earned for him the title of Father of the Poor. He was a model of every virtue, and so drawn to Our Lord in the tabernacle that he had to do violence to himself to keep away. An angel in purity, he was accused of a shameful crime; but he bore the calumny with such patience that St. Alphonsus said: "Brother Gerard is a saint. Father, there was no graver sin committed in the highest order, exorcism, prophecy, discernment of spirits, and penetration of hearts, bilocation, and with what seemed an unlimited power over nature, sickness, and the devils. When he accompanied the Fathers on missions, or was sent out on business, he could overcome all their obstacles by his missions. He predicted the day and hour of his death. A wonder-worker during life, he has continued to be the same since his death.

J. MAGNIER.

Gerard of Cremona, a twelfth-century student of Arabic science and translator from Arabic into Latin; b. at Cremona, in 1114; d. in 1187. The place and date of Gerard's birth are not given in any document prior to the fourteenth century. Tiraboschi, in his "Storia della letteratura Italiana", is at pains to refute the contention of some Spanish writers that Gerard was born, not at Cremona in Italy, but at Carmona in Spain. While conceding that Gerard spent a good many years at Toledo, Tiraboschi shows that Cremona and not Carmona is his birthplace. In fact, the MSS. of the "Chronicle" of the Dominicano Francisco Pipino, who flourished about the year 1300, we learn, besides the place and date of his birth and death, that he was an adherent of the rule of poverty. These regulations were confirmed, 28 November, 1336, by Benedict XII (1334-42); consequently Gerard was able to be at the chapter held at Cahors, 7 June, 1337, to obtain, in spite of the opposition of the able and powerful monks, the "Constitutiones Benedictine". Nevertheless, he was in danger of being removed from his position, nor did the statutes remain in force longer than the lifetime of Benedict XII and the period during which Gerard was general. The general chapter of Assisi abrogated, 1 June, 1345, the "Constitutiones Benedictine" and the since the time additions, the constitutiones of Narbonne (1260).

There is some truth in the assertion made as to Gerardus Odonis that he both resembled and imitated Brother Elias, the lax minister general second in succession from St. Francis of Assisi; indeed, he was often called the "Little Father of the Laterite". But this credit is, in union with the pope, zealously promoted Franciscan missions, constantly sending fresh
missionaries to Persia, Georgia, Armenia (1320); Malabar (1330), China and Tartary (1331); Bosnia (1340). In 1329 John XXII sent him to King Charles Robert of Hungary and to Ban Stephen of Bosnia for the purpose of bringing about the extermination of the heretics, largely Fatimaeans, in those countries. On 5 Sept., 1333, and 16 April 1334, Sancho, Archdeacon of Castille (Arnaldu de S. Michael) was appointed papal legate to make peace between the Kings of England and Scotland. The procurator of the Scotch king in Paris having reported, however, that his mission was not to be found in Scotland, John recalled the commission of the legates, 31 Oct., 1333. Gerardus Odonotius was also one of the commission of the university, on 18 Dec., 1333, the opinion of John XXII concerning the Visio beatifica, namely, that the saints do not enjoy the complete Beatice Vision until after the Last Judgment. The University of Paris was greatly agitated by the controversy, and the next day, 19 Dec., Philip VI called together twenty-nine professors at Vincennes to discuss the question. This assembly dissented from the opinion of the pope, as did also a second assembly which met 2 Jan., 1334. As is known, John XXII withdrew his opinion, 3 Dec., 1334. Gerardus Odonotius was also one of the commission of the master of theology which met by command of Benedict XIII from 4 July to 4 Sept., 1334, at Pont-Sorgues near Avignon, to discuss, under the pope's presidency, the question of the Visio beatifica. On 27 Nov., 1342, Benedict XIV appointed him Patriarch of Antioch and at the same time administrator of the Diocese of Catania, Sicily.

Apart from the "Constitutiones Benedictine," and the "Officium de stigmatibus S. Francisceci," still recited in the Franciscan Order and commonly attributed to Gerardus, the best known of his writings is his "Commentarius [Expositio] in Aristoteles Ethica." (P. V. Ramb, 1290). This brought him the honour later of being called Doctor Moralise. He also wrote on logic and a treatise entitled "Philosophia Naturalis," in which he is said to have apparently taught Atomism; another work was a "Commentarius in IV libros Sententiarum." Among his exegetical works are: "De figuris Biblicorum," and treatises on the Psalter, the First Epistle to the Corinthians, and the Epistle to the Galatians, besides "Sermones." In addition to taking severe measures against the adherents of the deposed Michael of Cesena, Gerardus addressed to the latter the writing "Quid nitida," to which, however, Cesena soon made a "Rebatement." He also wrote: "De theologis," in the monastery of St-Denis, near Paris, 29 March, 1711; educated by the Oratorians at Vendôme; became a Benedictine in the monastery of St-Méline, at Rennes, 11 Dec., 1649; studied theology in the monastery of Mont-S-Michel; ordained priest in 1665; and taught theology in the monasteries of Bourgeuil, St-Denis, and St-Beaujol-sur-Loire until 1663. His departure from the Scholastic method of teaching theology, and his leaning towards Jansenism, influenced his superiors to relieve him of his professional duties. In 1663 he was sent to the monastery of La Couture, near Le Mans, and three years later, to St-Germain-des-Prés, where he devoted six years (1666-1672) to the care of souls and to literary pursuits. In 1672 he was sent to the monastery of Argenteuil, and in 1675 he was appointed subprior of the monastery of Corbie. Here he openly opposed the encroachments of sixteen ecclesiastical and monastic affairs, and when it was known that he was the author of the second volume of "L'Abbé commendataire" (Cologne, 1674), a work which severely condemned the abuse of setting commendatory abbots over monasteries, the king condemned his arrest. (1675). He was tried in the hands of the law by fleeing to Brussels, thence to Holland, where he lived a few years under the assumed name of Augustin Kergre. In 1690 he returned to Brussels, and, in union with Quezel and other Jansenists, wrote numerous pamphlets in favour of Jansenism. On 30 May, 1703, he was arrested at the command of the Archbishop of Mechlin, who intended to speak of several notable persons of the place. Coins and a number of inscriptions prove that it was sometimes called Antioch on the Chrysorrhoea, the little river by which it is watered. In the Gospel (Matt., viii, 28; Mark, v, i; Luke, viii, 26, 37) there is question of the country of the Gerasans, but if this name is to be read instead, the four distinguishers or Gerasians on the reference is to another locality, near the lake of Tiberias. The prosperity of Gerasa, once considerable, dates from the first centuries of our era, its buildings date from the emperors of the second and third centuries. Its destruction was brought about by earthquakes and the Arab invasions. We know three Greek Bishops of Gerasa: Exarchius, Evagrius, Plancus, 451; Eneas, who built the church of St. Theodore in the sixth century. In 1121 Baldwin II attempted in vain to conquer it, and at the beginning of the thirteenth century the geographer Yakut informs us that it was no longer inhabited. In modern times, several thousand Tcherkeses have established themselves amid its ruins and have unfortunately destroyed most of the Greco-Roman monuments which time had spared. Until recently Djerash was the best preserved city of Roman antiquity and the one which afforded us the most exact idea of Roman civilisation. Its ramparts, with a partial preservation, are still to be seen; also a magnificent triumphal arch with three openings about 82 feet wide by 29 high, a "naumachia," or circus for naval combat; two theatres; the forum with fifty-five columns still standing; the great colonnade which crosses the city from north to south, and which still retains from 100 to 150 of its columns; several aqueducts; some propylae; a temple of the Sun, the columns of which are about 40 feet high, and several other temples, baths, etc. Greek and Latin inscriptions are very numerous among the ruins. The ramparts of the city cover a distance of about three miles.

Gerberon, Gabriel, a Benedictine of the Maurist Congregation; b. at St-Calais, Department of Sarthe, France, 12 Aug., 1628; d. in the monastery of St-Denis, near Paris, 29 March, 1711; educated by the Oratorians at Vendôme; became a Benedictine in the monastery of St-Méline, at Rennes, 11 Dec., 1649; studied theology in the monastery of Mont-St-Michel; ordained priest in 1665; and taught theology in the monasteries of Bourgeuil, St-Denis, and St-Beaujol-sur-Loire until 1663. His departure from the Scholastic method of teaching theology, and his leaning towards Jansenism, influenced his superiors to relieve him of his professional duties. In 1663 he was sent to the monastery of La Couture, near Le Mans, and three years later, to St-Germain-des-Prés, where he devoted six years (1666-1672) to the care of souls and to literary pursuits. In 1672 he was sent to the monastery of Argenteuil, and in 1675 he was appointed subprior of the monastery of Corbie. Here he openly opposed the encroachments of sixteen ecclesiastical and monastic affairs, and when it was known that he was the author of the second volume of "L'Abbé commendataire" (Cologne, 1674), a work which severely condemned the abuse of setting commendatory abbots over monasteries, the king condemned his arrest. (1675). He was tried in the hands of the law by fleeing to Brussels, thence to Holland, where he lived a few years under the assumed name of Augustin Kergre. In 1690 he returned to Brussels, and, in union with Quezel and other Jansenists, wrote numerous pamphlets in favour of Jansenism. On 30 May, 1703, he was arrested at the command of the Archbishop of Mechlin, who intended to speak of several notable persons of the place. Coins and a number of inscriptions prove that it was sometimes called Antioch on the Chrysorrhoea, the little river by which it is watered. In the Gospel (Matt., viii, 28; Mark, v, i; Luke, viii, 26, 37) there is question of the country of the Gerasans, but if this name is to be read instead, the four distinguishers or Gerasians on the reference is to another locality, near the lake of Tiberias. The prosperity of Gerasa, once considerable, dates from the first centuries of our era, its buildings date from the emperors of the second and third centuries. Its destruction was brought about by earthquakes and the Arab invasions. We know three Greek Bishops of Gerasa: Exarchius, Evagrius, Plancus, 451; Eneas, who built the church of St. Theodore in the sixth century. In 1121 Baldwin II attempted in vain to conquer it, and at the beginning of the thirteenth century the geographer Yakut informs us that it was no longer inhabited. In modern times, several thousand Tcherkeses have established themselves amid its ruins and have unfortunately destroyed most of the Greco-Roman monuments which time had spared. Until recently Djerash was the best preserved city of Roman antiquity and the one which afforded us the most exact idea of Roman civilisation. S. VAILHÉ.
give him over to his monastic superiors. Louis XIV, however, imprisoned him at Amiens (1703–1707) and at Vincennes (1707–1710). After retracing all his Jansenistic errors, Gerberon was set free, and returned to the monastery of St-Germain-des-Prés, 25 April, 1711. He died at the age of 79. He was the regent of the church, and died a repentant son of the Catholic Church.

Gerberon was one of the most prolific writers of the Maurist Congregation. Tassin (loc. cit. below) ascribes one hundred and eleven works to him, many of which, however, are spurious. Of the sixty-one works ascribed to him by de Latins (loc. cit. below), the following are the most important: "Apologia pro Ruperto Abbate Tuitensi" (Paris, 1699), in which he proves against Salmusius and other Protestants that Abbott Rupert of Deutz held the Catholic doctrine of the Real Presence; "Histoire générale du Jansénisme" (Amsterdam, 1700), 3 vols.; "Acta Marci Mercatoris" (Brussels, 1673); "Histoire de la Robe sans couture de N. S. Jésus-Christ, qui est révérée dans l'église des Bénédictins d'Argenteuil" (Paris, 1678). His chief Jansenistic work is entitled "Le Miroir de la Piété chrétienne" (Brussels, 1676). He also edited the works of St. Anselm and St. Anselmi opera omnia, neeom Eadmeri et Hugonis Cantuarii Historia Novorum et alia opera" (Paris, 1675).

MICHAIL OTT.

Gerbert, Martin, Prince-Abbot of Saint-Blaise, liturgist and musical writer; b. at Horb-on-the-Neckar, in the Black Forest, 12 August, 1720, by birth being entitled Baron von Hornau; d. in his monastery of Saint-Blaise, 13 May, 1793. He studied the humanities successively at Ebingen, Suabia, at Freiburg-im-Breisgau and at Klingenaug, and philosophy and theology at the Abbey of Saint-Blaise, whose prince-abbot marked his talents and undertook the direction of his studies, having in mind to make him his successor. Having entered at Saint-Blaise in 1730, he was ordained priest in 1744, and was almost immediately appointed professor of philosophy and theology. Besides, he fulfilled the duties of librarian. His first researches in liturgy and music date from this time. In the course of a sojourn in France and Italy, he made the acquaintance at Bologna of Martini, who was collecting materials for his "Histoire générale de la musique" and to whom he made known his own discoveries. Gerbert states that he was much surprised to learn of the existence of so extensive a literature on a special subject, but that his own studies led to the knowledge of many other works which he made known to Martini, with whom he kept up a correspondence.

In 1762 Gerbert announced through a prospectus his intention of writing a history of church music, and he laboured unceasingly at this task, despite the cares imposed on him by the absence of the Abbot of Saint-Blaise, of which he was named prince-abbot in 1764. The first volume was completed and the second much advanced when a fire destroyed the church, the library and a part of the manuscripts of Saint-Blaise (1768). Gerbert set to work once more, and the work appeared in 1774. The researches made necessary by the preparation had brought about the discovery of a number of manuscripts of the Middle Ages. Gerbert published more than forty of them in his "Scriptores de musica" (1784). Between whiles he published various writings, some of which are still of real importance, such as the "Lex Alemannicum", --in which, like Mabillon, Montfaucon, and many others, he shares with us the treasures he has discovered in the libraries of Germany, France, and Italy—and useful works on Rudolph I and the house of Hapsburg, on the history of Sweden, and the ancient liturgy of Germany.

List of works: "Martini Gerberti et Remigii Klee- sae XXIV Offertoriae Solemnia in festis Domini, B. V. M. et SS. operum" (in fol. Augsburg, 1747); Apparatus ad eruditionem theologiam (Saint-Blaise, 1754); "Iter Alemannicum, accedit Italicum et Gallicum (8th, Saint-Blaise, 1766); "Piaegeteae principum Austriae" (1768); "Codex epistolae Rudolphi I Romanorum regis" (Saint-Blaise, 1772); "De Cantu et Musica Saec. et imperii primum et usque ad presentem tempus" (2 vols. 4th, Saint-Blaise, 1774); "Taphographia principum Austriae, monumentorum domus Austriae comitum IV et ultimus" (2 vols. in fol., 1772); "Ve- tus liturgia Alemannica, dispositionibus previs, notis et observationibus illustrata" (2 vols. 4th, Saint-Blaise, 1776); "Monumenta veteris liturgiae Alemannici ex antiquis manuscriptis codicibus" (2 vols. 4th, Saint-Blaise, 1777-79); "Historia Silve Nigrae" (3 vols. 4th, 1783); "Scriptores ecclesiasticorum de musica sacrarum" (3 vols. 4th, Saint-Blaise, 1784); "De Rudolpho suevico comite de Rhinfelden, duce, rege, dux, ejus ejus familii" (4th, Saint-Blaise, 1785); "Observationes in Bertoldi seu Bernoldi, Constantiniensi presbyteri opuscula" (in the "Mon. res Aleman. illust." of Uffermann, 2 vols., 1792); "De sublimi in evangelio Christi junta divinam Verbi incarnarii ecclesiasticum" (8th, 1783).

MICHAEL OTT.

Gerbert, Olympe-Philippe, a French bishop and writer; b. at Poligny (Jura), 1798; d. at Perpignan (Pyrénées Orientales), 1864. He studied at the Académie and the Grand Séminaire of Besançon, also at St-Sulpice and the Sorbonne. Ordained priest in 1822, he joined Lemmenan at "La Chesnais" (1825) after a few years spent with Salinis at the Lyceum Henri IV. Although an enthusiastic admirer of Lemmenan he nevertheless accepted the papal Encyclcal "Mirari vos" of 15 Aug., 1832, and the "Singulari nos" of 13 July, 1834, which condemned the traditionalism of Lemmenan; and, after fruitless efforts to convert the master, he withdrew to the Collège de Juilly (1836). The years 1839-49 he spent in Rome, gathering data for his "Esquisse de Rome Chrétienne". Recalled by Monsieur Sibour, he became successively professor of sacred eloquence at the Sorbonne, Vicar-General of Amiens, and Bishop of Perpignan (1854). His episcopate was marked by the holding of a synod (1865), the reorganization of clerical studies, various religious foundations, and, above all, by the famous pastoral instruction of 1860 sur diverses erreurs du temps présent, which served as a model for the Syllabus of Pius IX.

Gerbert has been called the Fénelon of the nineteenth century. Besides, many articles in "Le Mémorial catholique", "L'Avenir", "L'Université catholique", and some philosophical writings ("Des doctrines
philosophiques sur la certitude”, Paris, 1826; “Sommaire des connaissances humaines”, Paris, 1829; “Coup d’oeil sur la controverse chrétienne”, Paris, 1831; “Précis de l’histoire de la philosophie”, Paris, 1834: under the names of Salinas and Soorbiac, all more or less tinted with Lamasism’s errors; he wrote the following: “Considérations sur le dogme générateur de la piété chrétienne” (Paris, 1829); “Vues sur la Pénitence” (Paris, 1836)—these two works are often published together; “Esquisse de Rome Chrétienne” (Paris, 1843), previously mentioned. In the two former books Gerbet was driven to the culmination of the Eucharist and Penance as admirably fitted to develop the affections—nourrir le coeur de sentiments—just as he uses the réalités visibles of Rome as symbols of her essence spirituelle. Saint-Beuve (Causeries de lundi, VI, 316) says that certain passages of Gerbet’s writings “are among the most beautiful and suave pages that ever honoured religious literature.” Gerbet’s “Mandements et instructions pastorales” were published at Paris in 1876.

De la Douceur, Gerbet, sa vie, ses œuvres et l’Ecole menaissienne (1870); L’Ecole menaissienne (Paris, 1881); Bremémond, Gerbet (Paris, 1897); Longhatte, Gerbet en Études littéraires (Paris, 1900). J. P. Sollier.

Gerbillon, Jean-François, French missionary; b. at Verdun, 4 June, 1654; d. at Peking, China, 27 March, 1707. He entered the Society of Jesus 5 Oct., 1670, and after completing the usual course of study at Louvain and the humanities for seven years his long-cherished desire to labour in the missions of the East was gratified in 1685, when he joined the band of Jesuits who had been chosen to found the French mission in China. Upon their arrival in Peking they were received by the Emperor for their services, and he was impressed by the reports of the returned Gerbillon and Bouvet at the Court. This famous monarch realized the value of the services which the fathers could render to him owing to their scientific attainments, and they on their part were glad in this way to win his favour and gain prestige in order to further the interests of the infant mission. As soon as they had learned the language of the country, Gerbillon with Pereyre, one of his companions, sent as interpreter to Nipchou with the ambassadors commissioned to treat with the Russians regarding the boundaries of the two empires. This was but the beginning of his travels, during which he was attached to the suite of the emperor. He made eight different journeys into Tartary. On one of these he was an eyewitness of the campaign in which Kang-Hi defeated the Eleuthes. On his last journey he accompanied the three commissioners who regulated public affairs and established new laws among the Tatar-Kalkas, who had yielded allegiance to the emperor. He availed himself of this opportunity to determine the latitude and longitude of a number of places in Tartary. Gerbillon was for a time in charge of the French college in Peking, and afterwards became superior-general of the mission. He enjoyed the special friendship and esteem of the emperor, who had a high opinion of his ability and frequently availed himself of his scientific and diplomatic services. He was withal a zealous missionary, and in 1692 obtained an edict granting the free exercise of the Christian religion. After the emperor’s recovery from a severe illness which he was supposed to have contracted while in Peking, he showed his gratitude by bestowing on them a site for a chapel and residence. Gerbillon was a skilled linguist. He was the author of several works on mathematics, and wrote an account of his travels in Tartary. These relations are valuable for the knowledge of the country, the customs of the people, and also for the details of the life of the missionaries at the Court. Among his works are “Éléments de Géométrie” (1689), “Géométrie pratique et théorique” (1690), “Éléments de philosophie”, “Relations de huit Voyages dans la Grande Tartarie”. A work entitled “Elementa Lingue Tartaricae” is also attributed to him.

Henry M. Brock.

Gerdi, Hyacinthe Sigimond, cardinal and theologian; b. at Samoëns in Savoy, 20 June, 1718; d. at Rome, 12 August, 1802. When fifteen years old, he joined the Barnabites at Annecy, and was sent to Rome to pursue his studies in the theologia moralis. He devoted his mind to the various branches of knowledge with great success, and attracted the attention of Archbishop Lambertini of that city, later Pope Benedict XIV. After his studies, he taught philosophy at Macerata, philosophy and moral theology at Turin, and became provincial of his order. At the suggestion of Benedict XIV, he was chosen preceptor of the Prince of Piedmont, afterwards Charles Emmanuel IV. Designated cardinal in pelle, in 1773, by Clement XIV, he was promoted to that dignity by Pius VI, in 1777, who called him to Rome and named him Bishop of Stibbert, consultant of the Congregation of the oriental books, and prefect of the Propaganda. After the invasion of Rome in 1798, he left the city and returned to his Abbey Della Chiusa. On the death of Pius VI he would probably have been elected pope at the consistory of Venice, in 1800, had not his election been vetoed by Cardinal Harsan in the name of the Emperor of Germany. He accompanied the new pope (Pius VII) to Rome, where he died in 1802.

His numerous works written in Latin, Italian, and French on divers subjects—dogmatic and moral theology, canon law, philosophy, pedagogy, history, physical and natural sciences, etc.; form twenty volumes in quarto (ed. Rome, 1806—1821). Among the most important may be mentioned: “L’Immortalité de l’âme démontrée contre Locke et défense du P. Malebranche contre ce philosophe” (Turin, 1747-48), 2 vols.; “Réflexions sur la théorie et la pratique de l’éducation contre les principes de J.-J. Rousseau” (Turin, 1765), reprinted in a new edition under the title “Histoire de l’Emile”; “Exposition des caractères de la vraie religion”, written in Italian (translated into French, Paris, 1770), etc. His works were written especially for the defence of spiritual philosophy against materialism, of supernatural religion against Deism, and of the supreme authority of the Pope against the inquisition and the Synod of Pistoia. A scholar of very extensive knowledge, a deep thinker, though some of his philosophical opinions, especially those concerning our knowledge of God, are not those generally accepted, a theologian of firm principles, he was also known as a man of great moderation in his counsels and of great charity in controversy.

Gerhard of Zülpchen (Zerbolt of Zülpchen); b. at Zülpchen, 1367; d. at Windesheim, 1398; a mystical writer and one of the first of the Brothers of the Common Life, founded by Gerhard Groote and Florentius Radewyns at Deventer, in the Netherlands. In that community of “plain living and high thinking” Gerhard was remarkable for his absorption in the sacred sciences and his utter oblivion of all matters of merely earthly interest. He held the office of librarian, and his deep learning in moral theology and canon law did the brethren of the order no small service in enabling them to meet the prejudice and opposition which their manner of life at first aroused. His best known works are
entitled "Homo quidam" and "Beatus vir"; the two are almost identical (De la Bigne, Bibliotheca Patrum, XXVI). Two other treatises on prayer in the mother-tongue and on reading the Scripture in the mother-tongue are attributed to him (Ullmann, Reformatoren vor der Reformation; and Hirsch in Herzog's Realencyklopädie, etc., gen. ed.). Ullmann and other Universalists have used Gerhard of Zutphen's zeal for propagating the vernacular Scriptures as proof to connect the Brothers of the Common Life with the German Reformers; but an examination of Gerhard's arguments, as quoted by them, reveals with how little foundation.

VINCENT SCULLY.

Gerhoh of Reichenberg, provost of that place and Austin canon, one of the most distinguished theologians of Germany in the twelfth century, b. at Polling, Bavaria, 1097; d. at Reichenberg, 27 June, 1169. His father held the office of Bishop of Moabburg and Hildeshamn. In 1119, Bishop Hermann of Augsburg called him as "scholasticus" to the cathedral school of that city; shortly afterwards, though still a deacon, he made him a canon of the cathedral. Gradually Gerhoh adopted a stricter ecclesiastical attitude, and eventually withdrew (1121) from the Simonian Bishop Hermann, and took refuge in the monastery of Raitenbuch in the Diocese of Freising. After the Concordat of Worms (1122) Bishop Hermann was reconciled with the legitimate pope, Callistus II, whereupon Gerhoh accompanied the bishop to the Lateran Council of 1123. On his return to Gerhoh fled to Germany to defend his cause, and with his father and two half-brothers joined the Austin canons at Raitenbuch (1124).

Bishop Kuno of Ratibon ordained him a priest in 1126, and gave him the parish of Cham, which he later resigned under threats from Hohenstaufen followers whom he had offended at the Synod of Würzburg in 1127. He returned to Ratibon, and in 1132 Archbishop Conrad I of Salzburg appointed him provost of Reichenberg, to the spiritual and material advantage of that monastery. Archbishop Conrad sent him several times on special missions to Rome; in 1143 he also accompanied the Archbishop to Rome. Gerhoh was a student of Arnold of Brescia, Conrad Guido of Santa Maria in Porticu on his embassy to Bohemia and Moravia. Eugene III (1145-53) held Gerhoh in high esteem; his relations with the successors of that pope were pleasant. On the occasion of the disputed papal election in 1159 (Alexander III and Victor IV) Gerhoh sided with Alexander III, but only after long hesitation; for this action the imperial party looked on him with hatred. For refusing to support the antipope, Archbishop Conrad was condemned to banishment in 1166, and the monastery of Reichenberg repeatedly attacked; Gerhoh himself was forced to take refuge in flight, and died soon after his return to Reichenberg. Gerhoh was a reformer in the spirit of the Gregorian ideas. He aimed particularly, perhaps with excessive zeal, at the reform of the clergy; it seemed to him that this object could not be attained unless the community life were generally adopted.

But reformatory views, and his ecclesiastical policy are set forth in the following works: "De edificio Dei seu de studio et cura disciplinae ecclesiasticae" (P. L., CXCIV, 1187-1336; Sackur, 136-202); "Tractatus adversus Simoniacos" (P. L., 1335-1372; Sackur, 239-272; see also Jashar in Mittheilungen der Insti- tution Gottfried von Reichenberg, Geschichtsologisch, 1885, 254-69); "Liber epistolaris ad Innocentium Pont. Max. de eo quid distet inter clericos seceu- lares et regulares" (P. L., CXCIV, 1375-1420; Sackur, 202-239); "De novitatisbus hujus seculi ad Adrianum IV Papam" (selections in Griaar and in Sackur, 288-304); furthermore, the important work written in 1162, "De investigazione Anti-Christi" libri III (selections in P. L., CXCIV, 443-460; see also Stülm in Archiv für österreichische Geschichte, XXII (1865), 127-188; selections in Selections from Fathers and Books, 1 (1889), complete in Sackur, 304-395); "De schismatico ad cardinale" [Mühlbacher in Archiv für österreichische Geschichte, XLVII (1871), 355-382; Sackur, 399-411]; his last work is the "De quarta vigilia noctis" [Österreichische Vierteljahresschrift für kath. Kirchengeschichte, X (1872), 563-600]. His principal work he left unfinished, "Commentarius in Psalmos" (P. L., CXXIII, 619-1814; CXCIV, 1-1066); it offers much interesting material for contemporaneous history. This is particularly true of his commentary on Ps. iv, that appeared separately as "Liber de corrupto Ecclesiae statu ad Eugenium III Papam" (P. L., CXCIV, 9-120; Sackur, 439-92). We are indebted to him also for a number of polemical works and letters against the Christological errors of Abelard, Gilbert de la Porre, and Bishop Eberhard of Bamberg; others deal with the errors of Folmar, the renunciation of Trifrenstein, on the subject of the Holy Eucharist.

The genuineness of the "Vita beatorum abbatum Formbacensium Berengeri et Wirtonis, O.S.B.", generally ascribed to Gerhoh, is denied by Wattenbach. The Migne edition of Gerhoh's works is faulty and incomplete. The literal and historical importance of these works is of importance for the study of the history of that period were edited by Sackur in the "Monumenta Germaniae Historica: Libellii de litterae imperatorum et pontificum", III (Hanover, 1897), 131-525, and also by Seebeliger, "Gerhohi Opera adicue inedita" (Linz, 1875). Scully, Historical Studies, p. 145, "Die Werke des Propstes Gerhoh I. von Reichenberg in Denkschriften der kaiserlichen Akademie der Wissenschaften in Wien, 1 (1849); Bacher, Propst Gerhoh I. von Reichenberg, ein deutscher Reformator des XII Jahrhunderts in Österreichische Vierteljahresschrift für kath. Theologie, IV (1885), 10-113; Dilio, De Gerhohi proposito Reichenbergensi (Berlin, 1867); Noll, Gerhoh von Reichenberg (Leipzig, 1881); Wettkamp in Kirchengeschichte, a. w.; Wetter, Deutschlandische Geschichtsquellen im Mittelalter, 4th ed., II (Berlin, 1894), 308-314; and in Allgemeine Deutsche Biographie, XIII, 788 sqq.; Vildhau, Handbuch der Quellen- quellen zur deutschen Geschichte (Amsterdam, 1886); Fottkamp, Bibliotheca historica multa, 2nd ed., I (Berlin, 1890), 503 sqq.; Hunter, The Writings of Arnold of Brescia, Cambridge, (1893); porch, Geschichtsquellen des Mittelalters, 1155 sqq. Details are treated in Bacher, Geschichte der deutschen National-, Provinzial und vorsorglich in Deutschland, Reuss, Braino von Ramberg in Trifrenstein, 1183-1188, 532-552; Ruber, Gerhoh von Reichenberg and his ideas over the Verhältnisse zwischen Orient und Kirche in Forschungen zür deutschen Geschichte, XXIV (Gottingen, 1889), 1-80; also see XXV (1885), 566-561; Geiser, Die Inventar- sachen nach angebrachten Schriften Gerhoh's von Reichenberg in Zeitschrift für kath. Theologie, IX (1885), 536-533.

Gerlandus. See Garland, John.

Germain, Saint, Bishop of Auxerre, b. at Auxerre c. 380; d. at Ravenna, 31 July, 448. He was the son of Rusticus and Germanilla, and his family was one of the noblest in Gaul in the latter portion of the fourth century. He received the very best education provided by the distinguished schools of Arles and Lyons, and then went to Rome, where he studied eloquence and civil law. He was in the tribunal of the prefect for some years with great success. His high birth and brilliant talents brought him into contact with the court, and he married Eustachia, a lady highly esteemed in imperial circles. The emperor sent him back to Gaul, appointing him as bishop of Auxerre, where he lived in peace and quiet in the Gallic provinces. He resided at Auxerre and gave himself up to all the enjoyments that naturally
fall to his lot. At length he incurred the displeasure of the bishop, St. Amator. It appears that Germain was accustomed to hang the trophies of the chase on a certain tree, which in earlier times had been the scene of pagan worship. Amator remonstrated with him in vain. One day when the duke was absent, the bishop went to the tree, cut down the tree, and brought the trophies home. Fearing the anger of the duke, who wished to kill him, he fled and appealed to the prefect Julius for permission to confer the tonsure on Germain. This being granted, Amator, who felt that his own life was drawing to a close, returned. When the duke came to the house, Amator caused the doors to be barred and gave him the tonsure against his will, telling him to live as one destined to be his successor, and forthwith made him a deacon.

A wonderful change was instantly wrought in Germain, and he accepted everything that had happened as the Divine will. He gave himself up to prayer, study, and works of charity, and, when in a short time Amator died, Germain was unanimously chosen to fill the vacant see, being consecrated 7 July, 418. His splendid education now served him in good stead in the government of the diocese, which he administered with wisdom and piety. He distributed his goods among the poor, and practised great austerities. He built a large monastery dedicated to Sts. Cosmas and Damasin on the banks of the Yonne, where he was wont to retire in his spare moments. In 429 the bishops of Britain sent an appeal to the continent for help against the Pelagian heretics who were corrupting the faith of the island. St. Prosper, who was in Rome in 431, tells us in his Chronicle that Pope Celestine commissioned the Church in Gaul to send help, and Germain and Lupus of Troyes were deputed to cross over to Britain. On his way Germain stopped at Nanterre, where he met a young child, Genevieve, destined to become his nun. He laboured to preserve the early faiths. St. Patrick, Apostle of Ireland, tells us that he formed one of St. Germain’s suite on this occasion. Tradition tells us that the main discussion with the representatives of Pelagianism took place at St. Alban’s, and resulted in the complete discomfiture of the heretics. Germain remained in Britain for some time preaching, and established several schools for the training of the clergy. On his return he went to Arles to visit the prefect, and obtained the remission of certain taxes that were oppressing the people of Auxerre. He constructed a church in honour of St. Alban about this time in the Roman city.

In 447 he was invited to revisit Britain, and went with Severus, Bishop of Trèves. It would seem that he did much for the Church there, if one can judge from the traditions handed down in Wales. On one occasion he is said to have aided the Britons to gain a great victory (called him the battle-decisive, Allobrigae the Alleluia victory) over a marauding body of Saxons and Picts. On his return to Gaul, he proceeded to Armoric (Brittany) to intercede for the Armoricians who had been in rebellion. Their punishment was deferred at his entreaty, till he should have laid their case before the emperor. He set out for Italy, and reached Milan on 17 June, 448. Then he journeyed to Ravenna, where he interviewed the empress-mother, Galla Placidia, on their behalf. The empress and the bishop of the city, St. Peter Chrysologus, gave him a royal welcome, and the pardon he sought was granted. While there he died on 31 July, 450. His body was brought to Paris. One of the later bishops of Auxerre and interred in the Oratory of St. Maurice, which he had built. Later the oratory was replaced by a large church, which became a celebrated Benedictine abbey known as St. Germain’s. This tribute to the memory of the saint was the gift of Queen Clothilda, widow of Clovis. One of the later bishops of the Bald had the shrine opened, and the body was found intact. It was embalmed and wrapped in precious cloths, and placed in a more prominent position in the church. There it was preserved till 1567, when Auxerre was taken by the Huguenots, who desecrated the shrine and cast out the relics. It has been said that the relics were afterwards picked up and placed in the Abbey of St. Marion on the banks of the Loire, but the authority of the tradition is uncertain. The church has never been canonically recognized. St. Germain was honoured in Cornwall and at St. Albans’s in England’s pre-Reformation days, and has always been the patron of Auxerre.

GERMAIN
Saint, Bishop of Paris; b. near Autun, Saône-et-Loire, c. 496; d. at Paris, 29 May, 576. He was the son of Eleuthерius and Eusebia. He studied at Avallon and also at Luzy under the guidance of his cousin Scapillon, a priest. At the age of thirty-four he was ordained by St. Agathon of Auxerre, and became Abbot of Saint-Symphorien near that town. His characteristic virtue, love for the poor, manifested itself so strongly in his alms-giving, that his monks, fearing he would give away everything, rebelled. As he happened to be in Paris, in 555, when Bishop Eusebius died, Childebert kept him, and with the unanimous consent of the clergy and people he was consecrated to the vacant see. Under his influence the king, who had been very worldly was reformed and led a Christian life. In his new state the bishop continued to practise the virtues and austerities of his monastic life. Of his labours against the evils caused by the incessant wars and the licence of the nobles. He attended the Third and Fourth Councils of Paris (557, 573) and also the Second Council of Tours (566). He persuaded the king to stamp out the pagan practices still existing in Gaul and to forbid the excess that accompanied the celebration of most Christian festivals. Shortly after 540 Childebert making war in Spain, besieged Saragossa. The inhabitants had placed themselves under the protection of St. Vincent, martyr. Childebert learning this, spared the city and in return the bishop presented him with the saint’s stole. When he came back to Paris, the king caused a church to be erected in the suburbs in honour of the martyr to receive the relic. Childebert fell dangerously ill about this time, at his palace of Celles, but was miraculously healed by Germain, as is attested in the king’s letters-patent bestowing the lands of Celles on the church of Paris, in return for the favour he had received. In 588 St. Vincent’s church was completed and dedicated by Germain, 23 December, the very day Childebert died. Close by the church a monastery was erected. Its abbots had both spiritual and temporal jurisdiction over the suburbs of St. Germain till about the year 1670. The church was frequently plundered and set on fire by the Normans in the ninth century. It was rebuilt in 1014 and dedicated in 1103 by Pope Alexander III.

Childebert was succeeded by Clotaire, whose reign was short. At his death (561) the monarchy was divided among his four sons, Charibert becoming King of Paris, Clothilde of Troyes, Sigebert of Soissons and Childebert of Angoulême. At this time Germain was forced to excommunicate him in 568 for his immorality. Charibert died in 570. As his brothers quarrelled over his possessions the bishop encountered great difficulties. He laboured to establish peace, but with little success. Sigebert and Childebert, instigated by their sisters, Michaela and Ado, infamous murderers of Fredegonde, went to war, and Chilperic being defeated, Paris fell into Sigebert’s
Germaine. Germain wrote to Bruneau (his letter is preserved) asking her to use her influence to prevent further war. Siegbert was obdurate. Despite Germain's warning he set out to attack Chilperic at Tours, wither he had fled, but Fredegunde caused him to retreat. After the death of Vital in 575, Germain himself died the following year before peace was restored. His remains were interred in St. Symphore's chapel in the vestibule of St. Vincent's church, but in 754 his relics were solemnly removed into the body of the church, in the presence of Pepin and his son Charles, then a child of seven. From that time the church became known as that of St. Germain-des-Prés. In addition to the letter mentioned above we have a treatise on the ancient Gallican Liturgy, attributed to Germain, which has been published by Martinei in his "Thesaurus Novus Anecdotorum". St. Germain's feast is kept on 29 May.

A. A. MacEwan.

Germaine Cousin, Saint, b. in 1579 of humble parents at Pibrac, a village about ten miles from Toulouse; d. in her native place in 1601. From her birth she seemed marked out for suffering; she came into the world with a deformed hand and the disease of scrofula and was yet an infant when she was opened with a knife. From that time the church became known as that of St. Germain-des-Prés. In addition to the letter mentioned above we have a treatise on the ancient Gallican Liturgy, attributed to Germain, which has been published by Martinei in his "Thesaurus Novus Anecdotorum". St. Germain's feast is kept on 29 May.

She was gifted with a marvellous sense of the presence of God and of spiritual things, so that her lonely life became a source of light and blessing. To poverty, bodily infirmity, the rigours of the seasons, the lack of affection from those in her own home, she added voluntary mortifications and austerities, making bread and water her daily food. Her love for Jesus in the Blessed Sacrament and for His Virgin Mother was the secret of her strength. She practised the Holy Sacrifice; when the bell rang, she fixed her sheep-hook or distaff in the ground, and left her flocks to the care of Providence while she heard Mass. Although the pasture was on the border of a forest infested with wolves, no harm ever came to her flocks.

She is said to have practised many austerities as a reparation for the sacrileges perpetrated by heretics in the neighbouring churches. She frequented the Sacraments of Penance and the Holy Eucharist, and it was observed that her piety increased on the approach of every feast of Our Lady. The Rosary was her only book, and her devotion to the Angelus was so great that she would fall on her knees at the sound of the bell, even though she heard it when crossing a stream. Whenever she could do so, she assembled the children of the village around her and taught them to instil into their minds the love of Jesus and Mary. The villagers were inclined at first to treat her piety with merriment, but she never divulged her secrets. Her signal favours made her an object of reverence and awe. In repairing to the village church she had to cross a stream. The ford in winter, after heavy rains or the melting of snow, was at times impassable. On several occasions the swollen waters were seen to open and afford her a passage without wetting her garments. Notwithstanding her poverty she found means to help the poor by sharing with them her allowance of bread. Her father at last came to a sense of his duty, forbade her stepmother henceforth to treat her harshly, and wished to give her a place in the home with the other children, but she begged to be allowed to remain in the humble position. At this point, when men were beginning to realize the beauty of her life, God called her to Himself. On the first Sunday of October in 1601, her father finding that she had not risen at the normal hour went to call her; he found her dead on her pallet of vine-twigs. She was then twenty-two years of age.

Her remains were buried in the parish church of Pibrac in front of the pulpit. In 1644, when the church was removed on account of its repairs, the body of Germaine was discovered fresh and incorrupt, apparently preserved, and miraculously raised almost to the level of the floor of the church. It was exposed for public view near the pulpit, until a noble lady, the wife of François de Beauregard, presented a thanks-offering a casket of lead to hold the remains. She had been cured of a malignant and incurable ulcer in the breast, and her infant son whose life was despaired of was restored to health on her seeking the intercession of Germaine. This was the first of a long series of wonderful cures wrought at her relics. The leaden casket was placed in the sacristy, and in 1661 and 1700 the remains were viewed and blessed by the vicars-general of Toulouse, who have left testamentary dispositions of the fact. Expert medical evidence deposied that the body had not been embalmed, and experimental tests showed that the preservation was not due to any property inherent in the soil. In 1784, however, a movement to get her mother's relics removed was made, with the intention of transporting them to the church of Germaine, but it fell through owing to accidental causes. In 1793 the casket was desecrated by a revolutionary tinsmith, named Toulou, who, with three accomplices took out the remains and buried them in the sacristy, throwing quicklime and water on them. After the Revolution, her body was found to be still intact save where the quick-lime had done its work.

The private veneration of Germaine had continued from the original finding of the body in 1644, supported and encouraged by numerous cures and miracles. The cause of beatification was resumed in 1850. The documents attested more than 400 miracles or extraordinary graces, and thirty postulatary letters from archbishops and bishops in France besought the beatification from the Holy See. The miracles attested were cures of every kind (of blindness, congenital and resulting from disease, of hip and spinal trouble), assisted daily by the distressed community of the Good Shepherd at Bourges in 1845. On 7 May, 1854, Pius IX proclaimed her beatification, and on 29 June, 1867, placed her on the canon of virgin saints. Her feast is kept in the Diocese of Toulouse on 15 June. She is represented in art with a shepherd's crook or with a distaff; with a watchdog, or a sheep; or with flowers in her apron.

C. Mollett.

German Gardiner, Blessed, last martyr under Henry VIII; date of birth unknown; d. at Tyburn, 7 March, 1544; son of Stephen Gardiner, and an able defender of the old Faith, as his tract against John Frith (dated 1 August, 1538) shows. During the years of fiery trial, which followed, we hear no more of him than that "he was stirred up to courage" by the examples of the martyrs, and especially by More, a layman like himself. His witness was given eight years later, under remarkable circumstances. Henry VIII was becoming more severe upon the fast-multiplying heretics. Cranmer fell under suspicion, and Gardiner was (or was thought to have been) employed in drawing up a list of the heresies of the Faith. Then the religion of the religious depot changed again, and the Catholic was sacrificed in the heretic's place. Still he was the last victim, and Henry afterwards became even more
hostile to Protestantism. Gardiner’s indictment states plainly that he was executed for endeavouring “to deprive the King of his dignity, title, and name of Supreme Head of the English and Irish Church”, and his constancy is further proved by this circumstance, that Thomas Haywood, who had been condemned with him, was afterwards pardoned on recanting his opinions. His other companions at the bar were Blessed John Larka, priest, whom Blessed Thomas More had presented to the rectory of Chelsea (when he himself lived in that parish), and also the Ven. John Ireland, who had once been More’s chaplain. They suffered the death of traitors at Tyburn.

**Germania**, a titular see in the province of Ephraemensis and the patriarchate of Antioch; incorrectly called Germanicia and located in Byasaene, Africa. An official document of the Propaganda, the “Catalogo dei vescovati titolari” for 1884 (no. 228, 10) expressly states that the see is Germanica in Ephraemensis. Lequien (Oriens christ., Paris, 1740, II, 939) names five Greek bishops of this city, among them the Arian Eudoxius, future Bishop of Antioch and Constantinople. In the same year (11, 1469) four Jacobite bishops, and at least eighteen others are known from the eighth to the thirteenth century (Revue de l’Orient Chrétien, 1901, 200), if Germanica be considered identical with Maraš, which has not been ascertained. It is customary to consider these two cities as identical, but the texts collected by Müller, in his edition of the “Geographia” (667-967), are so contradictory that it is difficult to arrive at any conclusion. Müller prefers to locate Germanica in the neighbouring ruins of Altum-Tash-Kalé. If Germanica and Maraš are one, this industrial city, whose climate is very healthy, is situated in a sanjak of the vilayet of Aleppo. It numbers 32,000 inhabitants, about 15,000 of whom are Catholics, comprising Melchites, Armenians, Chaldeans and Latins; 22,000 are Musulmans. The remainder are either schismatic Christians or Jews.

**Germanicopolis**, a titular see in the province of Isauria, suffragan of Seleucia. The city took its name from Germanicus, grandson of Augustus. Four of its bishops during the Byzantine government: Tyrannus, 451; Eustathius, 787; Basil, 878 (Lequien, Or. christ., II, 1027); and Bisulas in the sixth century (Brooks, Sixth Book of the Letters of Severus, 13, 26, 80). The crusaders sustained a great defeat near the city in 1098. It then passed into the power of the Armenian dynasty of the Rupiensians, who called it Germanicopolis, whence is derived the present name of Ermenek. The Turks took possession of it in 1228. It is situated at a height of 1362 feet, in a caza of the vilayet of Adana, and numbers 6500 inhabitants. The ruins of many Roman monuments and a stronghold are still to be seen on the mountain.

**Germania** is the beginning of German-American history. These early immigrants founded Germantown, Pennsylvania, where they soon built themselves a church and established a school, taught by Pastorius, who wrote for it, and published, a primer, the first original school-book printed in Pennsylvania. To this place came the German settlers directly after their landing; from it went out the settlers to Montgomery, Lancaster, and Berks Counties, among them, the so-called Rosicrucians (settled near Germantown), a colony of German Friends, Quaker converts made by William Ames and visited by Penn (founded Cresheim, from Kreisheim near Worms), and the Dunkers (Conestoga, Ephrata). From these early Pennsylvania settlers and their descendants many Americans of note have sprung, as Bayard Taylor, James Lick, Charles Vezes, John Fritz, John Wanamaker, Charles M. Schwab, and Henry C. Frick.

In 1707, a small band of Lutherans, from the Palatinate, embarked for America. They landed at Philadelphia and settled in what is now known as Morris County. In the spring of the following year, another company of fifty-two Palatines, joined by three Holsteiners, went to England and appealed to Queen Anne, praying for transportation to America. The majority of these men were farmers and one was a Hugenot clergymen; among them were Colonies in the winter of 1709, they were settled in the district then known as Quoемaick Creek and Thankskamir (part of the territory of the present Newburgh). Another, and far more extensive, migration took place in the same year and the following; about three thousand Palatines landed in America, by way of England. The severity of the winter of 1708–09 seem to have been the chief cause of this exodus. One company, under Christopher de Graffenried and Lewis Michell, settled at the junction of the Neuse River and the Trent (North Carolina) and in the neighbouring country. This colony included a considerable number of Swedes, and to their first settlement they gave the name, New Bern, in memory of the native city of the two Swiss partners, de Graffenried and Michell. Another company of Germans was settled about the same time, by Governor Spotwood, at Germanna in Virginia, whither, a little later, many of those who had established themselves in North Carolina are said to have removed. Some ten or fifteen years after Spotwood’s retirement to Germanna, a company of Germans came into Virginia from Pennsylvania, doubtless Palatines from Berks County. They settled in the lower Shenandoah Valley and purchased the town of Strasburg, just over the mountain from Germanna.

By far the largest expedition of Palatines left the shores of England towards the end of January, 1710. They were settled on the Hudson (Rhinebeck, Germantown, Newburgh, West Camp, Saugerties, etc.), those many afterwards removed to the Schoharie Valley (Blenheim, Obersweiser Dorp, Brunsdorf, Dorp, etc.); the Government, however, refused to recognize their title to the Schoharie lands, and some of them at last migrated in disgust to the Mohawk Valley, where their increase and the stream of German immigration that followed made the Mohawk for thirty miles, a German river (Manheim, Oppenheim, Newkirk, German Flats, Herkimer, etc.). But the greater portion removed from Schoharie in 1723 to Pennsylvania, where Governor Keith, on hearing of their afflictions and unrest, offered them an asylum from all persecution. Previously to this migration from New York to Pennsylvania, the Germans had sailed directly to the latter territory, and so large was the Palatine element in these and the following immigrations that the natives of all other German States, coming with them, were called by the same name. Between 1720 and 1730 the German immigration to Pennsylvania became so large as to be looked
upon by the other settlers with serious misgivings; Logan, Penn's secretary, suggested the danger of the province becoming a German colony, as the Germans "settled together, and formed a distinct people from His Majesty's subjects". As early as 1739, a German newspaper was published at Germantown, and another appeared at Philadelphia in 1743. The Germans maintained an important and active life in Pennsylvania, usually uniting with the Quakers, and forming with them a conservative peace party. In 1734, the Schwenkfelders, followers of Casper Schofield, came to Pennsylvania and settled along the Perkiomen, in Montgomery County. About the same time, another group of Germans established themselves near Frederick, Maryland, and between South Mountain and the Conococheague.

The first German settlement in South Carolina was in 1731, at Parris Island on the Savannah. In 1734 Lutherans from Salsburg founded Ebenezer, the first settlement in Georgia. Seven years later, there were about 1200 Germans in Georgia. By the middle of the eighteenth century the mountain counties of North Carolina had numerous German settlements. Meantime, the Moravians, who in 1738 had settled in Georgia, had left that colony and secured a tract of land in Pennsylvania, to which they gave the name of Pennsylvania. At the same time, the Zinzendorfs and their followers established themselves along the Delaware.

The "German Creoles" of Louisiana are descendants of these early colonists.

During the war of the Revolution, thirty thousand German soldiers fought under the British flag. They had been sold to England by the petty princes of Germany, those "brokers of men and sellers of souls", as one of these soldiers rightly styled them. As Hessians furnished more than any other German State (twelve thousand) all these soldiers were called Hessians. Over one third of the thirty thousand never returned to Europe; some had died; many had deserted to Washington's army, "coming over in shoals", as Gates wrote in 1777; many thousands settled in the newly created States.

On the eve of the Revolution there were fully a hundred thousand Germans in Pennsylvania. Their number was increased during the next fifty years, since the great immigration period did not begin until about the year 1840. Among those who came to the United States before 1830 was Franz Lieber, accompanied by his two friends, Professors Carl Beck and Carl Follen. For nearly half a century Lieber was one of the chief figures in the German public questions. The year 1848 brought to our shores those thousands of political fugitives who belonged to the most educated of the German nation.

To mention several, merely as typical of the rest, among these "Forty-Eighters" were Carl Schurz, Friedrich Hecker, Franz Sigel, Oswald Gottendorfer, Friedrich Kapp, Wilhelm Rapp, Gustav von Struve, and Lorenzo Brentano. Soon the number of German immigrants grew enormously, averaging over 800,000 for each of the six succeeding decades. They did not, however, settle in the Eastern States only, but the majority proceeded to the Middle West, whither many of the Germans, who had already been very numerous on the frontiers, had removed as soon as the new country was opened to colonization. Owing to prosperity in the Fatherland, German immigration began to decline in the early nineties. During the period subsequent to 1848 the Germans settled chiefly in the South; New York, Pennsylvania (especially the western parts), Maryland, Ohio, Indiana, Illinois, Michigan, Wisconsin, Iowa, Nebraska, Missouri, Minnesota, California, Louisiana, Texas, North Dakota. They were never attracted to the New England States until about the middle of the nineteenth century. Even now New Hampshire, Vermont, and Maine have practically no German population; in Massachusetts there are very few except around Boston. According to the twelfth census, taken in 1900, there was in that year, a German-born population of 2,663,418 in the United States (about three millions from Germany and German Austria). Since 1900 about 250,000 more have come over. To these the descendant of the settlements in the earliest periods down to our time, and the large number of people of German descent who can now hardly be recognized as Germans, owing to the fact that they have assumed English names, it is safe to say that there are at present (1906) fully twelve million persons of German birth or descent in the United States.

The early German settlers were mostly farmers in their old country, and it was but natural that, after their arrival in the United States, they should have chosen the same occupation. There is no need of pointing out the merits of the German farmers, since those merits have been generally admitted in Pennsylvania, the Mohawk Valley, and, later, the Middle West. In trade, industry, and commerce the Germans in the United States are second to none. Men like Spreckels, Havemeyer, A. Busch, Fred. Pabst, Henry Miller, and Henry C. Frick, stand among the pillars of American industry. Rockefeller is proud of being a German, and the German emanates from Alzey, the Astors from Walldorf near Heidelberg, the Iselins from Switzerland. The largest lumber-yard in the world, is owned by Fritz Weyerhaeuser, a native of Hesse. The Roeblings are still prominent in their line of industry. Prominent as bankers are those bearing German names.

But more important, though less known, is the army of skilled mechanics in all different branches, designers, lithographers, etc., who, in their sphere, have made the German name honoured and respected. The Germans are known to be a hardworking, thrifty people, and, as a result, they are generally prosperous and pacified. Americans have learned that wherever the Germans settle, prosperity and culture are pretty sure to follow.—What the Germans do, they do well", has become a common saying among their neighbours. Puritanism never gained a foothold among the Germans. Although they cannot be said to have a public aversion, they are fond of the quiet joys and amusements of social life, witness their many societies, which combine beneficial objects with recreation and amusement. Their fondness for children and family life is well known; as a rule they have large families. The industry and carefulness of the German are proverbial.

While there have not been any great political leaders among the Germans, with the exception, perhaps, of Carl Schurz, it cannot be denied that their influence on the political development of the country has been on the whole a very wholesome one. As adherents of healthy and vigorous conservatism in politics, they are universally respected. Though anxious to preserve their language and customs, they have given ample proof of their loyalty to the land of their choice. The share taken by the Germans in the war of the United States, was by no means limited to the war of the Revolution and the Civil War of 1861-65. From the very beginning of their settlement in this country, they always stood ready to take up arms in its defence. The early Germans of Pennsylvania and New York, responded freely to the summons to defend their new country against the French and their allies, the Indians. They were freely disposed to make the sacrifice of life in the cause of liberty in the War of the Revolution. The names of Generals de Kalb, F. W. A. Steuben, F. W. de Woedke, J. P. G. Muehlnberg, and George Weedon will always be mentioned with honour, among those who established the liberties of the country. Unquestionably the ablest of them was General Steuben, the impetuous warrior who took a
mob and hammered it into an army”. Nor should we forget to cite the name of Herkimer, than whom no braver man fought in the War for Independence. He was the son of a Palatine immigrant, and in the battle of Oriskany “of all the battles of the Revolution, the most obstinate and murderous”—those whom Herkimer led were largely Palatines. To them and their leader belongs largely the credit of the possible the victory of Saratoga, by which the struggle for the Hudson was ended, and the vital union of the northern Colonies secured.

The Germans also did their duty in full in the War of 1812 and in the Mexican War. What they did to keep the Confederacy together can be seen in an article by General Franz Sigel, which was published at St. Louis after his death. The General calls attention to the historical fact, that, three days after the surrender of Fort Sumter, when the City of Washington was in imminent peril of falling into the hands of the Confederates, this catastrophe was prevented by the arrival of a detachment of infantry and cavalry from Pennsylvania, the five companies of which were chiefly composed of Germans, both from the older and from the more recent immigrant stock. Again, when St. Louis was in extreme danger of falling into the hands of the Confederates it was four regiments of voluntary German volunteers under command of Sigel that surrounded the camp of the Confederates and made them prisoners. There were, during that war, not fewer than 176,767 Germans in the United States Army. Of the more than 5,000 officers of the German contingent, the following may here be mentioned: the exiled popular leader Friedrich Hecker, who was one of the first to form a volunteer regiment, Gustav von Struve, General Blanken, General Osterhaus, Jos. Fickler, Nepomuk Katzienmayer, General Alexander von Schmippelningen, General Max Weber, General Sigel, and Captain Albert Sigel, a brother of the General, August Willis, the commander of a regiment from Indiana, and especially General Carl Schurz, who commanded the eleventh corps at the battle of Gettysburg. It is deserving of mention that among the Germans, the advocates of the abolition of slavery were always prominent. The first German settlers in this country, were the signers of the first anti-slavery petition in America (1838).

Although the first German colonists themselves, for the most part, had no higher education than what was to be acquired in the German village schools of that time, they considered it their duty to establish schools for their children. They hired teachers over with them. School attendance was always looked upon as a serious matter, almost as serious as the teaching of religion, which was combined with elementary instruction, so that German colonies thus paved the way for compulsory education. Men like Muehlenberg and Schlatter did much in the way of improving the schools. The development of German literature in America, including thousands of publications, went hand in hand with this progress. The first German Bible published in the New World appeared in 1743, forty years before an English Bible was printed in America. The “Public Academy of the City of Philadelphia”, now the University of Pennsylvania, is the first American school into which German was introduced. Gradually the language was introduced into the public schools of cities with a large German population, and numerous German private schools were established in their midst of the country. And after educated Americans had become acquainted with German educational methods, German literature, and German science, either directly by attending German schools of learning, or indirectly from France through England, they enthusiastically advocated educational reform based upon the German models. It is no exaggeration to speak of a gradual “Germanization” of most of the greater American colleges. “Although Great Britain is generally regarded as the mother of the United States, Germany has, from an intellectual standpoint, become more and more the second mother of the American Republic. More than any other country, Germany has made the universities and colleges of America what they are today—a powerful force in the development of American Civilization” (Andrew D. White).

B. THE GERMAN CATHOLICS IN AMERICA. A certain proportion of the Palatines who went to England were of the Catholic Faith, but they were not allowed to proceed to the American colonies, neither was the English government willing to let them remain in residence in England. They were therefore returned under government passports to the Palatinate. But of those who came later and directly to America, undoubtedly, a considerable number were Catholics. In 1741 the German Province of the Society of Jesus, sent out two priests to minister to the German Catholics in Pennsylvania. These were Father William Wappeler (born 22 January, 1711, in the Diocese of Mainz), co-founder of the mission of Conewago, and Father Theodore Schneider, a Palatine (born at Geinsheim, Diocese of Speyer, 7 April, 1703), who took up his residence at Goschenhoppen, in Berks County. Other German Jesuits being denied permission by them Fathers James Frambach (died 1795 at Conewago), Luke Geissler (died at Lancaster, in 1786), Lawrence Grassell, who was appointed coadjutor to Bishop Carroll, but died in Philadelphia, of yellow fever, before consecration, James Pellents, one of Bishop Carroll’s vicars-general (died at Conewago in 1800), Matthias Sittenpapeter (changed his name to Mannern), Ferdinand Steinmayr (Farmer), who, according to Bishop Carroll, founded the first Catholic congregation in New York (died in Philadelphia, 17 August, 1787, in the odour of sanctity), Father Farmer was a member of the famous Philosophical Society of Philadelphia, and was a member of the Board of Trustees of the University of Philadelphia, when that institution was chartered in 1779. To these early missionaries may be added Father John Baptist de Ritter, who was a German, though a member of the Belgian Province. He died at Goschenhoppen, 3 February, 1787. Father Schneider was the pastor of the parish at Goschenhoppen for twenty-three years, ministering to the Catholics there and in the region for fifty miles around. Before he died, in 1764, he had the satisfaction of seeing the Church firmly established in Pennsylvania. His companion, Father Wappeler, founded the mission of the Sacred Heart at Conewago. Of him, Bishop Carroll wrote that “he was a man of much learning and unbounded zeal”. Having remained about eight years in America, and converted or reclaimed many to the Faith of Christ, he was forced by bad health to return to Europe. His successor, Father Pellents, built the church of the Sacred Heart of Jesus, the first in the country under that title. It is not probable that there was any large, or indeed appreciable, number of German Catholics in any other colony at that time, with the exception of Louisiana, whose French inhabitants shared and honoured their religion, whereas most of the English colonies had severe laws against the “Papists”. But gradually all were opened to Catholics.

From a letter by the Rev. Dr. Carroll to the Rev. C. Plowden, in 1785, we learn that in that year he visited Philadelphia, New York, and the different parts of New Jersey and Pennsylvania, “where our worthy German brethren have formed congregations”. Although we do not know of any German settlement in the Far West during the seventeenth or eighteenth centuries, we find during that period German priests labouring among the Indian tribes on the coast of the Pacific, and in the south-western States. The first
German priest on the Pacific coast was the Jesuit Father Eusebio Francisco Kino. His real name was Eusebius Franz Kuehn. He was a native of Trent, and entered the Society of Jesus in Bavaria, where for some time he was professor at Ingolstadt. He came from Germany in 1680 or 1681, and to Lower California the following year he was ordained as bishop of Sonora, where he laboured until his death, in 1710, meanwhile making missionary and exploring trips to the Rio Gila in Sonora. Other German Jesuits in Lower California from 1719 to 1767, were Joseph Baezgert, the author of the "Nachrichten von der Katholisch-Deutschen Kolonie im Heiligen Land", Bishop, Franz Benno Durece, Joseph Gesteger, Eberhard Hellen, Lambert Hostell, Wenzsealas Link, Karl Neumayr, Georg Retz, Ignatz Tuerch, Franz X. Wagner. Arizona saw the indefatigable Father Eusebius Kuehn, towards the latter part of the seventeenth century, as far up as the Gila River at its junction with the Colorado. In 1731, Philip V, at the suggestion of Benedict Crespo, Bishop of Durango, ordered three central missions to be established in Arizona, at the royal expense. To the joy of the bishop, three German Jesuit Fathers were sent, Father Ignatius Keller, Father Johann Baptist Grashofer, and Father Philip Section. Of these three, two died, and the other was prostrated by sickness, but Father Ignatius Keller became the leader of the new missions in that district, taking possession of Santa Maria Soamces, 20 April, 1732. About the year 1750, we find Father Ignatius Pfefferkorn, a native of Mannheim, Germany, at Guevavi; and at the same time, Father Sedelmayr, at the instance of the Spanish Government, was evangelizing the tribes on the Gila, erecting seven or eight churches in the villages of the Papagos, among whom Father Bernard Middendorf also laboured, and Father Keller was endeavouring to reach the Mohaves, who were willing to receive missions of any kind but Franciscans. Other prominent Jesuits from the Fatherland were Fathers Caspar Steiger, Heinrich Kürte, and Michael Gerstner. By the summary act of the King of Spain, in 1763, every church in Arizona was closed and the Christian Indians were deprived of their jealous German priests.

In 1808, the Diocese of Baltimore, which had, up to this time, embraced the entire United States, was divided, and the four new sees of Philadelphia, New York, Boston, and Bardstown erected. There were, at that time, under the jurisdiction of the first Bishop of Bardstown, Holy Trinity, Rev. William Elling and Father Adam Brit, the latter of whom issued a new edition of the German catechism; St. Joseph's Orphan Asylum, erected in 1806, was the first institution of its kind established by Catholics in the United States. The Rev. Louis de Barth attended at Lancaster and Conewago. He was the son of Joseph de Barth, Count de Walbach, and his wife, Maria Louisa de Rohme, and was born at Münster, 1 November, 1764. When the See of Philadelphia became vacant by the death of Bishop Egan, Father de Barth became administrator of the dioece. He died 13 October, 1838. The Rev. Paul Ernste had begun, in 1793, his quakerish marturian passtime at Goschenhopp. Father Peter Herbrun, O. Min. Cap., had reared a log chapel in Westmoreland County. After years of devoted service, he went to Philadelphia, but died at Carlisle on his homeward journey. The Rev. Demetrius A. Gallotan was labournng in the district of the Mohaves, who were willing to receive missions of any kind but Franciscans. He was consecrated a priest in America in 1792, with a lessor and pious priest, the Rev. F. K. Broesius, who had offered his services to Dr. Carroll. He travelled under the name of Schmet, a contraction of his mother's name, but this in America soon became Smith, by which he was known for many years to the letters to Bishop Carroll, and when he was introduced to the presbytery of Arentstulpe, delighted with their life and work. His father had marked out a brilliant career for him in the military or diplomatic service in Europe, but the peace and simplicity which reigned in America contrasted so forcibly with the seething maelstrom of European revolution that, penetrated with the vanity of worldly grandeur, young Gallatian resolved to renounce all ambitions of position and wealth. He had to leave the old country in 1806, together with two other priests of his order. The German Catholics in New York had gradually increased, so that they organised a little congregation by themselves. Their first pastor seems to have been the Rev. John Raffener, of whom Archbishop Hughes said: "Bishops, priests, and people have reason to remember Father Raffener for many years to come". He visited his countrymen far and near, always ready to hasten to any point to give them the consolations of religion. For a time the Germans in New York assembled under his care in a disused Baptist place of worship at the corner of Delancey and St. Mark's street. After the lease expired, in St. Mary's church; but on 20 April, 1833, the corner-stone of a church to be dedicated to St. Nicholas, on Second Street, was laid. By the sacrifices and exertions of Father Raffener the church was completed and dedicated on Easter Sunday, 1836. Father Raffener directed the church forever and became vicar-general for the Germans in the diocese. By the year 1836, the German Catholic element in the Boston diocese required Bishop Fenwick's care, the largest body of them being in and near Roxbury. Having no priest in his diocese who could speak German, the bishop consecrated Rev. John Raffener to his fellow-bishop in New York, and at the close of May, 1835, the Very Rev. John Raffener, apostle of his countrymen in the East, arrived. On the last day of May, that zealous priest gathered three hundred in the chapel of St. Aloysius and addressed them with so much power and unction, that he spent the whole evening in the confessional. Quickened by his seal, they resolved to collect means to support a priest, and in August, 1836, they obtained the Rev. Father Hoffmann as their pastor, with Father Freygang as assistant; but, led by designing men, they would not continue supported by them. He was forced to minister to them. Fathers Hoffmann and Freygang were both forced to retire, and an ex-Benedictine, named Smolnikar, became their choice. In a short time, however, the bishop discovered in this priest unmistakable signs of insanity and, unable to obtain another clergyman, became himself the chaplain of the German congregation. In 1837, persuaded by their bishop, they purchased a lot on Suffolk Street, and prepared to erect a church, laying the corner-stone on 28 June; he had already secured a zealous priest, Rev. F. Roloff, for this congregation. The German Catholic body in New York City, was now increasing so rapidly that a new church was needed. In the same year, when the corner-stone of St. John Baptist's was laid by the Very Rev. Dr. Power, to be dedicated on 13 September, by the Rt. Rev. Dr. Hughes.

About 1820 Ohio was already the home of many Catholic families of German speech. It was for this reason that Bishop Fenwick, of Bardstown, Louisville, urged that a see should be erected at Cincinnati, and for its first bishop recommended the Rev. Demetrius A. Gallatian, educated in Germany, and familiar with the language and ideas of the people; but the good priest, learning of the project, peremptorily refused. In 1823, two Gallican German priests began to make a list of their Catholic brethren in the state of Ohio. They found them everywhere—at Cincin-
nati, Somerset, Lancaster—and by their untiring zeal awoke religion in the hearts of many who for years neglected to practise it. One of these itinerant priests was the Rev. John Martin Henni, a name to be known in time as that of the founder of the first German Catholic paper, first Bishop of Wisconsin, first Bishop of Milwaukee. In 1832, on the death of Bishop Fenwick of Cincinnati, the administration of the diocese devolved on the zealous missionary priest, Father Edward Reese, who had laboured so earnestly among his countrymen in the diocese and been instrumental in the establishment of the "Leo-politikum Stiftung," an association for the instruction of youth at Vienna, whose aims have fostered so many missions and helped substantially towards developing the Catholic school system, particularly in the Diocese of Cincinnati, and the dioceses formed from it. Dr. Reese was born at Vianenzburg, near Hildesheim, in 1791, like Pio Nono, had been a cavalry officer before he embraced the priesthood. He was the founder of the Athenaeum in Cincinnati, which later was transferred to the Jesuits, and changed into the present St. Xavier College. Holy Trinity, erected in 1834, was the first German church west of the Alleghenies, and at home, resolved to John M. Herbeck, with whom we have already mentioned, displayed untiring energy in founding and organizing schools in Cincinnati and was actively interested in the development of Catholic educational work throughout the States; he also formed the German Catholic Orphan Society of St. Aloysius, to whose aid we are constantly referred. At this time, log churches arose at Glandorf, Bethlehem, and New Riegel in northern Ohio, sufficient to gather the faithful together, and afforded a place for the instruction of the young. Meanwhile, the Catholic population of the State increased steadily, and the churches and institutions were very inadequate. St. Mary's church at Marion was dedicated in July, 1842; another German church was erected about the same time, at Zanesville, by Rev. H. D. Juncker. As early as 1836, a German congregation was organized at Louisville, Kentucky, by the Rev. Jos. Stahlhelm; they soon erected St. Boniface's church, which was dedicated on the feast of All Saints, 1838. This church was attended for a time from Indiana and Ohio by the Rev. Jos. Fennedige and Rev. John M. Henni. In 1842, on 30 October, Bishop Chabrat dedicated St. Mary's church, Covington, Kentucky, a fine brick structure, erected by the German Catholic priests of his order; in 1844, the Rt. Rev. Frederick Reese became Bishop of Detroit, there were labouring in his diocese, among other German priests, the Redemptorist Fathers Sanderli and Hatcher. In the following year the German church of the Holy Trinity was established. At that time Vincennes was erected into a diocese. Three years later, we find a German congregation in Jasper County, Illinois. The German Catholics around Quincy, Illinois, had erected a house for a priest, and as a temporary chapel till their church was built. Father Charles Meyer's ministrations in the little log church of St. Andrew, at Belleville, Ill., was his first step to a future bishopric. In 1841 a German Catholic church was erected at West Point, Iowa, in the present Diocese of Dubuque. At Pittsburgh the German Catholics attended St. Patrick's until their increasing numbers made it expedient for them to form a separate congregation. They then worshipped in a building previously used by others, and in 1855 as a result of this increase, a community of Redemptorists then in Ohio, came and took charge of this mission, and the factory was soon transformed into the church of St. Philomena, with a Redemptorist convent attached—the first house of that congregation in the United States. Hence the Rev. John N. Neumann, who had the habit and began his noviciate, to become first Bishop of Philadelphia, and die in the odour of sanctity. When, on 3 December, 1843, the first Bishop of Pittsburgh reached that city, he found in his district a Catholic population estimated at forty-five thousand, 12,000 being of German origin.

An attempt at Catholic colonization was made about this time at St. Mary's, Elk County, where Messrs. Mathias Benziger and J. Eshbach, of Baltimore, purchased a large tract. Settlers soon gathered from Germany, who, from the first, were attended by the Redemptorist Fathers, but, though well managed, and encouraged by the hearty approval of the bishop, the town never attained any considerable size. Immigrants and wide-reaching interests in the result not only for the Diocese of Pittsburgh, but for the Catholic Church in the United States, was the arrival at Pittsburgh, 30 September, 1845, of the Benedictine monk, Dom Boniface Wimmer. The Rev. Peter Lemecke, a German priest, had been labouring for several years in the mission of Pennsylvania. His life had been a strange and varied one. Born in Mecklenburg, of Lutheran parents, he grew up attached to their sect, trained piously by those who still clung to the great doctrines of Christianity. Drafted into the army, he fought under Blücher at Waterloo, and afterwards returning to his native land, it became a Lutheran priest. To his astonishment and dismay, he found the professors to be men who, in their classes, ridiculed every religious belief which he had been taught to prize. He was led to study, and a thorough mastery of the works of Luther convinced him that Almighty God never could have chosen such men to be His Church. He went to Bavaria, where he began to study Catholic doctrines, and was received into the Church by Bishop Sailer. Having resolved to become a priest, he went through a course of study and was ordained. Coming to America in 1834, he was sent, in time, as assistant to Father Gallatin, and laboured in the missions of Western Pennsylvania. As early as 1835, he appealed, in the Catholic papers of Germany, to the Benedictines to come to the United States. He returned to Europe in 1844, mainly to obtain German priests for the missions of the Diocese of Pittsburgh. At Munich he met Dom Boniface Wimmer, a Benedictine monk of the ancient Abbey of Metten, in Bavaria, a religious whose thoughts had already turned to the American mission. Father Lemecke offered him a farm of 400 acres which he owned at Carrolltown, Maryland. Correspondence with Bishop O'Conner followed. Dom Boniface could not secure the necessary means, but obtained instead of the Benedictines, four young clerics and fourteen lay brothers. Their project was liberally aided by the Ludwig-Verein, the Prince-Bishop of Munich, the Bishop of Linz, and others. After conducting his colony to Carrolltown, Father Wimmer paid his respects to Bishop O'Conner. That prelate urged him to accept the estate at St. Vincent's which Father Brouwers had left to the Church in the preceding century, rather than establish his monastery at Carrolltown. Visiting St. Vincent's with the bishop, Dom Boniface found there a brick church with a two-story brick house which, though built for a pastoral residence, had been an academy of Sisters of Mercy. He decided in favour of this building, and on 19 October, 1846, the first community of Benedictine monks was organized in the schoolhouse at St. Vincent's. Father Wimmer took charge of the neighbouring congregation, and was soon attending several stations. His students were graduallly ordained, and in a few years St. Vincent's was declared by the Holy See as an independent priory, and incorporated 10 May, 1853. Prior Wimmer showed great ability and zeal, and from the outset confined his labours as much as possible to German congregations. Already before, 1850, the Rev. John E. Paulhuber and other Jesuit Fathers from Georgetown had been in charge of St. Mary's church at Richmond, Virginia, and erected for Germans, of whom there were seven or
eight hundred in the city. In the Diocese of Wheeling, erected in 1856, there was a log chapel near the German settlement of Kingwood. About that time, German settlers were gathering in Preston, Doddridge, and Marshall Counties. Soon after, the Rev. F. Mosbleeh began to plan the erection of a church for the Catholics of Rushville. In 1843, Bishop Huguenin, his countrymen, in New York State, of Fathers Schneider at Albany, Schwenniger at Utica, Inama at Salina, the Redemptorists and Franciscans of St. Peter's church at Rochester, and announced that peace prevailed in the long distracted congregation of St. Louis, Buffalo. In New York City, St. Alphon- sus, the second church of the Redemptorists for the Germans, was erected in 1848. The German Catho- lics of Albany, though struggling with difficulties, were soon nearing a neat Gothic church on Hamilton and Philip Streets. Addressing the Leopold Society, in January, 1850, to acknowledge their generous aid, Bishop McCloskey estimated the Catholic population of his diocese at 70,000, including 10,000 Germans. He had sixty-two churches, eleven of them for Ger- mans. At about the same time, Bishop Timon, of Buffalo, estimated his flock at 40,000 souls, half of whom were Germans, attended by five secular priests and five Redemptorists. The Diocese of Cincinnati received, in 1845, a valuable accession, a colony of seven priests of the Congregation of the Most Precious Blood (Sanguinists), led by the Rev. Francis de Sales Brunner. The difficult mission of Peru was assigned to them by the bishop, with the charge of Norwalk and several settlements in the neighboring counties. The labours of the Sanguinist priests were signalized, and the healthy growth of the Church in that part of Ohio must be ascribed mainly to these excellent mis- sioners. In December, 1844, Father Brunner established a convenant of his congregation at New Riegel, another, next year, at Thompson, and, in 1845, one at Glandorf. Each of these became the centre of religious influence for a large district. Father Brunner was born at Munster, Switzerland, 10 January, 1798, entered the Congregation of the Precious Blood in 1835, and, after taking part in the establishment of a community in Switzerland, formed the project of a mission in America.

In April, 1845, Bishop Purcell, with a large gathering of the clergy, societies, ecclesiastics, and pupils of the schools, laid the cornerstone of the German church of St. John the Baptist, Green Street, Cincin- nati, Ohio, to be dedicated on 1 November of the same year, by Bishop Henri of Milwaukee, who had done so much for the German Catholics of Cincinnati. St. Mary's church, at Detroit, Michigan, was dedicated for the Germans, 29 June, 1843. In 1844 Bishop Kenrick of St. Louis estimated the Catholic population of Missouri at 50,000, one-third being of Ger- man origin. At this time, the illustrious German church of St. Aloysius. The cornerstone of St. Joseph's, another church for the Germans, under the care of the Fathers of the Society of Jesus, was laid in April, 1844. A letter sent, in 1850, by Archbishop Kenrick to the Leopold Association, gave the estimate of the entire German Catholic Catholics in the dio- cese at this time—Four of the ten churches in St. Louis were exclusively German. The Germans had their own orphan asylum and an Ursuline convent, with sisters from Hungary and Bavaria. Three German congregations in Scott County were attended by a priest at Benton. Two congregations in St. Charles County had each a German priest. The Washington County were attended by two German Fathers of the Society of Jesus; and three other fathers attended four congregations in Osage and Cole Counties. Jefferson City had a German congregation and priest. In Gasconade County, the German Catho- lics were erecting a church. The archbishop was about to send a German priest to Montgomery County. The Rev. A. R. B. Wetzel visited the Germans, but had no church, while those in Pettis, with five or six small congregations, were regularly attended.

By the close of the year 1844 the Rt. Rev. William Quaer, first Bishop of Chicago, had twenty-three priests in his diocese, one at the cathedral (the Rev. W. T. H. Sturtevant), two in the Germans, while Quincy had its German congregation and priest. With a steadily increasing German flock, he appealed, and not in vain, to the Leopold Association and made plans to give them a church of their own in Chicago, as they were estimated at one thousand. Chapeis were being erected at St. Peter's and at Teutopolis. After Easter, 1850, the Rt. Rev. James Oliver de Velde, the second Bishop of Chicago, dedicated St. Joseph's church, at Grosse Pointe, or New Trier, erected by the Rev. Henry Fortmann, and exorted the Ger- man Catholics at Ridgeville to commence building. In 1844, the Rev. F. Schacht, who had a large dis- tribution embracing 200 members in the State of Ten- nessee, laid the corner-stone of a church at Clarksville. The German Catholics in Nashville desired a church of their own, and Bishop Miles appealed in their behalf to the Leopold Association.

When, in 1846, Bishop Loras of Dubuque, visited New Vienna, he found there 250 Germans, all Catho- lics. There were at that time more or less Germans everywhere in that diocese, and almost all farmers. On 19 April, 1846, Bishop Henri of Milwaukee, laid the corner-stone of St. Mary's German church in that city. Before the Mexican War had begun, German Catholics had published a monthly, Die Pfalz, in Milwau- kie, and Fredericksburg, Texas. About the year 1849 the Rev. Gregory Zenzel was labouring among his countrymen at the two last-named places, as well as at Bistrop and Austin, urging Catholics, for the sake of the future of their families, to gather near each other so as to enjoy the benefits of church and school. Bishop Odol of Galveston, in 1851, visited Europe and, before the end of the following year, had the con- solation of bringing with him four Franciscans from Bavaria to take care of his increasing German flock.

In the Diocese of Pittsburgh the community of Benedictines had grown in numbers. New lands were acquired, and suitable buildings for various purposes were erected. In 1855, Prior Wimmer visited Rome, and Pope Pius IX, on 24 August, made St. Vincent's an exempt abbey, and on 17 September appointed the Rt. Rev. Boniface Wimmer mitred abbot for a term of three years. St. Vincent's College, opened in 1849, had thriven with the growth of the community and soon had a large number of students. The course was thorough, and pupils had special advantages for acquiring a practical knowledge of German. The Redemptorists were labouring earnestly in Pittsburgh, under Father Seelig and others. In 1851 they laid the foundation of St. Joseph's German Orphan Asylum. When, in 1853, the See of Erie was erected, the German Catholics had a little church in that city. Williamsburg, New York, had a German church of the Holy Trinity many years before the Diocese of Brooklyn, to which it now belongs, was erected. In Brooklyn, the Diocese of the Episcopalians, was dedicated for the use of the Germans in 1854, as were Holy Trinity and St. Malachy's in East New York. From the year 1849, the German Catholics at Elisabeth, Diocese of Newark, were visited by the Redemptorist Fathers till the Rev. A. G. Vane of St. Peter, became the President of St. Mark's College in 1852. Bishop Bayley endeavoured to secure the Benedictine Fathers for St. Mark's German
Church, Newark, and in 1856 the Rt. Rev. Abbot Wimmer sent Father Valentine Felder, O. S. B., to that city. Two years later, St. Michael's German church was dedicated. In 1855 the Abbots of Einsiedeln, at the request of the Bishop of Vincennes, sent a colony of Benedictine monks to Indiana. They settled at St. Meinrad, near Hunting- 

The number of German Catholics in the United States can only be given approximately. Over one-third of the Germans from the German Empire, as well as the majority of the Germans from Austria, are Catholics; accordingly, almost one-half of the Germans in this country have been Catholics, or have returned subsequently to the Catholic faith. The number of German Catholics in this country is more than three times as large as that of the United States. In the absence of a census, we may safely say that at least one-fourth, i.e., over three millions, are Catholics. This is a conservative estimate. The leakage is considerable among Catholics of all nationalities. For the defection of Germans in particular, the following reasons must be assigned. Where the Germans settled in small numbers, frequently there were priests of their own tongue. Left to themselves, they were in a condition of religious isolation; they gradually neglected religious practices and finally lost their faith. Although this applies to all immigrants who do not speak English, it proved specially disastrous in the case of the Germans. As over one-half of the German settlers were Protestant, and frequently had churches and various church organizations, there was a non-Catholic atmosphere around them; mixed marriages, particularly in such places, frequently resulted in losses to the Catholic Church. Great as the contributions of the immigrants of foreign race were to the intellectual advancement of the United States, it cannot be denied that, on the whole, their influence was not favorable from a religious viewpoint. The same must be said of certain German organizations, as the turnvereins, which frequently manifested an anti-Catholic, and even anti-religious, spirit. Nor can it be denied that Socialistic principles were largely spread by German immigrants and German publications. Small wonder that hundreds of thousands of Germans have been lost to the Catholic Church.

German Churches and Religious Communities.—No accurate exact statement is made to a considerable extent on Catholic churches and parishes, because such are not available at the present time. A general idea, however, can be formed from the fact, that among the 15,655 priests in the Catholic Directory for the United States, about one third bear German names. Among the more distinguished German prelates, mention should be made of John Martin Henni, first Bishop, and later Archbishop, of Milwaukee; Michael Heiss, Archbishop of Milwaukee; Seb. Gebhard Messmer, Bishop of Green Bay, now Archbishop of Milwaukee; Winand S. Wigger, third Bishop of Newark, a wise and energetic administrator; John B. Easton, now work as head of the St. Raphael Society for the protection of immigrants; and most particularly of the saintly Bishop Neumann of Philadelphia, whose beatification is the earnest hope of all American Catholics.

Of the great number of European orders and congregations of men and women labouring in the United States for man's spiritual or physical welfare, the following are of German origin and even now (1909) are recruited chiefly from Germans or their descendants:

Religious Orders of Men. (1) Benedectines.—(a) American Cassinese Congregation, founded in 1846, by the Rev. Boniface Wimmer, O.S.B.—At the present time there belong to this congregation the following independent abbeys: St. Vincent's Arch-Abbey, Beatty, Pennsylvania, with 126 fathers, 5 deacons, 23 clerics, 64 lay brothers, and 4 novices; St. John's Abbey, in Colorado, with 16 fathers, 11 clerics, 26 lay brothers, 9 novices; St. Benedict's Abbey, Atchison, Kansas, with 51 fathers, 6 clerics, 18 brothers; St. Mary's Abbey, Newark, New Jersey, with 40 fathers, 7 clerics, 14 lay brothers; Maryhelp Abbey, Belmont, North Carolina, the Rev. Leo Haid, D.D., O.S.B., abbot; bishops 31 fathers, 1 deacon, 4 clerics, 36 lay brothers, 4 novices; St. Bernard's Abbey, Cullman Co., Alabama, with 38 fathers,
(There are also numerous Germans among the Passionists, Dominicans, Lazarists and the Fathers of the Holy Cross.)

Religious Orders of Women. (1) Sisters of St. Benedict.—In 1852 the first colony of Benedictine Sisters came to the United States from Eichstatt, Bavaria, and settled in St. Mary's, Elk County, in the Diocese of Erie, Pennsylvania. At present they have 46 houses in many other dioceses; their number is about 2000 sisters, 135 novices, and 115 postulants.

(2) Sisters of Christian Charity.—They were established in 1874 by sisters from Paderborn, Germany. The sisters conduct establishments in 17 dioceses; they number about 731, including novices and postulants.

(3) Sisters of the Third Order of St. Francis.—(a) Mother-house at Peoria, Illinois, founded in 1876, by sisters from the house of Bethlehem, Herford, Westphalia, Germany. 151 sisters, 32 novices, 28 postulants. (b) Mother-house at Glen Ridge, Pennsylvania. 304 professed sisters, 54 novices, 8 postulants. (c) Mother-house at 337 Pine Street, Buffalo, New York. 256 sisters, 30 novices, 14 postulants. (d) Mother-house at Syracuse, New York; Millvale, Pennsylvania, and at Mt. Loretto, Staten Island, New York. All these houses are German foundations, though now many sisters of other nationalities belong to them. (e) Mother-house of the Third Order Regular of St. Francis.—There are about 500 sisters, 48 novices, and 7 postulants, with mother-house at Oldenburg, Indiana. They were founded in the year 1851, by Mother M. Therese of Vienna, Austria. (f) Sisters of St. Francis.—Their mother-house is at 749 Washington Street, Buffalo, New York, was founded in 1874, by sisters from Nonnenwerth near Rolandske, Rhenish Prussia. There are 268 sisters. (g) Franciscan Sisters.—Founded in 1872, by sisters from Salzkotten, Germany, Mother-house for the United States, at St. Louis, Missouri. There are 102 sisters. (h) School Sisters of St. Francis.—Their mother-house and novitiate are at Milwaukee, Wisconsin. There are 668 professed sisters, 110 novices, 54 postulants. (i) Franciscan Sisters of the Perpetual Adoration.—Founded in 1853, by Most Rev. M. Heiss, D.D. There are 364 professed sisters, 46 novices, and the United States, and the United States. Besides, there are several hundred Jesuits of German descent who were born in this country. For nearly forty years there was a distinct German division called the Buffalo mission of the German Province, with colleges at Buffalo, New York; Cleveland and Toledo, Ohio; St. Louis, Missouri; Wisconsin; two Indian missions in South Dakota, and other missions. In 1907, the mission numbered about 300 members; in that year the mission was separated from the mother-province, and the houses and members joined to different American provinces. (5) Redemptorists.—Although now many other nationalities are represented in the Congregation of the Most Holy Redeemer, it still numbers a great many Germans among its members.

The two provinces of Baltimore and St. Louis are composed of 325 fathers, 95 professed students, 22 choir novices, 121 professed lay brothers, 48 novice lay brothers and postulants. (6) Fathers of the Precious Blood.—This congregation, founded at Rome in 1814 is divided into four provinces, three European and one American. The American province was organized in 1844 by the Rev. Francis S. Brunner, and most of its members are Germans, either by birth or by descent. The congregation is represented in the Diocese of Denver, number of members, 32; Fort Wayne, Cleveland, 238 candidates, with 99,000 pupils. (14) Sisters of the Most Precious Blood.—(a) Mother-house at Maria Stein, Ohio, established in 1834, by sisters from Switzerland. (b) Mother-house at Ruma, Illinois; established in 1868, at Piopolis, Illinois, by sisters from Gurtweil, Baden, Germany; transferred to Ruma, in 1876. (c)
Mother-house at O'Fallon, Missouri. About 1000 sisters belong to this congregation. (15) Sisters of Divine Providence. Mother-house at Pittsburgh, Pennsylvania, and Bridgeville, Holyoke, Massachusetts. The Pittsburg mother-house was established in 1876 by a group of German immigrants from Mainz, Germany. There are now about 400 sisters in all.

Besides all these, there are several smaller German religious congregations in the United States. In other congregations also, not of German foundation, there are now many German sisters. There must be, therefore, upward of twelve thousand sisters of German origin in this country.

Parochial Schools.—From the very beginning, of their settling in this country the German Catholics had at heart the establishing of parochial schools. Interesting details are given concerning the schools at Goshenhoppen and Conewago. The school at Goshenhoppen was begun by Father Schneider, S.J. (who had previously served as Rector Magnificus, or elective head, of Heidelberg University), soon after his arrival, in 1741. It was under his charge for twenty years, and under Father Ritter's during the twenty-three succeeding years. It was attended by the children of the Goshenhoppen schoolhouse, as well as by those of the nearest Catholics, being the only one in the place. About the time of the close of the French and Indian War, the school, for the first time, engaged the services of a lay teacher. Contrary to the custom which prevailed in the Colonies generally, the schoolmaster was looked upon as a person of distinction in the little village of Goshenhoppen. Three schoolmasters are mentioned in the parish registers between 1763 and 1796: Henry Freder, Breitenbach, and John Lawrence Gubernator. The last-named was no doubt the most distinguished of the three. Born at Oppenheim, Germany, in 1737, he arrived as an officer in the army of the Allies in the Seven Years' War, and came to America during the Revolutionary War. Highly educated, and a devoted teacher, he rendered eminent services to the cause of Catholic education in Pennsylvania, during a period of twenty-five years. When, about 1787, the school near Conewago was so far developed as to be able to support a lay teacher, the services of this famous schoolmaster were obtained.

These schools, along with the other schools established and conducted by the Jesuits, have greatly influenced the development of the Catholic parochial school system in the United States. This early seal for the parochial school system in the United States is a reflection of the activity of the Germans during all succeeding periods. Wherever they settled in sufficient numbers the schoolhouse soon rose by the side of the parish church, and until the present day they have never ceased to be staunch and unflinching advocates of the parochial school system.

Societies.—The natural inclination and aptitude of the Germans for organizations issued in the formation of numerous social and religious associations. Besides parochial and local societies there is one organization which exerted a far-reaching influence, namely, the Central-Verein. The wonderful organization of the Central Party in the Fatherland and the admirable unity shown by the German Catholics during the Kulturkampf, naturally stimulated the German Catholics in the United States to unite their efforts in vast organizations. "Germany is the land of fearless Catholicity, where Catholics have made themselves respected, and there is a very real national, both political and doctrinal, that should excite our admiration, and be for us a splendid example for imitation. Who can reflect upon the work of the Central Party, from Mullinekrodt and Windthorst to the late lamented Lieber, without a feeling of pride and satisfaction?" (Father John Conway, S.J.). There is no doubt that the Central-Verein would never have become what it now is without the noble example of Catholic Germany. Founded in 1855, the Central-Verein had for its object, above all, the material aid of its members. But gradually, it broadened its programme, and it became one of the objects of the organization "to stand for Catholic interests in the spirit of the Catholic Church". It was decided justly, that perhaps no other Catholic organization in the United States can point to a greater number of positive results, tending to promote the welfare of our fellow-men, than the Central-Verein. It has been a firm support of our youthful and flourishing Church, and has nobly contributed towards its growth and development. For decades it has unflinchingly laboured in the interest of the parochial school and for the preservation of the German language. Chiefly under its influence were founded the Teachers' Seminary, at St. Francis, and the Leo House, an institution in New York City for Catholic immigrants by which thousands have been rescued from bodily and spiritual perdition. The German-American Katholikentage likewise owed their origin to the activity of the men of the Central-Verein, after the model of the famous annual assemblies of the German Catholics, in the Fatherland. The influence of this splendid organization has long been felt in American society. "The influence of the Parochial Societies cannot be overrated. "The young organization breathes the spirit which animated the Central-Verein during the past fifty years; the programme of the Federation, in its essential parts, is identical with that of the Central-Verein, so that the former helps to further and complete the vigorous and valuable work of the Germans began." Together with Bishop McFaul of Trenton, the German Archbishop Messmer of Milwaukee, Wisconsin, is the prime mover and leading spirit of the Federation.

The Press.—More than twenty-five weekly papers are published in the United States for the benefit of Catholic Germans, besides a goodly number of monthly periodicals. The first German Catholic paper, "Der Wahrheitsfreund", was established in 1837, by the Rev. John M. Henni. After an existence of almost seventy years it ceased to appear in 1907. Another weekly which no longer exists, but which for many years rendered essential service to religion, was the "Katholische Kirchenzeitung". Maximilian Oertel, the founder of this weekly, was born at Ansbach, Bavaria, in 1811, and arrived in this country in the beginning of the year 1889, highly commended by the heads of his denomination, to attend Lutheran immigrants in the United States. Of the important events of the following year he was received into the Catholic Church, to which he remained true and faithful throughout the rest of his life, doing excellent service to the Catholic cause as one of the most brilliant editors the Germans ever produced in this country. The "Ohio Waisenfreund", founded in 1873, and edited by the indefatigable Rev. Jos. Jessing, later Monsignor, has a larger circulation than any other Catholic weekly in the country. It has been doing a great amount of good these thirty-five years, the finest monument of its missionary spirit being the "Josephinum", a seminary for the education of candidates for the priesthood. Whereas an English translation of the German denominational paper, "Hora-Blatt", for a number of years edited by the Rev. W. Färber, of St. Louis, which existed long before the able English "Ecclesiastical Review" was founded and edited by Dr. Herman J. Heuser.

It is surely deserving of notice that among Catholic publishers in this continent the German publishers of benziger, Herder, and Pustet stand in the front rank. Nor should it be overlooked, that the translations of
GERMANUS

German religious works—as Deharbe’s Catechism, Wilmer’s “Hand-book of the Christian Religion”, Schüter’s Bible History, the works of Knecht, Alasg, Brockel, Spiegel, Scholz, Frey, and others have been largely used, and are still being used, for the religious instruction of American Catholics. The words of Father John A. Conway, S.J. (in the preface to Fr. von Hammerstein’s work, “Edgar, or from Atheism to the Full Truth”) may well be quoted in this connexion: “We can read the works that seem from the German Catholic press which is fast fading that the defence of Catholic truth is in brave and fearless hands? It is in Germany that the fiercest onslaughts are made upon revealed truth by rationalists, materialists, pantheists, Kantians, Hegelians, evolutionists, etc. But it is from Germany, too, that we get our best defence and our best illustrations of Catholic doctrine. Thus we see that, although the efforts of the German Catholics, naturally, are concerned in the first place, with the religious affairs of their own people, still their activity has produced beneficial results for the Catholic body in general.

For Germany in General.—CORB, THE STORY OF THE POLITIANS (New York, 1870); VIERECK, German Instruction in American Schools (Washington, 1903); McMASTER, A History of the People of the United States (New York, 1880-1900); RITTER, Geschichte und Zukunft der Deutschen in Amerika (Gottingen, 1883); GILDEMEISTER, Deutsche Einmischung in Nordamerika und die Gründung von Constantinopel im Jahre 1883 (Philadelphia, 1883); KÖRNER, Das Deutsche Element in der U.S. Nation (St. Louis, 1891); WINTER, Deutsche in Staat New York während des achttzehnten Jahrhunderts (New York, 1885); JANETT-KIMPEF, Die Vereinigten Staaten in der Geschichte des Deutschen Abendlandes (Fribourg im Breisgau, 1838); KNORR, Das Deutschin in den Vereinigten Staaten (Hamburg, 1897); GOERING, Gesammelte Aufsätze (Hamburg, 1897); HERZBERG, A Catholic Columbus in Ohio in U. S. Catholic Historical Magazine, IV, 125.

GERMANY

Germanus I, SAINT, Patriarch of Constantinople (713-30). b. at Constantinople towards the end of the reign of Emperor Heraclius (610-41); d. there 733 or 734. After the death of Justus, who dedicated himself to the service of the Church and became a cleric at the cathedral of the metropolis. Some time after the death of his father, who had filled various high official positions, at the hands of the nephew of Heraclius, Germanus was consecrated Bishop of Thessalonica, but the exact year of his elevation is not known. According to Thesophanes and Nicholas, he was present in this capacity at the Synod of Constantinople held in 712 at the instance of the new emperor, Philippicus, who favoured Monothelitism. The object of the council was to re-establish Monothelitism and to condemn the Acts of the Sixth General Council of 681. Even Germanus is said to have bowed to the imperial will, with the majority of the Greek bishops (Masai, Conc. Coll., XII, 192-96). However, immediately after the dethronement of Emperor Philippicus (713) his successor, Anastasius II, restored orthodoxy, and Monothelitism was now definitively banished from the Byzantine Empire. If Germanus really yielded for a short time to the false teachings of the Monothelites, he now once more acknowledged the orthodox definition of the two wills in Christ. John, Patriarch of Constantinople, appointed by Philippicus to succeed the deposed Cyrus, sent to Germanus a letter ordering him to promulgate the true doctrine of the Church promulgated at the Council of 681, wherein he was recognized by the pope as Patriarch of Constantinople. On his death Germanus was raised to the patriarchal see (715).

He held until 730. Immediately (715 or 716) he convened at Constantinople a synod of Greek bishops, who acknowledged and proclaimed anew the doctrine of the two wills and the two natures of Christ, and placed under anathema Sergius, Cyrus, and the other leaders of Monothelism (q.v.). Germanus entered into communication with the Armenian Monophysites, with a view to restoring them to unity with the Church, but without success. Soon after his elevation to the patriarchal dignity, the Iconoclastic storm burst forth in the Byzantine Church and Leo III the Isaurian, who was opposed to the veneration of images having just acceded to the imperial throne (716), Bishop Constantine of Naccolia in Phrygia, who like some other bishops of the empire condemned the veneration of the pictures and images of Christ and the saints, wrote to Constantinople, and expressed his sympathy with Germanus on the subject. The patriarch represented the traditional use of the Church, and sought to convince Constantine of the propriety of reverencing images. Apparently he was converted to the teaching of the patriarch, but he did not deliver the letter entrusted to him by Germanus for the Metropolitan of Synnada, for which he was excommunicated. At the same time the learned patriarch wrote to Bishop Thomas of Claudiaspolis, another Iconoclast, and developed in detail the sound principles underlying the reverencing of images, as against the recent innovations of Emperor Leo III. He wrote a treatise on the place of icons, and everywhere encouraged the Iconoclasis. In a volcanic eruption between the islands of Thera and Therasia he saw a Divine judgment for the idolatry of image-worship, and in an edict (726) explained that Christian images had taken the place of idols, and the venerators of images were idolaters, since, according to the law of God (Ex., xx., 4), no product of the hand of man may be adored. Immediately afterwards, the first Iconoclastic disturbances broke out in Constantinople. The Patriarch Germanus vigorously opposed the emperor, and sought to convert him to a truer view of things, whereupon Leo attempted to depose him. Germanus turned to Pope Gregory II (729), who in a lengthy epistle praised his zeal and steadfastness. The emperor in 730 summoned the council before which Germanus was cited to subscribe to an imperial decree prohibiting images. He resolutely refused, and was summoned to Constantinople, where he was imprisoned in the patriarchal office, being succeeded by the pliant Anastasius. Germanus withdrew to the home of his family, where he died some years later at an advanced age. The Ecumenical Council of Nicea (787) bestowed high praise on Germanus, who was venerated as a saint both in the Greek and the Latin Church. His feast is celebrated on 12 May. Several writings of Germanus have been preserved (Migne, P. G., XVIII, 39-454, vis., “Narratio de sanctis synodis”, a dialogue “De vite termino”, a letter to the Armenians, and three letters on the reverencing of images, as well as nine discourses in the extravagant rhetorical style of the later Byzantine cerecines. Of doubtful authenticity is the “Historia eclesiastica et mystica”, also attributed to him (Migne, loc. cit., 383-454).

J. P. KIRCH.

GERMANY.—From their first appearance in the history of the world the Germans represented the principle of unchecked individualism, as opposed to the Roman principle of absolutism. The German Middle Ages were strongly influenced by two opposing principles: universalism and individualism. After Arminius had fought for German freedom in the Teutoburg Forest the idea that the
race was entitled to be independent gradually became a powerful factor in its historical development. This conception first took form when the Germanic states grew out of the three Frankish tribes. In the thought of unifying the discordant barbarian countries with the aid of the leges gentium into a great confederation of the Mediterranean. Although in these Mediterranean countries the Roman principle finally prevailed, being that of a more advanced civilisation, still the individualistic forces which contributed to thenceforward. By them the world-embracing empire of Rome was overthrown and the way prepared for the national principle. It was not until after the fall of the Western Empire that a great Frankish kingdom became possible and the Franks, no longer held in check by the Roman Empire, were then free to form the tribes of the old Teutonic stock and to lay the foundation of a German empire. Before this the Germanic tribes had been continually at variance; no tie bound them together; even the common language failed to produce unity. On the other hand, the so-called Lauter- schilder der Franken, separated the North and South Germans. Nor was German mythology a source of union, for the tribal centres of worship rather increased the already existing particularism. The Germans had not even a common name. Since the eighth century most probably the differentiations of the Franks extended beyond the boundaries of the Frankish tribe. It was not, however, until the ninth century that the expression theodisk (later German Deutsch), signifying "popular," or "belonging to people," made its appearance, and a great length of time divided this beginning from the use of the word as a name of the nation. The work of uniting Germany was not begun by a tribe living in the interior but by one on the outskirts of the country. The people called Franks suddenly appear in history in the third century. They represented no single tribe, but consisted of a combination of Low and High German tribes. Under the leadership of Clovis (Chlodwig) the Franks overthrew the remains of the Roman power in Gaul and built up the Frankish State on a Germano-Romanic foundation. The German tribes were conquered one after another and colonized in the Roman manner. Large extents of territory were marked out as belonging to the king, and military colonies were founded. The commanders of these military colonies gradually became administrative functionaries, and the colonies themselves grew into peaceful agricultural villages. For a long time political expressions, such as Hundreds, recalled the original military character of the people. The Frankish rule thenceforth enabled the German overlords, but the centrifugal tendency of the Germanic tribes reacted against this sovereignty as soon as the Merovingian Dynasty began slowly to decline, owing to internal feuds. In each of the tribes after this the duke rose to supremacy over his fellow tribesmen. From the seventh century the tribal duke became an independent ducal state originated in the supreme command of large bodies of troops, and then in the administration of large territories by dukes. At the same time the disintegration was aided by the bad administration of the counts, the officials in charge of the territorial districts (Qua), who were no longer supervised by the central authority. But what was most disastrous was that an unruly aristocracy sought to control all the economical interests and to exercise arbitrary powers over politics. These sovereign nobles had become powerful through the feudal system, a form of government which gave to medieval Germany its peculiar character. Caesar in his day found that it was customary among the Gauls for a freeman, the "client," voluntarily to enter into a relation of dependence on a "senior." This surrender (commendatio) took place in order to obtain the protection of the lord or to gain the usufruct of land. From this Gallic system of clientship there developed, in Frankish times, the conception of the "lord's man" (dominus et beneficarius). Even the oath to which they took the use of life. The struggle of the Franks with the Arabs quickened the development of the feudal system, for the necessity of creating an army of horsemen then became evident. Moreover the poorer freemen, depressed in condition by the frequent wars, could not afford it to give their duty (beneficium) to a noble lord, of which they could only be demanded from the vassals of the great landowners. In order to force these territorial lords to do military service fiefs were granted from the already existing public domain, and in their turn the great lords granted part of these fiefs to their retainers. The vassals received as a service (beneficium) a service of which they were to be held the greater part of the population. In this way in this way the service owed into a power, at the same time the Church was equally strengthened by feudalism. The Christian Church during this era—a fact of the greatest importance—was the guardian of the remains of classical culture. With this culture the Church was to endow the Germans. Moreover it was to bring them a great fund of new moral conceptions and principles, much increase in knowledge, and skill in art and handicrafts. The well- knit organization of the Church, the convincing logic of dogma, the grandeur of the doctrine of salvation, the sweet poetry of the liturgy, all these captured the understanding of the simple-minded but fine- natured primitive German. It was the Church, in fact, that first brought the exaggerated individualism of the race under control and developed in it gradually, by means of asesticism, those social virtues essential to the State. The country was converted to Christianity very slowly, for the Church had here a difficult problem to face. The founders of the Church were not the secular clergy but the monastic orders. The early missionaries were: St. Columbanus, the first to come to the Continent (about 583), who laboured in Swabia; Fridolin, the founder of St. Emmeram (d. 645), the founder of St. Gall. The cause of Christianity was furthered in Bavaria by Rupert of Worms (beginning of the seventh century), Corbinian (d. 730), and Emmeram (d. 715). The great organizer of the Church of Bavaria was St. Boniface. The chief herald of the Faith among the Franks was the Hucbald, St. Kilian (end of the seventh century); that missionaries received Christianity through Willibord (d. 739). The real Apostle of Germany was St. Boniface, whose chief work was in Central Germany and Bavaria. Acting in conjunction with Rome he organized the German Church,
and finally in 755 met the death of a martyr at the hands of the Frisians. After the Church had thus obtained a good foothold it soon reached a position of much importance in the eyes of the youthful German princes as the principal source of economic power which was greatly increased when many freemen voluntarily became dependents of these new spiritual lords; thus, besides the secular territorial aristocracy, there developed a second power, that of the ecclesiastical princes. Antagonism between these two elements was perceptible at an early date. Pepin sought to remove the difficulty by strengthening the Frankish Church and placing between the secular and spiritual lords the new Carolingian king, who, by the assumption of the title Dei gra (hand), obtained a somewhat religious character.

The Augustinian conception of the Kingdom of God early influenced the Frankish State; political and religious theories unconsciously blended. The union of Church and State seemed the ideal which was to be realized. Each needed the other; the State needed the Church as the only source of real order and true education; the Church needed for its activities the protection of the secular authority. Training in morals and learning that the Church gave, the State granted it large privileges, such as the privilege of. freedom from the jurisdiction of the State; immunity, that is exemption from taxes and services to the State, from which gradually grew the right to demand the taxes from the tenants resident on the exempt lands and the right to administer justice among them; further, release from military service; and, finally, the granting of great fiefs that formed the basis of the later ecclesiastical sovereignty. The reverse of this picture soon became apparent; the ecclesiastics to whom had been given lands and officers in fief became dependent on secular lords. Thus the State at an early date had a share in the making of ecclesiastical laws, exercised the right of patronage, appointed to dioceses, and soon undertook, especially in the time of Charles Martel, the secularisation of church lands. Consequently the question of the relation of Church and State soon claimed attention; it was the most important question in the history of the German Middle Ages. Under the first German emperors this problem seemed to find its solution.

Real German history begins with Charlemagne. Of all the German princes the most important one he carried on, and the result of this struggle, of fundamental importance for German history, was that the Saxons were brought into connexion with the other Germanic tribes and did not fall under Scandinavian influence. The lasting union of the Franks, Saxons, Frisians, Thuringians, Hessian, Bavarians, and the Saxons of the North Sea, that Charlemagne effected, formed the basis of a national combination which gradually lost sight of the fact that it was the product of conquest. From the time of Charlemagne the above-named German tribes lived under Frankish constitution retaining, however, old laws, the type of life the Saxons had been independent, and thus Charlemagne codified. Another point of importance for German development was that Charlemagne fixed the boundary between his domain and the Slavs, including the Wends, on the farther side of the Elbe and Saale Rivers. It is true that Charlemagne did not do all this according to a deliberate plan, but mainly in the endeavour to win over these related Germanic peoples over to Christianity. Charlemagne’s German policy, therefore, was not a mere brute conquest, but a union which was to be strengthened by the ties of morality and culture to be created by the Christian religion. The amalgamation of these ecclesiastical with the secular elements began in the reign of Pepin reached its completion under Charlemagne. The fact that Pepin obtained papal approval of his kingdom strengthened the bond between the Church and the Frankish kingdom. The consciousness of being the champion of Christianity against the Arabs, moreover, gave to the King of the Franks the religious character of the predestined protector of the Church; thus he attained a position of much importance in the Kingdom of God. Charlemagne was filled with these ideas: like St. Augustine he hated the supremacy of the heathen empire. The type of God’s Kingdom to Charlemagne and his counsellors was not the Roman Empire but the Jewish theocracy. This type was kept in view when Charlemagne undertook to give reality to the Kingdom of God. The Frankish king was then to be a great ecclesiastical and secular potentate, a royal priest. He was conscious that his conception of his position as the head of the Kingdom of God, according to the German ideas, was opposed to the essence of Roman Cesarism, and for this reason he objected to being crowned emperor by the pope on Christmas Day, 800. On this day the Germanic idea of the Kingdom of God, of which Charlemagne was the representative, bowed to the Roman idea, which regards Rome as its centre, Rome the seat of the old empire and the most sacred place of the Christian world. Charlemagne when emperor still regarded himself as the real ruler of the state. Although in 774 he confirmed the gift of his father to the Roman res publica, nevertheless he saw to it that Rome remained connected with the Frankish State; in return it had a claim to Frankish protection. He even interfered in dogmatic questions.

The great unity of the united Roman Empire from the ancient point of view, inasmuch as he greatly desired recognition by the Eastern Empire. He regarded his possession of the empire as resulting solely from his own power, consequently he himself crowned his son Louis. Yet on the other hand he looked upon his empire only as a Christian one, whose most noble calling was to train up the various races within its borders to the service of God and thus to unify them. The empire rapidly declined under his weak and nerveless son, Louis the Pious (814–40). The decay was hastened by the prevailing idea that the State was the personal property of the sovereign, a view that contained the germ of constant quarrels and necessitated the division of the empire when there were several sons. Louis sought to prevent the dangers of such division by the law of hereditary succession published in 817, by which the sovereign power was to descend to his eldest son. But his son Louis with a fourth son, by his second wife, Judith, he immediately set aside the law of partition of 817 for the benefit of the new heir. An odious struggle broke out between father and sons, and among the sons themselves. In 833 the emperor was captured by his sons at the battle of Liutpold (field), near Coima. Pope Gregory IV was at the time in the camp of the sons. The demeanaur of the pope, and the humilitating ecclesiastical menace that Louis was compelled to undergo at Soissons made apparent the change that had come about since Charlemagne in the theory of the relations of Church and State. Gregory’s view that the Church was under the rule of the representative of Christ, and that it was a higher authority, not only spiritually but also substantially, and, therefore, politically, had before this found learned defenders in France. In opposition to the eldest son Lothair, Louis and Pepin, sons of Charles the Pious, restored the father to his throne (834), but new rebellions followed when the sons once more grew dissatisfied. In 840 the emperor died near Ingelheim. The quarrels of the sons went on after the death of the father, and in 841 Lothair was completely defeated
near Fontenay (Fontanetum) by Louis the German and Charles the Bald. The empire now fell apart, not from the force of national hatreds, but in consequence of the partial religious and political tendencies of the Treaty of Verdun (August, 843), which divided the territory between the sons of Louis the Pious: Lothair, Louis the German (843–76), and Charles the Bald, and which finally resulted in the complete overthrow of the Carolingian monarchy.

As their imperial power grew weaker, the Church gradually raised itself above the State. The scandalous behaviour of Lothair II, who divorced himself from his lawful wife in order to marry his concubine, brought deep disgrace on his kingdom. The Church however, now an imposing and well-organized power, was in a just position to the ambitious king. When Lothair II died, his brothers divided his possessions between them; by the Treaty of Ribemont (Mersen), Lorraine, which lay between the East Frankish Kingdom of Louis the German and the West Frankish Kingdom of Charles the Bald, was assigned to the East Frankish Kingdom. In this way a long-enduring boundary was definitely drawn between the two powers of Germany and France. By a curious chance this boundary coincided almost exactly with the linguistic dividing line. Charles the Fat (876–87), the last son of Louis the German, united once more the entire empire. But according to old Germanic ideas that the sacredness of the land was assaulted when the aged king was attacked by cowardice when the dreaded Northmen appeared before Paris on one of their frequent incursions into France, and by his incapacity as a ruler. Consequently the Eastern Franks made his nephew Arnulf (867–89) king. This change was brought about by a revolt of the clergy against the bishops in alliance with the emperor. The danger of Norman invasion Arnulf ended one and for all by his victory in 891 at Louvain on the Dyle. In the East also he was victorious after the death (894) of Swatopluk, the great King of Moravia. The conduct of some of the great nobles forced him to turn for aid to the bishops; supported by the Church, he was crowned emperor at Rome in 896. Theoretically his rule extended over the West Frankish Kingdom, but the sway of his son, Louis the Child (899–911), the last descendant of the male line of the German Carolingians, was limited entirely to the Eastern Kingdom. Both Frankish Kingdoms, in this era of confusion, the nobility grew steadily stronger, and freemen in increasing numbers became vassals in order to escape the burdens that the State laid on them; the illusion of the imperial title could no longer give strength to the empire. Possessing like the German Princes of Spoleto, and Berengar of Friuli, were permitted to wear the diadem of the Caesars.

As the idea of political unity declined, that of the unity of the Church increased in power. The Kingdom of God, which the royal priest, Charlemagne, by his overshadowing personality had, in his own opinion, made a fact, proved to be an impossibility. Church and State, which for a short time were united in Charlemagne, had, as early as the reign of Louis the Pious, become separated. The Kingdom of God was now identified with the Church. Pope Nicholas I associated that the head of the one and indivisible Church could not be subordinate to any secular power, that only the pope could rule the Church, that it was obligatory on princes to obey the pope in spiritual things, and finally that the Carolingians had received their right to rule from the pope. This grand idea of unity, this great sentiment of a common bond, could not be annihilated, even when the papacy was humiliated by petty Italian rulers. The idea of her unity gave the Church the strength to raise herself rapidly to a position higher than that of the State. From the age of St. Boniface the Church in the East Frankish Kingdom had had direct relations with Rome, while numerous new churches and monasteries gave her a firm hold in this region. At an early date the Church there controlled the whole life, the intellectual and cultural, the entire intellectual life. She also gained frequently decisive influence over German economic life, for she disseminated much of the skill and many of the crafts of antiquity. Moreover the Church itself had grown into an economic power in the East Frankish Kingdom. Piety led many to place themselves and their lands under the control of the Church.

There was also in this period a change in social life that was followed by important social consequences. The old militia composed of every freeman capable of bearing arms went to pieces, to such an extent that the free men constantly decreased in number. In its stead there arose a higher order in the State, which alone was called on for military service. In this chaotic era the German people made no important advance in civilization. Nevertheless the union that had been formed between Roman and German elements and Christianity prepared the way for a development of the East Frankish Kingdom in civilization from which great results might be expected. At the close of the Carolingian period the external position of the kingdom was a very precarious one. The piratical Northmen boldly advanced far into the empire. Danzig and Steinkirchen crossed its borders, but the most dangerous incursions were those of the Magyars, who in 907 brought terrible suffering upon Bavaria; in their marauding expeditions they also ravaged Saxony, Thuringia, and Swabia. It was then that salvation came from the empire itself. The weak authority of the last of the Carolingians, Louis the Child, an infant in years, fell to pieces altogether, and the old ducal form of government revived in the several tribes. This was in accordance with the desires of the people. In these critical times the dukes sought to save the country; still they saw clearly that only a union of all the duchies could successfully ward off the danger from without; the royal power was to find its entire support in the laity. Once more, it is true, the attempt was made by King Conrad I (911–18) to make the Church the basis of the royal power, but the centralizing clerical policy of the king was successfully opposed by the imperial princes. The old freedom was the free choice of the lay princes at Fritilar. On the day he was elected the old theory of the State as the personal estate of the sovereign was finally done away with, and the Frankish realm was transformed into a German one. The manner of his election made it clear to Henry the Fowler to be prepared for it. It was necessary to yield to the wish of the several tribes to have their separate existence with a measure of self-government under the imperial power recognized. Thus the duchies were strengthened at the expense of the Crown. The fame of Henry I was assured by his victory over the Magyars near Merseburg (933). By regaining Lorraine, that had been lost during the reign of Conrad, he secured a bulwark on the side towards France that permitted the uninterrupted consolidation of his realm. The same result was attained on other frontiers by his successful campaigns against the Wends and Bohemians. Henry's kingdom was made up of a confederation of tribes, for the idea of a "King of the Germans" did not yet exist. It was only as the "Holy Roman Empire of the German Nation" that Germany could develop from a union of German tribes to a compact nation. As supporters of the supreme power, as vassals of the emperor, the Germans were united. This imperial policy was continued by Otto I, the Great (936–73). During his long reign Otto sought to found a strong central power in Germany, an effort at once opposed by the particularistic powers of Germany, who took advantage of disputes in the royal
family. Otto proved the necessity of a strong government by his victory over the Magyars near Augsburg (955), one result of which was the re-establishment of the imperial dignity a share in the election of the pope, he attained the imperial crown, 2 February, 962. It was necessary for Otto to obtain the pope's support in order to carry on his political and ecclesiastical policy. His intention was to make the Church an organic feature of the German constitution. This he could only do if the Church was absolutely under his control, and this could not be attained unless the papacy and Italy were included within the sphere of the empire. The pope found in the empire a powerful ally, his power over the church, it was strong enough to incline to particularism, upon a close union of Church and State. The Germans had now revived the empire and had freed the papacy from its unfortunate entanglement with the nobility of the city of Rome. The papacy rapidly regained strength and quickly renewed the policy of Nicholas I. By safeguarding the unity of the Church of Western Europe the Germans protected the peaceable development of civilisation, which was dependent upon religion, and the progress of culture which the Church spread. Thus the Germans, in union with the Church, founded the Western Empire. For itself, the heroic age of the medieval emperors was a period of progress in learning. The renaissance of antiquity during the era of the Ottos was hardly more than superficial. Nevertheless it denoted a development in learning, throughout ecclesiastical in character, in marked contrast to the tendencies in the same age of the grammarian Wiligart at Ravenna, who sought to revive not only the literature of ancient times, but also the ideas of antiquity, even when they opposed Christian ideas. Germany now boldly assumed the leadership of Western Europe and thus prevented any other power from claiming the supremacy. Moreover the new empire sought to assert its universal character in France, as well as in Burgundy and Italy. Otto also fixed his eyes on Lower Italy, which was in the hands of the Greeks, but he preferred a peaceful policy with Byzantium. He therefore married his son Otto II, in 972, to the Greek Princess Theophano.

Otto II (973–83) and his son Otto III (983–1002) firmly upheld the union with the Church inaugurated by Otto I. Otto II aimed at a great development of his power along the Mediterranean; these plans were frustrated by his early death. His campaign against the Saracens, however, came to a disastrous end in Calabria in 982, and he did not long survive the calamity. His romantic son sought to bring about a complete revival of the ancient empire, the centre of which was to be Rome, as in ancient times. There, in union with the pope, he wished to establish the true Kingdom of Germany. The power of the emperor were to be the wielders of a power one and indivisible. This idealistic policy, full of vague abstractions, led to severe German losses in the east, for the Poles and Hungarians once more gained their independence. In Italy Arduin of Ivrea founded a new kingdom; naturally enough the Apennine Peninsula was revolted against the German imperial policy. Without possession of Italy, however, the empire was impossible, and the blessings of the Ottonian theory of government were now manifest. The Church became the champion of the unity and legitimacy of the empire.

After the death of Otto III and the collapse of imperialism the Church raised Henry II (1002–24) to the throne. Henry, reviving the policy of Otto I which had been abandoned by Otto III, made Germany and the German Church the basis of his imperial system; he intended to rule the Church as Otto I had done. In 1014 he defeated Arduin and thus attained the imperial crown. The slyly ruler, whose nervousness caused him to take up plans to uproot the East Frankish Empire, endeavoured to carry out his policy by making a treaty that secured to the imperial dignity a share in the election of the pope, he attained the imperial crown, 2 February, 962. It was necessary for Otto to obtain the pope's support in order to carry on his political and ecclesiastical policy. His intention was to make the Church an organic feature of the German constitution. This he could only do if the Church was absolutely under his control, and this could not be attained unless the papacy and Italy were included within the sphere of the empire. The pope found in the empire a powerful ally, his power...
phantom. Each time an emperor went to Italy to be crowned that country had to be reconquered. Even at this very time the imperial supremacy was in great danger from the threatened conflict between the imperial and the aeclesiastical power, between Church and State. The Church, the only guide on earth to salvation, had attained dominion over mankind, whom it strove to wean from the earthly and to lead to the spiritual. The glaring contrast between the ideal and the reality, which thousands of the desire to leave the world. A spirit of asceticism, which first appeared in France, took possession of many hearts. As early as the era of the first Saxon emperors the attempt was made to introduce the reform movement of Cluny into Germany, and in the reign of Henry III this reform had become powerful. Henry himself laid much stress on the need of successors on the ecclesiastical side of his royal position. His religious views led him to side with the men of Cluny. The great mistake of his ecclesiastical policy was the belief that it was possible to promote this reform of the Church by laying stress on his suzerain authority. He repeatedly called and presided over synods and issued many decisions in Church affairs. His fundamental mistake, the thought that he could transform the Church in the manner desired by the party of reform and at the same time maintain his dominion over it, was also evident in his relations with the papacy. He sought to put an end to the disorder at Rome, caused by the unfortunate schism, by the energetic measure of deposing the three contendting popes and raising Clement II to the Apostolic See. Clement crowned an emperor and made him Patriarch of Rome. Thus Henry seemed to have regained the same control over the Church that Otto had exercised. But the papacy, purified by the elevated conceptions of the party of reform and freed by Henry from the influence of the degenerate Roman aristocracy, strove to be absolutely independent. The Church was now to be released from all human bonds. The chief aim of the papal policy was the rehabilitation of the clergy, the presentation of ecclesiastical offices by the Church alone, and the attainment by these means of as great a centralization as possible. Henry had acted with absolute honesty in raising the papacy, but he did not intend that it should outgrow his control. Sincerely pious, he was convinced of the possibility and necessity of complete accord between empire and papacy. His fanciful policy became an impractical idealism. Consequently the monarchical power began rapidly to decline in strength. Hungary regained freedom, the southern part of Italy was held by the Normans, and the Duchy of Lorraine, already long a source of trouble, maintained its hostility to the king. By the close of the reign of Henry III discontent was universal in the empire, thus permitting a growth of the particularistic powers, especially of the dukes.

When Henry III died Germany had reached a turning-point in its history. His wife Agnes assumed the regency for their four-year-old son, Henry IV (1056-1106), and at once showed her incompetence for the position by granting the great duchies the right of election of the crown. She also sought the support of the lesser nobility and thus excited the hatred of the great princes. A conspiracy of the more powerful nobles, led by Archbishop Anno (Hanno) of Cologne, obtained possession of the royal child by a stratagem at Kaiserswerth and took control of the government. Archbishop IV, however, preferred the guidance of Adalbert, Archbishop of Bremen, who was able for the moment to give the governmental policy a more national character. Thus in 1063 he restored German influence over Hungary, and the aim of his internal policy was to strengthen the central power. He called Tribus, 1066, however, he was overthrown by the particularists, but the king by now was able to assume control for himself. In the meantime the papacy had been rapidly advancing towards absolute independence. The Curia now extended the meaning of simony to the granting of an ecclesiastical office by a layman and thus demanded an entire change in the constitutions of the empire and placed itself in opposition to the imperial power. The ordinances passed in 1059 for the regulation of the papal elections excluded all imperial rights in the same. Conditions in Italy grew continually more unfavourable for the empire. The chief supporters of the papal policy were the Normans, over whom the pope claimed feudal suzerainty. The German bishops also yielded more and more to the authority of Rome; the Ottoman threat was already undermined. The question was now raised: In the Kingdom of God on earth who is to rule, the emperor or the pope? In Rome this question had long been settled. The powerful opponent of Henry, Gregory VII, claimed that the princes should acknowledge the supremacy of the Kingdom of God, and that the laws of God should be everywhere obeyed and carried out. The struggle which now lasted in principle a conflict concerning the respective rights of the empire and the papacy. But the conflict soon shifted from the spiritual to the secular domain; at last it became a conflict for the possession of Italy, and during the struggle the spiritual and the secular were often confounded. Henry was not a match for the genius of Gregory. He was courageous and intelligent and, though of a passionate nature, fought with dogged obstinacy for the rights of his monarchical power. But Gregory as the representative of the reform movement in the Church, demanding complete liberty for the Church, was too powerful for him. Aided by the inferior nobility, Henry sought to make himself absolute. The particularistic powers, however, insisted upon the maintenance of the constitutional limits of the monarchy. The revolt of the Saxons against the royal authority was led both by spiritual and secular
princes, and it was not until after many humiliations that Henry was able to conquer them in the battle on the Unstrut (1075). Directly after this began his conflict with the pope and the papacy. The occasion was the appointment of an Archbishop of Milan by the emperor without regard to the election already held by the ecclesiastical party. Gregory VII at once sent a threatening letter to Henry. Angry at this, Henry had the deposition of the pope declared at the Synod of Worms, 24 January, 1076. Gregory then felt himself released from all restraint and excommunicated the emperor. On 16 October, 1076, the German princes decided that the pope should pronounce judgment on the king and that unless Henry were released from excommunication within a year and a day he should lose his crown. Henry felt at first to break the alliance between the particularists and the pope by a clever stroke. The German princes he could not win back to his cause, but he might gain over the pope. By a penitential pilgrimage he forced the pope to grant him absolution. Henry appealed to the priest, and Gregory showed his greatness. He released the king from the ban, as though by so doing he injured his own interests, which required that he should keep his agreement to act in union with the German princes.

Thus the day of Canossa (2 and 3 February, 1077) was a victory for Henry. It did not, however, mean the coming of peace, for the German confederates of the 1076 council had not reconstituted the ecclesiastical organization at Canossa and elected Duke Rudolf of Swabia as king at Forchheim, 13 March, 1077. A civil war now broke out in Germany. After long hesitation Gregory finally took the side of Rudolf and once more excommunicated Henry. Soon after this, however, Rudolf lost both throne and life in the battle of Hohenmölsen, not far from Merseburg. Henry now abandoned his policy of absolutism, recognizing its impracticability. He returned to the Ottonian theory of government, and the German episcopate, which was embittered by the severity of the ecclesiastical administration of Rome, now came over to the side of the king. Relying upon this strife within the Church, Henry caused Gregory to be deposed by a synod held at Brixen and Guibert of Ravenna to be elected pope as Clement III. Accompanied by this pope, he went to Rome and was crowned emperor there in 1084. Love for the rights of kings and the great German into exile where he soon after died. After the death of his mighty opponent Henry was more powerful than the particularists who had elected a new rival king, Herman of Luxemburg. In 1090 Henry went again to Italy to defend his rights against the two powerful allies of the papacy, the Normans in the south and the Countess Matilda in the north. In 1091 Henry his own son Conrad declared himself king in opposition to him. Overwhelmed by this blow, Henry remained inactive in Italy, and it was not until 1097 that he returned to Germany. No reconciliation had been effected between him and Pope Urban II. In Germany Henry sought to restore internal peace, and this popular policy intensified the particularism of the princes. In union with these the king's son, young Henry, rebelled against his father. The pope supported the revolt, and the emperor was unable to cope with so many opponents. In 1105 he abdicated. After this he once more asserted his rights, but death soon closed (1106) this troubled life filled with many thrilling and tragic events. To Henry should be ascribed the credit of saving the monarchy from the threatened collapse. He has been called the most brilliant representative of the German laity in the early Middle Ages. During his reign began the development of the German nation. Emperor Henry V (1106-25) also adopted the policy of the Ottos. In the numerous discussions of the right of investiture men of sober judgment insisted, as did the emperor, that the latter could not give up the right of the investiture of his vassals with the regalia, that a distinction must be made between the spiritual and secular power of the bishops. The pope now made the strings that the emperor should give up the investiture and the pope the regalia. This proposal to strip the Church of secular power would have led to a revolution in Germany. Not only would the bishops have been unwilling to give up their position as ruling princes, but many nobles as well, as vassals of the Church, would have had the emperor abdicated. The outburst of dissatisfaction which in 1111 broke out in Rome obliged the pope to annul the prohibition of investiture. It was soon seen to be impossible to carry out the permission so granted, and it was a conflict regarding investitures began again. The ecclesiastical party then again joined alliance with the emperor, and the imperial forces were defeated on the Rhine and in Saxony. Consequently the papal party gained ground again in Germany, and the majority of the bishops fell away from Henry. Notwithstanding this he went, in 1116, to Italy to claim the imperial feudal estates of the Countess Matilda, who had died, and to confiscate her freehold property. This action naturally made more difficult the relations between pope and emperor, and in spite of the universal weariness the conflict began anew. The influence of the German secular princes had now to be reckoned with, for at this time certain families of the secular nobility succeeded in obtaining papal power and appeared as hereditary dynasties with distinct family names and residences. It was in the age of the Franconian emperors that the dynastic families of the German principalities were founded. These princes acted as an independent power in settling the disagreement between pope and emperor. Callistus II was ready for peace; in 1122 an agreement was reached and the concordat was proclaimed at the Synod of Worms. In this the pope agreed that in Germany the election of bishops should take place according to canonical procedure in the presence of the king or his representative, that the bishop-elect should be invested by the king with the secpit as a symbol of the regalia. In Germany this investiture was to precede the ecclesiastical consecration, in Italy and Burgundy it was to follow it. The emperor therefore retained all his influence in the appointment of the secular dignitaries but the pope was responsible to him. Notwithstanding this the Concordat of Worms was a defeat for the imperial claims, for the papacy that had been hitherto a subordinate power had now become a power of at least equal rank. It was now entirely free from the control of the German Crown and held an independent position, deprived of its dignity only by the fact that, on the contrary, received his dignity from the papacy. The talented, but intriguing and deceitful, king had greatly strengthened the anti-imperial tendency in all Western Europe. During the great investiture conflict the other kings had freed themselves completely from the suzerainty of the emperor. The pope's power became the guarantee of their independence, and he had became the representative of the whole of Christendom, while the imperial dignity had lost the attribute of universality. The way was now open to the pope to become the umpire over kings and nations. There was now a race between the conflict between pope and emperor. Only a minor question had been settled, but the conflict had awakened the intellects of men, and on both sides a voluminous controversial literature appeared. The assertion was now made that the Christian conception of the papacy was not realized by existing conditions. There were, however, at the same time, the Crusades opened a new world of ideas; historical writing made rapid progress, and art ventured upon new forms in architecture. Commerce and travel increased through the active intercourse with Italy, a state of affairs bene-
ficial to the growth of the cities. Germany grew in civilization although it did not reach the same level of culture which Italy and France had then attained.

Henry V died childless, and his nephew, Duke Frederick of Swabia, the representative of the most powerful ruling family in the empire, hoped to be his successor. The clergy, led by Archbishop Adalbert of Mainz, urged that in civilising the uncivilised the ecclesiastical policy of the Franconian emperors, and they succeeded in defeating him as a candidate. At Mainz the majority of the princes voted for Lothair of Supplinburg (1125–37); thus the electors disregarded any hereditary right to the throne. The Hohenstaufen brothers, Frederick and Conrad, did not vote for Lothair with whom Hohenstaufen family was in possession of the crownsland belonging to the inheritance of the Franconian emperors, and a long struggle ensued over these territories. Lothair's suzerainty was for a while in a very critical position; the Hohenstaufen power increased to such an extent that in 1127 its abettors ventured to proclaim Conrad king. In the end, however, Lothair conquered. A courageous man, but one somewhat inclined to hasty action, he was able to maintain the claim of the empire against Bohemia, Poland, and Denmark. As a statesman, however, Conrad was less aggressive and more astute. In 1130, he married Matilda II and Anselm II contended for the Holy See, to pass by without turning the temporal weakness of the papacy to the benefit of the empire. After a delay Lothair finally recognized Innocent as pope and brought him to Rome. Here Lothair was crowned emperor in 1133; but the Curia did not agree to his demand for the restoration of the old right of investiture. However, he received the domains of the Countess Matilda as a fief from the pope and thus laid the foundation of the strong position of the house of Welf (Guelph) in Central Europe. In the meantime the two Hohenstaufen brothers were defeated, and Lothair was now able (1136), without fear of an uprising in Germany, to go to Rome for a second time. The object of this further campaign in Italy was to defeat King Roger of Sicily, the protector of the anti-pope, but the success of the imperial army was only temporary. Differences of opinion as to imperial privileges led to the war of the Hohenstaufen Duke of Franconia, passing over Duke Henry the Proudt, ruler of Saxony and Bavaria, and a descendant of Duke Welf (Guelph). The new king demanded from Henry the surrender of the Saxon duchy. Although after a long struggle the double Duchy of Bavaria-Saxony was dissolved, yet the Saxon duchy that was given by the treaty of 1142 to young Henry the Lion, son of Henry the Proudt, continued a menace to the Hohenstaufen rule. Conrad was not able to put an end to the disorders in his realm, and the respect felt for the empire on the eastern frontier declined; neither was it possible to assert control. Yet all these troubles did not prevent his yielding to the fiery eloquence of St. Bernard of Clairvaux and joining the Second Crusade. This crusade, the success of which had been promised by St. Bernard and the pope, failed completely. When Conrad returned home, broken in spirit, he was confronted by the danger of a formidable rising of the Welfs. In 1152 he died. During his reign the intellectual results of the Crusades began to show themselves. Men's imaginations had been stimulated and led them away from traditional medieval sentiment. The world was seized by a romantic impulse and the conception of the Crusades, developed first among the Romanic nations, gave a new imaginative colouring that had no parallel in the age. For a long time German knighthood, in particular, was characterized by Romances and manners.

When the new king, Frederick I Barbarossa (1152–90), ascended the throne his German kingdom seemed on the verge of disintegration, and he sought to strengthen his power by journeying through his realms. Contrary to the policy pursued by his predecessor, he exerted himself to settle the strife between the Welf (Guelph) and Hohenstaufen parties. He wanted to strengthen the Welf power to such extent as to make it evident that this party's interests coincided with those of the Crown. Besides Saxony, Henry the Lion received also the Duchy of Bavaria which had been taken from his father Henry the Proud. As secular protector of the Church, Frederick came to an agreement with the pope in regard to the latter's adversaries, the citizens of Rome and King Henry the Lion, in which the emperor granted to the Holy See, as one of vast schemes which he could only carry out when he had a firm footing in Italy. But in Italy the city republics had arisen, and these had entirely cast off his suzerainty. Not realizing the power of resistance of the free communities, Frederick wanted to force the cities to recognize the supremacy of the empire. In case the pope should interfere in the dispute, Frederick was resolved not to permit his intervention in secular affairs. Frederick was filled with an ideal conception of his position as emperor. He believed that the Germans were destined in the history of the world to exercise universal rule. It was this idea, however, that exasperated the Italians and aroused their hatred. Frederick could only carry out this universal policy if Italy were his, and the question of its possession led to renewed struggles between Church and State. When Frederick went to Rome to be crowned emperor in 1155, most of the Italian cities paid their respects to him. On the return from Rome, however, Frederick was sole proprietor of the Duchies of Milan and of the East March (later Austria) being first detached from the duchy. This led in the course of time to a development of the mark that proved of great importance for the future history of the empire. Frederick's policy was, in the main, to interfere with the internal affairs of the German princes as long as they obeyed the laws of the empire. The spiritual princes he attached closely to himself. The most powerful bishops of this period, Rainald of Cologne, Christian of Mainz, and Wichmann of Magdeburg, supported the imperial party. The majority of the bishops looked upon Frederick as a protection against the encroachments of Rome and of the secular rulers. The emperor sought, by strengthening his dynastic power, to make himself independent of both the ecclesiastical and temporal princes; to carry out this policy he depended on his inferior civil officials (Ministeriales), who were still serfs, and from whom he was hereafter to come the important military nobility. Thus Frederick prepared the way for the flourishing period of chivalry, which was to give its signature to the time now at hand. A romantic, knightly culture arose; poetry flourished; yet the love lyrics of the age often expounded unhealthy views of morals and marriage. Nevertheless, the movement did not penetrate very deep, and the common people remained uncorrupted. Moreover, poetry was not wasted on artificial love songs; Wolfram von Eschenbach had the courage to attempt great problems; Walther von der Vogelweide was the herald of German imperialism. Art undertook to solve great questions, and began to draw
its themes from life. Scientific learning, however, had not made equal progress; the time of apprenticeship was not yet passed, while in France and Italy Scholasticism had already reached its creative height. In 1155 Frederick made a second campaign in Italy that closed with the sack of Milan, the subjugation of Italy, and the flight of Pope Alexander III to France. When, however, the rest of Europe sided with the lawful pope, the defeat of the emperor was assured, for the papacy was supported by all the other countries and not to be coerced by Frederick. The emperor's third campaign in Italy (1162–64) ended in the failure of his lower Italian policy, and the outbreak of the plague destroyed the more promising prospects of the fourth expedition. In the fifth campaign (1174) occurred the memorable defeat near Legnano which opened the eyes of the emperor to the new complication of things. Frederick took part in the Third Crusade in order that the highest power of Christendom might actively fight against the infidel. He was drowned in the river Salzach, 10 June, 1190; and was, at his death, a popular hero. He had greatly strengthened the feeling of the Germans that they were one great people, though a regional national empire was at the time quite out of the question; the achievement of unity was prevented by the international character of intellectual, and partly of social, life.

Frederick's son, Henry VI (1190–97), meant to establish a world power along the Mediterranean. His schemes were opposed by a Saxon-Guelphic combination headed by Richard the Lion-Hearted of England, and also by the German princes, who strove to hinder the increase of the royal power aimed at by Henry. The capture of Richard in 1192 dissolved the league of princes and led to peace with the House of Guelph. In 1197 Frederick died in conquered Sicily, and it seemed as though his imperialistic schemes would gain the day; nevertheless they failed owing to the opposition of the German princes and the pope. When Henry died in 1197 the countries of Western Europe had already taken a stand against the all-embracing scheme that occurred for the imperial Germany was threatened by the horrors of a civil war. All the national forces were active.

Instead of the crown going to Frederick, son of Henry, who was at Naples, Archbishop Adolph of Cologne sought, by means of the electoral rights of the princes, to obtain it for the son of Henry the Lion, Otto IV (1195–1215). But the Hohenstaufen party anticipated this scheme by securing the election of the popular Duke Philip of Swabia (1198–1208). For the first time the question now arose, which of the princes have the right to vote? The number of electors had not, so far, been defined; yet as early as the election of Lothair and Conrad only the princes had voted, and the right of the Archbishops of Mainz to preside at the election was clearly admitted. Not much later the opinion prevailed that only six ruling princes were entitled to act as electors: the three Rhenish Archbishops, the Rhenish Palsgrave, the Duke of Saxony, and the Prince-electors of Brandenburg. In the course of time the King of Bohemia. The "Sachenspiegel" (compilation of Saxon law, c. 1230) caused this view to prevail. At the time of the double election of Otto and Philip the policy pursued by the German princes was a purely selfish one. The energetic Innocent III, who was then pope, claimed the right of deciding the dispute and adjudged the crown to Philip. This claim was not supported by all the other countries and not to be coerced by Frederick. In this conflict the German princes changed sides whenever it seemed to their interest. Archbishop Adolph of Cologne, who had carried the election of Otto, finally fell away from him. Philip gained in authority, and after the successful battle of the Nesva at 1206 he would have overcome Otto and his ally the Hohenstaufen had not been murdered at Bamburg in 1208 by Otto of Wittelsbach. Otto IV was now universally acknowledged king. He promised the pope to give up his claim to the domains of the Countess Matilda of Tuscany and grant the free election of bishops. But when at Rome he refused to cut off his nose to spite his face, the pope, though displeased, crowned him emperor in 1210. But when Otto after this wished to revive the imperial claims to Naples, the pope excommunicated him (1210).

In the meantime the supreme position of the empire had become so important a matter that foreign princes meddled in German politics. The great conflict between Philip Augustus of France and John of England was reflected in the contest between the Guelphs and the Hohenstaufen in Germany. Protected by the French and the pope, Frederick II (1215–50) endeavored to Germanize the new kingdom of Sicily. Frederick II was an able organizer of the Hohenstaufen empire; the coalition of the English and the Guelphs was broken by the French at the battle of Bouvines (1214), yet Otto kept up the struggle for his rights until his death in 1218. The long conflict had greatly impaired the strength of the Hohenstaufen line; both the imperial and the Hohenstaufen claims had been squandered, and the German princes had become conscious of their power. Like his father, Frederick II made Italy the centre of his policy: but at the same time he intended to keep the control of Germany in his own hands, as the imperial power was connected with this country and he must draw the soldiers needed for his Italian projects from Germany. In order to maintain peace in Germany and to secure the aid of the German princes for his Italian policy Frederick made great concessions to the ecclesiastical princes in the "Concordat of Worms" (1220) and to the secular princes in the "Golden Bull" (1232). These two laws became the basis of an aristocratic constitution for the German Empire. They both contained a large number of separate ordinances, which taken together might serve as a secure basis for the future sovereignty of the local princes. In these statutes the expression landed estates (Lande) means general landed estates. In this sense Germany was cut up into a large number of territorial sovereignties, consisting of the ecclesiastical territories, the duchies, which, however, were no longer tribal duchies, the margravates, among which the North Mark ruled by Albert the Bear was one of the most important, the pale, and the countship, and the independent domains of those who had risen from landed proprietors to landed sovereigns. In addition to these were the districts ruled directly by the king through imperial warden. What Frederick sought to get by favouring the princes he obtained. He had no real interest in Germany, which was at first ruled by the energetic Engelbert, Archbishop of Cologne; after 1220 he visited it only once. It was to him an appendage of Sicily. Frederick's Italian policy threatened the papacy, and he strove by concessions to avert a conflict with the pope. The highly talented, almost learned, emperor was far in advance of the average an autocratic ruler, he created in lower Italy the first modern state; but by his care for Italy he overstrained the resources of the empire. This brought advantages to the neighbouring Kingdoms of France and England, now long independent powers, as well as
least, taught their doctrines in language quite intelligible to the people. The rise of the cities was also of importance in the social life of the day, for the principle, "City air gives freedom" (Stadtluft macht frei), created an entirely new series of relations with the Curia. In 1212 he was crowned emperor. Repeatedly urged to undertake the promised crusade, and finally excommunicated because he failed to do so, the emperor obtained successes in the East in 1227–29, contrary to the wishes of the pope. The defeat of a German army by an army impressed by the Curia was a victory for Frederick. A rebellion headed by his son Henry was quickly crushed, but the confederates of Henry, the Lombards, assumed a threatening attitude. The emperor was able to bring order out of the confusion in Germany by the policy of yoking the peasantry to the peasants. Almost at the same time he began in Frederick's struggle with the Lombards and Pope Gregory IX (1227–41). The German princes loyally upheld the emperor, consequently, upon the pope's death, the victory seemed to belong to the imperial party. Innocent IV (1243–54), however, renewed the struggle and, on Lyoner's excommunicating the emperor, his position now became a serious one. In Germany his son Conrad was obliged to contend with the pretenders, Heinrich Raspe of Thuringia and William of Holland. In Italy, though, conditions seemed favourable, but just at this juncture Frederick died (10 December, 1250), and with his death the struggle for the crown ceased.

The year 1250 marks an era of extraordinary change in Germany. The romance of chivalry passed away, and new forces directed the life of the nation. On account of the extraordinary economic changes the population rapidly increased; the majority of the people were peasants, as of the class was rising, and compared with nobles and ecclesiastics the peasants had no weight politically. The important factor of the new era was the municipality, and its development was the beginning of a purely German policy. The glamour of the imperial idea had vanished, men now took their stand on facts and realities. Education found its way among laymen, and it developed with trade. New markets were opened for commerce. The new commercial settlements received "city charters" under the royal cross. The merchants in these new settlements needed craftsmen, and these latter from the cities formed guilds of art, thus making a new political unit. Councils elected by the cities strove to set aside the former lords of the cities, especially the bishops on the Rhine. In vain the Hohenstaufen rulers supported the bishops against the independence of the towns, but the self-government in the cities could not be brought down. In order to protect their rights some of the cities formed alliances, such as the confederation of the Rhenish towns, that was formed as early as the period of the Great Interregnum, in order to guard the public peace. These confederations promised to become dangerous, as the cities were rising, but such alliances did not become general and, divided among themselves, without mutual support, the smaller confederations of towns succumbed to the united princely power. The growth of the towns brought about the ruin of the system of trade by barter or in kind; the rise of the capitalist system of commerce at once affected German views of life. Up to this time almost wholly absorbed in the supernatural, henceforth the Germans took more interest in worldly things. Unconditional renunciation of the world came to an end, and men grew more matter-of-fact and practical. The German mind of thinking was aided by the opposition that sprung up successful to the citizens and the former lords of the territory, often the bishops and their clergy. Here and there the influence of the city on the views of the clergy manifested itself. The Dominicans and Franciscans, at

The most valuable result of this strengthening of the national feeling was the conquest of what is now the eastern part of the present German Empire. Henry I had sought to attain this end, but it was not until the thirteenth century that it was accomplished, partly by the energy of the Teutonic Order. The Marks of Brandenburg and Pomerania, Prussia, Saxony were colonised by Germans in a manner that challenges admiration, and German influence advanced as far as the Gulf of Finland. The centres of German civilisation in these districts were the Premonstratensian and Cistercian monasteries. This extraordinary success was won by methods, not in an imperial government seemed ready to go to pieces. It was the period of the Great Interregnum (1256–73). We find traces of internal chaos as early as the reign of Frederick's son, Conrad IV (1250–54), and the confusion grew worse in the reign of William of Holland, and after him during the nominal reigns of Richard of Cornwall and Alfonso of Castile. At the same time Bohemia rapidly advanced in power under Ottocar II and became a dangerous element for the domestic and foreign policy of Germany. It was Pope Gregory X who restored order in Germany. To carry out his projects in the Holy Land peace must be secured in Western Europe. He therefore commissioned the electoral princes, who now appear for the first time, to elect a new king. In 1273 the princes chose Rudolf of Hapsburg (1273–91), a man of no great family resources. Meantime the imperial power had fallen into decay; the imperial title was invested by the pope; there were no imperial taxes; and the old method of obtaining soldiers for the service of the empire had broken down. Rudolf saw how necessary the possession of crown-lands was for the imperial authority, his aim being to create a dynastic force. Ottocar II, King of Bohemia, sought to induce the Curia to object to the election of Rudolf, but the Curia had quickly come to terms with Rudolf concerning conditions in Italy. After his election he demanded from Ottocar the return of the imperial fiefs, and the refusal of the latter led to a war (1276) in which, on the plain called the Lechfeld, Ottocar, lost both life and crown. This victory gave Rudolf possession of the Austrian provinces. As the German king was not permitted to retain vacant fiefs, he evaded this law by granting Austria, Styria, Carniola, and Lusatia in fief to his sons Albert and Rudolf; in this way the power of the family was greatly increased. Not even Rudolf thought of strengthening the kingly power by constitutional means. He decided to protect the public peace but did not entirely succeed in this. His policy was always influenced by the circumstances of the moment; at one time he favoured the princes, at another the cities; consequently he was never more than half successful. His only great achievement was that he secured for his family a position in Eastern Europe that was destined to give it importance in the future. Rudolf's successor was Adolf of Nassau (1292–98), not his son Albert, as he had desired. The policy of
the new sovereign was to weaken Austria, his natural opponent. Like Rudolf he recognised the necessity of some form of union for his family, for which he tried to lay a foundation in Thuringia. Adolf's success against Frederick the Degenerate of Thuringia caused the electoral princes to incline to Albert. In a battle near Gölheim, fought between Albert and Adolf, Albert, aided by Adolf's numerous enemies, defeated the king, who was killed. Albert, a very able but morecous man (1298–1308), was filled with a boundless ambition for power. Without regard for the rights of others, he enforced the recognition of his own rights in his duchy. He desired to preserve the public peace in Germany and opposed the cruel persecution of the Jews custom ary in his state. He also wished to reorganize the imperial lands, which were to be regained in such a way as to provide a connecting link between the territories of the Hapsburgs in the east and those in the west. If his lands were thus united he would be a match for the strongest of the territorial princes; but the latter opposed this scheme. Albert also roused the anger of the ecclesiastical electors by combining with King Philip IV of France against Boniface VIII, who had not recognised Albert. Boniface now declared his intention of summoning Albert before his tribunal for the murder of Adolf. Supported by the citizens of Ingolph and Williams, the Elector of Saxony, but after a while, in order to carry out his plans for the aggrandizement of his family, he came to terms with the pope, and this put an end to the opposition of these electors. The only opponent of his dynastic schemes now to be dreaded was Wenceslaus II of Bohemia; but the Przemysl line soon died out, and Albert at once claimed their lands and gave them to his son Rudolf as a fief. Before he could carry out his designs on Thuringia he was murdered by John of Swabia, called Johannes Parricida. According to legend the tyranny of his rule in Switzerland led to a great struggle for freedom on the part of the confederated Swiss. The aim pursued by Albert was always the same: by making Austria powerful to force the other sovereign princes to acknowledge his suzerainty and thus to make the crown hereditary in his family. It is, therefore, not a matter of surprise that after his death the electors decided to select a less mighty prince.

Archbishop Baldwin of Triern managed the matter so skillfully that his brother Henry of Luxemburg (Lützelsburg) was chosen (1308–13). A man of gentle, amiable character, Henry was full of visionary enthusiasm, but withal was a man of energy; consequently he was soon very popular. By birth he was in sympathy with the German and Austrian states, and the people of Germany, and he was welcomed with open arms. It was a great fascination for him; he was ambitious to receive the imperial crown, to be the first after a long interregnum. Clement V had recognised him. The Chibelle party in Italy greeted him with joy. At first they sought to hold a neutral position in the quarrels of the Italian parties, but this proved to be impossible. The Guelphs, led by King Robert of Naples, began to oppose him. When Henry thereupon wished to attack Naples, the old conflict with the Church again broke out, but death suddenly ended his imperial dreams. Henry's only successful act was the marriage of his son John with the heiress of Bohemia, Elizabeth, the sister of Wenceslaus III; for Germany his reign proved of no advantage. The election of his son John to succeed him was impossible, and the Luxemburg party chose Louis the Bavarian (1314–47) in opposition to Frederick the Fair (1314–30). There was a double election, each of the candidates being elected by one party, and a civil war broke out, confined, however, mainly to the partisans of the two Houses of Wittelsbach and Hapsburg. The struggle was ended by the capture of Frederick at the battle of Mühldorf (1322); after this Louis was universally recognised.

While this conflict was going on the old strife between Church and State again broke out. At the time of the double election John XXII claimed the rights of an administrator of the Curia. He asserted that no king chosen by the electors could exercise authority before the pope had given his approval. This over-straining of the papal claims roused a dissatisfaction which continually grew and to which were already added complaints of the worldliness of the Church. The Minorities placed at the disposal of the king eloquent preachers to denounce the worldliness of the papacy, which had rejected as heretical the Franciscan teaching concerning the poverty of Christ and the Apostles. In 1324 Louis was excommunicated because he had not obeyed the papal command to give up the clergy. This was followed by a sharp reply in the proclamations of Sachsenhausen, in which he denied the claims of the pope and at the same time defended the teaching concerning poverty upheld by the Franciscans. In the conflict with the pope, who supported the candidature of Charles IV of France for the imperial throne, the German cities and the German episcopate, the latter led by Baldwin of Triern, were virtually a unit on the side of Louis. Even the death of Frederick the Fair did not produce a reconciliation with the Curia. It was at this juncture that the writings of the Franciscans, Michael of St. Thomas, and William of Ockham became influential. The spirit of revolution in the Church is shown by the "Defensor Pacis" of Marsilius of Padua, a professor of Paris who went to the Court of Louis the Bavarian. In this the medieval papal ecclesiastical system is attacked. The intellectual ferment enabled Louis to undertake an expedition to Rome. He had been invited to enter Italy by the magnates of northern Italy, especially by the Visconti of Milan and the Scala of Verona. The city of Rome received him with joy, and he was the first German king to receive the imperial crown from the Roman commonwealth, which had always regarded itself as the source of all sovereignty. But theickle populace soon drove him away; the means at his command were too small to carry out the old imperial policy. Again Italy was lost. Notwithstanding the lack of success in Italy, Germany in the main held to Louis, who had been excommunicated again. It was now evident that papal interference had largely lost its terror; the civil communities frequently paid no attention to them, and in some places ecclesiastics were forced, notwithstanding the prohibition, to say Mass. The growth of a worldly spirit in the Church began to undermine respect for it, and Germany was the first country to turn against the Pope. So great was the popular contempt for papal titles that heretics extended them to the pope himself; schismatics appeared; mysticism tended to make the soul independent in its progress towards God, without, however, rejecting the sacraments, as was done by some in this era. Yet, unintentionally, mysticism strengthened the tendency to deny the absolute necessity of the intercessory office of the Church. Moreover, mysticism gave a national cast to German religious life, for the intellectual leaders of mysticism, Eckehard, Suse, and Tauler, wrote and preached in German. The chief strength of this religious movement was among the citizens of the towns. In the conflict between Church and State the cities sided with the emperor, but they were not yet strong enough without assistance to maintain the authority of a German emperor. Consequently the position taken by the German princes was decisive for Louis. As he meant to carry on a dynastic policy, as his predecessors had done, he soon came into conflict with the emperor, but they were not yet strong enough to withstand his power. He tried to make a good impression on every
one; as a consequence, he failed with all parties. He opened negotiations with the Curia, but the intrigues of Philip VI of France kept the two parties from concluding peace. This led Louis to take the side of Edward III of England at the beginning of the war between the French and English for the succession to the French throne, and to give his son Edward V his support. Louis also gave his support and sympathy for Louis in Germany. The electors were also influenced by public opinion when they declared at Rennes in 1338 that a legitimate German emperor could be created only by their votes; a king so chosen needed no papal recognition, and the pope, by crowning him, only gave him the imperial title. The emperor Louis was also declared to be entirely without blame in the dispute with the Curia. When Edward III appeared before Louis at Coblenz and the latter appointed him imperial vicar for the territories beyond the Rhine, the emperor had reached the zenith of his power. Nevertheless the sickle Louis, because he hoped, through the mediation of the King of France, to be reconciled with the Curia and to secure the support of the latter for his schemes to aggrandize his family, allied himself with the French in 1341. Instead of peace a worse estrangement with the papal court ensued.

With the consent of the emperor, Margaret Maultasch of Tyrol, who had married John of Luxembourg (Lüttichau), had divorced herself without awaiting the papal decision and married the emperor's son, Louis of Brandenburg. The Luxembourg party at once had recourse to Clement VI. Louis was excommunicated in 1346, and Charles IV of Moravia (1347-78) was, with the help of the pope, chosen German king by five of the electors under humiliating conditions. At first Louis had strong support from the German cities, but his unexpected death secured universal recognition for Charles. Henceforth for nearly a hundred years the Luxembourg dynasty held the throne. The king set up by the Wittelsbach party, Günther of Schwarzburg, could make no headway against the adroit policy of Charles IV. In 1347 Germany was ravaged by the Black Death; the Jews were immediately accused of poisoning the wells, and a frightful persecution followed. In the midst of the confusion the country was traversed by bands of Flagellants, and these "penitents" were often full of hostility to the Church. While in Italy Petrarch and Cola di Rienzi revived the dream of the universal dominion of the Eternal City, Charles IV regarded Italy as one of the sources of German power. The Italians said that he went to Rome (1355) to secure the imperial crown like a merchant going to a fair. In Germany Charles sought to settle the election to the crown at the Diets of Nuremberg and Metz in 1356, and he issued the Golden Bull, which was the first attempt to put into writing the more important stipulations of the imperial constitution. Above all, the Bull was intended to regulate the election of the king, and defined what princes should have the electoral vote. The electoral college was to consist of the three Archbishops of Mainz, Trier, and Cologne; the Count Palatine of the Rhine, the Duke of Saxony (Sachsen-Wittenberg), and the Margrave of Brandenburg; to this number was added later the King of Bohemia. The electors were granted special privileges; besides the royal rights (regalia) and those of taxation and coinage, they received the privilegium de non evocando, that is, their subjects could not be summoned before the royal court; the secular jurisdiction was said to be the imperial one. The royal authority was to find in the electors who were scattered throughout the empire a support against the many petty princes. Other articles of the Golden Bull were to guard the rights of the local princes against their vassals and subjects, especially the cities, and the share of the pope in the election of the king; the one chosen by the majority of the electors was to be the king. Only the coronation as emperor was left to the pope. The Golden Bull remained the most important part of the fundamental law of the Holy Roman Empire.

Learning flourished under the rule of Charles, who was a scholar among his contemporaries. He surrounded himself with the highest educated men, of whom was John of Neumarkt, the head of his chancellory. His interest being almost entirely in Bohemia, he showed his care for the advancement of learning chiefly in this country and founded there, 7 April, 1348, the University of Prague. Charles held steadfastly to Catholicism and Christian brotherhood; but this did not prevent him from carrying on policies independent of the pope. In reorganizing the imperial chancery he encouraged the use of German in the imperial documents and thus assured the victory of the national tongue over Latin. By this action he gave German learning an independent standing.

Charles also furthered the interests of the empire in various other directions. He did not, indeed, overthrow the power of the princes, which had grown strong during the several hundred years of its existence, but he sought by the maintenance of internal peace to preserve his subjects from the foreign interests of Germany he desired to liberate the papacy from its connexion with France and to persuade the pope to return from Avignon to Rome. Gregory XI went back to Rome, but the Babylonian Captivity was to be followed by the Great Schism. In the meantime Charles had largely increased the territorial possessions of his family; the Mark of Brandenburg, Lusatia, and Silesia came into his hands. By marriage he hoped to obtain for his son, and thus for his dynasty, both Hungary and Poland. Thus for a time the House of Luxembourg threatened to crush out the Hapsburgs. In two directions only Charles's policy was a disappointment to those in favor of perpetual peace. The Swiss Confederation seceded more and more completely from the empire, and the cities by their leagues established for themselves an independent position in the empire. Towards the end of his life he secured the election of his son Wenceslaus as German king.

Wenceslaus (1378-1400) reigned without the confirmation of the defenceless pope of that time. The German crown was no longer dependent on the papacy. Other questions far more important than this were now brought into the foreground by the Great Schism. There was a continual struggle of the papal and the imperial powers, which could not be suppressed, for the reform of the Church in its head and members. The demand for reform had fused new life into the whole conception of the Church, and the leaders of this movement still held to Catholic dogmas. The most difficult task of the new king, and one he did not shirk, was to put an end to the schism. He sided with Rome and supported Urban VI while France, at the head of the Romanic countries, upheld Clement VII. Wenceslaus, however, took no energetic action in ecclesiastical affairs; the internal disorder in Germany did not permit it, for here the confederations of princes, knights, and the cities, struggled with one another. In 1381 the confederation of the Rhineland cities formed a coalition with the league of the Swabian cities and sought with considerable success to obtain the adherence of other Swabian towns and of those of North Germany. Thus strengthened, the cities wished to share in the government of the empire; this desire was opposed by the princes, who found the cities superior to the cities. The attempts of the rulers of Austria to overthrow the Swiss confederates failed, but in Germany the army of the Swabian League suffered a crushing defeat in 1388 near Dörfingen. After this Wenceslaus changed his policy and aided with the proceeds of the war internal improvements.
ence and the territorial princes were the conquerors. The quick-tempered, irascible king sought to strengthen his hold on his hereditary provinces by protecting himself against the other ruling princes, but in this he was not successful. A government by favouritism of the worst kind began which excited the anger of the nobility and the clergy. A dispute with the Archbishop of Prague led to the murder, by the king's order, of the young and popular John of Podul, and this caused open rebellion. In 1394 the nobles with Jost, Margrave of Moravia, as their leader, took the king prisoner; he was soon set free at the instance of the German princes, but his release did not put an end to the rule of the Avignon pope by a bold stroke; but in 1392 Charles VI became insane, and his plans were brought to nought. The waning influence of the German Empire was everywhere perceptible and called forth universal indignation. The king's lack of capacity for government led the majority of the electors to form a league for the protection of the interests of the country.

The three episcopal electors chose Ruprecht, Count Palatine of the Rhine, as King of Germany (1400–10). As only a part of the electors joined in this choice Ruprecht was never more than a pretender, and although he was an ambitious and capable man he never succeeded in uniting the empire. Ruprecht hoped to gain popularity by restoring German influence in northern Italy, and by securing the imperial crown to prove himself the legal sovereign. As Ruprecht had no money, his expedition to Italy was inglorious, and its failure had a bad effect on his position in Germany. Even his final recognition by the popes did not suffice for a long time to raise the House of Luxembourg, his faithful supporters, did little to aid Ruprecht's cause, and his throne began to totter. In 1405 Archbishop Johann of Mainz combined the princes against Ruprecht in the League of Marbach which, however, accomplished next to nothing. In the question of the schism Ruprecht supported Boniface IX. As King of the Germans Ruprecht was a failure. During the laxity of government that followed his death the German conquests in the eastern part of the empire were in danger of being lost. A new factor had appeared in history, the Kingdom of Poland.

All this time the confusion in the affairs of the Church had continued to grow worse, and it was now proposed to put an end to the schism by means of a council. The cardinals of the two rival popes called a council at Pisa which deposed Popes Gregory XII and Benedict XIII and elected Alexander V, but Gregory and Benedict could still count on some supporters, and the world thus saw three popes. The greater part of Germany held to the new pope, Alexander V, but the party of the Count Palatine and of the Bishop of Trier held to Gregory. A period of utter confusion and great distress of conscience followed; all the relations of life suffered, to political by no means the least. In Germany the troubles led to a double election; Sigismund of Luxemburg, King of Hungary, the brother of Wenceslaus was elected (1410–37), as was also Jost, Margrave of Moravia. Jost withdrew, and Wenceslaus resigned the government to Sigismund, who in 1414 formed a Holy League in order to recover the political impotence of the last reign convinced the electors, who had chosen Margrave Jost for reasons of Church politics, that a king who had not large territorial power could accomplish nothing. Consequently they dropped their opposition to Sigismund. The latter's life before his election had been a very eventful one. He had married the daughter and heiress of Louis the Great of Hungary, and had been crowned king of that country in 1387. In the war between the Turks he had been completely defeated by Sultan Bajazet; after this he had had to contend with a dangerous rebellion in Hungary. Sigismund was talented, eloquent, witty, and exceedingly ambitious; he was inclined to visionary schemes, but he honestly desired to do good; and trouble was always to be expected in the hereditary dominions, to which Hungary was now added, there was great disorder. Yet notwithstanding this he succeeded in bringing together the great Councils of Constance and Basle. Ambition led him to attempt to settle the difficulties in which the Church was involved, but above all it led him to political considerations. He hoped that a council would aid him in suppressing the religious troubles kindled in his hereditary kingdom of Bohemia by John Hus. It was not seal for the Church, however, which inspired his interest in the council, as is evident from the general bent of his mind. For with all his interest in literature and learning, Sigismund scrupulously avoided involving himself in theological difficulties; moreover he took pleasure in denouncing the faults of the clergy. Nevertheless it was Sigismund's energy that held together the great council at Constance. It was certainly not his fault that many were not satisfied with the result of this and the following council. The forcible interference of the Council of Constance in the religious difficulties of Bohemia and the burning of John Hus were injurious to Sigismund's dynastic interests, and not in accordance with his political schemes. In Bohemia and Moravia the Hussites at once strove to prevent the king from taking possession of these countries; and the result, especially in Bohemia, was a violent religious and national outbreak. The king was held directly responsible for the burning of the national hero and saint. Fanatical hordes led by Ziska repeatedly overthrew Sigismund's army in his crusade against the Hussites; he was also forced to withdraw over the adjacent provinces of the empire. Bavaria, Franconia, Saxony, and Silesia were terribly devastated. The imperial government broke down completely. The selfishness of the cities prevented the reform of the German military system, even after its necessity had been proved by further successes of the Hussites. In 1427 an imperial law for the levying of a war-tax was laid before the Diet at Frankfort, but it was never carried out.

In addition to the troubles in Bohemia, Sigismund's already insecure position was made more precarious by a fresh invasion of Hungary by the Turks. The only help he received was from Duke Albert V of Austria, his son-in-law and the prospective heir of the great inheritance of the Luxemburg possessions. The jealousy among the German states prevented common action against both foes. Sigismund's chief ambition, after the reunion and the independence of the Church, to unite all the nations of Western Europe in a war against the Turks, became more and more hopeless. The defeat of the Hussites appeared equally impossible, and negotiations were opened with them, peace being finally arranged at Basle. Sigismund induced the pope to weaken in his attitude towards the conciliar theory, and especially to the Council of Basle which was to deal with the Hussite difficulties. To gain his point he had gone to Rome, where he was crowned emperor in 1433. Even in Bohemia where the existing anarchy had been increased by a new religious quarrel, where the moderate Calixtines had formed a party against the stricters, he was successful. To Procopius the Great in 1434, the need of peace grew more and more intense. The year previous to this, 1433, a commission of the Council of Basle had made a number of concessions to the Hussites in the Compact of Basle or of Prague; among these was the granting of the Cup to the laity. On the basis of the
Compact a peace was agreed to, which was followed by the recognition (1438) of Sigismund as king in Bohemia. His claim to the empire was not strenuously contested and he seemed to lose all concern for the reform of the Church and empire in which before he had shown so keen and active an interest. He can hardly be blamed, for the boundless selfishness and jealousy of the princes repeatedly wrecked the work of reform; and the whole responsibility for the scanty gains for the empire achieved during his reign should not be laid on his shoulders. Only two of his measures were to have permanent existence; the transfer of the Mark of Brandenburg to the Hohenzollerns, and the granting of electoral Saxony to the House of Wettin. The great councils passed without bringing the fervently desired reform. Great changes were witnessed in these assemblies. At Basle the pope was regarded simply as a representative of the Church, and the superiority of the council over the pope was openly declared. In 1433 Procopius had been allowed to enter Basle at the head of his heretical followers and to set forth his opinions before the assembled members of the council without molestation. At Basle opinions which were signs of a revolutionary movement in the Church repeatedly appeared. In character this council differed entirely from all earlier ones; the excitement was so great that tumults and brawls occurred. Contrary to the wishes of Rome the council remained at Basle; the fear was that if it were transferred to Italian soil the work of reform would be forgotten. Yet the honest intentions of the majority of the members cannot be doubted. In the end the pope was victorious, and the council was transferred to Ferrara. Some of the members remained at Basle and the spectacle of a conciliar schism was offered to the world.

In this troubled era Albert II (1438–39), Duke of Austria, was chosen emperor. The electors recognized the fact that the centre of gravity of the empire lay towards the east. Albert, member of the Hapsburg family, had not put himself forward as a candidate, and the electors probably selected him through fear that the important and necessary eastern territories might fall away from the empire. Before he could come to Western Germany Albert, a rough soldier, died during a campaign against the Turks.

The election now went to the head of the Hapsburg family, the inoffensive and indolent Frederick III, who, as King of the Romans, was Frederick IV (1440–93). During his reign the work of reform in the empire fell completely into abeyance. He too was obliged to face the difficulties in the Church. The electors had declared in neutral in the dispute between the pope and the Council of Basle, but this neutrality had been broken, inasmuch as the Diet of Mainz in 1439 accepted the reform decrees of Basle, with exception of the assertion of the superiority of the council over the pope. Henceforth bishops and abbots were to be elected canonically, but the king had the right to secure the election of suitable persons by negotiation. Papal reservations and annexations were abolished. The Council of Basle, however, held firmly to its exaggerated conception of the powers of a council, and its members wished to establish the dogma of conciliar superiority by deposing Pope Eugenius IV. In this dispute the electors remained neutral. The reform of the Church was more and more lost sight of by the Council of Basle in its struggle with the pope. Frederick, who was appealed to by both Rome and Basle, at first remained neutral; then he proposed the calling of a new council to reunite divided Christianity. Western Europe gradually turned again to the rightful pope, and the pope elected at Basle, Felix V, received but slight recognition. For a time the German attitude of neutrality was maintained, but after a while Frederick gave the impetus to the universal recognition of Pope Eugenius. This was brought about by Æneas Sylvius, later Pius II, an adroit diplomat who was able to influence the king and the electing princes. An agreement was made with Rome in the Concordat of Vienna (1448) in which the Curia made but trifling concessions, while the question of reform received scant consideration. From now on the Synod of Basle, transferred to Lausanne, had only a shadowy existence. The Curia, although sorely pressed, had once more conquered. The general anxiety to avoid a new schism in the Church had far more to do with the settlement of these ecclesiastical troubles than the interference of Frederick. Moreover, Frederick showed his lack of skill in other ways. In 1444 the Swiss at the battle of St. Jakob on the Birs, not far from Basle, by their extraordinary courage defeated his French mercenaries, called Armagnacs, and thus frustrated his schemes for restoring the control of the Hapsburgs over the Swiss League. In spite of the conciliation orders in the empire and the frequent wars, Frederick never wavered in his belief in the future greatness of the Hapsburg dynasty. It was this confidence that in 1452 led him to Rome, where he was crowned emperor by the pope, the last German king to be crowned at Rome. Directly afterwards came the capture of Constantinople by the Turks, which obliged the emperor to take up arms for the defence of the eastern frontier of his realm. Yet he could neither maintain peace within the empire nor its most important rights. Luxembourg and the possessions of the Wittelsbach family in the Netherlands fell into the hands of Burgundy, the Poles annexed West Prussia, and the remnant of the Teutonic Order in East Prussia was obliged to recognize the sovereignty of the Polish king. Thus the Germanizing influences that had been at work for centuries in what is now the eastern part of the German Empire were destroyed.

The complete breakdown of the power of the empire
called forth the demand that the emperor should be either deposed or have a coadjutor, but the lack of harmony among the electors prevented any change. The clamour for internal reform grew louder, and nothing was done except to enact laws for the maintenance of the public peace. During this confusion Frederick's position in his hereditary possessions became very precarious. The Czechs had held the preponderating power in Bohemia ever since the time of its troubles under Charles IV, and Podiebrad as king. The Hungarians also chose a ruler for themselves, electing the hero of the wars with the Turks, Matthias I Corvinus. Matthias soon overthrew the Bohemian king, and in 1487 apparently intended to form a great kingdom by uniting the eastern border provinces with Bohemia, Moravia, and Hungarian territories. Important changes also occurred in the northern part of Germany. The Counts of Holstein, who had carried the German nationality into the northern territory of what is now Germany, had received Schleswig as early as 1386 in fief from Denmark; the two provinces, Holstein and Schleswig, soon grew together. After the death of the last Count of Holstein, King Christian of Denmark was in 1460 elected duke by Schleswig and Holstein. In this way he became a prince of the empire, a point of importance in the near future. This was afterward remodeled into the Baltic counties and the German interests there. For centuries the centre of the empire had been in the south, and Germany had had no maritime interests. In this case also, as in the Germanization of the east, self-help was the means of attaining the desired end. The Hanseatic League, a union of German mercantile guilds, rapidly extended from Cologne to Reval on the Gulf of Finland. From the middle of the thirteenth century the chief towns of the League were Lübeck and Hamburg. German commerce flourished on all waters, for the members of the League carried the fame of their country across all the seas surrounding the Europe of that day. It is in fact a striking phenomenon that the national feeling was invigorated, while the strength of the empire was weakened by the division into so many petty sovereignties. The Hanseatic League maintained its ascendancy in the Baltic as late as the fifteenth and sixteenth centuries.

During a great power threatened to spring up in the west. By peaceful agreement Charles the Bold, Duke of Burgundy (1467–77), attempted to secure Frederick's consent to his election as King of the Romans and to the elevation of his possessions to the rank of an independent kingdom. But all these ambitious plans came to an end with the death of Charles at the battle of Nancy in 1477. The duke's possessions fell to Louis XI of France, while Maximilian, son of the Emperor Frederick and son-in-law of Charles the Bold, hastened to the Netherlands, which he secured for himself (1479) by the brilliant battle at Guinegate. He was not, however, able to make himself master of Burgundy. Moreover, Flanders was not willing to submit to the new regime and it was not until 1489 that it was completely subdued. Somewhat later, on the death of Matthias Corvinus in 1490, Maximilian's energetic action gained for his dynasty the future possession of Hungary and Bohemia, while at the same time he reunited the Tyrol with Austria. Consequently when the old emperor died, all looked to the knightly hero Maximilian for the restoration of the empire.

Thus the outlook was by no means unfavourable at the time Maximilian I (1493–1519) ascended the throne. There were evident indications of a healthier spirit. The wars of the empire could further be made up of the free cities and of the knights, sought, especially in 1486, to effect an adjustment of those interests of the different estates which most threatened the existence of the empire. Another favourable sign was the rapid development in civilization and culture of the several principalities. No less promising was the decision of the electors, now that the imperial authority had shown its limits, it was decided to push toward decentralization. Turbulent agitation for reform in the cities was another important indication in the same direction. Maximilian tried by vigorous reforms to win the good will of the cities, the aim of which would be essential to him in the expected war with France. Maximilian, with his dynastic resources, which were made up of very heterogeneous elements, was not able to overcome these oppositions. Thus the Diet of Worms in 1495 could not do much to promote reform on account of the opposing interests of the ruling princes, the free knights of the empire, and the imperial cities. At this diet the "Universal Pacification of the Empire" was proclaimed. All private wars were forbidden. An Imperial Chamber was established as a perpetual supreme court for the maintenance of the public peace, and the appointments to it were made by the emperor and the Estates of the empire. So many matters, however, were turned over to this court that it was prohibited from going from outside. Nor was the Imperial Chamber able to promote the public peace, as it lacked all power of enforcing its decrees. Order in the empire could not be attained until the subordinate rulers became strong enough to exercise a vigorous police power in their territories. Maximilian had only agreed to the establishment of this court on condition that a general imperial tax, "the common penny", and military help against France and the Turks should be promised him. Concessions of a very different character had also been demanded by the ruling princes from the king. The powerful Archbishop of Mainz, Berthold of Henneperg, was the first to express the opinion that the administration of the empire should be placed in the hands of the electors, without, however, doing away with the monarchy. This proposition of the Diet of Worms was rejected by Maximilian. Five years later, however, when the promised financial and military aid was not forthcoming, he consented to the formation of a permanent Imperial Council at Nuremberg. If this council had maintained an active existence for any length of time the king would have become a mere puppet. But after two years the royal power proved strong enough to break down the unnatural limitation imposed on it by the Diet.

During these constitutional struggles within the empire the hostile feeling between France and Germany continued to grow. France, now greatly increased in power, wished to gain a firm foothold in the Italian peninsula, and put forward claims to Naples and Milan. Thus began the long struggle of the Hapsburg dynasty with France for the possession of Italy. Maximilian was unable to checkmate the Italian schemes of the French king. In the end Maximilian even changed his policy, for, in order to gain assistance against Venice, he allied himself with France. Yet even now he reaped no laurels in Italy. In the Swabian war also, which the Swiss confederated cantons carried on against the Swabian League, his intervention was unsuccessful. As a matter of fact Maximilian was obliged, in the Treaty of Basle (1501), to acknowledge the independence of the Swiss Confederation. In the course of these wars the Swiss had become enthusiastic soldiers, and after this Swabian war the Swiss formed mercenary companies, in this way attaining European importance in the great struggle of the Hapsburgs with France. The work of reform in the empire, however, came to a complete standstill on account of these unsuccessful for-
eign undertakings. The only permanent result of all these efforts was the Imperial Chamber. The course of history could not be reversed; the territorial development of the separate states had been too long continued. A strengthening of the central administration, the preliminary condition for a reform of the empire, was no longer possible. In 1508 Maximilian had assumed the title of "Elected Roman Emperor," thus proclaiming that the imperial dignity was independent of papal confirmation. Restlessly, he strove everywhere, in the interest of those foreign policies that would strengthen his royal power. It was for this reason that he finally returned to his earlier course of action and joined the Holy League against France. The brilliant success of Francis I over the Swiss at Marignano (1515) forced Maximilian to cast his eyes on foreign affairs, and in 1516 he appointed Alexander Farnese as his Austrian governor. In the meantime, various imperial diets again took up the question of reform, but the whole reform movement failed entirely, and the separate states gained a complete victory over the central administration. At Maximilian's death practically nothing had been accomplished for the constitution of the empire.

Political and cultural life followed the course of development we have described, the focus being in the several states. Among these states the most prominent were the electoral principalities, which had been founded by the Hohenzollerns and the Wettins and which, like the Habsburgs, were not subject to the Church. The three Rhineland electors were the most important political personages. Saxony was much increased in size by the addition of Meissen. It would have become the leading state of northern Germany had its territories been divided in 1485 between the Hohenzollern and the Wettin dynasty of the ruling family. The Electoral Mark of Brandenburg, acquired in 1417 by the Hohenzollerns, was still in the beginnings of its growth. The Hussite wars had almost entirely estranged Bohemia from the empire. The Palatinate of the Rhine, always a home of culture, was still one of its centres. The Duchies of Brunswick-Lüneburg and Bavaria were also prominent. In 1495 the able Counts of Wirttemberg (Württemberg) received Countship of Swabia, which was raised to a duchy. Baden grew into a principality more slowly. More rapid was the development of Hesse, whose sovereigns under the title of Grand Dukes were soon to become princes. The future of the empire depended on the question of the minor states. The empire lacked imperial civil officials, imperial taxes, an imperial army, a general and systematized administration of imperial justice, while in these subordinate states there arose a defined government, a centralization of the civil officials, a systematization of administration. The rise of Maximilian's hereditary possessions, the Austrian provinces. The leaders of progress in this respect also were the imperial cities, in which intellectual life began to flourish. In art they produced an Albrecht Dürer and the two Holbeins. A darker side, however, was not lacking to the brilliant city life. Bloody outbreaks were often caused by a restless proletariat. Dissatisfaction was also rife among the free knights of the empire who had lost their former importance in consequence of the change in the military system, which had again made infantry the decisive element in battle. Moreover discontent was at work among the peasantry. The knights became robber-knights and highwaymen. Though banned by the emperor, Franz von Sickingen, without authority, carried on war with the city of Worms. The economic changes had even more ruinous consequences for the peasantry. The age of invention, the age of commerce, the age of great inventions, is also the age in which capital made its appearance as the great power of the world. There was a change in the value of money which brought severe suffering upon the peasantry which was despised and politically without rights, especially in the thickly populated southern part of Germany. Communal writings appeared, which discussed the position of the peasants. The unrest increased in Franconia, Swabia, and on the upper Rhine, and revolted against the authority of the imperialistic kingdom of God and all hopes were placed on a strong emperor. Mixed with these desires was the expectation of a thorough reform of ecclesiastical affairs concerning which dissatisfaction was loudly expressed. The social-religious restlessness continually increased the period of confusion. It had not passed by without leaving its impress on the German character. The brilliant exterior of life covered but thinly the brutality within. There was widespread evidence of the lack of morality in domestic life, of barbarity in the administration of justice, and of inhumanity in war. Peace was fading, although a rich and voluminous religious literature had been disseminated by the art of printing. Great preachers, like Geiler von Kaysersberg at Strasbourg, also appeared at this time. The Brethren of the Common Life took for their ideal the abnegation of the things of this world. But nothing could be accomplished for the decline of the authoritative influence of the Church on the life of the people. The Great Schism had severely shaken the position of the papacy. The common people were estranged from the Church. A craving for religious self-help arose, and religious movements aimed at the restoration of the monastic to the Church. The German learning loosened the bond that up to then had united it to theology. A new intellectual movement disputed the dominance of Scholasticism at the universities. Nicholas of Cusa, Æneas Sylvius, and Gregor von Heimburg prepared the way for Humanism. The medieval ideal had apparently lost their attraction, men turned to others, which advocated the world and its pleasures in opposition to self-abnegation, and instead of medieval universalism preached the freedom of the individual.

In the second half of the fifteenth century Italian Humanism entered Germany in order to break down here as it had done in Italy the absolute domination of the ecclesiastical conception of the world. But Humanism in Germany assumed an entirely different form. In Germany the end sought was not beauty of form in learning, art, and life; here it manifested, rather, a practical, pedagogical and, finally, religious ideology. Aided by this worldliness, by its delight in experiment and induction, roused others to sciences to fresh life, such as the science of history and especially the natural sciences. Individualism, moreover, strengthened the national sentiment and was a powerful force in overthrowing medieval unism, and in putting an end to the ideal of the medieval world, the universality of the Kingdom of God. At the close of Maximilian's reign the signs of the times were undoubtedly very threatening, yet closer investigation shows that the Christian idea was still powerful. Notwithstanding the turning away of many from the Church, there were still men in Germany who were filled with this idea. These men did not conceal from themselves the necessity of genuine moral reform. The same power and intensity of Christian feeling that had built the great cathedrals in the later Middle Ages was still alive in the more serious minded part of the nation. Only the few carried those feelings over into the preceding age, and with them the certain expectation of the reform of the Church from within.

From 1556 to 1618. — After the death of Maximilian I the two great competitors for the imperial crown were Francis I of France and Charles, Maximilian's grandson. Notwithstanding the opposition of Leo X and the alienation of French sympathies, the choice of the electors fell on Charles (28 June, 1610), who was crowned as Charles V (q. v.) at Aachen, on 23 October, and confirmed by Clement XI on 13 February, 1530. In January, 1521, he opened the Diet of Worms and his administration of the Holy Roman Empire lasted until his abdication. In 1556 Charles V resigned the imperial throne. This act implied a serious break in the continuity of the political and religious history of the German people. Charles had lasted for more than a generation, but only an insignificant part of it had been devoted to Germany. His attention had been mainly given to the Netherlands, to Spain, and to the wars with France and the Turks. Consequently from 1520 the defection from the Church had made more and more rapid headway, in spite of the emperor's prohibitory edicts issued at the Diet of Worms (1521) and at the Diet of Augsburg (1530), and shortly after 1540 this apostasy threatened to affect the whole of Germany. At the same time the separatist tendencies of the ruling princes increased in strength. It was not until towards the end of his reign that Charles took measures to check the princes of the empire. By the war in Gelderland (1543), the deposition of the Archbishop of Cologne (1547), and the Smallknight War (1546-47), he succeeded in bringing the triumphant career of Protestantism to a standstill, thus saving the greater part of the southern German territory. Driven from these territories Protestantism overran, during the following decades, the Bavarian and Bohemian-Austrian provinces in the south-east. But even there it was not able to maintain itself. On the other hand, Charles did not succeed in forcing the princes to return to their proper position in the empire and to subordination to the emperor. The most important of the princes were the rulers of the northern states; these were in no wise affected by Charles's military successes, as the eastern borders of the empire were as northern Germany. The Dukes of Saxony and Bavaria also, who were friendly to Charles and took part in his campaigns, suffered no curtailment of their power. The partial failure of Charles determined the future development of the empire, the basis of which was laid down in the last years of the Imperial Diet of 1555. By it, in the so-called Religious Peace of Augsburg, Germany was divided between the Catholics and the adherents of the Augsburg Confession, and the territorial princes were practically made the political arbiters of the empire. The principle, cuius regio, eius religio, which had been used, was recognized. The Reichskammergericht was subjected to the influence of the Estates of the empire. In the newly instituted system of administration by "circles" also, the control of the emperor was no longer permitted. Further, the permanent council of administration (Reichsdeputationstag), an organ of centralization developed in 1558 from the system of "circles," was summoned and presided over by the Elector of Mainz as chancellor of the empire and not by the emperor. Economical and judicial legislation developed on the separate states. At the Diet of Speyer (1570) the princes annulled the supreme authority of the emperor, and the "Reichskammergericht" ceased to exist. These events implied not only a change in the government of the empire, so that it was controlled by the electors and not by the emperor, but the empire itself became almost a shadow incapable of great administrative actions. Its constitutional powers waned; elections were seldom convoked (only ten up to 1618), the decisions of the Imperial Chamber were not carried out, the administration by "circles" did not take root. The empire failed just as signally, as a European power, in maintaining its interests during the great wars of the reign of Philip II in Western Europe, an exception being the Pacific War of Cologne (1579), which sought to restore order in the Netherlands, but to which little heed was paid. Not even the boundaries of the empire were maintained. From about 1580 the Spanish and Dutch established themselves in the Rhine provinces and Emsden, and Spain sought to prevent the acquisition of the Muscovy by the Bolognese. The Netherlands, and many of the south-western sections of the empire as possible in its intrigues, especially the city of Strasbourg. James I of England married his daughter to the Elector Palatine. On the Baltic coast the Swedes, Russians, and Poles despoiled the Germans of the portions nearest to their homelands. The Danes settled in the south-west corner of the Baltic. At the same time the Dutch overthrew the economic supremacy of the Hanseatic League in the Baltic Sea and German Ocean. On the Danube the Hapsburgs were compelled to buy an armistice with the Turks by the payment of tribute. The blame for the helpless condition of the empire rested principally on the reigning princes. They took no interest in its affairs, not because they were lacking in German sentiment, but because the horizon of their ideas was still too restricted, and because either they gave little thought to politics or their attention was absorbed by the details of administration within their own dominions. The governmental organization of their principalities was still very imperfect. The conservation and gradual development of their territories engrossed the energies of the princes, especially of the most powerful among them, the Elector of Cologne (1579) and that of Bavaria (1550-89). Therefore, avoided war above all things. The only alliance among them that had any stability at that time, the "Landsberg League" of southern Germany (1556-60), had, for its sole object, the maintenance of peace.
Maximilian II (1564–76), Rudolf II (1576–1612), and Matthäus (1612–19), not only failed to arouse the princes to a more intelligent treatment of the affairs of the empire, but by their own policy they encouraged the princes to pursue purely personal ends. For, unlike their predecessors, the Roman emperors, their credit in the empire, and the territories they governed, political importance of which barely exceeded that of the majority of German states, and which only surpassed these latter in extent. Accordingly, as none of them were men of pre-eminent ability, their political aims were narrow, their need of peace urgent, and their credit insecure while the credit of the western powers had largely developed since the time of Charles V. Moreover they had harder conditions to face in their own dominions than the other princes. Most of their territories were in the eastern part of Europe where, from the end of the fifteenth century, the landed petty nobles, who formed a large class, opposed with ever-increasing success the progress of the commonalty and the introduction of orderly administration under the control of the sovereign. With this inferior nobility in the dominions of the German Hapsburgs, the Protestants, who had equally no authority, made common cause. Thus the emperors were by degrees so harassed in their family possessions that, towards the end of Rudolf's reign, the power fell into the hands of the nobility, and Matthias, though advised by his able minister Cardinal Klesi, was hardly able to hold his authority. In the period from 1556 to 1618 the only general movement in the inner politics of the empire, and one that caused important changes in the relative influence of the German rulers, namely, the endeavour to place the ecclesiastical principalities in the hands of the younger sons of reigning princes, was entirely due to the desire of these princes to increase their territories. The ecclesiastical domains in the eastern provinces of Germany were few and insignificant, whereas in the north-west as well as throughout the west and south they were numerous, some being large in extent and of great importance. With exception of the territorially large and powerful Diocese of Münster and the small Diocese of Hildesheim those in the east and north came under the control of Protestant princes as "administrators" to the agrandisement of the Houses of Wittelsbach, Hohenzollern, and Guelph. In this way these territories were made easy for securing the same advantage the princes besides the Bishops of Cologne and Hildesheim, which were, thereby, saved from the fate that befell the others. These measures quickened the process of consolidation by which the territories of a few dynastic houses in northern Germany steadily grew in extent, the result being of considerable importance in the future political development of Germany. On the other hand, the attempts of the princes to annex the spiritual principalities of southern Germany failed. Protestantism entered these territories at a later date and with less force than it had in those of northern Germany. Consequently the ecclesiastical domain in the south retained its independence and value far longer than those in the north, while the princes were weaker, because their number was large and their possessions all small, excepting what belonged to the Austrian Hapsburgs on the Upper Rhine and perhaps also the territory belonging to Württemberg. In these circumstances the Ecclesiastical Reservation (Reservatum Ecclesiasticum), adopted at the instance of the Catholics in the Recess of the Imperial Diet of 1555, proved an effective precautionary measure in southern Germany. It provided that any bishop or abbot who turned Protestant could not take advantage of the rule of residence, and the exemption, his suc- The chief opponents of the ecclesiastical principalities in southern Germany were the representatives of the House of Wittelsbach, rulers of the Palatinates and of Bavaria. Prominent because of their noble descent, the Elector Palatine being in fact the ranking temporal elector, they were all poor in land. The branch that ruled the Palatinate of Neuburg acquired a heritage on the Lower Rhine by marrying into the ducal House of Cleves-Jülich, which was becoming extinct. The other Catholic princes and rulers in their domains at the expense of their neighbours. What decided the predominance of the Catholics in the south was the result of two movements which settled the question whether the Protestants, in spite of the successes in 1543–47 of Charles V, were finally to seize Cologne and the whole country of the Lower Rhine and from these centres crush the Catholics of southern Germany. In the first of these contests, the "Cologne War" (1582–84), which arose from the apostasy of Archbishop Gebhard Truchsess, the last Archbishop of Cologne who was not a Bavarian, the Catholics were successful. In the second, the contest over the Cleves-Jülich succession on the extinction of the native ducal family, the inheritance, it is true, passed to Protestant rulers, the Palatines of Neuburg and the Hohenzollerns; but of these the Neuburg line became Catholic in 1612, so that the danger was dispelled once more! As a consequence the Catholic Church gained sufficient time, after the Council of Trent, to accomplish gradually the reconversion of the greater part of southern and western Germany, especially since Bavar- ia in the south, and Münster as well as Cologne in the west, remained faithful to it. The political consequences of the Catholic victory in the south were that this part of the empire, in contrast to the northern sections, continued to be split up into many principalities. This caused a constant state of unrest among the reigning princes and the nobles of the empire in south-western Germany. The electors palatine, especially, were dissatisfied with their fortunes. They pursued within the empire a policy of hostility to the Catholics and to the imperial house that became more and more reckless with each succeeding decade. Moreover they were in league with France and other foreign countries. In accordance with this policy they turned from the Lutheran to the Calvinistic faith and put themselves at the head of all the discontented elements in the empire. Up to 1601 their aim was to bring about a union of all the German Protestant princes, including the Lutheran, for the purpose of enforcing the claims of Protestantism in south-western Germany. Even Saxony eventually took part in the negotiations. The princes became the Bishops of Cologne and Hildesheim, which were, thereby, saved from the fate that befell the others. These measures quickened the process of consolidation by which the territories of a few dynastic houses in northern Germany steadily grew in extent, the result being of considerable importance in the future political development of Germany. In these circumstances the Ecclesiastical Reservation (Reservatum Ecclesiasticum), adopted at the instance of the Catholics in the Recess of the Imperial Diet of 1555, proved an effective precautionary measure in southern Germany. It provided that any bishop or abbot who turned Protestant could not take advantage of the rule of residence, and the exemption, his suc-
and of individual bishops, of whom the Bishop of Würzburg, Julius Echter of Mespelbrunn, was the most noted of the Jesuits. The situation was in no wise altered by the fact that in 1598 Maxi-
milian I succeeded to the sovereignty of Bavaria. He sur-
passed all the German princes of that period in ability and energy, and in the course of a few years he made Bavaria the most powerful of the German states. But he was prudent, peaceable, and above all intent on the internal improvement of his principality. Only on one occasion did he offer a decided opposition to the Calvinistic party; in 1607 he seized Donauwörth, which had persecuted its Catholic inhabitants. The Catholic League, which he organized in 1609 to offset the Protestant Union, was of a purely defensive nature. Yet, because of a lack of unrest, the fanatical spirit of the empire appeared not in immediate danger at the beginning of the seventeenth century. Its impotence, however, was most clearly manifested in its economic and intel-
llectual life. Under Charles V the German mercantile instinct had made the mistake of giving itself largely to the profitable business of money transactions with governments. This was no longer lucrative, but the self-control necessary for the more arduous gains of industrial enterprises now hardly existed. Moreover, political conditions made commerce timid. The free cities of the empire, the centres of mercantile life, had lost nearly all of the imperial prerogatives. They were either hostile to them or still biased by their economic views of land and agriculture. Furthermore, the extent of the several principalities was too small to form the basis of commercial undertakings while customs duties closed their frontiers. Foreign competition was already proving a superior force; commerce and manufacture, with the prosperity of which the growth of great states seems universally bound up, were at the point of collapse in Germany. Intellectual life was in an equally discouraging state. Almost without knowing it the nation had been di-
vided by the Reformation into two religious camps, and a large part of it had accepted a wholly different faith. The thoughts of the people were being concen-
trated more and more on this one fact. They were encour-
aged in this by the princes who had derived from the schism great advantages in position and pos-
sessions by the cheap sale of spiritual positions, and still insurmountable prejudice of the Lutherans of northern Germany against Catholics can be traced to the sermons of their preachers in the sixteenth cen-
tury. From an entirely different point of view the Jesuits exhorted the Catholics to have as little as possi-le with Protestants and to believe that all Protestants con-
trolled all minds. Thereby the common consciousness of nationality was just as obscured in the people as it was dulled in the princes by political selfishness.

From 1618 to 1713.—(1) 1618 to 1648.—The politi-
cal life of the German nation was quickened into fresh activity by the strong character of several princes who in their respective states took up almost simultaneously the fight against the preponderating power of the petty landed nobility. Those among these princes who made their mark on German history were Ferdinand II of Austria, Gustavus Adolphus of Sweden, and, a generation later, Frederick William of Brandenburg, called the Great Elector. In 1617 Frederick II was chosen by his family, on account of the vigour he had shown as ruler of Styria, to be the associate and successor of Matthias. No sooner had the nobles felt Ferdinand's strong hand than they revolted in Bohemia, where they were most rebellious (1618). Their religion was made a pretext at his pleasure; he used the means to suppress it vigorously, the rebellion spread to the Danubian provinces, where it was supported by the rulers of Transylvania. When Matthias died (1619) the insurgents, through the mediation of Christian of Anhalt, went to the extreme of raising the head of the Union, Frederick V of Palatinate, to the throne of Bohemia (August, 1619), in order to obtain the help of the German Protestants. At the same time, however, Ferdinand was chosen emperor by the Electors, whereupon the Bohemian and the Elector Palatine was defeated by the Duke of Bavaria on 8 November, 1620, at the battle of the White Mountain (Weissenberg) before the gates of Prague. Ferdinand II followed up his victory vigorously and from 1621 to 1628 established a new basis of political adminis-
tration in his dominions. The multiplicity of heteroge-
neous Hapsburg territories, bound together almost entirely by dynastic interest, the threat of the empire to impinge Austrian state. This was to be founded on a system of government based on one official language, the German, on uniformity of administrative princi-
ples, on the profession of the Catholic faith by the entire population, and on the steady support of the reigning house by a body of great landed proprietors whose estates were made up of the confiscated lands of the landed petty nobility. These great landowners, established in the various dominions of the Hapsburgs and free from separatist traditions, were to represent the principle of a single state as against the peoples of the several provinces.

The consequences of this change of system were soon felt all over Europe. The scheme had in view the organization of so extensive a state that the united Austrian dominion must needs become one of the great powers of Europe. Hitherto great countries had developed only in Western Europe, namely Spain and France. Their fields of conflict were Italy and Burgundy. Now, however, a strong power was rising on the borders of central Europe, which appeared to have unlimited room for expansion in the territories of eastern Europe. By means of its dynastic connection with Spain it could aspire to the empire, and to France. As early as 1623 Austria and Spain supported each other in Switzerland; in 1628 Ferdinand by his power as emperor protected the interests of Spain in the War of the Mantuan Succession. As a result France became the natural enemy of Austria from the very first. It was for this reason that the empire first became interested in the issue of the war in Bohemia. The greater portion of its territory lay between France and Austria. In the paralyzed condition of the empire a war between these two great countries would have to be fought on imperial territory. It was the fear that the clouds of war so quickly gathered. For the states of western Europe were, first of all, hampered by internal troubles and by their relations to one an-
other, while the Hapsburgs were occupied at home. Even Maximilian of Bavaria, after the battle of the White Mountain, expected to bring the war to a speedy end by procuring Christian of Anhalt and a few other adherents of the fugitive Elector Palatine. In order to bring the old Wittelsbach family feud to a final settlement, to seize the Upper Palatinate by war of indemnity, and to secure the transfer of the electoral dignity from the Palatinate to the Bavarian line of the house Maximilian occupied the entire Palatinate. But war once kindled in the empire could not be confined within limits, and it spread slowly but steadily (see THIRTY YEARS WAR). Too much inflammable material had been accumulated by the discontent of the petty princes of the empire, by the religious strife that had set in at his pleasure, and by the employment that resulted from the economic decline, and by the occupation of the border provinces by foreign powers. Whenever Maximilian gained a vic-
tory his enemies with very little trouble enlisted fresh hosts of mercenaries; the Netherlands furnished the money. Very soon he was obliged to send his army
into north-western Germany; thus the war continued to spread.

Two events of the years 1624–29 increased animosities and tension; the famine of 1628–30, the greatest since the Thirty Years’ War. When he had driven the Elector Palatine out of Bohemia he had also outlawed him as a prince of the empire. Now that the territories in the empire occupied by Maximilian of Bavaria were growing in extent and the war was becoming more general throughout Germany, Ferdinand could hardly avoid assuming its direction. He had not the necessary funds for such an undertaking, because of the persistently blundering economic administration of Austria. But he accepted Wallenstein’s offer to maintain an army for him. Wallenstein was ambitious to be invested, as the head of an army, with extraordinary powers both military and diplomatic. He was a capable organizer and a remarkable man, but a condottiere rather than astatesman. Nevertheless the emperor placed him (1625) at the head of an army. Wallenstein did not act in conjunction with Maximilian’s troops; moreover, he showed little respect either for the historically established relations between emperor and princes, or for the position of the latter in the empire. Hequartered his troops in the territories of the princes, levied heavy contributions from their subjects and treated these sovereigns themselves with arrogance, while at the same time he was not a general who rapidly achieved decisive results. The blind jealousy that had animated the princes against Charles V was now directed against Ferdinand. Once more the complaint resounded that the emperor was placing on them “the yoke of brutal servitude”, was making himself “monarch” of the empire, and an autocrat. (b) Maximilian followed up the victory of the Bavarian and imperial forces by restoring Catholicism in the Upper Palatinate. The Catholics demanded the restitution of the small territories in southern Germany of which they had been despoiled since 1550, despite the Reservatum ecclesiasticum. Furthermore, overestimating their success in the north, he strove to regain the dioceses in north-western Germany that had passed under Protestant administration. The emperor was impelled by his political interests to enforce the claims for restoration in the south, since this would greatly weaken the Wurttemberg dynasty, which was an obstacle to the extension of the Habsburg influence in Sweden. He authorized the reclamation of the bishoprics of northern Germany in the district of the Elbe and at the mouth of the Weser, in order to place them in the hands of an Austrian archduke. Accordingly he issued the Edict of Restitution of 1629. The Calvinistic party of the Palatinate had been totally defeated, and now Lutheranism was in danger of being confined to a comparatively narrow territory split up into detached districts by Catholic ecclesiastical principalities. On this account all the Protestant states of the empire were filled with distrust and resentment, although ill-prepared to take arms in self-defence.

Cardinal Richelieu had, meanwhile, overthrown the Huguenots in France and had laid plans to strengthen the French power in Europe by the occupation of desirable positions in upper Italy as well as in Lorraine and on German soil. He saw a menace to his schemes in the imperial army that had hitherto been negligible, and in Ferdinand’s interference in the War of the Mantuan Succession. He reminded the princes that France had formerly protected their liberties, impressed them with its peace-loving character, and urged them, especially Maximilian of Bavaria, to refuse to elect the emperor’s son King of the Romans and to demand the dismissal of Wallenstein (1629–30). While he thus sought to deprive the emperor of his commander-in-chief and his main army, Richelieu also used every means to induce Gustavus Adolphus, King of Sweden, to invade the empire. The appearance of Wallenstein on the Baltic coast and the invasion of the ecclesiastical principalities on the Elbe by the Catholics disturbed the ambitious King of Sweden. He was the ablest of all the princes who, in the first half of the seventeenth century, sustained the authority of the sovereign against the encroachments of the petty nobility in central and eastern Europe. After a speedily won success in Sweden itself, he set about the task of conquering all the territories on the Baltic in which the princes still suffered the inferior nobility to do as they pleased, thereby securing for Sweden the control of this sea and a place as one of the great powers. If the Habsburgs should accomplish their plans for the restoration of Catholicism the schemes of Gustavus Adolphus would be completely frustrated. For, in order to control all the lands on the Baltic and to sever permanently the German princes of this region from the empire, he must unite them in an organic political system and civilization; this would be impossible unless all of them were separated in religion from the greater part of the rest of Europe by preserving Lutheranism. In the summer of 1630 the king landed in Pomerania; in August the emperor sacrificed Wallenstein to the princes.

The success of Richelieu’s intrigues and of the invasion of Gustavus Adolphus appeared more alarming at first than the outcome warranted. They did not cause the dynastic power of the Habsburgs to totter. Gustavus Adolphus was killed at Lützen (1632); his finest troops, the mainstay of his strength, were annihilated at Nördlingen (1634). Thereafter the Swedes could achieve only ephemeral successes by means of a few bold but spasmodic expeditions from the coast into the interior of the empire. Years passed before Richelieu was able to replace the army of Gustavus Adolphus by French troops. During the Swedish invasion he had occupied (1638–34) the whole of Lorraine and the region between the Moselle and the Upper Rhine. After the battle of Nördlingen he openly declared war against the emperor (1635), but he did not venture far beyond the Rhine. Within the empire the first successes of the Swedes led to a reconciliation between Maximilian and the emperor, while the continued occupation of German soil by the Swedes and the French declaration of war after Richelieu’s assurances of peace influenced most of the other princes to ally themselves again with the emperor, Saxony leading the way. There was a burst of patriotic indignation, such as had not been known for a long time; men were again ready to sacrifice their interests to those of the empire. In the Peace of Prague (1655) emperor and princes
agreed upon the future organization of the empire. This treaty made allowances both for the historical development of the empire and its necessities: the enforcement of the Empire's authority by “circles” was to be revived and perfected. Against foreign foes all pledged themselves to act in common, no one desired any further separate leagues. In case of war a consolidated imperial army was to enter the field. As early as 1635 the offensive was taken against France and Sweden. In 1636 Frederick II was elected King of the Romans; he was emperor 1637–57.

Thus the political unity of the German nation, sorely as it had suffered from the weakness of the imperial authority, the excessive growth of separatism, and the religious schism, stood the test in the hour of danger. However, its resources, seriously weakened after a struggle of twenty years, were not adequate to carry out the compact made at Prague and to relieve the distress of the empire at one stroke; Austria, in particular, was not equal to its task. It was found impossible to drive the enemy by force out of the empire, to secure all the empire for the emperor. For the protection of the frontiers had been neglected and the individual states allowed to cultivate relations with foreign countries too long to permit the attainment of these ends. In western Germany the Landgrave of Hesse became a supporter of the French, while the young Frederick William, Elector of Brandenburg, who had succeeded to his electorate in the latter part of 1640, concluded an armistice with the Swedes. From 1640 on Richelieu was finally able to send French armies into Germany. The inadequacy of the services that Austria rendered the empire and the support it gave the Spaniards, who were hated throughout Germany, reawakened distrust in the emperor. Moreover economic conditions in the German states, after nearly a century of gradual decline, and the ravages since 1621 of the soldiery, became each year more pitiful. The need for rest excluded every other consideration. Even the antagonistic religious parties began to long for peace. The smaller states of the empire felt no interest in the war and demanded peace at any price with the foreign enemies; even the greater ones, becoming gradually exhausted, declared themselves neutral. In conjunction with the emperor, and even without him, they negotiated for peace. Maximilian II of Bavaria and Emperor Ferdinand II of Bohemia and Sweden, whose influence thereby naturally became much more powerful. But the consciousness that they were parts of the empire did not again die out. A dim perception that Austria in its development as a great power partly belonged largely to eastern Europe deepened the conviction, which was encouraged by France, that the interests of the empire and Austria were not absolutely identical, that the policy of the one need not of necessity be the policy of the other and that the empire had needs of its own which should be safeguarded by the states. In order to meet these exigencies the states claimed, on behalf of the empire, the right to seek the protection of other great powers as well as of the emperor, so as to find support in all emergencies either on one side or the other. Some declared that these needs were, above all, the restoration and maintenance of peace, and the preservation of the circle of cities in the empire, and of the varied forms of German governmental administration as opposed to the centralisation of other countries. The Bishop of Würzburg, John Philip of Schönborn, the most active representative of the inferior estates, was strongly imbued with these principles.

These views were officially recognized by the Peace of Westphalia (1648). To procure the evacuation of Germany by the foreign armies France was indemnified by that part of Alsace that lay between France and Sweden by the territories at the mouths of the Oder and the Weser. The great possessions gained by Austria in Bohemia and in the countries on the Danube were not touched, but it agreed to cease supporting Spain. Within the empire everyone was restored to his own possessions and his own rights. At the same time, however, the possessions of the German princes having military resources were enlarged in such manner that the balance of power was maintained among them. To do this the lands of decadent principalities, especially the lands of the bishoprics of northern Germany, where Ernst von Pflug and Ulrich of Hanover were allotted to them. The consolidation of northern Germany into an ever decreasing number of states thus made another great advance, as was evidenced by the fact that towards the end of the war even the much divided possessions of the Guelphs in the north-west were combined to a large extent, like those of the other north German dynasties, under a single government. An attempt was made to assure the mutual recognition of the new territorial boundaries by establishing complete equality between Protestants and Catholics. The Catholics were satisfied with a slight enlargement of their possessions in return for their recognition of the party of the empire in 1618, the year taken as the standard being 1624, and the Calvinistic Confession was recognized. The new order of things was protected, as regards the emperor, by proclaiming the sovereignty of the princes of the empire, by restoring to them the right to make alliances, and by making France and Sweden the guarantors of the execution of the treaty. As against these two powers, however, it was most inadequately secured; the disturbances in the south-west, it is true, were suppressed, but the division of that region into small states was maintained, and its development thereby impeded. The result was that the western bordering on France was ill-protected, while the occupation of the lands at the mouths of the Oder and Weser by the Swedes was a perennial danger to northern Germany.

(2) 1648 to 1673.—Frightful as had been the devastation of property and loss of life, the conclusion of peace did not find a ruined people. Both in political affairs and in the advance of civilization the war had brought about the renewal of national vigour. In most of the states the governments gave themselves to arduous work. Some commercial centres gradually revived, and by uniting energy and agriculture to the arts. Nor was it a mere matter of material progress. Intellectual life also reawakened and grew apace. In jurisprudence, political science, education, the perfecting of the German language, and poetry, a succession of scholars, by a constantly increasing mastery of form and matter, produced a series of great works. The study of these works during the next two decades matured the all-embracing genius of Leibniz (1646–1716). France, which reached the height of its literary culture in the following generation, was the teacher of Germany, and Catholicism derived especial advantage from the influence of France. The reputation of Catholicism rapidly increased, and it soon exerted a powerful force of attraction over many high-minded Protestants in Germany which eventually led them into the Church. Around Schönborn especially, who in 1647 had become Archbishop of Mainz and chancellor of the empire, was gathered a circle of Catholics, and went over others who held in them the latter Leibnitz. From Schönborn emanated an influence that permeated the entire intellectual life of Germany. In the domain of politics Catholic hopes were founded on the military successes of Austria and Bavaria, which had shown themselves the stronger of the German states, on the efforts of Schönborn to
fuse life into the administration by "circles", and on his attempt to form alliances among the princes with the ultimate aim of bringing about a general confederation of the estates. Schönborn desired, by means of such a general confederation, to make Germany under him a powerful nation on a par with the great powers. Although this confederation was to be peaceful in character and could consequently only become a second grade power, he even hoped to make of it a means of establishing a balance of power in Europe between France and Austria, such as some Italians had sought to make of it in the preceding century. Schönborn's policy was most successful in 1657–58, when Ferdinand III died without leaving an heir who had attained his majority and had been elected King of the Romans, thus giving France an opportunity to attempt to dictates the succession to the imperial crown. Schönborn, however, secured its bestowal upon another Hapsburg, Leopold I (1658–1705); at the same time he united a large number of princes in the Confederation of the Rhine ("Rheinbund"), which looked for support to France.

Still more powerful but not more advantageous for Germany was the course of events by another reigning prince, Frederick William of Brandenburg, the Great Elector. His contemporaries looked upon him only as the most turbulent of the rulers in the empire. His chief object was the aggrandizement of Brandenburg to the eastward of the Elbe, but, in the course of Wangen at Leipsic, he lost it, compensated by new territories in western Germany. Dissatisfied with this arrangement he openly avowed that as the greater part of his dominion bordered on eastern Europe, he, like Austria and even more unscrupulously, did not consider the interests of Germany as identical with those of Brandenburg. When Sweden declared war on Poland in 1655 he took part on the side of the former country with all his resources. In 1658 the new emperor joined forces with him to drive Sweden out of Germany. In order to be more certain of the aid of the imperial troops Frederick William, at the election of the emperor, brought it about that Austria was required to renew its pledge not to support Spain, at which France was preparing to strike the final blow. This threatened Germany once more with serious danger, for France, after forcing Spain into the Peace of the Pyrenees in 1659, in 1660 dictated peace preliminaries at Olivia. The reports that Sweden was protected against any diminution of its territories. Then when the Turks, after a long truce, renewed their advance on Vienna in 1662 France forced auxiliaries on Austria as soon as the latter began to offer a sturdy defence. Consequently, after the first victories, Leopold preferred to come to a secret understanding with the Turks at Vasvár (1664). France interfered in every quarrel among the states of the empire.

Aided by the personal charm of his young king Louis XIV, who had assumed the government in 1661, France appeared to have obtained a dominant influence as a model statesman in Italy. What it had vainly striven to gain by war France now acquired during ten years of peace. Apparently in all parts of the empire, including Austria, there was a continually growing need of peace. The subsidies that Louis poured into the exchequers of the insubordinate princes, who were just beginning to demand a rational system of taxation, were intended to fetter them. The upper classes in Germany surrendered themselves completely to the influence of French culture and customs. Moreover, French statecraft, economic policy, and military system, which presented to the princes an example how an effective administrative organization to place Germany upon a firmer and more under the spell of its western neighbour. The Houses of Guelph and Wittelsbach and the rulers of Saxony allowed themselves to be won over by France.

In 1667–68 Louis was able to place a check upon the Elector of Brandenburg, and also upon Austria, the dynastic line of which was now reduced to one person, and threatened to become extinct like that of Spain. Although the Peace of Westphalia led the Germans to take up with France again, and the Treaty of Cassel, then in 1668, Louis's adviser in foreign affairs, warned him not to carry out his purpose of attacking the Netherlands until he was sure of the sympathy of the more important German princes, all the efforts of the able French diplomat did not avail to obtain this assurance. Louis, nevertheless, advanced against the Dutch, and a storm of popular indignation broke out in Germany which carried along with it the German princes, with the exception of the Wittelsbach line. In 1674 the empire declared war against France.

(3) 1674–78.—This was the signal for a war of fourteen years duration. Change of emphasis, division into three periods. In the first the advantages of efficient generals, well-trained troops, and abundant means were all on the side of France. The contingents of the German princes formed a motley body; in 1675 the Elector of Brandenburg withdrew, and marched into the empire. The Swedes and the French, the allies of the emperor, the Netherlands and Spain, proved inefficient. Only a few isolated exploits, such as the battle of Fehrbellin (1675), revived the fame of German military prowess. In 1679 peace was made between the empire and France at Nimwegen. Louis, however, overestimated his success. On the one hand he calculated on detaching the Elector of Brandenburg permanently from the German cause by compelling him, as in 1660, to restore all the territory won from the Swedes and then to enter into an alliance with France that would reduce him almost to feudal dependence. On the other hand, after peace had been signed, France seized various strips of territory on the western frontier of Germany (called the "Reunions"), this unwarranted procedure culminating in the occupation of Strasbourg (1781). Such conduct, however, only stimulated the patriotic indignation of Germany. Biberach (1682), while at the same time the rising generation in the larger principalities, including the territories of the Wittelsbach line, was rallying enthusiastically around the emperor for the Turkish war. The repulse of the Turks at the siege of Vienna (1683), followed by the glorious recovery of Hungary, gave a new impulse to Austria's political power. With the increase of French interference in German affairs (succession to the Palatinate, 1685; election of the Bishop of Cologne, 1688), German resistance to Louis, in which Brandenburg joined, became unanimous. Louis retorted by renewing war. Although Austria was still engaged in the War of Devolution, the military situation of the two sides were almost even. The Margrave Louis William of Baden organized the troops of the small south-western states of Germany in an efficient manner. Austria found in Eugene of Savoy a general and statesman who, in a position similar to Wallenstein's, far surpassed the latter in genius and character. Moreover, the emperor found in England a far more efficient ally than the Netherlands had been. Both sides brought larger and larger armies into the field, until each of them maintained 400,000 men. By the Peace of Ryswick (1697) Louis restored part of the territory of which he had been deprived, and in the brilliant victory of Zenta (1697), drove the Turks completely out of Hungary and Transylvania (Treaty of Carlowitz, 1699). The death of the last Spanish Hapsburg (1700) caused a fresh outbreak of
the war as early as 1701. This time Austria was able to employ most of its forces against France, England being again the ally of the empire. The allied powers won brilliant victories, some jointly, some separately (Blenheim, 1704, Ramillies and Turin, 1706, Oudenarde, 1708, Malplaquet, 1709). By straining its powers to the utmost France bettered its position after 1709. During the course of the war Austria changed rulers. Archduke Joseph I, reigning from 1711-40. After Charles VI ascended the throne England deserted Austria. By the Treaties of Rastatt and Baden in 1713-14 France retained only Alsace out of all its conquests on the German frontier. Meanwhile Austria, which had once more become embroiled with the Turks, again defeated the latter, and imposed terms at the Peace of Passarowitz in 1718 that were extremely favourable to Austrian trade in the Levant. At the same time a war was raging between Russia and Sweden, and the princes of northern Germany took advantage of it to drive Sweden completely out of Germany (treaty of Stockholm between Sweden and Hanover in 1718; between Sweden and Prussia in 1720).

By the victories over the Turks and by its opposition to Louis XIV the Austrian monarchy became in the fullest sense a great power, while France effected no substantial extension of its frontiers. In this way the war of Louis XIV and II resulted in the field of architecture. The Peace of Passarowitz especially in that of architecture. In Vienna and the capitals of the spiritual and temporal lords of southern Germany many architecturally striking buildings were erected; among the great architects and fresco painters of this period were Hildebrand, Prandauer, Fischer of Erlach, Neumann, and the brothers Asam. Protestantism, however, led, as was exemplified by the professors of the University of Halle, Thomasius, Christian Wolff, Francke. Moreover, the close relations of England to Germany now began to make themselves felt, and German Protestantism found in England a powerful and progressive and领取 and ,100 of Sweden had not been able to afford.

From 1713 to 1848. —(1) 1713 to 1789. —Many petty differences were still left unsettled in 1713, many an ambition was as yet unrealised. In Germany as well as in the rest of Europe questions remained to be settled by diplomatic negotiations, but swords were sheathed. The people had an intense desire for peace. The industrial classes longed to emerge from the miserable hand-to-mouth existence which had been theirs for so many years, to rise again to the profitable exercise of trades and commerce, and to accumulate capital for larger undertakings. For several decades to come they were obliged to work without visible results. But the strenuous effort produced the will and the strength necessary to achieve the phenomenal economic progress of the German people in the nineteenth century. The prevailing tendency among the princes and nobles was to increase the employment of the social and artistic pleasures of life, which they gratified by the erection of magnificent buildings and by gorgeous court ceremonial; examples of the indulgence of such tastes were the rulers of Saxony Augustus II (1684—1733) and Augustus III (1733—63), the latter being also Elector of Saxony, Wettin, and the Elector of Bavaria (1679—1726); Eberhard Louis (1677—1733) and Charles Eugene (1737—93) of Württemberg. Men of higher aims were Maximilian III Joseph of Bavaria (1745—77), and, among the bishops, especially those of the Schönborn family. In the interior development of the states the princes sought to complete the reorganisation of their territories according to the French absolutist and bureaucratic model, as: the introduction of state officials into local government, the collection of taxes in coin and a money basis for trade, the augmentation of the standing armies, repression of the privileges of the nobility, and the extinction of parliamentary and corporate rights. To perfect such a system both persistent and steady effort was needed; the majority of states fell short in this respect. In Hanover the nobility gradually recovered control of the government; in Austria a perilous state of political inertia set in under Charles VI. Frederick the Great of Prussia was the only sovereign who carried out the work of economic reconstruction with energy. The ideal state which the statesmen of the age of Louis XIV sought to attain, an ideal impracticable in larger countries, was to a great extent realised in Prussia. Small as was Prussia's territory and backward as it was in civiliza
tion, it grew, nevertheless, into a power influential out of all proportion to the size of its population and area, thanks to the high efficiency of the administration, to the utilization of all resources for the benefit of the state, and to the unflagging energy of the king himself. Shortly after 1740 Prussia was able to maintain a state army of more than 100,000 men, ready for war, and with this army it could turn the scale in a conflict between the equally balanced forces of the great countries.

In 1740 Frederick II, the Great, succeeded to the throne of Prussia. In the period just passed Austria and Prussia claimed the right to reign in the grand manner in 1733 over issues that had not been settled in 1713, namely, the Polish Succession, and the right of France to Lorraine. By the Peace of Vienna in 1738 France obtained Lorraine; Austria, moreover, in 1739 lost Belgrad to the Turks. Soon after Frederick's accession in Prussia, the Emperor Charles VI died, leaving a daughter, Maria Theresa (1740-80). France and Bavaria took up arms to prevent her coming to the throne of Austria; this was in direct violation of the promises made to Charles when these countries recognized the Pragmatic Sanction. At the instigation of France the electors chose Charles Albert of Bavaria emperor under the title of Charles VII (1742-45). Frederick the Great took full advantage of Maria Theresa's difficulties; he occupied Silesia and, upon her refusal to surrender it, concluded an alliance with France and Bavaria; the wars that followed upon this were the War of the Austrian Succession (1740-48), the First Silesian War (1740-42), and the Second Silesian War (1744-45). Impaired in strength during the weak government of Charles VI, Austria seemed ready to fall to pieces under the force of the shock. But the hesitation of Frederick the Great, the aid of England, Austria's ally after 1742, and above all Maria Theresa's political energy and inspiring personality helped Austria to withstand the shock. Silesia, it is true, was not recovered, but Maria Theresa kept all the other provinces and in 1745 her husband, Francis I, was elected emperor. She found in Kau- nits a most valuable guide in matters of foreign policy and a wise assistant in the direction of home affairs.

The internal administration was steadily perfected in imitation of Prussia, the army was reorganized by Daun, Leopold, and Lacy. Further, by the new alliance between the three great European powers, Austria, France and Russia, Austria was once more established in a commanding position in Europe. Nevertheless, with the decline of England and France prevented the consequences of these measures from becoming immediately apparent. In 1756 he made a fresh attack on Austria while England simultaneously went to war with France for the purpose of acquiring the latter's colonies. The ensuing struggle was the Seven Years War, which exposed the weak points of the schemes of Kaukats and especially the decline in the military strength of France before their excellences could be turned to use. Moreover Maria Theresa, by summoning as empress the French to enter the country, stilled in the princes all feeling of obligation to the emperor, while Frederick by his victory over the French at Rossbach (1757) became a national hero despite the unpopularity of Prussia. In addition, the sturdy restistance that the Prussian king offered to the three powers, even though he failed of victory, made an impression on the political world in Prussia's favour no less great in results than were the consequences in northern Germany of his alliance with England.

(2) 1768 to 1816.—After the Treaty of Hubertusburg (1763) Prussia was not only an independent state, it had as well an independent policy. From this time on the rest of northern Germany also became alienated from Austria and southern Germany. These states now received an impulse from England such as they had never had from the empire and Central Europe, for England in this period was rapidly advancing in commerce, industries, and intellectual life, and exhibited an energetic and far-seeing political policy. The mining of the coal and ore deposits in the Rhenish-Westphalian district and in Silesia was undertaken on a large scale, the number of factories increased, the Hanseatic towns took advantage of the American Declaration of Independence to establish transoceanic trade relations that were pregnant with rich results for the future of German commerce, while agriculture east of the Elbe adopted larger methods involving the use of capital in order to develop export trade in grain with England. In addition to HalJe other universities in northern Germany became noted as centres of intellectual life; among these were Göttingen, founded in 1737, which had the historians and writers on political science, Schölzer and Spitteler, as professors, and Königsberg, where Kant and Krauss taught. Most of the precursors of the classical age of German poetry, as Klopstock and Lessing, were North Germans, so were many of the writers of the Storm and Stress (Sturm und Drang) period. And although Goethe and Schiller, the great poets of the classic era, were South Germans, yet they made their homes in the north, the centre from which their influence was exerted being the Court of Weimar. Herder and the two Humboldts were Prussians. The Romantic School also under the leadership of North Germans, the Schlegels, Hardenberg, Tieck, Schleiermacher, developed around two northern cities, Berlin and Jena. It was through the intellectual ascendency exerted by northern Germany that Denmark and Holland were brought almost completely within the sphere of German culture. From north-western Germany proceeded the chief influences that in a periodical press created German public opinion (Schölzer's criticisms on contemporary politics in his “Staatsanzeiger”, the political writings of Genta), and encouraged the sense of nationality (Moser, Count Stolberg). It was in this part of Germany that Freiherr vom Stein received his early education and his training in official life. The relatively large area of the states of northern Germany, the result of the last two hundred and fifty years of political evolution, encouraged intellectual progress and was in turn promoted thereby. For the first time northern Germany undertook to outstrip southern Germany in development; along with this, however, the Protestant states once more took the lead of the Catholic states.

It is true that southern Germany immediately strove to compete with northern Germany, but the division of the former section into so many small principalities paralyzed commerce and retarded intellectual progress and the development of industries. Joseph II (q.v.), joint-ruler with Maria Theresa from 1780 and sole ruler of Austria from 1780 to 1790, desired to remedy this disintegration by annexing Bavaria to
Austria and by extending the Austrian power in Swabia and on the Upper Rhine. The latter result he desired to attain by making the city of Constance a great emporium of trade between Italy and Germany. In a brief disquisition on foot factories, he mentions that the French were the first to adopt the French rationalism and its destructive critical tendencies. The champions of the Church, foremost among them being the Prince-Abbot Martin Gerbert of St. Blasien, gave it a more national basis again and infused it into a more positive spirit. But they failed, almost without exception, to renounce in part the rationalistic movement; this failure led many men, as Joseph II, and Wessenberg, into grievous errors. Progress in southern Germany depended ultimately upon progress in Austria. Not only, however, did all the political plans for Germany of Joseph II break down before the War of the Bavarian Succession (1777–78) and in the league of princes formed by Frederick against Joseph (1786), but towards the end of Joseph’s reign serious revolutionary movements sprang up against him even in his own dominions. A complete reversal of the relative strength of northern and southern Germany seemed imminent. Nevertheless northern Germany did not fully utilize the pre-eminence it had obtained in intellectual progress. In spirit Frederick the Great was not in sympathy with recent developments. The English political system rested on principles differing widely from French absolutism, the methods and aims of which Frederick, following in his father’s footsteps, clung to tenaciously. He even carried these somewhat further, especially in regard to economic administration. Taken altogether his political achievements were the greatest and most effective development of the French system. After 1763 by the annexation of West Prussia, obtained through the First Partition of Poland in 1772, he extended his dominions in the district of the Oder and Weichsel Rivers, and by adopting the policy of Catherine II of Russia he secured for his kingdom a strong position among the states of Europe. Moreover he showed an increasing tendency to give special weight to the eastern or Prussian part of his monarchy by making its nobility, the Junker, his principal instrument both in the military and civil administration. From the time of their arrival in these districts these nobles had been trained to fight and to colonize. To impulse towards a united movement, and by humble supplication obtained from it the aggravement of their territories at the expense of the ecclesiastical rulers whose dominions were to be secularised. At the Congress of Rastatt (1797), Russia, England, and Austria brought the congress to a premature end by renewing the war with France. Previous to this, in 1792, Prussia had joined Austria in taking up arms against the French Revolution. At the Treaty of Basle (1795), however, it had deserted Austria and then joined France. Russia closed for the first time its ambition to become the ruling power of northern Germany, to annex Hanover, and to carry out the secularization of ecclesiastical lands. But Frederick the Great’s successor, Frederick William II (1786–97) and Frederick William III (1797–1840), were men of little ability. More by the Second (1793) and Third (1795) Partitions of Poland Prussia had assumed more Polish territory than it could assimilate; its administrative resources, unable to bear the strain put upon them, were paralyzed. Thus the end of the eighteenth century left Germany in chaos.

South-western Germany, brought into constant contact with France by active commercial relations, now manifested a desire for comprehensive and efficient political organization. For, by the impetuosity with which the French Revolution preached the principle of nationality and the rights of the individual in the Holy Roman Empire, the German mind had again become accessible to national ideas and strong political convictions. From the beginning of the nineteenth century the Romantic School extolled the glories of German nationality and the empire, and the younger generation of officials in the several states, especially in Prussia, professed to be influenced by the ideas of Napoleon, as the instrument of the times, contributed to the realization of these ideals. Defeating Austria again, both in 1800 (Treaty of Lunéville, 1801), and in 1805 (Treaty of Fressburg), Napoleon proceeded to make a new distribution of German territory. By the Treaty of Lunéville he annexed the left bank of the Rhine to France. By the partition compact with Prussia and Bavaria in 1802 and by the Imperial Delegates Enactment of 1803, he secularized such ecclesiastical states as still existed, and in 1805–06 he abolished the rest of the decadent petty principalities of the south, but preserved the form of the German Empire, with the predominance of the empire and of the free cities. He wished to retain only three territorial divisions in southern Germany: Bavaria, Württemberg, and Baden. These his creative genius built up into secondary states, similar to those of northern Germany both in aspect and in capacity of internal development. South Germans had at last a clear course for renewed progress. Napoleon hoped thereby to put them under lasting obligation to France; in 1806 he bound them, as well as the central German states, more strongly to himself by the Confederation of the Rhine (Rhénus). In the ability of France to throw the death-blow to the Holy Roman Empire, which ceased to exist 6 August, 1806. The administration and economic condition of the secondary states now rapidly improved, but, contrary to Napoleon’s expectations, the sympathies of their inhabitants did not turn to France. Napoleon then overthrew Prussia at the battles of Jena and Auerstädt (1806) and by the Treaty of Tilsit (1807) left to Prussia only its original provinces between the Elbe and the Russian frontier.

After this, by means of far-reaching, liberal reforms instituted under the enlightened guidance of Freiherr vom Stein aided by Gneisenau and Schimanko, both state and army in Prussia as in southern Germany, and Napoleon’s victories in 1796 compelled him to desist even from these (Treaty of Campo-Formio, 1797). The princes of southern Germany, being left to themselves, now turned to the French government and to various means of escape. The economic and social conditions of all the German lands on the right bank of the Rhine the educated classes were full of fervid patriotism, and in Austria and Prussia as well the people bore the foreign yoke with
impatience. In 1809 a national war against Napoleon broke out in Austria. The Tyrolean under Hofer made an heroic struggle, and Archduke Charles won a victory over the French at Aspern near Vienna, 1809, and Austria, thereafter, by the advice of Metternich, who was prime-minister from 1809 to 1848, adopted a policy of inaction. Pursuing an opposite course to that of Napoleon, Metternich in 1810 and 1811 advocated a revival of the confederate authority of the German states. Napoleon's disastrous campaign in Russia. This revolt Napoleon did not succeed in crushing; on the contrary, he himself was now defeated in the Wars of Liberation by the coalition of Russia, Austria, Prussia, and England.

The personal autonomy, the true home of Teutonic national life, had been forced almost completely into the background during the eighteenth century by Austria and Prussia. During the Napoleonic era it advanced materially in influence as a result of the formation of the secondary states and the growth of national political opinions. Nevertheless Austria and Prussia established their military ascendancy over the interior during the Wars of Liberation. In the Treaties of Paris (1814) and at the Congress of Vienna (1814–15) efforts were made to do justice to both of these circumstances. Under Metternich's guidance Austria reached the culminating crisis at the Congress of Vienna. It became the leading state in Europe, but at the same time it made the Danube and the territory east of the Alps the centres of its power and withdrew completely from southern Germany. Prussia, now likewise recognized as a great power and a leading state of Germany, received, on condition of surrendering a part of its Polish possessions, a strong position in the extreme north-west, but it did not attain the hegemony of northern Germany. The Napoleonic system of secondary states was ratified and amplified, as in the four kingdoms of Bavaria, Würtemberg, Hanover, and Saxony, etc. It was hoped that this settlement would be permanent since it was founded on the joint liability of all the European states, a principle recognized by the Vienna Congress and the maintenance of which was guaranteed both by Prussia and Austria. Moreover the political rivalry between the different states was supposed to have been overcome. In fact the problem of the ecclesiastical state was in the secondary states and Prussia Protestant and both were now in friendly terms. By the award of many Catholic districts to Protestant sovereigns Catholicity had, it is true, sustained great losses in central Germany, Württemberg being one-third, Baden two-thirds, and Prussia almost a fourth. Nevertheless the Catholic order became, in the eyes of the general public, the most powerful organisation in the country. It was feared that none of these states, not even Prussia, could be able thereafter to retain an entirely Protestant character. Moreover Catholicity gained greater influence over the minds of men owing to the Romantic movement and the spread of anti-revolutionary ideas. Metternich, continuing the policy decided upon in 1848 and 1835, committed himself to the following programme: to give a new guarantee to the reawakened national feeling by establishing a German Confederation; that each German state must belong to the Confederation, though without prejudice to its autonomy; that the primary object of the Confederation was to be the defence of the independence and stability of Germany against external foes as well as against revolutionary agitation; but it was also to be allowed to develop into a confederated state by gradually enlarging its authority over the internal affairs of the individual states, such as commerce, economic administration, civil and constitutional law; the composition of this confederation was to be a permanent assembly composed of plenipotentiaries appointed by the reigning princes, as in the Imperial Diet prior to 1806. This body was authorized to enact fundamental laws for the confederation and to organize its administrative machinery (Federal Acts of the Congress of Vienna, 9 June, 1815).

(3) 1815 to 1848.—The Federal Diet was in session from 1816 to 1848 and again from 1850 to 1866 without, however, enacting any fundamental laws or creating any administrative machinery. The only result of the deliberations was a fuller and more detailed but not a more definite statement of the problems to be solved by the confederation (Final Federal Act on 17 July, 1815) to meet the pressure for the working out of these problems. Prussia and the secondary states opposed all progress in the work of the Diet. Even Metternich was no longer really in earnest about it. In the autumn of 1815 he had concluded the Holy Alliance with the Tsar and the King of Prussia and had thereby bound himself to a common policy with the great powers of Eastern Europe, the three countries Russia, Austria, and Prussia being then called the eastern powers. This policy, in view of the possibility of revolutionary agitation, opposed the national and constitutional current of the times. Moreover, as Premier of Austria, Metternich's course had to be directed by the fact that, after the troubles of the reign of Joseph II and the losses sustained in war during the last twenty-five years, the country stood in need of absolute rest. Austria kept its people from all foreign commercial competition and industrial competition with foreign nations. Consequently its policy within the confederation was restricted substantially to the safeguarding of its own interests.

Between 1815 and 1848 Prussia and the secondary states also devoted themselves exclusively to the solution of problems within their own boundaries. Up to 1848 Germany witnessed the most complete autonomy of the individual states in its entire history. The need of national unity was once more entirely ignored. In most of the secondary states much was done to improve the administration and the economic policy. Prussia, the self-reliance of which had been still further intensified by the Wars of Independence waged against Napoleon, completed the reforms that had been started in the period before 1815, although not in the German national spirit of their authors but rather in accordance with antiquated Prussian ideas. Even the new western provinces were as far as possible Protestant to the old custom. There was an attempt to combine the Prussian ecclesiastical policy and methods of government. At the University of Berlin, founded in 1809 by William von Humboldt, Hegel raised the Prussian conception of the state, filled with the spirit of Protestantism and rooted in absolutism, to the dignity of an historical whole. Hegel gave this position to the state as the highest and all-controlling form of society. Nevertheless the individual German states had clearly passed the limit of their capacity for organization. Routine dominated state administration. A well-trained but arrogant bureaucracy seized control of the government in Prussia as well as in the secondary states, and while it carried to excess the traditional political principles, yet it did not enforce them with the firm hand of the rulers of an earlier era. This was especially the case in the conflict concerning mixed marriages in the fourth decade of the century when the Prussian government arrested Archbishop Droste-Vacher of Cologne as an "insubordinate servant of the state" (1837). Its weakness was also plainly shown when the people of western and southern Germany objected to the interfering supervision of the government officials.

The middle class was indebted to Metternich for more than thirty years of uninterrupted peace, during which he protected it from all disturbances both at home and abroad, and they owed to Prussia laws more favourable to commerce than had ever before existed. These were the moderately protective Prussian customs law of 1818 and the founding (1833) of the cua
toms-union (Zollverein), which made a commercial unit of Prussia, central and southern Germany. Now for the first time the exertions of the commercial classes during the eighteenth century brought forth such fruits, and Germany regained the financial ability to undertake large commercial enterprises. Important industries flourished and traffic was increased many-fold, while the middle class gained a clearer perception of the influence of foreign and domestic policies on economic conditions. The leaders (Hansemann, Mevissen, and von der Heydt) in the manufacturing district of the Lower Rhine, the most promising region in Germany from an economic point of view, were ready as early as 1840 to guide the fortunes of Prussia, provided they could obtain political rights. Holding radical views in politics and religion, they adopted also the political demands of their intellectual kinmen in France, the Liberals: the creation of a constitutional parliament and the remodelling of the body politic in accordance with their social and economic principles. As Prussia like Austria had not granted its subjects a constitution, the struggle of these men for influence was conducted under more adverse conditions. Their efforts were thwarted by the existence of constitutional government in some of the smaller states since 1819, whereby a number of men, mostly university professors, were enabled in the several Dieten to attack the bureaucratic administrations. These men were also Liberals, but their position was that of the constitution of the nation with which the government for that of the bureaucracy: the leaders were Rotteck and Welcker of Baden, and of the moderates, Dahlmann. As early as 1837 matters came to a crisis in Hanover, while in Baden the contest lasted from 1837 to 1844. In answer to the opposition they called forth the Liberals raised the battle-cry of national unity, claiming that union would be the strongest guarantee of civic liberty. Their programme, as well as the appeal to the moral feeling of the people made by many of their leaders, aroused universal sympathy. As champions both of the principle of national unity and of economic and social progress, they hoped soon to be able to lead the entire people in a struggle against the reactionary administrations of the individual states. The latter, blinded by their particularistic prejudices, did not rally their forces to meet the threatening attack. As early as the forties differences on politico-economic questions weakened the cooperation between Prussia and the rest of southern Germany. Metternich had repeatedly urged that Austria become a member of the customs-union. But it now appeared that the social and economic differences, always existing between Austria and the rest of Germany, had been so accentuated by the selfish policy pursued by Austria since 1815 that a strong opposition to its entering the customs-union came from within Austria itself.

The position of the Catholic Church also became critical. The expectations of the Congress of Vienna had not been realized. Catholicity, it is true, owing to the political inability of a majority of the members of the Church and partly converts, exercised a leading influence in the field of political sciences (Haller, Adam Müller, Friedrich von Schlegel, Görres, Jarecke, Radowitz), in history (Buchholtz, Hurter), in art (Cornelius, Overbeck, Veit), and in theology (Möller, Döllinger, Kuhn, Hefele). But in actual political life and in criticism of life with the life of the times it fared ill. The bureaucratic state administration so fettered the Catholic Church that it was hardly able to stir, while Liberalism for the most part anti-Catholic, threatened to place a gulf between the Church and the people. The deep piety of the people, however, was not extinguished; both in 1844 it was the pilgrimage to Trier, and in the rejection of German Catholicism (1844-46). The attempt, however, to build up a Christian and anti-revolutionary party in conjunction with a few conservative Protestants (the two von Gerlachs, and the periodical "Politisches Wochenblatt" in Berlin; Görres and his circle of friends in Munich), on the basis of Haller's political teaching, was unpopular and altogether out of sympathy with the actual political and social development of the nation. Nevertheless a few courageous politicians attacked at the same time the bureaucratic administration and Liberalism; thus Görres published his "Athanasius" in 1837, and founded with friends the periodical "Historisch-politische Blätter" in 1838; and Hefele in Würtemberg, Moritz Lieber in Nassau. In Bavaria the Catholics were represented by the Abel ministry (1837-47). In Austria Metternich favoured them.

From 1848 to 1871. — The wide-spread political agitation in Western Europe, which from 1846 had been undermining the foundations of the system of government established by the Congress of Vienna, culminated in Germany in March, 1848. The reigning princes, unprepared for the emergency, turned the governments over to the Liberals and ordered elections for a new parliament on the basis of universal suffrage. Austria and Prussia, in addition, now granted constitutions to their peoples and, besides the national, summoned local parliaments. On 18 May the German National Parliament was opened at Frankfort, Heinrich von Gagern presiding. Archbishop Johann of Aachen was chosen its president and administrator. The success of Liberalism was apparently complete, the individual existence of the separate states practically annulled, and the establishment of a constitutional German national State, as opposed to the development as a confederation, seemed assured. The only difficult question was, apparently, how Prussia was to be "emerged" into Germany. However, as Frederick William IV of Prussia (1840-61) had expressed his sympathy with German unity, while the Liberals were prepared to make it as easy as possible for Prussia, as the head of the customs-union and the leading Protestant power in Germany, to surrender its individuality as a state, and were ready to offer to Prussia the hereditary imperial crown, the Parliament made light of this obstacle. Austria, rent by grievous national dissensions, seemed ready to step aside of its own accord.

In the autumn of 1848, however, the situation became complicated. The draft of a new constitution made by the Liberals awakened the distrust of the Catholics by its provisions regarding the Church and the schools. At the suggestion of the Pius Association (Piusverein) of Mainz, the Catholics flooded the Parliament with petitions, while in October the Catholic societies assembled at Mainz and the German bishops at Würzburg. The Liberals gave way but conditions remained strained. The great mass of Catholics repudiated the proposed settlement of the German question in the "Little German" (Klein-deutsche) sense, which advocated the exclusion of the union of Germany, the preservation of the imperial dignity upon Prussia; they demanded that Austria should remain part of Germany and should be its leader. This was called the "Great German" (Grösse Deutsche) view. Simultaneously a radical reaction broke out against the Liberals. Liberalism stood for ethical and political progress only, not for revolution; nevertheless it had received the support of the labouring classes, who were impoverished by the recent industrial development but not ready to become a political organization, because of the Liberal opposition to the existing state of things. Now that the Parliament did nothing to be done for revolution before the spring of 1849 repeated disturbances resulted, especially in Southern Germany; furthermore Radicalism obtained a majority in the constitutional assembly
of Berlin. The Liberals were not able to make any headway against this movement. Prussian troops had to re-establish the authority of the crown, and in the interim the reigning princes had also regained confidence. Austria, now under the leadership of Schwarzenberg (Francis Joseph having been emperor since November, 1848), declared in December, 1848, that it would not suffer itself to be forced out of Germany. The situation was as well suited to the developments in the constitutional movements were in Austria's favour. The industrial classes of Southern Germany, inspired by the fear that Prussia would adopt free-trade, desired to secure a politico-economic alliance with Austria, while the great merchants of the Hanseatic cities preferred the restoration of the corporative system. In Austria included, an area extending from the Baltic Sea to the Levant, to the lesser Germany alone. Having imposed a constitution on his kingdom in December, 1848, the King of Prussia refused to accept the imperial crown at the hands of the Frankfurt Parliament (April, 1849). Maximilian II of Bavaria (1848-64), by a strange recourse to the ideas of the seventeenth century, advocated a union of the secondary states, which in conjunction with Prussia but not in subjection to it, should control the policy of Germany (the "Triad").

In May, 1848, the Frankfurt Parliament came to an inglorious end. An attempt was made immediately afterwards by Prussia with the aid of the Liberals and the secondary states to agree on a German constitution maintaining the federal principle (The Union, Diet of Erfurt, 1850), and to form merely an offensive and defensive alliance with Austria; this was foiled by Austria. But although Austria forced Prussia to yield in the negotiations at Olmütz in December, 1850, it failed to effect either the renewal of the German Confederation under conditions that would strengthen itself or to gain admission to the customs-union. The German Diet, still unreformed, resumed its deliberations in 1851, while by the treaty of February 23, 1853 (Februarvertrag) the negotiations for Austria's entrance into the customs-union were postponed for six years. Austria and Prussia neutralized each other's influence and nothing was done, either in the customs-union or in the Diet. Consequently the central states, Saxony and Bavaria, von Beust being prime-minister in the latter, continued to maintain the power of their respective states and to constitute the balance of power. Maximilian II summoned to Catholic Munich Liberal and Protestant professors, nicknamed the "Northern Lights", in order to win the public opinion of all Germany for his "Triad" project. Both of the great powers strove to secure the union of Germany into a single state. The Liberals in 1850 and its failure to form an alliance with Prussia against Napoleon, greatly excited public opinion in Germany, for the impression prevailed that Germany was menaced by France. The Liberals took advantage of this to renew their agitation for the union of Germany. In 1852 the Grand Duke Frederick of Baden (1852-1907), whose land was exposed to the attacks of France, entrusted the Liberals with the ministry of Baden. In 1861 the Liberals undertook to force parliamentary government upon Prussia so as to obviate all further opposition on the part of the king to the creation of a consolidated German state. They encountered, indeed, an obstinate resistance from King William I (1861-88), but the prevailing antagonism between the bureaucracy and the people caused the sympathizers of almost the entire German nation to be enlisted on the side of the Liberals. The smaller states, becoming anxious, proposed reforms, leading to greater unity, in the constitution of the German Confederation. Austria, where since 1860 von Schmerling had been prime minister, also made advances to the Liberals in order to strengthen its position in Germany (Austrian Constitution, 1861; congress of the principal States, Frankfort, 1863). However, the accession of Bismarck to the presidency of the Prussian ministry in the autumn of 1862, and the political organization in 1864 of Socialism by Lasalle, again checked the rising tide of Liberalism as early as 1863-64. This was followed by Bismarck's determination to settle once and for all...
with the sword the antagonism existing since 1848 in German affairs between Prussia and Austria. As Prussian envoy to the Federal Diet in the fifties Bismarck had observed the instability of the lesser German states and the decline of Austria's strength, as well as the methods of Napoleon, especially the use of the latter made of the principle of nationalities; but he was also able to see that since 1860 Napoleon's star was on the wane. To a certain extent he appropriated Napoleon's policy in order that in the end the fruits of what the French emperor had sown in Europe. At the same time he preserved an independent judgment so as to fit his measures to German conditions and proved that his genius contained greater qualities and more elements of success. In the Danish War (1864), fought to settle whether Schleswig and Holstein belonged to Denmark or Germany, he forced the Austrian minister of foreign affairs, Rechberg, to adopt his policy. He then manoeuvred Austria into, a position of diplomatic isolation in Europe and, after forming an alliance with Italy, made a furious attack upon Austria in 1866. After two weeks of war Austria, an army defeated at Königgrätz (3 July), and by the middle of July Prussia had occupied all Germany. In the meanwhile Napoleon had intervened. Bismarck put him off with unmeaning, verbal concessions, and in like manner pacified the German Liberals whose continued opposition might have caused the agitation of German unity. He then concluded with Austria the Treaty of Prague (23 August, 1866) which partook of the nature of a compromise. Austria separated itself entirely from Germany, the South German states were declared internationally independent, Prussia was recognized as the leader of North Germany, while Hanover, Hesse-Cassel (electoral Hesse), Hesse-Nassau, Schleswig-Holstein, and Frankfort were directly annexed to Prussia, and preliminaries were arranged for the adoption of a federal constitution by the still-existing North German states. The constitution of the North-German Confederation, established 1 July, 1867, was framed by Bismarck so that the federal development of German constitutional law should be guarded, thus the constitution was adopted by treaties with the several sovereign princes, the autonomy of the individual states was assured and, in the federal council was not the representative of the various governments. The necessary unity of the government was guaranteed (1) by endowing Prussia with large authority in administration, giving it especially the command of the army and direction of diplomatic relations; (2) by assigning most affairs, foreign, economic interests, traffic and means of communications to the authority of the confederation, the competence of which was to be gradually enlarged (the model here taken being the Federal Act of the Congress of Vienna of 1815); (3) by creating the Reichstag (Parliament), elected by universal, direct and equal suffrage, as the expression of the national desire for unity. In the years immediately following the Reichstag passed laws regulating the administration of justice.

Bismarck considered the absence from the confederation of the South German states to be merely temporary. As early as August, 1866, he had secretly made sure of their co-operation in case of war. In 1867 he re-established the customs-union with them; political-economic questions of common interest were, in future, to be laid before the Reichstag of the North German Confederation which, for this purpose, was to be complemented by delegates from Southern Germany so as to constitute a customs parliament. In all other respects he left diplomatic relations with the states of South Germany in statu quo. Attempts on their part to found a southern confederation failed. In like manner Bismarck postponed as long as possible the accounting with France in regard to the unification of Germany, although he foresaw that such an accounting was unavoidable. At a conference held in 1868 at a conference of the lesser German states in the Netherlands, Bismarck expressed the desire of the lesser German states in the Netherlands and Luxembourg. In 1868 he desired to secure a resolution in favour of national unity from the customs parliament. To attain this he relied on the economic progress which, in consequence of the gradual unification of Germany, continually grew more marked and thus Liberalism and nationalism might gain ground. In the legislation on social and economic questions, and in that on the administration of law, both in the North German Confederation and Bavaria. Illustrations of these liberal changes are: the organisation of the postal system by Henry Stephani; the introduction of freedom de trade and the right to reside in any part of Germany; enactment of the penal code, 1870. Notwithstanding these results of the efforts towards union, the opposition, led by Ludwig Windthorst, succeeded in obtaining a majority against him.

On 19 July, 1870, war broke out with France, the cause being the candidature of Prince Leopold of Hohenzollern for the Spanish throne. Napoleon had not been able to secure the help of Austria and Italy; furthermore, his army was not prepared for war. Bismarck, on the contrary, fanned to white heat the national enthusiasm of Germany. The German armies quickly crossed the Rhine, and gained a firm footing on the other side by heavy victories at Sadowa, Vaux, Metz, 27 October, and Paris, not until 28 January. Meanwhile Gambetta had organized a national militia, 600,000 strong, which, in conjunction with the remains of the standing army, harassed and obstructed the Germans on the Loire and in the North-West from October to January. On 10 May, 1871, by the Peace of Frankfort, Alsace-Lorraine was restored to Germany as an imperial territory (Reichsland). The southern states had already joined the Confederation, which had become the German Empire (with an area of 208,748 sq. miles). The Constitution of the North German Confederation which the reluctant states were not compelled to accept, provided that the empire should be composed of the several States on equal terms, each retaining its peculiar privileges in favour of Bavaria and Wurttemberg. The Constitution was proclaimed 10-20 April, 1871, Prussia being entitled to 17 of the 58 votes in the Bundesrat or Federal Council, and to 236 of the 397 deputies in the Reichstag or Imperial Parliament. From then I assumed the title of "German Emperor" at Versailles, 18 January, 1871; the office was made hereditary.

The New German Empire.—(1) 1871-1888.—A development that had been in progress for many centuries and had been attended by many complications had practically reached its culmination; the political union of the Germans in a single, body politic without any relinquishment of the federal principle, so far as the relations among the ruling houses were concerned, had been accomplished, advantage being taken of the popular movement towards the unification of the several States into one organic whole. Austria had been excluded from Germany, the political consolidation of Northern Germany was almost complete, and Prussia's economic superiority over the South had been established beyond question. While Southern and Central Germany (with the exception of Saxony and Nassau), as well as Hanover, experienced an increase in population of only about 20 per cent between 1830 and 1880, that of Prussia grew about 60 per cent; and nearly all the coal and ore deposits of Germany were located within the borders of the latter kingdom. Withal, during the ensuing years the United people did not devote themselves
exclusively to peaceful pursuits. It is true these received great attention; German commercial and economic interests throughout the world were developed; uniformity was established among the German states; the Reichstag (1875), the administration of justice (1879); the laws of the empire were codified; and after a short time close attention was also given to social problems. On the other hand, military preparations (September, 1874), in case France should renew the war, were pushed forward with increasing speed. Furthermore, the conflict between Church and State (the so-called Kulturkampf) was at its height. It was not until 1875 that there was any degree of tranquillity and stability. Bismarck recognized that he was lessening the extraordinary esteem in which he was held by the world. He was by his excessive intimidation of France. Moreover, the defeat in France of the Royalists and Catholics by the Radicals and Protestants freed him from apprehension of danger from that quarter. Russia having been estranged from the empire by his anti-French policy, Bismarck sought the friendship of Austria-Hungary. In 1879 he brought about an alliance with Austria, which, with that of 1873, an alliance with France, which still subsists—the league of the great powers of Central Europe. He re-established better relations with Russia by means of secret treaties with that country in 1887. The election of Leo XIII., the "pope of peace" (1878), disposed Bismarck to come to an understanding with the Catholic Church. But as a preliminary condition he demanded either that the Centre party be dissolved or that it become a government party. At the same time he contemplated sweeping changes in internal politics. The Liberal ascendency, beginning in 1871, had been responsible for the inauguration of an excessive number of economic undertakings, resulting in the financial depression of 1873; in political finance it brought about an almost complete stagnation in the development of the systems of taxation both of the empire and the component states; in social politics it had led to the establishment in the Empire of the Social Democrats, who after Lassalle's death had become an independent party, in which numerous anarchistic elements were blended. In 1875 there had been a fusion of the Lassalle and Bebel factions; the Gotha programme was drawn up; at the election of 1877 they secured their first important success. Liberalism had also failed completely in its opposition to the Centre; the latter party had so grown that it controlled more than a quarter of the votes in the Reichstag. Bismarck determined to restrict once more the influence of the Liberals in domestic politics. The transformation of the Conservative faction from an old Prussian party into a German Agrarian party (1876) made it capable of further development and useful as a support for Bismarck. He proposed a majority by combining this Conservative party with the moderate National Liberals (under Bennigsen and Miquel), while at the same time, the Centre party having refused to disband, there was the possibility of forming a majority of the Conservatives and the Centre.

Between 1876 and 1879 to organize the administration of the empire, the Reichstag created, subordinate to the chancellor, who under the Constitution was the only representative of the Federal Government, the following imperial authorities or secretariats of State: Ministry for Foreign Affairs, Imperial Home Office, Imperial Ministry of Justice, Imperial Treasury, Administration of Imperial Railways, Imperial Post Office, Imperial Admiralty, Secretariat for the Colonies (1907). A number of non-political departments were also established, in part under the various secretaries of State, the chief of which was the Imperial Insurance Department; military affairs were placed under the control of the newly created Office of War. In 1879 the imperial territory of Alsace-Lorraine was granted autonomy, though this was of a limited character. In 1878, after the attempts made by Hodel and Nobiling on the life of William I, Bismarck carried out temporary measures for the suppression of Social Democracy, the Socialist Law forbidding all Social Democratic organizations and newspapers. In the following year, encouraged by the increase in the sense of national unity due above all to the growth of German commerce and industry, he effected the financial and economic-political reform, his battle cry being "Protection for German Labour." Small protective duties were imposed upon agricultural and industrial imports, and a tariff for revenue only on colonial wares. The proceeds of both duties were to constitute the chief revenue of the empire, but of these only 130 million marks were to go to the imperial treasury; the rest being divided among the federal states an equal sum being deducted by the latter, by means of federal contributions (Matrikelzuschüsse), were to make good the contingent deficits of the empire. During the eighties the duties on agricultural products were gradually raised (especially in 1887), besides which several profitable indirect taxes, e.g., on brandy, tobacco, etc., were introduced in order to meet the growing expenditures of the empire. In 1881 an imperial message to the Reichstag announced the inauguration of a policy of social reform in favour of the working classes. Between 1881 and 1889 the compulsory insurance of working-men against sickness, accident, disability, and old age was provided for by legislation. This was Bismarck's greatest achievement in domestic politics. The empire was now for the first time made the centre of the civil interests of the Germans, who up to this time had been occupied chiefly with the doings of their respective states, the management of Church and school having been retained by these. Bismarck, now at the zenith of the second creative period of his life, conceived the idea of organizing labour insurance upon the basis of the community of interests of those engaged in the same work. By this means he proposed to establish self-governed social insurance systems, which would equal in importance the local self-government of communities subdivided into the individual states, and which would complement the establishment of universal suffrage by educating the people for the administration of public affairs.

Bismarck also laid the foundation of commercial interests which insisted upon the acquisition of colonies; in 1884 South-West Africa, Kamerun, and Togo were acquired; in 1885-86 German East Africa, German New Guinea, and the Bismarck Archipelago. He even went so far as to risk being embroiled with England, although it was an inviolable fundamental principle of his policy not to encroach on that country's privileges. It appeared as if Bismarck, though he had grown up under wholly different conditions and had been schooled in wholly different ideas, entered into the spirit of the democratic Germany of the future, with its world-wide commerce and its world-wide economic interests. But the first step taken, he retreated. He did not carry out his scheme of co-operative organization. It was in the fight against the growth of the German democratic tendencies within the empire that he exhausted his strength in the eighties. Domestic peace was promoted by the final so-called close of the Kulturkampf (1886-87); the beneficial effects of this were greatly lessened by the severity and violence of the measures with which Bismarck had begun (1885-86) to break up the national movement of the Prussian Poles, which was the conse-
quence of their constantly increasing prosperity and of the rise of a middle class among them. Exile, efforts to suppress the Polish language, the expenditure of State funds to colonize Poland with German peasants, Datos to the necessity of reforming the foreign policy by trying to shape a national policy, and the idea of forming an empire by conquest. All these efforts failed, but Bismarck, who had been forced to resign in 1876, returned to power in 1878, and in 1879, he became involved in incessant parliamentary contests with the Liberals. Particularly the demands of the Government for an increase in the strength of the army, which was levied by general conscription, brought them into conflict with the Liberals, and with the Catholics. Bismarck refused to agree to state protection of workmen, though he had conceded state insurance.

The political parties, all of which had been organized before the creation of the empire, now began to adapt themselves to new conditions, to cast aside issues resulting from the division of Germany into separate states, and to alter their positions to conform to new points of view; but their development was seriously hampered by these conflicts. In 1879 the Liberals had resigned the presidency of the Reichstag in consequence of the adoption of financial and tariff reform. The president was now chosen from the Conservators by the Conservative members of the Reichstag, which elected Bismarck. He had been a member of the Reichstag since 1857, and for many years was its speaker. His government was strengthened by the victory of the Conservatives in the elections of 1880, and the Liberal party, which had been almost destroyed by the elections of 1879, was now able to find a new lease of life. The Conservatives energetically took up the demands for the protection of the working classes. Eventually the Agrarian element among them got the upper hand. They failed, however, to attract into their ranks the smaller middle class, i.e., the small retail traders who had combined to resist the great industrial interests; nor did they win over the officials of the civil service, or the Christian Socialists among their Evangelical constituents. Consequently, the small parties in the west and north of Germany were fundamentally Conservative in character but had no connexion with the great Conservative party. The attempt that von Kleist-Retzow made to found a Protestant party of the Centre in the hope of winning over the hereditary prince, William, to its cause, was frustrated by Bismarck's intrigue, by which the prince was alienated from the Conservatives. The Centre maintained its strength and directed its attention to social politics in the empire and to the school question in the individual states. It became the leading party in the Reichstag, represented by the Hitzes and von Bertling. In 1890 the "Finnish Union for Catholic Youth" was founded. The Social Democrats, prevented by the Socialist Law from agitating their cause publicly, kept up their strength by secret recruitment. By dissolving the Reichstag in 1887, Bismarck secured the most favourable electoral results that had ever fallen to his lot, inasmuch as an overwhelming majority of Conservatives and National Liberals (so-called Kellert-Reichstag) was returned. But he was unable to work harmoniously even with this majority.

(2) From 1888 to 1909—In 1888 William I died, Frederick III, the hope of the Liberals, followed him to the grave in ninety-nine days, and the reign of William II began. The youthful and able ruler wished to make Germany as splendidly as possible a sharer in the world's commerce. He realized that, to attain this end, internal tranquility was as necessary as external peace. He dismissed Bismarck in March 1890 and replaced him by Caprivi (1830–94). Then he saw to it that the all but unanimous desire of the Hermannstadt to the Catholics a guarantee that the national schools would continue to be Christian by the proposed National School Law in 1892, but withdrew the bill when the Liberals assumed a hostile attitude, and his pacific aims were thwarted. In foreign affairs he came to an understanding with England and in order to the difficulties that had arisen from the colonial expansion of Germany, e.g., the exchange of Zanzibar for Heligoland in 1890. In the interests of peace likewise he succeeded in concluding commercial treaties with Austria, Italy, Russia, and several smaller states, by lowering the agricultural duties which had become very high. With France he sought to establish relations that were at least free from bitterness. Because of its sovereignty over the Balkans and the East, he devoted special attention to Germany's political relations to Turkey. For he saw that these countries were the best markets for German trade. But trouble soon began. The emperor's attitude had aroused bitter criticism among the people. The new Army Bill of 1893, which proposed to reduce the period of military service to two years, was well-meant on his part, but was so badly managed that it brought him into collision with the Centre (Dissolution of the Reichstag, 1893). On the other hand, the commercial treaties, which were opposed by the agricultural party, got the emperor into difficulties with the Conservatives. In 1895 the Reichstag turned a deaf ear to his demands for renewal of sharp repressive measures against agitations that were "hostile to the state" (the so-called "Umsturzvorlégung"). His views subsequently became liberalized, his following being recruited mainly from the commercial, industrial, and intellectual classes (Krupp, Ballin, Harnack).

The success of the emperor's policy during the next few years was due to the fact that his successor, as Caprivi's successor, Chlodwig Hohenlohe (1859–1901), was a man of astute and conciliatory nature, while in Count Posadowsky, Secretary of State for Home Affairs, the emperor had the support of an extremely competent and energetic man. Germany entered into friendly relations with the rapidly developing United States of America, despite the opposition of their economical interests and isolated instances of friction between officers, strengthened public confidence in the imperial situation. By the occupation of Kiao-chau in 1898, Germany secured a foothold on the Pacific coast of China, and the Seychelles Islands and the acquisition of the Carolines (1896–9) gave her a much-desired increase of stations in the Pacific. The German transatlantic merchant marine held for a long period the record for the race across the Atlantic, and, even in Africa and Asia, Germany promised to become a very serious rival of England. At the last decade of the nineteenth century was a period of exceptional prosperity throughout the country. From forty one millions in 1871, the population increased to sixty millions in 1905. The increased national well-being will be realized from the fact that at present the gross value of the agricultural produce amounts to some $3,525,000,000, and of the industrial output to about $8,480,000,000. In 1871, two-thirds of the population still lived in the country, whereas in 1900 54.3 per cent lived in towns of more than 2000
inhabitants, and in 1905 19 per cent lived in cities of more than 100,000 inhabitants. In the agricultural districts, however, conditions continued to be healthy —per cent of food products sold by rural producers and 22 per cent be sold by urban producers and 22 per cent be sold by urban producers and 22 per cent be sold by urban producers. ... In the woodland area still includes one-fourth of the total area.

During this period the national standard of living became more luxurious; revolutionary and anar- chistic tendencies cultivated by peasants, 24 per cent of whose products only to disappear. The whole nation was seized by a burning tendency to- wards the formation of new associations, a spirit to which we owe the foundation of the Catholic People’s Union (der Volksverein: members in 1908, 600,000), the Farmers’ League (1908: 300,000 members), the free (Socialistic) guilds (1908: 200,000 members), etc. In Parliament the great political parties (Conservatives, National Liberals, and the Centre) drew closer together; the presidency devolved on the Centre in consequence of its numerical pre-ponderance and the ability of its leaders. In 1899 the constantly recurring conflict between the Crown and the Reichstag on the subject of appropriations for military expenditure was settled by an agreement on the part of the legislative assembly to vote supplies henceforth for the parliamentary period, which had been the rule before. Among the important measures passed were the com- pletion of the unified legal codes (1896) and the Naval Acts (1898, 1901), which had in view the rais- ing of Germany to a maritime power of the first rank. In 1902 the resolution to restore the high protective duties on agricultural products passed in the face of the bitter opposition maintained by the Social Democrats for many months (Tariff Bills, on the basis of which the commercial treaties were renewed in 1905). Prussia’s project of constructing a canal through her own territory from the Oder to the Rhine was met with obstinate resistance, not indeed in the Reichstag, but in the Prussian diet (rejected in 1899, approved in 1903). In the midst of this era of prosperity Bismarck died (1898).

In foreign politics, however, there came a change for the worse after England’s subjugation of the Boers. Until 1905 Great Britain forced Germany back from almost all the positions which she had recently occupied. Meanwhile, William II devoted himself to a line of policy calculated to win temporary favour (journey to Jerusalem, 1898; intervention in the Chinese complications, 1900; landing in Tangier, 1906). Privy Councilor Bulow, who replaced Hohenlohe in 1900, was unable to stem the ebbing tide. In the Moroccan controversy between Germany and France, Germany, who appealed to an international confer- ence (at Algeciras, 1906), suffered a severe rebuff. By his efforts to separate Austria and Italy from the Triple Alliance and by his ententes with the other Powers of Europe, Edward VII isolated Germany (1907, Triple-Entente between England, Russia, and France). Bulow’s Polish policy, which was more drastic even than Bismarck’s (cf. the Expropriation Act of 1908), resulted only in disappointments without effectually checking the Polish disturbances. In 1907, owing in part to the financial crisis in America, Germany’s commercial prosperity markedly declined. Favoured by the customs tariff, agriculture alone continued to flourish. The revenue of the empire decreased with the commercial profits. At the same time the granting of the Hereros in South-Western Africa in 1904 was followed for large expen- ditures, while the troubled aspect of the foreign situa- tion necessitated a tremendous increase in the outlay on armaments (cf. Naval statutes of 1906). The “ordinary” expenditure in 1907 was 2329 millions of marks; National debt in 1873: 1800 millions, and in 1908 4400 millions of marks.) One attempt after an- other was made at fiscal reform (1904, relaxation of the Frankenstein clause; 1906, 150 million marks, 3,250,000 yearly taxes were voted; in 1908—9, 500 million were demanded; the debt burden to the government is still carried on with a deficit. Thorough recovery has been prevented by the re- newed violent dissensions in the nation by party spirit (since 1892) and the clash of opposing ideals.

The coalition, which had formed the majority dur- ing the nineties, broke up in 1905. Its most impor- tant factor was the Centre, the number of whose seats in the Reichstag and supporters in the constituencies remained stationary even during the period of its par- liamentary ascendency. Therein lay its weakness, since meanwhile its allies, the official Liberal and Conservative parties, gained ground. The Liberal was gained in consequence of a movement towards concen- tration among the Liberals of the Left soon after the beginning of the century (Fusion of the Liberals of the Left, 1906), and of a reconciliation between the National Liberals and the Liberals of the Left by means of a “Young Liberal” movement in their ranks. The Conservatives, who had been growing as a party almost uninterruptedly since 1876, especially after the founding of the “Farmers’ League” in 1893, gained by gradually invading the agrarian territory in the west and south-west.

In 1905, the Protestant League, founded in 1886, maintained a fanatical agitation amongst the populace to frustrate the endeavours of the Catholics, di- rected through the Centre, to secure recognition of their equal rights as citizens in the public life of the nation. Yielding to this agitation, first the National Liberals then the Conservatives signed the so-called “toleration bills”, in which the Centre strove by imperial legislation to fix the minimum of rights to be conceded to Catho- lic in the separate states, although repeatedly pre- sented to the Reichstag after 1900, always met with defeat. When, in 1906, the Christian character of the national schools was finally established by statute in Prussia after an interval of 13 years, the Reichstag drafted the bill in accordance with the wishes of the Conservatives and the National Liberals, and left to the Centre only the right of voting for it.

Another important factor in bringing about the cleavage between the parties was the spread among the wealthier classes of liberal and socialistic feeling, the expression of a strong feeling of opposition to further social legis- lation. This feeling found an outlet in the formation of influential syndicates, and was most bitterly di- rected against the Centre, as the principal promoter of social remedial measures. An open breach between the parties took place on the question of a relatively small, but important, governmental budget. The Government immedi- ately disowned the Centre, and dissolved the Reichstag (13 December, 1906). Since then the situa- tion has been very complicated. As a result of the elections the Centre retained its former voting strength, but was isolated. The Government formed a new coalition, called “the Blue”, consisting of the Conservatives and the united Liberal party—the Liberals of the Left had hitherto been in opposition. In this it relied on the feelings of hostility towards the Centre which animated the Protestants and the proper- tized classes. When the administration, however, made concessions to the Liberals (extension of the right of association, partial repeal of the stock exchange legislation, promise to introduce popular suffrage into Prussia), the Conservatives, after some hesitations, decided to oppose the Government and again sought an alliance with the Centre. They are
stronger than the Liberals, but the sympathies of the Government and of the anti-Catholic portion of the population will help the Liberals in their contests with the Conservatives. The quarrel amongst the civil parties prevents the further loss of parliamentary seats by the Democrats, who in the last voting period had been steadily increasing since 1890 (in 1907 they cast 3,259,000 votes, 29 per cent of the total, although they won only forty-three seats in the Reichstag as compared with eighty-one in 1903). It also prevents the reconstruction of the programme of the Socialists, many of whom really only with Germany—a favor to peaceful transformation of society. The difference of opinions existing among the Socialist party was clearly evidenced by the violent quarrel between the opposing sections at the Dresden Convention in 1903.

The position of the Government in view of its relations with the parties is at present (Jan., 1900) not very favourable. The administrative organization of the empire hardly suffices. Besides, the shock given to the power of the emperor in November, 1908, in consequence of the popular resentment of his personal interference in politics as revealed in the ‘Daily Telegraph’ interview, has not served to strengthen the government. On the other hand, its prestige was greatly enhanced by the re-establishment of German influence in international politics, owing to its firm support of Austria-Hungary in the Balkan crisis (1908–9). It has put an end to the isolation of Germany, strengthened the bonds of the Triple Alliance, and contributed to the result in a re-establishment of Austria-Hungary.

In dealing with the present situation of German Catholicism, relations between Church and State must be separated from the question of the civic rights of the German Catholics. The authorities of the Church and State work together in a spirit of mutual benevolence, the chief credit for which is due to Cardinal Kopp, since 1886 Prince-Bishop of Breslau. Ecclesiastically speaking, Germany is divided into 5 archbishoprics, 14 suffragan and 6 exempt bishoprics, 3 Apostolic vicarates, and 2 Apostolic prefectures. The clergy are trained for the most part by 15 theological universities or lyceum faculties (the most recently established being at Straubing, 1902), a smaller number in seminaries.

Ecclesiastical affairs are not regulated by the empire but by the individual state. In Prussia they rest on the Bull ‘De Salute Animarum’ and the explanatory bull ‘Quod de Fidelium’ of 1821 (although the promise inherent in the latter for the Church has not been kept), on the constitution of 1850, and on the laws of 1886–87 regulating ecclesiastical polity. In Württemberg, they rest on the Statute of 1892, in Baden on the Statutes of 1890, in Bavaria on the Concordat of 1817, which has not actually been enforced and which consequently creates a state of legal uncertainty. In these divisions of the empire, the Church has the rights of a privileged corporation. In the Kingdom of Saxony and in Saxo-Weimar, all ecclesiastical ordinances and appointments, even those issued from Rome, as well as the erection of new churches, etc., are subject to the approval of the Government. Appeal to Rome is forbidden. In the other small Thuringian states, and in Brunswick and Mecklenburg, the Catholics even recently had to submit their parochial affairs to the authority of the Protestant pastors, and in part Catholics even now pay tithes to the Protestant pastors for this unsought-for service. The building of churches and establishment of schools are also subject to galling restrictions.

The bishops are elected by the cathedral chapters, except in Bavaria (where they are chosen by agreement between the Government and Rome); in the Upper Rhenish church province, in Osnavrück, and in Hildesheim, the Irish method of election obtains; elsewhere exists the customary submission of a list of candidates to the Government. The establishment of convents is everywhere subject to the approval of the State. In Württemberg and Baden only female orders are allowed; in Saxony and the smaller Protestant States only nursing sisterhoods. Jesuit institutions are not permitted anywhere. The primary schools are mostly denominational, but are neutral in Baden, which is a part of Bavaria. Pluralism in Prussia. They are founded by the State and by the communities, but the local pastors supervise the religious instruction and are generally the local school inspectors. The system of intermediate and higher schools for boys is undenominational almost without exception, and the same is true for girls; in two partly, for the schools for girls are mostly under private and density religious management, being largely conducted by nuns. The civil marriage ceremony takes precedence of the religious by an imperial law of 1875; divorce is regulated by the civil code. For Catholic couples separation or a menage a trois may be granted. Charitable relief work is admirably regulated and carefully stimulated by the focusing of charitable impulses in the Charitenserverband (Charity Organization Society), founded at Freiburg in 1897. It is working more and more in harmony with social relief work. There is a large number of religious societies; the throngs who attend to all religious celebrations are large. The numbers who receive the sacraments are gratifying. Pilgrimages are numerous attended, the most famous place of pilgrimage in Prussia being Revalera, in Bavaria Altötting. Considerable anxiety is inspired by the prevalence of Social Democracy in certain districts, and by the rising generation of the propertied classes.

The civil status of Catholics is not so good. Of the 60,641,272 inhabitants of Germany in 1905, about 36.00 per cent were Catholic (in 1900 only 36.18 per cent as compared with 36.2 per cent in 1871). At present, the Catholic Church unreservedly gives vigorous life into the Catholic Church. The Catholics are splendidly organized (for politics by the Centre and in sociological respect by the Christian guilds and by Volksverein). They are making persistent efforts to secure equal recognition in public life (of the agitation afoot in Prussia since 1890 in favour of equal rights for Catholics; the so-called ‘Self-examination Movement’ throughout the empire, that is to say, the general investigation into the injustices suffered by Catholics in the educational and economical life of the country). Recently, the number of Catholic schools has increased, but only on the humanistic side. Their representation in the polytechnic schools as well as in the student bodies at the universities continues to be weak, out of all proportion to those of the other communions. Only in isolated instances are the leading positions in the states and communities filled by Catholics. No Prussian state minister, and only one state secretary is Catholic. Their share in the public wealth does not at all correspond with their numerical strength.

State. Martin Spann
German Literature.—I. From Oldest Pre-Christian Period to 800 A.D.—There are no written monuments before the eighth century. The earliest written record in early Germanic language, the Gothic translation of the Bible by Bishop Ulphilas, in the fourth century, does not belong to German literature. It is known from Tacitus that the ancient Germans had an unwritten poetry, which among them supplied the place of history. It consisted of hymns in honour of gods, or songs commemorative of the deeds of heroes. Such hymns were sung in chorus on solemn occasions, and were accompanied by dancing; their verse form was alliteration. There were also songs, not choric, but sung by minstrels before kings or nobles, songs of praise, besides charms and riddles. During the great period of the migrations poetic activity received a fresh impulse. New heroes, like Attila (Etzel), Theodoric (Dietrich), and Ermanric (Ermannich), came upon the scene; their exploits were confused by tradition with those of older heroes, like Siegfried. Mythic and historic elements were strangely mingled, and so arose the great saga cycles, which later formed the basis of the national epics. Of all these the Nibelungen saga became the most famous, and spread to all Germanic tribes. Here is the most primitive legend of the conversion of Germany, vigorously carried on since the eighth century by Irish and Anglo-Saxon missionaries, notably by St. Boniface (d. 755), who, in the seventh century and 800s, forced the heathen Saxons to submit to his rule and to be baptized, and united all the German tribes under his sway. Under him and his successors Christianity was firmly established. The clergy became the representatives of learning; the newly established monasteries and their schools, above all those of Fulda and St. Gall, were the centres of culture. The language of the Church was Latin, but preaching and instruction had to be carried on in the vernacular. The prose literature that arose to serve this purpose is only of linguistic interest. The poetry that developed during this period was wholly Christian in character. Examples are the “Wesenbrunner Gebet” and the “Muspilli,” the latter an alliterative poem on the destruction of the world; both date from the ninth century. The Church, naturally, opposed the old heathen songs and strove to supplant them by Christian poems. Thus arose the Old Saxon epic, the “Heliand,” which was composed between 822 and 840 by an unknown poet, at the suggestion of King Louis the Pious. It is written in Low German and is the last great poem in alliterative verse. The

Oppfried’s “Evangelienbuch”
Section of a page, 6th Century MS., Court Library, Vienna

Siegfried’s death was combined with the historical destruction of the Burgundians by the Huns in 435, and affords a typical instance of saga-formation.

Of all this pagan poetry hardly anything has survived. The collection that Charlemagne caused to be made of the old heroic lays has perished. All that is known are the “Marseburger Zauberspruch” by two songs of enchantment preserved in a manuscript of the eleventh century, and the famous “Hildebrandallé,” an epic fragment narrating an episode of the Dietrich saga, the tragic combat between father and son. It was written down after 800 by two monks of Fulda, on the cover of a theological manuscript. The evidence afforded by these fragments, as well as such literature as the “Bewulf” and the “Edda,” seems to indicate that the oldest German poetry was of considerable extent and of no mean order of merit.

II. The Old High German Period (c. 800–1050). Christianity and its Influence.—Between the years 500 and 700 occurred the High German sound-shifting, which divided the dialects of the South, High German, from those of the North, Low German. The history of German literature is henceforth mainly concerned with High German monuments. In fact, until the close of the Middle Ages Southern Germany occupies the leading place in literary production.

The Goths, the first Germanic tribe to be converted, embraced Christianity in the form of Arius. But they soon gave way to the Franks, who became the dominant people, and the conversion of their king, Clovis, to Christianity, in 496, was of decisive import-

story of the Redeemer is here told from a thoroughly German point of view, Christ being conceived as a mild but powerful chief, and His disciples as vassals or thanes. The same subject is treated in the “Evangelienbuch” of Oppfried, a monk of Weissenburg, the first German poet known by name. It was completed when Charlemagne (d. 814) forced the heathen Saxons to submit to his rule and to be baptized, and united all the German tribes under his sway. Under him and his successors Christianity was firmly established. The clergy became the representatives of learning; the newly established monasteries and their schools, above all those of Fulda and St. Gall, were the centres of culture. The language of the Church was Latin, but preaching and instruction had to be carried on in the vernacular. The prose literature that arose to serve this purpose is only of linguistic interest. The poetry that developed during this period was wholly Christian in character. Examples are the “Weserbrunner Gebet” and the “Muspilli,” the latter an alliterative poem on the destruction of the world; both date from the ninth century. The Church, naturally, opposed the old heathen songs and strove to supplant them by Christian poems. Thus arose the Old Saxon epic, the “Heliand,” which was composed between 822 and 840 by an unknown poet, at the suggestion of King Louis the Pious. It is written in Low German and is the last great poem in alliterative verse. The
Nortier III, surnamed Lebode (about 952–1022), the head of the convent-school of St. Gall. His translations from Boethius, Aristotle, Marciusius Capella, and especially of the Psalter, are the best examples of German prose until the fourteenth century.

**Middle High German Poetry.**—In the century under that movement emanated from the Burgundian monastery of Cluny, a spirit of stern asceticism begins to dominate in literature. The Church in its struggle with the emperors turned again to the people, to carry through the reforms of Gregory VII, and although the power of this period were almost exclusively clerics, they at least wrote in German. The literature which they produced consists mainly of rhymed versions of Biblical stories and other sacred themes, and is represented by Ezzo's "Lady of the Miracles of Christ," William's paraphrase of the Canticle of Canticos (both c. 1060), and the poems of Frau Ava. Some of the best poetry of this time was inspired by devotion to the Blessed Virgin, as for instance the "Drei Lied von der Maget" by a Bavarian priest named Wernher (c. 1170). In these songs the characteristic German trend towards mysticism is unmistakable. A most noteworthy product of the same "standard" is a poem in praise of Archbishop Anno II of Cologne (d. 1075). The "Kaiserschronik" (c. 1150), a bulky poem narrating the history of the world, presents a strange medley of legendary and historic lore. The bitter hostility of the asetic spirit to the worldly life finds expression in the satirical satire of Heinrich von Melk (c. 1160). But asceticism was losing ground; under the influence of the Crusades the prestige of the knighthood was steadily rising. A compromise between the secular spirit became imperative, and the clerical poets, to keep their audiences and meet the competition of the men of letters, wrote "chivalric" poetry; for their models they turned to France.

A priest named Lamprecht composed the "Alexanderlied" (c. 1150), while a priest of Ratibon, named Konrad, wrote the "Rolandlied" (c. 1135). In the cases composed of French originals. The minstrels began once more to come to the front, and a number of popular epics date from this period. Among these "König Rother" (c. 1160) is conspicuous. Its subject is an old Germanic saga, and the röle which the Orient, Constantinople in this case, plays therein shows the influence of the Crusades. Still more noticeable are the allusions for the first time to the Holy Land and the subject of marvellous adventures in the Far East. From this period dates also the first German beast epic, "Reinhart Fuehs," by Heinrich der Gleichenste (c. 1170).

The rule of the Hohenstaufen (1138–1254) marks the first great classic era of German literature. Many causes contributed to bring about a great literary revival. The Crusades instilled new fervour into religious life. Many thousands of German knights followed King Conrad III in the crusade of 1145–47. They were brought into contact with the Orient and its wealth of stories and marvels, and on the other with their more cultured French neighbours, whose polished customs and manners they adopted with avidity. Chivalry, an institution essentially Romance in origin and spirit, was thus raised to prominence of the social life of the age. Thetranslation of poetry passed chiefly into its hands; the clergy ceased to be the sole purveyors of learning and culture.

The poetry of this period are, as a rule, of knighthood rank. Many of the poorer knights depended on the generosity of princely patrons, such as the landgraves of Thuringia or the dukes of Austria. The Gunderkinds of poetry cultivated in this epoch were the epic and the lyric, and the former was either courtly or popular. Form received the most careful attention; versification was regulated by the strictest rules; the language, the classic Middle High German, is extremely elegant. This classic poetry was essentially a poetry of caste and confomed absolutely to the ideals of French courtly society. Brilliant as it was, it was mainly a poetry of translation; the original German language was little in use outside certain monasteries.

The courtly epic deals essentially with foreign subjects; its models were derived mostly from France. The subject most in favour was the matière de Bruges, the legends clustering around King Arthur and the Round Table, with which that of the Holy Grail had twined. Poetry in this genre was especially popular in the versions of the French trouvère, Chrétien de Troyes, who exerted great influence on the German courtly epic. Chivalry and the cult of woman are the leading motifs of this poetry. The court epic was introduced into Germany by Heinrich von Veldeke, a knight of the Lower Rhineland, whose "Einheit" (c. 1175–85), based on a French model, treats the story of Æneas in thoroughly medieval and chivalric spirit. The court epic was transplanted to Upper Germany by the Swabian, Hartmann von Aue (d. about 1215). In his "Enric" he introduced the Arthurian romance into German literature; his "Tristan" is from the same source as the asetic version of the Eridipus story. His best-known work is "Die arme Heinrich," which, as a purely German story of womanly devotion, occupies a unique position among the creations of the courtly poets. The greatest of these poets is Wolfram von Eschenbach (d. about 1220), whose chief work is his "Parzival," the story of the simpton who overcomes doubt and temptation and ultimately becomes the king of the Holy Grail. As in Goethe's "Faust," we have here the story of a human soul. To the cycle of Grail romances belong also the so-called "Titurel" fragment, which, while it was written by Wolfram von Eschenbach, is the historical legend which, however, remained incomplete. Opposed to Wolfram in spirit is his great rival, Gottfried von Strassburg, whose "Tristan" (c. 1210) is a glorification of sensual love and of somewhat dubious morality. With Gottfried the court epic reached its highest development; with him excessive artificiality begins to appear, and soon this species of poetry declines rapidly. The succeeding poets, in trying to imitate the great masters just mentioned, fell into tedious diffuseness, and their epic too often becomes a meaningless string of adventures. Rudolf of Enns (d. 1214) and Konrad von der Aufseh (c. 1180), is represented as a pilgrimage to the Holy Land and the subject of marvellous adventures in the Far East. From this period dates also the first German beast epic, "Reinhart Fuehs," by Heinrich der Gleichenste (c. 1170).

The rule of the Hohenstaufen (1138–1254) marks the first great classic era of German literature. Many causes contributed to bring about a great literary revival. The Crusades instilled new fervour into religious life. Many thousands of German knights followed King Conrad III in the crusade of 1145–47. They were brought into contact with the Orient and its wealth of stories and marvels, and on the other with their more cultured French neighbours, whose polished customs and manners they adopted with avidity. Chivalry, an institution essentially Romance in origin and spirit, was thus raised to prominence of the social life of the age. The translation of poetry passed chiefly into its hands; the clergy ceased to be the sole purveyors of learning and culture.

The poetry of this period are, as a rule, of knighthood rank. Many of the poorer knights depended on the generosity of princely patrons, such as the landgraves of Thuringia or the dukes of Austria. The Gunderkinds of poetry cultivated in this epoch were the epic and
interest are the other popular epics, which also date from the beginning of the thirteenth century; they are mostly related to the saga-cycle concerning Dietrich von Bern. The most notable are the “Rosengarten”, “Alpahart Tod”, “Laurn”, “Eckenlied”, and “Rabenacht”.

Three other epics, “Ortuit”, “Hugdietritius”, and “Wernher”, take their subjects from the Langobardic saga-cycle; in them the influence of the Crusades is very noticeable.

Lyric poetry also flourished brilliantly in this period. Lyric poetry of a popular kind seems to have existed in Austrian territory long before the Romance influence came in from the North-west, but it was under the German influence that the lyric attained its characteristic form. Minne, i.e. the conventional cult of woman, is the leading motif, but other themes, religious or political, are not wanting, and the Spruch, a poem of gnomic or sententious character, was also in great favour. Most of the minnesingers were of knightly rank. Tradition places Heinrich von Veldeke as the pioneer of minnesong. He was followed by Friedrich von Hausen, Heinrich von Morungen, and Reinmar von Hagenau. A disciple of the last-named, was the Austrian, Walther von der Vogelweide (c. 1165-1230), the greatest and most versatile lyric poet of the Middle Ages. He is equally great in the Minnelied and in the Spruch. He was a stanch partisan of the emperors in their fight against the papacy, and many of his poems are bitter invectives against pope and clergy. But he never attacked the doctrines of the Church; his religious fervour is attested by such poems as that in honour of the Trinity. With his successors the Minnesang enters on its decline. Ulrich von Lichtenstein’s life, as revealed in his autobiography, “Fraudienst” (1246), shows to what absurdities the worship of woman could go. Neidhart von Reuenthal (d. about 1246) holds up to ridicule the rude life of the peasants and so introduces an element of coarseness into the aristocratic art. Lastly, Reinmar von Zweter (d. about 1260) must be mentioned as a distinguished gnomic poet.

The didactic spirit, which now becomes prominent, is exhibited in longer poems, like “Der welsche Gast" (1215) of an Italian priest Thomasin of Zircelere, and especially in Freidank’s “Besecheidenheit” (c. 1215-30), i.e. wisdom born of experience, a collection of rhymes. Though these works are strictly pious in tone, outspoken criticism of papal and ecclesiastical matters is frequently indulged in.

Prose was very backward in this period. Latin was the language for history and law. About 1230 appeared the “Sachenspiegel”, a code of Saxon law written in Latin by Eike von Repgow, and this example produced in Upper Germany the “Schwabenspiegel” (before 1280). The first chronicle in German prose, the “Sachsenchronik”, was written by a Saxon cleric (before 1250).

A great impetus was given to German prose by the preaching of the mendicant friars, who were rising into prominence early in the thirteenth century. They reached the hearts of the people, on whom the aristocratic literature of chivalry had no influence. The sermons of David of Augsburg (d. 1272) are not preserved. His disciple, Berthold of Ratisbon (d. 1272), was immensely popular as a preacher. His dramatic, passionate eloquence, born of the sincerity of conviction, turned thousands of his hearers to repentance and a better life.

IV. DECLINE OF POETRY AT THE END OF THE MIDDLE AGES. RISE OF BOURGEOIS LITERATURE (1300-1500).—The decline of the knightly caste brought with it a decline of the literature of which this caste had been the chief support. The fourteenth and fifteenth centuries were not favourable to the development of an artistic literature. The Empire was losing its power and drifting into anarchy, the emperors were bent chiefly on increasing their dynastic power, while the princes strove to make themselves independent of imperial authority. They were no longer patrons of poetry. The clergy also, in great part, followed worldly pursuits and undermined the reverence in which they had been held. The rise of the cities and their commerce was fatal to the prestige of knighthood and its ideals; life became more practical, more utilitarian, less aesthetic, and as a consequence the didactic tone becomes more and more prominent in literature. The urban spirit sprang up in Germany during this period—the first being founded at Prague (1348)—widened the gap between the learned classes and the people and prepared the way for Humanism, which towards the end of the fifteenth century begins to be a force in German letters. The influence of Humanism was not wholly beneficial. It was a foreign institution and fostered Latin as the language of scholarship at the expense of the native idiom. Gradually the Humanists turned against the dominant Scholastic philosophy, and soon a spirit of revolt manifested itself against the Church and its authority. The schisms within the Church and the worldliness of many of its dignitaries stimulated this spirit, which took a violent form, notably in the Hussite movement. The way was thus prepared for the great Luther. The romance of chivalry degenerated into allegory and tedious description, of which a typical instance is the “Theuerdank” (1517), an allegorical description of Emperor Maximilian’s courtship of Mary of Burgundy, written at the suggestion of the emperor himself. The heroic epic fared no better; it became coarse and vulgar. Rhymed chronicles still supplied the place of histories, the most noteworthy being the
chronicle of the Teutonic Order translated from the Latin of Peter von Dunstberg by Nikolaus von Jeroschin (1200). His higher poetic value are the legends, fables, and anecdotes that enjoyed such popularity in this period. The best-known collection of fables was "Der Eleistein", containing a hundred fables translated from the Latin by Ulrich Boner, a Dominican monk of Berne (c. 1340). Of the many didactic poems of this period, by far the most important was the 'Tegerne Seele' ("The Soul of the Tegerne") of the learned humanist Sebastian Brant (d. 1521), which appeared in 1494 and achieved a European reputation. This is a satire of all the vices and follies of the age, of which no less than one hundred and ten kinds are enumerated. A satiric tendency pervades also the "Reinke der Dore", a Low German version poem of the Dutch story of the famous story of Reynard the Fox (1498). The allusions in this poem to the vices of men high in Church and State are unmistakable.

As for lyric poetry, the Minnesang dies out, Hugo, Count of Montfort (d. 1423), and Oswald von Wolkenstein (d. 1445) being its last representatives. The cultivation of the lyric is now taken up by the burghers; the Meistersang displaces the Minnesang. Poetry in the hands of this class became a mere matter of technic, a trade. His task was taught in schools established for that purpose. The guild system was applied to art, and the candidate passed through different grades, from apprentice to master. Tradition names Mainz as the seat of the oldest school, and Heinrich von Meissen (d. 1318) as its founder. Of the many cities where schools flourished, none gained such a reputation as Nuremberg, the home of Hans Sachs. Very little of the poetry of these meistersingers has survived. The best lyric poetry of this period and the following is found in the Volkslied, a song generally of unknown authorship, expressive of the joys and sorrows of people in all stations and ranks of life. Contemporary events often furnished the inspiration, as in Halbseuter's song of the battle of Bempach (1404) dealing with legendary subjects, as for instance the song of Tannhäuser, the minstrel knight who wandered into the Mountain of Venus and then journeyed to Rome to gain absolution. The religious lyric of this period is largely devoted to the praise of the Blessed Virgin; in this connexion Heinrich von Laufenberg, a priest of Freiburg im Breisgau, later a monk at Strasburg (d. 1450), is specially noteworthy.

Another literary genre that now rose into prominence was the drama, the origin of which here as elsewhere is to be sought in the religious plays with which the great Christian festivals, especially Easter, were celebrated. These plays had a distinct purpose; they were to instruct as well as to edify. But gradually they assumed a more secular character, they were no longer performed in the church, but in the marketplace or some public square. Laymen also began to participate, and in the fourteenth century German takes the place of Latin. Besides the Passion, Biblical stories and legends were dramatized. One of the oldest and most striking of such plays is the Tegernsee play "Antichrist" (twelfth century). A famous drama of which the text is preserved is that of the wise and foolish virgins, performed at Eisenach in 1322.

The origin of the secular drama is not wholly clear. In the fifteenth century this genre is chiefly represented by the Shrove Tide plays, which traces its origin to the mummeries and the coarse fun-making indulged in on special occasions, notably on Shrove-Tuesday. No doubt the religious drama exerted its influence on the development of the secular drama. As a rule the latter was extremely crude in form and also in its moral or religious content. The chief place for these plays was Nuremberg, and Hans Folz and Hans Rosenblüt are the best-known authors in this line. In their plays appears the tendency that was to make of this literary genre an effective vehicle for satire.

In this period of voluntarian prose comes to occupy a leading position. The romances of chivalry were turned into prose, foreign romances were translated, and thus arose the Volksbücher, of which the most noteworthy is that of Tilly Eulenspiegel, a notorious wag, around whom gathered all kinds of anecdotes. The original Low German book of 1485 is lost, the oldest High German version dating from 1516. In connexion with translated literature the names of the earliest German humanists, Heinrich Steinhöwel, Niklas van Wyl, and Albrecht von Eyb should be mentioned. Eyb's work, though written in German as prose. Of prose chronicles we possess a number, as that of Strasbourg (to 1362), of Limburg (to 1599), and the Thuringian chronicle of Johannes Rothe, a monk of Eisenach (1421).

But the best German prose of this period is found in the writings of the mystics. The founder of this school was Master Eckhart (d. 1327), a Dominican monk, and the dominant figure became its chief exponent. Eckhart was accused of pantheistic tendencies and was repudiated by this interpretation of his utterances. His disciple, Heinrich Seuse (Suso), also a Dominican (d. 1366), was less philosophical and more poetical. The third great mystic, Johannes Tauler (d. 1361), a Dominican of Strasburg, gave the teachings of his predecessors a more practical turn. The services which the mystics rendered to the German language in making it the medium for their speculations can hardly be overestimated.

The greatest preacher of the period was Geller von Kayserberg of Strasburg (d. 1510), whose series of sermons based on Brant's "Ship of Fools" was especially famous.

V. THE AGE OF THE REFORMATION (1500-1624).—The effects of Humanism in Germany began to be felt in the attention given by such men as Erasmus and Reuchlin to the study of the Bible in the original languages. For German literature the Reformation was a calamity. The fierce theological strife absorbed the best intellectual energy of the nation. Literature as an art suffered by being pressed into the service of religious controversy; it became polemic or didactic, and its prevailing form was prose.

Martin Luther (1483-1546) is the most important figure of this period and his most important work is his translation of the Bible (printed complete at Wittenberg, 1534; final edition, 1543-45). The German translations before his time had been made from the Vulgate and were deficient in literary quality. Luther's version is from the original, and although not
Protestant church hymns were Paulus Speratus (d. 1551), Nikolaus Decius (d. 1541), Nikolaus Herman (d. 1561), and Philipp Nicolai (d. 1608).

As a rule, the German Lutherans were indifferent to the Reformation, but Ulrich von Hutten (d. 1523) was a zealous partisan of the movement; his writings are mostly in Latin. One of the bitterest enemies of Luther was Thomas Murner, a Franciscan monk (1475–1537), who in his earlier satires castigated the follies of the age. At first he showed sympathy for the reform movement, but when Catholic doctrine was assailed, he turned, and in a coarse but witty satire "Von dem grossen Lutherischen Narren" (1522), he unsparingly attacked the Reformation and its author. The best poet of the sixteenth century was the Nuremberg shoemaker, Hans Sachs (1494–1576) who, although a follower of Luther, was not primarily a controversialist. He displayed amazing productivity in many fields, mastersong, Spruch, anecdote, fable, and drama. His Shrovetide plays display a genial humour that even to-day is effective. The spirit of the worthy master's verse is thoroughly didactic, and artistic form altogether lacking.

Towards the middle of the sixteenth century, the Counter-Reformation set in, and regained much of the ground lost to Protestantism, which had now spent itself as a vital force and was divided by the dissensions between Lutherans and Calvinists. The most prominent polemical writer on the Protestant side was Johann Fischart (d. 1590), much of whose satire is directed against the Jesuits, notably his "Viehdürfen Jesuitenbüchlein" (1580). His most ambitious work is the "Gesichtsklertung", a free version of Rabelais's "Gargantua" (1575). Fischart is not an original writer, and his extravagance of language and love for punning make his work thoroughly unpalatable to a modern reader.

Narrative prose is very prominent in the literature of this period. Collections of anecdotes, such as Jörg Wickram's "Rollwagenbüchlein" (1555) and especially "Schimpf und Ernst" (1522) of Johannes Pauli, a Franciscan monk, were very popular. Translations of French and Spanish romances like the "Amadis de Gaul" were also much in favour. Then there were the "Volksbücher", with their popular stories, among which those connected with Faust and the Wandering Jew have become especially famous. Didactic prose was represented by the historical work of Ægidius Tschudi (d. 1572), Sebastian Frank (d. 1542), and Johannes Thurmayr (known as Aventius; d. 1534); the collections of proverbs and sayings made by Frank and Johann Apraksin (d. 1542) are also to be mentioned in this connexion. In theology Bishop Berthold of Chiennsee represents the Catholic side, with his "Tewtsche Theology" (1528); the Franciscan, Johann Nas (d. 1590), a Catholic convert, in his "Sechs Centurien Evangelischer Wahrheiten" also champions the old Church. The chief Protestant writer was Johann Arndt (d. 1621), author of the "Vier Bücher vom waren Christenthum", one of the most widely read books of the time. Contemporary with Arndt was the famous shoemaker, Jakob Böhme (d. 1624), a mystical philosopher in whose writings profound thoughts and confused notions are strangely blended.

In the dramatic field there was also much activity. Luther, though opposed to the passion play, had favoured the drama on educational grounds. Nikolaus Meul, a Swiss (d. 1530), used the dramatic form for criticizing the pope and the Catholic Church. The Biblical drama was in favour, and many of the learned writers of school comedies chose their subjects from the Bible, as for instance, Paul Rebhun (d. 1546) and Sixt Birk (d. 1554). The most prolific dramatist of the period was Hans Sachs, who wrote no less than 208 plays, which in spite of their lack of all higher literary quality, make a promising beginning. Towards the end of the sixteenth century, English strolling players...
appeared in Germany, and through their superior hist-
tronic art gained the favour of the public. Jakob
Aywer (d. 1605), the leading dramatist of that age,
shines their influence: still more so Heinrich Julius
Duke of Brunswick-Wolfenbüttel (d. 1613), the first
writer German dramas in prose instead of verse.
VI. THE AGE OF RELIGIOUS WARS (1624-1748).
The Poetry of Scholarship and Imagination.--The
religious strife inaugurated by the Reformation cul-
minated in the Thirty Years War (1618-1648), which
practically destroyed Germany as a nation. National
feeling almost died out. The Catholic League looked
for support to Spain and Austria, while the Protestant
princes betrayed the national interests to Sweden and
France. A servile spirit of imitation was abroad.
The German language was neglected and despised in
aristocratic circles and was corrupted by the influx of
foreign words. Literature was de-
void of originality and substance;
the formal side absorbed the chief
attention of the writers.

The literary leader of this
period was Martin Opitz (1597-
1639), whose treatise "Von der
deutschen Poet-
erey" (1624) en-
joyed undisputed authority as an
ars poetica for
more than a cen-
tury. Intelligi-

gence and regular-
ity rather than
imagination and
feeling were to
be looked for in poetry. The theory of Opitz was
drawn from the practice of French and Dutch
Renaissance poets and left no room for originality.
The book had a salutary effect, however, in that it
put an end to the mechanical counting of syllables and
made rhythm dependent on stress. Its protest against
the senseless use of foreign words was also
laudable. Opitz is the author of a number of poems,
moralizing, didactic, religious, or descriptive in char-
acter, but of little real merit. His best-known work is
"Trostgedicht in Widerwärtigkeit des Kriegs" (1633).
The poets who followed the leadership of Opitz are
known as the First Silesian School, though not all were
Silesians by birth, and included some of real talent like
Friedrich von Logau (d. 1655), the witty epigram-
matist, and Paul Fleming (d. 1640), the lyricist.
The poets of the so-called Königsberg Circle were also
followers of Opitz. Among them, Simon Dach (d. 1659)
is pre-eminent. In this connexion may be mentioned
also, Andreas Gryphius (1616-64), the chief dramatist of
the period. His tragedies, based mostly on Dutch
models, are marred by their stilted rhetoric and
protection for the horrible; his comedies are far better,
though they did not meet with the same favour. It
was chiefly censure and versification that benefited by
the poets of this school. Literature in their hands
was a mere product of scholarship, entirely out of
touch with the people. The linguistics society that
sprang up at this time, the most famous of which was
Die fruchtbringende Gesellschaft (1617), did not change
this condition. The language, not the literature,
was improved through their efforts.
As a reaction against the cold formalism and util-
tarianism of the Opitzians, the writers of the Second
Silesian School, Christian Hoffmann von Hofmann-
waldau (1617-79) and Daniel Kaspar von Lohenstein
(1633-85) fell into the opposite extremes of bomba-

d, and exaggeration. Their style was modelled on
that of the Italian Marini. The lyric poems of the former
and the dramas and novels of the latter are written in
an unnatural and inflated style, overloaded with met-
aphors. In their style, as well as in their immor-
aty, these writings reflect the taste of temporary
courtly society. In opposition to this fashionable
tendency, Christian Weise (d. 1708) in his school
comedies and satiric novels strove for simplicity, which
in his work and that of his followers degenerated fre-
nly into triviality and inanity. The best poetry of the
seventeenth century produced was the reli-
gious lyrics, especially the hymns. The tone of these
poems is no longer one of combat, but rather of pious
resignation. The greatest of Protestant writers
in this line was Paul Gerhardt (1607-76). Others
deserving of mention are Joachim Neander, Georg
Neumark, Johann Franck, and Philipp Jakob Spener.
Among Catholic writers the most prominent were
the Jesuit, Friedrich Spe (1591-1635), the intrepid defen-
der of the victims of the witchcraft tribunals, author
of the lyric collection "Trutzachtigall", and Johann
Scheffer, better known as Angelus Silesius (d. 1677),
a convert and later a priest, in whose poetical collec-
tions "Bergige Sehnsucht" and "Dichtung und

dem," obtained by this "Anden-

ersmann" mysticism again finds a noble expression.
Another Jesuit poet, Jacob Balde (1604-68), did his
best work in Latin, though his German poems are not
without merit.
The novel began to flourish in the seventeenth
century. The heroic and gallant romance, of which
Lohenstein was the chief exponent, was high in favour
with aristocratic society, but of small literary value.
The romances of roguery, coming in under Spanish
influence, were far better. The prose classic of the
century is the "Simplicissimus" of Christoph von
Grimmelshausen (d. 1678), a convert to Catholicism.
In the form of an autobiography it unfolds a vivid and
realistic picture of the period of the Thirty Years War.
Defoe's "Robinson Crusoe" brought forth a flood of
imitations, of which Schnabel's "Die Insel Felsenburg"
was the best. Satire is represented by Christian Reu-
er in "Schelmische Abhandlung" (1699) and the

tings of Johann Balthasar Schupp, a Lutheran
pastor of Hamburg (d. 1661), as well as those of
Ulrich Megerle, known as Abraham a Sancta Clara
(1644-1709), who as court preacher at Vienna was
noted for his wit and drollery. German prose be-
gan to be used for scientific purposes. Pioneers in this line were Christian Thomas and Chris-
tian Wolff, who inaugurated the Rationalistic move-
ment in Germany.
At the beginning of the eighteenth century Ger-
man literature was still in a low state. The drama
especially was in a bad plight, coarse fancies with
the clown in the leading role predominating in favour.
A reform was attempted by the Leipzig professor,
Johann Christoph Gottsched (1700-56). His in-
tentions were praiseworthy, but unfortunately he
was anything but a poet. Poetry for him was a
matter of the intellect; its aims were to be practical.
For the mysterious and the wonderful he had no use.
Good taste was to be cultivated by imitating the
French classic drama, which was supposed to be the
best exponent of the practice of the ancients.
Gottsched's literary dictatorship was undisputed until he
became involved in a controversy with the writers,
Bocklin and Breitinger, who insisted on the rights of
imagination and feeling and held up the Eng-
lish poets as better models than the French. Gottsched
was defeated and in consequence lost all authority.
Slowly poetry began to improve. This improve-
ment is distinctly noticeable in the descriptive poems
"Die Alpen" of Albrecht von Haller (d. 1777) and the gracefu... of Friedrich von Hagedorn (d. 1754). The most popular author of the day was Christian Fürchtegott Oelert (1715-69), whose fables were familiar in every German household. He also wrote stories, moralizing comedies, and hymns. But neither these writers nor those of the Halle circle, Johann Wilhelm Ludwig Gleim, Ewald Christian von Kleist, and Johann Peter Ue, were in any sense great writers.

VII. The Classic Period of German Literature (1745-1805).—Many causes contributed to the rise of a great national literature in the eighteenth century. The victories of the Prussian King Frederick the Great quickened national sentiment in all German lands. This quickening of patriotism is discernible in Klopstock's poems; it encouraged Lessing to begin his campaign against the rule of French classicism. Religious movements also exerted a powerful influence. Pietism came as a reaction against the narrow Lutheran orthodoxy then prevailing, and though it ultimately added but one more petty sect to those already existing, the deepening of religious sentiment that followed it was beneficial to poetry. With the appearance of "Der Messias" a new era opened for German literature. The author, Friedrich Gottlieb Klopstock (1724-1803), was hailed at once as a poet born not made. Poetry again had a noble content: love, patriotism, and religion. The theme of the "Messias" is the Redemption. In its profound seriousness and lofty purpose, the poem is a failure as an epopee. Klopstock's gift was lyric; he is at his best in his odes. Impatient of the pedantic rules of versification followed by poets since the days of Opitz, he discarded rhyme altogether and chose for his odes antique metres and free rhythms. This, as well as their involved diction, has stood in the way of their popularity. Another defect that mars all of Klopstock's work is its excessive sentimentality, a defect that is disagreeably noticeable in most of the literature of that time. The poet's patriotism found vent in odes as well as in patriotic prose dramas, the so-called Bardträge, in which an attempt was made to revive Germanic antiquity and to excite enthusiasm for Arminius, the liberator of ancient Germany from Roman subjugation. As dramas these productions are utter failures, though their lyric passages are often beautiful; their chief effect was to stimulate the "bardic" movement represented by von Gerstenberg, Klopstock, and the Viennese priest, Jeitsch. Denis Diderot's Biblical dramas like "Der Tod Adams" (1757), are now wholly forgotten.

Of far greater influence in literature than pietism was rationalism, whose watchword was "Enlightenment." Reason was to be the sole guide in all things; tradition and faith were to be paramount to it. Dogmas of any kind there was no room in such a system, which frequently tended towards undisguised atheism, as with the English Deists and especially the French Encyclopedists. Frederick the Great was an adherent of their views and made them dominant in Church and State. Rationalism was confronted, however, rationalism did not go to the length of atheism; as a rule a compromise between reason and revealed religion was attempted. The broad humanitarianism of the great writers of this period, Lessing, Herder, Goethe, Schiller, shows the influence of the Enlightenment. Certain it is that all these writers were out of sympathy with any of the orthodox forms of Christianity. Often, however, the Enlightenment degenerated into a shallow, prosey rationalism, destitute of any finer sentiment, as in the case of the notorious Nicolai (d. 1811). As a reaction against the one-sidedness of rationalism, came a passionate revolt against all reason, the Romantics. The revolt was inspired by Rousseau and manifested itself in German literature in the Sturm-und-Drang-Periods (Storm and Stress period). The final product of the whole rationalistic movement was the epoch-making "Critique of Pure Reason" of Immanuel Kant.

The representative of the Enlightenment in its best aspect is Gotthold Ephraim Lessing (1729-81), one of the greatest critics of the century. In the "Literaturbeschreib" series, a series of essays on contemporary literature, his wonderful critical ability was first shown. Here Shakespeare is held up as a model and the supremacy of the French drama is challenged. In 1766 appeared the "Laokoon", in which the spheres of poetry and the plastic arts are clearly defined, and their fundamental differences pointed out. The attempt to establish a national theatre at Hamburg resulted in the "Hamburgische Dramaturgie" (1767-69), wherein Lessing investigates the nature of the drama, and refutes the claim of the French that their classic drama is the true exponent of the practice of the ancients. The rules of Aristotle are accepted as final, but it is shown that the French have misunderstood them, and their German imitators are therefore doubly in error. With all his one-sidedness, the polemic was fruitful, for it put an end to pseudo-classicism and made a national German drama possible. Lessing led the way. His "Miss Sara Sampson" (1755) is the first bourgeois comedy and tragedy of the German stage. It was followed by "Minna von Barnhelm" (1767), the first German national drama, on a subject of contemporaneous interest with the Seven Years War for a background, and by "Emilia Galotti", the first classic German tragedy (1772) an adaptation to modern conditions of the story of Appius and Virginia. Lessing's last drama "Nathan der Weise" (1779) was the outcome of the theological controversy in which he had been involved, through the publication of the Wolfenbüttel fragments. These had been written by Reimarus and contained a bold attack on Christianity and the Bible. A bitter feud between Lessing and Goethe, the champion of Lutheran orthodoxy, was the result, in the course of which Lessing wrote a number of pamphlets in which he asserted that Christianity could exist without, and did exist before, the Bible. When a decree of the Duke of Brunswick forbade further discussion, he had recourse to the stage and wrote his "Nathan". In this he uses Boccaccio's famous parable of the three rings to enforce the thesis that there is and absolutely true religion. Not faith, but virtuous action is the essence of religion, and all religious systems are equally good. For a dogmatic religion there is, of course, no room in this view, which is a frank expression of Lessing's deistic rationalism. His last prose works, notably "Die Erziehung des Menschengeschlechts" (1780), are philosophical in character as a treat of ideas related to those expressed in "Nathan".

A contrast to Klopstock's "seraphic" sentimentalism is offered in the sensualism of Christopher Martin Wieland (1733-1813). He began as a fervid pietist and admirer of Klopstock, and under the influence of rationalism passed to the opposite extreme of sensualism tinged with frivolity before he found his level. His "Agathon" is the first German Bildungsroman, presenting a modern content in ancient garb, a method
also followed in the "Abderiten" (1780), in which the provincialism of the small town is satirized. His masterpiece is the romantic heroic epic "Oberon" (1780), for which he drew his inspiration from the old French romance "Huon de Bordeaux". His best work, "Aristipp", is a novel in epistolary form, like the "Agathon" Greek in dress, but otherwise modern. Wieland was not a great poet, but the smooth graceful style of his writings and their pleasant wit did much to win the sympathy of the upper classes for German literature.

While Wieland's influence on German literature has been small, that of Johann Gottfried Herder (1744–1803) was decisive and far-reaching, though his own writings than through the new ideas he proclaimed and the influence of his personality on others, notably Goethe. Rousseau's summons to return to nature was applied by Herder to poetry. Not imitation, but native power makes the poet. Poetry was to be judged as the product of historic and national environment. Natural and popular poetry like the folk-song was preferred to artistic poetry. These views were developed in Leipzeg's "Essays Fragmente über die neuere deutsche Litteratur" (1767) and "Kritische Wälder" (1767) and were still further elaborated in essays on Ossian and Shakespeare in "Von deutscher Art und Kunst einige fliegende Blätter" (1773). Then followed "Stimmen der Völker in Liedern" (1778), a collection of 182 folk-songs from every age, clime, and nationality. Herder's skill as translator or adapter is exhibited here, as also in "Der Cid", a free version from the Spanish through the medium of the French. His original poems, mostly parables and fables, are of little importance. Herder, the founder of the historical method, could not be hostile to rationalism with its unhistoric methods and one-sided worship of reason. In "Vom Geiste der hebräischen Poesie" (1783) he showed what a wealth of poetry the Bible contained. In his last work, "Ideen zur Philosophie der Geschichte der Menschheit" (1784–91), the history of the human race is regarded under the aspect of evolution; humanitarianism is the ultimate goal of religious development. This work pointed out the way for the philosophical study of history.

The effect of the work of Klopstock, Herder, and Lessing was immediate. The national movement was taken up by the "Göttinger Hain" poets, of whom the best-known are Johann Heinrich Voss (d. 1826), the translator of Homer, Ludwig Heinrich Christoph Holty (d. 1776), the elegiac singer, and the two brothers Stolberg. Connected with them, though not members of the circle, were Mathias Claudius (d. 1816) and the gifted but dissolute Gottfried August Bürger (d. 1794), the ballad writer, whose "Lenore" (1778) has become widely known.

The protest voiced by Rousseau against the existing social order produced in German letters the so-called Sturm und Drang (Storm and Stress) movement, which dominated the decade (1774–80). It was the passionate revolt against conventional traditions and standards and manifested itself in the wild dramatic products of such men as von Klinger, Friedrich Müller or Maler Müller, and Lenz, and the lyric effusions of Schubart (d. 1791). But the movement found its best expression in the early work of Germany's greatest poet, Goethe and Schiller.

Johann Wolfgang von Goethe (1749–1832) while a student at Strasburg had come under Herder's influence and caught the revolutionary spirit. In his "Götzen d'berlichengen" (1773), the first great historical German drama, the poet gave vent to his dissatisfaction with the social and political conditions of his time. In spite of its irregular form, and its misguided enthusiasm for Shakespeare, the national content of the drama and the forceful diction carried the public by storm. Its popularity was exceeded by "Die Leiden des jungen Werthers" (1774), a novel in letter form, reflecting the morbid sentimentalism of the age; the hero kills himself under the spell of a hopeless passion for the affianced of his friend. The years from 1775 to 1786 were not so fruitful; political and social activity interfered with literary production. The spirit of storm and stress gradually subsided and gave way to the classicism which, especially after his return from Italy (1788), left its stamp on all of Goethe's subsequent work. The apotheosis of this neo-Hellenism was Johann Joachim Winckelmann (d. 1768), the founder of the historical study of art. He postulated the canons of ancient Greek art as absolute. The classicism that he inaugurated was directly opposed in spirit to the national tendency championed by Herder and Leipzeg's "Musica" of this neo-Hellenism. Now Goethe became its pronounced follower. The works that he wrote under its influence exhibit perfection of form, notably the dramas "Egmont" (1788), "Iphigenie auf Tauris" (1787), and "Torquato Tasso" (1790). Goethe's literary productions during this period, before 1794, are not numerous; they include the "Römische Elegien" and the epic "Reineke Fuchs" (1794), a free version in hexameters from the Old Low German. The dramas that arose under the influence of the French Revolution are not very important. In fact Goethe's chief interests at this time were scientific rather than literary. After 1794, however, under the inspiration of Schiller's friendship, the poetic impulse came with new strength. The period of Goethe's and Schiller's friendship (1794–1805) marks the climax of the poetical activity of these two great men. The satiric epigrams known as "Xanten" were the result of their poetic activity. Then followed a number of their finest ballads. In 1796 Goethe completed "Wilhelm Meisters Lehjahre", a novel of culture, discursive and didactic, with the stage for its principal theme. The exquisite idyllic epic, "Hermann und Dorothea" (1797), though written in hexameters, is thoroughly German in spirit and subject-matter. After Schiller's death (1805) Goethe's poetic productivity decreased. Some fine lyrics produced in this period are in the "Westöstliche Divan" (1819), a collection of poems in Oriental garb. Most of the poet's work now was in prose. "Die Wahlverwandtschaften" (1809), a psychological novel, depicts the tragic conflict between an individual and society, and upholds the sanctity of the marriage tie. In the autobiographical romance "Dichtung und Wahrheit" (1811–33) the poet tells with poetic licence the story of his life. A number of stories were loosely strung together in "Wilhelm Meisters Wanderjahre" (1821), a long didactic novel given over largely to the discussion of ethical and sociological problems. The greatest work of Goethe and of German literature is "Faust", a dramatic poem, the composition of which occupied the poet's entire life. The idea was conceived while Goethe was still a young man at Frankfort; a fragment containing the Gretchen episode appeared in 1770. Under the stimulus of the death of the first part was completed and published in 1806. The second part was not finished until eight months before
the poet's death. It is a colossal drama with humanity for its hero. Weak human nature may fall, under temptation, but its innate nobility will assert itself triumphantly in the end. Faust atones for his errors by a life devoted to altruistic effort, and so his soul after all is saved. The Catiline, the scene, where the penitent Gutenec intercedes with the Virgin for her lover, betrays the influence of the Romantic School.

If Goethe is the man of universal gifts, Johann Christoph Friedrich Schiller (1759-1805) is preeminently a dithyrambic idealist. The Storm and Stress movement. His first three dramas, "Die Räuber" (1778), "Fiesco" (1783), and "Kabale und Liebe" (1784), breathe a spirit of passionate revolt. With all their youthful exaggeration, they reveal unmistakable dramatic power. In "Don Carlos" a calmer spirit reigns and a greater mastery of form is evident. Freedom of thought is the burden of its message. The composition of this work had turned Schiller's attention to history, and for a time the study of history and philosophy got the better of poetic production. The historical works that are the outcome of these studies are probably his masterpieces. His style, rather than his original contributions. Goethe's study of Kant's philosophy was responsible for a number of works of an aesthetic character, notably "Über naive und sentimentliche Dichtung", where naive and sentimental are taken as typical of ancient and modern respectively. His friend Schiller (1759-1805) won Schiller's back to poetry and now followed in rapid succession his dramatic masterpieces: "Wallenstein", a trilogy, the first historic German tragedy in the grand style (1796-99), "Maria Stuart" (1800), and "Die Jungfrau von Orleans" (1801), a noble defence of the Maid of Orleans on lines of Voltaire. "Die Braut von Messina" (1803) is a not altogether successful attempt to combine modern spirit with antique form. The poet's last great drama, "Wilhelm Tell" (1804), is, perhaps, the most popular German play. Here he reverts again to the idea of freedom which he championed so passionately in his youthful dramas, and which here found its most convincing expression. The grandly conceived tragedy "Demetrius" remained a fragment, owing to the author's untimely death (1805). As a lyric poet Schiller is far below Goethe. His lyrics lack spontaneity; they are rather the product of reflection and are mostly philosophical in character. The first major German masterpieces are "Die Loreley von der Glocke" (1800). He also excels in epigram and gnomic verse, and as a writer of ballads he has few equals. The great classic drama by no means immediately won its way. Besides the opera, the bourgeois drama ruled the stage and its most popular representatives were Fehland and Kotzebue. The plays of these writers were thoroughly conventional in tone; those of Kotzebue had a distinctly immoral tendency, but they were theatrically effective and immensely popular. Of prose writers contemporary with Goethe we may mention the historians, Justus Möser (1734) and Johannes von Müller (d. 1809). In philosophy the commanding figure is Immanuel Kant, whose work has exerted a tremendous influence on modern thought. Alexander von Humboldt's (1769-1859) "Rosmos" is a classic of natural science.

In the field of the novel, Jean Paul Friedrich Richter (1763-1825) achieved distinction. His writings, "Quintus Fixlein", "Hesperus", "Titan", and others were enormously popular in their day, but owing to their bizarre style and absolute formlessness, they have lost all charm for modern readers. The unfortunate Friedrich Tieck (1773-1853) combined the classic with the romantic spirit in unique fashion. His passionate longing for the lost beauty of ancient Greece was expressed in his novel "Hyperion", as well as in some noble lyrics.

VIII. ROMANTICISM AND THE ERA OF REVOLUTION (1805-1848).—With the beginning of the nineteenth century the revolt against the Aufklärung (Enlightenment), started by Fichte, reasserted itself. There was also a marked revival of religious sentiment. The Romantic School rose into prominence. Art was to be rescued from the sway of rationalism; imagination and emotion were to be set free. Taking as a basis Fichte's philosophy, which proclaimed the ego as the core of true reality, the romanticists proceeded to free creative genius from the barriers of convention and tradition. But the result was often an extreme subjectivism that broke through the restraints of artistic form and lost itself in fantastic visions and vague mysticism. The leaders of the movement turned away from a sordid present to far-away Oriental regions, or to a remote past like the Middle Ages. This predilection for mediavalism coming together with the religious revival gave to the romantic movement a pronounced Catholic tendency. Some of the leading romanticists, Brentano, Görres, Klopstock, Eichendorff, were Lutherans; others, like Friedrich Schlegel, became Catholics. Sympathy for Catholicism is noticeable in the work of all the members of the school. The Romantic movement was also a salutary reaction against the excessive classicism of Goethe and Schiller. The national element was again emphasized. The Middle Ages, depreciated and misrepresented ever since the Reformation, were now shown in a fairer light by historians like von Raumer, Wilken, Voigt, and others. The great medieval literature was rediscovered by scholars like Jakob and Wilhelm Grimm and Lachmann. In fact, the science of Germanic philology owes its origin to the Romantic School. The enthusiasm for foreign literature also bore rich fruit in masterly translations and reproductions. Here lies the main significance of much of the work of the brothers Schlegel, the critical leaders of the German Romantic School. August Wilhelm von Schlegel (1767-1845) is famous as a translator. His translations of Shakespeare have become German classics, while his renderings from the Spanish (Calderon, Lope de Vega), Italian, and Sanskrit are hardly less meritorious. His brother, Friedrich von Schlegel (1772-1829), who became a convert to Catholicism, enunciated the romantic doctrines in his aphorisms. Through his treatise, "Über die Sprache und Weisheit der Indier" (1808) he became the pioneer of Sanskrit studies in Germany. The work of the Schlegels in criticism and literary history was epoch-making; they taught critics not merely to criticize, but to understand, to interpret, to "characterize". The school found no really great poet to put its theories into practice. Still the poetry of Friedrich von Hardenberg (1772-1801), better known as Novalis, is pervaded by deep feeling. His fragmentary novel "Heinrich von Ofterdingen" is an attempt to show the development of a true romantic poet. Ludwig Tieck (1773-1853) revived the old folk-books, satisfied the Enlightenment in his comedies, wrote roman-
tie dramas of no great value, like "Genoveva", and a novel of culture "Franz Sternbalds Wanderungen", which had much influence on German painting. After 1821 he turned to the short story, which he was the first to cultivate with success. A second group of romantic writers, the Younger Romantic School, gathered chiefly at Heidelberg. With them the national tendency is more pronounced, their work shows great talent, but is often spoiled by a lack of artistic restraint. Especially is this the case with Clemens Maria Brentano (1778-1842), a highly poetic but very eccentric character, who together with Achim von Arnim collected and edited an important book of folk-songs "Des Knaben Wunderhorn" (1805-8). Their friend Joseph von Görres (1776-1848), during his period of ardent patriotism edited old German songs and folk-books; his later activity was largely devoted to the service of the Catholic Church, which found in him a zealous champion. The patriotic tendency is much in evidence in the work of Friedrich de la Motte Fouqué (1777-1843), whose fantastic chivalric romances are forgotten, while his fairy-tale "Undine" still lives. The only dramatic poet of a high order connected with the Romantic School is Heinrich von Kleist (1777-1811), among whose poems, the difficult forms of "Daniel der Prinz von Homburg" (1810) is regarded as his masterpiece. His novels, of which "Michael Kohlhaas" is the best known, show a graphic power. Zacharias Werner (1768-1823), who ultimately became a Catholic, is chiefly known as the originator of the so-called "fate-tragedies", a gruesome species of drama in which blind chance is the dominating factor. Characteristic of decaying romanticism are the weirdly fantastic stories of E. T. A. Hoffmann (1776-1822). The influence of the romantic movement in the novels of Karl Theodor von Kammel, some time after the movement had spent itself as a living force. Almost all the poets of the first half of the nineteenth century were more or less affected by it. The national tendency fostered by romanticism was transformed by the Wars of Liberation into patriotic fervour which found expression in the stirring lyrics of Max von Schenkendorf, Theodor Körner, and Moritz Arndt.

The poets of the Swabian School, who were romantic only in so far as they leaned towards medieval or religious subjects, excelled particularly in the ballad. Their leader was Ludwig Uhland (1787-1862), distinguished as poet and scholar. Besides him there were Justus Kerner and Gustav Schwab. Some of Kerner's and Uhland's lyrics have become veritable Volklieder.

Romanticism cast its spell over the lyric, which occupies a large space in the literature of this period. Prominent in this field were Adelheid von Metternich, Wilhelm Müller, and Joseph von Eichendorff, a Catholic nobleman of Silesia, the most gifted lyricist of the group. Friedrich Rückert (1788-1866) was a voluminous but unequal writer of verse; his fame rests largely on his translations and imitations of Oriental poetry, his chief focus of which, he reproduced with amazing skill. In this he was followed by Count August von Platen (1796-1835), in whose verses form reached perfection, often to the detriment of feeling. The greatest lyric poet, and the most striking literary figure of the day, was Heinrich Heine (1797-1856), a Jewish convert to Protestantism. Unfortunately, his greatest gifts are marred by the insincerity and immorality of his character; his finest poetic efforts are often tinged with a whimsical and satirical vein. His prose works, for the most part fragmentary and journalistic in character, are written in a graceful, easy style, and with brilliant wit. The miserable political conditions of Germany were the object of Heine's bitterest satire; but unfortunately religion and morality also became a target for his mocking and cynical wit. Great as his influence was on literature, on the whole it was pernicious. His poems appeared in different collections under the titles of "Buch der Lieder," "Neue Gedichte", and "Romanzerzo". Of his prose writings the "Reisebilder" (1826) are the best. Another romantic lyricist of the highest order was the Austrian, Nikolaus Lenau (Niembsch von Streihenau), the poet of melancholy. A strong individuality, uninfluenced by the literary currents of the day, reveals itself in the work of a noble Catholic lady, Annette Elisabeth von Droste-Hülshoff (1797-1848), whose deep religious spirit. Her collection entitled "Das gesangliche Jahr" contains poems appropriate for the Sundays and Holy Days of the Catholic year, contains some of the finest religious poetry in the German language. Another genius who stood apart from the currents of the day was Franz Grillparzer (1791-1872), Austria's greatest dramatist. In his work classic and romantic elements were united. Of his many dramatic masterpieces we only mention "Die Abnana", "Sappho", "Das goldene Vlies", "Des Meeres und der Liebe Wellen", and "Der Traum ein Leben". His compatriot, Ferdinand Raimund, is the author of plays deservedly popular. The dramatic productions of which were too extravagant and erratic to be performed. The most popular playwright of that day, Ernst Raupach, is now forgotten.

The historical novel rose into favour during this period, largely through the influence of Sir Walter Scott. Von Arnim and Tieck had tried their hand at this genre, to be followed by Wilhelm Hauff, the author of Lichtenstein (1826) and Willibald Alexis (pseudonym for Wilhelm Haring). The latter took his subjects from Prussian history and gave the novel a patriotic tendency. A significant change is marked by the novels of Gustav Freytag, in "Die Epigenen" and "Münchhausen" (1838) treated contemporary conditions in a satirical vein. The episode of the "Oberhof" in the latter work introduced the village and peasant story into German literature. In this field, Jeremias Gotthelf (Albert von Stübel) and Berthold Auerbach won success. Charles I Sealsfield (Karl Poell) is known as a writer of novels of travel and adventure.

The hopes that patriots in 1815 had cherished of a united Germany had been rudely dispelled. Freedom of thought and speech had been suppressed by the absolutism tyrannised by the Metternich regime. The smouldering discontent broke forth violently at the news of the Paris Revolution (1830) and found its literary expression in the movement known as "Young Germany". The relentless war that was carried on against the existing political order was also directed against religion and morality. The "emancipation of the flesh" was von Orelli's aim, and Richard Wagner led the attack, and the members of the coterie followed with essays, novels, and dramas, which for the most part, owing to their political and social character, were short-lived. Karl Gutzkow (1811-78) is the leading figure of the coterie. His novels, with their anti-religious and immoral tendencies, have to-day only historical interest, while his dramas, of which the best known is
“Uriel Acaeta” (1847), are theatrically effective. Next to Gutzkow in prominence was Heinrich Laube (1806–84), whose best work, however, was done as a dramatist and not as a partisan of Young Germany. Women also took part in the movement. Of these the most notable are the Jewess, Fanny Lewald, whose writings display a decided anti-Christian spirit, and Countess Ida von Hahn-Hahn, who began her literary career as a poetess of high repute, but was treated with levity, and ended by becoming a devout Catholic.

The spirit of revolution inaugurated by Young Germany soon assumed a definite political character and dominated the literary activity from 1840 to the outbreak of the war. It found its most eloquent expression in the political lyric. In Austria Anastasius Grün (pseudonym for Count Anton Alexander von Auersperg), Karl Beck, Moritz Hartmann, and Lenau were most prominent in this line; in Germany Herwegh, Hoffmann von Fallersleben, Franz von Dingelstedt, Ferdinand Freiligrath (1810–76), and Gottfried Kinkel were the political leaders of the malcontents. Much of this poetry was necessarily ephemeral; in fact Kinkel, Fallersleben, and Freiligrath owe their fame to their verses not political in character. In the poetry of Count Moritz von Strachwitz and Karl Schlegel, the brilliant translator of Old German literature, a reaction against the political tendency in literature and in favour of romanticism is evident. The short stories of Adalbert Stifter and the dramas of Friedrich Haim (Freiherr von Münc-Bellinghausen) also show the romantic tinge. The greatest lyric of the age, Eduard Mörike (1804–75), a Swabian, went his way wholly unconcerned with the questions of the day.

IX. Modern German Literature (since 1848). New Aim, Poetic Realism, Naturalism.—The year 1848 marks a great change in the political and literary history of Germany. The great question of German unification now loomed in the foreground, and though a reaction had set in after the revolutionary outbreak, liberal ideas were strong, and interest in political questions was keen. Literature sought to get more in touch with life, and became less exclusively aesthetic. The materialistic tendencies of the age were reflected in and conditioned by the great progress of science and the rise of journalism. The lyric and epic lost ground to the drama and the novel. The classic-romantic tradition still found many followers. In fact, after the turbulences of the Revolution came a return to a more synthetic aesthetic concept, which either kept more or less in touch with the life of the age. An enormous array of names confronts the student of the literature of this period, but only a relatively small number call for notice.

The most prominent lyrist poet now was Emanuel Geibel (1815–84), whose poems are distinguished by beauty of form and dignity, patriotic sentiment. He was the leader of the Munich group, which numbered among others Count Adolf von Schack, the art connoisseur and distinguished translator of Firdausi, Herrmann von Ling and Julius Groesse, the epic poets, Friedrich von Bodenstedt, whose enormously popular “Mirza Schaffy” songs continued the Oriental fashion inaugurated by Goethe’s “Divan”. The work of one of this group, Paul Heyse, a masterly writer of short stories, is characterised by extreme elegance of form and diction. In his novel “Kinder der Welt” (1873), however, these fine qualities cannot conceal aesthetic and formal weaknesses. Among the writers of this period none achieved such popularity as Joseph Victor von Scheffel, with his romantic epic, “Der Trompeter von Säckingen” (1854) and his historic novel “Ekkehard” (1855). The lyric-epic poem “Amarnath” (1849) of the Catholic Baron Oskar von Redwitz owed its success more to its religious feeling than to any real merit. The neo-romantic productions of other Catholic poets like Behringer, Wilhelm Moltzer, and Maria Lenen failed to make a lasting impression. A Catholic poet of this period who won a permanent place was the Westphalian, Friedrich Wilhelm Weber (1813–94), author of the epic “Dreizehnhinden”. A pessimistic atmosphere pervades the Austrian Robert Hammerling’s epic, “Ahaver in Rom” (1866). “Die Nibelungen” of Wilhelm Jordan is a noteworthy attempt to revive the great medieval saga in modern alliterative form. This was accomplished with brilliant success by Richard Wagner (1813–83), whose music dramas are among the greatest achievements of modern German art.

A result of the more serious view of life was the new realism that strove to present life truthfully, stripped of the conventional phraseological idealism that had been the vogue since Schiller. This realism manifested itself chiefly in the drama and novel. In the former field its most eminent representative is Friedrich Hebbel (1813–63) with his powerful tragedies “Maria Magdalenens”, “Herodes und Mariamne”, “Gyges und sein Ring”, and “Die Nibelungen”. Otto Ludwig (1818–65) followed with “Der Erbförster” and “Die Makkabäer”, as well as the masterly romance “Zwischen Himmel und Erde”. These dramas found little favour at the time of their appearance; the realistic novel fared better. Gustav Freytag (1816–95) won great success with “Soll und Haben” (1855), a novel of bourgeois life. Trist Reuter (1810–74) used his native Low German dialect for his humorous novels, the most important of which are included in “Ole Kamellen” (1860–64). Great originality marks the work of the Swiss, Gottfried Keller (1819–90), regarded by many as the master-novelist of the period. His best production is the series of novels from Swiss life entitled “Die Leute von Seldwyla.” (1856). The literary value of the work of Friedrich Spielhagen (b. 1829), a novelist of undoubted talent, is impairs by its undue treatment of social and political questions, while the great favour accorded to the antiquarian novels of Georg Ebers and Felix Dahn cannot hide their literary defects.

A midway between romanticism and realism stands Theodor Storm (1817–88), whose great poetic talent is shown no less in his heartfelt lyrics than in his stories, such as “Aquis Submersus”. Fiction began to occupy a larger place in literature especially after 1870. We mention only the Swiss, C. F. Meyer, who excels in the historical novel, and Theodor Fontane, whose later works were thoroughly modern and realistic. Peter Rosegger, a Styrian, has won fame with his village stories. Of the numerous women-writers of fiction, the most gifted are Luise von François and Marie, Baroness von Ebnerr-Eschenbach. The chief activity of the last-mentioned writers belongs to the period after 1870.

The Franco-German War of 1870 and the establishment of the new empire had comparatively little effect on literature. Poetry continued to move largely in the old classic-romantic grooves. The graceful but trivial lyrics and epics of Rudolf Baumbach, Julius Wolff, and other imitators of Scheffel’s manner best
suited popular taste. The passionate lyrics of Prince Emil zu Schonbach-Carolath deserved their success. The poetry, however, of Martin Greif Eduard von Paulus, lyricism to the point of the melancholy, and Heinrich Voss, who aspired to win recognition. The decade following the great victories of 1870 was not favourable to literary activity. For the moment political, social, and religious questions (as in Kulturkampf) were dominant. A spirit of agitation and unrest was abroad. Much of the literature of the time was partisan and polemical, or else entered to the most insignificant and merely aimed to entertain. Of this kind were the dramas of Paul Lindau, cut according to French patterns, and presenting pictures from decadent Parisian life. The more serious drama, favouring historical subjects and affecting the conventional manner of Schiller, had already attracted attention. By far the most original dramatist was the Austrian, Ludwig Anzengruber (1839–98), whose dramas, “Der Pfarrer von Kirchfeld,” “Das vierte Gebot,” etc. received almost no recognition until after 1880. The only factors that helped to counteract the materialistic and commercialism that ruled the stage were the powerful performances of the Meiningen troupe and the uncompromising seriousness of Richard Wagner’s artistic activity, as demonstrated in the festival performances of Bayreuth.

The mediocrity into which literature had fallen by 1884, with its puerile naturalism, and conventional character, produced another literary revolt, a “Youngest Germany.” Poetry was to become more modern. The questions of the day were to be its concern, the faithful reproduction of reality its aim. Instead of harking back to the realism of a Hebbel or Ludwig, the leaders of this movement looked to foreign models for inspiration, to the works of Ibsen, Tolstoy, Dostoyevsky, and Zola. The realism there found was copied and exaggerated, and the result was a crude naturalism which unduly emphasized the mean, the ugly, and the vulgar. The pessimistic philosophy of Schopenhauer and especially the revolutionary doctrines of Nietzsche added their unwelcome influence and tended towards a perversion of ethical and moral standards. The activity of the movement was at first mainly negative and polemical. Its literary creations have already lost interest. Real literature was not produced until the extreme views were modified. As a result, the most naturalistic, “symbolism” appearance; but the art which it inspired is apt to be so intangible and hyper-aesthetic as to be limited for appreciation to a narrow and exclusive circle.

In the dramatic field Hermann Sudermann (b. 1857), whose novels “Frau Sorge” (1887) and “Der Kutzemba” (1890), had already attracted attention, won great success. His plays “Die Ehre,” “Heimat,” “Es lebe das Leben,” and others, are very effective, but marred by sensationalism. Sudermann is not a representative naturalist; his technique is a compromise between the older practice and the new theories. Consequently, the naturalist is Gerhart Hauptmann (b. 1863) in his first dramas “Vor Sonnenaufgang” (1889) and “Die Weber” (1892). Here the milieu is more important than character or action. In his comedies “Kollege Crampton” and “Der Biberpelt” he showed that naturalism did not preclude humour. His most famous play, the fairy-romance “Die versunkene Glocke” (1896), like “Hamlet” and Himmelfahrt before, and “Der arme Heinrich” afterwards, marks a significant turning towards symbolism and neo-romanticism. So far “Fuhrmann Henschel” (1898) is the dramatic masterpiece of naturalism. Of other dramatists of this school mention must be made of Max Halberstam, whose “Jugend” (1893) and Otto Erich Hartleben, whose “Rosenmontag” (1900) shows Sudermann’s influence. A popular dramatist, though of no particular school, is Ludwig Fulda; his plays, of which “Der Talisman” (1892) is the best known, are pleasing but shallow. The new romanticism, which is exemplified by the dreamy poetry of Maerztinck, was even less able than naturalism to develop. The famous poems of Hugo von Hofmannsthall (b. 1874) are wholly undramatic, reveling in emotion and devoid of action. His proper field is the lyric, where his talents as well as those of Stefan George (b. 1868) find scope. Symbolism has found its most characteristic expression in the rapturous and precious lyric effusions of Richard Dehmel (b. 1863). After all the best lyric poets of the present, are those who do not affect any particular fashion. Such are Detlev von Liliencron, a realist of great power, regarded by many as the foremost German lyricist of to-day, Gustav Falke, Ferdinand Avenarius, Kari Buse, Otto Julius Bierbaum and Anna Ritter. Freiherr Berries von Muenchhausen has written masterly ballads.

The novelistic literature has grown to enormous proportions, and shows a host of names. Naturalism asserted itself in the novels “Meister Timpe” (1888) and “Das Gesicht Christi” (1897) of Max Kretzer, as in the majority of cases, as in the majority of cases, but in the works of Wilhelm Speck, Georg von Ompteda and Walter Siegfried. Prominent among women writers of fiction are Isolde Kurz (b. 1853), Helene Bohlau, Marie Eugenie delle Grazie, Carmen Sylva (Queen Elizabeth of Romania) and above all Ricarda Huch (b. 1867), whose great novel “Erinnerungen von Ludolf Ursleu” (1895) stands in the front rank of modern fiction.

ARTHUR F. J. REMY.
Germany, Vicariate Apostolic of Northern (Vicariate Apostolic of the Northern Missions).—Its jurisdiction covers the Grand Duchies of Mecklenburg-Schwerin and Mecklenburg-Strelitz, the Principality of Hanover, the Free City of Hamburg, Lübeck, and Bremen, the Principality of Lübeck (capital Eutin), belonging to the Grand Duchy of Oldenburg, and the Island of Heligoland. The Northern Missions, viewed in a wider sense, include also the Prefecture Apostolic of Schleswig-Holstein, coinciding with the Prussian possession of that name, which was placed under a separate prelate in 1868. Both vicariate and prefecture are under the permanent jurisdiction of the Bishop of Osnabrück as administrator Apostolic. In the vicariate Catholics number about 79,400 (with 1,925,000 members of other congregations), 11 parishes, 31 mission stations, 34 secular priests, 35,900 Catholics, and 550,000 of other beliefs; 4 communities of Sisters of St. Elisabeth, and 3 of Franciscan nuns. In summer the Catholic population of the vicariate and prefecture is increased by 17,000 to 20,000 labourers (chiefly Poles) from other parts of Poland who return from their work at the beginning of the winter. The spiritual interests of the faithful are inadequately attended to owing to the extent of the parishes, the lack of priests, the poverty of the majority of the Catholics, and, in many places, owing to the intolerance of the Protestant state or the Hohenzollern government. A more encouraging picture is presented by the numerous Catholic societies, and by the maintenance of private Catholic schools, despite the fact that the Catholics are often obliged to contribute also to the support of the state and parish schools. A very fruitful activity has been developed in these missions by the Boniface Association.

The Reformation in the sixteenth century caused the loss of almost all Northern Germany to the Church. In 1682 the stray Catholics of Northern Germany, as well as of Sweden, Denmark, and Norway, were placed under the jurisdiction of a papal nuncio in Cologne. The Catholic cause, on its establishment in 1622, took charge of the vast missionary field, which, at its third session it divided among the nuncio of Brussels (Denmark and Norway), the nuncio of Cologne (North Germany), and the nuncio of Poland (Sweden). The scattered Catholics were chiefly confined to the Jesuits, and Dominicans and Catholics in many places had at their disposal only the chapels established in the houses of the diplomatic representatives of the emperor, and of the Catholic Powers, France and Spain. Sometimes admission even to these chapels was rendered difficult, or entirely prohibited by the Catholic authorities.

In some districts the conversion of the princes, e. g. Duke Johann Friedrich of Brunswick-Lüneburg (1651) and Duke Christian of Mecklenburg-Schwerin (1668), brought Catholics some measure of freedom. The number of Catholics having increased in 1697, chiefly through the above-mentioned Duke of Brunswick, a vicar Apostolic was established for Northern Germany. The first vicar was Valerio Maccioni, titular Bishop of Morocco, who resided at Hanover. He died in 1676, and was succeeded by the celebrated Danish convert, Nicolaus Steno, who in 1686 was appointed Bishop of Hanover. He was the auxiliary Bishop of Münster, and in 1683 returned to the Northern Missions. He died at Schwerin in 1686, and was followed in the vicariate successively by Friedrich von Hörde, Auxiliary Bishop of Hildesheim and titular Bishop of Joppe (1686–96), Jobst Edmund von Braubeck, Bishop of Hildesheim (1697–1702), and Otto von Bronckorst, Auxiliary Bishop of Osnabrück. Owing to its vast extent, the old vicariate Apostolic was divided by Pope Clement XI into two vicariates (1709); the Vicariate Apostolic of Schleswig-Holstein (or Hohenzollern-Saxony), embracing the portions of the old vicariate situated in the Palatinate and Electorates of Brandenburg and Brunswick, which was placed in charge of Agostino Steffani, Bishop of Spiga and minister of the Elector Palatine, as vicar Apostolic; the rest of the original vicariate (Denmark, Sweden, Lübeck, Hamburg, Altona, and Schwerin), which retained the title of Vicariate of the North and was placed under the Auxiliary Bishop of Osnabrück. This division lasted until 1775, when Friedrich Wilhelm von Westfalen, Bishop of Hildesheim, reunited under his administration the vicariates except Norway and Sweden.

The French Revolution and the Napoleonic regime brought great relief to Catholics in many cities and states; but the equality granted them by law in some countries was often merely theoretical. At the reorganization of Catholic affairs in Germany after the Napoleonic period, part of the territory of the vicariates was added to adjacent bishoprics. The only district remaining mission territory were the Kingdom of Saxony, the Princely Palatinate of Anhalt, constituted separate vicariates Apostolic in 1816 and 1825 respectively (see Anhalt and Saxony), and the North, which in 1818 was placed under the leadership of the Bishop of Paderborn. In 1839 Pope Gregory XVI wished to entrust the vicariate to a bishop with his see at Hamburg. Johann Theodor Laurent was appointed vicar and consecrated bishop. Protestant opposition prevented the realization of the plan and Laurent was unable to take possession of his See. In 1845 the pope thereupon gave the administration of the vicariate to the Auxiliary Bishop of Osnabrück, Karl Anton Lüppe (d. 1865). The Bishop of Osnabrück has since then been the regular Vicar Apostolic of the Northern Missions, and administrator of the Prefecture Apostolic of Schleswig-Holstein, separated from the vicariate in 1868. In 1869 Denmark was erected into a prefecture, and in 1892 into a vicariate.

Joseph Lins.

Germany, a titular see of Galatia Secunda, a suffragan of Pessinus; mentioned by Hierocles in the sixth century (Syene, 698, 4). About 650 it was already an autocephalous archdiocese directly dependent on Constantinople (Ecthesis pseudo-Epiphani, ed. Gelzer, n. 51). Its condition was the same in the ninth century (Georgii Cyprici Descritio, ed. Gelzer, n. 51), under Emperor Leo the Wise (901–07) (Ibid., n. 61), under Constantine Porphyrogenitus (ed. Gelzer, n. 59); and under Alexius I Comnenus after 1084 (ed. Parthey, n. 87). In the time of Michael Paleologus, about 1260, Germany must have been an autocephalous metropolitan see, such as it was still under Andronicus II, about 1300, and under Andronicus III, about 1350 (ed. Constantine Porphyrogenitus, ed. Gelzer, n. 59); and under Lequien (Oriens christ., I, 495) knows of four titular Bishops of Germany. From the time of Justianus I (527–565) the city was entitled Myriangeloi, on account of a church dedicated to St. Michael and the Holy Angels. Justianus went there to take the baths in 556 (Theoc.
GERONA

phases, Chronographia, A. M. 6056). To-day Germia is called Germa. It is a small village in the vilayet and cada of Angora, twenty-one miles south-east of Sivri-Hissar and twelve miles east of the ruins of Pessinus. The ancient baths and the ruins of the imm

lient) are still to be seen. Germia must not be confused with Germa, a suffragan see of Cysicus in the province of the Hellespont, and later an autocleral archiepisc. Geras, Rhetomus pseudo-Episcopanis, n. 135; IDM, Georgi Cappadocici Romani (1860), n. 149, 150; Hieocio, Synecdemus, ed. Patthy, p. 111; Lequien, Oriens Christi (Paris, 1740), I, 797; Couvet, La Turquie d'Asie (Paris, 1882), I, 260; Tappi, L'Asie Mineure, 479, note 2.

S. VAILHÉ.

GERONA, Dioecese of (Gerundensis), in Catalonia, Spain, suffragan of Tarragona, is bounded on the north by the Pyrenees, on the south and east by the Mediterranean, and on the west by the dioceses of Barcelona and Vich. The district is mountainous, with forests of pine, oak, and chestnut, and numerous mineral springs. Several of the towns are manufacturing centres, and the main railway from France to Barcelona runs through the province, which possesses considerable commercial importance. Its chief products are a source of wealth, but agriculture is not in a flourishing condition. The episcopal see of Gerona is the chief town of the province of the same name, and is situated at the confluence of the Ter and the Ona. The ancient portion of the city with its once-formid.

abilities for its positions stands on the steep hill of the Capuchins, while the more modern section is in the plain and stretches beyond the river. The bastions of the walls which have withstood so many sieges are still to be seen.

Gerona is the ancient Gerundus, a city of the Ause

tanians. It is said that Sts. Paul and James, on the an

rival in Spain, first preached Christianity there, and tradition also has it that St. Maximus, a disciple of St. James, was the first bishop of the district. It is generally held that the see was erected in 247. On 18 June, 317, a synod was convened here, and attended by the Archbishop of Tarragona and six bishops. Canons were promulgated dealing with the recitation of the Divine Office, infant baptism, and the celibacy of the clergy. The city has undergone twenty-five sieges and been captured seven times. In the time of Charlemagne it was wrested temporarily from the Moors, who were driven out finally in 1015. It was besieged by the French under Argnont in 1563, under Marshal Bellefonds in 1584, and twice in 1694 under de Noailles. In May, 1809, it was besieged by 35,000 French troops under Vergier, Auge
cau, and St. Cyr, and held out obstinately under the leadership of Alavari until disease and famine compelled it to capitulate, 12 December.

The ancient cathedral, which stood on the site of the present one, was used by the Moors as a mosque, and after their final expulsion was either entirely re

modelled or rebuilt. The present edifice is one of the noblest monuments of the school of the Majorcan and Valencian Gothic. It is said that the Collegiate Church of San Pau is also architecturally noteworthy. Its style is four

teenth-century Gothic, the facade dating from the eighteenth, and it is one of the few Spanish churches which possesses a genuine spire. It contains, besides the sepulchre of its patron and the tomb of the valiant Alvarez, a chapel dedicated to St. Narcissus, who acc.

ting to tradition was one of the early bishops of the see. The Benedictine church of San Pedro de los Reales is in Romanesque style of an early date. The present bishop Francisco Fol y Baralt was born at Arenys de Mar in the Diocese of Gerona, 9 June, 1854. The diocese contains 373 parishes, 780 priests, 325,000 Catholics. The Capuchins have a monastery at Olot, and among the cloisters for women in the diocese are those of the Franciscan, the Augustinian, and the Capuchin nuns.

BLANCHE M. KELLY.

GERRSA, a titular see in the province of Augustamnica Prima, suffragan of Pelusium in the Patriarchate of Alexandria. The city is mentioned by Pliny (Hist. Nat., VI, 29). Erastosthenes (46, 10) asserts that the district was formerly under water. Strabo (XVI, 2, 33) places Gerssa between Pelusium and Mt. Cassius. Finally, in the sixth century the geographer Hierocles (Synecdemus, n. 698) speaks of it as being in Augustamnica. Lequien (Oriens christ., 11, 5) has given the name of four towns standing on its site: Eudaimon, Pirus, and Nilanmon, at the end of the fourth century, and at the beginning of the fifth; Stephen, who in 451 assisted at the Council of Chalcedon. Marshes have encroached upon the land in modern times; the abandoned city is found north of Pelusium on the road to El-Arish.

S. VAILHÉ.

GERSON, Giovanni. See Thomas à Kempis.

GERSON, Jean le Châlèril de, the surname being the name of his native place, b. in the hamlet of Gerson 14 December, 1633; d. at the Isle of Wight, 14 December. The hamlet of Gerson has disappeared, but it was then a dependency of the village of Barby not far from Rethel, in the Diocese of Reims, and now included in the department of Ardennes. His father, Arnaud, and his mother, Elisabeth La Chardenière, were noted for their integrity and piety. They had twelve children, of whom Jean was the eldest. He attended the schools of Rethel and Reims and at the age of fourteen entered the famous Collège de Navarre at Paris, where he formed a life-long friendship with the rector, the illustrious Pierre d’Ailly of Compiègne. In 1351 Gerson obtained the degree of licentiate of arts under Marie Jean de Lourtrier; in 1353 the degree of Baccalaurius Biblicus; in 1390 he lectured on the “Sententia”, and in 1392 became a licentiate of theol.

gy. He was raised to the doctorate in theology in 1394, being then thirty-one years of age (cf. Denifle, Chartul. Universi. Paris, 111). Before receiving the doctorate he had written several works. In 1397 he preached before Pope Clement VII of Avignon with a view to calling forth the condemnation of Jean de Montesquieu, a Dominican, who had denied the immaculate Conception of the Blessed Virgin, and shortly afterwards he delivered a panegyric on St. Louis, King of France, and the finest of his historical career that was destined to become so brilliant.

Although Gerson had won the doctorate only a year before his former teacher, Pierre d’Ailly, was named Bishop of Puy (1395), Benedict XII chose him to succeed d’Ailly in the important position of Chancellor of Notre-Dame and of the university (13 April). Thenceforth he was actively interested in the expiation of the schism which, for seventeen years, had divided the Church into two hostile parties that were numerically almost equal. The friend of peace and union, he always expressed a sober and moderate point of view, as, for instance, when the Pope of Avignon, acting on all alliance, showed a strong repugnance to the violent proceedings entailed by certain members of the university (Noël Valois,
III, 71, 180). Appointed dean of the church of Saint Donatien at Bruges, Gerson remained there four years (1397–1401). It was at this period that he wrote the theological work on the Trinity (1398). The idea of this treatise was to refute the doctrine of the Council of Ferrara-Florence, which had condemned the belief in the divinity of Christ. He also wrote a treatise on canon law and a consolatio divina. Gerson was present at the Council of Pisa (1409), and he participated in the condemnation of the Flagellants ("Opp. Gersonii," II, 658, 660), of Gerson's differences with the English, and of his doctrinal strife (1418) with Mathew Grabon, that great enemy of new religious orders (Opp. Gersonii, I, 467). Mention will be made later of his attitude towards the three popes who then disputed the tiara, and of the theories that he set forth in the council in order to bring about the suppression of the schism.

It was above all his struggles against the Kathy Fearless that brought Gerson into unmerited disgrace. In Paris the Duke of Burgundy had before this provoked a riotous disturbance against him; his house had been plundered and he had only escaped assassination by taking refuge for two months under the vaulted roofs of Notre-Dame. After the Council of Constance, whilst the pope, the emperor, and the fathers were returning with all due pomp to their respective countries (1418), Gerson learned that John the Fearless had sworn his destruction and that the "nation of Picardy" in the university had demanded that he be disclaimed, recalled, and punished atrociter ("Opp. Gersonii," V, 374, Denigès, "Château," etc., IV, 356; Malo Lens, "Revue historique," IX, 470). To prevent his persecutor from having an opportunity to destroy him, he left Constance, 15 May, 1418, and with André and Ciresio, who had acted as his secretaries at the council, he took the road to exile. He retired to the Benedictine Abbey of Melk (Mölbling in Germany), the abbey of which he had known during his studies. Frederick wished to gain him for the University of Vienna, and Gerson repaired thither but did not remain. Finally in November, 1419, the chancellor learned of the death of his sworn enemy, John the Fearless, who, by order of the Dauphin, had been slain on the bridge of Castillon. Gerson set out for France but did not return to Paris, which was torn by factions and was still in the hands of the Burgundians. He directed his steps towards Lyons, called thither by his brother who was prior of the Celestines and by the archbishop, Amédeé de Talaru (Schwab, op. cit., 577 sqq.). Here he spent his last years in exercises of devotion and in performing his priestly functions. He also while at Lyons wrote various works, some of edification, some on mystical or pastoral theology, one especially being his well-known treatise, "De parvulis ad Christum tradendis." Combining example with precept, he loved to surround himself with little children in the church of Saint-Paul and delighted to teach them the elements of Christian doctrine. These ten years were the sweetest of his militant life, and the regrets of all good men followed him to the grave. Miracles were attributed to him, and he was canonized, made a saint, and given the title of Blessed. Over fifty particular councils and many ecclesiastical writers recommend to pastors "this great, pious and learned doctor, this ardent lover of souls, this incomparable director, this model of ministers of the Gospel". Statues have been raised to his memory at Paris and Lyons; in the
church of the Sorbonne his picture is the companion to that of Bossuet.

*Vicus as to the Constitution of the Church: Council of Constance.* It is well known that what the theologians of the early part of the fourteenth century lacked most, was a fixed doctrine on what theologians to-day call the *Traité de l’Église*. Gallicanism was born of the false principles, or rather of the temporary expedients believed to be a necessity amid the unfortunates of the time. It was only when the circumstances could be pleaded in Gerson’s favour. He had been instructed by men who were none too stable, and had made a close study of William of Occam, the most evil genius of the fourteenth century. As we have seen, Gerson was generally more sensible and moderate in practice than in theory. Besides, it is now proved that several treatises, sometimes made the basis of an attack on his theological doctrine, were not his at all ("De modis unius; octo conclusiones quorum dogmatizatio utilis videtur ad exterminationem moderni schismatis; Sermo factus in die Ascensionis", 1400, etc.). In fact his Protestant or Gallican editors, von der Hardt, Richer, and Ellies-Dupin, have done his memory poor service by exaggerating or envenoming some of his propositions. It is but too true that in regard to the pope and the council, the chancellor maintained erroneous theories which he could not condemn; and he was condemned by his opinion. The sovereign pontiff is not the universal bishop possessing immediate power over all the faithful; his power is only subjective and executive ("Opp. Gersonii", II, 259, 279). Far from being infallible, he can even sometimes fall into heresy, in which event, if he still remain pope, the faithful are empowered to bind him, imprison him and even throw him into the sea (Ibid., 221; Noël Valois, IV, 84). Gerson’s doctrine concerning the general council is no sounder. He admits the superiority of the Church and the ecumenical council over the pope, as he sees no other means of emerging from schism and returning to unity. With him temporary expedients become principles. It is what might be called ecclesiastical opportunism. Gerson is exclusively rational and practical, and the object of all his argumentation is the justification of the most extraordinary methods of procedure in order to attain the final result desired by him. He is, in other words, a statesman, and for him, the sovereign pontiff is amenable to the council which may correct and even depose him ("Opp. Gersonii", II, 201).

Regarding the convocation and composition of this assembly he declares, with d’Ailly, that the first four orders of ecclesiastics were not fit to attend the assembly ("De auctoritate episcopii", in Opp. Gersonii, II, 209 sqq.). He also maintains that pastors may be summoned to such an assembly and may have a deliberative voice as well as bishops ("De potestate ecclesiastica", in ibid., II, 249). None of the faithful should be excluded (ibid., II, 205). In all of these propositions is seen, as it were, a reflection of the extreme theses of the revolutionary Franciscan, William of Occam. Moreover, Gerson’s attitude in the Council of Constance was in conformity with his principles. With the delegates from the University of Paris, he demanded that all three popes immediately tender their resignation (Feb., 1415). A convinced partisan of the superiority of doctors over bishops, he insisted, like d’Ailly, upon the power of theologians and even of the parish that he preaches. The sixtieth in number, sixty-four in number, have been specially studied by the Abbé Bouret, later Bishop of Rodes and cardinal. In plan these instructions are almost the same as modern sermons, but Gerson’s learning is often deficient in taste and judgment, and he makes sometimes

285). He voted for the four famous articles of Constance (March, 1415) which are the code of Gallicanism, and pave the way for all the schismatic decisions of the assembly of 1415. He maintained that these revolutionary principles were dogmas and wanted them carved on the stone of all the churches (Opp. Gersonii, II, 275). However in 1416 he was obliged to admit with sadness that voices were still raised in denial of the superiority of the council over the pope. ExTurrit; circumstances can be pleaded in Gerson’s favour. He had been instructed by men who were none too stable, and had made a close study of William of Occam, the most evil genius of the fourteenth century. As we have seen, Gerson was generally more sensible and moderate in practice than in theory. Besides, it is now proved that several treatises, sometimes made the basis of an attack on his theological doctrine, were not his at all ("De modis unius; octo conclusiones quorum dogmatizatio utilis videtur ad exterminationem moderni schismatis; Sermo factus in die Ascensionis", 1400, etc.). In fact his Protestant or Gallican editors, von der Hardt, Richer, and Ellies-Dupin, have done his memory poor service by exaggerating or envenoming some of his propositions. It is but too true that in regard to the pope and the council, the chancellor maintained erroneous theories which he could not condemn; and he was condemned by his opinion. The sovereign pontiff is not the universal bishop possessing immediate power over all the faithful; his power is only subjective and executive ("Opp. Gersonii", II, 259, 279). Far from being infallible, he can even sometimes fall into heresy, in which event, if he still remain pope, the faithful are empowered to bind him, imprison him and even throw him into the sea (Ibid., 221; Noël Valois, IV, 84). Gerson’s doctrine concerning the general council is no sounder. He admits the superiority of the Church and the ecumenical council over the pope, as he sees no other means of emerging from schism and returning to unity. With him temporary expedients become principles. It is what might be called ecclesiastical opportunism. Gerson is exclusively rational and practical, and the object of all his argumentation is the justification of the most extraordinary methods of procedure in order to attain the final result desired by him. He is, in other words, a statesman, and for him, the sovereign pontiff is amenable to the council which may correct and even depose him ("Opp. Gersonii", II, 201).

Regarding the convocation and composition of this assembly he declares, with d’Ailly, that the first four orders of ecclesiastics were not fit to attend the assembly ("De auctoritate episcopii", in Opp. Gersonii, II, 209 sqq.). He also maintains that pastors may be summoned to such an assembly and may have a deliberative voice as well as bishops ("De potestate ecclesiastica", in ibid., II, 249). None of the faithful should be excluded (ibid., II, 205). In all of these propositions is seen, as it were, a reflection of the extreme theses of the revolutionary Franciscan, William of Occam. Moreover, Gerson’s attitude in the Council of Constance was in conformity with his principles. With the delegates from the University of Paris, he demanded that all three popes immediately tender their resignation (Feb., 1415). A convinced partisan of the superiority of doctors over bishops, he insisted, like d’Ailly, upon the power of theologians and even of the parish that he preaches. The sixtieth in number, sixty-four in number, have been specially studied by the Abbé Bouret, later Bishop of Rodes and cardinal. In plan these instructions are almost the same as modern sermons, but Gerson’s learning is often deficient in taste and judgment, and he makes sometimes
too pompous a display of incongruous quotations. From the point of view of doctrine he treats, for the greater part, ethical subjects, and inveighs against intemperance and the dissoluteness of morals. He labours mainly for reform within, frequently exHORTS to penance, and to moderate the asceticism of the then new Franciscan order, but does not leave them without words of hope and consolation. His style is far from uniform and differs according to his hearers. Cold and accurate in the setting forth of dogma, he most frequently stirs the passions and resorts largely to allegory and word-painting; his language, although, as is the picturesque, parochial, and commonly the old French chronicles, is always dignified and becoming.

Gerson's works were published directly after the introduction of printing, first at Cologne in 1483 (4 vols. in fol., for details consult Schwa, op. cit. ad finem). Both French editions, the one by Richer (Paris, 1496, 4 vols.), the other by Elie-Durut (Antwerp, or rather Amsterdam, 1706, 5 vols. in fol.) were prepared under the influence of Gallican ideas and with a view to religious polemics. They were hastily and confusedly compiled without any great care and contain serious defects. However, the one by Elie-Durut from the Latin and the other from the original edition, embody over 400 of Gerson's treatises. The references to Gerson's works in this article are to this edition.

Bibliography:
- Louis Saulemberg.

Gertrude of Aldenberg, Blessed, Abbess of the Premonstratensian convent of Aldenberg, near Wetzlar, daughter of Dietrich von Buxa, and granddaughter of Dietrich von Luxemburg. She was born in 1207. She was the youngest of the three daughters of Louis VI, margrave of Thuringia, and his wife St. Elisabeth of Hungary. Gertrude's father died on his way to the Holy Land shortly before she was born. She was scarcely two years old when St. Elizabeth brought her to the convent of Aldenberg, where she afterwards became a nun. In 1248, being then only twenty-one years old, she was elected Abbess of Aldenberg, over which she ruled forty-nine years. With the inheritance which she received from her uncle, the Margrave of Meissen, she erected a church and a poorhouse. She took personal charge of the poorhouse and led a life of extreme mortification. When Urban VI published a crusade against the Saracens, Gertrude and her nuns took the cross and obliged themselves to contribute their share to the success of the crusade by prayer and acts of mortification. In 1270 she began to observe the feast of Corpus Christi in her convent, thus becoming one of the first to introduce it into Germany. Clement VI permitted the ecclesiastical celebration of her feast to the convent of Aldenberg, and granted some indulgences to those who visit her relics at that convent.

Michael Ott.

Gertrude of Hackeborn, Cistercian Abbess of Helfta, near Eisleben; b. at Halberstadt in 1232; d. towards the end of 1292. She belonged to the noble Thuringian family of Hackeborn and was a sister of St. Mechthild. At an early age she entered the Cistercian convent of Rodersdorf, of which she was elected abbess in 1251 when she was only nineteen years old. In 1263 she founded with the assistance of her two brothers, Albert and Louis, the convent of Helfta in Halle in Saxony. Because her own convent suffered from want of water she obtained from her brothers the castle of Helfsta, with its surrounding land, and transferred her community to that place in 1258. During her rule, the convent of Helfta became the most famous abode of asceticism and of Heimlichkeit in Germany. She required her nuns to be educated in the liberal arts, but insisted especially on the study of Holy Scripture. Gertrude was a model abbess, remarkable for her piety as well as the prudent direction of her nuns. About a year and a half before her death, the abbess was seized with apoplexy, and during her sickness gave to all her nuns an example of heroic patience and resignation to the will of God. The Abbess Gertrude must not be confounded with St. Gertrude "the Great".

The Abbess Gertrude, quite in contrast with St. Gertrude "the Great", never wrote anything, received no extraordinary revelations from heaven, and never been canonized. She was born more than 20 years before Gertrude "the Great", who lived as an ordinary nun in the same convent.

Michael Ott.
Gertrude the Great, Saint, Benedictine and mystic writer; b. in Germany, 6 Jan., 1256; d. at Helfta, near Eisleben, Saxony, 17 Nov., 1301 or 1302. Nothing is known of her family, not even the name of her parents. It is clear from her life (Legat. lib. 1, xviii) that she was not born in the vicinity of Eisleben. When she was but five years of age she entered the alamoate of Helfta. The monastery was at that time governed by the saintly and enlightened Abbess Gertrude of Hackeborn, under whose rule it prospered exceedingly, both in monastic observance and in that intellectual activity which St. Lioba and her Anglo-Saxon nuns had transmitted to their foundations in Germany. All that could aid to sanctity, or favour contemplation and learning, was to be found in this hallowed spot. Here, too, as the centre of all its activity and the impetus of its life, the work of works — the Opus Dei, as St. Bernard terms the Church Office — was carried out. Such was Helfta when its portals opened to receive the child destined to be its brightest glory. Gertrude was confided to the care of St. Mechtilde, mistress of the almoner and sister of the Abbess Gertrude. From the first she had the gift of winning hearts, and her biographer gives many details of her exceptional charms, which matured with advancing years. Thus early had been formed between Gertrude and Mechtilde the bond of an intimacy which deepened and strengthened with time, and gave the latter saint a preponderating influence over her former.

Partly to care for the almoner, partly in the community, Gertrude had devoted herself to study with the greatest ardour. In her twenty-sixth year there was granted her the first of that series of visions of which the wonderful sequence ended only with life. She now gauged in its fullest extent the void of which she had been but vaguely conscious for years. This awakening came the realisation of the utter emptiness of all transient things. With characteristic ardour she cultivated the highest spirituality, and, to quote her biographer, "from being a grammarian became a theologian", abandoning profane studies for the breviaries, patristic writings, and treatises on theology. To these she brought the same earnestness which had characterised her former studies, and with indefatigable zeal coped, translated, and wrote for the spiritual benefit of others. Although Gertrude vehemently condemns herself for past negligence (Legat. II, ii), still to understand her words correctly we must remember that they express the indignant self-condemnation of a soul called to the highest sanctity. Distrustless her inordinate love of study had produced hindrance alike to contemplation and interior collection, yet it had none the less surely safeguarded her from more serious and grievous failings. Her struggle lay in the conquest of a sensitive and impetuous nature. In St. Gertrude's life there are no abrupt phases, no sudden conversion from sin to holiness. She passed from one sanctity almost unconsciously, and as naturally as she had passed from the almonate to the community. Outwardly her life was that of the simple Benedictine nun, of which she stands forth preeminently as the type. Her boundless charity embraced rich and poor, learned and simple, the monarch on his throne and the peasant in the field; it was manifested in tender sympathy towards the souls in purgatory, in a great yearning for the conversion of sinners, and in a vehement zeal for the perfection of souls consecrated to God. Her humility was so profound that she wondered how the Church could support such a saint. Her raptures were frequent and so absorbed her faculties as to render her insensible to what passed around her. She therefore begged, for the sake of others, that there might be no outward manifestations of the spiritual wonders with which her life was filled. She had the gifts of miracles as well as of prophecy.

When the call came for her spirit to leave the worn and pain-sricken body, Gertrude was in her forty-fifth or forty-sixth year, and had in turn assisted at the death-bed and mourned for the loss of the holy Sister Mechtilde (1281), her illustrious Abbess Gertrude of Hackeborn (1291), and her chosen guide and confidante, St. Mechtilde (1298). When the community was transferred in 1346 to the monastery of New Helfta, the present Trud-Kloster, within the walls of Eisleben, they still retained possession of their old home, where doubtless the bodies of St. Gertrude and St. Mechtilde still lie buried, though their place of sepulture remains unknown. There is, at least, no record of their translation. Old Helfta is now crown- property, while New Helfta has lately passed into the hands of the local municipality. It was not till 1677 that the name of Gertrude was inscribed in the Roman Martyrology as the feast of the universal Church, which now keeps it on 15 November, although it was at first fixed for 17 November, the day of her death, on which it is still celebrated by her own order. In compliance with a petition from the King of Spain she was declared Patroness of the West Indies; in Peru her feast is celebrated with great pomp, and in New Mexico a town was built in her honour and bears her name. Some writers of recent times have considered that St. Gertrude was a Cistercian, but a careful and impartial examination of the evidence at present available does not justify this conclusion. It is well known that the Cistercian Reform left its mark on many houses not attached to it; and the fact that Helfta was founded during the "golden age" of Citeaux (1134–1342) is sufficient to account for this impression.

Many of the writings of St. Gertrude have unfortunately perished. Those now extant are:—(1) "Legatus Divini Piatatis"; (2) "Exercit. St. Gertrudis"; (3) "Liber Specialis Gratiae" of St. Mechtilde. The works of St. Gertrude were all written in Latin, which she used with facility and grace. The "Legatus Divini Piatatis" (Herald of Divine Love) comprises five books containing the life of St. Gertrude, and records many of the favours granted her by God. Bk. II alone is the work of the saint, the rest being compiled by members of the Helfta community. In the "Exercit." we have the saint at her best. They were written for her Sisters in religion,
and we feel she has here a free hand unhampered by the deep humility which made it so repugnant for her to disclose favours personal to herself. The "Exercises", which are seven in number, embrace the work of the purification and sanctification of the soul from the reception of baptismal grace to the preparation for death. They are written with harmony and with the liturgy and Scriptures exalted the soul imperceptibly to the heights of contemplation. When the "Legatus Divini Pietatis" is compared with the "Libri Divini Gratiae" of St. Mechtilde, it is evident that Gertrude is the chief, if not the only, author of the latter book. Her writings are loaded with the glowing richness of that Teutonic genius which found its most congenial expression in symbolism and allegory. The spirit of St. Gertrude, which is marked by freedom, breadth, and vigour, is based on the Rule of St. Benedict. Her mysticism is that of all the great contemplative works of the Benedictine Order from St. Gregory to Bolinius. Here, in a word, is that ancient Benedictine spirituality which is simply the spirit of the Church and which Father Faber has so well depicted (All for Jesus, viii).

The characteristic of St. Gertrude’s piety is her devotion to the Sacred Heart, the symbol of that immense charity which she had in her blood, I have no fear in saying, to substitute the Holy Eucharist, to take on Himself our sins, and, dying on the Cross, to offer Himself as a victim and a sacrifice to the Eternal Father (Congregation of Rites, 3 April, 1825). Faithful to the mission entrusted to them, the superiors of Helfta appointed renowned theologians, chosen from the Dominican and Franciscan friars, to examine the works of the saint. These approved and commended them throughout. In the sixteenth century Lamspergius and Bolinius propagated her writings. The form, who with his confederate Loher spared no pains in editing her works and exalting them. The works were warmly received especially in Spain, and among the long list of holy and learned authorities who used and recommended her works may be mentioned: St. Teresa, who chose her as her model and guide, Ypes, the illustrious Suarez, the Descalced Carmelites Friars of France, St. Francis de Sales, M. Ober, Fr. Faber, Dom Guéranger. The Church has inscribed the name of Gertrude in the Roman Martyrology with this eulogy: “On the 17th of November, in Germany (the Feast of) St. Gertrude Virgin, of the Order of St. Benedict, who was illustrious for the gifts of revelations. In The Month, 1865, III, 221: Cath. World, 1865, II, 405; Leopold Divini Gratiae 61 in Epistolae 126 in Responsiones 145 (Potsgerm, 1875); Passio in S. M. Christi, Liber Speciales Gratiae: Recolletions de Ste Gertrude (Paris, 1908); Ledos, St. Gertrude, Sibylline in Kirchhen, Pergen, Gesch, deutsch. Mystik im Mittelalter (Leipzig, 1885); Zinckelmauer, Hist. Lit. Bened. (Vienna, 1754); Michaeli, Zeitchr. bez. Theol. (XXIII, 1860); Gesch. deutsch. Volkes im Mittelalter (Freiburg, 1899), II; Guéranger, Année liturgique, le temps après la Pentecôte, t. VI; Eng. tr. Liturgical Year, t. VI.

GERTRUDE CARANOVA.

Gertrude van der Oosten, Venerable, Beguine; b. at Voorburg, Holland; d. at Delft, 6 Jan., 1338. She was born of peasant parents, and was remarkable from childhood for her piety and prudence. Later, in order to gain a livelihood, she entered into service at Delft, where she likewise devoted herself to practices of piety and charity. Her surname of "van Oosten", or "of the East", is due to her custom of singing a hymn which began: "Het daghet in den Oosten", i.e., "In Friesland", and which is still sung at the "Docht", which is attributed to herself. She lived devoutly in the world, spending much time in exercises of piety and works of charity, and finally determined to abandon all human ties and give herself to the service of God. With this intent she begged, and with difficulty obtained, admission to the Beguine Order. She, though not a religious, nor bound by vows, she profited by the ample opportunities afforded for the exercise of her zeal and charity, as well as by the atmosphere of prayer and seclusion, to attain to a very high degree of virtue and contemplation. Gertrude evinced great devotion to the mysteries of the Incarnation, especially to the Sacred Passion, on which account she merited to receive on her body the impression of the sacred blood from which times a at each day of the canonical hours. Distressed and alarmed at the multitude that flocked to witness such a wonder, she begged that the favour might be withdrawn, and her prayer was so far granted that the blood ceased to flow, but the marks of the sacred stigmata remained. At the same time the great spiritual consolation she had enjoyed was succeeded by dryness and desolation. Gertrude was favoured with the gift of prophecy, having knowledge, at the actual time, of what took place at a distance as well as of what was to happen in the future.

At length, after many years passed among the Beguines in great fervour, austerity, and devotion, the time of her death approached. She had been wont to speak with great delight of this day, to meditate on it devoutly, and even to make it a subject of her frequent songs. She died on the feast of the Epiphany and was buried in the church of St. Hippolytus, Delft, the Blessed. On the 7th of May, 1338, she was transferred to the church of St. Walburga at Delft, which is now known as the church of St. Gertrude. The devotion to her continues to increase, and to this day her relics are preserved in the church of St. Gertrude in Delft.

GERVAISE.

Gervaise, Dom Francois Armand, Descalced Carmelites, b. at Paris, 1660; d. at Reclus, France, 1761. After completing his humanities with brilliant success, he joined the Descalced Carmelites, and having been nominated prior of a convent, he chanced to meet Bossuet, who recognized in him a fervent religious, a learned writer, and an eloquent orator. Anxious to embrace a more austere life, he entered La Trappe in 1695, where he became the privileged disciple of the Abbé de Rancé, and made his profession in 1696. In the same year Dom Zoizme, who had succeeded the Abbé de Rancé after his resignation, died after a few months of administration, and de Rancé then asked the Abbot, with the intention of persuading his former pupil, Bossuet, for Dom Gervaise as his second successor.

Dom Gervaise had given unequivocal proofs of his religious spirit and his eloquence; these qualifications led to the hope that his appointment would be of the greatest advantage to the reform, and consequently on 20 October, 1696, he received the abbatial blessing. But his turbulent administration, which in several points was opposed to that of the Abbé de Rancé, soon procured for him numerous enemies who well-founded accusations added some that were baseless. Dom Gervaise yielded before the storm and tendered his resignation in 1698. Soon, however, he regretted this step and tried to withdraw his resignation, but without success. Under the abbot chosen to fill his place he left La Trappe and began his wandering life from monastery to monastery, exercising to good purpose his talent as a writer. His style is always well-turned and flowing, but he is reproached for being "l’Abbé de Rancé", in which he takes his own apology; finally, the history of the Reform of Citeaux in France, a work in which he does not treat with suffi-
cient consideration the superiors of the order, and which caused his final disgrace. He was obliged to interrupt its publication, and was banished by order of the king to the monastery of the Reclus, in the Diocese of Troyes, where he died. Until the end of his life he remained faithful to the austerities of the life of La Trappe, observing in all its rigour the rule he had embraced.

MICHAUD. Biographie universelle; HUTTER. Nomenclator (Innsbruck, 1669); DUBOIS. Histoire de l'abbaye de Ramberv (Paris, 1866); GAILLARDIN, Histoire de La Trappe (Paris, 1844); LE N. M. B. Histoire de la maison du Béthard (Paris, 1715); CHATEAUBRIAND, Vie de Ramberv (Paris, 1844).

EDMOND M. OBERCET.

GERVAESE (JERVIS), George, priest and martyr; b. at Bosham, Sufolk, England, 1571; d. at Tyburn, 11 April, 1608. His mother's name was Shelly, and both his father's and mother's families had been long established in the County of Sufolk. Losing both parents in boyhood, he was kidnapped by pirates and carried off beyond seas, remaining in captivity over twelve years. He lost his religion during that period; but, when at last he was able to return to England, and found that his eldest brother Henry had become a voluntary exile in Flanders in order to be able to practise his religion. George followed him there so soon returned to the Church. He entered the English College at Douai in 1595, and was ordained priest in 1603. He at once went on the English mission. He laboured very successfully for over two years, but was arrested in July, 1606, and banished with several other clergy. He then made a pilgrimage to Rome, and there endeavoured to enter the Society of Jesus, but, not being admitted for some unknown reason, he returned to Douai, where he received the Benedictine habit. His brother Henry had obtained for him a comfortable living near Lille, being anxious to preserve him from the persecution then raging in England. But George was determined to labour for the conversion of his native land, and succeeded in returning safely to England, but was soon arrested and incarcerated. Refusing to take the new oath of allegiance on account of its infringing on spiritual matters, where Catholics were concerned, he was tried, convicted of the offence of merely being a priest, under the statute of 27 Elizabeth, and was hanged, drawn, and quartered at Tyburn. Some authorities say that he did not receive the Benedictine habit until a short time before his death from Father Augustine Bradlaw.

C. F. Wemyss Brown.

GERVAESE of Canterbury (Gervius Vigorborum), English chronicler, b. about 1141; d. in, or soon after, 1210. If his brother Thomas, who like himself was a monk of Christ Church, Canterbury, was identical with Thomas of Maidstone, they came of a Kentish family. St. Thomas of Canterbury received his religious profession on 16 Feb. 1163, and also ordained him. He was one of the monks who buried the saint after his martyrdom, 29 Dec., 1170. Later on he took a prominent part in the disputes between the monks and Archbishop Baldwin (1185−91) and was one of the monks sent to announce to the archbishop hisaspall to the pope. In 1189 he was again one of a deputation sent to lay the matter before King Richard I. As yet, Gervase, though one of the senior monks, had held no prominent office, but about this time he was made sacristan, for in 1193 he attended the new archbishop, Hubert Walter, in that capacity. He probably ceased to hold this office in 1197 when there is a mention of one Felix, as sacristan. The rest of his life is obscure. He was still writing in 1199 and there are slight indications in another chronicle, the "Geeta Regum", that he continued to write till 1210, when a sudden change in style and arrangement point to a new chronicler. His death may therefore be assumed in or soon after that year. Gervase has occasionally been confused with others of the same name, notably with Gervase of S. Ceneri, and thus he is described as prior of Dover by Dom Brial (Recueil des Historiens de France, XVII, 1818), which is impossible on chronological grounds. Sir Thomas Hardy identifies him with Gervase of Chichester, but Dr. Stubbe shows good reasons against this theory, as also against confusing him with Gervase of Melksham.

The works of Gervase consist of: (1) "The Chronicle", covering the period from 1100 to 1199. It was first printed by Twysden in "Historiae Anglorum Scriptores Decem" (London, 1652). (2) The "Geeta Regum", which is in part an abridgment of the earlier chronicle, and from the year 1199 an independent source of information for the last years of John's reign. (3) "Actus Pontificum Cau
tauriarissii Ecclesiae", a history of the archbishops of Canterbury to the death of Hubert Walter in 1203, also printed by Twysden with the chronicle. (4) "Mappa Mundi", a topographical work with lists of bishops and ecclesiastical foundations in the counties of England, Wales, and part of Scotland. The works of Gervase were published in the "Rolls Series" in 1879−80 under the editorship of Dr. Stubbe, whose introduction has been the groundwork of all subsequent accounts of Gervase.

EDWIN BURTON.

GERVAESE of Tilbury (Tilberensis), medieval writer, b. probably at Tilbury, in the County of Essex, England, about 1150; d. at Arlington, about 1220. He is supposed to have been related to English royalty. During his youth he entered the service of Henry of Guisene, later he travelled in many parts of Europe, for a time studied canon law at Bologna, where for a brief period he also taught, and was afterwards at the court of King William II of Sicily till 1189. Upon the death of King William he settled permanently in Arles and was appointed Marshal of the Kingdom of Arles in 1198 by King Otto IV; in virtue of this office he accompanied the king to Rome and was a witness of his coronation as emperor. During the years 1210−1214 he composed the "Otia imperialia" for the instruction and entertainment of the emperor, who was excommunicated by the pope in the latter part of 1210, and in 1214, after his defeat at the battle of Bouvines, was forced to retire to the prior of Brunswick. This work was also entitled "Libere de mirabilibus mundi", "Solatii imperatoris", and "Description toto orbis", it was divided into three parts, and contained all facts then known concerning history, geography, and physics. During the Middle Ages it was much read and was twice translated into French in the fourteenth century. Opinions differ in modern times concerning its value. Leibniz calls it a "bagful of foolish old woman's tales"; while by others it is considered very important since in it this medieval teacher of jurisprudence recognizes the correctness of the papal claims in the conflict between Church and Empire.

Leibniz edited it (1744) in his "Scriptores rerum Bravonianorum" (I, 881−1004) with variants from four Parisian manuscripts and a supplement (II, 751−784). "Ite account of the Frankish and English kings " lescriptores francorum et anglorum constanti" (I, 19; III, 363−74). Mader edited the same portion in his "De Imperio Romano et Gothorum, Langobardorum, Britonum, Francorum Anglorumque regni commentatio" (Heidelberg, 1673). Liebrecht edited a number of geographical and physi-
cal excerpts from it (Hanover, 1856). The references to Virgil were published by Spätzler [Altenl. Marchen (Brunswick, 1830), I, 89-92]. Many of the writings of Gervase have perished. He was formerly reputed to be the author of the "Antiquus dialogus de scacceario", but many critics now ascribe the work to another hand.

PATRICK SCHLAGER.

Gervasion and Protasus, Saints, martyrs of Milan, probably in the second century, patrons of the city of Milan and of haymakers; invoked for the discovery of thieves. Feast, in the Latin Church, June 19, the day of the translation of the relics; in the Greek Church, Oct. 14, the supposed day of their death. Emblems: scourge, club, sword.—The Acts (Acta SS., June, IV, 680 and 29) were perhaps compiled from a letter (Ep. liii) to the bishops of Italy, falsely ascribed to St. Ambrose. They are written in a very simple style, but it has been found impossible to identify the author. Among the bishops of Milan, Gervasion and Protasus were twins, children of martyrs. Their father Vitalis, a man of consular dignity, suffered martyrdom at Ravenna under Nero (7). The mother Valeria died for her faith at Milan. The sons are said to have been scourged and then beheaded, during the reign of Nero, under the presidency of Anabius or Anastasius, and while Caius was Bishop of Milan. Some authors place the martyrdom under Diocletian, while others object to this time, because they fail to understand how, in that case, the place of burial, and even the names, could be forgotten by the time of St. Ambrose, still 140 years after their places of death before Diocletian. It probably occurred during the reign of Antoninus (161-168).

St. Ambrose, in 386, had built a magnificent basilica at Milan. Asked by the people to consecrate it in the same solemn manner as was done in Rome, he promised to do so if he could obtain the necessary relics. In a dream he was shown the place in which such could be found. He ordered excavations to be made in the cemetery church of Sts. Nabor and Felix, outside the city, and there found the relics of Sts. Gervasion and Protasus. He had them removed to the church of St. Fausta, and on the next day, to the church of St. Ambrose, which later received the name San Ambrogio Maggiore. Many miracles are related to have occurred, and all greatly rejoiced at the signal favour from heaven, given at the time of the great struggle between St. Ambrose and the Arian Empress Justina. Of the vision, the subsequent discovery of the relics and the accompanying miracles, St. Ambrose wrote to his sister Marcellina. St. Augustine, not yet baptized, witnessed the facts, and related them in his "Confessions", IX, vii; in "De civ. Dei", XXII, viii; and in "Sermon. 286 in natal. SS. Mmr. Gerv. et Prot."," are also attested by St. Paulinus of Nola, in his Life of St. Ambrose. The latter died 397, and, as he had washed his body was, on Easter Sunday, deposited in his basilica by the side of these martyrs. In 835, Angilbert II, a successor in the See of Milan, placed the relics of the three saints in a porphyry sarcophagus, and here they were again found, January 18, 844 (Cassian, II, 130-134, etc., and ibi, 1, 34). A tradition claims that after the destruction of Milan by Frederick Barbarossa, his chancellor Rainald von Dassel had taken the relics from Milan, and deposited them at Altibruechen in Germany, whence some came to Soissons; the claim is rejected by Milan (Bischof, I, 6, 504, etc.). Immediately after the finding of the relics by St. Ambrose, the cult of Sts. Gervasion and Protasus was spread in Italy, and churches were built in their honour at Pavia, Nola, etc. In Gaul we find churches dedicated to them, about 400, at Mans, Rouen, and Soissons. At the Louvre there is now a famous picture of the saints by Lesueur (d. 1655), which was formerly in their church at Paris. According to the "Liber Pontificalis", Innocent II in 1136 founded a church to them at Rome. Later, the name of St. Vitalis, their father, was added to the title. Very early their names were inserted in the Litany of the Saints. The whole history of these saints has received a great deal of adverse criticism. Some deny their existence, and make them the invention of the Diocesi of the Romans. Thus Harris, "The Diocesi in Christian Legend", but see "Analecta Boll." (1904), XXIII, 427.

FRANCIS MERRIMAN.

Géry (Lat. GAUDERICUS), Saint, Bishop of Cambrai-Arras; b. of Roman parents, Gaudentius and Austodiola, at Eposiu (Yvois, Carignan), France, about the middle of the sixth century; d. 11 August, between 623 and 626. The Diocese of Cambrai-Arras of recent date is compared with the more ancient Bishopric of Cambrai, which dates from the fourth century. The territory, which comprised the Diocese of Cambrai-Arras, like that of Tournai and Térouanne, probably contained Christians before the date of the appearance of its first known bishop, St. Ysaet, but their spiritual head must have resided at Reims. The great barbarian invasion of 466 completely overthrew the ecclesiastical organization, but from the beginning of the Merovingian period the Church began to recover, the Diocese of Arras especially being restored by St. Ysaet about the beginning of the sixth century. Géry was one of his young clerics who became the youth of Géry was of a devout and devout life, and already all things combined to prepare him for the career of zeal and devotion which he was to embrace later on. During one of his episcopal visitsations, St. Magneric, Bishop of Trier, was struck by the exemplary conduct of the young man, and conceived the project of enrolling him in the ranks of his clergy. Géry was not ordained deacon, say his biographers, until he knew the whole Psalter by heart. The episcopal See of Cambrai-Arras soon became vacant, and Géry was called to fill it. King Childerich II gave his consent and instructed Géryius, Metropolitans of Reims, to consecrate the new bishop; the installation must have taken place between 585 and 597. Filled with apostolic zeal, Géry devoted his life to the extermination of the paganism which infected the district subject to his authority, and, since the worship of the old gods was deeply rooted in the souls of the barbarous peoples, the bishop destroyed or purchased the idols, which were the objects of their veneration. He erected the church of St-Médard in the chief town of Cambrai. He frequently visited the rural districts and the villea at a distance from his episcopal city, displaying particular solicitude for the ransom of captives.

But political events soon introduced a new dominion, when Clotaire II (d. 629) took possession of Cambrai. The bishop went to pay his respects to the conqueror in his villa of Chelles, probably in 613. At the command of the king he was compelled to go to the sanctuary and national place of pilgrimage of the saint, St. Martin of Tours, and there distribute alms to the poor. In October, 614, Géry assisted at the Council of Paris. He died after an episcopate of thirty-nine years, and was buried in the church of St-Médard at Cambrai. Géry was honoured with a cult immediately after his death. In the time of his succe-essor, Bertoald his successor, a cult of fervent veneration, and the monastery of St-Médard which he had founded profited largely by the offerings
made to him. Mention of his feast is already made in the additions to the Hieronymian martyrology, and in the ninth century in the martyrologies of Wandeleur of Prüm and of Rabanus Maurus. That feast is celebrated on 11 August. The institution of the feast of his exhumation, 18 November, and of his translation, 24 September, dates probably from 1245, as his relics were exhumed in that year by Bishop Guido of Cambrai. Relics of the saint are preserved at St-Marie de Bruges, at the Church of St-Géry at Brussels, at the church of the same name at Arras, at St-Donatien at Bruges, at St-Pierre at Douai, and in various churches of Belgium. St-Géry is the patron of Cambrai, subsidiary patron of Brussels, and he is honoured as a protector at Braine-leComte (Hainaut, Belgium). On 6 May the feast of the Cardinal of Cambrai, which contains the skull of St. Géry, he is represented in the attire of a bishop, mitre on head, without his crozier, right hand lifted in a gesture of benediction and left folded upon his breast.

L. van der Essenn.

_Gesellenvereine_, German Catholic societies for the religious, moral, and professional improvement of young men. They owe their origin and present condition to Adolph Kolping, summoned the Journeymen's Father (Gesellenvater). He was born 8 Dec. 1813, of poor parents, and, though he gave early evidence of inclination to study, he was obliged to learn the trade of a shoemaker. As a young workman, he became acquainted with the disadvantages suffered by men of his class on their journeys, in factories, and in city lodging-houses. At the age of twenty-three Kolping felt drawn to the priesthood, but reached that goal only in 1845, after years of patient study amidst troubles, privations, and sickness. He was first sent as chaplain to Elberfeld, where a number of journeymen carpenters had founded a choral society with the aim of reaching the local clergy. It grew rapidly into Young Workmen's societies, the best object of fostering the religious life by means of a closer union among its members, and at the same time of improving their mechanical skill. Kolping frequently addressed the members on subjects of interest to mechanics. He was elected president in 1847, and soon gave to the association the features that have since been distinctive of the Gesellenverein, or Society of Young Journeymen. Hitherto little attention had been paid to this class of workmen. Kolping recognized that, to uplift them morally and socially, it was advisable to establish a widespread organization of similar societies. Its first fruits could not fail to be a respectable body of master-workmen. He resolved to make Cologne, one of the great industrial centres of Germany, the seat of his life-work in this direction. In 1849 he was appointed assistant-priest at the cathedral of that city. With a few zealous friends, and using his own means, he founded at once a Gesellenverein, and began to instruct its members gratuitously on various subjects. The Cologne society soon acquired its own home, and opened therein a refuge, or hospice, for young travelling journeymen. In his efforts to develop the work Kolping was energetic and undaunted. He was eloquent both as a preacher and as a writer, and, when elected apostle, he visited frequently the great industrial centres of Germany, Austria, Switzerland, and Hungary. His propaganda bore good fruit, and in a short time societies of young Catholic journeymen were formed in many Rhenish towns, in Westphalia, and finally throughout the German-speaking world. When Kolping died (4 Dec., 1866), the Gesellenverein numbered about 40,000 members. This number had reached the number of 10,86, with a membership of 80,000 journeymen and 120,000 master-workmen. There are at present more than 1,170 unions affiliated to the Central Union at Cologne. Of these there are in Prussia and Northern Germany 505, in Bavaria 222, in the rest of Germany 215, in Austria 150, in Switzerland, Austria, and Hungary, 34 in Switzerland, 8 in Holland, 2 in Luxemburg, 2 in Brussels, 2 at Paris, 1 each in London, Stockholm, Rostach (Bulgaria), and Rome. About 360 unions own their own houses—over 220 in Germany, and 90 in Austria-Hungary. There are a general burial fund, a fund for the education of about 150 students, a general sick fund, and a fund to aid travelling journeymen. These societies or unions aim, in general, at the moral, mental, and professional improvement of young German Catholic journeymen, apprentices, etc. (Gesellen). They develop and cultivate in them religious sentiments, as many of the members are also connected with religious orders. Their results are a large and united body of self-respecting and respected master-workmen, distributed over all parts of Germany and throughout the lands bordering on the German Empire. Persuaded that the middle classes can thrive only when they repress on a basis of religion and practical faith, the Gesellenvereine have assiduously the religious and moral sense of its members. The entire organization exists primarily for this purpose. There is a quarterly general Communion, and the Easter Communion is preceded by a retreat, or brief spiritual preparation. On Sundays and great holidays special Mass is said for the members of the society. Lectures are given on Sunday evenings by clergymen and laymen; the subjects treated are quite varied, ranging from religious topics to the purely instructive or entertaining. Non-religious festivities, such as excursions, theatricals, evening entertainments, and the like, are allowed, but in moderation, lest they should develop in the members that excessive love of amusement which characterizes modern youth. Since 1890 much attention has been paid to the instruction of members in technical, industrial, and mercantile subjects (538 unions in 1908). Besides providing for Christian doctrine, the societies include each a distinct class for the arts. They combine the features of literary composition, music, natural sciences, etc. In the larger cities there are free classes in several crafts, e. g., for bakers, tailors, carpenters, workers in metal, painters, shoemakers. This instruction is designed especially for those workmen who aim at establishing a business of their own. Frequently, in the larger industrial schools, these classes are attached to local technical and industrial schools, municipal or governmental.

In its organization the Verein contains patriarchal, monarchical, and ecclesiastical elements. In accordance with the "general statute" which Kolping framed with various modifications, is still in force, each Verein conducts its own affairs as local circumstances require, yet always with a regard for the general principles of the organisation. At the head of each is a Catholic priest, whose control is supreme. He is nominated by the diocesan "Preses" (president) after consultation with the local authorities and is appointed by the bishop. He is assisted by a board of managers composed partly of citizens actively interested in the work and partly of members chosen by the Verein. The diocesan president acts as intermediary between the bishop and the Vereins, organizes meetings, holds conferences, etc. In Bavaria, Saxony, the Netherlands, and Switzerland, there is a diocesan president, a "central" president, and in Hungary a "federation" president. All these associations are united in the "Catholic Gesellenverein" under the headship of a president general, who, ac-
According to Kolpings' enactment, it is always the president of the local Verein in Cologne. On account of the importance of this position, the presidents of Vienna, Munich, Breslau, and Münster take part in the election. As a rule, only unmarried Catholic journeymen between the ages of 17 and 25 are admitted—after three months' probation—to regular membership. Those who are married or have committed coitus before apprenticeship are retained on the list of honorary or extraordinary members. No member is allowed to join any association whose aims are opposed to those of the Verein. Each member of a local Verein is at the same time member of all the federated societies; hence the importance of the federation as a whole.

The objects of which Kolping strove have been realized to a remarkable degree, as is evident from the wide development of the work he founded. "The Gesellschaftverein," says Schäfer, "has extended over hundreds of thousands its protective influence, teaching the ignorant, arousing the lukewarm, filling the timid with earnestness and self-respect, strengthening the weak and saving them from the perils to which so many workmen, especially through the efforts of social democracy, are everywhere exposed." These societies are among the few institutions of Catholic origin which have been appreciated, commended, and even imitated by Protestants. The latter, however, have even a larger number of workmen.

Owing to special conditions the Gesellschaftverein has so far shown but little signs of development in the United States. The almost total absence of the old trades' organization (apprentice, journeyman, master) in the country, the reluctance of the young artisans to place themselves in the power of others, and the general development of the factory system have prevented the growth of these societies. To this may be added the fact that efforts to create the Gesellschaftverein have been made by the German Catholics only. Branches of the Gesellschaftverein exist in Dayton, O., Paterson, N. J., Chichester, St. Paul and Minneapolis, Minn., and in New York. The membership varies from 40 (Paterson) to 450 (Dayton). The Dayton branch has a library of 3500 books. All these branches are affiliated to the society at New York, in close relation with the central authority in Germany. Kolping, Der Gesellschaftverein (Cologne, 1849); Schäfer, Adolf Kolping, der Gesellschaftverein (3d ed.; Paderborn, 1884); Wenzel, Kolping, der Gesellschaftverein (Berlin, 1866); Schwerin, Der Kath. Gesellschaftverein (1904); Kohl, Kath. Gesellschaften in its social Bedeutung (Cologne, 1907).

JOSEPH LINS.

Gesta Dei per Francos, the tale adopted by Guibert de Nogent (d. about 1122) to present him his history of the First Crusade. In the eleventh century the name of "Frank" was applied in a general manner to all the inhabitants of Western Europe, being a survival of the political unity established by the Carolingians for the benefit of the Franks. The Byzantine chroniclers never otherwise refer to the Western. Hervé, a Norman adventurer in the service of the Byzantine emperors in the eleventh century, is called "Francopoules" (Son of the Franks). It was therefore quite natural that this name of "Frank" should be used by the Orientals in referring to the crusaders, and it is evident that they called themselves by the same name. "Gesta Francorum" is the title of one of the chief accounts of the Crusades. Since the Crusades the word "Frank" remains in the east a synonym for Western, and to-day the term is still used in that sense. Moreover, the idea that the Franks were a people chosen by God arose soon after their conversion to Christianity, and finds expression many times in the traditions relative to Clovis, which Gregory of Tours transmits to us. It is read in one of the prologues of the Salic Law, "Glory to Christ, who chose the Franks to preserve their kingdom! May He replenish their leaders with His grace, for this is the strong and brave nation which has richly covered with gold the bodies of the holy martyrs." With Charlemagne the Franks protected the Roman Church from the Lombard invasion, destroyed paganism among the Saxons, drove back the Musulmans, and established their protectorate over the Holy Sepulchre. Hence the crusade was, for the men of the eleventh century, merely the crowning of that alliance between God and the Franks, and after the discourse of Urban II at Clermont, it was to the cry of "God wills it!" that all made haste to take the cross.

Guibert, b. in Picardy about 1053, was a monk at Saint-Germer-de-Fly, elected Abbot of Nogent-sous-Coucy in 1104, had been a witness of the enthusiasm aroused by the preaching of the crusade, perhaps he had even assisted at the Council of Clermont. Desiring to write an account of the Crusades, he chose this title of the "Doings of God through the Franks," and in his account, wherein the marvellous occasionally mingles with reality, he affirms at different times the Divine mission of the Franks. This work, dedicated to Caudri, Bishop of Toulouse, is not a history of the crusade itself, but a history of the crusade, and in part follows the anonymous author of the "Gesta Francorum." It is nevertheless not without great value, for it shows the profound impression created throughout Europe by the conquest of the Holy Land. Although Guibert was a contemporary of the events which he relates, they receive already in his account an epic colouring. The interest of these seven books, composed between 1108-1112 consists in their revealing to us the doctrine of the providential rôle, which the men of the Middle Ages assigned to the Westerners, but in Guibert's mind the only Franks worthy of considering were those who were the Franks, the French. To them only the ages turned when they suffered injuries inflicted by other nations, and he contrasts their conduct with that of the Teutons, in revolt against the Church. He therefore considers the crusade as a wholly French undertaking (Bk. II, 1). When, at the beginning of the seventeenth century, Jacques Bongars (1547-1612) undertook to publish the works of all the known historians of the Crusades, he chose as the title of his collection "Gesta Dei per Francos" (Hanover, 2 v., 1612).

LOUIS BREHIER.

Gesta Romanorum, a medieval collection of anecdotes, to which moral reflections are attached. It was compiled in Latin, probably by a priest, late in the thirteenth or early in the fourteenth century. The acceptance of authority in this history is not to be revised.
copies were multiplied, often with local additions, so that it is not now possible to determine whether it was originally written in England, Germany, or France. Oesterley, its latest critical editor (Berlin, 1872), is of opinion that it was originally the vaticina in English, whence it passed to the Continent, and that by the middle of the fourteenth century there existed three distinct families of MSS.: the English group, written in Latin; the Latin and German group; and a third group represented by the first printed editions. The MSS. differ considerably as to number and arrangement of articles, but no one MS. representing the printed editions exists. Probably the editors of the first printed edition selected stories from various MSS. Their volume was a folio issued from the press of Retelaer and De Leempt at Utrecht; while a second edition was published by Ter Hoenen at Cologne. Shortly after this collection had been published, an enlarged edition, now known as the Vulgate, was issued, containing 181 stories. This was compiled from the third group of MSS., and was printed by Ulrich Zell at Cologne. All these three editions appeared between 1472 and 1475, and subsequent reprints were numerous. In English translation, based on the English group of MSS., was issued by Wynkyn de Worde about 1510, and was followed by others. These English editions have many stories in common with the Vulgate, but include others derived from the English MSS. None of the English editions, old or new, give the moralizations in their entirety, as they are Catholic teaching, dogmatic and moral. Though the title of the work suggests Roman history as the chief source of the stories, many of them are taken from later Latin or German chronicles, while several are Oriental in character. In estimating the wide influence of the "Gesta" it must be remembered that the collection proved a mine of anecdotes, not only for preachers, but for poets, from Chaucer, Lydgate, and Boccaccio down through Shakespeare to Schiller and Rossetti, so that many of these old stories are now enshrined in masterpieces of European literature.

Gethsemani (Hebrew gat, press, and semen, oil) is the place in which Jesus Christ suffered the Agony and was taken prisoner by the Jews. Saint Mark (xiv, 32) calls it χωρα, "a place" or "estate"; St. John (xviii, 1) speaks of it as στέριον, a "garden" or "orchard". In the East, a field shaded by numerous fruit trees and surrounded by a wall of loose stone or a quickset hedge forms the ακολούθιον, the garden. The name "oil-press" is sufficient indication that it was planted especially with olive trees. According to the early Greek version and others, St. Matthew (xxvi, 36) designates Gethsemani by a term equivalent to that used by St. Mark. The Vulgate renders χωρα by the word villa. But there is no reason to suppose that there was a residence there. St. Luke (xxii, 39) refers to it as the Μαρωνία and St. John (xviii, 1) speaks of it as being "over the brook Cedron". According to St. Mark, the Saviour was in the habit of retiring to this place; and St. John writes: "Judas also, who betrayed him, knew the place; because Jesus had often returned thither together with his disciples". A place so enigmatic, to which all the Evangelists directed attention, was not lost sight of by the early Christians. In his "Onomasticon" (ed. Klostermann, 1904, p. 74), Eusebius of Cesarea says that Gethsemani is situated "at the foot of the Mount of Olives", and he adds that "the faithful were accustomed to go there to pray". In 333 the Pilgrim of Bordeaux visited the site, arriving by the road which climbs to the summit of the mountain, i.e. beyond the bridge from which the vallum goes to Jerusalem. At the time of the Jews, the bridge which spanned the torrent of Cedron occupied nearly the same place as the one which is seen there to-day, as is testified by the ancient staircase cut in the rock, which on one side came down from the town and on the other wound to the top of the mountain. Bishop Erasmus of Jerusalem, in his "Life of Theodosius", and Sophronius, Patriarch of Jerusalem, speak of this immense staircase and two other pilgrims counted the steps. Traces of it are still to be seen on the side towards the city, and numerous steps, very large and well-preserved, have been discovered above the present Garden of Gethsemani. The Pilgrim of Bordeaux notes "to the left, among the vines, the stone where Judas Iscariot betrayed Christ". In translating the "Onomasticon" of Eusebius, St. Jerome adds to the article Gethsemani the statement that "a church is now built there" (Onomasticon, ed. Klostermann, p. 75). St. Sylvia of Aquitania (385-398) relates that on a Thursday near Easter, the Mount of Olives (there was at that time a church on the Mount of Olives) made a station at "the beautiful church" built on the spot where Jesus underwent the Agony. "From there", she adds, "they descend to Gethsemani where Christ was taken prisoner" (S. Silvia, Ep. Adversus Epiphanem, ed. Gaisser, 1892, p. 65-66). On a Thursday of the Great Lent, the Church of the Dormition (Theophanes, Chronogr. ad an. 682) was destroyed by the Persians in 614; rebuilt by the Crusaders, and finally razed, probably in 1219. Arculf (c. 670), St. Willibald (723), Daniel the Russian (1106), and John of Würzburg (1165) mention the Church of the Agony. The foundations have recently been discovered at the place indicated by them, i.e. at a very short distance from the south-east corner of the present Garden of Gethsemani.

A fragmentary account of a pilgrimage in the fourth century, preserved by Peter the Deacon (1037), mentions "a grove at the place where the Jews took the Saviour captive". According to tradition it was in this grove that Christ was wont to take refuge with His disciples to pass the night. It is also memorable for a supper and a washing of the feet which, according to the same tradition, took place there. Eutychius, Patriarch of Constantinople (c. 850), says: "Jews say that the Church of the Agony is three supers. "The first repast", he says, "together with the purification, took place at Gethsemani on the Sabbath day, the first day, i.e. when Sunday was already begun. That is why we then celebrate the vigil." (P. G. LXXVI, 2392). The second supper was at Bethany, and the third was at Holy Thursday at which was instituted the Holy Eucharist. Theodosius (c. 530) describes this grove in these terms: "There [in the valley of Josaphat] is situated the basilica of Holy Mary, Mother of God, with her sepulchre. There is also the place where the Lord supped with his disciples. There He washed their feet. There are to be seen four benches where Our Lord reclined in the midst of His Apostles. Each bench can seat three persons. There also Judas betrayed the Saviour. Some persons, when they visit this spot, through devotion partake of some refreshment, but no more. They light torches because the place is in a grove." (Antoninus of Piacenza, 570), Arculf, Epiphanius the Hagiololite, and others make mention of the well-known pasch of which the Grotto of Gethsemani was witness. In the Church of the Agony the stone was preserved on which, according to tradition, Jesus knelt during His Agony. It is related of the fact that, after the destruction of the temple by the Persians, the stone was removed to the grove and there venerated. In 1165 John of Würzburg found it still preserved at this spot, and there is yet to be seen on the
ceiling of the grotto an inscription concerning it. In the fourteenth century the pilgrims, led astray by the presence of the stone and the inscription, mistakenly called this sanctuary the Grotto of the Agony.

In ancient times the grotto was used as a colne. In the sixteenth century, the grotto was used as a source of water which supplied a little light. The grotto, which is irregular in form, is, in round numbers, 56 feet long, 30 feet wide, and 12 feet high in its largest dimensions. It is adorned with four altars, but of the pictures which formerly covered the walls, and of the mosaic floor, traces only can be found. At a distance of about 130 feet to the south of the grotto is the Garden of Gethsemani, a quadrangular-shaped enclosure which measures about 195 feet on each side. Here are seven olive trees, the largest of which is about 26 feet in circumference. If they were not found there in the time of Christ they are at least the oldest trees of Christian antiquity. With the aid of historical documents it has been established that these same trees were already in existence in the seventh century. The east of the garden there is a rocky mass regarded as the traditional spot where the three Apostles waited. A stone's throw to the south, there were the cellars of the natives, the homes of the native Christians the place where Jesus prayed on the eve of his Passion. The foundations of the ancient church of the Agony were discovered behind this wall.

BARNABAS MEISTERMANN.

Gethsemani, ABBEY OF OUR LADY OF, of the Order of Reformed Cistercians, commonly called Trappists, established in 1848 in Nelson Co., Kentucky, in the Diocese of Louisville, being the first abbey on American soil. On 26 Oct., 1848, a colony of forty Trappists left the Abbey of Melleray, in the Diocese of Nantes, France, under the leadership of Dom Eutrope Proust, and arrived at New Orleans early in December. They travelled by river to Louisville, Ky., where Bishop Flaget, who had greatly desired their coming, received them. On 21 December they took possession of the lands destined for their establishment, and shortly after were incorporated by a second charter of twenty religious from the mother-house. The monks undertook the work of clearing their lands with indomitable energy, and little by little arose the imposing structures which form the present abbey. This is an immense quadrilateral, one side of which is formed by the church, whilst the other three sides contain the monastic quarters, with a commodious guesthouse for those who desire to spend a few days in solitude.

In 1850 a pontifical Brief (21 July) erected the new monastery into an abbey. By unanimous vote Dom Eutrope was elected abbot, and on 1 May, received the abbatial blessing from Bishop M. J. Spalding of Louisville, in the old cathedral of Bardstown. It was the first ceremony of the kind performed in North America. In 1859 Dom Eutrope resigned and returned to France. He left Dom Benedict Berger in charge, who was soon after elected abbot, and received the official blessing St. Catherine's Church, New Haven, Ky., 9 May, 1861. Dom Benedict insisted with true religious zeal on the observance of the rule, and under his administration the abbey buildings were finished. The church was solemnly consecrated by Archbishop Purcell of Cincinnati, 15 Nov., 1866. St. Benedict's Day, 21 July, 1867, Dom Benedict resigned his charge in 1889. The administration then passed to Dom M. Edward Chaix-Bourbon, who was elected abbot 9 May, 1890, and received the abbatial blessing in the church of the monastery, 29 September following. Dom Edward applied himself especially to improve the school attached to the abbey since its foundation. He erected new buildings, and transformed the old men's dormitory into a school room. By advice of physicians, he had to renounce his hopes of seeing Gethsemani again, and on 24 Jan., 1898, he was succeeded by Dom M. Edmond M. Obrecht, first appointed superior and shortly afterwards elected abbot by unanimous vote; he received the abbatial blessing at Gethsemani, 20 Oct., 1898. Through the generosity of Mgr. Batz of Milwaukee, Dom Edmund was able to create the splendid library which contains more than thirty thousand volumes of the principal authors on ecclesiastical sciences.

That the regime of La Trappe is entirely incompatible with the American temperament is a prejudice without foundation. The community has always numbered some, and now numbers over one-third, Americans amongst its religious, some of whom were raised in luxury, and all have found health and happiness at Gethsemani. Another prejudice is the belief that the Trappist life, being a penitent life, is only intended for criminals. Life at Gethsemani is the same as Cistercian life at Clairvaux, a life of contemplation and penance. Moreover, recent decrees of sovereign pontiffs and the constitutions of the order forbid the reception of men who have given public scandal. The community of Gethsemani is at present (1908) composed of 80 religious, of whom 34 members are priests, whilst the others are preparing themselves, by the regular studies, for the priesthood; 46 are lay brothers who are more especially engaged in the work of the farm.

GEULINCK, ARNOLD. See OCCASIONALISM.

Gazeir (or Dezireh), seat of two Catholic residential sees, one Chaldean, the other Syrian. The Chaldean diocese has been known, at least since 410, as Beit-Zabda ("Notices et extraites des manuscrits", Paris, XXXVII, 272). Its bishop, John, assisted at a council in 497 (op. cit., 310, 316). Under the Nestorians the diocese was regarded as an episcopal, sometimes as an archiepiscopal see. Later, it was united to Quardou, a diocese of the Kurds, situated on the opposite bank of the Tigris (op. cit., 680). Since the re-election of the Chaldean Catholic Church by Pope Pius VII in 1821, and the foundation of the diocese of St. John, by Pope St. John Paul II in 1986, the diocese has been united to the Syriac Catholic Church. The city of Gazeir-ibn-Omar, so called to distinguish it from the Gazeir near Bagdad, is situated on the right bank of the Tigris, about 125 miles north of Mosul in the vilayet of Diarbekir. It has about ten thousand inhabitants, six thousand of whom are Christians and nine thousand Turkish Catholics. It contains the tombs of several Abbesses. The soil is well watered; there are superb forests of oaks, and a rich oil-well is situated at a distance of about twenty-five miles.

S. VALEHÉ.
Größer, August Friedrich, German historian; b. at Calw, Württemberg, 5 March, 1803; d. at Karlsbad, 6 July, 1861. Obdient to the wishes of his parents, but against his own inclinations, he devoted himself to the study of theology; was a student at the "First Evangelical Seminary" in Tübingen from 1817–21, and from 1821–25 continued his studies in the higher seminary of the same place. He completed his education by a series of scientific travels through Switzerland and Italy, after which he returned to his Alma Mater. In 1829, he was appointed vicar in the city of Stuttgart. Having by this time lost all the faith in revealed religion, he became convinced that to continue his pastoral duties would involve him in serious conflicts; he therefore resigned his vicarage. At the recommendation of Victor von Bonstetten, a friend of his father, he was appointed third librarian of the public library of Stuttgart (1830) with the title of professor. During his numerous hours of leisure he applied himself with vigour and enthusiasm to the study of literature and history. As the fruit of these labours he published in the following year (1831) his work on "Philo und die judisch-alexandrinische Theosophie" (2 vols., Stuttgart, 1831). This monograph was his larger work entitled "Kritische Geschichte des Urchristentums" (Stuttgart, 1838, in 5 vols.). In it Größer, probably impelled by David F. Strauss's "Leben Jesu", sought to conceive historically the life and teaching of Christ, and, although writing as a rationalist throughout, he strongly disclaims being "an adherent of the modern champion of negative truths" (i. e. of Strauss). In the first part, with the sub-title "Das Jahr des Hells", he investigates the time in which Christ lived; in the second, entitled "Heilige Sage", he treats of the authenticity and literary character of the first three Gospels, and in the third, "Das Heiligtum und die Welt", he discusses the Gospel of St. John. The work, therefore, is a detailed investigation of the character and significance of the New Testament from an historical point of view, and is based on a wealth of materials. At the same time he studied the history of the Thirty Years War, and in 1835 (in Stuttgart) published "Gustav Adolf, König der Schweden und seine Zeit" (4th ed., 1863), in which by emphasizing the political rôle of the Swedish king he took a position diametrically opposed to the views previously held by Protestants.

An equally profound impression, especially in Catholic circles, was produced by his "Allgemeine Kirchengeschichte" (4 vols., Stuttgart, 1841–46). Closing with the year 1305, it brings into prominence the important part played by the Catholic Church in the development of the German Empire, and justly extols the policy of the popes. Shortly afterwards he was appointed professor of history at the Catholic University of Freiburg (Breisgau) and appointment which at first sight appears surprising, inasmuch as he was a rationalist, the results of whose investigations were not at all times in harmony with Christian doctrine. His call, however, is quite intelligible in view of the tendencies of his recent writings, and of his fair treatment of religious questions, which seemed to indicate a gradual return to more conservative religious opinions. In 1848, he was elected to the German Parliament at Frankfort as representative of a district of Württemberg; he belonged to the greater German party, and was a fanatical opponent of Prussia. It is a notable fact in Parliamentary history that he proposed a vote for the reunion of Catholics and Protestants, but only on condition that the Holy See would promise never to permit the Jesuits or Redemptorists to settle on German soil. In 1853 he entered the Catholic Church, after all the other members of his family had taken the same step. His later publications are: "Geschichte der ost- und westfriesischen Kortinge" (Freiburg, 1848, 2 vols.); "Die Urgeschichte des menschlichen Geschlechts" (Schaffhausen, 1855, 2 vols., incomplete), a demonstration that neither critical history nor the natural sciences, in treating of the origin and earliest history of the human race, can lay claim to certainty, when opposed to the earliest traditions of mankind and especially to Holy Writ; "Papst Gregor VII und sein Zeitalter" (Schaffhausen, 1859–61, in 7 vols.), a part of his "Church History", notable for its brilliant scholarship and conscientious research. Many volumes of lectures were published posthumously: "Geschichte des 18. Jahrhunderts" (Schaffhausen, 1862–73; Vols. 1—IV by Weise; second part of the fourth vol., not published), "Die Geschichtsgelehrte Volkerkreise im Mittelalter" (Schaffhausen, 1865, 2 vols.); "Byzantinische Geschichten" (Graz, 1872—74, 2 vols.). His "Prophete veteres pseudepigraphi latine versi" (Stuttgart, 1840), with translation, is critically unsatisfactory. Größer was a man of unusual ability; he possessed great acumen and great powers of bold and correct combination. He was a prolific author, although his literary researches were sometimes lacking in method.

Albrecht-Thim, A. F., Größer en seine Werken (Härtel, 1876), that he was the son of Christian Größer, Größer's son-in-law. Allgemeine Deutsche Biographie, IX, 139—144: von Wrede, Deutsche Biographien, I, 300—304; Rosenwald, Conversationsführer, 1, 807 sqq.

Patricius Schläger.

Ghardaia, Prefecture Apostolic of, in the French Sahara, separated in 1901 from the Vicariate Apostolic of Sahara and the Soudan. It includes the region between the Prefecture Apostolic of Morocco, the Dioceses of Algeria and Tunis, the Mission of Tripoli, and 20° N. lat. The inhabitants number about 300,000, all Muslims, but of different races, such as Arabs and Berbers. In this vast region are nomadic Arab tribes, such as the Lajba, the Chama'a, and the Said Otba; there are sedentary populations in the oases, as those of the oases of Wargla (Uargla), Guerara, Tuat (Twat), Tedikelt, various tribes of the Tuaregs, and lastly the strong and important group of Mahdists in the district of Mrab, he possessed great acumen and great powers of bold and correct combination. He was a prolific author, although his literary researches were sometimes lacking in method.

At present the mission comprises three stations, Ghardaia, Wargla and Elgolea. Twelve missionaries and three lay brothers of the Congregation des Missionnaires d' Afrique (White Fathers) are employed at the different tasks pertaining to a mission in a Muslim country. Evangelical converts do not be at one point in such countries. The task of the missionaries is wholly one of preparation, requiring long and obscure toil of which statistics convey no adequate appreciation. It consists in overcoming by degrees, through benevolent intercourse, the exercise of charity, and instruction, the ancient prejudices which the Muslims bear towards Christians, prejudices that are rooted deeply in the very religion of Mohammed. Only insensibly, therefore, and through appreciation of the benefits conferred by the missionaries and through customary respect for the latter as men of God, do these peoples become detached from their traditions, and a new generation is raised which is possible to make numerous and permanent conversions, permanent precisely because more numerous, for occasional conversions amid Muslim surroundings are almost impossible.

Missiæ Catholicæ (Rome, 1907); Catholic Missions (Lon.); Annales de la propagation de la Foi (lyons, 1901—1909).

Charles Guérin.

Ghent, Diocese of (Gandensiis of Gandavensis), at present comprises the whole territory of East Flanders, one of the nine provinces of Belgium. It numbers 1,103,930 inhabitants and 362 parishes. The see was erected by Paul IV ("Super universi", 12 May, 1559) at the request of Philip II, King of Spain and sovereign of the Low Countries. Till that time Ghent had belonged to the Diocese of Tournai. Situated on the left bank of the Scheldt (Escaut), the new diocese
was bounded on the north by the western arm of that river, on the east by the new Dioceses of Antwerp and Mechlin, detached from Cambrai, on the south by Tournaie, and on the west by the new Diocese of Bruges ("Ex injuncto"), Pius IV, 1560, and "Regimini universalis Ecclesiae" especially for Ghent, 7 August, 1561. Previous to this Charles V had obtained from Paul III the secularization of the monks of the Abbey of Saint-Bavon, at Ghent (22 July, 1536), and in 1541 they transferred their chapter from the ancient abbey to the parochial church of St. John the Baptist, which henceforth bore the name of Saint-Bavon. In 1559 it was decided that this chapter should become that of the cathedral, and that at the death of Viglius, then mitred provost of said chapter, the revenues of the abbacy, or provostship, should become the episcopal revenues.

After the concordat between Pius VII and the French Council, Bonaparte (see Concordat of 1801), the pope called upon all the bishops of France to resign their sees. Prince de Lokkowitz, the Bishop of Ghent, had died at Münster in 1795 and had not been replaced. By the Bull "Qui Christi Dominii" (29 November, 1801), Pius VII suppressed all the ancient dioceses throughout the French Republic, and erected sixty new dioceses, among which he re-established that of Ghent, comprising the two departments of Escaut and Lys, i.e. the three ancient dioceses of Ghent, Bruges, and Ypres, to which was added a portion of Mechlin and Dutch Flanders. Gregory XVI detached the part appertaining to Holland (25 August, 1832) and by the erection of the See of Bruges (27 May, 1834), determined the present jurisdiction of the Diocese of Ghent. Ghent has had twenty-four bishops, of whom the last is Mgr Antoine Stillemans, consecrated 27 January, 1890. Among them, Cornelius Janssenius and Antoine Triest are deserving of more special notice. The former, who must not be confounded with Janssenius, Bishop of Ypres, the author of the "Augustinus," was professor of theology at Louvain when Philip II sent him as his representative to the Council of Trent. On his return to Flanders, he was named by the king first Bishop of Ghent, in 1568, and this nomination was confirmed by Pius IV on 6 July of the same year. His numerous and learned commentaries on the Holy Scriptures reveal in him an exegete of great merit. The seventh bishop, Antoine Triest, occupied the see from 1622 to 1637. He was a veritable Mecenas and the cathedral of Saint-Bavon is indebted to him for most of the masterpieces which adorn it. His generosity towards the poor found expression in important charitable foundations and in the zeal which he displayed in the establishment at Ghent of the Mont de Piété, an institution founded to lend to the poor without interest. Bishop Triest bequeathed considerable sums to this work.

In 1813, during the episcopate of the Prince de Brogie (1807–1821), the seminarians of Ghent offered an heroic resistance to the despoticism of Napoleon. The emperor held the bishop prisoner and twice sought to wrest from him his resignation. He undertook to name a successor, and sent as Bishop of Ghent a canon of Dijon, M. de la Brue de Saint-Bauzille, but all the clergy, with the exception of thirty out of a thousand priests, refused to recognize him. Being called upon to submit to the intruder, the seminarians offered an energetic refusal, were compelled to enter the imperial regiments, and were taken, some to Wœlz, the others to Paris. Many subsequently died at Wœlz as a result of contagious diseases and privations of every sort, but all remained faithful to their motto: "Rather soldiers than schismatics."

During the episcopate of Mgr Delebecque (1838–64) nine American bishops sent two of their colleagues to ask priests from the Diocese of Ghent, intending to place under their direction and instruction the seminary which they proposed to found at Troy, New York. Mgr Delebecque acceded to this request, and in the month of August, 1864, MM. van den Hende, Gabriels (now Bishop of Ogdensburg), Roelants, and Puissant embarked for America. The Diocese of Ghent continued its collaboration in the seminary at Troy until July, 1896. It was also at Ghent and under the auspices of Mgr Delebecque that the work was founded, in 1859, which is now known as le Denier de Saint Pierre, i.e. Peter's Pence.

Among the clergy of Ghent Jean-François Van de Velde (1743–1823) is most deserving of notice. While he acquired a well-merited reputation as professor of Holy Scripture at the University of Louvain, and his published and manuscript works place him in the front rank of the theologians of his time, he is chiefly entitled to notice for the important part which he played in the religious affairs of his country, first, under Joseph II, by his intrepid opposition to the decrees with regard to marriage (1784), and later, under Napoleon, by his decisive intervention at the national council, which the emperor assembled at Paris in 1811, and where, as the counsellor of Mgr de Brogie, he presented a "Mémoire sur l'incompétence du concile national à changer la discipline de l'Eglise, en vertu de laquelle le Pape seul donne l'institution canonique aux évêques nommés" (Memorandum concerning the incompetency of the national council to alter the discipline of the Church, in virtue of which the pope alone confers canonical institution on the nominated bishops). One who was well entitled to be called "the Vincent de Paul of Belgium" also deserves mention. The inexhaustible charity of Canon Pierre-Joseph Triest (1760–1836) was extended to all human miseries, and for their more efficacious relief he founded in succession the Sisters of Charity (1803), the Brothers of Charity (1807), the "Association of Maternal Charity" (1822), the Brothers of St. John of God (1825), and the Sisters of the Holy Childhood of Jesus (1835).
We shall only pay the first and only second of these institutions, the development of which was truly extraordinary. The Sisters of Charity now number more than 1300, and their benevolent activity is spread throughout Belgium, Holland, England, the Congo, India (Punjab), and Ceylon. They are engaged not only in the instruction of children, but give intelligent and devoted care to deaf mutes, the insane and incurables. In Europe more than 6000 infants are sheltered in their houses. The Congregation of the Brothers of Charity, which numbers about 1000 religious, is spread throughout Belgium and has been extended successively to Canada, the United States, England, Ireland, and the Netherlands. At present it possesses 44 establishments where more than 6000 insane, aged, and sick persons and many other unfortunate are cared for.

Brothers teach and care for more than 11,000 children and poor youths, 440 deaf mutes, 500 mentally ill persons, 450 youthful delinquents and 1000 foundlings.

Truly remarkable religious monuments of the diocese are: the cathedral of Saint-Bavon and the churches of Saint-Nicholas, Saint-Jacques, and Saint-Michel at Ghent, the church of Saint-Martin at Alost, and the churches of Notre-Dame and Sainte-Walburge at Oudenaarde. From an architectural point of view the cathedral of Saint-Bavon at Ghent is one of the most beautiful churches in Belgium and is undoubtedly the richest in objects of art. Among its numerous works of sculpture the tomb of Bishop Triest, by Jérôme Duquesnoy, is incontestably the masterpiece, and has been rightly called "the most beautiful work of national statuary". The cathedral of Ghent is deservedly famous for the immortal altar-piece of the brothers Hubert and Jan Van Eyck, known as "The Adoration of the Lamb", which was completed in 1432. The cathedral now possesses only the central panel of the picture, the most important portion of the work. The side panels are at Berlin and at Brussels.

Ghibelines. See GUELPHS AND GHIBELINES.

Ghiberti, LORENZO DI CONE, sculptor; b. at Florence about 1381; d. there, December, 1455. He ubered in the early Renaissance in his native city of Florence as a sculptor in bronze, just as Massaccio led the way in the art of painting, and Brunellesco in architecture. In a competition for the best design for the second bronze door, he was on the north side of the baptistery, Ghiberti carried off the coveted prize by the merchants' guild of Florence in 1401; among his many rivals was Brunellesco. The designs presented by Ghiberti and Brunellesco, the subject of which was the Sacrifice of Isaac, are preserved in the Museo Nazionale of Florence. The work of Andrea Pisano on the south portal served as a model for the north portal. The style of the Trecento (Italian Renaissance of the fourteenth century) is apparent in the typical heads, in the lines, and the somewhat stiff character of the action, but there is more freedom in the forms, the expression, and the handling of the spaces. The wings of the doors are divided by vertical and horizontal bands into twenty-eight panels, in each of which the relief is enclosed in a modified quatrefoil. The jambs lintels and friezes are decorated with leaves and flowers. At the angles of the panels are the heads of prophets and of sibyls. The twenty upper scenes are taken from the Old Testament, and represent the four Evangelists and four Fathers of the Church. The whole composition is sober, pleasing, and harmonious. This portal finished (1403-1424), Ghiberti undertook the eastern, main portal, the work in this showing greater freedom in the treatment and advance in style. It includes ten scenes from the Old Testament, most of which are subdivided into several subjects. The reliefs produce a pictorial effect by reason of the number of figures, perspective, grouping, landscape and architectural background. They were completed in 1452. Ghiberti here shows himself in the development of sculpture the rival of his contemporary Massaccio. In fact he compels the less responsive art of sculpture to vie with the more vivacious sister art of painting. His "Paradise", for instance, includes a number of lesser subjects from the creation of Adam to his expulsion from Eden; the foremost figures are almost in the round, the relief becoming less marked as the figures, that at the same time grow smaller, recede from the foreground. His effort to follow nature is furthermore shown by the character expressed in the faces and the action; there is withal no loss of grace or beauty. Ghiberti is a master of technical; his perspicacity is everywhere evident, everywhere ornament. Vases containing vines intertwined with fruits and supporting the figures of various animals, adorn the frames of the doors. Each wing has a separate frame ornamented with statuettes in niches divided from each other by decorative busts. Of this gate Michelangelo declared that it was worthy to be the entrance of Paradise. Ghiberti himself, in a description of the work found among his papers, pronounced it his foremost achievement. In one of the small medallions of the framework of the house, doubtless with a just pride in his achievement, he has preserved his own signature: the same high art characterizes his treatment of the reliquary of St. Zenobius in the cathedral of Florenc. On three sides are scenes descriptive of the miracles of the saint, the fourth is adorned with a wreath and angels. The reliquary of San Giacinto is decorated with hovering angels, but on the front only. Among the works given by Ghiberti the best relief of Leonardo Dati in Santa Maria Novella deserves especial mention. The church of Or San Michele possesses many specimens of the new plastic art of this era of the Renaissance, among them three statues by Ghiberti, the latest and best of the three being that of St. Stephen. Among the ornaments that in these large statues exhibit one weakness of the master, i.e., the treatment of draperies and the pose. Originally a goldsmith, and working mostly in relief,
he lacked practice in the larger style of sculpture. In fact, from Vasari’s time, Ghiberti was often unduly admired. He falls optionally below some of his contemporaries in sharp characterization, in vigorous movement and unaffected naturalness. It must, however, be admitted that in contrast to the harsh realism of Donatello he observed always the dictates of grace and beauty, approaching therein Lucca della Robbia. His art belongs to a period of transition. Clear traces of the earlier Gothic art survive in Ghiberti, e.g. the mannerism of his slender and pleasing rather than expressive figures, also a similar treatment of the background. On the other hand his study of classic art is visible in the draperies and often in the heads of his figures. His fidelity to nature, moreover, developed in him a strong drift towards realism.

His sense of the beautiful and his originality stamp Ghiberti as the precursor of Raphael. He was no pioneer like Donatello, yet his work, especially his bronze doors, had a lasting influence on his successors. In him native genius was aided by reflection and theory. In a certain sense, therefore, a new era in art may be said to date from him. In his “Commentaries” he critically reviewed the development of art from the time of Ghiberti to his own day. While giving an account of his own works he clearly suggested that he consciously strove after a new art. He seems to characterize himself in his description of the second bronze gate, when he says: “In this work I sought to imitate nature as closely as possible, both in proportions and in perspective as well as in the beauty and picturesqueness of the composition and the numbers of figures, some of these scenes contain nearly one hundred figures, others less, but all were executed with the utmost care; the buildings appear as seen by the eye of one who gazes on them from a distance.”

A. Gietmann.
years of age, is disfigured by the coarse realism of Cassagnano. His "Virgin Most Pituif ular" (Vergine della Misericordia) follows yet the medieval conventionalism, but is remarkable for the beauty of its portrait, in which Ghirlandajo always excelled. Up to this point his artistic genius seems to have taken a definite form and to have changed but little in its development. There was little time for anything except the regular pursuit of his work in the life of this tireless artist. His enormous output covers a space of little more than fifteen years (1475–1491), and owing to its steady progress can scarcely be divided into periods. Untroubled by passion or conflict his genius grew and expanded like a flower. Though one of the most accomplished artists of the fifteenth century, his life exhibits none of the troubles, complex situations, or contradictions that meet us in the stormy life of Botticelli. The first characteristic work of the young master was executed when he was twenty-five (1475), in the collegiate church of San Gimignano. He drew his inspiration from the life of Santa Fina, a maiden of that city who died in the odour of sanctity on 12 March, 1254 (de' Medici, "Vita di Santa Fina", Siena, 1781), to whose memory a chapel had recently been erected (1468) by Giuliano and Benedetto da Majano. The two scenes treated by the artist, the "Vision" of the Saint and her "Burial", exhibit all the elements of his future great work. The first scene is on a large scale, is treated with much taste and in a familiar manner as was permitted to an Italian artist. In the "Burial" of the Saint something more personal appeals to us. The simple local event, the mere abolution pronounced over the remains of a sainted maiden, is magnified and elevated to a lofty and powerful significance, in the treatment of the assembled multitude. It is no longer an ordinary burial; the entire city, represented by its clergy, magistrates, and citizens, assists at the function, while the beautiful towers of San Gimignano are shown as decoration of the background. In reality what he seeks to put before us is an entire society harmoniously grouped; the picture is a serene portrayal of national life and a triumph of national sentiment. Of a short journey to Rome about this time we possess no accurate information; the artist returned to Florence at the request of St. Jerome at Ognissanti and his famous fresco of the "Last Supper" in the refectory of the same convent (1480). This very noble composition is the most idealistic of the artist's works, the only one in which he deals with abstract concepts and does not depict contemporary life.

The series of his great works began with a second journey to Rome. From 27 October, 1481, to 15 March, 1482, the artist was at work in the Sistine Chapel. In these six months he painted six portraits of popes and two large frescoes, the "Resurrection" (over which, in the sixteenth century, a mediocre Flemish artist had painted), and the "Call of the Apostles". The latter, with Perugino's "Giving of the Keys to St. Peter", is yet the chief masterpiece of that period of Sistine decoration. On his way back to Florence, he painted an "Annunciation" (1482) at San Gimignano. The remainder of his life seems to have been passed at Florence, where three great undertakings absorbed his activity. From 1482 to 1484, he executed at the Palazzo della Signoria the "Maestà di San Zenobio" and the noble frescoes "illustrative of the "Life of St. Francis". They were not finished when he received the order for his greatest work, the fifteen frescoes of the "Life of St. John the Baptist" and the "Life of the Virgin" which adorn the Tornabuoni chapel in Santa Maria Novella. These paintings, finished in 1490, are rightfully numbered among the most celebrated in Florence. They are Ghirlandajo's most popular work, and are reckoned among the greatest Italian masterpieces. Their merit is not owing to the subject. Dramatic emotion is entirely absent. Never did an artist, not even Michelangelo in the incident of the Medici, permit himself such liberties with his esthetic subject; or presume in the face of all tradition and probability to substitute arbitrarily a subject chosen in conformity with his own tastes and preferences. Only rarely, and in uninteresting traits, does Ghirlandajo force himself to serious conformity with the conventional treatment of his subject.

As a rule Ghirlandajo avoids representing movement. His calm and clear imagination, well-ordered and harmonious, is better adapted to depicting neutral gestures and attitudes nearly always borrowed from daily life. In most of his scenes and those the most beautiful, e.g. the "Visitation", the historical motif and the actual event are of no moment. The gospel theme is reduced to a minimum, and becomes a mere pretext for a great and magnificently conceived "tableau de mœurs", or representation of contemporary life. The beautiful everywhere diffused, reality in its highest forms, the artistic setting of things, daily life with its infinite variety of subjects, constitute the inexhaustible charm of these marvellous scenes, in which one must not seek depth, emotion, or poetry. No one ever conceived the life about him under such graceful and noble forms of expression, and compelled therefore to substitute for the great drama of the past the multitude of the spectacle of the present, he nevertheless attained, under the circumstances, the highest flights of fancy. Instead of the always hypothetical reconstruction of an imaginary scene, we have the thousand-fold more valuable representation of the very world in which the artist lived, and at one of the periods in which life seems to have been most agreeable. The Florentine republic, at its most dazzling height, lives again for us in these incomparable frescoes. Still earlier, in his "Call of the Apostles", he painted the entrance of a group of fifty figures foreign to the subject portraits of the principal Florentines then in Rome. In his "Visitation" we behold Florentine ladies of the middle class out walking. In "Zachary driven from the Temple" we admire the portrait of the charming Lorenzo Tornabuoni, prince of the Florentine youth and husband of the beautiful Giovanna Alabissi, also those of the artist himself and of his brothers. But it is in the "Apparition of the Angel to Zachary" that this realism finds its fullest expression. This interview, which must have taken place in the retirement of the sanctuary, is presented by the artist before the thirty members of the body of angels, significantly staged on the steps of the Temple. It is in fact a solemn glorification of the great line of Florentine bankers who built this admirable chapel.
aforesaid “Life of St. Francis” may be recognized the banker Sassetti, Lorenzo de’ Medici, Agnolo Acciaiuoli, Paolo Strozzi; in the Sistine Chapel fresco the scholar Argyropoulos, etc.

Behind these living persons it is Florence itself which forms the background of the scene, that admirably well to the end of the sixteenth century in which Botticelli, Leonardo, Angelo Poliziano, and Michelangelo were then living. In the “Life of St. Francis” are depicted the square of the Trinità with the old bridge of Taddeo Gaddi, the façade of the Spinelli and Gianfigliazzi palaces, the Signoria, with the Marzoeco and the Loggia of Oregna. In the “Visitazione,” the view of Florence is that seen from the back of San Miniato (background of the picture of the “Virgin of the Donor”) by H. Van Eyck at the Louvre with the dome of Brunelleschi, the campanile of Giotto, and the tower of the Signoria. Profusely scattered through these pictures are Renaissance ornaments, decorated pilasters, the “petti” friezes like those of the famous tribune of Donatello—“Naivety of the Virgin”—terra-cottas of della Robbia, antique bas-reliefs—“Appearance of the Angel to Zachary”—quite a museum of the artistic fancies of Florence. In the “Preaching of St. John the Baptist,” the figure of the saint is borrowed from Donatello, while in the audience seated behind him among the hearers in the foreground is the reproduction of a celebrated antique, “the Child with the Goose.” But he is most admirable in his power of creating new “antiques”, i.e. of grasping at once their counterparts in actual life. Italian art possesses nothing more beautiful, more Attic, than certain of his “canophs” or young girls of the people, e.g. who form the retinue in the “Marriage of the Virgin”, or the exquisite figure filling a bronze water-basin in the “Naivety.” In fact all this ideal summary of Florentine life breathes the pride and joy expressed in the “Zachary” and the “Angel,” by the inscription: “The year 1490, when the city beautiful among the beautiful, illustrious for her wealth, victories, arts and monuments, was sweetly enjoying abundance, health and peace.”

Ghirlandajo executed several altar-pieces, e.g. the charming “Madonna Inesnati” (Uffizi), the “Adoration of the Shepherds” (1485, Adoration of the Magi” (1488, Hospital of the Innocents) and the “Visitazione” of the Louvre (1491). His portraits, however, are most truly characteristic of his genius. The most exquisite of these, that of Giovanna degli Albizzi (1488, Paris, former Kann collection) has no equal in Florentine portraiture of the fifteenth century, and is far superior to Botticelli’s famous “Bella Simonetta”: indeed, it can scarcely be compared with any other than that of Pollaiuolo at Chantilly. Finally, the “Old Man and the Child” at the Louvre is a work of incomparable ingenuity, displaying a cordiality perhaps unique in Italian art. The picture is one of those which most forcibly recall Flemish good nature; its tenderness and grace of sentiment compel us to overlook the ugliness of the model. About 1480 Ghirlandajo married Costanza di Bartolomeo Nucci (d. 1485). By her he had two sons, Bartolommeo, b. 1481, who entered the Camaldolese Order; and Filippo, b. 5 Feb., 1483, who was like his father a painter. In 1488 the artist took as his second wife Antonia di ser Paolo di Simone Paolo. He died, almost suddenly, of a malignant fever, at the age of forty-five years. His seniety and his joy in life are typical of the Florentine genius prior to the mystical crisis and the deep emotions of that Column. Raphael’s picture was to let the tears of Savonarola, and interfered so profoundly with the artistic vocation of a Botticelli and a Fra Bartolommeo. Ghirlandajo was a joyous soul, amiable, productive, somewhat impersonal, and had the rare good fortune to represent perfectly the Florentine spirit in its golden prime. Like Carpanco at Venice he is perhaps the most national of the Italian masters. He was the instructor of Michelangelo.

Ghislain, SAINT, confessor and anchorite in Belgium; b, in the first half of the seventh century; d, at St-Ghislain (Ursidongus), 9 October, c. 680. He was probably of German origin. Ghislain lived in the province of Hainault (Belgium) in the time of St. Amand (d. 679) and Saints Waudru, Aldegonde, and Madelberthe. With great care he made a clearing in the vicinity of Castricum (now Mons, in Hainaut), taking up later his abode at a place called Ursidongus, where he built an oratory or chapel dedicated to Saints Peter and Paul. Aubert, Bishop of Cambrai, summoned him to the episcopal see in order to sound the intercession of this saint, an unknown hermit, but he afterwards accorded him efficient protection. During his visit to Cambrai Ghislain spent some time in the villa of Roisin and received as a gift the estates of Celles and Hornu. He soon entered into relations with St. Waudru, who was induced by him to build a monastery at Castricum. In his former place of residence the chapel which Ghislain influenced the religious vocation of St. Aldegonde, Abbess of Maubeuge, also of St. Madelberthe and St. Aldestrude, of whom the first was the sister and the last two the daughters of St. Waudru. One day Aldegonde, in her monastery of Maubeuge, had a vision in which, according to her biographer, the death of St. Amand, Bishop of Tongres, was revealed to her. Ghislain visited the saint in her villa of Mairieu, near Maubeuge, and explained to her that the vision was an announcement of her own approaching death. The intercourse between Ghislain and Aldegonde brought about a perfect understanding between Maubeuge and the monastery founded at Ursidongus under Ghislain’s direction. St. Waudru rewarded his counsellor with a portion of the villa of Frameries and of the oratory of St-Quentin, comprised within the boundaries of the villa of Quaregnon. Ghislain died at Ursidongus, and the monastery he founded took his name. The relics of the saint were first disinterred c. 929. They were transferred to Grandieu, near Quaregnon, about the end of the tenth century or the beginning of the eleventh, and in 1025 Gerar I, Bishop of Cambrai, removed them to Cateau-Cambresis. They were visited several times in the course of the Middle Ages by the Bishops of Cambrai. In 1647 they were removed to St-Ghislain, of which place our saint is patron. His feast is celebrated 9 October, and his intercession is sought to ward off convulsions from children. In iconography he is frequently represented with a bear or bear’s cub beside him. This is an allusion to the popular legend which relates that a bear, pursued in the chase by King Dagobert, sought refuge with Ghislain and later showed him the place where he should establish a monastery. Moreover, the site of the saint’s cell was called Ursidongus, “bear’s den.”

Ghost Dance, the principal ceremonial rite of a peculiar Indian religion which originated about 1887

with Wovoka, a handsome Jack Wilson, an Indian of the Piute tribe in Nevada. He claimed to have obtained his revelation in a vision in which he had been taken into the spirit world and talked with God, Who had promised a speedy return of the old Indian life through the reincarnation of all the dead Indians, the buffalo and other animals upon whose very bones his life would be advancing from the west and would push before it the alien whites to their own proper country beyond the ocean, while the Indian believers would be taken up, as by wings, upon the new surface and there reunited with their old-time friends. By performance of the prescribed 'ances' (of which there was a multiplication through the 'dancing' and 'chanting') and the avoiding of excessive consumption, the ceremonies would be hastened, while in the frequent hypnotic trances brought about by the efforts of the priests the more sensitive subjects were enabled to anticipate the event in visions.

The belief spread among nearly all the tribes eastward of the Missouri, and produced much excitement for several years, until several dates for the great change had passed without realization of the prophecy, when the ferment gradually subsided. In Dakota it led indirectly to an outbreak among the Sioux in the winter of 1890-1, notable events of which were the killing of Young Bull and the massacre of White Knees. In the dance, men and women together held hands, facing towards the centre, and danced slowly in a circle, singing the ghost songs, without instrumental accompaniment, while the priests within the circle brought the more sensitive subjects into the trance condition by means of hypnotizing performances. An essential doctrine of the new religion was the brotherhood of man, and in consequence of this all acts and ceremonies of a warlike nature were prohibited.

James Mooney.

Giannone, Pietro, Italian historian, b. 7 May, 1876, at Ischitella in the province of Capitana, Naples; d. at Turin, 27 March, 1748. He received his first instruction in the house of his uncle, Gaetano Argento, a lawyer, and after having received the degree of Doctor of Law at Naples he began to practise his profession, following the example of his father. He devoted all his leisure time to the study of history. After preparatory work extending over a period of twenty years, he published under the title 'Delle istorie civile del regno di Napoli, dal 1168 a 1715' (1723, 4 vols.) a work which created a great sensation, especially on account of its bitter anti-eclesiastical bias, which led to its repeated translation into English and German. In it Giannone combined a narrative of political matters, founded on historical sources, with an interesting description of the juridical and moral condition of the country; but as he ascribes all existing evils to the malignant influence of the Church, especially the Roman Curia, we may justly assume it a compilation of biased attacks and misstatements. It was immediately put on the Index and its author excommunicated and forced to leave Naples. He went to Vienna, where he was presented by Emperor Charles VI. He was readmitted to the Church soon after by the Archbishop of Naples who was in Vienna at the time. Having forfeited his pension in 1744 Giannone went to Venice, but the Government, suspecting him on account of his political opinions, surrounded him with spies. He tried to gain the Goodwill of the Doge by writing a pamphlet and entitled: "Letters interno al dominio del mare Adriatico", eulogizing Venice's conquest of the Adriatic; he was unsuccessful and was forcibly expelled in the following year. After wandering to and fro for a while he accepted the hospitality of an old bookseller in Genoa. There he composed his important anti-clerical essay: "Il triregno ossia del regno del cielo, della terra e del papa" (Genova, 1735, 2nd ed. Rome, 1895, 3 vols.). Enticed to a village in Savoy, he was arrested, imprisoned in the fortress of Ceva, and transported thence to Turin, where he died. It is reported that before his death he was reconciled with the Church. Giannone's posthumous works are: "Opere postume" (Laussanne, 1760; enlarged, Venice, 1765, 2nd ed.); "Opere postume" (Laussanne, 1765; new ed.); "Opere postume" (Laussanne, 1765; 2nd ed.). The first volume contains: "Apologia dell' istoria civile del regno di Napoli; the second: "Indice generale dell' opere dei tre regni". His collected works appeared in Milan (5 vols., 1858.). Later, Mancini published his posthumous works in two volumes (Turin, 1859), entitled "Opere colti e annotati delle opere del Padre Giannone sopra gli annali di Tito Livio"; "Le chiese sotto il pontificato di Gregorio il Grande". The autobiography of Giannone was published by Pierantoni (Rome, 1890).

Nouvelle Biographie Generale (Paris, 1858), XX. 421-424.

Patrius Schlagel.

Gibault and Batrun, a Maronite residential see. Gibail is merely the modern name of Byblos (q. v.) a town of Phoenicia. The diocese, the See of Gibail, and Batrun, is nominally under the Maronite patriarch through auxilliary bishops, comprises the civil districts of Ehden, Bcharr, Gibail and Batrun. It numbers 70,000 faithful, 470 priests, 277 churches and chapels, 14 convents of Bala- dites containing 177 religious, 2 of Apelles containing 8 religious, and 2 of Oblates containing 11 religious. There are also two religious houses in which there are 58 sisters. The patriarch resides at Bkerkey, where the patriarchal seminary of Saint-Jean-Maron is also situated, in which there are 30 students. Another seminary containing 32 students has been opened at Rachay. The question of dividing the diocese in such a manner that Gibail should form one diocese, and Batrun another, has been much discussed in recent years. Gibail is a town of about 1000 inhabitants, nearly all of whom are Christians, 650 being Maronites. There are 13 churches; three of them dating from the Crusades are very beautiful. The Catholic Melchite title of Gibail is united to that of Beirut; since 1902 the schismatic Melchite Diocese of Gibail is distinct from Beirut, and has jurisdiction over the mountainous region of Lebanon.

Missiones Catholicæ (Rome, 1907), 818.

Gibault, Pierre, missionary, b. at Montreal, Can- ada, 1737; d. at New Madrid, about 1804; son of Pierre Gibault, curé of Cape Vincent, 1728-37. He was educated at the seminary of Quebec, and ordained a priest 19 March, 1768. Shortly afterwards he was sent by Bishop Briand as missionary, with the title of Vicar-General, to Illinois. In July he arrived at Michilimackinac, where he spent a week attending to the religious wants of the Catholics, some of whom had not seen a priest for many years. By September he had fixed his residence at Kaskaskia. Later he re- sided successively at St. Genevieve, Vincennes, and Cahokia. In February, 1770, he visited Vincennes, where he found religion in a deplorable state. During the sojourn of two months at this place he converted a Presbyterian family, and became their pastor among the Catholics. In this year also, he blessed the little wooden chapel that had been erected at Pain- court, the present site of St. Louis. In spite of many difficulties and in the face of grave dangers incident to long journeys, he succeeded in vastly improving religious conditions in the scattered missions of the sur- rounding country. His journeys led him to such dis- tant points as Peoria, Ouiatenon, St. Joseph's, and Michilimackinac. In 1775 he wrote to the Bishop of Quebec: "This is the fourth voyage I have taken, the shortest of which was five hundred leagues." For a long time he was the only priest in Illinois and Iow-a. When George Rogers Clark captured Kaskaskia, in 1778, it was largely owing to Father Gibault's
influence that the inhabitants submitted without protest, and took the oath of allegiance to the Commonwealth of Virginia. Through his influence also the people of Cahokia took the same step. As a volunteer agent of Clark he then proceeded to Vincennes, and won the people of that post to the American cause. In consequence of his services, and of the approbation of the Indians, he had the right of inspecting their territory. In 1791 he left Illinois, then a part of the Diocese of Baltimore, and retired to the Spanish territory beyond the Mississippi.

Gibbons, James. See Baltimore, Archidioceze of.

Gibbons, John, Jesuit theologian and controversialist; b. 1544, at or near Wells, Somersetshire; d. 1623. He went as a youth to the University of Oxford, and in 1561, but left the university without a degree. After studying philosophy and theology for seven years in the German College, Rome, he obtained the doctorate in both, 1576. Gregory XIII gave him the canonry in the Cathedral of Bonn, in Germany, but he resigned this on entering the Society of Jesus at Trier, in 1578. In the college of this latter place he filled successively the offices of professor, professor of theology, professor of Sacred Scripture, prefect of studies, and rector. Though remarkable for his zeal, charity, and admirable administrative ability, he became more eminent on account of his controversial talents, which he displayed in frequent contests with the Lutherans of Germany. When Dr. Allen asked Father Gibbons as a fit candidate for the English mission, the latter wrote both to the Society of Jesus in Rome, and Dr. Allen, that he hoped he should give no disedication by saying that he had not the spiritual strength necessary for such an enterprise, but that he would lend it all the assistance in his power.

Among his literary works must be mentioned: "De planctu et victoria Catholicae Artis, contra Calvino-Papistas et Puritanos" (Trier, 1583). The work was republished on a larger scale in 1588 and 1594, by Dr. John Bridgewater, who numbered among his assistants Cardinal Allen and Dr. Humphrey Elv. Dr. Bridgewater also edited (see, however, Dict. Nat. Biog., s. v.) a posthumous work of Gibbons entitled "Confutatio virissimae disputationis theologicae in qua Georgius Sohn, Professor Academiae Heidelbergensis, conatus est docere Pontifici Romanum esse Antichristum a prophetia et apostolis predicatum" (Trier, 1589). The Calvinst aspersions on the Roman pontiff are disposed of without much difficulty.

Gibbons, Richard, brother of Father John Gibbons, b. at Winchester, 1550 or 1549; d. at Douai, 23 June, 1632. After making his early studies in England, and completing a two years' course in philosophy at Louvain and in the German College at Rome, he entered the novitiate with the Jesuits, 1576, and continued his studies for three years. After his ordination, he taught mathematics for thirteen years, philosophy for ten, scholastic theology for three and for some time also Hebrew and Scripture, dividing his time between Italy, Spain, Portugal, France, and Belgium. For a while he occupied the offices of prefect of studies at Louvain, and of preacher in the Jesuit College at St-Omer. His later years were spent at Douai, printing ancient manuscripts, and in translating editing, and annotating, ancient religious works. The following deserve to be noticed: "Historia admiranda Jesu Christi stigmatibus ab Alphonso Paleolo Archipiscopi. II. Bononiensis explicantia. Accessit tomus II . . . Historiae admirandae . . . complectens M. Vigerii S. R. E. Cardinale de praecepto et praenotatorio Incaniari Vitae . . . v. (Douai, 1616). . . "R. P. Francisci Ribera . . . in librum Duodecim Prophetarum commentarii . . ." (Douai, 1612). "Historia Anglicana Ecclesiastica: a primis gentibus susceptae fidei incunabulis ad nostra fere tempora deducta . . . autore Nicolao Harpsfeldio" (Douai, 1622). "Ludovici de Ponte Meditacionum de Vita et Passione Christi, Libri II, ex Hispanico in Latinum versi" (Cologne, 1612). "A Spiritual Doctrine, containing a Rule to Live Wel, with divers Praiers" (Louvain, 1599). "Meditations upon the Mysteries of our Holy Faith, with the Practice of Mental Praier . . ." (Douai, 1610). "The First Part of the Meditations of the Passion and Resurrection of Christ our Saviour" (1614). "Translation of Bellarmine's Christian Doctrine".

Gibert, Jean-Pierre, canonist; b. at Aix, Provence, in 1660; d. at Paris in 1736. He became a cleric at an early age, receiving the tonsure only; he studied at Aix, and became doctor of theology and canon law. He taught ecclesiastical law in the seminaries of Toulon and Aix, and settled in Paris in 1703, where he lived and worked in retirement.

His principal works are: "Doctrina canonum in corpore juris inclusorum, circa consensum parentum requisiitum ad matrimonium filiorum minorum" (Paris, 1709); "Institutiones eclecticae et beneficiaciae sui principes privatae, et prin. cipis ad voluntatem et studium dei, et eandem descriptionem sacrae et divinae" (Paris, 1719); "Defensio et explication de l'Eglise gallicane concernant les censure et l'irregularité considérées en général et en particulier" (Paris, 1724 and 1750); "Tradition ou Histoire de l'Eglise sur le sacrement de mariage" (Paris, 1725); "Consultations canoniques sur les sacrements" (Paris, 1725); "Consensus canonum" (Paris, 1735); "Concerning the order of the Sacrament: a mystical and general dissertation concerning the natural order of digestion, the heat of the elements, the emission from the泄continuity, and what may be the satisfactions of the sacrament" (Geneva, 1736; Lyons, 1737); a masterly work on canon law in which the writer deviates from the order of the Corpus Juris. Gibert was a moderate Gallicantian. Moreau, Grand Dictionnaire historique (Paris, 1739), quotes a letter from the Oratorian Bougerel (Paris, 1737), which gives a synopsis of Gibert's life: NICHEZ, Memoires pour servir a l'histoire des hommes illustres de France, 1727—30; XII, 264; SCHRITZ, Geschichte der Quellen und Literatur des canonischen Rechts (Stuttgart, 1880), II, 637.

A. BOUINNON.

Giberti, Gian Matteo, Cardinal, and Bishop of Verona, the natural son of Francesco Giberti, a Genoese naval captain, b. at Palermo in 1495; d. at Verona, 30 Dec., 1543. In 1513 he was admitted to the house of Cardinal Giulio de' Medici, and advanced as rapidly in Latin and Greek that he soon became an eminent member of the "Accademia Romana". Later he was appointed the cardinal's secretary, and Leo X, with whom he had political dealings, valued his opinions and advice very highly. In 1521 he was chief of the chancery of the Pope, and through his great influence over the pope to protect and help struggling men of letters. The choice intellects met
at his house. He led a severely religious life, and was a member of the Sodalitium Divini Amoris of St. Cajetan and Cardinal Caraffa. After his ordination to the priesthood at the cathedral of Verona, he went to Rome and was appointed to the papal court. Cardinal Giulio, his patron, on a mission to Charles V, and returned to Rome with the new pope, Adrian VI. Clement VII immediately after his election made him Datario (1523), and in 1524, at the request of the Doge of Venice, he was appointed Bishop of Verona. Being elected to the See, he went to the Romano, and himself represented at Verona by a very zealous vicar-general. Giberti was chosen a member of the Reform Committee decreed by the Fifth Lateran Council, but political events soon put an end to these labours. At Pavia (1525) he tried to make peace between Francis I and Charles V. It was at this time that Clement VII espoused the cause of France; the League of Cognac (22 May, 1526) was also his work. After the sack of Rome (1527) he was made to feel the vengeance of the Imperialists: being one of the hostages, he was put in prison and barely escaped death. He succeeded in making his escape, and went to Verona (1528) intending to devote himself entirely to the ruling of his diocese. He was done with politics, all the more because the pope had gone over to the imperial cause. However, he appeared from time to time in the Curia. Paul III recalled him to Rome for the work of the Reform. Among his missions was a sojourn to Trent to make preparations for the council. His wise and unwearying efforts to reform his diocese, whose clergy were in a deplorable state, were crowned with unlooked-for success. In that see Tridentine reforms were put in force long before the council assembled. St. Charles Borromeo, before taking charge of his see at Milan, wished to study Giberti’s system at Verona, and chose as his vicar-general a priest from Verona trained in Giberti’s school. His first aim was to improve the standard of ecclesiastical knowledge. In his own palace he set up a printing-press which turned out many splendid editions of the Greek Fathers, in whose writings he was very learned. He reformed the choir-school of Verona which had long been famous; for the instruction of the young he had printed the catechism known as “Dialogus,” the work of Tullio Crispoldi (Rome, 1539). At Verona, moreover, he gathered around him a group of learned men to assist him in that work. In 1536, Langue was edited by the famous scholars Pietro and Girolamo Ballerini (“Constitutiones Gibertine,” “Costituzioni per le Monache,” “Monitones generales,” “Edicta Selecta,” “Lettere Seclite,” etc., Verona, 1733, 1740), together with an appendix containing the story of his life. For the restitutio with the title of Januarius per Jo. Matth. Giberti ecclesiasticâ disciplinâ, and two panegyrics, one in Latin by Fumani, the other in Italian by Castiglione.

Dittico in Hist. Jahrbuch der Giessengemeinschaft (1828), VII, 1-80;粪in Kirchen, X, 383-93; also the excellent account by Pastor, Gesch. der Päpste, 1V (2), 600 eqq.

U. BENIGNI.

Gibney, Matthew. See Perth, Diocese of.

Gibraltar, Vicariate Apostolic of.—Gibraltar is a rugged promontory in the province of Andalusia, Spain, about 6 miles in circumference. Its almost perpendicular walls rise to a height of 1396 feet. The town is on the west side; on the north a narrow isthmus (neutral ground) connects the fortress with the mainland of Spain. The great rock itself is the ancient Mount Calpe, which with Abyla (Ceuta) constituted the famous Pillars of Hercules. In antiquity Gibraltar belonged to the Phoenicians, Carthaginians, Romans, and Visigoths. Scipio took it from the Carthaginians, and it remained Roman territory until A. D. 412, when the Goths became masters of Spain. Being Arians, they built two churches of their faith in the vicinity of Calpe; one at San Roce, the other, a chapel, on the rock itself. In 710 the Visigoth king

dom in Spain, after an existence of 300 years, was torn with internal strife. Amid this dissension the Moors crossed from Africa, for the second time (711), under their leader Tarik, but were repulsed at Carmona by Alonso de Guzman. By 1462 it had sustained eight sieges, with varying fortune. The last of these was under Alonso de Arcaes, who captured it from the Moors in 1462, the surrender on this occasion taking place on 20 August, the feast of St. Bernard, in consequence of which he became the patron of Gibraltar. The Infante Alonzo gave the city and territory of Gibraltar to the Duke of Medina-Sidonia in absolute and perpetual possession for himself and his successors. Ferdinand and Isabella confirmed this gift, conferring on the Duke of Medina-Sidonia the title of Marquis of Gibraltar; at a later period, however, during the same reign, the place was annexed by the Crown.

During the War of the Spanish Succession, which began in 1701, Gibraltar was besieged (1704) by a squadron commanded by Sir George Rooke and a land force of 1800 English and Dutch under Prince George of Denmark. After three months’ preparations the fortress was captured (24 July). The fortress had 100 cannon and ammunition, but a garrison of only 150 men; the inhabitants were reduced to 6000. After a bombardment of six hours the garrison surrendered.

Before a year had passed Spain endeavoured, with the help of France, to recapture Gibraltar. In this, the twelfth siege of Gibraltar, the attacking party had a great preponderance of numbers, but the fortress successfully resisted all their efforts to capture it. By a special decree of February, 1706, Queen Anne declared Gibraltar a free port. In 1713, by the Treaty of Utrecht, it became definitively a British possession, though many attempts were made by the Spaniards to regain it. The last siege, the fourteenth in its history, began 14 July, 1779, and continued for 3 years, 7 months, and 12 days. In April, 1782, the French and Spaniards again bombarded Gibraltar by land and sea, but without success. A peace was finally concluded by which Spain ceded to Great Britain the island of Gibraltar. When the city was occupied by the English in 1704, the Spaniards carried away whatever they could and settled in the neighbouring district of San Rocco. Scarcely a dozen persons remained in Gibraltar. It was subsequently populated by people of every nation, except, of course, by the Moors. The Moorish origin is evident from the various family names. Spanish is generally spoken by the people, though English is the tongue of public administration.

The population (1908) numbers about 25,000, of whom 16,000 to 18,000 are Catholics; and the rest Jews, Protestants, etc. Thearrison varies in number from 3,000 to 5,000 men. Gibraltar is ruled by special laws; has a military governor, an admiral, and a colonial secretary. The Anglican Bishop of Gibraltar does not reside there. Until 1806 Gibraltar belonged to the See of Cadiz. In that year it was made a vicariate Apostolic (since 1840 the vicar is always a titular bishop). The Catholic clergy number 11 secular priests and 5 religious. There are 8 churches and chapels; 3 religious houses for men and 4 for women, with a total of 28 and 61 members respectively. There is but one parish, though three of the churches have each a resident priest. There are public institutions provided for by 6 boys’ schools (1136) under the Christian Brothers and the Brothers of St. John of God, and 8 girls’ schools (1126). There is also an institute for the higher education of boys (141) and two similar ones for girls (174). There are many other private institutions and schools, the most im-

...
important of which is the Rook Academy under the direction of M. Sitman. The poor are cared for in 3 asylums, and there are 2 orphan asylums (65); for the aged, also, there is a house of the Little Sisters of the Poor. Giffard, b. at Wolverhampton, England, 1642; d. at Hammersmith, Middlesex, 12 March, 1734; second son of Andrew Giffard, of Chil-lington, Staffordshire. His father, who married Catherine, daughter of Sir Walter Leveson, was slain in a skirmish near his own home, during the Civil War. Owing to the religious persecutions, Bonaventure was sent, with his younger brother Andrew, to Douai to be educated. From Douai, in October, 1667, he went to Paris to pursue his theological studies, and was ordained for the secular mission. Some years later, he received the degree of Doctor of Divinity at the Sorbonne. Having attracted the attention of Kt. James II by his piety and learning, he was appointed preacher to the court. Religion had been in sore straits in England for the previous fifty years. Dr. Smith had been appointed vicar Apostolic of the whole country in 1625, but such was the persecution that he was forced to withdraw to France in 1631, where he remained till his death (1655). For nearly thirty years more his place in England remained unfilled; finally, in 1685, Dr. Leyburn was appointed to succeed him. Pope Innocent XI now entered into negotiations with James II; and, as a result, four vicarates were formed, Dr. Giffard being put in charge of the Midlands. He was consecrated bishop of Whitehall, by the nuncio, on 22 April, 1688. In religious matters James II displayed too little prudence, and by his high-handed actions gave great offence to the Protestants. Not only did he compel the authorities of Magdalen College, Oxford, to accept Bishop Parker as their president; but, on Parker’s death (1688), he had twelve Catholic fellows appointed, and made Dr. Giffard president, despite the fact that the college electors had selected a Protestant, John Hough. The king’s nominee took up his residence there on 15 June, 1688. A storm of opposition arose, and he was ejected about a year later. The Revolution followed, and the bishop was seized and imprisoned at Newgate, where he remained nearly two years. He was released on bail, in 1690, and for more than twenty-four years led a perilous life, being frequently compelled to hide from the pursuers. When Dr. Leyburn died, in 1703, Bishop Giffard was charged to look after his diocese, and from 1708 till 1713 he had to govern the Western vicariate as well. In this he was aided by his brother Andrew, his vicar-general, till the latter died, 14 Sept., 1714. Henry Howard was nominated as coadjutor to Dr. Giffard in 1720; but, as he died before his consecration, Benjamin Petre was appointed. The old bishop passed away fourteen years later, in 1734, at the age of ninety-two. He was buried beside his brother Andrew, in the churchyard of St. Pancras. A few of his sermons have been preserved, and many of his interesting letters were printed in the “Catholic Miscellany,” in 1826 and 1827.

A. A. MACERLEAN.

Giffard, Godfrey, Bishop of Worcester, b. about 1235; d. 26 Jan., 1301. He was the son of Hugh Giffard of Boyton in Wiltshire, and Sybil, the daughter and coheir of Walter de Cornelles. His elder brother Walter became Archbishop of York (d. 1279). During the earlier part of his life his success was bound up with that of his brother. When in May, 1264, Walter was elected Bishop of Bath and Wells, Godfrey was consecrated and subsequently archdeacon of Wells; he also held many other benefices, although only in minor orders, and, as his enemies alleged, not learned. When in August, 1265, Walter became chancellor, Godfrey in 1266 was appointed Chancellor of the Exchequer, with leave to attend a substitute to act during his absence. When in October, 1266, Walter was translated to York, Godfrey succeeded him as Chancellor of England, and received further benefices from the new Archbishop of York, becoming archdeacon of York and rector of Aldingdeet in 1267. When Bishop Nicholas of Ely was translated from the See of Worcester to that of Winchester, Godfrey was elected by the monks; he received the temporalities of his see in June, 1268. One of his first acts as bishop-elect was to obtain licence to continue the work, begun by Walter Cante-lupe, of building and fortifying Hartlebury Castle, which has ever since been the principal palace of the Bishops of Worcester. He was consecrated in the Abbey of Canterbury, 23 Sept., 1268, and his enthronement 25 December. During his chancellorship a parliament was held at Marlbridge (52. H. 3) where many useful laws were passed for restraining the abuse of distresses, regulating the incidence of tenure, and imposing civil and criminal procedures; a view of general jurisprudence they display is remarkable, and if he did not frame them himself, he deserves credit for having had the wit to employ the superior men who did. He continued in office as chancellor until 28 Oct., 1299, when he handed over the seal to his son.

As bishop Giffard devoted himself to the care of his diocese which he ruled for nearly thirty-four years. In the course of those years two affairs caused him considerable trouble: the disputes with the monks of Worcester cathedral, and that with Malvern Priory. The Worcester feud lasted down to the bishop’s death, and reached such a height that when, in 1300, Archbishop Winchelsey visited the priory, the monks presented a formal accusation against the bishop containing thirty-six articles of varying importance to which Giffard’s satisfactory answers are still extant. The dispute appears to date from 1288 and must have been considered that the rights of the church of Worcester had been infringed by the bishop’s refusal to allow their precentor to summon those who were to be ordained at an ordination at Westbury. The feeling aroused was intensified by the bishop’s attempt, in 1288, to annex the churches in his gift to the prebendary in the church of Westbury. This was eventually decided in the bishop’s favour in the Arches Court in 1297. Relations were, moreover, strained because of the unwillingness of the priory to admit the bishop’s visitations. The difficulty with the priory at Great Malvern was even more complicated. The cause was a claim made by the priory to be independent of the bishops of Worcester, and dependent upon the Abbot of Westminster. The relations between the two houses had been settled in 1217. Giffard’s predecessors had had continual trouble with the same priory. The present struggle with Richard of Ware, Abbot of Westminster lasted from 1279 until 1283 and was not really ended then. The climax was reached in September, 1282, when Giffard, as visitor, at the request of some of the monks, deposed the unworthy prior, William of Ledbury. A violent conflict followed, full of incidents, appeals, and counter-appeals and finally the king had to intervene to bring about a compromise.

Besides building the castle at Hartlebury, and rebuilding the church there, Giffard built magnificent mansions at Wick and Alvechurch. Moreover he
ornamented the eastern part of the cathedral with the small columns of marble having joints of gilded brass, which form one of the most graceful characteristics of the present choir and Lady chapel. Even after retiring from the chancellorship he still exercised certain judicial functions, as when, in 1272, with Roger Mortimer he enquired into the injuries done by the townpeople of Oxford to the scholars; and, in 1278, he was at the head of the justices itinerant for the counties of Hereford, Hertford, and Kent. He was buried on 4 Feb. in his cathedral church (Ann. Monast., IV, 361).

Edward Myers.

Giffard, William, second Norman Bishop of Winchester from 1100 to 1128. Little is known of his life before his consecration and that he was twice successively canon and dean of Rouen, and ably filled the office of chancellor to William the Conqueror (d. 1087), William Rufus (d. 1100), and Henry I. Since the death of Bishop Walkelin in 1098, no appointment had been made to the See of Winchester during the remaining years of the reign of the Confessor, which were appropriated by the king. The very first act of Henry I (Stubb's, "Const. Hist." Oxford, 1891-5, 1, 320, after his election as king at Winchester, in Aug., 1100, was to give a token of his good will to the Church by filling the See of Winchester, and he caused William Giffard, who was still under deacon, to be duly consecrated bishop. Henry may have wished to provide himself with a strong supporter in the episcopal body, but, from the first, William would appear to have realized that the points at issue between the king and the Church had become part of the great European quarrel of investitures, and declined to accept the pastoral staff from the king's hands. At the moment, the support of churchmen was necessary to assure Henry's position; he was too prudent to force the acceptance of the sacred symbol, and Giffard was immediately invested with the temporalities of the see. It only remained for the new Bishop to resign the See of Winchester, and when St. Anselm had returned from exile, and, strengthened by the decision of the council held at the Vatican in 1099, declined to become the homo of a layman.

An uneasy time followed, and embassies were sent to Rome. As bishop-elect, Giffard assisted at the council held at Westminster, 20 Sept., 1102. In spite of his agreement with Anselm, Henry invited the Bishops-Elect of Salisbury and Hereford, and requested Anselm to consecrate them. Anselm was willing to consecrate Giffard, but in spite of the king's repeated insistence declined to consecrate the others. Giffard, for a time, had the temporalities of the Bishopric, which he bore as his crozier; the consecration ceremony of the remaining two had already begun when Giffard, conscience-stricken, declined to take further part in it. The king failed to intimidate him and he was sent into exile, and his goods confiscated. He had a constant friend and adviser in St. Anselm, and when the latter set out for Rome in April, 1103, Giffard went with him. Anselm's long stay at Lyons began about Christmas, 1103. In the meantime Giffard had been allowed to come back to England; for in 1105 he signed, together with the bishops, the petition begging Anselm to return. Eventually a compromise was effected, Anselm returned 1 Aug., 1107; the rights and liberties of feudal homage were retained, but the special form of the gift of ring and crosier was given up by the king. Giffard, who had been ordained priest quietly the day before, was consecrated by Anselm on 11 Aug., 1107.

He regained Henry's confidence and acted for him in several matters of ecclesiastical interest. As Bishop of Winchester one of his first duties was to act as chief commissioner in the completion of the Domesday Book of Winchester, that royal city having been omitted from the Domesday Book of the Conqueror. In 1110 he negotiated with the king and the community the removal of the so-called "New Minster" (or St. Grimbald's Abbey) founded by King Alfred, which stood in very inconvenient proximity to the cathedral on the north side, to a site outside the city, under the name of Hyde Abbey.

Eventually this led to serious difficulties with the monks of the cathedral community, in consequence of the bishop's having alienated certain revenues which they conceived to belong to them. The difficulty culminated in 1122 in a strange symbolic pageant by the monks, and the interference of the king. Peace was made, and the bishop grew more and more attached to the community, spending most of his time among them, taking his meals with them, wearing the cowl, and eventually dying in their infirmary. The Canons Regular of St. Augustine were welcomed to England by Bishop Giffard and for 40 years flourished at Overy's (now St. Saviour's) in Southwark; near their stately church he built the town-house of the Bishops of Winchester. To him also belongs the honour of giving a first home in England to the monks of the Clarissan Order, by establishing, in Nov., 1128, a priory of St. Mary of Graces near Winchester, a filiation of L'Amoune in the Diocese of Chartres. He died on 25 Jan., 1129, and was buried in the nave of his cathedral church near his predecessor Walkelin.

Edward Myers.

Gifford, William, Archbishop of Reims; b. in Hampshire, 1554; d. at Reims, 11 April, 1629. He was the son of John Gifford, Esquire, of Westover-under-Edge, Gloucestershire, and Elizabeth, daughter of Sir George Throckmorton, Knight, of Coughton, Warwickshire (Wood, "Athen. Oxon.", below). He was sent to Oxford in 1569, where he was entrusted to the care of his uncle, Bishop Gifford of Winchester. The bishop was a Catholic at heart. Gifford remained at Oxford for about four years, part of time he spent in the celebrated boarding school kept by the Catholic physician Etheridge, whether he had been removed on the compulsory retirement of Bridgewater for refusals to conform. After this period, Gifford, accompanied by his tutor, proceeded to Louvain (1573), where he pursued his studies, and took the degree of M.A. (Athen. Oxon.). After having also obtained his baccalaureate in theology on the completion of a four years' course in that science under Bellarmine, Gifford was forced to quit Louvain owing to the disturbances in the Low Countries. Proceeding thence, he retired to his old ecclesiastical studies at Paris, at Reims, which he visited (1577) at the invitation of Dr. Allen, and at the English College at Rome, of which he was admitted a member on 15 Sept., 1579 [Foley, "Records of the English Province", etc., VI (London, 1880), 139; but compare statement there given as to age with date of birth above]. Having been ordained priest in March, 1582 (Foley, "Records", loc. cit.), he was recalled to Reims by Allen as professor of theology at the English College ("Douay Diaries", infra: Diarium Primum, 11; Dianam Secundum, 1590, note statement as to age). The degree of Doctor of Divinity was conferred on him in December of 1584 at Pont-a-Mousson in Lorraine, after which, returning to Reims, Gifford taught theology at intervals for nearly twelve years.

On Allen's elevation to the cardinalate, Gifford
accompanied him to Rome in the capacity of chaplain, and it is said that during this visit he resided for a time in the household of St. Charles Borromeo, who at this time (1597) Gifford was preferred to the deanery of Lille, which office Clement VIII conferred on him at the instance, it is alleged, of The Archbishop of Milan. This dignity he retained for about ten years, and, after his withdrawal from Lille (c. 1606), he was made Archbishop of the NaturalUniversity of Paris in 1606, Gifford, who had always held the Benedictines in high esteem and befriended them in many ways, took the habit of that order and subsequently became prior at Dieulouard (Dieulevert). In 1611, Father Gabriel of St. Mary, as Gifford was known in religion which was laid out and laid the foundation of the Order of the Benedictines of the Inhabitants of St. Malo. He was favourably received by the bishop, and a chair of divinity was assigned to him (Petre, op. cit. infra). He was one of the nine definitors chosen in 1617 to arrange the terms of union among the Benedictine congregations in England, of which province he was elected first president in May of the same year. In 1618, Gifford was consecrated coadjutor to Cardinal Louis de Loraine, Archbishop of Reims, with the title of Episcopus Archidialis (Bishop of Archbishop). On the death of Guise, he succeeded to the archbishopric, becoming also, by virtue of his office, Duke of Reims and First Prince of France.

Before his death, which occurred in 1629, he had acquired a high reputation as a preacher. His writings include: "Oratio Funebris in exequis venerabilis viri dominii Maximiliani Manare prepositi ecclesiae D. Petri oppidi Insulenses" (Douai, 1608); "Orationes diversae" (Douai, 1609); "Calvino Turismus", etc. (Antwerp, 1597 and 1603). The latter work, begun by Dr. Reynolds, Gifford completed and edited. He translated from the French of Fronto-Ducatus, S.J., "The Inventory of Errors, Contradictions, and false Citations of Philip Murray, Lord of Plessis and Moruay". He also wrote, at the request of the Duke of Guise, a treatise in favour of the League. The "Sermones Adventuales" (Reims, 1625) were a Latin rendering by Gifford of discourses originally delivered in French. He assisted Dr. Anthony Champney in his "Treatise on the Protestant Ordinances" (Douai, 1624). The history of Gifford's Monastery is destroyed in the burning of the monastery at Dieulouard in 1717.

F. J. MACAULEY.

GIFT. Supernatural, may be defined as something conferred on nature that is above all the powers (vires) of created nature. When God created man, He was not content with bestowing upon him the essential endowments required by man's nature. He raised him to a higher state, adding certain gifts to which his nature was not capable. These gifts comprise various graces and perfections, forces and energies, dignities and rights of destination to final objects, of which the essential constitution of man is not the principle; which are not required for the attainment of the final perfection of the natural order of man; and which can only be communicated by the free operation of God's goodness and power. Some of these are absolutely supernatural, i.e. beyond the reach of all created nature (even of the angels), and elevate the creature to a dignity and perfection which God and others are only relatively supernatural (preternatural), i.e. above human nature only, and elevate human nature to that state of higher perfection which is natural to the angels. The original state of man comprised both of these, and when he fell he lost both. Christ has restored to us the absolutely supernatural gifts, but the preternatural gifts He has not restored.

The absolutely supernatural gifts, which alone are the supernatural properly so called, are summed up in the Divine adoption of man to be the son and heir of God. This expression, and the explanations given of it, make it evident that this adoption is something far more than a relation founded upon the absence of sin; it is of a thoroughly intimate character, raising the creature from its naturally humble estate, and making it the object of a peculiar benevolence and complaisance on God's part, admitting it to filial love, and enabling it to become God's heir, i.e. a partaker of God's own beatitude. "God sent His Son ... that he might redeem them who were under the law: that we might receive the adoption of sons ( ¿ ε&psilonbeta&omicroneta&omicrona). And because you are sons, God sent the Spirit of His Son into your hearts, crying: Abba, Father. Therefore now he is no more a servant, but a son; and if a son, then an heir (Gal., iv, 4–7) "Who hath blessed us with [all] spiritual blessings in heavenly places, in Christ ... Who hath predestinated us unto the adoption of children (¢&omicroneta&omicrona) through Jesus Christ unto himself" (Eph., i, 3–5). "Behold what manner of charity the Father hath bestowed upon us, that we should be called, and should be the sons of God" (I John, iii, 1). Further, this exalted estate is described as a communication or partnership with the only-begotten Son of God, a participation in the privileges which are peculiar to Him in opposition to mere creatures. "That they all may be one, even as we, Father, in me, and I in thee; that they also may be one in us. . . . And the glory which thou hast given me, I have given to them; that they may be one, as we also are one: I in them, and thou in me; that they may be made perfect in one" (John, xvii, 21–23). It is also styled "fellowship (ì&omicroneta&omicrona)" between the Father and Son with his Son" (I John, i, 3); and "the communication (ì&omicroneta&omicrona) of the Holy Ghost" (II Cor., xiii, 13). Divine adoption is a new birth of the soul (John, i, 12; i, 3; i, 5; I John, iii, 9; v, 1; I Pet., i, 3; and i, 23; James, i, 18; Titus, iii, 5; Eph., ii, 5). This regeneration implies the conferring of a new life, a new nature, a new endowment in body and life, resulting from a special Divine influence, and admitting us to the dignity of sons of God. "For whom he foreknew, he also predestinated to be made conformable to the image of his Son; that he might be the firstborn among many brethren (Rom., viii, 29)." Cfr. also II Cor., i, 18; Gal., iii, 26, 27; iv, 19; Rom., xiii, 14. As a consequence of this Divine adoption and new birth we are made "partakers of the divine nature" (ì&omicroneta&omicrona Ò&omicroneta&omicroneta µ&omicroneta&omicroneta, II Pet., i, 4). The whole context of this passage and the passages already quoted show that this expression is to be taken as literally as possible; not, indeed, as a generation from the substance of God, but as a communication of Divine life by the power of God, and a most intimate indwelling of His substance in the creature. Hence, too, the inheritance is not confined to natural goods. It embraces the possession and fruition of the good which is the natural inheritance of the Son of God, viz., the beatific vision. "We know not what God hath not yet appeared what we shall be. We know, that, when we shall appear, we shall be like to him: because we shall see him as he is" (I John, iii, 2). "We see now through a glass in a dark manner; but then (in the beatific vision) face to face" (I Cor., xiii, 12). The Fathers have not hesitated to call this super-
natural union of the creature with God the deification of the creature. This is a favourite expression of St. Ireneus ("Adv. Haer.", III, xvii, xiv; IV, xx, etc.), and is frequently used by St. Athanasius (see Newman, "St. Athanasius", II, 88). See also St. Augustine ("De Nat. Dom.",) quoted by St. Thomas (III, Q. i, a. 3).

In order to live worthily of our Divine dignity and to attain our Divine end, we stand in need of supernatural aid. This supernatural aid to a supernatural end is called grace (q.v.). For our present purpose it will be well to note that grace is either habitus (i.e. sanctifying, making us pleasing to God) or actual (i.e. enabling us to produce works deserving of salvation).

There are other aids sometimes bestowed less for our own benefit than for the benefit of others. These are called gratiae gratiae date (charismata, q.v.). They do not directly and immediately help to the attainment of our end, but assist as it were from without. The theological virtues and the moral virtues are graces properly so called. As, too, are the gifts of the Holy Ghost (see Holy Ghost).

It may be well here to say a few words on the preternatural (relatively supernatural) gifts bestowed on our first parents, which are sometimes confused with the supernatural gifts properly so called. In the beginning exempted man from the inherent weakness of his nature, i.e. the infirmities of the flesh and the consequent infirmities of the spirit. He made man immortal, impassible, free from concupiscence and ignorance, and lord of the earth. These legacies are beyond man's nature, but not beyond that of some higher creature (e.g. the angels); hence they are preternatural (preter naturam). The Fathers look upon them as a glorification of nature, applying the words of Ps. viii., 5-9. In point of fact these gifts were not conferred apart from the supernatural gifts; a preternatural state is, however, conceivable, and the separability of the two sets of gifts is clear from our now possessing the supernatural without the preternatural gifts. Although distinct and separable, yet integrity and grace, when bestowed together, unite into one harmonious and organic whole. The Fathers look upon this union in the original state of man as an anticipation of his state of final beatitude in the vision of God, so that grace bears to integrity the same relation which the future glory of the soul bears to the future glory of the body. Integrity and grace, when compelled to man to the goodness with God attainable in this life; they dispose and prepare him for the still more complete likeness of eternal life."

Gilbert, Nicolas-Joseph-Laurent, poet, b. at Fontenoy-le-Château, 1751; d. at Paris, 12 November, 1793. As a student he was poor farmers. He pursued his studies at the Collège de l'Arc at Dôle, where the professor of literature boasted of having made poets of all his pupils except Gilbert. Upon leaving college in 1769, he settled at Nancy and tried to open a public course in literature. In 1772 he composed unsuccessfull for a prize at the French Academy. In 1774 he went to Paris, where Fréron won for him the favour of the archbishop. Young and unknown, he had the courage to oppose the triumphant and all-powerful chiefs of the philosophical party. Although there is a little juvenile audacity in the fury of his attacks, the sincerity of his religious convictions cannot be doubted. He died of brain fever caused by a fall from his horse. His enemies reported that he died insane, the partisans claimed that he was killed in hospital. Neither report is true. After the accident which caused his death, he was taken to the Hôtel-Dieu, but was soon removed to his own house, where he died. The story of his poverty is untrue, for at the time of his death he was drawing three pensions, which the church contributed for habitus, rather than to inseminate. Gilbert's works consist of a Persian novel, "Les familles de Darius et d'Eridame" (Paris, 1770), a satire in prose, "Le carnaval des auteurs" (Paris, 1773), a few odes, and satires. Three pieces, one ode and two satires, have given him a lasting reputation: the "Ode imitée de plusieurs poèmes" (1778), usually known under the title of "Adieux à la vie", struck the first personal and melancholy notes which were the characteristic of the Romantic school; in the satires "Le dix-huitième siècle" (1775) and "Mon apologie" (1778) there is a force, movement, and eloquence which one does not find elsewhere in the poetry of that time. He vigourously and justly castigates the philosophers and the Academy. His words are those of a man who writes with freedom, emotion, and sincerity, though his style is not always equal to the thought.

LOUIS N. DELAMARRE.

Gilbert, Sir John Thomas, Irish archivist and historian, b. in Dublin, 23 January, 1829; d. there, 23 May, 1898. He was the son of John Gilbert, an English Protestant, Portuguese consul, at Dublin, and Marianne, an Irish Catholic, daughter of Henry Costello. From her the future historian inherited his ardent patriotism, which was surpassed only by a deep spirit of religion which characterized him through life. His early days were spent at Branackstown, Meath. He was educated at Dublin, and at Prior Park, near Bath, England. He received no university training, as his mother preferred to sacrifice that rather than allow his faith to be imperilled in the Protestant University of Dublin. In 1846 his family moved to Blackrock, a suburb of the Irish metropolis, where he resided, free from the distractions of life, life. From his boyhood, he manifested a decided taste for history and archeology. When only nineteen, he was elected to the Council of the Celtic Society, and thus became associated with some of the famous writers and orators of the age, Butt, Duffy, Ferguson, Mitchell, O'Hagan, and Smith. In 1857 he submitted his essay, "Historical Literature of Ireland", Four years later he became a Member of the Royal Irish Academy, and secretary of the Irish Archeological Society, among whose members were O'Curry, O'Donovan, Graves, Todd, and Wilde. In 1854-9 he published his "History of Ireland", 3 vola, a work of remarkable erudition, which placed him among the greatest historians of the country. In 1863 his "History and Treatment of the Public Records of Ireland" caused considerable sensation by demonstrating to the government the futility of entrusting the publication of Irish State documents to men unskilled in the language and history of the nation. From this time till his death his pen was never idle, and he filled the most important posts in all the historical and antiquarian societies. He was librarian of the Royal Irish Academy for thirty-four years. In 1845 he married Miss Sarah Rosa Mulholland. He received the honorary degree of LL.D from the Royal University in 1892, and five years later was knighted for his services to archeology and history. In addition to the works already men-
tioned, his most important writings are the "History of the Viceroys of Ireland" (1865), "Calendar of the Ancient Records of Dublin" (7 vols., 1889-98); "History of the Irish Confederation and the War in Ireland, 1641-9" (7 vols., 1882-91); "Jacobite Narrative of the War in Ireland, 1688-91" (1892). Celtic scholars are indebted to him for the reproduction of the celebrated ancient Irish MSS. for the establishment of the Tod lecturership in Celtic, and also for editions of "Leabhar na h-Uladh" and "Leabhar Breac."

A. A. MacELHANN.

Gilbert de la PORREE (GILBERTUS PORRETANUS), Bishop of Poitiers, philosopher, theologian and general scholar; b. at Poitiers in 1076; d. in 1154; studied under Hilary in Poitiers, under Bernard of Chartres at the famous school there, and finally under Anselm at Laon, where he probably first met Peter Abelard. Returning later to Chartres, he taught philosophy and the arts there for about fifteen years, receiving a canonry and holding at intervals the office of chancellor of the school. He was present at the Council of Sens (1141), at which Abelard was censured. The following year we find him teaching in Paris, with John of Salisbury among his pupils; but only for a brief space, for in 1142 he became Bishop of Chartres. His high character for learning and ecclesiastical zeal seems to have won for him the universal respect and veneration of his contemporaries. But his teaching regarding the Blessed Trinity involved him in trouble for a time. Two of his own archdeacons, alarmed at its novelty, reported it to Eugene III, and induced St. Bernard to oppose Gilbert's doctrines in the pope's presence at the Councils of Paris (1147) and Reims (1148). The dispute ended amicably without any definite issue. Gilbert died universally regretted in the year 1154.

He lived and taught during the critical epoch when the great scholastic synthesis, both in philosophy and in theology, was just beginning to take shape. The principles, methods, and doctrines of purely rational research were being extended from philosophy to theology and applied—often rashly, as with Abelard—to the elucidation of revealed truth. Aristotle's philosophy was finding its way through Moorish and Jewish channels into the Christian schools of Europe, gradually to supplant Platonic influences there, and the discussion of the great central problem of the validity of knowledge—the controversy on the Universals, as it was then called—was waxing warm and vehement. Gilbert's place among his contemporaries was a leading and honoured one; while his philosophical writings secured for him a fame that long survived him. In his "Liber Sex Principiorum" he explained the last six categories of Aristotle, the latter having treated expressly only the first four. The work immediately took its place as a scholastic textbook, side by side with the "Isagoge" and the "Categories," and was studied and expounded for three centuries in the medieval schools. His "Commentary on the Four Books of Boethius," especially on the two "De Trinitate," contains those applications of his doctrine on the Universals which for a time brought his orthodoxy under suspicion.

Gilbert's attitude on the controverted question of the Universals has been very variously interpreted: as ontological realism (Prantl), empiric realism (Clerval, Zitrara), moderate realism ill-defined (de Wette). The latter is, perhaps, nearest to the truth. Gilbert's doctrine, like that of Abelard, is an attempt, though only partially successful, to repudiate the extreme realism of the epoch, with its pantheistic tendencies. The universal concept (of the genus or class) has corresponding to it in the world of sense a number of similar singular objects. This similarity is, however, explained by Gilbert in a way that brings it quite near identity. The created essence (forma natio, ells) of the individual member of a class is a copy of the Divine exemplar, "singularis in singularibus, sed in omnibus universalibus" (John of Salisbury, Metall., II, xvii). He means that the forma natio is not really (numerically) one and the same in omnibus, but only conceptually, i.e. by the consideration of the mind; so much is fairly evident from another reference of his to "universalia . . . quae abs ipsius individuas humana ratio quodammodo abstrahit." (P. L., LXIV, 1374). Yet there are grounds for supposing that he attributed to the forma natio, as it is in the individual, the universality of the logical concept. In the actual individual he distinguishes between the common or class essence which he calls substantia, e.g. "humanity" or "human nature" in the abstract, and that which makes it an existing individual and which he calls substantia, e.g. "Plato". This process of objectifying and dividing off the ab-
Gilbert's "Liber Sex Principiorum" and his "Commentary on Boethius" are in P. L., CLXXXIV and LXIV. He also left numerous commentaries on various books of the Old and New Testaments. A philosophical work called "Liber de Causis," sometimes attributed to him, is several years ago an abridged translation through the Arabes of the "Elevalio Theologica" of Proclus, a Greek Neo-Platonist of the fifth century.

Gilbert Foliot, Bishop of London, b. early in the twelfth century of an Anglo-Norman family and connected with the earls of Hereford; d. at London in 1186. He became a monk at Cluny in France, where he rose to the rank of prior; then he was abbey at Abbeville, and later at Gloucester. He became Bishop of Hereford in 1147. As abbot and bishop he took an important part in ecclesiastical and national affairs. He was a supporter of Empress Matilda and a confidential adviser of Theobald, Archbishop of Canterbury. In 1163 he was transferred to the Bishops of London, though such a translation was very exceptional at the time; but he received the support of Becket and the saint's successor, Innocent III. Foliot was noted for learning and eloquence and a good administrator. The austerity of his life was almost too widely known. However, in the great struggle for the rights of the Church between Henry II and St. Thomas of Canterbury he definitely took the king's side. In the stormy scenes at Clarendon and Northampton and during the prolonged negotiations of the years of St. Thomas's exile, his name is foremost among the opponents of his archbishop; and he was one of the prelates who, by their remonstrances against a renewed excommunion in 1170, brought about indirectly St. Thomas's martyrdom. It may be true that Gilbert was opposed to Becket's personality and methods more than to his aims, but Henry II would have been more than a match for a diplomatic bishop. A king who combined to such an extent intelligence and passion could have been checked only by a wave of popular enthusiasm. (See Thomas Becket, Saint.)

Gilbert Foliot's name appears on nearly every page of the Becket controversy and reference must be made to the bibliography.

F. F. Urquhart.

Gilbertines, Order of, founded by St. Gilbert, about the year 1130, at Sempringham, Gilbert's native place, where he was then parish priest. His wish originally had been to found a monastery, but finding this impossible, he gave a rule of life to the seven young women whom as children he had taught at Sempringham, and built for them a convent and cloisters of his parish church. After his death his friend the earl of Norfolk gave the support of his bishop, Alexander of Lincoln, and in a year's time the seven virgins of Sempringham made their profession. Gilbert seems to have been determined to copy the Cistercians as much as possible. At the suggestion of William, Abbot of Rievaulx, he instituted lay brothers to assist to the daily work of the nuns, and soon added a company of lay brothers to do the rougher work in the farms and fields. These he recruited from among the poorest serfs of his parish and estates. For eight years the little community at Sempringham continued to flourish, and it was not till about 1138 that it was moved to a site of AD. 1168, near Seaford, in Lincolnshire, the site of one of his castles destroyed in the contest between King Stephen and his barons. Alexander's deed of gift makes it clear that the nuns had by this time adopted the Cistercian rule "as far as the weakness of their sex allowed". The fame of Sempringham soon spread far and wide through that part of England, and the Cistercians sent there for further foundations. In 1148 Gilbert travelled to Citeaux in Burgundy to ask the Cistercian abbots there assembled in chapter to take charge of his order. This they refused to do, declining to undertake the government of women, and so Gilbert returned to England, determined to add to each of his convents a community of canons regular, who would also act as spiritual directors to the nuns. To these he gave the Rule of St. Augustine. Each Gilbertine house now practically consisted of four communities, one of nuns, one of canons, one of lay sisters, and one of lay brothers. The popularity of the order was considerable, and for two years after Gilbert's return from France he continued founding new houses on lands granted him by the nobles and prelates. These houses, with the exception of Watton and Malton, which were in Yorkshire, were situated in Lincolnshire, in the low-lying country of the fens. Thirteen houses were founded in St. Gilbert's life, four of which were for men only.

The habit of the Gilbertine canons consisted of a black tunic reaching to the ankles, covered with a white cloak and hood, which were lined with lamb's wool. The nuns were in white, and during the winter months were allowed to wear in choir a tippet of sheepskin and a black cap lined with white wool. The scapular was worn both by the canons and the nuns. The whole order was ruled by the "master", or prior general, who was not Prior of Sempringham, but was called "Prior of All". His authority was absolute, and the year was divided into a regular round of visits to the various houses. He appointed to the chief offices, received the profession of novices, affixed his seal to all charters, etc., and gave or withheld his consent regarding sales, transfers, and the like. He was to be chosen by the general chapter, which could depose him if necessary. This general chapter assembled once a year, at Sempringham, on the rogation days, and was attended by the prior, cellarer, and prioress of each house.

St. Gilbert, soon finding the work of visitations too arduous, ordained that certain canons and nuns should assist him. These also received a canonical habit. A "priest of confession" was chosen to visit each house and to act as confessor extraordinary. A Gilbertine monastery had only one church; this was divided unevenly by a wall, the main part of the building being for the men, the lesser part, to the south, for the canons. These had access to the men's part only for the celebration of Mass. The nunnery lay to the north, the dwellings of the canons were usually to the south. At Sempringham itself, and at Watton, we find them at some distance to the north-east. The number of canons to be attached to each nunnery was determined by St. Gilbert. He received from them their annual tax of a Scotch peck of barley for Gilbert experienced was the government of the lay brothers. They were mostly rough and untamed spirits who needed the control and guidance of a firm man, and it would have been surprising had there been no cases of insubordination and scandal among them. Two instances especially claim our attention. The first is related by St. Ælred, Abbot of Rievaulx, and gives us an unpleasant story of a girl at Watton Priory who had been sent there to be brought up by the nuns; the second was an open revolt, for a time successful, of some of the lay brothers at Sempringham. From their reports for the foundation of their monasteries the Crown showed great favour to the Gilbertines. They were the only purely English order and owed allegiance to no foreign superiors as did the Cumiaces and Cistercians. All the Gilbertine houses
were situated in England, except two which were in Westmeath, Ireland. Notwithstanding the liberal character of Henry VI's successor, the order had fallen into great poverty by the end of the fifteenth century. Henry VI exempted all its houses from payments of every kind—an exemption which could not and did not bind his successors. Heavy sums had occasionally to be paid to the Roman Curia, and expenses were incurred in suit against the real or pretended encroachments of the bishops. By the time of the Dissolution there were twenty-six houses. They fared no better than the other monasteries, and no resistance whatever was made by the last Master of Sempringham, Robert Holgate, Bishop of Llandaff, a great favourite at court, who was promoted in 1545 to the Archipresbyterate of York. The Gilbertines are described as surrendering "of their own free will!", each of the nuns and canons receiving "a reasonable yearly pension". Only four of their houses were ranked among the greater monasteries as having an income above £200 a year, and as the order appears to have preserved its end the piampona, which simplicity in church plate and vestments enjoined by St. Gilbert, the Crown did not reap a rich harvest by its suppression.

R. URBAN BUTLER.

GILBERT ISLANDS, VICARIATE APOTOLIC OF, comprises the group of that name, besides the islands of Ellice and Panapa. The most important members of the group, which consists of sixteen low atolls, are Tapiteuea, Arorom, Apennama, Maiama, Marakei, and Nonouti, which cluster near the Equator, and constitute the most easterly link in the chain of islands which makes Micronesia. The largest and most impressive is Ofu, and, until the advent of the white man were given over to savagery and, in some instances, cannibalism. Nominally under the protection of Great Britain, the islands are practically self-governed, and a sort of republicanism prevails. The principal industry is the preparation of the end the piampona, which simplicity in church plate and vestments enjoined by St. Gilbert, the Crown did not reap a rich harvest by its suppression.

Upon the partition of the Vicariate of Micronesia, the Gilbert Islands were erected into an independent vicariate by a decree of the Sacred Congregation of Propaganda dated 17 July, 1897, and the Vicar Apostolic, Mgr. Joseph Leray, titular Bishop of Remesiana, was placed at its head, and, with several missionary priests from the Congregation of the Sacred Heart, he entered upon the evangelization of the islands. The population of the vicariate is estimated at 20,000 and 40,000, of whom 14,000 are Catholics. There are 12 churches and 56 chapels under the care of 19 priests, 96 parochial schools, with an attendance of 1700 boys and 1500 girls, 2 schools for catechists with a combined attendance of 50, 12 orphanages which shelter 400 orphans, 11 houses of the Congregation of the Sacred Heart, with 35 religious and 8 houses of Our Lady of the Sacred Heart with 20 nuns.

STANLEY J. QUINN.

GILBERT OF SEMPRINGHAM, SAINT, founder of the Order of Gilbertines, b. at Sempringham, on the border of the Lincolnshire fens, between Bourn and Houghton. The exact date of his birth is unknown, but it lies between 1083 and 1089; d. at Sempringham, 1189.

His father, Jocelin, was a wealthy Norman knight holding lands in Lincolnshire; his mother, name unknown, was an Englishwoman of humble rank. Being ill-favoured and deformed, he was not destined for a military or knightly career, but was sent to France to study. After spending some time abroad, where he became a teacher, he returned as a young man to his Lincolnshire home, and was presented to the livings of Sempringham and Tington, which were churches in his father's gift. Shortly afterwards he betook himself to the court of Robert Bloet, Bishop of Lincoln, where he became a close friend of the Bishop Bloet. Robert was succeeded in 1123 by Alexander, who retained Gilbert in his service, ordaining him deacon and priest much against his will. The revenues of Sempringham had to suffice for his maintenance in the court of the bishop; none of Tington he devoted to the poor. Offered the archdeaconry of Lincoln, he declined, saying the office was unsuited to his nature, In 1131 he returned to Sempringham and, his father being dead, became lord of the manor and lands. It was in this year that he founded the Gilbertine Order, of which he was the first "Master", and constructed at Sempringham, with the help of Alexander, a dwelling and cloister for his nuns, at the north of the church of St. Andrew.

His life henceforth became one of extraordinary austerity, its strictness not diminishing as he grew older, though the activity and fatigue caused by the government of the order were considerable. In 1147 he travelled to Galicia, where he met Eugene III, St. Bernard, and St. Malachi, Archbishop of Armagh. The pope expressed regret at not having known of him some years previously when choosing a successor to the deposed Archbishop of York. In 1165 he was summoned before Henry II's justices at Westminster and was charged with having sent to the exiled St. Thomas à Becket. To clear himself he was invited to take an oath that he had not done so. He refused, for, though as a matter of fact he had not sent help, an oath to that effect might make him appear an enemy to the archbishop. He was prepared for a sentence of exile, when letters came from the king, in Normandy, ordering the judges to await his return. In 1170, when Gilbert was already a very old man, some of his lay-brothers revolted and spread serious calumnies against him. After some years of fierce controversy on the subject, in which Henry II took his part, Anderson freed him in suspension and restored the privileges granted to the order. Advancing age induced Gilbert to give up the government of his order. He appointed as his successor Roger, prior of Malton. Very firm and almost blind, he now made his religious profession, for though he had founded an order and lived for many years and never became a religious in the strict sense. Twelve years after his death, at the earnest request of Hubert Walter, Archbishop of Canterbury, he was canonized by Innocent III, and his relics were solemnly translated to an honourable place in the church at Sempringham, his shrine being a centre of pilgrimage. Besides the compilation of his rule, he has left a little treatise entitled "De constructione monasteriorum". His feast is kept in the Roman calendar on 11 February.

Acta SS., 4 Feb.; ARCHIVE IN DICT. NAT. BIOL., S. R. URBAN BUTLER.

GILDAS, SAINT, surnamed the Wise; b. about 516; d. at Hoult, Brittany, 570. Sometimes he is called "Badonius", because, as he tells us, his birth took place the year the Britons gained a famous victory over the Saxons at Mount Badon, near Bath, Somersetshire (493 or 516). Two biographies of Gildas exist—one written by an unknown Breton monk of the Abbey of Rhuys in the eleventh century, the other by
Caradoc, a Welshman, in the twelfth century. Both biographies contain unchronological and misleading statements, which have led some critics to reject the lives as spurious, without place. Underneath, Wace, Bale, Pits, and Colgan endeavour to adjust the discrepancies by contending that there were at least two saints named Gildas, hence their invention of such distinctive surnames as "Albanicus", "Badonicus", "Hibernicus", "Historicus", etc. The more general opinion, however, adopted by Lanyan, Leland, Healy, Stilligree, Mabili v. Bollandus, and O'Hanlon, is that there was but one St. Gildas. The discrepancies may be accounted for by the fact that the lives were drawn up in separate countries, and several centuries after the saint existed. As to Caradoc's statement that Gildas died at Glastonbury, O'Hanlon remarks that Glastonbury appraised many saints than Gildas (Lives of Irish Saints, I, 493).

Both narratives agree in several striking details, and may thus be harmonized: Gildas was born in Scotland on the banks of the Clyde (possibly at Dumbarton), of a noble British family. His father's name was Caw or Caw; his brother's, Huel or Coel. He was educated in Wales under St. Itutt, and was a companion of St. Samson and St. Peter of Lonn. Having embraced the monastic state, he passed over to Ireland, where he was advanced to the priesthood. He was said to have lived some time in Armagh, and then to have crossed to his native country, being ordained on both occasions by miracles. On his return to Ireland, at the invitation of King Amlaire, he strengthened the faith of many, and built monasteries and churches. The Irish annalists associate him with David and Cadoc in giving a special liturgy or Mass to the second order of Irish saints. He is said to have made a pilgrimage to Rome. On his homeward journey his love of solitude caused him to retire to the Isle of Houat, off Brittany, where he lived a life of prayer, study, and austerity. His place of retreat having become known, the Bretons induced him to establish a monastery at Rhuys on the mainland, whither multitudes flocked (Marius Sept. "St. Gildas de Rhuys", Paris, s. d.). It was at Rhuys he wrote his famous epistle to the British kings. His relics were venerated there till the tenth century, when they were carried for safety into Berry. In the eighteenth century they were said to be preserved in the church of Vannes. He was the patron of churches and monasteries in Brittany and elsewhere. His feast is locally observed on 29 January; another feast, 11 May, commemorates the translation of his relics.

The authentic work of St. Gildas, "De excidio Britanniae liber querulus", is now usually divided into three parts: (1) The prologue; (2) A sketch of British history from the Roman invasion to his own time; (3) An epistle of severe invective addressed to five petty British kings—Constantine, Vortipor, Cyngelas, Cynan, and Maelgwn. In the same epistle he addresses himself to the clergy whence he accuses of sloth and simony. His writings are clearly the work of a man of no ordinary culture and sanctity, and indicate that the author was thoroughly acquainted with the Sacred Scriptures.

Gildas is regarded as the earliest British historian, and is quoted by Bede and Alcuin. Two MSS. copies of his writings are preserved in Cambridge University library.

**Gil de Albornos, Alvarez Carillo, a renounced cardinal, general, and statesman; b. about 1310 at Cuenca in New Castile; d. 23 Aug., 1367, at the Castle of San Vicente, near Aragon. Usurer, Waldo, Bale, Pits, and Colgan endeavoured to adjust the discrepancies by contending that there were at least two saints named Gildas, hence their invention of such distinctive surnames as "Albanicus", "Badonicus", "Hibernicus", "Historicus", etc. The more general opinion, however, adopted by Lanyan, Leland, Healy, Stilligree, Mabili v. Bollandus, and O'Hanlon, is that there was but one St. Gildas. The discrepancies may be accounted for by the fact that the lives were drawn up in separate countries, and several centuries after the saint existed. As to Caradoc's statement that Gildas died at Glastonbury, O'Hanlon remarks that Glastonbury appraised many saints than Gildas (Lives of Irish Saints, I, 493).

Gildas is regarded as the earliest British historian, and is quoted by Bede and Alcuin. Two MSS. copies of his writings are preserved in Cambridge University library.
testa near Paterno, and on 2 June, 1355, a treaty was concluded with the Malatestas, which was approved by Innocent VI on 20 June. Henceforth the Malatestas were faithful allies of the papal forces. Their submission was soon followed by that of Montefeltro, which brought the districts of Urbino and Cagli under the power of the cardinal. Shortly after, the cities of Senigallia, and then the brothers Bernardo and Guido da Polenta, Lords of Ravenna and Cervia, submitted to the cardinal. Towards the end of 1355 Albornoz was appointed Bishop of Sabina, Giovanni and Riniero de' Manfredi, of Faenza, and Francesco degli Ordelaffi, of the Romagna, stubbornly refused to submit. In 1356 a crusade was preached against them. But only the Malatesta, under Faenza to Albornoz, 10 Nov., 1356, but Ordelaffi and his wife, the warlike Marzia, were still unconquered. The cardinal had repeatedly asked Innocent VI to be recalled to Avignon. Now that all the usurers of the Papal States with the exception of Ordelaffi had been subdued, the pope granted his request and sent Androën de la Roche, Abbott of Cluny, to replace him in Italy. Before returning to Avignon, the cardinal held a meeting of the vicars of the papal territory on 29 April, 1357, and the two following days. At this meeting he published his famous Constitutions for the Papal States, under the title "Constitutiones Egozianae," generally known as the "Egidian Constitutions." When he made known to the assembled vicars his intention to return to Avignon, they all urged him to remain, at least till September. He reluctantly consented and at once began military operations against Ordelaffi. On 21 June he took Cesena, and Bertinoro fell into his hands on 25 July. When the cardinal departed for Avignon in September, Ordelaffi was still master of Forlì and a few other strongholds of the Romagna. On 23 October the cardinal arrived at Avignon, was received with high honours by the pope, and installed his Lateran. 

Albornoz remained only a short time at Avignon. His successor in Italy, the Abbott of Cluny, lacked the military training to contend successfully with the skilled and valiant Ordelaffi. Moreover, the intrigues of Giovanni di Vico in the Papal States and fresh disturbances in Rome required the presence of Albornoz in Italy. The pope ordered him to March 1357, he returned to Italy. At once began operations against Ordelaffi, whose endeavours to buy the Condottiero Lando and his Grand Company into his service he frustrated by a contract with Lando. Ordelaffi was finally compelled to surrender, and on 4 July, 1358, the pope confirmed the concessions of the cardinal. He allowed his troops to continue under the protection of Ordelaffi to rule as papal vicar over Forlì, Impruneta, and Castrocaro. In Rome, during the cardinal's absence, the people had established the septimeiri to rule jointly with the senator. Deeming it imprudent to go against the will of the people, he consented to the new arrangement, but reserved the appointment of the senator to the pope. With the exception of Bologna, the entire pontifical territory now again acknowledged the sovereignty of the pope. Giovanni d'Ollegio, who had possession of Bologna, was engaged in a war with Bernabò Visconti of Milan, who attempted to become master of Bologna. Unable to contend with the powerful Bernabò, Giovanni d'Ollegio surrendered Bologna to the cardinal, who tried in vain to arrive at an amicable arrangement with Bernabò. Meanwhile Innocent VI had died (12 Sept., 1362). Albornoz refused the tiara which was offered him, and Urban V was elected. Under him the military operations against Bernabò, whose stubborn resistance was the principal obstacle to the crusade which Urban V intended to undertake against the Turks. When all other attempts failed, the pope published a crusade against Bernabò in the spring of 1363. In April the cardinal gained a victory at Salaria, near Modena, and the complete subjection of this stub-

born tyrant was now only a question of time. But the idea of a crusade against the Turks had so completely taken possession of the pope that on 13 March, 1364, a hurried peace was concluded, the conditions of which were extremely favourable to Bernabò, who received 500,000 gold florins for his surrender of the city and principality of Bologna.

The cardinal had now completed the difficult task that he had entrusted to him by Innocent VI. He had again subjected the whole pontifical territory to the papal authority and thereby made it possible for the pope to return to Rome. But he did not receive the gratitude which he had so well earned. Urban V gave credence to the cardinal's enemies who accused him of having married Piero della Valiera. In consequence the management of the temporal affairs of the Romagna was taken from Albornoz and given to the Bishop of Ravenna. Hereupon the cardinal asked to be recalled from Italy and addressed a letter to the pope in which he gave an account of his management. The pope discovered his mistake and in his answer gave due credit for the inestimable service which Albornoz had performed for the papacy. In 1367 Urban V returned to Rome; Albornoz received him at Viterbo, but died before the pope came to Rome. In accordance with his wish he was buried in the Church of St. Clement at Ancona. A few years later his remains were transferred to Toledo. His Constitutions for the Papal States were among the earliest books printed in Italy (Jesi, 1473); they remained in force until 1816. He is also the author of a compilation of all the documents relating to the subjection of the March of Ancona. They are preserved in the papal archives under the title "Codex legationis Card. Albornotii." In his will (29 Sept., 1364) he provided for the foundation of the Spanish College at St. Clement at Bologna (Collegium Albornotianum) with 24 Spanish students and 2 chaplains.

Michael Ott. Giles (Lat., Egidius), Saint, Abbot, said to have been born of illustrious Athenian parentage about the middle of the seventh century. Early in life he devoted himself exclusively to spiritual things, but, finding his noble birth and high repute for sanctity in his native land an obstacle to his perfection, he passed over to Gaul, where he established himself first in a wilderness near the mouth of the Rhone and later by the River Gard. But here again the fame of his sanctity drew multitudes to him, so he withdrew to a dense forest near Niémes, where in the greatest solitude he spent many years, and the companionship of a bear. This last retreat was finally discovered by the king's hunters, who had pursued the beast to its place of refuge. The king [who according to the legend was Wamba (or Flavius)], King of the Visigoths, but who must have been a Frank, since the Franks had expelled the Visigoths from the neighbourhood of Niémes almost a century and a half earlier] conceived a high esteem for
the solitary, and would have heaped every honour upon him; but the humility of the saint was proof against all temptations. He consented, however, to receive thenceforth some disciples, and built a monastery in his valley, which he placed under the rule of St. Benedict. Here he died in the early part of the eighth century, with the highest repute for sanctity and miracles.

His cult spread rapidly far and wide throughout Europe in the Middle Ages, as is witnessed by the numberless churches and monasteries dedicated to him in France, Germany, Poland, Hungary, and the British Isles; by the numerous MSS. in prose and verse commemorating his virtues and miracles; and especially by the vast concourse of pilgrims who from all Europe flocked to his shrine. In 1562 the relics of the saint were secretly transferred to Toulose, and from thence to Toulou, and a multitude of French cities, Antwerp, Bruges, and Tournai in Belgium, Cologne and Bamberg in Germany, Prague and Grun in Austria-Hungary, Rome and Bologna in Italy, possess celebrated relics of St. Gilles. In medieval art, he is a frequent subject, being always depicted with his symbol, the hind. His feast is kept on 1 September. On this day there are also commemorated another St. Gilles, an Italian hermit of the tenth century (Acta SS., XI, 305), and a Blessed Giles, d. about 1203, a Cistercian abbot of Caesara in the Diocese of Astorga, Spain (op. cit., XIII, 308).

JOHN F. X. MURPHY.

Gillespie, (1) Eliza Maria (in religion Mother Mary of St. Angela), b. in Washington county, Pennsylvania, 21 February, 1824; d. at St. Mary's convent, Notre Dame, Indiana, 4 March, 1887. She was the daughter of John Purell Gillespie and Mary Madeleine Miers, the latter a convert to the Church. After her husband's death, Mrs. Gillespie in 1838 went with three children to her former home, Lancaster, Ohio. Eliza Maria first attended the school of the Dominican sisters at Somerset, Ohio, and completed her studies at the Visitation Convent at Georgetown, D. C., in 1844. Her kinman, Thomas Ewing of Ohio, was then eminent in the fact, joined to her beauty and accomplishments, made her at once a prominent figure in the social life of Washington and Ohio. Her sympathy was roused by the sufferings of the Irish people during the famine, and she and her cousin, Eleanor Ewing, by their joint efforts, collected a large sum of money for their relief. In 1845 she felt the call to the religious life and determined to enter the order of the Sisters of Mercy. She went to Notre Dame, Indiana, to bid farewell to her brother, who was there engaged in his studies for the priesthood, and here she met Rev. Edward Sorin, provincial of the Congregation of the Holy Cross in the United States, through whose influence she was led to cast her lot with this small and struggling community. She received the religious habit in 1853, taking the name of Sister Mary of St. Angela. She was then sent to France, where she made her novitiate at the convent of the Sisters of Bon Secours, at Caen, making her religious profession by special dispensation 8 December, 1853, at the hands of Very Rev. Father Moreau, the founder of the congregation.

In January, 1855, Sister Angela returned to America and was made superior of St. Mary's Academy at Bertrand, Michigan. On 15 August, 1855, she transferred the academy to its present location near Notre Dame, Indiana, and procured for it a charter from the Indiana legislature. When the Civil War broke out Mother Angela organized a corps of the Sisters of the Holy Cross to care for the sick and wounded soldiers. She established hospitals, both temporary and permanent, and, when generals failed to secure needed aid for the sick and wounded, she made flying trips to Washington on their behalf. Her headquarters were at Cairo, Illinois, in ill-provided buildings. The close of the war left her physically enfeebled, but she returned to St. Mary's and resumed her educational work, and compiled two series of readers for use in Catholic schools, the "Metropolitan" and "Excelsior.

In 1868, at the advice of Bishop Luers of Fort Wayne, the Sisters of the Holy Cross in the United States determined on a separation from the members of the congregation in France. This was effected, with Mother Angela as superior of the new community. Under her rule thirty-five institutions were founded throughout the United States, among them St. Cecilia's and Holy Cross Academy in Washington, D. C.; St. Mary's Academy, Salt Lake City, Utah; St. Mary's Academy, Austin, Texas; St. Catherine's Normal Institute, Baltimore, Maryland; and Hawkes' Hospital, Mt. Carmel, Columbus, Ohio. Mother Angela was the moving spirit in the establishment in 1865 of the "Ave Maria", to whose pages she made many contributions. On laying down the burdens of her superiorship, Mother Angela was chosen mistress of novices at St. Mary's, and in September, 1886, she was again made the head of St. Mary's Academy, at which post she remained until her death.

In Memoriam, Mother Mary of St. Angela (Notre Dame, Indiana, 1887).

(2) Neal Henry Gillespie, brother of the foregoing; b. in Washington county, Pa., 19 January, 1831; d. at St. Mary's, Notre Dame, Indiana, 12 November, 1874. He was one of the first students of the University of Notre Dame, Indiana, and in 1849 received the first degree conferred by that institution. On 1 September, 1851, he entered the novitiate of the Congregation of the Holy Cross at Notre Dame, Ind., made his religious profession 15 August, 1853, and was ordained priest 29 June, 1856, at Rome, where he had been sent to complete his theological studies. Returning to America, he filled the post of vice-president and director of Notre Dame (1856-59), and then was appointed president of the College of St. Mary of the Lake, Chicago, Illinois. In 1863 he was called to the mother-house of the congregation at Le Mans, France, where he remained until 1866. He then returned to Notre Dame, and assumed the editorship of the "Ave Maria", which position he filled until his death. In addition to his editorial labours, he was a frequent contributor to its pages, as well as to many other Catholic periodicals.

JOHN G. EWING.

Gillis, James, Scottish bishop; b. at Montreal, Canada, 7 April, 1802; d. at Edinburgh, 24 February, 1864. He was the only son of a native of Banffshire, who had emigrated to Canada and married there. Educated in the Sulpician college at Montreal, where he acquired a perfect knowledge of French, he returned to Scotland in 1816, and next year entered the seminary at Aquareuse, studying afterwards at St. Nicholas's College in Paris, and at Isy. He was ordained priest on 9 June, 1827, and was stationed at Edinburgh, where his preaching soon attracted attention. He visited France in 1828 to collect money for the church, and again in 1831 to found the foundation of an Ursuline convent—the first religious house established in Scotland since the sixteenth century—which was opened in 1835. In July, 1838, he
was consecrated at Edinburgh as Bishop of Limyra and Coadjutor of the Eastern District. A subsequent visit to Paris, where he was much esteemed, resulted in the acquisition of what remained of the library of the Scotch College, and in the promise of an annual grant. He was honoured by the appointment of the Faith. In 1852 Bishop Gillis succeeded Bishop Carruthers as Vicar Apostolic of the Eastern District. During his twelve years' tenure of this office he did much for the advancement of Catholicism, founding many new missions, introducing several religious groups (including Jesusites, Sisters of Mary and Sisters of Mercy) into his district, and receiving into the Church many converts, among them Viscount and Viscountess Feilding, afterwards Earl and Countess of Denbigh. In 1857 he presided at Orleans cathedral an eloquent panegyric, in French, of Joan of Arc (published in London the same year), receiving in return from the Mayor of Orleans the heart of King Henry II of England, who had died at Chinon, on the Loire, in 1189. Bishop Gillis was buried in St. Margaret's convent, his own foundation, on 26 February, 1864. The nuns of St. Margaret's are in possession of his library.

D. O. HUNTER-BLAIR.

Gilmour, PATRICK SARKSFIELD, musician; b. at Balden, Co. Kildare, Ireland, 25 Dec., 1829; d. at St. Louis, 24 Sept., 1892; a kinman of Daniel O'Connell. In 1848 he arrived at Boston, Mass., becoming leader successively of the Suffolk, Boston Brigade, and Salem bands. In 1858 he founded "Gilmore's Band," in later years famous as the leading military and concert-band of America. When war was declared, Mr. Gilmour and band enlisted with the 24th Mass. Volunteers, accompanying General Burnside to South Carolina. After the temporary discharge of bands from the field, Governor Andrews placed their reorganization in Mr. Gilmour's hands, and General Banks created him bandmaster general. For patriotic and musical services at the inauguration of Governor Hahn of Louisiana, one hundred prominent representatives of the army, navy, and New Orleans civic government, tendered Mr. Gilmour a complimentary banquet at the historic old St. Charles Hotel, presenting him with an inscribed silver goblet containing five hundred dollars. A letter from Governor Hahn to President Lincoln, introducing "P. S. Gilmour" as a "musician of the highest abilities and a true gentleman, who had rendered important aid to the nation's cause by his faithful and patriotic services."

In celebration of the establishment of national peace, Mr. Gilmour organized and conducted two of the most gigantic popular festivals known in musical history—the National and International Peace Jubilees, held at Boston in 1869 and '72, in which thirty thousand singers, two thousand instrumentalists, the most famous composers, vocal and instrumental artists of the day, and the best military bands of Europe participated. Convened for the divisions, holding respectively sixty thousand and one hundred and twenty thousand persons. In recognition of these achievements, Mr. Gilmour was presented by the citizens of Boston with gold medals and the sum of fifty thousand dollars. In 1875 he went to New York, as conductor of the 22nd Regiment. In 1878, during a concert-tour of the principal cities of Europe, he received a medal from the French government.

In 1892, "Gilmore's Band," numbering one hundred men, were celebrating by a great national festival-tour the four-hundredth anniversary of the discovery of Columbus, when in New York, sudden illness accompanied by consumption, he died. His funeral occurred suddenly, consoled by the last Sacraments of the Church. Both civic and military honours were paid him in death, and memorial services were held over the entire country. Fourteen years after his death, on 15 May, 1906, under the auspices of an illustrious committee and directorship, a great Gilmour Memorial Concert was given in Madison Square Garden (originally Gilmour's Garden), and an audience of ten thousand, who, it is said, honoured him to the last, signified his title of "Father of Military Bands," by his elevation of the brass band to a dignified musical status. He was the first to mellow the brasses by the introduction of reeds, to claim a place for the band on the concert-platform, and to popularize classical music by adapting orchestral melodies for reed-band interpretation. From the quick-steps, marches, and dances characterizing band-music at its start, his unique personal effort attained in the single programme of his representative last concert, to the great works of the tone-masters, Bach, Schumann, Handel, Rubinstein, Wagner, and Liszt. He was at once a popular entertainer and an educator of the people. Many songs (words and music), marches, etc. were composed by Mr. Gilmour, who also wrote "The History of the Boston Pesce Jubilee."

MARY G. CARTER.

Gilmour, RICHARD. See CLEVELAND, DIOCESAN. of Santarem, Blessed, a Portuguese Dominican; b. at Vazoa, diocese of Viseu, about 1185; d. at Santarem, 14 May, 1265. His father, Rodrigo Pelayo Validadariz, was governor of Coimbra and councillor of the King of Portugal. It was the wish of his father that he should enter the ecclesiastical state, and the king was very lavish in bestowing ecclesiastical benefices upon him. When he was still a boy, he already held prebends at Braga, Coimbra, Idanha, and Santarem. Gil, however, had no desire to be an ecclesiastic; his ambition was to become a famous physician. After devoting some time to the study of philosophy and medicine at Coimbra, he set out for Paris, with the intention of perfecting himself in the science of medicine and obtaining the doctor's degree. If we may give credence to his unknown contemporary biographer, he was infected on his journey by a courteous stranger who promised to teach him the art of magic at Toledo. As payment, so the legend runs, the stranger required that Gil should make over his soul to the devil and sign the compact with his blood. Gil obeyed and, after devoting himself seven years to the study of magic under the direction of Satan, went to Paris. He only obtained the degree of doctor of medicine when he had performed many wonderful cures. One night while he was locked up in his library a gigantic knight, armed head to foot, appeared to him, and, with his sword drawn, demanded that Gil should change his wicked life. The same spectre appeared a second time, and threatened to kill G1 if he would not reform. Gil now repentent of his evil ways, burnt his books of magic and returned to Portugal, where he took the habit of St. Dominic in the newly-erected monastery at Palencia, about 1221. Shortly after, his superiors sent him to the Dominican house at Scalabris, the present Santarem. Here he led a life of prayer and penance, and seven years he continued to walk with the thought of the compact which was still in the hands of Satan. Finally, his biographer narrates, the devil was compelled to surrender the compact and place it before the altar of the Blessed Virgin. Gil returned to Paris to study theology and on his return to Portugal became famous for his piety and learning. He was twice elected provincial of his order in Spain. Benedict XIV ratified his cult on 9 March, 1748.

MICHAEL OTT.

Gindarus, a titular see of Syria Prima, in the Patriarchate of Antioch. Pliny (Hist. nat., V, 81) locates it in Cyrrhestica, as does Strabo (XVI, 2, 8), who says it
was a celebrated haunt of brigands. Ptolemy (V, xiv) speaks of it as being in the region of Seleucia, and Stephen of Byzantium (s. v.) makes it a small town situated near Antioch. The first and only known Bishop of this see was Patroclus, who assisted in the Council of Nicea in 325 (Gelzer, Patrum Nicenosorum nominis, p. 61) and at that of Antioch in 341 (Lequien, Oriens Christ., II, 789). Yet the episcopal see is not mentioned in the sixth-century "Notitiae" of Antioch (Echoes d'Orient, 1907, 144), nor in that of the tenth century (op. cit., 1907, 94); it is not on the list of cities of Syria given by the geographer Hierocles and George of Cyprus. It is probable that it was never an important town, and that its see, of early creation, soon disappeared. Under the Emperor Theodosius the Great, Gindarius was only a small village which he fortified (S. G., XVII, 517), and in the time of Justinian I, when the relics of the martyr, St. Marinus, afterwards transferred to Antioch, were found there, Gindarius possessed only a "periodiud" and not a bishop. It is now Djenderais, on the Afrin-Sou, in the vilayet and the sanjak of Aleppo, not far from Kal at Semaan, the famous monastery of St. Simon Stylites.

S. VALLÉ.

Ginoulhac, Jacques-Marie-Achille, a French bishop; b. at Montpellier (department of Hérault), 3 Dec., 1806; d. there, 17 Nov., 1875. Immediately attracted to the priesthood (1830) he was appointed professor in the seminary at Montpellier, and later (1839) vicar-general at Aix. Consecrated Bishop of Grenoble in 1853, he was appointed the following year assistant to the pontifical throne, and knight of the Legion of Honour. At the Council of the Vatican, Ginoulhac spoke publicly on the philosophical errors (30 Dec., 1869), on the rule of faith (22 March and 1 April, 1870), and on the pope's infallibility (23 May and 28 June, 1870). On this latter point he sided with the minority and left Rome before the session of 18 July, in which the doctrine was defined. In 1870 he was transferred from Grenoble to the archiepiscopal See of Lyons. Fearing the Prussian invasion, the inhabitants of Lyon vowed to erect a basilica at Fourvières if the city were spared. The written pledge, signed by thousands of inhabitants, was placed on the altar of the Blessed Virgin by the archbishop himself. In 1873, in fulfillment of this promise, he laid the cornerstone of the magnificent edifice which to-day stands on the hill of Fourvières. While at Grenoble, Bishop Ginoulhac wrote and published several letters and pastoral addresses, especially on the condition of the Pontifical States (1860), on Renan's "Life of Jesus" (1863), and on the accusations of the press against the Envoys of 8 Dec., 1864, and the Syllabus (1865). His works are "Histoire du dogme catholique pendant les trois premiers siecles de l'Eglise et jusqu'au concile de Nicaee" (Paris, 1865); "Les epîtres pastorales, ou réflexions dogmatiques et morales sur les épîtres de Saint Paul à Timothée et à Tite" (Paris, 1866); "Le catéchisme cénominique" (Paris, 1889); "Le sermon sur la montagne" (Lyons, 1872); "Les origines du christianisme", a posthumous work published by Canon Servonnert (Paris, 1878).

La France Ecclésiastique (Paris, 1870), 785-9; L'Épiscopat français, by the Société Bibliographique (Paris, 1907).

C. A. DUBRAY.

Gioberti, Vincenzo, Italian statesman and philosopher; b. at Turin, 5 April, 1501; d. at Paris, 26 October, 1552. When still very young he lost his parents, and at the age of sixteen he was admitted among the clerics of the court; he studied theology at the Turin University, and obtained there the doctorate; he was ordained priest in 1525 and appointed court chaplain and professor in the theological college. In 1528 he made a journey through Lombardy, and became friendly with Manzoni and other great men. He caused Rosmini's philosophy to be known in Piedmont, though at a later date he became its opponent. At this time under the pen-name "Deimofo" he was writing articles in Massimi's "Giovane Italia," printed at Brussels. In 1533 he resigned his court chaplaincy, and soon after was detained on suspicion of political intrigues. Nothing could be proved against him, but he was expelled from the country and went to Paris, where he made many friends. He now ceased contributing to the "Giovane Italia," and cousin offered him a chair of philosophy on condition that he would not oppose Cousin's own philosophical system. Though financially he was still well off, Gioberti refused the offer. He then accepted an offer to teach philosophy in a private school at Brussels conducted by an Italian. During his stay in Brussels most of his works were published.

In 1541, on the appearance of his book "Del Buono," the Grand Duke of Tuscany offered him a chair in the Pisa University, but King Charles Albert objected, and the offer came to nothing. His fame in Italy dates from 1543 when he published his "Del primato morale e civile degli Italiani," which he dedicated to Silvio Pellico. Starting with the greatness of ancient Rome he traced back the splendours of the papacy, and recounting all that science and art owed to the genius of Italy, he declared that the Italian people were a model for all nations, and that their then insignificance was the result of their weakness politically, to remedy which he proposed a confederation of all the Italian states under the pope as their head. It is curious that in this work he is very severe on the French, yet he has not a word to say about the Austrians who then occupied Lombardy and the Venetian territory. Pope and prince received the work very coldly, and a few Jesuits wrote against it. In 1545 he was once more in Paris and published the "Prologomeni al Primo," in which he attacked the Jesuits; and in 1547 he printed "Il Gesuita Moderno," a large sized pamphlet, full of vulgar invective; in 1548 this was followed by an "Apologia del Gesuita Moderno." These works were answered in 1548 by the Jesuit Father Curci's "Divinazione sulle tre ultime opere di V. Gioberti." Early in 1548, when Italy was burning with hopes of liberty, and independence, Gioberti returned to his native land and was joyously received by his fellow-townsmen. Soon afterwards he went to Milan to calm the over-impetuous and to oppose Massini; from there he visited Charles Albert of Savoy, and was received a mission for Rome, and on his arrival his reception was so enthusiastic that the pope became alarmed. On his return from Rome the king wanted to appoint him senator of the kingdom, but Gioberti preferred to be elected as deputy; he became president of the Chamber and, in July, he joined the Collegio cabinet. After the unfortunate Salasco armistice he broke up the cabinet, declared for a continuation of the war against Austria, and bitterly assailed the Revel ministry. He next founded a society to propagate the idea of a federated Italy, with the King of Piedmont and not the pope at its head. He became president of the ministry (with Ratta and other democrats), but whereas the new cabinet was all for war, Gioberti had learned caution, and was anxious to reorganize the ministry. Moreover, he wanted Piedmont to re-establish in their estates the pope and the Grand Duke of Tuscany, who had been driven out by the revolution; so he quarrelled with his colleagues and resigned on 20 February, 1849, but in the newspapers he carried on the quarrel. After the disastrous battle of Novara (23 March, 1849), Victor Emmanuel II offered him a portfolio; he agreed to join the ministry but would not take a portfolio. He was then sent as plenipotentiary to Paris to negotiate illicit French aid in Italy. He was unsuccessful, and finding he was out of favour at Turin he resigned his post, but remained in Paris, where, after three years
passed in study, he died. In 1851 he published his "Rinnovamento civile d'Italia" which contains an impassioned criticism of political events from 1848 onwards. This last book, while it clings to the idea of a federated Italy, shows that Gioberti was a republican, and that he hoped the loss of the papal temporal power would bring about the religious renovation of Italy. Thereupon all his works were put on the Index. His closing years were embittered by seeing his brother embittered, and this bitterness finds an echo in his works.

Gioberti's philosophy is a mixture of pantheistic ontologism with Platonism and traditionalism. The ontologism of Malebranche, as modified by Cardinal Gerulli, had been taught him at the Turin University. His chief thesis is that the passions of the human intellect are ideas or beings; i.e., absolute and eternal truth as far as "human intuition" can grasp it is God Himself. "Being" he calls the primus philosophicum, because in the mental order it is the primus psychologicum, and in the order of existing things it is the primus ontologicum; it is the common foundation of all essence and all knowledge of man and nature. The whole embraces the judgment, "being exists or is necessary," which is not the result of any mental process, but is the spontaneous effect produced when being presents itself to the mind. But in being we merely see its relative attributes, not its essence, which resides in the super (supra) and in the ontological object of revealed religion. Among these relative attributes is comprised the creative act, by intuition of which, in being, we arrive at a knowledge of its results, namely, contingent things, and thus establish the formula ideatis, "being creates existing things", ens creavit existentias. This judgment is synthetic as well as absolute, not in the Kantian sense, but by "objective synthesis" resulting from the revelation of being. However, intuition of the idea remains too indeterminate; and hence the necessity of speech which so circumscribes the idea that we can contemplate or re-think it (this is pure traditionalism).

His theory of creation is the most important part of his system and requires a longer explanation. He calls the idea also the Esse Universalis, which is common to and identical in all things, and which is nothing more or less than their possibility itself. Before the creation being, God exists in the absolute abstract. It becomes concrete by its own act, individuating itself, making itself finite, and multiplying itself. "To create is therefore to individuate." In this process the intelligible that was absolute becomes relative; there are two cycles to the process, one descending, inasmuch as the idea inffrings on the concrete (materia), the other ascending, inasmuch as it reaches out more and more towards the intelligible absolute (methexis), and participates of the Divine Being (this is pure Platonism). Thus he arrives at the conclusion that in the intellectual order the ideas of created things are so many steps in the scale of the hierarchy of ideas. At Santa Maria della Scala in Padua he heard the saying of Hegel that "logic . . . is nothing but creation." From all this, Gioberti's pantheism is evident. No doubt he is always asserting that God was distinct from His creatures; but the sincerity of these statements is not beyond question. As a matter of fact, after his separation from the Massimians they published a letter of his to the "Giovanie Italia" in which he expressly stated that "pantheism is the only true and sound philosophy." His theory of mimesis and methexis is also used to prove the immortality of the soul. Then again the idea of being imbedded the foundation of moral obligation as a binding force, and, inasmuch as it approves or disapproves, we have the concepts of merit and demerit. The aim of the moral law is to bring to pass the perfect union of existences and being, in other words to complete the methexic cycle. Man endowed with freedom can app
1508 he returned to Italy, wrote four dissertations on the waters and waterways of Venice and constructed the splendid Fondaco dei Tedeschi (1508), decorated by Titian and Giorgione. When in 1513 the Rialto and the clock tower were burned, Giorgione was one of the men who presented plans for a new bridge and surrounding structures, but he left Venice for Rome when the designs of a rival (Michelangelo?) were chosen by the republic for which he had done such monumental work. The Vatican welcomed him (1514) and on Bernini's death he was appointed painter (with Raphael and San Gallo) the erection of St. Peter's; but it was Fra Giocondo alone who improved and strengthened the foundations of the great basilica and the piers inadequately supporting its dome.

Two Italian editions of Pliny's "Epistles" were printed in Venice in 1508; one printed in Bologna and one from the press of Aldus Manutius (1508). He edited Caesar's "Commentaries" and made the first design (drawing) of Caesar's bridge across the Rhine. He was among the first to produce a correct edition of Vitruvius, printed at Venice in 1511, illustrated with figures and dedicated to Pope Julius II.; and published a Life of Julius Cesareus, Aurelius Victor, and Cato's "De re rustica". In addition to his classical and mathematical knowledge he was a master of scholastic theology. His last work was, probably, the rebuilding of the bridge of Verona (1521), for in a letter to Giuliano de' Medici, in 1513, Giocondo then called it "the bridge of paradiso".

LEIGH HUNT.

Giordano, Tommaso, composer, b. at Naples in 1738; d. at Dublin, Ireland, February, 1806. The family came to London in 1752, and settled in Dublin in 1764. Tommaso was one of the leading musicians in the Irish capital from 1764 to 1781, when he returned to London; after two years, he came back to Dublin, where he spent the remainder of his life. He was in demand as an opera-house and in a music-shop, neither of which was financially successful. Among his compositions are a number of operas, an oratorio "Isaac" (1767), and a vast quantity of overtures, sonatas, concertos, quartets, songs, etc. He was organist of the pro-cathedral from 1784 to 1798, and conducted a Te Deum of his own at the celebration upon the recovery of King George III, 30 April, 1789. Among his pupils were Lady Morgan, Tom Cooke, and others, and it was in one of his Rotunda concerts that John Field, the inventor of the nocturne, made his début (4 April, 1792). His last opera, "The Cottage Festival", was produced at the Theatre Royal, Dublin, 28 Nov., 1796. His song "Ciao mio ben" is still occasionally heard.

Giordano, Luca, Neapolitan painter; b. at Naples, 1632; d. in the same place, 12 Jan., 1705. He was esteemed the marvel of his age for the rapidity with which he covered with frescoes vast ceilings, domes, and walls in Italy and Spain, and was known as Luca "Fa Presto" (make haste), as the demand for his work was so great that his father was continually urging him to greater dispatch, until at length he was able to work with extraordinary speed. He was undoubtedly the chief of the Machiavelli, who was the most popular quick-painting decorators of Italy came to be called, and perhaps no other painter has left so many pictures. He was a pupil of Ribera, and then of Pietro da Cortona, and a constant copyist of the works of Raphael.

Some of his earliest paintings were for the churches of Naples, but in 1679 he was invited to Florence, and in 1692 to Madrid, where he painted the immense ceiling and staircases of the Escorial, and an enormous number of altarpieces. In 1707 he was called to Naples to King of Spain to Naples, and there he spent the last three years of his life. There are sixty of his pictures in Madrid, and about half that number in Naples, while the galleries of Dresden, Munich, Paris, Vienna, Rome, and St. Petersburg, all boast of a large number of his works. He seemed seed even by Velazquez. He was one of the most original and most versatile Venetian painters of the 18th cent. He was a great innovator, and is believed to have also worked in pastel.

Giordano Bruno. See BRUNO, GIORDANO.

Giorgione (GIOVACCHINO BARELLARI, ZORZO DA CASTELFRANCO), Italian painter, b. at Castelfranco in or before 1477; d. in Venice in October or November, 1510. Little is known of his life. His very origin has been discussed and some authorities attribute his father to have been of the great Barelli family and his mother a peasant girl of Vedelago, while later investigators find no proof of this, call the Barebrelli tradition false, and make him the descendant of peasants from the March of Treviso. Giorgione means "big George"; Ruskin calls him "stout George"; all agree that he was a man of a jolly, robust, and attractive presence. In Venice he studied under Giovanni Bellini, with Titian as a fellow-pupil. His great artistic talent developed rapidly, he outstripped his master, broke away from the timid and traditional style of the day, and became a great influence in art, even Titian following his example and imitating his colour, method, and style. To-day there is much confusion even in the great Continental galleries concerning the attribution of pictures to Titian and to Giorgione. With rare musical skill on the lute and with a fine voice, the talented youth was early admitted to the best Venetian society, and painted portraits of nearly all the great people; Caterina Cornaro, Gonzales (Gonzalvo) of Cordova, and two dogs being a few of his sitters. His portraits were the first to be painted in the "modern manner", and are full of dignity, truth of characterization, simplicity, and a well-balanced quality in every phase; a precocious and versatile young man was the first to paint landscapes with figures, the first to paint genre—movable pictures in their own frames with no devotional, allegorical, or historical purpose—and the first whose colours possessed that ardent, glowing, and melting intensity which was so soon to typify the work of all the Venetian School.

Giorgione was the first to discard detail and substitute breadth and boldness in the treatment of nature and architecture; and he was the first to recognize that the painter's chief aim is decorative effect. He never subordinate his tempera and colours to architecture, nor any artistic effect to a sentimental presentation. He possessed the typical artistic temperament, and this, with his vigour and gaiety, made him the true post-painter, a "lyrical genius" (Morelli). He is well called the "joyous herald of the Renaissance". The vigour of his chiaroscuro, the superb "relief" in his work, the "grand style", and his mastery of perspective may have come in part from a study of Leonardo da Vinci, who was in Venice when Giorgione was twenty-four years old; but no trustworthy records show that the two ever met. Giorgione painted the widest range of subjects from altar-pieces to decorative compositions, employing the popular motifs of three—in his compositions, and imitated the actual texture of draperies as none had ever done before. His method was to paint in tempera and then glaze in oil, a process contributing to great brilliance, transparency,

and permanence of colour. Giotto introduced into Venice the fashion of painting the fronts of houses in fresco (in 1307-08 he thus decorated, with Titian, the magnificent Fondaco dei Tedeschi); and cassoni (marriage-chests) and other pieces of furniture were not too humble for his magic brush.

All his life was spent in Venice, where his extraordinary
talent was recognized as a School of Giotto, and where his pictures, in great demand during his lifetime, had a host of imitators and copyists. Very little of his work is authenticated, and only three paintings have never been called in question by any expert or critic. The first of these is the Castelfranco altarpiece, painted when he was only twenty-two years old for the church of his native town. Here are the Madonna and Child enthroned, with Sts. Liberale and Francis below, "one of the two most perfect pictures in existence" (Ruskin); it is full of reverence, serenity, and religious sentiment, the very landscape-background awakening devotional feelings. The other unquestioned works are the "Ardastus and Hypsi-
pyle" (called for 350 years the "Giovanelli Figures" or the "Stormy Landscape with Soldier and Gypsy"), more sombre than the altar-piece but more romantic in treatment, and the "Zenaeus, Evander, and Pallas" (one of the "Three Philosophers" or the "Three Philosophers in Caves") probably completed by Sebastiano del Piombo, Giotto's pupil. The greatest rival authorities are agreed that four other works are undoubted Gior-
gones: the "Knight of Malta", "Judgment of Solom-
on", the "Trial of Moses" (all in the Uffizi), and "Christ Bearing the Cross" in Mrs. Gardner's collection (Boston, U. S. A.). Many great canvases are denied Giotto by modern negative criticism simply because they do not quite attain the high standard of excellence arbitrarily set for this master, by connoisseurs. Tradition says his death was due to grief because his lady-love proved false; probably the work of Veronese (in Venice Cathedral) was buried on the Island of Povegia. Other works attributed to Giotto are: "The Concert", Pitti Gallery, Florence; "Venus", Dresden Gallery; "Fête Champêtre", Louvre; "Madonna and Child", Prado.

LEIGH HUNT.

Giotto di Bondone, a Florentine painter, and founder of the Italian School of painting, b. most probably, in 1266 (not 1276), in the village of Vespigiana near Florence, in the valley of the Mugello; d. at Milan, 8 Jan., 1337. Very little is known of his early history. Vasari relates that Cimabue, rambling one day in the neighborhood of Ghib, saw a young shepherd lad drawing one of his sheep on a piece of smooth slate with a pointed stone, and that Cimabue thereupon took the lad with him and instructed him. The story is a pretty bit of fancy. There is no reason for believing that Giotto was ever a shepherd. It is possible that his father was a peasant; if so, he was in easy circumstances and certainly a freedholder. A document dated 1320 styles him vir praeclarus; such an epithet would not be applied to a man in straitened circumstances. As a matter of fact nothing is known of Giotto until he was thirty years old. This unfortunate gap in his personal history robs us of a story which would be of intense interest and not incompatible with his genius, and reduces us to the merest conjectures. However, without in any way detracting from Giotto's pre-eminence in Italian art, it is impossible to accord him that quasi-miraculous, providential importance that Florentine nationalism soon raised to a kind of dogma in the history of art. According to Vasari he arose in a barbarous age and straightway revealed a fully developed art to a wondering world. This is not credible. The thirteenth century, the century of the great cathedrals and of the French school of carving whose numerous pupils were met with in all parts of Christendom, cannot be called a barbarous age. In Italy itself a widespread renaissance was taking place. At Naples and at Rome the admirable School of the murarmoreous glass painters, forgetting their craft, reflected most illustrious, recalled to life much antique beauty of form. The mosaic-workers, with Jacopo Torriti and the artists who created the marvels of the Baptistry of Florence, likewise the painters, with Pietro Cavali-
lini whose fresco cycles in Santa Maria in Trastevere (begun 1341) exhibit all his breadth and is a most satisfactory proof of an earlier renewal of artistic spirit and power. The "Rucellai Madonna" by Duccio dates from 1287. Twenty years earlier, perhaps the very year of Giotto's birth, Nicolò Pisano had completed the pulpit in the Baptistry of Pisa. That of Siena followed in 1272. The lovely fountain at Perugia dates from 1278. Then came the works of Giovanni Pisano, whose sympathetic genius is in more than one way akin to that of Giotto. Amid this rich and wondrous development of art the young master grew up. Though he was by no means its creator, it certainly reacted in him. As an artist Giotto is a true son of St. Francis. It is at Assisi that he is first found, in that very basilica which was the cradle of Italian painting, and which still enshrine the most perfect records of its early history. There every master of note in the peninsula might have been seen at work. Giotto of Pisa was decorating the lower church, while Cavallini or one of his pupils was painting scenes from the Old Testa-
ment in the upper church. Cimabue was at the same time ornamenting the choir and the transept. It was doubtless in the train (brigata) of Cimabue that Giotto came to Assisi in 1294, and that he became acquainted with the works of Giotto of Pisa, which already inflamed his own. In 1296 Cimabue set out for Rome, whereupon Giovanni da Muro, General of the Francis-
cans (1296-1304), entrusted to Giotto the execution of the wonderful story of St. Francis which the painter accomplished in the famous twenty-eight scenes of the upper church. This is at once the source of Giotto's glory and the earliest example of the Italian School. In these scenes Giotto followed St. Bonaventure's life of St. Francis officially approved by the chapter of 1263 as the only official text. The first twenty-one frescoes are entirely by Giotto's hand; the remaining six were finished from his designs. All have suffered greatly from the humidity and from restorations. They are, nevertheless, incomparable monuments of art, and in many ways the very greatest for the story of modern painting. The intense impression created by St. Francis, the historical near-
ness of his truly evangelical personality, and his like-
ness to Jesus Christ borne out by the miracle of the stigmata, thenceforth influenced art to an incalculable degree. For the first time in centuries painters, until then limited to the repetition of consecrated themes, to an unvarying reproduction of hieratic patterns, were free to improve and create. Painting was no longer an echo of tradition, but rose at once to all the dignity of invention. In the portrayal of the wonder-
ful life-story of St. Francis, to his own age a real image of Jesus Christ, current events and the everyday life of the period were seized on and appropriated. Art no longer worked on conventional models, abstract and idee; it bore the stamp of immediacy, which the humblest intelligence is capable of appreciating. Representation of real life was to become the object of all painting. Henceforth there must always be a likeness between the painting and the object painted. The true portrait of St. Francis had to be given to the public, which must see his actions and the place where he lived, must also grasp all loca
peculiarities of topography, people, dress, and architecture. This principle of actuality and reality underlay the artistic revolution initiated by Giotto. Since the days of the catacombs nothing so important had occurred in the history of painting.

The germ of all this was to be found in the very earliest portrait of St. Francis, e.g. that of the "Sagro Speco" at Subiaco and in those of the lower church at Assisi and the church of Santa Maria degli Angeli, where the figure of the saint is inset between two rows of small panel-pictures descriptive of events in his life. To enlarge these vignettes into frescoes and thereby tell the story of Francis in heroic outlines was equivalent to equating the power of artistic expression and the new vastness of the pictorial framework; this prompted, in consequence, a background overflowing, so to speak, with contemporary life. This much Giotto undertook to do, and his success was

famous mosaic that adorns the vestibule of St. Peter's, was done in collaboration with Cavallini; moreover, the original has long since disappeared beneath successive restorations. A fourteenth-century copy may be seen in the Spanish Chapel at Florence.

The frescoes from the life of Christ, which Giotto executed for St. Peter's, were destroyed in the time of Nicholas V, when the choir of old St. Peter's was being remodelled. His Roman masterpieces, however, were the three frescoes ordered by Boniface VIII for the loggia or balcony of the Lateran to commemorate the famous jubilee of 1300. They represented the baptism of Constantine, the erection of the Lateran Basilica, and the proclamation of the jubilee. The first and second have perished, and only a fragment of the third remains, inset in the eighteenth century in one of the great pillars of the basilica, where it is yet visible. The pope stands between two acolytes, in the

marvellous. One is astounded at the multitude of things he suddenly brings within the domain of painting. Such an invasion of realism is not met with again till the seventeenth century, when Rubens gives us its counterpart in his life of Marie de' Medici. All Italy is there; cities and their environs, the walls of Arezzo, the temple of Minerva and the church of San Damiano at Assisi, the façade of the Lateran, the graceful interior of the Gregorian church, the landscapes of Albinea and Subasio, rural scenes like St. Francis's sermon to the birds, domestic interiors as in the "Death of the Lord of Celano", scenes from ecclesiastical life, e.g. chapter meetings and choir services. Every type of existence is laid under tribute: monks, peasants, townfolk, burghers, popes, bishops, singers by the roadside, men at drink, at feasts, and funerals. No peculiarity of place, condition, costume, or person escapes the far-reaching eye of the painter. He has put into his paintings every phase of life, and it is all so genuine and accurate, so true to reality that in his work, after five centuries, the Italian fresco still lives for us, despite the deplorable state of the frescoes, the defects of his perspective, and the childlike archaisms of certain technical formulae. No painter has ever surpassed Giotto in this power of gathering details from real life, and of surrounding the commonplace with an artistic halo. Herein also lies the power of all literary creators of life, from Dante in his "Divina Commedia" to Balzac in the "Comédie Humaine". The genius of Giotto was brought into further prominence by the works he executed at Rome, whither he was called in 1298 by Cardinal Stefaneschi. It may be noted at once that the "Nativella", i.e. the act of giving his blessing. The loss of this fresco is somewhat compensated for by a seventeenth-century sketch (in the Ambrosian Library at Milan) which restores the ensemble of the original scene. It was a magnificent representation of an actual spectacle, a vast historical panorama of which the painter must have been an eyewitness, an immense portrait gallery showing the pope, the cardinals, the army, and the Roman people; all this on the occasion of a momentous event in the history of Christendom.

From Rome Giotto returned to Florence, perhaps in 1301, and painted the "Last Judgment" in the chapel of the Podestà. This fresco is in a way a political manifesto, being a kind of idealized grouping of all classes of Florentine society, somewhat after the manner of Dante's great poem. Therein can be recognised Dante himself, Brunetto Latini, Corso Donati, Cardinal d'Acquasparta, and Charles of Valois. The "Life of Mary Magdalen", which completed the chapel decorations, is now so faded and discoloured as to be beyond recognition. In 1306, Giotto was called to Padua to paint the Capella dell'Arena, built by Enrico Seroveggi in expectation of the crimes of his father, the famous usurer Reginaldo. On the lateral walls the artist treated in thirty-six frescoes scenes from the life of Christ and of the Blessed Virgin. Beneath these scenes he placed fourteen small cameo figures, allegories of the virtues and virtues; on the end wall above the scene of the Annunciation, he painted a "Last Judgment". With this work a new epoch opens in the career of Giotto. It is the first of those vast complete series, or great decorative poems, conceived by him with systematic thoroughness, and meant to
develop fully a single great idea. It is truly a living organism, at once pictorial and theological, such as is met with later in the Spanish Chapel, on the ceiling of the Sistine Chapel, and in the Cappella delle Segnature at Ravenna and Santa Maria Maggiore at Rome. Giotto, indeed, continued to use the earlier conceptions, but could not fail to imbue with his own wonderful realism the traditional treatment of these sacred scenes. This introduction of allegory, on an elevated and magnificent scale, is his new master-concept. His work is henceforth dominated by an attempt to bring out the moral meaning and by unity of purpose. The historical element, of course, still held the place of honour; it had not varied for centuries, had been the same in the Apocalypse scenes at S. Apollinare in Classe at Ravenna and Santa Maria Maggiore at Rome. Giotto, indeed, continued to use the earlier conceptions, but could not fail to imbue with his own wonderful realism the traditional treatment of these sacred scenes. This introduction of allegory, on an elevated and magnificent scale, is his new master-concept. His work is henceforth dominated by an attempt to bring out the moral meaning and by unity of purpose. The historical element, of course, still held the place of honour; it had not varied for centuries, had been the same in the Apocalypse scenes at S. Apollinare in Classe at Ravenna and Santa Maria Maggiore at Rome. Giotto, indeed, continued to use the earlier conceptions, but could not fail to imbue with his own wonderful realism the traditional treatment of these sacred scenes.

There is, perhaps, no pictorial type so characteristic of the art of Giotto as the kiss. Circumstances here forced the artist's genius into a new path. Since his imagination had not in these sacred scenes the freest play, he turned to the perfection of artistic style; consequently the Padua frescoes are a new phase in his realisation of the beautiful. In the mind of the artist, now appears as conditioned by art. This preoccupation with the artistic presentation of things is striking at Padua from the earlier scenes, those depicting the story of St. Joachim and the marriage of the Blessed Virgin, where there are charming pastorals rarely equalled by Giotto's contemporaries. The scene of the "Meeting at the Golden Gate". One scene in particular, the marriage cortège of the Blessed Virgin, is introduced merely that the artist may develop a beautiful plastic theme, a frieze of white-veiled girls, quite like the procession of Greek maidens in the Panathenian festal pageant. The chiberti mentions other paintings made by Giotto for the Friars Minor at Padua. However, the most perfect examples of the master's mature skill are his frescoes at Assisi, between 1310 and 1320, in the lower church of the famous basilica of St. Francis. He began in the right transept with the addition of two miracles of the saint as a kind of appendix or supplement to the "Life" which he had painted twenty years earlier in the upper church. Facing these he painted nine frescoes of the Holy Childhood, a replica of the Padua frescoes but superior for delicacy and charm. In his quality of historian Giotto never rose above this work, the most extensive cycle of frescoes. In the Padua frescoes, however, in this period, was the decoration of the roof-groining over the high altar. In it he sets forth the "Triumph of St. Francis", together with the triumphs of the virtues which were the foundation of the order: poverty, chastity, obedience. This is the most complete example of the "Triumph of St. Francis" which from the Campo Santo at Pisa to Mantegna and Titian are a favourite theme of Italian art. It is moreover the earliest masterpiece of monumental art. The earlier "Psychomachia" of the poet Prudentius, so often treated by French sculptors and outlined by Giotto himself, in the frescoes of the Cappella dell' Arena, take here a large development. We seem to hear, as it were, an orchestration of incomparably greater variety and significance. The intimate meaning of life and thought, the power of plastic art, and the genius of beautiful symbols; the majesty of harmonious order, the beauty of the types, personifications, and person; the wondrous blending of fact and fancy; the perfect preservation of the original colours, all combine to make this magnificently planned ensemble one of the immortal works of painting. It seems to breathe the puissant moral ideas of the Middle Ages, while one of its lovely figures, the woman of Sybaris is, say Poston, suggests from afar all the mystic and quaintly modern poetry of Botticelli's "Primavera".

The closing years of Giotto's life (1320-27) were spent at Florence. His work at this period in the church of Santa Maria del Carmine and the palace of the Podestà, where he painted an allegory of Good Government (a theme of Ambrogio Lorenzetti at Siena in 1337), has almost entirely perished. In his work in the Bardi and Peruzzi chapels in the Franciscan church of Santa Croce there survive but some remnants. The Bardi chapel contains in six scenes a new life of St. Francis, besides four figures of the greater French saints: St. Clare, St. Elisabeth, St. Louis IX, King of France, and St. Louis of Toulouse (St. Louis of Toulouse was canonised in 1317; the decoration of the chapel must, therefore, be of later date.) The Peruzzi chapel contains six scenes from the lives of St. Paul and St. John the Evangelist. These frescoes were whitewashed over in the eighteenth century, were discovered in 1840, and have suffered much in the course of time. In the evolution of his art, Giotto, now a master and sure of his own powers, seems to lean towards the abstract in the treatment of his subjects. He appears to subordinate all to the rhythm of the composition. An almost excessive desire for balance and symmetry gives to these later works an aspect of stiffness, somewhat the impression of bas-reliefs. They seem somewhat cold and academic. Yet they reveal incomparable beauty and figures of genuine sculpturesque perfection. In the "Resurrection of St. Paul" the group of the Disciples leaning on the empty sepulchre, through two centuries, is more powerful than Raphael, is almost the same as the group of young geometricians in the latter's "School of Athens".

There is no evidence that Giotto ever visited Ferrara, Ravenna, or any of the other places where frescoes are attributed to him. King Robert of Anjou invited him to visit Naples in 1330, and he remained there three years, but left no trace of his influence in the local school. As for the pretended journey to Avignon and his death there, it is well known to be a fiction. Simone di Martino is the true author of the admirable frescoes in the papal palace at Avignon. In his later years Giotto, recognized as chief among Italian artists, was more or less capomastro or Master of the Works for all public constructions in Florence. We are told that he aided in designing the Porta San Giovanni of the Baptistery, the work of Andrea Pisano (1330). It is certain that he drew the plans for the Campanile in 1334. Perhaps the designs for the fifty-five bas-reliefs by other artists are partly due to his influence. In these, we do in more than one particular the "Virtues and Vices" at Padua. There are very few of Giotto's panels, properly so-called. One large "Madonna di Maestà" in the Accademia at Florence is interesting when compared with that of Duccio. A triptych of the "Life of St. Peter" painted in 1326 for Cardinal Stefaneschi is preserved in the sacristy of the canons at St. Peter's. Finally, his "St. Francis receiving the Stigmata", at the Louvre, is a youthful résumé of the noble frescoes at Assisi.

No painter ever made such an impression on his age as Giotto. All fourteenth-century art betrays his influence. No school ever turned out so homogeneous as the Giotteschi. Taddeo and Agnolo Gaddi, Orcagna, Spinello, and others, it is true, are weak enough imitators of their master. Indeed, outside of Florence there is no originality save at Siena where Simone di Martino and the Lorenzetti worked, and later at Padua in the days of Jacopo Avanzo and Altichieri. The triumph of Giotto, and the thorough manner in which his successors imitated him, proved how fully he embodied the national genius. In painting he invented that dolce stil nuovo, that vulgare eloquium which Dauc created in the realm of poetry. He is truly the founder of the art of painting in Italy. He was not handsome, says Petrarch, who was his friend, as was also Dante, whose portrait he so often painted. Nor must it be imagined that this great painter of St. Francis was either a mystic or an ascetic.
He loved life too well for that. He has left us in a
canzone, mediocre enough as poetry, a satire on "Holy 
Poor," the doctrines of the "Fraticelli," and other 
radicals among the Franciscans of that time. More-
evertheless, the Florentine novelists, Boccaccio and Sac-
cetti, tell many anecdotes of him which he figures 
as a bon-vivant, jovial, good-natured, with a sense of 
humour and a pardonal eccentricity. He may have been wealthy, as his works diligently 
entirely gives us an idea of his world. He married Cinta 
di Lapo del Fela by whom he had eight children.
The eldest, Francesco, registered in 1431 as a member 
of the guild of painters at Florence.

Louis Gillet.

Giovanni, Ruggero, composer, b. at Velletri, 
near Rome, in 1599; d. at Rome, January 1625. In 
1623, he was appointed choirmaster at the church of 
San Luigi dei Francesi in Rome, and subsequently at 
the Chiesa dell'Anima. As a composer of madrigals 
he was exceedingly fertile, and his six books of 
them, with one of canzonets and vilanelles, appeared 
between the years 1586 and 1606. So great was his fame 
as a churchmaster and composer that on the death 
of the illustrious Palestrina, he was appointed his suc-
cessor, 12 March, 1594. Among his sacred works are 
some beautiful masses for eight and twelve voices, and 
some pleasing motets. So little is known of his later 
years that biographers could formerly find no trace of 
Giovanni after 1615, at which date he published the 
second volume of his new edition of the Graduale 
known as the "Medicean". However, to the 
theological works of W. H. Frey, of Berlin, it is now certain 
that Giovanni lived ten years longer. He was buried 
in the church of Santa Marta.

Giraldo, Giovanni Battista (surnamed Cintio), 
Italian dramatist and novelist; b. at Ferrara, Italy, 
1504; d. there, 1573. He studied philosophy and 
medicine in his native town. Under the patronage of 
the family ruling over his native region, he served for 
a while as secretary to the dukes of Ferrara, but wearying of his duties, he gave himself up to academic life as 
a professor in turn at the Universities of Modonvi, 
Turin, and Pavia. Among his minor works there is a 
discussion on the methods to be observed in the com-
position of epic, romance, drama, etc. (Disoriors in 
torno al compor romanzi, commodie et tragedie, etc.), 
which shows him to be one of the leading literary 
critics of the time. He essayed the pastoral drama with 
the "Egle", and the epic with the "Ercole". 
His dramatic labors extended further, to the produc-
tion of one comedy, the "Edeumoni", and nine trage-
dies. In the "Clitigro", the "Chiride", 
the "Selene", and his best play, the "Orbecco". 
Even more than for the "Orbecco", a rather gory piece, 
Giraldo is remembered for his collection of tales, the 
"Ecotommiti" (Hecatommhit). In this he feigns, 
therein imitating the framework of Boccaccio's "De 
Camyon", that a company of men and women, fleeing 
from the sack of Rome in 1527, take ship at Civitave 
chia for Marseilles, and beguile the tedious of the jour-
ney by reciting the "Ecotommiti", as the "Fratelli 
D'oriente", as the "Fratellini". As a matter of fact there are 112 tales in the 
work. The style of the "Hecatommhit" has little to 
recommend it, being rather cold and colourless; and 
although the author announces his purpose of telling 
stories that shall stigmatize vice, and exalt virtue and 
religion, he does not wholly succeed in the execution and 
uniformity. It is worthy of note that the seventh 
tale of the third decade tells the story of the Moor of 
Venice, later used in Shakespeare's "Othello".

Tragedie (ed. Venice, 1531-34): "Ecosommithi" (ed. Florence, 
1532-34), "Bilancino, O. G. Giorgi, Opera della 
Casa di S. A. e del D. de' Franchi" (ed. Rome, 1541); "Floria 
XV" (Aquila, 1889): "Voci, L'infante mortale degli Ecosommithi" 
(Canterbury, 1890).

J. D. M. Ford.

Giraldo, Ubaldo (Ubaldo a Sano Cajetano), 
an Italian canonist; b. in 1632; d. in 1775. He was 
one of the four Friars (Clerici regularis Scholairum 
piarum), was twice assistant general-counselor of his 
congregation, was provincial of the Roman province, 
rector of the Friar college at Rome, and Apostolic 
examiner for the Roman clergy. He published an 
edition, with additions (Rome, 1757), of the "Insti 
tutiones Canonice" of Remi Maschat, also a Friar. 
Thus the "Expositio juris pontificii" of Giraldo (Rome, 
1769; re-edited, 1809-1830) is not a work of 
Law alone. The author merely reproduces the principal 
works of the Decretals and of the Council of Trent, 
adding thereto such papal documents as interpret or 
modify their meaning, with a brief commentary of his 
own. His last work, on which his reputation is chiefly 
based, was a new edition with notes and additions of 
Barbossa's great work on parish priests, "Animalver 
sione et additamenta ex posterioribus summarum pontificum constitutis et sacrarum congrega 
tionum decreta desumpta, ad Avg. Barbossa, de 
Officio et Potestate parochii" (Rome, 1773, new ed., 
1800).

liches Rechtes (Stuttgart, 1875-1880), III, 534-535; Huet, Nomen 
cator. A. Van Hove.

Giraldo Cambreensis (Geraldo de Barry) was a 
distinguished writer, historian, and ecclesiastic of the 
early Middle Ages; b. in Manorbeer, Pembroke 
shire, about the year 1147; d. probably between the years 
1200 and 1220. He was one of the most powerful of the Welsh 
nobility at the time. Though Gerald's brothers adopted the 
profession of arms he himself followed a more peaceful 
course, devoted himself to study, and, influenced by his 
uncle, the Bishop of St. David's, resolved to be 
converted to the ecclesiastical. He spent most of his 
time on his studies; and, if we are to believe his own account, 
he was looked upon here as a model of piety and 
learning. He returned to England about 1172, and 
was employed by the Archbishop of Canterbury on 
various ecclesiastical missions in Wales, where he dis 
tinguished himself for his efforts to remove the abuses 
then flourishing in the Welsh Church. He was 
appointed Archdeacon of Brecknock. On the death of 
his uncle, the Bishop of St. David's (1170), the chapter fixed upon Giraldo as the man most likely to 
stand the aggressions of the Archbishop of Canterbury and 
submitted him to the Pope. The Pope promptly rejected him in favour of one of his Norman 
retainers; the chapter acquiesced in the decision; and 
Giraldo, disappointed with the result, withdrew to 
Paris and here continued his studies. In 1180 he 
returned to Wales and received an appointment from 
the Bishop of St. David's, which he soon resigned, and 
was sent by Henry II to England in 1184 on 
his Irish expedition (1184). While in Ireland he composed 
his work "Topographia Hibernica", which pur 
ports to give a description of the country, but is full of 
legends and tales, as well as the "Expugnatio Hiber 
nica". The latter work is not entirely unreliable, but
requires to be read with care. He left Ireland in 1186, and two years later accompanied Archbishop Baldwin in his journeys through Wales, preaching the crusade. Here, according to his own account (Itinerarium Cambriae), his eloquence met with such a response that Williams was denounced as the principal instigator of Richard to France, but before they could interview him he died; his successor, King John, received them kindly, and granted them permission to hold an election. They were unanimous in their selection of Giralduus; and, as Hubert still refused to confirm the election, Giralduus started for Rome, where he had an interview with Innocent III. The archbishop, however, had anticipated him, and, as the pope was not convinced that St. David’s was independent of Canterbury, the mission of Giralduus proved a failure. It was in connexion with this that he wrote his book "De Breviaria Eclesiastica", which was supported by the chieftains of Wales, while King John warmly espoused the cause of the Archbishop of Canterbury. After a long struggle the chapter of St. David’s deserted Giralduus, and having been obliged to escape secretly from Wales he fled to Rome. Pope Innocent III annulled both elections, and Geoffrey Henlaw was appointed to the See of St. David’s, despite the strenuous exertions of Giralduus, who afterwards was reconciled with the king, and received from him a small pension. At the next election in St. David’s, 1214, his name was passed over in silence. He was alive at 1216, as it is evident from the way in which he speaks of John that that king was already dead.

De Barry was a writer of remarkable brilliancy and force, a narrator rather than a historian, full of self-confidence, and at times courageous, and on the whole neither the model of perfection which he proclaims himself to be, nor the desppicable character which he oftentimes painted. His works are published in the Rolls Series; and in the prefaces to the volumes may be sought indications as to probable dates of composition and publication. Appended is a list of de Barry’s writings: "Topographia Hibernica"; "E-pugnatio cum Ceremonia Ecclesiastica"; "De Instructione Principum"; "De Rebus a se gestis"; "Vita S. Dавидis II episcopi Menvenensis" (which Brewer considers as, more probably, the work of Giralduus); "Descriptio Cambrie" (published as the last); "Vita Galfridi Arch. Eboracensis"; "Symbolum Electorum"; "Inveoa ad Libellus"; "Speculum Ecclesiae"; "Vita S. Remigi"; "Vita S. Hugonis"; "Vita S. Davidis archiepiscopi Menvenensis"; "Vita S. Ethelberti"; "Epistola ad Stephanum Langton"; "De Giraldo Archidicacono Menvenesis"; "De Libris a se scriptis"; "Catalogus Heptadecim Diplomatiae"; "De jure Menvenensis Ecclesiae". See introduction to his works by the editors, Brewer and Dimock.

The works of Giralduus dealing especially with Ireland: the "Topography", and "History of the Conquest", though long regarded as possessing considerable authority, did not escape hostile criticism. In "Cambrensis Eversus" (1662), under the name of Gratianus Lucius, Dr. Lynch, of whose personal history little is known, produced a work which, though controversial in character, entitles the author to repute rather as a painstaking chronicler than as a controversialist of a high order. After criticising the "Topography" and denying the authenticity of the title of the second book, the "Conquest of Ireland", is a misnomer, the writer of "Cambrensis Eversus" disproves de Barry’s title of historian, and meets his charges against the Irish people. Giralduus is impeached with ignorance of the language, and unfamiliarity with the country; he is said to have embodied in his works unauthentic narratives, with little regard for chronology; his own admission that he had "followed the popular rumours of the land" is extended in meaning, and perhaps unduly insisted upon.

Nor is the "Cambrensis Eversus" merely a collection of arbitrary accusations and unsubstantiated rejoinders, made with a view to effect the discredit of de Barry as a writer of history. What might be urged as the greatest imperfection of Lynch’s polemic, its too great wealth of detail, had not escaped the attention of the able author, who excuses the diffuseness to which he is compelled by asseverating his determination to follow Giralduus closely to the end. Whatever may be said as to the ability with which Lynch discharged his task of controversialist, there can be no denial of the thoroughness and, above all, the sincerity of his methods. He does not pick out the weak points in his opponent’s armour, and never shirks the issue; but grapples with every difficulty, as the order of his opponent suggests.

Perhaps the most severe accusation levelled against Giralduus, next to the indictment of bias and dishonesty, is that wherein he is impeached of being added to the cult of the superstitious and the practice of witchcraft. If this be true, and Merlin would seem to have exercised a considerable sway over the mind of de Barry, then it would be vain to seek in the writings of the latter the reflex of that calm discrimination and sober balance of judgment which should characterise the historian. Finally, it may be said that the student of Irish history, by reading the works of Giralduus in the light of "Cambrensis Eversus", cannot fail to derive a helpful knowledge of the period which they embrace.

James MacCaffrey.

Girard, Jean-Baptiste, known as Père Girard, a Swiss pedagogue, b. at Fribourg, 17 December, 1765; d. there, 6 March, 1830. At sixteen he entered the novitate of the Franciscans at Lacerne; after spending some time teaching in the colleges of the order, he was sent to the Germanies, in particular to Würzburg for study, and was there ordained to the priesthood. Returning to Fribourg in 1789, he spent ten years in missionary work and in teaching philosophy to the young men of his order. His admiration for Kantian ideas, although restricted, was the occasion of suspicion of his orthodoxy. Upon the invitation of Stauffer, minister of arts and sciences, Girard wrote a plan for education in Switzerland and was called to Berne where he remained four years. In 1804 he was recalled to Fribourg, and took up work in the primary schools.

Girard, the director of the schools in Fribourg (1807-1823), Girard made education compulsory, organized the school administration, insisted on the adoption of good textbooks and methods, and introduced the monitodal system, avoiding the abuse of mere memorjary exercise and making every study converge to the child’s complete education. These reforms, though accompanied with success, encountered the opposition from those who did not realize the importance of education, or adhered to the old routine methods. In 1809 Girard was sent to Yverdon to make a report to the Government on Pestalozzi’s institution. He had met the latter in Berne and professed the greatest admiration for his ability, while differing from him on several important points, especially on the value of the monitodal system. This
method, in fact, which Girard applied, was opposed by the bishop and the civil authorities of Fribourg, in 1823. Girard abandoned his school and went to Lucerne as professor of philosophy in the gymnasion. In 1834 he returned to Fribourg, where he remained till his death, engaged in educational pursuits and in the promotion of his method of teaching. He had a great reputation in France, being a Knight of the Legion of Honour, and a corresponding member of the Académie des Sciences morales et politiques.

Besides many reports and memoirs, his principal writings are: "Cours de philosophie fait au Lycée de Lens" (1829); "Des moyens de stimuler l’activité dans les écoles" (1835); "Parallèle entre la philosophie et la physique" (1840); and "Cours éducatif de langue maternelle" (Paris, 1840-48). These works banish abstractions that are above the child’s intelligence, principles and rules being taught chiefly by means of concrete examples, and difficulties being introduced gradually. They contain the foundation of modern educational textbooks, and are still well worth studying. Père Girard ranks next to Pestalozzi among Swiss pedagogues.

C. A. DUBRAY.

Girardin, François, noted sculptor of the reign of Louis XIV, b. at Troyes, France, 1630; d. at Paris, 1715. The son of a bronze-founder, he studied first under the sculptor Francois Anguier and afterwards in Rome. Returning to France he was taken into the service of the king, working under Lebrun, whose favour he was. After Lebrun’s death in 1699 he exerted great influence as professor of the academy of sculpture and painting of which institution he later became the chancellor. Like the other sculptors of his time he followed in the footsteps of Bernini, but the influence of the old school of Fontainebleau was also perceptible in his work. The Louvre possesses the model of his spirited equestrian statue of the king which was erected on the Place Vendome. They contain the foundation of modern educational textbooks, and are still well worth studying. Père Girard ranks next to Pestalozzi among Swiss pedagogues.

three miles from the sea, on a steep rock overlooking a rich plain watered by the Drago. Besides trade in valuable balsams, and copals, it is a mining centre for sulphur, soda, chalk, copper, and iron. Its marble quarries are also rich. The Greeks called it Aegagia; the Romans Agrigentum. It was founded by a Greek colony from Gela about 582 B.C. The upper portion of the town was already in existence. It was called Cannium from its position on a platform of Mt. Camicus, and was surrounded by cyclopean walls. The Greeks settled at the foot of this acropolis, which they made the acropolis of their city; soon the town was doing a rich trade with the Carthaginians, and was reckoned, after Syracuse, the first town in Sicily. Like other Doric towns, it became a republic, but was often under the control of tyrants, e.g. Phalaris the Cruel (570–555), Theron (488–472), who with Gelo of Syracuse defeated the Carthaginians under Hamilcar near Himera (480 B.C.). The war of Thrasyedus, son and successor of Theron, on Hieron of Syracuse, brought Agrigentum under the tyrants of Syracuse (471 B.C.), but it soon regained its freedom. In 406 the Carthaginians under Hannibal and later under Himilco besieged the city, captured it, slew the inhabitants, and despoiled the temples of their artistic treasures, which were carried off to Carthage. Once more it regained autonomy, only to fall under the tyranny of Phintias (288 B.C.). After this it became the centre of Carthaginian resistance to Rome. In 262 the Romans captured it for the first time, and in 210 they gained complete control. The wealth and splendour of the ancient city are attested by all writers, and by ruins that remain till this day. The principal antiquities are: the temple of Jupiter on the acropolis, of which seven columns of the peristyle remain; that of Minerva, to which many of the townsfolk fled in 406 B.C., seeking death under its ruins rather than fall into the hands of the Carthaginians; in the district known as Neapolis the temple of Hercules mentioned by Cicero in his "Oratio in Verrem"; the Temple of Concord, in old Ionic style, the best preserved of them all, because used as a church in later times; over one of the cornices was carved a treaty of alliance between Agrigentum and Lilybaea. There are, moreover: the temple of Juno Lacinia; the temple of Eucalius, which contained a bronze statue of the god (this work of Myron was carried away to Carthage but restored by Scipio Africanus); the temple of Olympian Jove, according to Polybius the largest and most beautiful in Sicily. In 1401 three colossal caryatides supporting an architrave were discovered; the fact was commemorated in the coat of arms of Sirgenti. Other edifices of the city were: the temple of Castor and Pollux, of which there remains an architrave supported on four pillars; the temple of Vulcan that of Ceres and Proserpine; and the remains of a stadium. In 827 the Arabs, called in by the Byzantine tribune Euphemios, captured the city, and spread over the whole island. In the eleventh century Sirgenti was the centre of Saracen resistance to the Normans, who finally captured it in 1087; thenceforth it shared the fortune of the Kingdom of the Two Sicilies. In the roll of illustrious citizens are found the names of the philosophers Empedocles and Aeron; the historian Philinis; the musician Metellus, Plato's master; the dramatist Archion and Carenos; the orator Sophocles; the humanist Nisola di Vallet; and the dramatist Francesco del Carretto. Among the natural curiosities of note in the neighbourhood is the hill of Maccelebus, studded with small craters, about thirty inches in diameter, spewing cold water, carbonic acid, and hydrogen mixed with asphaltum, chalk, sulphate of lime, etc. The cathedral is built of ancient materials, and has a beautiful Madonna by Guido Reni, and paintings by Nunnio Magro. The church of S. Nicola exhibits a very fine Norman doorway. Sirgenti venerates St. Liberntinus as its earliest apostle; he is said to have been sent thither by St. Peter. The earliest bishop of whose date we are certain is St. Potamius, a contemporary of Pope Agapetus I (535–36). St. Gregory I, Bishop of Agrigentum, said to have been martyred in 362, is probably only a name given to the homonymous bishop who was a contemporary of St. Gregory the Great. The list of bishops, interrupted by the Saracen invasion, began again in 1071 with St. Gerlando. Other bishops of note are: Rinaldo di Acquaviva (1244), who restored the cathedral and crowned King Manfred, for which latter action he was excommunicated by Alexander IV; and Fra Matteo Gimmars, called the Blessed. Sirgenti is a suffragan of Monreale. It has 66 parishes and 381,000 souls, 10 religious houses for men, and 42 for women. It is on the Via Catania, 25 miles. U. BENIGNI.

Gilbert, Blaise, French rhetorician and erudite; b. at Cahors, 21 February, 1557; d. at Montpellier, 21 February, 1731. Having entered the Society of Jesus
in 1672, he taught the humanities, rhetoric, and philosophy, after which he devoted himself for a long time to preaching. The pleasure which Gesbert took in discussing pulpit eloquence with Lamoignon, the intendant of Langueado, impelled him to write an essay on a subject which he considered "le bon tort de l'éloquence chrétienne" (Lyons, 1702). He spent ten years in retouching this essay, and augmented it considerably by adding to the rules examples drawn from Holy Scripture and the Fathers, especially St. John Chrysostom. The second edition appeared at Lyons in 1715 under the title "L'Eloquence chrétienne dans l'idée et dans la pratique." The work, which comprises twenty-three chapters, does not follow the rigorous order of a didactical treatise and is without the dryness of a scholastic manual. It has been rightly called "un livre éloquent sur l'éloquence." It contains a series of talks on the faults to be avoided in the pulpit, on the qualities necessary to the preacher, on the matter and form of sermons, on oratorical action and decorum. Gesbert's book sufficed to make its author famous not only among the Catholic clergy, but even among Protestant pastors. One of them, Jacques Lenfant (1661-1728) carefully annotated it, and another, Korsmeyer, translated it into Dutch. An English translation appeared during Gesbert's lifetime, and later a Latin translation. The latest and best French edition is that of Crampom and Boucher (Paris, 1865). As a sort of supplement Gesbert wrote reflections on the collections of sermons printed in France from 1699 to 1720. In this he considers归要 to the somewhat narrow ideals of his age, ten orator before Bossuet and Bourdaloue. The MS. of this interesting "Histoire critique de la chair de France depuis François Ier" was lost, but was finally recovered by Mgr Puyol and published by Fathers Griselle and Griselle, S.J., in the "Revue Bourdaloue," 1902-04.

Paul Debrych.

Giulio Romano, properly Giulio dei Giannuzzi, also known as Giulio Pippi, a famous architect and painter, the best-known of Raphael's pupils, and the unique representative of the so-called "Roman School"; b. at Rome in 1492; d. at Mantua in 1546. At the age of 19, Giulio placed himself under Raphael, who had just finished after three years (1509-12) the Halls of the Segnatura and Heliodorus. In 1514, Raphael was appointed general overseer of works by Leo X, conducted in 1519 the excavations of ancient Rome, and found it difficult to carry out all his undertakings. It came thus to pass that the assistant was soon the factotum and right hand of the master, who during the later portion of his career seldom found time (except for a few portraits) to take a brush into his hands.

As an artist, Giulio has no originality; as a painter, he is merely a "temperamenter," a prodigious worker. His manual dexterity is unaccompanied by any greatness of conception or high moral principle. He enlarged and executed in fresco or on canvas the drawings and studies completed by Raphael for his pictures. In this way were completed, within eight years, "Fire in the Borgo" (1513), the decorations of the "Acts of the Apostles" (1512-1514), the loggias of the Vatican (1514-1519), the frescoes of the Farnesina (1518), and many other famous works such as the "Lo Spasimo" (Christ bearing the Cross), the "Pearl," the "Virgin with the Fish" (Madrid), the "St. Michael of the Louvre," and "The Holy Family" executed for Francis I of France. With this elevation to the real glory of Raphael's genius; the master's divine ideas became vulgarized in passing through Giulio's more material brain. Moreover he was carried away by the power of Michelangelo's works (the Sistine Roof was uncovered in 1512), which, however, he misinterpreted as the brute force of physical strength. Thus Raphael's graceful figures often became in Giulio's hands coarse muscular giants like the "Ignudi" and the "Prophets". Giulio is also responsible for the brick-like squared tones which he gave to the women in Raphael's later works, the artistic defects of which are in many cases entirely due to Giulio. A number of the master's most beautiful conceptions have come down to us only under this imperfect form, spoiled for ever by the triviality and lack of delicacy of the execution, and the beauty of it is, on the strength of Raphael's signature, these works seemed to impress the seal of sanction on many serious defects in the French School of the seventeenth century. Much time and discussion would have been saved if in arguing over the famous "Transfiguration" (1520), for instance, it were admitted that in its present state, as completed by Giulio, it is impossible to say what the master's original idea was, since the secret of it is buried with him in the grave. As for the "Battle of Constantine" and the "Coronation of the Virgin", it would be as well to admit that they retain nothing whatever of Raphael's hand.

Although the sole interest of this early portion of Giulio's career consists in the light it throws on Raphael's work, it is of greater artistic importance than all Giulio's subsequent independent efforts. Yet even they are not without interest. They show us Giulio developing, though with undeniable signs of the defects and deadly vices which lay hidden in the Renaissance movement. The most serious of these defects is dilettantism, or virtuosity for its own sake. Giulio had not with impunity devoted ten years simply to the execution of another's ideas; he came to believe that in art the thought is of no account the form everything. The necessary connexion between the idea and its expression, between art and life, quite escaped him. This was the grave defect of the Italian spirit—the abuse of art, the worship of form, the indifference to subject, and it could hardly fail to prove fatal to an artist whom it had obsessed.

An opportunity of translating this erroneous principle to canvas on a large scale was afforded to Giulio by the Duke of Mantua. For 22 years (1521-1546) the artist was absolute master of all the works of art executed in that town. He entirely remodelled the old Ducal palace (the Palazzo di Corte), lavishing it on the resources of his unlimited fancy. He refashioned the interior of the cathedral; he raised the important church of San Benedetto, and he built from roof to cellar the famous Palace of Tajetto, near the gates of the town. It is especially in these two palaces, which were almost entirely painted by him or his pupils, that Giulio marks an epoch in the history of art. His lively but superficial fancy, incapable of deep emotion, of religious feeling, or even of observation, attracted him to neutral subjects, to mythological paintings, and imaginary scenes from the world of fable. There is never a lack of brilliancy, a sensualism rather libertine than poetical, an epicureanism unredeemed by any elevated or noble quality. It is this that wins for Giulio his distinctive place in art. His conception of form was never quite original; it was always a clever and "bookish" compromise between Raphael and Michelangelo. His sense of colour grows ever louder and uglier, his ideas are void of finesse, whatever brilliance they show is second-hand. His single distinctive characteristic is the doubtful ease with which he played with the commonplaces of pagandom. In this respect at least, paintings like those of later Bolognese or the Vatican historical landmarks. It is the first time (even if we include the Farnesina) that an appeal is made to the senses with all the brutal frankness of a modern work. Unlike Raphael's "Galatea" and his "Three Graces",
examples of Klymias happiness in a race in the state of innocence, Giulio's decorations resemble saturnalia of luxury itself. The vulgarity of the drawing leaves no illusion as to the nature of its intention; nothing remains of the ancient myth, thus stripped of all its ideal signification, but what serves to excite the senses. Thus art, losing all moral import, sinks inevitably to the level of a game of conventional rules, and the cloak of fiction serves only to disguise the grossness of the instincts, which have ousted every laudable ideal. Such is the result of art's effort for art's sake in his case, and the danger of such principles was aggravated by the superstitious reverence for the antique in the sixteenth century. The word antique was held to purify and sanctify everything; all things were lawful in the name of erudition, the antique became a fetish. In the Hall of Troy (1534-1538) in the Palazzo di Corte, and in his "Triumph of Titus and Vespasian" in the Louvre, Giulio, following Mantegna, had given evidence that he too was among the learned, the connoisseurs, the men of disinterested culture, and no doubt concluded that he was thereby entitled to dispense with the claims of morality in the rest of his works. It was not long until the same specious reasoning became the fashion in Europe. Primatice introduced it to the Court of Fontainebleau; and Rubens, who spent eight years (1600-1608) at the Court of Mantua, brought it back with him to Flanders. Giulio is the originator of those lascivious pictures, dating from 1630 to 1638, which are in the Prado and Torre de la Parera galleries at Madrid. Mantua, Giulio's town, rather than Rome was the teacher of the seventeenth century. The consequences of these principles were disastrous. The antique, indeed, could only be the religion of the few, but, by constituting fable the sole vehicle of the beautiful, Giulio, vulgarian though he was, fell into the error of "aristocratizing" art, and thus severing its indispensable bond with the real. Henceforth its public became fewer; art, becoming the property of an intellectual class, was exposed to all the risks inherent in caste and party spirit. It was now a privileged possession, a code-language for use only among the initiated. Emancipated from morality (thanks to the sophism of the age and the necessity of the necessary export of reality, and immune from the common-sense verdict of the general public, it gave utterance only to aimless, useless, soulless, lifeless abstractions. As an example may be cited the most famous of Giulio's works, the "Hall of the Giants" (1532-1534) in the Palace of the Tadjeto. It is difficult to say whether the artist was here the dupe of his imagination, or whether the work was the result of a joico wage, for it is certainly a freak, a shock like those that used to startle the yokels in the Gardens of Castello and of Pratolinio. But the effect here is brought about by such palpable illusion, the importance is so enormous, it demands so much stillness from the spectator, who must not permit himself such a lack of all critical power on his part, that it is hard to understand such a pleasantry, though for Giulio's sake one would gladly wish it such. The effort is out of proportion to the result that one cannot repress a feeling of pity. Such a lack of dignity comes as a shock. There is, of course, in the Italian genius a substratum of scepticism, of irony, of parody, which outsiders can never quite apprehend. But it is worth while to heap Pelion on Ossa, to shake the whole world, to create such a cataclysm of colour, merely to raise a smile? Or can it be that the logical outcome of the doctrine of "art for art's sake" is nothing more or less than the bizarre and the burlesque? Distinguished by such characteristics and marked by such defects, Giulio Romano occupies nevertheless an important place in the history of art. More than any other, he aided in propagating the pseudo-classical, half-pagan style of art so fashionable during the seventeenth century, and it is mainly through his influence that after the year 1600 we find so few religious painters in Europe. It was reserved to a Dutchman—Rembrandt—to reconcile art and morality once more. By his influence as a pupil of Raphael, Giulio contributed to spread the evil germs of Italian Art—a carelessness, a bravura, lack of sincerity, lack of truth, mannerism, love of the grotesque. He painted many altar-pieces; the best is the "Stoning of St. Stephen" in San Giovanni at Genoa, executed before leaving Rome, when the mantle of Raphael was still on him. His Maddonnas, such as the "Madonna della Gaita" (Naples), the "Madonna della Catina" (Dresden), are mere genre pictures without feeling or religious depth, having the sort of abstract beauty we expect in box-reliefs. The "Nativity" of the Louvre is an attempt to reproduce the chiaroscuro of Correggio.

Giuseppe Maria Tommasi, Blessed, Cardinal, noted for his learning, humility, and zeal for reform; b. at Lieata, Sicily, of a princely family, 12 September, 1649; d. in Rome, 1 January, 1713. Though destined by his father for the Spanish Order of the Clerics Regular of the Theatine Order at Palermo, 24 March, 1665, renouncing his primogeniture and the princedom in favour of his brother. He was professed 25 March, 1666. He studied philosophy, first at Messina, and later, owing to poor health, at Ferrara and Modena; and theology in Rome and Palermo. He was ordained priest on Christmas Day, 1673. To a wide knowledge of Greek, he united the study of Ethnographic, Arabic, Syriac, Chaldaic and Hebrew—converting his master, a Jewish rabbi, to Christianity. From the Psalters in these different languages, he collected the titles of the Psalms. He devoted himself to the study of Scripture and the Fathers. Searching the chief libraries, archives, and monuments, he retraced the ancient ecclesiastical discipline and liturgy. His valuable works (Codici Tommassiani), published

GIUSEPPE  573  GIUSEPPE
Giusti, Giuseppe, poet and patriot; b. 1809, at Monsummano near Pescia, Italy; d. 31 March, 1850, at Florence. He received his early training under a private tutor and in an academy at Florence. Then he entered the University of Pisa to take up the study of jurisprudence. He did not give overmuch attention to his legal course, was awarded his degree, in 1834, after a delay due in part to a political satire written by him which displeased the authorities. Now establishing himself in Florence, ostensibly for the practice of law, he really devoted himself to literary pursuits. When his health began to fail, he travelled about the peninsula with the hope of recovering it, visiting Rome, Naples, Leghorn, Milan, Pisa, and other places. In the meantime he had been active in the liberal press as a prose and versifying hand. The grand duke, Leopold II, he addressed to him an encomiastic ode quite different from the satirical verses with which he had assailed him previously. He was admitted into membership in the Accademia della Crusca. Entering seriously into political life as a legislator, he was elected a deputy to the first and second Tuscan Legislative Assembly, in which he signalised himself by his patriotic endeavours. At first he favoured the return of the grand duke, but when the latter came under Austrian auspices Giusti withdrew from public life. By this time tuberculosis, the fatal malady threatening him, began to assert itself all too plainly, and on 31 March, 1850, he died of it in the mansion of his friend, the Marquis Gino Capponi, who, like himself, was a sturdy Catholic and patriot.

Among his early compositions there figure his scherzi, as he called them, little lyrics of which some were amorous and others of varied kind, which were scattered broadcast through the land in manuscript form. In 1844 they were published at Leghorn with his sanction. It is obvious that he began his lyric career under the influence of Petrarca; later, however, he developed a romantic and elegiac strain of his own. Notable among his purely lyrical compositions is the "Fiducia in Dio", which sets forth his hope and faith as a Catholic Christian. With tremendous force does he express himself in his political satires, in which, departing from the conventional employment of the terza-rima and the blank verse, he uses a variety of lyric measures. Taken in their entirety, his political satires present a picture of Italy in his day. They are directed against social abuses of many sorts, and at the same time they express a longing for political and moral regeneration. In view of the frankness and the acridity with which he assailed the grand-ducal government and the Austrians, it is surprising that he escaped the dungeon to which so many other Italian patriots of the time were condemned. In prose he published but little. Mention may be made, however, of his "Proverbi toscani", a collection of proverbs annotated by him, and his "Lettere a un giovane", in which he expresses himself. These letters are rather too studied and polished in form, but they remain valuable for the autobiographical information that they contain. On the basis of them, the librarian, Guido Biagi, has prepared a volume entitled "Vita di Giuseppe Giusti, scrittore da lui medesimo" (Florence, 1893).

Martini, Memoria inedita (Milan, 1894); Frassati, Vita di G. Giusti (Florence, 1859); Poesie di G. Giusti, with an essay by Carducci, Della vita e delle opere di G. Giusti (Florence, 1890); Versi e prose, an edition by Giovani himself (Florence, 1846). Annotated selections from his works, edited by Fioretti (Venice, 1878); by Frassati (Milan, 1890); and by Biaggi (Florence).

Francesco Paolo.

Glaber. Raoul, Benedictine chronicler; b. in Burgundy before 1000; d. at Cluny about 1050. In early boyhood he was so wayward and mischievous that his uncle, a monk, to safeguard him, forced him to enter the monastery of St-Léger de Chaumont at the age of twenty. However, he adopted only the monastic habit. He tells us that through pride he resisted and disobeyed his superiors, and quarrelled with his brethren. Finally he was expelled. He then entered the monasteries of Notre-Dame du Moutier and St-Benignus at Dijon. Abbot William of Dijon, who appreciated Raoul's literary talents, became his warm friend and took him in 1028 as his companion on a journey to
Suza in Italy. Yielding again to his roving disposition, Glaber quietly ran away and entered the monastery of St-Germain d'Auxerre. Thanks to his learning, he was sure of a refuge, as he tells us, wherever he chose to go. Fluent, too, in the mediocre tales displayed in his writings, the fact alone shows us to what depths literary culture had sunk in his time. The monks at St-Germain got him to restore or compose the inscriptions on the numerous altars in their church, and on the tombs of the saints who were buried in the church; this was approved by the Abbot of Bec, and at Cluny under St. Odilo. He seems at this time to have acquired with increasing years a disposition more in keeping with his profession, and he died at Cluny about 1050. His was a proud, indocile, restless spirit. From his writings we learn that he always had a lively faith, but was extraordinarily superstitious. Of his works there remain: "Wilhelm abbatis gestorum liber", the life of his superior at Dijon, printed in Acta SS., 1 Jan., 57 sqq.; and his "Chronicle", for which he is chiefly remembered. This is a history of the world, as he knew it, from the year 900 till 1000, the latter date being in Leverkusen and partly at St-Germain. Glaber is quite devoid of literary style; and critical spirit he has none, the most trivial events and tales being put on exactly the same plane as the most important facts. His chronology and geography are quite deficient; yet, despite all its faults, this manuscript placed it beyond all doubt that Glaber himself knew the sight into the customs and morals of an age when Christianity on the continent had reached a very low ebb.

A. A. MACERLAN.

Glabrio, MANIUS ACILIVS, consul at Rome during A.D. 91, with Trajan. He belonged to one of the noblest families of Rome, no fewer than nine of his name having held the consular office, the first being that of Acilius Glabrio who was consul in A. U. C. 563 (191 B.C.), conquered the Macedonians at the battle of Thermopylae, and in whose honour the Temple of Pietus, now the church of S. Nicola in Carcere, was erected. The family attained great wealth and power, and Dominus in the early imperial period occupied the whole of what is now the Pincian Hill. The subject of the present memoir was put to death by Domitian in the year 95. Suetonius (Domit., c. x) tells us that the emperor caused several senators and ex-consuls to be executed on the charge of conspiring against the empire—quod multos rerum nonorum "as contrivers of novelty"—and among them he names "Acilius Glabrio, who had previously been banished from Rome". The charge of "contriving novelties" seems in this particular case—not, however, in the others which are mentioned with it—to denote adhesion to the Christian religion. Dio Cassius (XXVI, 12, 14) tells us, as also does Juvenal (Sat., iv, 94), that, during his consulship and before his banishment, Glabrio was forced by Domitian to fight with a lion and two bears in the amphitheatre adjoining the emperor's villa at Albano. This amphitheatre still exists, and was excavated in 1887. It is partly hollowed out of the side of the mountain, and commands a remarkable view. Xiphilinus, speaking of the executions of 95, says that some members of the imperial family and other persons of importance were condemned for atheism, as having embraced "the customs and persuasions of the Jews", that is, of course, the Christians. Among these were Domitilla, of whose Christianity there is no doubt. Glabrio was involved in this trial and suffered under this indictment, so that we could have little doubt that he too was a Christian, even if we had not the archaeological evidence of which we shall now speak.

Glabrio was put to death in his place of exile, concerning the location of which we have no knowledge. But his body was brought by treasure-seekers, the Via Salaria, in the catacomb of Friscilla. Here the crypt, in which he with many of his family and dependents was laid to rest, was discovered in 1888. Henceforth there can be no doubt of his religion, or concerning the cause of his execution. Unfortunately, the crypt has been disturbed by treasure-seekers, the date of whose vandalistic action can be fixed as the time of Clement VIII (1667-70). The hypogeum was of very unusual form, consisting of a single large ambulacrum or "cryptoperipterus in gamma", that is turned at right angles with its own staircase. The places for tombs were all large "arcosolia", or niches for sarcophagi; there was not a single loculus of the usual cesemeterial pattern in the walls. At the end of the longer arm of the gamma a passage was opened into a large hall, nine yards by four and a half, barreled-vaulted and with a square "lucernarium", which had apparently originally been a cistern for water. It had contained an altar, raised over a tomb, with spiral columns of giallo antico, and was at one time beautifully decorated, but had been entirely wrecked. In it, however, were found fragments of a marble sarcophagus, with the inscription ACILIVS GLABRIO... FILIO still legible. Other fragments were afterwards discovered, that had been placed it beyond all doubt that he was buried in the place of the Aelian family, round one of their race who apparently had been a martyr. The lettering of the chief inscription being of the time of Domitian or thereabouts, and the fact that the hypogeum itself belongs to the earliest age of Christianity, is sufficient to enable us to feel certain that we have the tomb of the famous consul. The date and the circumstances connected with the translation of his relics to Rome from the place where he suffered are not known. De Romani, Bullettino di arch. Crist. (1888-9), p. 15; (1880), p. 97; Lancellotti, Papae or Christiani Romani (London, 1827), p. 4; IDM., in Atlantic Monthly (Boston, July, 1891); Frottin, in American Journal of Archaeology (Boston, June, 1888); DE BLANC, Comptes rendus de l'Acad. des Inscriptions, (Paris, 1888), p. 113; Marucchi, Le Catacombe Romane (Rome, 1903), pp. 450-66; Armellini, Gli antichi cimiteri (Rome, 1893); Allard, Les catacombes de Rome (Paris, 1896).

ARTHUR S. BARNES.

Glagolitic (or Glagolitsa; Slavonic glagol, a word; glagolati, to speak). An ancient alphabet of the Slavic languages, also called in Russian bukvtiva. The ancient Slavonic when reduced to writing seems to have been originally written with a kind of runic letters, which, when formed into a regular alphabet, were called the Glagolitic, that is the signs which spoke. St. Cyril, who, together with his brother St. Methodius, translated the Greek liturgy into Slavonic when he converted the Bulgarians and Moravians, invented the form of letters derived from the Greek alphabet with which the church Slavonic is usually written. This is known as the Cyrillic The Cyrillic form of letters is used in all the liturgical books of the Greek Churches, whether Catholic or schismatic, which use the Slavonic language in their liturgy, and even the present Russian alphabet, the Grazhdanska, is merely a modified form of the Cyrillic with a few letters added. Among the many forms of the letters of the alphabet in the Glagolitic and in the Cyrillic is nearly the same, but the letters bear no resemblance to each other, except possibly in one or two instances. Jagié uphold the theory that St. Cyril himself invented the Glagolitic, and that his disciple St. Clement transformed it into Cyrillic in 893. But using the Greek under the form of Greek is a tradition, however, that St. Jerome, who was a Dalmatian, was the inventor. Some of the earliest Slavic manuscripts are written in the Glagolitic characters. The Cyrillic alphabet continued to be used for
writing the Slavonic in Bulgaria, Russia, and Galicia, while the Southern and Western Slavs used the Glagolitic. These Slavs were converted to Christianity and used the Roman Rite. St. Leo missives by 894 gradually the Roman alphabet drove out the use of the Glagolitic, so that the Bohemians, Slovenians, Moravians, and part of the Croatians used Roman letters in writing their languages. In Southern Croatia and in Dalmatia (often treated as synonymous with Illyria in ancient times) the Glagolitic has continued in use as an employed alphabet in writing the ancient Slavonic. Although the Slavic peoples bordering on the Adriatic Sea were converted to the Roman Rite, they received the privilege, as well as their brethren of the Greek Rite, of having the Mass and the offices of the Church said in their own tongue. Thus the Roman Mass was translated into the Slavonic, and, in order to more fully distinguish the Western Rite from the Eastern Rite among the Slavic peoples, the use of the Glagolitic alphabet was reserved exclusively for the service books of the Roman Rite, just as the Cyrillic was used for the Greek Rite.

A. BOUDINHON.

Glanville, Ranulf de, Chief Justice of England; b. at Stratford, Suffolk, England, probably about 1150; before Acre, Palestine, 1190. He was of a baronial house which got its name from Glanville, in Normandy, and which in England held property in Norfolk and Suffolk. His father was William de Glanville, of whom he was a younger son, though eventually, on the death of an elder brother, he inherited the family estates and honours. But, when after his appointment to the judicial bench, he held the sheriffship of various counties, which seems to betoken employment in the Exchequer; in particular he was Sheriff of the great County of York from 1163 till the death of King Henry II, he left a short break, and in 1173 he became Chief Sheriff of England. These years had the effect of increasing the use of the Latin in the Roman Rite there, and the use of the Glagolitic books has accordingly diminished. Of course the non-Slavic inhabitants of Dalmatia and Croatia have always used the Latin language in the Roman Rite. At present the Slavonic language for the Roman Rite, printed in Glagolitic characters, is used in the Slavic churches of the Dioceses of Zengg, Veglia, Zara, and Spalato, and also by the Franciscans in their three churches in Veglia, one in Chero, two in Zara, and one in Sebenico. Priests are forbidden to mingle the Slavonic and Latin languages in the celebration of the Mass, which must be said wholly in Slavonic or wholly in Latin.

Andrew J. Shipman.
Henry II died. At the coronation of his successor, Richard I, the same year, Chief Justiciar Glanville was present, and when that prince took the cross, Glanville joined him, contributing a large sum towards the expenses. In 1197, when he died at the age of 64, a victim to the unwholesomeness of the climate. By his wife, Bertha, a daughter of a neighbouring Suffolk landowner, Theobald de Valognes, he left three daughters. Glanville is the reputed author of a celebrated work entitled "Tractatus de Legibus et Consuetudinis Regni Angliae," the oldest known treatise on English jurisprudence, more likely written by his illustrious nephew and secretary, Hubert Walter. Furthermore, he founded two abbeys, both in Suffolk, viz., Butley, for Black Canons, in 1171, and Leiston, for White Canons, in 1183; also a leper hosp. near Hadleigh, in North Woodham, in 1190. In 1197, a large portion of his estate was sold to the crown. 

Glaeser (Loriti), Henry, the most distinguished of Swiss humanists, poet, philosopher, geographer, mathematician, and musician, was born at Mollis, near Glarus, Switzerland, in June, 1488, and died at Freiburg-im-Breisgau, 27 March, 1563. Loriti, or Glaeser, as he came to be called after 1511, from the name of the town near which he was born, received his first instruction (as did Oswald Myconius, Rudolf Agricola, and others) from Michael Rubellius, at Rottweil. Rubellius also paid special attention to the development of his pupil's musical talent. In 1506 Glaeser entered the University of Cologne, where he devoted himself to philosophical and theological studies, and learned music and mathematics from Cochleus, and Greek from Caesarius. In 1510 he became a Licentiate and Master of Arts. In 1512 Maximilian I showed his appreciation of a poem which Glaeser composed in his honour by raising its author to the dignity of poet laureate. In 1514 the University of Basel received him among its Maestri and licensed him to conduct a bursa, or students' hall. Among his pupils was Ægidius Tschudi, who was afterwards to become famous as an historian of Switzerland and as a zealous defender of Catholicism in the Canton of Glarus.

Glaeser added a strong support to Erasmus, who in turn, acting as parens et protector, remained to the last a devoted friend and no doubt influenced his attitude in the midst of religious agitation and troubles. Glaeser carried a recommendation from him when he started for Paris in 1517; here, too, he held in a bursa, in Northern Hall, and entered into close scientific intercourse with Budinus, Faber Stapulensis, and Faustus Andelinus. On the death of the last-named, Glaeser became the recipient of a royal allowance, although he received no mandate to lecture publicly. In 1522 he settled at Basle, where he had a large following; but the combines of the religious movement which he, as an admirer of Luther's writings and an intimate friend of Zwingli, Myconius, and Ecolompiadius, had originally sympathized with, gave him little satisfaction. He severed his relations with the partisans of the Reformation, and in 1529 emigrated with Ber. Amerbach, and Erasmus, to Freiburg-im-Breisgau. He laboured in this university until his death, and was one of its most celebrated professors.

Glaeser was the author of numerous and important works. In the course of his public and private teaching, he produced a number of commentaries on, ancient writers, among whom were Livy, Dionysius of Halicarnassus, Horace, Ovid, Donatus, Cæsar, Sallust, Terence, Boethius, Lucan, Virgil, Maximus, Eutropius, and Curtius. He made distinguished contributions to his favourite sciences, music and geography. He published at Basle, in 1547, his "Dodeka-chordon", which was based on twenty years' study of ancient and ecclesiastical music, and introduced twelve tones, instead of the eight only which had been known until then. The "Dodeka-chordon" was recently published in the sixteenth volume of the "Publikation alterer praktischer und theoretischer Musikwerke" (Leipzig, 1888-90). The standing of Glaeser as a geographer rests on his "Helvetiae Descriptio", a verse composition (Basle, 1515; also re-edited by Bernoull in 1890), one of the earliest and most widely read descriptions of Switzerland; also on his "Liber de Geographia unus" (Basle, 1527), which is an exhaustive and specific study, in forty chapters, of the principles of mathematical geography. A find of historical interest was a manuscript map of the world, dated 1510, in which he, like Waldseemüller, used for the newly discovered continent the name of "Terra Americana". The library of Glaeser eventually passed, through his friend, Bishop S. E. von Krüningen, to the University of Innsbruck, and is now at Munich.

Gesellschaft (Munich, 1892), s. 67-74; Alter, de Hervico Glaeserano geographo (Bonn, 1861); Haywood, Glaeserus, His Geography and Maps in Geographical Journal (1905), XXX, 467-54. OTTO HARTIG.

Glas, John. See Sandemanians.

Glasgow, I. Archdiocese of (of Glasgowensis), in the south-west of Scotland, comprising at the present day the counties of Lanark, Dumfartong, and Renfrew, part of Ayrshire north of Lugton Water, the district of Balderock in Stirlingshire, and the Cumbrae Isles. The see was founded between 540 and 560 by St. Kentigern, or Mungo, who died 13 Jan., 601. He also established on the Welsh model a religious community, which served as a much needed centur to preserve the Faith among the surrounding Christian population. In his time Cathures, as the place was originally called, stood at the northern limit of the little kingdom of the Strathclyde Britons, which extended on the west of the island southwards as far as Carlisle in Cumberland. On the north-west were the Scots of Dalriada, and on the north-east the Picts, who were then being converted to Christianity by St. Columba and his missionary monks from Iona. On the east the Strathclyde Britons, like their brethren in Wales, were pressed by the Angles and Saxons westward to the sea.

On account of the struggle of races for mastery and the confusion of the times that followed there appears to have been no regular succession of bishops till the time of Alexander I of Scotland, son of St. Margaret. His brother and successor on the throne, St. David, while prince of this region under the name of Cumbria, may be said to have restored the Diocese of Glasgow.
The first bishop of the restored see was John Eochy, or Achsiaus, who held it from 1115 till 1147. He had twenty-three successors in actual possession till 1560, when the Catholic Faith was abolished by act of the Scottish Parliament. Nearly all these bishops of Glasgow took an active share in the government of the country, whether as chancellors or treasurers of the kingdom or as members of regency during the minority of a sovereign. Robert Wishart (consecr. 1272, d. 1316) was conspicuous for his patriotism during the War of Independence, and was the close friend of Wallace and Bruce. William Turnbull (consecr. 1447, d. 1454) obtained in 1450 from Pope Nicholas V the charter of foundation for the University of Glasgow. On 9 January, 1492, Innocent VIII raised the see to metropolitan rank, attaching to it the suffragan dioceses of Argyle, Dumblane, Dunkeld, and Galloway. James Beaton, nephew of the celebrated cardinal of the same name, was the fourth and last archbishop of the old hierarchy. In 1560, eight years after his nomination, he was forced to retire to France, where he acted as confidential agent of Queen Mary, and later openly as ambassador for James VI, till his death in Paris, 25 April, 1603. He carried away with him the diocesan records, two of which deserve special mention: (1) "Registrum Vetus Ecclesiae Cathedralis Glasguensis", in handwriting of the twelfth and thirteenth centuries, and (2) "Liber Ruber Ecclesiae Glasguensis", with entries from about 1400 to 1476. These, along with other records, were in 1843 printed in a handsome volume for the Maitland Club under the title: "Registum Episcopatus Glasguensis: Munimenta Ecclesiae Metropolitanae Glasguenses a seco restaurata secuo ineunte XII ad reformam religionem". A more splendid memorial of those times still remains in the old cathedral of St. Mungo, which was begun by Bishop Jocelyn (consecr. 1175, d. 1199) and received its last additions from Archbishop Blackader (consecr. 1484, d. 1508). The building as a national monument is administered by a department of Government, and the chancel is used for the Presbyterian worship of the State Church.

Glasgow did not again become a centre of Catholic life till about the beginning of the nineteenth century. The great industrial development which then began drew to the city and its neighbourhood Catholics from the Scottish Highlands and later, in far greater numbers, from Ireland. In 1828 the Holy See erected the Western District or Vicariate of Scotland, and the first vicar Apostolic to reside in Glasgow was Andrew Scott, Bishop of Eretia (b. 1772, d. 1846). He was succeeded by John Murdoch, Bishop of Castaba (b. 1790, d. 1865) and John Gray, Bishop of Hymopolis (b. 1817, d. 1872). On the resignation of Bishop Gray in 1869 Charles Eyre (b. 1817, d. 1902) was consecrated Archbishop of Anasarca and appointed administrator Apostolic. On the restoration of the Scottish hierarchy by Leo XIII, 4 March, 1878, the Archbishopric of Glasgow was re-established, and Archbishop Eyre was transferred to the restored see. He had consolidated the work of his predecessors in the former vicariate, and had laid the foundations for a complete diocesan organization. In 1874 he built the Holy See the erection of a cathedral chapter with a provost and eleven canons. He introduced a thorough system of inspection in religious knowledge for the schools of the archdiocese. He was also the founder in 1874 of the diocesan college for higher studies, to house which he erected in 1892 the building worthy of the purpose. He was succeeded in 1902 by John Aloysius Maguire (b. 1851), who had been consecrated as auxiliary bishop in 1894. The Catholics of the Glasgow district are computed at 380,000 out of a general population within the same bounds of 1,180,000. The number of Catholic baptisms in 1906 was 14,785. Taking into account the available for 1908, there are 91 quasi-parishes, with 271 priests on active service distributed over 21 deaneries. There are 7 religious communities of men, and 16 of women. There are Catholic elementary schools in all the quasi-parishes, besides 14 upper-schools and 1 training college for female teachers. The teaching staff of the archdiocese numbers 1230. The number of children presented in 1907 for religious examination in the elementary schools was 55,550. There are 15 charitable institutions of various kinds, and there is a conference of the St. Vincent de Paul Society in nearly every quasi-parish.

John Ritchie.

II. Glasgow University.—Forty years later than St. Andrews, Glasgow University was founded by Bull of Nicholas V, dated 7 January, 1450–1, granted at the request of James II, who acted on the advice of William Turnbull, Bishop of Glasgow. The bishop and his successors were charged to be adding the statistics of the university; the foundation also provided for a rector, doctors and masters in the four faculties. Originally, it appears, most of the students enrolled were ecclesiastics, secular and regular, especially of the Dominican Order; "many of the Friars Preachers were resident students" (Munimenta, p. xi); and the teaching was "in the interest in the success of the university" (Stewart, p. xiii); and Bishop Turnbull warmly encouraged his clergy both to learn and to teach. He also procured from James II a royal charter in 1453. The Bull constituted a "studium generale, tam in theologiam sanae canonicse et civilis, quam in artibus et quatuor libris licitae facultate", after the pattern of Bologna. The foundation of a college followed soon; it stood at first near Rotten Row; later, on a site given by Lord Hamilton in High Street, where it remained till 1870. The college (Paddockum) was ruled by three "regents"; the students were distributed in four "nations", originally called Clidisdalia, Thendalia, Albamia, Rosay, now surviving as Glottiana, Loundonia, Transforthana, Rothseiaena. Among the most famous names in the early annals of the university are: William Elphinstone, afterwards Bishop of Aberdeen and founder (in 1494–5) of Aberdeen University; the poet Robert Henryson; John Knox; Cardinal Beaton; and James Beaton, his nephew, chancellor of the university and Archbishop of Glasgow in 1560, when, upon the establishment of Protestantism, he fled to France. The university, almost destroyed in the religious troubles, was restored by James VI and I. Under Morton’s regency, in 1577 (Novo Recto), with increased endowments, and reorganized by Andrew Melville or Melvin. From that time it has continued to increase; Dr. Weir (op. cit.) calculated the number of students at various epochs as follows: at beginning of sixteenth century, 50; at beginning of seventeenth...
century, 100; at beginning of eighteenth century, 400; at beginning of nineteenth century, 700; in 1870–1–
1279; in 1889–90, 2180. In 1907–8 there were 1905 men students (arts, 691; science, 275; theology, 56;
medicine, 623; law, 208). In 1892 a neighbouring institution, St. John's College, was opened for the higher ed-
cation of women (Queen Margaret College) was incor-
porated into the university, and there are now some 600 female students.

The development of the university kept pace with the growth of Glasgow, and the increasing commercial importance of the city was reflected in the increased number of scientific studies. The brothers William and John Hunter, in medicine; the philosophers Francis Hutcheson, Thomas Reid, and Adam Smith, are the great names in the eighteenth century, as teachers; Tobias Smollett, James Boswell, Francis Jeffrey, and Thomas Campbell as students. The university was also made famous by the Fouliis printing press and the mechanical inventions of James Watt, inventor of the steam-engine. But perhaps the most world-wide celebrity that Glasgow University can boast is the late William Thomson, Lord Kelvin, who taught and carried on his researches here for fifty years until his retirement in 1894. Richard Jebb and Dr. Gilbert Murray, successively professors of Greek from 1874 to 1889; the Cairds, John and Edward, were great names in Scotland; and the medical faculty has been and is still grazed by men of European reputation, such as Lord Lister and Sir W. MacEwen.

The government of the university has been subjected to revision by royal commission many times, particularly in 1830, 1858, 1889. The old college was abandoned in 1870 for the large, and still largely ex-
 panding, buildings on Gilmorehill. The teaching staff numbers 32 professors, 50 lecturers, and 40 assistants. The total revenues from all sources amount to (Government annual grant of £20,000) amount to about £80,000. Magnificent additions to the equipment of the scientific and medical faculties have recently been made, the cost of which has been defrayed partly by the Carnegie Trust and partly by special subscription.

J. S. PHILLMORE.

Glasstone Abbey [Gle斯顿伯爵; called also Ynyswytrin (Isle of Glass) and Avalon (Isle of Apples)], Benedictine monastery, Somersetshire, England, pre-eminently the centre of early Christian tradition in England. Though now thirteen miles inland from the Bristol Channel, it was anciently an island encircled by broad fens, the steep conical hill called Golfstone Tor rising therefrom to a height of about four hundred feet. Thus, difficult of access and easy of defence, it formed a natural sanctuary round which the monastery clustered. The hall of the monastery, an ancient legend, and fiction so inextricably mingled with real and important facts that no power can now sift the truth from the falsehood with any certainty.

TRADITIONAL ACCOUNT OF FOUNDATION.—For the early history of the foundation the chief authority is William of Malmesbury in his De antiquitate Glas-
stonii: ecclesiae et edificium (i.e. D. Cest. Regim., ed. J. H. Riecz, 1861). The former work, composed apparently about 1135, was written for the express glorification of Golfstone and consequently gives the legendary history much more fully than the latter. Malmesbury's story of the foundation and early years is briefly as follows:

In the year 83 A. D. St. Joseph of Arimathea with eleven companions was sent to Britain from Gaul by St. Philip the Apostle. The king of the period, Audrius, gave to these twelve holy men the island of Ynyswytrin and there, in obedience to a vision, they built a church in honour of the Blessed Virgin Mary. This church, called the estwada ecclesiae or ignea basilica, was the subject of a miracle which was said to be, or have been, the burning church of the original twelve. This community of twelve hermits is described as continuing unaltered until the coming of St. Patrick, the Apostle of the Irish, in 433, who taught the hermits to live together as cenobites, him-

self became their abbot, and remained at Golfstone until his death, when his body was buried in the estwada ecclesiae. After St. Patrick his disciple, St. Benignus, became abbot at Golfstone, while St. David of Menevia is also stated to have thither, built an-
other church, and presented a famous jewel known as the Great Saphe of Golfstone. The chronical-
then goes on to record the death and burial of King Arthur at Golfstrom in the days of the apostles, and the death of the monks who either died and were buried at Golfstone, or whose bodies were translated thither on the gradual western advance of the conquering English. The first impression produced on a modern mind by William of Malmesbury's pages is that the whole is bare-faced invention, but on this point the late Pro-

visor Freeman may be quoted as an unbiased authority (Proc. of Somerset Archeological Soc., vol. XXVI): "We need not believe that the Golfstone legends are facts; but the existence of those legends is a great fact. . . . The legends of the spot go back to the days of the Apostles. We are meant to be very begin-
ning with the names of St. Philip and St. James, of their twelve disciples, with Joseph of Arimathe at their head, . . . we read the tale of Fagan and Deru-
vian; we read of Indractus and Gildas and Patrick and David and Columb and Bridge, all dwellers in or visitors to the first spot where the Gospel had alone in Britain. No fiction, no dream could have dared to set down the names of so many worthies of the earlier races of the British Islands in the Liber Vitae of Dur-
ham or Peterborough. Now I do not ask you to be-
lieve these legends; I do ask you to believe that there was some special cause why legends of this kind should grow, at all events why they should grow in such a shape and in such abundance, round Golfstone alone of all the great monastic churches of Britain." And he explains the "special cause" as follows: "The simple truth then is this, that among all the greater churches of England, Golfstone is the only one where we may be content to lay aside the name of England and fall back on the older name of Britain, . . . as I have often said, the talk about the ancient British Church, which is simply childish nonsense when it is talked at Canterbury or York or Lon-
don, ceases to be childish nonsense when it is talked at Golfstone. . . . It is a very remarkable fact that when at last the West Saxons captured Golfstone there already existed there, as at Glendalough or Conmnaoises, a group of small churches built in the typical Celtic fashion and occupied by the British monks. One of these, the oldest and most venerated of all, the estwada ecclesiae or ignea basilica, was pre-
served there, and by its survival at Golfstone it was preserved at Golfstone with their special character. Indeed its successor, falsely called the Chapel of St. Joseph, is the chief feature and loveliest fragment in the ruins that exist to-day.

With the coming of the English the mist clears. In the 9th years of the eighth century Ina, King of the West Saxons, founded the great church of the Apos-
tles Sts. Peter and Paul, and endowed the monastery,
granting certain charters which, in substance at any rate, are admitted as genuine (see Dugdale, *Monasticon Anglicanum*, I). The monastery, thus firmly established, maintained a high reputation until the advance of the Danes in the 10th century, when it was ravaged and despoiled and sank into a low state. From this it was raised by the work of St. Dunstan who, as a boy, received his education in the cloister at Glastonbury, and later became abbot there, ruling the monastery, except for a brief period of banishment for his opposition to epicenope. In the latter part of his life, in a vetustissima state, a passage asserts that Archbishop Warham, who then ordered the suppression of the Glastonbury shrine under pain of excommunication (Wharton, *Anglia Sacra*, II, 222–33).

Second only to St. Dunstan's shrine as an attraction to pilgrims was that of King Alfred, whose tomb is in a vetustissima state, a passage asserts that Arthur was buried at Glastonbury seems to be a late one. In the "Gesta Regum" (I, xxvii) William of Malmesbury says expressly that the burial-place of Arthur was unknown. However, in his "De antiquitate Glastonensis ecclesiae" (Cap. De nobilissimis Glstoniburni sepulcris) in which he is in a vetustissima state, a passage asserts that Arthur was buried at Glastonbury "inter duas piramides." Professor Freeman rejects this as an interpolation added after Geoffrey of Monmouth's time, when the Arthurian legend had reached its final form through that writer's fabrications. There is clear evidence that the two pyramids did actually exist, and in 1191, we are told, Abbot Henry de Soliaaco made a search for Arthur's body between them. Girdals Cambrensis, who writes apparently as an eyewitness of the scene, relates (Speculum Ecclesiae, dist. ii, cap. ix) that at a depth of seven feet a large flat stone was found, on the side of which was a silver plaque with the name Arthuris in insula Avalonia. Under this at a considerable depth was a huge coffin of hallowed oak containing the bones of the king and his Queen Guinevere. The bones were removed from the stone and in rude characters facing the stone were the words *Hic jacet sepulcrum inelutum Rex Arturius in insula Avalonia*. Leland (Assertioni Arthuri, 43, 50, 51) records that he saw both the tomb and the leaden cross with the inscription, and Camden (Britannia, Somerset) states that the latter still existed in his day, though he does not say where it was when he saw it.

**Suppression of the Abbey.**—In 1525 Abbots Bere and Richard Whiting, chamberlain of the abbey, was chosen for the post by Cardinal Wolsey, in whose hands the community had agreed to place the appointment. For ten years he ruled his monastery in peace, winning golden opinions on all hands for his learning, piety, and discreet administration. Then in August, 1535, came Dr. Richard Layton, the most contemptible of all the "visitors" appointed by Thomas Cromwell, to hold a visitation in the name of King Henry VIII. He found everything in perfect order, though Dr. Layton, with the people of the place, "At Bruton and Glastonbury", he writes to Cromwell, "there is nothing notable; the brethren are so straight that they cannot offend: but fain they would if they might, as they confess, and so the fault is not with them". But the end was not far distant. The lesser monasteries had gone already, and so soon it was the turn of the greater houses. By January, 1539, Glastonbury was the only religious house left standing in all Somerset, and on 19 September, in the same year, the royal commissioners arrived without previous warning. Abbot Whiting was examined, arrested, and sent up to London with the rest of the community to examine in person. Meanwhile the commissioners, regarding Glastonbury as part of the royal possessions already in view of the intended attainer of the abbot, proceeded to "dispatch with the utmost celerity" both their business as spoilers and the monks themselves. Within six weeks all was accomplished, and they handed over to the royal treasurer the riches still remaining at the abbey, which had previously been relieved of what the king chose to call its "superfluous plate", among which is specially mentioned "a superaltari garnished with silver gilt and part gold, called the Great Sapphire of Glastonbury." The abbots of Layton, of which he is one, were, because close to the admirable condition of the monastery as regards spirituals under Abbot Whiting. As one of the indigentiae brought against him was that of mismanagement in temporals, it is worth while to quote Crom-
part is the most perfect of all the ruins. The Norman work of 1184, exquisite in design and very richly decorated, has stood perfectly, although in the fifteenth century a crypt was excavated beneath it to the depth of some eleven feet. At the same period the Perpendicular style was inserted in the Norman window that was at the west end of the chancel and will remain. Of the great church (400 feet by 80), the pillars of the chancel arch, some of the chapels at the east side of the transepts, and a large portion of the outer wall of the choir aisles are practically all that remains. The nave consisted of ten bays; the transepts of three each, the outer two on either side being extended eastward to form aisles of its own chapels. The height of the nave was at first forty feet, but was increased to six in the later fourteenth century, the chapels behind the high altar being again modified in the fifteenth century. It is much to be regretted that so large a part of the buildings has been destroyed, but since the ruins were for long used as a kind of quarry, from which anyone might carry off materials at sixpence a cartload, the wonder is that anything at all is left. The ruins have recently been purchased at the cost of £30,000 ($150,000) through the action of the Bishop of Bath and Wells (Anglican) and are now held by trustees as a kind of national monument. Everything effort is being made to preserve them from further injury, and also, by means of excavation, to recover all possible knowledge of what has been destroyed.

One curious relic still exists. The church clock, formerly in the south transept of the great church, was removed in 1539, carried to Wells, and placed in the north transept of the cathedral there. It bears the inscription Petrus Lighthouse monachus fecit hoc opus, and was constructed in the time of Abbot de Sodbury (1322–35). The outer circle of the dial has twenty-four hours on it, another within this shows the minutes, and a third again gives the phases of the moon. Above this dial is an emblem of a horseman riding on what looks like a horseback and is probable to represent a mimic tournament. The original works were removed from Wells some years ago and may be seen, still working, in the Victoria and Albert Museum at South Kensington. This, with Lightfoot’s other clock at Wirbourne Minister, Dorset, are commonly held to be the oldest known. Of the conventual buildings the abbots’ kitchen and a small part of the hospice alone survive. The former is an octagon set within a square and crowned with an octagonal pyramid. Within it is square in plan, the upper part forms a dome, the height being seventy-two feet. The upper part forms a dome, the height being seventy-two feet. The upper part forms a domed lantern, which was formerly fitted with movable wooden shutters so that the smoke might always be let out on the side away from the wind. Practically all the rest is level with the ground, but mention must be made of the library, of which Leland, who saw it in Abbot Whiting’s time, declares that no sooner was he over the threshold but he was struck with astonishment at the sight of so many remains of antiquity; in truth he believed it had scarce an equal in all Britain. In the town, amongst other buildings erected by various abbots, are the cels of St. Botolph, St. Mary, and St. John the Baptist, the tithe barn, a fourteenth-century building and the finest existing specimen of this class of structure, also the Pilgrim’s Inn, a late Perpendicular work built at the end of the fifteenth century, where, it is said, all visitors used to be treated as guests and entertained for two days at the abbot’s expense.

Still in the neighbourhood, in many places, one sees the ruined abbey’s coat of arms: Vert, a cross botone argent; in the first quarter the Blessed Mother of God standing, on her right arm the Infant Saviour, a sceptre in her left hand.

The GLASTONBURY T所以 (Crateus Ozyacantha Praeox) is a variety of hawthorn, originally found only at Glastonbury, which has the peculiarity of well's own note in his manuscript "Remembrances" as to the booty obtained from Glastonbury at this, the second, spoliation: "The plate of Glastonbury, 11,000 ounces and over, besides golden. The furniture of the house of Glaston. In ready money from Glaston £1,100 and over. The rich copes from Glaston. The doors were plundered, [probably due to the abbey] £2,200 and above." While his monopoly was being asked and his community dispersed, Abbot Whiting was kept a prisoner in the Tower of London and subjected to secret examination by Cromwell. It is curious that the ordinary procedure of law, by which a bill of attainder should have been presented to and passed by Parlia- ment, was not followed. The execution was an accomplished fact before Parliament came together. His condemnation and execution and the appropriation of his monastery with its possessions to the Crown could only be justified legally by the abbot's attainder, but no trace that any trial did take place can be found. Such an omission, however, was not likely to trouble Cromwell, as is shown by the note in his autograph "Remembrances": "Item. The Abbott of Glaston to be tried at Glaston and also executed there with his complycys." Accordingly Abbot Whiting was sent back to Somersetshire, still another evidence of the fact that there was now no Glastonbury Abbey for him to return to. He reached Wells on 14 November, where some sort of a mock trial seems to have taken place, and the next day, Saturday, 15 November, he with two of his monks, John Thorne and Roger James, was carried from Wells to Glastonbury. At the outskirts of the town the three martyrs were fastened to hurdles and dragged by horses up the steep sides of Tor Hill to the foot of St. Michael's tower at its summit. Here all were hanged, their bodies beheaded and cut into quarters, Abbot Whiting's head being fixed over the great gate- way of the abbey as a sample of the punishment prepared for such as opposed the royal will (see Richard Whiting, Blessed). There can be no doubt that a special example was deliberately made of Glastonbury, inasmuch as by its wealth, its vast landed possessions, its munificence, and the halo of sanctity with which its past history and present observ- ance had crowned it, it was by far the greatest spiritual and temporal representative of Catholic interests still surviving in England. The savagery with which it was attacked and ruined was intended to and did strike terror into all the West of England, and during Henry VIII there was no one in the realm who feared from that part of his realm. During the brief restoration of Catholicism in Queen Mary's reign, some of the surviving monks petitioned the queen to restore their abbey again, as having been the most ancient in England. The queen's death, however, put an end to all hopes of restoration.

BUILDINGS.—Very little of the vast pile of buildings now remains above ground, but in its main lines the abbey followed the usual plan, a vast cruciform church on the north side, with cloister, conventual buildings, abbots' lodgings, and rooms for guests all south of this. The church fits loosely on the site of the ancient church, where the west door, instead of opening to the outer air in the usual way, gave entrance to a so-called "Galilee", which in turn led into the church of St. Mary, the westernmost part of the entire edifice. This famous church, now often called in error the Chapel of St. Bartholomew, was built between 1185 and 1186 to take the place of the original vetuta ecclesiae, which had been entirely destroyed in the great fire of 1184. It is said to preserve exactly the size and shape of the original building and measures sixty feet by twenty-four. The Galilee was added about a century later when the western part of the great church was being formed as a companion to the two churches, thus making the whole western extension about one hundred and nine feet long. This western
flourishing twice in the year, first about Christmas time and again in May. By a curious irony of fate the first mention of the Holy Thorn flowering at Christmas is contained in a letter written by Dr. Layton to Thomas Cromwell from Bristol, dated 24 August, 1535. "By this bringer, my servant", he writes, "I send you Erle, yonder covered in wine and dressed in surcoat and in a surcoat of Christen Mass Even, hora epsa qua Christus natus fuerat, will spring and burgen and bare blossoms. Quoed expertum est saith the Prior of Mayden Bradley." In a life of St. Joseph of Arimathea, printed in 1520 by Richard Eyreson, a pupil of Caxton, there is, however, an earlier notice of its coming into leaf at Christmas:

The Hawthornes also, that growth in Werall [Wearyall Hill]

Do burge and bere grene leaves at Christmas
As freshe as other ym May ....
Later references to the fact abound, e.g. Sir Charles Sedley's verse:

Cornelia's charms inspire my lays,
Who, fair in nature's scorn,
Blooms in the winter of her days,
Like Glastonbury Thorn
And the line of Tennyson's "In the Crail":

... Glastonbury, where the winter thorn
Blossoms at Christmas, mindful of Our Lord.

The original thorn tree on Wearyall Hill was cut down in 1653 by some fanatical soldier of Cromwell's army, to the great annoyance of Bishop Goodman of Gloucester, who wrote to the Lord Protector complaining of the outrage; but before the dispute had been taken from it, and many specimens now exist which blossom about Christmas time. The blossoms of the Christmas shoots are usually much smaller than the May ones and do not produce any haws. It is noteworthy also that plants grown from the haws do not retain the character of the parent stem, and that the Glastonbury gardeners propagate the thorn by budding and grafting only. Botanists are not yet agreed as to the origin of the Glastonbury thorn. Some have desired to identify it with the Morocco thorn, introduced into England about 1812, which puts forth its leaves very early in the year, sometimes even in January; while others claim it as the Siberian thorn, which begins to produce its shoots in January. Neither of these varieties, however, has the special peculiarity of the Glastonbury thorn, that of flowering twice. Possibly the truth may be that the Glastonbury thorn was an individual or a true variety; but if this is so it is certainly remarkable that for four hundred years the peculiarity of the tree has been preserved and transmitted to its progeny. The legend that the original tree grew from the staff of St. Joseph of Arimathea, which was thrust into the ground and took root, is found before the destruction of the abbey, but the date of its origin cannot now be ascertained.

G. ROGER HURLESTON.

Glebe (Lat. glaba) originally signified, in common law, any farm, estate, or parcel of land, and the word is still used in the Thesodian Code. But in ecclesiastical law it has become the technical term for land permanently assigned for the maintenance of the incumbent of a parish, and is the oldest form of parochial endowment. This use of the word is found in numerous medieval charters, of which Du Cange gives a few examples, and formerly no church could be constructed unless this endowment had been made. There is no indication that the fee-simple was held to be in abeyance, that is, without an owner in the eyes of the law, but the freehold belonged to the incumbent. It could be leased, sold, or exchanged, with the bishop's consent, and was sometimes allowed to be mortgaged for the purpose of repairing the parsonage or church. In England and Scotland, where glebe is held by the established Churches of those countries, there are now special laws regarding the leasing, sale, or exchange of such property, and all such transactions are subject to the approval of the land commissioners. In the Catholic Church, glebe, where it exists, is considered a moral property, and canon law regulates the conditions which govern its possession. The alienation of such property is now held by most legislatures to require the special permission of the pope, and even then only certain justifying causes are recognised, viz: (1) necessity, as when a church is overburdened with debt; (2) utility, or the opening of an advantageous exchange; (3) to redeem captives or feed the poor in time of famine; (4) convenience, as when the land is so situated that its produce cannot be gathered without great expense. Certain specified formalities have also to be complied with. (See Property, Ecclesiastical.)

BROOK, De parochia (Paris, 1850); FERDINAND, Ibid. prom. (Rome, 1886-95); SMITH, Elements of Eccl. Law (New York, 1897). For the English law see PHILLIMORE, Glebe (London, 1905). See also bibliography under Property, Ecclesiastical.

G. CYTRIAN AITON.

Glendalough, Diocese of. See Dublin.

Glendalough, School of.—Glendalough (the Valley of the Two Lakes) is a picturesque and lonely glen in the heart of the Wicklow Mountains. The fame of its monastic school is chiefly due to its founder, St. Kevin (q.v.), and to the famous nun of the celebrated monasteries of Ireland. Kevin (Ir. Coemghes, the fair-begotten) was born near Rathdrum towards the close of the fifth century, and lived to the age of...
120 years. His earliest tutor was St. Petron of Cornwall, who had come to Leinster about 492, and devoted himself with considerable ardour to the study of the Sacred Scriptures, in which his pupil also became proficient. Kevin then, no less than his uncle, put to the test the affections of a beautiful maiden, who once followed him to the woods. The young saint perceiving her, threw himself into a bed of nettles, and then gathering a handful scorched the maiden with the burning weeds. "The fire without", says the biographer, "extinguished the fire within", and Kathleen repenting became a saint.

One of the most celebrated of the pupils of St. Kevin at Glendalough was St. Moling, the founder of the well-known monastery, called from him St. Mullins, on the left bank of the Barrow in the south-west of the County Carlow. Like his master Kevin, he was a man of learning and extreme austerity, living, it is said, for a long time, as Kevin did, in a hollow tree. He was also an elegant writer both in Latin and in Irish. Several Irish poems have been attributed to him, his prophecies were in wide circulation, and the "Yellow Book of St. Moling" was one of those which Keating had in his hands, but which has since been unfortunately lost. Of all the scholars of Glendalough, however, St. Laurence O'Toole was by far the most distinguished. A poetic and musical hymn, that is, a psalm, prayed, he owed his entire training in virtue and in learning to this school. So far did he carry his devotion to St. Kevin that, even after he had become Archbishop of Dublin, he made it a practice to retire from the city, and spend the whole Lent in the very cave in the face of the rock over the lake where St. Kevin had lived so long alone with God.

The existing ruins at Glendalough still form a very striking scene in that wild and beautiful mountain valley. Within the area of the original enclosure are the great church, or cathedral, built probably in the time of St. Kevin, a fine round tower still 110 feet in height, the buildings of St. Kevin's "Cro" or kitchen, the Church of the Blessed Virgin, for whom Kevin, like most of the Irish saints, had a particular devotion. The building called St. Kevin's kitchen was doubtless the private oratory and sleeping-chamber of the saint, the latter being in the croft overhead, as in St. Columba's house at Kells.

Gloria, JOHN JOSEPH. See ST. LOUIS, ARCHDIOCESE OF.

Gloria in Excelsis Deo.—The great doxology (hymnus angelicus) in the Mass is a version of a very old Greek form. It begins with the words sung by the angels at Christ's birth (Luke, ii, 14). To this verse others were added very early, forming a doxology. In a slightly different form it occurs at the beginning of a "morning prayer (procesus et lustrationis)" in the "Apostolic Constitutions", VII, xlvii. This text, which has a similar subordination to that of this unadorned form, will be found in Duchesne, "Origines du Culte chrétien" (2nd ed., Paris, 1889, p. 158, n. 1). It goes back at least to the third century; Protob (Lehre und Gebet der drei ersten christl. Jahrhunderte", Tubingen, 1870, p. 290) thinks even to the first. A very similar form is found in the Codex Alexandrinus (2d half of the fourth century), in P. G., XXVIII, 275. Extended further, and with every trace of subordination corrected, it is sung by the Byzantine Church at the Orthros. In this form it has more verses than the Latin, and became with the Twelfth (apokopi. το μνημο, Rome, 1876, p. 57). It is not used in the Liturgy by any Eastern Church. The only first clause (the text of Luke ii, 14) occurs as part of the people's answer to the words, "Holy things for the holy", at the elevation in the Liturgy of the Apostolic Constitutions (Brightman, Eastern Lituriges, Oxford, 1896, p. 247). In a part of the Offertory and Consecratio in St. James's Liturgy (ibid., pp. 45, 64), at the kiss of peace in the Abyssinian Rite (p. 227), in the Nestorian Prothesis (p. 248) and again at the beginning of their Liturgy (p. 252), in the Byzantine Prothesis (p. 361). A similar tradition is that it was translated into Latin by St. Hilary of Poitiers (d. 366). It is thought that he learned it during his exile in the East (360) and brought back a version of it with him (so Belethys, "Rationale divinorum officiorum", c. 36; Durandus, "Rationale", IV, 13, who thinks that he only added from "Laudamus te" to "Mass", and notes that In hexen III attributes it to the Orientals, others to Symmachus). In any case, the Latin version differs from the present Greek form. They correspond down to the end of the Latin, which however adds: "Tu solus altissimus" and "Cum sancto Spiritu". The Greek then goes on: "Every day I will bless thee and will glorify thy name for ever, and for ever and ever" and continues with ten more verses, chiefly from psalms, to the Trisagion and Gloria Patri.

The "Liber pontificalis" says "Pope Telephorus (128-139) ordered that . . . on the birth of the Lord Masses should be said at night . . . and that the hymn Gloria in Excelsis be said before the sacrifice" (ed. Duchesne, I, 129); also "that Pope Symmachus [498-514] ordered that the hymn Gloria in excelsis, should be said every Sunday and on the feasts natalicia of martyrs". The Gloria is to be said in its present place, after the Kyrie, "but only by bishops (ibid., p. 263). We see it then introduced first for Christmas, on the feast to which it specially belongs, then extended to Sundays and certain great feast days, but only for bishops. The "Ordo Romanus I" says that when the Kyrie is finished "the pontiff, turning towards the people, begins Gloria in Excelsis, and be it observed that tempus fuerit" and notes specially that priests may say it only at Easter (ed. C. Atchley, London, 1905, pp. 130, 148). The "Ordo of St. Amand" (Duchesne, "Origines", appendix, p. 460) gives them leave to do so only on Easter Eve and on the day of their ordination.

The Gregorian Sacramentary (dictor Gloria in excelsis Deo, si episcopus fuisset, tantummodo die dominico siue diebus festis; a presbyteris autem minime dicitur nisi solo in Pascha) and Wahlfried Strabo, "Liber de exordiis", c. 22, in P. L., CXIV, 945, note the same thing. Berne of Constance thinks it a grievance still in the eleventh century (Libellus de saeclis nempe et rebus ad Missam pertinentibus, c. 2, in P. L., CXIII, 1059). But towards the end of the same century the Gloria was said by priests as well as by bishops. The "Micrologus" (by the same Berne of Constance, 1048) tells us that "On every feast that
has a full office, except in Advent and Septuagesima, and on the feast of the Innocents, both the priests and the bishop say Gloria in excelsis (c. ii). It then became, as it is now, an element of every Mass except in times of penance. Even in Advent, until it began to be considered such a time, it was said. As early as Ambrosian and Metz (ninth century) De Spiritu in libri IV, IV, 30, it was said during Advent "in some places." This would apply, of course, to bishops' Masses on Sundays and feasts at that time. So also Honorius of Autun (1145) in the twelfth century, and Guibert, III, 1. White vestments were used, and the Gloria said. In Roman usage Advent ended of the twelfth century. "Ordo Romanus XI" 4. After that, Advent was gradually considered a time of penance, in imitation of Lent. The Te Deum and Gloria were left out during it, and the use of purple vestments introduced. These so-called "faced" Glorias were a medieval development. As in the case of the Kyrie, verses were introduced into its text for special occasions. Such expanded forms were very popular, especially one for feasts of the Blessed Virgin that seems to have been used all over Europe. Thus in the Sarum Missal, after the Gloria of the Fourth Sunday of Easter, the lines "Spiritus et alme orphanorum paralycele" is added; after "Filius Patris" is inserted "Implorin genus Mariam virginis materia." Again: "Suscipe deprecationem nostram, ad Mariae gloriam," and the end: "Quoniam tu solus sanctus, Mariam sanctificans, Tu solus Dominum, in aiguis coronans, Jesu Christe" (ed. Burntsland, 1861–1883, col. 585–6). The following rubric says: "In omnibus aliis missis quando dicendum est, dicetur sine prosa;" that is, in other Masses than those of the B. V. M., the additional tropes—called prosa—are to be omitted. These tropes added to the Gloria that was contained in special books, "Libri troparii." In spite of repeated commands to expunge them, they were still sung in places when the Missal was revised by order of Pius V in 1570. In the Bull "Quo primum" of that year (printed at the beginning of the Missal) the pope forbids anything to be added to, or changed in, the text of the books then published. The popularity of the forms about the Blessed Virgin accounts for the rubric in the Missal after the Gloria: "Sic dictur Gloria in excelsis, etiam in missis B. Mariae quando dicendum est." Since then these "faced" forms have disappeared. It may be noted here that the Gloria, originally foreign to the Milanese and Mozarabic Rites, has displaced the older Trisagion in them since the seventh century—an obvious Roman importation (Duchesne, op. cit., p. 183 and note). The present law about the use of the Gloria is given by the "Rubricae generalis" of the Missal, VIII, 3. It is to be said in Mass whenever the Te Deum is said at Matins—with two exceptions. It is therefore omitted on ferials (except in Easter-tide), Ember days, vigils, during Advent, and from Septuagesima till Easter, when the Mass is de tempore. The feast of the Holy Innocents, however, is kept with purple vestments and without the Te Deum or Gloria. We have seen this already in the "Micologus" (above). Nor is the Gloria said at Requiem or votive Masses, with three exceptions: votive Masses of the Blessed Virgin on Saturdays, of Angels, and those said "pro re gratia" or for a public cause of the Church, unless with purple vestments, have the Gloria. The two cases in which it occurs without the Te Deum in the Office are Maundy Thursday (when the whole Mass is an exception in Passion-tide and has no correspondence with the canonical hours) and Holy Saturday in the first EC in which the Gloria is always involved "pro re gratia" at the end of Mass. When it is not said that versicle is changed to "Benedicamus Domino" or, in Requiem, to "Requiescant in pace." The manner of saying it is described in the "Ritus celebrendi Missam," IV, 7. In the "Ordo Romanus I" (above) the celebrant turns to the people to say the first words. That is no longer observed. At high Mass as soon as the Kyrie is finished the celebrant, facing the altar in the middle, intones: "Gloria in excelsis Deo," raising, joining, and lowering his hands, and bowing his body three times. Meanwhile the deacon and subdeacon stand behind him in line. They then come to his right and left and with him continue the Gloria in a low voice. All bow at the holy name (it occurs twice) and at the words: "Adoramus te," "Gratias agimus tibi," "Suscepi deprecationem nostram," and make the sign of the cross. Then they go per viam breviorum (genueflecting first, according to the usual rule) to the sedilia and sit. Meanwhile the choir immediately continues: "Et in terra pac," and sings the text straight through. In the former Missal four chants were printed for the celebrant’s intonation (for Doubles, Masses of B. V. M., Sundays, and Simples). This intonation ought to be in every way part—the beginning—of the melody continued by the choir; so in the new ("Vaticani") edition of the missal, eighteen alternative chants are given, one for each Gloria in the Gradual. Obviously, when this is sung, the celebrant and the choir intone the Gloria to the same chant (and at the same pitch) as its continuation by the choir. The ideal is for the choir to go on at once without any sort of prelude by the organ; "Et in terra pac" etc. is the second half of the same sentence as "Gloria in excelsis Deo," so exact a repetition is not possible. But in any case the choir may never repeat the celebrant’s words. Every Gloria in a figured Mass must begin: "Et in terra pac." The custom—one very common—of ignoring the celebrant and beginning again "Gloria in excelsis" is an unpleasant abomination, and indeed the Breviary has put the Gloria to the Collect. While the Gloria is sung, the celebrant, ministers, and servers bow (or uncover) at the holy name and the other clauses, as above. During the last clause the celebrant and ministers rise and go to the altar per viam longiorum (genueflecting at the foot, according to rule) and go to their places for the "Dominus vobiscum" before the Collect. At a sung Mass the same order is observed by the celebrant alone. At low Mass he recites the Gloria straight through clara voce, making the sign of the cross during the last clause (In gloria Dei Patris). Mystic and edifying reflections on the Gloria will be found in Durandus and Ghir (see below). Durandus sees much symbolism in the fact that the Church (that is, men) continues the angels’ hymn. By the birth of Christ who restores all things in heaven and on earth (Eph. i, 10), angels and men, separated by original sin, are now reconciled; men may now hope some day to join in the angels’ hymns. Ghir gives a devotional commentary on the text, word for word. He sees a mystic reason for the order of the words: Laudamus, benedictimus, adoramus, glorificamus. One may be edified by such meditations without attributing so much subtlety to the unknown subordinationist who apparently first arranged them. It will be noticed that the Gloria is a hymn of praise addressed to each Person of the Holy Trinity in turn, although the clause about the Holy Ghost is very short (cum sancto Spiritu) and is evidently an afterthought. It does not occur in the text of the Apostolic Constitutions. It will also be seen that the clauses are arranged in parallels with a certain loose rhythm. This rhythm is much more evident in the Greek original (measured by course of accent); for instance:

Kpēs basileōn tērōwme, οὖς λατερὶς παντοτερὶς.

Lastly, it would be difficult to find in any Liturgy a more beautiful example of poetry than our hymns.
angeicus. The Gloria and the Te Deum are the only remains we now have of the psalms idiotsi (psalms composed by private persons instead of being taken from the Biblical Psalter) that were so popular in the second and third centuries. These private psalms easily take root for the same reason as those in the Vulgate, and so fell into disfavour by the fourth century (Battifol, “Histoire du Brevisaire romain”, Paris, 1835, 9-12). The extraordinary beauty of these two (to which one should add the Deo Dador) is a witness to the splendour of that outburst of lyric poetry among Christians during the time of persecution.

ADRIAN FORTESCUE

Gloria Patri. See DOXOLOGY.

Glorieux, Alphonse Joseph. See BOISE, DIOCESE OF.

Glorious. This word has many shades of meaning which lexicographers are somewhat puzzled to differentiate sharply. As our interest in it here centres around its ethical and religious significance, we shall treat it only with reference to the ideas attached to it in Holy Scripture and theology.

I. SCRIPTURE. — In the English version of the Bible the word Glory, one of the commonest in the Scripture, is used to translate several Hebrew terms in the Old Testament, and the Greek θαύμα in the New Testament. Sometimes the Catholic versions employ brightness, where others use glory. When this occurs, the original signifies, as it frequently does elsewhere, a physical, visible phenomenon. This meaning is found for instance in Ex., xxiv, 16; “And the glory of the Lord dwelt upon Sinai”; in Luke, ii, 9, and in the account of the Transfiguration on Mount Tabor. In very many places the term is employed to signify the witness which the created universe bears to the nature of its Creator, as is an effect reverberating everywhere. Frequently in the New Testament it signifies a manifestation of the Divine Majesty, truth, goodness, or some other attribute through His incarnate Son, as, for instance, in John, i, 14: “(and we saw his glory, the glory as it were of the only begotten of the Father,) full of grace and truth”; Luke, ii, 32, “A light to the revelation of the Gentiles, and the glory of thy people Israel”; and throughout the prayer of Christ for His disciples, John, xvii. Here too, as elsewhere, we find the idea that the perception of this manifested truth works towards a union of man with God. In other passages glory is equivalent to praise rendered to God in acknowledgment of His beauty and perfection, manifested objectively in the world, or through supernatural revelation: “Thou art worthy, O Lord our God, to receive glory and honour, and power: because thou hast created all things”, Apoc., iv, 11; “Give glory to the Lord, and call upon his name”, Ps. cix, 1 (c. cxvi, 1). The term is used also to mean judgment on personal worth, in which sense the Greek θαύμα reflects the significance of the cognate verb βλέπω: “How can you believe, who receive glory one from another: and the glory which is from God alone, you do not seek?” John, v, 44, and xii, 43; “For they loved the glory of men more than the glory of God”. Lastly, glory is the name given to the blessedness of the future life in which the soul is united to God: “For I reckon that the sufferings of this time are not worthy to be compared with the glory to come”, Rom., viii, 18. “Because the creature also itself shall be delivered from the servitude of corruption, into the liberty of the glory of the children of God”, ib., 21. The texts cited above are representative of multitudes similar in tenor, scattered throughout the sacred writings.

II. THEOLOGICAL. — The radical concept present under various modifications in all the above expressions is rendered by St. Augustine as clara notitia cum laude, “brilliant celebrity with praise”. The philosopher and theologian have accepted this definition as the centre around which they correlate their doctrine regarding glory, divine and human.

1. Divine Glory. — The Eternal God has by an act of His will created, that is, has brought into being from nothingness, all things that are. Infinite Intelligence, He could not act aimlessly: He had an objective for His action; He created with a purpose; He destined His creatures to some end. That end was, could be, no other than Himself; for nothing existed but Himself, nothing but Himself could be an end worthy of His action. “I am Alpha and Omega, the beginning and the end, saith the Lord God” (Apoc., i, 8); “The Lord has made all things for Himself” (Ecclus., iv, 6). Did He, then, create in order that from His creatures He might derive some benefit? That, for example, as some present-day theories pretend, through the evolution of things towards a higher perfection the sum of His Being might be enlarged or perfected? Or that He might thereby co-operate with Himself in the elimination of evil which He by Himself is unable to cast out? No; such conceits are incompatible with the true concept of God. Infinite, He possesses the plenitude of Being and Perfection; He needs nothing, and can receive no complementary increment or superfluous accession of excellence from without. Omnipotent, He stands in need of no assistance to carry His will into execution.

But from His infinity He can and does give; and from His fullness have we all received. All things are, only because they have received of Him; and the measure of His giving constitutes the limitations of their being. Contemplating the boundless ocean of His reality, He perceives it as imitable ad extra, as an inexhaustible fund of exemplar ideas which may, if He so wills, be reproduced in an order of finite existence distinct from, yet dependent on His own, deriving their dower of actuality from His infinite fullness, which in imparting becomes the designated ideas. He spoke and they were made. Everything which His fiat has called into existence is a copy—finite indeed and very imperfect, yet true as far as it goes—of some aspect of His infinite perfection. Each reflects in fixed limitation something of His nature and attributes. The heavens show forth His power; earth’s oceans are . . . the glorious mirror where the Almighty’s form Glasses itself in tempests . . .

The summer flower, though only to itself it live and die, is a silent witness before Him of His power, goodness, truth, and perfection; and the Holy spirit which binds all the innumerable parts of creation into one cosmic whole is another reflection of His oneness and His wisdom. Yet, as each part of creation is finite, so too is the totality; and therefore its capacity to reflect the Divine Prototype must result in an infinitely inadequate representation of the Great Exemplar. Nevertheless, the unimaginable variety of existing things conveys a vague hint of that Infinite which must ever defy any complete expression external to itself. Now this objective revelation of the Creator in terms of the existences of things is the glory of God as distinct from the glory of God as formulated by the Council of the Vatican: “If any one shall say that the world was not created for the glory of God, let him be anathema” (Sess. III, C. I, can. 5).

This objective manifestation of the Divine nature
constitutes the Universe—the book, one might say, in which God has recorded His greatness and majesty. As the mirror of the telescope presents an image of the star that shines and wheels in the immeasurably remote depths of space, so this world reflects its own fashion the nature of its Cause between Whom and it lies the gulf that separates the finite from the Infinite. The telescope, however, knows not of the image which its surface bears; the eye and mind of the astronomer must intervene in order that the significance of the image and its relation to the subject matter may be grasped. To praise, in the exact sense of the term, demands not alone that worth be manifest, but also that there be a mind to acknowledge. The unconscious testimony of the universe to its Creator is rather potential than actual glory. Hence, this glory which it renders to Him is called in the classical phrase *gloria materialis*, to distinguish it from the *formal glory* rendered to God by His intelligent creatures. They can read the writing in the book of creation, understand its story, accept its lessons, and reverently praise the Majesty which it reveals. This praise involves not merely intellectual perception, but also the practical acknowledgment by heart and will which issues in obedience and loving service. The endowment of intelligence with all that it implies—spirituality and free-will—renders man a higher and nobler image of the Creator than is any other being of this visible world. The gift of intellect also imposes on man the duty of returning to God the gratitude for which we have just spoken. The more perfectly he discharges this obligation, the more does he develop and perfect that initial resemblance to God which exists in his soul, and by the fulfilment of this duty serves the end for which he, like all else, has been created.

The natural revelation which God has vouchsafed of Himself through the world interpreted by reason has been supplemented by a higher supernatural manifestation which has culminated in the Incarnation of the Godhead in Jesus Christ: "and we saw his glory, the glory as it were of the Father, full of grace and truth”. Similarly the natural resemblance to God and the relation of our being to His, established by creation, are supplemented and carried into a higher grade by His communication of sanctifying grace. To know God through the medium of this supernatural truth is to serve Him, and springing from this grace is to be "Filled with the fruit of justice, through Jesus Christ, unto the glory and praise of God” (Phil. i. 11). In manifesting the glory of God by the development of their proper powers and capacities, inanimate creatures reach that perfection for which the members of existing families for which God has provided for them. Likewise man achieves his perfection or subjective end by giving glory to God in the comprehensive sense above indicated. He attains the consummation of his perfection not in this life, but in the life to come. That perfection shall consist in a direct, immediate, intuitive perception of God: “We shall see now through a glass in a dark manner; but then face to face. Now I know in part; but then I shall know even as I am known” (1 Cor. xiii, 12). In this transcendent knowledge the soul shall become, in a higher measure than that which obtains by virtue of creation alone, a participant and therefore an image of the Divine nature; so “we shall be like to him: because we shall see him as he is” (1 John, iii. 2). So that objectively and actually the life in heaven shall be an unending ineffable manifestation and acknowledgment of the Divine majesty and perfections. Thus we understand the last part of the blessing of which the subject of the blessed is described as a state in which “we all beholding the glory of the Lord with open face, are transformed into the same image from glory to glory, as by the Spirit of the Lord” (2 Cor. iii. 18).

The Catholic doctrine on this subject is defined by the Council of Florence (see Denzinger, 588). (See CREATION; GOOD.)

2. Human Glory.—To enjoy glory before men is to be known and honoured on account of one’s character, abilities, possessions, or achievements. This glory may be real or imaginary. The moral question arises, is the desire and pursuit of this glory lawful? The doctrine on the subject is succinctly stated by St. Thomas (II-II, Q. cxxxii). Positing the question whether the desire of glory is sinful, he proceeds to answer it in the following sense: Glory imports the manifestation of something which is estimated honourable, whether it be a spiritual or a corporal good. Glory does not necessarily require that a large number of persons shall acknowledge the excellence; the esteem of a few, or even of oneself, may suffice, as, for example, when one judges some good of his own to deserve praise. That any person esteem his own good or excellence to be worthy of praise is not in itself sinful; nor, in like manner, is it sinful that we should desire to see our good works approved of men. “Let your light shine before men, that they may see your good works” (Matt. v. 16). Hence the desire of glory is not essentially vicious. But a vain, or perverse desire for renown, which is called vainglory, is wrong; for it is founded not on truth but falsehood. The desire of glory becomes perverse, (a) when one seeks renown because of something not really worthy; (b) when one seeks the esteem of the many, and not that of God; (c) when one desires glory before men without subordinating it to righteousness. Vainglory may become a deadly sin, if one seek the esteem of men for something that is incompatible with the reverence due to God; or when the thing for which one desires to be esteemed in one’s affections is not from God; or again, when the judgment of men is sought in preference to the judgment of God, as was the case with the Pharisees, who “loved the glory of men more than the glory of God” (John, xii, 43).

The term “vainglory” denotes not alone the sinful act, but also the vicious habit or tendency engendered by a repetition of such acts. This habit is ranked among the capital sins, or, more properly vices, because it is prolific of other sins, viz., disobedience, baseness, hypocrisy, contentiousness, discord, and a presumptuous love of pernicious novelities in moral and religious doctrine.

JAMES J. FOX.

Glosses, Scriptural.—I. ETYMOLOGY AND PRINCIPAL MEANINGS.—The modern English word gloss is derived directly from the Latin glossa, itself a transcript of the Greek γλωσσα. In classical Greek γλώσσα (Attic γλωττα) means the tongue or organ of speech and figuratively a tongue or language. In the course of time Greek grammarians, commenting on the works of Greek authors, used the word γλώσσα to designate first a word of the text which needed some explanation, and next the explanation itself. And it is in this last sense that Christian writers have principally employed the word glossa, gloss, in connexion with Holy Writ. Among them, as among Greek grammarians, a gloss meant an explanation of a purely verbal difficulty, whereas the fuller exposition required by doctrinal, ritual, historical, and other obstructions; and the words which were commonly the subject of their glosses may be reduced to the following five classes: (1) foreign words; (2) provincial dialectical terms; (3) obsolete words; (4) technical
Glosses

567

Glosses

terms; or (5) words actually employed in some unusual sense or in some peculiar grammatical form. As these glosses consisted of a single explanatory word, they were easily written between the lines of the text or on the margin in a regular alphabetical order. These collections of glosses thus formed kinds of lexicons which gave the concrete meaning of the difficult words of the text and even historical, geographical, biographical, and other notices, which the collectors deemed necessary or useful to illustrate the text of the Sacred Books. Besides the glossary, usually called a glossary (from Lat. glossarium), but bears at times in English the same name of a gloss. From a single explanatory word, interlined or placed in the margin, the word gloss has also been extended to denote an entire expositional sentence, and in many instances even a sort of running commentary on an entire book of Sacred Scripture. Finally the term gloss designates a word or a remark, perhaps intended at first as an explanation of the text of Holy Writ, and inserted for some time either between the lines or in the margin of the Sacred Books, but now embodied in the text, into which it is inserted by the scribes or by transcribers of manuscripts, and in which it appears as if an integral part of the Word of God, whereas it is but a late interpolation.

II. Glosses as Marginal Notes.—As is quite natural, the margin has always been the favourite place for recording explanatory words or remarks of glossical kind in commenting the text of the Bible. And in point of fact, marginal notes of varying nature and importance are found in nearly all manuscripts and printed editions of the Sacred Scriptures. With regard to the Hebrew text, these glosses or marginal notes are mostly extracts from the Masorah or collection of traditional remarks concerning Holy Writ. They usually bear on what was regarded as a questionable reading or spelling in the text, but yet was allowed to remain unaltered in the text itself or with respect for its actual form. Thus, at times the margin bids the reader to transpose, interchange, restore, or remove a conjunct or other transposition in the Hebrew text to insert even an entire word. Some of these glosses are of considerable importance for the correct reading or understanding of the original Hebrew, while nearly all have effectually contributed to its uniform transmission since the eleventh century of our era. The margins of the Greek and Latin manuscripts and editions of the Scriptures are usually of a wider import. Annotations of all kinds, chiefly the results of exegetical and critical study, crowd the margins of these copies and printed texts far more than those of the manuscripts and editions of the original Hebrew. In regard to the Latin Vulgate, in particular, these glosses gradually exhibited to readers so large and so perplexing a number of various textual readings that to remedy the evil, Sixtus V, when publishing his official edition of the Vulgate in 1588, decreed that henceforth copies of it should not be supplied with such variations recorded in the margin. This was plainly a wise rule, and its faithful observance by Catholic editors of the Vulgate and by its translators, notably by the authors of the Douay Version, has secured the object intended by Sixtus V. Despite the explicit resolve of James I that the Protestant Version of Holy Writ to be published during his reign should contain no such marginal notes—the so-called Authorised Version—appeared in 1611 with such notes, usually recording various readings. The glosses or marginal notes of the British Revised Version published 1881-85, are greatly in excess over those of the Version of 1611. They give various readings, alternate renderings, critical remarks, etc., and by their number and character have startled the Protestant public. The marginal notes of the American Standard Revised Version (1892) are much less general in description as those found in the British Revised Version of Holy Writ.

III. Glosses as Textual Additions.—As stated above, the word gloss designates not only marginal notes, but also words or remarks inserted for various explanations of the text, in the very text of the Holy Writ. The existence of such textual additions in Holy Writ is universally admitted by Biblical scholars with regard to the Hebrew text, although there is at times considerable disagreement among them as to the actual expressions that should be treated as glosses in the Sacred Writings. Besides the Scribes, ancient Rabbis regarded as made in the sacred text of the Old Testament before their time, and which were probably due to the fact that marginal explanations had of old been embodied in the text itself, recent scholars have treated as textual additions many words and expressions scattered throughout the Hebrew Bible. The works of the Mosaic authorship of the Pentateuch naturally maintain that the more or less extensive notices found in the Mosaic writings and relative to matters geographical, historical, etc. decided later than Moses’ time, should be regarded as textual additions. Others, struck with the lack of smoothness of style noticeable in selected passages of the original Hebrew, or with the apparent inconsistencies in its parallel statements, have appealed to textual additions as offering a natural and adequate explanation of the facts observed. Some have even admitted the view that Midrashim, or kinds of Jewish commentary, given at an early date, were introduced in the framing or in the transcription of our present Hebrew text, and thus would account for what they consider as actual and extensive additions to its primitive form. And it can hardly be doubted that by means of the literary feature known as “parallelism” in Hebrew poetry, many textual additions can be detected in the Hebrew text of the poetical books, notably in that of Job. All scholars distinctly maintain, however, and indeed justly, that all such glosses, whether actually proved, or simply conjectured, do not interfere materially with the substantial integrity of the Hebrew text of the Old Testament. Of the textual additions in the text of the Septuagint, or oldest Greek translation of the Old Testament, is an established fact which was well known to the Roman editors of that version under Sixtus V. One has only to compare attentively the words of that ancient version with those of the original Hebrew to remain convinced that the Septuagint translators have time and again deliberately deviated from the text which they rendered into Greek, and thus made a number of more or less important additions thereunto. These translators frequently manifest a desire to supply what the original had omitted or to ease passages perplexing to readers. Frequently, too, they adopt paraphrastic renderings to avoid the most marked anthropomorphisms of the text before them; while at times they seem to be guided in their additions by Jewish Halacha and Haggadah. Glosses as textual additions exist also in manuscripts of the New Testament, owing to a variety of causes, the principal among which may be given as follows: copyists have embodied marginal notes in the text itself; at times they have supplemented the words of an Evangelist by means of the parallel passages in the other Gospels; sometimes they have completed the text of the Old Testament as found in the New. Finally, textual additions appear in the manuscript, and printed editions of the Latin Vulgate. Its author, St. Jerome, has freely enough inserted in his rendering of the original Hebrew historical, geographical, doctrinal remarks which he thought more or less
necessary for the understanding of Scriptural passages by ordinary readers. He complains at times that during his own life copyists, instead of faithfully transcribed the text, added their own variations and readings in the text itself, which were found in the margin. And after his death manuscript subscriptions, especially those of the Spanish type, were supposedly enriched with all kinds of additional readings, which, together with other textual variations embodied in early printed copies of the Vulgate, led ultimately, to the official editions of Jerome's work by Popes Sixtus V and Clement VIII. But however numerous and important all such glosses may actually be, they have never materially impaired the substantial integrity either of the Greek New Testament or of the Latin Vulgate.

40. GIL'S SCRIPTURAL EXAGONS.—With regard to the Hebrew text of the Old Testament, most rabbinical commentators are little more than collections of glosses, or "glossaries", as they are usually called, inasmuch as their chief object is to supply explanations of Hebrew words. A part of the Masaroh may also be considered as a kind of glossary to the Hebrew Bible; and the same thing may be said in reference to the collections of Oriental and Western readings given in the sixth volume of the London Polyglot. As regards the Greek Bible texts, there are no separate collections of glosses; yet these texts are taken in the text, together with the rest of the Greek literature, in a certain number of glossaries which afford explanations of difficult words in the Greek language. The following are the principal glossaries of that description: (1) the lexicon of Hesychius, a Greek grammarian of the fourth century of our era; (2) the "Apostolicon," a collection of glosses, of the celebrated patriarch Photius (d. 891); (3) the lexicon of Suidas, apparently an author of the tenth century; (4) the "Etymologium Magnum" by an unknown writer of the twelfth or the thirteenth century; (5) the "Vocabularium" of the Byzantine monk Zonaras; (6) the "Dictionarium" of the Benedictine Varius Phavorusinus, published early in the sixteenth century. Most of the glosses illustrating the language of Scripture which are found in the works of Hesychius, Suidas, Phavorusinus, and in the "Etymologium Magnum", were collected and published by J. C. Erdmann (orig. 1785-90). The glosses on the Latin Vulgate, as a collection of explanations chiefly of its words, is that of St. Isidore of Seville, which he completed in 632, and which bears the title of "Originum sive Etymologiarum libri XX". It is found in Migne, F. L., LXXI IP.

41. GLOSSARIANS.—As Scriptural commentaries there are two celebrated glosses on the Vulgate. The former is the "Glossa Ordinaria", thus called from its common use during the Middle Ages. Its author, the German Walafrid Strabo (d. 849), had some knowledge of Greek and made extracts chiefly from the Latin Fathers and from the writings of his master, Rabanus Maurus, for the purpose of illustrating the various senses—chiefly the literal sense—of all the books of Holy Writ. This gloss is quoted as a high authority by St. Thomas Aquinas, and it was known as "the tongue of Scripture". Until the seventeenth century it remained the favorite commentary on the Bible; and it was only gradually superseded by more independent works of exegesis. The "Glossa Ordinaria" is found in vols. CXIII and CXIV of Migne, F. L. The second gloss, the "Glossa Interlinearis", derived its name from the fact that it was written in the margin of the Vulgate, as was the work of Anselm of Laon (d. 1117), who had some acquaintance with Hebrew and Greek. After the twelfth century copies of the Vulgate were usually supplied with both these glosses, the "Glossa Ordinaria" being inserted in the margin, at the top and at the sides, and the "Glossa Interlinearis" being placed between the lines of the Vulgate text; while later, from the fourteenth century onward, the "Postilla" of Nicholas of Lyra and the "Adnotationes" of Paulus Bruenius were added at the foot of each page. Some early printed editions of the Vulgate contained all the exegetical apparatus; and the latest and best among them is the one by Leander a S. Martino, O. S. B. (six vols. fol., Antwerp, 1634).

FRANCIS E. GROTT.

Glosses, Glossaries, Glossarists (in Canon Law)—A gloss (Gk. γλώσσα, Lat. glossa, tongue, speech) is an interpretation or explanation of isolated words. To gloss is to interpret or explain a text by taking up its words one after another. A glossary is therefore a collection of words about which observations and notes have been gathered, and a glossarist is one who thus explains or illustrates given texts. In canon law, glosses are short elucidations attached to the important words in the juridical texts which make up the collections of the "Corpus Juris Canonici" (q.v.). But they go back to the rest of the Bible as notes in any entire collection, e.g. the Gloss of the "Decretum" of Gratian, of the "Liber Sextus", etc. The Glossarists are those canonists who lived during the classic period of canon law, from the twelfth to the fifteenth century, though many left works other than glosses. The canonists of Bologna in particular favoured the method of the glossarists, and affixed to text and words the meaning which they should bear. In the beginning the masters noted down on their own copies of the "Decretum" of Gratian a few words by way of résumé, and as a help in their lectures; in course of time such notes passed into the copies of their pupils. These brief notes, at first inserted between the lines, soon overflowed the margins, and became copious enough to form a framework within which the real text was enshrined, as may be seen by an examination of ancient manuscripts and certain editions of the "Corpus Juris Canonici". Later glosses were of such ample proportions as to become at times small commentaries containing discussions on the opinions of previous canonists. As each master added his own gloss the notes began to swell in volume, but care was always taken to indicate the particular author by placing a significant abbreviation after his gloss, thus: Hug. or H. Huguccio); Jo. Fa. or F. (Joannes Faventinus), etc. Gradually this mass of glosses took on in the schools a permanent form, a necessary condition to its usefulness in teaching; and became a kind of secondary canonical text, less authoritative, of course, than the original, but supplying material for oral commentary. Thus arose "ordinary gloss" (glossa ordinaria), endowed with a certain authority, not indeed official (as though it were actually the law on the point), but none the less real, since it represented the opinion and authority of the canonists who wrote it down, but chiefly because it expressed the teaching at the time. Hence it comes to pass that a medieval canonical gloss is often quoted even in our day; the quotation is made quite as the quotations from the canons or chapters of the "Corpus Juris Canonici", except that the word on which the gloss bears is not that of the Vulgate, nor that of Lict. v. De crimine falsi, v' (verbo) "Falsitatia" (the gloss on the word "falsitatia", in ch. Lict, fifth book of the Decretals).

It is not easy to illustrate in a few words the legal learning that lies hidden in the glosses of canon law collections. The principal heads of information are as follows: (a) résumé of the case; (b) deter-
mination of the question to be solved; (c) division of the text and statement of conclusions drawn; (d) introduction of important words; (e) examples of real or fictitious cases showing the application of the law; (f) discussion of the various readings of the same text as given in different manuscripts; (g) countless references to parallel texts; (h) axioms or mnemonic helps (brocards) often in leoline hexameter verses; (i) allusions to the teaching of various masters, and to solutions given on various occasions by pontifical letters. Evidently the juridical value of these glosses for the teaching of canon law in our day has greatly lessened; historically, however, they still offer much precious information. The more eminent of the glossators, in their own places among the canonists of renown. Attention will be confined here to what is strictly essential in this connection. The gloss of the "Decretum" of Gratian was the work of John Zimeke, called the Teutonic (Joannes Simeca Teutonicus), between 1211 and 1215; he profited by the notes of his predecessors as well as those which he had made himself. This work, remodelled and completed by Bartholomew of Brescia (Bartholomaeus Brixiensis) in 1245 or 1246, became the "ordinary gloss" of the "Decretum". Before their incorporation in the collection of Gregory IX, the so-called "theological glosses" (quinque compilationes antiquae) had all been glossed. Tancredus, archdeacon of Bologna, had written on the first of these collections (the "Breviariun" of Bernard of Pavia) a gloss which was received as its "glossa ordinaria" until the appearance of the Decretals of Gregory IX in 1234. The last collection, as is known (see Corpus Juris Canonicorum), caused the Five Compilations to disappear; in turn it was glossed by the masters of Bologna. The author of this "ordinary gloss" was Bernard of Botone, also known as Bernard von Parma (Bernardus Parmensis), who composed it about 1250. Afterward many new glosses, especially from Joannes Andree, identified by the prefix Add. and at the end the initials Jo. Andr. It is to this famous canonist we owe the "glossa ordinaria" of the "Liber Sextus"; he wrote this gloss about the year 1305. Many manuscripts contain glosses of Joannes consacrus, known as Cardinal Lemoine, written also about 1305. The gloss of Joannes Andreae on the "Clementine", compiled soon after the appearance of this collection (1317), has become its "glossa ordinaria", with additions however by Franciscus de Barberis, later a cardinal and Archbishop of Florence (d. 1417). The "Extravagantes" of John XXII were glossed as early as 1325, by Zenzelin (Zenzelinus) de Cassino. (See Corpus Juris Canonicorum; Decretalium, Papal.) The "Extravagantes Communes" had no regular gloss, but when Jean Chappuis edited this collection, in 1500, he included glosses of many authors that he came across in his manuscripts. All the glosses of the Corpus Juris are given in the official edition of Gregory XIII (1582); since then they have not been revised and recent critical editions of the text omit them.

Gloves, Episcopal.—Liturgical gloves (chirotheac, called also at an earlier date manice, vauni) are a liturgical adornment reserved for bishops and cardinals. Other ecclesiastics, including abbots, cannot use them without a special papal privilege. They are worn only at a pontifical Mass, never at any other function, and then only to the washing of the hands before the Sacrament. Episcopal gloves at the present day are knitted by machine or hand from silk thread, and are ornamented on the back with a cross; the border of the opening for the hand is also, as a rule, embellished. The colour of the gloves must correspond with the liturgical colour of the feast or day in the services of which they are worn; episcopal gloves, however, are never black, as they are not used on Good Friday nor at the celebration of Masses for the dead. When a bishop is consecrated the gloves are put on him by the consecrator, aided by the assisting bishops, just after the Blessing. The use of episcopal gloves became customary at Rome probably in the tenth century, outside of Rome they were employed somewhat earlier. Apparently they were first used in France; already as the earliest traces of the custom are found in this country, whence it gradually spread into all other parts and even to Rome. The chief reason for the introduction of the usage was probably the desire to provide a suitable adornment for the hands of the bishop, rather than practical considerations such as the preservation of the cleanliness of the hands, etc. Episcopal gloves appertained originally to bishops, but at an early date their use was also granted to other ecclesiastics, XV Century, Catholic Church, etc. no later than 1070 the abbot of the monastery of San Pietro in Cielo d'Oro at Pavia received this privilege, the first certain instance of such permission.

In the Middle Ages these gloves were either knitted or otherwise produced with the needle, or else they were made of woven material sewed together; the former way of making them has been the more usual. Gloves made by both methods are still in existence, as for example, in Saint-Sernin at Toulouse, at Brignoles, in S. Trinità at Florence, in the cathedrals of Halberstadt and Brixen, in New College at Oxford, Conflans in Savoy, and other places. In the later Middle Ages the custom was customary to enlarge the lower end, giving it the appearance of a cuff or gauntlet, and even to form the cuff with a long point which hung downwards and was decorated with a tassel or little bell. The back of the glove was always ornamented, sometimes with an embroidered pattern, or with some other form of embroidery, sometimes with a metal disk having on it a representation of the Lamb of God, a cross, the Right Hand of God, saints, etc., the disk being sewn to the gloves. At times, the ornamentation was of pearls and precious stones. The gloves were generally made of silk thread or woven fabric, rarely of woolen thread, sometimes of linen woven material. Up to the end of the Middle Ages the usual colour was white, although the gloves at New College, Oxford, are red; apparently it was not until the sixteenth century that the ordinances as to liturgical colours were applied to episcopal gloves. Even in the Middle Ages the occasions on which the gloves were worn were not many, but their use was not so limited as to-day, for in the earlier period they were occasionally worn at the pontifical Mass after Confirmation, at solemn offices, and during processions. Episcopal gloves are symbolical of purity from sin, the performance of good works, and carefulness of procedure.

Gluttony (From Lat. gluturr, to swallow, to gulp down), the excessive indulgence in food and drink. The moral deformity discernible in this vice lies in its defiance of the order postulated by reason, which prescribes necessity and the economy of indulgence in eating and drinking. This deordination, according to the teaching of the Angelic Doctor, may happen in five ways which are set forth in the scholastic verse: "Pre-propere, laute, nimis, ardentem, studiose," or, according to the apt rendering of Father Joseph Rickaby: too soon, too expensively, too much, too eagerly, too daintily. Clearly one who uses food or drink in such a way as to injure his health or impair the mental equipment needed for the discharge of his duties, is guilty of the sin of gluttony. It is incontrovertible that to eat or drink for the mere pleasure of the experience, and for that exclusively, is likewise to commit the sin of gluttony. Such a temper of soul is evidently the direct and positive shutting out of that reference to our last end which must be found, at least implicitly, in all our actions. At the same time it must be noted that there is no obligation to formally and explicitly have before one's mind a motive which will immediately relate our actions to God. It is enough that such an intention should be implied in the apprehension of the thing as lawful with a consequent virtual submission to Almighty God. Gluttony is in general a venial sin in so far forth as it is an undue indulgence in a thing which is in itself neither good nor bad. Of course it is obvious that in different cases it would have to be given of one so wedded to the pleasures of the table as to absolutely and without qualification live merely to eat and drink, so minded as to be of the number of those, described by the Apostle St. Paul, "whose god is their belly" (Phil., iii, 19). Such a one would be guilty of mortal sin. Likewise a person who, by excesses in eating and drinking, would have greatly impaired his health, or unfastified himself for duties for the performance of which he has a grave obligation, would be justly chargeable with mortal sin. St. John of the Cross, in his work "The Obscure Nature" (I, 30), distinguished between spiritual and natural gluttony. He explains that it is the disposition of those who, in prayer and other acts of religion, are always in search of sensible sweetness; they are those who "will feel and taste God, as if he were palpable and accessible to them not only in Communion but in all their other acts of devotion." This he describes as a very great imperfection and productive of great evils.

Joseph F. Delany.

Gnesen-Posen, Archidioecesis of, in the Kingdom of Prussia. The archdiocese includes the Dioceses of Gnesen and Posen, which were separate up to 1821. Since that time they have been united under one archbishop. Besides these dioceses the ecclesiastical province also embraces the Bishopric of Gumbinnen, I.

The Bishopric of Posen (Lat., Poseniae; Polish, Poznan) was founded in 968 under Mieszyslaw or Meeko, Duke of Poland. Unable to cope with internal enemies, he sought the support of the German Emperor Otto I and became one of his vassals. Convinced by his pious wife, Dukdvaka, daughter of Duke Bolieslaw I of Bohemia, he was baptized, and, in order to promote the Christianization of his dominions, undertook to establish a permanent ecclesiastical organisation. The first bishop was Jordan (968-92), who was appointed suffragan to the Archbishop of Magdeburg, in 970. Posen continued to be the only bishopric in Poland until the Diocese of Gnesen was created (Lat., Gnesna; Polish, Gniezno). The latter place was chosen by Duke Boleslaw as a suitable location for a shrine for the remains of the Bishop Adalbert, who had suffered martyrdom at the hands of the heathen Prussians. When the Emperor Otto III made his pilgrimage to the grave of St. Adalbert in 1000, he established an archbishopric in Gnesen without consulting Bishop Unger of Posen (982-1012), who was placed in the jurisdiction of the suffragans Gaudentius, brother of St. Adalbert. At the same time he created the Bishoprics of Cracow, Breslau, and Kolberg, and incorporated them in the new archdiocese. On the death of Boleslaw, Posen was restored from Magdeburg in the course of the strife engendered by the national opposition to Germanism. Bishop Paulinus, elected in 1037, was the first bishop consecrated in Gnesen. St. Norbert, Archbishop of Magdeburg, succeeded in obtaining a papal rescript in 1133, in which the metropolitan jurisdiction of his archiepiscopal see over Posen was still recognized. But since the twelfth century, however, Posen has been for the de facto a suffragan of Gnesen. Both bishoprics were dependent on the temporal rulers of the country, who nominated the bishops at will, disposed arbitrarily of the benefices and prebends, and confiscated the estates of the bishops on their death. The archiepiscopal See of Gnesen, richly endowed with estates and tithes, soon surpassed the older Bishopric of Posen both in extent and importance, and grew to be the most influential bishopric in the duchy. In the thirteenth century the archbishops acquired the Principality of Lowicz. The diocese was further augmented by the addition of the Bishopric of Liwa, Wlodzkie, and Plock in the thirteenth century; of Wilna and Lutsk in the fourteenth; of Samogitia in the fifteenth, and of Culm in the sixteenth. Its prelates also obtained many extremely valuable privileges, both ecclesiastical and temporal. At the Council of Constance they were given the rank and title of Primae Poloniae et Magni Ducatus Lithuanus, thereby getting ecclesiastical jurisdiction over all the Bishops of Poland and Lithuania. At the Fifth Lateran Council in 1515 they were honoured with the title of papal Legatus a latere. In 1741 they received the privilege of being allowed to wear theMitra without the ring of the hat. The primacy entitled them to rank as princes of the empire. From 1572 they held authority as regents of the empire during an interregnum, superintended the election of the king and crowned the successful candidate.

The domestic condition of both bishoprics left much to be desired during the first few centuries of their existence, even with respect to the spiritual and moral training of the clergy. Such was the charge made by Pope Innocent III in a letter to Henry I, Archbishop of Gnesen (1220-1244), in 1223: "I believe the prelate on this ground that the majority of the priests were living in open immorality, that the clergy were presenting frivolous plays before the laity, that theatrical performances were being given in churches, and so forth. Most of the credit for the improvement of both dioceses is due to the activities of the monks of Gnesen's foundation. These included abbeys of the Benedictines, Cistercians, Dominicans, Franciscans, Augustinians, Knights Templars and Knights of St. John, and convents of Poor Clares, all of which became centres of prosperous development. Many of the bishops, also, displayed such deficiency solicitude for education as alluded to at this point there is very little precise information to be obtained. But at least we know that in the synodal statutes of 1257 Archbishop Fulik of Gnesen (1232-58)
directed the parish priests to establish and maintain schools; also that Bishop John VII (Lubraski) of Posen (1499–1520) founded a college at Posen, and other educational establishments.

 Hussitism became widely disseminated throughout both dioceses in the fifteenth century. Its progress was mainly due to the fact that a great number of the Polish nobility attended the University of Prague. Bishop Stanislaus I (Glodek) of Posen (1428–37) found himself at open variance with the city of Breslau, whose inhabitants had become prevailingly Hussite, and was even compelled to fly from his diocese. His successor, on the other hand, Andreas or On (1438–79), forced the city to deliver into his hands five Hussite churches which he had seized by the stake in 1439. The further spread of the Hussite movement was checked by the recall of all Poles living in Bohemia, and by the prohibition of all commercial intercourse with that country. The doctrines of Luther, however, found ready supporters amongst the inhabitants, thanks largely to feuds between the clergy and the nobility. They found acceptance first in the towns—in Danzig as early as 1518. In Posen, Bishop John Lubraski (1499–1520) favoured the cause of the Reformation, sent to Leipzig for Christopher Endorf the humanist, and gave him an audience. High in the high school of the Petrus Seminary (1520–25), the new bishop, seemed blind to the danger that menaced the Church. It was not until 1523 that strict measures for the preservation of the Faith were taken at the instance of the king. A kind of inquisition tribunal was instituted, and, at a synod convoked at Lenczyce by Archbishop John Laski (1510–31) of Gnesen, the bull of Pope Leo X excommunicating Luther was published. In 1534 the young men of Poland were forbidden to attend foreign schools. This restraint was somewhat relaxed under Laski’s successors, Matthias Drezewicz (1531–35) and Andreas Borkowski (1535–50), the latter, however, was ordered to suppress the poems of Jerzy Voivod and other degrading themes. The conduct of Archbishop Jacob Uchański (1562–81) in his attempts to establish a national church was marked by the greatest duplicity. The Moravian Brethren meanwhile obtained a footing in the Bishopric of Posen in spite of the opposition of Bishop Benedict Izbiefski (1546–53).

The defeat of the Reformation in Poland was mainly due to the energy of Cardinal Hosius. He instigated the promulgation and execution of the decrees of the Council of Trent throughout the country, and had the Council in mind. In 1562–74 they brought them into Posen in 1571, and in Gnesen Archbishop Stanislaus Karnkowski (1882–1903) entrapped them with the direction of the seminaries of Gnesen and Kalisz. From a national standpoint, the effect of the victory of the Counter-Reformation was that the German element in both dioceses became almost completely Polonized. Among the most important of the subsequent prelates may be mentioned: of the Archdiocese of Gnesen, Cardinal Bernhard Maciejowski (1604–08), Laurentius Gembicki (1616–24), Matthias Lubelski (1641–52), Cardinal Michael Rodziejewski (1687–1705), and Stanislaus Szembek (1607–22); of Posen, Andreas Opaleński (1607–23), Andreas Słodkowski (1636–60), Bartholomew Tarto (1710–15), Prince Theodore Czartoryski (1739–68).

The decline of Poland resulted in its partition among Russia, Austria, and Prussia, nominally by the Treaty of Tilsit, and in 1775. The Archbishop of Gnesen retained jurisdiction only over that part of the kingdom that fell to the share of Prussia, and the Diocese of Posen was also reduced in extent. When the Prussian occupation took effect, the Church was assured of the continued enjoyment of all its rights, but after 1772 all her estates were confiscated. Pius VII transferred the primacy to the Archbishop of Warsaw; but the title of prince was still attached to the Archbishops of Gnesen until it was withdrawn in 1823 by the Congregation of all the cabinet. At the revolution of 1830, the ecclesiastical affairs in Prussia in 1821, the Russian-Polish part of the Diocese of Posen was cut off; the see was raised to an archiepiscopal, and joined to Gnesen under one prelate. Each bishopric, however, retained its own suffragan, its own cathedral chapter, and its own consistory. Bishop Mieciłowski (d. 1825) consecrated first Archbishop of Gnesen-Posen, after he had been Bishop of Posen since 1809. The city of Posen, which in the interim had outstripped Gnesen in size and importance, was designated the official seat of the diocese. Since the Polish regime has been in control, there have been two joint right of electing the archbishop. This right, however, has already proved illusory in several elections, the archiepiscopal throne having been left vacant on several occasions for lengthy periods. After the brief incumbency of Theophilus Wolkewski (1829–29), the archdiocese was ruled by Martin Dunin (1831–42), a graduate of the Collegium Germanicum. Although he met the views of the government as far as possible on all questions concerning the schools and religious seminaries, he, with the Archbishop of Cologne, Clement August von Droste-Vichtering, declared the Petrus Seminary in high school. After 1843, he was removed, and the see was exiled from his diocese, and later, on his return to Gnesen, was arrested and confined in the fortress of Kolberg. It was only in 1840 that he was reinstated, as the result of the personal interposition of King Frederick William IV. Leo Przebniak (1845–65) was succeeded by Mieciłowski Halka Ledochowski (1866–66), one of the first victims of the "Kulturkampf". On the 24 November, 1873, he was requested to abdicate his office by the chief president of the Province of Posen. Upon his refusal, he was summoned to appear before the court on 3 February, 1874, and kept in prison at Ostrowo until February, 1876. Forbidden to stay in Prussia, he went to Rome, and was raised to the cardinalate by Pius IX in March, 1876. The Prussian government had him deposed by the supreme court of the state, and ordered a new election. Both cathedral chapters refused to carry out this order, whereupon the Prussians confiscated the episcopal possessions. Both suffragan bishops, the official Korytkowski, and other clergy were persecuted by the government, and had variously to suffer imprisonment, exile, fines, the dissolution of parishes and deaneries. In the result of the 555 parishes in the two dioceses were without a pastor, and of these 131, embracing 165,000 souls, were absolutely without any clergyman whatsoever.

In the beginning of 1886 Ledochowski resigned his incumbency into the pope's hands. The latter appointed a German, Julius Dinder, to the archbishopric (1886–90). From the outset his German nationality inspired the distrust of the Poles. He was bitterly attacked by Polish newspapers and at public meetings, because he carried out the wishes of the administration in ordering religious instruction to be given to the higher classes of the secondary schools in the German tongue. Even his attitude in expounding in general the cause of the Poles wherever their rights were affected did nothing to mitigate his unpopularity. He was succeeded by a Pole, Florian von Stablewski (1891–1906), who, as in the case of Dinder, was appointed by the government. On good terms with the civil government, promoted the education and training of the clergy by founding seminaries and preparatory colleges in Gnesen and Posen, improved the Catholic unions and societies, and caused the publication of several Catholic daily and weekly journals. In 1904, by his own concurrence, his policy he was subjected to the attacks of both the German and Polish elements as a result of the ex-
cessively obnoxious conditions that prevailed throughout the archdiocese. Since his death it has been without a spiritual head. The diocese is at present in a very precarious condition. The diocese is being hostile to the administration in consequence of the exclusion of their language from the schools, and of the plantation laws and expropriation policy inaugurated by the Prussian government. The schools have been altogether removed from the influence of the archbishop, the clergy, and the parents of the pupils; the intermediate schools are, for the most part, without the guidance of Protestant directors and teachers.

In consequence the plantation of German settlers, mostly of Protestant extraction, many parishes have been brought to the verge of ruin. The efforts of the government to Germanize the country and the consequent resistance of the Poles have, in many cases, exceeded all legitimate bounds, and have given rise to conditions which are very detrimental to the interests of the Catholic Church.

II. STATISTICS.—The Archdiocese of Gneisen-Posen embraces the Prussian governmental department of Posen, the department of Bromberg (with the exception of the circle, or district, of Bromberg), the circles of Deutz-Krone and the circle of Thorn in Western Prussia and several small places in Pomerania. The total population in 1900 consisted of 1,279,490 souls, of whom 110,000 were Germans. Each of the dioceses has a suffragan and its cathedral chapter. During the vacancy of the see the administration of the Diocese of Posen is administered by the suffragan as capellan vicar and administrator general. The cathedral chapter is composed of a provost, a dean, eight canons and six honorary canons (1 vacant). At the beginning of 1909 the bishopric included 26 deaneries, 348 parish churches, 104 chapels-of-ease, 91 oratories and public chapels, 69 private chapels, 554 priests, 97 clerics, 951,920 souls. There is a clerical seminary (Seminarium Leonium) at Posen with 5 professors and 97 alumni, and 2 preparatory colleges. There have been no male orders in either diocese since the Kulturkampf.

The following female orders and congregations have institutions in the diocese: the Sisters of Charity of St. Vincent de Paul have 13 convents with 112 sisters; the Sisters of St. Elizabeth have 21 convents with 203 sisters; the Sisters of Mercy of St. Charles Borromeo 3 with 28 sisters; the Servants of the Immaculate Conception, 8 with 42 sisters. The church at Posen is the official cathedral of the diocese. It was built between 1772 and 1775 on the site of an older structure. It contains numerous memorial tablets and monuments, of which the most famous is the chapel of Rauch. A collegiate chapter with a provost, a dean, and two canons is attached to the parish church ad Sanctam Mariam Magdalenam, formerly the church of the Jesuits. In the Diocese of Gneisen the provost of the cathedral chapter has jurisdiction as vicar capellan and administrator general. The chapter consists of the provost and six canons. At the beginning of 1909 the diocese included 17 deaneries 207 parish churches, 29 chapels-of-ease, 64 oratories and chapels, 277 priests, 438,525 Catholics. There is one seminary at Gneisen, with 3 professors and 31 students, one archiepiscopal preparatory college, and 9 ecclesiastical hospitals. There are 8 convents of the Sisters of St. Elisabeth with 38 sisters, 5 of the Sisters of Charity of St. Vincent de Paul with 33 inmates, and six of the Servants of the Immaculate Conception with 38 sisters. The Gothic cathedral at Gneisen was burned in 1763 and the religious edifice was rebuilt in 1770 by F. W. von Hidegh. The new cathedral contains 2155 stained glass windows. The oldest is from the 14th century. It contains the silver sarcophagus enclosing the relics of St. Adalbert, to which thousands make pilgrimages each year. There are collegiate chapters attached to the church of St. George in Gneisen, and to the parish church in Kruszwica.

JOSEPH LINN.

Gnosticism, the doctrine of salvation by knowledge. This definition, based on the etymology of the word γνωσις "knowledge", γνωτίζειν, "good at knowing", is correct as far as it goes, but it gives only one, though perhaps the predominant, characteristic of Gnostic systems of thought. Whereas Judaism and Christianity, and almost all pagan systems, hold that the soul attains its proper end by obedience of mind and will to the Supreme Power, i.e. by faith and works, it is markedly peculiar to Gnosticism that it places the salvation of the soul merely in the possession of a quasi-intuitive knowledge of the mysteries of the universe and of magic formula indicative of that knowledge. For "gnostics" were "people who knew", who in an elevated knowledge at once constituted them a superior class of beings, whose present and future status was essentially different from that of those who, for whatever reason, did not know. A more complete and historical definition of Gnosticism would be: "A collective name for a large number of greatly varying pantheistic, idealistic sects, which flourished from some time before the Christian Era down to the fifth century, and which, while borrowing the phraseology and some of the tenets of the chief religions of the day, and especially of Christianity, held matter to be a deterioration of spirit, and the whole universe a deception of Deity, and taught the ultimate end of all being to be the overcoming of the grossness of matter and the return to the Parent-Spirit, which return they held to be inaugurated and facilitated by the appearance of some God-sent Saviour". However unsatisfactory this definition may be, its multiplicity, and wild confusion of Gnostic systems will hardly allow of another. Many scholars, moreover, would hold that every attempt to give a generic description of Gnostic sects is labour lost.

ORIGIN.—The beginnings of Gnosticism have long been a matter of controversy, and are largely a subject of research. The more these origins are studied, the farther they seem to recede in the past. Whereas formerly Gnosticism was considered mostly as a corruption of Christianity, it now seems clear that the first traces of Gnostic systems can be discerned some centuries before the Christian Era. Its Eastern origin is already acknowledged by all scholars. Its father is generally held to be a Jewish writer of the 2nd century; F. Ch. Bauer (1831) and Lassen (1858) sought to prove its relation to the religions of India; Lipsius (1860) pointed to Syria and Phoenicia as its home, and Hilgenfeld (1884) thought it was connected with later Mosaicism. Joel (1890), Weingarten (1881), Koffman (1881), Anr. (1894), and Wooberrin (1896)
sought to account for the rise of Gnosticism by the influence of Greek Platonic philosophy and the Greek mysteries, while Harnack described it as "acute Hellenization of Christianity". For the last twenty-five years, however, the trend of scholarship has steadily modified our view of both the Christian and Oriental origins of Gnosticism. At the Fifth Congress of Orientalists (Berlin, 1882) Kessler brought out the connexion between Gnosis and the Babylonian religion. By this latter name, however, he meant not the original religion of Babylonia, but the syncretistic religion which then followed the conquest of Cyrus. The same idea is brought out in his "Mani" seven years later. In the same year F. W. Brandt published his "Mandäische Religion". This Mandean religion is so unmistakably a form of Gnosticism that it seems beyond doubt that Gnosticism existed independent of, and anterior to, Christianity. In more recent years (1897) Wilhelm Anx pointed out the close similarity between Babylonian astrology and the Gnostic theories of the Hebdodem and Ogload. Though in many instances speculations on the Babylonian Astrallehre have gone beyond all sober scholarship, yet in this particular instance the inferences made by Anx seem sound and relevant. The work continued and instituted on a wider scale by W. Bousset, in 1907, and led to carefully ascertained results. In 1898 the attempt was made by M. Friedländer to trace Gnosticism in pre-Christian Judaism. His opinion that the Rabbinic term Mimin designated not Christians, as was commonly believed, but Antinomian Gnostics, has not found universal acceptance. In fact, E. Schürer brought sufficient proof to show that Mimin is the exact Aramaean dialectic equivalent for φασίς. Nevertheless Friedländer's essay retains its value in tracing strong antinomian tendencies with Gnostic colouring on Jewish soil. Not a few scholars have laboured to find the source of Gnostic theories on Hellenistic and, specifically, Alexandrian soil. In 1890 Joel sought to prove that the germ of all Gnostic theories was to be found in Plato. Though this may be dismissed as an exaggeration, some Greek influence on the birth, but especially on the growth, of Gnosticism cannot be denied. In Trismegistic literature, as pointed out by Reitzenstein (Pompiardes, 1904), we find much that is strangely akin to Gnosticism. Its Egyptian origin was defended by E. Amélineau, in 1887, and by G. Gsell, in 1891. In 1901 and 1903 (Mithrasliturgie). The relation of Plotinus's philosophy to Gnosticism was brought out by C. Schmidt in 1901. That Alexandrian thought had some share at least in the development of Christian Gnosticism is clear from the fact that the bulk of Gnostic literature and, above all, the Egyptian (Coptic) sources. That this share was not a predominant one is, however, acknowledged by O. Gruppe in his "Griechische Mythologie und Religionsgeschichte" (1902). It is true that the Greek mysteries, as O. Anrich pointed out in 1894, had much in common with Gnosticism, but there remains the further question, in how far the Greek mysteries, as they are known to us, were the genuine product of Greek thought, and not much rather due to the overpowering influence of Orientalism.

Although the origins of Gnosticism are still largely enveloped in obscurity, so much light has been shed on the problem by the combined study of Egyptian and philosophical and religious pessimism. The Gnostics, it is true, borrowed their terminology almost entirely from existing religions, but they only used it to illustrate their great idea of the essential evil of this present existence and the duty to escape it by the help of magic spells and a superhuman Saviour. Whatever they borrowed, this pessimism they did not borrow—

not from Greek thought, which was a joyous acknowledgment of the beauty of this world and of salvation in this world, with a studied disregard of the element of sorrow; not from Egyptian thought, which did not allow its elaborate speculations on retribution and judgment in the netherworld to cast a gloom on this present existence, but considered the universe created by God as a matter of wisdom and knowledge, and some of the expositions of the dualism between good and evil from Iranian thought, which held to the absolute supremacy of Ahura Mazda and only allowed Ahriman a subordinate share in the creation, or rather counter-creation, of the world; not from Indian Brahminic thought, which was Pantheistic pure and simple, or Buddhist, dwelling in maya identified with the universe, rather than the universe existing as the contradictory of God; not, lastly, from Semitic thought, for Semitic religions were strangely reticent as to the fate of the soul after death, and saw all practical wisdom in the worship of Baal, or Marduk, or Assur, or Hadad, that they might live long on this earth. This utter pessimism is, however, the kernel of the spirit of Gnosticism, as a corruption and a calamity, with a feverish craving to be freed from the body of this death and a mad hope that, if we only knew, we could by some mystic words undo the cursed spell of this existence—this is the foundation of all Gnostic thought. It has the same parent-soil as Buddhism; but Buddhism is ethical, it endeavours to obtain its end by the extinction of all desire; Gnosticism is pseudo-intellectual, and trusts exclusively to magical knowledge. Moreover, Gnosticism, placed in other historical surroundings, developed from the first on other lines than Buddhism. When Cyrus entered Babylon in 539 B.C., two great worlds of thought met, and syncretism in religion, as far as we know it, began. Iranian thought began to mix with the ancient civilization of Babylon. The idea of the great struggle between evil and good, ever continuing in this universe, is the parent idea of Masdeism, or Iranian dualism. This, and the imagined existence of numberless intermediate spirits, angels and devas, was the conviction which overcame the contentedness of Semitism. On the other hand, the unshakable trust in astrology, the persuasion that the planetary system had a fatalistic influence on this world and on the individual, and that those divine spirits of the Heliopolis temple, the Emanations of Barzakh and all the angels in the system, were the cause of all that happened in the world, the great universe of Titans the Seven—the Moon, Mercury, Venus, Mars, the Sun, Jupiter, and Saturn—the sacred Hebdomed, symbolized for millenniums by the staged towers of Babylonia, remained undiminished. They ceased, indeed, to be worshipped as deities, but they remained μορφώσεως and θεοπομποί, rulers and powers whose almost irresistible force was dreaded by man. Practically, they were changed from gods to devas, or evil spirits. The religions of the invaders and of the invaded effected a compromise: the astral faith of Babylon was true, but beyond the Hebdomed was the infinite light in the Orient, and even on this side the adverse influence of the god or gods of the Hebdomed before it could ascend to the only good God beyond. This ascetism of the soul through the planetary spheres to the heaven beyond (an idea not known even to ancient Babylonian speculations) began to be conceived as a struggle with adverse powers, and became the first step towards Buddhist and Christian asceticism. The second great component of Gnostic thought is magic, properly so called, i. e. the power ex opere operato of weird names, sounds, gestures, and actions, as also the mixture of elements to produce effects totally disproportionate to the cause. These magic formulae, which entered laughter and dance as consorts, are not a later and accidental corruption, but an essential part of Gnosticism, for they are found in all forms of Christian Gnosticism and likewise in Mani.
Gnosticism. No Gnosis was essentially complete without the knowledge of the formula, which, once pronounced, were the undoing of the higher hostile powers. Magic is the original sin of Gnosticism, nor is it difficult to guess whence it is inherited. To a certain extent it formed part of every pagan religion, especially the ancient mysteries, yet the thousands of magic tablets unearthed in Assyria and Babylonia show us where the rank growth of magic was to be found. Moreover, the terms and names of earliest Gnosticism bear an unmistakable similarity to Semitic sounds and words. Gnosticism came early into contact with Judaism, and it betrays a knowledge of the Old Testament, if only to reject it or borrow a few names from it. Considering the unknown name it might be difficult to locate, the colonies in the Euphrates valley, this early contact with Judaism is perfectly natural. Perhaps the Gnostic idea of a Redeemer is not unconnected with Jewish Messianic hopes. But from the first the Gnostic conception of a Saviour is more superhuman than that of popular Judaism; their Manda d'Haye, or Solar, is some immediate manifestation of the Deity, a Light-King, an Εως (after), and an emanation of the good God. When Gnosticism came in touch with Christianity, which must have happened almost immediately on its appearance, Gnosticism threw itself with everything into Christianity, and borrowed its nomenclature, acknowledged Jesus as Saviour of the world, united its sacraments, pretended to be an esoteric revelation of Christ and His Apostles, flooded the world with apocryphal Gospels, and Acts, and Apocalypses, to substantiate its claim. As Christianity grew within and without the Roman Empire, Gnosticism spread as a fungus at its root, and claimed to be the only true form of Christianity, unifit, indeed, for the vulgar crowd, but set apart for the gifted and the elect. So rank was its poisonous growth that there seemed danger of its stifling Christianity altogether. This crisis was met by the Church, it opposed it, and its offspring was uprooted. Though in reality the spirit of Gnosticism is utterly alien to that of Christianity, it then seemed to the unwary merely a modification or refinement thereof. When domiciled on Greek soil, Gnosticism, slightly changing its barbarous and Semitic terminology and giving its "emanations" and "synagogues" Greek names, assumed somewhat like neo-Platonism, though it was strongly repudiated by Plotinus. In Egypt the national worship left its mark more on Gnostic practice than on its theories. In dealing with the origins of Gnosticism, one might be tempted to mention Manichaeism, as a number of Gnostics and Manichaeans have been found in the same regions, where they are obviously at home. This, however, would hardly be correct. Manichaeism, as historically connected with Mani, its founder, could not have arisen much earlier than A.D. 250, when Gnosticism was already in rapid decline. Manichaeism, however, in many its elements is far beyond its common accepted founder; but then it is a parallel development with the Gnosis, rather than one of its sources. Sometimes Manichaeism is even classed as a form of Gnosticism and styled Parsee Gnosis, as distinguished from Syrian and Egyptian Gnosis. This classification, however, ignores the fact that the two systems, though they have the doctrine of the evil of matter in common, start from different principles, Manichaeism from dualism, while Gnosticism, as an idealistic Pantheism, proceeds from the conception of matter as a gradual deterioration of the Godhead. Manichaeism, in its late development and emergence of Gnostic theories, a detailed exposition in this article would be unsatisfactory and confusing and to a certain extent even misleading, since Gnosticism never possessed a nucleus of stable dogma, or any sort of depositum fidei round which a number of varied developments and heresies or sects might be grouped; at most it had some leading ideas, which are more or less clearly traceable in different schools. Moreover, a fair idea of Gnostic doctrines can be obtained from the articles on leaders and phases of Gnostic thought (e.g. BASILIDES; VALENTINUS; MARCION; DOCETÆ; DEMIURGE). We shall here only indicate some main phases of thought, which can be regarded as key points, which, though not fitting all systems, will unlock most of the mysteries of the Gnosis. Cosmogony. Gnosticism is thinly disguised Pantheism. In the beginning was the Deep; the Fullness of Being; the Not-Being God; the First Father, the Monad, the Man; the First Source, the unknown God (βασιλέα κρατοῦν, δηλούει γίγνεται, πρωτόκολλο, πάντα, ἀληθινός, πράγματε, γνώσεως δίκαιος), or by whatever name it might be addressed. Thence, or elsewhere, something, though it might be addressed by the title of the Good God, was not a personal Being, but, like Tad or Brahna of the Hindus, the "Great Unknown" of modern thought. The Unknown God, however, was in the beginning pure spirituality; matter as yet was not. This source of all being causes to emanate (προδόχαδε) from itself a number of pure spirit forces. In the different systems these emanations are differently named, classified, and described, but the emanation theory itself is common to all forms of Gnosticism. In the Basilidian Gnosis they are called sonships (εὐγενεία), in Valentinian Gnosis they are called "processions" (ἐγκατάστασις) or "synagogues" (συναγωγή). Depth and Silence produce Mind and Truth; these produce Reason and Life, these again Man and State (καλεῖσθαι). According to Marcus, they are numbers and sounds. These are the primary roots of the Eons. With bewildering fertility hierarchies of Eons are thus produced, sometimes to the number of thirty. These Eons belong to the purely ideal, noumenal, intelligible, or supersensible world; they are immaterial, they are hypostatic ideas. Together with the source from which they emanate they form the πνεύμα. The transition from the immaterial to the material, their passage from the immaterial to the material, is brought about by a flaw, or a passion, or a sin, in one of the Eons. According to Basilides, it is a flaw in the last sonship; according to others it is the passion of the female Εως Sophia; according to others the sin of the Great Archon, or Εως-Creator, of the Universe. The ultimate end of all Gnosis is metanoe, or repentance, the undoing of the material existence and the return to the Pleroma.

(b) Sophia-Myth.—In the greater number of Gnostic systems an important rôle is played by the Εως Wisdom—Sophia or Achamoth (ὢκαμοθ). In some sense she seems to represent the supreme female principle, as for instance in the Ophitic systems, the mother of the seven heavens is called Achamoth, in the Valentinian system, in which ἡ ἁμα Σοφία, the Wisdom above, is distinguished from ἡ ἁτά Σοφία, or Achamoth, the former being the female principle in the noumenal world, and in the Archontian system, in which the mother of the seven heavens is called Achamoth, and in which beyond the heavens of the Archons is ἡ μητέρι τῶν κατων and likewise in the Barbeloglossia, where the female Barbelos is but the counterpart of the Unknown Father, which also occurs amongst the Ophites described by Irenæus (Adv. Haereses, III. vii. 4). Moreover, the Eucharistic prayer in the Acts of Thomas (ch. i.) seems addressed to this supreme female principle. W. Boussct's suggestion, that the Gnostic Sophia is nothing else than a disguise for the Dea Syra, the great goddess Istar, or Ashtaroth, seems worthy of consideration. On the other hand, the Εως Sophia of the primitive Gnostic rites, she is ἡ Προδόχας or the "Lustful One", once the virgin goddess, who by her fall from original purity is the cause of this sinful material world. One of the earliest forms of this myth is found in the Simonian Gnooses, in which Simon, the Great Power, finds Helena, who during ten years had been a prostitute in Tyre, but who is Simon's "femea", or understanding, and whom
his followers worshipped under the form of Athena, the goddess of wisdom. According to Valentinian's system, as described by Hippolytus (Book VI, xxxv-xxvii), Sophia is the youngest of the twenty-eight ones. Observing the multitude of ones and the power of begetting them, she hurries back into the depth of the Father, and seeks to emulate him by producing offspring out of love she sends messengers to the unknown places, an abortion, a formless substance. Upon this she is cast out of the Pleroma. According to the Valentinian system as described by Ireneus (op. cit., I) and Tertullian (Adv. Valent., ix), Sophia conceives a passion for the First Father himself, or rather, under pretext of love she seeks to know him and to comprehend his greatness. She would have suffered the consequence of her audacity by ultimate dissolution into the immensity of the Father, but for the boundary Spirit. Accorded to the Platia Sophia (ch. xxix) Sophia, daughter of Barbelos, originally dwells in the highest, or thirteenth heaven, but she is seduced by the demon Ajudhades by means of a ray of light, which she mistook for an emanation from the First Father. Ajudhades thus enticed her into Chaos below the twelve ones, where she is imprisoned by evil powers. According to these ideas, matter is the fruit of his error; this, however, is in the Valentinian development; in the older speculations the existence of matter is tacitly presupposed as eternal with the Pleroma, and through her sin Sophia falls from the realm of light into the Chaos or realm of darkness. This original dualism, however, was overcome by the predominant spirit of Gnosticism, pantheistic emanationism. The Sophia myth is completely absent from the Basilidian and kindred systems. It is suggested, with great verisimilitude, that the Egyptian myth of Isis was the original source of the Gnostic "lower wisdom". In many systems this Kara Zippa is identified with wisdom from the Higher Wisdom mentioned above; as, for instance, in the magick formulas for the dead mentioned by Ireneus (op. cit., I, xxi, 5), in which the departed has to address the hostile archons thus: "I am a vessel more precious than the female who made you. If your mother ignores the source whence she is, I know myself, and I know whence I am and invoke the incorruptible Sophia, who is in the Father, the mother of your mother, who has neither father nor husband. A man-woman, born from a woman, has made you, not knowing her mother, but thinking herself alone. But I invoke her mother. This agrees with the system minutely described by Origen (Contra Celsum, vi, xxxii), referring to the Ophitic system, gives us the names of the seven archons as Jadabaoth, Jao, Sabaoth, Adonaios, Astaphaioi, Alaloioi, and Oraios, and tells us that Jadabaoth is the planet Saturn. Astaphiaios is beyond doubt the planet Venus, as there are seven stars, seven planets, seven individuals, one seven-headed, seven-throated, seven-thyma, which name is also used in magic spells as the name of a goddess. In the Mandaean system Adonaios represents the Sun. Moreover, St. Ireneus tells us: "Sanctam Hebdomadem VII stellas, quas dicitur planetas, esse volunt. It is safe, therefore, to take the seven ones as being seven of the seven planets, seven stars, then considered planets. Jadabaoth (Ὑάδαβαοθ) - Child of Chaos? - Saturn, called the Lion-
faced”, ἀναστασίας is the outermost, and therefore the chief ruler, and later on the Demiurge par excellence. This is called the magos and is Jupiter. Sabaoth (казал Old-Testament title—God of Hosts) was misunderstood; “of hosta” was thought a proper name, hence Jupiter Sabaoth (Σαβαώθ Sabaeth) was Mars. Astaphiaos (taken from magic tablets) was Venus. Adonaios (אֲדונֵי, Hebrew term for the Lord) used of God; Adonis of the Syrians representing the Winter sun in the cosmic tragedy of Tamuz) was the Sun; Aliaos, or sometimes Alieion (αλίειον, Elohim, God), Mercury; Oraios (Ὀραῖος, Jaregal? or Λαής light?), the Moon. In the hellenized form of Gnosticism either all or some of these names are replaced by personified vices. Authadia (Ἀθύδα), or Authiadion, is the perfect knowledge of Jachin, the presumptuous Demiurge, who is lionfaced as the Archon Authadia. Of the Archons Kikias, Zelos, Pithones, Erennyx, Epiphthyma, the last obviously represents Venus. The number seven is obtained by placing a proarch or chief archon at the head. That these names are only a disguise for the Spiritual Hierarchy, the seven is clear, for Sophia, the mother of them, retains the name of Ogdoas, Octonatio. Occasionally one meets with the Archon Ἡρακλεῖος, which is evidently the El Shaddai of the Bible (יהוה), and he is described as the Archon “number four” (τέτραυτος τέτρατος) and must represent the Sun. In the system of the Gnostics of Epiphanius we find, as the Archons, Iao, Saklas, Seth, David, Eloieon, Eliaios, and Jaldabaoth (or no. 6 Jaldabaoth, no. 7 Sabaoth). Of these, Saklas is the chief demon of Manichaeism. Eloieon is probably connected with En-il, the Bel of Nippur, the ancient god of Babylonia. In this, as in several other systems, branches of the planetary seven have become obscured, but hardly in any way have they become totally effaced. What tended most to obliterate the sevenfold distinction was the identification of the God of the Jews, the Lawgiver, with Jaldabaoth and his designation as World-creator, whereas formerly the seven planets together ruled the world. This confusion, however, was suggested by the very fact that at least five of the seven archons bore Old-Testament names for God—El Shaddai, Adonai, Eloheinu, Jehovah, Sabaoth.

(c) Doctrine of the Primordial Man.—The speculative Primordial Man or Primaeval Man (Πρωτοανθρώπων, Adam) occupy a prominent place in several Gnostic systems. According to the “Evangelium Maris”, the Father is Prōtanthropos; Barbelo became Prōtanthropos. According to Irenaeus (I, xxix, 3) the Ζων Autochtones are the true and perfect Anthropos, also called Adamas; he has a body, the “Perfect Knowledge”, and receives an irresistible force, so that all things rest in him. Others say (Irenaeus, I, xxx) there is a blessed and incorruptible and endless light in the power of Bythos (Βυθός); this is the Father of all things who is invoked as the First Man, who, with his Eumma, emotes the Son of Man as a Demiurge. According to Valentinus, Adam was created in the name of Anthropos and overawe the demons by the fear of the pre-existent man (τοῦ παράπονος ἀνθρώπου). In the Valentinian syllogisms and in the Marcionite system we meet in the fourth (originally the third) place Anthropos and Ecclesia. In the Pistis Sophia the Ζων Ιēo is called the First Man, he is the overseer of the Light, messenger of the First Precept, and constitutes the forces of the Heirmomen. In the Books of the Jēd this “Great Man” is the King of the Light-treasure, he is enthroned above all things and is the goal of all souls. According to the Marcionites the Prōtanthropos is the first elect; the foundation-stone being before its individualation into individuals. “The Son of Man” is the same being after it has been individualized into existing things and thus sunk into matter. The Gnostic Anthropos, therefore, or Αδάμ, as it is sometimes called, is a cosmogenic element, pure mind as distinct from matter, mind conceived hypostatically as emanating from God and not yet darkened by contact with perishable material; this is its higher and its lower self. Anthropos is the majesty of humanity, or humanity itself, as a personified idea, a category without corporeality, the human reason conceived as the World-Soul. This speculation about the Anthropos is completely developed in Manichaeism, where, in fact, it is the basis of the whole system. God is in danger of losing his power on the earth, in the cosmic tragedy of darkness, and in order to protect the preserver of the world, the cosmic Anthropos is strangely mixed up with the historical figure of the first man, Adam. Adam “was the true prophet, running through all ages, and hastening to rest”; “the Christ, who was from the beginning and is always, who was ever present to every generation, in a hidden manner indeed, yet ever present.” In fact Adam was, to use Modernist language, the Godhead immanent in the world and ever manifesting itself to the inner consciousness of the elect. The same idea, somewhat modified, occurs in Hermetic literature, especially the “Poimandres”. It is elaborated by Philo, who makes Adam the first man to be created in the image and likeness of God and as a model for the human being created first “after God’s image and likeness” and the historic figures of Adam and Eve created afterwards. Adam η ἀνθρώποι is: “A Idea, Genus, Character, belonging to the world of Understanding, without body, neither male nor female; he is the Beginning, the Name of God, the Logos, immortal, incorruptible” (De opif. mund, 134–148; De conf. ling., 146). These ideas, in Talmudism, Philonism, Gnosticism, and Trismegistic literature, all come from one source, the late Masdei development of the Gayomarthians, or worshipper of the Super-Man.

(5) The Barbelo.—This Gnostic figure, appearing in a number of systems, the Nicolaites, the “Gnostics” of Epiphanius, the Sethians, the system of the “Evangelium Maris” and that in Iren., I, xxix, 2 sq., remains to a certain extent an enigma. The name βαρβελος, μαθητας, μαθητας has not been explained with certainty. In any case she represents the supreme female Wisdom, the highest Goddess in the Gnostic aspect. Barbelo has most of the functions of the Sw Sophia as described above. So prominent was her place amongst some Gnostics that some schools were designated as Barbeliote, Barbelo worshippers or Barbelognostics. She is probably none other than the Light-Maiden Sophia of the Pistis Sophia, or simply the Maiden, τῷ θεῷ. In Epiphanius (Hier., xxvi, 1) and Philostratus (Hier., xxviii) Balthracus (Barbelos) seems identical with Noria, who plays a great role as wife either of Noe or of Seth. The suggestion, that Noria is ὡ ὡ, “Maiden”, ἁμαρτωλα, ἀσκαρά, Ἠθών, Ἀθροί, seems worthy of consideration.

RTES.—We are not so well informed about the practical and ritual side of Gnosticism as we are about its doctrinal and theoretical side. However, St. Irenaeus’s account of the Marcionites, Hippolytus’s account of the Ebionites, the liturgical portions of the “Acta Thomae”, some passages in the Pseudo-Clementines, and above all Coptic Gnostic and Mandaean literature give us at least some insight into their liturgical practices.

(a) Baptism.—All Gnostic sects possessed this rite in some way; in Mandaeism daily baptism is one of the most important practices for the purification of souls. The formula used by Christian Gnostics seem to have varied widely from that enjoined by Christ. The Marcionites said: “In [εἰς] the name of the unknown Father of all, in [εἴ] the Truth, the Mother of all, in him, who came down on Jesus [εἴ τὸν κυρίαν τὸν κυρίαν], οὐ κατὰ ἡμᾶς, οὐ κατὰ παρθένους”. The Ebionites
said: "In [the name of the great and highest God and in the name of his Son, the great King. In Iren. (I, xxii, 3) we find the formula: "In the name that was hidden from every divinity and lordship and truth, which [name] Jesus the Nazarene has put on in the invisible light" and several other formulae, which were sometimes pronounced in Hebrew or Aramaic. The Mandaeans said: "The name of the Life and the name of the Manda d’Haye is named over thee." In connexion with Baptism the Sphragis (Σφραγίς) was of great importance; in what the seal or sign consisted whether they were marked is not easy to say. There was also the tradition of a name either by utterance or by handing a tablet with some mystic word on it.

(b) Confirmation.—The anointing of the candidate with chiasm, or odorous ointment, is a Gnostic rite which overshadows the importance of baptism. In the Acta Thomæ, so some scholars maintain, it had completely replaced baptism, and was the sole sacrament of initiation. This however is not yet proven. The Marcionites went so far as to reject Christian baptism and to substitute a mixture of oil and water which they poured over the head of the candidate. By confirmation the Gnostics intended so much to give the Holy Ghost as to seal the candidate against the attacks of the archons, or to drive them away by the sweet odour which is above all things (τιν έν το θεο έσται). The balsam was somehow supposed to have flowed from the Tree of Life, and this tree was again mystically connected with the Cross; for the chiasm is in the "Acta Thomæ" called "the hidden mystery in which the Cross is shown to us."

(c) The Eucharist.—It is remarkable that so little is known of the Gnostic substitute for the Eucharist. In a number of passages we read of the breaking of the bread, but in what this consisted is not easy to determine. The use of salt in this rite seems to have been important (Clem. Hom. xiv), for we read distinctly how St. Peter broke the bread of the Eucharist and "putting salt thereon, he gave first to the mother and then to us." This is in all probability, though no certainty, that the Eucharist referred to in the "Acta Thomæ" was merely a breaking of bread without the use of the cup. This point is strongly controverted, but the contrary can hardly be proven. It is beyond doubt that the Gnostics often substituted water for wine. (Acta Thomæ, Baptism of Mygdonia, ch. cxxi.) What formula of consecration was used we do not know, but the bread was certainly signed with the Cross. It is to be noted that the Gnostics called the Eucharist by Christian sacrificial terms—μυστήριον, "oblation", Τελεία (II Bk. of Jet, 45). In the Church Books (Pistis Sophia, 142; II Jet, 45-47) we find a long description of some apparently Eucharistic ceremonies carried out by Jesus Himself. In these fire and incense, two flasks, and also two cups, one with water, the other with wine, and branches of the vine are used. Christ crowns the Apostles with olive wreaths, begets Melchisedech to come and change wine into water for baptism, puts herbs in the Apostles' mouths and hands. Whether these actions in some sense reflect the ritual of Gnosticism, and several imaginations of the author, cannot be decided. The Gnostics seem also to have used oil sacramentally for the healing of the sick, and even the dead were anointed by them to be rendered safe and invisible in their transit through the realms of the archons.
