### TABLES OF ABBREVIATIONS.

**tr.** translation or translated. By itself it means "English translation", or "translated into English by". Where a translation is into any other language, the language is stated.

**tr., tract.** tractate.

**v.** see (Lat. vide).

**Ven.** Venerable.

**Vol.** Volume.

#### II. — Abbreviations of Titles.

**Acta SS.** *Acta Sanctorum* (Bollandists).

**Ann. pont. cath.** *Battandier, Annuaire pontifical catholique*.

**Dict. d'arch. chrét.** Cabrol (ed.), *Dictionnaire d'archéologie chrétienne et de liturgie*.

**Dict. de théol. cath.** Vacant and Mangenot (ed.), *Dictionnaire de théologie catholique*.

**Kirchenlex.** Wetzer and Welte, *Kirchenlexicon*.

**P. G.** Migne (ed.), *Pères Graci*.

**P. L.** Migne (ed.), *Pères Latini*.

**Vig.** Della Bible.Vigouroux (ed.), *Dictionnaire de la Bible*.

#### Notes.

**Note I.** — Large Roman numerals standing alone indicate volumes. Small Roman numerals standing alone indicate chapters. Arabic numerals standing alone indicate pages. In other cases the divisions are explicitly stated. Thus "Rashdall, Universities of Europe, I, ix" refers the reader to the ninth chapter of the first volume of that work; "I, p. ix" would indicate the ninth page of the preface of the same volume.

**Note II.** — Where St. Thomas (Aquinas) is cited without the name of any particular work the reference is always to "Summa Theologica" (not "Summa Philosophiae"). The divisions of the "Summa Theol." are indicated by a system which may best be understood by the following example: "I-II, Q. vi, a. 7, ad 2 um" refers the reader to the seventh article of the sixth question in the first part of the second part, in the response to the second objection.

**Note III.** — The abbreviations employed for the various books of the Bible are obvious. Ecclesiasticus is indicated by *Eccles.*, to distinguish it from Ecclesiastes (*Eccle*). It should also be noted that I and II Kings in D. V. correspond to I and II Samuel in A. V.; and I and II Par. to I and II Chronicles. Where, in the spelling of a proper name, there is a marked difference between the D. V. and the A. V., the form found in the latter is added, in parentheses.

THE CATHOLIC ENCYCLOPEDIA

Fathers of the Church.—The word Father is used in the New Testament to mean a teacher of spiritual things, by whose means the soul of man is born again into the likeness of Christ: "For if you have ten thousand instructors in Christ, yet not many fathers. For in Christ Jesus, by the gospel, I have begotten you. Wherefore I beseech you, be ye followers of me, as I also am of Christ" (1 Cor., iv, 15, 16; cf. Gal., iv, 19). The first teachers of Christianity seem to be collectively spoken of as "the Fathers" (II Peter, iii, 4). Thus St. Irenaeus defines that a teacher is a father, and a disciple is a son (iv, 41, 2), and so says Clement of Alexandria (Strom., I, i, 1). A bishop is emphatically a "father in Christ", both because it was he, in early times, who baptized all his flock, and because he is the chief teacher of his church. But he is also regarded by the early Fathers, such as Hegesippus, Irenaeus, and Tertullian, as the recipient of the tradition of his predecessors in the see, and consequently as the witness and representative of the faith of his Church before Catholicity and the world. Hence the expression "the Fathers" comes naturally to be applied to the holy bishops of a preceding age, whether of the last generation or further back, since they are the parents at whose knee the Church of to-day was taught her belief. It is also applicable in an eminent way to bishops sitting in council, "the Fathers of Nicaea", "the Fathers of Trent". Thus Fathers have learnt from Fathers, and in the last resort from the Apostles, who are sometimes called Fathers in this sense: "They are your Fathers", says St. Leo, of the Princes of the Apostles, speaking to the Romans; St. Hilary of Arles calls them sancti patres; Clement of Alexandria says that his teachers, from Greece, Ionia, Coele-Syria, Egypt, the Orient, Asia, Palestine, respectively, had handed on to him the tradition of blessed teaching from Peter, and James, and John, and Paul, receiving it "as son from father".

It follows that, as our own Fathers are the predecessors who have taught us, so the Fathers of the whole Church are especially the earlier teachers, who instructed her in the teaching of the Apostles, during their infancy and first growth. It is difficult to define the first age of the Church, or the age of the Fathers. It is a common habit to stop the study of the early Church at the Council of Chalcedon in 451. "The Fathers" must undoubtedly include, in the West, St. Gregory the Great (d. 604), and in the East, St. John Damascene (d. 744). It is frequently said that St. Bernard (d. 1153) was the last of the Fathers, and Migne's "Patrologia Latina" extends to Innocent III, halting only on the verge of the thirteenth century, while his "Patrologia Graeca" goes as far as the Council of Florence (1438-9). These limits are evidently too wide. It will be best to consider that the great merit of St. Bernard as a writer lies in his resemblance in style and matter to the greatest among the Fathers, in spite of the difference of period. St. Isidore of Seville (d. 636) and the Venerable Bede (d. 735) are to be classed among the Fathers, but they may be said to have been born out of due time, as St. Theodore the Studite was in the East.

The Appeal to the Fathers.—Thus the use of the term Fathers has been continuous, yet it could not at first be employed in precisely the modern sense of Fathers of the Church. In early days the expression referred to writers who were then quite recent. It is still applied to those writers who are to us the ancients, but no longer in the same way to writers who are now recent. Appeals to the Fathers are a subdivision of appeals to tradition. In the first half of the second century begin the appeals to the sub-Apostolic age: Papias appeals to the presbyters, and through them to the Apostles. Half a century later St. Irenaeus supplements this method by an appeal to the tradition handed down in every Church by the succession of its bishops (Adv. Haer., III, i-iii), and Tertullian clinches this argument by the observation that as all the Churches agree, their tradition is secure, for they could not all have strayed by chance into the same error (Praescr., xxviii). The appeal is thus to Churches and their bishops, none but bishops being the authoritative exponents of the doctrine of their Churches. As late as 341 the bishops of the Dedication Council at Antioch declared: "We are not followers of Arius; for how could we, who are bishops, be disciples of a priest?"

Yet slowly, as the appeals to the presbyters died out, there was arising by the side of appeals to the Churches a third method: the custom of appealing to Christian teachers who were not necessarily bishops. While, without the Church, Gnostic schools were substituted for churches, within the Church, Catholic schools were growing up. Philosophers like Justin and most of the numerous second-century apologists were reasoning about religion, and the great catechetical school of Alexandria was gathering renown. Great bishops and saints like Dionysius of Alexandria, Gregory Thaumaturgus of Pontus, Firmilian of Cappadocia, and Alexander of Jerusalem were proud to be disciples of the priest Origen. The Bishop Cyprian called daily for the works of the priest Tertullian with the words "Give me the master". The Patriarch Athanasius refers for the ancient use of the word ἐπισκόποι, not merely to the two Dionysii, but to the priest Theognostus. Yet these priest-teachers are not yet called Fathers, and the greatest among them, Tertullian, Clement, Origen, Hippolytus, Novatian, Lucian, happen to be tinged with heresy; two became antipopes; one is the father of Arianism; another was condemned by a general council. In each case we might apply the words used by St. Hilary of Tertullian: "Sequenti errore detraxit scriptia probabilis, auctoritatem Comm. in Matt., v, 1, cited by Vincent of Lérins, 24) A fourth form of appeal was better founded and of enduring value. Eventually it appeared that bishops as well as priests were fallible. In the second century
the bishops were orthodox. In the third they were often found wanting. In the fourth they were the leaders of schisms, and heresies, in the Meletian and Donatist troubles and in the long Arian struggle, in which few were found to stand firm against the insidious persecution of Constantius. It came to be seen that the true Fathers of the Church are those Catholic teachers whose teaching has been recognised as orthodox. So it came to pass that out of the four "Latin Doctors" one is not a bishop. Two other Fathers who were not bishops have been declared to be Doctors of the Church, Bede and John Damascene, while among the Doctors of the East we find two priests, the incomparable St. Bernard and the greatest of all theologians, St. Thomas Aquinas. Nay, few writers had such great authority in the Schools of the middle ages as the layman Boethius, many of whose definitions are still commonplaces of theology.

Similarly (we may notice in passing) the name "Father", which originally belonged to bishops, has been as it were delegated to priests, especially as ministers of the Sacrament of Penance. It is now a form of address to all priests in Spain, in Ireland, and, of recent years, in England and the United States.

If [a] or [a] pope, was a term of respect for eminent laymen, as some letters to St. Augustine, neither of these writers seems to use it in addressing other bishops, except when St. Augustine writes to Rome. Eventually the term was reserved to the bishops of Rome and Alexandria; yet in the East to-day every priest is a "pope". The Aramaic obis was used from early times for the superiors of religious houses. But through the abuse of granting abbots in commendam to seculars, it has become a polite title for all secular clerics, even seminarists, in Italy, and especially in France, where all religious who are priests are addressed as "Father".

We receive only, says St. Basil, what we have been taught by the Holy Fathers; and adds that in his Church of Cæsarea the faith of the holy Fathers of Nicea has long been implanted (Ep. cxl, 2). St. Gregory Nazianzen declares that he holds fast the teaching which he heard from the holy Oracles, and was taught by the holy Fathers. These Cappadocian saints seem to be the first to appeal to a real canons of Fathers. The appeal to one or two was already common enough; but not even the learned Eusebius had thought of a long string of authorities. St. Basil, for example (De Spiri. S., ii, 29), cites for the formula "with the Holy Ghost" in the doxology, the example of Irenæus, Clement and Dionysius of Alexandria, Dionysius of the pupils of Cæsarius. Origen, Ambrose and the preces lucernarian said at the lighting of lamps, Athenagoras, Gregory Thaumaturgus, Firmilian, Melitius. In the fifth century this method became a stereotyped custom. St. Jerome is perhaps the first writer to try to establish his interpretation of a text by a string of exegetes (Ep. cxl, 2). Paulinus, the dean and biographer of St. Ambrose, in the libellus he presented against the Pelagians to Pope Zosimus in 417, quotes Cyprian, Ambrose, Gregory Nazianzen, and the decrees of the late Pope Innocent. In 420 St. Augustine quotes Cyprian and Ambrose against the same heretics (C. duæ Epp. Pol., iv). Julian of Eclanum quoted Chrysostom and Basil; St. Augustine replies to him in 421 (Contra Julianum, i) with Irenæus, Cyprian, Reticius, Olympius, Hilary, Ambrose, the decrees of African councils, and above all Popes Innocent and Zosimus. In a celebrated passage he argues that these Western writers are more than the Alexandrians had appealed to the East he shall go, and the saint adds Gregory Nazianzen, Basil, Synod of Diospolis, Chrysostom. To these he adds Jerome (c. xxxiv): "Nor should you think, Jerome, because he was a priest, is to be despised", and adds a eulogy. This is amusing, when we remember that Jerome in a fit of irritation, fifteen years before, had written to Augustine (Ep. exli): "Do not excite against me the silly crowd of the ignorant, who venerate you as a bishop, and receive you with the honour due to a prelate when you declaim in the Church, whereas they think little of me, an old man, nearly decrepit, in my monastery in the solitude of the country."

In the second book "Contra Julianum", St. Augustine again cites Ambrose frequently, and Cyprian, Gregory Nazianzen, Hilary, Chrysostom; in ii, 37, he recapitulates the nine names (omitting councils and popes), adding (iii, 32) Innocent and Jerome. A few years later the Senate of Southern Gaul was led by St. Hilary of Arles, St. Vincent of Lérins, and Bl. Cassian, refuse to accept St. Augustine's severe view of predestination because "contrarium putant patrum opinioni et ecclesiasticò sensui". Their opponent St. Prosper, who was trying to convert them to Augustinianism, complains: "Obstinationem suam vestutae sedem" (Ep. inter Aug. cxxv, 2), and they said that no ecclesiastical writer had ever before interpreted Romans quite as St. Augustine did—which was probably true enough. The interest of this fact lies in the fact that it was, if not new, at least more definite than any earlier appeal to antiquity. Through the story of the Arian antecedents of St. Augustine, and the controversy with the Arians had turned upon Scripture, and appeals to past authority were few. But the appeal to the Fathers was never the most imposing locus theologici, for they could not easily be assembled so as to form an absolutely conclusive test. On the other hand up to the end of the fourth century, there were practically no infallible definitions available, except condemnations of heresies, chiefly by popes. By the time that the Arian action under Valens caused the Eastern conservatives to draw towards the orthodox, and prepared the restoration of orthodoxy to power by Theodosius, the Nicene decisions were used to be looked upon as an appeal to this council to be preferred to a unique position above all others. By 430, the date we have reached, the Creed we now say at Mass was revered in the East, whether rightly or wrongly, as the work of the 150 Fathers of Constantinople in 381, and there were also new papal decisions, especially the tracts of Pope Zosimus, which in 418 had been sent to all the bishops of the world to be signed.

It is to living authority, the idea of which had thus come to the fore, that St. Prosper was appealing in his controversy with the Lernissian school. When he went to Gaul, in 431, after the death of St. Augustine, he told them to accept the decrees of the Council. After the death of the saint, he reproved to their difficulties, not by restating that saint's hardest arguments, but by taking with him a letter from Pope St. Celestine, in which St. Augustine is entreated as having been held by the pope's predecessors to be "inter magistrorum opiniones". No one is to be allowed to depreciate him, but it is not said that every word of his is to be followed. The disturbances had appealed to the Holy See, and the reply is "Desinat incessere novitas vetustatem". (Let novelty cease to attack antiquity!). An appendix is added, not of the opinions of ancient Fathers, but of recent popes, since the very same monks who thought St. Augustine went too far, professed (says the appendix) "that they followed and approved only what the most holy See of the Blessed Apostle Peter sanctioned and taught by the minstry of its prelates". A list therefore follows of "the judgments of the rulers of the Roman Church", to which are added some sentences of African councils, "which indeed the Arians do not believe when they approved them". To these inviolables sanctions (we might roughly render "infallible utterances") prayers used in the sacraments are appended "ut legem credendi lex statuat supllicandi"—a frequently misquoted phrase—and in conclusion, it is declared that these testimonies of the Apostolic See
are sufficient, "so that we consider not to be Catholic at all whatever shall appear to be contrary to the decisions we have cited". Thus the decisions of the Apostolic See are put on a very different level from the views of St. Augustine, just as that saint always drew a sharp distinction between the resolutions of African councils or the extracts from the Fathers, on the one hand, and the decrees of Popes Innocent and Zosimus on the other.

[The text continues discussing the history and authority of the Apostolic See and its decisions in comparison with the views of St. Augustine.]

The same result is obtained by modern theologians, in their definitions; e.g. Fessier thus defines what constitutes a "Father": (1) orthodoxy doctrine and teaching; (2) being a bishop; (3) living (if possible) in the lifetime of (or at any rate the day) a certain antiquity. The criteria by which we judge whether a writer is a "Father" or not are: (1) citation by a general council, or (2) in public Acts of popes addressed to the Church or concerning Faith; (3) encomium in the Roman Martyrology as "sancti"; (4) philological; (5) in the Churches in early centuries; (6) citation, with praise, as an authority as to the Faith by one of the more celebrated Fathers. Early authors, though belonging to the Church, who fail to reach this standard are simply ecclesiastical writers ("Patriologia", ed. Jungmann, ch. i, §11). On the other hand, where the appeal is not to the authority of the writings of the Fathers, the testimony is merely required to the belief of his time, one writer is as good as another, and if a Father is cited for this purpose, it is not as a Father that he is cited, but merely as a witness to facts well known to him. For the history of dogmas, therefore, the works of ecclesiastical writers who are not only not approved, but even heretical, are often just as valuable as those of the Fathers. On the other hand, the witness of one Father is occasionally of great weight for doctrine when taken singly, if he is teaching a subject on which he is recognized by the Church as an especial authority. E.g. St. Augustine, in the De Trin., called St. Cyril of Alexandria, St. John Chrysostom, and St. Augustine on the Holy Trinity, etc. There are a few cases in which a general council has given approbation to the work of a Father, the most important being the two letters of St. Cyril of Alexandria which were read at the Council of Ephesus. But "the authority of single Fathers considered in itself," says Franselin (De Tradit. 72. 23), "is not infallible or ex cathedra; though piety and sound reason agree that the theological opinions of such individuals should not be treated lightly, and should not without great caution be interpreted in a sense which clashes with the common doctrine of other Fathers." The reason is plain enough; they were holy men, who are not to be presumed to have intended to swerve from the doctrine of the Church, and their doubtful utterances are therefore to be taken in the best sense of which they are capable. If they cannot be explained in an orthodox sense, we have to admit that not the meaning, but the real meaning of the previous passages or obscure. But on the use of the Fathers in theological questions, the article TRADIT. and the ordinary dogmatic treatises on that subject must be consulted, as it is proper here only to deal with the historical development of their use. The subject was never treated as a part of dogmatic theology until the rise of what is now commonly called "Theologia fundamentalis", in the sixteenth century, the founders of which are Melchior Canus and Bellarmine. The former has a discussion of the use of the Fathers in deciding questions of faith (De locis theologici, vii). The Protestant Reformers attacked the authority of the Fathers with great success, and the question was given into the hands of the Church by St. Vincent de Beauvais and Dalleau (Jean Daille, 1594-1670, "Traité de l'emploi des saints Pères", 1682; in Latin "De usu Patrum", 1656). But their objections are long since forgotten.

Having traced the development of the use of the Fathers up to the period of their frequent employment, and of its formal statement by St. Vincent of Lérins, it will be well to give a glance at the continuation of the practice. We saw that, in 434, it was possible for St. Vincent (in a book which has been most unreasonably taken to be a mere polemic against St. Augustine —a notion which is amply refuted by the use made of it in St. Celestine's letter) to define the meaning and the use of the Patristic testimony, and to declare that they are very common. In the Council of Ephesus, 431, as St. Vincent points out, St. Cyril presented a series of quotations from the Fathers, "IUS APOSTOLICUM".
FATHERS

beoswţan pâtrwv kai evvapxovn kai diaphorwv martrwv, which were read on the motion of Flavian, Bishop of Philippoi. They were from Peter I of Alexandria, Martir Athanasius are from Pope Felix (for judges), Theophilus, Cyprian, Ambrose, Gregory Nazianzen, Basil, Gregory of Nyssa, Atticus, Amphilochius. On the other hand Eutyches, when tried at Constantinople by St. Flavian, in 449, refused to accept either Fathers or councils as authorities, confining himself to Holy Scripture as demonstration which horrified his early panegyric (see EUTYCHES). In the following year St. Leo sent his legates, Abundius and Asterius, to Constantinople with a list of testimonies from Hilary, Athanasius, Ambrose, Augustine, Chrysostom, Theophilus, Gregory Nazianzen, Basil, Cyril of Alexandria. They were not received, but were not produced at the Council of Chalcedon in the following year. Therefore forward the custom is fixed, and it is unnecessary to give examples. However, that of the sixth council in 680 is important: Pope St. Agatho sent a long series of extracts from Rome, and the leader of the Monotheletes, Macarius of Antioch, presented another. Both sets were carefully verified from the library of the Patriarchate of Constantinople, and sealed. It should be noted that it was never in such cases thought necessary to trace a doctrine back to the earliest times; St. Vincent demanded the proof of the Church's belief before a doubt arose—this is his notion of analogiea. When the Council of Constantinople endorsed the Decretals, the Fathers quoted by councils and popes and Fathers are for the most part recent (Petauirius, De Incarn., XIV, 15, 2-5).

In the last years of the fifth century a famous document, attributed to Popes Gelasius and Hormisdas, adds to decrees of St. Damasus of 382 a list of books which are approved, and another of those disapproved. In its present form the list of approved Fathers comprises Cyprian, Gregory Nazianzen, Basil, Athanasius, Chrysostom, Theophilus, Hilary, Cyril of Alexandria (wanting in one MS.), Ambrose, Augustine, Jerome, Prosper, Leo ("every iota" of the tome to Flavian is to be accepted under anathema), and "also the treatises of all orthodox Fathers, who deviated in nothing from the fellowship of the holy Roman Church, and were not separated from her faith and preaching, but were participators through the grace of God until the end, in her communion also, the decreetal letters, which most blemished have great veneration at various times when consulted by various Fathers, are to be received with veneration". Orosius, Sedulius, and Juveneces are praised. Rufinus and Origen are rejected. Eusebius's "History" and "Chronicle" are not to be condemned altogether, though in another part of the letter they appear as "apocrypha" with Tertullian, Lactantius, Africanus, Commodian, Clement of Alexandria, Amobius, Cassian, Victorinus of Pettau, Faustus, and the works of heretics, and forged Scriptural documents. The later Fathers constantly used the writings of the earlier. For instance, St. Cesararius of Arles drew freely on St. Augustine's sermons, and embodied them in collections of his own; St. Gregory the Great has largely founded himself on St. Augustine; St. Isidore rests upon all his predecessors; St. John Damascene's great work is a synthesis of patriarchal theology. St. Bede's sermons are a cento from the greater Fathers. Eugippius made a selection from St. Augustine's writings, which had an immense vogue. Cassiodorus made a collection of select commentaries by various writers on all the books of Holy Scripture. St. Benedict especially recommended patriarchic study, and his sons have observed his advice: "Ad perfectionem conversationis qui festinat, sunt doctrinae sanctorum Patrum, quarn observatio percutat hominem ad celsitudinem perfectionis ... quis liber sanctorum catholicorum Patrum hoc non resolat, ut recto curru perveniamus ad creatorem nostrum?" (Sanct Regula, lxiii). Florilegia and catena became common from the fifth century onwards. They are mostly anonymous, but those in the East which go under the name of Eusebius, Clement of Alexandria, and Philo of Byzantium throughout the Middle Ages was the "Glossa ordinaria" attributed to Walfrid Strabo. The "Catena aurea" of St. Thomas Aquinas is still in use. (See CATENA, and the valuable matter collected by Turner in Hastings, Dict. of the Bible, VI, 621.)

St. Augustine was not at the first of the Western Fathers, with St. Ambrose and St. Jerome by his side. St. Gregory the Great was added, and these four became "the Latin Doctors". St. Leo, in some ways the greatest of theologians, was excluded, both on account of the paucity of his writings, and by the fact that his letters had a far higher authority as patristic utterances. In the Oriental Church St. Basil has always been the most popular, as he is the most voluminous, of the Fathers. With the great St. Basil, the father of monachism, and St. Gregory Nazianzen, famous for the purity of his faith, he made up the triumvirate called "the three hierarches", familiar up to the present day in Eastern art. St. Athanasius was added to these by the Westerns, so that four might answer to four. (See DOCTORS OF THE CHURCH.) It will be observed that many of the writers rejected in the Gelasian list lived and died in Catholic communion, but incorrectness in some part of their teaching, e.g. the Semitistic error attributed to Cassian and Faustus, the chiliasm of the conclusion of Victorinus's commentary on the Apocalypse (St. Jerome issued an expurgated edition, the only one in print as yet), the unsoundness of the lost "Hypotheses" of Clement, and so forth, prevented such writers from being spoken of, as Hilary was by Jerome, "inoffenso pede percurririt". As all the more important doctrines of the Church (except that of the Canon and the Inspiration of Scripture) may be proved, or at least illustrated, from Scripture, the widest office of tradition is the interpretation of Scripture, and the authority of the Fathers is here of very great importance. Nevertheless it is only then necessarily to be followed when all are of one mind: "Nemo ... contra unanimum consensum Patrum ipsum Scipiturum sacram interpretari audet", says the Council of Trent; and the Creed of Fiaus IV has similarly: "nec exam unquam nisi juxta unanimum Patrum ... x in Interpretatione simplici", and the Vatican Council echoes Trent: "neminici locere ... contra unanimum consensum Patrum ipsum Sacramentum sacram interpretari.

A consensus of the Fathers is not, of course, to be expected in very small matters: "Quae tamen unanimum sanctorum Patrum non unani- mous divinae legis questiuiculae, sed solum certe prescripte in fidei regula magno nobis studio et investiganda est et sequenda" (Vincent, xxvii, 72). This is not the method, adds St. Vincent, against widespread and inveeterate heresies, but rather against novelties, to be applied directly they appear. A better estimate could hardly be given than the way in which Adoptionism was met by the Council of Frankfort in 794, nor could the principle be better expressed than by the Fathers of the Council: "Tenete vos intra terminos Patrum, et nolite novas versare questiuiculae; ad nihilum enim valient nisi ad subversionem audentium. Sufficient enim nobis sanctorum Patrum vestigia sequi, et illorum dicta firma tenere fide. Illi enim in Domino nostri existerunt doctores in fide et doctores ad vitam; quorum et sapientia Spiritu Dei plena libris legitur inscripta, et vita meritorum miraculae et sanctitatis. Quorum animae ipdemo Deum Dei Filium, D. N. J. C. pro magno pistasis labore regnant in celis. Hoc ergo tota animi virtute, toto caritatis affecto sequimi, beatissimi fratres, ut horum inconuassa firmata doctrinis adherentes, consortium sterner beatiudinis ... cum illis ha-
bene mereamini in oculis” (“Synodica ad Episc.” in Mansi, XIII, 897–8). And an excellent act of faith in the tradition of the Church is that of Charlemagne (ibid., 902) made on the same occasion: “Apostolicae sedi et antiquis ab initio nascentis ecclesie et catholicis traditionibus tota mentis intentione, tota cordis sincere, tota bucor, quod regnaris unumque divinum Spiritu affati, toti orbi a Deo Christo dati sunt doceres, indubitante teneo; hoc ad salutem animae meae sufficere credens, quod sacratissimae evangelicae veritatis pandit historia, quod apostolos in suis episcopii confirmat acustoritis, quod eum invictum Sacrum Scriptura eumque atque in precipitio Christi doceres ad perpetua posteri scriptum reliquiorum memoriam.”

CLASSIFICATION OF PATRISTIC WRITINGS.—In order to get a good view of the patristic period, the Fathers may be divided in various ways. One favourite method is by periods; the Ante-Nicene Fathers till 325; the Great Fathers of the fourth century and half the fifth (325–451); and the later Fathers. A more obvious division is into Easterns and Westerns, and the Easterns will comprise writers in Greek, Syriac, Armenian, and Coptic. A convenient division into smaller groups will be by periods, nationalities, and churches: for in East and West there were many races, and some of the ecclesiastical writers are apologists, some preachers, some historians, some commentators, and so forth.

A. After (1) the Apostolic Fathers come in the second century (2) the Greek apologists, followed by (3) the Western apologists somewhat later, (4) the Gnostic and Marcionite heretics with their apocryphal Scriptures, and (5) the Catholic replies to them.

B. The third century gives us (1) the Alexandrian writers of the catechetical school, (2) the writers of Asia Minor and (3) Palestine, and the first Western writers, (4) at Rome, Hippolytus (in Greek), and Tertullian, (5) the great African writers, and a few others.

C. The fourth century opens with (1) the apologetic and the historical works of Eusebius of Cæsarea, with whom we may class St. Cyril of Jerusalem and St. Epiphanius, (2) the Alexandrian writers Athanasius, Didymus, and others, (3) the Capadocians, (4) the Antiocchians, (5) the Syrie writers. In the West we have (1) the opponents of Arius, (2) the Italians, including Jerome, (3) the Africans, and (9) the Spanish and Gallic writers.

D. The fifth century gives us (1) the Nestorian controversy, including the Western St. Leo; (2) the historians. In the West (4) the school of Léryns, (5) the letters of the popes.

E. The sixth century and the seventh give us less important names and they must be grouped in a more mechanical way.

(1) To these groups in detail we find the letters of the chief Apostolic Fathers, St. Clement, St. Ignatius, and St. Polycarp, venerable not merely for their antiquity, but for a certain simplicity and nobility of thought and style which is very moving to the reader. Their quotations from the New Testament are quite rare. They offer the most important information to the historian, though somewhat homeopathic quantities. To these we add the Didache (q. v.), probably the earliest of all; the curiosus theologizing anti-Jewish epistle which goes under the name of Barnabas; the Shepherd of Hermas, a rather dull series of visions chiefly connected with personal theology, and the First and Second Clement, composed by Polycarp, Pius I, and long appended to the New Testament as of almost canonical importance. The works of Papias, the disciple of St. John and Aristeus, are lost, all but a few precious fragments.

(2) The apologists are most of them philosophers in their treatment of Christianity. Some of their works were presented to emperors in order to disarm persecutions. We must not always accept the view given to outsiders by the apologists, as representing the whole of the Christianity they knew and practised. The apologies of Quadratus to Hadrian, of Aristus of Pella to the Jews, of Mitianes, of Apollinaris of Hierapolis, and of Melito of Sardis are lost to us. But some of them possessed in certain periods, that of Aristides of Athens was presented to Antoninus Pius, and deals principally with the knowledge of the true God. The fine apology of St. Justin with its appendix is above all interesting for its description of the Liturgy at Rome c. 150. His arguments against the Jews are well worth reading, but his works are read in their Catholic books as “Apologiae apologeticae ad Graecos” with Trypho”, where he speaks of the Apostolic style of the Apocalypse in a manner which is of first-rate importance in the mouth of a man who was converted to Epaphus some time before the year 132. The “Apology” of Justin's Syrian disciple Tatian is a less conciliatory work, and its author fell into heresy. Athenagoras, an Athenian (c. 177), addressed to Marcus Aurelius and Commodus an eloquent refutation of the absurd calumnies against Christians. Theophilus, Bishop of Antioch, about the same date, wrote three books of apology addressed to a certain Autolycus.

Of all these works are of considerable literary ability. This is not the case with the great Latin apologie which closely follows them in date, the “Apologia” of Tertullian, which is in the uncollected and untranslatable language affected by its author. Nevertheless it is a work of extraordinary genius, in interest and value far above all the rest, and for energy and boldness it is incomparable. His fierce "Ad Scapulam" is a warning addressed to a persecuting proconsul. “Adversus Judaeos” is a title which explains itself. The other Latin apologists are later. The “Octavius” of Minucius Felix is as polished and general as the Greek, and as uncertain. If the “Apologiae” was well calculated to inflame courage into the persecuted Christian, the “Octavius” was more likely to impress the inquiring pagan, if so be that more flies are caught with honey than with vinegar. With these works we may mention the much later Lactantius, the most perfect of all in the literary form (“Divinae Institutiones”, c. 300, and “De Mortibus persecutorum”, c. 314). Greek apologies probably later than the second century are the “Iririones” of Hermias, and the very beautiful “Epistle to Diognetus.” (4) The heretical writings of the second century are mostly lost. The Gnostics and Jews of Palestine; that of Photinus, composed about 390. Some curious works have come down to us in Coptic. The letter of Ptolemaeus to Flora in Epiphanius is almost the only Greek fragment of real importance. Marcion founded not a school but a Church, and his New Testament, consisting of St. Luke and St. Paul, was preserved to some extent in the works written against him by Tertullian and Epiphanius. Of the writings of Greek Montanists and of other early heretics, almost nothing remains. The Gnostics composed a quantity of apocryphal Gospels and Acts of individual Apostles, large portions of which are preserved, mostly in fragments, in Latin revision, or in Syriac, Coptic, Arabic, or Slavonic translation. To these may be added such well-known forgeries as the letters of Paul to Seneca, and the Apocalypse of Peter, of which a fragment was recently found in the Fayûm.

(5) Replies to the attacks of heretics form, next to the apologetic against heathen persecutors on the one hand, and the Jewish heretics on the other, the chief branch of the Latin literature of the second century. The “Syntagma” of St. Justin against all heresies is lost. Earlier yet, St. Papias (already mentioned) had directed his efforts to the refutation of the rising errors, and the same persecution is seen in St. Ignatius and St. Polycarp. Hegesippus, a converted Jew of Palestine, journeyed to Corinth and Rome, where he stayed from the episc-
copate of Anticius till that of Eleutherius (c. 160-180),
with the intention of refuting the novelties of the
Gnostics and Marcionites by an appeal to tradition.
His work is lost. But the great work of St. Irenæus (c.
180) against heresies is founded on Papias, Hegesippus,
and Justin, and gives from careful investigation an
account of the principal heresies, both Gnostic and
Marcionite, together with the refutation of them.
His appeal is less to Scripture than to the
tradition which the whole Catholic Church has re-
ceived and handed down from the Apostles, through
the ministry of successive bishops, and particularly
to the tradition of the Roman Church founded by Peter
and Paul by the bond of the eucharist.
By the side of Irenæus must be put the Latin Ter-
tullian, whose book “Of the Prescriptions Against
Heresies” is not only a masterpiece of argument, but is
almost as effective against modern heresies as against
those of the early Church. It is a witness of extraver-
tory importance to the principles of unvarying tradi-
tion which the Catholic Church has always professed,
and to the primitive belief that Holy Scripture must
be interpreted by the Church and not by private in-
dustry. He uses Irenæus in this work, and his po-
lemical books against the Valentinians and the Mar-
cionites borrow freely from that saint. He is the less
perfect, two, because his arguments are both less
clever, too anxious for the slightest controversial ad-
vantge, without thought of the easy replies that
might be made. He sometimes pretends what or hard
hitting to solid argument. At this period controver-
sies were beginning within the Church, the most im-
portant being the question whether Easter could be
celebrated on a weekday. Another burning question
at Rome, at the turn of the century, was the doubt
whether the prophesying of the Montanists could be
approved, and yet another, in the first years of the
third century, was the controversy with a group of
opponents of Montanism (so it seems), who denied the
authenticity of the writings of St. John, an error then
quite new.
B. (1) The Church of Alexandria already in the sec-
dond century showed the note of learning, together with
a habit borrowed from the Alexandrian Jews, espe-
cially Philo, of an allegorizing interpretation of Scrip-
ture. The latter characteristic is a breadth with their
“Epistle of Barnabas”, which may be of Alexandrian
origin. Pantaenus was the first to make the Cate-
chetical school of the city famous. No writings of his
are extant, but his pupil Clement, who taught in
the school with Pantaenus, c. 180, and as his head, c.
194-215 (4), has left us fragments of rather lengthy disquisitions dealing with my-
thology, mystical theology, education, social observ-
ances, and all other things in heaven and on earth.
He was followed by the great Origen, whose fame
spread far and wide even among the heathen. The
remains of his works, though they fill several volumes,
are to a great extent only in free Latin translations
and bear but a small ratio to the vast amount that has
perished. The Alexandrians held as firmly as any
Catholics to tradition as the rule of faith, at least in
theory, but beyond tradition they allowed themselves
to speculate, so that the “Hypotyposes” of Clement
have been almost entirely lost on account of the errors
which found a place in them, and Origen’s works fell
under the ban of the Church, though their author lived
the life of a saint, and died, shortly after the Decian
persecution, of the sufferings he had undergone in it.
The disciples of Origen were many and eminent. The
most celebrated of them was St. Dionysius “the Great”
of Alexandria and St. Gregory of Neocesarea in Pontus, known as the Wonder-Worker, who, like St.
Nomosus in the West, was said to have moved a
mountain for a short distance by his prayers. Of the
writings of these two saints not very much is extant.

(2) Montanism and the paschal question brought Asia
Minor down from the leading position it held in the
second century into a very inferior rank in the third.
Besides St. Gregory, St. Methodius at the end of that
century was a polished writer and an opponent of
Origenism—his name is consequently passed over
without mention by the Origenist historians Eusebius.
We have his “Banquet” in Greek, and some smaller
works in Old Slavonic.

(3) Antioch was the head see over the “Orient”, in-
cluding Syria and Mesopotamia as well as Palestine
and Phoenicia, but at no time did this form a compact
patriarchate like that of Alexandria. The must group
of writers who have left works with one another in
matter or style. Julius Africanus lived at Em-maua
and composed a chronography, out of which the
episcopal lists of Rome, Alexandria, and Antioch,
and a great deal of other matter, have been preserved
for us in St. Jerome’s version of the Chronicle of Eusebius,
and in Byzantine chronicographers. Two letters of his
are of interest, but the fragments of his “Kesotis” or
“Girdles” are of no ecclesiastical value; they contain
much curious matter and much that is objectionable.
In the second half of the third century, perhaps to-
wards the end of it, a great school was established at
Jericho by Lucian, too absent-minded and too stupid
as to be of much interest, to be of much interest.
312. He is said to have been excommunicated
under three bishops, but if this is true he had been long
restored at the time of his martyrdom. It is quite un-
certain whether he shared the errors of Paul of Samo-
sata (Bishop of Antioch, deposed for heresy in 208-9).
At all events he was—however unintentionally—father of Arianism, and his pupils were the leaders of
that heresy: Eusebius of Nicomedia, Arius himself,
with Menophantus of Ephesus, Athanasius of Anazar-
bus, and the only two bishops who refused to sign the
new creed at the Council of Nicaea, Theognis of Nicaea
and Maris of Chalcedon, besides the scandalous bishop
Lucian of Antioch and the Sophist Asterius of Cesa-
reas, an Origenist centre, flourished under another
martyr, St. Pamphilus, who with his friend Eusebius,
a certain Ammonius, and others, collected the works
of Origen in a long-famous library, corrected Origen’s
“Hexapla”, and did much editing of the text both of
the Old and the New Testaments. Eusebius

(4) We hear of no writings at Rome except in Greek,
until the mention of some small works in Latin, by
Pope St. Victor, which still existed in Jerome’s day.
Hippolytus, a Roman priest, wrote from c. 200 to 235,
and always in Greek, though at Carthage Tertullian
had been writing in Latin. He was the editor of the
philosophumena or “Philosophumena”, he was an
antipope, and full of unreasoning enmity to his rival
St. Cyprian; his theology makes the Word proceed
from God by His Will, distinct from Him in substance,
and becoming Son by becoming man. There is noth-
ing like him in the theology of this work; it rather an-
nects itself with the Greek apologists. A great part
of his work is a large commentary on Daniel and a work
against Noetius are the only other important remains of
this writer, who was soon forgotten in the West, though
fragments of his works turn up in all the Eastern lan-
guages. Parts of his chronography, perhaps his last
work, have survived. Another Roman antipope,
Novatus, wrote in ponderous and studied prose with
metrical endings. Some of his works have come down
to us under the name of St. Cyprian. Like Hippoly-
tus, he made his rigorist views the pretext for his
schism. Unlike Hippolytus, he is quite orthodox in
his incipient work, which is in the manner of St.
Alexander of Paphlagonia.

(5) The apologetic works of Tertullian have been
mentioned. The earlier were written by him when a
priest of the Church of Carthage, but about the year
200 he was led to believe in the Montanist prophets
of Phrygia, and he headed a Montanist schism at Car-
thage. Many of his treatises are written to defend his
position and his rigorist doctrines, and he does so
with considerable violence and with the clever and hasty argumentation which is natural to him. The placid flow of St. Cyprian's eloquence (Bishop of Carthage, 249–58) is a great contrast to that of his "master". The short treatises and large correspondence of this saint are all concerned with local questions and needs, and he eschews all speculative theology. From the few lights on the life and works of the church, its government, and on a number of interesting ecclesiastical and social matters. In all the patristic period there is nothing, with the exception of Eusebius's history, which tells us so much about the early Church as the small volume which contains St. Cyprian's works. At the end of the century Arnobius, bishop of Lyons, was still the greatest of the pagan writers. In the African, Tertullian, Cyprian, Lactantius, and Augustine, a former rhetorician, composed a dull apology. Lactantius carries us into the fourth century. He was an elegant and eloquent writer, but like Arnobius was not a well-instructed Christian.

C. (1) The fourth century is the great age of the Fathers. It was twelve years old when Constantine published his edict of toleration, and a new era for the Christian religion began. It is ushered in by Eusebius of Cæsarea, with his great apologetic works "Preparatio Evangelica" and "Demonstratio Evangelica", which stand as a landmark on the history of the church. Then, in the second part of the century, we have the "Chronicle" (the Greek original is lost) and the "Historia", which has gathered up the fragments of the age of persecutions, and has preserved to us more than half of all we know about the heroic ages of the Faith. In theology Eusebius was a follower of Origen, but he rejected the eternity of Creation and of the Logos, so that he was able to regard the Arians with considerable cordiality. The original form of the pseudo-Clementine romance, with its long and tiresome dialogues, seems to be a work of the very beginning of the century against the new developments of heathenism, and it was written either on the Phoenician coast or not far inland in the Syrian neighborhood. Replies to the greatest of the pagan attacks, that of Porphyry, become more frequent after the pagan revival under Julian (361–3), and they occupied the labours of many celebrated writers. St. Cyril of Jerusalem has left us a complete series of instructions to the catechumens and the newly-baptized, with an exact knowledge of the religious teaching imparted to the people in an important Church of the East in the middle of the fourth century. A Palestinian of the second half of the century, St. Epiphanius, became Bishop of Salamis in Cyprus, and wrote a long series of books on all the heresies. He is not minutely inexact, and has further made great difficulties for us by not naming his authorities. He was a friend of St. Jerome, and an uncompromising opponent of Origenism.

(2) The Alexandrian priest Arius was not a product of the catechetical school of that city, but of the heart of Antioch. The Alexandrian tendency was quite opposite to the Antiochene, and the Alexandrian bishop, Alexander, condemned Arius in letters still extant, in which we gather the tradition of the Alexandrian Church. There is no trace in them of Origenism, the head-quarters of which had long been at Cæsarea in Palestine, in the succession Theotissimus, Pamphilus, Eusebius. The tradition of Alexandria was rather that which Dionysius the Great had received from Pope Dionysius. Three years after the Nicene Council (325), St. Athanasius began his long episcopate of forty-five years. His writings are not without mistakes, but his vigour, his art, and his cleverness of his own troubles, but their theological and historical value is enormous, on account of the leading part taken by this truly great man in the fifty years of fight with Arianism. The head of the catechetical school during this half-century was Didymus the Blind, an Athanian in his doctrine of the Son, and rather clearer even than his patriarch in his doctrine of the Trinity, but in many other points carrying on the Origenistic tradition. Here may be also mentioned by the way a rather later writer, Synesius of Cyrene, a man of philosophical and literary habits, who showed energy and sincere piety as a bishop, in spite of the rather pagan character of his culture. His life had been spent in the state of the Church, on its government, and on a number of interesting ecclesiastical and social matters. In all the patristic period there is nothing, with the exception of Eusebius's history, which tells us so much about the early Church as the small volume which contains St. Cyprian's works. At the end of the century Arnobius, bishop of Lyons, was still the greatest of the pagan writers. In the African, Tertullian, Cyprian, Lactantius, and Augustine, a former rhetorician, composed a dull apology. Lactantius carries us into the fourth century. He was an elegant and eloquent writer, but like Arnobius was not a well-instructed Christian.

(3) The second half of the century is illustrated by an illustrious triad in Cappadoecia, St. Basil, his friend St. Gregory Nazianzen, and his brother St. Gregory of Nyssa. They were the main workers in the return of the East to orthodoxy. Their doctrine of the Trinity is an advance even upon that of Didymus, and is very noticeable indeed to the modern churchman, who does not attempt to embody the Athanian creed. But it had taken a long while for the East to assimilate the entire meaning of the orthodox view. St. Basil showed great patience with those who had advanced less far on the right road than himself, and he even tempered his language so as to conciliate them. For fame of sanctity scarcely any of the Fathers, save St. Gregory the Wonder-Worker, or St. Augustine, has ever equalled him. He practised extraordinary asceticism, and his family were all saints. He composed a rule for monks which has remained practically the only one in the East. St. Gregory of Nazianzen embodied his equal abilities and learning, with greater eloquence. The love of Origen which persuaded the friends in their youth to publish a book of extracts from his writings had little influence on their later theology; that of St. Gregory in particular is renowned for its accuracy or even inerrancy. St. Gregory of Nyssa is, on the other hand, full of Origenism. The classical culture and literary form of the Cappadoceans, united to sanctity and orthodoxy, makes them a unique group in the history of the Church.

(4) The Antiochene school of the fourth century seemed given over to Arianism, until the time when the great Alexandrians, Athanasius and Didymus, were dying, when it was just reviving not merely into orthodoxy, but into an efflorescence by which the recent glory of Alexandria and even of Cappadoce was to be surpassed. Diodorus, a monk at Antioch and then Bishop of Tarsus, was a noble supporter of the same doctrine, but as the result of the knowledge of part of his works had perished. His friend Theodore of Mopsuestia was a learned and judicious commentator in the literal Antiochene style, but unfortunately his opposition to the heresy of Apollinarius of Laodicea carried him into the opposite extreme of Nestorianism—indeed as the master Theodore who was far as the master Theodore. But then Nestorius resisted the judgment of the Church, whereas Theodore died in Catholic communion, and was the friend of saints, including that crowning glory of the Antiochene school, St. John Chrysostom, whose greatest sermons were preached at Antioch, before he became Bishop of Constantinople. Chrysostom of Antioch is of course the chief of the Greek Fathers, the first of all commentators, and the first of all orators whether in East or West. He was for a time a hermit, and remained ascetic in his life; he was also a fervent social reformer. His grandeur of character makes him worthy of a place beside St. Basil and St. Athanasius.

As Basil and Gregory were formed to oratory by the Christian Prophets, so was Chrysostom by the heathen orator Libanius. In the classical Gregory we may sometimes find the rhetorician; in Chrysostom never; his amazing natural talent prevents his every word being the asperior of the classic or orator, though what he says is often lost in the flow of energetic thought and the torrent of words. He is not afraid of repeating himself and of neglecting the rules, for he never wishes to be admired, but only to instruct or to persuade. But even so great a man has his limitations. He has no speculative interest in philosophy
or theology, though he is learned enough to be absolutely orthodox. He is a holy man and a practical man, so that his thoughts are full of piety and beauty and wisdom; but he is not a thinker. None of the Fathers has been more imitated than Saint Basil (d. 379). Most of his writings are poetic: his commentaries are in prose, but the remains of these are scanty. His homilies and hymns are all in metre, and are of very great beauty. Such tender and loving piety is hardly found elsewhere in the Fathers. The twenty-three homilies of Aphraates (326-7), a Mesopotamian bishop, are of great interest.

(6) St. Hilary of Poitiers is the most famous of the earlier opponents of Arianism in the West. He wrote commentaries and polemical works, including the great treatise "De Trinitate" and a lost historical work. His style is affectedly involved and obscure, but he is historical because of his less polished and more serious character. The very name of his treatise on the Trinity shows that he approached the dogma from the Western point of view of a Trinity in Unity, but he has largely employed the works of Origen, Athanasius, and other Easterns. His exegesis is of the allegorical type that was adopted by the Western Fathers. St. Cyprian, and Hilary had no rival in his own generation.

Lucifer, Bishop of Calaris in Sardinia, was a very rude controversialist, who wrote in a popular and almost uneducated manner. The Spanish Gregory of Iliberis, in Southern Spain, is only now beginning to receive his due, since Dom A. Wilmar restored to him in 1908 the important so-called "Tractatus Originis de libris SS. Scripturae," which he and Batiffol had published in 1900, as genuine works of Origen translated by Victorinus of Pettau. The commentaries and anti-Arian works of the converted rhetorician, Marcus Victorinus, were not successful. St. Eusebius of Vercellae has left us only a few letters. The date of the short discourses of Zeno of Verona is uncertain. The fine letter of Pope Julius I to the Arians and a few letters of Liberius and Damasus are of great interest.

The greatest of the opponents of Arianism in the West is St. Ambrose (d. 397). His sanctity and his great actions make him one of the most imposing figures in the patristic period. Unfortunately the style of his writings is often unpleasant, being affected and intricate, without being correct or artistic. His exegesis is not merely of the most extreme allegorical kind, but so fanciful as to be sometimes positively absurd. And yet, when off his guard, he speaks with genuine and touching eloquence; he produces apophthegms of admirable brevity, and without being a deep theologian, he shows a wonderful profundity of thought on ascetical, moral, and devotional matters. And then, he is not over-demanding of attention, so his writings gain our affectionate respect, in spite of their very irritating defects. It is easy to see that he is very well read in the classics and in Christian writers of East and West, but his best thoughts are all his own.

(7) At Rome an original, odd, and learned writer composed a commentary on St. Paul’s Epistles and a series of questions on the Old and New Testaments. He is usually spoken of as Ambrosiaster, and may perhaps be a converted Jew named Isaac, who later apostatized. St. Damasus wrote verses which are poor poetry but interesting where they give us information not elsewhere recorded by other writers. His secretary for a time was St. Jerome, a Pannonian by birth, a Roman by baptism. This learned Father, "Doctor maximus in Sacris Scripturis," is very well known to us, for almost all that he wrote is a revelation of himself. He tells the reader of his inclinations and his antipathies, his enthusiasms and his irritations, his friendships and his enemies. If he is often out of temper, he is the most human of men, more real; and almost devoted to orthodoxy, and in many ways a very lovable character; for if he is quick to take offence, he is easily appeased, he is laborious beyond ordinary endurance, and it is against heresy that his anger is usually kindled. He lived all the latter part of his life in a retreat at Bethlehem, suffocated by loving disciples, whose unirrited devotion shows that the saint was by no means such a rough diamond, one might say such an ogre, as he is often represented. He had no taste for philosophy, and seldom gave himself time to think, but he read and wrote ceaselessly. His many commentaries are brief and to the point, full of information, and the product of wide reading. His greatest work was the translation of the Old Testament from the Hebrew into Latin. He carried on the textural labours of Origen, Pamphilus, and Eusebius, and his revision of the Latin Gospels shows the use of admirably pure Greek MSS., though he seems to have been driven by necessity to use the Greek text.

He attacked heretics with much of the cleverness, all the vivacity, and much more than the eloquence and effectiveness of Tertullian. He used the like weapons against any who attacked him, and especially against his friend Rufinus during their passing period of hostility.

If he is only "perhaps" the most learned of the Fathers, he is beyond doubt the greatest of prose writers among them all. We cannot compare his energy and wit with the originality and polish of Cicerro, or with the delicate perfection of Plato, but neither can they or any other writer be compared with Jerome in his own sphere. He does not attempt flights of imagination, musical intonation, word-painting; he has no flow of honeyed language like Cyprian, no torrent of phrases like Chrysostom; he is a writer, not an orator, and a learned and classical writer. But such letters as his, for astonishing force and liveliness, for point, and wit, and terse expression, were never written before or since. There is no sense of effort, and though we feel that the language must have been studied, we are rarely tempted to call it studied language, for Jerome knows the strange secret of polishing his steel weapons while they are still at a red heat, and of hurling an unpolished weapon as a dangerous adversary, and had few scruples in taking every possible advantage. He has the unfortunate defect of his extraordinary swiftness, that he is extremely inaccurate, and his historical statements need careful control. His biographies of the hermits, his words about monastic life, the virility, Roman faith, our Blessed Lady, relics of saints, have exercised great influence. It has only been known of late years that Jerome was a preacher; the little extempore discourses published by Dom Morin are full of his irrepressible personality and his careless learning.

(8) Africa was a greater and more vigorous arena of struggle, being occupied by a battle of its own. Donatism (311-411) was for a long time paramount in Numidia, and sometimes in other parts. The writings of the Donatists have mostly perished. About 370 St. Opstatus published an effective controversial work against them. The attack was made on a yet greater controversialist, St. Augustine, with a marvelous success, so that the inveterate schism was practically at an end twenty years before that saint’s death. So happy an event turned the eyes of all Christendom to the brilliant protagonist of the African Catholics, who had already dealt crushing blows at the Latin Mani-chiacs, and had eclipsed his own fame in all Rome and the East. This man was engaged in an even greater conflict with the philosophical and naturalistic heresy of Pelagius and Celestius. In this he was at first assisted by the aged
Jerome; the popes condemned the innovators and the emperor legislated against them. If St. Augustine has the unique fame of having prostrated three heresies, it is because he was as anxious to persuade as to refuse. He was perhaps the greatest controversialist the world has ever seen. Besides, he was the greatest philosopher among the Fathers, but he was the only great philosopher. His purely theological works, especially his “De Trinitate”, are unsurpassed for depth, grasp, and clearness, among early ecclesiastical writers, whether Eastern or Western.

As a philosophical theologian he has no superior, even if he is not in a like strain. The Gospels show that he could attend to history and detail. The allegorizing tendencies he inherited from his spiritual father, Ambrose, carry him now and then into extravagances, but more often he rather scorns than comments, and his “In Genesim ad litteram”, and his treatises on the Psalms and on St. John, are works of extraordinary power and penetration. He is quite worthy, in a totally different style, to rank with Chrysostom on Matthew. St. Augustine was a professor of rhetoric before his wonderful conversion; but like St. Cyril, and even more than St. Cyril, he put aside, as a Christian, all the artifices of oratory which he knew so well. He retained correctness of grammar and perfect good taste, together with the power of speaking and writing with ease in a style of masterly simplicity and of dignified though almost colloquial plainness.

Nothing could be more individual than this style of St. Augustine, in which he talks to the reader or to God with perfect openness and with an astonishing, often almost exasperating, subtility of thought. He had the power of seeing all round a subject and through and through it, and he was too conscientious not to use this gift to the uttermost. Large-minded and far-seeing, he was also very learned. He mastered Greek throughout his life, in order to have himself well familiar with the works of the Eastern Fathers. His “De Civitate Dei” shows vast stores of reading; still more, it puts him in the first place among apologists. Before his death (431) he was the object of extraordinary veneration. He had founded a monastery at Hippo, which supplied Africa when he lived at Hippo with his clergy in a common life, to which the Regular Canons of later days have always looked as their model. The great Dominican Order, the Augustinians, and numberless congregations of nuns still look to him as their father and legislator. His devotional works have had a vogue second only to that of another of his spiritual sons, Thomas à Kempis. He had in his lifetime a reputation for miracles, and his sanctity is felt in all his writings, and breathes in the story of his life. It has been remarked that there is about this many-sided bishop a certain something which makes him an almost faultless model of a holy, wise, and active man. It is well to remember that he was essentially a penitent.

In Spain, the great poet Prudentius surpassed all his predecessors, of whom the best had been Jun Venetus and the almost pagan rhetorician Ausonius. The curious tussles of the Spanish heretic Priscillian was dissolved only in 415. So Aquileia must be mentioned as the very free translator of Origen, etc., and of Eusebius’s “History”, which he continued up to his own date. In South Italy his friend Paulinus of Nola has left us pious poems and elaborate letters.

(1) The fragments of Nestorius’s writings have been collected by Loofs. Some of them were preserved by a disciple of St. Augustine, Marius Mercator, who made two collections of documents, concerning Nestorianism and Pelagianism respectively. The great adversary of Nestorius, St. Cyril of Alexandria, was opposed by a yet greater writer, Theodoret, Bishop of Cys. Cyril’s works are the best, and his long commentaries in the mystical Alexandrian vein do not much interest modern readers. But his principal letters and treatises on the Nestorian question show him as a theologian who has a deep spiritual insight into the meaning of the Incarnation and its effect upon the human race—the lifting up of man to God. His use of the Greek words for Egyptian asceticism, from Anthony the Great (whose life St. Athanasius wrote), and the Macarian (one of whom left some valuable works in Greek), and Pachomius, to his own time. In their ascetical systems, the union with God by contemplation was naturally the end in view, but one is surprised how little is made by them of meditation on the life and Passion of Christ. It is not omitted, but the tendency as with St. Cyril and with the Monophysites who believed they followed him, is to think rather of the Godhead than of the Manhood. The Antiochene school had exaggerated the contrary tendency, one of opposition to Apollinarianism, while Chrysostom was complete, and they thought more of man united to God than of God made man. Theodoret undoubtedly avoided the excesses of Theodore and Nestorius, and his doctrine was accepted at last by St. Leo as orthodox, in spite of his earlier persistent defence of Nestorius. His history of the monks is less valuable than the earlier writings of eyewitnesses—Palladius in the East, and Rufinus and afterwards Cassian in the West. But Theodoret’s “History” in continuation of Eusebius contains valuable information. His apologetic and controversial writings are the works of a good theologian. His masterpieces are his exegetical works, which are neither oratory like those of Chrysostom, nor exaggeratedly literal like those of Theodore. With him the great Antiochene school worthily closes, as the Alexandrian does with St. Cyril. Together with these great men may be mentioned St. Cyril’s spiritual adviser, St. Isidore of Pelusium, whose 2800 letters told a life with allegorical exegesis, the commentary on St. Mark by Victor of Antioch, and the introduction to the interpretation of Scripture by the monk Hadrian, a manual of the Antiochene method.

(2) The Eutychian controversy produced no great works in the East. Such works of the Monophysites as have survived are in Syriac or Coptic versions. (3) The two Constantinopolitan historians, Socrates and Sozomen, in spite of errors, contain some data which are precious, since many of the sources which they used are lost to us. With Theodoret, their contemporary, they form a vivid justus writer, and with allegorical exegesis, the commentary on St. Mark by Victor of Antioch, and the introduction to the interpretation of Scripture by the monk Hadrian, a manual of the Antiochene method.

(4) St. Sulpicius Severus, a Gallic noble, disciple and biographer of the great St. Martin of Tours, was a classical scholar, and showed himself an elegant writer in his “Ecclesiastical History”. His school of Latins produced many writers besides St. Vincent, We may mention Theodoret and the great St. Cassian of Arles (543). Other Gallic writers are Salvian, St. Sidonius Apollinaris, Gennadius, St. Avitus of Vienne, and Julianus Pomerius. (5) In the West, the series of papal decrets begins with Pope Siricius (384–98). Of the more important letters large numbers have been lost. Of those of the wise St. Innocent I (401–17), the hot-headed St. Zosimus (417–8), and the severe St. Celestine are perhaps the most important in the first half of the century; in the second half those of Hilarus, Simplicius, and above all the learned St. Gelasius (492–9). Midway in the century stands St. Leo, the greatest of the early popes, whose steadfastness and sanctity
saved Rome from Attila, and the Romans from Ge-seric. He could be unbending in the enunciation of principle; he was condescending in the condoning of breaches of discipline for the sake of peace, and he was a skilful diplomatist. His sermons and the dogmatic letters in his large correspondence show him to us as the most lucid of all theologians. He is clear in his exegese to a degree perhaps unequalled, but his thought has remained clearly and deeply. He steers between Nestorianism and Eutycheianism, not by using subtle distinctions or elaborate arguments, but by stating plain definitions in accurate words. He condemned Monothelitism by anticipation. His style is careful, withrical cadences. Its majestic rhythms and its epigrams have invested the Latin language with a new splendour and dignity.

E. (1) In the sixth century the large correspondence of Pope Hormisdas is of the highest interest. That century closes with St. Gregory the Great, whose celebrated "Registrum" exceeds in volume many times over the collections of the letters of other early popes. The Epistles are of great variety and throw light on the varied interests of the great pope's life and the varied events in the East and West of his time. His "Morals on the Book of Job" is not a literal commentary, but pretends only to illustrate the moral sense underlying the text. Hence the characteristic presence of the modern notions, it is a work full of wisdom and instruction. The style of St. Gregory on the spiritual life and on contemplation are of special interest. As a theologian he is original only in that he combines all the traditional theology of the West without adding to it. He commonly follows Augustine as a theologian, a commentator and a preacher. His sermons are admirably practical; they are models of what a good sermon should be. After St. Gregory there are some great popes whose letters are worthy of study, such as Nicholas I and John VIII.; but these and the many other later writers of the West belong properly to the medieval period. St. Gregory of Tours is certainly medieval, but the learned Bede is quite pastoral. His great interest is the most faithful and perfect history to be found in the early centuries. (2) In the East, the latter half of the fifth century is very barren. The sixth century is not much better. The importance of Leo the Great (died 544) is that he has given the dogma has only lately been realized. Poets and hagiographers, chroniclers, canonists, and ascetical writers succeed each other. Catena by way of commentaries are the order of the day. St. Maximus Confessor, Anastasius of Mount Sinai, and Andrew of Csesarea must be mentioned. The first of them commented on the works of the Azo Dios and the Apocalypses. He had probably first seen the light towards the end of the fifth century. St. John of Damascus (c. 750) closes the patriarchic period with his polemics against heresies, his exegetical and ascetical writings, his beautiful hymns, and above all his "Fountain of Wisdom", which is a Byzantium of patriotic theory and of kind of anticipation of scholasticism. Indeed, the "Summa Theologica" of the Middle Ages were founded on the "Sentences" of Peter Lombard, who had taken the skeleton of his work from this last of the Greek Fathers.

CHARACTERISTICS OF PATRISTIC WRITINGS.—(a) Commentaries.—It has been seen that the literal school of exegesis had its home at Antioch, while the allegorical school was Alexandrian, and the entire West, on the whole, followed the allegorical method, mingling literalism with it in various degrees. The suspicion of Arius has led to the fourteenth-century Antiochene school, such as Theodore of Heraclea and Eusebius of Emess, and the charge of Nestorianism has caused the commentaries of Diodorus and Theodore of Mopsuestia (for the most part) to disappear. The Alexandrian school has lost yet more heavily, for little of the great Origen remains except in fragments and in unreliable versions. The great Antiochenes, Chrysostom and Theodore, have a real grasp of the sense of the sacred text. They treat it with reverence and love, and their explanations are of deep value, because the language of the New Testament was their own tongue, so that we moderns cannot afford to neglect their comments. On the contrary, Origen, in the following type of commentary, who had inherited the Philonic tradition of the Alexandrian Jews, was essentially irreverent to the inspired authors. The Old Testament was to him full of errors, lies, and blasphemies, so far as the letter was concerned, and his defence of it against the pagans, the Gnostics, and especially the Marcionites, was to qualify it only to the spirit in true sense. He has distinguished a triple sense, the somatic, the psychic, and the pneumatic, following St. Paul's trichotomy; but in practice he mainly gives the spiritual, as opposed to the corporal or literal.

St. Augustine sometimes defends the Old Testament against the Manicheans in the same style, and occasionally in a most unconvincing manner, but with great moderation and restraint. In his "De Genesi ad litteram" he has evolved a far more effective method, with his usual brilliant originality, and he shows that the objections brought against the truth of Scripture in the first chapters of Genesis. He has made a baseless assumption that the objector has found the true meaning of the text. But Origen applied his method, though partially, even to the New Testament, and regarded the Evangelists as sometimes false in the letter, but as saving the truth in the hidden spiritual meaning. In this point the good feeling of Christians prevented his being followed. But the brilliant example he gave, of running riot in the fantastic exegesis which his method encouraged, had an unfortunate influence. He is fond of giving a variety of applications to a single text, and his promise to hold nothing but what can be proved from Scripture becomes illusory when he shows by example that part of Scripture may mean anything he pleases. The reverent temper of later writers, and especially of the Westerns, preferred to represent as the true meaning of the sacred writer the allegory which appeared to them to be the most obvious. St. Ambrose and St. Augustine in the beginning of the Pauline treatises for the beginning of the exegesis, or moralize, than allegorize, and their imaginative interpretations are chiefly of events, actions, numbers, etc. But almost all allegorical interpretation is so arbitrary and depends so much on the caprice of the exegete that it is difficult to conciliate it with reverence, however one may be tempted to do so. An alternative way of defending the Old Testament was excogitated by the ingenious author of the pseudo-Clementines; he asserts that it has been depraved and interpolated. St. Jerome's learning has made his exegesis unique; he frequently gives alternative explanations and refers to the authors who have adopted them. From the middle of the fifth century onwards, second-hand commentaries are universal in East and West, and originality almost entirely disappears. Andrew of Csesarea is perhaps an exception; for he commented on a book which was scarcely at all read in the East, the Apocalypse. Discussions of method are not wanting. "Clement of Alexandria gives 'traditional methods', the literary, typical, moral, and prophetic. The tradition is obviously from Rabbinism. We must admit that it has in its favour the practice of St. Matthew and St. Paul. Even more than Origen, St. Augustine has shown how important it was to keep the 'pure doctrine of the Church.' he gives elaborate rules of exegesis. Elsewhere where he distinguishes four senses of Scripture: historical, etiological (economic), analogical (where N. T. explains O. T.), and allegorical ("De Util. Cred."); 3; cf. "De Vera Rel." 50). The book of rules composed by the Donatist Tichonius has an analogy in the
smaller “canons” of St. Paul’s Epistles by Priscillian. Hadrian of Antioch was mentioned above. St. Gregory the Great compares Scripture to a river so broad that even the smallest eel can swim in it, so deep that an elephant can float. (Pref. to “Moralis on Job”). He distinguishes the historical or literal sense, the moral, and the allegorical or typical. If the Western Fathers are fanciful, yet this is better than the extreme literalism of Theodore of Mopsuestia, who refused to allow even the Canaanite, so deep that an elephant can float. (Pref. to “Moralis on Job”).

(b) Preachers.—We have sermons from the Greek Church much earlier than from the Latin. Indeed, Sozomen tells us that, up to his time (c. 450), there were no public sermons in the churches at Rome. This seems almost incredible. St. Leo’s sermons are, however, the first sermons we have distinctly by name in Rome which have reached us, for those of Hippolytus were all in Greek; unless the homily “Adversus Alae- tores” be a sermon by a Novatian antipope. The series of Latin preachers begins in the middle of the fourth century. The so-called “Second Epistle of St. Clement” is a homily belonging possibly to the second century. Many of them are a series of sermons, as is the case later with all Chrysostom’s commentaries and most of Augustine’s. In many cases treatises are composed of a course of sermons, as, for instance, is the case for some of those of Ambrose, who seems to have rewritten his sermons and made these “De Sanctis” that Chrysostom should be the version by a shorthand-writer of the course which the saint himself edited under the title “De mysteriis.” In any case the “De Sacramentis” (whether by Ambrose or not) has a freshness and vividness which is wanting in the certainly authentic “De mysteriis.” Similarly the great courses of sermons preached by St. Chrysostom at Antioch were evidently written or corrected by his own hand, but those delivered at Constantinople were either hurriedly corrected, or not at all. His sermons on Acts, which have come down to us in two quite distinct texts in the MSS. are probably known to us only in the forms in which they were taken down by two different tachygraphers. St. Gregory Nazianzen complains of the importunity of these shorthand-writers (Orat. xxxii), as St. Jerome does of their incapacity (Ep. lixxi, 5). Their art was evidently highly perfected, and specimens of it have come down to us in the official acts of the council at the great conference with the Donatists at Carthage, in 411, we hear of them. It appears that many or most of the bishops at the Council of Ephesus, in 449, had their own shorthand-writers with them. The method of taking notes and of amplifying receives illustration from the Acts of the Council of Constantinople of 27 April, 449, at which the minutes were examined which had been taken down by tachygraphers at the council held a few weeks earlier.

Many of St. Augustine’s sermons are certainly from shorthand notes. As to others we are uncertain, for the same style of the written ones is so colloquial that it is difficult to get a criterion. The sermons of St. Jerome at Bethlehem, published by Dom Morin, are from shorthand reports, and the discourses themselves were unprepared conferences on those portions of the Psalms or of the Gospels which had been sung in the liturgy. The speaker has clearly often been preceded by a brother priest, and on the Western Christmas Day, his community alone is keeping, the bishop is present and will speak last. In fact the pilgrim Athéria tells us that at Jerusalem, in the fourth century, all the priests present spoke in turn, if they chose, and the bishop last of all. Such improvised compositions are known from the lives of St. Gregory Nazianzen, from the lofty flights of Chrysostom, from the torrent of iteration that characterizes the short sermons of Peter Chrysologus, from the neat phrases of Maximus of Turin, and the ponderous rhythms of Leo the Great. The eloquence of these Fathers need not be here described. In the West we may add in the fourth century Gaudentius of Brescia; and in the fifth century: the sixth opens with the numerous collections made by St. Cesarius for the use of preachers. There is practically no edition of the works of this eminent and practical bishop. St. Gregory (apart from some fanciful exegeesis) is the most practical preacher of the West. Nothing could be more admirable for imitation than St. Chrysostom. The more ornate writers are less safe to copy. St. Augustine’s style is too personal to be an example, and few are so learned, so great, and so ready, that they can venture to speak as simply as he often does. The Western Fathers do not belong to the strictly classical period of either the Greek or the Latin language; but this does not imply that they wrote bad Latin or Greek. The conversational form of the vernacular or common dialect of Greek, which is found in the New Testament and in many papyri, is not the language of the Fathers, except of the very early Greek Fathers. For instance the apocryphal gospels are evidently composed in a popularizing style than most of the New Testament writers; none of them uses quite a vulgar or ungrammatical Greek, while some Atticize, e.g. the Cappadocians and Syncerus. The Latin Fathers are often less classical. Tertullian is a Latin Carlyle; he knew Greek, and translated, and used the new idiom of the ecclesiastical terms into Latin. St. Cyprian’s “Ad donatum,” probably his first Christian writing, shows an Apuleian preciseness which he eschewed in all his other works, but which his biographer Pontius has imitated and exaggerated. Men like Jerome and Augustine, who had a thorough knowledge of classical literature, would not employ tricks of style, and cultivated a manner which should be correct, but simple and straightforward; yet their style could not have been what it was but for their previous study. For the spoken Latin of all the patriotic centuries was very different from the written. We get examples of the vulgar tongue here and there in the letters of Pope Cornelius as edited by Mercati, for the third century, or in the Rule of St. Benedict in Wolfin’s or Dom Morin’s editions, for the sixth. In the latter we get such modernisms as cor murmumant, post quibus, cum responseris suae, which show how the confusing mixture of the classical and the popular language was reduced into the more reasonable simplicity of Italian. Some of the Fathers use the rhetorical endings of the “cursus” in their prose; some have the later accented endings which were corruptions of the correct prosodic ones. Familiar examples of the former are in the older Collects of the Mass; of the latter the Te Deum is an obvious instance.

(d) East and West.—Before speaking of the theological characteristics of the Fathers, we have to take into account the great division of the Roman Empire into two languages. Language is the great separator. When two emperors divided the Empire, it was not quite according to language; nor were the ecclesiastical divisions more exact, since the great province of Illyricum, including Macedonia and all Greece, was attached to the West through at least a large part of the patriotic period, and was governed by the archbishop of Thessalonica, not as its exarch or patriarch, but as papal legate. But in considering the literary productions of the age, we must class them as Latin or Greek, and this is what will be meant here by Western and Eastern. The understanding of the relations between Greeks and Latins is often obscured by certain prepossessions. We talk of the “unchanging”, of the philosophic and Gnostic, and of the practical Romans, of the reposeful thought of the Oriental mind over against the rapidity and orderly classification which characterizes Western intelligence. All this is very misleading, and it is important to go
back to the facts. In the first place, the East was converted far more rapidly than the West. When Constantine made Christianity the established religion of both empires from 323 onwards, there was a striking contrast between the two. In the West paganism had everywhere a large majority, except possibly in Africa. But in the Greek world Christianity was quite the equal of the old religions in influence and numbers; in the great cities it might even be predominant, and some towns were practically Christian. The story told of St. Gregory the Great that he was converted by seventeen pagans in the same city where he died (c. 370–5), must be substantially true. Such a story in the West would be absurd. The villages of the Latin countries held out for long, and the pagans retained the worship of the old gods even after they were all nominally Christianized.

In Phrygia, on the contrary, entire villages were Christian long before Constantine, though it is true that elsewhere some towns were still heathen in Julian's day—Gaza in Palestine is an example; but then Marcus of Gaza was a heretic.

Two consequences, amongst others, of this swift evangelization of the East must be noticed. In the first place, while the slow progress of the West was favourable to the preservation of the unchallenged tradition, the quick conversion of the East was accompanied by a rapid development which, in the sphere of thought, created the necessary books, libraries and schools of the schools. Secondly, the Eastern religion partook, even during the heroic age of persecution, of the evil which the West felt so deeply after Constantine, that is to say, of the crowding into the Church of multitudes who were only half Christianized, because it was the fashionable thing to do, or because a part of the beauties of the new religion and of the absurdities of the old were seen. We have actually Christian writers, in East and West, such as Arnobius, and to some extent Lactantius and Julius Africanus, who show that they are only half instructed in the Faith. This must have been largely the case among the people in the East. Tradition in the East was less regarded, and faith was less deep than in the smaller Western communities. Again, the Latin writers begin in Africa with Tertullian, just before the third century, at Rome with Novatian, just in the middle of the third century, and in Germany, only towards the end of that century. But the East had writers in the first century, and numbers in the second; there were Gnostic and Christian schools in the second and third. There had been, indeed, Greek writers at Rome in the first and second centuries and part of the third. But when the Roman Church became Latin they were forgotten; the Latin writers did not cite Clement and Hermas; they totally forgot Hippolytus, except his chronicle, and his name became merely a theme for legend.

Though Rome was powerful and venerated in the second century, and though her tradition remained unbroken, the break in her literature is complete. Latin Christianity is a century younger than the Greek; indeed it is practically two centuries and a half younger. Tertullian stands alone, and he became a heretic. Until the middle of the fourth century there had appeared but one Latin Father for the spiritual reading of the educated Latin Christian, and it is natural that his chemistry, edited (perhaps semi-officially) under Pope Liberius for the control of booksellers' prices, gives the works of St. Cyprian as well as the books of the Latin Bible. The unique position of St. Cyprian was still recognized at the beginning of the fifth century. From Cyprian (d. 258) to Hilary there was scarcely a Latin book that could be called an apologia except Lactantius's 'De mortibus persecutorum', and there was no theology at all. Even a little later, the commentaries of Victorinus the Rhetorician were valueless, and those of Isaac the Jew (?or?) were odd. The one vigorous period of Latin literature is the bare century which ends with Leo (d. 461). During that century Rome had been repeatedly captured or threatened by her enemies—Arian Vandals, Gothic Huns, Persian Persians, Iberian and Gaul, had almost destroyed the Catholicism of Spain and Africa; the Christian British had been murdered in the English invasion. Yet the West had been able to rival the East in output and in eloquence and even to surpass it in learning, depth, and variety. The soberer sister knew that the West was supplied with a considerable body of translations from the Greek, even in the fourth century. In the sixth, Cassiodorus took care that the amount should be increased. This gave the Latins a larger outlook, and even the decay of learning which Cassiodorus and Agapetus could not remedy, and which, Pope Agatho deplored so humbly in his letter to the Greek council of 680, was resisted with a certain persistent vigour.

At Constantinople the means of learning were abundant, and there were many authors; yet there was a gradual decline nevertheless. Ten more notable writers are like flickers amid dying embers. There were chroniclers and grammarians, but with little originality. Even the monastery of Studium is hardly a literary revival. There is in the East no enthusiasm like that of Cassiodorus, of Isidore, of Alcuin, amid a barbarian world. Moreover, the declining Rome was, from its downfall, still more isolated. Learning was less and less continuous, her theology and literature became more and more mummified; whereas the Latin world blossomed anew with an Anselm, subtle as Augustine, a Bernard, rival to Chrysostom, an Aquinas, prince of theologians. Hence we observe in the early centuries a twofold movement, which must be spoken of separately: an Eastward movement of theology, by which the West imposed her dogmas on the reluctant East, and a Westward movement in most practical things—organization, liturgy, as- seties, devotion—by which the West assimilated the example and the use of the Greeks. We take first the theological movement.

(e) Theology.—Throughout the second century the Greek portion of Christendom bred heresies. The multitude of Gnostic schools tried to introduce all kinds of foreign elements into Christianity. Those who taught and believed them did not start from a belief in the Trinity and the Incarnation such as we are accustomed to. Marcion formed, not a school, but a Church; his Christology was very far removed from tradition. The Montanists made a schism which retained the traditional beliefs and practices, but asserted a new revelation. The leaders of all these false beliefs taught there; all were condemned and excommunicated. At the end of the century, Rome got all the East to agree with her traditional rule that Easter should be kept on Sunday. The Church of Asia Minor had a different custom. One of their bishops protested. But they seem to have submitted almost at once. In the first decades of the third century, Rome impartially repelled opposing heresies, those which identified the three Persons of the Holy Trinity with only a modal distinction (Monarchians, Sabellians, "Patrapians"), and those who, on the contrary, made Christ a mere man, or seemed to subscribe the Word of God a distinct person from that of the Father. This last conception, to our amazement, is assumed, it would appear, by the early Greek apologists, though in varying language;
Athenagoras (who as an Athenian may have been in relation with the West) is the only one who asserts the Unity of the Trinity. Hippolytus (somewhat diversely in the "Contra Noetum" and in the "Philosophumena." If they are both his) taught the same distinction of the Son from the Father as traditional, and his words that Pope Callistus condemned him as a Diteist.

Origen, like many of the others, makes the procession of the Word depend upon his office of Creator; and if he is orthodox enough to make the procession an eternal and necessary one, this is only because he recognised itself as necessary and eternal. His pupil, Dionysius of Alexandria, in combating the Sabellians, who admitted no real distinctions in the Godhead, manifested the characteristic weakness of the Greek theology, but some of his own Egyptians were more correct than their patriarch, and appealed to Rome. The Alexandrian listened to the Roman Dionysius, for all respected the unchanging tradition and unblemished orthodoxy of the See of Peter; his apology accepts the word "consubstantial," and he explains, no doubt sincerely, that he had never meant anything else; but he had learnt to see more clearly, without recognizing how unfortunately worded his earlier statements were, and that the Godhead is the One and the Same in the ancient council, mainly of Origenists, justly condemned Paul of Samosata (268); and these bishops, holding the traditional Eastern view, refused to use the word "consubstantial" as being too Sabellianism. The Arians, disciples of Lucian, rejected (as did the modern moderate Eusebius of Csesarea) the eternity of Creation, and they were logical enough to argue that consequently "there was (before time) was when the Word was not," and that He was a creature. All Christendom was horrified; but the East was soon appeased by vague explanations, and after Nicaea, where Arianism had been condemned, it presided over its nearly forty years. The highest point of orthodoxy that the East could reach is shown in the admirable lectures of St. Cyril of Jerusalem. There is one God, he teaches, that is the Father, and His Son is equal to Him in all things, and the Holy Ghost is adored with them; we cannot separate them as our worship. But he does not think of how there are not three Gods: he will not use the Nicene word "consubstantial," and he never suggests that there is one Godhead common to the three Persons.

If we turn to the Latins all is different. The essential Monotheism of Christianity is not saved in the West; there is one God, but the Latins teach the unity of the Divine essence, in which subsist three Persons. If Tertullian and Novatian use subordinationist language of the Son (perhaps borrowed from the East), it is of little consequence in comparison with their main doctrine, that there is one substance of the Father and of the Son. Callistus excommunicates equally those who deny the distinction of Persons, and those who refuse to assert the unity of substance. Pope Dionysius is shocked that his name sake did not use the word "consubstantial"—this is more than sixty years before Nicaea; this council a Western bishop has the first place, with two Roman priests, and the result of the discussion is that the Roman word "consubstantial" is imposed upon all. In the East the council is succeeded by a conspiracy of silence; the Orientalists will not use the word. Even Alexandria, which had kept to the doctrine of Rome, is not convinced that the policy was good, and Athanasius spends his life in fighting for Nicaea, yet rarely uses the crucial word. It takes half a century for the Easterns to digest it; and when they do so, they do not make the most of it meaning. It is curious how little interest even Athanasius shows in the Unity of the Trinity, which he so eagerly mentions except when quoting the Dionysius; it is Didymus and the Cappadocians who word Trinitarian doctrine in the manner since consecrated by the centuries—three hypostases, one ousia; but this is merely the conventional translation of the ancient Latin formula, though it was new to the East.

If we look back at the three centuries, second, third, and fourth, of which we have been speaking, we see that the Greek-speaking Church taught the Divinity of the Son, and Three inseparable Persons, and one God the Father, without being able philosophically to harmonize these conceptions. The attempts which were made were sometimes condemned as heresy in one place and not in another, or at best were unsatisfactory and erroneous explanations, such as the distinction of the Ággyos éndikatos and the Ággyos prōtostathos or the assertion of the eternity of Creation. The Latin Church preserved always the simple tradition of three distinct Persons and one divine Essence. We must judge the Easterns to have started from a less perfect tradition, for it would be too harsh to accuse them of wilfully perverting it. But they show their love of subtle distinctions at the same time that they lay bare their want of philosophical grasp. The common people talked theology in the streets; but the professional theologians did not see that the root of their religion was the belief of God, and that it was better to be a Sabellian than a Semi-Arian. There is something mythological about their conceptions, even in the case of Origen, however important a thinker he may be in comparison with other ancients. His conceptions of Christianity dominated the East for some time, but an Origenist Christianity would never have influenced the modern world.

The Latin conception of theological doctrine, on the other hand, was by no means a mere adherence to an uncomprehended tradition. The Latins in each controversy of these early centuries seized the main point, settled it as a matter of fact, and prescribed its teaching. What instant did they allow the unity of God to be obscured. The equality of the Son and his consubstantiality were seen to be necessary to that unity. The Platonist idea of the need of a mediator between the transcendent God and Creation does not entangle them, for they were too clear-headed to suppose that there could be anything half-way between the finite and the infinite. In a word, the Latins are philosophers, and the Easterns are not. The East can speculate and wrangle about theology, but it cannot grasp a large view. It is in accordance with this that it was in the West, after all the struggle was over, that the Trinitarian dogma was completed by St. Augustine; in the West, that the Athanasian creed was formulated. The same story repeats itself in the fifth century. The philosophical heresy of Pelagius arose in the West, and in the West only could it have been exorcized. The schools of Antioch and Alexandria each insisted on one side of the question as to the union of the two Natures in the Incarnation; the one School fell into Nestorianism, the other into Eutychianism, though the leaders were orthodox. But neither Cyril nor the great Theodoret was able to rise above the controversy, and express the two complementary truths in one consistent doctrine. They held what St. Leo held; but, omitting their interminable arguments and proofs, the Latin writer words the true doctrine once for all, because he sees it philosophically. No wonder that the most popular of the Eastern Fathers has always been untheological Chrysostom, whereas the most popular of the Western fathers is the philosopher, St. Augustine. When the East was severed from the West, it contributed nothing to the elucidation and development of dogma, and when united, its contribution was mostly to make difficulties for the West to unravel. But the West has continued without ceasing its work of exposition and evolution. After the fifth century there is not much development or definition
in the patristic period; the dogmas defined needed only a reference to antiquity. But again and again Rome had to impose her dogmas on Byzantium—519, 690, and 786 are famous dates, when the whole Eastern Church had to accept a papal document for the sake of reunion, and the intervals between these supply lesser instances. The Eastern Church had always possessed a traditional belief in Roman tradition and in the duty of recourse to the See of Peter; the Arians expressed it when they wrote to Pope Julius to deprecate interference—Rome, they said, was “the metropolis of the faith from the beginning”. In the knowledge of the East, and of the eleventh and twelfth centuries had been learnt thoroughly, and the East proclaimed the papal prerogatives, and appealed to them with a fervour which experience had taught to be in place. In such a sketch as this, all elements cannot be taken into consideration. It is obvious that Eastern theology had a great and varied influence on Latin Christendom. But the essential truth remains that the West thought more clearly on the East, while preserving with greater faithfulness a more explicit tradition as to cardinal dogmas, and that the West imposed her doctrines and her definitions on the East; and repeatedly, if necessary, reasserted and reinaugurated them.

(f) Discipline, Liturgy, Ascetics.—According to tradition, the multiplication of bishoprics, so that each city had its own bishop, began in the province of Asia, under the direction of St. John. The development was uneven. There may have been bishoprics, or at least sees in Egypt at the end of the second century, though there were large numbers in all the provinces of Asia Minor, and a great many in Phoenicia and Palestine. Groupings under metropolitan sees began in that century in the East, and in the third century this organization was recognized as a matter of course. Over most of it, it was the pattern of grouping spread to the West. At first Africa had the most numerous sees; in the middle of the third century there were about a hundred, and they quickly increased to more than four times that number. But each province of Africa had not a metropolitan see; only a presidency was accorded to the senior bishop, except in Proconsularia, where Carthage was the metropolis of the province and her bishop was the first of all Africa. His rights were undefined, though his influence was great. But Rome was near, and the pope had certainly far more actual power, as well as more religious, than the presbyter. We see traces of Tertullian’s time, and it remains true in spite of the resistance of Cyprian. The other countries, Italy, Spain, Gaul, were gradually organized according to the Greek model, and the Greek names, <em>metropolit</em>, <em>patriarch</em>, were adopted. Councils were held early in the West. Early discipulus canons were first enacted in the East. St. Cyprian’s large councils passed no canons, and that saint considered that each bishop is answerable to God alone for the government of his diocese; in other words, he knows no canon law. The foundation of Latin canon law is in the canons of Eastern councils, which open the Western collections. In spite of this, we need not suppose the East was more regular, or better governed, than the West, where the popes guarded order and justice. But the East had larger communities, and they had developed more fully, and therefore the need arose earlier there to commit definite rules to writing.

Martyrs of the East soon decorated the liturgy with beautiful excrescences. Many such excellent practices moved Westward; the Latin rites borrowed prayers and songs, antiphons, antiphonal singing, the use of the alleluia, of the doxology, etc. If the East adopted the Latin Christmas Day, the Western churches merely followed this custom—feast after feast, in the fourth, fifth, sixth, and seventh centuries. The West joined in devotion to Eastern martyrs. The special honour and love of Our Lady is at first characteristic of the East (except Antioch), and then conquers the West. The parcelling of the bodies of the saints as relics for devotional purposes, spread all over the West from the East; only Rome held out until the time of St. Gregory the Great, against what might be thought an inveterate custom rather than an honour to the saints. If the first three centuries are full of pilgrimages to Rome from the East, yet from the fourth century onward West joins with East in making Jerusalem the principal goal of such pious journeys; and these voyagers brought back much knowledge of the East, and of the Middle East, to the West. Monasticism began in Egypt with Paul and Anthony, and spread from Egypt to Syria; St. Athanasius brought the knowledge of it to the West, and the Western monachism of Jerome and Augustine, of Honorius and Martin, of Benedict and Columba, always looked to the East, to Anthony and Pauchomius and Hilairon, and above all to Basil, for its most perfect models. Edifying literature in the form of the lives of the saints began with Athanasius, and was imitated by Jerome. But the Latin writers, Rufinus and Cassian, gave accounts of Eastern monachism, and Theodoret and the other Greek fathers were translated into Latin. Soon indeed there were lives of Latin saints, of which that of St. Martin was the most famous, but the year 600 had almost come when St. Gregory the Great felt it still necessary to protest that as good might be found in Italy as in Egypt and Syria, and published his dialogue to prove his point, by supplying edifying stories of his own country to put beside the older histories of the monks. It would be out of place here to go more into detail in these subjects. Enough has been said to show that the West borrowed, with open-minded simplicity and humility, from the elder East all kinds of practical and useful arts, as well as ecclesiastical and moral lore. The converse influence in practical matters of West on East was naturally very small.

(g) Historical Materials.—The principal ancient historians of the patristic period were mentioned above. They cannot always be trusted. The continuators of Eusebius, that is, Rufinus, Sozomen, Theodoret, are not to be compared to Eusebius himself, for that industrious prelate has fortunately bequeathed to us rather a collection of invaluable materials than a history. His “Life” or rather “Panegyric of Constantine” is less remarkable for its political character than St. Jerome’s; he had found his materials in the library of Pamphilus at Cesarea, and still more in that left by Bishop Alexander at Jerusalem. He cites earlier collections of documents, the letters of Dionysius of Corinth, Dionysius of Alexandria, Serapion of Antioch, some of the apostles sent to Pope Victor I by councils throughout the Church, besides employing earlier writers of history or memoirs such as Papias, Hegesippus, Apollonius, an anonymous opponent of the Montanists, the “Little Labyrinth” of Hippolytus (?), etc. The principal additions we can still make to these precious remains are, first, St. Jerome’s commentaries; then the works of Tertullian, full of valuable information about the controversies of his own time and place and the customs of the Western Church, and containing also some less valuable information about earlier matters—less valuable, because Tertullian is singularly careless and deficient in historical sense. Next, we possess the correspondence of St. Cyprian, especially the letters of African councils, of St. Cornelius and others, besides those of the saint himself. To all this fragmentary information we can add much from St. Epi-phanus, something from St. Jerome and also from Photius and Byzantine chronographers. The whole Augustinian collateral literature was growing in the industrious industry by Harnack, with the help of Freschen and others, in a book of 1021 pages, the
volume of his invaluable "History of Early Christian Literature". In the middle of the fourth century, St. Epiphanius's book on heresies is learned but confused; it is most annoying to think how useful it would have been had its pious author quoted his authorities by name, as Eusebius did. As it is, we can with difficulty, if at all, tell the famous monks of the fourth century on or not. St. Jerome's lives of illustrious men are carelessly put together, mainly from Eusebius, but with additional information of great value, where we can trust its accuracy. Gennadius of Marseilles continued this work with great profit to us. The Western catalogues of heresies, such as Philostratus, Eusebius of Venantius, and St. Augustine are extremely useful.

Collections of documents are the most important matter of all. In the Arian controversy the collections published by St. Athanasius in his apologetic works are first-rate authorities. Of those put together by St. Hilary only fragments survive. Another dossier by the Honomousian Sabinus, Bishop of Herculane, was known to Socrates, and we can trace its use by him. A collection of documents connected with the origins of Donatism was made towards the beginning of the fourth century, and was appended by St. Optatus to his great work. Unfortunately only a part is preserved of the life of the former is quoted by St. Optatus and Augustine. A pupil of St. Augustine, Marius Mercator, happened to be at Constantinople during the Nestorian controversy, and he formed an interesting collection of pieces justificatives. He put together a corresponding set of papers bearing on the Pelagian controversy. Ireneaus, Bishop of Tyre, amassed documents bearing on Nestorianism, as a brief in his own defence. These have been preserved to us in the reply of an opponent, who has added a great number. Another kind of collection is that of letters. St. Isidore's and St. Augustine's are immensely numerous, but largely on the decretales. There is a fair amount of historical matter in those (for instance) of Ambrose and Jerome, Basil and Chrysostom. Those of the popes are numerous, and of first-rate value; and the large collections of them also contain letters addressed to the popes. The correspondence of Leo and of Hormisdas is quite complete. Besides these collections of papal letters and the decretales, we have second-rate collections, of which two are important, the Collectio Avellana, and that of Stephen of Larissa.

Councils supply another great historical source. Those of Nicea, Sardica, Constantinople, have left us no Acts, only some letters and canons. Of the later councils we have the famous John X's decretales; but also numbers of letters connected with them. Many smaller councils have also been preserved in the later collections; those made by Ferrandus of Carthage and Dionysius the Little deserve special mention. In many cases the Acts of one council are preserved by another at which they were read. For example, in 418, a Council of Carthage recited all the canons of former African plenary councils in the presence of a papal legate; the Council of Chalcedon embodies all the Acts of the first session of the Robber Council of Ephesus, and the Acts of that session contained the Acts of the synods of Constantinople. The later sessions of the Robber Council (preserved only in Syria) contain a number of documents concerning inquiries and trials of prelates. Much information of various kinds has been derived of late years from Syria and Coptic sources, and even from the Arabic, Armenian, Persian, Ethiopic and Slavonic. It is not necessary to speak of patriarchal history; the knowledge of Church organization, ecclesiastical geography, liturgies, canon law and procedure, archeology, etc. The sources are, however, much the same for all these branches as for history proper.

Patriotic Study.—(1) Editors of the Fathers.—The earliest histories of patriotic literature are those contained in Eusebius and in Jerome's "De viris illustribus". They were followed by Gennadius, who continued Eusebius, by St. Isidore of Seville, and by St. Ilephonsus of Toledo. In the Middle Ages the best known are Sigebert of the monastery of Gembloux (d. 1112), and Trithemius, Abbot of Sponheim and of Wurzburg (d. 1516). Between these come an anonymous monk of Mount Athos (1108-1172) and of the Monastery of Honorius of Autun (1122-5). Ancient editors are not wanting; for instance, many anonymous works, like the Pseudo-Clementines and Apostolic Constitutions, have been remodelled more than once; the translators of Origem (Jerome, Rufinus, and unknown persons) cut out, altered, added; St. Jerome published an enlarged edition of "On the Apocalypse". Pamphilus made a list of Origem's writings, and Possidius did the same for those of Augustine.

The great editions of the Fathers began when printing had become common. One of the earliest editors was Faber Stapulanus (Lefèvre d'Estaples), whose edition of Dionysius the Areopagite was published in 1498, The Belgian Pamèle (1536-87) published much. The controversy of Feuardent, a Franciscan (1539-1610) did some good editing. The sixteenth century produced gigantic works of history. The Protestant Centuriators of Magdeburg described thirteen centuries in six volumes, under the editorship of Baronius (1538-1607), replied with his famous "Annales Ecclesiastic", reaching to the year 1198 (12 vols., 1588-1607). Marguerin de la Bigne, a doctor of the Sorbonne (1546-90), published his "Bibliotheca veterum Patum" (9 vols., 1577-9) to assist in refuting the Centuriators.

The great Jesuit editors were almost in the seventeenth century; Greuterus (1562-1625), Fronto Ducatus (Fronton du Duc, 1588-1624), Andreas Schott (1532-1620), were diligent editors of the Greek Fathers. The celebrated Sirmond (1559-1651) continued to publish Greek Ptolemus and canons of the Fathers, from the age of 51 to 92. Denia Petavus (1583-1652) edited Greek Fathers, wrote on chronology, and produced an incomparable book of historical theology, "De theologici dogmatibus" (1634). To these may be added the ascetic Hallox (1572-1646), the uncorrected Chiffes (1592-1659), and Jean Garnier, the historian of the Puriell (d. 1656). The greatest work of the Society of Jesus is the publication of the "Acta Sanctorum", which has now reached the beginning of November, in 64 volumes. It was planned by Rosweyde (1570-1629) as a large collection of lives of saints; but the founder of the work as we have it is Sirmond (1598-1651). Sirmond joined in 1643 by Henschenius and Paperbochius (1628-1714), and thus the Society of Bollandists began, and continued, in spite of the suppression of the Jesuits, until the French Revolution, 1794. It was happily revived in 1836 (see BOLLANDISTS). Other Catholic exores were Gerhard Voss (d. 1649), Altabisnous (d. 1640), Albaubespine (d. 1640), Rigault (1577-1654), and the Sorbonne doctor Collette (1629-86). The Dominican Combé (1605-79) edited Greek Fathers, added two volumes to de la Bigne's collection, and made collections of patriarchal sermons. The layman Valesius (de Valois, 1603-70) was of great eminence.

Among Protestants may be mentioned the controversialist Clericus (Le Clerc, 1657-1736); Bishop Fell of Oxford (1625-66), the editor of Cyprian, with whom must be classed Bishop Pearson and Dodwell; Grabe (1669-1711), a Frussian who settled in England; the Prussian Bartholomaeus (1683-1739) and Jean Ladet (1683-1747); and Etienne Baluze (1630-1718), an editor of great industry. The Provençal Franciscan, Pagi, published an invaluable commentary on Baronius in 1689-1705. But the greatest historical achievement was that of a secular priest, Louis Le Nain de Tillemont, whose "Histoire des Empereurs" (6 vols., 1800) and "Mémoires pour servir à l'histoire ecclesiastique"
des six premiers sicles’ (16 vols., 1693) have never been superseded or equalled. Other historians are Cardinal H. Norris (1631-1704); Natalis Alexander (1639-1725), a Dominican; Fleury (in French, 1690-1719). To these must be added the Protestant Archbishop Ussher of Dublin (1650-1656), and many canonists, of whom Van Empel, Du Pin La Monce, Christianus Lupus. The Oratorian Thomassin wrote on Christian antiquities (1619-95); the English Bishop of Cambridge composed a great work on the same subject (1705-22). Holstein (1596-1661), a convert from Protestantism, was librarian at the Vatican, and published collections of documents. The Benedictine Mr. Mont (1561-1659) published a famous work on the history of Holy orders, and a confused one on that of penance.

The chief patristic theologian among English Protestants is Bishop Bull, who wrote a reply to Pepys’s views on the development of dogma, entitled “Defensio fidei Nicene” (1653). The Greek Leo Allatius (1586-1669), custos of the Vatican Library, was almost a second Bessarion. He wrote on dogma and on the ecclesiastical books of the Greeks. A century later the Maronite J. S. Assemani (1659-1758) published amongst others a “Bibliotheca Orientalis” and an “Index Syrurus.” His nephew editcd an immense collection of liturgies. The chief liturgiologist of the seventeenth century is the Blessed Cardinal Tommasi, a Theatine (1649-1713, beatified 1803), the type of a saintly savant.

The great Benedictines form a group by themselves (apart from Dom Calmet, a Biblical scholar, and Dom Corder, who belonged to the Congregation of St-Vannes) all were of the Congregation of St-Maur, the learned men of which were drafted into the Abbey of St-Germain-des-Prés at Paris. Dom Luc d’Achery (1603-85) is the founder (“Spicilegium,” 13 vols.); Dom Mabillon (1632-1707) is the greatest name, but not the only one. The early schools of the Agæs. Bernard de Montfaucon (1655-1741) has almost equal fame (Athanasius, Hexapla of Origen, Chrysostom, Antiquities, Palaeography). Dom Costant (1654-1721) was the principal collaborator, it seems, in the great edition of St. Augustine (1679-1700; also letters of the Popes, Hilary). Dom Garet (Cassiodorus, 1679), Du Triche (St. Ambrose, 1686-90), Martianay (St. Jerome, 1693-1706, less successful), Deluze (Origen, 1733-39), Maran (with Toute, Cyril of Jerusalem, 1720; alone, the Apologists, 1742; Gregory Nazianzen, unfinished), Massuet (Irenæus, 1710), St. Martian (Gregory the Great, 1705), Julian Garnier (St. Benedict, 1721-4), Acts Martyrum since 1699; Victor Vitensis, 1694, and Gregory of Tours and Felegar, 1699), are all well-known names. The works of Martene (1654-1739) on ecclesiastical and monastic rites (1690 and 1700-2) and his collections of anecdotæ (1700, 1717, and 1724-30) are most voluminous; he was assisted by Durand. The great historical works of the Benedictines of St-Maur need not be mentioned here, but Dom Sabatier’s edition of the Old Latin Bible, and the new editions of Du Cange’s glossaries must be noted. For the great editors of collections of sees under the names mentioned in the bibliography of the article on See.

In the eighteenth century may be noted Archbishop Potter (1674-1747, Clement of Alexandria). At Rome Arevalo (Isidore of Seville, 1797-1803); Gallandi, a Venetian Oratorian (Bibliotheca veterum Patrum, 1765-81). The Venetian scholars form a remarkable body. The manuscripts of the Cistercian Fathers, for instance his “anecdotæ of Cassiodorus” are to be noted, 1702), Vallarsi (St. Jerome, 1734-42, a great work, and Rufinus, 1745), the brothers Ballerini (St. Zeno, 1739; St. Leo, 1753-7, a most remarkable production), not to speak of Bianchini, who published eddes of the Old Latin Gospels, and the Dominican Manel, Archbishop of Lucca, who re-edited Baronius, Fabriæus, Thomassinus, Baluze, etc., as well as the “Collectio Amplissima” of councilors.

A general concursus shows us the Jesuits taking the lead c. 1590-1650, and the Benedictines working about 1680-1750. The French are always in the first place. There are some sparse names of eminence in Protestant England; a few in Germany; Italy takes the lead in the second half of the seventeenth century. The great literary histories of Bellarmine, Fabricius, Du Pin, Cave, Oudin, Schram, Lumper, Ziegelmayer, and Schöenemann will be found below in the bibliography. The first half of the nineteenth century was singularly barren of patristic studies; nevertheless the lead was marked by the work of the newer in which Germany takes the lead. The second half of the nineteenth century was exceptionally and increasingly prolific. It is impossible to enumerate the chief editors and critics. New matter was poured forth by Cardinal Mai (1782-1854) and Cardinal Pitra (1812-89), both prefects of the Vatican Library. Inedita in such quantities seem to be found no more, but isolated discoveries have come frequently and still come; Eastern libraries, such as those of Mount Athos and Patmos, Constantinople, and Jerusalem, and Mount Sinai, have yielded unknown treasures, while the modern, etc., have supplied many losses supposed to be irrecoverable. Books of Egypt have given something, but not much, to patrology.

The greatest boon in the way of editing has been the two great patrologies of the Abbé Migne (1800-75). This energetic man put the works of all the Greek and Latin Fathers within easy reach by the “Patrologia Latina” (222 vols., including 4 vols. of indexes) and the “Patrologia Graeca” (161 vols.). The Ateliers Catholiques which he founded produced wood-carving, pictures, organs, etc., but printing was the special work. The workshops were destroyed by a disasterrous fire in 1868. The early part (St. Augustin’s agee) was made impossible by the Franco-German war. The “Monumenta Germaniae,” begun by the Berlin librarian Pertz, was continued with vigour under the most celebrated scholar of the century, Theodor Mommsen. Small collections of patristic works are catalogued below. A new edition of the Latin Fathers was undertaken in the sixties by the Academy of Vienna. The volumes published up till now have been uniformly creditable works which call up no particular enthusiasm. At the present rate of progress some centuries will be needed for the great work. The Berlin Academy has commenced a more modest task, the re-editing of the Greek Ante-nicene writers, and the energy of Adolf Harnack is ensuring rapid publication and real success. The same indefatigable student, with von Gebhardt, edits a series of “Texte und Untersuchungen”, which have for a part of their object to be the organ of the Berlin editors of the Fathers. The series contains many valuable studies, with much that would hardly have been published in other countries.

The Cambridge series of "Texts and Studies" is younger and proceeds more slowly, but keeps at a rather higher level. There should be mentioned also the Italian "Studi e Testi", in which Mercati and Pio Franchi de’ Cavalieri collaborate. In England, in spite of the slight revival of interest in patristic studies caused by the Oxford Movement, the amount of work has not been great. For learning perhaps Newman is really first in the theological questions. The articles on "Bollandists, the Roman Martyrologies, above all Lightfoot, are second to none. But the amount edited has been very small, and the excellent "Dictionary of Christian Biography" is the only great work published. Until 1898 there was absolutely no organ for patristic studies, and the "Journal of Theological Stud" of the future would have found it difficult to survive financially without the help of the Oxford University Press. But
there has been an increase of interest in these subjects of late years, both among Protestants and Catholics, in England and in the United States. Catholic and

Fathers of the Oratory. See Orientalis.

FAUNT, LAWRENCE A. See Jesus theologian; b. 1554; d. at Wilna, Poland, 28 February, 1590-91. After two years at Merton College, Oxford (1568-70) under the tuition of John Potts, a well-known philosopher, he went to the Jesuit college at Louvain where he took his B.A. After some time spent in Paris he entered the University of Munich under the patronage of Duke William of Bavaria. He was professed in 1579, and by date of his entrance into the Society of Jesus is disputed, some authorities giving 1570, others 1575, in the year in which he went to the English College, Rome, to pursue his studies in theology. It is certain, however, that on the latter occasion he added Lawrence to his baptismal name, as he was professor of divinity and attracted the favourable attention of Gregory XIII, who, on the establishment of the Jesuit college at Posen in 1581, appointed him rector. He was also professor of Greek there for three years, of moral theology and controversy for nine more, and was held in highest repute among both ecclesiastical and secular authorities. His chief theological works are: "De Christi in terris Ecclesia, quarnen et penequo existat" (Posen, 1684);"Canon profelementum et universorum legem Doctrine et Dei" (Posen, 1658);"Apologia libri sui de invocazione et venerazione sanctarum" (Cologne, 1881).

F. M. RUDGE.

FAURIÉ, CHARLES-CLAUDE, historian, b. at St-Etienne, France, 27 October, 1772; d. at Paris, 15 July, 1844. He studied first at the Oratorian College of Tournon, then at Lyons. He served in the army of the Pyrénées-Orientales. Under the Directory Fouche, an ex-Oratian, attached him to his cabinet as private secretary. Under the Empire, he refused office, in order to devote all his time to study. Faurié adopted the new ideas of the philosophers and the principles of the Revolution, but repudiated them in part in the later years of his life. He was an intense worker and knew Greek, Latin, Italian, German, English, Sanskrit, and Arabic. He was the one who made the merits of Ossian and Shakespeare known to the French public, and spread in France the knowledge of German literature, which had been previously looked upon as unimportant. He was one of the first to investigate Romance literature, and the originality of his views in this direction soon popularized this new study. He also gathered the remnants of the ancient Basque and Celtic languages. The first works he published were a translation of "La Parthéniade" (Paris, 1811), an idyllic epic by the Danish poet, Baggesen, and of the tragedy of his friend Manzoni, "Il Conte di Carmagnola" (Paris, 1822). The numerous linguistic and archaeological contributions which he wrote for various magazines won him for a great reputation among scholars; it was said of him that "he was the man of the nineteenth century who put in circulation the most ideas, inaugurated the greatest number of branches of study, and gathered the greatest number of new
Faustinus

Faustinus and Jovita, saints and martyrs, members of a noble family of Brescia; the elder brother, Faustinus, being a priest, the younger, a deacon. For their fearless preaching of the Gospel, they were arraigned before the Emperor Hadrian, who, first at Brescia, later at Rome and Naples, subjected them to frightful torments, after which they were beheaded at Brescia in the year 120, according to the Bollandists, though Allard (Histoire des Persécutons pendant les Deux Premiers Siècles, Paris, 1883) places the date as early as 118. The many "Acts" of these saints are chiefly of a legendary character. Fedele Savio, S.J., the most recent writer on the subject, calls in question nearly every fact related of them except their existence and martyrdom, which are too well attested by their inclusion in so many of the early martyrologies and their extraordinary cult in their native city, of which from time immemorial they have been the chief patrons. Rome, Bologna and Verona share with Brescia the possession of their relics. Their feast is celebrated on 15 Feb., the traditional date of their martyrdom.

Faustinus of Riez, Bishop of Riez (Rhegium) in Southern Gaul (Provenza), the best known and most distinguished defender of Semiipelagianism, b. between 405 and 410, and according to his contemporaries, Avitus of Vienne and Sidonius Apollinaris, in the island of Britain; d. between 490 and 495. Nothing, however, is known about his early life or his education. He is thought by some to have been a lawyer but owing to the influence of his mother, famed for her sanctity, he abanoned secular pursuits while still a young man and entered the monastery of Lérins. Here he was soon ordained to the priesthood and because of his extraordinary piety was chosen (432) to be head of the monastery to Maximus who had died. Bishop of Riez. His career as abbot lasted about twenty or twenty-five years during which he attained a high reputation for his wonderful gifts as an extempore preacher and for his stern asceticism. After the death of Maximus he became Bishop of Riez. This elevation did not make any change in his manner of life; he continued his ascetic practices, and frequently returned to the monastery of Lérins to renew his fervour. He was a zealous advocate of monasticism and established many monasteries in his diocese. In spite of his activity in the discharge of his duties as bishop, he participated in all the theological discussions of his time and became known as a stern opponent of Arianism in all its forms. For this, and also, it is said, because of the view, set forth by the Southern schools, that in an human soul, he incurred the enmity of Euric, King of the Visigoths, who had gained possession of a large portion of Southern Gaul, and was banished from his see. His exile lasted eight years, during which time he was asked by loyal friends. On the death of Euric he resumed his labours at the head of his church and continued till the end of his days. Throughout his life Faustus was an uncompromising adversary of Pelagius, whom he styled Pestifer, and equally decided in his opposition to the doctrine of Predestination which he styled "erroneous, blasphemous, heathen, false, and conducive to immorality." This doctrine in its most repulsive form had been expounded by a presbyter named Lucidus and was condemned by two synods, Arles and Lyons (475). At the request of the bishops who composed these synods, and especially Leontius of Arles, Faustus wrote a work, "Libri duo de Gratia Dei et humanae mentis libero arbitrio", in which he refuted not only the Semiipelagians but also those of Pelagius (P. L., LVIII, 783). The work was marred, however, by its decided Semipelagianism, for several years was bitterly attacked, and was condemned by the Synod of Orange in 529 (Denzinger, Enchiridion, Freiburg, 1908, no. 174 sqq.—old no. 144; P. L., XLV, 785; Mansi, VIII, 712). Besides this error, Faustus maintained that the human soul is in a certain sense corporeal, God alone being a pure spirit. The opposition to Faustus was not fully developed in his lifetime and he died with a well-merited reputation for sanctity. His own flock venerated him as a saint but he received no honour. Faustus wrote also: "Libri duo de Spiritu Sancto" (P. L., LXII, 9), wrongly ascribed to the Roman deacon Paschasius. His "Libellus parvus adversus Arianos et Macedonianos", mentioned by Genadius, seems to have perished. His correspondence (epistles) and sermons are best found in the new and excellent edition of his works of Fr. G. Eichbrecht, "Fausti Reiniensis presbyter sermones pseudo-Eusebianos opera. Accedunt Ruricii Epistulae" in "Corpus Scrip. eccles. lat." vol. XXI (Vienna, 1891).

Faustus of Milevis. See MANICEAENS.

Faversham Abbey, a former Benedictine monastery of the Cluniaceae Congregation situated in the County of Kent about nine miles west of Canterbury. It was founded about 1147 by King Stephen and his Queen Matilda. Claribald, the prior of Bermesday, and twelve other monks of the same abbey were transferred to Faversham to form the new community; Claribald was appointed abbot. It was dedicated to Our Saviour and endowed with the manor of Faversham. In the church, which was completed about 1251, Stephen and Matilda, the founders, were buried and also their eldest son Eustace, Earl of Boulogne. We read of chapels in the church dedicated to Our Lady and St. Anne. All the deans, archdeacons, and privileges conferred by Stephen, adding others to them, and all these were again confirmed to the monks by Kings John and Henry III. The abbots had their seat in Parliament and we find them in attendance at thirteen several parliaments during the reigns of Edward I and Edward II, but on account of their reduced state and
poverty, they ceased to attend after the 18th, Edward II. It appears that some bitterness existed for a considerable time between the monks and the people of Fawkes, who bore a grudge. The abbey's income and exactions. Among these grievances were claims, by way of composition, for allowing the inhabitants to send their swine to pannage, for exposing their goods for sale in the market, and for the liberty of brewing beer. Twenty-two abbeys are known to us, that was John Gelaye, prior of Castelo, who died in December, 1534, along with the sacristen and four monks, is said to have signed the Act of Supremacy. On 8 July, 1538, the abbey was surrendered to the king, at which time the annual revenue was about £350. Henry VIII gave the house and site to John Ponder for twenty-one years at an annual rent of £23 18s. 6d. As a result of John's property, the property of the abbey passed to the possession of Sir Thomas Cheney, warden of the Cinque Ports. Later it was owned by Thomas Ardern and subsequently came to belong to the family of Sondes. The two entrance gates were standing a century ago, but had to be taken down on account of their ruinous condition. At the present day there is nothing left except some portions of the outer walls. 

G. E. HIND.

Fawkes, Guy. See Gunpowder Plot.

Faye, Hervé-Auguste-Etienne-Album, astronomer, b. at Saint-Benoît-du-Sault (Indre, France), 1 Oct., 1814; d. at Paris, 4 July, 1902. The son of a civil engineer, he entered the Ecole Polytechnique in 1832 to prepare for a similar career. He left the school before the end of the second year and went to Holland. In 1836 he entered the Paris Observatory as a pupil. There, in 1843, he discovered the periodic comet bearing his name. This discovery gained for him the Prix Lalanne. As early as 1847 he was elected member of the Academy of Sciences. From 1848 to 1854 he taught geodesy at the Ecole Polytechnique and then went to Nancy as rector of the academy and professor of astronomy. In 1873 he was called to succeed Delaunay in the chair of astronomy at the Ecole Polytechnique, where he worked and lectured until 1893. He held other official positions: inspector of education (1857); member (1862) and later (1876) president of the Bureau des Longitudes; for a few weeks only, minister of public instruction, then inspector-general of higher education (1877); and member of the superior council of public instruction (1892). Chevalier of the Legion of Honour in 1843, he became chevalier and commander of the Legion of Honour. He was honored with other decorations and by election to the membership of the principal European academies and societies. Faye's fame rests both on his practical and on his theoretical work. He improved the methods of astronomical measurement, invented the zenith oscillator, suggested and applied photography and electricity to astronomy, and dealt with problems of physical astronomy, the shape of comets, the spots of the sun, meteors, etc. Credit is given him as well as by his friends to the great influence of his wife, whom he met on his early trip to Holland. His religious nature finds corroboration in his knowledge of the wonders of the universe. Cæli immovebant gloriam Dei, he quotes in "Sur l'origine du Monde", and goes on to say: "We run no risk of deceiving ourselves in considering it [the Superior Intelligence] the author of all things, in referring to it those wonders of the universe which imposed our thoughts; and finally we are ready to understand and accept the traditional formula: God, Father Almighty, Creator of heaven and earth." He contributed over 400 memoirs and notes to the "Comptes rendus", the "Bulletin de la société astronomique", "Monthly Notices of the R. A. S.", and "Astronomische Nachrichten". His larger works are: "Cours d'astronomie de l'École polytechnique" (Paris, 1833); "Humboldt's 'Cosmos'" by Faye and Galuscy (Paris, 1849-59); "Cours d'astronomie nautique" (Paris, 1880); and "Sur l'origine du monde" (Paris, 1885).

Fear (in Canon Law), a mental disturbance caused by the perception of instant or future danger. Since fear, in greater or less degree, diminishes freedom of action, contracts entered into through fear may be judged invalid; similarly fear sometimes excuses for the application of the law in a particular case; it also excuses from the penalty attached to an act contrary to the law. The cause of fear is found in oneself or in a natural cause (intrinsic fear) or it is found in another person (extrinsic fear). Fear may be grave, such for instance as would influence a steadfast man, or it may be slight, such as would affect a person of weak will. In order that fear may be considered grave certain conditions are requisite: the fear must be grave in itself, and not merely in the estimation of the person fearing; it must be based on a reasonable foundation; the threats must be possible of execution; the execution of the threats must be inevitable. Fear, again, is either just or unjust, according to the justness or otherwise of the reasons which lead to the use of fear as a compelling force. Reversential fear is that which may exist between superiors and their subjects. Grave fear diminishes will power but cannot be said to totally take it away, except in some very exceptional cases. Slight fear (mutus levius) is not considered even to diminish the will power, hence the legal expression "Foolish fear is not a just excuse".

The following cases may be taken as examples to illustrate the manner in which fear affects contracts, marriage, vows, etc., made under its influence. Grave fear excuses from the law and the censure attached thereto, if the law is ecclesiastical and if its non-observance will not militate against the public good, the Faith, or the authority of the Church; but if there is question of the nuptial contract, a grave fear excuses the omission (Commentators on Decretals, tit. "De hierarchia vi mutueve causæ fuint"); Schmalgrueber, tit. "De sent. excomm." n. 79). Fear that is grave, extrinsic, unjust, and inflicted with a view to forcing consent, nullifies a marriage contract, but not if the fear be only intrinsic. The burden of proof lies on the person who has acted through fear. Reversential fear, if it be also extrinsic, i.e., accompanied by blows, threats, or strong entreaty, and aimed at extorting consent, will also invalidate marriage. Qualified as just stated, fear is a diriment impediment of marriage when coupled with violence or threats (via et metu). For further details see any manual of Canon Law, e.g., Santi-Leitner, "Prælect. Jur. Can." (Ratisbon, 1805), IV, 56-59; Heiner, "Kathol. Eherecht" (Münster, 1905), 82-86; also Ploch, "De Matr. vi ac metu contractio" (1833). For the history of this impediment see Esmein, "Le mariage en droit canonique" (Paris, 1891), I, 308; II, 232; also Freisen, "Gesch. des kanon. Eherechts etc." (Tübingen, 1858).

Resignation of office extorted by unjust fear is generally considered to be valid, but may be rescinded unless the resignation has been confirmed by oath. On the other hand, if fear has been justly brought to bear upon a person, the resignation holds good (§ 8, Cong. Conc. 24 April, 1880). Ordination received under grave and unjust fear is invalid, but the obligations of the order are not contracted unless there is subsequent spontaneous acceptance of the obligation (Sánchez, "De matrim.""). VII, Disp. xxix. n. 5. In
such cases if freedom is desired the Holy See should be petitioned for a dispensation (S. Cong. Conc. 13 Aug., 1870). The same holds good with regard to the vows of religious profession, and all other vows made under the influence of fear which is grave, extrinsic, or permanent (see Vow). In English law, on proof of force and fear, the law restores the parties to the contract to the position in which they were before it was entered into, and will find the constraining party liable to damages as preparation for any injury done to the party constrained. The maxims of the common law in this regard are: "Where otherwise the law has nullity and just if sought by force or fraud becomes bad and unjust."

See Contract; Fraud.

DAVID DUNFORD.

FEAR (from Moral Standpoint), an unsettlement of soul consequent upon the apprehension of some present or future danger. It is here viewed from the moral standpoint, that is, so far as it is a factor to be reckoned with in grounding upon the freedom of human action as well as offering an adequate excuse for failing to comply with positive law, particularly if the law be of human origin. Lastly, it is here considered in so far as it impugns or leaves intact, in the court of conscience, and without regard to explicit enactment, the validity of certain deliberate engagements or contracts. The division of fear most commonly in vogue among theologians is that by which they distinguish serious fear (metus gravis), and trifling fear (metus levis). The first is such as grows out of the discernment of some formidable impending peril: if this be really, and without qualification, of large proportions, then the fear is to be absolutely justified; otherwise, only relatively so, as for instance, when account is taken of the greater susceptibility of certain classes of persons, such as old men, women, and children. Trifling fear is that which arises from being confronted with harm of inconsiderable dimensions, or, at any rate, of whose happening there is only a slender likelihood.

It is customary also to note a fear in which the element of reverence is uppermost (metus reverentialis), which has its source in the desire not to offend one's parents and superiors. In itself this is reputed to be a trifling, though from circumstances it may easily rise to the dignity of a serious dread. A criterion rather uniformly employed by moralists, to determine what really, and apart from subjective conditions is, a serious fear, is that contained in this assertion. It is the feeling which is calculated to influence a solidly balanced man (cudere in virum constantem). Another important classification is that of fear which comes from some source within the person, for example, that which is created by the knowledge that one has contracted a fatal disease; and fear which comes from without, or is produced, namely, by some cause extrinsic to the terror-stricken subject. In the last named instance the cause may be either natural, such as probable volcanic eruptions, or recognizable in the attitude of some free agent. Finally it may be observed that one may have been submitted to the spell of fear either justly or unjustly, according as the one who provokes this passion regards his rights, or even, exceeds them in some measure. Actions done under stress of fear, unless of course it be so intense as to have dethroned reason, are accounted the legitimate progeny of the human will, or are, as the theologians say, simply voluntary, and therefore imputable. The reason is obvious. Such acts lack neither adequate advenence nor sufficient consent, even though the latter be elicited only to avoid a greater evil or one conceived to be greater.

much, however, as they are accompanied by a more or less vehement repugnance, they are said to be in a limited and partial sense involuntary.

The practical inference from this teaching is that an evil act having the same bad end as a good sin remains such, even though done out of serious fear. This is true when the transgression in question is against the natural law. In the case of obligations emerging from positive precepts, whether Divine or human, a serious and well-founded dread may often operate as an excuse, so that the failure to comply with the law under such circumstances is not regarded as sinful. The lawgiver is not presumed to have it in mind to impose an heroic act. This, however, does not hold good when the catering to such a fear would involve considerable damage to the common weal. Thus, for instance, a parish priest, in a case visited by a pestilence, is bound by law of residence to stay at his post, no matter what his apprehensions may be. It ought to be added here that attention, or sorrow for sin even though it be the fruit of dread inspired by the thought of eternal punishment, is not in any sense involuntary. At least it must not be so, if it is to avail in the dispensation of the sacrament of Penance for the justification of the sinner. The end aimed at by this imperfect sort of sorrow is precisely a change of will, and the giving up of sinful attachment is an unreservedly good and reasonable thing. Hence there is no room for that concomitant regret, or dislike, with which other things are done through fear.

It is, of course, needless to observe that in what has been said hitherto we have been referring always to what is done as a result of fear, not to what takes place merely in, or with, fear. A vow taken out of fear produced by natural causes, such as a threatened shipwreck, is valid; but one extorted as the effect of fear unjustly applied by another is invalid; and this fact is probably true even when the fear is trifling, if it be the sufficient motive for making the vow. The reason is that it is difficult to conceive such a promise being accepted by Almighty God. So far as natural law is concerned, fear does not invalidate contracts. Nevertheless, when one of the parties has suffered distress at the hands of the other, the contract is voidable within the choosing of the one so injured. As to marriage, unless the fear prompting its solemnization is so extreme as to take away the use of the reason, the common teaching is that such consent, having regard for the moment only to the natural law, would be binding, and so the ecclesiastical law is discussed in another article. It is worthy of note that mere insensibility to fear, having its root whether in stolidity, or pride, or want of a proper rating of even temporal things, is not a valuable character asset. On the contrary, it represents a vicious temper of soul, and upon occasion its product may be notably sinful.

JOSEPH F. DE ANZA.

Feast of the Ass. See Asses, Feast of.

Feast of the Fools. See Fools, Feast of.

Feasts (Lat. Festum; Gr. ἡμέρα). Ecclesiastical, Holy Days, are days which are celebrated in commemoration of the sacred mysteries and events recorded in the history of our redemption, in memory of the Virgin Mother of Christ, or of His apostles, martyrs, and saints, by special services and rest from work. A feast not only commerates an event memorable, but also serves to excite the spiritual life by reminding us of the event it commemorates. At certain hours Jesus Christ invites us to His vineyard (Matt., xx, 1-15); He is born in our hearts at Christmas; on Good Friday we nail ourselves to the cross with Him; at Easter we rise from the tomb of sin; and at Pentecost we receive the gifts of the Holy Ghost. Every religion
had its feasts, but none has such a rich and judiciously constructed system of festive seasons as the Catholic Church. The succession of these seasons forms the ecclesiastical year, in which the feasts of Our Lord form the ground and framework, the feasts of the Blessed Virgin and the Saints the ornamental tracery.

Prototypes and starting-points for the oldest ecclesiastical feasts were the Jewish solemnities of Easter and Pentecost. Together with their Jewish models, they remained the only universal Christian feasts down to the third century (Tertullian, "De bapt."); 19; Origen, "Contra Celsum", VIII, 22). Two feasts of Our Lord (Epiphany, Christmas) were added in the fourth century; then came the feasts of the Apostles and Saints, particularly on the latter bank of the Rhine. For the Catholics in England Pius VI (19 March, 1777) established the following list of feasts: Easter and Pentecost two days each, Christmas, New Year's Day, Epiphany, Ascension, Corpus Christi, Annunciation, Ascension, Sts. Peter and Paul, St. George, and All Saints. After the restoration of the hierarchy (1850), the Annunciation, St. George, and the Monday after Easter and Pentecost were abolished. Scotland keeps also the feast of St. Andrew, Ireland the feasts of St. Patrick and the Annunciation. In the United States, the number of feasts was not everywhere the same; the Council of Baltimore (1854), the third Plenary Council of Baltimore (1884), by a general law, retained six feasts: Christmas, New Year's Day, Ascension, Assumption, the Immaculate Conception, and All Saints. Sts. Peter and Paul and Corpus Christi were transferred to the next following Sunday. In the city of Rome the following feasts are of double precept (i.e., of hearing Mass, and rest from work): Christmas, New Year's Day, Epiphany, Purification, St. Joseph, Annunciation, Ascension, St. Philip Neri (26 May), Corpus Christi, Nativity of the B. V. M., All Saints, Conception of the B.V.M., St. John the Evangelist. The law of Rome gives these feast days: Christmas, St. Peter and Paul, Assumption, Nativity, Conception, Christmas, and the patronal feasts. The Greek Church at present observes the following Holy Days: Nativity of Mary, Exaltation of the Cross (14 Sept.), St. Demetrius (26 Oct.), St. Michael (8 Nov.), Entrance of Mary into the Temple (21 Nov.), Conception of St. Nicholas (6 Dec.), Conception of St. Anne (9 Dec.), Nativity of Christ, Commemoration of Mary (26 Dec.), St. Stephen (27 Dec.), Circumcision (1 Jan.), Epiphany, the Doctors St. Basil, St. Gregory, St. John Chrysostom (30 Jan.), the Meeting of Christ and Simeon (2 Feb.), Annunciation, St. George (29 Apr.), Nativity of St. John the Baptist (3 June), Pentecost (5 June), Transfiguration (6 Aug.), Assumption, Beheading of St. John (29 Aug.), the Monday after Easter and Pentecost, Ascension of Christ, and the patronal feasts. The Russians have only nine ecclesiastical Holy Days which do not fall on a Sunday, viz.: Nativity, Epiphany, Ascension, Transfiguration, Purification, Annunciation, Assumption, Presentation of Mary (21 Nov.), and the Exaltation of the Cross. But they have fifty festivals (birthdays, etc.) of the imperial family, on which days not even a funeral can be held.

Division of Feasts.—Feasts are divided: (a) According to external celebration (feriatio): (1) festa jori, or feasts of precept, with double obligation, to rest from work and to hear Mass; (2) festa chori, which are kept only in the liturgy, by the celebration of Mass, and the recitation of the Divine Office. Besides these there can and still are, in some dioceses, e.g. in England, the so-called "Half Holy Days" on which the people after having heard Mass can do servile work (Candlemas, Nativity of Mary, and the Immaculate Conception in the Diocese of Utrecht). (b) According to extension: (1) Universal feasts, celebrated everywhere, at least in the Latin Church;
Particular feasts, celebrated only by certain religious orders, countries, provinces, dioceses or towns. These last are either prescribed by the general Constitutions, like the provincial feasts, or are specially approved by the ApostolicSee, and prescribed by bishops or synods, for particular countries or dioceses (festa pro aliquibus locis in the Breviary). The universal feasts are contained in the Roman Calendar.

According to their position in the calendar:
1. movable feasts, which always fall on a certain day of the week, depending on the date of Easter, or the position of the Sunday, e.g. Ascension of Christ (forty days after Easter), or the feast of the Holy Rosary, the first Sunday of October;
2. immovable feasts, fixed on a certain date of the year, e.g. Christmas, 25 December.

In the Armenian Church all the feasts of the year are movable, except six: Epiphany, Purification (14 Feb.), Annunciation (7 April), Nativity (8 Sept.), Presentation (21 Nov.), and 8 Dec). Conception of Mary (Tondini, "Calendrierliturgique de la Nation Armenienne", Rome, 1906).

The Breviary is the office of the pope (see Calendar and Duplex). Since the thirteenth century there are three kinds of feasts: festum simplex, semiduplex, and duplex, all three regulated by the recitation of the Divine Office or Breviary. The simple feast commences with the chapter (caputulium) of the Mass, and ends with none. It has only lessons and takes the psalms of Mattins from the aforesaid office; the rest of the office is the like of the semidouble. The semidouble feast has two Vespers, nine lessons in Mattins, and ends with Compilae. The antiphons before the psalms are only intoned. In the Mass, the semidouble has at least three "orationes" or prayers. On a double feast the antiphons are sung in their entirety, before and after the psalms. In Lauds and Vespers there are no suffragia of the saints, and the Mass has only one "oratio" (if there be no commemoration prescribed). The ordinary double feasts are called duplіcіa minora; occurring with feasts of a higher rank, they can be simplified, except the octave days of some feasts and the feasts of the Doctors of the Church, which are transferred. The feasts of a higher rank are the duplіcіa mаjоra (introduced by Clement VIII), the duplіcіa secundae claсsіs and the duplіcіa prіma clаsіs. Some of the latter are kept as the octave.

The Reformation of the Breviary by Pius V (1566-72), the terms by which the solemnity of a feast could be known were, in many churches, very different from the terms we use now. We give a few examples from Grotefend, "Zeitschrift", etc. (Hanover, 1891-98, 11-11): Chur: "Festum summum, plenum officium trium lectionum, commemoratio." Havelberg: "Festum summum, semisummum, secundum, tertium, novem majus, novem minus, compulsatio 3 lect., antiphona." Halle: "Festum prepooz, apostolicum, dominicale, 9 lect., compulsatio 3 lect., antiphona." Breslau: "Festum Triplex, duplіum, 9 lect., commemoratio," Carthusians: "Festum Candelarum, capituli, 12 lect., missa, commemoratio." Lund: "Festum Prelatorum, canoniciorum, vicariorum, duplіum, simplex, 9 lect., 3 lect., memoria."

Some of the religious orders which have their own breviary, did not adopt the terms now used in the Roman Breviary. For example, the Cistercians have the following terminology: "Festum sermonis majus, sermonis minus, duum missarum majus, 2 missae minus, 12 lectionum, 3 lect. commemoratio." The Dominicans: "Tотum duplex, duplіum, simplex, 3 lect., memoria." The Carmelites: "Duplіum majus I. classis solemnis, duum missarum majus I. classis, duplіum minus I. classis, duplіum minus 2. classis, semiduplіum, simplex, simplicissimum."

Among the feasts of the same rite there is a difference in dignity. There are (1) primary feasts which commemorate the principal mysteries of our religion, or celebrate the death of a saint; (2) secondary feasts, the object of which is a particular function, e.g. the feast of the Crown of Thorns, of the relics of a saint or of some miracle worked by him, e.g. the feast of the translation of St. Stephen, the Apparition of Our Lady of Guadalupe. The list of primary and secondary feasts has been determined by a decree of the Sacred Congregation of Rites (22 Aug., 1858), and is found in the introduction to the Roman Breviary.

Within the two classes mentioned the feasts of Christ take the first place, especially those with privileged vigils and octaves (Christmas, Epiphany, Easter, Pentecost, and Corpus Christi); then follow the feasts of the Blessed Virgin, the Holy Angels, St. John the Baptist, St. Joseph, the Apostles and Evangelists, and the other saints.

F. G. HOLWECJ.

Feasts among the Jews. See Atonement; Biblical Antiquities; Dedication; Jubilee; Passover; Pentecost; Purim; Sabbath; Tabernacles; Trumpets.

Febronianism, the politico-eclesiastical system outlined by Johann Nikolaus von Hontheim, Auxiliary Bishop of Trier, under the pseudonym Justus Febronius, in his works led to the anti-Franciscan Juris consulti de Statu Ecclesie et legitimat potestate Romani Pontificis Liber singularis ad reuiniendos dissidentes in religione christianos compositus" (Bullioni apud Guillemum Evardi, 1763; in reality the work was published by Esslinger at Frankfort-on-the-Main). Taking as a basis the Gallican principles which he had imbibed from the canonist Van Espen while pursuing his studies in Louvain, Hontheim advanced along the same lines, in spite of many inconsistencies, to a radicalism far outstripping traditional Gallicanism. He develops in this work a theory of ecclesiastical organization founded on a denial of the papal cosmopolitan authority of the Church. The ostensible purpose was to facilitate the reconciliation of the Protestant bodies with the Church by diminishing the power of the Holy See.

According to Febronius (chap. I), the power of the keys was entrusted by Christ to the whole body of the Church, which holds it principaliuer et radicaliter, but exercises it through her prelates, to whom only the administration of this power is committed. Among these the pope comes first, though even he is subordinate to the Church as a whole. The Divine institution of the primacy in the church is acknowledged (chap. II), but Febronius holds that its connection with the Roman See does not rest on the authority of Christ, but on that of Peter and the Church, so that the Church has the power to attach it to another see. The power of the pope, therefore, should be confined to those essential rights inherent in the primacy which were exercised by St. Peter during the first eight centuries. The pope is the centre with which the individual Churches must be united. He must be kept informed of what is taking place everywhere throughout the Church, that he may exercise the care demanded by his office for the preservation of unity. It is his duty to enforce the observance of the canons in the whole Church: he has the authority to promulgate laws in the name of the Church, and to depute legates to exercise his authority as primate. His power, as head of the whole Church, however, is of an administrative and unifying character, rather than a power of...
jurisdiction. But since the ninth century, chiefly through the influence of the False Decretals of pseudo-
Isidore, the constitution of the Church has undergone a complete transformation, in that the papal authority
has been extended beyond all bounds (cap. iii). By a violation of justice, questions which at one
time were left to the decision of provincial synods and
metropolitans gradually came to be reserved to the
Holy See (cap. iv), as, for instance, the condemnation of
heretics, the confirmation of episcopal elections, the
naming of superiors, with the consecration of bishops,
transfer and removal of bishops, the establishment of new
dioceses, and the erection of metropolitan and
primalial sees. The pope, whose infallibility is ex-
pressly denied (cap. v), cannot, on his own authority,
without a council or the assent of the entire episco-
porate, give forth any decisions on matters of faith
universal obligation. Likewise in matters of disci-
pline, he can issue no decrees affecting the whole body
of the faithful; the decrees of a general council have
binding power only after their acceptance by the indi-
vidual churches. Laws once promulgated cannot be
altered at the pope's will or pleasure. It is also denied
that the pope, by the nature and duty of his office,
has any real authority to summon one, nor the right to preside at
its sessions, and the conciliar decrees do not need his rat-
ification. Ecumenical councils are of absolute neces-
sity, as even the assent of a majority of bishops to a
papal decree, if given by the individuals, outside a
council, does not constitute a final, irrevocable deci-
sion. Appeal from the pope to a general council is jus-
tified by the superiority of the council over the pope.
According to the Divine institution of the episcopate
(cap. vii), all bishops have equal rights; they do not receive
their power of jurisdiction from the Holy see. It is not within the province of the pope to exercise
ordinary episcopal functions in dioceses other than
that of Rome. The papal regulations regarding the
granting of benefices, annates, and the exemption of
religious orders are thus in conflict with the primitive
law of the Church, and must be abolished. Having
sustained, as he believes, that the existing ecclesiastical
law was not contrary to the original constitutions, the
pope has, as it were, expelled the pseudo-Isidore from
the Church, and the supreme pontiff restituted its
primacy, conferred upon it by the first bishop of the
Church, St. Peter (cap. viii). He then suggests as means
for bringing about this reformation (cap. ix), that the
people shall be properly enlightened on this subject,
that a general council with full freedom be held, that
national synods be convened, but especially that
Catholic rulers take concerted action, with the co-
operation and advice of the bishops, that secular
princes avail themselves of the Regnum Fiscet to resist
papal decrees, and that ecclesiastic and lay obedience be
assured to the pope. The second book, the pseudo-
Isidore, was not only extended by papal decrees (cap.
iii), but enlarged, was issued as early as 1765; it was reprinted
at Venice and Zurich, and translations appeared
in German, French, Italian, Spanish, and Portuguese.
In the three later volumes, which Hontheim issued as
supplementary to the original work, and numbered II
and III, a new part was added (Vol. II, Parts 1 and 2, 1772;
Vol. IV, Parts 1 and 2, 1773–74), he defended it
under the name of Febronius and various other pseu-
donyms, against a series of attacks. Later he pub-
lished an abridgment under the title: "Justinus Fe-
bronius abbreviat us et emendat us" (Cologne and
Frankfort, 1777). In addition to the "Judicature of
the Seminary" of the University of Cologne (1765), refuta-
tions appeared from a large number of Catholic au-
thors, the most important being: Ballerini, "De vi ac
racione primatii Romanorurn Pontificum et de ipso
urum infallibilitate in definiendis controversiis fidelit"
(Verona, 1766); Idem, "De potestate ecclesiastic
Romanorum Pontificum et potestate antiquae a
corporis, una cum vindiciis auctoritatis pontifici a contra
opus Just. Febronius (Verona, 1768; Augsburg, 1770;
new ed. of both works, Münster in W., 1845, 1847);
Zaccaria, "Antifebronio, oesia apologia polemico-
storici del primato del Papa, contra la dannata opera
Febronii" (1773); Konstanz, "Febronii pars 4, 5 et 6"
(vols., Cesena, 1768–70; tr. German, Reichenberger,
Augsburg, 1768); Idem, "Antifebronius vindicus" (4
vols., Cesena, 1771–2); Idem, "In tertium Justini
Febronii tomen animadversiones Romano-catholicoe"
(Rome, 1774); Mamachi, "Epistole ad Just. Febronii
de ratione regenae christianae reprehensione deque
legitimâ Romani Pontificis potestate" (5 vols., Rome,
1776–78). There were, besides, refutations written
from the Protestant standpoint, to repudiate the idea
that a diminution of the papal power was all that was
necessary to bring the Protestants back into union
with the Church, for instance Karl Friedrich Bahrdt,
"Dissertatio de eo, an fieri possit, ut sublato Pontificio
imperio reconcilientur Dissidentes in religione Christi-
iani" (Leipzig, 1763), and Johann Friedrich Bahrdt,
"De Romana Ecclesiae irreconcilibi l" (Leipzig, 1767);
Karl Gottl. Hofmann, "Programma continens examen regulea ex Vico Laurie Linerensi in Febronii repetitae"
(Wittenberg, 1768).
The first measures against the author were taken by Pius VI, who urged Clemens Wenzelslaus, Elector of
Trier, to prevail on Hontheim to recall the work. Only after prolonged exertions, and after a retrac-
tation, couched in general terms, had been adjudged
unsatisfactory in Rome, the elector forwarded to
Rome Hontheim's emended recantation (15 Novem-
ber, 1778). This was communicated to the car-
dinals in consistory by Pius VI on Christmas Day.
That this retraction was not sincere on Hontheim's
part is evident from his subsequent movements.
No more than was implied by reference to his
appearances in "Justini Febronii Jcti. Commentarius
in suam Retractionem Pio VI. Pont. Max. Kalendis
Nov. anni 1778 submissam" (Frankfort, 1781; Ger-
man ed., Augsburg, 1781), written for the purpose
of justifying his position before the public. Mean-
while, notwithstanding the prohibition, the "Febronii"
had produced its pernicious effects, which were not
checked by the retraction. The ideas advanced in
the work, being in thorough accord with the absolutis-
tic tendencies of civil rulers, were eagerly accepted
by the Catholic courts and governments of France, the
Austrian Netherlands, Spain and Portugal, Venice,
and Venice, and these, thenceforth, furthered the
development of the hands of court theologians and
canonists who favoured the scheme of a national Church.
Among the advocates of the theory of Febronianism

Trier, complied. Meanwhile no steps had been taken
against the author personally, who was well known in
Rome. Despite the ban of the Church, the book, har-
mourning as it did with the spirit of the times, had a
tremendous success, and, reprinted and enlarged, was issued as early as 1765; it was reprinted
at Venice and Zurich, and translations appeared
in German, French, Italian, Spanish, and Portuguese.
In the three later volumes, which Hontheim issued as
supplementary to the original work, and numbered II
and III, a new part was added (Vol. II, Parts 1 and 2, 1772;
Vol. IV, Parts 1 and 2, 1773–74), he defended it
under the name of Febronius and various other pseu-
donyms, against a series of attacks. Later he pub-
lished an abridgment under the title: "Justinus Fe-
bronius abbreviat us et emendat us" (Cologne and
Frankfort, 1777). In addition to the "Judicature of
the Seminary" of the University of Cologne (1765), refuta-
tions appeared from a large number of Catholic au-
thors, the most important being: Ballerini, "De vi ac
in Germany, mention should be made of the Trier professor, Franz Anton Haube, "Themata ex historiæ ecclesiasticae de hierarchia sacræ primorium V seculorum" (Trier, 1786); "Systema primum de potestate episcopali e quoque appellationi ad episcopalia quodam jura in specie punctuationibus I. II. et IV. congressi apostolici" (Trier, 1788); and Joseph Castello, "Dissertatio historica de varis causis, quibus accidentalis Romani Pontificis potestas successor ampliata fuit" (Trier, 1788). It was the Austrian canonsists, however, who contributed most towards the compilation of a new law code regulating the Church and State, which was reduced to practice after Joseph II. Especially notable, as being conceived in this spirit were the textbooks on canon law prescribed for the Austrian universities, and compiled by Paul Joseph von Rieger, "Institutiones juris ecclesiasticæ" (4 vols., Vienna, 1768–72; frequently reprinted), and Pehem, "Prefaceiones in juss ecclesiasticum universa," also, in a more pronounced way, the work of Johann Valentin Eybel, "Introductio in juss ecclesiasticum Catholicorum" (4 vols., Vienna, 1777; placed on the Index, 1784).

The first attempt to give Febronian principles a practical application was made in Germany at the Congress of 1776, where, under the three ecclesiastical Electors of Mainz, Cologne, and Trier, through their delegates, and under the directions of Hohnstein, compiled a list of thirty grievances against the Roman Church, in consonance with the principles of the "Febronius" (Gravamina trium Archiepiscoporum Electorum, Moguntini, Treviriensis et Colonensis contra Curiam Apostolicam anno 1769 ad Cesarem de-lata; printed in Le Bre, "Magasin zum Gebrauch der Staaten- und Kirchengeschichte," Pt. VIII, Ulm, 1783, pp. 1–21). More significant was the Ems Congress of 1786, at which the three ecclesiastical electors and the Prince-Bishop of Salzburg, in imitation of the Congress of Vienna, and in consonance with the basic principles of the "Febronius", made a fresh attempt to readjust the relations of the German Church with Rome, with a view to securing for the former a greater measure of independence; they also had their representatives draw up the Ems Punctuation in twenty-three articles; they achieved, however, no practical results. An attempt was made to realize the principles of the "Febronius" on a large scale in Austria, where under Joseph II a national Church was established according to the plan outlined. Efforts in the same direction were made by Joseph's brother Leopold, in his capacity of Grand-Duke of Tuscany. The resolutions adopted at the Synod of Pistoia, under Bishop Scipio Ricci, along these lines, were repudiated by the majority of the bishops of the country.

Feder, Johann Michael, German theologian, b. 25 May, 1753, at Oellingen in Bavaria; d. 26 July, 1824, at Würzburg. He studied in the episcopal seminary of Würzburg from 1772–1777; in the latter year he was ordained priest and promoted to the licentiate in theology. For several years Feder was chaplain of the Julius hospital; in 1783 he was appointed extraordinary professor of Oriental languages at the University of Würzburg; was created a Doctor of Divinity in 1786; director of the university library, 1791; ordinary professor of theology and censor of theological publications, 1795. After the reorganisation of the University of Würzburg, 1803–4, he was appointed chief librarian, resigning the professorship of theology in 1805. Shortly after his removal from office as librarian, November, 1811, he suffered a stroke of apoplexy, from which he never fully recovered. Feder was a prolific writer, editor, and translator, but was imbued with the liberal views of his age. His most meritorious work is a revision of Dr. Heinrich Braun’s German translation of the Bible (1803), 2 vols. This revision served as the basis for Dr. Altioli’s well-known translation. He also translated the writings of St. Cyril of Jerusalem (1786); the sermons of St. Chrysostom on Matthew and John, in comp. with the unfortunate Eulogius Schneider (1786–88); Theodore’s ‘ten discourses on Divine Providence’ (1788); Gerard’s lectures on pastoral duties (1803); de Baussete’s life of Fénélon (1809–12), 3 vols., and the same author’s life of Bossuet (1820); Faber’s ‘Meditations’ (1786). He was editor of the ‘Magasin sur Beförderung des Schulwesens’ (1791–97). He printed the ‘Prakt. Lehrin. für katholische Geistliche’ (1798–1800), and of the ‘Würzburger Gelehrten Anzeigen’ (1788–92). He also wrote several volumes of sermons.

Feeling, Rudolph William Basil, eighth Earl of Denbigh, and ninth Earl of Desmond, b. 9 April, 1853; d. 3 July, 1902. He was educated at Eton College and Trinity College, Cambridge, where he took the degree of Bachelor of Arts. He was received into the Church in 1850, and took an active part in many Catholic works of charity under Cardinal Wiseman. As Viscount Feilding he was appointed honorary treasurer, jointly with Viscount Campden and Mr. Archibald J. Dunn, of the Peter’s Pence Association. He was a man of great courage and decided character, qualities needed in the middle of the nineteenth century when the English Protestant mind was much inflamed in consequence of the establishment of the Catholic hierarchy in England. As a thanksgiving for his conversion, he built the Franciscan monastery at Pentasph, North Wales.

Feilmoser, Andreas Benedict, theologian and Biblical scholar, b. 8 April, 1777, at Hofgarten, Tyrol; d. at Tübingen, 20 July, 1831, studied at Salzburg from 1792 to 1794, took a two years’ course in philosophy at the University of Innsbruck (1794–96), and entered the Benedictine Order at Fiecht, Tyrol, in September, 1796. At this abbey he studied the Oriental languages under Dom Georg Maurer, a monk of St. George’s Abbey, Villingen. For his theological studies he was sent to Villingen, where he again heard Dom Maurer and Dom Gottfried, theological scholars. Returning to Fiecht in 1800, he taught Biblical exegesis and was ordained priest in 1801; late in the same year he was appointed master of novices, in 1802 professor of Christian ethics and in 1803 of ecclesiastical history. A number of these which he published in 1803 aroused the suspicions of the ecclesiastical authorities of the Diocese of Brixen. The Abbot of Fiecht was sharply rebuked for permitting Feilmoser to teach unsound doctrine. In 1804 appeared Feilmoser’s ‘Animadversiones in historiam ecclesiasticam’, which did not meet the approval of the diocesan authorities, who threatened, in case Feilmoser did not desist from advancing dangerous opinions, to institute proceedings against the abbot. To Feilmoser’s request for a specification of the objectionable passages in his writings no reply was made, but the entire matter was reported to the emperor at Vienna. An investigation instituted by order of the emperor resulted favourably for Feilmoser. He was, nevertheless, removed from the office of master of novices and in 1806 was made assistant in the parish of Achenthal. By the Treaty of Presburg (26 Dec., 1805) Tyrol was cut off from Austria and became a part of Bavaria. The new Government, in November, appointed him professor of rhetoric, languages and of introduction to the Old Testament at the University of Innsbruck. The monastery of Fiecht having been suppressed in 1807, he left the order. At Innsbruck he received the degree of Doctor of Theology in 1808 and was appointed to the chair of New Testament exegesis. During the Tyrolean insurrection, August, 1809, he, with a number of other professors, was taken prisoner and carried to Pustertal by order of Andreas Hofer. In 1810 he returned to Innsbruck; in 1811 he was made professor of catechetics, in 1812 of Latin and Greek philology, and in 1817 was reappointed professor of New Testament exegesis in the face of much opposition. About this time the old charges against him were revived, and in 1818 he was bitterly attacked in an anonymous work published at Augsburg. He was denied the opportunity of publicly defending himself, inasmuch as the imperial censor at Vienna, on 17 July, 1819, decided that the anonymous work was too national for the country, it was under Austrian censure and must be regarded as non-existent. On 25 April, 1820, he was formally appointed a professor at the University of Tübingen, where he continued to teach New Testament exegesis until his death.

He wrote: “Sätze aus der christlichen Sittenlehre für die öffentliche Prüfung in dem Benediktinerstift zu Fiecht” (Innsbruck, 1803). “Sätze aus der Einleitung
in die Bücher des alten Bundes und den hebräischen Alterthümern" (Innsbruck, 1803); "Animadversiones in historiam ecclesiasticam" (Innsbruck, 1803); "Sätze aus der Einleitung in die Bücher des neuen Bundes und der bibl. Hermeneutik" (Innsbruck, 1804); "Einleitung in die Bücher des neuen Bundes" (Innsbruck, 1810); "Auszug des hebr. Sprachlehrs nach Jahn" (Innsbruck, 1812); "Die Vertheidigung des Kurfürsten" (Weil, 1820). His principal work, "Einleitung in die Bücher des neuen Bundes", published in a revised edition (Tübingen, 1830), is inaccurate and was praised far beyond its due. He also contributed papers and criticisms to the "Annalen der österreichischen Literatur" and the "Theologische Quartalschrift" of Tübingen. His exoteric writings were influenced by the rationalistic spirit of his day. He denied the genuineness of the Comma Johanneum and maintained that the Books of Job, Jonas, Tobias, and Judith are merely didactic poems.

ALEXIUS HOFFMANN.

Feldbíger, Johann Ignaz von, a German educational reformer, pedagogical writer, and canon regular of St. Augustine, b. 6 January, 1740, at Gross-Glogau in Silesia; d. 17 May, 1788, at Freiburg in Hungary. He was the son of a postmaster, who had been ennobled by Emperor Charles VI. The death of his parents constrained him, after studying theology at the University of Breslau, to accept (1744) the position of teacher in a private family. In 1746 he joined the Order of Canons Regular of St. Augustine at Sagan in Silesia, was ordained a priest in 1748, and ten years later became abbot of the monastery of Sagan. Noting the sad condition of the local Catholic schools, he strove to remedy the evil by publishing his first school-ordinance in 1761. During a private journey to Berlin, in 1762, he was favourably impressed with Hecker's Realschule and Hähn's method of instructing by initials and tables (Literal- or Tabellenmethode), and became an enthusiastic propagator of this method. A school-ordinance for the dependencies of the monastery of Sagan was issued in 1763, a teachers' college was established, and Feldbíger's school-reforms soon attracted the attention of Catholics and Protestants alike. He was supported by the Silesian minister von Schlabrendorf, and at the latter's request, after a second journey to Berlin he elaborated a general school-ordinance for the Catholic elementary schools (1766). Finally, the joint work of the prior and the abbot of Sagan, appeared in 1766 under the title, "Silesian Catechism", and enjoyed a wide circulation. The death of von Schlabrendorf in 1769 marked the end of the Silesian government's educational efforts. Feldbíger's suggestions were heeded, however, by King Frederick II in the regulations issued (1774) for Silesian high schools.

At the request of the empress, Maria Theresa, he repaired to Vienna in 1774, and was appointed General Commissioner of Education for all the German lands of her dominions. The same year he published his general school-ordinance, and in 1775 his most important pedagogical production: "Methodenbuch für Lehrer der deutschen Schulen". His school-reform was copied by Bavaria and other German lands and was not without influence on Russia. Considerable opposition, aroused by Feldbíger's arbitrary, developed in Austria against his plan of founding special schools for the neglected classes. In 1774, however, always remained his faithful protectress. But his strictly religious principles of education displeased Joseph II, who deprived him of his position, assigned him to his provostship at Presburg, and advised him to look after educational interests in Hungary (1782). The chief peculiarity of Felbíger's too mechanical method was the use of tables containing the initials of the words which expressed the lesson to be imparted. Other features were the substitution of class-instruction for individual instruction, and the practice of questioning the pupils. He aimed at raising the social standing, financial condition, and professional qualification of the teaching body, and at giving a friendly character to the mutual relations between teacher and pupil. For a list of his 78 publications, which are mainly of a pedagogical character, see Panholz's "Methodenbuch" (46-46).

Felician Sisters, O. F. S., founded 21 November, 1855, at Warsaw, Poland, by Mother Mary Angela, under the direction of Father Honorat, O. M. Cap. On their suppression, in 1864, by the Russian Government they transferred the mother-house to Cracow, Austria. In the province of Cracow there are forty houses of this congregation, as well as in the United States, where the first foundation was made in 1874, there are two provinces, 820 choir and lay sisters, 100 novices, 168 postulantes; in charge of 87 schools with 36,700 pupils, 5 orphanages with 416 inmates, 2 homes for the aged, an emigrant home, working girls' home, and a day nursery.

MOTHER MARY JEROME.

Feliciussimus, a deacon of Carthage who, in the middle of the third century, headed a short-lived but dangerous schism, to which undue reverence has been given by a certain class of writers, Neander, Ritschl, Harack, and others, who see in it "a presbyteral reaction against episcopal autocracy". Of the chief figure in the revolt, Feliciussimus, not much can be said. The movement of which he was afterwards the leader originated in the opposition of five presbyters of the church of Carthage to the election as bishop of that see. One of these presbyters, Novatus, selected Feliciussimus as deacon of his church in the district called Mons, and because of the importance of the office of deacon in the African Church, Feliciussimus became the leader of the malcontents. The schism of Feliciussimus led to no open rupture until after the outbreak of the Decian persecution in 250, when St. Cyprian was compelled to flee from the city. His absence created a situation favourable to his adversaries, who took advantage of a division already existing in regard to the methods to be followed in dealing with those who had apostatized (lapsi) during persecution and who afterwards sought to be readmitted to Christian fellowship. It was easy under the circumstances to arouse much hostility to Cyprian, because he had followed an extremely rigorous policy in dealing with those lapsi. The crisis was reached when St. Cyprian sent from his place of hiding a commission consisting of two bishops and two priests to distribute alms to those who had been ruined during the persecution. Feliciussimus, regarding the activities of these men as an encroachment on the prerogatives of his office, attempted to frustrate their mission. This was reported to St. Cy- prian, who at once denounced the proceedings of the Europa- nus immediately gathered around him all those who were dissatisfied with the bishop's treatment of the lapsi and proclaimed an open revolt. The situation was still further complicated by the fact that the thirty years' peace preceding the Decian persecution had caused much laxity in the Church, and that on the
Moreover, apart from the present form of the Acts, various details have been called in question. Thus, if Felicitas were really the mother of the seven martyrs honoured on 10 July, it is strange that her name does not appear in the well-known fourth-century Roman calendar. Her feast is first mentioned in the “MartYROLOGIUM Hieronymianum”, but on a different day (3 Nov.). It is, however, worth noting that, as the seven martyrs called her sons in the Acts, suffered for the Christian Faith. From a very early date her feast was solemnly celebrated in the Roman Church on 23 November, for on that day Gregory the Great delivered a homily in the basilica of S. Maria Maggiore, where the seven brothers are buried in the catacomb of Maximus; in that cemetery the Via Salaria all Roman itineraries, or guides to the burial-places of martyrs, locate her burial-place, specifying that her tomb was in a church above this catacomb (De Rossi, Roma sotterranea, I, 176–77), and that the body of her son Silanus was also there. The crypt where Felicitas was laid to rest was later enlarged into a subterranean chapel, and was rediscovered in 1885. A seventh-century fresco is yet visible on the rear wall of this chapel, representing in a group Felicitas and her seven sons, and overhead the figure of Christ bestowing upon them the eternal crown.

Certain historical references to St. Felicitas and her sons antedate the aforesaid Acts, e.g. a fifth-century sermon of St. Peter Chrysologus (Sermon cxxxiv, in P. L., LII, 563) and a metrical epithal in either written by Pope Damasus (d. 384) or composed shortly after his time and suggested by his poem in praise of the martyr:

Diutius quid merit prophetæ pro rege feri; Femina non timuit gladium, cum natis obivit.
Confessa Christum meruit per secula nomen.

(Learn how meritorious it is to die for the King (Christ). This woman feared not the sword, but perished with her sons. She confessed Christ and merited an eternal renown.—ibm, Damiæ Epigrammata, Leipzig, 1895, p. 45.) We possess, therefore, confirmation for an ancient Roman tradition, independent of the Acts, to the effect that the Felicitas who reposed in the catacomb of Maximus, and whose feast the Roman Church commemorated 23 Nov., suffered martyrdom with her sons; it does not seem improbable concerning these sons. It may be recalled that the tomb of St. Silanus, one of the seven martyrs (10 July), adjoined that of St. Felicitas and was likewise honoured: it is quite possible, therefore, that tradition soon identified the sons of St. Felicitas with the seven martyrs, and that this formed the basis for the extant Acts. The tomb of St. Januarius in the catacomb of Prætextatus belongs to the end of the second century, to which period, therefore, the martyrdoms must belong, probably under Marcus Aurelius. If St. Felicitas did not suffer martyrdom on the same occasion we have no means of determining the time of her death. In an ancient Roman edifice near the ruins of the Baths of Titus there stood in early medieval times a chapel in honour of St. Felicitas. A faded painting in this chapel represents her with her sons just as in the above-mentioned fresco in her crypt. Her feast is celebrated 23 Nov.

J. P. KIRSCH.
FELICITAS and Perpetua, SAINTS, martyrs, suffered at Carthage, 7 March, 203, together with three companions, Revocatus, Saturius, and Secundulus. The details of the martyrdom of these five confessors in the North African Church have reached us through a contemporaneous description, one of the most affecting accounts of the glorious warfare of Christian martyrs in ancient times. By a rescript of Septimius Severus (193-211) all imperial subjects were forbidden under severe penalties to become Christians. In consequence of this decree, the five catechumens at Carthage were seized and cast into prison, viz. Bibra Perpetua, a young married lady of noble birth; the slave Felicitas, and her fellow-slave Revocatus, also Saturius and Secundulus. Soon one Saturius, who deliberately declared himself a Christian before the judge, was also incarcerated. Perpetua's father was a pagan; her mother, however, and two brothers were Christians, one being still a catechumen; a third brother, the child Dinocrates, had died a pagan.

After their arrest, and before they were led away to prison, the five catechumens were baptized. The sufferings of the prison life, the attempts of Perpetua's father to induce her to apostatize before her martyrdom, and the violent death of the martyrs before their execution, the visions of Saturus and Perpetua in their dungeons, were all faithfully committed to writing by the last two. Shortly after the death of the martyrs a zealous Christian added to this document an account of their execution. The darkness of Christ and the oppressive atmosphere seemed frightful to Perpetua, whose terror was increased by anxiety for her young child. Two deacons succeeded, by sufficiently bribing the jailer, in gaining admittance to the imprisoned Christians and alleviating somewhat their sufferings. Perpetua's mother also, and her brother, yet a catechumen, visited them. Her mother brought in her arms to Perpetua her little son, whom she was permitted to nurse and retain in prison with her. A vision, in which she saw herself ascending a ladder leading to green meadows, where a flock of sheep was browsing, assured her of her approaching martyrdom.

A few days later Perpetua's father, hearing a rumour that the trial of the imprisoned Christians would soon take place, again visited their dungeon and besought her by everything dear to her not to put this disgrace on his name; but Perpetua remained steadfast to her Faith. The next day the trial of the six confessors took place before the Church, and of these six, three resolutely confessed their Christian Faith. Perpetua's father, carrying her child in his arms, approached her again and attempted, for the last time, to induce her to apostatize; the procurator also remonstrated with her but in vain. She refused to sacrifice to the gods for the safety of the emperor. The procurator thereupon had the father removed by force, on which occasion he was struck with a whip. The Christians were then condemned to be torn to pieces by wild beasts, for which they gave thanks to God. In a vision Perpetua saw her brother Dinocrates, who had died at the earhest age, at first seeming to her in pain, but shortly thereafter happy and healthy. Another apparition, in which she saw herself fighting with a savage Ethiopian, whom she conquered, made it clear to her that she would not have to do battle with wild beasts but with the Devil. Saturus, who also wrote down his visions, saw himself and Perpetua transported by four angels towards the East, into a beautiful garden, where they met four other North African Christians who had suffered martyrdom during the same persecution, viz. Jocundus, Saturninus, Antsuchus, and Quintus. He also saw in this vision Bishop Optatus of Carthage and the priest Aspasius, who had been deposed the day before, between them. In the meanwhile the birthday festival of the Emperor Geta approached, on which occasion the condemned Christians were to fight with wild beasts in the military games; they were therefore transferred to the prison in the camp. The jailer Fundus had learnt to respect the confessors, and he permitted other Christians to visit them. Perpetua's father was also admitted and made another fruitless attempt to pervert her.

Secundulus, one of the confessors, died in prison. Felicitas, who at the time of her incarceration was with child (in the eighth month), was apprehensive that she would not be permitted to suffer martyrdom at the time of the last martyrs, and the law forbade the execution of pregnant women. She prayed God to permit her to die with her companions. Happily, two days before the games she gave birth to a daughter, who was adopted by a Christian woman. On 7 March, the five confessors were led into the amphitheatre. At the demand of the pagan mob they were first scourged; then a boar, a bear, and a leopard, were set at the men, and a wild cow at the women. Wounded by the wild animals, they gave each other the kiss of peace and were then put to the sword. Their bodies were interred at Carthage. Their feast day was solemnly commemorated even outside Africa. Thus the 7th of March the feast of the victors of Carthage entered in the Philocalian calendar, i.e. the calendar of martyrs venerated publicly in the fourth century at Rome. A magnificent basilica was afterwards erected over their tomb, the Basilica Majorum; that the tomb was indeed in this basilica has lately been proved by Père Delattre, who discovered the ancient inscription bearing the names of the martyrs.

The feast of these saints is still celebrated on 7 March. The Latin description of their martyrdom was discovered by Holstenius and published by Pousinnes. Chapters iii-x contain the narrative and the visions of Perpetua; chapters xi-xiv the visions of Saturus. Chapters i, ii and xiv-xxi were written by an eyewitness soon after the death of the martyrs. In 1890 Rendell Harris discovered a similar narrative written in Greek, which he published in collaboration with Seth K. Gifford (London, 1890). Several historians maintain that this Greek text is the original, others that both the Greek and Latin texts are original and contemporary; but there is no doubt that the Latin text is the original and that the Greek is merely a translation. That Tertullian is the author of these Acts is an unproved assertion. The statement that these martyrs were all or in part Montanists also lacks proof, at least there is no evidence that they were montanists. Holstenius, Passio SS. MM. Perpetua et Felicitia, ed. FELIX. See Sandoe, Felina-Maria.

FELIX I, SAINT, POPE, date of birth unknown; d. 274. Early in 269 he succeeded Saint Dionysius as head of the Roman Church. About this time there arrived at Rome, directed to Pope Dionysius, the report of the Synod of Antioch which in that very year condemned the local bishop Paul of Samosata, for his heretical teachings concerning the doctrine of the Trinity (see Antioch). A letter, probably sent by Felix to the East in response to the synodal report,
supplanting the exiled Catholic bishops with bishops of Arian tendencies, exerted himself to install a new Bishop of Rome in place of the banished Liberius. After it was invited to listen to the Roman Church; on the latter's arrival, Acacius of Caeasarea proceeded in inducing him to accept the office from which Liberius had been forcibly expelled, and to be consecrated by Acacius and two other Arian bishops. The majority of the Roman clergy acknowledged the validity of his consecration, but the laity would have nothing to do with him and remained true to the banished but lawful pope.

When Constantinus visited Rome in May, 357, the people demanded the recall of their rightful bishop Liberius, who, in fact, returned soon after signing the third formula of Sirmium. The bishops, assembled in that city of Lower Panonia, wrote to Felix and the Roman clergy advising them to receive Liberius in all charity and to put aside their dissensions; it was added that Liberius and Felix should together govern the Church of Rome. The people received their legitimate pope with great enthusiasm, but a great commotion arose against Felix, who was finally driven from the city. Soon after, he attempted, with the help of his adherents, to occupy the Basilica Julia (Santa Maria in Trastevere), but was finally banished in perpetuity by unanimous vote of the Senate and the people. He retired to the neighbouring Porto, where he died. Felix was portrayed as a saint and confessor of the true Faith. This distortion of the true facts originated most probably through confusion of this Felix with another Felix, a Roman martyr of an earlier date.

According to the "Liber Pontificalis," which may be registering here a reliable tradition, Felix built a church on the Via Aurelia. It is well known that on this road was buried a Roman martyr, Felix; hence it seems not improbable that apropos of both there arose a confusion (see Felix I) through which the real story of the antipope was lost and he obtained in local Roman history the status of a saint and a confessor. As such he appears in the Roman Martyrology on July 30.

Felix II, Pope (more properly Antipope), 355–58; d. 22 Nov., 356. In 355 Pope Liberius was banished to Berea in Thrace by the Emperor Constantius because he upheld tenaciously the Nicene definition of faith and refused to condemn St. Athanasius of Alexandria (see Liberius). The Roman clergy pledged itself in solemn council not to acknowledge any other Bishop of Rome but Liberius. ("Maiestas ecclesiae," the church calendar) or Fausti Libellus preceum," no. 1: "Quae gesta sunt inter Liberrum et Felicem episcopos" in "Collectio Avellana," ed. Günther; Hieronymus, "Chronicon," ad an. Abr. 2365.) The emperor, however, who was

(1883), 152; Bibliotheca hagiographica latina, 26; Courtois, in Etudes d'histoire ecclésiastique, I, 272, 364; Zahn, Gesch. der römischen Kirche, 2, 189, 383 sqq.; Allard, Histoire des persecutions, II, 243 sqq.

FELIX III, SAINT, POPE (483–492), b. of a Roman senatorial family and said to have been an ancestor of Saint Gregory the Great. Nothing certain is known of Felix, till he succeeded St. Simplicius in the Chair of Peter (483). At that time the Church was still in the midst of her long conflict with the Eutychian heresy. In the preceding year, the Emperor Zeno, at the suggestion of Acacius, the perfidious Patriarch of Constantinople, had issued an edict known as the Henoticon or Act of Union, in which he declared that no symbol of faith, other than that of Nice, with the additions of 381, should be received. The edict was intended as a bond of reconciliation between Catholics and Eutychians, but it caused greater conflicts than ever, and was the Church of the East into three: the Eutychian, the Monophysite, and the Catholicae. As the Catholics everywhere spurmed the edict, the emperor had driven the Patriarchs of Antioch and Alexandria from their sees. Peter the Tanner, a noto-

J. P. KIRCHS.
Antioch, and Peter Mongus, who was to be the real source of trouble during the pontificate of Felix, had seized that of Alexandria. In his first synod Felix excommunicated Peter the Tanner, who was living at Constantinople, and who was accused of committing fornication. In 484, Felix also excommunicated Peter Mongus—an act, which brought about a schism between East and West, that was not healed for thirty-five years. This Peter, being a time-server and of a crafty disposition, ingratiated himself with the emperor, and Acacius by subduing him to the Heretical teaching of Acacius in a synod at Constantinople. In 484, Felix also excommunicated Peter Mongus—an act which brought about a schism between East and West, that was not healed for thirty-five years. This Peter, being a time-server and of a crafty disposition, ingratiated himself with the emperor, and Acacius by subduing him to the Heretical teaching of Acacius in a synod at Constantinople.

Felix, having convened a synod, sent legates to the emperor and Acacius, with the request that they should expel Peter Mongus from Alexandria and that Acacius himself should come to Constantinople to discuss the conduct of the legates. The legates were detained and imprisoned; then, urged by threats and promises, they held communion with the heretics by distinctly uttering the name of Peter in the reading of the sacred diphtys. When their treason was made known at Rome by Simeon, one of the "Acacian" monks, Felix convened a synod of seventy-seven bishops in the Lateran Basilica, in which Acacius as well as the papal legates were excommunicated. Supported by the emperor, Acacius disregarded the excommunication, removed the pope's name from the sacred diphtys, and remained in the see till his death. His successor Phraвitas, sent messengers to Felix, assuring him that he would not hold communion with Peter, but, the pope learning that this was a deception, the schism continued. Peter having died in the meantime, Euthymius, who succeeded Phraвitas, also sought communion with Rome, but the pope refused, as Euthymius would not remove the names of his two predecessors from the sacred diphtys. The schism, known as the Acacian Schism, was not finally healed till 518 in the reign of Justinian. In Africa, the Arian Vandals, Genseric and his son Hvenirac, had been persecuting the Church for more than 50 years and had driven many Catholics into exile. When peace was restored, numbers of those who through fear had fallen into heresy and had been rebaptized by the Arians desired to return to the Church. On being refused by those who had remained firm, they appealed to Felix, who convened a synod and sent a letter to the bishops of Africa expounding the conditions under which they were to receive back. Felix died in 492, having reigned eight years, eleven months and twenty-three days.

Felix IV, Pope (528-530).—On 18 May, 528, Pope John I (q. v.) died in prison at Ravenna, a victim of the angry suspicions of Theodoric, the Arian king of the Goths. When, through the powerful influence of this ruler, the cardinal-priest, Felix of Samnium, son of Castorius, was brought forward in Rome as John's successor, the clergy and laity yielded to the wish of the Gothic king and chose Felix pope. He was consecrated Bishop of Rome 12 July, 526, and took advantage of the favour he enjoyed at the court of Theodoric to further the interests of the Roman Church, discharging the duties of his office in a most worthy manner. On 30 August, 526, Theodoric died, and, his government being a Roman one, the government was conducted by Athalaric's mother Amalasuntha, daughter of Theodoric and favourably disposed towards the Catholics. To the new ruler the Roman clergy addressed a complaint on the usurpation of their privileges by the civil power. A royal edict, drawn up by Cassiodorus in terms of the deepest respect for the papal authority, confirmed the ancient custom that every civile and criminal charge against a cleric should be submitted to the pope, or to an ecclesiastical court appointed by him. A fine of ten pounds of gold was imposed as a punishment for the violation of this order, and the money thus obtained was to be distributed amongst the poor by the pope (Cassiodorus, "Variae," VIII, n. 24, ed. Mon. Germ. Hist. Coll., Mon. German. Hist., Mon. Germanicorum in discipline sacra, XI, 255). The pope received as a gift from Amalasuntha two ancient edifices in the Roman Forum, the Temple of Romulus, son of the Emperor Maxentius, and the adjoining Templum sacra urbis, the Roman land-registry office. The pope converted the buildings into the Church of SS. Costantin and Damiano, which still exists and in theapse of which is preserved the large and magnificent mosaic executed by order of Felix, the figure of the pope, however, being a later restoration (see COSSUS AND DAMIAN). Felix also took part in the so-called Semipelagian conflict in Southern Gaul with Simeon, archbishop of Marseilles, concerning the right of laymen to appoint bishops to the see of the bishops of those parts a series of "Capitula," regarding grace and free will, compiled from Scripture and the Fathers. These capitula were published as canons at the Synod of Orange (529). In addition Felix approved the work of Cassius of Arles against the Riezian John (q. v.) and the pallium of Boniface V, made it known publicly that he had chosen Boniface to succeed him, and that he had apprised the court of Ravenna of his action ("Neues Archiv," XI, 1886, 367; Duchesne, "Liber Pontificalis," I, 282, note 4). Felix IV died soon afterwards, but in the papal election which followed his wishes were disregarded (see BONIFACE II). The feast of Felix IV is celebrated on 30 January. The day of his death is uncertain, but it was probably towards the end of September, 530.

Felix V (Amadeus of Savoy), Anti-pope (1440-1449), b. 4 Dec., 1483; d. at Ripaille, 7 Jan., 1461. The schismatic Council of Basle, which appeared in 1438, elected as the rightful pope, Eugene IV, deposed, proceeded immediately with the election of an anti-pope (see BASLE, COUNCIL OF). Wishing to secure additional influence and increased financial support, they turned their attention towards the rich and powerful prince, Duke Amadeus VIII of Savoy. Amadeus had exercised his dependencen on the papacy, and had evinced a great zeal for the interests of the Church, especially in connexion with the Western Schism regarding the papal succession, brought to a close by the Council of Constance. Emperor Sigismund had shown his appreciation of this ruler's service by raising, in 1416, the former county of Savoy to the status of a duchy, and in 1422 conferred on Amadeus the county of Geneva. On the death of his wife, Maria of Burgundy, Duke Amadeus resolved to lead henceforth a life of contemplation, without however entirely resigning the government of his territories. He appointed his son Ludwig regent of the duchy, and retired to Ripaille on the Lake of Geneva, where, in company with five knights whom he had formed into an Order of St. Maurice, he led a semi-monastic life in accordance with a rule drawn up by himself.
FÉLIX

Amadeus had been in close relations with the schismatic Council of Basle; and was elected pope, 30 October, 1439, by the electoral college of that council, including one cardinal (d'Allemand or Aries), eleven bishops, and five theologians, and the canonists. After long negotiations with a delegation from the council, Amadeus acquiesced in the election, 5 Feb., 1440, completely renouncing at the same time all further participation in the government of his duchy. Ambition and a certain fantastic turn of character induced him to take this step. He then married the niece of Felix V, and was solemnly consecrated and crowned by the Cardinal d'Allemand, 24 July, 1440. Eugene IV had already excommunicated him, 23 March, at the Council of Florence. Until 1442, the famous Éneas Sylvius Piccolomini, later Pius II, was the anti-pope's secretary. This renewal of the schism ruined any surviving prestige of the Basle assembly, just closed at Constance. Subsequently, Amadeus took up his residence in Savoy and Switzerland; his efforts to surround himself with a curia met with little success; many of those whom he named cardinals declined the dignity. He found general recognition only in Switzerland, and his claims to the crown of Savoy were recognized by the Dukes of Austria, Tyrol, and Bavarian-München, the Count-Palatine of Simmern, the Teutonic Order, some orders in Germany and some universities, hitherto adherents of Basle. He was soon ennobled in a quarrel with the Council of Basle concerning his rights in the duchy and its revenues. The rightful pope, Eugene IV, and his successor Nicolas V (1447), who were universally recognized from the first in Spain and Poland, found their claims even more widely admitted in France and Germany. In 1442, Felix left Basle; and on 16 May, 1443, occurred the last session of the Basle assembly. Felix, who had for the sake of its revenues assumed the administration of the Diocese of Geneva, clung for six years more to his usurped dignity, but finally submitted (1449) to Nicolas V, received the title of Cardinal of St. Sabina, and was appointed permanent Apostolic vicar-general for all the states of the House of Savoy and for several dioceses (Basle, Strasbourg, Chur, etc.). Thus ended the last papal schism.

FÉLIX, CÉLÉSTE-JOSEPH, French Jesuit, b. at Neuvillev-sous-les-Escus (Nord), 28 June, 1810; d. at Lille, 7 July, 1891. He began his studies under the Jesuits at the Dominican College at Cambrai, where he completed his secondary studies. In 1833 he was named professor of rhetoric, received minor orders and the diaconate, and in 1837 entered the Society of Jesus. He began his novitiate at Tronchiennes in Belgium, continued it at Saint-Acheul, and ended it at Bruges, where he studied philosophy and the sciences. Having completed his theological studies at Louvain, he was ordained in 1842 and returned to Brugellettes to teach rhetoric and philosophy. His earliest Lenten discourses, preached at Ath, and especially one on true patriotism, soon won him a brilliant reputation for eloquence.

Called to Amiens in 1850, he introduced the teaching of rhetoric at the Collège de la Providence and preached during Advent and Lent at the cathedral. His oratorical qualities became more and more evident, he was called to Paris. He first preached at St. Thomas d'Aquin in 1851, and in 1852 preached Lenten sermons at Saint-Germain-des-Prés, and those of Advent at Saint-Sulpice. It was thus that Mgr. Sibour named him to succeed the Dominicans, Father Lacordaire, and the Jesuits, Father de Raviggnan in the pulpit of Notre-Dame (1853 to 1870). He became one of its most brilliant orators. The conferences of the first three years have not been published in full. In 1856 Père Félix began the subject which he made the core-work of his life: "Progrès par le Christianisme". This formed the matter of a series of Lenten conferences which are preserved for us in fifteen volumes, and which have lost none of their reality. True progress in all its forms, whether of the individual or of the family, in science, art, morals, or government, is herein treated with great doctrinal exactness and breadth of view. The practical conclusions of these conferences Père Félix summed up every year in his preaching of the Easter retreat, which had been inaugurated by Père de Raviggnan. This was the side of his ministry which by nearest his heart, but he had especially during his stay at Nancy (1867-1882), and at Lille (1883-1891), the illustrious Jesuit spoke in nearly all the great cathedrals of France and Belgium. In 1881 he even went to Copenhagen to conduct the Advent exercises, and there he held a celebrated conference on monothelitism, at the request of the Society of St. Michael for the distribution of good books, and employed the leisure moments of his last years in the composition of several works and in the revision of his "Rerites à Notre-Dame", which he published in six volumes. The eloquence of Père Félix was characterized by clearness, vigorous logic, unction, and pathos, even in his reasoning. He lacked imagination and the enthusiasm of Lacordaire, but he was more skilled in dialectic and serene in doctrine. His dictum was richer than that of de Raviggnan, and while he was less dialectic than Monsabré he was more original. A list of his works is given by Sommervogel.

Félix and Adaeactus, Saints, martyrs at Rome, 303, under Diocletian and Maximian. The Acts, first published in Ado's Martyrology, relate as follows: Félix, a Roman priest, and brother of another priest, also named Félix, being offered to sacrifice to the gods, was brought by the prefect Dracus to the temple of Serapis, Mercurius, and Diana. But at the prayer of the saint the idols fell shattered to the ground. He was then led to execution. On the way an unknown person joined him, professed himself a Christian, and also received the crown of martyrdom. The Christians gave him the name Adaeactus (added). These Acts were afterwards embellished and later with an understood inscription by Pope Damascus. A Dracus cannot be found among the prefects of Rome; the other Félix of the legend is St. Félix of Nola; and Félix of Monte Pincio is the same Félix honoured on the Garden Hill. The brother is imaginary (Anat. Boll., XVI, 19-29). Their veneration, however, is very old; they are commemorated in the Sacramentary of Gregory the Great and in the ancient martyrologies. Their church in Rome, built over their graves, in the cemetery of Commodilla, on the Via Ostiensis, near the basilica of St. Paul, and restored by Leo III, was disused about three hundred years ago and again un-earthed in 1905 (Civitella Catt., 1905, IV, 608). Leo IV, about 850, is said to have given their relics to Irmengard, wife of Lothair I; she placed them in the abbey of canoneses at Echau in Alsace. They were brought
to the church of St. Stephen in Vienna in 1361. The heads are claimed by Anjou and Cologne. According to the "Chronicle of Andechs" (Donauwörth, 1877, p. 69), Henry, the last count, received the relics from Honorius III and brought them to the Abbey of Andechs. Their feast is kept on 30 August.

Brooks in Dict. Christ. Biog., s. v. Felix (217); Acta SS., Aug., VI, 549; Stadler, Heiligtumlexicon, s. v.

FRANCIS MERSHAM.

Felix of Cantalice, SANCT, Capuchin friar, b. at Cantalice, on the north-western border of the Abruzzi; d. at Rome, 18 May, 1557. His feast is celebrated amongst the Franciscans and in certain Italian dioceses on 18 May. He was usually represented in art as holding in his right hand a child, the Infant Jesus, because of a vision he once had, when the Blessed Virgin appeared to him and placed the Divine Child in his arms.

His parents were peasant folk, and very early he was set to tend sheep. When nine years of age he was hired out to a farmer at Città D'Acquile with whom he remained for over twenty years, first as a shepherd-boy and afterwards as a farm labourer. But from his earliest years Felix evinced signs of great holiness, spending all his leisure time in prayer, either in the church or in some solitary place. A friend of his having read to him the lives of the Fathers of the Desert, Felix grew to a great desire of embracing an eremitical life, but at the same time feared to live otherwise than under the obedience of a superior. After seeking light in prayer, he determined to ask admission amongst the Capuchins. At first the friars hesitated to accept him, but he eventually received the habit, in 1542, at Anticoli in the Roman Province. It was not without the severest temptations that he persevered and made his profession. These temptations were so severe as to injure his bodily health. In 1547 he was sent to Rome and appointed questor for the community. Here he remained for the rest of his life, and in fulfilling his lowly function became a veritable apostle of Rome.

The influence which he speedily gained with the Roman people is an evidence of the inherent power of personal holiness over the consciences of men. He had no learning; he could not even read; yet learned theologians came to consult him upon the science of the spiritual life and the Scriptures. Whenever he appeared amongst Romans he was respected, sometimes even abashed and withdrew from his sight. Sometimes Felix would stop them and earnestly exhort them to live a better life; especially did he endeavour to restrain young men. But judges and dignitaries also at times incurred his rebuke; he was no respecter of persons. It was a matter of public occasion, during a Carnival, he and St. Philip Neri organized a procession through the streets. The Oratorians headed the procession with their crucifix; then came the Capuchin friars; last came Felix leading Fra Lupo, a well-known Capuchin preacher, by a rope round his neck, to represent Our Lord to judgment by his executioners. Arrived in the middle of the revels, the procession halted and Fra Lupo preached to the people. The Carnival, with its open vice, was broken up for that year.

But Felix's special apostolate was amongst the children of the city, with whom his childlike simplicity made him a special favourite. His method with these was to gather them together in bands and, forming a circle, set them to sing canticles of his own composing, by which he taught them the beauty of a good life and the ugliness of sin. These canticles became popular, and frequently when on his rounds in quest of souls, Felix would be invited into the houses of his wayfarers and asked to sing. He would seize the opportunity to bring home some spiritual truth in extemporeized verse. During the famine of 1580 the directors of the city's charities asked his superior to place Felix at their disposal to collect alms for the starving, and he was untinged in his quest.

VII. — 3

St. Philip Neri had a deep affection for the Capuchin lay brother, whom he once proclaimed the greatest saint then living in the Church. When St. Charles Borromeo sought St. Philip's aid in drawing up the constitutions of his Oblates, St. Philip took him to St. Felix as the most competent adviser in such matters. But through all, Felix kept his wonderful humility and sanctity. He was accustomed to say, "I am but the Ass of the Capuchins". Acclaimed a saint by the people of Rome, immediately after his death, he was beatified by Urban VIII in 1625, and canonized by Clement XI in 1712. His body rests under an altar dedicated to him in the church of the Immaculate Conception in Rome.

FATHER CUTHBERT.

Felix of Nola, SAINT, b. at Nola, near Naples, and lived in the third century. After his father's death he distributed almost all his goods amongst the poor, and was ordained priest by Maximus, Bishop of Nola. In the year 250, when the Decian persecution broke out, Maximus was forced to flee. The persecutors seized on Felix and he was cruelly scourged, loaded with chains, and cast into prison. One night an angel appeared to him and gave him grace to escape. His chains fell off, the doors opened, and the saint was enabled to bring relief to the bishop, who was then speechless from cold and hunger. On the persecutors making a second attempt to secure Felix, his escape was miraculously effected by a spider weaving her web over the opening of a hole into which he had just crept. Thus deceived, they sought their prey elsewhere. The persecution ceased the following year, and Felix, who had lain hidden in a dry well for six months, returned to his duties. On the death of Maximus he was earnestly desired as bishop, but he persuaded the people to choose another, his senior in the priesthood. The remnant of his estate having been confiscated in the persecution, he refused to take it back, and for his subsistence rented three acres of land, which he tilled with his own hands. Whatever remained over he gave to the poor, and if he had two coats at any time he invariably gave them the better. He lived to a ripe old age and died 14 January (on that day he is commemorated), but the year of his death is uncertain. Five churches were built in his honour, outside Nola, where his remains are kept, but some relics are also at Rome and Benevento. St. Paulinus, who acted as porter to one of these churches, testifies to numerous visions and appearances of Felix during his lifetime. The letters of Paulinus on Felix are the source from which St. Gregory of Tours, Venerable Bede, and the priest Marcellus have drawn their biographies (see PAULINUS OF NOLY). There is another Felix of Nola, bishop and martyr under a Prefect Martinianus. He is considered by some to be the same as the above.

AMBROSE COLEMAN.

Felix of Valois, SAINT, b. in 1127; d. at Cerfroy, 4 November, 1212. He is commemorated 26 November. He was named Valois because, according to some, he was a member of the royal branch of Valois in France; according to others, because he was a native of the province of Valois. At an early age he renounced his possessions and retired to a dense forest in the Diocese of Meaux, where he gave himself to prayer and contemplation. He was introduced to St. John of Matha, who proposed to him the project of founding an order for the redemption of captives. After fervent prayer, Felix in company with John set out for Rome and arrived there in the beginning of the pontificate of Innocent III. They had letters of recommendation from the Bishop of Paris, and the new
pope received them with the utmost kindness and lodged them in his own palace. The project of founding the order was never solely confined to cardinals and prelates, and the pope after fervent prayer decided that these holy men were inspired by God, and raised up for the good of the Church. He solemnly confirmed their order, which he named the Order of the Holy Trinity for the Redemption of Captives. The pope commissioned the Bishop of Paris and the Abbot of St. Victor to draw up for the institute a rule, which was confirmed by the pope, 17 December, 1198. Felix returned to France to establish the order. He was received with great enthusiasm, and King Philip Augustus authorised the institute in France and fostered it by signs and benefactions. King Louis VII of France granted the order twenty acres of the wood where Felix had built his first hermitage, and on almost the same spot he erected the famous monastery of Cerfri, the mother-house of the institute. Within forty years the order possessed six hundred monasteries in almost every part of the world. St. Felix and St. John of Matha were forced to part; the latter went to Rome to found a house of the order, the church of which, Santa Maria in Navicella, still stands on the Caelian Hill. St. Felix remained in France to look after the interests of the congregation. He founded a house in Paris attached to the church of St. Maturinus, which afterwards became a famous foundation, under Robert Guin, master general of the order. Though the Bull of his canonisation is no longer extant, it is the constant tradition of his institute that he was canonised by Urban IV in 1262. De Plessis tells us that his feast was kept in the Diocese of Meaux in 1215. In 1661 Alexander VII declared him a saint because of his immemorial cult. His feast was transferred to 20 November by Innocent XI in 1679.

MICHAEL M. O'KANE.

FELLER, FRANCOIS-XAVIER DE, author and apologist, b. at Brussels 18 August, 1735; d. at Ratisbon 22 May, 1802. He received his primary scientific education in the Jesuit College at Luxemburg, studied philosophy and the exact sciences at Reims, 1752—54, after which he joined the Society of Jesus at Tournai. After the suppression of the order he emigrated in 1774 to France, and settled at Paris. He afterwards returned to Luxemburg, and wrote the "Muse Leodiensis" (Liège, 1761), a collection of Latin poems in two volumes composed by his pupils. Later he taught theology in various institutions of the order in Luxemburg and Tyninau (Hungary). After the suppression of the order he was active as preacher in Austria, and served in the French army in 1794, he emigrated to Paderborn and joined the local college of the ex-Jesuits. After staying there two years, he accepted the invitation of the Prince of Hohenlohe to come to Bavaria and join the court of the Prince-Bishop of Freising and Ratisbon, Joseph Konrad von Schoenburg, with whom he remained, dividing his time between Freising, Ratisbon, and Berchtesgaden. 

Feller was very amiable and talented, gifted with a prodigious memory, and combined diligent study with these abilities. His superiors had given him every opportunity during his travels of cultivating all the branches of science then known, and the wealth and diversity of his writings prove that he made good use of his advantages. All his writings attest his allegiance to the Jesuit Order and his uniring zeal for the Catholic religion and the Holy See. It is, however, too much to say that he became prominent as a literary man only after the suppression of his order, he had previously contributed articles of note to the periodical "La clef du cabinet des princes de l'Europe, ou recueil historique et politique sur les matières du temps" (Luxemburg, 1760). During the years 1778—1794 he was the sole contributor to this journal, which com- prised in six all sixty volumes and was, from the first mentioned date (1778), published under the title "Journal historique et littéraire". Because he publishedly denounced the illegal and despotic attempts at reform on the part of Joseph II, the journal was suppressed in Austrian territory and was, consequently, transplanted first to Liège and then to Maastricht. Its principal articles were published separately as "Mélanges de politique, de morale chrétienne et de littérature" (Louvain, 1822), and as "Cours de morale chrétienne et de littérature religieuse" (Paris, 1826). His next work of importance is entitled "Dictionnaire historique, ou histoire abrégée de tous les hommes qui se sont fait un nom par le génie, les talents, les vertus, les honneurs, etc., dans le monde du monde, jusqu'à notre temps" (Augsburg, 1781—1784), 6 vols. He shaped this work on the model of a similar one by Chaudron without giving the latter the slightest credit; he showed a certain amount of prejudice, for the most part lauding the Jesuits as masters of science and underrating others, especially those suspected of Jes-

Feneberg, JOHANN MICHAEL NATHANAEL, b. in Oberdorfer, Allgäu, Bavaria, 9 Feb., 1751; d. 12 Oct., 1812. He studied at Kaufbeuren and in the Jesuit gymnasium at Augsburg, and in 1770 entered the Society of Jesus, at Landsberg, Bavaria. When the Society was suppressed in 1773, he left the town, but continued his studies at Munich and Ingolstadt. He was appointed professor in the gymnasium of St. Paul at Ratisbon. From 1778—85 he held a modest benefice at Oberdorfer and taught a private school; in 1785 he was appointed professor of rhetoric and poetry at the gymnasium of Dillingen, but was removed in 1793, together with several other professors, to Leipzig on account of his opposition to the progress of the so-called "Illuminists". A plan of studies drawn up by him for the gymnasium brought him many enemies also. He was next given the parish of Seeg, comprising some two thousand five hundred souls, and received as assistants the celebrated author Christoph Schmid, and X. Bayer. He was a model pastor in every respect. Within a short time he executed a chart of the eighty-five villages in his parish, and took a census of the entire district. 

In the first year of his pastoral service he sustained severe injuries by a fall from his horse, which necessitated the amputation of one leg just below the knee. He bore the operation without an anesthetic, and consol- ed himself for the loss of the limb by saying: Non pedibus, sed corde diligentius Deum (We love God not with our feet but with our hearts). Shortly after, his relations with the priest Martin Boos led him to be suspected of false mysticism. Boos had created such a sensation by his sermons that he was allowed only to leave the village for safety. He took refuge at Seeg with Feneberg, who was a relation, and assisted him in parochial work for nearly a year. In the meantime he strove to con- vert or "awaken" Feneberg to the higher Christian life, the life of faith and love to the exclusion of good works. Boos's followers were called the Erweckten
Bruder (Awakened Brethren). Among these brethren, many of whom were priests, Feneberg was called Nathansel and his two assistants Markus and Silas.

Boos' preaching and conduct at Seeg was reported to the bishop of Augsburg, and Feneberg, with his assistants, Bayer and Siller, were also involved. In February, 1797, an episcopal commissioner arrived in Seeg, and in Feneberg's absence seized all his papers, private correspondence and manuscripts, and carried them to Augsburg. Feneberg, with his assistants, apprehended in Augsburg, was sentenced by the bishop of Augsburg, his August, 1797; they were required to subscribe to the condemnation of ten erroneous propositions, and then permitted to return to their parish. They all protested that they had never held any of the propositions in the sense implied. It does not appear that Feneberg or his assistants were punished in the least, nor did he ever fail to show due respect and obedience to the ecclesiastical authorities. In 1805 he resigned the parish of Seeg and accepted that of Vohringen, which was smaller but returned slightly better revenues. This appointment and the assistance of generous friends enabled him to pay the debts he had incurred on account of his troubles and the personal disturbances of the time. For a month before his death he suffered great bodily pain, but he prayed unceasingly, and after devoty receiving the sacraments expired.

He remained friendly to Boos even after the latter's conversion and regretted that his friend, Bishop Sailer, was not more sympathetic to mysticism. Feneberg was a man of singular piety, candour, and zeal, but failed to see the dangers lurking in Boos' Pietism. Numbers of the disciples of Boos—as many as four hundred at one time—became Protomantes, although he himself remained nominally in the Church. Feneberg is the author of a translation of the New Testament, which was published by Bishop Wittmann of Ratibon.

Alexius Hoffmann.

Fénélon, François de Salignac de la Mothe-, a celebrated French bishop and author, b. in the Château de Fénélon in Périgord (Dordogne), 6 August, 1615; d. at Cambrai, 7 January, 1715. He came of an ancient family of noble birth but small means, the most famous of his ancestors being Guillaume de Salignac (d. 1599), who fought at Muts under the Duke of Guise and became ambassador to England; also François de Salignac I, Louis de Salignac I, Louis de Salignac II, and François de Salignac II, bishops of Sarlat between 1567 and 1688. Fénélon was the second of the sons of François de Salignac, Count of La Motte-Fénélon, by his second wife, Louise de La Cropte. Owing to his delicate health Fénélon's childhood was passed in his father's château under a tutor, who succeeded in giving him a keen taste for the classics and a considerable knowledge of Greek literature, which influenced the development of his mind in a general way. At the age of fourteen he went to the neighbouring University of Coimbra, where he studied rhetoric and philosophy, and obtained his first degrees. As he had already expressed his intention of entering the Church, one of his uncles, Marquis Antoine de Fénélon, a friend of Monsieur Oliver and St. Vincent, sent him to Paris to study at the Collège des Pléiades, whose students followed the course of theology at the Sorbonne. There Fénélon became a friend of Antoine de Noailles, afterwards Cardinal and Archbishop of Paris, and showed such decided talent that at the age of fifteen he was chosen to preach a public sermon, in which he acquitted himself admirably. To facilitate his preparation for the priesthood, the marquis sent his nephew to the Séminaire de Saint-Sulpice (a.p. 1635), then the training-ground of the clergy, but the young man was placed in the small community reserved for ecclesiastics whose health did not permit them to follow the excessive exercises of the seminary. In this famous school, of which he always retained affectionate memories, Fénélon was grounded in the office of priest and entered upon the practice of a regular and pious vocation, but above all in solid Catholic doctrine, which saved him later from Jansenism and Gallicanism. Thirty years later, in a letter to Clement XI, he congratulates himself on his training by M. Tronson in the knowledge of his Faith and the duties of the ecclesiastical life. About 1675 he was ordained priest and for a while thought of devoting himself to the Eastern missions. This was, however, only a passing inclination. Instead, he joined the community of Saint-Sulpice and gave himself up to the works of the priesthood, especially preaching and catechizing.

In 1678 Harlay de Champvallon, Archbishop of Paris, entrusted Fénélon with the direction of the house of "Newes-Catholiqes", a community founded in 1634 by Archbishop Jean-François de Gondi for Protestant young women about to enter the Church or convert to Catholicism. It was a new and delicate form of apostolate, for which Fénélon himself was the model. It required all the resources of his theological knowledge, persuasive eloquence, and magnetic personality. Without his late years his conduct has been severely criticized, and he has been even called intolerant, but these charges are without serious foundation, and have not been accepted even by the Protestant authors of the "Encyclopédie des Sciences Religieuses"; their verdict on Fénélon is "that in justice to him it must be said that in making converts he ever employed persuasion rather than severity".

When Louis XIV revoked the Edict of Nantes, by which Henry IV had granted freedom of public worship to the Protestants, missionaries were chosen from among the greatest orators of the day, e.g. Bourdaloue, Féchter, and others, and were sent to those parts of France where heretics were most numerous, to labour for their conversion. At the suggestion of his friend Bossuet, Fénélon was sent with five companions to Dompierre, where he resided for six years, and his methods were always tempered by gentleness. According to Cardinal de Basseix, he induced Louis XIV to remove all troops and all evidences of compulsion from the places he visited, and it is certain that he proposed and insisted on many methods of which the king did not approve. "When hearts are to be moved," he wrote to Seignelay, "force avails not. Conviction is the only real conversion." Instead of force he employed patience, established classes, and distributed New Testaments and catechisms in the vernacular. Above all, he laid especial emphasis on preaching. "Bring me," he said, "by gentle preachers who have a faculty not only for instructing, but for winning the confidence of their hearers". It is doubtless true, as recently published documents prove, that he did not altogether repudiate measures of force, but he only allowed them as a last resource. Even then his severity was confined to exiling from their villages a few recalcitrants, and to constraining others under the small penalty of five sous to attend the religious instructions in the churches. Nor did he think that preachers ought to advocate openly even these measures; similarly, he was unwilling to have known the Catholic authorship of pamphlets against Protestantism and was determined to have printed in Holland. This was certainly an excess of cleverness; but it proves at least that Fénélon was not in sympathy with that vague tolerance.
founded on scepticism which the eighteenth-century rationalists charged him with. In such matters he shared the opinions of all the other great Catholics of his time. Bossuet and St. Augustine he held that "to be obliged to do good is always an advantage and that heretics and schismatics, when forced to apply their minds to the consideration of truth, eventually lay aside their erroneous beliefs, whereas they would never have examined these matters had not authority constrained them."

This he attacks with great vigour and at length the theories of the famous Oratorian on optimism, the Creation, and the Incarnation. This treatise, though annotated by Bossuet, Fénélon considered it unwise to publish; it saw the light only in 1820. First among the friends of Fénélon at this period were the Duc de Brézé, the Duc de Bouillon, the two great courtiers, eminent for their piety, who had married two daughters of Colbert, minister of Louis XIV. One of these, the Duchesse de Beauvilliers, mother of eight daughters, asked Fénélon for advice concerning their education. His reply was the "Traité de l'éducation des filles", in which he insists on education beginning at an early age and on the instruction of girls in all the duties of their future condition of life. The religious teaching he recommends is one solid enough to enable them to refute heretics if necessary. He also advises a more serious course of studies than was then customary. Girls ought to be learned without pedantry; the form of instruction should be concrete, sensible, agreeable, and prudent, in a manner to aid their natural abilities. In many ways his pedagogy was ahead of his time, and we may yet learn much from him.

The Duchesse de Beauvilliers, who had been the first to take an interest in this own family the value of the "Traité de l'éducation des filles", was in 1689 named governor of the grandchildren of Louis XIV. He hastened to secure Fénélon as tutor to the eldest of these princes, the Duke of Burgundy. It was a most important post, seeing that the formation of a future king lay in his hands but it was not without great difficulties, owing to the violent, haughty, and passionate character of his pupil. Fénélon brought to his task a whole-hearted zeal and devotion. Everything, down to the Latin themes and versions, was made to serve in the taming of this impetuous spirit. Fénélon prepared them himself in order to adapt them to his plans. With the same object in view, he wrote his "Fables" and his "Dialogues des Morts", but especially his "Théâmaque", in which work, under the guise of pleasant fiction, he taught the young prince lessons of self-control, and all the duties required by his exalted position. The results of this training were wonderful. The historian Saint-Simon, as a rule hostile to Fénélon, says: "De cet abime sortit un prince, affable, doux, modéré, humain, patient, humble, tout appliqué à ses devoirs." It has been asked in our day if Fénélon did not succeed too well. When the prince grew to man's estate, his pupils were often too refractory to him, examining himself, reasoning for and against, till he was unable to reach a definite decision, his will being paralysed by fear of doing the wrong thing. However, these defects of character, against which Fénélon in his letters was the first to protest, did not show themselves in youth. About 1685 every one who came in contact with the prince was in admiration at the change in him.

To reward the tutor, Louis XIV gave him, in 1694, the Abbey of Saint-Valéry, with its annual revenue of fourteen thousand livres. The Académie had opened its doors to him, and Madame de Maintenon, the morganatic wife of the king, began to consult him on matters of conscience, and on the regulation of the house of Saint-Cyr, which she had established for the training of young girls. Soon afterwards the archiepiscopal See of Cambrai, one of the best in France, fell vacant, and the king offered it to Fénélon, at the same time expressing a wish that he would continue to instruct the Duke of Burgundy. Nominated in February 1686, Fénélon was consecrated in August of the same year by Bossuet in the chapel of Saint-Cyr. The future of the young prelate looked brilliant, when he fell into deep disgrace.

The cause of Fénélon's trouble was his connexion with Madame Guyon, whom he had met in the society of his friends, the Beauvilliers and the Chevreuses. She was a native of Orléans, which she left when about twenty-eight years old, a widowed mother of three children, to carry on a sort of apostolate of mysticism, under the direction of Père Lacombe, a Barnabite. After many journeys to Geneva, and finally, she published two works, "Le moyen court et facile de faire oraison" and "Les torrents spirituels". In exaggerated language characteristic of her visionary mind, she presented a system too evidently founded on the Quietism of Molinos, that had just been condemned by Innocent XI in 1687. There were, however, great divergencies between the two systems. Whereas Molinos had made man's earthly perfection consist in a state of uninterrupted contemplation and love, which would dispense the soul from all active virtue and reduce it to absolute inaction, Madame Guyon rejected with horror the dangerous conclusions of Molinos as to the cessation of the necessity of offering positive resistance to temptation. Indeed, in all her relations with Père Lacombe, as well as with Fénélon, her virtuous life was never called in doubt. Soon after her arrival in Paris she became acquainted with many pious persons of the court and in the city, among them Madame de Maintenon and the Duchesse de Chavreuse, who introduced her to Fénélon. In turn, he was attracted by her piety, her lofty spirituality, the charm of her personality, and of her books. It was not long, however, before the Bishop of Chartres, in whose diocese Saint-Cyr was, began to unseat the influence of Madame Guyon in August 1687. The orthodoxy of Madame Guyon's theories. The latter, thereupon, begged to have her works submitted to an ecclesiastical commission composed of Bossuet, de Noailles, who was then Bishop of Châlons, later Archbishop of Paris, and M. Tronson, superior of Saint-Sulpice. After an examination which lasted three months, the commission delivered its verdict in thirty-four articles known as the "Articles d'Issy", from the place near Paris where the commission sat. These articles, which were signed by Fénélon and the Bishop of Chartres, also by the members of the commission, condemned very briefly Madame Guyon's ideas, and gave a short exposition of the Catholic teaching on prayer. Madame Guyon submitted to the condemnation, but her teaching spread in England, and Protestants, who have had her books reprinted, have always expressed sympathy with her views. Cowper translated some of her hymns into English, which were translated into English by Thomas Digby (London, 1805) and Thomas Upham (New York, 1848). Her books have been long forgotten in France.

In accordance with the decisions taken at Issy, Bos-
must now wrote his instruction on the "Etats d'oraison", as an explanation of the thirty-four articles. Fénélon refused to sign it, on the plea that his honour forbade him to condemn a woman who had already been condemned. To explain his own views of the "Etats d'oraison", he undertook the task of writing a "Lettre sur l'union des Maximes des Saints", a rather arid treatise in forty-five articles. Each article was divided into two paragraphs, one laying down the true, the other the false, teaching concerning the love of God. In this work he undertakes to distinguish clearly every step in the development of the life of the Papal Church; the end of the Christian soul is pure love of God, without any admixture of self-interest, a love in which neither fear of punishment nor desire of reward has any part. The means to this end, Fénélon points out, are those long since indicated by the Catholic mystics, i.e., holy indifference, detachment, self-abandonment, passiveness, through all of which states the soul is led by contemplation. Fénélon's book was scarcely published when it aroused much opposition. The king, in particular, was angry. He distrusted all religious novelties, and he reproached Bossuet with not having warned him of the ideas of his grandsons' tutor. He agreed too fast for analysis, for he knew, and had to examine Fénélon's work and select passages for condemnation, but Fénélon himself submitted the book to the judgment of the Holy See (27 April, 1697). A vigorous conflict broke out at once, particularly between Bossuet and Fénélon. Attack and reply followed, too fast for analysis. The works here are few, Fénélon on the subject fill six volumes, not to speak of the 646 letters relating to Quietism, the writer proving himself a skilful polemical writer, deeply versed in spiritual things, endowed with quick intelligence and a mental suppleness not always to be clearly distinguished from quibbling and a misunderstanding of the thoughts, were "téméraires, scandaleux, ill-sounding, offensive to pious ears, pernicious in practice, and false in fact". Twenty-three propositions were selected as having incurred this censure, but the pope by no means intended to imply that he approved the rest of the book. Fénélon submitted at once. "We accept the brief", he wrote in his pastoral letter, in which he made known Rome's decision to his flock, "and we accept it not only for the twenty-three propositions but for the whole book, simply, absolutely, and without a shadow of reservation." Most of his contemporaries found his submission adequate, editing, and admirable. In recent times, however, scattered expressions in his letters have enabled a few critics to doubt its sincerity. In our opinion a few words written impulsively, and contradicted by the whole tenor of the writer's life, cannot justify so grave a charge. It must be remembered, too, that the bishop held his Brief of condemnation, Fénélon declared that he laid aside his own opinion and accepted the judgment of Rome, and that if this act of submission seemed lacking in any way, he was ready to do whatever Rome would suggest. The Holy See never required anything more than the above-mentioned spontaneous act.

Louis XIV, who had done much in the way of condemning the condemnation of the "Maximes des Saints", had already punished its author by ordering him to remain within the limits of his diocese. Vexed later at the publication of "Télémaque", in which he saw his perspicacity and his government subjected to criticism, the king was inclined to revoke a previous command. Fénélon submitted without complaint or regret, and gave himself up entirely to the care of his flock. With a revenue of two hundred thousand livres and eight hundred parishes, some of which were on Spanish territory, Cambrai, which had been regained by France only in 1678, was one of the most important sees in the kingdom. Fénélon gave up several months of each year to a visitation of his archdiocese, which was not even interrupted by the War of the Spanish Succession, when opposing armies were camped in various parts of his territory. The captains of these armies, full of veneration for his person, left him free to come and go as he would. The remains of the year were given to the visitation of the diocese of Cambrai, where with his relatives and his friends, the Abbé de Langeron, de Chantecor, and de Beaumont, he led an uneventful life, monastic in its regularity. Every year he gave a Lenten course in one or other of the important parishes of his diocese, and on the principal feasts he preached in his own cathedral. His sermons were short and simple, composed after a brief meditation, and never committed to writing; with the exception of some few preached on more important occasions, they have not been preserved. His dealings with his clergy were always marked by condescension and cordiality. "His priests", says Saint-Simon, "loved and adored him. No bishop, before or after him, has rendered so much service to God and his Church, as he did to them. He was ever ready to forgive them. He would rather reproach himself than bore him in their hearts." He took a deep interest in their seminary training, assisted at the examination of those who were to be ordained, and gave them conferences during their retreat. He presided over the concourses for benefices and made inquiries among the clergy concerning the qualifications of each candidate.

Fénélon was always approachable, and on his walks often conversed with those he chanced to meet. He loved to visit the peasants in their houses, interested himself in their joys and sorrows, and, to avoid painting them, accepted the simplest gift of their hospitality. During the War of the Spanish Succession the doors of his palace were open to all the poor who sought refuge in Cambrai. The rooms and stairways were filled with them, and his gardens and vestibules sheltered their live stock. He is yet remembered in the vicinity of Cambrai and the peasants still give their children the name Fénélon, as that of a saint.

Engrossed as Fénélon was with the administration of his diocese, he never lost sight of the general interests of the Church. This became evident when Jansenism, quiescent for nearly thirty years, again raised its head on the occasion of the famous "Cas de Conscience", in which an anonymous pastoral letter, "A New Life in the Old Distinction Between the Question of Law and Question of Fact" (question de droit et question de fait), acknowledged that the Church could legally condemn the famous five propositions attributed to Jansenius, but denying that she could oblige any one to believe that they were really to be found in the "Augustinus" of that writer. Fénélon multiplied publications of every kind against the reviving heresy; he wrote letters, pastoral instructions, memoirs, in French and in Latin, which fill seven volumes of his works. He set himself to combat the errors of the "Cas de Conscience", to refute the theory known as "respectful silence", and to open the "Index" for public opinion in France. Père Quesnel brought fresh fuel to the strife by his "Réflexions morales sur le Nouveau Testament", which was solemnly condemned by the Bull "Unigenitus" (1713). Fénélon defended this famous pontifical constitution in a series of dialogues and pamphlets, and in the end was compelled to lose his position in the world. Great as was his zeal against error, he was always gentle with the erring, so that Saint-Simon could say "The Low Countries swarmed with Jansenists, and his Diocese of Cambrai, in particular, was full of them. In both places they found an inoffensive refuge, and from them glad and contented they were peaceably under one who was their friend with his pen. They had no fears of their archbishop, who, though
opposed to their beliefs, did not disturb their tranquility."

In spite of the multiplicity of his labours, Fénélon found time to carry on an absorbing correspondence with his relatives, friends, deists, and in fact, everyone, one that sought his advice. It is in this mass of correspondence, ten volumes of which have reached us, that we may see Fénélon as a director of souls. People of every sphere of life, men and women of the world, religious, soldiers, courtiers, servants, are here met with, among them Mesdames de Maintenon, de Grandprétot, de Neufchâtel, marquises of the Colbert family, the Marquis de Seignelay, the Duc de Chauny, above all the Ducs de Chevreuse and de Beaufort, not forgetting the Duke of Burgundy. Fénélon shows how well he possessed all the qualities he required from directors, patience, knowledge of the human heart and the spiritual life, equanimity of disposition, firmness, and straightforwardness, "together with a quiet gaiety altogether removed from any stern or affected austerity". In return he required docility of mind and entire submission of will. He aimed at leading souls to feel they live an end as far as much a thing is humanly possible; for though the errors of the "Maximes des Saints" do not reappear in the letters of direction, it is still the same Fénélon; with the same tendencies, the same aiming at self-abandonment and detachment from all personal interests, all kept, however, with affection; for as he says "this love of God does not require all Christians to practise austerties like those of the ancient solitaries, but merely that they be sober, just, and moderate in the use of all things expeditious"; nor does piety, "like temporal affairs, exact a long and continuous application"; "the practice of devotion is in no way incompatible with the duties of one's state in life". The desire to teach his disciples the secret of harmonising the duties of religion with those of everyday life suggests to Fénélon all sorts of advice, sometimes most unexpected from the pen of a director, especially when he happens to be dealing with his friends at court. This has given occasion to some of his critics to accuse him of ambition, and of being as anxious to control the State as to guide souls.

It is especially in the writings intended for the Duke of Burgundy that his political ideas are apparent. Besides a great number of letters, he sent him through his friends de Beaufort and de Chevreuse, some "Examen de conscience sur les devoirs de la Royauté", nine memoirs on the War of the Spanish Succession, and "Plans de Gouvernement, concrétés avec le Duc de Chevreuse". If we add to this the "Télémaque", the "Lettre à Louis XIV", the "Essai sur le Gouvernement civil", and the "Mémoires sur les précautions à prendre après la mort du Duc de Bourgogne", we have a complete exposition of Fénélon's political ideas. We shall indicate only the points in which they are original for the period when they were written. Fénélon's ideal government was a monarchy. The monarch is an aristocratism, he has absolute power; he was to obey the laws, which he was to draw up with the co-operation of the nobility; extraordinary subsidies were to be levied only with the consent of the people. At other times he was to be assisted by the States-General, which was to meet every three years, and by provincial assemblies, all to be advisory bodies to the king rather than representative assemblies. The State was to have charge of education; it was to control public manners by summptuary legislation and to forbid both sex unsuitable marriages (mêlalliances). The temporal arm and the spiritual arm were to be independent of each other, but the latter was always to be subordinated to the former in a manner lined with much wisdom; in his political writings are to be found many observations remarkably judicious, but also not a little Utopianism.

Fénélon also took much interest in literature and philosophy. Monseigneur Dacier, perpetual secretary to the Académie Française, having requested him, in the name of that body, to furnish him with views on the "Dictionary of Occupations of the Académie Française", a work still much admired in France. This letter, which treats of the French tongue, of rhetoric, poetry, history, and ancient and modern writers, exhibits a well-balanced mind acquainted with all the masterpieces of antiquity, alive to the charm the language, and classical traditions, yet discreetly open to new ideas (especially in history), also, however, to some chimerical theories, at least concerning things poetical. At this very time the Due d'Orléans, the future regent, was consulting him on quite different subjects. This prince, a sceptic through circumstances rather than by any force of reasoning, profited by the appearance of Fénélon's "Traité de l'existence de Dieu" to ask its author some questions on the worship due to God, the immortality of the soul, and free will. Fénélon replied in a series of letters, only the first three of which he himself published. The other five were not printed till later. Together they form a continuation of the "Traité de l'existence de Dieu", the first part of which had been published in 1712 without Fénélon's knowledge. The second part appeared only in 1718, after its author's death. Though an almost forgotten work of his youth, it was reprinted soon after it was translated into English and German. It is from his letters and this treatise that we learn something about the philosophy of Fénélon. It borrows from both St. Augustine and Descartes. For Fénélon the strongest arguments for the existence of God were those based on final causes and on the idea of the infinite, both developed along broad lines and with much literary charm, rather than with precision or originality.

Fénélon's last years were saddened by the death of his best friends. Towards the end of 1710 he lost Abbé de Langle, his lifelong companion; in February, 1712, his pupil, the Duke of Burgundy, died. A few months later the Due de Chevreuse was taken away, and the Due de Beaufort followed in August, 1714. Fénélon survived him only a few months, making a last request to Louis XIV to appoint a successor firm against Jansenism, and to favour the introduction of Sulpician novices into the Congregation of Montmartre. He had been one of the most illustrious members of the French episcopate, certainly one of the most attractive men of his age. He owed his success solely to his great talents and admirable virtues. The renown he enjoyed during life increased after his death. Unfortunately, however, Fénélon's fame is largely due to his opposition to Bossuet, and among the philosophers to the fact that he opposed and was punished by Louis XIV. Fénélon is therefore for them a precursor of their own tolerant scepticism and their infidel philosophy, a forerunner of Rousseau, whom they placed him on the façade of the Pantheon. In our days a reaction has set in, due to the cult of Bossuet and the publication of Fénélon's correspondence, which has brought into bolder relief the contrasts of his character, showing him at once an ancient and a modern, Christian and profane, a mystic and a statesman, democrat and aristocrat, gentle and obstinate, frank and subtle. He would perhaps have seemed more human in our eyes were he a lesser man; nevertheless he remains one of the most attractive, brilliant, and puzzling figures that the Catholic Church has ever produced.

The most convenient and best edition of Fénélon's works is that by Voltaire, published by Lebel at Versailles in 1820 and completed at Paris by Leclerc in 1830. It comprises twenty-two volumes, besides eleven volumes of letters, in all thirty-three volumes, not including an

Ferdinand, Blessed, Prince of Portugal, b. in Portugal, 29 September, 1402; d. at Fes, in Morocco, 5 June, 1443. He was one of five sons, his mother being Philippa, daughter of John Gaunt, Duke of Lancaster, and his father King John I, known in history for his victories over the Moors and in particular for his conquest of Ceuta, a powerful Moorish stronghold, and his establishment of an episcopal see within its walls. In early life Ferdinand suffered much from sickness, but his mind and body were eventually restored, and even in his boyhood and youth he gave evidence of remarkable qualities of soul and intellect. With great strength of character and a keen sense of justice and order he combined an innocence, gentleness, and charity which excited the wonder of the royal court. He had a special love for the Church ceremonies and devotions of the Church. After his fourteenth year he recited daily the canonical hours, rising at midnight for Matins. Always severe with himself, he was abstemious in his diet and fasted on Saturdays and on the feast days of the Church. He cared for the spiritual as well as the corporal necessities of his people, his charity for the poor and oppressed was unbounded. His generosity towards the monasteries was impelled by his desire to share in their prayers and good works. He had himself enrolled for the same reason in all the pious congregations of the kingdom.

Upon the death of his father in 1433, his brother Edward (Duarte) ascended the throne, while he himself received but a small inheritance. It was then that he was induced to accept the grand-mastership of Avis, in order that he might be better able to help the poor. As a brother, his cleric, the king, obtained for him the necessary papal dispensation. The fame of his charity went abroad, and Pope Eugene IV, through the papal legate, offered him the cardinal’s hat. This he refused, not wishing, as he declared, to burden his conscience.

Though living a life of great sanctity in the midst of the court, Ferdinand was not a mere recluse. He was
also a man of action, and in his boyhood his soul was stirred by the heroic campaign against Ceuta. His mother, the queen, had imbued him with martial spirit of her sons, and it is even said that on her deathbed she gave them each a sword, charging them to use it in defence of widows, orphans, and their country, and in particular against unbelievers. An opportunity soon presented itself. In 1437 Edward planned an expedition to Tangiers in Africa; but his captains, Henry and Ferdinand in command. They set sail 22 Aug., 1437, and four days later arrived at Ceuta. During the voyage Ferdinand became dangerously ill in consequence of an abcess and fever which he had concealed before the departure, in order not to delay the fleet. Some misadventure the Portuguese numbered only 6000 men, instead of 14,000, as ordered by the king. Though advised to wait for reinforcements, the two princes, impatient for the fray, advanced towards Tangiers, to which they laid siege. Ferdinand recovered slowly but was not able to take part in the first battle. The Portuguese fought valiantly against great odds, but were finally compelled to make terms with the enemy, agreeing to restore Ceuta in return for a safe passage to their vessels. The Moors likewise demanded that one of the princes be delivered into their hands as a hostage for the delivery of the city. Ferdinand offered himself for the dangerous post, and a few faithful followers, including João Alvarez, his secretary and later his biographer, began a peaceful negotiation which ended only with his death. He was first brought to Arzila by Salá ben Salá, the Moorish ameer. In spite of sickness and bodily sufferings, he continued all his depositions and showed great charity towards his Christian fellow-captives. Henry at first repaired to Ceuta, where he was joined by his brother John. Realizing that it would be difficult to obtain the royal consent to the restoration of the fortress, they proposed to exchange their brother for the son of Salá ben Salá, whom Henry held as a hostage. The Moors scornfully rejected the proposal, and both returned to Portugal to devise means of setting the prince free. Though his position was perilous in the extreme, the Portuguese Cortes refused to surrender Ceuta, not only on account of the treachery of the Moors, but because the place had cost them so dearly and was a point of danger to all that was most precious. It was resolved to ransom him if possible. Salá ben Salá refused all offers, his purpose being to recover his former seat of government.

Various attempts were made to free the prince, but all proved futile and only served to make his lot more unhappy. In May 1438 he was sent to Tangiers and handed over to the cruel Lazurac, the king's vizier. He was first condemned to a dark dungeon and, after some months of imprisonment, was compelled to work like a slave in the royal gardens and stables. Amid insult and misery Ferdinand never lost patience. Though often urged to seek safety in flight, he refused to abandon his companions and grieved more for their sufferings, of which he considered himself the cause, than for his own. His treatment of his persecutors was respectful and dignified, but he would not descend to flattery to obtain any alleviation of his sufferings. During the last fifteen months of his life he was confined in a dark dungeon with a block of wood for his pillow and the stone floor for a bed. He spent most of his time in prayer and in preparation for death, which his rapidly failing health warned him was near at hand. In May, 1443, he was stricken with the fatal disease to which he finally succumbed. His persecutors then allowed to come abode, although they allowed a physician and a few faithful friends to attend him. On the evening of 5 June, after making a general confession and a profession of faith, he peacefully gave up his soul to God. During the day he had confided to his confessor, who frequently visited him, that the Blessed Virgin with St. John and the Archangel Michael had appeared to him in a vision. Lazurac ordered the body of the dead prince be embalmed and the vital organs removed, and then caused it to be suspended head downwards for four days on the walls of Fez. Nevertheless he was compelled to pay tribute to the constancy, innocence, and spirit of prayer of his royal victim. Of Ferdinand's companions, four died afterwards followed him to the grave; one joined the ranks of the Moors, and the others regained their liberty after Lazurac's death. One of the latter, João Alvarez, his secretary and biographer, carried his heart to Portugal in 1451, and in 1473 his body was brought to Portugal, and laid to rest in the royal vault at Estrela amid imposing ceremonies.

Prince Ferdinand never ever lost in great veneration by the Portuguese on account of his saintly life and devotion to country. Miracles are said to have been wrought at his intercession, and in 1470 he was beatified by Paul II. Our chief authority for the details of his life is João Alvarez, already referred to. Calderón made him a hero of one of his most remarkable dramas, "El Príncipe Constante y Mártir de Portugal".

Alvarez, in Acta SS., June, I; Ofyvern, Leben des standhaftten Prinzen (Berlin, 1827); Dunham, History of Spain and Portugal (New York, III).

Henry M. Brock.

Ferdinand II, emperor, eldest son of Archduke Karl and the Bavarian Princess Maria, b. 1578; d. 15 February, 1637. In accordance with Ferdinand I's disposition of his possessions, Styria, Carinthia, and Carniola fell to his son Karl. As Karl died in 1580, when his eldest son was only twelve years old, the government of these countries had to be entrusted to a regent during the minority of Ferdinand. The latter began his studies under the Jesuits at Graz, and continued them in company with Maximilian of Bavaria at the University of Ingolstadt, also in charge of the Jesuits. According to the testimony of his professors, he displayed remarkable diligence, made rapid progress in the mathematical sciences, and above all gave evident of a deeply religious spirit. On the completion of his studies, he took up the reins of government, although not yet quite seventeen. During a subsequent visit to Italy he made a vow in the sanctuary of Castelnuovo to banish all for future years the enemy that might fall under his rule. He was of middle height, compact build, with reddish-blonde hair and blue eyes. His dress and the cut of his hair suggested the Spaniard, but his easy bearing towards all with whom he came into contact was rather German than Spanish. He was wont to lay the responsibility for important measures on his counsellors (Freiherr von Eggenberg, Graf von Harrach, the Bohemian Chancellor, Zdenek von Lobkowitz, Cardinal-Prince Dietrichstein, etc.). Liberal even to prodigality, his exchequer was always low. In pursuance of the principle laid down by the Diet of Augsburg, 1555 (aut regio etius et rei noster), he established the Counter-Reformation in his three dukies, while his cousin Emperor Rudolf II reluctantly recognized the Reformation.

As Ferdinand was the only archduke of his day with sufficient power and energy to take up the struggle against the estates, he remained at heart in the Austrian hereditary domains, the childless Emperor Matthias strove to secure for him the succession to the whole empire. During Matthias's life, Ferdinand was crowned King of Bohemia and of Hungary, but, when Matthias died during the height of the religious war (20 March, 1619), Ferdinand's position was en-
compassed with perils. A united army of Bohemians and Silesians stood before the walls of Vienna; in the city itself Ferdinand was beset by the urgent demands of the Lower-Austrian estates, while the Bohemian estates chose as king in his place the head of the Protestant Union in Germany (the Palatine Frederick V), who could also count on the support of his father-in-law, James I of England. When the Austrian estates entered into an alliance with the Bohemians, and Bethlen Gabor, Prince of Transylvania, marched triumphantly through Hungary with the assistance of the Hungarian evangelical party, and was crowned king of that country, the end of the Hapsburg dynasty seemed at hand. Notwithstanding these troubles in his hereditary states, Ferdinand was chosen German Emperor by the votes of all the electors except Bohemia and the Palatinate. Spaniards from the Netherlands occupied the Palatinate, and the Catholic League (Bund der katholischen Fürsten Deutschlands) headed by Maximilian of Bavaria declared in his favour, although to procure this support Ferdinand was obliged to mortgage Austria to Maximilian. On 22 June, 1619, the Imperial General Buquoy repulsed from Vienna the besieging Generals Thurn; Mansfeld was crushed at Budweis, and on 8 November, 1620, the fate of Bohemia and of Frederick V was decided by the Battle of the White Mountain, near Prague.

The firm re-establishment of the Hapsburg dynasty was the signal for the introduction of the Counter-Reformation (q. v.) into Bohemia. Ferdinand annulled the privileges of the estates, declared void the concessions granted to the Bohemian Protestants by the Majestätsbrief of Rudolf II, and punished the heads of the insurrection with death and confiscation of goods. Protestantism was exterminated in Bohemia, Moravia, and Lower Austria; in Silesia alone, on the intercession of the Lutheran Elector of Saxony, the Reformers were treated with less severity.

The establishment of a general peace might perhaps now have been possible, if the emperor had been prepared to return his possessions to the outlawed and banished Palatine Elector Frederick. At first, Ferdinand seemed inclined to adopt this policy out of consideration for the Spaniards, who did not wish to give mortal offence to James I, the father-in-law of the elector. However, the irritating conduct of Frederick and the Protestant Union, and the wish to recover Austria by indemnifying Maximilian in another way led Ferdinand to continue the war. Entrusted with the execution of the ban against the Elector Palatine, Maximilian assisted by the Spaniards took possession of the electoral lands, and in 1632 was himself raised to the electoral dignity.

Uneasy at the rapidly increasing power of the emperor, the estates of the Lower Saxon circle (Krève) had meanwhile formed a confederation, and resolved under the leadership of their head, King Christian IV of Denmark, to oppose the emperor (1625). In face of this combination, the Catholic Union or League under Count Tilly proved too weak to hold in check both its internal and external enemies; thus the recruiting of an independent imperial army was indispensable, though the Austrian exchequer was unable to meet the charge. However, Albrecht von Waldstein (usually known as Wallenstein), a Bohemian nobleman whom Ferdinand had a short time previously raised to the dignity of prince, offered to raise an army of 40,000 men at his own expense. His offer was accepted, and soon Wallenstein and Tilly repeatedly vanquished the Danes, Ernst von Mansfeld and Christian of Brunswick, the leaders of the Protestant forces. On the defeat of Christian at Lutter am Barenberg (27 August, 1626), the Danish Duchies of Schleswig and Holstein fell into the hands of the victorious Tilly. Christian was compelled to make the equitable peace of Lübeck on 12 May, 1629, and Wallenstein was invested with the lands of the Dukes of Mecklenburg, allies of Christian.

Contemporaneously, an insurrection broke out among the Austrian estates for the recovery of their ecclesiastical rights abrogated by the emperor. This rising was soon quelled, but, as Wallenstein did not conceal his intention to establish the emperor's rule in Germany on a more absolute basis, the princes of the empire were uneasing in their complaints, and demanded Wallenstein's dismissal. The excitement of the princes, especially those of the Protestant faith, ran still higher when Ferdinand published, in 1629, the "Edict of Restitution," which directed Protestants to restore all ecclesiastical property taken from the Catholics since the Convention of Passau, in 1552 (2 archbishops, 12 bishops, and many monastic seigniories, especially in North Germany). At the meeting of the princes at Ratisbon (1630), when Ferdinand wished to procure the election of his son as King of Rome, the princes headed by Maximilian succeeded in prevailing on the emperor to remove Wallenstein. The command of the now reduced imperial troops was entrusted to Tilly, who with these forces and those of the League marched against Magdeburg; this city, formerly the see of an archbishop, energetically opposed the emperor and the Edict of Restitution. Even before Wallenstein's dismissal on 4 July, 1630, Gustavus Adolphus, King of Sweden, had landed at the mouth of the Oder, but, as the Protestant estates (notably Brandenburg and Saxony) hesitated to enter into an alliance with him, he was unable at first to accomplish anything decisive. When, however, in May, 1631, Tilly stormed and reduced to ashes
the town of Magdeburg, the Electors of Brandenburg and Saxony openly espoused the cause of Gustavus Adolphus. After the utter defeat of Tilly at Breitenfeld (September, 1631), Gustavus Adolphus advanced through Thuringia and Franconia to the Rhine, while the Saxons army invaded Bohemia and occupied its capital, Prague. In 1632, the Swedish King invaded Bavaria. Tilly faced him on the Lech, but was defeated, and mortally wounded. Gustavus Adolphus was now master of Germany, the League was overthrown, and the emperor threatened in his hereditary domain. In this crisis Ferdinand induced Wallenstein to receive an army of 40,000, and entrusted him with unlimited authority. On 6 November, 1632, a battle was fought at Lützen near Leipzig, where Gustavus Adolphus was slain, though the Swedish troops remained masters of the battle-field. Wallenstein was now in a position to continue the war with energy, but after the second half of 1633 he displayed an incomprehensible inactivity. The explanation is that Wallenstein had formed the resolution to betray the emperor, and, with the help of France, to seize Bohemia. His plan miscarried, however, and led to his assassination at Eger on 25 February, 1634. The empire was left in saw to its destruction. On 27 August of the same year, the imperial army under the emperor's eldest son, Ferdinand, inflicted so crushing a defeat on the Swedes at Nördlingen that the Protestant of south-western Germany turned for help to France. On 30 May, 1636, by the cession of both Upper and Lower Lusatia, Ferdinand became reconciled with Saxony, which became his ally. In September, the combined imperial and Saxony armies were defeated at Wittstock by the Swedes under Baner. France now revealed its real policy, and dispatched a powerful army to join the ranks of the emperor's foes. Ferdinand lived to witness the election of his son as Emperor (22 December, 1636), and his coronation as King of Bohemia and Hungary. He died, however, 15 February, 1637, without witnessing the end of this destructive conflict, known as the Thirty Years War. In his will, he expressly provided for the succession of the first-born of his house and the indivisibility of his hereditary states.

FERDINAND

III., Saint, King of Leon and Castile, member of the Third Order of St. Francis, b. in 1198 near Salamanca; d. at Seville, 30 May, 1252. He was the son of Alfonso IX, King of Leon, and of Berengaria, the daughter of Alfonso III, King of Castile, and sister of Alphonso, the mother of St. Louis IX.

In 1217 Ferdinand became King of Castile, which crown his mother renounced in his favour, and in 1230 he succeeded to the crown of Leon, though not without civil strife, since many were opposed to the union of the two kingdoms. He took as his counsellors the wise men of the State, and, to the strict administration of justice, and took the greatest care not to overburden his subjects with taxation, fearing, as he said, the curse of one poor woman more than a whole army of Saracens. Following his mother's advice, Ferdinand, in 1219, married Beatrice, the daughter of Philip of Swabia, King of Germany; one of the most virtuous and beautiful of her time. God blessed this union with seven children: six princes and one princess. The highest aims of Ferdinand's life were the propagation of the Faith and the liberation of Spain from the Saracen yoke. Hence his continual wars against the Saracens. He took from them vast territories, Granada and Almeria. One of his most important works of charity was the protection of the poor. In the most important towns he founded bishoprics, re-established Catholic worship everywhere, built churches, founded monasteries, and endowed hospitals. The greatest joys of his life were the conquests of Cordova (1236) and Seville (1248). He turned the great mosques of these places into cathedrals, dedicating them to the Blessed Virgin. He watched over the conduct of his subjects, becoming more in their virtue than in their valour, fasted strictly himself, wore a rough hairshirt, and spent more in prayer, especially before battles. Amid the tumult of the camp he lived like a religious in the cloister. The glory of the Church and the happiness of his people were the two guiding motives of his life. He found in the Church an asylum, and in the monks of the Athens of Spain. Ferdinand was buried in the great cathedral of Seville before the image of the Blessed Virgin, clothed, at his own request, in the habit of the Third Order of St. Francis. His body, it is said, remains incorrupt. Many miracles took place at his tomb, and Clement X canonized him in 1671. His feast is kept by the Minorites on the 30th of May.

LEO, Lives of the Saints and Blessed of the Three Orders of St. Francis (Turin, 1896); 390 sq.; BUTLER, Lives of the Saints (New York, 1896), II, 444 sq.; Acts SS., May, VII, 280 sq., where the Lives by his prime minister RODRIGO XIMENES, Abbot of Seville, of Ferdinand, are mentioned. Ferdinand Heckmann.

Ferentino (Ferentum), Diocese of, in the province of Rome, immediately subject to the Holy See. The town was in antiquity the chief place of the Hernici. Its ancient origin is borne out by the numerous remains of its cyclopean walls, especially near the site of the ancient fortress where the cathedral now stands. In the days of the kings there was strife between Rome and Ferentum which then belonged to the Volscians. The Consul Furius gave it over to the Hernici, and in 487, a. u. c., it became a Roman town (municipium), and shared therefrom the fortunes of Rome. Local legend attributes the first preaching of the Gospel in Ferentum to Sts. Peter and Paul; they are said to have consecrated St. Leo as its first bishop. In the persecution of Diocletian the centurion Ambrose suffered martyrdom (304) at Ferentino; possibly he was one of the martyrs of this city that period. In the time of Emperor Constantine the town had its own bishop; but the first known to us by name is Bassus, present at Roman synods, 487 and 492-493. St. Redemptus (about 570) is mentioned in the "Dialogues" of St. Gregory the Great; and he also relates to a Bishop Bonifacius, the Bishop of Trastamara Sogno (1150), who died in prison; Ubaldo (1150), legate of Adrian IV to the princes of Christendom in favour of a crusade, later the consecrate of the antipope Victor IV; Giacomo (A. d. 1276), legate of John XXI to Emperor Michael Paleologus; Landolfo Rossio (1297), who rendered good service to Boniface VIII; Francesco Filippeschi (1279), legate of Julius II to the Emperor Maximilian.

Ferentino has (1909) 19 parishes and 45,000 souls; 3 boys' and 2 girls' schools; 6 monasteries for men; and 8 convents for women.

U. Bentogni.

Fergus, Saint, d. about 739, known in the Irish martyrologies as St. Fergus Cruithneach, or the Fict. The Breviary of Aberdeen states that he had been a bishop for many years in Ireland when he came on a mission to Alba with some chosen priests and other clerics. He settled first near Stragheath, in the present parish of Upper Strathfoyle, in Upper Perth, and built three churches on their remains. One of the towers of Stragheath, Blackford, and Dolpatrick are found there to-day dedicated to St. Patrick. He next
evangelized Caithness and established there the churches of Wick and Halkirk. Thence he crossed to Buchan in Aberdeenshire and founded a church at Tullagh, a village now called St. Fergus. Lastly, he established a church at Glammis in Forfarshire. He was buried in 721 and was present with Sedebius and twenty other bishops at a synod in the basilica of St. Peter, convened by Gregory II. His remains were deposited in the church of Glammis and were the object of much veneration in the Middle Ages. The Abbot of Soone transferred his head to Soone and build in it a costly shrine. There is an entry in the accounts of the treasurer of James IV, October, 1503, "An offerand of 13 shillings to Sanct Fergus' heide in Soone". The churches of Wick, Glammis, and Lundie had St. Fergus as their patron. His festival is recorded in the Martyrology of Tullagh for the 8th of September but seems to have been observed in Scotland on the 18th of November.

Fergus, Saint, Bishop of Dulce, d. 778, mentioned by Duda MacFirbis, Annals of the Four Masters, Annals of Ulster.

Fergus, Saint, Bishop of Downpatrick, d. 583. He was sixth in descent from Coeblack, King of Erin. He was knighted by the monks of Kilmainham, identified by Colgan, Acta SS., 30 Mar.; O'Higgins, op. cit., 30 Mar.; Lanigan, Ec. Hist. of Ireland (Dublin, 1829), II, 183.

C. Mulcahy.

Feria (Lat. for "free day"), a day on which the people, especially the slaves, were not obliged to work, and on which there were no court sessions. In ancient Roman times the feriae publicae, legal holidays, were either static, recurring regularly (e.g. the Saturnalia, concepctive, i.e. movable, or imperative, i.e. appointed for special occasions. When Christianity spread, the feriae were ordered for religious rest, to celebrate the feasts instituted for worship by the Church. The faithful were obliged on those days to attend Mass in the churches, and the city became gradually a mercantile enterprise, partly from necessity and partly for the sake of convenience. This custom in time introduced those market gatherings which the Germans call Messen, and the English call fairs. They were fixed on saints' days (e.g. St. Barry's fair, St. Germanus's fair, St. Wenn's fair, etc.).

To-day the term feria is used to denote the days of the week with the exception of Sunday and Saturday. Various reasons are given for this terminology. The Roman Breviary, in the sixth lesson for 31 Dec., says that Pope St. Silvester ordered the延续的 of the custom, 'That the clergy, daily substaning from earthly cares, would be free to serve God alone'. Others believe that the Church simply Christianized a Jewish practice. The Jews frequently counted the days from their Sabbath, and so we find in the Gospels such expressions as una Sabbathi and prima Secundae from the Second. The early Christians reckoned the days after Easter in this fashion, but, since all the days of Easter week were holy days, they called Easter Monday, not the first day after Easter, but the second feria or feast day; and since every Sunday is the dies Dominico, a lesser Easter day, the custom prevailed to call each Monday a feria seconda, and so on for the rest of the week.

The ecclesiastical style of naming the week days was adopted by no nation except the Portuguese, who alone use the terms Segunda Feira etc. The old use of the word feria, for feast day, is lost, except in the derivative feriatio, which is equivalent to our of obligation. To-day those days are called feria upon which no feast is celebrated. Ferias are either major or minor. The major ferias are: those days on which the fathers, on a day of remembrance, even on the highest feasts, are the feasts of Advent and Lent, the Ember days, and the Monday of Rogation week; the others are called minor. Of the major ferias Ash Wednesday and the days of Holy Week are privileged, so that their office must be taken, no matter what occurs on them.

Dublin Review, CVIII, 350: W. PALMER, Compendium S. Urspurgi (New York, 1860); HERFURTH, in Kirchenlex., s. v.

Francis Mersham.

Ferland, Jean-Baptiste-Antoine, French Canadian historian, b. at Montreal, 25 December, 1805; d. at Quebec, 11 January, 1865. He studied at the college of Nicolet and was ordained priest 14 September, 1828. He ministered to country parishes until 1841, when he was made director of studies in the college of Nicolet. He became its superior in 1848. Being named a member of the council of the Bishop of Quebec, he took up his residence in that city, where he was also chaplain to the English garrison. From his colporteur days he had devoted himself to the study of Canadian history; the numerous notes which he collected had made him one of the most learned men of the country. It was not, however, until he had reached the age of forty that he thought of writing a history of Canada. In 1853 he published his "Observations sur l'histoire ecclésiastique du Canada," a refutation and criticism of the work of the Abbé Brasseur de Bourbourg; it was reprinted in France in 1854. In the latter year he published "Notes sur les registres de Notre-Dame de Québec," a second edition of which, revised and augmented, appeared in the "Foyer Canadien" for 1855. In 1855 he was regent of Canadian history at the University of Laval (Quebec), and went at once to France to collect new documents to perfect him in his work. He returned in 1857, bringing with him valuable notes. The public courses which he delivered from 1858 to 1862 attracted large audiences, and his lectures, printed as "Cours d'Histoire du Canada," established Ferland's reputation. The first volume appeared in 1861; the second was not published until after the author's death in 1865. This work, written in a style at once simple and exact, is considered authoritative by competent judges. It is, however, incomplete, ending as it does with the concordat of 1854. Ferland aimed above all at establishing the actual facts of history. He desired also to make known the work of the Catholic missions. His judgments are correct and reliable. Ferland also published in the "Soirées Canadiennes" of 1863 the "Journal d'un voyage sur les côtes de l'Amérique", and in the "Littérature Canadienne" for 1863 an "Étude sur le Labrador", which had previously appeared in the "Annales de l'Association pour la Propagation de la Foi". For the "Foyer Canadien" of 1863 he wrote a "Vie de Mgr. Plessis", Bishop of Quebec, translated later into English.

J. Edmond Roy.

Fermo, Archdiocese of (Firmiana), in the province of Ascoli Piceno (Central Italy). The great antiquity of the episcopal city is attested by the remains of its cyclopean walls. It was the site of a Roman colony, established in 264 B.C., consisting of 6000 men. With the Pentapolis it passed in the eighth century under the authority of the Holy See and underwent thenceforth the vicissitudes of the March of Ancona. Under the predecessors of Honorious III the bishops of
the city became the counts, and later princes, of Fermo. In the contest between the Hohenstaufen and the papacy, Fermo was several times besieged and captured; in 1176 by Archbishop Christian of Mainz, in 1192 by Henry VI, in 1208 by Marzukal, Duke of Ravenna, in 1241 by Frederick II, in 1245 by Manfred. After this it was governed by different lords, who ruled as more or less legitimate vassals of the Holy See, e. g. the Monteverdi, Giovanni Visconti, and went to Abyssinia, where he soon won favour with King Melek Seghed. This monarch, converted to the Faith in 1622, after the arrival of the Latin patriarch, for whom he had petitioned the Holy See, publicly acknowledged the papal supremacy and constituted Catholicism the State religion (1626). For a time innumerous conversions were made, the monarch in his zeal resorting even to compulsory measures. The emperor's son, however, took sides with the schismatics, headed a rebellion, seized his father's throne, and reinstated the former faith, proscribing the Catholic religion under the penalty of death. The missionaries, on their expulsion, found a temporary protector in one of the petty princes of the country, by whom, however, they were soon abandoned. Those who reached the port of Massowah were held for a ransom. Father Fernández, then over eighty years of age, was one of those detained as hostage, but a younger companion persuaded the pasha to substitute him, and Father Fernández was allowed to return to India, where he ended his days. On his missions for the king Father Fernández had traversed vast tracts of hitherto unexplored territory. He translated various liturgical books into Ethiopian, and was the author of ascetical and polemical works against the heresies prevalent in Ethiopia.

F. M. Rudge

Fernández, Juan, Jesuit lay brother and missionary; b. at Cordova; d. 12 June, 1687, in Japan. In a letter from Malacca, dated 20 June, 1549, St. Francis Xavier begs the prayers of the Goa brethren for those about to start on the Japanese mission, mentioning among them Juan Fernández, a lay brother. On their arrival in Japan Juan rendered active service in the work of evangelizing. In September, 1550, he accompanied St. Francis to Firando (Hirado), thence to Amaguchi (Yamaguchi), and on to Miako (Sakai), a difficult journey, from which they returned to Amaguchi, where he was left with Father Cosmo Torres in charge of the Christians, when Francis started for China. There is still in the records of the Jesuit college at Coimbra a lengthy document professed to be the translation of an account rendered St. Francis by Fernández of a controversy with the Japanese on such questions as the nature of God, creation, the nature and immortality of the soul. The success of Brother Fernández on this occasion in rebutting his Japanese adversaries resulted in the ill will of the bonzes, who stirred up a rebellion against the lord prince, who had become a Christian. The missionaries were concealed by the wife of one of the nobles until they were able to resume their work of preaching. St. Francis says in one of his letters: "Joan Fernández, though a simple layman, is most useful on account of the fluency of his acquaintance with the Japanese language and of the aptness and clearness with which he translates whatever Father Cosmo suggests to him." His humility under insults impressed all, and on one occasion resulted in the conversion of a brilliant young Japanese doctor, who later became a Jesuit, and one of the shining lights in the Japanese Church. Brother Fernández compiled the first Japanese grammar and lexicon.

Fernández de Palencia, Diego, Spanish conqueror and historian; b. at Palencia in the early part of the sixteenth century. He took part in the military career and went to Peru shortly after the conquest (about 1545). In 1553 and 1554 he took part in the civil struggle among the Spaniards, fighting under the banner of Alonso de Alvaredo, Captain-General of Los Charcos, against the rebel Francisco Hernández de Giron. In

The Cathedral, Fermo, XII Century

Francesco Sforza (banished 1446), Oliverotto Uffreducci (murdered in 1503 by Cesar Borgia), who was succeeded by his son Ludovico, killed at the battle of Monte Giorgio in 1520, when Fermo became again directly subject to the Holy See. Boniface VIII (1294-1303) established a university there. Fermo is the birthplace of the celebrated poet, Annibale Caro.

Local legend attests the first preaching of the Gospel at Fermo to Sts. Apollinaris and Maro. The martyrdom of its bishop, St. Alexander, with seventy companions, is placed in the persecution of Decius (250), and the martyrdom of St. Philip under Aurelian (270-75). Among the noteworthy bishops are: Passiunus, the recipient of four letters from Gregory III; Cardinal Domenico Capranica (1428); Sigismondo Zanetti (1584), under whom Fermo was made the seat of an archiepiscopate; Giambattista Rinuccini, nun
nuncio in Ireland; and Alessandro Borgia. The suffragan See of Fermo is Macerata-Tolentino, Montalto, Ripatransone, and San Severino. The archdiocese has (1908) a population of 185,000; 147 parishes; 368 secular priests and 86 regular; 2 male and 5 female educational institutions; 6 religious houses of men and 50 of women; and a Catholic weekly, the "Voce delle Marche".

Cappelletti, Le Chiese d’Italia (Venice, 1844), II; Napoleontani, Fermo nel Piceno (Rome, 1907); Catalani, De Eccleside Fermana episcopus episcopi (Fermo, 1783).

U. Benigni

Fernández, Antonio, Jesuit missionary; b. at Lisbon, c. 1560; d. at Goa, 12 November, 1642. About 1602 he was sent to India, whence two years later he
1555 Hurtado de Mendoza, Marques of Cañete, came to Peru as viceroy, and charged Fernández to write a history of the troubles in which he had just taken part. He then began his history of Peru, and later, when he had returned to Spain, upon the suggestion of Sandoval, President of the Council of the Indies, Fernández enlarged the scope of his work, and added to it a first part, dealing with the movements of Pizarro and his followers. The whole work was published under the title "Primera y segunda parte de la Historia del Perú." Having taken part in many of the events, and known the men who figured in most of the scenes which he describes, Fernández may be regarded as an historian whose testimony is worth consideration. Garcilaso de la Vega, the Peruvian, who quotes long passages from Fernández, severely attacks his story and accuses him of partiality and of animosity against certain personages. Whatever the reason may have been, however, possibly because of the truth of the story, the fact is, that the Council of the Indies prohibited the printing and sale of the book in the provinces under its jurisdiction. A perusal of the book conveys the impression that Fernández was a man of sound judgment, who set down the facts only after a thorough investigation. The reproaches of the Inca historian may, therefore, be regarded as without foundation.

Fernández, Dioce of (Fernensia), in the province of Leinster (Ireland), suffragan of Dublin. It was founded by St. Aedan, whose name is popularly known as Moedhog, or "My dear little Aedh", in 598. Subsequently, St. Aedan was given a quasi-supremacy over the other bishops of Leinster, with the title of Ard-Escap, or chief bishop, on which account he and some of his successors have been regarded as having archiepiscopal powers. The old annalists style the see Ferna-mor.-Maedhog, that is, "the great plains of the alder-trees of St. Moedhog." Even yet Moedhog (Mogue) — the Irish endearing form of Aedan — is a familiar Christian name in the diocese, while it is also perpetuated in Tuba (Tuam), Bovlovogue, Croome, Island Mogue, etc. The bell and shrine of St. Aedan (Breae Maedioi) are to be seen in the National Museum, Dublin. Many of his successors find a place in Irish martyrlogies, including St. Mochuha, St. Moling and St. Cillena. Of these the most famous is St. Moling, who died 13 May, 697. His book-shrine is among the greatest art treasures of Ireland, and his "well" is still visited, but he is best known as patron of St. Mullins (Teach Moling), County Carlow. The ancient monastery of Ferns included a number of cells, or oratories, and the cathedral was built in the Irish style. At present the remains of the abbey (refounded for Austin Canons, in 1160, by Dermot MacMurrough) include a round tower, about seventy-five feet high, in two stories, the lower of which is quadrangular and the upper polygonal. Close by is the Holy Well of St. Mogue.

Ferns was raided by the Scandinavians in 834, 836, 839, 842, 917, 920, 928, and 930, and was burned in 1377. St. Peter's Church, Ferns, dates from about the year 1060, and is of the Hiberno-Romanesque style, having been built by Bishop O'Lynam, who died in 1052. The bishops were indirectly styled as of Ferns, Hy Kinsellagh, or Wexford; thus, Maelog O'Donnegan (d. 1125) is called "Bishop of Wexford," while Bishop O'Tuathain (d. 1145) is named "Archbishop of Hy Kinsellagh." This was by reason of the fact that the boundaries of the diocese are coextensive with the territory of Hy Kinsellagh, on which account Ferns includes County Wexford with small portions of Wicklow and Carlow. Dermot MacMurrough, King of Leinster, burned the city of Ferns in 1166, "for fear that the Connacht men would destroy his castle and his house," and, three years later, he brought over a pioneer force of Welshmen. He died in 1171, and, at his own request, was buried "near the shrines of St. Maclog and St. Moling." The same year Henry II of England landed in Ireland, where he remained for six months.

Ailbe O'Molloy, a Cistercian, who ruled from 1185 to 1222, was the last Irish bishop in the pre-Reformation history of Ferns. He attended the Fourth General Council of Lateran (1215) and, on his return, formed a cathedral chapter. His successor, Bishop St. John, was granted by Henry III (6 July, 1226) a weekly market at Ferns and an annual fair, also a weekly market at Enniscorthy. This bishop (8 April, 1227) assigned the manor of Enniscorthy to Philip de Prendergast, who built a castle, still in excellent preservation. In exchange, he acquired six plough-lands forever for the See of Ferns. He held a synod at Selkirk (St. Sepulchre) Priory, Wexford (8 September, 1240). The appointment of a dean was made in 1247 (23 August, 1265). Bishop St. John rebuilt the cathedral of Ferns, which from recent discoveries seems to have been 180 feet in length, with a crypt. A fine stone statue of St. Aedan, evidently early Norman work, is still preserved. In 1346 the castle of Ferns was made a royal appanage, and constables were appointed by the Crown, but it was recovered by Art
MacMourugh in 1386. Patrick Barret, who ruled from 1400 to 1415, removed the episcopal chair of Ferns, and made Wexford his cathedral. His successor, Robert Whitty, had an episcopate of forty years, dying in February, 1458. Under John Purcell (1459–1479), Franciscan friars acquired a foundation in Enniscorthy, which was dedicated 18 October, 1460. Lawrence Neville (1479–1503) attended a provincial council at Christ Church Cathedral, Dublin, on 5 March 1502, and his successor, Edmund Comford, died in 1500, whereupon Nicholas Comyn was elected. Bishop Comyn resided at Fethard Castle, and assisted at the provincial councils of 1512 and 1518. He was transferred to Waterford and Lismore in 1519, and was replaced by John Purcell, whose term ended in 1524. Alexander Devereux was a schismatically consecrated, Alexander Devereux was rehabilitated under Queen Mary as Bishop of Ferns, and died at Fethard Castle on 6 July, 1566—the last pre-Reformation bishop. Peter Power was appointed his successor in 1582, but the temporalities of the see were held by John Devereux. Bishop Power died a confessor, in exile, 15 December, 1588. Owing to the disturbed state of the diocese and the lack of revenue, no bishop was provided till 19 April, 1624, but meantime Father Daniel O’Drohan, who had to adopt the alias of James Walshe", acted as vicar Apostolic (1624–1643), and was succeeded by another, John Roche, 6 February, 1644, who never entered on possession, the see being administered by William Devereux from 1636 to 1644. Dr. Devereux was an able administrator at a trying period, and he wrote an English catechism, which was used in the diocese during a few years ago. Nicholas French was made Bishop of Ferns 16 September, 1644, and died in exile at Ghent, 23 August, 1679. His episcopate was a remarkable one, and he himself was a most distinguished prelate. Bishop Wadding (1679–1691) wrote some charming Christmas carols, which are still sung in Wexford. His successors, Michael Rosset, (1695–1709), John Gordon (1709–1729), and the Franciscan Ambrose O’Culaghasen (1729–1744), experienced the full brunt of the penal laws. Nicholas Sweetman (1745–1786) was twice imprisoned on suspicion of “disloyalty”, while James Caulfield (1786–1814) was destined to outlive the “rebellion” of 1798. One of the Ferns priests, Fr. Francis Tynan, who was transported as a “felon”, was the first Prefect Apostolic of Australia. All the post-Reformation bishops lived mostly at Wexford until 1809, in which year Dr. Ryan, coadjutor bishop, commenced the building of a cathedral in Enniscorthy, which had been assigned him as a mensal pension. Catholic bishops died at Wexford until 1831, when the diocese, except for the brief period from 1813 to 1837, when it was leased to the King of Sicily for an annual tribute. Alfonso I d’esté, hoping to cast off the overlordship of the pope, kept up relations with Louis XII of France long after the League of Cambrai, and had been invalided to France, but he attempted in person to bring him back to a sense of duty, but was not successful. In 1519 Leo X tried to capture the town by surprise, but he too failed; in 1522, however, Alfonso of his own accord made his peace with Adrian VI. In 1597 Alfonso II died without issue and named his cousin Cesare as his heir. Clement VIII refused to recognize him and sent to Ferrara his own nephew, Cardinal Pietro Aldobrandini, who in 1598 brought the town directly under papal rule. In 1796 it was occupied by the French, and became the chief town of the Bas-Po. In 1815 it was given back to the Holy See, which governed it by a capitulation with the side of an Austrian garrison. In 1831 it proclaimed a provisional government, but the Austrian troops restored the previous civil conditions, which lasted until 1859, when the territory was annexed to the Kingdom of Italy.

From an interesting Relatio forwarded to the Propaganda by Bishop Caulfield in 1796, the Diocese of Ferns is described as 95 miles in length and 20 in breadth, with eight borough towns, and a chapter of nineteen members. In pre-Reformation days it had 143 parishes; 17 monasteries of Canons Regular of St. Augustine; 3 priories of Knights Templars; 2 Cistercian abbeys; 3 Franciscan friaries; 2 Austin friaries; 1 Carmelite Friary, and 1 Benedictine Priory. Ferns had a nunnery or a Dominican friary. (The Jesuits had a flourishing college in New Ross in 1675.) The population was 120,000, of which 114,000 were Catholics, and there were 80 priests, and many regulars. There were 36 parishes, many of which had no curates.

At present (1909), the population is 108,750, of which 99,000 are Catholics. There are 41 parishes, of which (Wexford is 2), and the curates are the churches number 92. The religious orders include Franciscans (one house), Augustinians (two houses), and Benedictines (one house). The total clergy are 140. In addition, there are 14 convents for religious women, and a House of Missions (Superior Father John Rosser), as also Christian Brothers schools, a diocesan college, a Benedictine college, and several good schools for female pupils. Enniscorthy cathedral was not completed until 1875, and the interior was not completely finished till 1908. Most Rev. Dr. James Browne was consecrated Bishop of Ferns 14 September, 1908, at Maynooth, 15 March, 1908. He died at Wexford in 1942, finished his studies at Maynooth College, where he was ordained in 1865, and served for nineteen years as curate and parish priest with conspicuous ability.

FERRARA. Archdiocese of (Ferrariensis), immediately subject to the Holy See. The city, which is the capital of the similarly named province, viz., the banks of the Po di Volano, where it branches off to form the Po di Primaro, in the heart of a rich agricultural district. The origins of Ferrara are doubtful. No mention is made of it before the eighth century. Until the tenth century it followed the fortunes of Ravenna. In 988 it was given as a papal fief to Tedaldo, Count of Canossa, the grandfather of Countess Matilda against whom it rebelled in 1101. From 1115 it was directly under the pope, though often claimed by the emperors. During this period arose the commune of Ferrara. Gradually the Salinguerra family became all-powerful in the city. They were expelled in 1208 for their fidelity to the emperor, whereupon the citizens offered the governorship to Asso VI d’Este, who accepted it in 1292. He died in 1519, with the exception of the brief period from 1313 to 1317, when it was leased to the King of Sicily for an annual tribute. Alfonso I d’Este, hoping to cast off the overlordship of the pope, kept up relations with Louis XII of France long after the League of Cambrai, and had been invalided to France, but he attempted in person to bring him back to a sense of duty, but was not successful. In 1519 Leo X tried to capture the town by surprise, but he too failed; in 1522, however, Alfonso of his own accord made his peace with Adrian VI. In 1597 Alfonso II died without issue and named his cousin Cesare as his heir. Clement VIII refused to recognize him and sent to Ferrara his own nephew, Cardinal Pietro Aldobrandini, who in 1598 brought the town directly under papal rule. In 1796 it was occupied by the French, and became the chief town of the Bas-Po. In 1815 it was given back to the Holy See, which governed it by a capitulation with the side of an Austrian garrison. In 1831 it proclaimed a provisional government, but the Austrian troops restored the previous civil conditions, which lasted until 1859, when the territory was annexed to the Kingdom of Italy.

The dukes of Ferrara, especially Alfonso I (1505–1534), and Alfonso II (1539–1597), were generous patrons of literature and the arts. At their court lived Tasso, Ariosto, Boiardo, V. Strozzi, G. B. Guarini, the historian Guido Bentivoglio, and others. It counted many artists of renown, whose works adorn even yet the churches and palaces of the city, e.g., the ducal palace,
the Schifanoia, Diamanti, Rosella, Scaraf-Calcagnini, and other palaces. The more famous among the painters were Benvenuto Tisi (Garofalo), Ercole Grandi, Ippolito Scarselio, the brothers Dossi, and Girolamo da Carpi. Alfonso Cattadella, the sculptor, left important works in the cathedral of Mantua (the Pietà and the Apostles), and in San Giovanni (Madonna). Churches of note are the cathedral, SS. Benedetto and Francesco, San Domenico (with its beautiful carved choir stalls of the fourteenth century). The most famous work of ecclesiastical architecture is the magnificent Holy Spirit window, designed and executed by Boniface XIX. Ferrara was the birthplace of Savonarola and of the great theologian, Silvestro di Ferrara, both Dominicans.

The earliest bishop of certain date is Constantine, present at Rome in 561; St. Maurilius (patron of the city) must have lived before this time. Some think that the bishops of Ferrara are the successors to those of Vigona (the ancient Vicubabentia). Other bishops of note are Filippo Fontana (1243), to whom Innocent IV entrusted the task of inducing the German princes to depose Frederick II; Blessed Alberto Pandolfo (1261) and Blessed Giovanni di Tessiomanico (1431); Giovanni di Este (1520 and 1550); and Luigi di Este (1555), all three munificent patrons of learning and the arts; Alfonso Rossetti (1553), Paolo Leoni (1579), Giovanni Fontana (1590), and Lorenzo Magalotti (1628), all four of whom eagerly supported the reforms of the Council of Trent; finally, the saintly Cardinal Giovanni della Rovere, the nephew of the Pope, Archbishop of Ravenna claimed metropolitan rights over Ferrara; in 1735 Clement XII raised the see to archiepiscopal rank, without suffragans. It has 98 parishes and numbers 130,752 souls; there are two educational institutions for boys and six for girls, nine religious houses of men and nine of women. Cappelletti, La Chiesa d'Italia (Venice, 1846), IV, 9-11, 24-226; Frizzi, Memorie per la storia di Ferrara (Ferrara, 1791); Agnelli, Ferrara in Italia artistica (Bergamo, 1892).

COUNCIL OF FERRARA.—When Saloniki (Thessalonica) fell into the hands of the Turks (1429) the Emperor John Paleologus approached Martin V, Eugene IV, and the Council of Basle to secure help against the Turks. A council was convoked for the reunion of the two Churches, as the only means of efficaciously resisting Islam. At first it was proposed to hold the council in some seaport town of Italy; then Constantinople was suggested. The members of the Council of Basle held out for Basle or Avignon. Finally (18 September, 1437) the council met at Ferrara, that city being acceptable to the Greeks. The council was opened 8 January, 1438, by Cardinal Niccolò Albergati, and the pope attended on 27 January. The synodal officers were divided into three classes: (1) the cardinals, archbishops, and bishops; (2) the abbots and prelates; (3) doctors of theology and canon law. Before the arrival of the Greeks, proclamation was made that all further action by the Council of Basle such would be null and void. The Greeks, i. e. the emperor with a train of archbishops, bishops, and learned men (790 in all), landed at Venice, 8 February and were cordially received and welcomed in the pope's name by Ambrogio Traversari, the General of the Camaldolese. On 4 March the emperor entered Ferrara. The Greek bishops came a little later. Questions of precedence and ceremonial caused no small difficulty. For preparatory discussions an interdicted committee, one from each side was appointed. Among them were Marcus Eugenius, Archbishop of Ephesus; Bessarion, Archbishop of Nicæa; Balsamon; Siropulos and others, for the Greeks; while Cardinals Giuliano Cesarini and Niccolò Albergati, Giovanni Turrercemati, and others represented the Latin. The Greek Emperor prevented a discussion on the Procession of the Holy Spirit and on the use of leavened bread. For months the only thing discussed or written about was the ecclesiastical teaching on purgatory. The uncertainty of the Greeks on this head was the cause of the delay. The emperor's object was to bring about a general union without any concessions on the part of the Greeks in matters of the Council of Constance (the Apostles), and in San Giovanni (Madonna). Churches of note are the cathedral, SS. Benedetto and Francesco, San Domenico (with its beautiful carved choir stalls of the fourteenth century). The most famous work of ecclesiastical architecture is the magnificent Holy Spirit window, designed and executed by Boniface XIX. Ferrara was the birthplace of Savonarola and of the great theologian, Silvestro di Ferrara, both Dominicans.

The sessions began 8 October, and from the opening of the third session the question of the Procession of the Holy Spirit was abandoned. The pope, perhaps at Marcus Eugenius' behest, ordered Bessarion to hurriedly draft a decree providing that there be no procession of the Holy Spirit. Despite the delay, and a few of the Greeks, among them Marcus Eugenius, attempted to depart secretly, but they were obliged to return.

which makes him stand out in an age where faith and single-mindedness were gradually disappearing, as a man of another country, almost of another time.

When we consider the works of Gaudenzio, more especially his earlier ones, in the light of the fact that the district in which he was born was in the direct line of communication between North and South; and reflect that what might be termed the “art traffic” between Germany and Italy was very great in his time, we are forced to recognize that German influence played a considerable part in the development of his genius, in so far at least as his mind was amenable to external stimuli. He is, in fact, the most German of the Italian painters. In the heart of a school where art was becoming more and more aristocratic, he remained the people’s painter. In this respect his personality stands out so boldly amongst the Italian painters of the time that it seems natural to infer that Gaudenzio in his youth travelled to the banks of the Rhine, and bathed long and deep in its mystic atmosphere.

Like the Gothic masters, he is perhaps the only sixteenth-century painter who worked exclusively for churches and monasteries. When we consider the works of Gaudenzio, we have painted lengthy sacred dramas and legends from the lives of the saints: a “Passion” at Varallo; a “Life of the Virgin”, and a “Life of St. Magdalene”, at Vercelli; and at times, after the fashion of the cinquecento, he grouped many different episodes in one scene, at the expense of coherence, and in order to foster the mysteries, and might-be styled “sectional paintings”. He was not aiming at art, but at edification. Hence arose a certain negligence of form and a carelessness of execution still more pronounced. The “Carrying of the Cross” at Cannobio, the “Calvary at Vercelli, the “Deposition” at Turin, works of great power in many ways, but unloved at the time in Italy for pathos and feeling, are somehow wanting in proportion, and give one the impression that the conventional grouping has been departed from. The soul, being filled as it were with its object, is overpowered by the emotions; and the intellect confesses its inability to synthesize the images which rise tumultuously from an over-excited sensibility.

Another consequence of this peculiarity of mental conformation is, perhaps, the abuse of the mate-rials at his disposal. Gaudenzio never refrained from using doubtful methods, such as ornaments in relief, the use of chiaroscuro, the encroachment into the aureolas, etc. And to heighten the effect he does not even hesitate to make certain figures stand out in real, palpable relief; in fact some of his frescoes are as much sculpture as they are painting, by reason of this practice.

This history must always remain incomplete until we get further enlightenment concerning that strange movement of the Pietist preachers, which ended in establishing (1487-93) a great Franciscan centre on the Sacro Monte de Varallo. It was in this retreat that Gaudenzio spent the years which saw his genius come to full maturity; it was there he left his greatest works—“Life of Christ” of 1513, in twentysix frescoes at Santa Maria delle Grazie, and other works on the Sacro Monte dating between 1523 and 1528. It was there that the combined use of painting and sculpture produced a most curious result. Fresco is only used as an ornament, a sort of background to a scene presenting a tableau vivant of figures in terracotta. Some of the groups embrace no less than thirty figures. Forty chapels bring out in this way the principal scenes in the drama of the Incarnation. Gaudenzio is responsible for the chapels of the Magi, the Pietà, and the Calvary.

In his subsequent works, at Vercelli (1530-34) and at Saronno (in the cupola of Santa Maria dei Miracoli, 1535), the influence of Correggio is curiously blended with the above-mentioned German leanings. The freshness and vigour of his inspiration remain untouched in all their homely yet stern grace. The “Assumption” at Vercelli is perhaps the greatest lyric in Italian art; this lyric quality in his painting is still more intense in the wonderful “Glory of Angels” in the cupola at Saronno, the most effulgent and jubilant symphony that any art has ever produced. In all Correggio’s art there is nothing more charming than the exquisite sentiment and tender rusticity of “The Flight into Egypt”, in the cathedral of Como. The artist’s latest works were those he executed at Milan, whither he retired in 1536. In these paintings, the creations of a man already seventy years of age, the vehemence of feeling sometimes becomes almost savage, the presentation of his ideas abrupt and apocalyptic. His method becomes colossal and more and more careless; but still in the “Pamò” at Santa Maria delle Grazie (1542) we cannot fail to trace the hand of a master.

Gaudenzio was married at least twice. By his first marriage a son was born to him in 1509 and a daughter in 1512. He married, in 1528, Maria Mattia della Poppa who died about 1540, shortly after the death of the additions which the author had made to the second edition under the title of additiores auctoris, and also other enlargements (additiones ex alieni manu) inserted in their respective places in the body of the work (and no longer in the appendix as in the former editions) and supplements. These various editions thus differ from each other. The third edition is that of the Benedictiones (Naples, 1844-55), reproduced by Migne (Paris, 1861-1883), and an edition published at Paris in 1884. A new edition was published at Rome in 1899, at the press of the Propaganda in eight volumes, with a volume of supplements, edited by the Jesuit, Buccheroni, containing several dissertations and the most recent and important documents of the Holy See. This supplement serves to keep up to date the work of Ferraris, which will ever remain a precious mine of information, although it is sometimes possible to reproach the author with laxism.
King Pedro for the beautiful Inés de Castro, an incident which has also been splendidly treated by Camões in his "Lusiadas," and has furnished the theme for at least ten Portuguese and four Spanish plays, and over a score of compositions in foreign languages. If tested by the requirements of the stage, the play is doubtless far from perfect, but the purity of its style and diction ensures its popularity with its author's compatriots. It was rendered into English by Musgrave in 1826. The rather free Spanish version of 1877 was made on the basis of a manuscript copy of the Portuguese original, for the first Portuguese printed edition is of 1587.

CASTILLO, António Ferreira, poeta quinhentista (Rio de Janeiro, 3 vols., 1875); DE VARGONCELLOR in GRABER, Grundriss der romanischen Philologie (Stuttgart, 1887), II, p. 286; BRAGA in Historia dos Quinhentistas (Oporto, 1871).

Ferreol, SAINTS. See BERANÇON; UZES.

Ferrer, RAFAEL, Spanish missionary and explorer; b. at Valencia, in 1570; d. at San José, Peru, in 1611. His father had destined him for a military career, but he entered the Society of Jesus, and in 1593 was sent to Quito, Ecuador. In 1601 he penetrated the territory of the Cofan, a hostile tribe who had been a source of great trouble to the Spanish Government. Within three years the Indians of several villages were so civilized by the influence of religion that the surrounding country was open to colonization.

In 1606, at the command of the viceroy of Quito, Ferrer went among the uncivilized tribes of the River Napo. He was well received by the Indians, and on this journey, which lasted two and a half years, he travelled 3600 miles into the interior, bringing back with him a chart of the basin of the Napo, a map of the country he had explored, and an herbarium which he presented to the viceroy. He was appointed governor and chief magistrate of the Cofan, and received the title of "Chief of the Missions of the Cofan." After a period of rest at the mission he next journeyed northward from Quito through unexplored forests, and discovered a large lake and the River Pilcomayo. In 1610 he returned to his labours among the Indians, sending his energies to the civilisation of the few tribes of the Cofan who were not yet within the range of his influence. He met his death at the hands of the chief of one of these tribes, whom he had compelled to abandon polygamy. The murder was slain in his house, four of his tribesmen, who were enraged on learning of his deed. An extract from Father Ferrer's account of his explorations was published by Fr. Detré in the "Lettres Edifiantes," and the same extract was also published by Father Bernard de Bologne in the "Bibliotheca Societatis Jesu," but the original manuscript was lost and has never been published in its entirety. Besides compiling his "Arte de la Lengua Cofana," Father Ferrer translated the catechism and selections from the Gospels for every Sunday in the year into the language of the Cofan.

Ferrer, VINCENT, SAINT. See VINCENT FERRER, SAINT.

Ferrères, ABBEY OF, situated in the Diocese of Orleans, department of Loiret, and arrondissement of Montargis. The Benedictine Abbey of Ferrères-en-Gâtinais has been most unfortunate from the point of view of the preservation of historical relics, its archives, its records, its charters, and everything which would aid in the re- construction of its history. Thus legend and credulity have had full play. But it is interesting to encounter in the work of an obscure Benedictine of the eighteenth century, Dom Philippe Mazoyer, information which perhaps the most accurate and veracious is not obtainable. According to Dom Mazoyer there was formerly at Ferrères a chapel dedicated to the Blessed Virgin under the title Notre-Dame de Beth-

VI. 4
Verstel, Heinrich, Freiherr von, architect; with Hansen and Schmidt, the creator of modern Vienna; b. 7 July, 1828, at Vienna; d. at Grünzing, near Vienna, 14 July, 1883. His father was a banker. He devoted his life to the study of art, and at the same time between the different arts, all of which possessed a strong attraction for him, the talented youth finally decided on architecture, which he studied at the Academy under Van der Null, Siccardt, and Rössler. After several years during which he was in dispute because of his part in the Revolution, he entered the atelier of his uncle, Stache, where he worked at the votive altar for the chapel of St. Barbara in the cathedral of St. Stephen and co-operated in the restoration and construction of many castles, chiefly in Bohemia. Journeys of some length into Germany, Belgium, Holland, and England, then in the year 1847, he went to Paris and towards Romanticism. It was in Italy, however, where he was sent as a bursar in 1854, that he was converted to the Renaissance style of architecture. This was thenceforth his ideal, not because of its titanic grandeur, but because of its beauty and symmetrical harmony. Two generations of the profession to trace Baroque, his favourite master. He turned from the simplicity and restraint of the Late Renaissance to the use of polychromatic by means of graffito decoration and terra-cotta. This device, adopted from the Early Renaissance and intended to convey a fuller sense of life, he employed later with marked success in the Albertinum Museum.

While still in Italy he was awarded the prize in the competition for the votive church (Votivkirche) of Vienna (1855) over seventy-four contestants, for the most part celebrated architects. In this masterpiece of modern ecclesiastical architecture he produced a structure of marvellous symmetry designed along strong architectural principles, with a simple, well-defined ground-plan, a harmonious correlation of the Early Italian Renaissance, to the accepted Augustinian and Gothic tradition. After his death this edifice was proposed by Sykes as a model for the new Westminster cathedral in London. Another of Verstel's monumental works belonging to the same period is the Austro-Hungarian bank in Vienna, in the style of the Early Italian Renaissance, 1566-70. The expansion of the city of Vienna enabled Verstel, with Eitelberger, to develop civic architecture along artistic lines (burgomaster's residence, stock exchange, 1858). At the same time he had also the opportunity of putting his ideas into practice in a number of private dwellings and villas at Brunn and Vienna.

The more important buildings designed during his later years, passing over the churches at Brunn and Schonau near Teplitz, really products of his earlier activity, the palace of Archduke Ludwig Victor, bishop of Stein, printer publisher of "Catholica Christiana," and Johann Liechtenstein in the Rosseu near Vienna, the palace of the Austro-Hungarian Lloyd's, at Triest, but above all the Austrian Museum (completed in 1871), a masterpiece of interior economy of space with its imposing arcade court. Next to his civic and ecclesiastical masterpieces come the Vienna University in masterly construction with wonderfully effective stairways (1871-84). Through a technical error his design for the Berlin Reichstag building received no award.

Verstel is the most distinctive Viennese of all Viennese architects, and give a structure beauty of design and harmony without prejudice to the purpose it was to subserve, and this because of his artistic versatility and inexhaustible imagination. These qualities also assured him success as a teacher, and were evident in his memoirs and numerous treatises, which are masterpieces of clearness. Special mention should be made of those which appeared in Förster's architectural magazine. In 1866 Verstel was appointed professor at the Polytechnic School, in 1871 chief government inspector of public works and in 1879 was raised to the rank of Freiherr. At the time of his death he was still in the full vigour of his strength.
VOTIVKIRCHE, VIENNA
DESIGNED BY HEINRICH FREIHERR VON FERSTEL
On 4 April, 1803, Napoleon appointed Cardinal Fesch successor to Cacault as ambassador to Rome, giving him Châteaubriand for secretary. The early part of his sojourn in the Eternal City was noted for his differences with Châteaubriand and his efforts to have the Concordat extended to the Italian Republic. He prevailed upon Pius VII to go to Paris in person and crown Napoleon. This was Fesch’s greatest achievement. He accompanied the pope to France and, as grand almoner, blessed the marriage of Napoleon and Josephine before the coronation ceremony took place. By a decree issued in 1804, the missionary institutions of Saint-Lazare and Saint-Sulpice were placed under the direction of Cardinal Fesch, who, laden with this new responsibility, returned to Rome. In 1806, after the occupation of Aëona by French troops, and Napoleon’s letter proclaiming himself Emperor of Rome, Alquier was named to succeed Fesch as ambassador to Rome. Returning to the episcopal See of Lyons, the cardinal remained in close touch with his nephew’s religious policy and strongly occasionally with success, to obviate certain irreparable mistakes. He accepted the coadjutorship to Dalberg, prince-primy, in the See of Ratibon, but, in 1808, refused the emperor’s offer of the Archdiocese of Paris, for which he could not have obtained canonical institution. Although powerless to prevent either the rupture between Napoleon and the pope in 1809 or the closing of the seminaries of Saint-Lazare, Saint-Espirit, and the Missions Etrangères, Fesch nevertheless managed to deter Napoleon from signing a decree relative to the independence of the Gallican Church. He consented to bless Napoleon’s marriage with Marie Louise, but, according to the researches of Geoffroy de Grandmaison, he was not responsible to the same extent as the members of the diocesan officialité for the illegal consummation of the emperor’s first marriage.

In 1809 and 1810 Fesch presided over the two ecclesiastical commissions charged with the question of canonical institution of bishops, but the proceedings were so conducted that neither commission adopted any schismatic resolutions. As its president, he opened the National Council of 1811, but at the very outset he took and also administered the oath (formula juramentum professionis fidelis) required by the Bull "Injunctiones" of Pius IV. But the papal conclavists’ vote of eleven out of ten that the method of canonical institution could not be altered independently of the pope. A message containing the assurance of the cardinal’s loyalty, and addressed to the supreme pontiff, then in exile at Fontainebleau, caused Fesch to incur the emperor’s disfavour and to forfeit the subsidy of 150,000 florins which he had received as Dalberg’s coadjutor. Under the Restoration and the Monarchy of July, Fesch lived at Rome, his Archdiocese of Lyons being in charge of an administrator. He died without again returning to France and left a splendid collection of pictures, a part of which was bequeathed to his episcopal city.

As a diplomat, Fesch sometimes employed questionable methods. His relationship to the emperor and his cardinalitial dignity often made his position a difficult one; at least he could never be accused of approving the violent measures resorted to by Napoleon. As archbishop, he was largely instrumental in establishing the Brethren of Christian Doctrine and recalling the Jesuits, under the name of Pascalinists. The Archdiocese of Lyons is indebted to him for some eminently useful institutions. It must be admitted, moreover, that in his pastoral capacity Fesch took a genuine interest in the education of priests.

Georges Goyau.

Fessler, Joseph, Bishop of St. Polten in Austria, and secretary of the Vatican Council; b. 2 December, 1813, at Lochau near Bregens in the Vorarlberg; d. 25 April, 1872. His parents were peasants. He early showed great abilities. His classical studies were done at Feldkirch, his philosophy at Innsbruck, including a course of legal studies, and his theology in Innsbruck. He was ordained priest in 1837, and, after a year as master in a school at Innsbruck, studied for two more years in Vienna. He then became professor of ecclesiastical history and canon law in the theological school at Brixen, 1841–52. He published at the request of the Episcopal Council of Tyrol, in 1848, a useful little book "Ueber die Provinzial-Concili en und Diöcesen-Synoden" (Innsbruck, 1849), and in 1850–1 the well-known "Institutiones Patrologiae, quas ad frequentiorem utiliorem et faciliorem SS. Patrum lectionem promovendam concinnavit J. Fessler" (Innsbruck, 2 vols., 1850). This excellent work superseded the unfinished books of Möhler and Peraneder, and was not surpassed by the subsequent works of Alseg and Nirschl. In its new edition by the late Prof. Jungmann of Louvain (Innsbruck, 1890–9), it is still of great value to the student, in spite of the newer information given by Bardenhewer. From 1856 to 1861 Fessler was professor of canon law in the University of Vienna, after making special studies for six months at Rome. He was consecrated as assistant bishop to the Bishop of Brixen, Dr. Gasser, on 31 March, 1862, and became his vicar-general for the Vorarlberg. On 23 Sept., 1864, he was named by the German Bishop of St. Polten, at the request of Prince Metternich, when at Rome in 1867 he was named assistant at the papal throne. In 1869 Pope Pius IX proposed Bishop Fessler to the Congregation for the direction of the coming Vatican Council as secretary to the council. The appointment was well received, the only objection being from Cardinal Ceterini who thought the choice of an Austrian might make the other nations jealous. Bishop Fessler was informed of his appointment on 27 March, and as the pope wished him to come with all speed to Rome, he arrived there on 8 July, after hastily dispatching the business of his diocese. He had a pro-secretary and two assistants. It was certainly not easy to choose a prelate who was in great intercourse with the Fathers and with ecclesiastical history was equalled only by his thorough knowledge of canon law. He seems to have given universal satisfaction by his work as secretary, but the burden was a heavy one, and in spite of his excellent constitution his unceasing labours were the cause of his early death. Before the council he published an opportune work "Das letzte und das nächste allesmeine Konzil" (Freiburg, 1869), and after the council he replied in a masterly brochure to the attack on the council by Dr. Schulte, professor of canon law and German law at Prague. Dr. Schulte’s pamphlet was a powerful press against the Roman pope over princes, countries, peoples, and individuals, in the light of their acts since the reign of Gregory VII, was very similar in character
to the Vaticanism pamphlet of Mr. Gladstone, and rested on just the same fundamental misunderstanding of the dogma of Papal Infallibility as defined by the Vatican Council. The Prussian Government promptly appointed Dr. Schultze to a professorship at Bonn, with which Catholic and bishop had answered with a letter, the Father’s proposal: “Die wahre und die falsche Unfehlbarkeit der Päpste” (Vienna, 1871), was translated into French by Cosquin, editor of “Le Français,” and into English by Father Ambrose St. John, of the Birmingham Oratory (The true and false Infallibility of the Popes, London, 1875). It is still an exceedingly incomplete explanation of the true doctrine of Infallibility as taught by the great Italian “Ultramontane” theologians, such as Bellarmine in the sixteenth century, P. Ballerini in the eighteenth, and Perrone in the nineteenth. But it was difficult for those who had been fighting against the definition to realize that the “Infallibilists” had wanted no more than this. Bishop Hefele of Rottenburg, who had strongly opposed the definition, and afterwards loyally accepted it, said he entirely agreed with the moderate view taken by Bishop Fessler, but doubted whether such views would be received and in Rome. It was evident, one would have thought, that the secretary of the council was likely to know; and the hesitations of the pious and learned Hefele were removed by the warm Brief of approbation which Pius IX addressed to the author.

John Chapman.

Feti, Domenico, an Italian painter; b. at Rome, 1589; d. at Venice, 1624. He was a pupil of Cigoli (Ludovico Cardi, 1569–1615), or at least was much influenced by this master during his sojourn in Rome. From the end of the sixteenth century Rome again became what she had ceased to be after the sack of 1527, the metropolis of the beautiful. The jubilee of the year 1600 marked the triumph of the papacy. Art, seeking its pole now at Parma, now at Venice, now at Bologna, turning towards Rome, concentrated itself there. Crowds of artists flocked thither. This was the period in which were produced the masterpieces of the Carracci, Caravage, Domenichino, Guido, not counting those of many cosmopolitan artists, such as the brothers Bril, Elsheimer, etc., and between 1600 and 1624, the greatest artists paid three visits to Rome. This exceptional period was that of Domenico’s apprenticeship; the labour, the unique fermentation in the world of art, resulted, as is well known, in the creation of an art which in its essential characteristics became for more than a century that of all Europe. For the old local and provincial schools (Florentine, Umbrian, etc.) Rome had the privilege of substituting a new one which was characterized by its universality. Out of a mixture of so many idioms and dialects she evolved an international language, the style which is called baroque. The discredit thrown on this school should not lead us to ignore its grandeur. In reality, the reorganization of modern painting dates from it.

Domenico is one of the most interesting types of this great evolution. Eclecticism, the fusion of various characteristics of Correggio, Barrochi, Veronese, was already apparent in the work of Cigoli. To these Feti added the naturalism of the traditional masters. He borrowed from them the traditional methods of representing the picturesque, his rare lights and strong shadows, his famous chiaroscuro. He nevertheless, he anticipated, he prepared, he developed the full daylight and the diffuse atmosphere of out-of-doors. He did not have time to succeed completely in this. His colouring is often dim, crude, and faded, though at times it assumes a golden patina and seems to solve the problem of conveying mysterious atmospheric effects.

At an early age Domenico went to Mantua with Cardinal Gonzaga, later Duke of Mantua, to whom he became court painter and bishop of Mantua’s episcopal, and he felt the transient influence of Giulio Romano. His frescoes in the cathedral, however, are the least characteristic and the feeblest of his works. Domenico was not a good frescoist. Like all modern painters he made use of oils too frequently. By degrees he abandoned his decorative ambitions. He painted few altar-pieces, preference leading him to execute easel pictures. For the most part these dealt with religious subjects, but conceived in an intimate manner for private devotion. Scarcely any of his themes were historical, and few taken from among those, such as the Nativity, Calvary, or the entombment, which had been presented so often by painters. He preferred subjects more human and less dogmatic, more in touch with daily life, romance, and poetry. He drew by preference from the parables, as in “The Labourers in the Vineyard,” “The Lost Coin” (Pitti Palace, Florence), “The Good Samaritan” (St. Martin’s), “The Return of the Prodigal Son” (and others at the Museum of Dresden). Again he chose picturesque scenes from the Bible, such as “Elia in the Wilderness” (Berlin) and the history of Tobias (Dresden and St. Petersburg).

The astonishing to find in the canvasses of this Italian nearly the whole repertoire of Rembrandt’s subjects. They had a common liking for the tenderer parts of the Gospel, for the scenes of every day, of the “eternal present,” themes for genre pictures. But this is not all. Domenico was not above reproach. It was his excesses which shortened his life. May we not assume that his art is but a history of the sinful soul, a poem of repentance such as Rembrandt was to present? There is found in both painters the same confidence, the same sense of the divine Protection in spite of sin (cf. Feti’s beautiful picture, “The Angel Guardian” at the Louvre), and also, occasionally, the same anguish, the same disgust of the world and the flesh as in that rare masterpiece, “Melancholy”, in the same museum. Thus Domenico was in the way of becoming one of the first masters of lyric painting, and he was utilizing to the perfection of his art all that he could learn at Venice when he died in that city, worn out with pleasure and the excitement of the charm of that city’s good life. It is no good life of this curious artist. His principal works are to be found at Dresden (11 pictures), St. Petersburg, Vienna, Florence, and Paris.

Louis Gillet.

Fetishism means the religion of the fetish. The word fetish is derived through the Portuguese jeito from the Latin fictitium, a copy of something real, signifyng made by art and artificial (cf. Old English fez on in Chaucer). From facio are derived many words signifying idol, idolatry, or witchcraft. Later Latin has factori, to bewitch, and factura, witchcraft. Hence Portuguese jeito, Italian fatauro, O. Fr. fa- ture, meaning witchcraft, magic. The word was probably first applied by the natives to the same things as ours, and supposed to possess magic power. In the early part of the sixteenth century, the Portuguese, exploring the West Coast of Africa, found the natives using small material objects in their religious worship. These they called jeito, but the use of the term has now extended beyond the native usages to the coast. Other names are bohun, the tetratal fetishes of the Gold Coast; suhman, a term for a private fetish; gree-gree on the Liberian coast; monda in the Gabun
country; *bian* among the cannibal Fang; in the Niger Delta *ju-ju*—possibly from the French *joujou*, i.e. a doll or toy (Kingesley)—and *grou-grou*, according to some of the same origin, according to others a native term, but they say that *ju-ju* went direct. Every Congo leader has his *m'kete*; in other tribes a word equivalent to “medicine” is used.

C. de Brosses first employed fetishism as a general descriptive term, and claimed for it a share in the early development of religious ideas (Du Cuit des Dieux Fétiches, 1780). He compared the phenomena observed in the West African object-worship with certain features of the old Egyptian religion. This comparison led Pietzschmann to emphasize the elements of fetishism in the Egyptian religion by starting with its magic character. Barthold (1805) claimed as fetish “everything produced by nature or art, which receives divine honor, including sun, moon, earth, air, fire, water, mountains, rivers, trees, stones, images, animals, if considered as objects of divine worship.” Thus the name became more general, until Comte employed it to designate only the lowest stage of religious development. In this sense the term is used in the three stages of the Tiele, Selborne, Menzies, Höfding. Taking the theory of evolution as a basis, Comte affirmed that the fundamental law of history was that of historic filiation, that is, the Law of the Three States. Thus the human race, like the human individual, passed through three successive stages of material, animal, and vegetable, by fetishism, polytheism, monotheism; the metaphysical or abstract, which differed from the former in explaining phenomena not by divine beings but by abstract powers or essences behind them; the positive or scientific, where man enlightened percepts that the only realities are not supernatural beings, e.g. God or angels, nor abstractions, e. g. substance or causes, but phenomena and their laws as discovered by science.

Under fetishism, therefore, he classed worship of heavenly bodies, nature-worship, etc. This theory is a pure assumption, yet a long time passed before it was cast aside. The case with which it explained everything recommended it to many. Spencer formally repudiated it (Principles of Sociology), and with Tylor made fetishism a subdivision of animism.

While we may with Tylor consider the theory of Comte as abandoned, it is difficult to admit his own view. For the spirit supposed to dwell in the fetish is not a spirit proper to the object, but a spirit foreign to the object, yet in some way connected with and embodied in it. Lippert (1881), true to his exaggerated animism, defines fetishism as “a belief in the souls of the departed coming to dwell in anything that is tangible in heaven or on earth.” Schultze, analysing the consciousness of savages, states that fetishism is a worship of material objects. He claims that the narrow circle of savages’ ideas leads them to admire and exaggerate the value of very small and insignificant objects, to look upon these objects anthropopathetically as alive, sentient, and willing to assist them with wondrous events and experiences, and finally to believe that such objects require religious veneration. In his view these four facts account for the worship of stocks and stones, bundles and bows, gorges and stripes, which we call fetishism. But Schultze considers fetishism as a portion, not as the whole, of primitive religion. By the side of it he places the magico-religious, and these two forms run parallel for some distance, but afterwards meet and give rise to other forms of religion. He holds that man ceases to be a fetish-worshipper as soon as he learns to distinguish the spirit from the material object. To Müller and Brinton the fetish power does not belong to the object (Rel. of Prim. Peop., Philadelphia, 1898). Menzies (History of Religion, p. 129) holds that primitive man, like the untutored savage of to-day, in worshipping a tree, a snake, or an idol, worshipped the very objects themselves. He regards the suggestion that these objects represented or were even the dwelling-place of some spiritual being, as an afterthought, up to which man has grown in the lapse of ages. The study of the African negro refutes this view. Ellis asserts: “Every native with whom I have conversed on the subject has laughed at the possibility of it being supposed that he could worship or offer sacrifice to some such object as a stone, which of itself would be perfectly obvious to his senses was a stone only and nothing more.”

La Saussaye regards fetishism as a form of animism, i.e. a belief in spirits incorporated in single objects, but says that not every kind of worship paid to material objects can be called fetishism, but only that which is connected with magic; otherwise the whole worship of nature would be fetishism. The stock and stone which forms the object of worship is then called the fetish. Tylor has rightly declared that it is very hard to say whether stones are to be regarded as altars, as symbols, or as fetishes. He strives to place nature-worship as a connecting link between fetishism and polytheism, though he is obliged to admit that the latter can be divided into many classifications.

The others, e.g. Reville, de La Saussaye, separate the worship of nature from animism. To Höfding, following Usener, the fetish is only the provisional and momentary dwelling-place of a spirit. Others, e.g. Lubbock, Hoppel, insist that the fetish must be considered as a means of magic—being itself the expression of a wish and desire of worship, but a means by which the wish is brought into close contact with the deity—and as endowed with divine powers. De La Saussaye holds that to savages fetishes are both objects of religious worship and means of magic. Thus a fetish may often be used for magic purposes, yet it is more than a mere means of magic, as being itself anthropopathetic, and often the object of religious worship.

Within the limits of animism, Tiele and Höfding distinguish between fetishism and spiritism. Fetishism contents itself with particular objects in which it is supposed a spirit has for a longer or a shorter time taken up its abode. In spiritism, spirits are not bound up with certain objects, but may change their mode of revelation, partly at their own discretion, partly under the influence of magic. Thus Höfding declares that fetishism, as the lowest form of religion, is distinguished from spiritism by the special weight of the material objects and the practical character of psychical activity. In selecting objects of fetishism, religion appears, according to Höfding, under the guise of desire. He holds that religious ideas are only religious in virtue of this connexion between need and expectation, i.e., as elements of desire, and that it is only when thus viewed that fetishism can be understood. Hubbe-Schleiden, on the contrary, holds that fetishism is not a proper designation for a religion, because Judaism and Christianity have their fetishes as well as the nature religions, and says the word “fetish” should be used as analogous to a word-symbol or emblem. Haddon considers fetishism as a stage of religious development. Jefferson connects fetishism to the negation of religion. He denies that fetishism is the primitive religion, or a basis from which religion developed, or a stage of religious development. To him, fetishism is not only anti-social, and therefore anti-religious, he even holds that the attitude of superiority is manifested by the possession towards the fetish deprives it of religious value, or rather makes it anti-religious.

The fetish differs from an idol or an amulet, though at times it is difficult to distinguish between them. An amulet, however, is the pledge of protection of a divine nature, but the fetish can be used for magical purposes, e.g. the New Zealand *wakakapoko*, or not, but the divine nature or spirit is supposed to be wholly incorporated in it. Farnell says an image may be viewed as a symbol, or
as infused with divine power, or as the divinity itself. Idolatry in this sense is a higher form of fetishism. Farnell does not distinguish clearly between fetish and amulets, and calls relics, crucifixes, the Bible itself, fetishes when his view is any, a fetish. But objects may be held as sacred by external association with sacred persons or places without having any intrinsic sanctity. This loose use of the word has led writers to consider the national flag (especially a tattered battle-flag), the Scottish stone of Scone, the mast of a ship, horsemen, as fetishes which these terrors of the dead have no value in themselves, but are prized merely for their associations—real in the case of the battle-flag, fancied in the case of the horsemen.

The theory advanced by certain writers that fetishism represents the earliest stage of religious thought, has two twofold bases: (1) philosophical; (2) sociological.

(1) Philosophical Basis: the Theory of Evolution.—Assuming that primitive man was a semi-brute, or a semi-idiot, some writers of the Evolutionist School under the influence of Comte taught that man in the earliest stage was a fetish-worshipper, instancing in proof the African tribes who, in their view, represent the original state of mankind. This basis is a pure assumption. More recent investigation reveals clearly the universal belief in a Great God, the Creator and Father of mankind, held by the negroes of Africa; Coussin and Grama, and Dict. of the Congo Language) and Wilson (West Guinea) prove that religions in structure and vocabulary; while Tylor, Spencer, and most advocates of the animistic theory look upon fetishism as by no means primitive, but as a decadent form of the belief in spirit and souls. Finally, there are no well-authenticated cases of savage tribes whose religion consists of fetish-worship only.

(2) Sociological Basis.—Historians of civilization, impressed by the fact that many customs of savages are also found in the highest stages of civilized life, concluded that the development of the race could best be understood by taking the savage level as a starting-point. The life of savages is thus the basis of the higher development. But this argument can be inverted. For if the customs of savages may be found among civilized races, evident traces of higher ideals are also found among savages. Furthermore, the theory that a savage or a child represents exclusively, or primarily, the life of primitive man can no longer be entertained. Writers on the philosophy of religion have used the word "fetishism" in a vague sense, susceptible of many shades of meaning. To obtain a correct knowledge of the subject, we must go to authorities like Wilson, Norris, Ellis, and Kingsley, who have spent years with the African negroes and have made exhaustive investigations on the spot. By fetish or ju-ju is meant the religion of the natives of West Africa. Fetishism, viewed from the outside, appears strange and complex, but is simple in its underlying idea, very logically thought out, and very reasonable to the minds of its adherents. The prevailing notion in the former (Anambé, Anzam), having made the world and filled it with inhabitants, retired to some remote corner of the universe, and allowed the affairs of the world to come under the control of evil spirits. Hence the only religious worship performed is directed to these spirits, the purpose being to court their favour or ward off their displeasure. The Ashanti recognize the existence of a Supreme Being, whom they adore in a vague manner although, being invisible, He is not represented by an idol. At the commencement of the world, God was in daily relations with man. He created earth, conversed with men, and all went well. But man, being rebellious, was cast out of his management to subaltern divinities. These are spirits which dwell everywhere—in waters, woods, rocks—and it is necessary to conciliate them, unless one wishes to encounter their displeasure. Such a phenomenon then as fetish- or spirit-worship, existing alone without an accompanying belief in a Supreme Being who is above all fetishes and other objects of worship, has yet another basis in the recognition of the fundamental idea of one God who is Lord and Creator, say that this God is too great to interest Himself in the affairs of the world; hence after having created and organized the world, He charged His subordinates with its government. Hence they neglect the worship of God, but for the complaisance of spirits. These spirits correspond in their functions to the gods of Greek and Roman mythology, but are never confused with the Supreme Being by the natives. Fetishism therefore is a stage where God is quietly disregarded, and the worship due to Him is quietly transferred to a multitude of spiritual agencies under His power, but uncontrolled by it. "All the air and the future are peopled by the Bantu," says Dr. Norris, "with a large and indefinite company of spiritual beings. They have personality and will, and most of the human passions, e. g., anger, revenge, generosity, gratitude. Though they are all probably malevolent, yet they may be influenced and made favorable by worship." In the face of this animistic view of nature and the peculiar logic of the African mind, all the seemingly weird forms and ceremonies of fetishism, e. g. the fetish or witch-doctor, become but the natural consequence of the process of the development of the belief. There are grades of spirits in the spirit-world. Miss Kingsley holds that fourteen classes of spirits are clearly discernible. Dr. Nasseu thinks the spirits commonly affecting human affairs can be classified into six groups. These spirits are different in power and functions. The class of spirits that are human souls, always remain human souls; they do not become deified, nor do they sink in grade permanently. The locality of spirits is not only vague in the surrounding air, but in prominent natural objects, e. g. caves, enormous rocks, hollow trees, dark forests. While all can move from place to place, some belong peculiarly to certain localities. Their habitations may be natural (e. g. large trees, caverns, large rocks, capes, and promontories); and for the spirits of the dead, the villages where they had dwelt during the lifetime of the body, or graveyards) or acquired, e. g. for longer or shorter periods of power with the possession of individuals of the aanga or native doctor. By his magic art any spirit may be localized in any object whatever, however small, and thus placed is it under the control of the doctor and subservient to the wishes of the possessor or wearer of the object in which it is confined. This constitutes a fetish. The dispenser makes a clear distinction between the reverence with which he regards a certain material object and the worship he renders to the spirit for the time being inhabiting it. Where the spirit, for any reason, is supposed to have gone out of that thing and definitively abandoned it, the thing itself is no longer revered, but it becomes a useless, or sold to the curio-hunting white man.

Everything the African negro knows by means of his senses, he regards as a twofold entity—partly spirit, partly not spirit or, as we say, matter. In man this twofold entity appears as a corporeal body, and a spiritual or "astral" body in shape and feature like the former. This latter form of "life" with its "heart" can be stolen by magic power while one is asleep, and the individual sleeps on, unconscious of his loss. If the life-form is returned to him before he awakes, he will be unaware that anything unusual has happened. If he awakes before this portion of himself has been regained, though he may live for a while, he will sicken and eventually die. If the magician who stole the "life" has eaten the "heart", the victim sinks at once and dies. The connexion of a certain spirit with
a certain mass of matter is not regarded as permanent. The native will point out a lightning-struck tree, and tell you its spirit has been killed, i.e., the spirit is not actually dead, but has fled and lives elsewhere. When the tree's actions provoke the insect, to which its weapon fails, it is because some one has stolen the spirit, or made it sick by witchcraft. In every action of life he shows how much he lives with a great, powerful spirit-world around him. Before starting to hunt or fight, he rubs medicine into his weapons to strengthen them; with them, talking to them, telling them what care he has taken of them and what he has given them before, though it was hard to give, and begging them not to fail him now. He may be seen boding over the river, talking with proper incantations to its spirit, asking that, when it meets an enemy, it will upset the canoe and destroy the dead part. The African believes that each human soul has a certain span of life due or natural to it. It should be born, grow up through childhood, youth, and manhood to old age. If this does not happen, it is because some malevolent influence has blighted it. Hence the African lays on the spirits, while he is alive, to do us all good! "Go away!" "Come not into this town, plantation, house; we have never injured you. Go away!" This malevolent influence which cuts short the soul-life may act of itself in various ways, but a coercive witchcraft may have been at work. Hence the vast majority of deaths—almost all deaths in which no blow has been struck—are caused by such a spirit that has been produced by human beings, acting through spirits in their command, and from this idea springs the widespread belief in witches and witchcraft.

Thus every familiar object in the daily life of these people is touched with some curious fancy, and every trivial action is regulated by a reference to unseen spirits who are unceasingly watching an opportunity to hurt or annoy mankind. Yet upon close inspection the tenets of this religion are vague and unformulated, for with every tribe and every district belief varies, and rites and ceremonies diverge. The fetish-man, fetuero, nganga, chibone, is the authority on all religious observances. He offers the expiatory sacrifice to the spirits to keep off evil. He is credited with a controlling influence over the elements, winds and waters obeying the waving of his charm, i.e., a bundle of feathers, or the whistle through the magic antelope horn. He is looked for, is hallowed, and calls down rain. One of his principal duties is to find out evil-doers, that is, persons who by evil magic have caused sickness or death. He is the exorcist of spirits, the maker of charms (i.e., fetishes), the prescriber and regulator of ceremonial rites. He can discover, using "the heart" of the chief who died yesterday; who caused the canoe to upset and gave lives to the crocodiles and the dark waters of the Congo; or even "who blighted the palm trees of the village and dried up their sap, causing the supply of malafu to cease; or who drove away the rain from a district, and withheld its field of nguba" (ground-nut). These are the commoncharged witchcrafts at present. They have no organization, and are honoured only in their own districts, unless they be called specially to minister in another place. In their ceremonies they make the people dance, sing, play, beat drums, and they spot their bodies with their "medicines". Anyone may choose the profession for himself, and large fees are demanded for services.

Among the natives on the lower Congo is found the ceremony of n'kimbwa, i.e. the initiation of young men into the mysteries and rites of their religion. Every village in this region has its n'kimbwa enclosure, generally a walled-in tract of half an acre in extent buried in a thick grove of trees. Inside the enclosure are the huts of the nganga and his assistants, as well as of those receiving instruction. The initiated alone are permitted to enter the enclosure, where a new language is learned in which they can talk on religious matters without being understood by the people. In other parts of the Congo the office falls on an individual in quite an accidental manner, e.g., because he has been chosen by his fellows. Every unusual action, display of skill, or superiority is attributed to the intervention of some supernatural power. Thus the future nganga usually begins his career by some lucky adventure, e.g., prowess in hunting, success in fishing, bravery in war. He is then regarded by others, and he is enjoying the protection of some spirit. In consideration of payment he pretends to impart his power to others by means of charms, i.e., fetishes consisting of different herbs, stones, pieces of wood, antelope horns, skin and feathers tied in little bundles, the possession of which is supposed to yield to the purchaser the same power over spirits as the nganga himself enjoys.

The fetish-man always carries in his sack a strange assortment of articles out of which he makes the fetishes. The flight of the poisonous arrow, the rush of the maddened buffalo, or the venomous bite of the adder, can be averted by saying: "I have assurance the waters of the Congo may be safely crossed." The Moloki, ever ready to pounce on men, is checked by the power of the nganga. The eye-teeth of leopards are an exceedingly valuable fetish on the Krou coast. The Kabinda negroes wear on their necks a little brown shell sealed with wax to preserve intact the fetish-medicine. A fetish is often made by theузimage has been edited to remove the pages, so I can't provide a natural text representation of the entire document. However, I can provide a natural text representation of the isolated text you've given me:

"a certain mass of matter is not regarded as permanent. The native will point out a lightning-struck tree, and tell you its spirit has been killed, i.e., the spirit is not actually dead, but has fled and lives elsewhere. When the tree's actions provoke the insect, to which its weapon fails, it is because some one has stolen the spirit, or made it sick by witchcraft. In every action of life he shows how much he lives with a great, powerful spirit-world around him. Before starting to hunt or fight, he rubs medicine into his weapons to strengthen them; with them, talking to them, telling them what care he has taken of them and what he has given them before, though it was hard to give, and begging them not to fail him now. He may be seen boding over the river, talking with proper incantations to its spirit, asking that, when it meets an enemy, it will upset the canoe and destroy the dead part. The African believes that each human soul has a certain span of life due or natural to it. It should be born, grow up through childhood, youth, and manhood to old age. If this does not happen, it is because some malevolent influence has blighted it. Hence the African lays on the spirits, while he is alive, to do us all good! "Go away!" "Come not into this town, plantation, house; we have never injured you. Go away!" This malevolent influence which cuts short the soul-life may act of itself in various ways, but a coercive witchcraft may have been at work. Hence the vast majority of deaths—almost all deaths in which no blow has been struck—are caused by such a spirit that has been produced by human beings, acting through spirits in their command, and from this idea springs the widespread belief in witches and witchcraft.

Thus every familiar object in the daily life of these people is touched with some curious fancy, and every trivial action is regulated by a reference to unseen spirits who are unceasingly watching an opportunity to hurt or annoy mankind. Yet upon close inspection the tenets of this religion are vague and unformulated, for with every tribe and every district belief varies, and rites and ceremonies diverge. The fetish-man, fetuero, nganga, chibone, is the authority on all religious observances. He offers the expiatory sacrifice to the spirits to keep off evil. He is credited with a controlling influence over the elements, winds and waters obeying the waving of his charm, i.e., a bundle of feathers, or the whistle through the magic antelope horn. He is looked for, is hallowed, and calls down rain. One of his principal duties is to find out evil-doers, that is, persons who by evil magic have caused sickness or death. He is the exorcist of spirits, the maker of charms (i.e., fetishes), the prescriber and regulator of ceremonial rites. He can discover, using "the heart" of the chief who died yesterday; who caused the canoe to upset and gave lives to the crocodiles and the dark waters of the Congo; or even "who blighted the palm trees of the village and dried up their sap, causing the supply of malafu to cease; or who drove away the rain from a district, and withheld its field of nguba" (ground-nut). These are the commoncharged witchcrafts at present. They have no organization, and are honoured only in their own districts, unless they be called specially to minister in another place. In their ceremonies they make the people dance, sing, play, beat drums, and they spot their bodies with their "medicines". Anyone may choose the profession for himself, and large fees are demanded for services.

Among the natives on the lower Congo is found the ceremony of n'kimbwa, i.e. the initiation of young men into the mysteries and rites of their religion. Every village in this region has its n'kimbwa enclosure, generally a walled-in tract of half an acre in extent buried in a thick grove of trees. Inside the enclosure are the huts of the nganga and his assistants, as well as of those receiving instruction. The initiated alone are permitted to enter the enclosure, where a new language is learned in which they can talk on religious matters without being understood by the people. In other parts of the Congo the office falls on an individual in quite an accidental manner, e.g., because he has been chosen by his fellows. Every unusual action, display of skill, or superiority is attributed to the intervention of some supernatural power. Thus the future nganga usually begins his career by some lucky adventure, e.g., prowess in hunting, success in fishing, bravery in war. He is then regarded by others, and he is enjoying the protection of some spirit. In consideration of payment he pretends to impart his power to others by means of charms, i.e., fetishes consisting of different herbs, stones, pieces of wood, antelope horns, skin and feathers tied in little bundles, the possession of which is supposed to yield to the purchaser the same power over spirits as the nganga himself enjoys.

The fetish-man always carries in his sack a strange assortment of articles out of which he makes the fetishes. The flight of the poisonous arrow, the rush of the maddened buffalo, or the venomous bite of the adder, can be averted by saying: "I have assurance the waters of the Congo may be safely crossed." The Moloki, ever ready to pounce on men, is checked by the power of the nganga. The eye-teeth of leopards are an exceedingly valuable fetish on the Krou coast. The Kabinda negroes wear on their necks a little brown shell sealed with wax to preserve intact the fetish-medicine. A fetish is often made by the
they can be implicitly trusted. Thus, according to Ellis, the natives of the Gold Coast put their *bôhun* in fire as a probation, for the fire never injures the true *bôhun*. A fetish then, in the strict sense of the word, is any material object consecrated by the *nganga* or magic doctor with a variety of ceremonies and processes, by virtue of which some spirit is supposed to be embodied or to operate on that object, and subject to the will of the possessor.

These objects are filled or rubbed by the *nganga* with a mixture compounded of various substances, selected according to the special work to be accomplished by the fetish. Its value, however, depends not on itself, nor solely on the nature of these substances, but on the skill of the *nganga* in dealing with spirits. Yet there is a relation, difficult sometimes for the foreigner to grasp, between the substances selected and the object to be attained by the fetish. Thus, to give the possessor bravery or strength, some part of a leopard or of an elephant is selected; to give cunning, some part of a gazelle; to give wisdom, some part of the human brain; to give courage, a portion of the heart; to give influence, some part of the eye. These substances are supposed to please and attract some spirit, which is satisfied to reside in them and to aid their possessor. The fetish is consecrated, as usual, with the accompaniment of dances, drumming, invocations, looking into mirrors or limpid water to see faces human or spiritual, and is packed into the hollow of the shell or bone, or smeared over the stick or stone. If power over some one be desired, the *nganga* must receive crumbs from the food, clippings of the fingers, nail, hair, or even a drop of blood of the person, which is mixed in the compound. So fearful are the natives of power being thus obtained over them, that they have their hair cut by a friend; and even then it is carefully burned, or cast into the river. If one is accidentally cut, he stamps out the blood that has dripped into the ground, or cuts away the wood which it has saturated.

The African negro in appealing to the fetish is prompted by fear alone. There is no confession, no love, rarely thanksgiving. The being to whom he appeals is not God. True he does not deny that God is; if asked, he will acknowledge His existence. Very rarely and only in extreme emergencies, however, does he make an appeal to Him, according to his belief God is far off, so inaccessible, so indifferent to human wants, that a petition to Him would be almost vain. He therefore turns to some one of the many demons from whom he believes himself to be the observant of human affairs, in which, as former human beings, some of them once had part. He seeks not spiritual, but purely physical, safety. A sense of moral and spiritual need is lost sight of, although not quite eliminated, for he believes in a good and a bad. The white man cannot feel is fear of possible natural injury from human or subsidized spiritual enemies. This physical salvation is sought either by prayer, sacrifice, and certain other ceremonies rendered to the spirit of the fetish or to non-localized spirits, or by the use of charms or amulets, usually material, i. e. finches, vocal, e. g. utterances of cabalistic words which are supposed to have power over the local spirits; ritual, e. g. prohibited food, i.e. *orundo*, for which any article of food may be selected and made sacred to the spirit. At night the Congo chief will trace a slender line of ashes round his hut, and firmly believe that this line by which will protect him and his till morning against the attacks of the evil spirit.

The African believes largely in preventive measures, and his fetishes are chiefly of this order. When least conscious, he may be offending some spirit with power to work him ill; he must therefore be supplied with charms for every season and occasion. Sleeping, eating, drinking, he must be protected from hostile influences by his fetishes. These are hung on the plantation fence, or from the branches of plants in the garden, either to prevent theft or to sicken the thief; over the doorway of the house, to bar the entrance of evil; from the bow of the canoe, to ensure a successful voyage; they are worn on the arm in hunting to ensure an accurate aim; on any part of the person, to give against diseases in loving, hurts of the body; and so through the whole range of daily work and interests. Some kinds, worn on a bracelet or necklace, ward off sickness. The new-born infant has a health-knot tied about its neck, wrist, or loins. Before every house in Whydah, the seaport of Dahomey, one may perceive a column, the apex of which is discoloured with libations of palm-oil, etc. To the end of their lives the people keep on multiplying, renewing, or altering these fetishes.

In fetish-worship the African negro uses prayer and sacrifice. The stones heaped by passers-by at the base of some great tree or rock, the leaf cast from a passing canoe towards a point of land on the river bank, are silent acknowledgements of the presence of the *ombôwiri* (i.e. spirits of the place). Food is offered, as also blood-offerings of a fowl, a goat, or a sheep. Until recently human sacrifices were offered, e. g. to the sacred palms of the Dahomey, for the wandering spirits of the upper Guinea coast, where annual sacrifices of a maiden were made for success in foreign commerce; the thousands of captives killed at the "annual custom" of Dahomey for the safety of the king and nation. In fetishism prayer has a part, but it is not prominent, and not often formal and public. Euphony prayer is constantly made in the utterance of cabalistic words, phrases, or sentences adopted by, or assigned to, almost every one by parent or doctor. According to Ellis no coercion of the fetish is attempted on the Gold Coast, but Kidd states that the negro of Guinea beats his fetish, if his wishes are frustrated, and hides it in his waistcloth if then he is about to do anything of which he is ashamed.

The fetish is used not only as a preventive of or defence against evil (i. e. white art), but also as a means of offence, i.e. black art or witchcraft in the full sense, which always connotes a possible taking of life. The half-civilised negro, while repudiating the fetish as a black art, feels justified in retaining it as a white art, i.e. as a weapon of defence. Those who practise the black art are all "wizards" or "witches"—names never given to practitioners of the white art. The user of the white art uses no concealment; a practitioner of the black art carries it about in his case; hence the latter is masked more secretly. The black art is supposed to consist of evil practices to cause sickness and death. Its medicines, dances, and enchantments are also used in the professed innocent white art; the difference is in the work which the spirit is entrusted to perform. Not every one who uses white art uses black art; not every one who uses black art uses also the white art. Anyone believing in the fetish can use the white art without subjecting himself to the charge of being a wizard. Only a wizard can cause sickness or death. Hence witchcraft belief includes witchcraft murder.

There exists in Bantu a society called the "Witchcraft Company", whose members hold secret meetings at midnight in the depths of the forest to plot sickness or death. The owl is their sacred bird, and their signal-cue is an imitation of its hoot. They profess to leave their corporeal bodies asleep in their hut, and to enter the spirit world passing through walls and over tree-tops with instant rapidity. At the meeting they have visible, audible, and tangible communications with spirits. They have feasts, at which is eaten the "heart-life" of some human being, who through this loss of his "heart" is made sick and suppose under a perpetual spell. The early cock-crow is a warning for them to disperse, for they fear the advent of the morning star, as, should
the sun rise upon them before they reach their corporeal bodies, all their plans would fail and they would sicken. They dread cayenne pepper; should its bruised leaves or pods be rubbed over their corporeal bodies during their absence, their spirits are unable to re-enter, and their bodies die or waste miserably away. This is not introduced out by the Dutch or West Indians, e.g. Jamaica and Hayti, and to the Southern States as Voodoo worship. Thus Voodooism or Oodoism is simply African fetishism transplanted to American soil. Authentic records are procurable of midnight meetings held in Hayti, as late as 1888, at which human bodies, especially children, were killed and eaten at the secret feasts. European governments in Africa have put down the practice of the black art, yet so deeply is it implanted in the belief of the natives that Dr. Norris does not hesitate to say it would revive if the whites were to withdraw.

Fetishism in Africa is not only a religious belief; it is a system of government and a medical profession, although the religious element is fundamental and colours all the rest. The fetish-man, therefore, is priest, judge, and physician. To the believers in the fetish the killing of those guilty of witchcraft is a judicial act; it is not murder, but execution. The fetish-man has sworn to do as we regard the naturalistic system does not exist. Whatever rules there are, are handed down by tradition, and the persons familiar with these old sayings and customs are present in the trial of disputed matters. Fetishes are set up to punish offenders in certain cases where it is considered especially desirable to make the law operative though the crimes cannot be detected (e.g. theft). The fetish is supposed to be able not only to detect but to punish the transgressor. In cases of death the charge of witchcraft is made, and the relatives seek a fetish-man, who employs the ordeal by poison, fire or other tests to work for him, but they promise that if the guilty person (i.e. ordeal by poison) was performed by giving to the accused a poisonous drink, the accuser also having to take the test to prove their sincerity. If he vomited immediately he was innocent; if he was shown guilty, the accusers were the executioners. On the upper coast of Guinea the test is a solution of the sassa-wood, and is called "red water"; at Calabar, the solution of a bean; in the Gabun country, of the asakya leaf or bark; farther south in the Nkami country, it is called mbundu. The distinction between poison and fetish is vague in the minds of many natives, to whom poison is another material form of a fetish. In the belief of the Druid, a fetish was a demon; it has been estimated that for every natural death at least one—and often ten or more—has been executed.

The judicial aspect of fetishism is revealed most plainly in the secret societies (male and female) of crushing power and far-reaching influence, which before the advent of the white man were the court of last appeal for individual and tribal disputes. Of this kind were the Egbo of the Niger Delta, Ukuwu of the Corisco region, Yasi of the Ogowé, M'weteyi of the Shekani, Bweti of the Bakele, Inda and Njembé of the Mpongwe, Ukuwu and Malinda of the Batanga region. All of these societies had for their primary object the laudable one of government, and for this purpose they fostered the superstitious dread with which the fetish was regarded by the natives. But the arbitrary means employed in their management, the oppressive influences at work, the false representations indulged in, made them almost all evil. They still exist among the Negroes; on the coast, they have not been entirely suppressed or exist only for amusement (e.g. Ukuwu in Gabun), or as a traditional custom (e.g. Njembé). The Ukuwu society claimed the government of the country. To put "Ukuwu on the white man" meant to boycott him, i.e. that no one should drink from him, no one should eat food from him; he was not allowed to go to his own spring. In Dahomey the fetish-priests are a kind of secret police for the despotic king. Thus, while witchcraft was the religion of the natives, these societies constituted their government.

Although sickness is spoken of among the natives as a disease, yet the patient is said to be sick because of an evil spirit, and it is believed that when this is expelled by the medicine, the patient will recover. When the heathen negro is sick, the first thing is to call the "doctor" to find out what spirit by invading the body has caused the sickness. The diagnosis is made by drum, dance, frenzied song, mirror, fumes of drugs, consultation of relics, and consummation with these medicines, which is榜ed and the ceremony peculiar to that spirit, the vegetable and mineral substances supposed to be either pleasing or offensive to it. If these cannot be obtained, the patient must die. The witch-doctor believes that his incantations have subdued the power of a spirit, which forthwith enters the body of the patient and, searching through its vitals, drives out the antagonising spirit which is the supposed actual cause of the disease. The nkinda, "the spirit of disease", is then confined by the doctor in a prison, e.g. in a section of sugar-cane stalk with its leaves tied together. The component parts of any fetish are regarded by the natives as related to materia medica. Their drugs, however, are esteemed operative not through certain inherent chemical qualities, but in consequence of the presence of the spirit to whom they are favourite media. This spirit is induced to act by the pleasing enchanter's of the magic-doctor. The ngoum, as surgeon and physician, shows more than considerable skill in extracting bullets from wounded warriors, and in the knowledge of herbs as poisons and antidotes.

Whether the black slaves brought to America the okra or found it already existing on the continent is not absolutely certain, but it is carried by negroes of African origin, as also is the term mbenda (peanuts or ground-nuts), corrupted into pinder in some of the Southern States. The folk-lore of the African slave survives in Uncle Remus's tales of "Br'er Rabbit". Br'er Rabbit is an American substitution for Brother Njá (Leopard) or Brother Ikki (Gazelle) in Pato N'jambu's (the Creator's) council of speaking animals. Jeovs holds that fetishes are private only, although, in fact, not only individuals, but families and tribes have fetishes. The fetish Deudo at Kragje and Ata Yaw of Okwuak were known and feared for leagues round the land. In the fetish, of which the family fetish is known by the name of Yákó. It is a bundle of the parts of bodies of their dead, i.e. first joints of fingers and toes, lobe of ear, hair. The value of Yákó depends on the spirits of the family dead being associated with the portions of their bodies, and this combination is effected by the prayer and invocation of the doctor. The Yákó is appealed to in family emergencies, e.g. disease, death, when ordinary fetishes fail. This rite is very expensive and may require a month, during which time all work is suspended.

The observances of fetish-worship fade away into the customs and habits of everyday life by gradations, so that in some of the lower classes there may be no formal handling of a fetish amulet containing a spirit nor actual prayer nor sacrifice, nevertheless, spiritism is the thought and is more or less consciously held, and consequently the term fetish might perhaps be extended to them. The superstition of the Negro is different from that of the Christian, for it is the practical and business side of his religion. To the Christian it is a pitiful weakness; to the negro, a trusted belief. Thus some birds and beasts are of ill omen, others of good omen. The mournful hooting of an owl at midnight is a warning of death, and all who hear the call will hasten to the wood and drive away the messenger of ill-tidings with sticks and stones. Hence arises the belief in the
power of Ngot, Moloki, N'deohi or Unogwe (i.e., evil-spirited leopard, like the German werewolf), vis., that certain possessors of evil spirits have ability to assume the guise of an animal, and reassume at will the human form. To this superstition must be referred the reverence shown fleshed leopards, hippopotamuses, crocodiles, soros (large monkeys of the gorilla type).

JOHN T. DREISCOLL

FEUARDENT, FRANÇOIS, Franciscan, theologian and preacher of the Ligue, b. at Coutances, Normandy, in 1539; d. at Paris, 1 Jan., 1610. Having completed his humanities at Bayeux, he joined the Friars Minor. After the novitate, he was sent to Paris to continue his studies, where he received (1576) the degree of Doctor of Philosophy. He was then taught with great success at the university. He took a leading part in the political and religious troubles in which France was involved at that time. With John Boucher and Bishop Rose of Senlis, he was one of the foremost preachers in the cause of the Catholic Ligue, and, as Roennus remarks in an appendix to Feuardent’s “Theomachia,” there was not a church in Paris in which he had not preached. Throughout France and beyond the borders in Lorraine and Flanders, he was an eloquent and ardent defender of the Faith. Neverthe-

less, even Pierre de l’Etoile, a fierce adversary of the Ligue, recognizes in his “Mémorials” the merits of Feuardent’s subsequent efforts in pacifying the country. In his old age he retired to the convent of Bayeux, which he restored and furnished with a good library. His works can be conveniently grouped in three classes: (1) Scriptural; (2) patristical; (3) controversial. Only some of the most remarkable may be pointed out here. (1) A new edition of the medieval Scripturist, Nicholas of Lyra: “Biblia Sacra, cum glossa ordinaria ... et postillae Nicolai Lyran” (Paris, 1590, 6 vols. fol.). He also wrote commentaries on various books of Holy Scripture, viz. on Ruth, Esther, Job, Jonas, the two Epistles of St. Peter, the Epistles of Jude, and James, the Epistle of St. Paul to Philemon, and others. (2) “S. Irenaei Lugd. episcopi adversus Valentinian ... heresee libri quinque” (Paris, 1576); “S. Ildenphi dearchiepiscopi Toletani de virginitate Marie liber” (Paris, 1576). Feuardent also wrote an introduction and notes to “L. D. Dialogues de langue seps operae Testamenti demonstratum a Petro Morelo” (Paris, 1577). (3) “Appendix ad libros Alphonsi a Castro (O.F.M.) contra heresee” (Paris, 1578). “Theomachia Calvinaistica,” his chief work is based on some earlier writings, such as: “Semiaene premier des dialogue auxquels sont exaemnées et réfutées 174 erreurs des Calviniastes” (1685); “Seco ode semaine des dialogue ...” (Paris, 1598): “Entremangeroes et gueres ministrales ...” (Casen, 1601).

LIVIUS OLGIER.

Feuchtersleben, Baron Ernst von, an Austrian poet, philosopher, and physician; b. at Vienna, 29 April, 1806; d. 3 September, 1849. After completing his course at the Theresian Academy, he took up the study of medicine in 1825, receiving the degree of Doctor of Medicine in 1833. In 1844 he began a series of free lectures on psychiatry at the University of Vienna; the next year became dean of the medical faculty, and in 1847 was made vice-director of medico-

chirurgical studies. In July, 1848, he was appointed under-secretary of state in the ministry of public instruction, and in this capacity he attempted to introduce some important reforms in the system of education, but, discouraged by the opposition which he encountered, he resigned in December of the following year. As a medico-philosophical writer, Feuchtersleben attained great popularity, especially through his book "Zur Diätetik der Seele" (Vienna, 1838), which went through many editions (4th ed. in 1839). Hardyly less famous is his "Au Leaving Ton der geistlichen Kunde" (Vienna, 1845), translated into English by H. Evans Lloyd under the title of "Principles of Medical Psychology" (revised and edited by B. G. Babington, London, 1847). He also wrote an essay, "Die Ge-

wissheit und Würde der Heilkunst" (Vienna, 1839), a new edition of which appeared under the title "Lehrbuch und Publikum" (Vienna, 1845). As a poet Feuchtersleben is chiefly known by the well-known song, "Es ist bestimmt in Gottes Rat", which appeared in "Ge-

dichte" (Stuttgart, 1836) and was set to music by Mendelssohn. His later poems are more philosophi-

cal and critical. His essays and other prose writings were published under the title "Beiträge zur Literatur-, Kunst- und Lebenstheorie" (Vienna, 1837-41). His complete works (exclusive of his medical writings) were edited by Friedrich Hebel (7 vols., Vienna, 1831-53).

persera in Jahrbuch der Grilpparzer-Gesellschaft, III (Vienna, 1895).

ARTHUR F. J. REMY.

Feudalism.—This term is derived from the Old Aryan pe’ku, hence Sanskrit paću, "cattle"; so also Lati. pecus (cf. pecunia); Old High German fehu, fahu, "cattle," "property," "money"; Old Frisian fàa; Old Saxon fex; Old English feoh, feoh, foæ, foæ. It is an indefinable word, for it represents the progressive development of European organization during seven centuries. Its roots go back into the social conditions of primitive peoples, and its branches stretch out through military, political, and judicial evolution to our own day. Still, it can so far be brought within the measurable and comprehensible limits if sufficient allowance be made for its double aspect. For feudalism (like every other systematic arrangement of civil and religious forces in a state) comprises duties and rights, according as it is looked at from a central or local point of view. (1) As regards the duties involved in it, feudalism may be defined as that social system by which the nation as represented by the king lets its lands out to individuals who pay rent by doing governmental work not merely in the shape of military service, but also of suit to the king’s court. Originally indeed it began as a military system. It was in imitation of the later Roman Empire, which had Germanic threads by grants of lands to individuals on
FEUDALISM

condition of military service (Palgrave, "English Commonwealth", I, 350, 495, 505), that the Carolingian Empire adopted the same expedient. By this means the ninth-century Danish raids were opposed by a semi-professional army, better armed and more tactically efficient than the old Germanic levy. This method of fixing a standing force by grants of lands to individuals is perfectly normal in history, witness the Turkish timar fiefs (Cambridge Modern History, I, i, 99, 1902), the feu de sousduts of the Eastern Latin Kingdoms (Bréhier, "L'Eglise et l'Orient au moyen âge", Paris, 1907, iv, 94), and, to a certain extent, the "Way of the Welsh" - the Welsh may ("The Welsh People", London, 1900, vi, 206). On the whole, feudalism means government by amateurs paid in land, rather than professionals paid in money. Hence, as we shall see, one cause of the downfall of feudalism was the substitution in every branch of civil life of the "cash-nexus" for the "land-nexus". Feudalism, therefore, by connecting ownership of land with governmental work, went a large way towards solving that ever-present difficulty of the land-quest; nor, indeed, by any real system of land-nationalisation, but by inducing lords to do work for the country in return for the right of possessing landed property. Gradually, work which till then was paid for, or at any rate realized, the political ideal of Aristotle, "Private possession and common use" (Politics, II, v, 1263, a). To a certain extent, therefore, feudalism still exists, remaining as the great justification of modern landowners wherever—as sheriffs, justices of the peace, etc.—they do unpaid governmental work. (2) As regards the rights it creates, feudalism may be defined as a "graduated system based on land-tenure in which every lord judged, taxed, and commanded the class next below him" (Stubbs, "Constitutional History", Oxford, 1897, I, ix, 278). One result of this was that, whenever a Charter of liberties was wrung by the people from the king, the latter always managed to have his concessions to his tenants-in-chief paralleled by their concessions to his lower vassals (cf. Stubbs, "Select Charters", Oxford, 1900, §4, 101; §60, 304). Another more serious, less beneficent, result was that, while feudalism centrally converted the method of fixing a landowner, it locally converted the landowner into a sovereign.

Origin.—The source of feudalism arises from an intermingling of barbarian usage and Roman law (Maine, "Ancient Law", London, 1896, ix). To explain this reference must be made to a usage that passed into Roman law at the beginning of the fourth century. About that date Diocletian reorganized the Empire by the establishment of a huge bureaucracy, at the same time disabling it by his crushing taxation. The obvious result was the depression of free classes into unfree, and the barbarization of the empire. Before, a. 300 the absentee landlord farmed his land by means of a familia rustica or gang of slaves, owned by him as his own transferable property, though others might till their fields by hired labour. Two causes extended and intensified this organized slave-system: (1) Imperial legislation that two-thirds of a man's wealth must be in land, so as to set free hoarded specie and prevent attempts to hide wealth and so escape taxation. Hence land became the medium of exchange instead of money, i.e. land was held not by rent, but by service. (2) The pressure of taxation falling on land (tributum soli) forced smaller proprietors to put themselves under the protection of a lord, who paid a fixed rent for whom they were accordingly obliged to perform service (obsequium) in work and kind. Thus they became tied to the soil (ascripti glebae), not transferable dependents. Over them the lord had powers of correction, not, apparently, of jurisdiction.

Meanwhile the slaves themselves had become also territorial, and not personal. Further, the public land (ager publicus) got manorialized by grants partly to free veterans (as at Colchester in England), partly to latif—i.e. a semi-serf class of conquered peoples (as the Germans in England under Marcus Antonius), paying, besides the tributum soli, manual service in kind (servita manera). Even in the Roman towns, by the same process, the public lands (curiatae) became debased into the manufacturing population (collegiat). In a word, the middle class disappeared; the empire was split into two opposing forces: an aristocratic bureaucracy and a servile labouring population. Over the Roman Empire thus organized poured the Teutonic flood, barbarian in race and character, rude and changeful though it might be. According to Tacitus (Germania), the Germans were divided into some forty civitates, or populi, or folk. Some of these, near the Roman borders, lived under kings, others, more remote, were governed by folk-moots or elective princes. Several of these might combine to form a "stem", the only bond of which consisted in common religious rites. The populus or civitas, on the other hand, was a political unity. It was divided into pugi, each pugi being apparently a jurisdictional limit, probably meeting in a court over which a princeps, elected by the folk-moot, presided; but it was divided, though not distinctly, into free men usually numbering about a hundred. Parallel with the pugi, according to Tacitus (Germania, xii), though in reality probably a division of it, was the vicus, an agricultural unit. This vicus was (though Seebohm, "English Historical Review", July, 1892, 444-465, though not) represented in the types (1) the dependent village, consisting of the lord's house and cottages of his subordinates (perhaps the relics of the indigenous conquered peoples) who paid rent in kind, corn, cattle, (2) the free village of scattered houses, each with its separate enclosure. Round this village generally great men would have fortified their castle. Every year a piece of new land was set apart to be ploughed, of which each villager got a share proportioned to his official position in the community. It was the amalgamation of these two systems that produced feudalism.

But here, precisely as to the relative preponderance of the Germanic and Roman systems in manorial feudalism, the discussion still continues. The question turns to a certain extent on the view taken of the character of the Germanic inroads. The defenders of Roman preponderance depict these movements as mere raids, producing indeed much material damage, but no permanent change in the institutions which the Romano-Germanic peoples. Their opponents, however, speak of these incursions rather as people-wanderings—of warriors, women and children, cattle, even, and slaves—indubitably stamping and moulting the institutions of the races which they encountered. The same discussion focuses round the medieval manor, which is best seen in its English form. The old theory was that the manor was the same as the Teutonic mark, plus the intrusion of a lord (Stubbs, "Constitutional History", Oxford, 1897, i, 32-71). This was attacked by Fusel de Coulanges (Histoire des institutions politiques de l'ancienne France, Paris, 1839, 4, 180) and by Seebohm (The English Village Community, London, 1883, viii, 252-386), who insisted on a Latin ancestry from the Roman villa, contending for a development not from freedom to serfdom, but from slavery through servitude to freedom. The arguments of the Latin School may be thus summarized: (1) the manor is a tax for the Terence, "Que tua res", s. v., 167; "mark moat" probably means "a parsley bed"). (2) Early German law is based on assumption of private ownership. (3) Analogies of Maine and others from India and Russia not to the point. (4) Romanized Britons, for example, in south-eastern Britain had complete manorial system before the Saxons came from Ger-
FEUDALISM

FEUDALISM

They are thus answered by the Teutonic School (Elton, Eng. Hist. Rev., July, 1886; Vinogradoff, "Growth of the Manor," London, 1905, 87; Maitland, "Domesday Book and Beyond," Cambridge, 1897, 222, 232, 327, 337): (1) the name mark may not be applied in England, but the thing existed. (2) It is not denied that there are analogies between the manor and the later seigneurial domain, but analogies do not necessarily prove derivation. (3) The manor was not an agricultural unit only, it was also judicial. If the manor originated in the Roman vill, which was composed of a servile population, how came it that the suitors to the court were also judges? or that villages had rights over the woods against the lord? or that the community was represented in the hundred court by four men and its reeve? (4) Seebohm's evidence is almost entirely drawn from the position of villages and villeins on the demeans of kings, great ecclesiastical bodies, or churchmen. Such villages were admittedly dependent. (5) Most of the evidence comes through the tainted source of Norman and French lawyers who were inclined to see serfdom even where it did not exist. On the whole, the latest writers on feudalism, taking a legal point of view, incline to the Teutonic School.

The causes producing the effects of the later Roman Empire the disappearance of a middle class and the confronted lines of bureaucracy and a servile population, operated on the teutonized Latins and latinized Teutons to develop the complete system of feudalism.

(1) A tax, whether by means of jorum-fultum, danegeld, or gabelle, forced the poorer man to commend himself to a lord. The lord paid the tax, but demanded in exchange conditions of service. The service-doing dependent therefore was told to have "taken his land" to a lord in payment for the tax, which land the lord restored to him to be held in fief, and this (i.e., land held in fief from a lord) is the germ-cell of feudalism.

(2) Another, and more outstanding, cause was the royal grant of folio-land. Around this, too, historians at one time ranged in dispute. The older view was that folio-land was simply private land, the authoritative possession of which was based upon the wills of the people as opposed to the bok-land, with its written title deeds. But in 1830 John Allen (Rise and Growth of Royal Prerogative) tried to show that folio-land was in reality public property, national, waste, or unappropriated land. His theory was that all land-books (convenci) made by kings were simply thefts from the national demesne, made for the benefit of the king, his favourites, or the Church. The land-book was an ecclesiastical instrument introduced by the Roman missionaries, first used by that zealous convert, Ethelbert of Kent, though not becoming common till the ninth century. Allen based his theory on two grounds: (a) the king occasionally books land to himself, which could not therefore have been his before; but the assent of the Witan was necessary to grants of folio-land, which, therefore, was regarded as a national possession. To this Professor Vinogradoff (Ibid., Hist. Rev., Jan., 1890, 1-17) made answer: (a) that even the village knew nothing of common ownership, and that a fortiori the whole nation would not have had such an idea; (b) that the king in his charters never speaks of terram gentis but terram juris sui; (c) that the land thus conveyed away is often expressly described as being unappropriated, and that the fiefs of the churchmen have been unappropriated or waste land. Finally, Professor Maitland (Domesday Book and Beyond, Cambridge, 1897, 244) clearly explains what happened, by distinguishing two sorts of ownership, economic and political. Economic ownership is the right to share in the agricultural returns of the land, as does the modern landlord, etc. Political ownership is the right to the judicial returns from the soil, ownership, therefore, in the sense of governing it or exercising jurisdiction over it. By the land-bok, therefore, land was handed over to be owned, not economically, but politically; and the men suing on the courts of justice, paying toll, etc., directed their fines, not to the royal exchequer, but to the free land-tax, which possessed suzerainty and its fiscal result. In consequence the local lord received the privilege of the jorum-fultum, or right to be entertained for one night or more in progress. So, too, in Ireland, till the seventeenth century, the chieftains enjoyed "oigne and livery" of their tribesmen; and in medieval France there were again the great land-tax, called dîme, which was to prove insufficient in kind, not unnaturally, helped in vilifying the Frenchmen. Moreover the king surrendered to the new lord the profits of justice and the rights of toll, making, therefore, the freeman still more dependent on his lord. However, it must also be stated that the king nearly always retained the more important criminal and civil cases in his own hands. Still the result of the king's transference of rights over folio-land was easy enough to foresee, i.e. the depression of the free village. The steps of this depression may be shortly set out: (a) the Church or lord entitled to folio-land established an overseer or official, and so the dîme. Somehow or other this overseer appropriated land for a demesne, partly in place of, partly alongside of, the food-rents; (b) the Church or the lord entitled by the land-bok to jurisdictional profits made the tenure of land by the villagers depend upon suit to his court; the villagers' transfers came to be made at that court, and were finally conceived as having their validity from the gift or grant of its president.

Meanwhile the action of the State extended this depression (a) by its very endeavour in the tenth century Capitularies to keep law and order in those rude castle-lifting societies. For the subject was that men should be grouped into societies that one man should be responsible for another, especially the lord for his men. As an example of the former may be taken the Capitularies of the Frankish kings, such as of Childerib and Cis Otabriu, and of the English King Edgar (Stubbs, Select Charters, 69-74); and of the latter the famous ordinance of Athelstan (Com. Treatise, c. 930, ii; Stubbs, Select Charters, Oxford, 1900, 66): "And we have ordained respecting those lordless men of whom no law can be got, that the hundred be commanded that they dwell in the folkright and find him a lord in the folk-moot;" (b) by the institution of the tithe in the eleventh century—in England by means of danegeld, abroad by various gabelles. These were monetary taxes at a time when other payments were still largely made in kind. Accordingly, just as under the later Roman Empire, the poorer man commended himself to a lord, who paid for him, but demanded instead payment in service, a tributum soli. The dependent developed into a retainer, expecting, as in the Lancastrian days of maintenance, to be protected by his lord, even in the royal courts of justice, and repaying his master by service, military and economic, and thus the feudal incident of heriots, warship, etc. (for details of feudal aids, cf. Maitland, Constitutional History, 27-30).

(4) Nor should it be forgotten that a seigneur or merchant could "thrive" (Stubbs, Select Charters, 65; probably of eleventh-century date), so as to amass wealth to the loss of his neighbours, and gradually to become a master—indeed their own master—of the church and the district. Such a kitchen in a church, where the said villeins must bake their bread (jus jurmi), a semi-fortified bell-house, and a burghe house, where he could sit in judgment.

(5) The last great cause that developed feudalism was war. It is an old saying, nearly a dozen centuries old, that "war begets the king." It is no less true that war, not civil, but international, begets feudalism.
First it forced the kings to cease to surround themselves with an antiquated fyrd or national militia, that had forgotten its agricultural pursuits that rapidity of movement was the first essential of military success, and by beating the sword into the ploughshare had lost every desire to beat back the iron into its old form. In consequence a new military force was organized, a professional standing army. This army had a fixed capital, possessed land, and was not content its individual members were granted lands and estates, or lived with the king as his personal suite. At any rate, instead of every able-bodied man being individually bound in person to serve his sovereign in the field, the lords or landowners were obliged in virtue of their tenure to furnish a certain quantity of fighting men, armed and supplied with arms and other necessary military equipment, according to the degree, rank, and wealth of the combatant. Secondly, it gave another reason for commendation, i.e. protection. The king was now asked not to pay a tax, but to extend the sphere of his influence so as to enable a lonely, solitary farmstead to keep off the attacks of a foe, or at least to afford a place of shelter and retreat in time of war. This the lord would do for a consideration, to wit, that the protected man should acknowledge himself to be judicially, politically, economically, the dependent of his high protector. Finally, the king himself was pushed up to the apex of the whole system. The various classes committed themselves to this central figure to aid them in times of stress, for they saw the uselessness of trying singly to repel a foe. They were continually being defeated because "shire would not help shire" (Anglo-Saxon Chronicle, ann. 1010). Thus the very reason why the English left Ethelred the Unready to accept Sweyn as full king (Anglo-Saxon Chronicle, ann. 1012) was simply because Ethelred had no idea of centralizing and unifying the nation; just as in the contrary sense the successful resistance of Paris to the Northmen gave to its dukes, the Lords of the Isle of France, the royal titles which the Carolingians of Loon were too feeble to defend; and the lack of a defensive national army prevented any unification of the unwieldy Holy Roman Empire. This is effectually demonstrated by the real outburst of national feeling that centred round one of the weakest of all the emperors, Frederick, the Lion, of the House of Neustadt, who was thought by Frederick the Bold was thought to be threatening Germany by his attack on Cologne. From these wars, then, the kings emerged, no longer as mere leaders of their people but as owners of the land upon which their people lived, no longer as Reges Francorum but as Reges Francorum, nor as Dux Normannorum but as Dux Normannorum, nor as Kings of the Anglo-Normans but as Kings of the Anglo-Saxons, of England-land. This exchange of tribal for territorial sovereignty marks the complete existence of feudalism as an organization of society in all its relations (economic, judicial, political), upon a basis of commendation and land-tenure.

Essence.—We are now, therefore, in a position to understand what exactly feudalism was. Bearing in mind the double definition given at the beginning, we may, for the sake of clearness, resolve feudalism into its three component parts. It includes a territorial element, an idea of vassalage, and the privilege of an immunity. (1) The territorial element is the grant of the enfeoffment by the lord to his man. At the beginning this was probably as well of stock and cattle as of land. Hence its etymology. Littre makes the Low Latin feudum of Teutonic origin, and thus cognate with the Old High German Vett, Gothic Votan, Anglo-Saxon foeg (our fee), modern German wuch. That is to say, the word goes back to the days when cattle was originally the only form of wealth; but it came by a perfectly natural process, when the race had passed from a nomadic life to the sires of abode necessitated by pastoral pursuits, to signify wealth in general, and finally wealth in land. The cattle, stock, or land was therefore handed over by the lord to his dependent, to be held, not in full ownership, but in subinfeudation, on conditions originally personal but becoming hereditary. (This whole process can be easily traced in Hecktor Munro Chadwick's "Studies in Anglo-Saxon Institutions", Cambridge, 1905, ix, 308-334; x, 378-411, where a detailed account is given of how the thegn, a royal personal servant, in the career of a king, devoted himself to the service of his sovereign, possessing an average of five hides of land and responsible to his sovereign in matters of war and jurisdiction.) The influence of the Church, too, in this gradual transference of a personal to a territorial vassalage has been very generally admitted. The monastic houses would be the first to furnish the word, Libius (Liber Eliensis, 275) to keep a sort of knights within their cloister walls. Bishops, too, however, magnificient their palaces, could not fail to wish that the fighting men whom they were bound by their barony to furnish to the king should be lodged elsewhere than close to their persons. Consequently they soon developed the system of territorial vassalage. Hence the medieval legal maxim: nulla terre sans seigneur (Vinogradoff, English Society in the Eleventh Century, Oxford, 1908, ii, 39-89). This enfeoffment of the lord or landowner by the king and of the dependent by the lord was partly in the nature of a reward for the services of the vassal. It was a way of saving the land and the future. It is this primitive idea of the lord who gives land to his supporter that is answerable for the feudal incidents which otherwise seem so tyrannous. For instance, when the vassal died, his arms, horse, military equipment reverted as heriot to his master. So, too, when the tenant died without heirs, his property escheated to the lord. If, however, he died, with heirs, indeed, but who were still in their minority, then these heirs were in wardship to the feudal superior, who could even dispose of a female ward in marriage to whom he would, on a plea that otherwise she might unite herself and land to an hereditary enemy. All the way along it is clear that the ever-present idea ruling and suggesting these incidents, was precisely a territorial one. The origin, that is, of these incidents went back to earlier days when all that the feudal dependent possessed, whether arms, or stock, or land, he had received from his immediate lord. Land would become the tie that knitted one into another society. Land was now the governing principle of life (Pollock and Maitland, History of English Law, Cambridge, 1898, i, iii, 66-78). A man followed, not the master whom he chose or the cause that seemed most right, but the master whose land he had and tilled, the master that he was so closely interwoven to, and made main. The king was looked up to as the real possessor of the land of the nation. By him, as representing the nation, baronies, manors, knights-fees, fiefs were distributed to the tenants-in-chief, and they, in turn, divided their land to be held in trust by the vassals (Vinogradoff, English Society in the Eleventh Century, 42). The statute of Edward I, known from its opening clause as Quia Emptores, shows the extreme length to which this sub-infeudation was carried (Stubbins, Select Charters, 478). So much, however, had this territorial idea entered into the past legal conceptions of the medieval policy, and been passed on from age to age by the most skilful lawyers of each generation, that, up to within the last half century, there were not wanting some who taught that the very peerages of England might descend, not by means of blood only, nor even of will and bequest, but by the mere possession of a sort of certain lands and tenements. Witness the Berkeley case of 1861 (Anson, Law and Custom of the Constitution, Oxford, 1897, Part I, i, vi, 200-203). (2) Feudalism further implies the idea of vassalage. This is partly concurrent with, partly overlapping, the territorial conception. It is certainly prior to, more
FEUDALISM

primitive than, the notion of a landed enfeoffment. The early barbed hordes that broke over Europe were held together by the idea of loyalty to a personal chief. The term feudalism (Germania, vii): "The holders hold command rather by the example of their boldness and keen courage than by any force of discipline or autocratic rule." It was the best, most obvious, simplest method, and would always obtain in a state of incessant wars and raids. But even when that state of development had been passed, the personal element, though doubtless sensibly lessened, could not fail to continue. Territorial enfeoffment did not do away with vassalage, but only changed the medium by which that vassalage was made evident. The dependent was, as ever, the personal follower of his immediate lord. He was not merely holding land of his lord; the very fact of that held was but the expression of his dependence, the outward and visible sign of an inward and invisible bond. The fief showed who the vassal was, and to whom he owed his vassalage. At one time there was a tendency among historians to make a distinction between the theory of feudalism on the Continent and that introduced into England by William I. But a closer study of both has proved their identity (Tout, Eng. Hist. Rev., Jan., 1905, 141-143). The Salisbury Oath, even on the supposition that it was actually taken by "all the land-owning men of account there within in the land" (Ancren Riwel, 1068), was nothing more than had been exacted by the Anglo-Saxon kings (Stubs, Select Charters, Doom of Exeter, iv, 64; i, 67; but compare Vinogradoff, Growth of the Manor, Oxford, 1905, 294-306). In Germany, too, many of the lesser knights held directly of the emperor and over all, whether immediately subject to him or not, he had, at least in theory, sovereign rights. And in France, where feudal vassalage was very strong, there was a royal court to which a dependent could appeal from that of his lord, as there were also royal cases, which none but the king could try. In fact it was perhaps in France, earlier than elsewhere, that the centralizing spirit of royal interference began to busy itself in social, economic, judicial interests of the individual. Besides, on the other hand, the anarchy of Stephen's reign that spread over the whole country (Davis, Eng. Hist. Rev., Oct., 1909) showed how slight even in England was the control over the "sires". If English feudalism did at all differ from the hierarchic vassalage that caused so much harm abroad, the result was due far more to Henry II and his successors than to the Norman line of kings. And even the work of the Angevins was to no small degree understood and continued by Theobald of Merton (1278), Mortmain (1279), Quia Emptores (1290) all laid the foundations, though such, of course, was foreign to their object, for the aggregations of large estates. Then came the marriage of the royal princes to great heiresses; the Black Prince gained a son-in-law; and so on. Lukas astounds the student of history: he was "Harry of Hereford, Lancaster and Derby", as well as Leicester and Lincoln. The result was that England, no less than France, Germany, Italy, and Spain, had its feudal vassals that acquired ascendancy over the crown, or were only prevented by their mutual jealousy from doing so. In England, too, the substitution of a fodalité apagnée, or nobility of the blood royal, for the old fodalité territoriale worked the same mischief as it did in France; and the War of the Roses played into the hands of Burgundians and Armagnacs, the horrors of the Fronde and the anarchy of the League of the Public Weal. It will be seen, therefore, that all over Europe the same feudal system prevailed of a hierarchic arrangement of classes, as some vast pyramid of which the apex, pushed high up and

separated by intervening layers from its base, represented the king.

(3) Feudalism lastly included the idea of an immunity - or grants of the benefits of justice - in a leaf or other piece of land (Vinogradoff, Eng. Soc., in the Eleventh Century, 177-207). We have already stated how by the land-books the Anglo-Saxon kings (and the like had been done, and was to be repeated all over the Continent) granted to others political ownership over certain territories that till that time had been, in the medieval phrase, "de libero squamato". The result was that, apparently, private courts were set up, typified in England by the alliterative jingle "sac and soc, tol and theam, and infangentheaf". Sometimes the lord was satisfied by merely taking the judicial forfeitures in the ordinary courts, without troubling to hold any of his own courts. In all cases, however, it seems he had the right, and to have used it, of keeping his own separate courts. Feudalism, therefore, includes not merely service (military and economic) but also suit (judicial). This suit was as minutely insisted upon as was the service. The king demanded from his tenants-in-chief that they should meet in his curia regis. So William I had his threecircle year-crown-wearings, attended by "all the rich men over all England, archbishops and bishops, abbots and earls, thegns and knights" (Anglo-Saxon Chronicle, ad ann. 1087). So too in France, there was the curia du souverain maitre de la chai, for either the king himself or the king's demesne or immediate tenants; at this royal court, whether in England or in France, all the tenants-in-chief, at any rate in the days of the full force of feudalism, were obliged to attend. The same court existed in the Holy Roman Empire and was of great importance, at least till the death of Henry V (Bryce, Holy Roman Empire, London, 1904, viii, 120-129). All those who attended these courts did so in virtue of the tenurial obligations. Now, these royal councils were not constitutional bodies, for we have no evidence of any legislation by them. Rather, like the Parlement of France, they simply registered the royal edicts. But their real work was judicial, adjudicating causes too numerous or too complicated for the king alone to deal with. So Philip Augustus summoned John as a vassal prince to the cou r du roy to answer the charge of the murder of Arthur of Brittany. Just as these royal courts were judicial bodies for dealing with questions relating to the royal person, so were these courts of the enfeoffed tenants-in-chief, and in a descending gradation every lord and master, had their private courts in which to try the cases of their tenants. The private criminal courts were not strictly feudal, but dependent on a royal grant; such were the franchises, or liberties, or privileges, as in the counties Palatine up and down Europe. Besides these, however, were those who were libera curia, courts baron, courts leet, courts customary, and, in the case of the Church, courts Christian (for details, Pollock and Maitland, History of English Law, I, 571-594). The very complexity of these courts was one of the chief causes of the many complaints of the time, for they led to a degree of squabbling that was too great for the system of the society of the time. Besides,less, for Langland in "Piers Plowman" (Passus III, ii. 318-319) looks forward to a golden day when King's court and common court, consistory and chapter,

All shall be one court and one baron-judge.

CIVIL AND FEUDALISM.—The Church too had her place in the feudal system. She too was granted territorial siefs, became a vassal, possessed immunities. It was the result of her calm, wide sympathy, turning to the new nations away from the Roman Empire, to which many Christians thought she was irrevocably bound. By the baptisms she showed the teaching of Constantine had not ties her to a political system. So she created a new world out of chaos, created the paradox of barbarian civilization. In gratitude kings and emperors endowed her with property; and ecclesiastical property has not infrequently
brought evils in its train. The result was disputed elections; younger sons of nobles were intruded into bishoprics and abbacies, even against the will of princes, and the clergy became professors of spiritual offices. The cause of this was feudalism, for a system that had its basis on land-tenure was bound to enslave a Church that possessed great landed possessions. In Germany, for example, three out of the mystically numbered seven electors of the Electorate of Bavaria were of the family of the prince-bishops. There were, besides, several prince-bishops within the empire, and mitred abbots, whose rule was more extended and more powerful than that of many a secular baron. As it was in Germany, so it was in France, England, Scotland, Spain, etc. Naturally there was a growing desire on the part of the king and the princes to force the Church, to a greater or lesser degree, to assume the national burdens and duties. Moreover, since by custom the secular rulers had obtained the right of presentation to various benefices or the right of veto, with the title on the Continent of advocates or vott; the numerous claimants for the livings were only too ready to admit every possible demand of their lord, if only he would permit them to possess the bishopric, abbacy, or whatever else it might be. In short, the Church was in danger of becoming the annex of the State; the pope, of becoming the chaplain of the emperor. Simony and concubinage were rife. Then came the Reformers of the Church, who, in Church and State, in this sense, that the Church would confer the dignity or office, and the State the barony. But even when this concordat had been arranged (in England between Henry I and St. Anselm in 1107; the European settlement did not take place till 1122 at Worms), the Church still lay entangled with feudalism. It had to perform its temporal duties. It might owe suit and service to a lord. Certainly, lesser vassals owed suit and service to it. So it was brought into the secular fabric of society. A new tenure was invented for it, tenure by frankishmuth. But it had more often than not to provide its knights and war-men, and to do justice to its tenants. The old ideal of a world-monarchy and a world-religion, the pope as spiritual emperor, the emperor as temporal pope, as set out with matchless skill in the fresco of the Dominican Church in Florence, S. Maria Novella, had ceased to influence public opinion long before Dante penned his Divine Comedy, and the Feudal idea (Barry, in Dublin Review, Oct., 1907, 221–243).

There was to be no such widespread a universal Church, as a number of national Churches under their territorial princes, so that feudalism in the ecclesiastical sphere prepared the way for the Renaissance principle, Cujus regio, cujus religio, for while the Church sanctified the State and anointed with sacred chrism the king vested in priestly apparel, in the end the State secularized the Church amid the gilded captivity of Avignon. Royal despotism followed the indignities of Anagni; the Church sank under the weight of her feudal duties.

Results.—(1) Evil Results.—(a) The State instead of entering into direct relations with individuals, entered into relation with heads of groups, losing contact with the members of those groups. With a weak king or disputed succession, these group-heads made themselves into sovereigns. First of all viewing themselves as sovereigns they fought with one another as sovereigns, instead of coming to the State as to the true sovereign to have their respective claims adjudicated. The result was what the chroniclers call guerra or private war (Coxe, House of Austria, I, London, 1807, 306–7). This was forbidden in England even under its monarch form the tournament. Still it was too much tangled with feudalism to be fully suppressed. Breach was the result, far worse than if it had been in the open. (b) The group-heads tempted their vassals to follow them as against their overlords. So Robert of Bellesme obtained the help of his feudatories against Henry I. So Albert of Austria headed the elections against the Emperor Adolph of Nassau. So Louis X of France, and Philip the Second of France, and Philip the Second of Castile, the Emperors of Germany, and Louis the Ninth of France. So James of Urgel formed the Privileged Union at Saragossa.

(c) These group-heads claimed the rights of private coinage, private fortresses, full judicial authority, full powers of taxation. There was always a struggle between them and their overlords, the degree of independence. Each manorial group or privilege feared to be self-sufficient and to hold itself apart from its next overlord. Each overlord endeavoured more and more to consolidate his domains and force his vassals to appeal to him rather than to their direct superior. This continual struggle, success and failure of which formed the personal characters of lord and overlord, was the chief cause of the instability of life in medieval times. (d) A last evil may perhaps be added in the power given to the Church. In times of disputed succession the Church claimed the right to defend herself, then to keep order, and eventually to nominate the ruler. This, however justifiable in itself and however at times beneficial, often drove the ecclesiastical order into the arms of one or other political party; and the cause of the Church often became identified with a particular claimant for other than Church reasons; and the penalty of excommunication was frequently used to prevent the Church and the State from using the Church to protect itself and its times imposed to defend worldly interests. As a rule, however, the influence of the Church was directed to control and soften the unjust and cruel elements of the system.

(2) Good Results.—(a) Feudalism supplied a new cohesive force to the nations. At the break-up alike of the Roman Empire and of the Germanic tribal loyalty to the tribal chief, a distinct need was felt for some territorial organization. As yet the idea of nationality was non-existent, having indeed little opportunity of expression. How then were the peoples to be made to feel their distinct individuality? Feudalism came with its ready answer, linked Germany with Roman political systems, built up an inter-connected pyramid that rested on the broad basis of popular possession and culminated in the apex of the king. (b) It introduced moreover into social and political life the bond of legitima. Every war of the Middle Ages was a war of feudal vassals for their lord, or rather for their legal claim, since other causa belli there was none. Political expediency or national expansion were unknown doctrines. No doubt this legalitas, as in the English claim to the French throne, often became sheer hypocrisy. Yet on the whole it gave a moral restraint to public opinion in that dependent and inarticulate age; and the inscription on the simple tomb of Edward I: PACTUM SERVATET, however at times disregarded by the king himself, still sums up the great bulwark raised in medieval days against violence and oppression. To break the feudal bond was felony; and more, it was dishonour. On the side of the king or lord, there was the intangible but none the less indelible mark of authority, personal authority, a symbol; on the side of the man or tenant, homage for the land, sworn on bended knees with hands placed between the hands of the lord, the tenant standing upright while taking the fealty, as the sign of a personal obligation. (c) Feudalism gave an armed force to Europe when she lay defenceless at the feet of the old mountains over which so many peoples had wandered to conquer the Western world. The onrush of Turk, Saracen, and Moor was checked by the feudal levy which substituted a disciplined professional force for the national fyrd or militia (Oman, Art of War, IV, ii, 357–377, London, 1898). (d) From a modern point of view its most interesting character is its being a real, if only temporary, solution of the landQuestion. It enforced a just distribution of the territorial domains included within the geographical limits of the nation, by allowing individuals to carve out
estates for themselves on condition that each landlord, whether secular baron, churchman, even abbeys, rendered suit and service to his overlord and demanded them in return from each and every vassal. This effectually taught the principle that owners of land, precisely as such, had to perform in exchange governmental work. Not that there was exactly landlessness, for if serfdom still lingered and the various expressions of medieval literature seem to imply the existence of this), but that the nation was paid for its land by service in war and by judicial, administrative, and, later, legislative duties.

Decline of Feudalism.—This was due to a multiple development (though perhaps acting upon another. Since feudalism was based on the idea of land-tenure paid for by governmental work, every process that tended to alter this adjustment tended also to displace feudalism.

(1) The new system of raising troops for war helped to substitute money for land. The old system of feudal levy became obsolete. It was found impracticable for the lords to retain a host of knights at their service, waiting in idleness for the call of war. Instead, the barons, headed by the Church, enfeoffed these knights on land which they were to own on condition of military service. Hence they became lords of land, and were in effect the government. This system of funding the military by selling land was in fact a fixed wage, paid at first to the immediate lord, eventually demanded directly by the king. Land ceased to have the same value in the eyes of the monarch. Money took its place as the symbol of power. But this was further increased by a new development in military organization. The system by which sheriffs, in virtue of royal writs, summoned the county-levy had taken the place of the older arrangements. These commissions of array issued to the tenants-in-chief, or proclaimed for the lesser vassals in all courts, fairs, and markets were now exchanged for indentures, by which the knight contracted to the virtual feudatories, barons, knights, etc., to furnish a fixed number of men at a fixed wage ("They sell the pasture now to buy the horse.").—"Henry V", prologue to Act II). The old conception of the feudal force had completely disappeared. Further, by means of artillery the attacking forces completely dominated the defensive, fortified castles declined in value, archers and foot increased in importance, heavily armoured knights were becoming useless in battle, and on the Continent the supremacy of harquebus and pike was assured. Moreover as part of this military displacement the reaction against liberality (cf. Land, History of England, p. 140) must be noted. The intense evils occasioned all over Europe by this bastard feudalism, or feudalism in caricature, provoked a fierce reaction. In England and on the Continent the new monarchy that sprang from the Three Estates of Bacon stimulated popular resentment against the great families of king-makers and broke their power.

(2) A second cause of this substitution was due to the Black Death. For some years the emancipation of villeinage had, for reasons of convenience, been gradually extending. A system had grown up of exchanging tenure by rent for tenure by service, i.e. money paid in exchange for services, and the lord's fields were tilled by hired labourers. By the Great Pestilence labour was rendered scarce and agriculture was disorganized. The old surplus population that had ever before (Vinogradoff in Engl. Hist. Rev., Oct., 1900, 775-91; April, 1906, 356) drifted from manor to manors, no longer rented, no longer tilled their tenants; capital was begging from labour. All statutory enactments to chain labour to the soil proved futile. Villains escaped in numbers to manors, not of their own lords, and entered into service this time as hired labourers. That is, the lord became a landlord, the villein became a tenant-farmer at will or a landless labourer. Then came the Peasant Revolt over all Europe, the economic complement of the Black Death, by which the old economy was broken up and from which the modern social economy began. On the Continent the result was the métayer system or division of national wealth among small landed proprietors. In England under stock-and-land leases became common on farms and the villeins of the 12th century then disappeared, emerging eventually after successive ages as our modern "enclosed" agriculture.

(3) As in things military and economic, so also in things judicial the idea of landed administrative sinks below the horizon. All over Europe legal kings, Alphonse the Wise, Philip the Fair, Edward I of England, were rearranging the constitutions of their countries. The old curia regis or cour du roy ceases to be a feudal board of tenants-in-chief and becomes at first partly, then wholly, a body of legal advisers. The king's chaplains and clerks with their knowledge of civil and canon law, able to spell out the old customaries, take the place of grim warriors. The Placita Regis or cas royaux get extended and simplified. Appeals are encouraged. Civil as well as criminal litigations come into the royal courts. Finance, the royal auditing of the accounts of sheriffs, barons, and communal authorities, is the virtual feudal taxation. The country breaks down the power of the landed classes, and draws the king and people into alliance against the great nobles. The shape of society is no longer a pyramid, but two parallel lines. It can no longer be represented as broadening down from king to nobles, from nobles to people; but the apex and base have withdrawn, the one forming the feudal support, supporting, the central block. The rise to power of popular assemblies, whether as States-General, Cortes, Diet, or Parliaments, betokens the growing importance of the middle-class; and the triumph of the middle-class (i.e. of the moneyed, not landed, propertied) is the virtual extinction of feudalism in scholarship. The literature of the fourteenth century and onward witnesses to this triumph. Henceforward till the Renaissance it is eminently bourgeois. Song is no longer an aristocratic monopoly; it passes out into the whole nation. The troubadour is no more; his place is taken by the ballad writer composing in the vulgar tongue a dolce stil nuovo. This new tone is especially evident in "Renard le Contrefait" and "Branche des Roys Laignage". These show that the old reverence for all that was knightly and of chivalry (q. v.) was passing away. The medieval theory of life, thought, and government had broken down.

Feuillants.—The Cistercians who, about 1145, founded an abbey in a shady valley in the Diocese of Rieux (now Toulouse) named it Fullens; later Les Feuillants or Notre-Dame-des-Fleurs (q. v.), and the religious were soon called Feuillants (Lat. Fulientes). Relaxesns crept into the Order of Citeaux as into most religious congregations, and in the sixteenth century the Feuillant monastery was dis honoured by unworthy monks. A reform was soon to be introduced, however, by Jean de la Barrière, b. at Saint-Céré, in the Diocese of Cahors, 22
April, 1544; d. 25 April, 1600. Having completed a successful course in the humanities at Toulouse and Bordeaux, at the age of eighteen he was made commendatory Abbot of the Feuillants by the King of France, succeeding Charles de Crussol, who had just joined the Reformers. After his nomination he went to Paris to continue his studies, and then began his lifelong friendship with the cardinal, whose successor he was to become. In 1573 Barrière, having resolved to introduce a reform into his abbey, took the habit of novice, and after obtaining the necessary dispensations, made his solemn profession and was ordained priest, some time after 8 May, 1573. His enterprise was a difficult one. There were two mysteries to it: (1) Influence with the reformers to accept the reform, and unmoveyed by the example and exhortations of their abbot, resolved to do away with him, by means of poison. Their attempts, however, were frustrated. In 1577, having received the abbatial benediction, he solemnly announced his intention of reforming his monastery, and made the members of the community understand that they had either to accept the reform or leave the abbey; they chose the latter and dispersed to various Cistercian houses. Their departure reduced the community to five persons, two professed clerics, two novices, and the superincumbent abbot, the most rigid of abbots, and in many ways even surpassed. Sartorius in his work "Cistercium bis-ternitium" sums up the austerities of the reform in these four points: (1) The Feuillants renounced the use of wine, fish, eggs, butter, salt, and all seasoning. Their nourishment consisted of barley bread, herbs cooked in water, and oatmeal. (2) Tables were abolished; they ate on the floor kneeling. (3) They kept the Cistercian habit, but remained bare-headed and barefoot in the monastery. (4) They slept on the ground or on bare planks, with a stone for pillow. They slept but four hours. Silence and manual labour were held in honour. The community was increased rapidly by the admission of fervent postulants.

In 1581 Barrière received from Gregory XIII a Brief of commendation and in 1589 one of confirmation, establishing the Feuillants as a separate congregation. In spite of the opposition of the abbots and general chapters of the monks, the reform waxed strong. In 1587 Sixtus V called the Feuillants to Rome, where he gave them the church of St. Pudentiana, and the same year, Henry III, King of France, constructed for them the monastery of St. Bernard, in the Rue Saint-Joseph, Paris. In 1590, however, the Peace of Vassy was concluded, and Louis XIII, who was still siding with the King of England, remained loyal to Henry III, the majority of his religious declared for the League. As a result, in 1592 Barrière was condemned as a traitor to the Catholic cause, deposed, and reduced to lay communion. It was not until 1600 that, through the efforts of Cardinal Béroul, he was exonerated and reinstated. Early in the same year, however, he died in the arms of his friend Cardinal d'Ossat. In 1695 Clement VIII exempted the reform from all jurisdiction on the part of Cistercian abbeys, and allowed the Feuillants to draw up new constitutions, containing some mitigations of the primitive rigor. These were approved the same year. In 1598 the Feuillants took possession of a second monastery in Rome, San Bernardo alle Terme. In 1630 Pope Urban VIII divided the congregation into two entirely distinct branches: that of France, under the title of Notre-Dame des Feuillants; and that of Italy, under the name of Bernardoni Reformati. In 1634 the Feuillants of France, and in 1657 the Bernardines of Italy modified somewhat the constitutions of 1595. In 1751 at the time of the suppression of the religious orders, the Feuillants possessed twenty-five abbeys in France; almost all the religious were confessors, exiles, or martyrs. The Bernardines of Italy eventually combined with the Order of Citeaux. The congregation of the Feuillants has given a number of illustrious personages to the Church, among others: Cardinal Bona (q.v.), the celebrated liturgist and ascetical writer (d. 1674); Gabriel de Castello (d. 1687), general of the Italian branch, who also received the cardinal's hat; Dom Charles de Saint-Paul, first abbot of the Feuillants of the Urne near Le Mans; Bishop of Avranches, who published in 1641 the "Geographia Sacra"; among theologians, Pierre Comogère (d. 1662), Laurent Apsius (d. 1681), and Jean Gouluy (d. 1629). Special mention should be made of Carlo Giuseppe Morozzi (Morotius), author of the most important history of the order, the "Cisterce reforescentia... chronologica historia". Many martyrologies give Jean de la Barrière (25 April) the title of Venerable. The Abbey des Feuillants was authorized by papal Brief to publicly venerate his relics, but the cause of beatification has never been introduced.

The Feuillantes, founded in 1588 by Jean de la Barrière, embraced the same rule and adopted the same austerities as the Feuillants. Matrons of the highest distinction sought admission into this severe order, which soon grew in numbers, but during the Revolution, in 1791, the Feuillantes disappeared.

Feuillet, Louis, geographer, b. at Mane near Forcalquier, France, in 1660; d. at Marseilles in 1732. He entered the Franciscan Order and made rapid progress in his studies, particularly in mathematics and astronomy. He attracted the attention of members of the Academy of Sciences and in 1699 was sent by order of the king on a voyage to the Levant with Cassini to determine the geographical positions of a number of seaports and other cities. The success of the undertaking led him to make a similar journey to the Antilles. He left Marseilles, 5 Feb., 1703, and arrived at Martinique 11 April. A severe sickness was the cause of considerable delay, but in September of the following year he began a cruise along the northern coast of South America, making observations on a numerous ports and collected a number of botanical specimens. Upon his return to France in 1706, his work won recognition from the Government, and he immediately began preparations for a more extended voyage along the western coast of South America to continue his observations. He received the title of royal mathematician, and arrived with letters from the ministry set sail from Marseilles, 14 Dec., 1707. He rounded Cape Horn after a tempestuous voyage and visited the principal western ports as far north as Callao. At Lima he spent several months studying the region. He returned to France in 1711, bringing with him much valuable data and a collection of botanical specimens. Louis XIV granted him a pension and built an observatory for him at Marseilles. Feuillet was of a gentle and simple character, and while an enthusiastic explorer, was also a true ecclesiastic. He was the author of "Joumal des observations physiques, mathématiques et botaniques" (Paris, 1714); "Suite du Journal" (Paris, 1725).

Henry M. Broec.

Féval, Paul-Henri-Corentin, novelist, b. at Rennes, 27 September, 1817; d. in Paris, 5 March.
1887. He belonged to an old family of barristers, and his parents wished him to follow the family traditions. He received his secondary instruction at the lycée of Rennes and studied law at the university of the city. He was admitted to the bar at the age of nineteen, but the loss of his first case disgusted him with the practice of law, and he went to Paris, where he secured a position as a bank clerk. His fondness for reading, which caused him to neglect his professional duties, led to his dismissal a few months later. He was next found in the service of an advertising concern, then on the staff of an obscure Parisian paper, and finally as a proof-reader in the offices of "Le Nouveliste." He had already begun to write. A short story, "Le club des Phoques," which he published in "La Revue de Paris," in 1834, attracted attention and opened to Féval the columns of the most important Parisian newspapers. In 1844, under the pseudonym of Francis Troppol, he wrote "Les mystères de Londres," which had great success and was translated into several languages. From this time on he hardly ever ceased writing, sometimes publishing as many as four novels at a time. Some of them he also tried to adapt for the stage but, with the exception of "Le Bossu" which was played many times, his ventures in that direction were unsuccessful. Féval's writings had not always been in conformity with the teachings of the Church. In the early seventies he sincerely returned to his early belief, and between 1877 and 1882 published a revised edition of all his books. He also wrote some new works which show the change. His incessant labours and the financial reverses he had already incurred forced him to sell his literary rights to the Société des Gens de Lettres, of which he was president, but he had to remain in the home of Les Frères de S. Jean de Dieu, where he died.

Most of Féval's novels are romantic; in fact he may be considered as the best imitator of the style of Dumas; his fecundity, his imagination, and his power of interesting the reader are due to his ability to make the reader feel as if he were present at the scene. His narratives are always full of action, and the results are often brilliant. In his later years, however, he became more disinterested in the general themes of his works. His novels were written in a very plain style, but they have a great deal of interest to the modern reader. Féval died in Paris in 1852.

Pierre Marique.

Feyjó y Montenegro, Benito Jerónimo, a celebrated Spanish writer, b. at Casdemiro, in the parish of Santa María de Melias, Galicia, Spain, 8 October, 1676; d. at Oviedo, 26 September, 1764. Intended by his parents for a literary career, he showed from a very early age a predilection for ecclesiastical studies, and in 1688 received the cowl of the Order of St. Benedict at the monastery of San Juan de Samos. He was a man of profound learning, and wrote on a great variety of subjects, embracing nearly every branch of human knowledge. In his writings he attacked many old institutions, customs, and superstitions. He criticized, among other things, the system of public instruction in Spain, offering suggestions for reforms; and it was owing to his influence that many universities adopted new and better methods of teaching logic, physics, and medicine. He naturally stirred up many controversies and was the object of bitter attacks, but he was not without his supporters and defenders. In his long life he wrote many works, the fullest list of which may be found in Vol. XXX of the Relaciones Españoless (Madrid, 1833). The subjects may be conveniently grouped as follows: arts; astronomy and geography; economics; philosophy and metaphysics; philology; mathematics and physics; natural history; literature; history; medicine. Nearly all are included in the eight volumes which bear the title "Tratado crítico universal de discursos varios en todo género de materias para desengaño de errores comunes" (Madrid, 1726-39) and in the five volumes of his "Cartas Eruditas" (Madrid, 1742-60). During the life of the author his works were translated into French, Italian, German, and after his death into English. At his death a panegyric was paid to him by the university of San Vicente at Oviedo. A fine statue in his memory ornaments the entrance to the National Library at Madrid.

VENTURA Fuentes, Vicente de la Fuente, Vida y Juicio Crítico de Feyjó y Montenegro, Biblioteca de autores Españoles (Madrid, 1848-50), LV.

Fiacc, Saint (about 415-530), poet, chief bishop of Leinster, and founder of two churches. His father, Mac Dara, was prince of the Hy-Bairche in the country around Carlow. His mother was sister of Dubhtach, the chief bard and brenhon of Erin, the first of Patrick's converts at Tara, and the apostle's lifelong friend. Fiacc was a pupil to his uncle in the bardic profession and soon embraced the Faith. Subsequently, when Patrick came to Leinster, he so-journed at Dubhtach's house in Hy-Kinsellaigh and selected Fiacc, on Dubhtach's recommendation, to be consecrated bishop for the converts of Leinster. Fiacc was then a widower; his wife had recently died, leaving him one son named Fiacre. Patrick gave him an alphabet written with his own hand, and Fiacc acquired with marvellous rapidity the learning necessary for the episcopal order. Patrick consecrated him, and in after time Fiacc was made the bishop of the province. Fiacc founded the church of Domnas-Fiech, east of the Barrow. Dr. Healy identifies its site at Kylebeg. To this church Patrick presented sacred vestments, a bell, the Pauline Epistles, and a pastoral staff. After many years of austere life in this place, Fiacc was led by Patrick to leave the island and to move to the west of the Barrow, for there "he would find the place of his resurrection". The legends state that he was directed to build his oratory where he should meet a hind, his rectorory where he should find a boar. He consulted Patrick, the latter fixed the site of his new church at Sletty—the highland—a mile and a half north-west of Carlow. Here Fiacc built a large monastery, which he ruled as abbot, while at the same time he governed the surrounding country as bishop. His annual Lenten retreat to the cave of Drum-Cobby and the rigours of his Lenten fast, on five barley loaves mixed with ashes, were mortifying in his life by Joyce of隽恩斯. He suffered for many years from a painful disease, and Patrick, commiserating his infirmity, sent him a chariot and a pair of horses to help him in the visitation of the diocese. He lived to a very old age; sixty of his pious disciples were gathered to their rest before him. His festival has been always observed on the 12th of October. He was buried in his own church at Sletty, his son Fiacc, whom Patrick had ordained priest, occupying the same grave. They are mentioned in several calendars as jointly revered in certain churches.

St. Fiacc is the reputed author of the metrical life of
St. Patrick in Irish, a document of undoubted antiquity and of prime importance as the earliest biography of the saint that has come down to us. A hymn on St. Brigid, "Audite virginis laudes", has been sometimes attributed to him, but on insufficient grounds.

Flamingino (The Fleming), Dennis. See Calvert, Dionysius.

Ficino, Marsilio, philosopher, philologist, physician; b. at Florence, 19 Oct., 1433; d. at Correggio, 1 Oct., 1499. Son of the physician of Cosmo de' Medici, he served the Medici for three generations and was received from them a villa at Monte Vecchio. He studied at Florence and at Bologna; and was specially protected in his early work by Cosmo de' Medici, who chose him to translate the works of Plato into Latin. The Council of Florence (1439) brought to the city a number of Greek scholars, and this fact, combined with the founding of the Platonic Academy, of which Ficino was elected president, gave an impetus to the study of Greek and especially to that of Plato. Ficino became an ardent admirer of Plato and a propagator of Platonism, or rather neo-Platonism, to an unwarranted degree, going so far as to maintain that Plato should be read in the churches, and claiming Socrates and Plato as forerunners of Christ. He taught Plato in the Academy of Florence, and it is said he kept a light burning before a bust of Plato in his room. It is supposed that the works of Savonarola drew Ficino closer to the spirit of the Church. He was ordained priest in 1477 and became a canon of the cathedral of Florence. His disposition was mild, but at times he had to use his knowledge of music to drive away melancholy. His knowledge of medicine was applied very largely to himself, becoming almost a superstition in its detail. As a philologist his work was recognized, and Reuchlin sent him pupils from Germany. Angelo Poliziano was one of his pupils, and as a translator his work was painstaking and faithful, though his acquaintance with Greek and Latin was by no means perfect. He translated the "Argonautica", the "Orphic Hymns", Homer's "Hymns", and Hesiod's "Theogony"; his translation of Plato appeared before the Greek text of Plato was published. He also translated Plotinus, Porphyry, Proclus, Iamblichus, Alcinous, Synesius, Pselus, the "Golden Thoughts" of Pythagoras, and the works of Dionysius the Areopagite. When a young man he wrote an "Introduction to the Philosophy of Plato"; his most important work was "Theologia Platonica de anima immortalitate" (Florence, 1482); a shorter form of this work is found in his "Compendium theologica Platonica". He respects Aristotle and calls St. Thomas the "glory of theology"; yet for him Plato is the philosopher. Christianity, he says, must rest on philosophic grounds; in Plato alone do we find the arguments to support its claims, hence he considers the revival of Plato an intervention of Providence. Plato does not stop at immediate causes, but rises to the highest cause, God, in whom he sees all things. The philosophy of Plato is a logical outcome of previous thought, beginning with the Egyptians and advancing step by step till Plato takes up the mysteries of religion and casts them in a form that made it possible for the neo-Platonists to set them forth clearly. The seed is to be found in Plato, its full expression in the neo-Platonists. Ficino follows this line of thought in speaking of the human soul, which he considered as the image of the God-head, a part of the great chain of existence coming forth from God and leading back.
to the same source, giving us at the same time a view of the attributes of God and of his relations to the world. His style is not always clear. Perhaps his distinctive merit rests on the fact that he introduced Platonic philosophy into Germany. Besides the Akad., already mentioned, he left: "De religione Christiana et fidei pietate", dedicated to Lorenzo de' Medici; "In Epistolae Pauli commentaria"; Marsilius Ficini Epistolae (Venice, 1491; Florence, 1497). His collective works: Opera (Florence, 1491, Venice, 1516, Basel, 1563).

FICHERT, De vita, moribus et scriptis Marsillii Ficini commentario in his Almae dulci. Tom. i. Conti, Commentarius, et, seu M. Ficini vita, ed. M. SCHUMACHER.

FICHER, JULIUS (more correctly CASPAR) von, historian, b. at Paderborn, Germany, 30 April, 1826; d. at Innsbruck, 10 June, 1902. He studied history and law at Bonn, Münster, and Berlin, and during 1848–49 lived in Fr unkfort-on-the-Main, where he was closely associated with the noted historian, Böhmcr, who proved himself a generous friend and patron. In 1852 he proceeded to Bonn, but shortly afterwards accepted an invitation from Count Leo Thun, the reorganizer of the Austrian University, to be professor of history at Innsbruck, a position he held until 1866, when he was named professor of general history. In 1863, however, he joined the faculty of jurisprudence, and his lectures on political and legal history drew around him a large circle of devoted and admiring pupils. In 1866 he was elected member of the Academy of Sciences, but retired, after being ennobled by the Emperor of Austria, in 1879. His numerous and important works extended over three branches of scientific history (i.e., political and legal history and the science of diplomacy), and in each division he discovered new methods of investigation. Among his writings those of especial note are: "Rainald von Dassel, Reichskanzler und Erzbischof von Köln" (Cologne, 1850); "Münster'sche Chroniken des Mittelalters" (Münster, 1851); "Engelbert der Heilige, Erzbischof von Köln" (Cologne, 1853); "Die Ueberreste des deutschen Reichsarchivs in Pisa" (Vienna, 1855). The second division of his works includes "Ueber einen Spiegel deutscher Geschichte in der Zeit des Sachsenspiegels" (Innsbruck, 1859); "Vom Reichsfürstenstande" (Innsbruck, 1861); "Forschungen zur Reichs- u. Reichsgeschichte Italiens" (4 vols., Innsbruck, 1858–74); "Untersuchungen zur Reichsgeschichte" (3 vols., Innsbruck, 1891–97). Finally he proved himself a master in diplomacy in his "Beiträge zur Urkundenlehre" (2 vols., Innsbruck, 1877–78). During the period 1859–1866, he was engaged in a literary controversy with the historian, Heinrich von Sybel, on the significance of the German Empire. Ficcher advocated and defended the theory that the unique institution of the Holy Roman Empire is best fitted as successor of the old empire to secure the political advancement both of Central Europe and of Germany. In support of his theory, he wrote "Das deutsche Kaiserreich in seinen universalen und nationalen Beziehungen" (Innsbruck, 1871), and "Deutsches Königreich und Kaiserum" (Innsbruck, 1872). As the result of Böhmcr's literary estate, he compiled the "Acta Imperii selecta" (Innsbruck, 1870) and directed the completion and revision of the "Regesta Imperii".

FIDATUS, SIMEON A CASIA. See Simon of Cassia.

FIDEISM (Lat. fides, faith), a philosophical term meaning a system of philosophy or an attitude of mind, which, denying the power of unaided human reason to reach certainty, affirms that the fundamental act of human knowledge consists in an act of faith, and the supreme criterion of certainty is authority. Fideism has divers degrees and takes divers forms, according to the field of truth to which it is extended, and the various elements which are affirmed as constituting the authority. For some fideists, human reason cannot of itself reach certainty in regard to any truth whatever; for others, it cannot reach certainty in regard to the fundamental truths of metaphysics, morality and religion, while some maintain that we can give a firm supernatural sort to revelation on motives of credibility that are merely probable. Authority, which according to fideism is the rule of certainty, has its ultimate foundation in divine revelation, preserved and transmitted in all ages through society and manifested by tradition, common sense or some other agent of a social character. Fideism was maintained by Huet, Bishop of Avranches, in his work "De imbecillitate mentis humanae" (Amsterdam, 1748); by de Monodier, who laid great stress on tradition in society as the means of the transmission of revelation and the criterion ofcertitude; by Lamen- nais, who assigns as a rule of certitude the generalreason (la raison générale) or common consent of the race (Défense de l'essai sur l'indifférence, ch. vii, x); by de Staël (Histoire de Charles le Bon), by Bautain, Ventur, Ubaghs, and others at Louvain. These are sometimes called moderate fideists, for, though they maintained that human reason is unable to know the fundamental truths of the moral and religious orders, they admitted that, after accepting the teaching of revelation concerning them, human intelligence can demonstrate the reasonableness of such a belief (cf. Ubaghs, Logiques seu Philosophiae rationalis elementa, Louvain, 1860).

In addition to these systematic formulæ of fideism, we find throughout the history of philosophy from the time of the sophists to the present day a fideistic attitude of mind, which became more or less conspicuous at different periods. Fideism owes its origin to distrust in human reason, and the logical sequence of such an attitude is scepticism. It is to escape from this conclusion that some philosophers, accepting as a principle the impotency of reason, have emphasized the need of belief on authority, without asserting the primacy of belief over reason or else affirming a radical separation between reason and belief, that is, between science and philosophy on the one hand and religion on the other. Such is the position taken by Kant, when he distinguished between pure reason, confined to subjectivity, and practical reason, which alone is able to put us by an act of faith in relation with objective reality. It is also a fideistic attitude which is the occasion of agnosticism, of positivism, of pragmatism and other modern forms of anti-intellectualism. As against these views, it must be remembered that the authority of God, cannot be the supreme criterion of certitude, and an act of faith cannot be the primary form of human knowledge. This authority, indeed, in order to be a motive of assent, must be previously acknowledged as being certainly valid; before we believe in a proposition as revealed by God, we must first know with certitude that God exists, that He reveals such and such a proposition, and that His teaching is worthy of assent, all of which questions can and must be ultimately decided only by an act of intellectual assent based on objective evidence. Thus, fideism not only denies intellectual knowledge, but logically ruins faith itself. This, however, is not surprising, for the Church has condemned such doctrines. In 1348, the Holy See proscribed certain fideistic propositions of Nicholas d'Auvecourt (cf. Denzinger, Enchiridion, 10th ed., 367).
553-570). In his two Encyclicals, one of September, 1832, and the other of July, 1834, Gregory XVI condemned the political and philosophical ideas of Lamen- nais. On 8 September, 1840, Bautin was required to subscribe to several propositions directly opposed to Fideism, the first and the fifth of which read as follows: “Human reason is able to prove with certitude the existence of God; faith, a heavenly gift, is posterior to revelation, and therefore cannot be properly used against the atheist to prove the existence of God.” And The Church, in reason proceeds far beyond, with the help of revelation and grace, leads to it.” The same propositions were subscribed to by Bonnetty on 11 June, 1855 (cf. Denzinger, nn. 1650-1652). In his letter of 11 December, 1862, to the Archbishop of Munich, Pius IX, while condemning Fröhsshammer’s naturalism, affirms the ability of human reason to reach certitude concerning the fundamental truths of the moral and religious order (cf. Denzinger, 1666-1676). And, finally, the Vatican Council teaches as a dogma of Catholic faith that “one true God and Lord can be known with certainty by the natural light of human reason by means of the things that are made” (Const. “De Rebus B.A.”, sess. III; cf. Granderath, “Constitutiones dogmaticae Conc. Vatic.”, Freiburg, 1892, p. 32; cf. Denzinger, n. 1806).

As to the opinion of those who maintain that our suprasensum is prepared for by motives of credibility merely probable, it is evident that it logically depends on the suprasensum, and was condemned by Innocent XI in the decree of 2 March, 1679 (cf. Denzinger, n. 1171), and by Pius X in the decree “Lamentabili sane” n. 25: “Assenius fidei ultimo in iurit in congerie proabilitatim” (The assent of faith is ultimately based on a sum of probabilities). Revelation, indeed, is the supreme motive of faith in supernatural truths, yet the existence of this motive and its validity has to be established by reason. No one will deny the importance of authority and tradition or common consent in human society for our knowledge of natural truths. It is quite evident that to despise the teaching of the sages, the scientific discoveries of the past, and the voice of common consent would be to condemn ourselves to a perpetual infancy in knowledge, to render impossible any progress in science, to ignore the social character of man, and to make human life intolerable; but, on the other hand, it is an error to make these elements the supreme criterion of the individual and the natural certitude, the validity of which is grounded upon a more fundamental rule. It is indeed true that moral certitude differs from mathematical, but the difference lies not in the firmness or validity of the certainty afforded, but in the process employed and the dispositions required by the nature of the truths with which they respectively deal. The Catholic doctrine on this question is in accord with history and philosophy. Rejecting both rationalism and fideism, it teaches that human reason is capable (physical ability) of knowing the moral and religious truths of the natural order; that it is able to establish certainty of the immortality of the soul, and can acknowledge most certainly the teaching of God; that, however, in the present conditions of life, it needs (moral necessity) the help of revelation to acquire a sufficient knowledge of all the natural truths necessary to direct human life according to the precepts of natural religion (Const. “Vatican I”, De Fide Compendiit, cap. ii; cf. St. Thomas, “Cont. Gent.”, Lib. I, c. iv).

G. M. Sauvage.

Fidelis of Sigmaringen, Saint, b. in 1577, at Sigmaringen, Prussia, of which town his father Johanes Rey was burgomaster; d. at Sevis, 24 April, 1622. On the paternal side he was of Flemish ancestry. He pursued his studies at the University of Freiburg in the Breisgau, and in 1604 became tutor to Wilhelm von Stotzingen, with whom he went to Italy. In the process for Fidelis’s canonization Wilhelm von Stotzingen bore witness to the severe mortifications his tutor practised on these journeys. In 1611 he returned to Freiburg to take the doctorate in canon and civil law, and at once began to practise as an advocate. But the open revolt of which he found place in the law courts determined him to relinquish that profession and to enter the Church. He was ordained priest the following year, and immediately afterwards was received into the Order of Friars Minor of the Capuchin Reform at Freiburg, taking the name of Fidelis. He has left an interesting memorial of his novitiate and of his spiritual development at that time in a book of spiritual exercises which he wrote for himself. This work was reprinted by Father Michael Hetzenauer, O. M. Cap., and republished in 1893 at Stuttgart under the title: “S. Fidelis a Sigmaringen exercitans seraphicae devotionis”. From the novitiate Fidelis went to Constance to study in the Seminary of that city under Father John Baptist, a Polish friar of great repute for learning and holiness. At the conclusion of his theological studies Fidelis was appointed guardian first of the community at Rheinfelden, and afterwards at Freiburg and Feldkirch. As a preacher his humble sermons earned him a great reputation.

From the beginning of his apostolic career he was untiring in his efforts to convert heretics; nor did he confine his efforts in this direction to the pulpits, but also used his pen. He wrote many pamphlets against Calvinism and Zwinglianism, though he would never put his name to its writings. Unfortunately these publications have long been lost. Fidelis was still guardian of the community at Feldkirch when in 1621 he was appointed to undertake a mission in the country of the Grisons with the purpose of bringing back that district to the Catholic Faith. The people there had almost all gone over to Calvinism, owing partly to the ignorance of the priests and their lack of zeal. In 1614 the Bishop of Coire had requested the Capuchins to undertake missions amongst the heretics in his diocese, but it was not until 1621 that the general of the order was able to send friars there. In that year Father Ignatius of Bergamo was commissioned to visit several other places to plant the seeds of this missionary work; and a similar commission was given to Fidelis, who, however, still remained guardian of Feldkirch. Before setting out on this mission Fidelis was appointed by authority of the papal nuncio to reform the Benedictine monastery at Pfaffers. He entered upon his new labours in the true apostolic spirit. Since he first entered the order he had constantly prayed, as he confided to a fellow-friar, for two favours: one, that he might never fall into mortal sin; the other, that he might die for the Faith. In this spirit he now set out, ready to give his life to the cause of Christ, to spread the teachings of the Church in the Grisons, to refute the crucifix, Bible, Breviary, and the book of the rule of his order; for the rest, he went in absolute poverty, trusting to Divine Providence for his daily sustenance. He arrived in Mayenfeld in time for Advent and began at once preaching and catechizing; often preaching in several places the same day. His coming aroused strong opposition and he was frequently abused and insulted. He not only preached in the Catholic churches and in the public squares, but occasionally in the conventicles of the heretics. At Zizers, one of the principal centres of his activity, he held conferences with the magistrates and chief townsmen, often far into the night. They resulted in the conversion of Joseph Salis, the most influential man in the town, whose public recantation was followed by many conversions.

Throughout the winter Fidelis laboured indefatigably
and with such success that the heretic preachers were seriously alarmed and set themselves to inflame the people against him by representation that his mission was political rather than religious and that he was preparing the way for the subjugation of the country by the Austrians. During the Lent of 1622 he preached with especial fervour. At Easter he returned to Feldkirch to attend a chapter of the order and settle some affairs of his community. By this time the Congregation of the Propaganda had been established in Rome, and Fidelis was formally constituted by the Congregation, superior of the mission in the Grisons. He had, however, a presentiment that his labours would shortly be brought to a close by a martyr’s death. Preaching a farewell sermon at Feldkirch he said: as much as reiterating the country of the Grisons he was met everywhere with the cry: “Death to the Capuchins!” On 24 April, being then at Grusch, he made his confes-
sion and afterwards celebrated Mass and preached. Then he set out for Sevis. On the way his companions noticed that he was particularly cheerful. At Sevis he entered the church and began to preach, but was interrupted by a sudden tumult both within and without the church. Several Austrian soldiers who were guarding the doors of the church were killed and Fidelis himself was struck. A Calvinist present offered to lead him to a place of security. Fidelis thanked the man with a smile in the hand of death. Outside the church he was surrounded by a crowd led by the preachers who offered to save his life if he would apostatize. Fidelis replied: “I came to exterminate heresy, not to embrace it,” whereupon he was struck down. He was the first martyr of the Congregation of Propaganda. His body was afterwards taken to Feld-
dikirch and buried in the church of his order, except his head and left arm, which were placed in the cathedral at Coire. He was beatified in 1729, and canonized in 1745. St. Fidelis is usually represented in art with a crucifix and with a wound in the head; his emblem is a bludgeon. His feast is kept on 24 April.

**Fiesole, Diocese of (FESULANA), in the province of Tuscany, suffragan of Florence. The town is of Etruscan origin, as may be seen from the remains of its ancient walls. In pagan antiquity it was the seat of a famous school of augurs, and every year twelve young men went thither to study the art of divination. Sulla colonized it with veterans, who afterwards, under the leadership of Manlius, supported the cause of Catiline. Near Fiesole the Vandals and Suevi under Radagaisus were defeated (405) by hunger rather than by the troops of Stilicho. During the Gothic War (536-53) the town was several times besieged. In 539 Justinian, the Byzantine general, captured it and razed its fortifications. In the early Middle Ages Fiesole was more powerful than Florence in the valley below, and many wars arose between them. In 1010 and 1025 Fiesole was sacked by the Florentines, and its leading families obliged to take up their residence in Florence.

According to local legend the Gospel was first preached at Fiesole by St. Romulus, a disciple of St. Peter. The fact that the ancient cathedral (now the Abbazia Fiesolana) stands outside the city is a proof that the Christian origins of Fiesole date from the period before the Christianization. The oldest monument of a Bishop of Fiesole is in a letter of Gelasius I (492-496). A little later, under Vigilius (537-55), a Bishop Rusticus is mentioned as papal legate at one of the Councils of Constantinople. The legendary St. Alexander is said by some to belong to the time of the Lombard

**King Autari (end of the sixth century), but the Bohemians assign him to the reign of Lothair (middle of the ninth century). A very famous bishop is St. Donatus, an Irish monk, the friend and adviser of Em-
perors Louis the Pious and Lothair. He was elected in 826 and is buried in the cathedral, where his epi-
taph, dictated by himself, may still be seen. He founded the abbey of San Martino di Mensola; Bishop of Bologna in 850 and died that of St. Michael at Pas-
sgnano, which was afterwards given to the Vallombro-
san monks. Other bishops were Hildebrand of Lucca (1220), exiled by the Florentines; St. Andrew Corsini (1332), born in 1302 of a noble Florentine family, and who, after a reckless youth, became a Carmelite monk, died at Paris, and as such was renowned as a peacemaker between individuals and States. He died 6 January, 1373, and was canonized by Urban VIII. Other famous bishops were the Dominican Fra Jacopo Altovita (1390), noted for his zeal against schism; An-
tonio Aglio (1466), a learned humanist and author of a collection of lives of the saints; the Augustinian Gugli-
elmo Bacchio (1470), a cele-
brated preacher, and author of com-
mentaries on St. Otto-
tole and on the “Sentences” of Peter Lombard; Francesco Cataneo Diaceto (1570), a theologian at the Council of Trent and a prolific writer; Lorenzo dellaRobbia (1634), who built the sem-
inary. Among the glories of Fiesole should be men-
tioned the painter Lorenzo Monaco (1370-1424). But the greatest name associated with the history of the city is that of Blessed Giovanni Angelico, called da Fiesole (1387-1455). His baptismal name was Guido, but, entering the convent of the Reformed Dominici-
cans at Fiesole, he took the name of Giovanni in religion; that of Angelico was afterwards given to him in allusion to the beauty and purity of his works.

The Cathedral of St. Romulus was built in 1228 by Bishop Jacopo Bardi with materials taken from se-
ter older edifices; it contains notable sculptures by Mino da Fiesole. The old cathedral became a Bene-
dietine abbey, and in course of time passed into the hands of the regular canons of Lateran. It once pos-
sessed a valuable library, long since dispersed. The abbey was closed in 1778. The diocese has 254 par-
ishes and 155,800 souls. Within its limits there are 12 monasteries of men, including the famous Vallombrosa, and 24 convents for women.

The principal holy places of Fiesole are: (1) the cathedral (Il Duomo), containing the shrine of St. Romulus, martyr, according to legend the first Bishop of Fiesole, and that of his martyred companions, also the shrine of St. Donatus of Ireland; (2) the Badia or ancient cathedral at the foot of the hill on which Fiesole stands, supposed to cover the site of the martyrdom of St. Romulus; (3) the room in the bishop’s palace where St. Andrew Corsini lived and died; (4) the little church of the Romanesca in the cathedral square, where the same saint was warned by Our Lady of his approaching death; (5) the church of S. Ales-
sandro, with the shrine of St. Alexander, bishop and martyr; (6) the monastery of S. Francesco on the crest of the hill, with the cells of St. Bernardine of
FIGUEROA

Siena and seven Franciscan Beati; (7) S. Girolamo, the home of Venerable Carlo dei Conti Guidi, founder of the Hieronymites of Fiesole (1580); (8) S. Domenico, the new political and Franciscan history of Fiesole and of St. Antoninus of Florence; (9) Fontanella, a villa near S. Domenico where St. Aloysius came to live in the hot summer months, when a page at the court of Grand Duke Francesco de' Medici; (10) Fonte Lucente, where a miraculous crucifix is greatly revered. A few miles distant is (11) Monte Senario, the cradle of the Servite Order, where its seven holy founders lived in great austerity and were cheered at their death by the songs of angels; also (12) S. Martino di Meso- sola, with the body of St. Andrew, an Irish saint, still incorrupt.

CAPPELLETTI, La chiave d'Italia (Venice, 1848), XVII, 7-72; Ammirato, Gli Vecchi di Fiesole (Florence, 1637); Fellimore, Fra Angiolico (London, 1881).

U. BENIGNI.

FIGUEROA, Francisco de, a celebrated Spanish poet, surnamed “the Divine”, b. at Alcalá de Henares, c. 1540; d. there, 1620. Little is known of his life, except that he was of noble family, received his educat- tion at Alcalá, and followed a military career for a time, taking part in campaigns in Italy and Flanders. From a very early age Figueroa showed unusual poetical talent, and his poems are full of fire and passion. His work first attracted attention in Italy, where he resided for a time, but it was not until 1610 before he had earned a brilliant reputation in his own country. Following in the footsteps of Bos- can Almgovar and Garcilaso, to whose school he be- longed, he wrote pastoral poems in the Italian metres, and was one of the first Spanish poets who used with much success blank verse, which had been introduced by Boscán in 1543. His best-known and most highly praised work is the elegy “Tirias”, written entirely in blank verse. He was highly praised by Cervantes in his “Galatea”. It is unfortunate that but a small part of the works of this brilliant poet have reached us, the greater portion having been burned by his direc- tion just before his death. A small part, however, was preserved and published by Luis Tribaldos de Toledo, at Lisbon in 1625. They were reprinted in 1785 and again in 1804. The best of Figueroa’s works appear in “La Biblioteca de Autores Españoles” of Rivadeneira, vol. XLII.

VENTURA FUENTES.

FIGUEROA, Francisco García de la Rosa, Franciscan; b. in the latter part of the eighteenth century at Tolucá, in the Archdiocese of Mexico; date of death unknown. Figueroa possessed extraordinary administrative powers and for more than forty years directed the affairs of his order with singular prudence and ability, being lector emeritus of his order, prefect of studies of the college of Taltiltepec, superior of several convents, definitor, custodian, twice provincial of the province of Santo Evangelio, and visitor to the other provinces of New Spain. He was much beloved by the people, and highly esteemed by the viceroys and bishops. On 21 Feb., 1790, a royal order was received directing that all documents shedding light on the history of New Spain should be copied and sent to Spain, the order designating in some instances special documents which were wanted. D. Juan Vicente de Guzmán Fache de Padilla, second Count of Revilla- giga, dc., Figueroa’s order from 1759 to 1774, entrusted to Father Figueroa the work of copying and preserving these manuscripts. To this task Father Figueroa brought such marvellous activity and rare judgment, both in selecting the material and the copyists, that in less than three years he turned over to the Govern- ment thirty-two folio volumes of almost a thousand pages each, in duplicate, containing copies of original documents collected from the archives of convents and from private collections, for the most part almost forgotten, and of the greatest value for the knowledge of Mexican history. The work was completed, and the manuscripts, kept in Mexico in the Secretaría del Virreinado, and from there was transferred to the general archives of the Palacio Nacional, where it is still kept. The first volume of this was missing, but about 1872 a copy of it was made from that preserved in Madrid. To the original thirty-two volumes another was added, compiled years afterwards by some Franciscans, which contains a minute index of the contents of the work. Two other copies of the thirty-two volumes were found; one is in Mexico, the property of Señor Agueda, and the other in the United States in the H. H. Bancroft collection.

As this work of Figueroa’s has never been published it is of be of interest to select out from it the different volumes. They are as follows: I. Thirty fragments from the Museo de Boturini, among them four letters from Father Salviati. II. Treatise on political virtues by D. Carlos Sigénica; life and martyrdom of the children of Taxcasia; narrative of New Mexico by Father Gerónimo de Saldaña, Father Vélez, and others. III. Report of Father Posadas on Texas; three fragments on ancient history, Canticles of Nettahualoyotli, etc. IV. Narrative of Ixtlilxochitl. V-VI. Conquest of the Kingdom of New Galicia by D. Matías de la Mota Padilla. VII-VIII. Introduction to the history of Michoacán. IX-X. Chronicle of Michoacán by Fray Pablo Beaumont. XII. Mexican Chronicle by D. Hernando Alvarado Terosomoc. XIII. History of the Chichimecas by Ixtlilxochitl. XIV. Reminiscences of the City of Mexico. XV. Reminiscences for the history of Sinaloa. XVI-XVII. Notes for the history of Sonora. XVIII. Important letters to elucidate the history of Sonora and Sinaloa. XIX-XX. Documents for the history of New Viscaya (Durango). XXI. Establishment and progress of the Missions of Old California. XXII-XXIII. Notes on New California. XXIV. Log-book kept by the Fathers García, Barbastro, Font, and Capetillo; voyage of the ship “Santiago”. XXV. History of the Guayaquil. Anza, etc. XXV-XXVI. Documents for the ecclesi- astical and civil history of New Mexico. XXVII-XXVIII. Documents for the civil and ecclesiastical history of the Province of Texas. XXIX. Documents for the history of Coahuila and Central Mexico (Seno Mexicano). XXX. Tampico, Rio Verde, and Nuevo León. XXXI. Notes on the cities of Vera Cruz, Cor- dova, Oaxaca, Puebla, Tepotzotlán, Querétaro, Guana- juato, Guadalajara, Zacatecas, and Nootka. XXXII. Pious reminiscences of the Indian nation.

BENEDICT, Bib. hispanica septentrionalis (2d ed., Mexico, 1883); Diccionario Universal de la Historia y Geogra- fía, published by a society; revised and enlarged by D. Lucas Álamos, D. J. GAR- cía Bozal, V. Sabater, and others. GARCÍA CUBAS, Diccionario, geo., hist., y biográfico de los Estados Unidos Mexicanos (Mexico, 1888), 1; LEÓN, Hist. Gen. de México (Mexico, 1892).

CAMILLO CRIVELLI.

FILCOCK, Robert. See Line, Anne

FILIPPO, Francesco, humanist, b. at Tolentino, 26 July, 1398; d. at Florence, 31 July, 1481. He studied grammar, rhetoric, and Latin literature at Padua, where he was appointed professor at the age of eight- teen. In 1417 he was invited to Venice by the Doge, and moral philosophy at Venice, where the rights of citi- zenship were conferred upon him. Two years later he was appointed secretary to the Venetian consul- general at Constantinople. Arriving there in 1420, he at once began the study of Greek under John Chry-
solora, whose daughter he afterwards married, and he was received with great favour by the Emperor John Palaeologus, by whom he was employed on several important diplomatic missions. In 1426, receiving the invitation to the chair of eloquence at Venice, Filelfo returned there with a great collection of Greek books. The following year he was called to Bologna, and in 1429 to Florence, where he was received with the greatest enthusiasm. During his five years’ residence there he engaged in numerous quarrels with the Florentine scholars and incurred the hatred of the Medici, so that in 1434 he was forced to leave the city. He went to Siena and later to Milan, where he was welcomed by Filippo Maria Visconti, who showered honours upon him. Some years later, after Milan had been forcibly entered by Francesco Sforza, Filelfo wrote a history of Sforza’s life in a Latin epic poem of sixteen books, called the “Sforzid”. In 1474 he left Milan to accept a professorship in Rome, where, owing to a disagreement with Sixtus IV, he did not remain long. He went back to Milan, but left there in 1481 to teach Greek at Florence, having long before become reconciled with the Medici. He died in poverty only a fortnight after his arrival. The Florentines buried him in the church of the Annunziata. Filelfo was the most restless of all the humanists, as is indicated by the number of places at which he taught. He was a man of indefatigable activity, but arrogant, rapacious, fond of luxury, and always ready to assail his literary rivals. His writings include numerous letters (last ed. by Legrand, Paris, 1892), speeches (Paris, 1515), and satires (Venice, 1602); besides many scattered pieces in prose, published under the title “Convivio Mediolanensis”; and a great many Latin translations from the Greek. In both these languages he wrote with equal fluency.

Symonds, Renaissance in Italy (New York, 1900), II: The Revival of Learning; Romint, Vita di Fr. Filelfo (3 vols., Milan, 1908); Young, Die Wiederbelebung des klassischen Alterthums (Berlin, 1893); Sander, History of Classical Scholarship (Cambridge, 1908), I, 55–57.

Edmund Burke.

Filial Church (Lat. filialis, from filia, daughter), a church to which is annexed the cure of souls, but which remains dependent on another church. As this dependence on the mother church may be of various degrees, the term filial church has naturally more than one signification as to minor details. Ordinarily, a filial church is a parish church which has been constituted by the dismemberment of an older parish. Its rector is really a parish priest, having all the essential rights of such a dignity, but still bound to defer in certain accidental matters to the pastor of the mother church. The marks of deference required are not so fixed that local custom may not abrogate them. The principal marks are: obtaining the baptismal water from the mother church, making a moderate offering of money (fixed by the bishop) to the parish priest of the mother church annually, and occasionally during the year assisting with his parishioners in a body at services in the older church. In some places this last includes a procession and the presentation of a wax candle. If the filial church has been endowed with the revenues of the mother church, the parish priest of the latter has the right of presentation when a pastor for the dependent church is to be appointed.

This term is also applied to churches established within the limits of an extensive parish, without any dismemberment of the mother church. The pastor of such a filial church is really only a curate or assistant of the parish priest of the mother church, and he is removable at will, except in cases where he has a benefice. The parish priest may retain to himself the right of performing baptism, assisting at marriages and similar offices in the filial church, and that such functions be performed only in the parish church, restricting the services in the filial church to Mass and Vespers. In practice, however, the curates of such filial churches act as parish priests for their districts, although by canon law the dependence upon the pastor of the mother church remains of obligation, though all outward manifestation of subjection has ceased.

In the union of two parishes in the manner called “union by subjection”, the less important of the parish churches may sink into a condition scarcely distinguishable from that of a filial church and be comprehended under the term. In other words, the parish priest may govern such a church by giving it over to one of his assistants. It is true that the subordinated church does not lose its parochial rights, yet its dependence on the parish priest of another church and its administration by a vicar has led to its being included loosely under the designation filial church. Historically, this term has also been applied to those churches, often in different countries, founded by other and greater churches. In this sense the great patriarchal Sees of Rome, Antioch, Jerusalem, Alexandria, Constantinople established many filial churches which retained a special dependence upon the church founding them. The term Mother Church, however, as applied to Rome, has a special significance as indicating its headship of all the churches.

William H. W. Fanning.

Filia/a, Vincenzo da, lyric poet; b. at Florence, 30 Dec., 1642; d. there 24 Sept., 1707. At Pisa he was trained for the legal profession, which he later pursued, but during his academic career he devoted no little attention to philosophy, literature, and music. Returning to Florence, he was made a member of the Accademia della Crusca and of the Arcadia, and enjoyed the patronage of the illustrious convert to the Catholic faith, Christina, ex-Queen of Sweden, who with her purse helped to lighten his family burdens. A lawyer and magistrate of integrity, he never attained to wealth. His profligacy and ability, however, were acknowledged by those in power, and he was appointed to several public offices of great trust. Thus, already a senator by the nomination of Grand Duke Cosmo III, he was chosen governor of Volterra in 1696, and of Pisa in 1700, and then was given the important post of Secretary of State at Florence. An ardent Catholic, he not infrequently gives expression to his religious feeling in his lyrics, which, even though they may not entitle him to rank among the greatest of Italian poets, will always attract attention because of their relative freedom from the literary vices of the time, the bombast, the exaggerations and obscurity of Manzoni. But two collections are the odes or canzonet, which deal with the raising of the siege of Vienna by John Sobieski, when in 1683 it was beleaguered by the Turks, and the sonnets in which he bewails the woes of Italy whose beauty
had made her the object of foreign cupidity and whose sons were incapable of fighting for her and could only enlist mercenaries to defend her. The most famous of the sons was perhaps the "Italia, (Italia, O tu la sorte ", which Byron rendered with skill in the fourth canto of Child Harold. Some letters, e. g., orazioni, and Latin carmina, constitute the rest of his literary output. After the death of Ficicaja, an edition of the "Poesie toscane," containing the lyrics, was given to the world by his better edition is that of Florence, 1823; selected poems are given in "Lirici del secolo XVII", published by Bonzogno.

Anico, Poesie e lettere di Vincenzo da Ficicaja (Florence, 1864), with a preface on his life and work; Castellani, Studi letterari (Città di Castello, 1889).

J. D. M. FORD.

Filique is a theological formula of great dogmatic and historical importance. On the one hand, it expresses the Procession of the Holy Ghost from both Father and Son as one Principle; on the other, it was the occasion of the Greek schism. Both aspects of the expression are of equal importance.

I. DOGMATIC MEANING OF FILIQUE. - The dogma of the double Procession of the Holy Ghost from Father and Son as one Principle is directly opposed to the errors that the Holy Ghost proceeds from the Father, not from the Son. Neither dogma nor error created much difficulty during the course of the contentions with Arians and Macedonians and his followers, the so-called Pneumatomachi; were condemned by the local Council of Alexandria (362) and by Pope St. Damasus (378) for teaching that the Holy Ghost derives His origin from the Son alone, by creation. If the creed used by the Nestorians, which was composed probably by Theodorus of Mopsuestia and translated by Theodore of Mopsuestia directed against the ninth anathema by Cyril of Alexandria, deny that the Holy Ghost derives His existence from or through the Son, they probably intend to deny only the creation of the Holy Ghost by or through the Son, inculcating at the same time His Process from both Father and Son. At any rate, if the double Procession of the Holy Ghost was discussed at all in those early times, the controversy was restricted to the East and was of short duration. The first undoubted denial of the double Procession of the Holy Ghost we find in the seventh century among the Monothelites. Pope Leo (655), in his synodal writing against the Monothelites, employed the expression "Filique". Nothing is known about the further development of this controversy; it does not seem to have assumed any serious proportions, as the question was not connected with the characteristic teaching of the Monothelites.

In the Western church the first controversy concerning the double Procession of the Holy Ghost was conducted with the envoys of the Emperor Constantine Copronymus, in the Synod of Gentilly near Paris, held in the time of Pepin (787). The synodal Acts and other records of information do not seem to exist. At the beginning of the ninth century, John, a Great monk of the monastery of St. Sabas, charged the monks of Mt. Olivet with heresy, because they had inserted the Filoque into the Creed. In the second half of the same century, Photius, the successor of the unjustly deposed Ignatius, Patriarch of Constantinople (858), denied the Procession of the Holy Ghost from the Son, and opposed the insertion of the Filoque into the Constantinopolitan Creed. The same position was maintained towards the end of the tenth century by the Patriarchs Sisinnius and Sergius, and about the middle of the eleventh century by the Patriarch Michael, who renewed and complexioned the Greek schism. The rejection of the Filoque, or of the dogma of the double Procession of the Holy Ghost from the Father and Son, and the denial of the primacy of the Roman Pontiff constitute even to-day the principal errors of the Greek Church. While outside the Church doubt as to the double Procession of the Holy Ghost grew into open denial, inside the Church the doctrine of the Filoque was described to be a denial of faith in the Fourth Lateran Council (1215), the Second Council of Lyons (1274), and the Council of Florence (1438-1445). Thus the Church proposed in a clear and authoritative form the teaching of Sacred Scripture and tradition on the Procession of the Third Person of the Holy Trinity.

As to Sacred Scripture, the inspired writers call the Holy Ghost the Spirit of the Son (Gal., iv, 6), the Spirit of Christ (Rom., viii, 19), just as they call Him the Spirit of the Father (Matt., x, 20) and the Spirit of God (1 Cor., ii, 11). Hence they attribute to the Holy Ghost the same relation to the Father as the Son has to the Father. Again, according to Sacred Scripture, the Son sends the Holy Ghost (Luke, xxiv, 49; John, xv, 26; xvi, 7; xx, 22; Acts, ii, 33; Tit., iii, 6), just as the Father sends the Son (Rom., viii, 3; etc.), and as the Father sends the Holy Ghost (John, xiv, 26). Now, the "mission" or "sending" of one Divine Person to another is to mean merely that the Person said to be sent assumes a particular character, at the suggestion of Himself in the character of Sender, as the Sabellians maintained; nor does it imply any inferiority in the Person sent, as the Arians taught; but it denotes, according to the New Testament teaching, the filling of the work which the Father has reserved for the Holy Ghost. The Procession of the Person sent from the Person Who sends. Sacred Scripture never presents the Father as being sent by the Son, nor the Son as being sent by the Holy Ghost. The very idea of the term "mission" implies that the person sent goes forth for a certain purpose by the power of the sender, a power exerted on the person sent by a personal impulse, or of a command, or of prayer, or finally of production; now, Procession, the analogy of production, is the only manner admissible in God. It follows that the inspired writers present the Holy Ghost as proceeding from the Son, since they present Him as sent by the Son. Finally, St. John (XVI, 13-18) gives the words of Christ: "What things soever he [the Spirit] shall hear, he shall speak; ... he shall receive of mine, and shall shew it to you. All things whatsoever the Father hath, are mine." Here a double consideration is in place. First, the Son has all things that the Father hath, so that the Holy Ghost is the Son's Person being the Principle from which the Holy Ghost proceeds. Secondly, the Holy Ghost shall receive "of mine" according to the words of the Son; but Procession is the only conceivable way of receiving which does not imply dependence or inferiority. In other words, the Holy Ghost proceeds from the Son.

The teaching of Sacred Scripture on the double Procession of the Holy Ghost was faithfully preserved in Christian tradition. Even the Greek schismatics grant that the Latin Fathers maintain the Procession of the Holy Ghost from the Son. The great work on the heresy by Petavius (Lib. VII, cap. ii) develops the proofs of this contention at length. He claims as his only source of argument some of the later documents in which the patristic doctrine has been clearly expressed: the dogmatic letter of St. Leo I to Turribius, Bishop of Astorga, Ep. XV, c. i (447); the so-called Athenasian Creed; several councils held at Jerusalem in the years 449, 589 (II), 675 (XI), 683 (XV); the letter of Pope Hormisdas to the Emperor Justinus, Ep. Ixxix (521); St. Martin I's synodal utterance against the Monothelites, 649-655; Pope Adrian I's answer to the Caroline Books, 772-795; the Synod of Merida (668), Braga (675), and Hatfield (680); the writing of Pope Leo III (d. 816) to the monks of Monte Cassino; the letter of Pope Stephen V (d. 891) to the Monarch King Suentopolus (Sutapluk), Ep. xii; the symbol of Pope Leo IX (d. 1054); the Fourth Lateran Council, 1215; the Second Council of Lyons, 1274; and the Council of Florence,
1439. Some of the foregoing conciliar documents may be seen in Hefele, "Concilien geschichte" (2d ed.), III, nn. 109, 117, 252, 411; cf. P. G., XXVIII, 1567 sqq. Bessarion, speaking in the Council of Florence, in 1439, said that he was the first to demand the teaching of the Latin; since the Greek and the Latin Fathers before the ninth century were members of the same Church, it is antecedently improbable that the Eastern Fathers should have denied a dogma firmly maintained by the Western. Moreover, there are certain observations which form a direct proof for the belief of the Greek Fathers in the double Procession of the Holy Ghost. First, the Greek Fathers enumerate the Divine Persons in the same order as the Latin Fathers; they admit that the Son and the Holy Ghost are logically and ontologically connected in the same way as the Son and the Father [St. Basil, Ep. CXV; Ep. XXXVIII (alia xlii) ad Gregor. Itratam; "Adv. Eunom."] I, xx, III, sub init.]. Second, the Greek Fathers establish the same relation between the Son and the Holy Ghost as between the Father and the Son; as the Father is the fountain of the Son, so is the Son the fountain of the Holy Ghost (Athana., Ep. ad Theod.). So also, "De Incarnatione", Arian, 24; Basil, "Adv. Eunom.", v, in P. G., XXIX, 731; cf. Greg. Naz., Orat. xliii, 9). Third, passages are not wanting in the writings of the Greek Fathers in which the Procession of the Holy Ghost from the Son is clearly maintained: Greg. Thumatos, "Expos. fidei 
varii", 32, in Proclus Phidias, Epiph., Hom. xliii, 34; Greg. Nyss., Hom. iii in orat. domin. (cf. Mai, "Bibl. nova Patrum", IV, 40 sqq.); Cyril of Alexandria, "Thes.", ass. xxiv; the second canon of a synod of forty bishops held in 410 at Seleucia in Mesopotamia (cf. Lamy, Concilium Seleuciae et Cesiphontae habitum a. 410, Louvain, 1869; Hefele, "Concilien geschichte", II, 102 sqq.); the Arabic version of the Canons of St. Hippolytus (Haneberg, "Canonae St. Hyppolyti", Münster, 1870, 40, 70); the Nestorian explanation of the Symbol (cf. Badger, "The Nestorians", London, 1852, II, 79; Cureton, "Ancient Syriac Documents Relative to the Earliest Establishment of Christianity in Edessa", London, 1864, 43; "The Doctrine of Addai, the Apostle", ed. Phillips, London, 1876). The only scriptural difficulty deserving our attention is based on the words of Christ as recorded in John, xx, 26, that the Spirit proceeds from the Father, without mention being made of the Holy Ghost. In the first place, it is evident that this omission amounts to a denial; in the second place, the omission is only apparent, as in the earlier part of the verse the Son promises to "send" the Spirit. The Procession of the Holy Ghost from the Son is not mentioned in the Creed of Constantinople, because it was directed against the Macedonian error against which it sufficed to declare the Procession of the Holy Ghost from the Father. The ambiguous expressions found in some of the early writers of authority are explained by the principles which apply to the language of the early Fathers generally.

II. HISTORICAL IMPORTANCE OF THE FILIOTE. — It has been seen that the Creed of Constantinople at first declared only the Procession of the Holy Ghost from the Father; it was directed against the followers of Macedonius who denied the Procession of the Holy Spirit from the Father. In the East, the omission of Filioque lead to an asceticizing of the Church; but conditions were different in Spain after the Goths had renounced Arianism and professed the Catholic faith in the Third Synod of Toledo, 589. It cannot be ascertained who first added the Filioque to the Creed; but it appears to be certain that the Creed, with the addition of the Filioque, was adopted in the Spanish Church after the conversion of the Goths. In 796 the Patriarch Paulinus of Aquileia justified and adopted the same addition at the Synod of Piaul, and in 800 the Council of Aachen appears to have approved of it. The decrees of this last council were examined by Pope Leo III, who approved of the doctrine conveyed by the Filiote, but gave the advice to omit the phrase in the Creed. The practice of adding the Filioque was retained in the East, and about the middle of the eleventh century it had gained a firm foothold in Rome itself. Scholars do not agree as to the exact time of its introduction into Rome, but most assign it to the reign of Benedict VIII (1014-15).

The Catholic doctrine was accepted by the Greek deputations who were present at the Second Council of Lyons, in 1274, and at the Council of Florence, in 1439, when the Creed was sung both in Greek and Latin, with the addition of the word Filioque. On each occasion it was hoped that the Patriarch of Constantinople and his subjects had abandoned the state of heresy and schism in which they had been living since the time of Photius, who about 870 found in the Filiote an excuse for throwing off all dependence on Rome. But however sincere the individual Greek bishops may have been, they failed to carry their people with them, and the breach between East and West continues to this day. It is only since the Council of Florence in 1449 that the subject as the doctrine of the double Procession of the Holy Ghost should have appealed to the imagination of the multitude. But their national feelings were aroused by the desire of liberation from the rule of the ancient rival of Constantinople; the occasion of lawlessness obtaining in Florence, Mediolanum, Egel.

Fillastre (Philastrius), Guillaume, French cardinal, canonist, humanist, and geographer, b. 1348 at La Suse, Maine, France; d. at Rome, 5 November, 1409. After graduating at Paris, Fillastre taught jurisprudence at Reims, and in 1392 was appointed dean of its metropolitan chapter. During the Western Schism he showed at first much sympathy for Benedict XIII (Peter de Luna). In 1409, however, he took part in the attempt to reconcile the factions at the Council of Pisa. John XXIII, who was concerned to lead to the union of the Eastern Churches, appointed Fillastre legatus a latere to France (1418), where he was to pro-
NOTE

mot e the cause of Church unity. In recognition of his successful efforts in this capacity, he was made Archbishop of the Lateran Basilica. In 1421 he resigned the See of Rome and in 1422 he succeeded to the See of Saint-Pons-de-Thomières. He died at Rome in his eightieth year, as Cardinal-Priest of San Marco.

During the Council of Constance Fillastre kept a diary discovered by Heinrich Finke, first reviewed by him in the Römische Quartalschrift (1857), and then edited and published by him in 1883-1889, and was the first historical source for the Council of Constance, and was edited by Finke in its entirety in 1889 (in his Forschungen und Quellen, see below, 163-242). Fillastre's notes throw new light on the principal participants in the council, as well as on the two popes who were deposed and their trial, on the college of cardinals as a body, and in particular on Cardinals d'Ailly, Fillastre, Zabarella, etc. Fillastre is our only authority concerning the preliminary motions on the method of voting and the extremely difficult position of the college of Cardinals; he gives us our first clear conception of the quarrels that arose among the "nations" over the matter of precedence, and the place which the Spanish "nation" held at the council; he also furnishes the long-sought explanation of the confirmation of Sigismund as Holy Roman Emperor by Martin V. Fillastre's diary derives its highest value, however, from the exposition of the relations between the king and the council and the description of the concile.

While Fillastre was in Constance (where, it may be remarked, he translated several of Plato's works into Latin), he rendered important services to the history of geography and cartography, as well as to the history of the council. Thus he had copied the Latin translation of Ptolemy's geography (without maps), which had been completed by Jacobus Angelus in 1409, a manuscript he had great difficulty in securing from Florence. Together with this precious Ptolemy codex, he sent in 1418 to the chapter-library of Reims, which he had founded and already endowed with many valuable manuscripts, a large map of the world traced on wax, and a codex of Pomponius Mela. The two geographical codices are still preserved as "cimeia" in the municipal library of Reims, but the map of the world unfortunately during the eighteenth century.

About 1425 Fillastre wrote one of his most important canonical works on interest and usury; it has been handed down in numerous manuscripts. In 1427, though now an old man, he was as indefatigable as ever, and had the maps of Ptolemy drawn from a Greek manuscript (Venice, 1550), "see scale, distance, arranged with Latin terminology, to go with his Latin Ptolemy. Since Ptolemy had no knowledge of the Scandinavian Peninsula, much less of Greenland, Fillastre completed his codex by adding to Ptolemy's ten maps of Europe an eleventh. This "eleventh map of Europe", with the subjoined detailed descriptions of Denmark, Sweden, Norway, and Greenland, is the only existing copy of the "first map" of Claudius Clavus, "the first cartographer of America". This precious cartographic treasure is still preserved in the municipal library of Nancy.

JOSEPH FISCHER.

FILLUCCI, VINCENZO, Jesuit moralist; b. at Sienna, Italy, 1566; d. at Rome, 5 April, 1622. Having entered the Society of Jesus at the age of eighteen and made the usual course in classics, science, philosophy, and theology, he professed philosophy and mathematics for some years, and later became rector of the Jesuit college in his native city. Being summoned to Rome to fill the chair of moral theology in the Roman College, he taught there for ten years with great distinction. Paul V appointed him penitentiary of St. Peter's, a post he filled until his death in the following pontificate. Fillucci's greatest work, "Moralium Questionum de Christianis Officiis et Canibus Conscribente Tomo Duo", appeared in 1622, and together with a posthumous "Appendix, de Statu Cleri", forming, he most a twofold "hymn of praise" to the Jesuit name, it has been reprinted in several countries of Europe. A "Synopsis Thesauri Moralis", which likewise appeared posthumously in 1626, went through numerous editions. Fillucci is also known for his excellent "Breviar Instrucri pro Confessionibus Exciipendi" (Havensburg, 1626); this work is generally published as an appendix in all subsequent editions of his "Synopsis". Besides these published works, there is a manuscript, "Tractatus de Censuris", preserved in the archives of the Roman College. As an authority in moral theology, Father Fillucci has ever been accorded high rank, though this did not save him from the attacks of the Jansenists. The "Provincial Letters" of Pascal and the "Les Extraits des Assertions" make much capital out of their garbled quotations from his writings; while, in the anti-Jesuit tumult of 1762, the "parlement" of Bordeaux forbade his works and the "parlement" of Rouen burnt them, together with twenty-eight other works by Jesuit authors.

SOMMERVOGEL, B. de la C. de J., III, 735; IX, 840; DB ACKER, R. des Erasmes de la Comp. de Jeesus, I, 306; HURTER, Nomenclator Literarum, I, 964.

JOHN F. X. MURPHY.

FILLIUS, FELIX (or, as his name is more often found, in its Italian form, FILLUCCI), an Italian humanist, a philosopher, and theologian of note, was b. at Sienna about the year 1525; supposed to have d. at Florence c. 1590. He completed his studies in philosophy at Padua and was for a time in the service of Cardinal Del Monte, afterwards Julius III. In spite of the fact that he gained a great reputation as an orator and poet, and had a wide knowledge of Greek, no mention of his name is found in such standard works on the Renaissance as Burchardt, Voigt (Die Wiederbelebung der class. Alterthums), and Belloni (Il Sec. cento). After having enjoyed the pleasures of the wealthy life at the court of the great Duke of Mantua, the orders of the Franciscan convent at Florence, where he assumed the name Alexus. His works are both original in Italian and translations into that language from the Greek. Worthy of mention are: "Il Fedro, ovvero del bello" (Rome, 1844); "Delle divine lettere del gran Marsilio Ficino" (Venice, 1551); "Le undici Filippiche di Demostene dichiarate" (Rome, 1550); "Della Filosofia morale d'Aristotile" (Rome, 1551); "Della Politica, ovvero Scienza civile secondo la dottrina d'Aristotile, libri VIII scritti in modo di dialogo" (Venice, 1583). Fillius attended the Council of Trent, where he delivered a remarkable Latin oration and, at the order of St. Pius V, translated into Italian, under his cloister name of Alexus, the Latin Catechism of the Council of Trent (Catechismo, cioè istruzione secondo il decreto del concilio di Trento, Rome, 1567), often reprinted.

JOSEPH DUNN.

Finan, SIR, second Bishop of Lismifairne; d. 9 February, 861. He was an Irish monk who had been trained in Iona, and who was specially chosen by the Columbarian Monks to succeed the great St. Aidan (635-651). St. Bede describes him as an able ruler, and tells of his labours in the conversion of Northumbria. He built a cathedral "in the Irish fashion", employing
FINBARR

“hewn oak, with an outer covering of reeds”, dedicated to St. Peter. His apostolic zeal resulted in the foundation of St. Mary’s at the mouth of the River Tyne; Gilling, a monastery on the spot where King Oswin had been murdered, founded by Queen Eanfled, and the great Abbey of Stanesaebhtly, or Whity. St. Finan (Finnán—little Finn) converted Peada, son of Penda, King of the Middle Angles, “with all his North and Thanes”, and gave him four priests, including Diurth, who had been converted of the Middle Angles and Mercia, under King Osywy. The Breviary of Aberdeen styles him “a man of venerable life, a bishop of great sanctity, an eloquent teacher of unbelieving races, remarkable for his training in virtue and his liberal education, surpassing all his equals in every manner of knowledge as well as in circumspection and prudence, but chiefly devoting himself to good works and presenting in his life, a most apt example of virtue”.

In the mysterious ways of Providence, the Abbey of Whity, his chief foundation, was the scene of the famous Paschal controversy, which resulted in the withdrawal of the Irish monks from Lindisfarne. The inconvenience of the two systems—Irish and Roman—of keeping Easter was specially felt when on one occasion King Osywy and his Court were celebrating Easter Sunday with St. Finan, while on the same day Quiros and his attendants were still fasting and celebrating Palm Sunday. St. Finan was spared being present at the Synod of Whity. His feast is celebrated on the 9th of February.

FINBARR (Lochan, Barr), Saint, Bishop and patron of Cork, b. near Bandon, about 550, d. at Clonyc, 25 Sept., 623, was son of Aemgin. He evangelized Gowran, Coolashin, and Aghaboe, and founded a school at Eire. For some years he dwelt in a hermitage at Cougan Barra, where a beautiful replica of Cormac’s chapel has recently been erected in his honour. Finbarr was buried in the cathedral he built where Cork city now stands. He was specially honoured also at Dornoch and Barra, in Scotland. There are five Irish saints of this name. (See Cork.)

Life by Walsh (New York, 1884); Bamba (Dublin), 207.

A. A. MacEhlean.

FINCH, JOHN, VENERABLE, martyr, b. about 1548; d. 20 April, 1584. He was a yeoman of Eccleston, Lancashire, a member of an old Catholic family, but he appears to have been brought up in schism. When he was twenty years old he went to London where he spent nearly a year with some cousins at the Inner Temple. While there he was forcibly struck by the contrast between Protestantism and Catholicism in practice and determined to lead a Catholic life. Failing to find advancement in London he returned to Lancashire where he was reconciled to the Catholic Church. He then married and settled down, his house becoming a centre of missionary work, he himself harbouring priests and aiding them in every way, besides acting as cæcubist. His zeal drew on him the hostility of the authorities, and at Christmas, 1581, he was entraped into bringing a priest, George Ostiffe, to a place where both were apprehended. It was given out that Finch, having betrayed the priest and other Catholics, had taken refuge with the Earl of Derby, but in fact, he was kept in the earl’s house as a prisoner, sometimes tortured and sometimes bribed, in order to pervert him and induce him to give information. This failing, he was removed to the Fleet prison at Manchester and afterwards to the House of Correction. When he refused to go to the Protestant church he was dragged there by the feet, his head beating on the stones. For many months he lay in a damp dungeon, ill-fed and ill-treated, desiring always that he might be brought to trial and martyred. After three years’ imprisonment he was sent to be tried at Lancaster. There he was brought to trial with three priests on 18 April, 1584. He was found guilty and, on 20 April, having spent the night in converting some condemned felons, he suffered with Ven. James Bell at Lancaster. The cause of his beatification with those of the other English Martyrs was introduced by decree of the Sacred Congregation of Rites, 4 Dec., 1886.

EDWIN BURTON.

Finglow, John, Venerable, English martyr; b. at Bempby, near Howden, Yorkshire; executed at York, 8 August, 1586. He was ordained at the English College, Reims, 25 March, 1581, whence the following month he was sent on the English mission. After labouring for some time in the north of England, he was seized and confined in Ousebridge Kidicote, York, where for a time he endured serious discomforts; alleviated slightly by a visit from the English Martyrs, finally tried for being a Catholic priest and reconciling English subjects to the ancient Faith, and condemned to be hanged, drawn, and quartered.

F. M. RUDGE.

FINLAND, GRAND DUCHY OF, a department or province of the Russian Empire; bounded on the north by Norway, on the west by Sweden and the Gulf of Bothnia, on the south by the Gulf of Finland. Its limits extend from about 60° to 70° N. lat., and from about 19° to 33° E. long.; the area is 141,017 sq. miles. Finland abounds in lakes and forests, but the proportion of arable soil is small. The population numbers 2,900,000 souls, chiefly Finns; the coasts are inhabited by the descendants of Swedish settlers.

Up to the beginning of the twelfth century the people were pagans; about this date efforts for the conversion of the Finns were made from two sides. The Grand Duke of Novgorod, Vassievolodovich, sent Russian missionaries to the Karelains. Finns living on the Lake of Ladoga. All these efforts were successful. King Erik of Sweden undertook a crusade to Finland. Erik established himself firmly on the south-western coast and from this base extended his power. Henrik, Bishop of Uppala, who had accompanied Erik on this expedition, devoted himself to preaching the Gospel and suffered the death of a martyr in 1158. His successor, Rodulus, met the same fate about 1178, while the next following bishop, Folkvind, died a natural death. Finland attained an independent church organization under Bishop Thomas (1220; d. 1248), whose see was Rantemisaki; at a later date the episcopal residence was transferred to Abo. The successors of Thomas were: Bero I (d. 1258); Ravgald I (1258-66); Kettal (1266-86); Joannes I (1286-90); Magnus I (1290-1308), who was the first Finn to become bishop: he transferred the see to Abo; Ravgald II (1309-21); Bengt (1321-35); Hemming (1338-66), who made wise laws, built numerous churches, began the collection of a library, and distributed sanctuities; in 1514 his bones were taken up, the relics now being in the museum of the city of Abo, but he was not canonized; Henricus Hartmanni (1366-68); Joannes II Petri (1368-70); Joannes II Westfal (1370-82), a bishop of German descent; Bero II (1385-1412); Mag-

FINNOTTI

Finnian of Moville, SAINT, b. about 495; d. 589.

Though not so celebrated as his namesake of Clonard, he was the founder of a famous school about the year 540. He studied under St. Colman of Dromore and St. Moche of Noendrum (Mahee Island), and subsequently at Candida Casa (Whithern), whence he proceeded to Rome, returning to Ireland in 540 with an integral copy of St. Jerome's Vulgate. St. Finnian's most distinguished pupil at Moville (County Down) was St. Columba, whose surreptitious copying of the Psalter led to a very remarkable sequel. What remains of the copy which the Abbot made of the one that contains it, is now in the National Museum, Dublin. It is known as the Cathach or Battier, and was wont to be carried by the O'Donnell in battle. The inner case was made by Cathbar O'Donnell in 1084, but the outer is fourteenth-century work. So prized was it that the family of MacCrotty were hereditary custo-
drians of this Cathach, and it finally passed, in 1802, to Sir Neal O'Donnell, County Mayo. St. Finnian of Moville wrote a rule for his monks, also a penitential, the canons of which were published by Wasserschleben, in 1851. His festival is observed on 10 September.

FINOTTI, Joseph M., b. at Ferrara, Italy, 21 September, 1817; d. at Central City, Colorado, 10 January, 1879. In 1833 young Finotti was received into the Society of Jesus in Rome, and for several years taught and studied in the colleges of the order in Italy. He was one of the recruits whom Father Ryder, in 1845, brought from Europe to labour in the Maryland Province. After his ordination at Georgetown, D. C., Father Finotti was appointed pastor of St. Mary's Church, Alexandria, Virginia, and given charge of outlying missions in Maryland and Virginia. In 1852 he left the Society of Jesus and went to Boston. For many years he held the position of literary editor of "The Pilot", while acting as pastor of Brookline and later of Arlington, Mass. The last few years of his life he spent in the West, becoming, in 1877, pastor of Central City, Colorado, and retaining charge of that parish up to the time of his death. Father Finotti was a great book-lover, a much-much reader, giving much thought to the books he read, and displaying special interest in the Catholic literary history of America. Among his productions are: "Month of Mary", 1853, which reached a sale of 50,000 copies; "Life of Blessed Paul of the Cross", 1869; "Diary of a Soldier", 1861; "The Spirit of St. Francis de Sales", 1870; "The French Jansenist", 1863; "Herman the Pianist", 1863; "Works of the Rev. Arthur O'Leary", "Life of Blessed Peter Claver", etc. Most of these publications were translated or edited by him. His best known work, completed, is his Bibliographia sacra, which took --

intended
published in the United States, with notices of their authors and an epitome of their contents. The first part, which brings the list down to 1821 inclusive, was published in 1847; the second volume, which was to include the works of Catholic writers from 1821 to 1875, was never finished, though much of the material for it had been industriously gathered from all available sources. His last literary effort, which he did not live to see published, entitled "The Mystery of the Wizard Chip" (Baltimore, 1879), is a story of preternatural occurrences at Smithfield, W. Virginia, which is partly told in the life of Father Gallitzin.

Illustrated Catholic Family Almanac, 1848. Biographical sketches about the priest were collected by the archivists at the McClellan House, 297 Fifth Ave., New York.

Edward P. Spillane.

Fantan, Saint.—Fianton of Clonacody was a Leinster saint, b. about 524; d. 17 February, probably 594, or at least before 597. He studied under St. Columba of Terrigal, and in 550 settled in the solitude of the Sliave Bloom Mountains, near what is now Maryborough, Queen's County. His oratory soon attracted numerous disciples, for whom he wrote a rule of life, and miracles recounted. He is known as the apostle of Clonacody. Among his pupils was the great St. Comgall of Bangor. When he attained his seventy-sixth year he chose Fianton Maelubh as his successor in the Abbey of Clonacody. He has been compared by the Irish annalist to St. Benedict, and is styled "the Irish Monk."

Fianton (Munnu) of Tagmon, Saint, son of Tulchan, an Ulster saint, d. at Tagmon, 636. He founded his own church at Tagmon, near Tagmon (Teach Munnu) in what is now County Wexford, in 599. He is principally known as the defender of the Irish method of keeping Easter, and, in 550, he attended the Synod of Magh Lene, at which he dissuaded his brethren from the decision to adopt the Roman paschal method. Another synod was held somewhat later at Magh Ailbe, when St. Fianton again upheld his views in opposition to St. Lseran (Moc Laire). The influence of the synod of the Universal Church prevailed, and the saint was forced to abandon his views.

Fioriotti di S. Francesco d'Assisi (Little Flowers of St. Francis of Assisi), the name given to a classic collection of popular legends about the life of St. Francis of Assisi and his early companions as they appeared to the Italian people at the beginning of the fourteenth century. Such a work, as Ozanam observes, can hardly be said to have one author; it is the product rather of gradual growth and must, as Sabatier remarks, remain in a certain sense anonymous, because it is national. There has been some doubt as to whether the "Fioriotti" were written in Italian in the first instance, as Sabatier thought, or were translated from a Latin original, as Wadding maintained. The latter seems altogether more probable, and modern critics generally believe that a larger Latin collection of legends, which has come down to us under the name of "Actus B. Francisci et Sociorum Eius," represents an earlier and well-known original to the text now lost of the original "Fioriotti," of which the "Fioriotti" is a translation. A striking difference is noticeable between the earlier chapters of the "Fioriotti," which refer to St. Francis and his companions, and the later ones which deal with the friars in the province of the March of Ancona. The first half of the collection is, no doubt, merely a new form given to traditions that go back to the early days of the order, the other is believed to be substantially the work of a certain Fra Ugoletio da Monte Giorgio of the noble family of Brunforte (see Brunforte, Ugoletio), who, at the time of his death in 1348, was provincial of the Friars Minor in the March. Living as he did a century after the death of St. Francis, Ugoletio was dependent on hearsay for much of the information which it is said to have learned from Fra Giacomo da Masaia who had been well known and esteemed by the companions of the saint, and who had lived on terms of intimacy with Fra Leone, his confessor and secretary. Whatever may have been the sources from which Ugoletio drew his materials, they constitute the Latin work in question seem to have been written before 1328. The four appendices on the Stigmata of St. Francis, the life of St. Ginepro, and the life and sayings of St. Egidio, which occupy nearly one half of the printed text of the "Fioriotti," as we now have it, form no part of the original collection and were probably added by later compilers. Unfortunately the name of the fourteenth-century Franciscan friar who translated into Italian fifty-three of the sixty-six chapters found in the "Actus B. Francisci," and in translating immortalized them as the "Fioriotti," remains unknown, and the attribution of this work to Giovanni di San Lorenzo has been made upon conjecture. It has been surmised that the translator was a Franciscan. However this may be, the vernacular version is written in the most limpid Tuscan and is reckoned among the masterpieces of Italian literature.

The "Fioriotti" have been described as "the most exquisite expression of the religious life of the Middle Ages." That which perhaps gives these legends such a peculiar charm, is what may be called their atmosphere; they breathe all the delicious fragrance of the early Franciscan spirit. Nowhere can there be found a more childlike faith, a livelier sense of the supernatural, or a simpler literalness in the following of Christ than in the pages of the "Fioriotti," more than any other work transport us to the scenes amid which St. Francis and his first followers lived, and enable us to see them as they saw themselves. These legends, moreover, possess to the vitality and enthusiasm with which the memory of the life and teaching of the Poverello was preserved, and they contain much more history, as distinct from mere poetry, than it was customary to recognize when Suyssens and Papini wrote. In Italy the "Fioriotti" have always enjoyed an extraordinary popularity; indeed, this libur aureus is said to have been more widely read there than any other book, not excepting even the Bible or the Divine Comedy. Certain it is that the "Fioriotti" have exercised an immense influence in forming the popular conception of St. Francis and his companions. The earliest known MS. of the "Fioriotti" now preserved at Berlin, is dated 1320; the work was first printed at Vicenza in 1476. Manzoni has collected many interesting details about the well-known innumerable codices and editions of the "Fioriotti." The best edition for the general reader is unquestionably that of Father Antonio Cesari (Verona, 1822) which is based on the epoch-making edition of Filippo Buonarroti (Florence, 1718). The Crusa quote from this edition which has been often reprinted. The "Fioriotti" have been translated into nearly every European language and in our own day are being well read and studied in Northern countries. There are several Italian editions of the "Fioriotti."
FIRE

Fire, Baptism by. See Baptism.

Fire, Liturgical Use of.—Fire is one of the most expressive and most ancient of liturgical symbols. All the creeds of antiquity accorded a prominent place to this element whose mysterious nature and irresistible power frequently caused it to be adored as a god. The sun, as the principle of heat and light for the earth, was regarded as an igneous mass and had its share in this worship. Christianity adapted this usual belief, but denied the divinity of the world to this symbol: the symbol of light, which enlightens and warms humanity. The symbolism led quite naturally to the liturgical rite by which the Church on the Eve of Easter celebrates the mystery of the Death and Resurrection of Christ, of which the extinguished and rekindled fire furnishes the expressive image. The beginning of the office also reflects ancient beliefs. The new fire is struck from a flint and is blessed with this prayer: "Lord God, Almighty Father, inextinguishable light, Who hast created all light, bless this light sanctified and blessed by Thee, Who hast enlightened the whole world: make us all that is light and inflamed with the fire of Thy brightness; and as Thou didst enlighten Moses when he went out of Egypt, so illuminate our hearts and senses that we may attain life and light everlasting through Christ our Lord. Amen." When the fire has been struck from the flint the three-branched candle is lighted and the deacon chants the "Exultet" (q.v.), a liturgical poem whose style is as lively and charming as the melody which accompanies it. It is yet preserved in the Roman Liturgy. In the East the ceremony of the new fire occupies a place of considerable importance in the paschal ritual of the Greek Church at Jerusalem. This ceremony is the occasion for scandalous demonstrative of a piety which frequently degenerates into orgies worthy of pagan rites. The Journal of the Marquis de Nointel, in the seventeenth century, relates scenes which cannot be transcribed and which take place periodically. This ceremony is peculiar to the Holy City and does not form part of the ordinarine paschal ritual.

In the West we see the Irish, as early as the sixth century, lighting large fires at nightfall on the Eve of Easter. The correspondence of St. Boniface with Pope Zachary furnishes a curious detail on this subject. These fires were kindled, not with brands from light, but when they were therefore new fires. There is no trace of this custom in Gaul, where the Merovingian liturgical books are silent on the point. It is difficult to say what took place in Spain, for although the Mozarabic Missal contains a blessing of fire at the beginning of the vigil of Easter, it cannot be admitted that this ceremony was practised. It may have been inserted in this missal at a later date as it was in the Roman Missal, in the case of which fire is obtained from a flint and steel. It is possible that the custom, of Breton or Celtic origin, was imposed upon the Anglo-Saxons, and the missionaries of that nation brought it to the Christians in the eighth century. An altogether different rite, though of similar meaning, was followed at Rome. On Holy Thursday, at the consecration of the holy chasm, there was collected in all the lamps of the Lateran basilica a quantity of oil sufficient to fill three large vases deposited in the corner of the church. Wicks burned in this oil until the Holy Saturday, when the flames were extinguished from these lamps the candles and other luminaries by which, during the Eve of Easter, light was thrown on the ceremonies of the administration of baptism. This rite must have been attended with a certain solemnity since the letter of Pope Zachary to St. Boniface prescribes that a priest, perhaps even a bishop, should officiate on this occasion. Unhappily we are reduced to this information. But for neither the Roman "Ordines", nor the Sacramentaries tell us anything concerning this ceremony. This blessing of the paschal candle and the fire at the beginning of Easter Eve is foreign to Rome. The large lamps prepared on Holy Thursday provided fire on the Friday and Saturday without necessitating the solemn production of a new fire. The feast of the Purification or Candlemas (2 February) has a celebrated rite with ancient prayers concerning the emission of liturgical fire and light. One of them invokes Christ as "the true light which enlighteneth every man that cometh into the world" (John, 1:9). The title of this Egypt, "Nume Dimitris", is chanted with the anthem "A light (which my eyes have seen) for the revelation of the Gentiles and for the glory of thy people Israel." Fire Worshippers. See Pseudees.

Firmament (Heb. גַּלּוֹת; Sept. στεφάνους; Vulgate, firmamentum).—The notion that the sky was a vast solid dome seems to have been common among the ancient peoples whose ideas of cosmology have come down to us. Thus Homer conceived the heavens to be an arched iron ceiling from which the stars were suspended by means of cables (Chabas, L'Antiquité historique, Paris, 1873, pp. 64-67). Likewise to the mind of the Babylonians the sky was an immense dome, forged out of the hardest metal by the hands of Meredach (Marduk) and set in motion by the prodigious being Enlil. Jean Delaporte, Die Kosmologie der Babylonier, Strasbourg, 1890, pp. 253, 260). According to the notion prevalent among the Greeks and Romans, the sky was a giant vault of crystal to which the fixed stars were attached, though by some it was held to be of iron or brass. That the Hebrews entertained similar ideas appears from numerous biblical passages. In the first account of the creation (Gen., i) we read that God created a firmament to divide the upper or celestial from the lower or terrestrial waters. The Hebrew word גַּלּוֹת means something beaten or hammered out, and thus extended; the Vulgate rendering, "firmamentum", corresponds more closely with the Greek στεφάνους (of Symmachus), "something made firm or solid". The notion of the solidity of the firmament is moreover expressed in such passages as Job, xxxvii, 18, where reference is made incidentally to the heavens, "which are most strong, as if they were of molten brass". The same is implied in the purpose attributed to God in creating the firmament, viz. to serve as a wall of separation between the upper and lower bodies of water, it being conceived as supporting a vast celestial reservoir; and also in the account of the deluge (Gen., vii), where we read that the "flood gates of heaven were opened" and "shut up" (viii, 2). (Cf. also IV Kings, vii, 19; Is., xxiv, 18; Mal., iii, 10; Prov., viii, 28 sqq.) Other passages, e. g. Is., xiii, 5, emphasize rather the idea of something extended: "Thus saith the Lord God that created the heavens and stretched them out" (Cf. Is., xiv, 24, and xl, 22). In conformity with these ideas, the writer of Gen., i, 14-17, 20, represents God as setting the firmament of heaven, and the fowls are located beneath it, i. e. in the air as distinct from the firmament. On this point, as on many others, the Bible simply reflects the current cosmological ideas and language of the time.

J. A. H. JUSTE, IN THEOLOGICA LITTERATURA IN HASTINGS, Dict. of the Bible, s. v. Campony, I, 582.

JORIS F. DRISSCOIL.
Firmicus Maternus, Christian author of the fourth century, wrote a work "De errore profanarum religionum". Nothing is known about him except what can be gleaned from this work which is found in one MS. (Codex Vaticanus-Palatinus, Sec. X). Some references to the Persian Wars, and the fact that the work was addressed to the two emperors, Constantius II and Constans I, have led to the conclusion that it was composed during their joint reign (337–350). The work was written not for the sake of popularizing paganism but to show that the Christian religion, the successor of which the paganism of the later Roman Empire had taken, under the stress of the new spiritual needs aroused by contact with the religions of Egypt and the East. It aims, if one may judge from the mutilated introduction, at presenting from a philosophically and historically point of view, the advantages of Christianity over the superstitions and licentiousness of heathenism. In a general survey of pagan creeds and beliefs the author holds up to scorn the origin and practices of the Gentile cults. All its parts are not of equal merit or importance, from the purely historical standpoint. The first portion, in which the religions of Greece and of the East as described, is merely a compilation from earlier sources, but in the latter section of the work, in which the mysteries of Eleusis, Isis, and especially Mithra are set forth in detail, with their system of curious passwords, formulae, and ceremonies, the author seems to speak from personal knowledge; and it is apparent from other facts which are not found elsewhere. The emperors are exalted to stamp out this network of superstition and immorality, as a sacred duty for which they will receive a reward from God Himself, and ultimately the praise and thanks of those whom they rescue from error and corruption. The theory that the author of the Christian work was identical with Julius Firmicus Maternus Siculo, who wrote a work on astrology (De Nativitatibus sive Matheosee), assigned by Mommsen to the year 337 ["Hermes", XXIX (1894), 486 sq.], is favourably received by some, as well because of the identity of names and dates, as because of similarities in style which they are satisfied the two documents exhibit. This theory of course supposes that the author wrote one work before, the other after, his conversion.

Critical edition by Halm (Vieenna, 1867) in "Corpus Scrip. Eccles. Lat.", II.

Firmilian, Bishop of Cesarea in Cappadocia, died c. 209. He had among his contemporaries a reputation comparable to that of Dionysius or Cyprian. St. Gregory of Nyssa tells us that St. Gregory the Wonder-Worker, then a pagan, having completed his secular studies, "fell in with Firmilian, a Cappadocian of noble family, similar to himself in character and talent, as he showed in his subsequent life when he adorned the Church of Cesarea. "... The young man, moved in their desire to know more of God, and came to Origen, whose disciples they became, and by whom Gregory, at least, was baptized. Firmilian was more probably brought up as a Christian. Later, when bishop, Eusebius tells us, he had such a love for Origen that he invited him to his own country for the benefit of the Armenians. At this time (c. 202–205) when the teacher was staying in Cæsarea of Palestine, on account of his bishop's displeasure at his having been ordained priest in that city, Firmilian also went to him subsequently and stayed with him some time that he might advance in theology ( Hist. Eccl., VII, xxvii, 1). He was an opponent of the antipope Novianus, for Dionysius in 152–3 writes that Helenus of Tarsus, Firmilian, and Theoctistus of Cæsarea in Palestine (that is, the Metropolitans of Cæcilia, Cappadocia, and Palestine) had invited him to a synod at Antioch, where some were trying to support the heresy of Novatus (Euseb., Hist. Eccl., VI, xiv, 3). Dionysius counts Firmilian as one of the more eminent bishops of his time to Eusebius (Hist. Eccl., VII, v, 1). In his expression "Firmilian and all Cappadocia" again implies that Cesarea was already a metropolitan see. This explains why Firmilian could invite Origen to Cappadocia "for the benefit of the Churches".

In a letter to Pope Sixtus II (258–8), Dionysius mentions that Pope Sixtus was a witness to the baptismal controversy had refused to communicate with Helenus of Tarsus, Firmilian, and all Cæcilia and Cappadocia, and the neighbouring lands (Euseb., VII, v, 3–4). We learn the cause of this from the only writing of St. Firmilian's which remains to us. When the baptismal controversy arose, St. Cyprian wished to gain support from the Churches of the East against Pope Stephen for his own decision to rebaptize all heretics who returned to the Church. At the end of the summer of 256, he sent the deacon Rogatian to Firmilian with a letter, together with the documents on the subject—letters of the pope, of his own, and of his council at Carthage in the spring, and the treatise "De Eccl. Cath. Unitate". Firmilian's reply was received at Carthage about the middle of November. It is a long letter, even more bitter and violent than that of Cyprian to Pompeius. It has come down to us in a translation made, no doubt, under St. Cyprian's direction, although, as seems apparent, it may be revised (Ep. lxxxvi among St. Cyprian's letters). St. Cyprian's arguments against St. Stephen are reiterated and reinforced, and the treatise on Unity is laid under contribution. It is particularly interesting to note that the famous fourth chapter of that treatise must have been written before the writer of the letter in its original form, and not in the alternative "Roman" form (c. xvi). It is the literal truth when Firmilian says: "We have received your writings as our own, and have committed them to memory by repeated reading" (c. iv).

The reasoning against the validity of heretical baptism is mainly that of St. Cyprian, that those who are outside the Church and have not the Holy Spirit cannot admit others to the Church or give what they do not possess. Firmilian is fond of dilemmas: for instance, either the heretics do not give the Holy Ghost, in which case rebaptism is unnecessary, or else they do it, in which case rebaptism is laying on of hands. It is important that Firmilian enables us to gather much of the drift of St. Stephen's letter. It is "ridiculous" that Stephen demanded nothing but the use of the Trinitarian formula. He had appealed to tradition from St. Peter and St. Paul: this is an insult to the Apostles, cries Firmilian, for they exorcized heretics. Besides (this is from Cyprian, Ep. lxxxiv, 2), "no one could be so silly as to believe this", for the heretics are all later than the Apostles! And Rome has not preserved the Apostolic traditions unchanged, for it differs from Jerusalem as to the observances at Easter and as to other mysteries. "I am the more indignant with St. Peter's obvious and manifest silliness, that he so boasts of his position, and claims that he is the successor of St. Peter on whom were laid the foundations of the Church; yet he brings in many other rocks, and erects new buildings of many Churches when he defends with his authority the baptism conferred by heretics; for those who are baptized are without doubt numbered in the Church, and he who approves their baptism affirms that there is among them a Church of the baptized. ... Stephen, who declares that he has the Chair of Peter by succession, is excited by no zeal against heretics" (c. xvii). "You have cut yourself off—do not mistake—since he is the humblest person in the Church, you have cut off all the communion of ecclesiastical unity. For in thinking that all can be excommunicated by you, you have cut off yourself alone from the communion of all" (c. xxvii).
We thus learn the claims of the pope to impose on the whole Church by his authority as successor of Peter, a custom derived by the Roman Church from Apostolic tradition. Firmilian tells the Africans that with them the custom of rebaptizing may be new, but in Cappadocia it is not, and he can answer Stephen by opposing tradition to tradition, for it was their practice from the beginning (c. xix. 5). At some time in the course of his episcopate, he had joined in a council at Iconium with the bishops of Galatia and Cilicia and other provinces, and had decided to rebaptize the Montanists (c. vii and xix). Dionysius, in a letter to the Roman priest Philemon, also mentions the Council of Iconium with one at Symmades "among many". It was presumably held in the time of Martin (234-5) and Firmi- lian also took part in the two councils of 234-5 at Antioch which deposed Paul of Samosata. He may even have presided. The letter of the third council says he was too easily persuaded that Paul would amend; hence the necessity of another council (Euseb. Hist. Eccl. vii. iii-v). He was on his way to Asia when death overtook him at Tarsus. This was in 268 (Harnack) or 269. Though he was cut off from communion by Pope Stephen, it is certain that the following popes did not adhere to this severe policy. He is commemorated in the Greek Menza on 28 October, on the day on which his great successor, St. Basil, mentions his view on heretical baptism without accepting it (Ep. clxxxviii, and says, when speaking of the expression "with the Holy Ghost," in the Doxology: "That our own Firmi- lian held this faith is testified by the books [Meyer] which he has left" (De Sacr. Sane, xxv, 74). We hear nothing else of such writings, which were probably letters.

Bosworth, in Acta SS., 28 Oct., gives an elaborate dissertation on this saint; Benson in Dict. Christ. Biog., the genuineness of his letter being preserved by Mimiunus against Pomp., inter Cypr. (Venice, 1733), and by Molkenbusch, ed. Pomp., inter Cypr. (Praha, 1768), and in P. L. (IL, 1557); Ritschl, Cyprianus v. Karth (Gottingen, 1885), argued that the letter had been interpolated at Carthage in the interests of Cyprian's views: see also Harnack in Gesch. der altchristl. Lit. (Leipsig, 1883), II, 407, and Soden, Die cyprischen Briefsammlung (Berlin, 1904): this was disproved by Eusebius, Die Schriften der Kirchenväter, vii. 476. The letter is found in 200, and Zur Frage uber die Echtheit der Briefe F.s. an Cyprian (1894, 1895 and 1898) by Barnack (London, 1898). Barnack later expressed himself convinced (Gesch. II, ii, p. 359, 1904). Moses of Chorene, Hist. Arm., II, iv, xxxiv, states that of the eight of them a history of the persecutions of the Church in the days of Maximus, Decius and later of Diocletian. This is a mistake. It seems there were nine, firmilian in the espoused correspondence which was published contemporaneously with Origen, according to St. Jerome's version of the list of Origen's works by Pampolinus and Ephraemius: "Origenis, Firmilianus [sic] et Ephraemius..." (Ecclesiasticon, 237). See also Harnack, Gesch. der altchristl. Lit., II, ii, p. 47; the letter to Gregory Thaurin, is extant. A fragment of a letter from Origen to Firmilian, cited by Victor of Capua, was published by Pitra, Spic. Sac., I, 268. St. Augustine seems not to have known the letter to Cyprian, but Cicer novus seems to have referred to it, C. Cereus., iii, 1 and 3. The letter is not quoted by any ancient writer, and is found in at most 25 out of the 458 MSS. of Origen's works. See von Boetticher, op. cit. See also Harnack, Gesch. der altchristl. Lit., II, i, 296; Batiffol, Lit., gregoire (Paris, 1898); IDSC, L'Eglise nationale d'apres Helmar. (1898); see also references under CYPRIAN OF CARThAGE, SAINT.

John Chapman.

First-born.—The word, though casually taken in Holy Writ in a metaphorical sense, is most generally used by the sacred writers to designate the first male child of a family. The first-born animal is, in the English Bibles, termed "firstling". The firstlings, both human and animal, being considered as the best representatives of the race, because its blood flows purest and strongest in them, were commonly believed, among the early nomad Semitic tribes, to belong to God. Hence the custom of sacrificing the first-cast animals; hence also the prerogatives of the first-born son; hence, possibly, even some of the superstitious practices which mar a few pages of the history of Israel.

Among the Hebrews, as well as among other na-
First Fruits.—The practice of consecrating first fruits to the Deity is not a distinctly Jewish one (cf. Iliad, IX, 529; Aristophanes, "Ran," 1272; Ovid, "Metam." VIII, 273; 84; Pliny, "Hist. Nat." IV, 269). It seems to have sprung up naturally among agricultural peoples from the belief that the first—hence the best—yield of the earth is due to God as an acknowledgment of His gifts. "God served first", then the whole crop becomes lawful food. The offering of the first-fruits was, in Israel, regulated by laws contained in different parts of the Mosaic books. These laws were, in the course of ages, supplemented by customs preserved later on in the Talmud. Three entire treatises of the latter, "Bikkurim", "Terumoth", and "Hallah", besides numerous other passages of both the Mishna and Gemarah, are devoted to the explanation of these customs.

First-fruits offerings are designated in the Law by a threefold name: Bikkurim, Reishith, and Terumoth. There remains much uncertainty about the exact import of these words, as they seem to have been taken indiscriminately at different epochs. If, however, one considers the texts attentively, he may gather from them the three separate ideas connected with this ordinance.

1. The first FRUIT-offering connected with the beginning of the harvest. Leviticus, xxiii, 10-14, enacted that a sheaf of ears should be brought to the priest, who, the next day after the Sabbath, was to lift it up before the Lord. A holocaust, a meal-offering, and a libation accompanied this ceremony; and until it was permitted no "bread, or parched corn, or frumenty of the harvest" should be eaten. Seven weeks later two loaves, made from the new harvest, were to be brought to the sanctuary for a new offering. The Bikkurim consisted, it seems, of the first ripened raw fruits; they were taken from wheat, barley, grapes, figs, pomegranates, olives, and honey. The fruits offered were supposed to be the choicest, and were to be fresh, except in the case of grapes and figs, which might be offered dried by Israelites living far from Jerusalem. No indication is given in Scripture as to how much should be thus brought to the sanctuary. But the custom was gradually introduced of consecrating no less than one-sixtieth and no more than one-fortieth of the crop (Bikk., ii, 2, 3, 4). Occasionally, of course, there were extraordinary offerings, like that of the fruit of a tree the fourth year after it had been planted (Lev., xix, 23-25); one might also, for instance, set apart as a free offering the harvest of a whole field.

No time was, at first, specially set apart for the offering; in later ages, however, the feast of Dedication (25 Casleu) was assigned as the limit (Bikk., i, 6; Hahalah, iv, 10). In the Book of Deuteronomy, xxvi, 1-11, directions are laid down as to the manner in which these offerings should be made. The first-fruits were brought in a basket to the sanctuary and presented to the priest, with an expression of thanksgiving for the deliverance of Israel from Egypt and the possession of the fertile land of Palestine. A feast, according to Leviticus and Deut., xxv, 1-7, in the year of release, whether the fruits offered were consumed in that meal is not certain; Numbers, xviii, 13, seems to intimate that they henceforth belonged to the priest, and Philo and Josephus suppose the same.

Other offerings were made of the prepared fruits, especially oil, wine, and dough (Deut., xviii, 4; Num., xv, 20-21; Lev., xii, 14-16; cf. Ex., xxii, 29; Bikk. Greek), and "the first of the fleece". As in the case of the raw fruits, no quantity was determined; Execheil affirms that it was one-sixtieth of the harvest for wheat and barley and one-hundredth for oil. They were presented to the sanctuary with ceremonies analogous to those alluded to above, although, unlike all the Bikkurim, they were not offered at the altar, but brought into the store-rooms of the temple. They may be looked upon, therefore, not so much as sacrificial matter as a tax for the support of the priests. (See ATTANNES.)

Fiscal Procurator (Lat. PROCURATORE FISCALIS).—The duties of the fiscal procurator consist in preventing crime and safeguarding ecclesiastical law. In case of notification or denunciation it is his duty to institute proceedings and to represent the law. His office is comparable to that of the state attorney in criminal cases. The institution of the procurators regii or procurateurs du roi (king's procurators) was established in France during the thirteenth century, and has developed from that time onward; though canon law, previous to that time, had imposed on the bishops the duty of investigating the commission of crimes and instituting the proper judicial proceedings. It is to be noted that formerly canon law admitted the validity of private as well as of public accusation or denunciation. At present custom has brought it about that all criminal proceedings in ecclesiastical courts are initiated exclusively by the fiscal procurator.

The Congregation of Bishops and Regulars, 11 June, 1880, called attention to the absolute necessity of the fiscal procurator in every episcopal curia, as a safeguard for law and justice. The fiscal procurator may be named by the bishop, either permanently, or his term of office may be limited to individual cases (see Third Plenary Council of Baltimore, 1884, no. 209; App., p. 289). This official appears not only in criminal proceedings but also in other ecclesiastical matters. In matrimonial cases, canon law provides for a defender of the matrimonial tie whose duty it is to uphold the validity of the marriage, as long as its invalidity has not been proven in two lower ecclesiastical courts. This defender of the matrimonial tie represents both ecclesiastical law and public morality, whose ultimate objects would not be attained if the validity or invalidity of a marriage were decided in too easy or informal way. A similar office is that of the defender of the validity of sacred orders and solemnization. The validity of either of these acts, and their pertinent obligations, is attacked, becomes the duty of this official to bring forward whatever arguments may go to establish their binding force. In all these cases the defender, like the fiscal procurator in criminal cases, represents the public interest. The institution of this office was all the more necessary, as it takes cognizance of causes in which both parties frequently display a desire to have the contract nullified. In the processes of beatification and canonization it devolves on the promoter of fidei to investigate strictly the reasons urged in favour of canonization, and to find out and emphasize all objections which can possibly be urged against it. He is therefore popularly known as the advocatus diaboli, i.e. "devil's lawyer". It is the duty of the promoter fidei, therefore, to take up the negative side in the discussion which has a place amongst the preliminaries to beatification and canonization, and to endeavour, by every legitimate means, to prevent the completion of the process.

Fiscal of the Holy Office.—The Holy Office, i.e. the supreme court in the Catholic Church for all matters that affect its faith or are closely connected with its teaching, has an officialis fiscalis, whose duties are similar to those of the fiscal procurators in ecclesiastical courts. The officialis fiscalis is present at all sessions of the Holy Office, when criminal cases are sub judice, and
as adviser to the ordinary when the process is referred to the episcopal court. By the reorganization of the Roman Curia, 29 June, 1908, the Holy Office continues to retain its exclusive competency in all cases of heresy and kindred crimes. The office of fiscalis to this Congregation therefore remains unchanged.

JOSEPH LAURENTIUS.

**Fish, Symbolism of the.** Among the symbols employed by the primitive Christians that of the fish ranks probably first in importance. While the use of the fish in pagan art as a purely decorative sign is ancient and constant, the earliest literary reference to the symbolic fish is made by Clement of Alexandria, born about 150, who recommends his readers (Pseudo- gogus, III, xi) to have their seals engraved with a dove or a fish. Clement did not consider it necessary to give any reason for this recommendation, from which it may safely be inferred that the meaning of both symbols was so well known to Christians that explanation was unnecessary. Indeed, from monumental sources we know that the symbolic fish was familiar to Christians long before the famous Alexandrian was born; in such Roman monuments as the Capella Graec and the Sacrament Chapel of the catacomb of St. Callistus, the fish was depicted as a symbol in the first decades of the second century. The symbol itself may have been suggested by the miraculous multiplication of the loaves and fishes or the repast of the seven Disciples, after the Resurrection, on the shore of the Sea of Galilee (John, xx, 9), but its popularity among Christians was due principally, it would seem, to the famous acrostic consisting of the initial letters of five Greek words forming the word for fish (Ἰχθύς), which words briefly but clearly described the character of Christ and His claim to the worship of believers: Ἰχθύς Χριστός Θεοῦ Τύπος Σωτῆρ, i. e. Jesus Christ, Son of God, Saviour. (See the discourse of Emperor Constantine, "Ad cos tum Sanctorum" c. xvii.) It is not improbable that this Christian formula originated in Alexandria, and was intended as a protest against the pagan apotheosis of the emperors; on a coin from Alexandria of the reign of Domitian (81-96) this emperor is styled Ἰχθύς (son of God).

The word Ἰχθύς then, as well as the representation of a fish, held for Christians a meaning of the highest significance; it was a brief profession of faith in the divinity of Christ, the Redeemer of mankind. Believers in this mystic Ἰχθύς were themselves "little fishes", according to the well-known passage of Tertullian (De baptismo, c. I): "we, little fishes, after the image of our Ἰχθύς Jesus Christ, are born in the water." The association of the Ἰχθύς with the Eucharist is strongly emphasized in the epitaph of Abercius, the second-century Bishop of Hierapolis in Phrygia (see ABERCIUS, INSCRIPTION OF), and in the somewhat later epitaph of Pectorius of Autun. Abercius tells us on the aforesaid monument that in his journey from his Asiatic home to Rome, everywhere on the way he received as food "the Fish from the spring, the great, the pure", as well as "wine mixed with water, together with bread". Pectorius also makes mention of the Fish as a distinctive nourishment supplied by the "Saviour of the Saints". In the Eucharistic rites this idea is expressed repeatedly in pictorial form; the food before the banqueters is invariably bread and fish on two separate dishes. The peculiar significance attached to the fish in this relation is well brought out in the Catacomb fresco of the Fra-ctio Panis scene in the cemetery of St. Prisca; and the fishes on the grass, in closest proximity to the baskets containing bread and wine, in the crypt of Lucina. (See EUCARIST, SYMBOLISM OF THE.) The fish symbol was not, however, represented exclusively with symbols of the Eucharist; quite frequently it is found associated with other symbols as the dove, the anchor, and the monogram of Christ. The monuments, too, on which it appears, from the first to the fourth century, include frescoes, sculptured representations, rings, seals, glazed glasses, as well as enkolpia of various materials. The type of fish depicted calls for no special observation. Since the second century, the form of the dolphin was frequently employed. The reason for this particular selection is presumed to be the fact that, in popular esteem, the dolphin was regarded as friendly to man. Besides the Eucharistic frescoes of the catacombs a considerable number of objects containing the fish symbol are preserved in various European museums, one of the most interesting, because of the grouping of the fish with several other symbols, being a carved gem in the Kircherian Museum in Rome. On the left is a T-form anchor, with two fishes beneath the crossbar, while next in order are a T-form cross with two fish on the crossbar and a sheep at the foot, another T-cross as the mast of a ship, and the Good Shepherd carrying on His shoulders the shorn sheep. In addition to these symbols the five letters of the word Ἰχθύς are distributed round the border. Another ancient carved gem represents a ship supported by a fish, with doves perched on the mast and stern, and Christ on the waters rescuing St. Peter. After the fourth century the symbolism of the fish gradually disappeared; representations of fishes on baptismal fonts and on bronze baptismal cups like those found at Rome and Trier, now in the Kircherian Museum, are merely of an ornamental character, suggested, probably by the water used in baptism.

Internazionale (Rome, 1902), 1-8.

MAURICE M. HAMPT.}

**Fisher, John.** See JOHN FISHER, BLESSED.

**Fisher, Philip (an alias, real name Thomas Cop ley), missionary, b. in Madrid, 1585; d. in Maryland, 1632. He was born at Copley of Gatton, England, of a Catholic family of distinction who suffered exile in the reign of Elizabeth. He arrived in Maryland in 1637, and, being a man of great executive ability, took over the care of the mission, "a charge which at that time required rather the activity of a governor than of a missionary." Fisher was wontonly seized and carried in chains to England, with Father Andrew White, the founder of
the English mission in America. After enduring many hardships he was released, when he boldly returned to Maryland (Feb., 1648), where, after an absence of three years, he found his flock in a more flourishing state than those who had oppressed and plundered them. That he made an effort to enter the missionary field, is evident from a letter written 1 Apr., 1648, to the Jesuit General Caraffa in Rome, in which he says: “A road has lately been opened through the forest to Virginia; this will make it but a two days' journey, and both places can now be united in one mission. After Easter I shall wait upon the Governor of Virginia to be on business of great importance. Unfortunately there is no further record bearing on the projected visit. Neill, in his “Terra Maris” (p. 70), and Smith, in his “Religion under the Barons of Baltimore” (p. VII), strangely confound this Father Thomas Copley of Maryland with an apostate John Copley, who was never a Jesuit. Father Fisher is mentioned with honourable distinction in the missionary annals of Maryland, and, according to Hughes, was “the most distinguished man among the fourteen Jesuits who had worked in Maryland”.

Edward P. Spillane.

Fisherman's Ring. See Ring.

Fitter, Daniel b. in Worcestershire, England, 1616; d. at St. Thomas Priory, near Stafford, Feb., 1700. In 1636 Copley, then at the age of fifteen, went through his studies with some distinction, and was raised to the priesthood in 1651. A year or two later, he returned to England, and was appointed chaplain to William Fowler, Esq., of St. Thomas' Priory, near Stafford, where he remained until his death. During the reign of James II, he opened a school at Stafford, which was suppressed at the revolution in 1688. At the period of excitement ensuing upon the Titus Oates plot (1678), he, with a few others, upheld the lawfulness of taking the oath then tendered to every well-known Catholic. He himself subscribed to the Catholic Oath, and defended the same against the attacks of non-Catholic papers. This conviction led him to the idea of a common and legal use of the term “spiritual”. In consequence of this, when the chapter chose him as Vicar-General of the Counties of Stafford, Derby, Cheshire and Salop, they required that he should “sign a Declaration made by our Brethren in Paris against the Catholic Church”.

In a letter to the clergy of England and Scotland (1684), Cardinal Philip Howard recommended warmly the “Institutum clericorum in communi viventium”, founded in 1641 by the German priest Bartolomäus Holzhauser, and approved by Innocent XI in 1680 and 1684. The institute met with such approval in England, and Fitter was appointed its first provincial president and procurator for the Midland district. The association was, however, dissolved shortly after his death by Bishop Giffard in 1702, on account of a misunderstanding between its members and the rest of the secular clergy. Fitter had bequeathed property to “the Common Fund” of the institute in much of his property, in which interest in favour of his elder brother Francis; but when the institute ceased to exist, Francis, by a deed of assignment, established a new trust (1703), called “The Common Fund” for the benefit of the clergy of the district. This fund became subsequently known as the “Common Fund”. The fund and the property thereto also left a fund for the maintenance of a priest, whose duty it should be to reside in the county of Stafford and take spiritual charge of the poor Catholics of the locality.

Henry Parkinson.

Fitzton, James, missionary, b. at Boston, Massachusetts, U. S. A., 10 April, 1805; d. there, 15 Sept., 1881. His father, Abraham Fitzton, went to New England from Preston, England. His mother was of Welsh origin and a convert to the Faith. His primary education was received in the schools of his native city, and his classical course was made at Claremont, New Hampshire, at an academy conducted by Virgil Horace Barber, an early New England convert to the Faith. His theology he learned from the lips of Bishop Fenwick, by whom he was ordained priest, 23 Dec., 1827. Thenceforth for nearly a quarter of a century the whole of New England became the theatre of his zealous missionary labours. Carrying a valise containing vestments, chalice, and all necessary for celebrating the Holy Sacrifice, his holy orders under his arm, he travelled, often on foot, from Eastport and the New Brunswick line on the northeast, to Burlington and Lake Champlain on the northwest; from Boston in the east, to Great Barrington and the Berkshire Hills in the west; from Providence and Newport in the southeast, to Bridgeport and the New York State line in the southwest. In the course of his ministry he was often exposed to insult and hardship, but he considered these trifles when souls were to be saved. During his missionary career he was pastor of the first Catholic church at Hartford, Connecticut, and at Worcester, Massachusetts. He erected the church of Our Lady of the Isle at Newport, Rhode Island. In 1840, while pastor of the church at Worcester, he purchased the present site of Holy Cross College, and erected a building for the advanced education of Catholic young men. In 1842 he deeded the grounds and building to Bishop Fenwick, who placed it under the care of the Jesuits. In 1855 he was appointed by Bishop Fenwick pastor of the church of the Most Holy Redeemer in East Boston. Here he laboured for the remaining twenty-six years of his life, and built four more churches. In 1877 he celebrated the golden jubilee of his priesthood.

Arthur T. Connolly.

Fitzalan, Henry, twelfth Earl of Arundel, b. about 1511; d. in London, 24 Feb., 1580 (0. S. 1579). Son of William, eleventh earl, and Lady Anne Percy, he was godson to Henry VIII, in whose palace he was educated. From 1540 he was governor of Calais till 1543, when he succeeded to the earldom. In 1544 he besieged and took Boulogne, being made lord-chamberlain as a reward for his successful service. He accompanied Protector Somerset and supported Warwick, who eventually unjustly accused him of peculation and removed him from the council. On the death of Edward he abandoned the cause of Lady Jane Grey and proclaimed Mary as queen. Throughout her reign he was in favour as lord steward and was en
dowed with much power. On the death of Elizabeth he at first retained his offices and power though distrustted by her ministers. Yet he was too powerful to attack, and, being a widower, was considered as a possible consort for the queen. But in 1564 he fell into disgrace, and Elizabeth did not again employ him till 1568. Being the leader of the Catholic party, he desired a marriage between Mary, Queen of Scots, and his son-in-law, the Duke of Norfolk, but
was too cautious to commit himself, so that even after the futile northern rebellion of 1569 he was recalled to the council. But the discovery of the Ridolfi conspiracy, in 1571, again led to his confinement, about which he spent the rest of his life in retirement.

EDWIN BURTIN.

Fitzherbert, Maria Anne, wife of King George IV; b. 26 July, 1756 (place uncertain); d. at Brighton, England, 29 March, 1837; eldest child of Walter Smythe, of Brambridge, Hampshire, younger son of Sir John Smythe, of Eshe Hall, Durham and Acton Burnell Park, Salop, a Catholic baronet. In 1775 she married Edward Weld, of Lulworth, Dorset (son of Cardinal Weld), who died before the year was out. Her next husband was Thomas Fitzherbert, of Swnnerton, Staffordshire, whom she married in 1778 and who died in 1781. A young and beautiful widow with a jointure of £2000 a year, she took up her abode in 1782 at Richmond, Surrey, having at the same time a house in town. In or about 1784 happened her first visit of George, Prince of Wales, then about twenty-two years of age, she about six years older. He straightway fell in love with her. Marriage with her princely suitor being legally impossible, Mrs. Fitzherbert turned a deaf ear to the prince's solicitations. She had set her heart on getting rid of which she withdrew to the Continent. However, on receipt of an honourable offer from the prince, she returned after a while to England, and they were privately married in her own London drawing-room and before two witnesses, 15 Dec. 1786, the consociating minister being an Anglican curate. Thenceforth, though in separate houses, they lived together as man and wife, she being treated on almost every hand with unbounded respect and deference, until 1787, when, upon the prince's application to Parliament for payment of his debts, Fox authorized declaration in the House of Commons that no marriage between the prince and Mrs. Fitzherbert had ever taken place. However, upon the prince's solemn and oft-repeated assurance that Fox had no authority for this degrading denial, the breach between the offended wife and her husband was healed. So they continued to live together on a matrimonial footing, until 1794, when, being in the midst of a forced legal marriage with his cousin, Caroline of Brunswick, the prince very reluctantly cast Mrs. Fitzherbert off, at the same time continuing the pension of £3000 a year, which he had allowed her ever since their marriage. Shortly after the birth of Princess Charlotte in 1796, the prince, the Princess of Wales, was separated from her and besought the forsaken Mrs. Fitzherbert to return to him. This, after consultation with Rome, she at length did in 1800, and remained with him some nine years more, when they virtually parted. At last, in 1811, because of a crowning affront put upon her on occasion of a magnificent fête given at Carlton House by the prince, lately made regent, at which entertainment no fixed place at the royal table had been assigned her, she broke off connexion with the prince for ever, withdrawing into private life upon an annuity of £6000. Her husband, as King George IV, died in 1830, with a locked chest containing her jewels behind his neck, and was so buried. Mrs. Fitzherbert survived him seven years, dying at the age of eighty, at Brighton, where she was buried in the Catholic church of St. John the Baptist, to the erection of which she had largely contributed, and wherein a mural monument to her memory is said to be seen.

C. T. BOOTHMAN.

Fitzherbert, Sir Anthony, judge, b. in 1470; d. 27 May, 1558. He was the sixth son of Ralph Fitzherbert of Norbury, Derbyshire, and Elizabith Marshall. His brothers dying young, he succeeded his father as lord of the manor of Norbury, an estate granted to the family in 1125 and still in their hands. Wood states that he was educated at Oxford, but no evidence of this exists; nor is it known at which of the inns of court he received his legal training, though he is included in a list of Gray's Inn readers (Douthwaite, Gray's Inn, p. 46). He was called to the degree of serjeant-at-law, 18 Nov., 1510, and six years later he was appointed king's serjeant. He had already published (1514) his great digests of the yearbook. The first of his attempts to provide a summary of English law. It was known as "La Grauntle Abridgement" and has often been reprinted, both entire and in epitomes, besides forming the foundation of all subsequent abridgements. He also brought out an edition of "Magna Charta cum diversis aliis statutis" (1519). In 1522 he was made a judge of common pleas and was knighted; but his new honours did not check his literary activity and in the following year (1523) he published three works: one on law, "Diversité de courts et leur jurisdictions" (tr. by Hughes in 1649); one on agriculture, "The Boke of Husbandrie"; and one on law and agriculture combined, "The Boke of Surveyinge and Improve-ments". All three were frequently reprinted and though Sir Anthony's authorship of the "Boke of Husbandrie" was formerly questioned it is now regarded as established. Meanwhile his integrity and ability caused him to be trusted to him. In 1524 Fitzherbert was sent on a royal commission to Ireland; Archbishop Warham appointed him by will sole arbitrator in the administration of his estate; and in 1529 when Wolsey fell, he was made a commissioner to hear chancery causes in place of the chancellor, and he subsequently signed the articles of imprisonment against him. As one of the judges he unwillingly took part in the trials of the martyrs Fisher, More, and Haile, but he strongly disapproved
of the king's ecclesiastical polity, particularly the suppression of the monasteries and he bound his children under oath never to accept or purchase any abbey lands. In 1534 he brought out "that exact work, exquisitely penned" (Coke, Reports X, Pref.), "La Novelle Natura Brevium", which remained one of the classical English law books until the end of the eighteenth century. His last works were the constantly reprinted "L'Oifice et Auctoryté des justices de peus" (1538), the first complete treatise on the subject, and "L'Oifice de Vicoints Baliffes, Escheators, Constables, Coroner". Sir Anthony was twice married, first to Dorothy Willoughby who died without issue, and secondly to the Lutella Cooper, with whom he had a large family. His descendants have always kept the Faith and still own his estate of Norbury as well as the family seat at Swnynerton.

EDWIN BURTON.

Fitcherbert, THOMAS, b. 1552, at Swnynerton, Staffs, England; d. 17 Aug., 1640, at Rome. His father having died whilst Thomas was an infant, he was, even as a child, the head of an important family and the first heir born at Swnynerton, where his descendants have lived and still remain Catholics. He was trained to piety and firmness in his religion by his mother, and when sent to Oxford in his sixteenth year he confessed his faith with a courage that grew with the various trials, of which he has left us an interesting memoir (Foley, Records of English Province, 1859, p. 210). At last he was forced to keep in hiding, and in 1572 he suffered imprisonment. In 1580 he married and had issue, but he did not give up his works of zeal. When Campan and Persone commenced their memorable mission, Fitcherbert put himself at their service, and helped Campan in the preparation of "De Republica" by wise quotations and copying passages from the Fathers in various libraries, to which it would have been impossible for the Jesuit to obtain admission. Unable at last to maintain his position in face of the ever-growing persecution, he left England in 1592, and took up his residence in the north of France. Here, as Cardinal of the Catholic faith, mesons, and unexceptionable character, he was much trusted by the Catholic leaders, and as sedulously watched by Walsingham's emissaries, whose letters contain frequent insinuations against his intentions and ulterior objects (see Foley, Records of English Province, ii. 11, 220-228). His wife died in 1598, and afterwards he sought a vow of celibacy. He is next found in the household of the young Duke of Feria, whose mother was Lady Anne Dormer. With him or in his service he lived in Flanders, Spain, Milan, Naples, and Rome for some twenty years, until the duke died in 1607, on the point of settling for a diplomatic mission to Germany, on which Fitcherbert was to have accompanied him. It was during this period that he was charged in 1598 by Squire with having tempted him to murder Queen Elizabeth; in 1595 a charge of contradictory implication had been preferred against him to the Spanish Inquisition, viz., that he was an agent of Elizabeth. Both charges led to the enhancement of his reputation. An interesting series of 200 letters from the duke to him is preserved in the archives of the Archdiocese of Westminster. In 1601, while in Spain, he felt moved to take a vow to offer himself for the priesthood, and he was ordained in Rome 24 March, 1602. After this he acted as Roman agent for the archpriest Harrison until he was succeeded, in 1609, by the future bishop, Richard Smith. But in 1606 he had made a third vow, namely, to enter the Society of Jesus, which he did about the year 1613. He was soon given the important post of superior in Flanders, 1616 to 1618, afterwards recalled and made rector of the English College, Rome, from 1618 to 1639. He died there, dying, at the age of eighty-eight years, a life that had been filled with an unusual variety of important duties. His principal works are: "A Defence of the Catholycke Cause, By T. F., with an Apology of his innocence in a fayned conspiracy of Edward Squire" (St-Omer, 1602); "A Treatise concerning Policy and Religion" (Donaual, 1610); "The Vtia" to Latin in 1630. This work was highly valued for its sound and broad-minded criticism of the lax political principles professed in those days. He also wrote books in the controversy that grew out of King James's Oath of Allegiance: "A Supplement to [Father Person's] the Discussion of M. D. Barlow" (St-Omer, 1613); "A Confutation of certaine Absurdittees uttered by M. D. Andrews" (St-Omer, 1613); "Of the Oath of Fidelity" (St-Omer, 1614); "The Obmutesence of F. T. to the Epphata of D. Collins" (St-Omer, 1621). We have also from his pen a translation of Turchelli's "Life of St. Francis Xavier" (Paris, 1649); "Foley, Records of English Province, S. J., II, 193-230, VII. 238; Cooper in Diet. Nat. Biog., etc. s. v."

Fitz MAURICE, JOHN. See ERIE, DIOCES OF.

Fitspatrick, JOHN BERNARD. See BOSTON, DioceSE OF.

Fitspatrick, WILLIAM JOHN, historian, b. in Dublin, Ireland, 31 Aug., 1830; d. there 24 Dec., 1895. The son of a rich merchant, he had ample means to indulge his peculiar tastes, and these were for biography, and especially for seeking out what was hitherto unknown and not always desired to be known. Educated partly at a Protestant school, partly at Clongowes Wood College, he early took to writing and in 1855 published his first work—"The Life, Times and Correspondence of Lord Cloncurry". The same year he wrote a series of letters to "Notes and Queries" charging Sir Walter Scott with plagiarism in his Waverley novels, and attributing the chief credit of having written these novels to Sir Walter's brother Thomas. The latter was dead, but his daughters repudiated Fitspatrick's advocacy and their father's supposed claims, and the matter ended there. In 1859 Fitspatrick published "The True and Genuine Adventures of Lady Morgan". From that date to his death, his pen was never idle. His research was great, his industry a marvel, his patience and care immense, nor is he ever consciously unjust. For these reasons, though his style is unattractive, his works are valuable, especially to the Irish historical student. Notable amongst these are "The Shanakles" (1866), "Ireland before the Union" (1867), "The Correspondence of Daniel O'Connell" (1888), "Secret Service under Pitt" (1892). Fitspatrick also wrote works dealing with Archbishop Whately, Charles Lever, Rev. Dr. Lanigan, Father Tom Burke, O.F.P., and Father James Healy of Bray. In 1876 he was appointed professor of history by the Hibernian Academy of Arts. Fitspatrick's painstaking research as well as his spirit of fair play are specially to be commended and have earned words of praise from two men differing in many other things—Lecky and Gladstone.

E. A. D'ALTON.

Fitters, RICHARD, Archbishop of Armagh, b. at Dundalk, Ireland, about 1295; d. at Avignon, 16 Dec., 1360. He studied in Oxford, where we first find mention of him in 1325 as an ex-fellow and teacher of Balliol College. He was made doctor of theology before 1321, and was chancellor of Oxford University in 1328. In 1354
he was made chancellor of Lincoln Cathedral, and in Jan., 1335, canon and prebendary of Lichfield, "notwithstanding that he has canonsries and prebends of Crediton and Bosham, and has had provision made for him of the Chancellorship of Lincoln and the canonsries and prebends of Armagh and Exeter, all of which he is to resign" (Bliss, Calendar of Entries in Papal Registers, ii, 524). He was archdeacon of Chester when made dean of Lichfield in 1337. On 31 July, 1346, he was consecrated Archbishop of Armagh.

Fitzralph was a man who pre-eminently joined the speculative temperament to the practical, combining an ascetic luminaries of his day, and a close friend of the scholarly Richard of Bury, he fostered learning among his priests by sending many of them to take higher studies in Oxford. He was zealous too in visiting the various church provinces, and in bettering financial as well as spiritual conditions in his own see. He contended for his prelatical rights against the immunity claimed by the See of Dublin; and on various occasions acted as peacemaker between the English and the Irish. He was in great demand as a preacher, and many of his sermons are still extant in manuscript. Whilst at Avignon in 1560, Fitzralph presented a memorial to the English clergy reciting complaints against the mendicant orders. After serving on a commission appointed by Clement VI to inquire into the points at issue, he embodied his own views in the treatise "De Pauperis Salvatoris", which deals with the subject of evangelical poverty, as well as the question of the right of governing diocesan, possession, and use, and the relation of these to the state of grace in man. Part of this work is printed by Poole in his edition of Wyclif's "De Domino Domino Divino" (London, 1890). It was probably during this visit that Fitzralph also took part in the negotiations among the Pope, the Emperor and the Venetian and Genoese ambassadors, and he composed an elaborate apologistic-politico-legal work, entitled "Summa in Qestionibus Armenorum" (Paris, 1511), in which he displayed his profound knowledge of Scripture with telling effect in refuting the Greek and Armenian heresies.

Fitzralph's controversy with the friars came to a crisis when he was cited to Avignon in 1367. Avoiding his entire submission to the authority of the Holy See, he defended his attitude towards the friars in the plea entitled "Defensorum Curatorum" (printed in Goldaet's "Monarchia" and elsewhere). He maintained as probable that voluntary mendicancy is contrary to the teachings of St. Paul, that is true for the withdrawal of the privileges of the friars in regard to confessions, preaching, burying, etc. He urged a return to the purity of their original institution, claiming that these privileges undermined the authority of the parochial clergy. The friars were not molested, but by gradual legislation harmony was restored between them and the parish clergy. Fitzralph's position, however, was not directly condemned, and he died in peace at Avignon in 1370. His remains were transferred to St. Nicholas' church, Dundalk; miracles were reported from his tomb and for several centuries his image was held in veneration. His printed works are mentioned above. His "Opus in P. Lombardi Sententias" and several other works (list in the "Catholic University Bulletin", xi, 243) are still in manuscript.

John J. Greaney.

Fitzsimon (Fitz Simon), Henry, Jesuit, b. 1566 (or 1569), in Dublin, Ireland; d. 29 Nov., 1643 (or 1645), probably at Kilkenny. He was educated a Protestant at Oxford (Hart Hall, and perhaps Christ Church), 1583-1585, and in 1584 became a zealous protagonist of Protestantism, "with the firm intention to have died for it!", if need had been. But having engaged in controversy with "an owld English Jesuit, Father Thomas Darshibishe, to my happiness I was overcome". Having embraced Catholicism he visited Rome and Flanders, where, in 1592, he "elected to liberate under the Jesuits' standard, because they do most impugn the impurity of heresies". In 1595 there was a call for Jesuit labourers for Ireland, which had been deprived of them for ten years. He at once offered himself for the post of danger, and he shares with Father Archer the honour of having refounded that mission on a basis that proved permanent amidst all of which is to reconcile (Bliss, Calendar of Entries in Papal Registers, ii, 524). He was archdeacon of Chester when made dean of Lichfield in 1337. On 31 July, 1346, he was consecrated Archbishop of Armagh.

Fitz-Simon's, Thomas, American merchant, b. in Ireland, 1741; d. at Philadelphia, U. S. A., 26 Aug., 1811. There is no positive record of his arrival in America, but church records in Philadelphia show he was there in 1758. In 1763 he was married to Catherine, sister of George Meade, and he was Meade's partner as a merchant until 1794. In the events that led up to the revolt of the colonists against England he took a prominent part. He was a delegate from the Congress of Philadelphia to the conference in Carpenter's Hall, Philadelphia, out of which conference went the Continental Congress that
assembled 4 Sept., 1774, and of which he was a member. His election as one of the Provincial Deputies in July, 1774, is the first instance of a Catholic being named for a public office in Pennsylvania. At the breaking-out of hostilities he organized a company of militia. In the Trenton campaign in New Jersey. After this service in the field he returned to Philadelphia and was active with other merchants in providing for the needs of the army.

On 12 Nov., 1782, he was elected a member of the Congress of the old Confederacy and was among the founders of its deliberations. He was a member of the Convention that met in Philadelphia 25 May, 1787, and framed the Constitution of the United States. Daniel Carroll of Maryland being the only other Catholic member. In this convention Fitz-Simons voted against universal suffrage and in favour of limiting it to free-holders. Under this constitution he was elected a member of the first Congress of the United States and it served on the Committee on Ways and Means. In politics he was an ardent Federalist. He was re-elected to the second and the third Congresses, but was defeated for the fourth, in 1794, and this closed his political career. Madison wrote to Jefferson in 1794, that there was a strong desire to see the "stinging blow for the aristocracy". The records of Congress show that he was among the very first, if not the first, to advocate the fundamental principles of a protective tariff system to help American industries. When Washington was inaugurated as the first president in 1789, Fitz-Simons was one of the four laymen, Charles and Daniel Carroll of Maryland, and Dominic Lynch of New York being the others, to sign the address of congratulation presented to him by the Catholics of the country. He was among the founders of Georgetown College, and was considered during his long life one of the most enlightened merchants in the United States. On all questions connected with commerce and finance his advice was always sought and regarded with respect in the operations that laid the foundation of the commercial prosperity of the new republic.

FIVE MILE Act. See Nonconformists.

Fitzimlinner, Placidus, astronomer, b. at Achleuthen near Kremsmünster, Austria, in 1721; d. at Potsdam, 27 August, 1765. He received his early education at Salzburg, where he displayed a talent for mathematics. He joined the Benedictines at the age of sixteen and became distinguished for his broad scholarship. In 1750 he published a small treatise entitled "Reipublice sacre originis divine". He intended to continue this work but the transit of Venus in 1761 again aroused his interest in mathematics. Though already forty years of age he resumed his old studies with ardour, and an opportunity soon presented itself for work in astronomy. He was appointed director of the observatory of Kremsmünster, which had been established by a lease in 1754. His researches on the motion of the moon through a star revealed the nature of the character of the motion. In his measurements of vanishingly small distances, such as the expansion of crystals, he made use of the extremely small and very regular wave-length of light. His addition of a condenser in the primary circuit of the induction coil increased the effectiveness of this device considerably. On the recommendation of the Academy of Sciences he was awarded the Grand Prix (10,000 frances) of the Institute in 1856. He was elected a member of the Academy of Sciences in 1800, and a member of the Bureau des Longitudes in 1878. He received the decoration of the Legion of Honour in 1826 and became officer in 1875. In 1866 the Royal Society of London awarded him the Rumford Medal. Cornu says of him: "He was a practical and convinced Christian and did not hide that fact."

On the recommendation of the Academy of Sciences he was awarded the Grand Prix (10,000 francs) of the Institute in 1856. He was elected a member of the Academy of Sciences in 1800, and a member of the Bureau des Longitudes in 1878. He received the decoration of the Legion of Honour in 1826 and became officer in 1875. In 1866 the Royal Society of London awarded him the Rumford Medal. Cornu says of him: "He was a practical and convinced Christian and did not hide that fact."

In the presidential address before the academy (Comptes Rendus, 1879), Fizeau calls attention to "the dignity and independence of natural science as well as to its limits of action, preventing it from interfering in philosophic or social questions, and not permitting it to put itself in opposition to the noble emotions of the heart nor to the pure voice of conscience". Most of his published works are contained in "Comptes Rendus" and in the "Annales de physique et de chimie". A few of the titles are: "Sur la daguerreotypie"; "Sur l'interférence entre deux rayons dans le cas de grandes dif-
LEO XII (1823-29) CARRIED IN PROCESSION IN ST. PETER’S
FROM VERNET’S PAINTING, SHOWING THE FLABELLA AS USED ON OCCASIONS OF STATE
WITH THE “SEDIA GESTATORIA”, OR PROCESSIONAL CHAIR
Flabellum, in liturgical use a fan made of leather, silk, parchment, or feathers intended to keep away insects from the Sacred Species and from the priest. It was in use in the sacrifices of the heathens and in the Christian Church from very early days, for in the Acts of the Apostles (21:23), written in the first century, we read (VIII, 12): "Let two of the deacons, on each side of the altar, hold a fan, made up of thin membranes, or of the feathers of the peacock, or of fine cloth, and let them silently drive away the small animals that fly about, that they may not come near to the cups". Its use was continued in the Latin Church to about the fourteenth century. In the Greek Church to the present day, the deacon, at his ordination, receives the fan, or "fanion"; in the Liturgy of St. Basil only during the Consecration. Among the ornaments found belonging to the church of St. Riquier, in Pontlieu (813), there is a silver flabellum (Migne, P.L., CLXXIV, 1257), and for the chapel of Casoin, near Lisle, another flabellum of silver is noted in the will of Everard (d. 937), the founder of that abbey. When, in the sixth century, the "Intronaires" of the Abbey of Tours was, on the Saône in France, possessed an old flabellum, which had an ivory handle two feet long, and was beautifully carved; the two sides of the ivory circular disc were engraved with fourteen figures of saints. Pieces of this fan, dating from the eighth century, are in the Musée Cluny at Paris, and in the Collection Carrand. The silver flabellum is also found in the Slavic flabellum of the thirteenth century, preserved at Moscow, and in one shown in the Megaspelieon monastery in Greece. On this latter disc are carved the Madonna and Child and it is encircled by eight medallions containing the images of cherubim and the Seven Angels. It is preserved in the Presbytery of the Cathedral of St. Sophia in Kiev, and was brought from Constantinople in 1222, of the treasury of Salisbury, enumerates a silver fan and two of parchment. The richest and most beautiful specimen is the flabellum of the thirteenth century in the Abbey of Kremsmünster in Upper Austria. It has the shape of a Greek cross and is ornamented with work and the representation of the Resurrection of Our Lord. A kind of fan with a hoop of little bells is used by the Maronites and other Orientals and is generally made of silver or brass.

Apart from the foregoing liturgical uses, a flabellum, in the shape of a fan, is often an umbrella or canopy, which is a mark of honour for bishops and princes. Two fans of this kind are used at the Vatican whenever the pope is carried in state on the seda gestatoria or to from the altar or audience-chamber. Through the influence of Count Ditaloma di Brozza, the fans formerly used at the Vatican were, in 1902, presented to the Philadelphia, U. S. A., by Leo XIII, and in return she gave a new pair to the Vatican. The old ones are exhibited in the museum of the University of Pennsylvania. They are splendid creations. The spread is formed of great ostrich plumes tipped with peacock feathers; on the sticks are the papal arms, worked in a crimson field in heavy gold, the crown studded with rubies and emeralds.

St. Paul's Cathedral, London, had a fan made of peacock feathers, and York Cathedral's inventory mentions a silver handle of a fan, which was gilded and had upon it the enamelled picture of the bishop. Haymo, Bishop of Rochester (d. 1352), gave to his church a fan of silver with an ivory handle.

**Flaccilla**, Empress, wife of Theodosius the Great, died c. 385 or 386. Like Theodosius himself, his wife was Flaccilla, of Spanish descent. She may have been the daughter of Claudius Antonius, Prefect of Gaul, who was consul in 382. Her marriage with Theodosius probably took place in the year 376, when his father, the comes Theodosius, fell into disfavour and he himself withdrew to Cauca in Gallicia, for her eldest son, afterwards Emperor Arcadius, was born towards the end of the following year. In the succeeding years she presented the emperor with another son.

Pulcheria, who died in early childhood, shortly before her mother. Gregory of Nyssa states expressly that she had three children; consequently the Gratian mentioned by St. Ambrose, who married Pulcheria, was probably not her son. Flaccilla was, like her husband, a zealous supporter of the Nicene Creed and prevented the conference between the emperor and the Arian Eunomius (Sozomen, Hist. eccl., VII, vi). On the throne she was a shining example of Christian virtue and ardent charity. St. Ambrose describes her as "laisitissima" (Fidelis anima Deo—De obtit Theodosii", n. 40, in P. L., XVI, 1462). In his panegyric St. Gregory of Nyssa bestowed the highest praise on her virtuous life and pictured her as the helmsman of the emperor in all good works, an ornament of the empire, a leader of justice, an image of beneficence. He praises her as filled with zeal for the Faith, as a pillar of the Church, a mother of the indigent. Theodoret, in particular extols her charity and benevolence (Hist. eccl., V, xix, ed. Valetius, III, 192 sq.). He tells us how she personally tended cripples, and quotes a saying of hers: "To distribute money belongs to the imperial dignity, but to care for the poor, in view of my personal service to the Giver." Her humility also attracts a special meed of praise from the church historian. Flaccilla was buried in Constantinople, St. Gregory of Nyssa delivering her funeral oration. She is venerated in the Greek Church as a saint, and her feast is kept on 14 September. The Bollandists (Acta SS., Sept., IV, 142) are of the opinion that she is not regarded as a saint but only as venerable, but her name stands in the Greek Menaia and Synaxaria followed by words of eulogy, as is the case with the other saints (cf. e.g. Synaxarium Eccl. Constantinopolitanae, ed. Delachaye, Brussels, 1902, col. 40, under 14 Sept.).

**Flagellants**, a fanatical and heretical sect that flourished in the thirteenth and succeeding centuries. Their origin was at one time ascribed to the missionary efforts of St. Anthony of Padua, in the cities of Northern Italy, early in the thirteenth century;
Lempp (Zeitschrift für Kirchengeschichte, XII, 435) has shown this to be unwarranted. Every important movement, however, has its forerunners, both in the idea out of which it grows and in specific acts of which it is a culmination. And, undoubtedly, the practice of self-flagellation, familiar to the penitent as an act of religious reparation to the divine persons (such as the Camaldolese, the Cenobite Dominicans), had but to be connected in idea with the equally familiar penitential processions popularized by the Mendicants about 1233, to prepare the way for the great outburst of the latter half of the thirteenth century. It is in 1299 that we have a record of the Flagellant of Genoa, the terrible plague of 1259, the long-continued tyranny and anarchy throughout the Italian States, the prophetic concerns Antichrist and the end of the world by Joachim of Floris and his like, had created a mingled state of despair and expectation among the devout lay-folk of the middle and lower classes. Then there appeared a famous hermit of Umbria, Raniero Fasani, who organized a brotherhood of "Disciplinati di Gesù Cristo", which spread rapidly throughout Central and Northern Italy. The brotherhoods were known by various names in various localities (Battuti, Scopatori, Zostori, etc.). They were everywhere. All ages and conditions were alike subject to this mental epidemic. Clergy and laity, men and women, even children of tender years, scourged themselves in preparation for the sins of the whole world. Great processions, amounting sometimes to 10,000 souls, passed through the cities, beating themselves, and calling the faithful to repentance. With crosses and banners borne before them by the clergy, they marched slowly through the towns. Stripped to the waist and with covered faces, they scourged themselves with leathern thongs till the blood ran, chanting hymns and canticles of the Passion of Our Lord. The presences of the clergy were necessary. For thirty-three days and a half this penance was continued by all who undertook it, in honour of the years of Christ's life on earth. Neither mud nor snow, cold nor heat, was any obstacle. The processions continued in Italy throughout 1280, and by the end of that year had spread beyond the Alps to Alsace, Bavaria, Bohemia, and Poland. In 1261, however, the ecclesiastical and civil authorities awoke to the danger of such an epidemic, although its undesirable tendencies, on this occasion, were rather political than theological. In January the pope forbade the processions, and the laity realized suddenly that the movement was without the sanction of the church. It ceased almost as quickly as it had started, and for some time seemed to have died out.

Wandering flagellants are heard of in Germany in 1296. In Northern Italy, Venturino of Bergamo, a Dominican, afterwards beatified, attempted to revive the processions of flagellants in 1234, and led about 10,000 men, styled the "Doves", as far as Rome. But he was received with laughter by the Romans, and his followers deserted him. He went to Avignon to see the pope, by whom he was promptly relegated to his monastery, and the movement collapsed.

The Black Death swept across Europe and devastated the Continent for the next two years. In 1348 terrible earthquakes occurred in Italy. The scandals prevalent in Church and State intensified in the popular mind the feeling that the end of all things was come. With extraordinary suddenness the companies of Flagellants appeared again, and rapidly spread like fires throughout the land. In 1349 they had reached Flanders, Holland, Bohemia, Poland, and Denmark. By September of that year they had arrived in England, where, however, they met with but little success. The English people watched the fanatics with quiet interest, even expressing pity and sometimes admiration for their devotion; but no one could be induced to join them, and the attempt at proselytism failed utterly. Meanwhile in Italy the movement, in accordance with the temperament of the people, so thorough, so ecstatic, yet so matter-of-fact and practical in religious matters, spread rapidly through all classes of the community. Its diffusion was marked and aided by the popular laudi, folk-songs of the Penitential type and the Sorrows of Our Lady, while in its wake there sprang up numberless brotherhoods devoted to penance and the corporal works of mercy. Thus the "Battuti" of Siena, Bologna, Gubbio, all founded Case di Dio, which were at once centres at which they could meet for devotion and penitential exercises, and hospices in which the sick and destitute were relieved. Though tendencies towards heresy soon became apparent, the same Italian faith was unfavourable to its growth. The confinements adapted themselves to the permanent ecclesiastical organization, and not a few of them have continued, at least as charitable associations, until the present day. It is noticeable that the songs of the Laudesi during their processions tended more and more to take on a dramatic character. From them developed in time the popular mystery-play, whence came the beginnings of the Italian dramatic art.

As soon, however, as the Flagellant movement crossed the Alps into Teutonic countries, its whole nature changed. The idea was welcomed with enthusiasm; a ceremonial was rapidly developed, and almost as rapidly a specialized doctrine, that soon degenerated into heresy. The Flagellants became an organized sect, with severe discipline and extravagant claims. They wore a white habit and mantle, on each of which was a red cross, whence in some parts they were called the "Brotherhood of the Cross". Whosoever desired to join this brotherhood was bound to remain in it for thirty-three and a half days, to swear obedience to the "Master", and to possess at least four pence a day for his support, to be reconciled to all men, and, if married, to have the sanction of his wife. The ceremonial of the Flagellants seemed to have been much the same in all the northern cities. Twice a day, proceeding slowly to the public square or to the principal church, they put off their shoes, stripped themselves to the waist and prostrated themselves in a large circle. By their posture they indicated the nature of the sins they intended to expiate, the murderer lying on his back, the adulterer on his face, the perjurer on one side holding up three fingers, etc. First they were beaten by the "Master", then they felled among the noses of executioners, and they stood in a circle and scourged themselves severely, crying out that their blood was mingled with the Blood of Christ and that their penance was preserving the whole world from perishing. At the end of the "Master" read a letter which was supposed to have been brought by an angel from heaven to the church of St. Peter in Rome. This stated that Christ, angry at the grievous sins of mankind, had threatened to destroy the world, yet, at the intercession of the Blessed Virgin, had ordained that all who should join the brotherhood for thirty-three and a half days should be saved. The reading of this letter, the emotions caused by the public penance of the Flagellants, aroused much excitement among the populace. In spite of the protests and criticism of the educated, thousands enrolled themselves in the brotherhood. Great processions marched from town to town, with crosses, lights, and banners borne before them. They were accompanied by the knockings, the howlings, the assorted scourges and chanting their melancholy hymns. As the number grew, the pretences of the leaders developed. They professed a ridiculous horror of even accidental contact with women, and insisted that it was of obligation to fast rigidly on Fridays. They cast doubts on the necessity or even desirability of the sacraments, and even pretended to
absolve one another, to cast out evil spirits, and to work miracles. They asserted that the ordinary ecclesiastical jurisdiction was suspended and that their pilgrimages would be continued for thirty-three and a half years. Doubtless not a few of them hoped to establish a lasting rival to the Catholic Church, but very soon the authorities took action and endeavoured to suppress the whole movement. For, while it was thus growing in Germany and the Netherlands, it had also entered France.

At first this fatum novus ritus was well received. As early as 1348, Pope Clement VI had permitted a similar procession in Avignon in entreaty against the plague. Soon, however, the rapid spread and heretical tendencies of the Flagellants, especially among the turbulent peoples of Southern France, alarmed the authorities. At the entreaty of the University of

fourteenth century, too, the great Dominican, St. Vincent Ferrer, spread this penitential devotion throughout the north of Spain, and crowds of devotees followed him on his missionary pilgrimages through France, Spain, and Northern Italy.

In fact, the great outburst of 1349, while, perhaps, more widespread and more formidable than similar fanaticisms, was but one of a series of popular upheavals at irregular intervals from 1290 until the end of the fifteenth century. The governing cause of these movements was always an obscure amalgam of horror of corruption, of desire to imitate the heroic expiations of the great penitents, of apocalyptic vision, of despair at the prevailing corruption in Church and State. All these things are smouldering in the minds of the much-tried populace of Central Europe. It needed but a sufficient occasion, such as the accumulated

Minature in the Chronicle of Gillon II Muisis (1333). Library of Brussels

Paris, the pope, after careful inquiry, condemned the movement and prohibited the processions, by letters dated 20 Oct., 1349, which were sent to all the bishops of France, Germany, Poland, Sweden, and England. This condemnation coincided with a natural reaction of public opinion, and the Flagellants, from being a powerful menace to all settled public order, found themselves a hunted and rapidly dwindling sect. But, though severely stricken, the Flagellant tendency was by no means eradicated. Throughout the fourteenth and fifteenth centuries there were recrudescences of this and similar heresies. In Germany, about 1360, there appeared one Konrad Schmid, who called himself Enoch, and pretended that all ecclesiastical authority was abrogated, or rather, transferred to himself. Thousands of young men joined him, and he was able to continue his propaganda till 1360, when the vigorous measures of the Inquisition resulted in his suppression. Yet we still hear of trials and condemnations of Flagellants in 1414 at Erfurt, in 1446 at Nordhausen, in 1453 at Sangerhausen, even as late as 1481 at Halberstadt. Again the “Albati” or “Bianchi” are heard of in Provence about 1390, with their processions of nine days, during which they beat themselves and chanted the “Stabat Mater”. At the end of the tyranny of some petty ruler, the horror of a great plague, or the ardent preaching of some saintly ascetic, to set the whole of Christendom in a blaze. Like fire the impulse ran through the people, and like fire it died down, only to break out here and there anew. At the beginning of each outbreak, the effects were generally good. Enemies were reconciled, debts were paid, prisoners were released, ill-gotten goods were restored. But it was the merest revitalism, and, as always, the reaction was worse than the former stagnation. Sometimes the movement was more than suspected of being abused for political ends, more often it exemplified the fatal tendency of emotional pietism to degenerate into heresy. The Flagellant movement was but one of the manias that afflicted the end of the Middle Ages; others were the dancing-manias, the Jew-baiting rages, which the Flagellant processions encouraged in 1349, the child-crusades, and the like. And, according to the temperament of the peoples among whom it spread, the movement became a revolt and a fantastic heresy, a rush of devotion settling soon into pious practices and good works, or a mere spectacle that aroused the curiosity or the pity of the onlookers. Although as a dangerous heresy the Flagellants are not heard of after the fifteenth century, their practices
were revived again and again as a means of quite orthodox public penance. In France, during the sixteenth century, we hear of White, Black, Grey, and Blue Brotherhoods. At Avignon, in 1574, Catherine de Medici herself led a procession of Black Penitents. In the 1520s, King Henry I of England became part of the "Blanche Batte de l'Annunciation". On Holy Thursday of that year he organized a great procession from the Augustinians to Notre-Dame, in which all the great dignitaries of the realm were obliged to take part in company with himself. The laughter of the Parisians, however, who treated the whole thing as a jest, obliviously provided the source of the present-day joke. In the seventeenth century, the scandals arising among these brotherhoods caused the Parliament of Paris to suppress them, and under the combined assaults of the law, the Gallicans, and the sceptics, the practice soon died out. Throughout the seventeenth and eighteenth centuries Flagellant processes and self-flagellation were encouraged by the Jesuits in Austria and the Netherlands, as well as in the far countries which they evangelized. India, Persia, Japan, the Philippines, Mexico, and the States of South America, all had their Flagellant processions; in Central and South America they went underground and were neglected and regulated and repressed by Pope Leo XIII. In Italy generally and in the Tyrol similar processes survived until the early years of the nineteenth century; in Rome itself they took place in the Jesuit churches as late as 1870, while even later they occurred in parts of Tuscany and Sicily. Always, however, these later Flagellants have taken place under the control of ecclesiastical authority, and must by no means be connected with the heretical epidemic of the later Middle Ages.

One of the best modern accounts of flagellation and the Flagellants is an article by Hauer, Gröning, Kirche, und Geisterbruderschaften, in Resenmeykl, fürl prot. Theol. It contains a summary of the histories. Some of the original sources for the outbreak in 1320 will be found in Ernst, Mon. Germ. Hist., XVII, 102-3, 105, 191, 402, 531, 714; XIX, 179. For the history of 1548 may be consulted: Chroniken der deutschen Städte, VII, 204 sqq.; IX, 105 sqq.; Forschungen zur deutschen Geschichte, XXI (1881), 21 sqq.; Recueil des chroniques de Flandres, II (Bruges, 1841), 111 sqq.; Frederico, Corpus documentorum inquisitionis hereticos praecipui neerlandicorum, I (Ghent, 1890), 100 sqq.; Burkmann, "Prostitution sexuale auf den Flagellantentag von 1349", in Revue Belge de Théologie, January, 1908. Good accounts are to be found in Muratori, Antiquit. Ital. med. ant., VI (Munich, 1734-53); Eck, Gesch. der Flagellanten in Frankreich, II (1734), 43-55; Zöckler, Askese und Mönchtum, II (Frankfurt, 1897), 518, 530-7.

LESLIE A. ST. L. TOKE.

Flagellation.—The history of the whip, rod, and stick, as instruments of punishment and of voluntary penance, is a long and interesting one. The Heb. מַשְׁפָּךְ, "whip", and כַּפָּר, "rod", are etymologically closely related (Genesis). Horace (Sat. I, 3), tells us not to use the horribile flagellum, made of thongs of ox-hide, when the offender deserves only the severitas of twisted parchment; the schoolmaster's ferula—Eng. ferule (Juvenal, Sat., I, i, 15)—was a strap or rod for the hand (see ferule in Skeat). The earliest Scriptural mention of the whip is in Ex. xii, 14, 18 (flagellantium: flagellationem, "flagellationes"). Where the Heb. "strike" is interpreted in the Greek and the Latin texts, "were scourged"—"beaten with whips". Roboam said (II Kings, xii, 11, 14; 1II Par., x, 11, 14): "My father beat you with whips, but I will beat you with scourges"; i. e. with scourges armed with knots, points, etc. In Luke, viii, 5, etc. In the New Testament we are told that Christ used the scourge on the enemies of John, in John, viii, 39. He predicted He and His disciples would be scourged (Mat., x, 17; xx, 19); and St. Paul says: "Five times did I receive forty stripes, save one. Thrice was I beaten with rods" (II Cor., xi, 24, 25; Deut., xxv, 2; Acts, xvi, 22). The offender was to be beaten in the presence of the judges (Deut., xxv, 2, 3), but was never to receive more than forty stripes. To keep within the law, it was the practice to give only thirty-nine. The culprit was also attached to a low pillar that he had to lean forward—"they laid him down upon a pillar, and they received the strokes. Verses of thirteen words in Hebrew were recited, the last always being: "But he is meek, and will forgive their sins: and will not destroy them" (Ps. lxxxvii (Heb. lxxxviii) 38); but the words served merely to count the blows. Moses allows the masters to throng his servants for the wood; also so as to cause death (Ex., xxii, 20). The flagellation of Christ was not a Jewish, but a Roman punishment, and was therefore administered all the more cruelly. It was suggested by Pilate's desire to save Him from crucifixion, and this was inflicted only when the scourging had failed to satisfy the Jews. In Pilate's plan flagellation was not a preparation, but rather a substitute, for crucifixion.

As the earliest monuments of Egypt make the scourge or whip very conspicuous, the children of Israel cannot have been the first on whom the Egyptians used it. In Ancient Egypt, we meet with whips under the taskmaster's lash. In Sparta even youths of high social standing were proud of their stiriastical indifference to the scourge; while at Rome the various names for slaves (fagrinones, verberones, etc.) and the significant term torarii, used by Flautus, give ample assurance that the scourge was not spared. However, from passages in Cicero and texts in the New Testament, we gather that Roman citizens were exempt from this punishment. The bamboo is used on all classes in China, but in Japan heavier penalties, and frequently death itself, are imposed upon offenders. The European element is most conspicuous at the present day for the whipping of culprit's is Russia, where the knout is more than a match for the worst scourge of the Romans. Even in what may be called our own times, the use of the whip on soldiers under the English flag was not unknown; and the State of Delaware yet believes in it as a corrective and deterrent for the criminal class. If we refer to the past, by Statute 39 Eliz., ch. iv, evil-doers were whipped and sent back to the place of their nativity; moreover, Star-chamber whippings were frequent. In Partridge's Almanack for 1692, it is stated that Oates was whip with a whip of 2255 long thongs, and received over 20550 lashing amounting to 13356 stripes" (A Hist. of the Rod, p. 158). But survived, however, and lived for years. The pedagogue made free use of the birch. Orbilus, who flogged Horace, was only one of the learned line who did not believe in moral suasion, while Juvenal's words: "Et nos ergo manum ferula subduximus" (Sat., I, i, 15) show clearly the system of school discipline existing at his day. The priests of Cybele scourged themselves and others, and such stripes were considered sacred. Although these and similar acts of penance, to propitiate heaven, were practised even before the coming of Christ, it was only in the religion established by Him that they found widespread recognition and real merit. It is held by some interpreters that St. Paul in the words: "I chastise my body" refers to self-inflicted bodily scourging (1 Cor., ix, 27). The Greek word ευρέως (see Liddell and Scott) means "to strike under the eye", and metaphorically "to mortify"; consequently, it so interpreted is a variant of the Latin "collaboremus" in Luke, xviii, 5, such an interpretation is quite inadmissable. Furthermore, whereas St. Paul certainly refers to scourging, he uses a different word. We may therefore safely conclude that he speaks here of mortification in general, as Piconio holds (Triplex Pacis). Scourging was soon adopted as a sanction in the monastic discipline of the fifth and following centuries. Early in the fifth century it is mentioned by Palladius.
in the "Historia Laussica" (c. vi), and Socrates (Hist. Ecol., IV, xxiii) tells us that, instead of being excommunicated, offending young monks were scourged. See the sixth-century rules of St. Cassarius of Arles for nuns (P. L., LVII, 1111), and of St. Aurelian of Arles (ibid., LXVIII, 392, 401-2). Thenceforth scourging in the monastic and ecclesiastical councils as a preservative of discipline (Hefele, "Concilieng., II, 594, 656). Its use as a punishment was general in the seventh century in all monasteries of the severe Columban rule (St. Colombanus, in "Regula Corombalia", c. x, in P. L., LXX, 215 sqq.); for later ages we have many instances. The manuscript "Vet. se nova ecc. disciplina, II (3), 107; Du Cange, "Glossar. med. et infm. latinit.", s. v. "Disciplina"; Gretzer, "De spontanea disciplinarum seu flagellorum cruce libri tres" (Innsbruck, 1603); Kober, "Die körperliche Züchtigung als kirchliches Strafmittel gegen Cleriker und Mönche" in "Th. Quartalschrift" (1875). The canon law (Decree of Gratian, Decretals of Gregory IX) recognized it as a punishment for ecclesiastics; even as late as the sixteenth and seventeenth centuries, it appears in ecclesiastical legislation as a punishment for blasphemy, concubinage, and simony. Though Fouquet de Carenzano (ibid., 65) objects to the practice as unnecessary and to the violent treatment, he is evidently aware of the well-known methods of penance and mortification, such use is publicly exemplified in the tenth and eleventh centuries by the lives of St. Dominic Lorica (P. L., CXLIV, 1017) and St. Peter Damian (d. 1072). The latter wrote a special treatise in praise of self-flagellation; though blamed by some contemporaries for excess of zeal, his example and the high esteem in which he was held did much to popularize the voluntary use of the scourge or "discipline" as a means of mortification and penance. Thenceforth it is met with in most medieval religious orders and associations. The practice was, of course, capable of abuse, and so among the thirteenth century Flagellants (q. v.), though in the same period we meet with the private use of the "discipline" by such saintly persons as King Louis IX and Elisabeth of Thuringia.

John T. Tierney.

Flaget, Benedict Joseph, first Bishop of Bardstown (subsequently of Louisville), Kentucky, U.S.A., b. at Contournat, near Biliom, Auvergne, France, 7 November, 1763; d. 11 February, 1850, at Louisville, Kentucky. He was a posthumous child and was only two years old when his mother died, leaving him and two brothers to the care of an aunt; they were welcomed at the home of Canon Benoit Flaget, their uncle, at Biliom. In his seventeenth year, he went to the Sulpician seminary of Clermont to study philosophy and theology, and joining the Society of St. Sulpice, 1 November, 1783, he was ordained priest in 1787, at Issy, where Father Gabriel Richard, the future apostle of Michigan, was then superior. Flaget taught dogmatic theology at Nantes for two years, and filled the same chair at the seminary of Angers when that house was closed by the Revolution. He returned to Biliom in 1791 and on the advice of the Sulpician superior, Father Emery, determined to devote himself to missionary work. He sailed in November, 1792, with Father J. B. M. David, his future coadjutor, and the subdeacon Stephen Badin (q. v.), landing in Baltimore, 29 March, 1792. He was studying English with his Sulpician brethren, when Bishop Carroll tested his self-sacrifice by sending him to Fort Vincennes, as missionary to the Indians and pastor of the Fort. Crossing the mountains he reached Pitts- borough, where he had to tarry for six months owing to low water in the Ohio, doing such good work that he gained the lasting esteem of General Anthony Wayne. The latter recommended him to the military commander Colonel Clark at the Falls of the Ohio, who deemed it an honour to escort him to Fort Vincennes, where he arrived 21 December, 1792. Father Flaget stayed here two years and then returned to Fort Vincennes, where he was again priest and finally regular priest. In May, 1795, he went to Pennsylvania and in July, 1796, to New York, where he laboured among the Indians. In 1797, he was back at Vincennes and there he remained until 1802 when he was commissioned to accompany the army of General Wayne in his expedition to the Indians. In 1803 he went to New Orleans and in 1810 to Mobile. He was consecrated Bishop of Vincennes, and the subdeacon, Guy Ignatius Chabrat, his future coadjutor in Kentucky, Flaget landed in Baltimore and was consecrated 4 November, 1810, by Archbishop Carroll. The Diocese of Bardstown comprised the whole North-West, bordering East and South of Louisian, and Sippi. Bishop Flaget, handicapped by poverty, did not leave Baltimore until 11 May, 1811, and reached Louisville, 4 June, whence the Rev. C. Nerincx escorted him to Bardstown. He arrived there 9 June. On Christmas of that year he ordained priest the Rev. Guy Ignatius Chabrat, the first priest ordained in the West. Before Easter, 1813, he had established priestly conferences, a seminary at St. Stephen's (moved to St. Thomas', November, 1811), and made two pastoral visits in Kentucky. That summer he visited the outlying districts of Indiana, Illinois, and Eastern Missouri, confirming 1275 people during the trip.

Bishop Flaget's great experience, absolute self-denial, and holy life gave him great influence in the councils of the Church and at Rome. Most of the bishops appointed within the next twenty years were selected with his advice. In October, 1817, he went to St. Louis to prepare the way for Bishop Dubourg. He recommended Bishop Fenwick for Ohio, then left on a trip through that State, Indiana, and Michigan in 1818. In the latter State he did great missionary work at Detroit and Monroe, attending also a rally of 10,000 Indians at St. Mary's. Upon his return to Kentucky in 1819 he consecrated his first cathedral, Bardstown, 8 August, and consecrated there his first coadjutor, the bishop, Rev. J. B. M. David, on the 15th. In 1821 he started on a visitation of Tennessee, and bought property in Nashville for the first Catholic church. The years 1819 to 1821 were devoted to missionary work among the Indians. He celebrated the first Synod of Bardstown, 8 August, 1823, and continued his labours until 1828, when he was called to Baltimore to consecrate Archbishop Whitfield; there he attended the first Council of Baltimore in 1829. In 1830 he consecrated one of his own priests, Rev. Richard Kenrick, as Bishop of Philadelphia. A great friend of education, he invited the Jesuits for ten years to educate the sons of the College, Bardstown, in 1832. In the meantime he had resigned his see in favour of Bishop David with Bishop Chabrat as coadjutor. Both priests and people rebelled, and their representations were so instant and continued that Rome recalled its appointment and reinstated Bishop Flaget, who during all this time was, regardless of age and health, the backbone of the choler-astricken in Louisville, Bardstown, and surrounding country during 1832 and 1833. Bishop Chabrat became his second coadjutor and was consecrated 20 July, 1834. Only Kentucky and Tennessee were now left under Flaget's jurisdiction, and in the former he founded various religious institutions, including four colleges, two convents, one foundation of brothers, and
two religious institutions of priests. Tennessee became a diocese with see at Nashville in 1838. Flanagan, an Irish priest, went to Europe and Rome was not undertaken until 1835. He spent four years in France and Italy in the interests of his diocese and of the propagation of the Faith, visiting forty-six dioceses. Everywhere he edified the people by the sanctity of his life, and well authenticated miracles are ascribed to his intercession. He returned to the United States in 1839, transferred his see to Louisville, and crowned his fruitful life by consecrating, 10 September, 1848, a young Kentucky priest, Martin John Spalding, as his third coadjutor and successor in the See of Louisville. The cornerstone of the cathedral of Louisville was laid 15 August, 1849. He died peacefully at Louisville, center of his labors, and remembered to this day. His only writings are his journal and a report of his diocese to the Holy See.

Camillus P. Maes

Flanagan, THOMAS CANON, b. in England in 1814, though Irish by descent; d. at Kidderminster, 21 July, 1885. He was educated at Sedgley Park School. At the age of eighteen he proceeded to Oscott—that is, the seminary now known as St. Chad's College—to study for the priesthood. The presbyter at that time was Dr. Weedall, under whose supervision the present imposing college buildings were about to be erected. The students and professors migrated there in 1838, after the summer vacation, Flanagan being thus one of the original members at the new college. He was ordained in 1842, Bishop (afterwards Cardinal) Wiseman being then president. At this time Oscott was the centre of much intellectual activity, many of the Oxford converts during the following years visiting the college, where some made their first acquaintance with Catholic life. Flanagan, who throughout his course had been an industrious and persevering student, was asked by Wiseman to remain as a professor, and as such he came into contact with the new converts, his own bent towards historical studies creating a strong bond of sympathy between him and those who had become convinced of the truth of Catholicism on other grounds.

In 1847 Flanagan brought out his first book, a small manual of British and Irish history, containing numerous statistical tables the preparation of which was congenial to his methodical mind. The same year he became prefect of studies and acted successfully in this capacity until 1850, when he was appointed rector, president and then president of Sedgley Park School, and he became one of the first canons of the newly formed Birmingham Diocese in 1851. The active life of administration was, however, not congenial to his tastes, and he was glad to resume his former position at Oscott in 1855. It was at this time that he began writing his chief work, a "History of the Church in England". In order to allow him more leisure for this, he was appointed chaplain to the Holland family at Blackmore Park, and his history appeared in two volumes, during his residence there, in 1857. It was at that time the only complete work on the Church in England continued down to present times, and, though marred by some inaccuracies, on the whole it bore witness to much patient work and research on the part of the author. His style, however, was somewhat concise, and Bishop Ullathorne's remark, that Canon Flanagan was a compiler of history rather than a vivid historian, has been borne out by the appearance of his Church history, we find Flanagan once more installed in his old position as prefect of studies at Oscott, where he remained for eighteen months, when his health gave way. The last years of his life were spent as assistant priest at St. Chad's Cathedral, Birmingham. He died at Kidderminster, whither he had gone for his health.

Bernard Ward.

Flanders (Flem. Vlaanderen; Ger. Flandern; Fr. Flandre) designated in the eighth century a small territory around Bruges; it became later the name of the country bounded by the North Sea, the Scheldt, and the Canche; in the fifteenth century it was even used by the Italians and the Spaniards as the synonym for the Low Countries; to-day Flanders belongs for the most part to Belgium by the During the prehistoric, East Flanders and West Flanders. A part of it, known as French Flanders, has gone to France, and another small portion to Holland. Flanders is an unpicturesque lowland, whose level is scarcely above that of the sea, which accounts for the fact that a great part of it was for a long time flooded at high water. The country took its present aspect only after a line of downs had been raised by the sea along its shore. The soil of Flanders, which for the most part was unproductive, owes its present fertility to intelligent cultivation; its products are various, but the most important are dairy products, beer-brewing, and the manufacture of linens are the main Flemish industries. At the time of its conquest by the Romans, Flanders was inhabited by the Morini, the Menapii, and the Nervii. Most probably these tribes were of partly Teutonic and partly Celtic descent, but, owing to the almost total absence of Roman colonies and the constant influx of barbarians, the Germanic element soon became predominant. The Flemings of to-day may be considered as a German people whose language, a Low-German dialect, has been very slightly, if at all, influenced by Latin.

It is likely that Christianity was first introduced into Flanders by Roman soldiers and merchants, but its progress must have been very slow, for Saint Eligius (Eligius, c. 590-660) tells us that in his days almost the whole population was still heathen, and the conversion of the Flemings was not completed until the beginning of the eighth century. Towards the middle of the ninth century, the country was governed by a marquess or "forester" named Baldwin, whose bravery in fighting the Northmen had won him the surname of Iron Arm. Baldwin married Judith, daughter of the Emperor Charles the Bald, and received from his father-in-law, with the title of count, the country bounded by the North Sea, the Scheldt, and the Canche. Thus was founded, in 864, the County of Flanders. Baldwin I was a warm protector of the clergy, and made large grants of land to churches and abbeys. He died in 878. His successors were Baldwin II, the Bald (878-919), Arnold I (919-964), Baldwin III (968-981), and Arnoul I (984-1038), who could not prevent Baldwin from annexing the County of Boulogne to the royal domain of France. The son of Arnold II, Baldwin IV, the Bearded (989-1036), was a brave and pious prince. He received from the Emperor Henry II the imperial castle of Ghent and its territory. From that time there were two Flanders: Flanders under the Crown, a French fief; and imperial Flanders, under the suzerainty of Germany. Baldwin V, of Lille (1036-67), added to his domains the County of Eenzan or Alost. He was regent of France during the minority of Philip I. Baldwin VI, of Mons (1067-70), was also Count of Hainault in consequence of the fall of the seed of that county. He reigned only three years, and was succeeded in Flanders by his brother Robert the Friesman (1070-1093). Robert II, of Jerusalem (1093-1111), took a leading part in the First Crusade. He annexed Tourain to Flanders and died fighting for
his suserain. His son Baldwin VII, Hapkin (1111–1119), enforced strict justice among the nobility. Like his father, he died while supporting the cause of his suserain. His successor was Charles, son of Saint Canute of Denmark (1119–27). The new count was a saintly prince and a great lover of peace. His stern justice, however, angered a few greedy nobles, who made him the target of a conspiracy. He was murdered in the church of Saint-Donat in Bruges. Louis VI, King of France, then gave the County of Flanders to William of Normandy, a grandson of the Conqueror, but William’s high-handed way of governing the country soon made him unpopular and the Flemings turned to Thierry of Alsace, leader of a band of the nobility who resented the war which ensued, and Thierry’s candidacy received the royal sanction. Thierry (1128–68) granted privileges to the Flemish communes, whose origin dates from this period, and took part in the Second Crusade. His son Philip (1168–91) granted new privileges to the communes, did much to foster commerce and industry, and was a generous protector of poets. He made a political blunder when he gave up Artois to France as the dowry of his niece, as this dismemberment of the county led to many wars with the latter country. Philip died in the Holy Land during the Third Crusade. His successor was his brother-in-law, Baldwin VII, a peaceful and effective ruler (1186–1205). Flanders under his rule (1195–1205) is famous in history as the first Latin Emperor of Constantinople. He died in 1205 in a war against the Bulgarians, and the Counties of Flanders and Hainault passed to his daughter Jeanne, who had married Ferdinand of Portugal. This prince was involved in the war of King John of England against Philip II of France, and was made a prisoner at the battle of Bouvines (1214). He was released in 1228, only to die shortly afterwards. Jeanne (1205–1244) administered the counties wisely during her husband’s captivity, and after his death she increased the liberties of the communes to counteract the influence of the nobility—a policy which was followed by her sister Margaret, who succeeded her in 1244. Upon Margaret’s death, in 1279, her children by her first husband (Bouchard d’Avesnes) inherited Hainault, while Flanders went to the Dampierre’s, her children by her second husband. The battle of Bouvines was the beginning of a new era in the history of Flanders. Up to that time the counts had occupied the foreground; their place was henceforth taken by the communes, whose power reaches its acme in the course of the thirteenth century. Bruges, the Venice of the North, had then a population of more than 50,000, the chief industry being the making place of the merchants of all Europe; Ghent and Ypres had each more than 50,000 men engaged in the cloth industry. This commercial and industrial activity, in which the rural classes had their share, brought to Flanders a wealth which manifested itself everywhere—in the buildings and in the costumes of the inhabitants in their dress. “I thought I was the only queen here,” said the wife of Philip the Fair on a visit to Bruges, “but I see hundreds of queens around me.” The intellectual and artistic activity of the time was no less remarkable. Then flourished Henry of Ghent, the Soennin Doctor; Van Maerlant, the great Flemish poet, and his spiritual guide, Van Velthum; Philip Musche, the chronicler, who became Bishop of Tournai; and the mystic Jan van Ruysbroeck. Then, too, were built the beautiful guild-halls, city-halls, and churches, which bear witness at once to the popular love for the fine arts and Flemish religious zeal—the guild-hall of Bruges and Ypres, the church of the Holy Saviour and of Our Lady at Bruges, those of Saint-Bavon, Saint-Jacques and Saint-Nicolas at Ghent, and of Saint-Martin at Ypres. Still more worthy of admiration was the internal organization of the communes, which, owing to the beneficent influence of the Church, had become so powerful a factor in the moral welfare of the masses. Guy of Dampierre (1279–1305) succeeded his mother Margaret, and inaugurated a new policy in the administration of the county. His predecessors had on the whole been friendly to the wealthy classes in the Flemish cities, in whose hands were the most important offices of the communes. Guy, who aimed at absolute rule, sought the support of the burghers in his conflict with the rich. A tax appeal from his decisions to the King of France, the wily Philip the Fair, who readily seized upon this opportunity of weakening the power of his most important vassal. Philip constantly ruled against the count, who finally appealed to arms, but was defeated. The Flemish borders reached by the arms of the French governor, but the tyranny of the French soon brought about revolution, in the course of which some 3000 French were slaughtered in Bruges, and at the call of the two patriarchs, de Coninck and Breydel, the whole country rose in arms. Philip sent into Flanders a powerful army, which met with a crushing defeat at Courtrai (1302); after another battle, which remained undecided, the King of France resorted to diplomacy, but in vain, and peace was restored only in 1320, after Pope John XXII had induced the Flemings to accept it. Guy of Dampierre, who died in prison in 1305, was succeeded by his son Robert of Béthune, who had an unhappy reign (1305–27). His brother’s son, the latter was his grandson, Louis of Nevers (1322–1346), who was unfit for the government of Flanders on account of the French education he had received. Shortly after his accession, the whole country was involved in a civil war, which ended only after the Flemings had been defeated at Cassel by the King of France (1328).

At the breaking out of the Hundred Years War, the Flemish communes, whose prosperity depended on English wool, followed the advice of Ghent’s great citizen, Jacques van Artevelde, and remained neutral; the count and nobility took the part of the French king. When the policy of neutrality could no longer be adhered to, the Flemings sided with the English and helped them to win the battle of Sluis (1340). By that time Van Artevelde had become practically master of the country, which was very prosperous under his rule. He was murdered in 1345, and Louis of Nevers was killed the next year. His son Louis of Male (1346–1384) was a spendthrift. The communes paid his debts several times, but they finally refused to give him any more money. He managed, however, to get some from Bruges by granting to that city a licence to build a canal, which Ghent and Ypres considered a menace to their flourishing trade. A war broke out between the two cities, and peace was not restored until Charles VI of France had defeated the insurgents at Rooseweke (1382). Louis of Male’s successor was his son-in-law, Philip the Bold, Duke of Burgundy (1384–1404). This prince and his son, John the Fearless (1410–1419), being mostly interested in the affairs of France, paid little attention to those of Flanders.

The situation changed after Philip the Good, third Duke of Burgundy (1419–1467), had united under his rule the whole of the Low Countries. Philip wanted to weaken the power of the communes for the benefit of the central government, and soon picked a quarrel with Bruges, which was compelled to surrender some of its privileges. Ghent’s turn came next. A contention had arisen between that city and the duke over a question of taxes. War broke out, and the army of Ghent was utterly defeated at Gavere (1452), which city had to pay a heavy fine and to surrender her privileges. In 1446, Philip created the Great Council of Flanders, which, under Charles the Bold, became the Great Council of Mechlin. Appeals from the judgments of local courts were henceforth to be made to this council, not to the Parliament of Paris as before. Thus were seved the bonds of vassalage which for
six centuries had connected Flanders to France. Philip was succeeded by Charles the Bold (1467-1477), the marriage of whose daughter to Maximilian, Archduke of Austria, brought Flanders with the rest of the Low Countries under the rule of the House of Hapsburg in 1477. In 1488, the communes tried to recover their independence. The attempt was unsuccessful, and the war was disastrous for Bruges, because it hastened her approaching decline. The main causes of this decline were: the siting up of her harbour, which became inaccessible to large vessels; the discovery of America, which opened new fields for European enterprise; the dissolution of the Flemish Hanse, whose seat was Bruges; and the declining policy of the kings towards England; and the civil wars of the preceding fifty years. The prosperity of Bruges passed to Antwerp. The reign of the House of Burgundy, in many respects so harmful to Flanders, was a period of artistic splendour. To that time belong Memling and the Van Eycks, the first representatives of the Flemish school of painters. Flemish literature on the whole declined, but a Fleming, Philippe de Comines, was the leading French writer of the fifteenth century. Another Fleming of that time, Thierry-Maertens of Alost, was the Gutenberg of the Low Countries. Flanders can also claim two of the greatest scientists of the sixteenth and seventeenth centuries: Simon Stevin, mathematician and engineer, and the Jesuit Father Grégoire de Saint-Vincent, whom Leibniz considered the equal of Descartes.

Although the material condition of Flanders is today very satisfactory, the country has not recovered its former prosperity. And it is not likely that it ever will, not because of any decrease in the energy of the Flemish race, but because economic conditions have changed. Intellectually the Flemings of the sixteenth century are still the true sons of the glorious generations which produced Van Maerlant, Van Artevelde, Rubens, and Van Dyck; perhaps it is not an exaggeration to say that they have taken the lead in promoting the prosperity of Belgium. The Flemish tongue, which during the eighteenth century had fallen so low that in 1830 it was little more than a patois, has risen again to the rank of a literary language and can claim the larger portion of the literary production of Belgium in the last seventy-five years; nay, the Flemings have even made important contributions to French literature. In the fine arts, in the sciences, in politics, their activity is no less remarkable. They have given the Belgian Parliament some of its best orators; its ablest statesmen, Malte, Jacobs, Woeste, Beernaert, Schollaert. Above all they have retained, as the most precious inheritance of the past ages, the simple, fervent, vigorous faith of the crusaders and their filial attitude towards the Church. No country sends out a larger proportion of secular and regular missionaries, some of whom (like Father P. J. De Smet, the apostle of the American Indians) have attained a world-wide celebrity. Flanders may, indeed, be considered the bulwark of Catholicism in Belgium. The Socialists are well aware of this fact, but the Catholics realize it just as clearly, and their defence is equal to the enemy's attack. Every Flemish community has its parochial schools; the Catholic press is equal to its task; and the "Volk" of Ghent has been organized to counteract the evil influence of the Socialist "Voruit!".

P. J. MARIQUE.

Flandrin, Jean-Hippolyte, French painter, b. at Lyons, 23 March, 1809; d. at Rome, 21 March, 1864. He came of a family of poor resources and was a pupil of the sculptor Legendre and of Revello. In his education, however, two elements must above all be taken into account. The first is the Lyonnaise genius. Various causes, physical and historical, have combined to give the city of Lyons a character all its own. This is twofold—religious and democratic—and the labouring classes have always been an active centre of idealism. This is especially noticeable in its poets, from Maurice de Sève to Lamartine. Lyons has always been of great importance, and the province was a permanent centre of Roman culture. The second factor in Flandrin's development was the influence of Ingres, without which it is doubtful whether Flandrin would have achieved any fame. In 1829 Flandrin, with his brother Jean-Paul (the landscape painter), went to Rome as a pupil of Ingres, who conceived a paternal affection for him. In Paris the young man experienced the bitterest trials. He was often without a fire, sometimes without bread, but he was sustained by a quiet but unshakable faith, and finally (1832) carried off the Grand Prix de Rome through "The Recognition of Theseus by his Father". At Rome, where, after 1834, Ingres was director of the French Academy, his talents expanded and blossomed under the influence of natural beauty, a mild climate, and the noble spectacle of the works of classic and Christian antiquities. He put himself to the best advantage of "Dante and Virgil" (Lisieux Museum, 1835); "Europa" (Louvre Museum, 1835); "St. Clare Healing the Blind" (Cathedral of Nantes, 1836); "Christ Blessing the Children" (Lisieux Museum, 1837). The serenity of his nature, his chaste sense of form and beauty, his taste for effective disposition of details, his moral elevation, and profound piety, found expression in these early efforts. On his return to Paris, in 1838, he was all intent upon producing great religious works.

At this time there sprang up throughout the French School a powerful reaction against "useless pictures", against the conventional canvases exhibited since the end of the eighteenth century (Quatretemps to Courbet). There was a return to an art more expressive of life, less arbitrary, more mural and decorative. Delacroix, Chassérìa, and the aged Ingres were engaged on mural paintings. It was above all, however, the walls of the churches which offered an infinite field to the decorators, to Chassériau, Victor Mottet, Couture, and Amaury Duval. Within fifteen or twenty years this great pictorial movement, all too obscure, left on the walls of the public buildings and churches of Paris pictorial treasures such as had not been seen since the days of Giotto. It is true that this movement was the first impulse towards this movement (especially so far as religious paintings are concerned) was due to the Nazarene School. Ingres had known Overbeck and Steinele at Rome; Flandrin may well have known them. In any case it is these artists whom he resembles above all in purity of sentiment and profound conviction, though he possessed a better artistic education. From 1840 his work is scarcely more than a painstaking revival of religious painting. The artist made it his mission in France to serve art more brilliantly than ever, for the glory of God, and to make beauty, as of old, a source of instruction and an instrument of edification to the great body of the faithful. He found a sort of apostolate before him. He was one of the petits prédicateurs de l'Évangile. Artistic productions in the mid-nineteenth century, as in the Middle Ages, became the Biblia Pauperum.

Henceforth Flandrin's life was passed almost entirely in churches, borne upon earth on his ladders and scaffolds. His first work in Paris was in the chapel of St-Jean in the church of St-Sévérin. He next decorated the sanctuary and choir of the church of St-Germain-des-Prés (1842-48). On either side of the sanctuary he painted "Christ's Entry into Jerusalem" and "The Journey to Calvary" besides the figures of the Apostles and the symbols of
the Evangelists. All these are on a gold background with beautiful arabesques which recall the mosaic of Torriti at Santa Maria Maggiore. At St. Paul, Nîmes (1847–49), he painted a lovely garland of virgin martyrs. But unlike the other themes, the fresco in the nave of the church of St.-Vincent-de-Paul at Paris. The last is a double procession, developing symmetrically between the two superimposed arches, without any exaggeration, a Christian Panathenaia, as it was called by Théophile Gautier. It might be shown how the same theme is subjected, in the work of the modern painter, to a more flexible, less uniform, and more complex rhythm, how the melodic procession, without losing any of its grandeur or its continuity, is strengthened by silences, pauses, cadences. But it is more important to note the originality in the return to the most authentic sources of Christian iconography. Hibert or painters of this class hardly went back beyond the fourteenth or fifteenth century. But Flandrin turned to the first centuries of the Church, and drew his inspiration from the very fathers of religious thought. In the fresco of St.-Vincent-de-Paul fifteen centuries of Christian tradition are unrolled. In 1851 he executed the new work in the chapel of the church of Ainay near Lyons. On his return he undertook his crowning work, the decoration of the nave of St.-Germain-des-Prés. He determined to illustrate the life of Christ, not from a historical, but from a theological, point of view, the point of view of events, rendered less wild than with the Arians. His tendency to parallelism, to symmetry, found its element in the symbolism of the Middle Ages. He took pleasure in considering, according to this system of harmony and relations, the Old Testament as the prototype of the New, the burning bush as representing the Annunciation, and the baptism of Christ as prefiguring the crossing of the Red Sea.

It was, perhaps, the first time since the frescoes of Perugino and Botticelli in the Sistine Chapel, that Christian art returned to its ancient genius. The interrupted tradition was renewed after three centuries of the Renaissance. Unhappily the form, despite its sustained beauty, possesses little originality. It is lacking in personality. The whole series, though exhibiting a high degree of learning and poise, of grace, and even of strength, lacks charm and life. The colouring is flat, crude, and dull, the design neutral, unaccented, and commonplace. It is a miracle of superficial exactness, a sense of the sentiment, more harsh in the Old Testament, and more tender in the Christian, scenes, glow through this pedantic and poor style. Certain scenes, such as "The Nativity", which strongly recalls that of Giotto at Padua, possess a sweetness which is quite human in their way. Others, such as "Adam and Eve after the Fall", and "The Confusion of Tongues", are marked by real grandeur. This was Flandrin's last work. He was preparing a "Last Judgment" for the cathedral of Strasbourg, when he went to Rome, where he died.

During his religious work, Flandrin is the author of some very charming portraits. In this branch of painting he is far from possessing the acute and powerful sense of life of which Ingres possessed the secret. Nevertheless, pictures such as the "Young Girl with a Pink", and the "Young Girl Reading", of the Louvre, will always be admired. Nothing could be more maidenly and yet profound. His portraits of men are at times magnificent. Thus in the "Napoléon III" of the Versailles Museum the pale massive countenance of Caesar and his dream-troubled eyes reveal the impress of destiny. An admirable "Study of a Man," in the Museum of the Louvre, is quite Ingrian in its expression, but in the master's Oedipus. What was lacking to the pupil in order that the artistic side of his work should equal its merits from the religious and philosophic side was the power of always painting in the style displayed in this portrait.

LOUIS GILLET.

Flathead Indians, a name used in both Americas, without special ethnologic significance, to designate tribes practising the custom of compressing the skull in infancy by artificial means. Curiously enough the tribe best known under this name, the Salish or Flathead proper of Western Montana, not only practising the custom, the confusion arising from the fact that the early traders felt compelled to adopt the local Indian classification, which considered the prevailing compressed skull of the neighbouring tribes as pointed and the naturally shaped Salish skull by contrast as flat. The Salish or Flathead Indians of the mountain region of north-western Montana are the easternmost tribe of the great Salishan stock which occupied much of the Columbia and Fraser River region westward to the Pacific. Although never a large tribe, they have always maintained an exceptional reputation for bravery, honesty, and general high character and for their friendly disposition towards the whites. Little is known about the beginning of the last century, they subsisted chiefly by hunting and the gathering of wild roots, particularly camas, dwelt in skin tipis or mat-covered lodges, and were at peace with all tribes excepting their hereditary enemies, the powerful Blackfeet. Their religion was the ordinaryanimism of the Indians and they had a number of ceremonial dances, apparently including the Sun Dance. Having learned through the Catholic Iroquois of the Hudson Bay Company something of the Catholic religion, they voluntarily adopted its simpler forms and prayers, and in 1851 sent a delegation all the long and dangerous way to St. Louis to ask of the resident government Indian superintendent that missionaries be sent to them. This was not then possible and other delegations were sent, until in 1840 the noted Jesuit Father Pierre De Smet (q. v.) responded and was welcomed on his arrival in their country by a great gathering of the 1600 Indians of the allied mountain tribes. In 1841 he founded on Bitter Root River the mission of St. Mary, which was abandoned in 1850, in consequence of the inroads of the Blackfeet, for the new mission of St. Ignatius on Flathead Lake. This still exists in successful operation, practically all the converted Indians of the reservations of Flathead, Pend d'Oreille, Kutenai, and Spokane—having been consistent Catholics for half a century.

In 1855 the Flatheads made a treaty ceding most of their territory, but retaining a considerable reservation south of Flathead Lake and including the mission. They number now about 850, the confederated tribes numbering 2200. In their reservation a few Indian communities actually increasing in population. They are prosperous and industrious farmers and stockmen, moral, devoted Catholics, and in every way a testimony to the zeal and ability of their religious teachers, among whom, besides De Smet, may be named such distinguished Jesuit priests and scholars as Canestrelli, Giorda, Mengarini, Point, and Ravalli, several of whom have made important contributions to Salishan philology. The mission is (1908) in charge of Rev. L. Tallman, assisted by several Jesuits, together with a number of Christian Brothers, Sisters of Providence, and Ursulines.

Affairs (Washington, 1906).
main, since De Rossi showed that the "Cemeterium Domitillae" (see Cemeteries, Early Christian) was situated on ground belonging to the Flavia Domitilla who was banished for her faith, and occupied as a Christian burial place as early as the first century. As a result of the accusations made against them Clement was put to death, and Flavia Domitilla was banished to the island of Pandataria in the Tyrrhenian Sea. Eusebius (H. E., III, 18; Chron. ad an. Abrahami 307) says that she was banished to Pandataria, the spurious acts of Theodorus and Alexander, the bishops of St. Jerome (Ep. CVIII, 7) represent Flavia Domitilla as the niece, not the wife, of the consul Flavius Clemens, and say that her place of exile was Pontia, an island also situated in the Tyrrhenian Sea. These statements have given rise to the opinion that there were two Domitiæs (aunt and niece) who were Christians, the latter generally referred to as Flavia Domitilla the Younger. Lightfoot has shown that this opinion, adopted by Tillemont and De Rossi and still maintained by many writers (among them Allard and Duchesne), is derived entirely from Eusebius, who was led into this error by mistakes in transcription, or ambiguity of expression, in the sources which he used.

P. J. HEALY.

Flavian, Saint, Bishop of Constantinople, date of birth unknown; d. at Hypepe in Lydia, August, 449. Nothing is known of him before his elevation to the episcopate save that he was a compiler and translator of the Greek Scriptures; he was a swarthy and stoical man, son of a respectable父, of the Church of Constantinople, and noted for the holiness of his life. His succession to St. Proclus as bishop was in opposition to the wishes of the eunuch Chrysaphius, minister of Emperor Theodosius, who sought to bring him into imperial disfavour. He persuaded the emperor to require of the new bishop certain eulogia on the occasion of his appointment, but scornfully rejected the proffered blessed bread on the plea that the emperor desired gifts of gold. Flavian's intrepid refusal, on the ground of the impropriety of thus disposing of church treasures, roused considerable enmity against him. Puliates, the emperor's personal envoy who, being a devoted advocate, Chrysaphius secured the support of the Emperor Eudocius. Although their first efforts to involve St. Flavian in disgrace miscarried, an opportunity soon presented itself. At a council of bishops convened at Constantinople by Flavian, 8 Nov., 448, to settle a dispute which had arisen among his clergy, the archimandrite Eutyches, who was a relation of Chrysaphius, was accused of heresy by Eusebius of Doryleum. (For the proceedings of the council see EUSEBIUS OF DORYLEUM; EUTYCHES.) Flavian exercised clemency and urged moderation, but in the end the refusal of Eutyches to make an orthodox declaration on the two natures of Christ, which Flavian pronounced the sentence of degradation and excommunication. He forwarded a full report of the council to Pope Leo I, who in turn gave his approval to Flavian's decision (21 May, 449), and the following month (13 June) sent him his famous "Dogmatic Letter". Eutyches' complaint that justice had been violated in the council and that the Acts had been tampered with resulted in an imperial order for the revision of the Acts, executed (8 and 27 April, 449). No material error could be established, and Flavian was justified. The long-standing rivalry between Alexander and Constantine had ended in the latter's death; the succession to his see had been disputed between Eutyches and his nephew, Proclus, and the latter had been banished by the synod of 449. The See of Constantinople had been officially declared next in dignity to Rome, and Dioscurus, Bishop of Alexandria, was quite ready to join forces with Eutyches.
against Flavian. Even before the revision of the Acts of Flavian's council, Chrysaphius had persuaded the emperor of the necessity for an eccumenical council to adjust matters, and the decree went forth that one should convene at Ephesus under the presidency of Dioscurus, who also controlled the attendance of bishops. All the bishops who had attended the previous synod were allowed no voice, being, as it were, on trial. (For a full account of the proceedings see Ephesus, ROBBER COUNCIL OF.) Eutyches was absolved of heresy, and despite the protest of the papal legate Hilary (later pope), who by his Contradicur shows that the decisions of the council, Flavian was condemned and deposed. In the violent scenes which ensued he was so ill-used that three days later he died in his place of exile. Anatolius, a partisan of Dioscurus, was appointed to succeed him.

St. Flavian was repeatedly vindicated by Pope Leo, whose epistle of commendation failed to reach him before his death. The pope also wrote in his favour to Theodosius, Pulcheria, and the clergy of Constantinople, besides convening a council at Rome, wherein he designated the Council of Ephesus Epistola non judicium sed latrocinium. At the Council of Chalcedon (451) the Acts of the Robber Council were annulled and the ancient canons of the Faith were confirmed. Pope Hilary had Flavian's death represented pictorially in a Roman church erected by him. On Pulcheria's accession to power, after the death of Theodosius, she brought the remains of her friend to Constantinople, where they were received in triumph and interred with those of his predecessors in the see.

In the Greek Menology and the Roman Martyrology his feast is entered 18 February, the anniversary of the translation of his body. Relics of St. Flavian are venerated in Italy.

St. Flavian's appeal to Pope Leo against the Robber Council was published by Anselmi in his work "S. Leonis Magni e l'Oriente" (Monte Cassino, 1890), also by Lacey (Cambridge, 1903). Two other (Greek and Latin) letters to Leo are preserved in Migne, P. L. (LIV, 723–32, 743–51), and one to Emperor Theodosius also in Migne, P. G. (LXV, 889–92).

F. M. RUDGE.

Flavias, a titular see of Cilicia Secunda. Nothing is known of its ancient name and history, except that it is said to be identical with Sils. Lequien (II, 899) gives the names of several of its bishops: Alexander, later Bishop of Jerusalem and founder of the famous library of the Holy Sepulchre in the third century; Nicetas, present at the Council of Nicea (325); John, who lived in 451; and Ardeodrius, Patriarch of Antioch about 868. If the identification of Flavias with Sils, which is probable, be admitted, it will be found that it is first mentioned in the "Life of Simeon Stylites".

In 704 the Arabs laid siege to the stronghold of Sils. From 1186 till 1375 the city was the capital of the Kings of Lesser Armenia. In 1266 it was captured and burned by the Egyptians. Definitely conquered by the latter in 1375, it passed later into the power of the Persians. At this time it was the religious centre of Christian Armenians, at least until the catholics established himself at Etchmiadzin. It is still the residence of an Armenian catholics, who has under his jurisdiction several bishops, numerous villages and convents. It is the chief town of the district of the same name in the vilayet of Adana and numbered, with the Arab tribes, about 30,000 inhabitants. The great heat compel the inhabitants to desert it during the summer months. It is surrounded by vineyards and groves of cypress and sycamore trees. Ruins of churches, convents, castles, and palaces may be seen on all sides.

ALBERNI, Storia di L’Armenia-Cilicia (Venice, 1899), 241–272; CUINET, La Turquie d’Asie, II, 90–92.

S. VAILÉE.

Flavigny, Abbey of, a Benedictine abbey in the Diocese of Dijon, the department of Côte-d'Or, and the arrondissement of Semur. The abbey was founded in 721, the first year of the reign of Thierry IV, by Widerad, who richly endowed it. According to the authors of "Gallia Christiana", the new abbey, placed under the patronage of St. Pric, Bishop of Clermont, and martyr, was erected on the site of an ancient munificently founded cloister, during the time of Clovis, and formerly under the patronage of St. Peter. This titular eventually overshadowed and superseded St. Pric. Pope John VIII dedicated the new church about the year 877, from which time the first patronage, that of St. Peter, appears to have prevailed definitively. The fame of Flavigny was due partly to the relics which it preserved, and partly to the piety of its religious. The monastery was at the height of its reputation in the eighth century, in the time of the Abbot Manasses, whom Charlemagne authorized to found the monastery of Corbigny. The name Manasses transferred from Flavigny to Corbigny on the relics of St. Pric. There were also preserved the relics of St. Regina, whom her acts represent as having been beheaded for the faith in the borough of Alise (since called Alise-Sainte-Reine). The history of the translation of St. Regina (21–22 March, 864) was the subject of a contemporary account. Unfortunately the "Chroniques," the "Vie du duc Robert" and the "Necrology" of the Abbot Hugues, and the "Live contenant les choses notables" have either perished or contain few facts of real interest. The liturgical books, notably the "Lecionary," have disappeared. The abbatial list contains few names worthy to be observed, with the exception of that of Hugues of Flavigny. The monastery was rebuilt in the seventh century and occupied by Benedicitines of the Congregation of St. Maur, who were actively employed in research concerning the historical documents of the abbey, but it disappeared during the French Revolution. Hitherto it had been the Abbey of the Dresses of Autun; but after the conquest of 1802 the new partition of the diocese placed Flavigny in the Diocese of Dijon. Lacordaire rebuilt and restored all that remained of the monastery surrounded by a portion of its ancient estate, and established there a convent of the Order of St. Dominic.

H. LECLERCQ.

Flaviopolis, a titular see in the province of Honoria. The city, formerly called Cratia, originally belonged to Bithynia (Polemy, V, 1, 14), but was later attached to Honoria by Justinian (Novella xxii), and in 526, after the conquest of Constantine by the Persians, it was transferred to the Diocese of Flaviopolis. No less than ten of its bishops are known from 343 to 869 (Lequien, I, 575–78). One of them, Paul, was the friend and defender of St. John
Chrysostom. The most noted was St. Abraham, bishop in the sixth century, whose life has recently been published (Vailhé, "Saint Abraham de Cratia, in "Éloge M'Orient," VIII, 290-94). The diocese was still in existence in the twelfth century. Flavipolis, now known as Guedré, is a caza situated in the sanjak of Bolou, and the vilayet of Castamouni. Its 4000 inhabitants, are nearly all Musulmans; there are only 200 Christians, 40 of whom are Armenian Catholics. A small river, the Oulu Sou, irrigates the very fertile plain which is particularly celebrated for its peaches (apricot and cherry) grow there in great abundance.

Textes, L'Asie Mineure, 149-151; Cunet, La Turquie Éclairée, 192-200; and the council of Nice or Flavipolis, see Viallet, Histoire de la Grèce, 420, and Supplement, II, 260.

S. VAILHÉ.

Flavius, Josephus. See Josephus.

Fleicher, Esprit, bishop; b. at Permes, France, 1632; died at Montpellier, 1710; member of the Academy, and together with Bourdolau, Bossuet, Fénelon, and Mascaron, one of the greatest sacred orators of his century; his earliest studies were made at Tarascon, under the guidance of his uncle, who was superior of a religious congregation. He himself entered this congregation, where he received holy orders, but soon left it and went to Paris in 1660. It was not long before he acquired a reputation as a wit and spiritual writer. A discourse which he was to deliver in the Church of St. Etienne du Mont, in 1682, he was invited to the Dauphin, when his preaching began to make him famous. His funeral orations in particular won for him more than one comparison with Bossuet. It happened that on a number of occasions he had to treat the same subjects as the Bishop of Meaux, for instance the funeral oration of Maria Theresa, so as to arouse almost the same sentiments of admiration.

He was received a member of the French Academy in 1673, on the same day as Racine. Having been consecrated bishop in 1685, he left the See of Lavaur for that of Nimes in 1687. During his administration he was remarkable for his great charity and his zeal in converting Protestants, but this did not prevent him from devoting himself to letters and to making the Academy of Nîmes, of which he was the director, shine with particular brilliancy. He was less a preacher of the Gospel than a remarkable panegyrist. His sermons are as different from those of Bourdolau as his function is from that of Bossuet's. He was much more an elegant man of letters and fashionable orator than a severe moralist and humble preacher. He delighted in ingenious turns of phrase, sonorous words and pretentious periods which have the appearance of seeking applause and which are hardly in accord with the spirit of the Gospel. His funeral oration for the Dauphin is in every classical handbook. His oratorial works have been collected under the title of "Oraison Funèbres" (Paris, 1878), "Sermons," and "Panégyriques." In history he has left an "Histoire du Cardinal Ximénès" (Paris, 1839), the "Vie de Théodore le Grand" and "Leçons choisies sur divers sujets." The last edition of the "Œuvres" of Fleicher is in two volumes (Paris, 1886).

Delachaux, Vie de Fleicher (Paris, 1885); Memórias de Fleicher, ed. 1844, 1846; Economie politique, in Histoire de la France, 1776; SAINT-BEVE, Introduction to the edition of the Memórias; Fabre, Fleicher orateur (Paris, 1860); Alcoz, Histoire universelle de l'Église (Tournai, 1851).

LOUIS LALANDE.

Fleming, Patrick, Franciscan friar, b. at Lagan, County Louth, Ireland, 17 April, 1599; d. 7 November, 1631. His father was great-grandson of Lord Slane; his mother was daughter of Robert Cusack, a baron of the exchequer and a near relative of Lord Delvin. In 1612, at a time when religious persecution raged in Ireland, young Fleming went to Flanders, and became a student, first at Douai, and then at the College of St. Anthony of Padua at Louvain. In 1617 he took the Franciscan habit and a year later made his solemn profession. He then assumed in religion the name of Patrick, Christopher being the name he received at baptism. Five years after his solemn profession he went to Rome with Hugh MacCaghwell, the definator general of the order, and when he had completed his studies at the College of St. Isidore, he was ordained priest. From Rome he was sent to Louvain and for some years lectured there on philosophy. During that time he established a reputation for scholarship and administrative capacity; and when the Franciscans of the Strict Observance opened a college at Prague in Bohemia, Fleming was appointed to the most superior of its houses. He was the first and the last. The Thirty Years War was raging at this time, and in 1631 the Elector of Saxony invaded Bohemia and threatened Prague. Fleming, accompanied by a fellow-countryman named Matthew Hoar, fled from the city. On 7 November the fugitives encountered a party of armed Calvinist peasants; and the latter, animated with the fierce fanaticism of the times, fell upon the friars and murdered them. Fleming's body was carried to the monastery of Voticeum, four miles distant from the scene of the murder and there buried.

Eminent both in philosophy and theology, he was specially devoted to ecclesiastical history, his tastes in this direction being still further developed by his friendship for his learned countryman Father Hugh Ward. The latter, desirous of writing on early Christian Ireland, asked for Fleming's assistance, which was readily given. Even before Fleming left Louvain for Prague he had amassed considerable materials, and it had written a "Life of St. Columba," but, however, published in his lifetime. That and other MSS. fell into the hands of Thomas O'Sheen, lecturer in theology at the College of St. Anthony of Padua, who edited and published them at Louvain in 1687.
Fleming also wrote a life of Hugh MacCaghwell (q. v.), Primate of Armagh, a chronicle of St. Peter’s monastery at Ratisbon (an ancient Irish foundation), and letters to Hugo Ward on the lives and works of the Irish saints. The letters have been published in “The Irish Ecclesiastical Record” (1909). The life of Fleming published at Louvain in 1667 is now rare and costly; one copy in recent years was sold for seventy pounds.

W. H. Am. Writings of Ireland (Dublin, 1794); Utter Journal of Archaeology; T. I.; The Irish Ecclesiastical Record, VII; Cooper’s Dict. Brit. Biog., s. v.

E. A. D’ALTON.

Fleming (FLEMING, FLEMMYNG), RICHARD, Bishop of Lincoln and founder of Lincoln College, Oxford; b. of a good Yorkshire family about 1360, Croston being sometimes mentioned, though without clear authority, as his birthplace; d. at Sleaford, 25 Jan., 1431. He studied at University College, Oxford, and became junior proctor in 1407. In 1409 he was chosen by convocation as one of the twelve commissioners appointed to examine the writings of Wyclif, though at this time he was suspected of sympathy with the new movement and is mentioned by name in a mandate which Archbishop Arundel addressed to the chancellor in 1409 in order to suppress this tendency in the university. If the archbishop’s description is correct the use of the unorthodox name of Fleming for his birth must be far too early, for a man close on fifty could not be mentioned as one of a company of beardless boys who had scarcely put away the playthings of youth (Wilkins, Conc. Magn. Brit., III, 322). If he ever had any sympathy with Wyclif it did not extend to Wyclif’s heretical doctrines, for his own orthodoxy was beyond suspicion and it subsequently became his duty as bishop to burn the exhumed body of Wyclif in 1428. He held successively the prebends of Southwell (22 Aug., 1406) and Langtoft (21 Aug., 1415), both in York Diocese, and subsequently was rector of Boston. He became bachelor in divinity some time before 1413. Finally he was elected Bishop of Lincoln, 20 Nov., 1419, in succession to Philip Repyngdon, and was consecrated at Florence, 28 April, 1420. In 1422 he was in Germany at the head of an embassy, and in June, 1423, he acted as president of the English representatives at the Council of Pavia, which was transferred to Siena and finally developed into the Council of Basle. More than once he pleaded before the council, but as he supported the rights of the pope against the assembled Fathers his views were disapproved of. The pope, however, showed him favour by appointing him a preacher at the Archibishopric of York in 1424. Difficulties, however, arose with the king’s ministers, and the appointment was set aside. On returning to Lincoln, the bishop began the foundation of Lincoln College, which he intended to be a collegium of theologians connected with the three parish churches of St. Mildred, St. Michael, and Allhallows, Oxford. The preface which he wrote to the statutes is printed in the “Statutes of Lincoln College” (Oxford, 1853). He proved a vigorous administrator of his diocese, and added to his cathedral a chantry in which he was subsequently buried. One work now lost, “Super Anglia Elymologia”, is attributed to him by Bale.

EDWIN BURTON.

Fleming, THOMAS, Archbishop of Dublin, son of the Baron of Slane, b. in 1593; d. in 1655. He studied at the Franciscan College of Louvain, became a priest of the Franciscan Order, and after finishing his studies continued at Louvain for a number of years as professor. In October, 1623, he was appointed by Urban VIII to Dublin as successor of Archbishop Matthews. His appointment gave great offence to the opponents of the religious orders, and a bitter onslaught was begun against the new archbishop by the priest Paul Harris, in his “Olfactorium” and other brochures. Archbishop Fleming convened and presided at a provincial synod of the province of Dublin in 1640. When the Confederate War broke out (1641-1642) the archbishop, though rather a man of peace, felt constrained to take sides with the Confederates and despatched a proctor to represent him at the synod of the clergy held at Kilkenny (May, 1642). Later on, when the general assembly was convoked at Kilkenny for October, the archbishop resolved to attend personally and take part in the deliberations. As might be expected from his antecedents, and especially from his collaboration with the Antipopes, he was opposed to the “thorough” policy of the Old Irish, and wished for peace at all costs. In 1643 he was one of the prelates who signed the commission empowering the Confederates to treat with Ormond for a cessation of hostilities. He also opposed Scaramanga and Rinneuci, the latter strongly identified with the Old-Irish party. In 1649, when all was lost, and the defeated Irish were confronted with Cromwell, a reconciliation was effected with Ormond at a synod of bishops, a step which Archbishop Fleming favoured. But even then King Charles could not recognize his real friends, and the alliance was broken off. The remainder of the archbishop’s life was much disturbed by religious persecution carried on by the government of Cromwell. He died in 1655, and the severity of the persecution may be judged from the fact that until 1669 no successor could be appointed. The diocese was administered by vicars until the nomination of Peter Talbot in 1669.

JAMES MACCAFFEY.

Fletcher, JOHN, missionary and theologian, b. at Ormskirk, England, of an old Catholic family; educated at Douai and afterwards at St. Gregory’s, Paris; d. about 1848. After ordination to the priesthood he became a professor at Douai, and was named by his great-uncle, Rev. William Wilkinson, who had been president. When the French Revolution broke out he was taken prisoner with the other collegians and spent many months in captivity at Arras and Dourlens. After they were released in 1795 he returned to England and acted as priest first at Hexham, then at Blackburn, and finally at Weston Underwood (1827), the seat of the Throckmortons. Having acted for a time as chaplain to the dowager Lady Throckmorton he took charge of Leamington Mission (1839-1844). He removed thence to Northampton in 1844 and resigned, owing to his great age, in 1846, after which his name does not appear in the “Catholic Directory”, though his death is not therein recorded. Dr. Fletcher’s works are: “Sermons on various Religious and Moral Subjects for all the Sundays after Pentecost” (2 vols., 1812, 1821); the introduction is “An Essay on the Spirit of Controversy”, also published separately; “The Catholic’s Prayer Book” with a commentary and notes (1817, 1829); “Thoughts on the Rights and Prerogatives of Church and State, with some observations upon the question of Catholic Securities” (1823); “A Comparative View of the Grounds of the Catholic and Protestant Churches” (1826); “The Catholic’s Prayer Book,” compiled from a MS., drawn up in 1813 by Rev. Joseph Berington (q. v.); “The Prudent Christian; or Con-
siderations on the Importance and Happiness of Attending to the Care of Our Salvation" (1834); "The Guide to the True Religion" (1836); "Transcendent Considerations on the Letters of St. Fénélon" (1839); "On the Use of the Bible"; "The Letters of Fénélon, with illustrations" (1837); "A Short Historical View of the Rise, Progress and Establishment of the Anglican Church" (1843). He translated Blessed Edmund Campion's "Decem Rationes" (1827); de Maistre's "Letters on the Spanish Inquisition" (1848); and Fénélon's "Reflections for Every Day of the Month" (1844). He also brought out an edition of "My Motives for Renouncing the Protestant Religion" by Antonio de Dominis (1828).

Fleete, William, an Augustinian hermit friar, a contemporary and great friend of St. Catherine of Siena; the exact place and date of his birth are unknown and those of his death are disputed. He was an English mystic, and lived in the latter half of the fourteenth century; educated at Cambridge, he afterwards joined the Austin Friars in England, but desiring a stricter life than they were living, and hearing that there were two monasteries, one of which had returned to the primitive discipline near Siena, he set out for Italy. On reaching the forest of Lucceto near Siena, in which one of these monasteries stood, he found the place, which abounded in caves, so suited to the contemplative life, that with the consent of his superiors he joined this community. Henceforth he spent his days in study and contemplation in one of these caves, and returned to the monastery at night to sleep. He was called the "Bacheller of the Wood"; here he became acquainted with St. Catherine, who occasionally visited him at Lucceto and went to confession to him. He had so great a love for solitude, that he declined to leave it when invited by Pope Urban VI to go to Rome, to assist him with his counsel at the time of the papal schism, then disturbing the Church. He wrote a long panegyric on St. Catherine at her death, which, with another of his works, is preserved in the public library at Siena. For at least nineteen years he led a cloistered life in this cave; and is said by Torellus to have returned to England immediately after St. Catherine's death in 1383, and after introducing the reform of Lucceto, to have died the same year. Others say he died in 1383, but there is no mention of his death in the book of the dead at Lucceto, and the exact date of it is uncertain. He was considered a saint by his contemporaries. None of his works have been printed; they consist of six MSS.: (1) an epistle to the provincial of his order; (2) a letter to the doctors of the province; (3) an epistle to the brethren in general; (4) predictions to the English of calamities coming upon England; (5) a treatise against heresy, which Heresy would lose the Catholics who believe in the true faith; (6) divers epistles; (7) a treatise on remedies against temptation. A fifteen century MS. of this last is now in the University Library at Cambridge, to which it was presented by George I.

FRANCESCA M. STEELE.

"Fleuriot, Zenaide-Marie-Anne, a French novelist, b. at Saint-Brieuc, 12 September, 1829; d. at Paris, 18 December, 1890. She published her first novel, "Les souvenirs d'une douairière", in 1859, and its success led her to adopt the literary profession. Either under her real name or the pseudonym of "Anna Edianez de Saint-B." she published a large number of novels, most of which were intended for women and girls. She was a constant contributor to "Le Journal de la jeunesse" and "La Bibliothèque rose", whose aim is to provide young people with unobjectionable reading. Her novels are written in a simple, easy style, which leaves the reader's whole attention free to occupy itself with the interest of the story; they are Catholic in the true sense of the word, for they not only contain no unorthodox opinion, but present none of those evil suggestions with which so many writers have won popularity and lucre. The most striking decisive work especially mentioned is "La vie en famille" (Paris, 1869); "Le theatre chez soi" (Paris, 1873); "Mon sieur Nostradamus" (Paris, 1875); "Sans beaute" (Paris, 1889).

LABOUME, Supplément au Dictionnaire uniuerse du XIXe siècle.

PIERRE MARIQUE.

Fleury (more completely Fleury-Saint-Benoît), ABBEY, one of the oldest and most celebrated Benedictine abbeys of Western Europe. Its modern name is Saint-Benoît-sur-Loire, applicable both to the monastery and the township with which the abbey has always been associated. Situated on the right banks of the Loire, the little town is of easy access from Orleans. Its railway station, St-Benoît-St-Aignan (Loiret) is a little over a mile from the old Floriacum. Long before reaching the station, the traveller is struck by the imposing mass of a monastic church looming up solitary in the landscape. The church of Floriacum has survived the sated habitatation of abbot and monks. The list of the abbots of Fleury contains eighty-nine names, a noble record for one single abbey. From Merovingian names like St. Mommolus, and Carolingian names like St. Abbo, we come down to those that arouse different feelings, like Odet de Coligny (Cardinal de Châtillon), Armand du Plessis (Cardinal de Richelieu). The last twenty-two abbots held the abbey in commendam. The list closes with Georges-Louis Phélypeaux, Archbishop of Bourges, in 1789. Tradition, accepted by Mabillon, attributes the foundation of Fleury to Leo the Great, about 440. Before the days of the monks there was a Gallo-Roman villa called Floriacum, in the Velleis aurea. This was the spot selected by the Abbot of St-Aignan for his foundation, and from the very first Fleury seems to have known the Benedictine rule. Rigomarus was its first abbot.

Church building must have made busy men of many abbots of Fleury. From the very start the abbey boasted of two churches, one in honour of St. Peter and the other in honour of the Blessed Virgin. This latter became the great basilica that survived every storm. In 1022 Abbot Gauzin started the erection of a gigantic feudal tower, intending it to be one day the west front of the abbey church. His bold plan became a reality, and in 1218 the edifice was completed. It is a fine specimen of the romanesque style, and the tower of Abbot Gauzin, resting on fifty columns, forms a unique porch. The church is about three hundred feet long and one hundred and forty feet wide at the transepts. The crypt alone would repay an artist's journey. The choir of the church contains the tomb of a French monarch, Philip I, buried there in 1108. But the boast of Fleury is the relics of St. Benedict, the father of Western monasticism. Mommolus, the second Abbot of Fleury, is said to have effected their transfer from Monte Cassino when that abbey fell into decay after the ravages of the Lombards. Nothing is more certain than the belief of western Europe in the presence of these precious relics at Fleury. To them more than to its flourishing schools Fleury owed its wealth and fame, and to-day French pieties surround them with no less honour than when kings came thither to pray. The monks of Monte Cassino impugn the claims of Fleury, but without ever showing any relics to make good their contention that they possess...
the body of the founder. No doubt there is much fabulous matter in the Fleury accounts of the famous transfer, but we must remember they were written at the time when even good causes were more effectually defended by introducing the supernatural than by the most obvious natural explanations.

ANSCAR VONIER.

Fleury, André-Hercule, b. at Lodève, 26 June, 1653; d. at Paris, 29 January, 1743. He was a protégé of Cardinal de Bonsi and became chaplain to Maria Theresa in 1679, and to Louis XIV in 1693. He was appointed Bishop of Fréjus in 1698, but resigned the see in 1715, when he received the Abbey of Tournus and was appointed tutor to the young Louis XV. Naturally cold and imperturbable, he remained in the background until Louis XV attained his majority in 1723, when there was the instance of Fleury that the Duc de Bourbon was made prime minister, and quarrelling with the duke, Fleury pretended to retire to Lyon. Louis XV, however, who admired and loved his tutor, sent the duke into exile, and entrusted the government to Fleury. True to his habits of discretion, and accustomed, as Duclos says, "to bridle the envious", he never assumed the title of prime minister.

He was made cardinal in September, 1724, and until his death remained the guiding spirit in French politics.

Comparing the three cardinals, d'Argenson said: "Richelieu bled France, Marasini purged it, and Fleury put it on a diet". He alluded in this bartering way to the cardinal's policy of economy, which, among other drawbacks, retarded the development of the French military marine at the very period when the mercantile marine, thanks to private enterprise, was making considerable progress. In spite of this, however, Fleury had the qualities of a great minister. He was the first to foresee that France would not always be at enmity with the Hapsburgs. In connection with the succession and the Duchy of Lorraine, he availed himself of the able advice of the diplomats Chauvelin, when it became necessary to play a cautious game with Austria. But, as Vandal says, the policy of Chauvelin was that of the past. Fleury, in redoubling his efforts to bring about as quickly as possible the union between the King of France and the emperor, was the precursor of Choiseul, Vergennes, and Talleyrand. He was accused of timidity when at the outbreak of the War of the Austrian Succession he wrote a letter to General Königseck, in which he seemed to apologize for this war. But, in truth, Fleury was simply anticipating the policy of the renversement des alliances (breaking up of the alliances), which began in 1756, and by which France and Austria was to be more in conformity with the Catholic traditions of both countries. The opinion of historians like Vandal and Masson with regard to this renversement des alliances, so long the object of criticism, tends to justify Cardinal Fleury.

During the period of Fleury's power Jansenism was gaining ground among the masses as a superstitious sect, as is evidenced by the miracles of the deacon Périguer, while among the upper classes it took shape as a political faction.

Fleury was the minister who had to contend with a Jansenist opposition in the Parliament of Paris. He reserved to royal authority all matters relating to the Jansenists, one consequence of which was a "strike" on the part of the magistrates and lawyers, which Fleury repressed by certain measures of severity. He became a member of the Academy in 1717 and was the first to propose sending a scientific expedition to the Far North and to Peru to measure the degrees of the meridian.

GEORGES Goyau.
to the Princes de Conti, whom Louis XIV wished to be educated with the Dauphin. During the succeeding period, he published his first important works. Later appeared two books, containing the fruits of his legal studies: "Histoire du droit françois" (Paris, 1674) and "Institution au droit ecclésiastique" (Paris, 1677). The latter of these works was at first issued separately, but subsequently (1687) appeared with the author's name. In these writings Fleury shows himself to be an outspoken Gallican. That he was a pronounced follower of Bossuet in this regard appears also from his "Discours sur les libertés de l'Eglise gallicane", written in 1690. His position as teacher for him to the study of pedagogics, and as executor of the claims of Bossuet on his "Traité du choix et de la méthode des études", which was published at Paris in 1686. For the instruction of his pupil and as a practical application of the principles expounded in his treatise, he wrote a series of three works: "Les mœurs des israélites" (Paris, 1681), "Les mœurs des chrétiens" (1682), and the "Grand catéchisme historique" (1683). Meanwhile he maintained his close relations with Bossuet, who was ever a zealous patron of the able and industrious teacher, and translated into Latin (1678) his "Exposition de la foi catholique".

By completing the education of the Princes de Conti, Fleury was (1680) appointed tutor to the Comte de Vermandois, the legitimized son of Louis XIV and Louise de La Vallière. On the death of the young count in 1684, Louis XIV, in token of his appreciation of Fleury's tutorial services, appointed him Abbot of Loc-Dieu in the Diocese of Rhodes, and Fleury devoted himself zealously to the duties of his pastoral charge. He preached frequently in the Diocese of Meaux, and accompanied the Abbé Fénelon on his missionary journeys in Saintonge and Poitou, after the abrogation of the Edict of Nantes (1685), both labouring diligently and with great success for the conversion of the Huguenots. At the same time Fleury continued his literary pursuits, and in 1685 he published a "Life of Marguerite d'Arbouze, Abbess and reformer of the Abbey of Val-de-Grâce", and in 1688 the treatise entitled "Devoirs des maîtres et des domestiques". Shortly afterwards he was recalled to the court, on Fénelon's recommendation, was appointed tutor (sous-précepteur) to the grandsons of Louis XIV, the young Dukes of Burgundy, of Anjou, and of Berry. He continued at this post for nearly sixteen years, and lived at the brilliant court the same modest, retired life, devoted to his duties as teacher and counsellor. During this period and in later years, he was given mainly to the composition of his "Histoire ecclésiastique", the first volume of which appeared in 1691. In this great work, the principal literary fruit of the remaining years of his life, the author discloses once more his leanings toward Gallicanism.

In recognition of his literary services, Fleury was chosen in 1696 to fill La Bruyère's seat in the Academy, was offered the Bishopric of Montpellier, which however, he refused. When in 1697, on the appearance of the "Maximes des saints", a Quietistic controversy broke out between Bossuet and Fénelon, Fleury, as the protecté of Fénelon, was in danger of sharing his patron's disfavour at court. Bossuet, however, proved a true protector, and Fleury was rescued from Fénelon's fate, and allowed to retain his place as tutor to the princes. In 1706, as a reward for his services, the king appointed Fleury prior of Notre-Dame d'Argenteuil, near Paris. On receiving any days of rest, Fleury resigned forthwith his Abbacy of Loc-Dieu, as he was opposed to the cumulation of ecclesiastical benefices, and devoted himself to the continuation of his "Histoire ecclésiastique". On a subsequent occasion, he was again summoned to court to fill an important and responsible position. On the death of Louis XIV, the regent, wishing to secure a trustworthy and learned cleric who held neither Jansenistic nor Molinistic views, and who might be trusted to represent Gallican principles, appointed Fleury as confessor to the young King Louis XV. Fleury continued to fill this office until 1722, but then resigned on the plea of old age, and until his death lived a life of the closest retirement in Paris.

Fleury was a rigorous, pious, universally respected pastor, a conscientious, devoted teacher, a talented and profound scholar and author. Most of his works have been recently reprinted; some have been translated into other languages and have secured a wide circle of readers. His comprehensive "Histoire ecclésiastique", of which he himself issued twenty volumes (Paris, 1691-1720), is among the most imposing and extensive of all. It extends from the Ascension of Christ to the year 1414. This work is at once instructive and edifying; its material is carefully and fully treated, but all critical examination is avoided. The facts are recorded in elegant and well-chosen language without rhetorical exaggerations, and although his judgments are tinged with Gallicanism (especially as regards the papacy), they are expressed moderately and with restraint. Consequently Fleury's work offers a marked contrast to the histories of Noël Alexandre and Tillemont. His "Histoire" was received enthusiastically by the learned circles, three successive editions appeared, and was translated into German (Leipzig, 1752) and Latin (Augsburg, 1758). The Gallican views expressed in the work have been attacked by several historians, of whom the most notable are Honoratus a S. Maria (Mechlin, 1729), Baldwin de Housta (Mechlin, 1733), N. Lantausme (Avignon, 1736), Rossignol (Paris, 1802), Marchetti (Venice, 1794). The ex-Oratorian, John Claude Fabre, an extreme Gallican, issued a continuation of Fleury's work in sixteen volumes (Paris, 1722-36), bringing the history to the year 1595. This continuation, however, is neither in its narration nor its workmanship comparable with Fleury's achievement. Rondet added a further volume (XXXVII) which contains a table of contents (Paris, 1754); Alexander of St. John of the Cross, who, with the assistance of a brother Carmelite, had already translated Fleury's work into Latin, continued the history to the year 1765, in thirty-five volumes, and after his playwright's death another volume (extending to 1768) was added by Benno, a member of the same order. Father Alexander also translated Calmet's "Histoire de l'Ancien et du Nouveau Testament" into Latin, and published it in five volumes as an introduction to Fleury's work, so that the complete edition in Latin (Augsburg, 1775-98) consists of ninety-on volumes, with two index volumes.

Amongst Fleury's papers was found a sketch in manuscript of the ecclesiastical history from 1414 to 1517, and this sketch was inserted in the edition issued in 1840 at Paris. Several collections of Fleury's sermons and treatises have been issued since his death, e. g. his "Discours" (2 vols., Paris, 1752); "Traité du Droit public en France" (4 vols., Paris, 1769); "Opuscules de l'abbé Fleury", published by Rondet (5 vols., Nîmes, 1780); "Oeuvres de l'abbé Fleury", published by A. Martin (Paris, 1837). In conclusion, it should be noted that the "Abrégé de l'histoire ecclésiastique de Fleury", published at Berne in 1766, with an introduction by Frederick II of Prussia, has no connexion with Claude Fleury's "Histoire ecclésiastique"; it is a work undertaken at the suggestion of the above-mentioned monarch and is dominated throughout by a spirit hostile to Charles.
Flooding (or Frodoard), French historian and chronicler, b. at Epernay in 894; d. in 966. He was educated at Reims, where he became canon of the cathedral and keeper of the episcopal archives. He visited Rome during the pontificate of Leo VII (930-955) and was shown much favour by the pope. In gratitude he wrote a long poem in Latin hexameters, celebrating the deeds of Christ and of the first saints in Palestine and Antioch, adding a versified narration of the history of the popes. The whole work, which is valued rather than historical, was dedicated to Archbishop Robert of Trier. When his patron died, Archbishop Arnold of Reims, was deposed through the intrigues of the powerful Héribert, Count of Vermandois. Flooding remained loyal to him, and after Arnold's re-establishment became his trusted counsellor. In 932 he retired to a monastery, probably that of St. Basil, and became abbot. This dignity he laid down when seventy years of age.

At the instance of Archbishop Robert Flooding undertook to write a history of the Church of Reims, "Historia Remensis ecclesiae", for which he used the episcopal archives as well as the writings of Bishop Liutprand of Cremona. To meet the exception of Pertz that it was a mere account of the completeness of the material as well as the truthfulness of the narration. Flooding's other great work is the "Annales", which covers the period from 919 to 966. With the most painstaking exactness he narrates in plain, simple language all the events that happened during these years; and thus the work is of the utmost importance for a knowledge of the history of France, Lorraine, and the East Frankonian realm. With this chronicle he was occupied almost to the day of his death. An addition was made subsequently to cover the period from 979 to 978. The "Historia Remensis ecclesiae" was first edited by Simond (Paris, 1611); the best edition is that of Hellebrand and Waitz in the "Monumenta Germaniae historica: Scriptores", XIII, 405-599 (Hanover, 1881). The "Annales" were edited by Pertz in the same work, III, 363-408 (Hanover, 1839). The poem was published in Mabillon's "Acta Sanctorum", vol. XIII (Paris, 1689-1701). Flooding's complete works were published with a French translation by the Academy of Reims (Reims, 1854-55, 3 vols.) and in Migne's Latin Patrology, CXXXIV, 1-886.

ARTHUR F. J. REMY.

Flooding. See Deluge.

Florence, Abbey of, pleasantly situated on the right bank of the Sambre, about seven miles southwest of Namur, Belgium, owes its foundation to Godfrey, Count of Namur, and his wife Ermensendis. When St. Norbert, in the year after the foundation of his order, returned from Cologne with a rich treasure of relics for his new church at Frémond, Godfrey and Norbert went to meet him at their castle at Namur. So edified were they with what they had seen and heard, that they besought the saint to found a house at Floreffe. The charter by which they made over a church and house to Norbert and his order bears the date of 27 November, 1121, so that Floreffe is chronologically speaking, the second abbey of the order. Norbert laid the foundations of the church which was called Salve, and the abbey received the sweet name of Flos Maris, the Flower of Mary. The chronicles of Floreffe record the following event: While celebrating Mass at Floreffe, the saint saw a drop of Blood issuing from the Sacred Host on the altar. During his own eyes, he said to the deacon who assisted him: "Brother, do you see what I see?" "Yes, Father", answered the deacon, "I see a drop of Blood which gives out a brilliant light." The altar stone on which St. Norbert celebrated Mass is still preserved at Floreffe. St. Norbert placed Richard, one of his first disciples, at the head of the young community. The second abbot, Almaric, was commissioned by Pope Leo VIII (911-913) to Constantinople to spread religion in Palestine. Accompanied by a band of chosen religious from Floreffe, he journeyed to the Holy Land and founded the abbey of St. Habacuc (1137). Philip, Count of Namur, gave to Werc, the sixth abbot, a large piece of the Holy Cross which he had received from another Baldwin from the Cross of Constantinople. The chronicles record that twice, namely in 1204 and 1254, Blood flowed from this relic on the Feast of the Invention of the Holy Cross, the miracle being witnessed by the religious and by a large concourse of people. At the suppression of the Abbey of Floreffe, the relic was removed to a place of safety. When a few years ago, the Norbertine canons, who had been expelled from France, bought an old Augustinian Monastery at Bois-Seigneur-Isaac, this precious relic was restored to them, so that it is again in the custody of the sons of St. Norbert. All the abbots and convents founded by the Abbey of Floreffe have ceased to exist with the exception of the one founded by Louis the Great, which was not elected in 1791, was the fifty-fifth and last abbot of Floreffe. When the French Republican army overran Belgium, the religious were expelled, and the abbey with all its possessions was confiscated. Put up for sale in 1797, it was bought back for the abbey and once more restored to the Norbertines. A few of its religious returned to the abbey, but so great were the difficulties that after the death of the last religious the abbey became the property of the Bishop of Namur, and is now the seat of a flourishing seminary.

F. M. GUEDENZ.
the townfolk which paved the way for the establishment of the "Commune" was convened by Bishop Ranieri in 1105. About the same time they helped the Florentines in the conquest of Pisa (1135) and of the Salernian Lami (1136) asking no other reward than two porphyry columns for the great central doorway of the Baptistery (San Giovanni). By 1155 they had grown so powerful that they dared to close their gates against Frederick Barbarossa. The nobles (magistrates, grandi), forced to bear arms, were not slow in casting disturbing shadows in the town by their rival factions, and in hindering the work of the consuls who chanced to be displeasing to them. In this way there was endless friction and strife, and thus was laid the foundation of the two great parties that for centuries divided the city, Guelfs and Ghibellines. The former was democratic, republican, favorable to the papacy; the latter was the party of the old Florentine aristocracy and the emperor. In 1197 the Tuscan League (in imitation of the successful Lombard League) was formed at San Ginesio between the cities of Florence, Lucca, Siena, Prato, San Miniato, and the Bishop of Volterra, in presence of papal legates. The Ghibellines found themselves on that occasion not to acknowledge the authority of emperor, king, duke, or marquis without the express order of the Roman Church. At that time, in the interest of better administration, Florence abolished its old-time government by two consuls, and substituted for them twelve consuls. In 1207 a law was passed which made it obligatory for the podestà to be an outsider. The legislative power originally resided in the Statuto, a commission nominated by the consuls. After the introduction of a podestà it was exercised by the priors of the chief guilds (the arti magiores), seven in number (carpenters, wool-weavers, skinners, tailors, shoemakers, and farriers), to which were afterwards added fourteen lesser guilds (the judges, the notaries-public, doctors, money-changers, and others). To hold any public office it was necessary to belong to one or other of these guilds (arti); the nobles were therefore wont to enter their names on the books of the wool-weavers' guild. The management of all political affairs rested with the Signoria, and there was a kind of public parliament which met four times a year. Public business was attended to by the podestà and his deputies by turns.

GUelfS AND GHiBELLINEs.—A broken engagement between one of the Buondelmonti and a daughter of the house of Amidei, and the killing of the young man, were the causes of a fierce civil strife in 1215 and long after. Some sided with the Buondelmonti and the Amidei, and were Guelfs; others, with the Amidei and the Uberti, who were Ghibellines. Up to 1249 the two factions fought on sight; in that year Emperor Frederick II, who wished to have Florence on his side in his struggle with the papacy, sent the Uberti reinforcements of German mercenaries with whose aid they drove out the Buondelmonti and so many of the followers that the Guelph party was completely routed. The Ghibellines straightway established an aristocratic government but retained the podestà. The people were deprived of their rights, but they assembled on 20 October, 1250, in the church of Santa Croce and deposed the podestà and his Ghibelline administration. The government was then entrusted to two men, one a podestà, the other a Captain of the People (capitano del popolo), both of them outsiders; besides these the six precincts of the town nominated each two avanzi, or elders. For military purposes the town was divided into twenty gonfalonieri, or banner-wards, the country round about into sixty-six, the whole force being under the command of the gonfaloniere. The advantage of the new arrangement was quickly shown in the wars against neighbouring towns, once their allies, but which had fallen under Ghibelline control. In 1253 Pistoia was taken, and was forced to recall the exiled Guelph. The year 1254 has been called the year of victories. Siena, Volterra, and Pisa were then constrained to accept peace on favourable terms for the Florentine republic. In 1255 it was the turn of Arezzo; Pisa was once more defeated at Ponte Serchio, and forced to cede to Florence the Castello di Mutrone, overlooking the sea. Henceforward war was continuous between Pisa and Florence until the once powerful Pisa passed completely into the power of the Florentines. In 1260, however, Farinata degli Uberti, leader of the outlawed Ghibelines, with the help of Siena and of the German bands in King Manfred's pay, but mostly by deceiving the Florentines into believing that he would betray Siena into their hands, defeated (4 Sept.) the Florentine army of 30,000 horse and 3,000 foot in the battle of Montaperti. The Guelphs thereupon chose exiles for themselves and their families. The people's government was again overturned; the citizens had to swear allegiance to King Manfred, and German troops were called on to support the new order of things. The podestà, Guido Novello, was appointed by Manfred. After the latter's death the Guelphs again took courage, and Guido Novello was forced to make concessions. Finally, in 1266, the people rose, and barricaded the streets with locked chains; 'guido lost courage and on 4 November, accompanied by his cavalry, fled from the city. The popular government of the guild-masters and the patriciate (1193) continued, and the council of twelve consuls. In 1278 Nicholas also attempted to reconcile the two factions, and with some success. Peace was concluded (Cardinal Latini's peace) in 1280 and the exiles returned.

The government was then carried on by the podestà and the captain of the popolo, aided by fourteen buoni uomini, i.e. reputable citizens (eight Guelfs and six Ghibellines), afterwards replaced by three (later six) guild-masters, elected for two months, during which time they lived together in the palace of the Signoria. Nor could they protect the country from its foes.

There were, moreover, two councils, in which also the guild-masters took part. As a result of the assistance Florence gave Genoa in the war against Pisa (1284 and 1285) its territory was greatly extended. The victory at Campaldino (1289) over Ghibelline army of Siena put an end to Tuscany, and transferred it to Tuscany. In 1293 Pisa was obliged to grant Florence the right to trade within its walls. Fresh troubles, however, were in store for Florence. In 1293 the bur- gesses, exulting in their success, and acting under the influence of Giano della Bella, excluded the nobles from election to the office of guild-master. On the other hand, even the lesser guilds were allowed to retain a share in the government. To crown the insult a new magistrature, styled gonfaloniere di giustizia, was appointed to repress all abuses in the part of the nobles. The latter chose as their leader and defender Corso Donati; the burghers gathered about the Cerchi family, whose members had grown rich in trade, common people or artisan class sided with the Donati. In 1295 Giano della Bella was found guilty of violating his own ordinances, and was forced to leave Florence. The opposing factions united now with similar factions in Pistoia; that of the Cerchi with the Bianchi or Whites, that of the Donati with the Nerli or Blacks. To restore peace the guild-masters in 1300 exiled the leaders of both factions; among them went Dante Alighieri. The leaders of the Bianchi were, however, soon recalled. Thereupon the Neri appealed to Boniface VII, who persuaded Charles of Valois, brother of
Philip the Fair, to visit Florence as peacemaker. He at once recalled the Donati, or Neri, and set aside the remonstrances of the Ghibellini, who were once more expelled, Dante among them. The exiles negotiated successfully with Pisa, Bologna, and the chiefs of the Ghibelline party for assistance against the Neri; for a while they seemed to infuse new life into the Ghibelline cause. Before long, however, both parties split up into petty factions. In 1304 Benedetto da Maiano was sent over with a view to restore peace by causing the recall of the exiles. The city then became the wretched scene of incendiary attempts, murders, and robberies. In 1306 the Ghibellines were once more driven out, thanks to Corso Donati (Il Barone), who aimed at tyrannical power and was soon hated by rich and poor alike. Aided by his father-in-law, Ugolino della Fagiuola, leader of the Ghibellines in Romagna, he attempted to overthrow the Signoria, accusing it of corruption and venality. The people assembled and the guild-masters condemned him as a traitor; he shut himself up in his fortress-like house, but soon afterwards fell from his horse and was killed (13 Sept., 1308).

In 1310 Emperor Henry VII invaded Italy, and obliged successively the cities of Lombardy to recognize his imperial authority. The Florentine exiles (particularly Dante in his Latin work “De Monarchia”), also the Pisans, ardently denounced Florence to the emperor as the hotbed of rebellion in Italy. Great was, therefore, the terror in Florence. All the exiles, save Dante, were recalled; but in order to have an ally against the emperor, whose overlordship they refused to acknowledge, they did homage to Robert, King of Naples. On his way to Rome (1312) Henry found the gates of Florence closed against him. He besieged it in vain, while Florentine money fanned the flames of further revolt in all the cities of Lombardy. On his return journey in October he was again obliged to abandon his siege of Florence. At Pisa he laid Florence under the ban of the empire, deprived it of all rights and privileges, and permitted the counterfeiting of its coinage, the famous “florins of San Giovanni”. Pisa and Genoa were now eager for revenge on their commercial rival, when suddenly Henry died. The Pisans then elected as podestà the aforesaid exiled Florentine, Ugolino della Fagiuola, who became master of several other towns of which Lucca was then the most important (1314). In 1315 he defeated the Florentines near Montecatini, and already beheld Florence in his power and himself master of Tuscany. Unfortunately, at this juncture Lucca, under Castruccio Castracane, rebelled against him and drove him out, nor was he ever able to return. Castruccio, himself a Ghibelline, was a menace to the liberty of the Tuscan League, always Guelph in character. After a guerrilla warfare of three years, the army of the League under Raimondo Cardona was defeated at Alostapacio (1325), though the Florentines succeeded in making good their retreat. To guarantee the safety of the city, Florence offered Charles, Duke of Calabar, son of King Robert of Naples, the Signoria for ten years. He came, and greatly curtailed the privileges of the citizens. Happily for Florence he died in 1329. Thereupon, Florence, having regained its freedom, remodelled its government, and created five magistracies: (1) the guild-masters (priori di corporazioni), charged with the military operations; (2) the Gonfalonieri charged with the supreme administrative power; (3) the capitani di porta (Guelphs, common people); (4) a board of trade (Giudici di commercio); (5) consuls for the guilds (Consoli del commercio). Moreover, two councils or assemblies were established, one composed of three hundred Guelphs and the hundred commoners, the other of rich and poor under the presidency of the podestà. These councils were renewed every four months.

Later Medieval History.—It has always been a cause for wonder that amid so many political, economic, and military vicissitudes the prosperity of Florence never ceased to grow. Majestic churches arose amid the din of arms, and splendid palaces were built on all sides, though their owners must have been at all times uncertain of peaceful possession. At the date we have now reached forty-six towns and walled castelli, among them Pescia and Empoli, acknowledged the authority of Florence, and every year its mint turned out between 330,000 and 400,000 gold florins. Its coinage was the choicest and most reliable in Europe. The receipts of its exchequer were greater than those of the Kings of Sicily and Aragon. Merchants from Florence thronged the markets of the known world, and established banks wherever they went. In the city itself there were 110 churches. It openly aimed at sovereignty over all Tuscany. Arms and money won for it Pistoia (1329) and Arezzo (1330). It aided Venice (1338) against Mastino della Scala, a peril to Florence since he became master of Lucca. Knowing well the commercial greed of the Florentines, Mastino, to free himself from their opposition, offered to sell them Lucca. But the Pisans could not allow their ancient enemy to come so near; they took up arms, captured Lucca, and defeated the Florentines at La Ghiaccia (1341). Seeing now that their militia needed a skilful leader, the Florentines offered the command and a limited dictatorship, first to Jacopo Gabrielli d’Agabio, and when he proved unfit, to a French freebooter, Gauthier de Brienne (1342), who styled himself Duke of Athens on the strength of his descent from the dukes of Achaia. He played his part so skilfully that he was proclaimed Signore for life. In this way Florence imitated most other Italian cities, which in their weariness of popular government had by this time chosen princes to rule over them. Gauthier de Brienne, however, became despotic, favoured the nobility and the populace (always allies in Florence), and harassed the rich middle-class families (Aloviti, Medici, Rucellai, Ricci). The populace soon tired of him, and joined the peasantry (genti del contado), they raised the cry of “liberty” on 26 July, 1343. Gauthier’s soldiers were slain, and he was forced to leave the city. But the newly recovered liberty of Florence was dearly bought. Its subject

![Facade of the Cathedral (S. Maria del Fiore), Florence](image-url)
towns (Arezzo, Colle di Val d'Elsa, and San Gimignano) defend themselves independently; Pistoia allied with Pisa; Ottaviano de' Belforti was lord of Volterra. There was now an interval of peace, during which the greater guilds (known as the popolo grasso) strove gradually to restrict the rights of the lesser guilds, which in the end found themselves shut out from all public offices. Aided by the populace they threatened rebellion, and secured thus the abolition of the more onerous laws.

It was now the turn of the humblest classes, hitherto without political rights. Clearly they had reaped no advantage from their support of the small bourgeoisie, and so they resolved to resort to arms in their own behalf. This dispute about the revolution of Ciompi (1378), so called from the wool carders (ciompi), who under Michele di Lando seized the palace of the Signoria, and proclaimed their leader gonfaloniere di giustizia. They instituted three new guilds in which all artisans were to be inscribed, and which had equal civil rights with the other guilds. Much ado at first, but the interest of the popular tumult would end in a restoration of the Signoria, went over to the burgesses; after a sangarini conflict the Ciompi were put to flight. The rich burgesses were now more firmly established than before, which was a sure thing. The popolo grasso was in power, and the populace. This deep discontent was the source of the brilliant fortune of Giovanni de' Medici, son of Bicci, the richest of the Florentine bankers.

Apropos of this world-famous name it may be said here that the scope of this article permits only a brief reference to the great influence of the Medici Family not as an industrial, commercial, and financial centre. In the woolen industry it was easily foremost, particularly in the dyeing and final preparation of the manufactured goods. Its banking houses were famous throughout all Europe, and had for clients not only a multitude of private individuals, but also kings and popes. As financial agents of the latter, the mercadifores papa, the Florentines were to be found in all the chief national centres, and exercised no little influence. (See H. de B. Gibbins, "History of Commerce in Europe", London, 1892; Peruzi, "Storia dei commerci dei banchieri di Firenze il medio e il moderno" in "Nuova Antologia", 1870, XIII, 327-425.)

To take up the thread of our narrative, several events of interest had meanwhile occurred. In 1345, Emperor Charles III appeared before Florence. The city had become more cautious as it grew in wealth and did not, therefore, venture to resist him; it seemed wiser to purchase, with gold and a nominal submission, entailing as few obligations as possible, present security and actual independence. The citizens swore allegiance on the understanding that the emperor would ratify the laws made or to be made in Florence; that the members of the Signoria (elected by the citizens) should be ipso facto, vicars imperial; that neither the emperor himself nor any envoy of his should enter the town; that he should be content with the payment of 100,000 florins, in lieu of all past claims (regalia), and a promise of 400,000 florins annually during his life. The Florentines could hardly ask more complete autonomy. The populace, it is true, opposed even this nominal submission, but it was explained to them that their liberties were untouched.

In 1360 Volterra returned again to Florence, and war with Pisa followed. Pisa sought the help of Bernabò Visconti; after a protracted conflict won the decisive battle of San Savino (1364), and peace was declared. In 1375 the inquisitor, Fra Pietro d'Aquila, having exceeded his powers, the Signoria restricted his authority and conferred on the ordinary courts jurisdiction in all criminal cases of ecclesiastics; and as ambassador Guillaume de Noëlet, papal legate at Bologna, directed against Tuscany the band of mercenaries known as the "White Company" (Compagnia Bianca). Florence had hitherto been undauntingly faithful to the Holy See; it now began to raise against the pope, not only the cities of Romagna and the Marches, but even Rome itself. Eighty cities joined in the movement. Gregory XI thereupon placed Florence under interdict (1376), and allowed anyone to lay hands on the goods and persons of the Florentines. Nor was this a mere threat; the Florentine merchants in England were obliged to return to Florence, leaving their ships and cargo behind. Not even the intercession of St. Catharine of Siena, who went to Avignon for the purpose, could win pardon for the city. It was only in 1378, after the Western Schism had begun, that Urban VI absolved the Florentines. Even then the people compelled the offending magistrates to give ample satisfaction to the pope (Gherardì, La guerra de' Fornimenti con papa Gregorio XI, detta guerra degli otto santi, Florence, 1869). Florence now beheld with no little concern the political progress of Gian Galeazzo Visconti, Lord of Milan. By the acquisition of Pisa he had gained a coveted foothold in Tuscany. The Florentins sided with his numerous enemies, all of whom were anxious to prevent the formation of an Italian sole monarchy. Visconti was victorious, but he died in 1402, whereupon Florence at once laid siege to Pisa. In 1405 Giovanni Maria Visconti sold the town to the Florentines for 200,000 florins; but the Pisans continued to defend their city, and it was not until 1406 that Gino Capponi entered it with the signor Olgiati just as Pisa broke out soon after the surrender was repressed with great severity. The purchase (1421) of the port of Leghorn from Genoa for 100,000 gold florins gave Florence at last a free passage to the sea, nor did the citizens long delay to compete with Venice and Genoa in the trade with Asia and Africa (1421). In 1415 the new constitutions of the republic were promulgated. They were drawn up by the famous jurist Paolo di Castro and Bartolommeo Volpi of the University of Florence.

The Medici.—Naturally enough, these numerous wars were very costly, partly early in the fifteenth century the taxes increased greatly and with them the popular discontent, despite the strongly democratic character of the city government. Certain families now began to assume a certain prominence. Maso degli Albizzi was captain of the people for thirty years; after his death other families sought the leadership. Giovanni di Bicci de'Medici, to bring about a more equal distribution of taxation, proposed the catasto, i.e. an income-tax. This made him very popular and he was proclaimed Gonfaloniere for life (1421). His son Cosimo (d. 1464) inherited his immense riches and popularity, but his generosity brought him under suspicion of men of the greater guilds, and especially the Albizzi family, charged him with a desire to overthrow the government and he was exiled to Padua (1433). In 1434 the new Signoria, favourable to Cosimo, recalled him and gave him the proud title of Pater Patriae, i.e. father
of his country. In 1440 the Albizzi were outlawed, and Cosimo found his path clear. He scrupulously retained the old form of government, and refrained from all arbitrary measures. He was open-handed, built palaces and villas, also churches (San Marco, San Lorenzo); his costly and rare library was open to all; he patronized poets and encouraged the arts. With him began the golden age of the Medici. The republic now annexed the district of Casentino, taken from the Vincenzi at the Peace of Gavriana (1441). Cosimo’s son Piero was by no means equal to his father; nevertheless the happy ending of the war against Venice, the formal ally of Florence, shed glory on the Medici name. Piero died in 1469, and his sons Lorenzo and Giuliano were created “princes of the State” (principi dello Stato). In 1478 occurred the conspiracy of the Pazzi, to whose ambitious plans Lorenzo was an obstacle. A plot was formed to kill the two Medici brothers in the cathedral on Easter Sunday; Giuliano fell, but Lorenzo escaped. The authors of the plot, among them Francesco Salviati, Archbishop of Pisa, perished at the hands of the angry populace.Sixtus IV, whose nephew Girolamo Riario was also an accomplice, laid the town under an interdict because of the murder of Salviati and the Pazzi, and supported by the King of Naples threatened to go to war. Hostilities had actually begun, when Lorenzo set out for Naples and by his diplomatic tact induced King Alonso to make peace (1480); this obliged the pope also to come to terms. Meanwhile, despite his almost unlimited influence, Lorenzo refused to be anything else than the foremost citizen of Florence. With the exception of Siena, all Tuscany now acknowledged the rule of Florence and offered the spectacle of an extensive principality governed by a republic of free and equal citizens. Lorenzo died in 1492. (See the life of Lorenzo by Roscoe, Liverpool, 1795, and often reprinted; also the German life by A. von Reumont, Leipzig, 1874, and Eng. tr. by R. Harrison, London, 1876.)Lorenzo was succeeded by his son, Piero, but he did not long retain popularity, especially after he had ceded the fortresses of Pietra Santa and Pontremoli to Charles VIII of France, who entered Italy with the avowed purpose of overthrowing the Aragonese domination in Naples. The popular displeasure reached its acme when Piero pawned the towns of Pisa and Leghorn to the French king. He was driven out and the former republican government restored. Charles VIII entered Florence and endeavoured to have Piero murdered; but his boasts were soon exploded, and Capponi and a threatened uprising of the people forced the French king to quit Tuscany (1494). There were at that time three parties in Florence: the Medici, the papal party, known as the Palleschi (from the palle or little balls in the Medici coat of arms), the oligarchic republicans called the Arrabbiati (enraged), and the democrats or Piagnoni (weepers). The last had for chief the Dominican friar, Girolamo Savonarola of Ferrara, who hoped by their aid to restore in Florence piety and a Christian discipline of life, i.e. to establish in the city the Kingdom of Christ. In fact, Christ was publicly proclaimed Lord or Signore of Florence (Rez popului Florentini). For this extravagance and rationalistic elements in the city at this period see Guicciardini and Machiavelli. Savonarola’s impassioned speeches were the occasion of his excommunication, and in 1498 he was publicly burned. The Arrabbiati were then in power. In 1512 Cardinal Giovanni de’ Medici, at a great price, supported the Spanish captain Cardona and sent him to Florence to demand the return of the Medici. Fearing worse evils, the people consented, and Lorenzo II, son of Piero, was recalled as prince. Cardinal Giovanni, however, kept the reins of power in his own hands. As Leo X he sent thither Cardinal Giulio de’ Medici (the natural son of Giuliano), afterwards Clement VII. The family had now reached the acme of its power and prestige. The sack of Rome (1527) and the misfortunes of Clement VII caused a third exile of the Medici. Ippolito and Alessandro, cousins of the pope, were driven out.In the peace concluded between Emperor Charles V and Clement VII it was agreed that the Medici rule should be restored in Florence. The citizens, however, would not listen to this, and prepared for resistance. Their army was defeated at Gavirana (1530) through the treachery of their general, Malatesta Baglioni. A treaty was then made with the emperor. Florence paid a heavy war indemnity and recalled the exiles, and the pope granted a free amnesty. On 5 July, 1531, Alessandro de’ Medici returned and took the title of Duke, promising allegiance to the emperor. Clement VII dictated a new constitution, in which among other things the distinction between the greater and the lesser guilds was removed. Alessandro was a man of dissolute habits, and was stabbed to death by a distant relative, Lorenzino (1536), no better, but more clever, than Alessandro. The murderer fled at once from Florence. The party of Alessandro now offered the ducal office to Cosimo de’ Medici, son of Giovanni delle Bande Nere. He avenged the death of Alessan-
see canonised (Sieveking, Gesch. der platon. Akademie zu Florenz, Göttingen, 1812), and of an equally passionate zeal for the restoration of all things in Christ (see Savonarola). For its rôle in the restoration and development of classical literary taste, both Greek and Latin, see HUMANISM, and for its share in the great arts see RENAISSANCE.

INSTITUTIONS AND BUILDINGS.—Florence is the seat of a university, and possesses also an institute of social science, conservatory of music, a botanical garden, and an observatory (astronomical, meteorological, and seismological). Various scientific societies have their center in the Accademia della Crusca, whose famous Italian dictionary is one of the glories of the city. The city has four libraries containing many rare manuscripts. The Biblioteca Nazionale, one of the largest and most important in Europe, founded in 1861 by merger of the famous Magliabechiana and the former (Pitti) Biblioteca Palatina; the Laurentiana, founded in 1444 by Cosimo de' Medici; the Marucelliana, containing a collection of brasses; the Riccardiana. The State archives are the most important in Italy. Various art collections are: the Uffizi Gallery; the Pitti, in the old palace of the grand dukes; the archeological museum with its fine collection of bronzes and tapestries; the museum of the Seminary or cathedral; the Accademia delle belle arti (Academy of the Fine Arts); and the Casa Buonarroti (house of Michelangelo). The charitable institutions include: the Great Hospital (Arcispedale) of Santa Maria Nuova (1500 beds), founded in 1285 by Falco Portinari, the father of Dante's Beatrice; the Hospital of the Innocents, or Foundling Hospital (1421); a home for the blind; an insane asylum, and many private charities.

Among the numerous charitable works of Florence the most popularly known is that of the "Confraternita di Misericordia," founded in 1244, and attached to the church of that name by the canons of the Franciscan order. Its members belong to all classes of Florentine society, the highest as well as the lowest, and are bound to quit all work or occupation at the sound of the oratory bell, and hasten to any scene of accident, violent illness, sudden death, and the like. The costume of the friars is that of a rove black robe and girdle, with a hood that completely covers the head except two loopholes for the eyes. Thus attired, a little group may frequently be seen hastening through the streets of Florence, bearing on their shoulders the sick or the dead to the specific institution that is to care for them. "La misericordia di Firenze" in "Le Correspondant," 1884, 805-26.

The chief industries are the manufacture of majolica ware, the copying of art works and their sale, also the manufacture of felt and straw hats.

The more noted of the public squares of Florence are the Piazza della Signoria (Palazzo Vecchio, Loggia dei Lanzi, and the historic fountain by Ammannati); the Piazza del Duomo; the Piazza di Santa Croce, with its monument to Dante; the Piazza di Santa Maria Novella, adorned by two obelisks. Among the famous churches of Florence are the following: Santa Maria del Fiore, consecrated 1436 by Arnolfo del Cambio, consecrated in 1436 by Eugène IV, and called del Fiore (of the flower), either in reference to the name of the city or to the municipal arms, a red lily on a white ground. It is about 140 yards long, and badly proportioned. The admirable Campanile was begun by Giotto, but fin- ished by his son in law, Gaddi (1360). The main dome is by Brunelleschi (1420) and furnished inspiration to Michelangelo for the dome of St. Peter's. The façade was not completed until 1887; the bronze doors are also a work of recent date. The Baptistery of San Giovanni dates from the seventh century; it was remodelled in 1100, again in the fifteenth century, and is octagonal in form. San Giovanni was the old cathedral of Florence, around which in Lombard times (seventh and eighth centuries) the city grew up. Some have maintained that it rises on the site of an ancient temple of Mars. Dante mentions it twice with veneration in the Paradiso (xv, 136-37; xvi, 25-27). The three massive bronze doors of the Baptistry are unparalleled in the world. Among them is the work of Andrea Pisano (1330), the remaining two are the masterpieces of Lorenzo Ghiberti (1403-47), and were declared by Michelangelo to fit to serve as the gates of paradise. Santa Croce (Franciscana) is a Gothic church (1294-1442), with frescoes by Giotto and his students. It is a kind of natural history of Florence, and contains monuments to many illustrious Italians. In the cloister stands the chapel of the Pazzi family, the work of Brunelleschi, with many rich friezes by della Robbia. (Ozanam, "Sainte Croix de Florence" in "Poètes franciscains italiens," Paris, 1852, 273-80). Santa Maria Novella, the Dominican counterpart of Santa Croce, begun in 1278 by Fra Jacopo Talenti da Nipozzano, is also a Gothic edifice. The façade is by Leone Battista Alberti. The church contains frescoes by Orcagna, Ghirlandaio, and Fra Lippo Lippi. In its Rucellai chapel is the famous Madonna of Cimabue. Or San Michele, a unique artistic monument, was consecrated for a convent in 1288, and remodelled in 1336. On the exterior walls are to be seen admirable statues of the patron saints of the various Florentine guilds, the work of Verrocchio, Donatello, Ghiberti, and others. San Lorenzo, dedicated in 383 under the holy bishop Zanobius by St. Ambrose, with a sermon yet preserved (P. L., XIV, 107), was altered to its present shape (1421-61) by Brunelleschi and Manetti at the instance of Cosimo de Medici. It contains in its sacristies (Nuova, Vecchia) the tombs of the Medici by Verrocchio, and more famous ones by Michelangelo. San Marco (1290), with its adjacent convent founded in 1324 by Fra Angelico, is the home also of Fra Bartolommeo and the other artists of Savonarola. Santissima Trinità contains frescoes by Ghirlandaio. Santa Maria del Carmine, contains the Brancacci Chapel, with frescoes by Masaccio, Masolino, and Filippino Lippi. Other monumental or historic churches are the Santissima Annunziata masterpiece of the Quattrocento, and the Renaissance church of Ognissanti (Franciscan).

Several Benedictine abbeys have had much to do with the ecclesiastical history of Florence. Among them are San MINIATO, on the Arno, about twenty-one miles from Florence, restored in the eleventh century, and the seventeenth century an abbey (Cappella, "Chiese d'Italia," Venice, 1862, XVII, 305-47; Rondoni, "Memorie storiche di San Miniato," Venice, 1877, p. 1145); La Badia di Santa Maria, founded in 977 (Galletti, Ragionamenti dell' origine e dei primi tempi della Badia Fiorentina, Rome, 1778); Santa Maria a Settine, founded in 889; Vinaugora, founded in 1039 by St. John Gualbert. All of these being within easy reach of the city, exercised strong religious influence, particularly in the long conflict between the Church and the Empire. Besides the public buildings already mentioned, we may note the Loggia del Bigallo, the Palazzo del Podestà (1258) now used as a museum, the Palazzo Strozzi, Palazzo Riccardi, Palazzo Rucellai, and several other public edifices of architectural and historic interest.

EPISCOPAL SUCCESSION.—St. Frontinus is said by local tradition to have been the first bishop and a disciple of St. Peter. In the Decian persecution St. Miniatus (St. Miniate) is said to have been one of the twenty-three who met the bath. It is to him that is dedicated the famous church of the same name on the hill overlooking the city. It has been suggested that Miniatus is but a form of Minias (Mena), the name of a sage who suffered at Alexandria. In 313 we find Bishop Felix mentioned as present that year at a Roman synod. About 400 we meet with the above-mentioned St. Zanobius. In the
THE CATHEDRAL OF FLORENCE
following centuries Florence sank into obscurity, and little is known of its civil or ecclesiastical life. With St. Reparata (fl. 679), the patron of the Duomo, begins the unbroken line of episcopal succession. Among the best known of its medieval bishops are Gerardo, bishop of Fabriano (1176–1209) and Nicholas (1199–1203), who was famous for his decrees and papal elections; Pietro of Pavia, whom another Florentine, San Pietro Aldobrandini (Petrus Iguene), convicted of simony (1062); Ranieri (1101), who preached that Antichrist had already come (Mansi, Suppl. Conc., II, 217); Arlengho, under whom was fought (1246) a pitched battle with the Ardinghelli; and Battista degli Alberti (1271), who roused all Florence, and even his clergy, against the German Emperor Henry VII; Angelo Acciaiuoli (1383), a zealous worker for the extinction of the Western Schism; Francesco Zabarella (1410), cardinal, canonist, and philosopher, prominent at the Council of Constance. When in 1453 the see became vacant, Pope Eugenius IV did it the honour to rule it in person. Other archbishops of Florence were Cardinal Giovanni Vitelleschi, captain of Eugene IV's army; the Dominican St. Antonino Forcellini, d. 1459; Cosimo de' Pazzi (1508), a learned humanist and philosopher; Angelo Politian, translator of Dante's Divine Comedy (1471–1781). In 1809 Napoleon, to the great dissatisfaction of the diocese, imposed on Florence its archbishop Monsignor d'Osmond, Bishop of Nancy. To Eugenio Ceccini (1874–88) we owe an (unfinished) "Storia del concilio ecumenico Vaticano" (Rome, 1875). The Council of Florence was one of the Society of the Pious Schools (Scuole Pie), was born at Savona, in 1852, and transferred (19 June, 1899) from Pontremoli to Florence.

Santa and Popes.—Florence is the mother of many saints. Besides those already mentioned, there are St. Maria Maddalena, St. Blaise, St. Donato, St. Rocco Bianchi, Bl. Antonio Baldinucci, St. Caterinne de' Ricci, St. Mary Magdalen de' Pazzi, and St. Philip Neri. The Florentine popes are: Leo X (1513–21), Clement VII (1523–34), Clement VIII (1592–1605), Leo XI (1605), Urban VIII (1623–44), and Clement XII (1730–40).

Since 1420 Florence has been an archdiocese; its suffragan sees are: Borgo San Sepolcro, Colle di Val d' Elsa, Fiesole, San Miniato, Modigliana, and the united Dioceses of Pistoia and Prato. The Archdiocese of Florence has 800 secular and 33 regular clergy; 475 parishes and 1900 churches, chapels, and oratories; numerous monasteries and nunneries, with over 400 canons and 80 convents (women). In 1907 the population of the archdiocese, almost exclusively Catholic, was 500,000.

The literature of this subject is so extensive that only a few titles can be here given. General bibliographies will be found in Chervatow, Topo-bild. (Paris, 1894), s. v., and P. Bocchi, Firenze e consorzi, manual bibliografo-biografico (Florence, 1893), 390. Ecclesiastical:—Cappelletti, Le chiese d'Italia (Venice, 1861), XVI, 407–12; Cerracini, Cronologia storica dei concili, ed assemblee di Firenze (Florence, 1716); Lami, Sacra Ecc. Florentiae Monumenta (Florence, 1738); Gori, Hagiographe Ecc. Florenti, (Florence, 1877); Ricchi, Notizie storiche delle chiese fiorentine (Florence, 1814). Of the Sigismondi, Le chiese di Firenze dal secondo secolo IV fino al secolo X (Florence, 1879), he gives a detailed account of the city from the fourteenth to the fifteenth centuries, and an account of the city from 1270 to 1500. The most important of the recent works are the contributions of the seventeenth-century documentary work of Ugoelli, Italia Sacra, III, 14 sq., and F. M. Fiorentini, Histoire pietiste origine (Utrecht, 1883), of which we have in English, Memorie storiche dell' antica basilica di San Giovanni di Firenze (Florence, 1888); Girolamo del Moro, Memorie storiche dell'Ambrosiana basilica di San Lorenzo (Florence, 1804, 1816, 17); Lamarmore, Memorie storiche dell'antica basilica di San Giusto di Firenze (Florence, 1813); Barnabè, Memorie storiche del santuario di San Marco in Firenze (Florence, 1887). For the hospitals and other charities and institutions see Faustini, Storia degli istituti beneficoli della citta di Firenze (Florence, 1825). For the ecclesiastical organisation see in Florence Cerracini, Catalogo generale de' bologni della scuola universitaria fiorentina (Florence, 1725); Iden, Fatti teologici (Florence, 1773); Schiappi, L'universita degli studi in Firenze (Florence, 1857).

Civic.—Florentine historiography is very rich, and may best be studied in special introductory works like Bazzani, Le Cronache d' Italia (Milan, 1884), also in Eng. tr., S. P. C. K.; cf. Mosti, Storia di Firenze e del suo contado (Florence, 1898), and for the still more celebrated Historia Fiorentina, libri VIII of Machiavello see the Fabbrini edition (Florence, 1873), and for a more recent and improved tr. in John's Students' Series (New York; 1888). Among the more modern comprehensive histories of Florence may be mentioned: Conti, Storia della repubblica fiorentina (3 ed., Florence, 1888); Villari, Storia di Firenze (3 ed., Turin, 1873); Storia delle origini dell'arte nelle città del Medio Evo (Florence, 1871; new ed. small quarto, 1900 seq.).

Vieillot, Histoire d'Firenze, les Medecins, les humanistes, les lettres, les arts (Paris, 1880). tr. (London, 1882); Kleinpaul, Florenz in Wort und Bild (Leipzig, 1888), also in Eng. tr., Notizie storiche di Firenze (1791); Oliphant, The Makers of Florence, Doni, Giotto, Sercorisanae, and their City (London, 1880); E. M. Clarke, Florence in the Time of Dante in Dublin Review (1879), LXXXV, 279. The writings of Ruskin (1819–1900) on Italian art abound with studies and impressions of the Florentine artists. Symonds, The Age of the Renaissance (London, 1882–2) deals at great length with the literary and political figures of Florentine of history in the fifteenth century, and is not unfrequently prejudiced, insular, and unduly harsh. The German writings of von Ranke have also done much to make better known the medieval influence and prestige of the great city by the Arno. U. Benigni.

COUNCIL OF FLORENCE, the Seventeenth Ecumenical Council, was, correctly speaking, the continuation of the Council of Pisa; and the Council of Florence, considered as an independent general council because of the pest, or, indeed, a continuation of the Council of Basle, which was convoked in 1431 by Martin V. In the end the last-named assembly became a revolutionary conciliabulum, and is to be judged variously, according as we consider the manner of its convocation, the history of its membership, the content of its decrees, and the circumstances of its career. Generally, however, it is rated as an ecclesiastical council until the decree of dissolution in 1437. After its transfer to Ferrara, the first session of the council was held 10 Jan., 1438. Eugene IV proclaimed it the regular continuation of the Council of Basle, and hence its ecumenical character is admitted by all.

The Council of Constance (1414–18) had seen the growth of a fatal theory, based on the writings of William Durandus (Guillaume Durant), John of Paris, Marsiglio of Padua, and William of Occam, i.e. the conciliar theory that proclaimed the superiority of the council over the pope. It was the outcome of much previous conflict and embitterment; was hastily voted in a time of angry confusion by an incompetent body; and, besides leading eventually to the deplorable articles of the "Declaratio Cleri Gallicani" (see GALICANISM), almost provoked at the time new schisms. Influenced by this theory, the members of the Council of Constance promulgated in the thirty-fifth general session (9 Oct., 1417) five decrees, the first being the famous decree known as "Frequens," according to which an ecumenical council should be held every ten years. In other words, the council was henceforth to be a permanent, indispensable institution, that is, a kind of religious parliament meeting at regular intervals, and including amongst its members the ambassadors of Catholic sovereigns; hence the ancient papal monarchy, elective but absolute, was to give way to a constitutional oligarchy.

While Martin V, naturally enough, refused to recognize these decrees, he was unable to make a move openly against a movement which he considered fatal. In accordance, therefore, with the decree "Frequens" he convoked an ecumenical council at Pavia for 1423, and later, yielding to popular opinion, which even many cardinals countenanced, summoned a new council at Basle to settle the difficulties raised by the anti-papal wars. A Bull of Martin V in 1426 against the president of the council Giuliano Cesarini, Cardinal of Sant' Angelo, whom the pope had sent to Germany to
preach a crusade against the Huns. Martin V died suddenly (20 Feb., 1431), before the Bull of convocation and the legate faculties reached Cesarini. However, Pope Eugene IV (Gabriele Condulmieri), confirmed the acts of his predecessor to the reservation that further events might cause him to revoke his decision. He referred probably to the reunion of the Greek Church with Rome, discussed between Martin V and the Byzantine emperor (John Palaeologus) but put off by reason of the pope's death. Eugene IV in the mean time, was sent as legat in the department, where he was destined to see accomplished in the Council of Ferrara-Florence. The Council of Basle had begun in a rather burlesque way. Canon Beaupère of Bessançon, who had been sent from Basle to Rome, gave the pope an unfavourable and exaggerated account of the meeting. Eugene IV thereupon dissolved the council before the close of 1431, and convoked it anew at Bologna for the summer of 1433, providing at the same time for the participation of the Greeks. Cesarini, however, had already opened the council at Basle, and now the Council recognized that the conciliar theory should be withdrawn. Yielding to the aggressive attitude of the Basle assembly, whose members proclaimed anew the conciliar theory, Eugene IV gradually modified his attitude towards them, and exhibited in general, throughout these painful dissensions, a very temperate and flexible temper.

Many reform-decrees were promulgated by the council, and, though never executed, contributed towards the final rupture. Ultimately, the unskilful negotiations of the council with the Greeks on the question of reunion moved Eugene IV to transfer it to Ferrara. The embassy sent from Basle to Constantinople (1435), Giovanni di Ragusa, Heinrich Heyen, and Simon Fréron, insisted obstinately on holding at Basle the council which was to promote the union of the two Churches, but in that matter the Byzantine Emperor refused to give way. With all the Greeks he wished the council to take place in some Italian city near the sea, preferably in Southern Italy. At Basle the majority insisted, despite the Greeks, that the council of reunion should be convoked at Avignon, but a minority sided with the Greeks and was by them recognised as the true council. Hereupon Eugene IV approved the action of the minority (29 May, 1437), and summoned the Greeks to Ferrara. He replied by dissolving it on 18 September. Wearyed of the obstinacy of the majority at Basle, Cardinal Cesarini and his adherents then quitted the city and went to Ferrara, whither Eugene IV, as stated above, had transferred the council by decree of 30 December, 1437.

The Ferrara Council opened on 8 January, 1438, under the presidency of Cardinal Niccolò Albergati, whom the pope had commissioned to represent him until he could appear in person. It had, of course, no other objects than those of Basle, i.e., reunion of the Churches and the reforms, and the restoration of peace between Christian peoples. The first session of the council took place 10 January, 1438. It declared the Council of Basle transferred to Ferrara, and annulled in advance any and all future decrees of the Basle assembly. When Eugene IV heard that the Greeks were nearing the coast of Italy, he set off (24 January) for Ferrara, and three days later made his solemn entry into the city. The manner of voting was first discussed by the members of the council. Should it be, as at Constance, by nations (nationes), or by committees (commissiones)? It was finally decided to divide the members into three estates: (1) the cardinals, archbishops, and bishops; (2) the abbots and prelates; (3) the doctors and other members. In order that the vote of any estate might count, it was resolved that a majority of two-thirds should be required, and it was hoped that this provision would remove all possibility of the recurrence of the regrettable dissensions at Constance. At the second public session (15 February) these decrees were promulgated, and the pope communicated the members of the Basle assembly, which still continued at Basle, to appear at Ferrara, headed by Emperor John Palaeologus and Josaph, the Patriarch of Constantinople, and numbered about seven hundred. The solemn sessions of the council began on 9 April, 1438, and were held in the cathedral of Ferrara under the presidency of the pope. On the throne seat of the altarpiece, 14th century, the crowned throne of the Western Emperor (Sigismund of Luxemburg), who had died only a month previously; on the Epistle side was placed the throne of the Greek Emperor. Besides the emperor and his brother Demetrius, there were present, on the part of the Greeks, Joseph, the Patriarch of Constantinople; Antonio, the Metropolitan of Heraclea; Gregory Hamma, the Protoecycellus of Constantinople (the last two representing the Patriarch of Alexandria); Marcus Eugenius of Epheus; Isidore of Kiev (representing the Patriarch of Antioch); Dionysius, Bishop of Sardes and representing the Patriarch of Constantinople; Archbishop of Nicea; Balsamon, the chief chartophylax; Syropoulos, the chief ecclesiarch; and the Bishops of Monemvasia, Lacedemon, and Anchielo. In the discussions the Latins were represented principally by Cardinal Giuliano Cesarini and Cardinal Niccolò Albergati; Andrew, Archbishop of Rhodes; the Bishop of Forli; the Dominican John of Turrecremata; and Giovanni di Ragusa, provincial of Lombardy.

Preliminary discussions brought out the main points of difference between the Greeks and the Latins, viz., the Procession of the Holy Spirit, the azymes, purgatory, and the primacy. During these preliminaries the zeal and girdle binding the Great Empires were evident. Serious discussion began apropos of the doctrine of purgatory. Cesarini and Turrecremata were the chief Latin speakers, the latter in particular engaging in a violent discussion with Marcus Eugenius. Bessarion, speaking for the Greeks, made clear the divergency of opinion existing among the Greeks themselves on the question of purgatory. This stage of the discussion closed on 17 July, whereupon the council rested for a time, and the Greek Emperor took advantage of the respite to join eagerly in the pleasures of the chase with the Duke of Ferrara.

The new council assembled again before the end of the year, and again the chief decided (indeed, thenceforth the only) subject of discussion was the Filioque. The Greeks were represented by Bessarion, Marcus Eugenius, Isidore of Kiev, Gemistus Pletodon, Balsamon, and Xantopoule; on the Latin side were Cardinals Cesarini and Niccolò Albergati, the Archbishop of Rhodes, the Bishop of Forli, and Giovanni di Ragusa. In this and the following fourteen sessions, the Filioque was the sole subject of discussion. In the fifteenth session it became clear that the Greeks were unwilling to consent to the insertion of this expression in the Creed, although it was imperative for the good of the Church and as a defense against future heresies. Many Greeks began to despair of realizing the projected union and spoke of returning to Constantinople. To this the emperor would not listen; he still hoped for a reconciliation, and in the end succeeded in appeasing the heated spirits of his partisans. Eugene IV now announced his intention of transferring the council to Florence, in consequence of pecuniary straits and the outbreak of the pest at Ferrara. The papal Bull was read, in both Latin and Greek, by which the council was transferred to Florence (January, 1439).

The seventeenth session of the council (the first
at Florence) took place in the papal palace on 26 February. In nine consecutive sessions, the Filo-
que was the chief matter of discussion. In the last
session, July 14, 1439, Giovanni di Ragusa set forth clearly the
Latin doctrine in the following terms: “The Latin
Church recognizes but one principle and its law is the Holy
Spirit, namely, the Father. It is from the
Father that the Son holds his place in the ‘Proc-ecesis’ of the
Church. The Son is not the Holy Ghost, for the Holy
Ghost proceeds from the Father, but He proceeds also
from the Son.” In the last session, the theologians again
expounded the doctrine, after which the public
sessions were closed at the request of the
Greeks, as it seemed useless to prolong further the
thrusts of the active efforts of Isidore of Kiev, and, as the result of
the longer discussion, Eugene IV submitted four propositions
summing up the result of the previous discussion and
exposing the weaknesses of the attitude of the
Greeks. As the latter were loath to admit defeat,
Cardinal Bessarion, in a special meeting of the Greeks,
on 13 and 14 April, 1439, delivered his famous
discourse in favour of reunion, and was supported by
Georgius Scholarius. Both parties now met again,
in which to put an end to all equivocation, the
Latinus drew up and read a declaration of their faith in
which they stated that they did not admit two
principals, but one; that the Holy Spirit was the
power of the Father and the Son, and that the Holy
Ghost proceeds also from the Son. They admitted,
therefore, two hypostases, one action, one productive
power, and one product due to the substance and
the hypostases of the Father and the Son. The Greeks
met this statement with an equivocal counter-formu-
lae, whereupon Bessarion, Isidore of Kiev, and Doro-
theus of Mitylene, encouraged by the emperor, came
out strongly in favour of the ex filio.

The union of the Churches was at last really in
sight. When, therefore, at the request of the
emperor, Eugene IV promised the Greeks the military
and financial help of the Holy See as a consequence of
the projected reconciliation, the Greeks declared (3
June, 1439) that they recognized the procession of the
Holy Ghost, from the Father and the Son as from one
principle (episkopos) and from one essence (sarka). On
8 June, a final agreement was reached concerning this
detail. In teaching, faith and doctrine, the Greek
Church accepted the decrees of the Council of
Florence, and purgatory was also accepted by the Greeks.
As to the primacy, they declared that they would grant
the pope all the privileges he had before the schism.
An amicable agreement was also reached regarding the
form of consecration in the Mass (see Epiklesis).
Almost simultaneously with these measures the Patri-
arch of Constantinople died, 10 June; not, however,
before he had drawn up and signed a declaration in
which he admitted the Filioque, purgatory, and the
papal primacy. Nevertheless the union of the Churches was not yet an accomplished fact.
The Greek representatives insisted that their aforesaid
dispensations were only their personal opinions; and as they
stated that it was still necessary to obtain the
assent of the Greek Church in synod assembled, seem-
ingly insuperable difficulties threatened to annihilate
all that had so far been achieved. On 6 July, how-
ever, the famous decree of union (Laetentur Coeli), the
original copy of which is preserved in the Vatican
Library at Florence, was formally announced in the
capital of that city. The council was over, as far
as the Greeks were concerned, and they departed at
once. The Latin members remained to promote the
reunion with the other Eastern Churches—the Arm-
ientes and the Jacobines of Syris (1440), the
Mesopotamians, between the Tigris and the Euphrates
(1444), the Chaldeans or Nestorians, and the Maronites
of Cyprus (1445). This last was the concluding public
act of the Council of Florence, the proceedings of
which from 1443 onwards took place in the Lateran
palace at Rome.

The erudition of Bessarion and the energy of Isidore of Kiev were chiefly responsible for the reunion of the Churches as accomplished at Florence. The question now was to secure its adoption in the East. For this
purpose Isidore of Kiev was sent to Russia as papal legate and cardinal, but the Muscovite princes, jealous of their religious independence, refused to abide by the decrees of the Council. They even, as it were, took refuge in
prison, but afterwards escaped and took refuge in
Italy. Nor was any better headway made in the
Greek Empire. The emperor remained faithful, but
some of the Greek deputies, intimidated by the dis-
content prevailing amongst their own people, deserted their post and fled back into the
mass of schism. The new emperor, Constantine,
brother of John Paleologus, vainly endeavoured to
overcome the opposition of the Byzantine clergy and
to bring about the desired acceptance of the Floren-
tine ‘Decretum Unionis’ (Laetentur Coeli), but, be-
fore he could succeed in his mission, he fell (1453)
before the advancing hordes of Mohammed II.

One advantage, at least, resulted from the Council of Florence: it proclaimed before both Latins and Greeks that the Roman pontiff was the foremost ecclesi-
astical authority in Christendom; and Eugene IV was able to arrest the disunity which was
threatening the Western Church anew (see Basile, Council
of). This council was, therefore, witness to the
prompt rehabilitation of papal supremacy, and facil-
itated the return of men like Evæus Sylvius Piccolo-
mini, who in his youth had taken part in the Council
at Florence, but ended by recognizing its erroneous
attitude, and finally became pope under the name of
Pius II.

Florentes, Enrique, Spanish theologian, archeologist, and historian; b. at Valladolid, 14 February, 1701; d. at Madrid, 20 August, 1773. While still very young (1715) he joined the Order of St. Augustine, and thereafter he devoted his entire life to great works on history and antiquities, which are valuable contributions to the civil and ecclesiastical history of Spain. He was one of the most learned men produced by Spain, and on account of his learning enjoyed the respect and friendship of the most eminent men of his time. His best-known and most important work is "La España Sagrada, ó teatro geográfico-histórico de la Iglesia de España" (51 vols., Madrid, 1747-1775), a work following the same plan as the "Gallia christiana" of Saint-Marthé and the "Italia sacra" of Ugelli. It is a history of the Church in Spain, with biographies of bishops, and its value is enhanced by the insertion of ancient documents which are not to be found elsewhere. But the work was of such large scope that he did not live to finish his task, so that, of the fifty-one volumes of which the history consists, Florez wrote and published only a little more than half (twenty-nine volumes), the rest being written and published after his death by two other Augustinians, Fathers Risco and Fernández. This and other works of Father Florez are enriched by carefully made illustrations which serve still further to increase their value. In 1743 he published his historical work, the curious "Llave historial", a work similar to the French "Art de vérifier les dates", but having the advantage of priority over the latter, which did not appear until 1750. This book passed through several later editions in 1774, 1786, and 1790. It did not, however, add much to the literary fame of its author. Father Florez had pursued studies in numismatics and published "España carpetana; medallas de las colonias, municipios, y pueblos antiguos de España" (3 vols., Madrid, 1757), dealing with the history of Spain when under rule of the Romans. Other works of Florez were "Cursus Theologiae" (5 vols., Madrid, 1732-38), one of his earlier works, and "Memorias de las reynas Católicas" (2 vols., Madrid, 1761, 1770, and 1779), a genealogical history of the royal house of Leon and Castile.

Ventura Fuenters.

Florian, Jean-Pierre Claris, Chevalier de, a French poet and novelist, b. at the château of Florian (Gard), 6 March, 1755; d. at Sceaux, 13 Sept., 1794. An orphan at an early age, he was brought up by his grandfather and studied at St-Hippolyte. At ten years of age he was taken by one of his uncles who was related to Voltaire, to the château of Fenay. The influence of the philosopher was already beginning to be felt by the child when he was sent in 1768 to the Duke of Penthièvre, to act as a page. His sojourn at the château of Anet was very beneficial to him. Not only did the duke interest himself in his studies, and direct his readings, but he gave him good advice and made him promise that he would write extensively and with decency. Upon leaving the service of the Duke of Penthièvre, he entered the military school at Baume, obtained a commission in the dragons of Penthièvre, but soon abandoned the army for literature and began to write comedies. He was elected to the
Académie Française in 1788. Arrested at Soeaux in 1793, he owed his life to the death of Robespierre, but he outlived the terrors of his imprisonment only a short time. To modern readers, Florian is chiefly known as the author of pretty fables well suited as reading for the young, but his contemporaries praised him also for his poetical and pastoral novels. He was the Bouchier and the Watteau of the literature of the eighteenth century and it is remarkable that some of his graceful and delicate works were written in the midst of the Revolution. The list of his works is long. Worthy of mention are: two pastoral novels, "Galatée" and "Estelle"; two poetical novels, "Numa Pomπilius" and "Anacresse de Corday"; two comedies, the principal being "Les Deux Billets", "Le Bon Ménage", "Le Bon Père", "Jeanot et Colin"; two volumes of short stories, a few religious poems, like "Ruth" and "Tobie", etc. Florian was very fond of Spain and its literature, doubtless owing to the influence of his mother, Gilette de Salgue, who was a Castillan. He was loved by his contemporaries as well for his character as for his writings, and he was much praised for his charity.

**Florianopolis.** See Santa Catharina, Diocese of.

**Florians (Floriacenses).** The, an altogether independent order, and not, as some consider, a branch of the Cistercians; it was founded in 1189 by the Abbot Joachim of Flora (q. v.), by whom its constitutions were drawn up. Besides preserving a number of Cistercian customs, the founder added to the austerities of Citeaux. The Florians went barefoot; their habits were white and very coarse. Their Breviary differed in the distribution of Offices from that of Citeaux. The constitutions were approved by Pope Celestine III in 1196. The order spread rapidly, soon numbering as many as thirty-five monasteries, but it seems not to have extended beyond Italy. In 1470 the regular abbots were replaced by commendatory abbots, but the abuses of this regime hastened the decline of the order. In 1503 the Abbey of Flora and its affiliated monasteries were united to the Order of Citeaux. In 1515 the other monasteries united themselves to the Grande Chartreuse or to the Cistercians, and in 1570, after a century under the regime of commendatory abbots, not a single independent monastery remained, and the Order of Flora had ceased to exist. Under the Abbot of Flora were four monasteries of religious women, who followed the Florian rule.

**Florida.**—The Peninsula or Everglades State, the most southern in the American Union and second largest east of the Mississippi, lies between parallels 24° 38' and 31° N. latitude and meridians 79° 48' and 87° 38' W. longitude. Its name, commemorative of its discovery by Ponce de Leon at Easterday (Sp. Façua florida), 1513, or less probably derivative of the Indian Florida, was originally applied to territory extending northward to Virginia and westward indefinitely from the Atlantic. Florida is bounded north by Alabama and Georgia, east by the Atlantic, south by the Straits of Florida and Gulf of Mexico, and west by the Gulf and the Perdido River. In 68,880 sq. miles, 1440 being lake and river area. Politically, the State is divided into forty-six counties, geographically into the peninsular section, stretching 450 miles north and south, average width 95 miles, and the continental or northern portion, measuring 400 miles from Alabama to the Atlantic, mean width 65 miles. Its eastern coast-line, comparatively regular, is 470 miles long; it is paralleled almost its entire length by sand reefs which enclose an innumerable number of shallow lagoons and islands and islets known as the Florida Keys, which extend 200 miles in a south-western direction, terminating in the Tortugas. Over the Keys an extension of the Florida East Coast Railroad from the mainland to Key West is in course of construction. A system of deep-water ports are Fernandina, Jacksonville, and Key West. The Gulf coast-line, sinuous in form, measures 475 miles; the chief ports are Tampa, Apalachicola, and Pensacola.

**Physical Characteristics.**—The Everglades, often erroneously described as swamp-lands, form the characteristic feature of Southern Florida. They consist mainly of submerged saw-grass plains extending 130 by 70 miles, studded with numerous islands which produce a semi-tropical jungle-growth. The surface water, ordinarily about knee-deep, pure, potable, and abounding in fish, has a perceptible southbound current. A limestone substratum occasionally appears through a bed-bottom of vegetable mould. While subterranean sources of supply are contributory, the inundation chiefly results from the overflow of Lake Okeechobee (1200 sq. mile), whose rock-rimmed shores, 18 feet above sea-level, exceed by 10 feet the general elevation of the Everglades. North of the lake, extending through the counties of De Soto, Manatee, Osceola, and Brevard, lie vast tracts of prairie or savanna land with large swamp areas. This is the cattle region of Florida. Farther north, and embracing the counties of Polk, Lake, Orange, Sumter, Marion, and Alachua, is the fertile and picturesque Central Florida country of the central ridge with a general altitude of 200 feet, and elevations approaching 300 feet above sea-level. This is the lake region; Lakes Kissimmee, Tohopekaliga, Apopka, Harris, and George are chief amongst thousands. The extensive coastal plains, comprising the entire area of the Gulf and Atlantic seaboard counties, are low-lying sandy tracts, monotonously level and frequented by marshes which constitute the pine region of Florida. The northern portion of middle Florida, between the Suwannee and Apalachicola Rivers, while corresponding in general altitude and topography to the central ridge, differs widely from all other parts of the State. Red clay and loam of surpassing fertility replace the elsewhere prevalent thin sandy soils, while the featureless aspect of boundless pine plains and the recurrent sameness of undulating landscape are replaced by a rare exuberance and diversity of highland, plain, lake, and woodland scenery. Florida is an exceedingly well-watered and well-watered State. Pine, cypress, cedar, oak, magnolia, hickory, and sweet gum everywhere abound, while there are good supplies of rarer hardwoods and semi-tropical varieties. There are, including the East Coast Canal nearing completion, nearly 2000 miles of navigable waterways. The chief rivers flowing into the Atlantic are: St. Mary's, form-
ing part of the northern boundary; St. John's, 300 miles long, navigable for 200 miles; Indian River, properly a salt-water lagoon or sound, forming part of the East Coast Canal. The Caloosahatchee, Peace, Manatee, Withlacoochee, Suwannee, Ocklawaha, Apalachicola, Choctawhatchee, Yellow River, Escambia, and Perdido empty into the Gulf. The Kissimmee enters Lake Okeechobee. Characteristic of the State are its immense mineral springs: Silver, Wakulla, Chipola, Green Cove, and White Springs are the principal. The remarkably mild and agreeable climate of Florida makes it a favourite winter resort. The average annual range of temperature in Pensacola, by 70° at Key West; extremes of heat for cold are rarely perceived; the annual rainfall is about 60 inches.

Resources.—Agriculture.—Diversity of product, rather than abundance of yield, is noticeable. Besides semi-tropical productions, all varieties common in higher latitudes, except a few cereals, may be profitably cultivated in Florida. The soil, exclusive of the impertinently distributed fertile hammock lands, i.e. limited areas enriched by decomposed vegetable deposit, is excessively sandy and rather poor in quality, yet surprisingly responsive to cultivation. Even where not especially suited to the warm climate stimulates a rapid and vigorous plant growth. In 1905 31,233 farms were operated by whites, 14,231 by negroes, 20 by others; farm acreage, 4,768,874; 1,621,362 acres being improved. Value of farms, $51,464,124; operating expenses, $3,914,296; products, $40,131,814; field crops, $15,632,841; fruit crops, $5,423,390; live stock, $14,731,290. Crops in order of value: cotton, 282,078 acres, 80,485 bales, value $1,749,351; corn, 455,274 acres, 4,888,958 bushels, value $3,315,965; peanuts, sweet potatoes, tomatoes, beans, white potatoes, tobacco, celery, hay, watermelons, oats, lettuce, cabbage, cucumbers. The most valuable per acre crop is tobacco at $1,785.44 bearing trees, producing 2,961,195 boxes, value $3,353,609; followed in order of value by pineapples, grapefruit, strawberries, and peaches. Live stock included 36,131 horses, 19,331 mules, 69 asses, 1,010,454 cattle, 604,742 swine, 115,524 sheep, 33,150 goats.

Commerce and Industries.—The report for the last statistical year shows a remarkable increase in commercial and industrial activities; 1906 manufacturing establishments, capital $42,157,080, paid $18,048,599 to 52,345 wage-earners; value of manufactured products, $53,606,154. The leading industries and value of output are: cigarmaking about $18,000,000 (returns incomplete); lumber, $15,210,916; naval stores, $10,196,327; phosphate, $6,601,000. The value of exports (overland being about as much more, not included) was $26,655,599 for 1906, cigen: comprising one-third this amount, the remainder being almost equally divided between lumber, naval stores, and phosphate; the value of imports was $6,654,546. The fisheries of the west coast and sponge industry of the Keys are important, giving employment to 6000 men and yielding an annual product valued at $3,750,000. The total assessed valuation of taxable property in the State was $111,233,589; State debt, $26,507. On 1 March, 1908, eighteen railroads, with a total mileage of 4104, main track 2948, miles, were in operation.

History.—The landing of Ponce de Leon on the shores of Florida probably on the Sunday after Easter, 3 April, 1513, is the first positively authenticated incident of European occupation of the mainland of the United States. This expedition, which popular narrative invests with romantic glamour, was undertaken according to the royal patent of authorization "to discover and people the island of Bimini." Ponce named the land Florida in honour of the Easter festival, "to put up on the first inscription, was impressed with the hostile character of the natives returned after six months' exploration to Porto Rico. His attempt to establish a colony in 1521 was doomed to speedy failure. The voyages of Miruelo (1516), Cordova (1517), Pineda (1519), Ayllón (1520), and Gomez (1524) accomplished little beyond establishing the fact that Florida was not an island but part of a vast continent. The disastrous outcome of the expeditions of Pánfilo Narvaz (1527-28), of Hernando de Soto (1538-43), and of Tristan de Luna (1559-61) are well-known episodes in the early history of America. On the failure of Ribaut's French colony, founded at Port Royal (1562), René de Laudonnière planted the first settlement of Fort Caroline at the mouth of St. John's River (1564). Pedro Menendez de Avilés, the foremost naval commander of his day, learning that Ribaut had left France with reinforcements and supplies for the new colony, set out to intercept him and banish for ever French Huguenots from the land that belonged by right of discovery to Catholic Spain. Menendez never undertook an enterprise and failed. He reached the harbour of St. Augustine 28 August, 1565, naming it for the saint of the day. The founding of the oldest city in the United States merits a brief description. After devoting a week to reconnoitring, Menendez entered the harbour on 6 September of the same year. Three companies of the warlike Acosta under two captains, to select a site and begin a fort. On 8 September Menendez landed, and the booming of artillery and the blast of trumpets the standard of Castile and Leon was unfurled. The chaplain, Father Lopez de Mendoza, carrying a cross and followed by the troops, proceeded to meet the general who advanced to the cross, which he kissed on bended knee as did those of his staff. The solemn Mass of Our Lady's Nativity was then offered on a spot which was ever afterward called Nombre de Dios. On 20 Sept. Fort Caroline was taken by surprise, only women and children being spared. The merciless assault of 21 September was made by Menendez a few days subsequently is an indelible stain on a singularly noble record. The story, so assiduously copied by successive historiographers, that Avilés hanged some of his prisoners on trees and attached the inscription No por franceses sino por Lude- ranos, is an apocryphal embellishment (see Spanish Settlements, II, 178). Two years later De Gourgues retaliated by slaughtering the Spanish garrison at Fort Caroline.

The history of Florida during the first Spanish administration (1565-1793) centres round St. Augustine, which passed into the hands of English buccaneers under Drake in 1586 and again under Davis in 1655 plundered and sacked the town. Distrust and hostility usually prevailed between the Spanish colonies and their northern English neighbours. Governor Moore of South Carolina made an unsuccessful attempt in 1702 to capture St. Augustine, and in 1704 laid waste the country of the civilised Apalachee. Governor Ogletorpe of Georgia invaded Florida in 1740, besieging St. Augustine with a large force but was repulsed by the Spanish Governor Montesano and forced to retreat. Spain ceded Florida to England by the treaty of 1763, and in 1763 the English period great efforts were made to populate the country and develop its resources, but religion suffered irreparably. During the second Spanish occupation (1783-1821) some important military operations took place in West Florida under General Andrew Jackson in 1814 and 1815. In consequence of the Treaty of 1819 the United States took possession of Florida in 1821. In 1822 Florida became a territory of the United States, William P. Duval being appointed first governor. The following year Tallahassee was selected as the new capital. The refusal of the warlike Seminoles to repair to reservations resulted in the long, costly, and bloody war (1835-58), with an inscription, which came to an end in the capture by treachery of Osceola.
Florida was admitted to Statehood in 1845. The State seceded from the Union 10 January, 1861. In 1862 minor engagements between the Federal and Confederate forces took place, but the Confederate forces held Jacksonville, St. Augustine, and Fernandina, but the Confederates, under General Finegan, gained a decisive victory over the Union forces commanded by General Seymour at Olustee in 1864. In proportion to population Florida furnished more troops than any other Confederate State; they took an honourable part in the war. At the close of the war 10,000 Jacksonvillians, St. Augustines, and Fernandina, staked their distinguished reputation for steadfast endurance on the march and conspicuous gallantry on the battlefield. Florida gave to the higher ranks of the Confederate service three major-generals, Loring, Anderson, and Smith, and the Brigadier-Generals Brevard, Luckey, Finegan, Miller, Davis, Finley, Perry, and Shoup. The State was represented in the Confederate Cabinet by Stephen H. Mallory, Secretary of the Navy. If the war proved disastrous to Florida, the subsequent reconstruction added to disaster to war as citizens witnessed the control of public affairs pass into the hands of unscrupulous adventurers. The ordinance of secession was passed in October, 1865, and a State government organized in 1866. In 1868 a new constitution having been adopted and the Fourteenth Amendment ratified, Florida was readmitted into the Union, but it was not till 1877, when Floridians obtained political ascendency, that a healthy industrial growth set in. Agriculture, manufacturing, and commerce began to appear. The present constitution was adopted in 1886. The discovery of rich phosphate deposits in 1889 greatly improved economic conditions, and the constantly growing popularity of Eastern Florida—the American Riviera—as a winter resort contributes to the general prosperity.

Population.—The colony of 600 Spaniards founded by Menendez at St. Augustine in 1565 was the earliest permanent white settlement within the present limits of the United States. Relinquishing fruitless attempts to establish extensive settlements, Florida's Spanish conquerors early subordinated purposes of colonization to motives of military expediency, so that during an occupation of two hundred years the white population remained limited to a few stations of strategic importance. In 1648 the civilian population of St. Augustine was represented by 500 families, and in 1673, nearly a hundred years later, it was estimated at 2143. The military garrison and Spanish garrisons usually aggregated about 2000 men. In 1763, when Florida passed under English rule, the entire Spanish population of 5700 moved away. During the twenty years of English occupancy there was a steady influx of settlers, including numbers of loyalists from the revoluted colonies. At this period the so-called Micronan colony was founded at New Smyrna. During the second Spanish regime (1783–1821) immigration continued and, when Florida came under the United States flag in 1821, increased rapidly. The first U. S. census of 1830 gives the population at 34,730. For the thirty years following the official importance of the Census appears, the population in 1860 being 140,124. Since 1860 the increase per decade has averaged 40 per cent. In 1900 the population was 528,542, and in 1905, 614,845, nearly 18 times that of 1830, showing in five years an increase of 86,303, or 15 per cent. In 1900 whites numbered 297,812, coloured 230,730, average number of inhabitants per square mile 9.7. Following are detailed statistics of 1908 (State census): white, 348,923; coloured, 265,737; other races, 185; average per square mile, 11.3. Foreign born white, 22,409, comprising 3867 Cubans, 3120 Italians, 2589 West Indians, 2061 English, 1516 Spanish, 1299 Germans, 1264 Dutch, 1175 Irish, 1174 of other nationalities. The Cuban population is concentrated mainly at Tampa and Key West, Spanish and Italian at Tampa, West Indian of both races at Key West; the other nationalities are scattered broadly over the State. Nine counties exhibit a slightly decreased population attributed to a shifting of negroes from the farms. In twelve counties negroes outnumber whites. Leon county has the largest negro population among the whites, 14,880 out of 18,883 total, or 78.8 per cent; Leon county the smallest, 399 out of 3961 total, or 10 per cent. Leon has 25.8 inhabitants per square mile, Lee only 0.8; these figures are typical of racial distribution of population throughout the State. Cities (of 1000 population and upwards) area 28,000, Pensacola 21,505; and Key West 20,498.

Education.—The organization of the Florida Educational Society in 1831 was apparently the first attempt made to inaugurate a public school system. It resulted in the establishment of a free school at St. Augustine in 1832. During the ante-bellum period, owing to general lack of interest, inefficiency of educational legislation, and the prejudice that regarded public schools as "pauper" schools, but little was accomplished for the cause of popular education. In 1860 a few counties had organized public school systems, but for a considerable time the dismal process of reconstruction proved a serious blow to educational progress. The constitutional convention of 1865 gave the subject scant recognition, but that of 1868 adopted in its constitution liberal provisions, which were greatly amplified by the constitution adopted in 1885. This constitution established a permanent State school fund, and authorized the levy of a school tax of one mill, and a one-mill property tax, the interest of which was to be applied to support public schools. This fund (1908) exceeds one million dollars. Each county constitutes a school unit (but when advisable special school districts may be formed) and is authorized to levy a school tax of from 3 to 7 mills. Poll-tax proceeds also revert to the county school fund. The governor, secretary of state, attorney-general, State treasurer, and the State superintendent of public instruction form the State Board of Education. County boards consist of a county superintendent and three commissioners. There are twelve grades or years of instruction, eight months constituting a school year. The school age is six to twenty-one years. The constitution prescribes that "white and coloured children shall not be taught in the same school, but impartial provision shall be made for both". Statistics from latest biennial report (1908) of the Superintendent, show: total public schools, 2387; white 1720; coloured 667; enrolment: white 81,473, or 66 per cent of school population, coloured 48,992, or 52 per cent of school population; total expenditure for school year ending June, 1906, $1,020,674.95 for white schools, $200,752.27 for coloured schools. There are 2495 white and 794 coloured teachers. The report observes that while rapid progress has been accomplished along educational lines, a comparison with more advanced States shows that in Florida popular education of the masses is yet in its initial stage. One of the greatest hindrances to educational progress at the present time is the scarcity, not only of professionally trained teachers, but teachers of any kind. This scarcity is ascribed to the inadequate remuneration teachers receive.

The system of higher education fostered by the State was reorganised by legislative act of 1905. Several existing institutions were abolished, and in their stead were established a State college for men, and a coloured normal and industrial school in which co-education prevails. These higher educational institutions receive generous support. State appropriations in 1907 amounted to $600,000, while annual subventions from the federal bureau for Indian affairs aggregate $75,000. The University of the State of Florida, Gainsville, includes a normal department, also a United States Agricultural Experiment Station, under a separate managerial staff. The
university faculty numbers 15, Experiment Station staff 14, enrollment (1906) 103. The Florida Female College, Tallahassee, also includes a normal school, and has 22 professors and instructors and 240 students. The coloured normal school, Tallahassee, reports a faculty of 24 and an enrolment of 307. Institutions of higher education under denominational auspices: The John B. Stetson University (Baptist), Deland, incorporated 1885, and Rolflins College (denominational non-evangelical), Winter Park, incorporated 1885, possesses an endowed fund of $250,000, faculty 80, enrolment 148. The Southern College (Methodist), South Carolina, founded 1890, faculty 19, enrolment 216. The Columbia College (Baptist), Lake City, was established in 1907; its faculty numbers 12, enrolment 143. St. Leo College (Catholic), St. Leo, incorporated 1889, is conducted by the Benedictine Fathers, faculty 9, enrolment 78. The Presbyterian College of Florida, Eustis, opened in 1905 and has at present 9 professors and 63 students. There is a business college located at Tampa and two at Jacksonville.

Catholic institutions, beneath college grade but maintaining a high standard of instruction, are the Academy at St. Joseph, Tallahassee, and Loretto—the latter a boys' preparatory school—of the Holy Names at Tampa and Key West, and of the Sisters of Mercy at Pensacola. The number of children under Catholic care is 3704. Denominational institutions of high grade for the education of negroes are the Cookman Institute (Methodist), enrolment 487; the Edward Waters College (Methodist); and the Florida Baptist College, all situated at Jacksonville. In all the non-Catholic institutions co-education obtains.

RELIGION.—Early Missionary Efforts.—The permanent establishment of the Christian Religion in what is now the United States dates from the founding of St. Augustine in 1565. The previous fifty years exhibit a record of heroic though fruitless attempts to plant the cross on the soil of Florida. The solicitude manifested by the Spanish Crown for the conversion of the Indians was sincere and lasting, nor was there ever wanting a plentiful supply of zealous zealous missionaries to bring to the spiritual subjugation of the Western World the same steadfastness of purpose and unflinching courage that achieved within so short a space the mighty conquests of Spanish arms. Priests and missionaries accompanied Ponce (1521), Alavyón (1528), De Soto (1539), and De Leon. The Dominican Father Luis Cancer de Barbarosta, honoured as Apostle of Central America and Protomartyr of Florida, in attempting to establish a mission, was slain by hostile Indians near Tampa Bay. Having secured Spanish supremacy by ruthlessly crushing out the French, a colony, planting a permanent colony at St. Augustine in 1565, Menéndez y de Avilés devoted himself to the evangelization of the Indians. Of the twenty-eight priests who embarked with him from Spain, four only seem to have reached Florida, of whom Martín Francisco Lopez de Mendoza Grajales became first parish priest of St. Augustine, the first who received ordination in the United States. Beginning the arrival of regular missionaries, Menéndez appointed soldiers possessing the necessary qualifications as religious instructors to the Indians. The Jesuits were the first to enter the missionary field; three were sent by St. Francis Borgia in 1566 and ten in 1568; the few who remained in the United States by 1580 were recalled in 1572. In 1577 the Franciscans arrived. The good progress made by 1597 was severely checked by a general massacre of the missionaries instigated by a young chief chafing under merited reprimand. In 1609 several Indian chiefs sought baptism at St. Augustine, and the Florida missions entered the priest period of their existence, which lasted well past the middle of the century. In 1634 the Spanish crown of St. Helena, with mother-house at St. Augustine, contained 44 Indian missions, 35 missionaries, and 30,000 Catholic Indians. By 1674 evidences of decline began to appear. Bishop Calderon found his episcopal jurisdiction questioned by the friars, and although he visited the Chicago University in 1674, he found evidence of the universal ignorance of Christian doctrine. The arbitrary excesses of successive governors provoked resentment and rebellion amongst the Christian Indians, while the English foe on the northern border menaced their very existence. In 1704 the blow fell. Burning, plundering, and murder were the record of Moore's raid amongst the Apalachee missions. Efforts at re-establishment partially succeeded, there being in 1720 six towns of Catholic Indians and several missions, but owing to the ravages of persistent conflict between the Spanish and English colonies, these in 1763 had languished to four missions with 136 souls. The cession to England in 1763 resulted, not merely in the final extinction of the missions, but in the complete obliteration of Florida's ancient Catholicity.

Formation of Dioceses.—St. Augustine began its existence as a regularly constituted parish of the Diocese of Santiago de Cuba. Its church records, dating from 1570, are in manuscript and are in the present cathedral. The first recorded episcopal visitation was made by Bishop Cabeza de Alaminano in 1606. In 1674 Bishop Gabriel Díaz Varas Calderon visited the Florida portion of his diocese; he confided minor orders on seven candidates, and during an itinerancy of eight months, extending to the Carolinian confines, confirmed 13,152 persons, founded many mission churches, and liberally supplied others. The permanent residence of Bishops—Auxiliary Resino (1790-10), Tejada (1735-45), and Ponce y Carasco (1751-56) at St. Augustine, shows that despite the changing condition of the colony and missions at this period, the Church in Florida was not deprived of episcopal care and vigilance. Bishop Morell of Santiago, exiled from his see during the English occupation of Havana (1662-63), remained four months at St. Augustine, confirming 539 persons. When Florida in 1763 passed under English rule, freedom of worship was guaranteed by acts of the legislature, the religious officials resulted in the general exodus of Catholics, so that by 1765, the bi-centenary year of the Church in Florida, a few defaced church buildings presented the only evidence of its former Catholicity. Five hundred survivors of the New Smyrna colony of 1566 Catholics, natives of Florida, still preserved their faith in St. Augustine in 1776 and preserved the Faith alive through a trying epoch. In 1787 Florida became subject to the newly constituted See of St. Christopher of Havana, and the following year Bishop Cyril de Barcelona found the church at St. Augustine progressing satisfactorily under the care of Fathers Humett and O'Reilly, who had arrived on the reorganization of Florida to Spain in 1783.

In 1793 Pius VI established the Diocese of Louisiana and the Floridas, appointing the Right Rev. Luis Peñalver y Cardenas, with residence at New Orleans, as first bishop. After Bishop Peñalver's promotion to the Archdiocese of Guatemala in 1801, no successor having been appointed, Louisiana, which was annexed to the United States in 1803, came under the jurisdiction of Bishop Carroll of Baltimore in 1806, the bishops of Havana resuming authority over Florida until the appointment of the Rev. Michael Portier in 1813, to the see of their by then detached See. The Rev. Bishop Portier undertook single-handed the work of his vast vicariate, not having a single priest, until at his request Bishop England of Charleston sent Father Edward Mayne to St. Augustine in 1823. In 1850 the See of Savannah was created and included that part of
Florida which lies east of the Apalachicola River; this was constituted a separate vicariate in 1857 under the Right Rev. Augustin Verot in the vicar apostolic and erected into the Diocese of St. Augustine in 1870, with Bishop Verot, who had occupied the See of Savannah since 1861, as first bishop. Bishop Verot's unwearying activity and zeal in promoting religion and education soon bore fruit; schools were opened by the Christian Brothers, the Congregation of Notre Dame, and the Sisters of Notre Dame, but the break of the Civil War frustrated all hopes of success. In 1866 the Sisters of St. Joseph were introduced from France, and despite the most adverse conditions, they had several flourishing schools and academies in operation before many years. The era of progress in Florida was the period of Bishop Verot's few uneventful years under the administration of Bishop John Moore (1877-1901), whose successor, the Right Rev. William John Kenny, was consecrated by Cardinal Gibbons 18 May, 1902, in the historic cathedral of St. Augustine. The Catholic population of the State, including 1750 coloured Catholics, is (1908) about 30,000. The Diocese of St. Augustine, wholly included within the State, contains about 25,000 Catholics; there are 49 priests with 40 churches and several missions, and 2897 young people under the care of religious teaching orders. That portion of the State situated west of the Apalachicola River forms part of the Diocese of Mobile since 1852; the Episcopalian denomination is recognized by the State constitution. The Catholic population of the Diocese is about 10,000; there are 8 churches with resident priests and 6 Catholic schools with 807 pupils; Pensacola, founded 1696, is the Catholic centre.

Other Religious Denominations.—The Methodist Church South has the largest membership. The Florida Conference was set off from the Georgia Conference in 1844. The session of December, 1907, reported 341 churches and 155 ministers; estimated membership 40,000. The Baptists report 35,021 total membership, 548 churches, 370 ministers. The Episcopalian denomination, comprising the Diocese of Florida and the Missionary District of Southern Florida, organized 1892, has 7777 communicants, about 12,000 total baptized, and 66 ministers. These three denominations display considerable activity and efficiency in missionary and educational work. The Baptist State Mission board supports 40 missionaries; while the Episcopalians, with 13 churchmen, carried nearly 200 missions, including 14 churches for negroes and 10 parish schools with 540 pupils. In 1894 the Episcopal Church started mission work amongst the Seminole Indians of the Everglades, who number about 300, but as the chiefs who are arbiters of all individual rights have hitherto held aloof, much has been very discouraging. Presbyterians North and South number 6500 with 95 ministers, Congregationalists 2500; other denominations represented in the State are: Adventists, Christians, Lutherans, Unitarians, Campbellites, Jews, Christian Scientists, and Mormons. Reliable religious statistics of the negroes are difficult to obtain owing to multiplicity of organizations and mobility of religious temperament. Five distinct branches of Methodists report 635 preachers, 400 churches, and 7470 members. Baptist organizations approximate the Methodists in strength, while the coloured membership of other denominations is very small.

Florida Indians.—The early explorers found the Indians distributed over the entire peninsula. To the north-west the populous tribes of the Apalachee inhabited the country watered by the Suwanee and Apalachicola Rivers; the Timuquanas occupied the centre of the peninsula, with numerous settlements along the coast; the Calusa on the south-west ranged from Cape Sable to Tampa Bay; on Biscayne Bay the small settlement of Tegetas seems to have come originally from the Bahamas and contracted kinship with the Calusa; along the Indian River south of Cape Canaveral lived the Aya, also comparatively few in numbers and mentioned only in connexion with early missionary labour, probably having become absorbed in the Timucuan nation under the unifying influence of Christianity. Sufficient data for an approximate estimate of population are wanting; probably the entire population of the tribes mentioned exceeded 20,000 but not 40,000. These tribes retained ethnologically and linguistically to the great family of American aborigines, but are so highly mixed as being of fine physique, intelligent, courageous, generally monogamous, very fond of ceremonial, and much addicted to human sacrifice and superstition. Their settlement near St. Augustine furnished the first Indian converts, in all probability prior to the advent of the Franciscan missionaries in 1577. In 1602 Governor Cano estimated the number of Christians amongst them at 1200. A catechism in the Timucuan language by Father Francisco Pareja was printed in Mexico in 1612 and a grammar in 1614 (reprinted at Paris, 1886), besides other works. These were the first books printed in any of our Indian tongues. The baptismal register of St. Augustine in 1609 at St. Augustine cleared the way for the conversion of the whole nation to Christianity. English and hostile Indian raids diminished their numbers (1685-1735), and by 1763 they had all but disappeared. The Apalachee Indians, closer related to the Creeks, resembled the neighbouring Timuquanas in general disposition and manner of life. It is not mentioned that they practised human sacrifice, and in other respects, especially after their conversion to Christianity, they exhibited a superiority of character over the other Florida tribes, being docile and tractable to religious teaching and training. Towards Narvaez (1528) and De Soto (1539) they assumed a surprisingly hostile demeanour, in view of the ready response accorded subsequently to the efforts of the missionaries. In 1595 Father Pedro de Chozas penetrated to Ocute in the Apalachee country, and his mission proved so fruitful that the Indian Council in 1607 for additional missionaries by 1640 the whole tribe was Catholic. The Apalachee country was invaded and devastated by hostile Indians and English under Moore in 1704. Of thirteen flourishing towns but one escaped destruction, missionaries were tortured and slain, 1000 Chippewas were carried off to be used as slaves, and 7000 Chippewas and 400 escaped. One of the last items recorded of the tribe is the testimony of the French writer Penicaut to the edifying piety with which a fugitive band that had settled near Mobile adhered to the practices of religion. The Calusa or Carlos Indians, with whom Menendez in 1566 endeavoured to establish friendship and alliance, in order to pave the way to their conversion, showed a persistent spirit of hostility to Christian teaching. They were cruel, crafty, though recklessly brave, polygamous, and ineritably addicted to human sacrifice. The Jesuit Father Rogel laboured fruitlessly amongst them (1567-8). The Franciscans in 1697 were even less successful. In 1743 the Jesuit Fathers Monaco and Alana, who obtained some little success, described them as cruel, lewd, and rapacious. The remnant of the tribe moved to the western reservations about 1835. The Seminoles, also allied to the Creek stock, came into Florida about 1750; very few of them became Christian, but they distinctly influenced the English occupation in 1763. Their refusal to withdraw to reservations resulted in the Indian War of 1835-42. On the conclusion of the war 2000 were conveyed to Indian Territory. About 300, defying every effort of the United States, retired to the
some church are authorized to solemnize the rites of the matrimonial contract under the regulations prescribed by law. Marriages of whites with negroes or persons of negro descent to the fourth generation inclusive, and marriages between persons prohibited degrees, besides the direct line of consanguinity, include only brother and sister, uncle and niece, nephew and aunt. Continuous absence of either spouse over sea or continual absence for three years following voluntary desertion, with presumption of divorce, gives the court the right to decree a divorce. The statutory grounds for divorce are: consanguinity within the degrees prohibited by law, natural impotence, adultery not convicted at or condoned, extreme cruelty, habitual indulgence in violent and uncontrolable temper, habitual intemperance, willful, obstinate, and continued desertion for one year, divorce procured by defendant in another state or country, and bigamy. To file a bill of divorce two years' residence (the cause of adultery excepted) is conditional. Separation a mensa et toro is not legally recognized; every divorce is a vinculo. Special personal and local divorce legislation is unconstitutional.

The aid of the State and denunciation of national schools. The law directs every teacher "to labor faithfully and earnestly for the advancement of the pupils in their studies, deportment and morals, and to embrace every opportunity to inculcate, by precept and by example, the principles of truth, honesty and patriotism, and the exposition and use of the Bible in such institutions maintained by the State include an insane asylum situated at Chattahoochee, a school for the blind, deaf, and dumb at St. Augustine, and a reform school for youthful delinquents at Marianna. A Confederate Veterans' Home at Jacksonville receives an annual appropriation. Each county cares for its indigent and needy infirm. While financial support is denied, ample provision for incorporation is afforded religious charitable institutions. The constitution orders the establishment and maintenance of a State prison, which is not at present permanently located. Convicts are leased through contractors to tarpertine and phosphate operators. Over these convicts the State retains surveillance through supervisors appointed by the governor. The law provides also for the appointment and remuneration of a chaplain for state convicts. On 1 January, 1906, there were 1234 state prisoners, 90 per cent of whom were coloured, distributed through 180 different institutions throughout the State.

The constitution gives to each county the privilege of local option to permit or prohibit the sale of liquor. In a majority of the counties prohibition prevails. Where permitted, the manufacture and sale of intoxicating liquor are regulated by State, county, and municipal license laws. Conveyance of real and personal property by will is restricted only by conditions of soundness of mind and age requirement of twenty-one years on part of the testator. There appear to be no Supreme Court decisions referring to bequests for masses and charitable purposes or to the seal of consent, but the notarization of both bond and bond in the State has in these matters been ever above suspicion of anti-Catholic bias or partiality.

JAMES VALE.

Florilegia (Lat. florilegium, an anthology) are systematic collections of excerpts (more or less copious) from libraries of the Fathers and more ecclesiastical writers of the early period, compiled with a view to serve dogmatic or ethical purposes. These encyclopedic compilations—Patristic anthologies as they may be fitly styled—are a characteristic product of the later Byzantine theological school, and form a very considerable branch of the extensive literature of the Greek Catena.

Two classes of Christian florilegia may here be distinguished: the dogmatic and the ascetical, or ethical. The dogmatic florilegia are collections of Patristic citations designed to exhibit the continuous and connected statements of the Fathers on a particular doctrine or dogma. The first impulse to compilations of this nature was given by the Christological controversies that convulsed the Eastern Church during the fifth century, when, both at the gatherings of the great church councils and in private circles, the practical need had made itself definitely felt, of having at hand, for ready reference, a convenient summary of what the Fathers and most approved theologians had held and taught concerning certain controverted doctrines. Such a summary, setting forth the views of Nestorius and the mind of the orthodox Fathers, was first laid before the Council of Ephesus, in 431, by St. Cyril of Alexandria. Summaries of dogmatic utterances were used also at the Council of Chalcedon in 451, and at the Fifth General Council in 533. But it was not until the seventh century that the dogmatic florilegia assumed a fully developed and definite form. At the Sixth General Council, in 680, two of these collections played a very prominent role, one, constructed by Macarius, the Patriarch of Antioch, in favour of the Monothelites, and the other, a counter collection presented by the legates of Pope Agatho. During the Iconoclastic controversy similar collections were produced. Mention is made of one on the cult of relics and images when these were cut off from Jerusalem sent to John, Bishop of Gothia, about 760.

The oldest extant, and at the same time most extensive and valuable, of these dogmatic compilations, is the “Antiquorum Patrum doctrina de Verbi incarnatione” (first completely edited from a manuscript in the Vatican Library by F. Diekamp, “Doctrina Patrum de incarnatione verbi. Ein griechisches Florilegium aus der Wende des 7. und 8. Jahrhunderts”, Münster, 1907). It is extraordinarily rich in fragments from writings of the Patristic period which are now lost. Of the 977 citations (mainly of a christological character) which it contains, 751 alone are from the works of the Fathers of the ante-Nicene period. Diekamp ascribes the work to the period between the years 685 and 726, and, though nothing can be said with certainty concerning the author, a slight probability points to Anastasius of Sinai as its compiler. A florilegium somewhat similar to the “Doctrina” is mentioned by Photios in his Bibliotheca (Migne, P. G., CLIII, 1089–92), but not a trace of it survives to-day. Another compilation of this kind, covering the whole province of theology in five books, is ascribed to the monk Doxopatas, identical perhaps with the eleventh-century John Doxopatas, one of the two books, treating of Adam and Cain, still extant; no authority remains, however, that part of other dogmatic florilegia are still extant in manuscript form, but they have never been edited, nor even critically examined. The authors of most of them are unknown.

The ascetical florilegia are collections of monastic sentences and excerpts drawn partly from the Scriptures and partly from the Fathers, on such topics as virtues and vices, duties and exercises of a religious life, faith, discipline, etc. They are not, of course, dogmatic florilegia, and apparently were all compiled before the tenth century. Their material, as a rule, is gathered indiscriminately from various authorities, though in some instances it is furnished by only a single writer, a distinct preference being then shown for the works of the more illustrious Fathers, Basil the Great, Gregory of Nazianzus, and St. John Chrysostom. An extensive Christian florilegium of the sixth century, entitled τα λεπά (Sacred Things), is probably the earliest of these anthologies. The work consisted originally of three books, the first of which treated of God, the second of man, and the third of the virtues and vices. In the course of time it underwent contraction into one book, its material was recast and arranged in alphabetical order under τίτλοις, or sections, its name changed to τα λεπά παράλληλα, “Sacra Parallela” (from the fact that in the third book a verse of Scripture is usually set alongside the verse to which it is referred), and its authorship widely ascribed to St. John Damascene. That the Damascene was really the compiler of the “Sacra Parallela”, and that he used as his principal source the “Capita theologicae”, a florilegium of Maximus Confessor, has been maintained recently with much learning and skill (against Loofs, Wendland, and Cohn) by K. Hohl (Katholische Rechenväter aus den Sacra Parallela”, Leipzig, 1899). Though τα λεπά is no longer extant in its original form, considerable portions of the first two books have come down to us in manuscript, and parts of the third are preserved in “The Bee” (Melissa) of Antonius, a Greek monk of the eleventh century (Migne, P. G., CXXXVI, 765–1124). Of the “Sacra Parallela” there are several recensions, one of which is given in Migne (P. G., XC, 1040–1586; XCVI, 9–544). Other extant ascetical florilegia still remain unedited. As in the case of the dogmatic florilegia, most of them are anonymous.

The character and value of the Christian florilegia cannot be definitely or finally estimated until the various manuscripts that now lie scattered through the libraries of Europe and the East have received a more thorough and critical investigation than has hitherto been accorded to them. Questions as to the authorship, sources, structure, relative dependence, etc., have as yet been treated only in a general way. As the characteristic production of an age of theological decadence, these collections of ancient Christian fragments have no high literary value; they are, however, of great importance to us, because they frequently embody the only remains of important Patristic writings. The difficulties connected with their use arise chiefly from the unsatisfactory condition of the text, the uncertainty concerning the names to which the fragments have been ascribed, and the want of sufficient data to determine the dates. Only a small part of the extant material has been printed.

The best general account of the florilegia will be found in Krummacher, Geschichte der djevischen Literatur (2nd ed., Munich, 1897), 200–210, 218–218, where there is also bibliography and a full list of manuscripts.—WACHMUTH, Studien zu den greechischen Florilegien (Berlin, 1862).

THOMAS OESTREICH.

Florus, a deacon of Lyons, ecclesiastical writer in the first half of the ninth century. We have no information regarding the place of birth, the parents, or the youth of this distinguished theologian; but it is probable that he came from the neighbourhood of Lyons.
not however from Spain, as some scholars have as-
serted. A letter to Bishop Bartholomew of Narbonne, written between 827 and 830 and signed by Florus as well as by Archbishop Agobard and the priest Hicho-
gisus, furnishes us with the first positive informa-
tion we possess of his history (“Mon. Germ. Hist.: Epp.”, V, 206 sqq.). He was then a dean of the church of Lyon, which office he continued to hold throughout his life. From the fact that at this time he already enjoyed the reputation of a theologian, we may con-
clude that he was born certainly before the end of the eighth century. That he was then known (827) even outside the boundaries of the church of Lyon is testi-
fied by the poetic epistle written about the same time by the youthful Walafrid Strabo to Archbishop Ago-
bard of Lyon. In this he mentions him with an allusion to his name, as a flower the fragrance of which had spread even to the banks of the Rhine (“Versus Strabi Walahfridi”, vii, v, 17–24, ed. Dümmér, “Poetae Carol. svi”, II, 357, in “Mon. Germ. Hist.”).

Until about the middle of the ninth century, the dean of Lyon followed an active literary career; he was the theologian, canonist, liturgist for the various days. He is considered one of the foremost authorities on theo-
logical questions among the clergy of the Frankish kingdom; and, in consequence, his opinion was often sought in important ecclesiastical matters. When, after the deposition of Archbishop Agobard of Lyon by Emperor Louis the Pious in 821, Diezendorf and Autun summoned before the civil power certain eccle-
siastics of the church of Lyon, Florus, in his work “De inuista vexatione ecclesie Lugudunensis”, took issue with Modoin and defended ecclesiastical freedom. Other canonical writings of Florus are his “Capitula ex lege et canone collecta” and his treatise on the election of bishops, “De electionibus episcoporum”. Another of his works, “Querela de divisione Imperii”, a lament over the dissensions of the realm, was written by Florus when the kingdom was undergoing severe political disturbance occasioned by the strife between Louis the Pious and Lothair. His liturgical writings are: “De expositione Missae”, and three treatises against Amalarius (“Opuscula contra Amalarium”). In these latter works the author inveighs against the famous Amalarius of Metz, who came to Lyon, in 835, and wished to introduce changes in the liturgy which were approved by Florus. Later, Florus took part in the conflict concerning predestination, which had been stirred up by the monk Gottschalk. Shortly after the Synod of Quierzy, in the year 849, he wrote on this subject, “De predestinacione”, and laid down the doctrine of a twofold predestination, to salvation and to damnation, maintaining at the same time the doctrine of the free will of man. When John of Ficinus Eriugena attacked this opinion, Florus, commissioned by the church of Lyons, wrote in 852 his work “Liber adversus Johannem Scotum”. He is also the author of commentaries on the Epistles of St. Paul. His next work was the completion of the Martyrology of Bologna, in which he made additions for the various days. The chief sources on which he relied in enlarging the work are a manuscript from St-Pierre in Mâcon, and two manuscripts of Echternach and Toul, which may all be found in the National Library at Paris (MS. lat. 5264, 10018 and 10168). In later revisions of the martyrology, these additions have been made use of. Finally, the dean of Lyons has left a number of poems. After the year 852, no further information, definite as to time, has come down to us regarding Florus; so that his death may be said, with probable exactitude, to have occurred about the year 860.

The works of Florus are found in P. L., LXXI, 1081 sqq., LXXIV, 799 sqq., LXIX; in Mon. Germ. Hist.: Epp. V, and in P. K. M. Harsch, “Ubertragung zu den Pseudo-
plagiarii, II, in Mon. Germ. Hist.: Maassen, Ein Kommentar des Florus an das Acta Pauli”. Flora’s literary contributions are mentioned in Steinschneider’s dissertation akademie zu Wien, Phil.-Hist. Klasse, XII (1873), 301–325; Bahr, Geschichte der römischen Literatur

Flower, Richard. See Leigh, Richard.

Floyd, John, English missionary, wrote under the names, Flud, Daniel à Jesu, Hermannus Lecemius, George White, Annoius Fidelis Verimentanus, and under the initials J. R. Some of his works have been erroneously attributed to Robert Jennison. He was born in Cambridgeshire in 1572; d. at St-Omer, 16 Sept., 1649. He was educated at the Jesuit College at Eu, then at the English College at Reims (17 March, 1588), and finally the English College at Rome (1590), where he entered the Society of Jesus, 1 Nov., 1592. His earliest writing is known on the occasion of the arrest of a Jesuit at Paris on Jan. 4, 1600, who was a missionary priest in England. On 8 April in that year he was arrested at Worcester while attempting to visit Ven. Edward Oldeorne who was to suffer martyrdom next day. Having been imprisoned for twelve months he, with forty-six other priests, was banished for life. He then spent four years teaching at St-Omer, in the French colony. In 1602, he published a tract entitled “Cassar: Cassar...” which is mistaken in supposing that he published any controversial works at that time. On 31 July, 1609, he was pro-
cessed for the fourth time, and soon after returned to England, where he laboured on the mission for many years, being often captured, but escaping his escape or being captured off the coast of France. In 1613, Bishop Mountfitchet presented him with his first work, “The Overthrow of the Protestant Pulpit Babels”, in which he replied to Crashaw’s “Jesus’s Gospel!”. He was in turn answered by Sir Edward Hoby, in his “A Counter-snorl for Ishmael Rabbakeh & Cyropedian Lycaonite, being an an-
wser to a Roman Catholic who writes himself J. R.”. Father Floyd retorted in 1613 with “Purgatorie’s Triumph over Hell, maugre the barking of Cerberus in Syr Edward Hobyes Counter Snarle!”. This controversy closed with Hoby’s rejoinder “A Curry-comb for a Cox-combe”, published in 1615. Father Floyd next turned his attention to Marc’ Antonio de Domi-
nis, formerly Archbishop of Spalatro, who had apostasi-
ed and become Protestant dean of Windsor. Against him Father Floyd wrote four works: “Synopsis Apostasie Marci Antonii de Dominis, obliv Archiepiscopi Spalatensis, nunc Apostatis, ex ipiusam libri demonstratio” (Antwerp, 1617), “De praefatione libro” (Antwerp, 1620); “Censura X Librorum de Republica Ecclesiastic” Marci Antonii de Dominis” (Antwerp, 1620; Col-
ogne, 1621); “Monarchia Ecclesiae ex scriptis Marci Antonii de Dominis Archiepiscopi Spalatensis Demostrato, dubos libris comprehensa” (Cologne, 1622). All four works appeared under the signature “Fidelis Annonus Verimentanus”.

In 1620 Floyd published “God and the King”, a translation of a work on loyalty; and in the following year a translation of St. Augustine’s “Meditations”. In 1623 he was living in Fleet Lane (Gee’s “Foot out of the Snare!”) and in the same year he wrote “A Word of Comfort: or a discourse concerning the late lamentable accident of the fall of a room at a Catholic Sermon in the Blackfriars at London, wherewith about four-score persons were oppressed”; also a translation of Molina’s “On the Sacrifice of the Mass”. In 1625 he published “An Answer to Francis White’s reply to Mr. Fisher’s answer to the Nine Articles offered by King James to Father John Fisher”. In 1629 and the succeeding years Father Floyd played a leading part in the controversy between the Jesuits and the desirability of having a bishop resident in England. Bishop Richard Smith, whose presence was regarded by some as a source of persecution, had in fact left England for Paris and was never able to return, but...
the situation gave rise to acrimonious discussion. Father Foy's works were "An Apology of the Holy See" and "Polemics of the Councils of the Catholics of England during the time of persecution" (Rouen, 1630; enlarged Lat. ed., Cologne, 1631); and "Hermanni Lzermellii Antverpiensis Spongia qua diliuntur Calumnie nomine facultatis Parisiensis impositae libro qui inscriptur Apologia", etc. (St.-Omer, 1617). Both these works were published in the Sorbonne, and in 1633 Urban VIII stopped the controversy and suppressed all writings upon the subject. His other works are: "A Paire of Spectacles for Sir Humphrey Linde to see his way withal!" (1631); "The Church Conquerer over Human Wit" (1638); "The Total Summ" (1640); "The Imposture of Puri
tum" (1648). He left in manuscript "Vita Brunehildis Francorum Regine" and a "Treatise on Holy Pictures". Father Foyd spent the last years of his life teaching philosophy and theology at St. Omer's.

EDWIN BURTON.

FOGARAS, ARCHDIOCESE OF (FOGARASIENSIS), HUNGARY, of the Greek-Rumanian Rite. It has three suffragan sees, Grosswarden (Nagy Várad), Lugos, and Szamos Ujvár (Armenopolis). Since 1733 the residence has been at Balassafalva (Blaj, Blasaendorf). The Diocese of Fogarás was erected in 1721, suffragan to the Primate of Hungary (the Latin Archbishop of Gran). In 1853 Pius IX re-established the arch
bishopric of Alba Julia (Weissenburg, Karlsburg), an ancient metropolitan title, and united it with the See of Fogarás. Since that time the head of the Greek-Rumanian Church bears the title of Archbishop of Fogarás and Alba Julia. Since 1697 (Synod of Karlsurg), when these Rumanians returned to Catholic unity, there have been eleven Catholic titulars of Alba Julia or Fogarás.

The city of Fogarás (6000 inhabitants) (in German Fagensmarkt) is built on the Aluta. Its fortifications are in all the wars with the Turks. In 1849 the Hungarians were defeated here by the Russians. Balassafalva, the residence of the archbishop, has also about 6000 inhabitants. Here, in 1848, the Rumanians protested against political union with Hungary. The diocese numbers 45 parishes and 168 Catholic schools. In 1901, nearly all married, 705 parishes, as many churches, and several chapels. The preparatory and theological seminaries are at Blaj, also a college and a printing establishment, where the weekly journal "Unirea" has been published since 1890. The diocesan schools for boys and girls are attended by 60,000 pupils. There are 3 gymnasia for boys or girls, and several convents.

S. VAILHÉ.

FOGARTY, MICHAEL. See Killala, Diocese of.

FOGGIA, DIOCESAN OF (FOGIANA), in the province of the same name in Apulia (Southern Italy). The city is situated on the agricultural centre, in a vast plain between the rivers Cervo and Sele. In 1758 he set up about the church of the Madonna dei Sette Veli, to
today the cathedral, built in 1702 by Robert Guiscard. Foggia is so named from the swampy character of the territory, foja or foja signify "marsh". It later became the capital of the district known as the Capitanata. Frederick II built an imperial fortress there in 1254 Manfred defeated there Pope Innocent IV, though in the same place, in 1266, he himself submitted to Charles of Anjou, who in 1288 destroyed the city for taking part with the unhappy Conradino. In 1781 a severe earthquake greatly damaged the city. Foggia formed part of the Diocese of Troia until 1855, when it was made a diocese by Pius IX, comprising territory of the Dioceses of Siponto and Manfredonia. The first bishop was Bernardino M. Frangipane. Sit
atuated so near the ancient city of Arpi, which had a bishop, Pardus, as early as 314, the Bishops of Troia may be considered as successors of the Bishops of Arpi. In 1907 Foggia was united aepi principaliter with Troia. It is immediately subject to the Holy See. The cathedral, a remarkable architectural monument, was on account of its church, which contains the mausoleum of the Princess of Durazzo. Worthy of mention is the church of the Crosses, which is approached through a series of chapels. Foggia has 9 parishes, 81,000 inhabitants, 2 male and 8 female educational institutions, 3 religious houses of men, and 9 of women.

CAPPELLIETTI, LA CHIESA D'ITALIA (Venice, 1844), XXI; ANNAILO ECOLO (Rome, 1908).

U. BENIGNI.

FOILLAN (Irish FaELIN, FAOLAN, FOELAN, FOELAN), SAINT, represented in iconography with a crown of thorns on his feet to show that he had given up the world. He was born in Ireland early in the seventh century and was the brother of Saints Ulcan and Fursey, the latter a famous missionary who preached the Faith to the Irish, the Anglo-Saxons, and the Franks. Foillan, probably in company with Ulcan, went with his brother Fursey when the latter, fleeing from his country then devastated by foreign invaders, retired to a lonely island. Fursey soon went among the Anglo-Saxons and built a monastery at Burgh Castle (Cnobereburg) in Suffolk, between 634 and 642.

Seized again with the desire for solitude, Fursey left the monastery in the care of Foillan, who remained at the head of the community and had the happiness of once more seeing his brother Fursey, who, having since gone to the kingdom of the Franks, came to visit him about 650. Soon a disastrous war broke out bet
tween Penda, the Mercian chief, and Ana, King of the Eastern Anglo-Saxons. Ana being put to flight, the monastery of Cnobereburg fell into the hands of the enemies. It was pillaged, and its superior, Foillan, barely escaped death. He hastened to ransom the captive monks, recovered the relics, put the holy books and objects of veneration on board ship, and fled to Ireland. The king himself accompanied his brother Fursey was buried. He and his companions were well received at Péronne by Erconwald, Mayor of the Palace. But soon, for some unknown reason, Foillan and his companions left Péronne and went to Nivelles, a monastery founded by St. Ida and St. Gertrude, wife and daughter of Duke Pepin I.

Foillan, like so many other Irishmen who went to the Continent in the seventh century, was invested with episcopal dignity, having doubtless been a mon
aistic bishop at Cnobereburg. He was therefore of great assistance in the organisation of worship, and the holy books and relics which he brought were great treasures for St. Ida and St. Gertrude. As the monas
terio of Nivelles was under Irish discipline, the companio
nians of Foillan were well received and lived side by side with the holy women, occupying themselves with the details of worship under the general direction of the abbes. Though the liberty of Ida, Foillan was enabled to build a monastery for his followers at Nivelles, in the province of Namur. After the death of Ida in 652, Foillan came one day to Nivelles and sang Mass, on the eve of the feast of St.-Quentin. The ceremony being finished, he resumed his journey, doubtless undertaken in the interests of his monastery.
In the forest of Seneffe the saint and his companions fell into a trap set by bandits who inhabited that solitude. They were slain, stripped, and their bodies concealed. But they were recovered by St. Gertrude, and when she had taken some relics of the saint his body was borne to the monastery of Fosses, where it was buried about 655.

Foillan was one of the numerous Irish travellers who in the course of the seventh century evangelized Belgium, bringing thither the liturgy and sacred vessels, founded monasteries, and mastered the Gospels. Whatever their monastic cabinets, whether in Laon or Reims, they bore not merely the books, but the friendship which united him with Erconwald, Mayor of the Palace, and with the members of Pepin's family, Foillan played a preponderant part in Frankish ecclesiastical history, as shown by his share in the division of Nivelles and by the foundation of the monastery of Fosses. It is not surprising, therefore, that he should be honoured and venerated both at Nivelles and Fosses and to find at Le Reau (Belgium) a monastery bearing his name. As late as the twelfth century the veneration in which he was held inspired Philippe Le Harve, Abbot of Bonne-Espérance, to compose a lengthy epitaph in his memory.

In the Diocese of Namur his feast is celebrated on 31 October, in the Dioceses of Mechlin and Tournay on 5 November.

L. VAN DER EMMEN.

Folengo, Trovolo, Italian poet, better known by his pseudonym of Merlino Caccoia or Cocal; b. at Mantua in 1496; d. at the monastery of Santa Croce in Campepe in 1544. He received some training at the University of Bologna and then entered the Benedictine Order in 1524 or 1525, either for himself or for his abbot, Ignazio Scurialupi, or because of a temporary impatience of monastic life, he divested himself of the habit and acted for a while as a private tutor. Then repenting of the step he took, he made overtures to his order for his readmission, which was granted in 1534, only after he had done penance and had cleared himself of certain suspicions of heterodoxy.

Three years later he became prior of the monastery of Santa Maria delle Ciambre in Sicily. He returned to the mainland in 1543. Folengo's fame rests chiefly on his "Baldus" which was first printed in 1517 in seven cantos, which were extended, and read in four cantos with eight additional books. The work, epic in its tendencies, belongs to the category of burlesque composition in macaronic verse (that is in a jargon, made up of Latin words mingled with Italian words, given a Latin aspect), which had already been inaugurated by Titi Odasi in his "Macaronica" and, which, in a measure, marks a continuation of the goliardic traditions of the Middle Ages. For the first edition of the "Baldus", Folengo had derived burlesque traits and types of personages from the chivalrous romances of Boiardo and Pulci. His second edition reveals, in the greater amplitude of its action, in the improved manner of setting forth, and in this type of thought, a better developed feeling for art, the author's reading of the "Orlando Furioso" of Ariosto. However, the poem is a parody not only of the Italian chivalrous romance but also of the Virginian epic, and, in its latter part, of Dante's "Divine Comedy" as well. Furthermore, it is grossly satirical in its treatment of the clergy and at times borders on the sacrilegious. In view of the general nature of the work, it is only intelligible that it should have appealed to Rabelais, who found in it the prototype of his "Panurge" and his "Gargantua".

Among the lesser works of Folengo are the "Zanitonella", which parodies both the Virginian pastoral and the Petrarchian love-lyric; the "Orlando Furioso", which gives an Italian burlesque account of the birth and youth of Roland; the curious "Caes del Tripurano" (1527), which in verse and prose and in mingled Latin, Italian, and Macaronic speech, sets forth allegorically the author's own previous heretical leanings and finally states his confession of faith; and the "Romance", which in three recensions of Macaronic distichs relates, somewhat after the fashion of the "Betrachiomachia", as well as of the chivalrous romances, the victory of the ants over the flies, and preludes the Italian mock-heroic poem of the seventeenth century. After his return to his order, Folengo wrote only religious works, such as the Latin poem "Jamus" wherein he expresses his repentance for having written his earlier venturesome compositions; the "Palermitana", in Italian terza rima; and the "Hagiomachia", which, in Latin hexameters, describes especially the lives of eighteen saints.

Ciceromero, Le opere morali (Mantua, 1682–1688); LUCIUS AND REAUS in Giornale storico, XIII, XIV, XXIV; RENDA, Studi Folenganiani (Florence, 1868); SCHMIDT, Foliengo (Wein, 1858); MINIS, II Cinquecento, extensive bibliography on pp. 544 sqq.

Foligno, Angela de. See ANGELA OF FOLIGNO.

Foligno, Diocese of (Fulignatesch), in the province of Perugia, Italy, immediately subject to the Holy See. The city, situated on the river Tiberino, was founded on the site of the ancient Christian cemetery surrounding the basilica of San Feliciano, outside the ancient city of Fulginium, which, after the battle on the Esinus (295 B.C.), was annexed to Rome. The splendour of the ancient city is attested by numerous ruins of temples, aqueducts, circuses, etc. In the eighth century a bishopric was established, and the city was frequently ravaged by the Goths, Vandals, and Lombards. The city suffered from the profligacy of the noble Tusci and the continual warfare between the landed proprietors, who disputed the possession of the town. It was captured by the Franks in 852 and again in 876, and in 1044 it was bestowed on the archbishop of Todi, and immediately after, in 1055, on the bishop of Spoleto, who in 1070 gave it to the papacy. In 1215 the pope granted the town to the Knights of St. John of Jerusalem, and it was held by them until the year 1507, when it was ceded to the commune of F. by the terms of the peace of Constanza. The town was granted the rights of a free city in 1487, and in 1495 it was granted the right of a municipal government. In 1507 the town was restored to the pope, and in 1520 it was granted the privilege of a university. In 1571 it was given by the pope to the Commune of F. to be held in perpetuity. The town was divided into two parts, the lower and upper, and the latter was called the "Hercules", a famous statue now in the Louvre at Paris. After the Lombard invasion (565) the city formed part of the Duchy of Spoleto, with which, in the eighth century, it came into the possession of the Holy See. During the thirteenth century it was a bishopric, but in 1305 the Guelphs under Nello Trinci expelled the Ghibellines with their leader Corrado Anastasi; thenceforth until 1439 the Trinci governed the city as the pope's vicars. In 1420 their rule was overthrown by Spoleto, Bevagna, Nocera, Trevi, Giano, and Montefalco.

Art and literature flourished vigorously at Foligno. Evidence of this may still be seen in the Trinci palace, with its magnificent halls decorated by Ottaviano Nelli, Gentile da Fabriano, and others. Better preserved is the chapel, on the ceiling of which is pictured the life of the Blessed Virgin; in the adjoining room the story of Romulus and Remus is depicted. Another room is called "The Hall of Astronomy"; the largest is "The Hall of the Giants", so called from its immense portraits of personages of Biblical and Roman history. This splendid edifice has unfortunately been disgraced in former times and now serves as a court of justice, prison, etc. At the court of the Trinci, especially Nicolò, were many distinguished poets, e.g. Mastro Paolo da Foligno, Fra Tommasuccio da No-
cess, Candido Bontempi, and others; the most illustrious was the Dominican Federigo Frazzi, Bishop of Foligno (1403), whose "Quadrirrego" is a kind of commentary on the "Hall of the Giants". After the murder of Nicolò Trinci in 1437, his brother Corrado began to rule in a tyrannical way; Eugen IV, therefore, in 1439 sent Cardinal Vitelleschi to demand his submission. Henceforth Foligno enjoyed a large communal liberty under a papal governor.

There is reason to believe that Christianity was introduced at Foligno in the first half of the second century. St. Felicianus, the patron of the city, though certainly not the first bishop, was consecrated by Pope Victor and martyred under Decius (24 January); the exact dates of his history are uncertain (Acta SS., Jan., II, 582–88; Analecta Boll., 1890, 381).

FOLIOT, GILBERT, BISHOP OF LONDON. See Gilbert Foliot.

Folkestone Abbey, or more correctly Folkestone Priory, is situated in the east division of Kent about two or seven miles from Maidstone. In 1106 a monastery of Benedictine nuns founded in 630 by St. Eanswith or Eanswida, daughter of Eadbald, King of Kent, who was the son of St. Ethelbert, the first Christian king among the English. It was dedicated to St. Peter. Like many other similar foundations it was destroyed by the Danes, in 1067; a new church was erected on the site by Nigel de Mundeville, Lord of Folkestone. This was an alien priory, a cell belonging to the Abbey of Lonley or Lolley in Normandy, dedicated to St. Mary and St. Eanswith, whose relics were deposited in the church. The cliff on which the monastery was built was gradually undermined by the sea, and William de Abbrincis in 1137 gave the monks a new site, that of the present church of Folkestone. The conventual buildings were erected between the church and the sea coast. Being an alien priory it was occasionally seized by the king, when England was at war with France, but after 1347 it was made denizen and independent of the mother-house in Normandy and thus escaped the fate which befell most of the alien priories in the reign of Henry V. It continued to the time of the dissolution and was surrendered to the king on 15 Nov., 1535. The names of twelve priors are known, the last being Thomas Barrett or Bassett. The net income at the dissolution was about £50. It was bestowed by Henry VIII on Edmund, Lord Clinton and Saye; the present owner is Lord Radnor. The only part of the monastic buildings remaining is a Norman doorway, but the foundations may be traced for a considerable distance.

G. E. HIND.

FONSECA, JOSÉ RIBEIRO DA, Friar Minor; b. at Evora, 3 Dec., 1690; d. at Porto, 16 June, 1755. He was received into the Franciscan Order in the convent of Ara Coeli at Rome, 8 Dec., 1712. As minister general of the order, he was unfailing in his efforts to restore discipline in places where it had become lax; and displayed in this regard singular prudence, tact, and executive ability. In 1740 he founded the large library in the old convent used by the direction and patronage, the "Annales Minorum" of Wadding were published at Rome in seventeen volumes, between the years 1731 and 1741. Fonseca several times declined the episcopal dignity, but finally accepted (1741) the See of Oporto, to which he was nominated by John V of Portugal.

Flosek, España Sagrada (Madrid, 1745), XXI, 233 sqq.

STEPHEN M. DONOVAN.

FONSECA, PEDRO DA, philosopher and theologian; b. at Cortisada, Portugal, 1528; d. at Lisbon, 4 Nov., 1599. He entered the Society of Jesus in Coimbra in 1548, and in 1551 passed to the University of Evora, where, after completing his studies, he lectured upon philosophy with such subtlety and brilliancy as to win for himself the title of "Professor Magnificus". His works, which for over a century after his death were widely used in philosophical schools throughout Europe, are: "Institutionum Dialecticarum Libri Octo" (Lisbon, 1564); "Commentarium in Librum Metaphysicorum Aristotelis Stagiritarum" (Rome, 1577); "De Terren Philosophia" (Lisbon, 1591). He also appeared in an immense number of editions from the Catholic press all over Europe. Fonseca also shares the fame of the "Conimbricensees" (q. v.), as it was

LATERNAL FACADE, CATHEDRAL OF FOLIGNO, XIII CENTURY

Until 471 no other bishop is known. St. Vincentius of Laodicea in Syria was made bishop by Pope Hormisdas in 523. Of subsequent bishops the following may be mentioned: Eusebius, who persuaded King Luitprand to spare the city (740); Azuz degli Aszi, who distinguished himself at the Council of Rome in 1059 against Berengarius; Bonfiglio de' Bonfighi, who took part in the First Crusade; Blessed Antonio Bettini (1461), a Jesuit; Isidoro Clario (1547), a theologian at the Council of Trent. In 1146 a council was held at Foligno. The cathedral, of very early date, and possessing a beautiful crypt, was rebuilt in 1133; in 1201 a wing, with a façade, was added, famous for its sculptures by Benello and Rosolo (statues of Frederick Barbarossa and of Bishop Anselm), restored in 1903. Other churches are: Santa Maria infra Portas, of the Lombard period, with Byzantine frescoes; San Claudio (1232); San Domenico (1251); San Giovanni Profanum (1231), whose name recalls the ancient city of Forum Flamini. The monastery of Sassovio (1229), with a remarkable cloister of 120 columns, and the Palazzo Communale are also noteworthy.

The diocese has 55 parishes, 31,000 inhabitants, 3 male and 3 female educational institutions, 4 religious houses of men, and 12 of women; it has also a weekly Catholic paper.

G. E. HIND.
during his term of office as provincial and largely owing to his initiative that this celebrated work was undertaken by the Jesuit professors of Coimbra.

As a man of affairs, Fonseca was not less gifted than as a philosopher. He filled many important posts in his order, being assistant, for Portugal, to the general, visitor of Portugal, and superior of the professed house at Lisbon; while Gregory XIII and Philip II (from 1580 King of Portugal) employed him in affairs of the greatest delicacy and consequence. Fonseca used his influence wisely in promoting the interests of charity and learning. Many great institutions in Lisbon, notably the Irish college, owe their existence, at least in great part, to his zeal and piety. He is also credited with a considerable share in the drawing up of the Jesuit Constitutions.

Fonseca's greatest claim to lasting reputation lies in the fact that he first devised the solution by his scientia media in God, of the perplexing problem of the reconciliation of grace and free will. Nevertheless his fame in this matter has been somewhat obscured by that of his disciple, Luis de Molina, who, having more fully developed and perfected the idea of his master in his work "Exercitia Spiritualia," etc., came gradually to be regarded as the originator of the doctrine.

JOHN F. X. MURPHY.

**Fonseca Soares, Antonio da (Antonio das Chagas), Friar Minor and ascetical writer; b. at Vidi- gueria, 25 June, 1631; d. at Torres Vedras, 20 Oct., 1682.**

Having entered the Portuguese army as a common soldier, he was forced to flee to Bahia in Brazil, as the result of a duel. There he abandoned himself to a careless and dissolute life, but was converted through the writings of Louis of Granada and resolved to embrace the religious life. The execution of his resolution was deferred indefinitely, and having returned to Portugal, he continued to lead his former life of dissipation, until in 1662 he was taken with a grievous illness.

On his recovery he hastened to fulfill his promise, and on admission into the Family of Minors, on 28 March of the same year, receiving in religion the name of Antonio das Chagas. He soon became famous throughout Portugal on account of his poetical and ascetical writings, in which he combined remarkable erudition with such singular elegance of style as to give him a merited place among the classics of Portugal. He died universally esteemed for his virtuous life, leaving a great part of his writings still unpublished. The following were published since his death: "Faiscas de amor divino e lagrimas da alma" (Lisbon, 1683); "Obras espirituais" (Lisbon, 1684-1687); "O Padre nosso commentado" (Lisbon, 1688); "Espeho do Espiritu Santo" (Lisbon, 1690); "Como nueve se consagra a Oramos" (Lisbon, 1683); "Escola da penitencia e flagello dos pecadores" (Lisbon, 1687); "Sermoes Genuinos" etc. (Lisbon, 1689); "Cartas espirituais" (Lisbon, 1884); "Ramilhetes espirituais" etc. (Lisbon, 1722). **Fontana, Carlo, architect and writer; b. at Bruciato, near Como, 1634; d. at Rome, 1714.** There seems to be no proof that he belonged to the family of famous architects of the same name. Fontana went to Rome and studied architecture under Bernini. His principal works in Rome are the Ginetti chapel at Sant' Andrea della Valle; the Cibor chapel in Madonna del Popolo; the cupola, great altar, and ornaments of the Madonna de' Miracoli; the church of the monks of Santa Marta; the façades of the church of Santa Rita and of San Marcolino in the Corso; the sepulchre of Queen Christina of Sweden in St. Peter's; the palaces Grimani and Bolognetti; the fountain of Santa Maria in Trastevere, and that in the piazza of St. Peter's which is towards Porta Cavallegieri; reparation of the church of Spirito Santo de' Napolitani, and the theatre of Tordinona. By desire of Innocent XI, his patron, he erected the immense building of San Michele al Ripa; the chapel of Baptist at St. Peter's; and finished Monte Citorio. By request of Clement XI he built the granaries at Terminii; the portico of Santa Maria in Trastevere, and the basin of the fountain of San Pietro Montorio. He restored the Library of Minerva, the cupola of Montefiascone and the casino in the Vatican, and collected all the models of the building. He sent a model for the cathedral of Fuldas, and others to Vienna for the royal stables. By order of Innocent XI he wrote a diffus description of the Temple of Vaticum artium. In this work, Fontana advises the demolition of that nest of houses which formed a sort of island from Ponte Sant' Angelo to the piazza of St. Peter's. Fontana made a calculation of the whole expense of St. Peter's from the beginning to 1694, which amounted to 46,800,052 crowns, without including the buildings of the Flavian Amphitheatre; the Aqueduct; the inundation of the Tiber, etc. He was assisted by his nephews Girolamo and Francesco Fontana. Fontana seems to have been considered an able artist and a good designer and more successful as an architect than as a writer.

**Thomas H. Poole.**

**Fontana, Domenico, Roman architect of the Late Renaissance, b. at Merli on the Lake of Lugano, 1543; d. at Naples, 1607.** He went to Rome before the death of Michelangelo and made a deep study of the works of ancient and modern architects in particular the confidence of Cardinal Montalto, later Pope Sixtus V, who in 1584 charged him with the erection of the Cappella del Presepio (Chapel of the Manger) in S. Maria Maggiore, a powerful domical building over a Greek cross, a marvelously well-balanced structure, notwithstanding the profusion of detail and ornament. He restored the Library of Minerva in no way interferes with the main architectural scheme. It is crowned by a dome in the early style of S. Biagio at Montepulciano. For the same patron he constructed the Palazzo Montalto near S. Maria Maggiore, with its skilful distribution of masses and rich decorative scheme of relief and ornaments. In the decoration of the Cappella del Presepio, Fontana has the dexterity with which the artist adapted the plan to the site at his disposal. After his accession as Sixtus V, Montalto appointed Fontana architect of St. Peter's, bestowing upon him among other distinctions the title of Knight of the Golden Spur. He added the lantern to the dome of St. Peter's, and it was he who proposed the prolongation of the interior in a well-defined nave. Of more importance were the alterations he made in St. John Lateran (c. 1586) where he introduced into the loggia of the north façade an imposing double arcade of wide span and ample deep, and probably added the two-story portico to the Scala Santa. This project of the second storey, a essential features of an architectural scheme, was brought out in the different fountains designed by Domenico and his brother Giovanni, e.g. the Fontana dell' Acqua Paola, or the Fontana di Terminii planned
along the same lines. Among profane buildings his strong restrained style, with its suggestion of the School of Vignola, is best exemplified in the Lateran Palace (begun 1556), in which the vigorous application of sound structural principles and a power of coordination are undeniable, but not the untamed brutality of imagination and barren monotony of style. It was characteristic of him to remain satisfied with a single solution of an architectural problem, as shown in the fact that he reaped the motif of the Lateran Palace in the later part of the Vatican containing the present papal residence, and in the additions to the Quirinal Palace. Fontana also designed the transverse arms separating the courts of the Vatican. In 1586 he set up the obelisk in the Square of St. Peter's, of which he gives an account in "Della transportazione dell' obelisco Vaticano e delle fabbriche di Sisto V" (Rome, 1590). The knowledge of statues here displayed, which aroused universal astonishment at the time, he availed himself of in the erection of three other ancient obelisks on the Piazza del Popolo, Piazza di S. Maria Maggiore, and Piazza di S. Giovanni in Laterano. After his patron's death he continued for some time in the service of his successor, Clement VIII. Stiff and aloof with his style, the charge that he had misappropriated public money, drove him to Naples where, in addition to canals, he erected the Palazzo Reale on a design totally devoid of imagination. His aim was to execute a sharply defined plan in vigorous sequence, without concern for detail, employing the means available, but without much originality. The chief lack in his work is a want of the distinctive character of an individual creation. Undue spaciousness, tremendous expanse, with an appalling barrenness and coldness and without the inspiration of inner motifs, are his ideals.

Domenico's brother Giovanni (b. 1548; d. at Rome, 16 March, 1585) held in high esteem the important fountains and gigantic fountains, spiritless in detail, at Frascati and Rome, where the Palazzo Giustiniani is also ascribed to him.

FONTANA, Felice, Italian naturalist and physiologist, b. at Pomarolo in the Tyrol, 15 April, 1730; d. at Florence, 11 January, 1805. He received his early education at Roveredo and spent several years at the universities of Padua and Bologna. After five years in the chair of philosophy at Pisa, to which he was appointed by the Emperor Francis I, he was summoned to Florence by the Grand-Duke Peter Leopold and made court physician. He was at the same time commissioned to organize and equip the museum, which is well known for its geological and botanical institutions and its physical and astronomical instruments, some of which are of much historical value. A special feature of the collections is the unique set of anatomical models which were made of coloured wax under Fontana's personal direction. They were of excellent workmanship and excited much attention at the time. Emperor Joseph II engaged him to make a similar set for the Academy of Surgeons in Vienna. Fontana spent the latter part of his life in Florence where his position as curator of the museum gained for him the acquaintance of most of the scientific men of the time. Though never in Holy Orders, he performed the ecclesiastical duties of his profession and his death was due to a fall received on the public street, and he was buried in the church of Santa Croce near Galilei and Viviani. Fontana was a follower of Hal- ler and wrote a series of letters in confirmation of the latter's views on irritability. He made a special study of the eye and in 1765 carried on a series of experiments on the contractile power of the iris. He investigated the physiological action of poisons, par-ticularly of serpents and of the laurel berry. He discovered that the stagers, a disease of sheep, is due to hydatids in the brain. He also gave much attention to the study of the physical and chemical properties of gases. He published a number of memoirs and the through a laborious work of preparing and collecting his chief works are "De' moti dell' iride" (Lucca, 1765); "Ricerche filosofiche sopra la fisica animale" (Florence, 1775); "Ricerche fisiche sopra 'l veneno della vipera" (Lucca, 1767), of which a larger and much extended edition was published in two volumes in 1781; "Descrizioni ed alcuni storici dei luoghi sacri ed antichi per la salubrità dell' aria" (Florence, 1774); "Ricerche fisiche e di l'air noterelle" (Paris, 1776).

HENRY M. BROCK.

Fontbonne, Jeanne, in religion Mother St. John, second foundress and superior-general of the Sisters of St. Joseph of Lyons, b. 3 March, 1759, at Bas-en-Basset, Velay, France; d. 22 November, 1843, at Lyons. In 1778 she entered a house of the Sisters of St. Joseph which had just been established at Monistrol (Haute-Loire) by Bishop de Galland of Le Puy. The following year she received the habit and soon gave evidence of unusual administrative power. After her election as superior of the Revolution she and her community followed Bishop de Galland in refusing to sign the Oath of the Civil Constitution of the Clergy, notwithstanding the example of the Curé of Monistrol, who went so far as to abet the government officials in their persecution of the sisters. Forced to disperse her community, the superior remained at her post till she was dragged forth by the mob and the convent taken possession of in the name of the Commune, after which she returned to her father's home. Not long afterwards she was torn from this refuge, to be thrown into the prison of Saint-Didier, and only the intervention of Robespierre on the day before the formal execution saved her from the guillotine. Unable to regain possession of her convent at Monistrol, she and her sister, who had been her companion in prison, returned to their father's house. Twelve years later (1807), Mother St. John was called to Saint-Etienne as head of a small community of young girls and members of dispersed congregations, who, at the suggestion of Cardinal Fesch, Archbishop of Lyons, were now established as a house of the Sisters of St. Joseph. She restored the asylum at Monistrol, re-purchased and reopened the former convent, and on 10 April, 1812, the congregation received Government authorization. In 1816 Mother St. John was appointed superior general of the Sisters of St. Joseph, and summoned to Lyons to found a general mother-house and novitiate, which she accomplished after many difficult years of labour. During the remainder of her life she was busied in perfecting the affiliation of the scattered houses of the congregation, which had been formally decreed in 1828. She also established over two hundred new communities. An object of her special solicitude was the little band which she sent to the United States in 1836 and with which she kept in constant correspondence, making every sacrifice to provide them with the necessities of life. Towards the end of her life, Mother St. John was relieved of the arduous duties of superior, and spent the last few years in preparation for the end.

RIVET, Life of Rev. Mother St. John Fontbonne, tr. (New York, 1887).

F. M. RUDGE.
Fonte-Avellana, a suppressed order of hermits, which takes its name from their first hermitage in the Apennines. Its founder, Ludolph, the son of Gisco, came from a German family that had settled in Gubbio. He was born about the year 956; in 977 he left his home and, with a companion called Julian, began to live the life of a hermit in a valley between Monte Catria and Monte Corvo, in the Apennines. This valley was known as Fonte-Avellana, from a spring among the pines with three streams. Disciples soon gathered round the two hermits; by 989 they were sufficiently numerous to receive a rule from St. Romuald, who was then in that district. This rule seems to have been of great severity. The hermits lived in separate cells and were always occupied with prayer, study, or manual labour. Every week they ate only eight but brewers. They were allowed a little fruit and vegetables. Wine was used only for Mass and for the sick, meat not at all. They observed three "Lents" during the year, that of the Resurrection, that of the Nativity, and that of St. John the Baptist. During these they fasted on bread and water every day except Sundays and Thursdays, when they were allowed a few vegetables. They wore a white habit and their feet were bare. Every day, in addition to the office, they recited the whole Psalter before dawn. Many wore chains and girdles or other instruments of mortification, and each, according to his strength, was accustomed to scourge himself, to make many genuflexions and to pray with arms extended in the form of a cross. Day and night he lacerated his body with a pair of scourges.

It had become the custom to regard the recital of the Divine Office while taking the discipline (i.e. about three thousand strokes) as equivalent to one year’s canonical penance. So that to scourge oneself while reciting the whole psalter was to execute five years of penance. St. Dominic Loricitus is related to have accomplished in this manner one hundred years of penance (i.e. twenty psalters), spreading the process over one week. And during one or two Lents he is said to have fulfilled in this way one thousand years of penance, scourging himself night and day for forty days, while he recited no less than two hundred psalters. Daily he used to recite two or three psalters, and daily he was scourged with the stricter diet of his fellow-hermits and he never slept save when, from sheer fatigue, he fell asleep in the midst of his prostrations. In 1059 St. Peter Damian appointed him prior of the hermitage of San Severino, near San Severino. Here he continued his terrible penances up to his death about 1060. His body still lies under the altar in the church at San Severino. Another saintly companion of St. Peter Damian was his biographer, St. John II of Lodi (Bishop of Gubbio), who entered Fonte-Avellana about the year 1055 and became prior of the hermitage soon after the death of his friend in 1072, which office he retained till 1086 when he was made Bishop of Gubbio, one year before his death in 1106.

In addition, there were the blessed brothers Rudolph and Peter, who in 1054 gave their castle at Campo Regio to St. Peter Damian and retired to Fonte-Avellana. Rudolph became Bishop of Gubbio in 1059 and in that year attended a council at Rome. He died in 1061. Of his brother Peter little is known save that he lived a life of great mortification. Four years after the death of St. Peter Damian, Gregory VII in 1076 took the hermitage of Fonte-Avellana under the special protection of the Holy See, and for 250 years popes and emperors and nobles showered privileges upon it. In 1301 Boniface VIII subjected the hermitage immediately to the Holy See, and in 1325 John XXII raised it to the status of an abbey, and ordained that its abbots should always receive their blessing at the hands of the pope or of his legate a latere. In the early fourteenth century St. Peter Damian received from Benedict VIII the church of San Domenico, having many subject houses. But the glory of Fonte-Avellana was soon to pass. In 1393 it was given in commendam to Cardinal Bartolomeo Mediavaccas, and the evils that follow this practice soon appeared. Slowly the fervour of observance departed, and the religious house and discipline of Fonte-Avellana disappeared. By the sixteenth century the habit had changed, and they wore a short white cassock, a blue mantle, shoes, and a white biretta.

In 1524 the great Camaldolese reformer, St. Paolo Giustiniani, suggested that the congregation of Fonte-Avellana should be united to his own order. The project then came to nothing; but in 1588 by agreement with Guido della Rovere, the commendatory abbot of Fonte-Avellana, joined with his brother the Duke of Urbino in urging on Pius V the canonical visitation of the hermitage. This was performed early in 1589 by Giambattista Barba, general of the Camaldolese, and in November of the same year the pope, by the Bull "Quantum animus nostri," suppressed the order of Fonte-Avellana, transferred its members to Camaldoli or any other house they might choose, and united all its possessions under the jurisdiction of the Camaldolese Order. On 6 January, 1570, the Camaldolese solemnly entered into possession, and the order of Santa Croce of Fonte-Avellana ceased to exist.

LESLIE A. ST. L. TOKE.

Fontenelle, Abbey of (or Abbey of Saint-Wandrille), a Benedictine monastery in Normandy (Seine-Inferieure), near Caudebec-en-Caux. It was founded by Saint-Wandrille (Wendregusius; d. 22 July, 720), who had been ordained through the intercession of his friend St-Ouen (Audoenois), Archbishop of Rouen. St-Wandrille was of the royal family of Austrasia and held a high position at the court of his kinsman, Dagobert I, but being desirous of devoting his life to God, he retired to the Abbey of Montlucon, in Champagne, in 629. Later on he went to Bobbio and then to Romain-Moutiers, where he remained ten years. In 648 he returned to Normandy and founded the monastery which afterwards bore his name. He commenced by building a great basilica dedicated to St. Peter, nearly three hundred feet long, which was consecrated by St-Ouen in 657. This church was destroyed in 756 and rebuilt by Abbot Ansegisius (823-833), who added a narthex and tower. About 862 it was wrecked by Danish pirates and the monks were obliged to flee for safety. After sojourning at Chartres, Boulogne, St-Omer, and other places for over a century, the community was at length brought back to Fontenelle by Abbot Maynard in 905 and a restoration of the buildings was again undertaken. A new church was built by Abbot Gérard, but was hardly finished when it was destroyed by lightning in 1012. Undaunted by this disaster the monks once more set to work and another church was consecrated in 1033. Two centuries later, in 1230, this was burnt to the ground, but Abbot Pierre Mauvel at once commenced a new one. The work was hampered by want of funds and it was not until 1331 that the building was finished. Meanwhile the monastery attained a position of great importance and celebrity. It was re

but also other parts of the monastery as well. They added new wings and gateways and also built a great chapter-hall for the meetings of the general chapter of the Maurist congregation. They infused new life into the abbey, which for the next two hundred and fifteen years again enjoyed some of its former celebrity. Then came the Revolution, and with it the extinction of monasticism in France. St-Wandrille was suppressed in 1791 and sold by auction the following year. The church was allowed to fall into ruins, but the rest of the buildings served for some time as a school, and when they passed into the possession of the de Staepoole family, and were turned to domestic uses. The Duke of Staepoole, who had become a priest and a domestic prelate of the pope, and who lived at Fontenelle until his death, in 1899, restored the entire property to the French Benedictines (Solemes congregation), and a colony of monks from Ligué settled there in 1893, under Dom Pothier as superior. This community was expelled by the French government in 1901, and is at present located in Belgium. Besides the chief basilica, St-Wandrille built several other churches or oratories within and without the monastery precincts. All of these have either perished in course of time, or been replaced by others of later date, except one, the chapel of St-Saturnin, which stands on the hillside overlooking the abbey. It is one of the most ancient ecclesiastical buildings now existing and, though restored from time to time, is still substantially the original erection of St-Wandrille. It is cruciform in shape and of the Romanesque type, and eastern apse, and is a unique example of a seventh-century chapel. The parish church of the village of St-Wandrille also dates from the Saint's time, but it has been so altered and restored that little of the original structure now remains.

G. CYPRIL ALSTON.

Fontevrault, Order and Abbey of.—I. CHARACTER OF THE ORDER.—The monastery of Fontevrault was founded by Blessed Robert d'Arbrissel about the end of 1100 and is situated in a wooded valley on the confines of Anjou, Tours, and Poitou, about two and a half miles south of the Loire, at a short distance west of its union with the Vienne. It was a “double” monastery, containing separate convents for both monks and nuns. The government was in the hands of an abbot. This position was filled by an abbess who was not necessarily based upon the text of St. John (xii., 27), “Behold thy Mother”, but want of capacity among the brethren who surrounded the founder would seem to be the most natural explanation. To have placed the fortunes of the rising institute in feeble hands might have compromised its existence, while amongst the nuns he found women endowed with high qualities and in every way fitted for government. Certainly the long series of able abbesses of Fontevrault is in some measure a justification of the founder's provision.

Fontevrault was the earliest of the three orders which adopted the double form, and it may be used to point out the chief differences in rule and government which mark it off from the similar institutions of the English St. Gilbert of Sempringham, founded in 1135 (see GILBERTINES), and that of the Swedish princess, St. Bridgett, founded in 1344 (see BRIDGETINES), both of which have the monastic rule and the Benedictine Rule (see below, II), as did the Gilbertine nuns, but the male religious of that order were canons regular and followed the Rule of St. Augustine. The Brigitines of both sexes were under the Regula Salutaris, an adaptation and completion of the Augustinian Rule. The Abbess of Fontevrault—over all the religious of the order, and the heads of the dependent houses were priories. Each Brigitine house was independent, and was ruled by an abbesS

VI.—9
who was supreme in all temporalities, but in matters spiritual was forbidden to interfere with the priests, who were under the confessor general. The head of the Gilbertines was a canon, the "Master" or "Prior of All", who was not attached to any one house; his power was absolute over the whole order. All three orders were primarily founded for nuns, the priests being second in the direction of spiritual service, and in all three the nuns had control of the property of the order. The habit of the Fontevrault nuns was a white tunic and surplice with a black girdle, a white guimp and black veil; the cowl was black. The monks wore a black tunic with a surplice and above it a hood and capuchon from the centre of the face, in front and behind. The nuns were a small, snub-nosed figure of Holy Roman Kings, the "Robert". In winter the monks wore an ample cloak without sleeves. The original habit was in both cases much simpler.

II. THE RULE.—It appears certain from the biography of Blessed Robert, which is known as the "Vita Andrea", that the Rule was written down during the founder's lifetime, probably in 1116 or 1117. This original Rule dealt with four points: silence, good works, food, and clothing, and contained the injunction that the abbess should never be chosen from among those who had been brought up at Fontevrault, the advice being that she should have seen the world (de conversi sororibus). This latter injunction was observed only in the case of the first two abbesses and was abrogated by Innocent III in 1201. We have three versions of the Fontevrault Rule (F. L., CLXII, 1079 sq.), but it is clear that none of these is the original, though it is probable that the second version is a fragment possibly a selection with additions by the first abbess, Petronilla (for the argument see Walter, op. cit. infra, pp. 65–74). This Rule was merely a supplement to the Rule of St. Benedict and there were no important variations from the latter in the ordinary conventual routine, though some modifications were necessitated by the conditions of the "double" life. The rules for the nuns enjoin the utmost simplicity in the materials of the habit, a strict observance of silence, abstinence from flesh meat even for the sick, and rigorous enclosure. The separation of the nuns from the monks is carried to such a point that a sick nun must be brought into the church to receive the last sacraments. The subjection of the monks is very marked. They are men "who of their own free will have promised to serve the nuns till death in the bonds of obedience, and that too with the reverence of due subjection. . . . They shall lead a contemplative life with a spiritual property of their own, content with what the nuns shall confer upon them." The very scraps from their table are to be carried to the nuns' door and there given to the poor". A fugitive but penitent monk "shall ask pardon of the Abbess and through her regain the fellowship of the brethren. The monk cannot even receive a postulant without the permission of the abbess.

III. HISTORY OF THE ORDER.—At the death of Robert d'Arbrissel, in 1117, there are said to have been at Fontevrault alone 3000 nuns, and in 1150 even 5000: the order was approved by Paschal II in 1112. The first abbess, Petronilla of Chemillé (1115–1149), was succeeded by Matilda of Anjou, who ruled for five years. She was the daughter of Fulk, King of Jerusalem, and widow of William, the eldest son of Henry I, of England. The prosperity of the abbey continued under the next two abbesses, but by the end of the twelfth century, owing to the state of the country and wars, the nuns were reduced to producing their livelihood by manual work. The situation was aggravated by internal dissensions which lasted a hundred years, and prosperity did not return till the beginning of the fourteenth century, under the rule of Eleanor of Brittany, grand-daughter of Henry III of England, who had taken the veil at the Fontevrault priory of Amesbury, in Wiltshire. The next abbess was Isabel of Valois, great-grandchild of St. Louis, but on her death there succeeded another period of trouble and decadence largely due to the disaffection of the monks who were discontented with their subordinate position. During the fifteenth century there were several attempts at reform, but these met with no success till the advent of the reforms initiated in 1437, of Mary, sister of Francis II, Duke of Brittany. The order was suffered severely from the decay of religion, which was general about this time, as well as from the Hundred Years War. In the three priories of St-Aignan, Breuil, and Ste-Croix there were in all but five nuns and one monk, where there had been 187 nuns and 17 monks at the beginning of the thirteenth century. All three were no better off. In 1459, a papal commission decided upon a mitigation of rules which could no longer be enforced, and nuns were even allowed to leave the order on the simple permission of their priors. Dissatisfied with the mitigated life of Fontevrault, Mary of Brittany removed to the priory of La Madeleine-Orléans in 1471. Here she deputed a commission consisting of religious of various orders to draw up a definite Rule based on the Rules of Blessed Robert, St. Benedict, and St. Augustine, together with the Acts of Visitations. The resulting code was finally approved by Sixtus IV in 1482. The Code was obligatory on the whole order. Mary of Brittany died in 1477, but her work was continued by her successors, Anne of Orléans, sister of Louis XII, and Renée de Bourbon. The latter may well be styled the greatest of the abesses, both on account of the number of priories (29) in which she re-established discipline, and the victory which she gained over the rebellious religious at Fontevrault by the reform, enforced with royal assistance in 1502. The result was a great influx of novices of the highest rank, including several princesses of Valois and Bourbon. At Renée's death there were 150 nuns and 150 monks at Fontevrault. Under Louise de Bourbon (1534–1575), the order was of sincere but gloomy piety, the order suffered many losses at the hands of the Protestants, who even besieged the great abbey itself, though without success; many nuns apostatized, but twelve more houses were reformed. Eleanor of Bourbon (1575–1611) saw the last of these troubles. She had great influence with Henry IV, and her affection for him was so great that, towards the end of her life, when he was assassinated, her nuns dared not tell her lest the shock should be too great.

The Abbess Louise de Bourbon de Lavedan, aided by the famous Capuchins, Ange de Joyeuse and Joseph du Tremblay, sought to improve the status of the monks of St-Jean de l'Habit and made various attempts to establish theological seminaries for them. Her successor Jeanne-Baptiste de Bourbon, an illegitimate child of Henry IV by the beautiful Charlotte des Cars, has the credit of founding a new place to the order. In 1641 she obtained royal letters confirming the reform and finally quashing the claims of the monks, who sought to organize themselves independently of the authority of the abbess. The following year the Rule approved by Sixtus IV was printed at Paris. The "Queen of Abbesses", Gabrielle de Rohan-Chabot (1670–1704), sister of Mme. de Montespan and friend of Mme. de Maintenon, is said to have translated all the works of Plato from the Latin version of Ficino. The abbey school was frequented by the children of the highest nobility, and her successors were entrusted with the education of the daughters of Louis XIV, the last two abbesses being sisters of Louis's two mistresses, Duval d'Antin, was driven from her monastery by the Revolution; her fate is unknown. Towards the end of the eighteenth century there were 230 nuns and 60 monks at Fontevrault, and at the Revolution there were still 200 nuns, but the monks were few in number and only formed a community at the mother-
house. In the course of his preaching journeys through France, Robert d’Arbrissel had founded a great number of houses, and during the succeeding centuries others were given to the Friars. In the sixteenth century the Fontevrist priories numbered about sixty in all and were divided into the four provinces of France, Brittany, Gascony, and Auvergne. The order never attained to any great importance outside France though there were a few houses in Spain and Germany; the history of the order and the story of its houses may be read in the four volumes of The Abbey (Paris, 1849); and in the Dictionary of the Government and the abbey houses; the story of the abbey is told in the Abbey of Fontevraud (Paris, 1842). See also HENRIQUES, De K. de Heimhuyser, and the English Benedictines at the Beginning of the Seventeenth Century in The Angleterre Journal, II. Bishop, Bishop Girard and the Reform of Fontevraud in The Doucehouse Review (Jan., 1859); JUENNE, L’Abbaye Marie de Bretagne et la reformation de l’ordre de Fontevraud. (Angers, 1872); COPELON, Fontevraud et ses biennes (Paris, 1880); SICHEL, First and Last Abbeys of Fontevraud in Revue de l’Abbaye de Fontevraud (Paris, 1911). The only authority account of the abbey buildings, though now a large house, is Destinat, Fontevraud, son histoire et ses monuments (Paris, 1890.)

RAYMOND WEBSTER.

Fontevraud, Abbey of (B. Maria de Fonte Frigido), a Cistercian monastery in the department of Aude, six miles north-west of Narbonne, formerly in the diocese of Narbonne, now in that of Carcassonne. It was founded at Narbonne some time before 1097 by Aimery, Count of Narbonne, and was originally a filiation of the Abbey of Grandval. In 1118 the monks settled at Fontevraud, so-called from a spring in the place where the new monastery was built, and in 1146 the Cistercian reform was adopted. The abbey held a position of considerable importance in the Middle Ages and many of its abbots and monks were drawn from the nobility and highest families of France. One, Jacques Fournier, was elevated to the papacy as Benedict XII in 1334; some became cardinals, amongst whom were Arnaud Novelli (1310), Augustin Trivulce (d. 1548), and Hippolyte d’Este (d. 1572); and several others became Bishops of Narbonne or neighbouring churches. In the seventeenth century three successive priors were consecrated by the bishop of Narbonne, and in the nineteenth, Antoine de La Rochefoucauld family. Fontevraud was the burial place of the Counts of Narbonne, its chief patrons, and it had also many royal benefactors. In 1401 the use of abbatial pontificate was granted by Benedict XII, and other papal privileges were conceded at different times. The abbots also exercised civil jurisdiction over their dependents. The abbey escaped the intrusion of commendatory abbots, so common in the seventeenth and eighteenth centuries, and flourished under the rule of monastic superiors right up to the time of the Revolution, when it was suppressed. The conventual property, still in the private hands of the monks, was gradually falling into decay, when, in 1858, they were purchased for a sum of eighty thousand francs by Père Marie-Bernard (Louis Barnoin), the founder of the "Cistercians of the Immaculate Conception" and rector of the abbey of Sénanque, which had been incorporated into the Order of Cîteaux a year previously. A colony of about a dozen monks, under Père Marie-Jean, as first abbot of the restored Fontefrides, was sent there from Sénanque. In 1908 the "Association Laws" obliged them to leave, and the community was now domiciled at Tarascon, in the province of Lérida, and at Ségur-en-Conflent. There are nine men and thirty-one members, of whom fourteen are priests. They belong to the "Cistercians of the Common Observation", who were separated from the Trappists or "Stricter Observation" in 1834. The monasteries of
Fontfoide and Hautcounbe (in Savoy) now form the "Congregation of Sénanque", formerly that of "the Immaculate Conception", of which the present Abbot of Fontfoide is the vicar-general. Its constitutions were approved in 1892. The buildings at Fontfoide are chiefly of the thirteenth and fourteenth centuries, and include the church, cloisters, chapter-house, etc., comprising two quadrangles, all practically complete. (See Cistercians.)

G. CYTHIAN A. ASTON.

Fools, Feast of, a celebration marked by much licence and buffoonery, which in many parts of Europe, and particularly in France, during the later middle ages took place every year on or about the feast of the Circumcision (1 Jan.). It was known by many names—festum faktorum, festum stultorum, festum hypodiacoernor, to notice only some Latin variants—and it is difficult, if not quite impossible, to distinguish it from certain other similar celebrations, such, for example, as the Feast of Asses (q. v.), and the Feast of the Boy Bishop (q. v.). So far as the Feast of Fools had an independent existence, it seems to have gone back to the "festival of the deacons"*, which John Beleth, a liturgical writer of the twelfth century and an Englishman by birth, assigns to the day of the Circumcision. He is among the earliest to draw attention to the fact that, as the deacons had a special celebration on St. Stephen's day (26 Dec.), the priests on St. John the Evangelist's day (27 Dec.), and again the choristers and mass-servers on that of Holy Innocents (28 Dec.), so the subdeacons were accustomed to hold their feast about the same time of year, but more particularly on the festival of the Circumcision. This feast of the subdeacons afterwards developed into the feast of the lower clergy (each abbey or priory having its own) and was later taken up by brotherhoods or guilds of "fools" with a definite organization of their own (Chambers, T., 373 sq.).

There can be little doubt—and medieval censors themselves recognized the fact—that the licence and buffoonery which marked this occasion had their origin in pagan customs of very ancient date. John Beleth, when he discusses these matters, entitles his chapter "De quidam libertate Decembris" and goes on to explain: "Now the licence which is then permitted is called Decembrin, because it was customary of old among the pagans that during this month slaves and serfs would have a sort of liberty given them, and should be put upon an equality with their masters in celebrating a common festivity." (P. L., CCII, 123.)

The Feast of Fools and the almost blasphemous extravagances in some instances associated with it have constantly been made the occasion of a sweeping condemnation of the medieval Church. On the other hand some Catholic writers have thought it necessary to try to deny the existence of such abuses. The truth, as Father Drevès has pointed out (Stimmun aus Maria-Lasch, XLVII, 572), lies midway between these extremes. There can be no question that ecclesiastical authority repeatedly condemned the licence of the Feast of Fools in the strongest terms, no one being more determined in his efforts to suppress it than the great Robert Grosseteste, Bishop of Lincoln. But these customs were so firmly rooted that centuries passed away before they were entirely eradicated. Secondly, it is equally certain that the institution did lend itself to some serious characterizations, though the nature and gravity of these varied considerably at different epochs. In defence of the medieval Church one point must not be lost sight of. We possess hundreds, not to say thousands, of liturgical manuscripts of all countries and all descriptions. Amongst them the occurrence of anything which has to do with the Feast of Fools is extraordinarily rare. In missals and breviaries we may say that it never occurs. At best a prose or a trope composed for such an occasion is here and there to be found in a gradual or an antiphonary (Drevès, p. 575). It is reasonable to infer from this circumstance that though these extravagances took place in church and were attached to the ordinarv services, the official sanction was of the slenderest.

The same conclusion follows from two well-known cases which Father Drevès has carefully studied. In 1199, Bishop Eudes de Sully imposed regulations to check the abuses committed in the celebration of the Feast of Fools on New Year's Day by the Church in Paris. The celebration was not entirely banned, but the part of the "Lord of Misrule" or "Preceptor Stultorum" was restrained within decorous limits. He was to be allowed to intone the prose "Letemur gaudibus" in the cathedral, and to wield the preserver's staff, but this was to take place before the first verses of the feast were sung. Apart from this, the Church offices proper were to be performed as usual, with, however, some concessions in the way of extra solemnity. During the second Vespers, it had been the custom that the preceptor of the fools should be deprived of his staff when singing "Filiae de sade" (He hath put down the mighty from their seat) was sung at the Magnificat. Seemingly this was the dramatic moment, and the feast was hence often known as the "Festum Deposuit". Eudes de Sully permitted that the staff might here be taken from the preceptor, but enjoined that the verse "Deposuit..." was not to be repeated more than five times. A similar case of a legitimized Feast of Fools at Sens c. 1220 is also examined by Father Drevès in detail. The whole text of the office is in this case preserved to us. There are many proses and interpolations (farce) added to the ordinary liturgy of the Mass, but nothing which could give offence as unseemly, except the prose "Orientis partibus", etc., partly quoted in the article Asces, Feast of. This prose or "conductus", however, was not a part of the office, but only a preliminary to Vespers sung while the procession of subdeacons moved from the church door to the choir. Still, as already stated, there can be no question of the reality of the abuses which followed in the wake of celebrations of this kind.

The central idea seems always to have been that of the old Saturnalia, i.e. a brief social revolution, in which power, dignity and immunity are conferred for a few hours upon those ordinarily in subjection. Whether it took the form of the boy bishop or the subdeacon conducting the cathedral office, the parody must always have trembled on the brink of burlesque, if not of the profane. We can trace the same idea at St. Gall in the tenth century, where a student, on the thirteenth of December each year, enacted the part of the abbot. It will be sufficient here to notice that the continuance of the celebration of the Feast of Fools was finally forbidden under the very severest penalties by the Council of Basle in 1435, and that this condemnation was supported by a twenty-worded document issued by the faculty of the University of Paris in 1444, as well as by numerous decrees of various provincial councils. In this way it seems that the abuse had practically disappeared before the time of the Council of Trent.

A very large number of monographs and papers in the proceedings of learned societies have been devoted to this subject. Many of these are quoted by CHAMBERS, The Medieval Stage, I, 1883 (London, 1883), with bibliography, see also LERER, Collection des meilleures mémori-ales sur l'ancienne musique religieuse, vols. IX and X (Paris 1890). See also LEHMANN, Die Gesellschafts- und Fasnachtsfei- ren in Bayern (1891), and the further bibliographical references, such as the bibliography, Fous. Many articles written on this subject are mere lampoons directed against the medieval Church, and be-
FOPPA

tray a complete ignorance of the facts. An article entitled *Festum Stullorum in the Nineteenth Century* (June, 1903) is a typical specimen.

HERBERT THURSTON.

**FOPPA**, AMBROGIO, generally known as CARADOSSO, Italian goldsmith, sculptor, and die sinker, b. at Mon- donico in the province of Como, 1446, according to some; and 1447 according to others in Parma, the same year; d. about 1527. It is possible that this artist is not correctly known as Ambrogio, but that his Christian name was Cristoforo. He was in the service of Lodovico il Moro, Duke of Milan, for some years, and executed for him an exceedingly fine medal and sev- eral rings. In 1506 he is heard of in Rome, working for Popes Julius II and Leo X. His will was executed in 1526 and he is believed to have died in the following year. Cellini refers at some length to a medal struck by him in Rome, having upon it a representation of Bramante and his design for St. Peter’s, and he speaks of him as “the most excel- lent goldsmith of that time, who has no equal in the execution of dies.” He is believed to have been responsible for the terra-cotta reliefs in the sacristy of San Satiro, works which in their remarkable beauty are almost equal to the productions of Donatello. In addition to the Bramante and Moro medals three others are known, one representing Julius II, another the fourth Duke of Milan, Francesco Sforza, and the third Gian Giacomo Trivulzio (1448–1518).

A large number of examples of fine goldsmith’s work in the sacristies of the various churches of Italy are attributed to Foppa with more or less uncertainty. They especially include reliquaries, morses, and cro- siers. He was responsible for a papal mitre. A drawing of this tiara, made for Julius II, is in the print room at the British Museum, and was executed at the instance of an English collector named John Talman. An inaccurate engraving of it by George Vertue is extant, and this was reproduced by Müntz in his article on the papal tiara. He declares that the pope told his master of ceremonies that it cost two hundred thousand ducats. This wonderful work of art survived the sack of Rome through the accident of its being in pawn at the time, but was deliberately broken up and refashioned by Pope Pius V. (See Thurston in the “Burlington Magazine” for October, 1895.) Foppa is believed to have designed several pendent jewels, but there is a good deal of uncertainty at present respecting his goldsmith’s work, but neither can be attributed to him with anything like accuracy.

GEO GEORGE CHARLES WILLIAMSON.

**FORBIS**, JOHN, Capuchin; b. 1570; d. 1606. His father, John, eighth Lord Forbes, being a Protestant, and his mother, Lady Margaret Gordon, daughter of the fourth Earl of Huntly, a Catholic, John followed the religion of his father, while his elder brother was educated a Catholic. To preserve his Faith the latter went to Brussels and there entered the Capuchin order. His letters and the influence of a maternal uncle, James Gordon, S.J., led John into the Catholic Church, 1587. To recover his son to Protestantism Lord Forbes assisted him to a noble Protestant lady. On the eve of the marriage John, disguised as a shepherd, fled and, having eluded his father’s supposed pursuit, landed in Lille. Pursued into the English army, he escaped, was finally restored by Spanish militia, imprisoned at Antwerp, but finally released. After some delay he was admitted to the Capuchin Order, August, 1593, at Tournai, and took the name of his deceased brother, Anchangel. Perser- ving in spite of persuasion, force, and the stratagems of friends to the contrary, he completed his studies, was ordained a priest and after refusing an appointment as guardian, was sent as chaplain to the Spanish garrison at Dendermond. Mindful of his own countrymen he wrote to his kinman and companion in youth, James VI of Scotland, setting forth the claims of the Catholic religion. Learning of his whereabouts, many countrymen visited him, eighteen of whom he converted to Catholicism, also three hundred soldiers. To his great delight he was appointed missionary Apostolic to Scotland, but succumbed to an epidemic at Dendermond. He is said to have written an account of his conversion, though it was never published. His mother spent her declining years near her son; his betrothed became a nun in Rome.

JOHN M. LENTHART...

**FORBIS-JANSON**, CHARLES - AUGUSTE - MARIE - JOSEPH, COMTE DE, Bishop of Nancy and Toul, founder of the Association of the Holy Childhood, b. in Paris, France, 3 Nov., 1785; d. near Marseilles, 12 July, 1844. He was the sec- ond son of Count Michel Palamède de Forbis-Janson and of his wife Cornélie Henri- nette, princess of Gallas. He was a Knight of Malta from childhood, and a soldier at sixteen. Napol- eon I made him Audi tory of the Council of State in 1805. His family and the aristoc- racy looked for- ward to a most brilliant career as a statesman for him, but he sur- prised all by en- ter- ing the semi- nary of St-Sulpice in the spring of 1808. He was ordained priest in Savoy in 1811, and was made Vicar-General of the Diocese of Chambéry, but eventually determined to become a missionary. Pius VII advised him to remain in France where missionary work was needed. He heeded the advice, and with his friend the Abbé de Rau- zen, founded the *Missionnaires de France* and preached with great success in all parts of his native land. In 1817 he was sent to Syria on a mission, returned to France in 1819, and again took up the work of a mis- sionary until 1823 when he was appointed Bishop of Nancy and Toul, and was consecrated in Paris, 6 June, 1824, by the Archbishop of Rouen; Bishop Chevers of Boston, U.S.A., was a consecrator and Bishop Fen- nix of Cincinnati a witness. The French Govern- ment did not cease persecuting him for his refusal to sign the Gallican Declaration of 1682; finally, he was obliged to leave France in 1830, but succeeded in get- ting his own choice of a coadjutor bishop by threaten- ing to return to Nancy. Every good cause appealed to his pietist heart, every good work to his purse. He aided Pauline Jaricot in the establishment of the Society for the Propagation of the Faith. At the request of Bishop Flaget and Bishop Purell, Gregory XVI sent him on a missionary tour through the United States of America in 1833. During his two years stay in that country, he trav- eled far and wide giving missions to the people and
FERRARI, Vita di Forcellini (Padua, 1792).

EDMUND BURKE.

FOREMANN, Andrew, a Scottish prelate, of good border family; b. at Hatton, near Berwick-on-Tweed; d. 1522. His talents marked him out for early promotion in his ecclesiastical career; through the influence of King James IV, he soon became a prothonotary Apostolic and was employed on various important missions. The king sent him in 1497 with two other eminent prelates to conclude the treaty of Henry VII of England, and four years later he was empowered to negotiate for the marriage of King James with King Henry's daughter Margaret. By 1502 Foreman was Bishop of Moray (for which see, notwithstanding the protest of the priamate, he procured exemption from the metropolitan jurisdiction of St. Andrews); he was also "commendatory" Abbot of Dunkeld and Dunblane, and held an important synod, the enactments of which, still extant, throw an important light on the condition of the Scottish Church immediately before the Reformation. These statutes testify to the priamate's zeal for the amelioration of the state of the clergy, for the reform of abuses, the advancement of learning, and the augmentation of the solemnity of the services of the Church. Archbishop Foreman was buried in Dunfermline Abbey.

D. O. HUNTER-BLAIR.

FORENBERG, CLAUS, controversialist, b. at Luccerno, 1580; d. at Ratisbon, 1 January, 1599. He entered the Society of Jesus at the age of twenty, in Landshut, and made part of his studies under Fathers Laymann and Tanner. He taught philosophy at Ingolstadt (1615-1619), and theology, moral and controversial, for six years at Dillingen. In the latter institution he is also the first to collect the documents for the history of the Church. He spent the years 1632-1643 in the Tyrol, whither he had withdrawn with his illustrious penitent Heinrich von Knöringen, Bishop of Augsburg, on account of the inroads of the Swedes. Forer visited Rome (1645-1646) as the representative of the province of Upper Germany in the eighth congregation. He became rector of the college of Luccerno in 1650. Father Sommergovel enumerates sixty-two titles of publications from the pen of Forer; though not all of them are very voluminous, they show at least the writer's versatility and erudition, as well as his zeal for the integrity and the honour of the Church. The Prophecies of Dunkeld and Dunblane wrote one or more treatises each against the apostates Reibing and de Domini, against Melchior Nicolai, Hottinger, Kallien, Schopp, Molinos, Haberkorn, Voet, Hoe, the Ubiquists, and others. Such works as "Lutherus thamaturgus" (Dillingen, 1624), "Septem caracteris Lutheri" (Dillingen, 1620), "Quoestio ultima Thelemuri protestantis" (Dillingen, 1653; Pt. II, Ingolstadt, 1654), "Bellum ubiasticum vetus et novum inter ipsos Lutheranos bellatum et necudum debellatum" (Dillingen, 1627) are directed against all Protestants. Others, as "Anatomiæ anatomie Societatis Jesu" (Innsbruck, 1634),

Foresters, Catholic Orders of.—I. On 30 July, 1879, some members of the St. Vincent de Paul Society of Boston, Massachusetts, U.S.A., desiring to have a Catholic fraternal insurance society, organized one on the plan of the Foresters' courts and called it the Massachusetts Catholic Order of Foresters. It was so chartered in 1880. It had a membership of 27,757. Of the members 9679 were women. The initial subscription was $31 06, Dec., 1879, was $27,757,000.

II. On 24 May, 1883, a number of Catholics of Chi-
cago, Illinois, taking up the plan of this Massachus-
setts society, organized on the same lines the Catholic Or-
der of Foresters of Illinois. A flat all-around death 
assessment of one dollar was adopted, and men of all ages were admitted to membership at the same rate. Later, when courts were established in a number of other States and in Canada, an international convention in 1895 adopted a graded system of assessment insurance. Catholics between eighteen and forty-
five years of age are eligible for membership. From 
the date of organization to 1 June, 1908, it paid out $10,630,936 for death claims, and $2,500,000 in fu-
neral and sick benefits. It had in April, 1909, 1,600 
courts and a membership of 136,212 distributed over 
twenty-six States and the Dominion of Canada. The 
main offices are at Chicago, Illinois. The official or-
gan, "The Catholic Forester", is published at Mil-
waukee, Wis. The word "forester" as the title of the organization was dropped in 1888, as the mem-
bership had then extended beyond the limits of that 
State. This society is not affiliated with the Massa-
echusetts Catholic Order of Foresters.

III. A Woman's Catholic Order of Foresters was or-
ganized in 1892 at Chicago, having for its object be-
evolved co-operation among Catholic women with 
assessment-life-insurance at low rates. It has a 
membership of 54,350, with courts scattered over 
many of the States. The main offices are at Chicago.

THOMAS F. MEEHAN.

Forged, Forger.—If we accept the definition usu-
ally given by canonists, forgery (lat. falsum) differs very slightly from fraud. "Forgery", says Ferraris, who claims that his definition is the usually ac-
cepted one, "is a fraudulent interference with, or 
alteration of, truth, to the prejudice of a third person". It consists in the deliberate untruthfulness of an asser-
tion, or in the deceitful presentation of an object, and is 
based on an intention to deceive and to injure while 
using the external of honesty. Forgery is truly a 
falsehood and a fraud, but it is something more. It 
includes fraudulent misdemeanors in matters regu-
lated by the law, and endangering the public peace. 
These misdemeanors are divided by canon law 
writers into three classes—according as the crime is 
committed by word, by writing, or by deed. 
The principal crime in each of these classes being false 

witness, falsification of public documents, and counter-
feiting money. A fourth category consists in making 
use of such forgery, and is equivalent to forgery proper. 
This classification, while slightly superficial, is exact, 
and presupposes the erroneous belief of Jesus; 
finally, two of his works, written for Catholics, "Dis-
putkunst für die einfaltigen Catholischen" (Ingol-
stadt, 1656) and "Leben Jesu Christi" (Dillingen, 
1650-1658), have been re-edited and republished at 
Würzburg (1861) and Ratisbon (1856).

THOMAS F. MEEHAN.

Forged, Forger.—If we accept the definition usu-
ally given by canonists, forgery (lat. falsum) differs very slightly from fraud. "Forgery", says Ferraris, who claims that his definition is the usually ac-
cepted one, "is a fraudulent interference with, or 
alteration of, truth, to the prejudice of a third person". It consists in the deliberate untruthfulness of an asser-
tion, or in the deceitful presentation of an object, and is 
based on an intention to deceive and to injure while 
using the external of honesty. Forgery is truly a 
falsehood and a fraud, but it is something more. It 
includes fraudulent misdemeanors in matters regu-
lated by the law, and endangering the public peace. 
These misdemeanors are divided by canon law 
writers into three classes—according as the crime is 
committed by word, by writing, or by deed. 
The principal crime in each of these classes being false
tory of the Popes"), tr. V, 351). Again the sub-
datarius, Francesco Canonicci, called Mascabruno, was
confirmed in his death on 5 April, 1652, for many for-
geries discovered only on the eve of his elevation to the
cardinalate.

Canon law deals mainly with the attempt to put
forgeries to a specific use. It connects forgery and the
use of forged documents, on the presumption that he
who would make use of such documents must be either
the author or instigator of the forgery. In
canon law, forgery consists not only in the fabrication or
substitution of an entirely false document, "as
when a false bulla, or seal, is affixed to a false letter"
(Licet v., "De criminis falsi"), but even by partial
substitution, or by any alteration affecting the sense and
beauty of the document. It affects not only the
point, such as names, dates, signature, seal, favour
granted, by erasure, by scratching out or by writing
one word over another, and the like. The classical
and oft-commented text on this matter is the chapter
Licet v., "De crimine falsi" in which Innocent III
(1198) points out to the bishop and chapter of Milan
nine species of forgery which had come under his
notice. This famous instruction was given in order to
enable his correspondents to guard against future
fraud. Following his teaching the gloss on this chap-
ter enumerates among the six points a judge should
examine in order to discover a false pope or his
representatives.

Forma, stylum, filum, membrana, litura, sigillum.

Haece sex falsata dant scripturam valere posulium.

In other words a document is suspect, (1) If its out-
ward appearance differs greatly from the usual ap-
pearance of such documents. (2) If the style varies
from the usual manner of the Curia. Chapter iv,
"De crimine falsi" gives us an example of this: Inno-
cent III declares a Bull false wherein the pope ad-
dresses a bishop as "Dear Son" and not as "Venera-
ble Brother"; or in which any other person than a
bishop is styled "Venerable Brother" instead of
"Dear Son", or in which the plural usus is used to
address a single individual. (3) If the thread which
ties the leaden seal to the Bull is broken. (4) If the parch-
ment bears traces of a doubtful origin (just as we dis-
tinguish the water-marks and letter-heads of modern
documents). (5) If there are any erasures, or words
scratched out. (6) If the seal is not intact, or is not
clearly visible. If a judge suspects forgery he ought to
repudiate the document and punish the guilty party; but in case he considers it merely
doubtful he ought to make inquiries at the office of
the Roman Curia which is supposed to have issued it.

Substitution of false documents and tampering with
official documents was a frequent practice in the
Middle Ages. In the chapter Dura vi., "De crimine falsi", written in 1198, (para deciann), Innocent III relates that he had
discovered and imprisoned forgers who had prepared
a number of false Bulls, bearing forged signatures
either of his predecessor or of himself. To obviate
abuses, he orders under pain of excommunication or
suspension that pontifical Bulls be received only from
the hands of the pope or of the officials charged to
deliver them. He orders bishops to investigate sus-
picious letters, and to make known, to all those having
forged letters, that they are bound to destroy them,
or to hand them over within twenty days, under
pain of excommunication. The same pope legislated
severely against forgery and the use of forged docu-
ments. In the chapter Ad falsarium, vili., "De crim-
mine falsi", written in 1201, forgers of Apostolic Let-
ters, whether the actual criminals or their aiders and
helpers, are alike excommunicated, and if clerics, are
ordered to be degraded and given over to the secular
arm.

Whoever makes use of Apostolic Letters is invited
to assure himself of their authenticity, since to use
forged letters is punished in the case of clerics by
privatization of benefice and rank, and in the case of lay-
men by excommunication. The excommunication
threatened by Innocent III, and extended to the for-
gery of official dispensions, was interpreted in the Bull
"In Coma Domini", passed thence with some modifications into the constitution "Apostolicæ Sedis", where it is number 2
among the excommunications of a late sentence especially
reserved to the pope. It affects "all falsification of
Apostolic Letters, even in the form of Briefs, and sup-
plicatures concerning favours sought or dispensions asked
for, which have been signed by the Sovereign Pontiff,
or the vice-chancellors of the Roman Church or their
deputies, or by order of the pope", also all those who
falsely publish Apostolic Letters, even those in the
form of Brief; lastly, all those who falsely sign these
documents with the name, or any such signature as
the vice-chancellor or their deputies. The documents in
question here are of two sorts: (a) Apostolic Letters,
in which the pope himself speaks, whether they are in
the form of Bulls or Briefs (q. v.); (b) Supplications or
requests addressed to the pope to obtain a favour, and
to which, in proof that the request is granted, the
pope or the vice-chancellor or some other official
attaches his signature. It is from these supplications thus
signed that the official document conveying the con-
cession is drawn up. Consequently rescripts of the
Roman Congregations and of other offices, which are not
signed by the pope or by his order, do not come under
this heading.

The acts of falsification herein punished by excom-
unication are fewer than formerly. In the first
place, the principal crime is the only one dealt with;
the aiders and abettors of the forgery are not men-
dioned. In the next place, by a strict interpretation,
allowable in penal matters but certainly opposed to
the spirit of the Decretals of Innocent III, recent
 canonists exempt from the ipso facto censure forgers of
entire Apostolic Letters, and bring under it only those
who seriously alter authentic documents. It is cer-
tain, in any case, that the word faberius of the Bull
"In Coma Domini" becomes publicantes in the
Constitution "Apostolicæ Sedis". There are therefore
three acts contemplated by the latter text; the falsifi-
cation, in the strict sense of the word, of Apostolic
Letters and supplications; the publication of false
Apostolic Letters; the forging of signatures to supplic-
ations. The first of these is forbidden by the Decretals,
and the material divulgation of a document, but presup-
poses that such document is offered as, and affirmed
to be, authentic. Supplicatures with forged signatures it
would be useless to publish since they cannot take
the place of the official document conveying the con-
cession; it is in this case an act of fraud, and the strength of such signed supplications would have been
mislaid by the false signature. It must be remem-
bered that all other forms of forgery which escape the
ipso facto excommunication are subject to penalties and
censures "ferendæ sententiae" according to the
gravity of the case.

To have their full official weight before a tribunal,
public documents must be presented either in the
original, or in copies certified by some public officer.
Hence the note of falsification does not attach to re-
productions devoid of all guarantee of authenticity:
nevertheless such reproductions are sometimes seri-
ously criminal because of the perverse intention
xx, in a note) gives two examples of fraudulent repro-
ductions of this nature. Frederick II of Prussia for-
ged a Brief of Clement XIII, and dated it 30 January,
1759, by which the pope was made to send his ap-
signations and a bannopost to the Elector of Mo-
shal Daun, after the battle of Hochkirch. A Bull
purporting to be by Pius IX, dated 28 May, 1873,
modyfying the law in vigour for the election of a pope
was forged, with the connivance at least, of the Prus-
sian Government. Another false document, pub-

A. Boudinoff.

Forli, Dioceze of (Forolivien), in the province of Romagna (Central Italy), suffragan of Ravenna. The city of Forli, the ancient Forum Livii, is situated between the rivers Ronco and Montone, and was founded in 206 B.C. by the consul M. Livius Salinarus; destroyed during the Pontificate of Marcus Sulla; and rebuilt by the prior Livius Clidius. During the seventh and eighteenth centuries it was often besieged by the Lombards (665, 728, 742), until its incorporation with the Papal States in 757. In the medieval struggle between the papacy and the empire it was Giubelline. On the downfall of the Hohenstaufen, Simone Mestheguerra had himself proclaimed Lord of Forli (1257). He was succeeded by Maghinardo Pagano, Ugucione della Faglgiola (1297), and others, until in 1302 the Ordelafel came into power. More than once this family sought to establish their lordship in the Holy See, and therefore several times expelled, e.g. in 1327–29 and again in 1359–1375 (Gil d’Albomoro). Forli was seized in 1488 by Visconti and in 1499 by Cesar Borgia, after whose death it was again directly subject to the pope. In 1706 it was sacked by the Austrians.

St. Mercursialis is venerated at the Council of Rimini in 359. The Christian religion, however, must have been introduced, and a see established, much earlier. Among the illustrious bishops the following may be enumerated: Alessandri (1160), who built the episcopal palace; Fra Bartolomeo da Sanzetto (1551), canvassed by Francesco degli Ordelafel; Giovanni Capparelli (1427), banished by Antonio degli Ordelafel; Luigi Pirano (1437), who took an active part in the Council of Ferrara. The following were natives of Forli: Blessed Jacopo (decapitated, d. 1314), a Dominican; Blessed Pellegrino Sasie (d.1345), a Servite; Blessed Marcello Amanni (d. 1397), a Dominican. The Cathedral of Santa Croce existed as early as 562; in 1419 Martin V ordered restorations that were completed in 1475; and it was again enlarged in 1841. A notable site is the cathedral of the Madonna del Fuoco; the sacred image contained there was formerly in a private house, where it remained unharmed during a fire. Also worthy of mention are: the church of San Mercuriale, with its celebrated bell-tower, the work of Francesco Daddi (1428); San Biagio, with frescoes by Malerba da Forli and Pacchiarani; and an "Immaculate Conception" by Guido Reni; Santa Maria dei servi (built by Blessed Pellegrino, buried there), with frescoes of the school of Giotto. The seminary has a rich collection of 500 Aldine first editions and of pictures. Near Forli is the shrine of Santa Maria delle Grazie of Forno. The diocese has 61 parishes, 60,000 inhabitants, 3 male and 6 female educational institutions, 4 religious houses of men, and 7 of women, and a weekly Catholic paper.

Cappelletti, Le Chiese d’Italia (Venice, 1844), II, 307–67; M. Matteo, Lettere ad Agostino (Rome, 1678); Rossetti, Vita degli uomini illustri Forliesi (Forli, 1858–61).

U. Bentoni.

Fors (Lat. foris; Gr. ἀπόδοσις, ορθός, τὸ κατὰ τὸν ἄλογον ἔνδρα, τὸ πτὸ ζειρα; Aristot.).—The original meaning of the term, both in Greek and Latin, was and is that in common use— dildo (derived from dildo, root ρύθ, an obsolete form from which comes the second

aurist ἀπόδοσις, I see, akin to Latin video), being translated, that which is seen, shape, etc., with secondary meanings derived from its form, sort, particular, kind, nature. It is also used by Plato to express kind, both as genus and species. From the primary and common significance given above, an easy transition is made to that in which it comes to signify the intrinsic determinant of quantity, from which figure certain properties result, and therefore to the fundamental, and scholastic usage as the intrinsic determinant of anything that is determinate. Thus the term is employed even in such expressions as "form of contract," "form of worship," and as theological form, "form of words" (the theological statement of dogmatic truth); fundamental form being the general formula of the philosophical usage, however, it is limited to its signification of the intrinsic principle of existence in any determinate essence. This covers form, whether accidental or substantial. But there is a further extended use of the term form, derived from the fact that in all its previous significations it stands for the intrinsic constitutive element of the species, accidental or substantial, in sensible entities. Hence, all species or nature, whether in itself material or existent as immaterial, is called a form, though not, in the strict meaning of the term, a formal principle. In this manner, it is not unusual to speak of the angelic form, or even of the form of its own kind, as signifying its nature, or of the angel or of God. Hence, form is sometimes also used as a synonym of essence and nature. Thus also the form, or formal cause of Aristotle’s theory of causality, is identified with the essence (τὸ ἐπὶ τῇ ἐσχατον), as the form is that in virtue of which the essence, even of material and composite entities, is precisely what it is. This point will be further considered in the paragraph treating of the development of the idea of form.

The various kinds of form recognized in philosophy include the following, of which brief definitions are given. Substantial form, in material entities, is that which determines or constitutes matter (see Matter). By substantial form (a term used by Aristotle) to a specific substantial nature or essence, as the form of hydrogen, a rose, horse, or man. It is defined by Aristotle as the first entelechy of a physical body (De Anima, II, 1), and may be of such a nature that it is merely the determinant of matter (corporate substance, or form), or it may be a permanent principle of the determined matter (spiritual or subsistent form). Accidental form is that which determines a substance to one or other of the accidental modes as quantified, qualified, related, etc. (see Category). As the existence of an "accident" is a secondary one, consisting in an inessential or inherent, an existent such, as subject of inherence, is per accidens. A separated form is one which exists apart from the matter it actuates. No accidental form can thus exist, nor can corporeal substantial forms. The separated form is that of man—the human soul. Inherent form is an accidental form modifying or determining substance. The term is employed to emphasize the distinction of accidental from substantial forms. These latter do not inhere in matter, but are co-principles with it in the constitution of material substances. Forms of knowledge, according to Kant, are forms of (1) intuition (space and time), and (2) thought (the twelve categories in which all judgments are conditioned: unity, plurality, totality; reality, negation, limitation; substantiality, causality, relation; possibility, existence, necessity). They are all a priori and under them, as content, fall all our intuitions and judgments. The logical system of Kant is generally known as "formal" logic, from this common use, as also that of Herbart, whose logical treatment of thought consists in the isolation of the content from its psychological and metaphysical implications. The point is related to the whole subject of epistemology (q. v.). The attempt to ascertain the nature, extent, and validity of knowledge was made by Kant through
a criticism, not of the content of thought, but of its essence. It is an endeavour to examine not the "factual or natural" relation itself.

The development of the philosophical doctrine of form may be said to have begun with Aristotle. It provided a something fixed and immutable amidst what appears to be involved in a series of perpetual changes, thus obviating the difficulty of the Heraclean position as to the validity of knowledge. The concept of form restores the permanence of a true knowledge of things as they are. Thus Aristotle may be looked upon as the one above all others who laid a solid base for any true system of epistemology. Like Plato, he saw the radical scepticism implied in an assertion of unending change. But unlike the doctrine of the former, providing unalterable but separated ideas as the ideal counterpart of sensible things, that of Aristotle, by its distinction of matter and form, makes it possible to abstract the unalterable and eternal from its concrete and mutable manifestation in individuals. Aristotle, however, identifies the form with the essence; and this because the substance is what it is (essentially) by reason of the substantial form. It would be a mistake, none the less, to suppose that his doctrine leaves no room for a distinction between the two. Indeed Grote clearly shows that "the Aristotelian analysis thus brings out, in regard to each individual, (or sort of objects) to use his own phrase, a triple point of view: (1) the form; (2) the matter; (3) the compound or aggregate of the two—in other words the inseparable "Ens" which carries us out of the domain of logic or abstraction into that of the concrete or reality" (Grote, "Aristotle," ed. Bain and Robertson, II, 182). The theory is a fundamental one in Aristotle's "Philosophia Prima," presenting, as it does, a phase, and that perhaps the most important, of the distinction between the potential and the actual. It is no less essential to the philosophical and theological system of St. Thomas Aquinas which is representative of the Christian School. Substantial form is an act, the principle of activity, and by it things actually exist (Summa I, Q. lxvi) as they are. Moreover it is one. Thus man exists as man in virtue of his substantial form, the soul.

That the rational soul is the unique form of the body is of faith (Council of Vienne; V Lateran; Brief of Pius VII, 1877). Man lives on the virtue of the accidental (qualifying) forms of learning or health that "inhere" in him. These, without detriment to his humanity, may be present or absent. Both kinds of form, it may be noted, though they specify their resultant essences, or quasi-essences, are individualised and identified mutually, and this subject of inhesion in the other. Thus, while the accidental or substantial corporeal form falls back into mere potentiality when it does not actuate its subject, the incorporeal substantial form of man, though continuing to exist when separated from the body, retains its habitus, or relationship, to the matter by which it was individuated. This doctrine is usual in the School, but it is interesting to observe that Scotus taught, in distinction to St. Thomas's doctrine of one substantial form, a plurality of form in individuals. Thus, e.g., while according to Aquinas man is all that he is substantially (corporeal, animal, rational, Socrates) in virtue of his one soul, according to Scotus each determinate (generic or specific) superadds a form. In this way, man would be corporeal in virtue of a corporeal form, animal in virtue of a superadded animal form, etc., until he became Socrates, in virtue of the ultimate personal form (socrates). Ockham also distinguished between a rational and a sensitive soul in man, and taught that the latter was corruptible. The terminology of the Scholastic doctrine of form is employed by the Church in dogmatic definitions, such as that of the Council of Vienne cited above, and in her teaching with regard to the sacraments. Thus, while the matter of the sacrament of baptism, for example, is water; the sacramental form consists of the words ego te bapto, etc., pronounced by the minister as he bathes it. The same terminology is adopted in the exposition of moral theology, as in the distinction of formal and material sin.

The principal alternative systems professing to give an account of corporeal substances are those of Descartes, Locke, Mill and Bain, the scientists (Atomists, Monadology, substance in three dimensions, identifying quantified substance with quantity and in no way accounting for substantial differences. Each substance possesses a "pre- eminent attribute, which constitutes its nature and essence and to which all others relate; thus extension", etc. To this Locke adds the qualities of the substance, making its essence consist of its primary qualities, or properties (extension, figure and mobility, divisibility and activity). Locke's doctrine, which seems to be the opinion of many contemporary men of science, labours under the same grave inconvenience as that of Descartes, as, by a hylomorph-proteron, it accounts for the nature of a given substance by its accidents. Mill and Bain, considering substance from a psychological rather than an ontological viewpoint, define it by its relation to sense perception as an external and permanent possibility of our sensations. The view is not unlike that just alluded to, inasmuch as it expresses not the essence of each substance, but their activity as permanently capable of evoking sensations in us. Akin to this is the doctrine of positivism, explaining the nature of "matter" as a series of sensations.

The topic of form is, as has been seen, closely connected with epistemology. As was said, a weapon for the defeat of scepticism and Heracleianism was provided by Aristotle in his doctrine of forms and essences; Aquinas, also, would have our knowledge to be of the eternal essences, though derived by way of contemplation of contingent individuals. Kant, on the other hand, denies the possibility of such knowledge of the Thing-in-itself, and, establishing a set of mental forms (see above) into which our experience of concrete beings may be fitted, inaugurates an epistemology of the phenomenal. Hegel begins with the idea of pure being, identical, because of its entire lack of determination; and, finding or hearing, as it were, the essential lines, his theory of knowledge. The "realism" of Herbart is an attempt to reconcile the contradictions that arise in the formal conceptions presented in experience. His epistemological principle is, therefore, a critical and methodical transformation of such concepts as the one (to which in the case of form and matter simple, real essences exist, each possessing a single simple quality. Several of the modern systems (Pragmatism, Modernism, etc.), based directly and indirectly upon the teaching of Kant, assert a life-value or work-value to truth, inculcating an extreme relativity of knowledge and tending to pure subjectivism and solipsism. The scholastic theory of form is not that generally adopted by modern scientists, though it may be noticed that it is not directly impugned by any scientific system. From Bacon on, empirical science has been progressive; and there is reason to believe that the therapeutic science of to-day is in a state of transition in its attitude with regard to the constitution of "matter" (substance). The atomic and molecular theories, principally on account of the discovery of the radioactive substances and their properties, are being modified or abandoned (at any rate in so far as they were held to represent the real constitution of matter); on the other hand, a theory not unlike that of the Jesuit Boscovich. In any case the former did not go farther than to provide a theoretic account of the construction of "matter", leaving the ultimate construction of substance unexplained. At this point the theory of hylomorphism and the doctrine of sub-
For a critical examination of the Mechanistic position in this connexion the reader is referred to Nya's "Cosmologie". Furthermore, there is a noticeable reaction towards the scholastic position in recent biology, in which a growing school of neovitalism is making itself felt.

(Citations from various works are omitted for brevity)

FORMBY, Henry, b. 1816; d. at Normanton Hall, Leicester, 12 March, 1884. His father, Henry Grene-halgh Formby, was the second son of Richard Formby of Formby Hall, Lancashire. The family had been Catholic until the eighteenth century, when, with the exception of a younger branch, they left the Faith and closed the chapel of their fifteenth-century mansion. Henry Formby was educated at Clitheroe grammar-school, the Charterhouse School, London, and Brasenose College, Oxford, where he took his M.A. Having taken orders, he became vicar of Rusdean in Gloucestershire, where in 1843 he completed his first book, "A Visit to the East", and he showed the interest in ecclesiastical music that always characterized him in a pamphlet reprinted from "The English Churchman" called "Parochial Psalmsody Considered" (1845). At this time he was profoundly influenced by the Oxford Movement and soon after his ordination he became a Catholic, he decided to resign his living and join the Church. His reception took place on 24 Jan., 1846, at Oscott, where he continued studying theology till he was ordained priest, 18 Sept., 1847. He was attached to St. Chad's Cathedral where the careful performance of plain chant has ever been a noted feature. He edited whilst he was there works on the subject: "The Catholic Christian's Guide to the Right Use of Christian Psalmody of the Psalter" (1847); "The Plain Chant the Image and Symbol of the Humanity of the Divine Redeemer and the Blessed Virgin Mary" (1848); and "The Roman Ritual and Its Canto Femina, Compared with the Works of Modern Music, in Point of Efficiency and General Fitness for the Purpose of the Catholic Church" (1849). He also published "The Young Singer's Book of Songs" (1852), "School Songs and Poetry to Which Music Is Adapted" (1852), and he was one of the editors of the "First Series of Hymns and Songs for the Use of Catholic Schools and Families" (1853). Other works belonging to this period were: "The Duties and Happiness of Domestic Service" (1851), "The March of Intellect; or, The Alleged Hostility of the Catholic Church to the Diffusion of Knowledge Examined" (1852), and "State Rationalism in Education; An Examination Into the Actual Working and Result of the System of the Board of Commissioners of National Education in Ireland" (1854).

Besides his interest in ecclesiastical music, Father Formby had much at heart the use of pictures as a means of spreading knowledge of the Scriptures and Catholic doctrine. In furtherance of this purpose he published a series of carefully illustrated books. Among these was his very successful "Pictorial Bible and Church History Stories", which began with "Pictorial Bible Stories for the Young" (1858). An edition of the complete work was published in 1857, followed by another in three volumes with new illustrations in 1862, and an abridged one-volume edition in 1871. From 1857 to 1864 he was the editor of "The Catholic"; Wednesday; during which time he published "The Fifteen Mysteries of the Rosary" (1857), "The Life of St. Benedict" (1858), "The Parables of Our Lord Jesus Christ" (1858), "The Life of St. Patrick" (1862), all of which were illustrated. A sermon on "Our Lady of Lourdes" (1857) and "The Documentiz into the Truth of the Catholic Religion" (1863) were also published while he was at Wednesbury. In 1864 he retired from active missionary work and withdrew to the Dominican priory at Hinckley in Leicestershire, where he spent the remaining twenty years of his life in issuing books and pamphlets and in helping to train the novices. For some years he edited "The Monthly Magazine of the Holy Rosary". His later publications included "The Cause of Poor Catholic Emigrants Pleaded" (1867); "Fleury's Historical Catechism continued to the Vatican Council" (1871); "The Book of the Holy Rosary for the Church and Home" (1872); "Christi Tractatus" (1872); "Sacramentum Septemarianum" (1874); "The Children's Forget-me-not" (1877); "Compendium of the Philosophy of Ancient History" (1877); "Little Book of the Martyrs of the City of Rome" (1877); "Five Lectures on the City of Rome" (1877); "Monothelism... the primitive Religion of the City of Rome" (1877); "Ancient Rome and Its Connection with Christian Religion" (Part I, 1880; Part II, unfinished at his death); "The Growing Unbelief of the Educated Classes" (1880); "Safeguards of Divine Faith in the Presence of Sceptics, Atheists, and Freethinkers" (1882); "A Familiar Study of the Sacred Scriptures", his last work. He also wrote a great number of minor devotional and educational books.

EDWIN BURTON.
question of succession, Louis II having no male heir. At first Pope John VIII (872–882) reposed trust in Formosus, and, on the death of Louis II (878), employed two of his knights to convey his congredation to Charles the Bald, King of France, to come to Rome and receive the imperial crown from the hands of the pope. Charles obeyed the call, was crowned emperor on Christmas Day, 875, and, before returning home, appointed Dukes Lambert and Guido of Spoleto to assist the pope against the Saracens. In 871, these nobles had been dismissed from their dignities when opposing against Louis II; but they were restored by Charles.

In the pope’s entourage there were many who viewed with disapproval the coronation of Charles, and favoured the widowed Empress Engelberga and Louis, the German, bearing severe chastisement, these political opponents of the pope left Rome secretly to seek safety elsewhere. Cardinal Formosus was among the fugitives, as he dreaded the anger of the pope without knowing exactly whereby he had incurred the papal resentment. From the fact that Formosus had been sent by the pope as ambassador to Charles and now directed his flight to Abbot Hugo at Tours in Western France, it must be inferred that he was not fundamentally opposed to the coronation of Charles. He cannot, however, have been in sympathy with the pope’s political views, and consequently feared lest he might share the fate of John upon the papal court. The papal court was, in fact, as early as 872, a candidate for the papal see, so that John possibly viewed him in the light of an opponent. On the flight of Formosus and the other papal officials, John convened a synod, 19 April, which ordered the fugitives to return to Rome. As they refused to obey this injunction, they were condemned by a second synod on 30 June. Against Formosus, should he fail to return, sentence of excommunication and deposition were pronounced by the first synod, the charges being that, impelled by ambition, he had aspired to the Archbishops of Bulgaria and the Chair of Peter, had opposed the emperor and had deserted his diocese without papal permission. It follows from this that John saw in Formosus a rival whom he gravely suspected. The second synod of 30 June, after several new accusations had been brought against Formosus (e.g. that he had defrocked the cloisters in Rome, had slaughtered the divine service in the sight of the people, had conspired with certain iniquitous men and women for the destruction of the papal see), excluded him from the ranks of the clergy. Such charges, made against a man who was religious, moral, ascetic, and intellectual can only be referred to party spirit.

On the 10th of July Formosus was announced to the emperor and the Synod of Ponthion in July. In 878 John himself came to France, and the deposition of Formosus, who appeared in person, was confirmed at the synod of Troyes. According to the acts of the synod, which are however of doubtful authority, the synod was composed against Formosus was withdrawn, after he had pronounced on oath never to return to Rome or exercise his priestly functions. The succeeding years were spent by Formosus at Sens. John’s successor Marinus (882–884) released Formosus from his oath, recalled him to Rome, and in 885 restored him to his Diocese of Porto. During the short pontificate of Marinus and his successor Hadrian III (884–885), and under Stephen V (885–891), we learn nothing important concerning Formosus. In September, 891, he was elected to succeed Stephen. Under Stephen V the political horizon had become very threatening. Charles the Fat had reunited the Frankish kingdom, and the pope, placed in the mouth of the mouth of the Lombard kings, in 887, Arnulf of Carinthia, the natural son of Karlmann and the nominee of the Germans, was unable to preserve its unity. In the western kingdom, Count Eudes of Paris came forward as king; in Provence (Arelate), Louis, son of Boe; in North Burgundy (Jura), Rudolf, son of the Count of Auxerre and grandson of Louis the Pious; in Italy, Manfred, son of the Deacon Guido of Spoleto, thereupon took possession of Lombardy, and assumed the title of king. Ruling now over the greater portion of Italy, Guido was a dangerous neighbour for the papal states, especially as the Archdukes of Spoleto had been on many occasions engaged in conflict with the papal states. The pope, fearing the dignity of the see coveted by Guido, emperor, as King Arnulf had been unable to accept the pope’s invitation to come to Rome. Consequently Formosus, after he had been unanimously elected pope by clergy and people, found himself compelled to recognize Guido’s dignity and to crown him king, and his son Lambert Roman Emperor on April 892. Important ecclesiastical questions claimed the pope’s attention immediately after his elevation. In Constantinople, the patriarch Photius had been ejected and Stephen, the son of Emperor Basilus, elevated to the patriarchate. Archepiscopal Stylian of Neo-Caesarea and the clerical opponents of Photius had written to Stephen V, requesting dispensation and promotion for those clerics who had recognized Photius only under compulsion and had received orders at his hands. In his reply to this petition (892) Formosus insisted on a distinction of persons; indulgence might be shown in the case of the laity, but in the case of clerics such a condition was impossible. As early as 872, Formosus had been a candidate for the papal see, so that John possibly viewed him in the light of an opponent. On the flight of Formosus and the other papal officials, John convened a synod, 19 April, which ordered the fugitives to return to Rome. As they refused to obey this injunction, they were condemned by a second synod on 30 June. Against Formosus, should he fail to return, sentence of excommunication and deposition were pronounced by the first synod, the charges being that, impelled by ambition, he had aspired to the Archbishops of Bulgaria and the Chair of Peter, had opposed the emperor and had deserted his diocese without papal permission. It follows from this that John saw in Formosus a rival whom he gravely suspected. The second synod of 30 June, after several new accusations had been brought against Formosus (e.g. that he had defrocked the cloisters in Rome, had slaughtered the divine service in the sight of the people, had conspired with certain iniquitous men and women for the destruction of the papal see), excluded him from the ranks of the clergy. Such charges, made against a man who was religious, moral, ascetic, and intellectual can only be referred to party spirit.

On the 10th of July Formosus was announced to the emperor and the Synod of Ponthion in July. In 878 John himself came to France, and the deposition of Formosus, who appeared in person, was confirmed at the synod of Troyes. According to the acts of the synod, which are however of doubtful authority, the synod was composed against Formosus was withdrawn, after he had pronounced on oath never to return to Rome or exercise his priestly functions. The succeeding years were spent by Formosus at Sens. John’s successor Marinus (882–884) released Formosus from his oath, recalled him to Rome, and in 885 restored him to his Diocese of Porto. During the short pontificate of Marinus and his successor Hadrian III (884–885), and under Stephen V (885–891), we learn nothing important concerning Formosus. In September, 891, he was elected to succeed Stephen. Under Stephen V the political horizon had become very threatening. Charles the Fat had reunited the Frankish kingdom, and the pope, placed in the mouth of the mouth of the Lombard kings, in 887, Arnulf of Carinthia, the natural son of Karlmann and the nominee of the Germans, was unable to preserve its unity. In the western kingdom, Count Eudes of Paris came forward as king; in Provence (Arelate), Louis, son of Boe; in North Burgundy (Jura), Rudolf, son of the Count of Auxerre and grandson of Louis the Pious; in Italy, Manfred, son of the Deacon Guido of Spoleto, thereupon took possession of Lombardy, and assumed the title of king. Ruling now over the greater portion of Italy, Guido was a dangerous neighbour for the papal states, especially as the Archdukes of Spoleto had been on many occasions engaged in conflict with the papal states. The pope, fearing the dignity of the see coveted by Guido, emperor, as King Arnulf had been unable to accept the pope’s invitation to come to Rome. It follows from this that John saw in Formosus a rival whom he gravely suspected. The second synod of 30 June, after several new accusations had been brought against Formosus (e.g. that he had defrocked the cloisters in Rome, had slaughtered the divine service in the sight of the people, had conspired with certain iniquitous men and women for the destruction of the papal see), excluded him from the ranks of the clergy. Such charges, made against a man who was religious, moral, ascetic, and intellectual can only be referred to party spirit.

On the 10th of July Formosus was announced to the emperor and the Synod of Ponthion in July. In 878 John himself came to France, and the deposition of Formosus, who appeared in person, was confirmed at the synod of Troyes. According to the acts of the synod, which are however of doubtful authority, the synod was composed against Formosus was withdrawn, after he had pronounced on oath never to return to Rome or exercise his priestly functions. The succeeding years were spent by Formosus at Sens. John’s successor Marinus (882–884) released Formosus from his oath, recalled him to Rome, and in 885 restored him to his Diocese of Porto. During the short pontificate of Marinus and his successor Hadrian III (884–885), and under Stephen V (885–891), we learn nothing important concerning Formosus. In September, 891, he was elected to succeed Stephen. Under Stephen V the political horizon had become very threatening. Charles the Fat had reunited the Frankish kingdom, and the pope, placed in the mouth of the mouth of the Lombard kings, in 887, Arnulf of Carinthia, the natural son of Karlmann and the nominee of the Germans, was unable to preserve its unity. In the western kingdom, Count Eudes of Paris came forward as
continue the campaign. Shortly afterwards (4 April, 896) Formosus died. He was succeeded by Boniface VI, who reigned only fifteen days.

Under Stephen VI, the successor of Boniface, Emperor Louis the German and Agilulph recovered their authority in Rome at the beginning of 897, having renounced their claims to the greater part of Upper and Central Italy. Agilulph being determined to wreak vengeance on her opponent even after his death, Stephen VI lent himself to the revolting scene of sitting in judgement on his predecessor. Formosus, at the synod convened for that purpose, he occupied the chair; the corpse, clad in papal vestments, was withdrawn from the sarcophagus and seated on a throne; close by stood a deacon to answer in its name, all the old charges formulated against Formosus under John VIII being revived. The decision was that the deceased had been unworthy of the pontificate, which he could not have validly received since he was bishop of another see. All his measures and acts were annulled, and all the orders conferred by him were declared invalid. The papal vestments were torn from his body; the three bibles which he had brought and had used in consecrations were seized from his right hand; the corpse was cast into a grave in the cemetery for strangers, to be removed after a few days and consigned to the Tiber. In 897 the second successor of Stephen had the body, which a monk had drawn from the Tiber, restored with full honours. It was furthermore annulled at a synod the decisions of the court of Stephen VI, and declared all orders conferred by Formosus valid. John IX confirmed these acts at two synods, of which the first was held at Rome and the other at Ravenna (898). On the other hand Sergius III (904-911) approved at a Roman synod the decisions of Stephen VI’s synod against Formosus; all who had received orders from the latter were to be treated as lay persons, unless they sought reordination. Sergius and his party meted out severe treatment to the bishops consecrated by Formosus, who, in turn had meanwhile conferred orders on many other clerics, a policy which gave rise to the greatest confusion. Against these decisions many books were written, which demonstrated the validity of the consecration of Formosus and of the orders conferred by him (see AUXILIUS).

J. P. KIRSCH.

Formularies (LIBRI FORMULARVM), medieval collections of models for the execution of documents (acta), public or private; a sphere being left for the inclusion of civil, ecclesiastical, and commercial to each case. As is well known, it is practically inevitable that documents of the same nature, issued from the same office, or even from distinct offices, will bear a close resemblance to one another. Those charged with the execution and conduct of such documents cannot be expected to exercise a minute diligence, since, in many cases, the use of such formularies permits the drafting of important documents to be entrusted to minor officials, since all they have to do is to insert in the allotted space the particular information previously supplied them. Finally, in this way every document is clothed in all public and private measures, and almost every one has a meaning clearly and definitely intended. Uncertainties and difficulties of interpretation are thus avoided, and not infrequently lawsuits. This legal formalism is usually known as the "style" or habitual dictum of chanceries and the documents that issue therefrom. It represents long efforts to bring into the document all necessary and useful elements in their most appropriate order, and to use technical expression, to a point where, in many cases, some of them more or less essential, others merely as a matter of tradition. In this way arose a true art of drafting public documents or private acta, which became the monopoly of chanceries and notaries, which the mere layman could only imperfectly imitate, and which in time of woe, to such a point that even the "style" of a supposititious deed has often been sufficient to enable a skilful critic to detect the forgery. The earlier Roman notaries (tabelliones) had their own traditional formulae, and the drafting of their acta was subject to an infinity of detail (see "Novels" of Justinian, xlv, lxi); but in the Middle Ages the case of Rome and Byzantium were more remarkable still for their formulatores. The chanceries of the barbarian kingdoms and that of the papacy followed in their footsteps. Nevertheless it is not directly from the chanceries that the formulatores of the Middle Ages have come down to us, but rather from the case that they are ecclesiastical schools. Therein was taught, as pertaining to the study of law, the art of drafting public and private documents (see Du Cange, "Glossarium med. et infime Latinitatis", s. v. "Dictare"). It was called dictare as opposed to scribere, i.e. the mere material execution of such documents.

To train the dictatores, as they were known, specimens of public and private acta were placed before them, and they had to listen to commentaries thereon. Thus arose the yet extant formulatores, between the seventh and the ninth centuries. These models were sometimes of a purely academic nature, but the number of such was small; against every case the dictator took from real documents, in the transcription of which the individualizing references were suppressed so as to make them take on the appearance of general formulae; in many instances, too, nothing was suppressed. The formulae dealt with public documents: royal decrees on civil matters, ordinances, etc.; with documents relative to legal processes and the administration of justice; or with private deeds drawn up by a notary: sales, exchanges, gifts to churches and monasteries, transference of ecclesiastical property, the manumission of slaves, the settlement of matrimonial goods, the execution of wills, etc. The formulatores锄 included deeds which refer solely to ecclesiastical concerns: consecrations of churches, blessings of various kinds, excommunications, etc. The study of the medieval formulatores is of importance for students of the history of legislation, the rise of institutions, the development of manners and customs, judicial changes, above all for the criticism of charters and diplomas, and for researches in medieval philology. In those times the ecclesiastical and civil orders were closely related. Many civil functions and some of the highest state offices were held by ecclesiastics and monks. The scrina dictandi was taught in the schools connected with the monasteries and those with clerical training. It was quite a long time all acta were drawn up only in Latin, and as the vernacular languages, in Romance lands, gradually fell away from classical Latin, recourse to ecclesiastics and monks became a matter of necessity. The formulatores are, of course, anything but models of Latinity; with the exception of the Letters (Variae) of Cassiodorus, and the St. Gall collection "Sub Salomone", they are written in careless or even barbarous Latin, though it is possible that their wretched "style" is intentional, so as to render them intelligible to the multitude.

The formulatores of the Middle Ages date from the sixth to the tenth century, and we still possess many once used in one or other of the barbarian kingdoms. Many were edited in the seventeenth century by Jérome Biguon, Baluze, Mabillon, and others; and
many more in the nineteenth century, especially by two savants who compiled collections of them: (1) Eugène de Rozière, "Recueil général des formules usitées dans l'empire des Francs du cinquième au dixième siècle" (3 vols., Paris, 1859-71). He grouped these early medieval formule under five principal heads: "Formule ad justum publicum, ad justum privatum, ad judiciorum ordinem, ad justum sanctiﬁcium et ad res sacrae spectantium". And he followed up this arrangement by a very complete set of tables of concordance. (2) Karl Zeumer, "Formule Merovingici et Karolini avi" (Hanover, 1886) in "Mon. Germ. Hist.-Leg." V; he reproduces the formule in the work and gives a more complete study than de Rozière. The pages will be the main source of information. This collection dates from before 538 (P. L., LXIX). The Servite Canciani took ninety-two of these formule of Cassiodorus and included them in his "Barbarorum leges antique" (Venice, 1781, I, 19-50).

(2) The Visigoths.—Cassiodorus, secretary and afterwards prime minister of King Theodoric, included in his "Varia,um (epistolarium) libro XII", particularly in books six and seven, and, as he says, for the guidance of his successors, a great number of acta and formule drawn up by his royal master. It is a genuine formule, though standing apart by itself. This collection dates from before 538 (P. L., LXIX). The Servite Canciani took ninety-two of these formule of Cassiodorus and included them in his "Barbarorum leges antique" (Venice, 1781, I, 19-50).

(3) The Franks.—Their formule are numerou:s: (a) "Formule Andecavenses", a collection made at Angers, consisting of sixty formule for private acta, selected from the eighth century, the greater number from the early part of the seventh; the fast three of the collection belong to the end of the seventh century. They were first edited in 1880 by Mabillon from an eighth-century manuscript preserved at Fulda. (b) "Formule Arverneses" (also known as "Formule Arvernesi Francorum"; these who issued the works in 1713), a collection of eight formule of private acta made at Clermont in Auvergne during the eighth century. The first of them is dated from the consulate of Honorius and Theodosius (407-422). (c) "Marculfi monachi formularium libri duo", the most important of these collections, and dedicated by its author to a Bishop Landri, doubtless identical with the Bishop of Paris (650-650). The first book contains thirty-seven formule of royal documents; the second, carta pagenses, or private acta, to the number of fifty-two. The work, which was well done, was very favourably received, and became popular as an official textbook, if not in the time of the mayors of the palace, at least under the early Carolingians. During the reign of Charlemagne it received a few additions, and was re-arranged under the title "Formule Marcuriae avi Karolini". Zeumer edited six formule closely related to this collection. (d) "Formule Ravenses", also called "Formule Simplices" (Baluze edited them under this title because they had been discovered by Père Simonde in a Langres manuscript). This collection, made at Tours, contains forty-five formule, two of which are royal documents, many being judicial decisions, and the remainder private acta. It seems to belong to the middle of the

eighth century. Zeumer added to the list twelve other formule taken from various manuscripts, one of which, "Formule Biturigenses", a name given to nineteenth formule taken from different collections, but all drafted at Bourges; they date from 720 to the close of the eighth century. Zeumer added to them twelve formule taken from the Abbey of Saint-Pierre de Solesmes. —(e) "Formule Senoneses", two distinct collections, both of which were in the keep of the monks of Saint-Seine, and preserved in the same ninth-century manuscript. The first, "Carte Senonesiae", dates from before 775, and contains fifty-one formule, of which seven are for royal documents, two are letters to the king, and forty-two are private charters. Zeumer added six Merovingian formule, the compiler of these, "Formule Lausenses recentiores", dates from the reign of Louis the Pious, and contains eighteen formule, of which seven deal with judicial acts. Zeumer added five metrical formule, and two Merovingian formule written in Tironian notes. —(f) "Formule Pitheoi". In a manuscript loaned by Pithou to Du Cange for his "Glossarium" of medieval Latin there was a rich collection of at least one hundred and eight formule, drawn up originally in territory governed by Salic law. This manuscript has disappeared. Under the above heading Zeumer has collected the various quotations made in the "Hist. Du Cange" from a manuscript at the University of Paris, called "Formule Salicae Bignoniana", so called from the name of their first editor, Bignon. It contains seventy-four formule, one of which is for a royal decree; they were collected in a country subject to Salic law, about the year 770. —(g) "Formule Salicae Merkelliana", so called from the name of their editor, Merkel (about 1850), a collection of sixty-six formule taken from a Vatican manuscript; they were not brought to completion until after 817. The first part (1-30) consists of formule for private acta, modelled on "Marculfi" and the "Formule Turonenses"; the second part (31-42) follows the "Formule Bignoniana"; the third (43-45) contains three formule drawn up in some abbeys, the fourth (46-66) has formule dating from the close of the eighth century and probably compiled in some episcopal town. Two formule of decrees of the bishops of Paris were discovered by Zeumer in the same manuscript. —(k) "Formule Salicae Lendenbrogni"; so called from the name of their editor, Friedrich Lendenbro, a Frankfort lawyer (1613) who edited them together with other documents. The collection contains twenty-one formule of private acta, drawn up in Salic law territory. Four others were added by Zeumer. —(l) "Formule Imperiales e curia. Ludovici II usque ad annum MDXI", of which first edited in his "Alphabetum Tironianum" (Paris, 1747). This is an important collection of fifty-five formule, drawn up after the fashion of the charters of Louis the Pious at the Abbey of St. Martin of Tours, between 828 and 832. The manuscript is written mainly in Tironian notes. This collection was written by the Carthusians of the monastery of the ninth century. Zeumer has added to the list two formule. —(m) "Collectio Flaviensis"; one hundred and seventeen formule compiled at the Abbey of Flavigny in the ninth century; of these, ten only are not to be met with elsewhere. —(n) "Formule collections Sancti Dionysi", a collection of twenty-five formule made at the Abbey of St-Denis under Charlemagne; for the most part it is taken from the archives of the abbey. —(o) "Formule codicis Laudunensis", a Leau manuscript containing seventeen formule, of which the first five were drawn up at the Abbey of St-Bavon in Ghent, and the remainder at Laon. —(p) "Formule Quingentiae". —(q) "Formule Laredoense". —(r) "Formule Orléansensis". —(s) "Formule Cadurcensis". —(t) "Formule Tolosanae". (u) "Formule Viroinensis". —(v) "Formule Murbachiae". —(w) "Formule Marcaesiae". —(x) "Formule Fossanae". —(y) "Formule Albigeoensis". —(z) "Formule Commingensis".

(4) The Alamanni.—The most important of their formule are: (a) "Formule Alaustiae", under which name we have two collections, one made at the Abbey of Murbach (Formule Morbaceaen) at the end of the eighth century and preserved in a manuscript of St. Gall, containing twenty-seven formule, one of which is
FORMULARIES

for a royal decree; the other embodies three formulae made at Strasbourg (Formule Argentines) and preserved in a Berne manuscript.—(b) “Formule Augi-
enses”, from the Abbey of Reichenau. This consists of
three distinct collections: one from the end of the
eighteenth century and the beginning of the nineteenth
century, containing twenty-five private acts; another belonging to the eighth and ninth
centuries, comprising forty-three formulae of private doc-
uments; the third, “Formule epistolares Augienses”, is
a “correct letter-writer” with twenty-six formulae.—
(c) “Formule Sangalenses” (from the Abbey of St.
Gall), two collections of formulae. The “Formule Sangalenses miscellanea” consists of twenty-five-five for-
more, many of which are accompanied by directions
for their use. They date from the middle of the
eighth to the end of the ninth century. The impor-
tant “Collectio Sangaliensis Salomonis III tempore
conscripta” is so called because it seems to have been
compiled by the monk Notker at St. Gall, under Abbot
Salomon III (890–920), who was also Bishop of Con-
stance. Notker died in 912. It contains, in forty-
seven formulae, models of royal decrees, of private
documents, of litterae formatae and other episcopal
documents. Zeuner added six formulae from the
same source.

(5) The Bavarians.—Among their formulae are: (a)
“Formule Salisburgenses”, a very fine collection of
one hundred and twenty-six models of documents
and letters, published in 1858, by Rockinger, and drawn up
at Salzburg in the early part of the ninth century.
(b) “Collectio Patavinese” (of Passau), containing
seven formulae, five of which are of royal decrees, ex-
ecuted at Passau under Louis the German.—(c) “For-
mule codicis S. Emmerami”, fragments of a large
collection made at St. Emmeram’s, Ratisbon.

(6) Rome.—The most important of all ancient for-
malities is certainly the “Liber diurnus romanorum
pontificum”, a collection of one hundred and seven
formulae long used by the Apostolic chancery. If
it was not drawn up for the papal chancery, it copies
its documents, and is largely compiled from the
“Registrum” or register-book of St. Gregory the Great
(590–604). It was certainly in official use by the
Roman chancery from the ninth to the end of the
eleventh century. This collection was known to the
medieval canonists, and is often quoted by Cardinal
Deusdedit and Yves of Chartres; four of its documents
were incorporated into the “Decretum” of Gratian.
The best manuscript of the “Liber diurnus”, written
at the beginning of the ninth century in the Romano-
monastery of Santa Croce in Gerusalemme, and was discovered in the Vatican Library. About
the middle of the seventeenth century, the learned
Lucas Holstenius used it when preparing an edition of
the work which was officially stopped and suppressed
on the eve of its appearance, because it contained
an ancient profession of faith in which the popes ana-
matized their predecessor Honorius. In 1680 the
Jesus Garnier, using another manuscript of the Col-
lege of Clermont (Paris), brought out an edition of the
“Liber diurnus” not approved by Rome (P. L., CV).
In the century that followed it was utilized for two editions, one by de Rosière (Paris,
1889), the other by von Sickel (Vienna, 1889).
In 1891 the Abbate Ceriani discovered at the Ambrosiana
(Milan) a third manuscript as yet unused. For a full
bibliography of recent researches concerning the
“Liber diurnus” see the “Topo-Bibliothek” of Chevalier,
a v. While, in its complete form, the “Liber diurnus”
cannot date back further than 786, the earliest forms of
it go back to the end of the seventh century. Von
Sickel holds that its opening formula (1–63) are even
fifty years earlier than that date. It is badly arranged
as a collection, but wonderfully complete. After a
second consideration of documents that vary according to the addressees, there are formulæ
concerning the installation of bishops, the consecra-
tion of churches, the administration of church prop-
erty, the grant of the pallium, and various other
privileges. Then follow models for the official corres-
pondence on the occasion of a vacancy of the Holy See
and the election of a pope, also directions for the con-
struction and the forwarding of the acts of the pope-elect:
finally a group of formulæ affecting various matters of
ecclesiastical administration.

In the tenth century these formulæ cease to be
universal use; in the eleventh, recourse is had to them
still more rarely; other methods of training notaries
were substituted for them. Lastly, in the twelfth
century, the liturgy and the law were substitutes for
them. In their stead, special treatises of instruc-
tion are prepared for these officials, and manuals
of epistolar rhetoric appear, with examples scattered
here and there throughout the text, or collected in
separate books. Such treatises on composition, artes
dicendiæ, have hitherto been only partially studied
and classified, chiefly by Rockinger in “Brieftäler
und Formulbücher des XI. bis XIV. Jahrhunderts”
(Munich, 1863). The most ancient of these manuals
are those of the “Breviariuni de dictamine” of
Albert of Monte Cassino, about 1075; in the twelfth
century treatises of this kind become more frequent,
both in Italy, then in France, especially along the
banks of the Loire at Orléans and at Tours. Side by
side with these works of epistolar rhetoric we meet
special treatises for the use of clerks in different chanc-
ersies, and formulæ to guide notaries public. Such
are the “Formularium tabellionum” of Imerius of
Bologna in the twelfth century, and the “Summa arte
notariorum” of Ranieri of Perugia in the thirteenth;
that of Salathiel of Bologna printed at Strasburg, in
1516, and the very popular one of Rolandino that went
through many editions, beginning with the Turin
edition of 1479.

As to the papal chancery, in general very faithful to
its customs and its “style”, after the reform of Inno-
cent III many formulæ and practical treatises
appeared, none of them possessing an official value.
The writings of Dietrich of Nieheim (an employé of
the chancery in 1380), “De Stilo” and “Liber Canec-
lariarum”, have been the subject of critical studies (see
Dietrich von Nieheim). At a more recent date we
meet many treatises on the Roman chancery and on
pontifical letters, but they are not formulæ, though
their text oftentimes contains many models.

Quite recently, however, there has appeared an
official publication of certain formulæ of the Roman
Curia. I.e. the collection of the papal dispensations granted by the Dataria Apostolica (see
ROMAN CONGRAGATIONS), published in 1901 as “For-
mulæ Aposotolicae Datarie pro matrimonialibus dis-
ispensationibus, jussu Eml. Card. Pro Datarii Cajetani
Alodsi-Masella reformatis”, and in a different order of ideas, it may be well to
mention a collection of formulæ for use in episcopal
courts, the “Formularium legale-practicum” of
Francesco Monacelli (Venice, 1737), re-edited by the Cam-
era Apostolica (3 vols. fol., Rome, 1834).

From the twelfth century onward the formulæ of
to papal Curia became more numerous but less
interesting, since it is no longer necessary to have
 recourse to them to supplement the documents.

The formulæ of the Cancellaria Apostolica are
collections drawn up by its clerks, almost exclusively
for their own guidance; they interest us only through
their relation to the “Curia of the Curia” (e.g. the
ROMAN CURIA). The formulæ of the Penitenti-
taria have a higher interest for us; they appear during the
twelfth century when that department of Roman
administration was not restricted, as it now is, to
questions of conscience and the forum internum, but
served as a sort of clearing-house for lesser favour
acts of the Holy See. These formulæ are therefore
more numerous but less interesting, since it is no
longer necessary to have recourse to them to
supplement the documents.

These interesting documents, including the formulæ,
have been collected and edited by Goller in “Die
papétliche Poenitentiarie bis Eugen IV.” (Rome, 1907).

Previously, Lea had published “A Formulary of the Papal Penitentiary in the Thirteenth Century” (Philadelphia, 1892), probably the work of Cardinal Alessandro Caetani (d. 1243). We must mention the “Summa de absolutionibus et dispensationibus” of Nicholas IV; of particular value also is the formulary of Benedict XII (1336 at the latest), made by order of that pope and long in use. It contains five hundred and seventy letters of which more than two hundred are taken from the collection of Cardinal Attieno. Attention is also directed to the list of “faculties” conferred, in 1357, on Cardinal Albornois, first edited by Lecacheux in “Mélanges d’Archéologie et d’Histoire des écoles françaises de Rome et d’Athènes”, in 1898; and to later texts in Goller. It will suffice if we make a bare mention of the “lazae or “taxes” in use at the Penitentiaria, to which were occasionally joined those imposed by the Cancellaria; in the opinion of the writer, they are not in any way related to the formularies.

Besides the works mentioned above see GRAY, Manuel de diplomatique (Paris, 1894), Bk. IV, ch. i, Formulaires et manuels; Bk. V, Les Chancelleries; from this work we have largely drawn. WYNN in Kirchenzetl., s. vv. Formalbücher, and Liber diurnus.

A. BOUDINHOON.

FORTES, See SABINA, DIOCESE OF.

FORSYTH, William, priest and poet; dates of birth and death uncertain. Few personal details are known of him. He is thought to have been related to John Forest, the Franciscan martyr, and was connected with Christ Church, Oxford, though in what capacity is not clear; probably he was a student there. It is certain that he was present when the university, in 1530, discussed the question of Henry VIII’s divorce; he also gives a long account of Henry VIII on Catherine of Aragon of the rebuilding of the college when it was remodelled, and we find him in receipt of a pension from it in 1555. Soon after the accession of Mary he was made a royal chaplain, but nothing is known of what became of him after her death. An interesting entry occurs in the State papers (domestic) of Elizabeth, under the date 23 Dec., 1592, to the effect that a certain Robert Faux being examined, confessed that “3 or 4 years since he had given a gray nag with a saddle and bridle to Forrest, a priest, at an ale house in Stoke, Northampton”. This may have been William Forsyth, and points perhaps to his being a fugitive at the time. He was a skilful musician and collected the manuscripts of some of the best contemporary English composers. This collection is now preserved in Oxford. The greater part of his poems are still in MS. None of them are of great poetical merit, but some are extremely interesting from the light they throw upon certain political, religious, and social events of his time. There are some enlightened suggestions in his work concerning points of social reform. Warton, in his “History of English Poetry”, remarks that Forsyth seems to have been able to “accommodate his faith to the reigning powers”, and the statement rests upon the fact that he dedicated two of his works to the protector Somerset. Otherwise he seems to have been a loyal Catholic. Forsyth’s works are: “History of Joseph the Chaste” (in MS., Oxford and British Museum); “The Pleasant Poesie of Princely Practice” (in MS., British Museum)—a long extract from this poem is given in “Starkey’s Life and Letters” (see below); A metrical version of certain Psalms and Canticles (in MS.); “A New Ballad of the Marigold”, in praise of Queen Mary, printed in the “Harleian Miscellany”, vol. X; “The History of Grisel and the Second”, a long poem upon Catherine of Aragon and her divorce, published entirely by the Rambler Club (London, 1875), with memoir by the Rev. W. H. Macray; “The Life of the Virgin Mary”, and other poems (Harleian MS., 1703).

K. M. WARREN.

Förster, Arnold, German entomologist; b. at Aachen, 20 Jan., 1810; d. in the same city, 12 Aug., 1884. His father died while he was quite young, and it was only by strict economy and by tutoring that he was able to complete his gymnasium course, which he began in 1824. He was an apt student, and showed a marked preference for the natural sciences. The entomologist Meigen, who resided in the neighbourhood, fostered and directed this preference and his influence may be traced throughout Förster’s subsequent work in entomology. Förster began the study of medicine at Bonn in 1822, but soon abandoned it to devote himself entirely to natural science. He made rapid progress, and, while still a student, became assistant to Goldfuss and tutor in his family. In 1836 he was appointed instructor in the high school—known to-day as the Realgymnasium—of his native city, with which he was connected until his death.

Förster was a conscientious teacher and endeavoured to awaken in his pupils a love of and interest in the wonders of nature. His wealth of knowledge and his untiring spirit of research would, however, have found a wider and more suitable field in the university than in the gymnasium. Most of his leisure was devoted to entomological studies, and he was a part of his attention. He was regarded in particular as an authority in the “microhymenoptera”. He was an indefatigable collector and a keen observer, but was inclined to magnify minute differences, and so multiply species and divisions. Förster belonged to a number of societies of natural history, and carried on an extensive correspondence with entomologists both at home and abroad. In 1853 he received the degree of Doctor of Philosophy honoris causa at Bonn, and in 1855 the title of professor from the Minister of Instruction. He was abstemious in his habits, and a devout and practical Catholic, conspicuous for his charity towards the poor. Among his papers on entomology are “Beiträge zur Monographie der Pteromalinen”, “Einige neuen Arten aus der Familie der Blattwespen”, “Hymenopterologische Studien”, “Monographie der Gattungen Campoplex u. Hylaeus”, “Flora Exsiccatoris des Regierungsbereichs Aachen”.

FÖRSTER, VERHAND, d. Naturhistorischen Vereins in Preussischen Rheinlande, Westfalens und d. Regierungsbereichs Osnabrück (Bonn, 1880), Correspondenzblatt, d. 38. HENRY M. BROCK.

Förster, Frobenius, Prince-Abbot of St. Emmeram at Ratisbon, b. 30 Aug., 1709, at Königsfeld in Upper Bavaria; d. 11 Oct., 1793, at Ratisbon. After studying the humanities and philosophy at Freising and Ingolstadt, he entered the Benedictine monastery of St. Emmeram at Ratisbon where he took vows on 8 Dec., 1728. He made his theological studies partly at his monastery and partly at Rott, where the Bavarian Benedictines had their common study house. Shortly after his elevation to the See of Freising he became professor of philosophy and theology at St. Emmeram and for some time held the office of master of novices. In 1745 he was sent to the Benedictine university at Salzburg to teach philosophy and physics. Two years later he returned to his monastery where he taught philosophy and Holy Scripture until becoming abbot of the monastery and prior in 1750. He had gained an enviable reputation as a philosopher and scientist, and was one of the first religious who endeavoured to reconcile Scholastic philosophy with the Cartesian and the Leibniz-Wolffian school. Though leaning towards the Leibniz-Wolffian philosophy, he retained many of its teachings, such as the cosmological optimus of Leibniz and the mechanism of Wolff, and was rather eclectic than a slavish follower of any one system. In
1769 Forster was chosen one of the first members of the newly founded Bavarian academy of sciences. A year later he was appointed provost at Hofengebraching, a dependency of St. Emmeram, situated about five miles south of Ratibon. On 24 July, 1762, he was elected as successor to the deceased Prince-Abbot Johann Baptist Kraus of St. Emmeram.

Forster's election was the inauguration of the golden era of St. Emmeram. The learned new prince-abbot endeavoured to impart his own love for learning to each of his subjects and offered them every facility to advance in knowledge. During his reign the course given in the natural sciences at St. Emmeram became famous throughout Germany and drew scholars not only from the medical faculties of Bavaria, but also from the houses of other religious orders. In order to promote the study of Holy Scripture, Forster called the learned Maurist philologist, Charles Lancelot of St.-Germain-des-Prés, who instructed the monks of St. Emmeram in Oriental languages from 1 Oct., 1771, to 27 May, 1775. To encourage his young monks still more in their respective studies, he founded a physical, a mineralogical, and a numismatic cabinet and procured the best available literature in the various branches. Forster's chief literary production is his carefully prepared edition of the works of Alcinus which was published in two volumes in 4 folios in Ratibon in 1777. It is reprinted in the Latin Patrology of Migne (vols. C and CI). He also wrote in Latin five short philosophical treatises and a dissertation on the Vulgate. From a codex preserved in the library of the cathedral chapter at Freising he edited the decrees of the Synod of Aschheim and made a German translation of it for "Abhandlungen der Bayr. Akad. der Wissenschaften" (1, 39—60); and from a codex in the library of St. Emmeram he published in Mansi's "Collectio Ampl. Conciliorum" (XIII, 1025—28), the decrees of a Bavarian synod held during the time of the Aglingings.

Forster, Thomas Ignatius Maria, astronomer and naturalist, b. 1739; d. 1800. His literary education was neglected, as his father, a distinguished botanist, was a follower of Rousseau. He made up this deficiency, and during his lifetime became master of a number of modern languages. His early studies were, however, desultory, and he seems to have put aside the choice of a profession until some years after attaining to man's estate. As early as 1805 he had compiled a "Journal of the Weather" and had published his "Liber Rerum Naturalium." A year later, inspired by Gall's works, he took up the study of phrenology. The comet of 1811 aroused his interest in astronomy, a science which he pursued for eight years later. On 3 July, 1819, he himself discovered a new comet. He finally matriculated at Corpus Christi College, Cambridge, in order to study law, but soon abandoned it for medicine, taking his degree in 1819. Two years before, he had married the daughter of Colonel Beaufoy and taken up his residence at Spa Lodge, Tunbridge Wells. After the birth of his only daughter he moved to Hartwell in Sussex, and then went abroad, where he spent three years. His observations and studies on the Continent led to the publication, in 1824, of his "Perennial Calendar." It was also during this period that he founded the Cambridge University Scientific Society to which he became a convert. After his return to England he became a fellow of the Royal Astronomical Society and helped to found a meteorological society, which, however, had but a brief existence.

His father died in 1825, and he soon after took up his residence in Chelmsford in order to be near his daughter, who was a pupil at Newhall Convent. Here he undertook a series of researches on the influence of atmospheric conditions on health and disease, especially on cholera. In 1830 he collected and published the letters of Locke, Shaftesbury, and Algermon Sydney. In 1833 he again went abroad, where he spent most of his remaining years, settling finally in Bruges. He continued his literary activity during the latter part of his life, some of his writings being poetical. Besides these works mentioned, he also wrote, "Researches about Atmospheric Phenomena" (London, 1812; 2nd ed., 1823); "Reflections on the Destructive Operation of Spirituous Liquors" (London, 1812); "Pocket Encyclopedia of Natural Phenomena" (from his father's MSS., 1826); "Beobachtungen über den Einfluss des Luftdruckes auf das Gehör" (Frankfort, 1835); "Observations sur l'influence des Comètes" (1836); "Pan, a Pastoral" (Brussels, 1840); "Essay on Abnormal Affections of the Organs of Sense" (Tunbridge Wells, 1841); "Annales d'un Physicien Voyageur" (Bruges, 1845); and numerous articles in "The Guardian".

Fortaleza, Diocese of (Fortalexiensis), is coextensive with the State of Ceará in the Republic of Brazil, having an area of 46,912 square miles, and a population of 850,000 souls, of whom fewer than 1000 are non-Catholics. Fortaleza, or Ceará, the episcopal city, has a population of 60,000. Formerly a part of the Diocese of Pernambuco, this district was erected into a separate diocese, suffragan to Bahia, by Pius IX, 6 June, 1854. João Guarino Gomes was named as first bishop but did not accept the appointment. Father Gomes, who was famous in his day both as an orator and as a philosopher, died in 1859; a biographical notice of him was presented to the Historical Institute of Bahia by his cousin, José Antonio de Albuquerque. The first bishop of Fortaleza, Antonio Luís Alves, founded the diocesan seminaries at Fortaleza and Crato, and, for the education of girls, the College of the Immaculate Conception, besides building the church of the Sacred Heart at Fortaleza.

Dom Luis Antonio dos Santos having been elevated to the metropolitan See of Salvador, Josê Vieira—bishop of Fortaleza and of the Diocese of Natal since 1836, consecrated at Campinas in the State of São Paulo, 9 December, 1883—took possession of the See of Fortaleza on 24 February, 1884. His incumbency has been fruitful in the increase of means for the education of the poor, the college of Canindé and the Jesus-Mary-Joseph School at Fortaleza owing their existence to his pastoral zeal. In 1908 this diocese contained 77 parishes with 120 priests. The diocesan seminary is conducted by the Lazarist Fathers; there is a Benedictine abbey, with a college, at Quixadá; the Italian Capuchins have charge of the Sacred Heart church at Fortaleza and the church of St. Francis of the Wounds at Candeia, to which latter is attached a college for poor boys. The Sisters of Charity have under their care the Misericordia Hospital at Fortaleza, the College of the Immaculate Conception, the Jesus-Mary-Joseph School, and the lunatic asylum at Parangaba. The principal lay association in the diocese is the Catholic Young Men's Society, with a superior council, 32 particular councils, and 156 conferences, and maintains 10 primary schools and 9 libraries, besides publishing, as its official organ, the "Revista do Conselho Central".

Guilherme Studant.
Fort Augustus Abbey.—St. Benedict’s Abbey, at Fort Augustus, Inverness-shire, is at present the only monastery for Benedictine monks in Scotland. It owed its inception to the desire of John, third Marquess of Bute, for the restoration of monasticism in a country which, before the Reformation, possessed so many glorious abbeys and priories, and in later days owned many others on the Continent. The marquess, brought the matter before several of his superiors of the English Benedictine Congregation in 1874, promising substantial pecuniary help in the establishment of a house in Scotland, with the understanding that when two other monasteries should have been founded they should all form a separate Scottish congregation. The suggestion was approved, and an English Benedictine Group resolved to incorporate with the Scottish monastery the more ancient foundation of St. Adrian and Denis, formerly existing at Lambsteins, in Hanover, which was peopled by English monks from 1645 to 1803, and when suppressed by a hostile government was afterward resuscitated in England. Inadequacy of funds had prevented any lasting restoration of this house, but with the help promised by Lord Bute, it seemed possible to revive it in Scotland. Dom Jerome Vaughan, a brother of Cardinal Vaughan, was appointed to superintend the work, and succeeded in obtaining from the Bishop of Lambsteins, in Hanover, and Ireland, sufficient means for the erection of a fine monastery at a cost of some £70,000. A site was given by Simon, fifteenth Baron Lovat, comprising the buildings of a dismantled fort, built in 1729 and known as Fort Augustus, a title given in compliment to George Augustus, Duke of Cumberland, son of George II. The fort, originally erected for the suppression of Highland Jacobites, had been purchased from the Government by the Lovat family, in 1857. The monastic buildings commenced in 1876 were completed in 1880. They occupy the four sides of a quadrangle about one hundred feet square. In one wing a school for boys of the upper classes was conducted by the monks, with the assistance of university graduates and other lay masters, for about sixteen years, but was reluctantly closed in 1894, as its distance from England and the dearth of Scottish Catholic families of rank made its continuance a matter of difficulty. The room was one of a more refined style of equipment than was usual at the time of its inception.

Up to the year 1882 St. Benedict’s monastery remained under the jurisdiction of the Anglo-Benedictine Congregation, but in response to the wishes of the Scottish monks, in 1882 the leading Scottish nobility—notably Lords Lovat and Bute—Leo XIII., by his Brief “Suumâ cum animi letiitiat”, dated 12 December, 1882, erected it into an independent abbey, immediately subject to the Holy See, thus separating it from English rule. When this step had been accomplished, it was found that made it difficult for the Scottish community, by signing the title deeds, which for a time had been held over. In 1888 Dom Leo Linse of the Beuron Benedictine Congregation, who had resided for more than ten years in England, part of that time as superior of Erdington Priory, near Birmingham, was nominated abbot by the Holy See and received the abbatial benediction at the hands of Archbishop, after wards Cardinal, Persico, who had been sent to the abbey as Apostolic Visitor. In 1889, special constitutions, based upon those of the Beuron Benedictine Congregation, were adopted, with the approval of the Holy See, for a term of ten years. This measure was modified by the experience, received definite approval in 1901. In 1905, in view of the exceptional position of the monastery as an independent abbey, the Holy See conferred upon the priamate of the Benedictine Order, as regards Fort Augustus Abbey, the powers ordinarily exercised by the president of a congregation. This arrangement has not only provided for regular canonical visitations at definite intervals, but has facilitated intercourse with the Holy See, under whose immediate jurisdiction the abbey still remains.

From its foundation the monastery made it a prominent duty, in accordance with the tenor of its constitutions, to fulfil St. Benedict’s precept regarding the celebration of the liturgy with solemnity of the liturgical worship of the Church. Mass, Vespers, and the Divine Office are daily celebrated with the music and ritual demanded by the varying importance of season or festival. Since 1893 the Solesmes version of the Gregorian melodies, since recognized as the authoritative edition of the chant, has been exclusively used in all liturgical ceremonies in the monastery, which is not occupied by choir duties and other community exercises is claimed by a variety of occupations. The management of a large farm and of an adjoining estate, annually let to tenants for shooting purposes; the generation of electric light for the use of the abbey and of many of the residents of the village; the working of a small printing press; the spiritual charge of a tract of country forty square miles in extent, containing many habitations of Catholics scattered over the hills; the preaching of missions, and the giving of retreats both within and without the abbey; the rendering of assistance, chiefly by correspondence, to religious and secular, theological, musical, artistic, and scientific studies; literary work, facilitated by a fine library of some 20,000 volumes and some rare and precious manuscripts; all these afford abundant employment to a community of about fifty monks and lay brothers. The graceful and stately buildings whose spires and turrets rise above the trees forms a conspicuous object from Loch Ness, and is visible from a distance of many miles. A church of large size, designed by Peter Paul Pugin, was commenced in 1890; a temporary wooden church has been in use since 1830.

Archives of Fort Augustus Abbey: The Nineteenth Century (October, 1884); The Catholic World (New York, September, 1886).

Michael Barrett.

Fort-de-France. See Martinique, Diocese of.

Fortescue, Adrian, Blessed, Knight of St. John, martyr; b. about 1476, executed 10 July, 1539. He belonged to the Selden branch of the great Devonshire family of Fortescue, and was a true country gentleman of the period, occasionally following the king in the wars with France (1513 and 1522), not unfrequently attending the court, and at other times acting as justice of the peace or commissioneer for subsidies. He was knighted in 1503 (Clermont; but D. N. B. gives 1528), attended the Field of the Cloth of Gold (1520), and late in life (1532) became a Knight of St. John. When Anne Boleyn became queen, Sir Adrian (whose mother, Alice Boleyn, was Anne’s grand-aunt) naturally profited to some extent, but, as we see from his papers, not very much. The foundations of his worldly fortunes had been laid honourably at an earlier date. He was a serious thirsty man, pains-taking in business, careful in accounts, and a lover of the homely wit of that day. He collected and signed several lists of proverbs and wise saws, which, though not very brilliant, are never offensive or coarse, always sane, and sometimes rise to a high moral or religious level.

All of a sudden this quiet, worthy gentleman was overwhelmed by some unexplained whim of the Tudor tyrant. On 29 August, 1534, he was put under arrest, and none knows why. On 3 February, 1539, he was arrested a second time and sent to the Tower. In April he was condemned untried by an act of attainder; in July he was beheaded. No specific act of treason was alleged against
Upon the latter element is based fortitude, but the animal spirit needs to be taken up and guided by the rational soul in animating and sincere the other—breath that is the residence of courage, passion, and love. In the breast that is body, to the soul, is courage, passion, and love, situated midway between reason in the head and concupiscence in the abdomen. Plato's high spirituality enabled him to speak too exaltedly of fortitude which rested on bodily excellence: consequently he would have wise legislators educate their citizens rather in temperance than in courage. There is a difference this from wisdom and may be found in children or in mere animals (Laws, I, 630, C, D, E; 631, C; 667, A).

Although Aristotle makes animal courage only the basis of fortitude—the will is courageous, but the animal spirit co-operates (δι' ἵππος συνεργεῖ)—he has not a similar confidence for the body, and speaks in animal terms of bodily fear before the face of death in battle. Aristotle likes to narrow the scope of his virtues as Plato likes to enlarge his scope. He will not with his predecessor (Lackes, 191, D, E) extend fortitude to cover all the firmness or steadiness which is needful for every virtue, consequently Kant was able to say: "Virtue is the moral strength of the will in obeying the dictates of duty" (Anthropol., sect. 10, a). The Platonic Socrates took another limited view when he said that courage was the εὐθυμία τῶν διαμικρωτών καὶ τὰ ἰσοτέρων, and that the moral virtue was to be taught. Given that in themselves a man prefers virtue to vice, then we may say that for him every act of vice is a failure of fortitude. Aristotle would have admitted this too; nevertheless he chose his definition: "Fortitude is the virtue of the man who, being confronted with a noble occasion of encountering the danger of death, meets it fearlessly" (Eth., Nic., III, 6). Such a spirit has to be formed as a habit upon data more or less favourable; and therein it resembles other virtues of the moral kind. Aristotle would have controverted Kant's description of moral stability in all virtue as not being a quality cultivatable into a habit: "Virtue is the moral strength of the will in obeying the dictates of duty, never developing into a custom but always springing freshly and directly from the mind" (Anthropol., I, 10, a). Not every sort of danger to life satisfies Aristotle's condition for true fortitude: there must be present some noble display of power and courage. He makes it essential that the act should positively exclude the passive endurance of martyrdom, but St. Thomas seems to be silently protesting against such an exclusion when he maintains that courage is rather in endurance than in onset.

As a commentator on Aristotle, Professor J. A. Scott challenges the excessive trust in the Roman martyrs to make a stand for their cause when he says: "It is only when a man can take up arms and defend himself, or where death is glorious, that he can show courage" (p. 283). Here the disjunctive "or" may save the situation: but there is no such reserve on p. 286, where he adds: "Men show courage when they can take up arms and defend themselves, or (4) where death is glorious. The former condition may be realised without the latter, in which case the ἄρετα would be of a spurious kind: the latter condition, however, cannot be realized without the former. Death in a good cause which a man endured fearlessly, but could not actively resist, could not be said to be virtuous (a glorious death)." Does Aristotle positively make this exclusion? If so, St. Thomas corrects him very needfully, as Britons would admit on behalf of their soldiers who, off the coast of S. Africa in 1852, nobly stood in their ranks and went unresistingly down in the sinking ship, Birkenhead, that they might be saved and their comrades being saved. As specimens of courage not in the higher order Aristotle gives the cases of soldiers whose skill enables them to meet without much apprehension what others would dread, and who are ready to flee as soon as grave danger is seen: of animal cour-
eous men whose action is hardly moral: of courage where hope is largely in excess over dread: of ignorance which does not apprehend the risk: and of civic virtue which is moved by the sanction of reward and penalty. In the above instances the text δὲ ἀπειθεία δὲ

"πρὸς τὴν ἀρετὴν καὶ τὴν εὐεργεσίαν τῆς ἀρετῆς τοῦ ἀρχιλέοντος τῆς ἐπηρεασίας τῆς ἀρετῆς γάρ," a principle which is opposed to the mere pragmatism that would measure courage by efficiency in soldierliness—fails. Aristotle says that mercenaries, who have not a high appreciation of the value of their own lives, may very well expose their lives with more readiness than those who are found in the virtuous man who understands the worth of his own life, and who regards death as the πάθη—"the end of his own individual existence (φιλερήμοτος δ' ὑπὸν πάθος πάθος γάρ). Some have admired Russian nihilists going to certain death with no hope for themselves, here or hereafter, but with a hope for future generations of Russians. It is in the hope for the end that Aristotle places the stimulus for the brave act which of itself brings pain. *Dolce et decorum est pro patria mori* ("It is sweet and noble to die for one's native land")—Horne, Odes, III, ii, 13: the nobility is in the act, the sweetness chiefly in the anticipated consequences, excepting so far as there is a strongly felt nobility (Aristotle, Eth. Nic., III, 6-9) in the self-sacrifice.

(3) St. Thomas keeps as close to Aristotle as he may, departing from him as to the dignity, perhaps, which is to be found in the passive martyr's death, as to the hope of future life, and as to the character of virtue as a love of fine consequences calls the specific virtue of fortitude that which braves the greatest dangers and therefore that which meets the risk of life in battle. Fortitude is concerned not so much with audacia as with timor: not so much with aggressi (attack) as with sustinere (endurance): which means that the courageous man has to attend rather to bearing up against terrifying circumstances than to mastering his impetuosity or else to arousing it to the requisite degree: principalior actus fortitudinis est sustinere, immobili sitere in periculis, quam aggressi. Seneca as a Stoic also attacks Aristotle's use of anger as an instrument in the hand of virtue; he treats the passion as bad and to be suppressed. In the onslaught is displayed the animal excitement, the battle rage, which St. Thomas calls the irascible passion: and of this St. Thomas says, what Aristotle says of τυμχά, that it is an agency to be used by the rational will with care. Anything of all opponents to slaughter a hated enemy out of vengeance or out of savage delight in blood-shedding should be excluded. For the endurance (sustinere), says St. Thomas, the irascible part is not demanded, since the reasonable will suffice, "as the act of endurance rests only with the reason per se." A cardinal virtue, which is a consideration not taken up by Aristotle, fortitude is treated by St. Thomas from the aspect of its need for ensuring the stability of the virtues in general: Cardinales principaliores dicuntur virtues, quae praeipue sibi vindicant ipse quod pertinet communitas ad virtutes. Virtutes in general must act with that firmness which fortitude, II-III, Q., exegete 11, 12.

(4) Fortitude as one of the gifts from the Holy Ghost is a supernatural virtue, and passes beyond the Aristotelian range. It is what, as Christians, we must always have in mind in order to make our actions acceptable for eternal life. But we still keep hold upon the natural principles of fortitude as those wherein grace has to build. In the spiritual life of the ordinary Christian much that Aristotle has said remains in its own degree true, though we have to depart especially from the master's insistence upon the field of battle. Our exercise is mainly not in war strictly so-called, but in moral courage against the evil spirit of the times, against improper fashions, against human respect, against the common tendency to seek at least the comfortable, if not the voluptuous. We need courage also to be patient under poverty or privation, and to make laudable struggles to rise in the social scale. It requires fortitude to mount above the dead level of average Christianity into the region of magnanimity, and, if opportunity allow it, of magnificence which are the external fortitudo viri; and another is perseverance, which tolerates occasional remissness, still less occasional bouts of dissipation to relieve the strain of high-toned morality and religion.

(5) The physical conditions of fortitude are treated for instance by Bain in "The Emotions and the Will," and they are such as these: "good health is a condition which keeps all the currents in their proper courses with a certain robust persistence; health and freshness; tonic coolness; light and buoyant spirit; elate and sanguine temperament; acquired mastery over terror, as when the soldier gets over the cannon fever of his first engagement, and the public speaker over the nervousness of his first speech," (Chap V, no. 17). These physical matters, though not directly moral, are worthy of attention; there is much interaction between moral and physical qualities, and our duty is to cultivate the two departments of Fortitude conjointly. The authors quoted in this article and in this article, *natural virtues*. J. RICKABY.

Fortunato of Brescia, morphologist and Minorite of the Reform of Lombardy; b. at Brescia, 1701; d. at Madrid, 1754. He received the religious habit in 1715. A distinguished physician and theologian, Fortunato was also unusual for his activity in natural sciences. He was secretary general of his order, and stood in high favour at the Bourbon court of Spain. A special importance attaches to his philosophical works, as he was among the first to bring together the teachings of Scholastic philosophy and the discoveries of the physical sciences. His scientific work is rendered important by his extensive use of the microscope, in which he followed the leads of Malpighi. Avoiding the then prevalent discussions on vitalism, he devoted himself to a positive study of the problems of natural science. Convinced that a knowledge of microscopic anatomy is the key to the secrets of nature, he deemed two things to be of prime importance: first, an experimental study of the histological constitution of the various organs, to learn their functions; and second, the separation of these organs into their elements, to determine their embryological origin. In spite of all malignity which was raised against the works of Fortunato, has prevailed in pathological and physiological schools, and has indicated a method of examining what was formerly considered the most complex and delicate part of the human body, namely the central nervous system. The same view has also led to some of the most remarkable discoveries in biology. In this sense Fortunato is a pioneer. In fact it was a century after that Bichat, following Bourdeu's lead, and, later on, Cuvier, advanced in the same direction. True to his purpose, Fortunato gave no heed to the anti-vitalistic controversies of his day, and spent no time investigating plastic force and the *vita formativa*; he devoted himself to a microscopic study of the parts of the organism, and in this way succeeded in classifying tissues and organs many years before Bichat (1800), who received all the credit for the classification. Fortunato was the first to distinguish between tissues and organs. He established the idea of tissues, or, as he wrote, "of those organic parts which possess a definite structure visible with the microscope and characterized by their component elements." With sufficient accuracy he described connective and bony tissue. The morphological complexus of the various tissues he calls the "system of tissues," and the physiological complexus of the various organs he calls the "system of organs." These exact notions must have been the reward of wide and difficult investigation, as at that time there was no
systematic technic in microscopy. From his many accurate descriptions, it is evident that his researches extended to many animals, and particularly to insects. In view of all this, it seems warranted to assert that Fortunatus was the first morphologist, especially as not the slightest branch of comparative anatomy is found in Malpighi, Morgagni, Leeuwenhoek, or Haller, the path-finders in microscopic anatomy.

A. GEMELLI.

**Fortunatus, Father.** See RAPPOLANA, PREFACIUM APOSTOLICUM OF.

**Fortunatus, Venantius Honorius Clementianus,** a Christian poet of the sixth century, b. between 530 and 540 in Upper Italy, between Ceneda and Tresviso. He received his literary education at Ravenna. Here he first manifested his poetical ability by a poem celebrating the dedication of a church to St. Andrew by the bishop, Vitalis. He appears to have left Ravenna to attend the council of Sutri (519), which was held at Fontanellato in the autumn, the banks of the Moseale. The stages of his journey may be traced in his poems. They were: Maina, where he celebrated the dedication of the baptistery and church of St. George (II, 11 and 12), and in which he compliments the bishop, Sidonius (IX, 9; Cologne, where he accepted the hospitality of Bishop Carenthius (III, 14); Trier, where he praises Bishop Niceius (III, 11) who had built a castle on the Mosele (III, 12); Metz, which he describes (III, 13). He then made a journey on the Mosele, of which he gives a humorous account (VI, 3). But the principal event of his journey at Metz was his presentation at the court of King Sigebert, where he arrived at the time of the king's marriage with Brunehild (566), for which occasion he wrote an epithalamium (VI, 1). Shortly afterwards Brunehild renounced Arianism for Catholicism, and Fortunatus extolled this conversion (VI, 19). He won the favour of the courtiers by his eloquence, notably that of Gogo and Duke Lupus, the latter one of the most remarkable men of the time, a real survival, amid barbarian surroundings, of Roman culture and traditions. Fortunatus soon resumed his journey. New poems repaid the hospitality of the Bishop of Trier (III, 16), and at Soissons he venerated the tomb of St. Medardus (II, 16), and finally arrived at Paris, where he praised the clergy for their zeal in reciting the Divine Office (II, 9). His description of the chanting of the Office on the eve of a feast accompanied by an orchestra is a curious document. He made the acquaintance of King Carlbert, whom he compares to Solomon, Tristan, and Fabius, and whose Latin eloquence he praises highly (VI, 2). From Paris he went to Tours, which was probably his original destination, for while at Ravenna he had been miraculously cured of a disease of the eye through the intercession of St. Martin, he worshipped at the tomb of the saint and gave thanks to the bishop, Euphronius (III, 3), whom he afterwards came to know more intimately.

From Tours Fortunatus went to Poitiers, attracted, no doubt, by the renown of St. Radegunde and her monastery. This circumstance had a decisive influence on the unhappy youth. The son of his uncle, Hermanfried, and the conquer of her country (531). Hermanfried had slain her father. She became, against her will, the wife of Cotaire. Her brother put to death, by the orders of his father. In order to escape, she sought refuge with St. Medardus, Bishop of Vernon (St-Quentin and Soissons), who caused her to take the veil, and she remained at Poitiers. The monastery of Poitiers was very large and contained about 200 religious. At first they lived without a definite rule, but about 587 Radegunde accepted that of St. Cassarius of Arles. At this time, which was previous to the death of Cotaire (568), she caused the consecration as abbess of her beloved adopted daughter Agnes. It was at the same period that Fortunatus became the friend of the two women and took up her residence at Poitiers, where he remained till the death of Radegunde, 13 Aug., 587, Agnes, doubtless, having died shortly before. The closest friendship sprang up between them, Fortunatus, Radegunde's mother and Agnes her sister. It was one of those tender and chaste friendships between ecclesiastics and pious women; similar, for example, to the relations between St. Jerome and the Roman ladies, delicate friendships enhanced by solid piety, confirmed in peace by a mutual love of God, and which do not exclude the charming child's play usually marking feminine friendship. In this instance it brought about a constant interchange of letters in which the art and grace of Fortunatus found their natural vent. He was an epicure, and there were sent to him from the court, milk, eggs, which were savoury meats in the artistic arrangement of which the cooks of antiquity exercised their ingenuity. He did not allow himself to be outdone and sent to his friends at one time flowers, at another chestnuts in a basket woven by his own hands. The little poems which accompanied them are not included in the works published by Fortunatus himself; it is probable that many of them are lost, no great importance being attached to them. Circumstances provided him with graver subjects which necessitated the production of more serious works. About 588 Radegunde received from Emperor Justin II a grant of the Trucca which the monastery had been dedicated, and Fortunatus was commissioned to thank the emperor and empress for their gift. This religious event led him to write a series of poems (II, 1–6); two, the "Vexilla Regis Prodeunt" and the "Pange Lingua" (II, 6, 2), have been adopted by the Church. The vigorous movement of these poems shows that Fortunatus was not lacking in strength and seriousness. Two of this series are "figurate" poems, i.e., the letters of each verse, being arranged with due regularity, form artistic designs. It was one of the least happy inventions of this period of literary decadence.

Radegunde was in constant communication with Constantinople, for Amalafried, a cousin whom she dearly loved, had found refuge in the East where he was in the service of the empire. Through Fortunatus Radegunde bewailed the sad lot of her country and her family; this long elegy, full of life and movement, and addressed to Amalafried, one of the most celebrated works (Appendix, I). Another elegy deprecates the premature death of Amalafried (Appendix, 3). The death of Galeswintha was also the occasion for a number of elegies in which Fortunatus shows himself at once so profound and so natural. For this princess, the last of his work, he was contrived to Chilperic, and had just been put to death by the order of her husband (569 or 570). Shortly before this Fortunatus had seen her arrive from Spain and pass through Poitiers in a silver chariot, and it was on this occasion she had won the heart of Radegunde. In recalling these things and in his portrayal of the mother and daughter, the poet's heart swelled with tender sympathy. Sentimental farewell, he succeeded, despite many rhetorical devices, in depicting true grief. Other poems written at Poitiers deal with religious subjects. Fortunatus explained to his "sister" Agnes that his love was wholly fraternal (XI, 9), and devoted 400 lines to the virgin. Through the soil of virginity, the poet develops his amorous sentiments and he develops in a singularly realistic style the inconveniences of marriage, especially the
physiological sufferings it imposes upon woman. It is
probably an academic theme. Fortunatus also took
part in ecclesiastical life, assisting at synods, being
invited to the consecration of churches, all of which
occasions were made the pretext for verses. He was
associated with Gratian of Tours, whose
influenced him to make and publish a collection of his
verses, with Leonius of Bordeaux, who sent him many
invitations, and with Felix of Nantes, whom he
praised, especially for the rectifying of a watercourse
(III, 10). Fortunatus was now a celebrated man and a
welcome guest. Rendered more free by the
death of his friend St. Saturninus and his visit to
native Austuria, where he was received with greater evidence of regard
than on a former occasion when he had arrived from
Italy poor and unknown. To this period belongs his
account of a journey on the Moselle which is full of
graceful details (X, 10). He celebrates the comple-
tion of the basilica of Tours in 590 (X, 6), and in 591
the consecration of Plato, the new Bishop of Poitiers,
archdeacon of Gregory (X, 14). His predecessor
Maroveus, whose barbarous name indicates that he
was a person lacking in culture, had been entirely
neglected by the Roman Fortunatus and his refined
pastoral epistles. It is the last time before the end of the
sixth century he succeeded to the See of Poitiers. In the episcopal list of that
city he follows Plato and may have become bishop
about 600. He was already dead when, shortly after
this time, Baudonivis, a nun of the monastery of the
Holy Cross, added a second book to Venantius' life of
Radvigndus.
The poems of Fortunatus comprise eleven books.
The researches of Wilhelm Meyer have established the
fact that Fortunatus himself published successively
Books I–VIII, about 578; Book IX in 584 or 585; Book
X after 591. Book XI seems to be a posthumous col-
lection. A Paris manuscript has happily preserved some poems not found in the eleven-book manuscripts.
These poems form an appendix in Leo's edition.
Apart from these occasional poems Fortunatus wrote
between 573 and 577 a poem in four books on St. Martin.
He follows exactly the account of Sulpius Severus,
but has abridged it to such an extent as to render
his own work obscure unless with the aid of Sulpius Severus.
He wrote in rhythmic prose the lives of sev-
eral saints, St. Albin, Bishop of Angers, St. Hilary and
Passentinus, Bishops of Poitiers, St. Marcellus of Paris,
St. Germanus of Paris (d. 576), his friend Radegunde,
and St. Severus of Autun, Bishop of Auxerre. The
poetical merit of Fortunatus should not be over-
estimated. Like most poets of this period of extreme
decadence, he delights in description, but is incapable of
sustaining it; if the piece is lengthy his style runs into
mannerisms. His vocabulary is varied but affected, and
while his language is sufficiently exact, it is marred by a
deliberate obscurity. These defects would render him
intolerable had he not written in verse; poetic tradi-
tion, Boisser well says, imposed a certain sobriety.
The prose prefaces which Fortunatus adds to each of his
works exhibit a command of bombastic Latin scarcely
infected by the language used in his historical
description, and a fault of prosody are not rare.
By his predilection for the distich he furnished the model
for most Carlowingian poetry. Fortunatus, like a
ttrue Roman, expresses with delicate sincerity the sen-
timents of intimacy and tenderness, especially when
mournful and anxious. He interprets with success the
themes suggested by the topics of his historical
surrounding barbarian life, particularly in the hearts of
women, too often in those times the victims of brutal
passions. In this way, and by his allusions to con-
temporary events and persons, and his descriptions of
churches and works of art, he is the painter of Mero-
val society. His entire work is a monument.
Fortunatus has been praised for abstaining
from the use of mythological allegory, despite the fact
that his epithalamium for Sigebert is a dialogue be-
tween Venus and Love. Occasionally one encounters
in his works the traditional academic themes, but in
general he refrains from these literary ornaments less
through disdain than through necessity. Every
writer of occasional verse is perfice a realist, e.g. Stat-
us in the "Silvae." Meyer has skilfully shown in his
portrayal of the barbarian society of Gaul Fortunat-
us exhibits the manner in which contemporary Chris-
tian thought and life permeated its gross and uncultur-
ed environment. Leaving aside the bishops, all of
them Gallo-Romans, it is the women of the period,
writing in the barbarian tongue and reeling under the
load of Latin episcopi, who are most sensitive to this Christian culture. They are the first to appreciate delicacy of sentiment and charm
of language, even refined novelties of cookery, that art
of advanced civilizations and peoples on whose hands
time hangs heavily. From this point of view it may
be said that the friendship of Fortunatus with Rade-
gunde and Agnes mirrors with great exactness the life
of sixth-century Gaul.
The best edition of Fortunatus is that of F. Leo and
B. Kruse; the former edited the poems, the latter the
prose writings in "Mon. Germ. Hist.: Auct." (Berlin,

HAMELIN, De vita et operibus V. Fortunatus (Rennes, 1872);
MEYER, Die Gelehrteischer V. Fortunatus (Berlin, 1901);
OBERMEYER, Monumenta Fortunatus et de his sociis, XXXII, 1, 414–526; BARDENHEUER, Patrology, tr. SHARAN (Fre-
burg im B., St. Louis, 1908), 647–650.

PAUL LEJAY.

Fort Wayne, Diocese of (Wayne Castrensis).—
The Diocese of Vincennes, Indiana, U. S. A., estab-
lished in 1834, comprised the whole State of Indiana
till the Holy See, on 22 September, 1857, created the
Diocese of Fort Wayne, assigning to it that part of
Indiana bordering on the northern border of Illinois,
Fountain, Montgomery, Boone, Hamilton, Madison,
Delaware, and Randolph Counties, a territory of
17,431 square miles, numbering 20,000 Catholics, with
14 priests, 20 churches, and two religious institu-
tions, with educational establishments of the Fathers,
Brothers, and Sisters of the Congregation of the Holy
Cross. The Right Rev. John Henry Lewinski was
ominated first Bishop of Fort Wayne and consecrated in
Cincinnati, Ohio, 10 January, 1858. He was born
29 September, 1819, in Germany, and emigrated to
America in 1831. He was ordained priest in Cincinnati,
11 November, 1846. Entering upon the administra-
tion of the diocese, he devoted himself to the
founding of new parishes and missions, provided a
home for the orphans, and built a cathedral. In
June, 1871, during a vacancy of the See of Cleveland,
Ohio, he was called to that city to confer ordination
on a number of seminarians. After the function, on
his way to the train, he suffered an apoplectic stroke and
fell dead (29 June, 1871). At the time of Bishop
Lewinski's death there were in the Diocese of Fort Wayne
89 priests, 75 churches, 10 chapels, 1 hospital, 1 or-
phan asylum, 1 college, 11 academies for girls, 40
parochial schools, and a Catholic population estimated
at 30,000.

The Rev. Joseph Dwenger was then appointed to
the see. He was born near Minster, Ohio, in 1837.
Orphaned at an early age, he was educated by the
Fathers of the Precious Blood, entered their com-munity,
and was ordained priest 4 September, 1859. App-
pointed professor in the seminary of his community,
he filled that position until 1862, and was then as-
signed to parochial work. From 1867 to 1872 he was
occupied in preaching missions. He was consecrated
14 April, 1872. In 1874 Bishop Dwenger was the
head of the first American pilgrimage to Rome. In
1875 he erected an orphan asylum and manual labour
school for boys near the Diocesan Seminary, and was
promoter of the parochial school system. In 1884 he
attended the Third Plenary Council at Baltimore, and
in the following March was deputed, with Bishops Moore and Gilmour, to present the decrees of the council to the Holy Father. In 1886 he erected an asylum for orphan girls at Fort Wayne. In 1888 and in 1891 he again went to Rome, the last time in the interest of the North American College. Soon after his return he was attacked by a lingering illness, to which he succumbed 22 January, 1893.

The Right Rev. Joseph Rademacher, Bishop of Nashville, Tennessee, was transferred to Fort Wayne, 13 July, 1893. He was born 3 December, 1846, in Wetumpka, Alabama, and ordained priest 2 August, 1863, by Bishop Luers, to whose diocese he had been affiliated. In April, 1883, he was appointed Bishop of Nashville, Tennessee, and was consecrated 24 June. At Fort Wayne Bishop Rademacher applied himself assiduously to increase the number of churches, schools, and missions. In 1896 he remodelled the cathedral at an expense of $75,000. In 1898 his health gave way. Symptoms of mental collapse appeared and he had to relinquish the government of the diocese. He expired peacefully 12 January, 1900. During his illness, and until the appointment of a successor, Very Rev. J. H. Guendling, vicar-general and pastor of the cathedral, was administrator of the diocese.

The Rev. H. J. Alerding, pastor of St. Joseph's Church, Indianapolis, was appointed successor of Bishop Rademacher 30 Aug., 1900. He was born 13 April, 1845, in Germany. During his infancy his parents emigrated to the United States and settled in Newport, Kentucky. He was ordained priest by Bishop Maurice de St. Palais de Vincennes 22 September, 1868, and appointed assistant at St. Joseph's church, Terre Haute, where he remained till 1871, attending, besides, a number of missions. From October, 1871, to August, 1874, he was pastor of Cambridge City, whence he was transferred to Indianapolis and entrusted with the organization of St. Joseph's parish, where he built the church, the school, and a parochial residence. In 1883 he published "A History of the Catholic Church in the Diocese of Vincennes", a work of deep historical research and accuracy. Bishop Alerding was consecrated in the cathedral of Fort Wayne 30 November, 1900. Since then he has founded new parishes, aided struggling ones, reorganized the parochial school system, provided for the orphans, and promoted all good works. He held a diocesan synod in the cathedral in 1889. Two statutes enacted were promulgated 19 March, 1904. Among other salutary regulations the establishment of six deaneries was decreed—Fort Wayne, South Bend, Hammond, Logansport, Lafayette, and Muncie. In 1907, for the fiftieth anniversary of the creation of the diocese, Bishop Alerding published "A History of the Diocese of Fort Wayne", an elaborate historical work, covering the period from 1699 to 1907.

Dioecesan statistics for 1908 give priests, secular, 128; religious, 71; churches with resident priest, 110; missions with churches, 43; stations, 6; chapels, 49; parochial schools, 52, with 14,252 pupils; orphan asylums, 2, with 200; foundling homes, 2; Catholic population, 93,844. Educational Institutions: the University of Notre Dame, in charge of the Fathers of the Holy Cross; St. Joseph's College (Collegeville), conducted by the Fathers of the Precious Blood. For girls: academies, 11. The number of pupils in Bishops Alerding's diocese is 26,895. Religious Communities. — Men: Fathers and Brothers of the Holy Cross; Franciscans; Fathers and Brothers of the Precious Blood. Women: Sisters of the Holy Cross; Poor Handmaids of Christ; Franciscan Sisters (various branches); Dominican Sisters; Sisters of the Poor. Religious: St. Joseph of Providence; of the Holy Family; of St. Agnes. The following communities have novitiates in the diocese: The Fathers and Brothers of the Holy Cross, at Notre Dame; the Franciscan Sisters of Perpetual Adoration, at Lafayette; the Sisters of the Holy Cross, at Notre Dame; the Poor Handmaids of Christ, at Fort Wayne; the Sisters of St. Joseph, at Tipton.

Forty Hours' Devotion, also called Quarant' Ore or written in one word Quarantore, is a devotion in which continuous prayer is made for forty hours before the Blessed Sacrament. It is regarded as the essence of the devotion that it should be kept up in a succession of churches, terminating in one at about the same hour at which it commences in the next, but this question will be discussed in the historical summary. A solemn high Mass, "Mass of Exposition", is sung at the beginning, and another, the "Mass of Deposition", at the end of the period of forty hours; and both these Masses are accompanied by a procession of the Blessed Sacrament and by the chanting of the litanies of the saints. The exact period of forty hours' exposition is not in practice very strictly adhered to; for the Mass of Deposition is generally sung, at about the same hour, two days after the Mass of Exposition. On the intervening day a solemn Mass pro pace is offered— if possible, at a different altar from the high altar upon which the Blessed Sacrament is exposed. It is assumed that the exposition and prayer should be kept up by night as well as by day, but permission is given to dispense with this requirement when an adequate number of watch-ers cannot be obtained. In such a case the interruption of the devotion by night does not forfeit the indulgences conceded by the Holy See to those who take part in it.

History of the Devotion. — Although the precise origin of the Forty Hours' Devotion is wrapped in a good deal of obscurity, there are certain facts which must be accepted without dispute. The Milanese chronicler Burigozzo (see "Archiv. Stor. Ital.", III, 537), who was a contemporary, clearly describes the custom of exposing the Blessed Sacrament in one church after another as a novelty which began in Milan, in May, 1537. He does not ascribe the introduction of this practice to any one person; but he gives details as to the church with which it started, etc., and his notice seems to have been actually written that year. Less than two years later we have the reply of Pope Paul III to a petition soliciting indulgences for the practice. This is so important, as embodying an official statement of the original purpose of the devotion, that we copy it here: "Since [says the pontiff] . . . Our beloved son the Vicar General of the Archbishop of Milan at the prayer of the in-habitants of the said city, in order to appease the anger of God provoked by the offences of Christians, and in order to bring to nought the efforts and machinations of the Turks who are pressing forward to the destruction of Christendom, amongst other pious practices, has established a round of prayers and supplica-tions to be offered by all priests and by people in their homes, faithful of Christ, before our Lord's Most Sacred Body, in all the churches of the said city, in such a manner that these prayers and supplications are made by the faithful themselves relieving each other in relays for forty hours continuously in each church in succession, according to the order determined by the Vicar, . . . and, approving in our Lord so pious an institution, and confirming the same by Our authority, grant and remit", etc. (Sala, "Documenti", IV, 9; cf. Ratti in "La Scuola Cattolica" [1893], 204).

The parchment is endorsed on the back in a contemporary hand, "St. Joseph's Concession of Indulgences", etc., and we may feel sure that this is the earliest pronouncement of the Holy See upon the subject. But the practice without doubt spread rapidly, though
the details cannot be traced exactly. Already before the year 1550 this, or some analogous exposition, had been established by St. Philip Neri for the Confraternity of the Trinità dei Pellegrini in Rome; while St. Ignatius Loyola, at about the same period, seems to have lent much encouragement to the practice of exposure of the consecrated Sacrament, as known in the earlier centuries in France, Italy, and Spain. This form of the practice was especially promoted by the Oratorian Father, Blessed Juvenal Ancina, Bishop of Saluzzo, who has left elaborate instructions for the carrying out of the devotion with greater solemnity and decorum. It seems that it is especially in connection with these exercises, as they flourished under the direction of the Oratorian Fathers, that we trace the beginning of those sacred concerts of which the memory is perpetuated in the musical "Oratorios" of our greatest composers. Elaborate instructions for the regulation of the Quarant' Ore and for the analogously celebrated "Oratorio di Comunione" (last interrupted prayer) were also issued by St. Charles Borromeo and will be found among the "Acta Mediolanensis Ecclesiae". However, the most important document belonging to this matter is the Constitution "Graves et diuturnae" of Pope Clement VIII, 28 Nov., 1592. In the period of numerous and dangerous threatening the peace of Christendom and especially of the distracted state of France, the pontiff strongly commends the practice of unwaried prayer. "We have determined," he says, "to establish publicly in this Mother City of Rome (in his alma Urbe) an uninterrupted course of prayer in such wise that in the different places and at the various hours, on appointed days, there be observed the pious and salutary devotion of the Forty Hours, with such an arrangement of churches and times that, at every hour of the day and night, the whole year round, the incense of prayer shall ascend without intermission before the face of the Lord." It will be noticed that, as in the case of the previously cited Brief of Paul III, the keynote of this document is anxiety for the peace of Christendom. "Pray," he says, "for the concord of Christian princes, for France, pray, for the enemies of our faith the dreadful Turks, who in the heat of their passion the fury threaten slavery and devastation to all Christendom, may be overthrown by the right hand of the Almighty God." Curiously enough the document contains no explicit mention of the exposition of the Blessed Sacrament, but inasmuch as this feature had been familiar on such occasions of public prayer both in Milan and at Lyons itself for more than half a century, we may infer that when the pope speaks of "the pious and salutary devotion of the Forty Hours" he assumes that the prayer is made before the Blessed Sacrament exposed. More than a century later Pope Clement XII, in 1731, issued a very similar instruction for the proper carrying out of the Quarant' Ore devotion. Upon this, which is known as the "Instruction Clementina," a word must be said later.

With regard to the actual originator of the Forty Hours' Devotion there has been much difference of opinion. The dispute is too intricate to be discussed here in detail. On the whole the evidence seems to favour the conclusion that a Capuchin Father, Joseph Piantanida da Fermo, was the first to organize the arrangement by which the Forty Hours' Exposition was transferred from church to church in Milan and was there kept up without interruption throughout all the years. This instruction for the proper carrying out of the other hand, the practice of exposing the Blessed Sacrament with solemnity for forty hours was certainly older; and in Milan itself there is good evidence that one Antonio Bellotto organized this in connexion with a certain confraternity at the church of the Holy Sepulchre as early as 1527. Moreover, a Dominican, Father Thomas Nieto, the Barnabite, St. Antonio Maria Zaccaria, and his friend, Brother Buono of Cremona, are known as the earliest promoters of the practice as the founders of the Forty Hours' Devotion. The claims of the last named, Brother Buono, have recently been urged by Bergamaschi ("La Scuola Cattolica", Milan, Sept., 1908, 327-333), who contends that the Quarant' Ore had been started by Brother Buono at Cremona in 1529. But the evidence in all these cases only goes to show that the practice was then being introduced of exposing the Blessed Sacrament with solemnity on occasions of great public calamity or peril, and that for such expositions the period of forty hours was generally selected. That this period of forty hours was so selected seems in all probability due to the fact that this was about the length of time that the Body of Christ remained in the tomb, and that the Blessed Sacrament in the Middle Ages was left in the Easter Sepulchre. St. Charles Borromeo speaks as if this practice of praying for forty hours was of very recent origin; and he refers it to the Forty Hours our Lord's Body remained in the tomb, seeing that this was a period of watching, suspense, and ardent prayer on the part of all His disciples. In all probability this was the exact truth. The practice of reserving the Blessed Sacrament with solemnity in the Holy Sepulchre began in the thirteenth or fourteenth century; and seems in some places, e.g. at Zara in Dalmatia, to have been popularly known as the "Prayer [or Supplication] of the Forty Hours". From this the idea grew up of transferring this figurative vigil of forty hours to other days and other seasons. The transference to the carnival season was very obvious and was adopted by many people, but it occurred independently to many different people. This seems to have been the case with Father Manare, S.J., at Macerata, c. 1548, but probably the idea suggested itself to others earlier than this.

RUBRICAL REQUIREMENTS.—The "Instruction Clementina" for the Quarant' Ore has been already mentioned stands almost alone among rubrical documents in the minuteness of detail into which it enters. It has also been made the subject of an elaborate commentary by Gardellini. Only a few details can be given here. The Blessed Sacrament is always, except when the priest is to be absent from the church, to be kept in the high altar. Statues, pictures, and relics in the immediate neighbourhood are to be removed or covered. At least twenty candles are to be kept burning day and night. The altar of exposition is only to be tended by clerics wearing surplices. Everything is to be done, e.g. by hanging curtains at the dooryards, by prohibiting the solicitation of alms, etc., to promote recollection and silence. There must be continuous relays of watchers before the Blessed Sacrament; and these, if possible, should include a priest or cleric in higher orders who alone is permitted to kneel within the sanctuary. At night the greater part of the church must be closed and women excluded. No Masses must be said at the altar at which the Blessed Sacrament is exposed. Precise regulations are made as to the Masses to be said at the time of Exposition and Deposition. Except on greater feasts, this Mass must be a solemn votive Mass de sanctissimo Sacramento. No bells are to be rung in the church at any private Masses which may be said there while the Blessed Sacrament is exposed. When a votive Mass de sanctissimo Sacramento cannot be said, according to the rubrics, the collect of the Blessed Sacrament is at least to be added to the collect of the Mass. No Requiem Masses are permitted between Easter and Aug. 15th. An early institutional Mass pro pace is to be sung on the second day of the Exposition; and the litanies of the saints to be said...
chanted, under conditions minutely specified, at the conclusion of the procession both at the opening and at the close of the Quarat' Ore. Finally it may be said that the "Instructio Clementina" in the foundation upon which is based the ritual for all ordinary Benedictions and Expositions. For example, the incensing of the Blessed Sacrament at the words "Genitori Genitique" of the "Tantum Ergo," the use of the humeral veil, and the giving of the Blessing with the monstrance, are all exactly prescribed in section thirty-one of the same document.

HERBERT THURSTON.

Forty Martyrs, a party of soldiers who suffered a cruel death for their faith, near Sebaste, in Lesser Armenia, on the persecution of Licinius, who after the year 316, persecuted the Christians of the East. The earliest account of their martyrdom is given by St. Basil, Bishop of Cæsarea (370-379), in a homily delivered on the feast of the Forty Martyrs (Hom. xix in P. G., XXXI, 507 sqq.; Ruinart, Acta simpliciss., 545 sqq.) on a subsequent day; it is more ancient than the episcopate of Basil, whose eulogy on them was pronounced only fifty or sixty years after their martyrdom, which is thus historically beyond a doubt. According to St. Basil, forty soldiers who had openly confessed themselves Christians were condemned by the prefect to be exposed naked upon a frozen pond near Sebaste on a bitterly cold night, that they might freeze to death. Among the confessors, one yielded and, leaving his companions, sought the warm baths near the lake which had been prepared for any who might prove inconstant. One of the guards set to keep watch over the martyrs beheld at this moment a supernatural brilliance over-shadowing them and at once proclaimed himself a Christian, threw off his garments, and placed himself beside the thirty-nine soldiers of Christ. Thus the number of forty remained complete. At daybreak, the stiffened bodies of the confessors, which still shone, were thrown into the pond and frozen into a river. The Christians, however, collected the precious remains, and the relics were distributed throughout many cities; in this way the veneration paid to the Forty Martyrs became widespread, and numerous churches were erected in their honour.

One of them was built at Cæsarea, in Cappadocia, and it was in this church that St. Basil publicly delivered his homily. St. Gregory of Nyssa was a special client of these holy martyrs. Two discourses in praise of them, preached by him in the church dedicated to them, are still preserved (P., XLVI, 749 sqq., 773 sqq.), and upon the death of his father, he laid them to rest beside the relics of the confessors. St. Ephraem, the Syrian, has also eulogized the Forty Martyrs (Opera, ed. Assemani, II, Gr., 341-356; Hymn. in SS. 40 martyres, in Opera, ed. Lamy, III, 937-958). Sosomen, who was an eye-witness, has left us (Hist. Ecc., IX, 2) an interesting account of the finding of the relics in Constantinople through the instrumentality of the Empress Fulcheria. Special devotion to the Forty Martyrs of Sebaste was introduced at an early date into the West. St. Gaudentius, Bishop of Brescia in the beginning of the fifth century (d. about 410 or 427), received particles of the ashes of the martyrs during a visit to the East, and placed them with other relics in the altar of the basilica which he had erected, at the consecration of which he delivered a discourse, still extant (P., L., XX, 959 sqq.). Near the Church of Santa Antiqua, in the Roman Forum, built in the fifth century, a chapel was found, built, like the church itself, on an ancient site, and consecrated to the Forty Martyrs. A picture, still preserved dating from the seventh century, depicts the scene of the martyrdom. The names of the confessors, as we find them also in later sources, were formerly inscribed on this fresco [Papers of the British School at Rome, I (London, 1902), 109 sqq.]. Acts of these martyrs, written subsequently, in Greek, Syriac and Latin, are yet extant, under the title "Testamentum" of the Forty Martyrs. The feast is celebrated in the Greek, as well as in the Latin Church, on 9 March.

J. P. KIRSCH.

Forum, Ecclesiastical.—That the Church of Christ has judicial and coercive power is plain from the constitution given to it by its Divine Founder. (See COURTS, ECCLESIASTICAL.) This judicial jurisdiction is expressed by the word Forum, the Latin designation for a place containing a tribunal of justice. As the Church is a perfect society, she has conferred upon herself all the powers necessary to direct her members to the end for which she was instituted and she has a correlative right to be obeyed by those subject to her. This right is called jurisdiction, and it is the source of all the Church's action that is not derived from the power of Sacred order. It is this jurisdiction which is the foundation of ecclesiastical law, both externally and internally binding, and from Apostolic times it has been put into practice by the Church's rulers. The public judicial power of the Church is explicitly mentioned in Holy Scripture (Matt., xviii, 17), and the exercise of it is also recorded (Acts, xv, 29). In other words, just as the civil state has the legitimate jurisdiction over its subjects to guide them to the end for which it was instituted, because it is a perfect society, so likewise the Church, being constituted by Christ as a perfect society, possesses within itself all the powers necessary for lawfully and effectively attaining the end for which it was established, the salutary power of the civil state.

As the power of the Church extends not only to its individual members but also to the whole corporate body, not only to questions concerning the conscience but also to the public actions of its subjects, ecclesiastical jurisdiction is distinguished into that of the internal and external forum. The jurisdiction of the internal forum deals with questions concerning the welfare of individual Christians and with their relation to God. Hence it is called the forum of conscience (Forum conscientiae). It is also designated the forum of Heaven (forum po, because it guides the soul on the path to God. The internal forum is subdivided into the sacramental or penitential, which is exercised in the tribunal of penance or at least is connected with it, and the extra-penitential forum. Causes concerning the private and secret needs of the faithful can often be expiated outside of sacramental confession. Thus, vows may be dispensed, secret censures may be abrogated, occult impediments of matrimony may be dispensed outside of the tribunal of penance. The internal forum deals therefore directly with the spiritual welfare of the individual faithful. It has reference to the corporate body only secondarily, inasmuch as the good of the whole organization is promoted by the protection of the individual. Owing to the individualism of the civil state and the end for which it was instituted, it has no jurisdiction corresponding to the ecclesiastical forum of conscience. Finally, it may be said that circumstances may bring about a conflict
between the internal and external forum. Thus, for example, a marriage may be null and void in the forum of conscience, but binding in the external forum for want of judicial process. It may be held that a canonical offense requires trial by a court of the Church, while in the external forum it may be void, to the concern of individuals, it does so only in as far as these affect the public good. Thus, the annulment of a marriage is held to be a matter of public concern, and the competency of the ecclesiastical forum has reference to matters touching the public and social welfare of the corporate body. It corresponds, consequently, very closely to the powers exercised by civil rulers in affairs belonging to their jurisdiction. While the external forum may be busy with the concerns of individuals, it does so only in as far as these affect the public good. Thus, the abolution of a marriage is held to be a matter of public concern, and the competency of the ecclesiastical forum has reference to matters touching the public and social welfare of the corporate body. It corresponds, consequently, very closely to the powers exercised by civil rulers in affairs belonging to their jurisdiction. While the external forum may be busy with the concerns of individuals, it does so only in as far as these affect the public good.

The Church's jurisdiction in the external forum has reference to matters touching the public and social welfare of the corporate body. It corresponds, consequently, very closely to the powers exercised by civil rulers in affairs belonging to their jurisdiction. While the external forum may be busy with the concerns of individuals, it does so only in as far as these affect the public good. Thus, the abolution of a marriage is held to be a matter of public concern, and the competency of the ecclesiastical forum has reference to matters touching the public and social welfare of the corporate body. It corresponds, consequently, very closely to the powers exercised by civil rulers in affairs belonging to their jurisdiction. While the external forum may be busy with the concerns of individuals, it does so only in as far as these affect the public good.

The juridiction of the external forum is divided into voluntary and involuntary, or voluntary, or extra-judicial, is that which a superior can exercise towards those who invoke his power, or even against those who are unwilling, but without his using the formalities prescribed in law. Necessary or contentious jurisdiction is that which the judge employs in punishing crimes or deciding disputes according to prescribed forms. In general, the acts of jurisdiction of the external forum are the decision of disputes concerning faith, morals or discipline, the making and enforcing of laws, the punishment of transgressors of ecclesiastical statutes, and the like. The competency of the ecclesiastical forum arises either from the nature of the cause to be judged. As to persons, all clerics are subject to its judgments both in civil and criminal causes (see IMMUNITIES, CERICAL). As to causes: they may be purely civil, or ecclesiastical, or they may be mixed. Purely civil causes would not of themselves properly belong to the Church's forum, as it regards the competence of the secular tribunal, when a civil judge is wanting in his duty and the defect can be supplied by an ecclesiastical judge. This supposes, however, the practical recognition of the Church's forum by the civil power. Ecclesiastical causes themselves are civil when they concern either spiritual things, as the sacraments, or matters connected with them, as church property, the right of patronage, etc. They are called criminal when they involve the dealing with delinquents guilty of scandal, and the like. The Church has called mixed causes when they are subjects proper for decision by either the ecclesiastical or civil forum, as usuage contracts, concubinage, violations of the Church's peace, etc. Causes are likewise called mixed when they have both a spiritual and temporal end. Thus, marriage, in its sacramental nature as to its identity, belongs to the Church; in its temporal aspect, to the property of married persons and similar things, it may be dealt with by the civil tribunals. To this class of mixed causes can also be reduced the suppression of heresy, where Church and State cooperate with each other for the maintenance of the integrity of the faith and the preservation of the civil peace. Finally, many causes, of their own nature civil, are accounted mixed by canonists, either because the State relinquished them to the Church's tribunals or custom gradually caused them to be reagitated to the ecclesiastical forum, such as the recognition of last wills and testaments, the care of the poor, etc.

The punishments which may be inflicted by the external ecclesiastical forum are not only spiritual, as excommunication, but also temporal or corporal. As regards the infliction of the death penalty, canonists generally hold that ecclesiastical law forbids inferior church tribunals to decree this punishment directly, but that the power of the council has the power at least indirectly, inasmuch as they can demand that a Catholic state inflict this punishment when the good of the Church requires it. Finally, they hold that there is no valid argument to prove that the direct exercise of this power does not fall within the competency of the ecclesiastical forum, although it was the custom of the councils of Trent to hand over the criminal to the secular arm for the infliction of the corporal punishment. The competency of the civil power on the domain of the Church's juridiction have in our days, practically though unwarrantably, restricted the ecclesiastical forum to spiritual causes only.
FOSSORS 155

Certain date is Innocent, present at the synods of Pope Symmachus (504). Other noteworthy bishops were: Fielemimus (1086), present at the Council of Salona as legate of Gregory VII to receive the oath of fidelity to the Holy See from Dementrius, King of Dalmatia; St. Aldemarico Faber (1119), who died at the age of 118 years; Blessed Riccardo (date uncertain); Addo Ratiere (1379), poet and litterateur; Paul of Middelburg (1494), of German origin, a skilful mathematician, and author of a work on the computation of Easter; Giacommo Guidicione (1524), a famous poet and writer; Cardinal Niccolò Arlinghelli (1841), who left an important correspondence; Giulio Aloisini (1808), internuncio in Russia. The diocese has 20,050 inhabitants. 40 parishes, 7 educational institutions, a Capuchin convent, and three religious houses of women.

Cappelletti, Le Chiese d’Italia (Venice, 1844). III, 245-83; Vernaecchi, Fossombrone dei tempi antichissimi ai nostri (Fos- sombrone, 1907).

U. BENIGNI.

FOSSORS (Lat. fossores, fossarii from fodere, to dig), grave diggers in the Roman catacombs in the first three or four centuries of the Christian Era. The determination, from the first days of the Church, of the ecclesiastical authorities to inter the mortal re-

 mains of the faithful in cemeteries reserved exclusively to Christians, brought into existence the class of workmen known as fossors. The duties of the Christian fossor correspondent in a general way with those of the pagan sepulchres, but whereas the latter were held in anything but esteem in pagan society, the fossors from an early date were ranked among the inferior clergy of the Church (Wieland, Ordines Minores, 1897), an excellent example of the elevating influence of Christianity on the lowest orders of society. An interesting literary reference to fossors, in their character of one of the orders of the inferior clergy, is found in the “Gesta apud Zenophilum”, an appendix to the work of St. Optatus of Mileve against the Donatists. Speaking of the “house in which Christians assembled” at Cirta in the year 303, during the persecution of Diocletian, this writer enumerates first the higher orders of the clergy present, from the bishop to the subdeacons, and then mentions by name the fossors Januarium, Hierachus, Fructuoso, et cereris fossoribus (“Opp. S. Optati”, ed. C. Ziwa, in “Corpus Script. Eccl. Lat.”, Vienna, 1893, XXVI, 187). St. Jerome also (Ep. xlix) alludes to fossors as clerici, and a sixth-century chronicle edited by Cardinal Mai (Spicil. Rom., IX, 133) enumerates the orders of the clergy as ostiarius, fossorius, lector, etc. At first the fossors seem to have received no regular salary, but were paid by individuals for the work accomplished; with the organization of the Church, however, they appear to have been paid from the common treasury. In the fourth century the corporation of fossors were empowered to sell burial spaces, as we learn from inscriptions. For example, in the cemetery of St. Cyricus two women bought from the fossor Quintus a biosoma, or double grave, reserved (near martyr’s tomb), and thus opened several other references to this practice. The corporation of fossors, there is good reason to believe, did not consist merely of the labourers who excavated the galleries of the catacombs; it included also the artists who decorated the tombs, as appears from another allusion in the “Gesta Apud Zenophilum” already cited. According to this authority two fossors were brought before the judge (inductis et ad nutricium Victore Sansurici et Saturnino fossoribus); when interrogated as to their calling, one replied that he was a fossor, the other that he was an artes. The latter term at that period indicates the profession of the two答复者. Thus it would seem that this person who is generally referred to as a fossor is also an artist.

Among the representations of fossors in the catacombs the one best known, through Wiseman’s “Fabula”, is that of the fossor Diogenes, discovered by Boldetti. The picture, which was seriously injured in an attempt to remove it from the wall, represents Diogenes with his pick over his right shoulder and a sack, probably containing his midday meal, on his left shoulder, while in his left hand he carries a staff with a light attached. The inscription reads: DIOGENES FOSSOR, IN FACE DEPOSITVS, OCTABR. KALENDAS OCTO-

•

BRE (the fossor Diogenes, deposited in peace, the eighth day before the calends of October). The oldest fresco of a fossor, or rather of two fossors, dating from the latter half of the second century, is in one of the so-called Sacrament Chapels in the catacomb of St. Callistus. The figures are represented pointing toward three Eucharistic scenes, probably to indicate another of their duties, which was to exclude unauthorized persons from taking part in the liturgical celebrations held occasionally in the cemeteries in commemoration of martyrs. Representations of fossors are usually near the entrance to the subterranean cemeteries.

mann, Manuel de arch. cristiens (Rome, 1907).

MAURICE M. HASSETT.

FOSTER, JOHN GRAY, soldier, convert, b. at Whifield, New Hampshire, U. S. A., 27 May, 1823; d. at Nashua, New Hampshire, 2 September, 1874. After graduating at the West Point Military Academy in 1846, he served as a lieutenant in the Engineer Corps during the Mexican War, where he was wounded at the battle of Molino del Rey. A service on the Coast Survey, 1852-54, brought him promotion to captaincy and assignment as assistant professor of engineering at West Point, where he was stationed from 1855 to 1857.

When the Civil War broke out Foster was in command at Fort Moultrie, Charleston harbour, and during the night of 26 December, 1860, succeeded in transferring the garrison under his command to Fort Sumter, in the subsequent defence of which he took so conspicuous a part as to earn the brevet rank of major. He was commissioned a brigadier-general of volunteers, 23 October, 1861, and assisted in Burnside’s attack on Fort Fisher, 15 December, 1862. It is said that his conversion occurred, his baptism taking place in New York, 4 November, 1861. He was commander of the Department of North Carolina, during 1862-3, with the rank of major-general. The combined De-
portments of Virginia and North Carolina were assigned to him from July to November, 1863, and then that of Ohio, which he had to relinquish, owing to injuries received by a fall from his horse. He next sided with the Confederates in the defense of Charleston, and on gallant services in the capture of Savannah was brevetted brigadier-general in the regular army. During 1865-6 he was in command of the Department of Florida, and then superintended various river and harbour improvements. In the harbours of Boston and Portsmouth he conducted with great ability and success, important submarine operations, an experience which added the value of direct experience to his work on "Submarine Blasting in Boston Harbor" (New York, 1889) and his articles in various periodicals on engineering subjects, which received high professional appro

Thomas F. Meenan.

FOUDAD, SAINT, surnamed na Canoine (of the Canon), a monk of Fahan-Mura, County Donegal, Ireland, at the close of the eighth century. He became bard, counsellor, and tutor to Aedh Omridh (the dignified Head King of Ireland, who ruled from 794 to 818. He is specially venerated in the Irish Church from the fact that, in 804, when he accompanied King Aedh in his expedition against the Leinstermen, he obtained from that monarch exemption of the clergy forever from military service. His literary works were so highly thought of that St. Aedh submitted his "Feline" to him for approval, and, in return, St. Fothad presented St. Aedh with a copy of his "Remonstrance", addressed to King Aedh, protesting against the consecration of ecclesiastics. This "Remonstrance", which was really a rhymed judicial opinion, was canonized as a canon or decree, and hence St. Fothad was ever after called "Fothad na Canoine". It commences thus: "The Church of the living God let her alone, waste her not."

O'HANLON, Lives of the Irish Saints (Dublin, a. d.); HYDE, Lit. Hist. of Ireland (London, 1901); HEALY, Ireland's Ancient Schools and Scholars (Dublin, 1902); O'CARRY, Lectures Dublin, 1861); MATTHEW, The O'Neill's of Ulster Dublin, 1907).

FOUDAD, CONSTANT, ecclesiastical writer; b. at Elbeuf, near Rouen, 6 Aug., 1857; d. at his native place on 8 Aug., 1898. The son of the Rev. Charles Fontaine, he was educated at Saint-Omer, where he completed his secondary studies. He entered the SEMINARY OF SEMINAIRES at Saint-Omer, from which he was graduated in 1292, and then took up the study of theology. He was ordained priest in 1861 and entered the "Solitude", the novitiate of the Sulpicians, but left on account of illness after several months without joining their society. He taught some time at Boisguillaume, then pursued the study of classics at the college of Saint Barbara, Paris, obtained the degree of Licentiate in Letters, 1867, and resumed the teaching of classics at Boisguillaume, taking the class of rhetoric, 1867-1876. His piety drawing him to sacred sciences, he was appointed by the State (1876) to the chair of Holy Scripture in the faculty of theology at Rouen; he continued, however, to reside at Boisguillaume and to share in the duty of governing the student-body.

Honours came to him: he was made doctor of theology (1877), canon of the cathedral of Rouen (1884), and member of the Biblical Commission (1900). His ecclesiastical science, his piety, his spiritual wisdom were continually at the service of religion in his native diocese. For the benefit of his studies he travelled in Palestine, Syria, Greece, and Italy. The Faculty of Theology being suppressed about 1884, his teaching ceased. His writings are: "La Vie de N-S Jésus-Christ" (1880); "Saint Pierre et les premières années de christianisme" (1886); "Saint Paul, ses Maîtres" (1892); "Saint Paul d'Arles" (1897); "Saint Jean et la fin de l'âge apostolique" (posthumous, 1904). The dates witness, incidentally, to the extremely painstaking character of his labours. All these books form part of one grand work, "Les Origines de l'Eglise", which Fournard wrote as an answer to the present-day, with great ability and success, important submarine operations, an experience which added the value of direct experience to his work on "Submarine Blasting in Boston Harbor" (New York, 1889) and his articles in various periodicals on engineering subjects, which received high professional appro

Pilot (Boston, Sept., 1874), files; Cyclopaedia of American Biography, II, s. v.

Thomas F. Meenan.

FOUCAULT, JEAN-BERTHAND-LÉON, physicist and mechanic, b. at Paris, 19 Sept., 1819; d. there 11 Feb., 1868. He received his early schooling at home and showed his mechanical skill by constructing a boat, a mechanical telegraph, and a working steam-engine. He passed the examinations for the B.A. and began to study medicine. Later, unable to bear the sight of blood, he abandoned medicine and worked for Donné as preparator in his course on medical microscopy. His elementary mathematical and scientific training had been very deficient and he supplemented it as he became interested in invention and experiment. In 1845 he succeeded Donné as scientific editor of the Revue des Deux Mondes. In 1847 he was presented with the Copley medal, the highest honour of the Royal Society of London, for his work showing the relation between mechanical energy, heat, and magnetism. The position of physicist of the Paris Observatory was created especially for him in 1855. A member of the Bureau of Longitude (1859), it was finally elected to the Academy in 1865. Those of Berlin and St. Petersburg and the Royal Society of London also honoured him.

Foucault worked along several lines. With Fizeau he experimented upon the interference of red rays and their influence on daguerrotypes plates, while with Regnault he studied binocular vision. We are indebted to him for experiments on the corpuscular or emission theory of light, defended by Kepler, Newton, and Laplace. Following Arago's suggestion he used the rotating mirror of Wheatstone to determine the difference between the velocities of light in various transparent media. Contrary to the emission theory he found that light travels faster in air than in the denser medium water (17 May, 1850). Light was reflected from a mirror through a tube, containing the medium to be studied, to a concave reflector and back again to the mirror. If the mirror was rotated, the image was observed to shift by an amount depending on the speed of light through the particular medium in the tube. Exceedingly accurate measurements were made of this enormous velocity (about 188,000 miles per second) with an apparatus occupying only twelve feet of space. Foucault invented an
FOULQUE

157

FOUNDATION

automatically regulator for the feed of the Davy electric arc lamp and thus made electric lighting practicable. The Foucault pendulum was invented to demonstrate visibly the rotation of the earth; the one exhibited at the Pantheon in Paris in 1851, 18 feet long. The governor, with its intricate and puzzling movements was another device invented by him to show also the earth’s motion around its axis. This gained for him the cross of the Legion of Honour. Foucault currents are heating currents of electricity developed in a disc of metal rotating between the poles of a strong magnet. He had observed and reported this effect in 1845. As physicist at the observatory he applied himself also to the improvement of large telescopic lenses and reflectors, devising a method for silverting the surface of a glass reflector. The mercury interrupter used with the induction coil and an excellent form of engine governor are also due to him. Foucault at first appeared careless in the performance of his religious duties but in later years he was a practical Catholic. A stroke of paralysis put an untimely end to his useful work, just as he was about to enjoy the comforts of a well-equipped laboratory. His contributions to science are: the "Commerce de la Connaissance des verbaux de la Société Philomatique", and "Bibliothèque d’Instruction populaire". His collected works have been put in order by C. M. Gabriel and published by his mother, "Recueil des Travaux Scientifiques de Léon Foucault" (Paris, 1878).

WILLIAM FOX.

FOULQUE de Neullly, a popular Crusade preacher; d. March, 1202. At the end of the twelfth century he was curé at the church of Neullly-sur-Marne, in the Diocese of Paris (now the department of Seine-Oise). According to Jacques de Vitry he once led an irregular life, but experienced a sudden conversion. Ashamed of his ignorance, he went to Paris to study under Pierre, a canon of Notre-Dame. It was not long before his master noticed his earnestness and had him preach in the church of Saint-Séverin before a number of students. His eloquence was so great that he was thought to be inspired by the Holy Ghost. Large crowds assembled to hear him in the Place Champeaux where he was wont to preach. He was especially severe in his denunciation of usurers and distillers. In 1195, upon the death of the assent of the Bishop of Paris, he began to preach in the neighbourhood of Paris, and is soon afterwards met with successively in Normandy, at Lisieux and Caen, later in Burgundy, Picardy, and Flanders. He was credited with power to work miracles, and from every quarter the sick were brought to him whom he cured by the laying on of hands and by the sign of the cross. After 1198 he preached the Fourth Crusade amid much popular enthusiasm. He declared later that in three years he had given the cross to more than 200,000 persons. According to Jean de Flixecourt, it was into four parishes that the archbishop allotted his ablest preachers. As bishop, the clergy, the poor, and the care of the ecclesiastical buildings. At the end of the twelfth and the beginning of the thirteenth century the energy displayed by the clergy in political affairs gave rise to a spirit of public enterprise which manifested itself in the formation of industrial guilds and the creation of charitable institutions. Paris, following the examples of founding homes, hospitals, houses for the aged and infirm, hospices, and leper-hospitals, the majority of which were liberally endowed. For an account of this wonderful era of popular generosity, see Thomasin, "Vetus sc nova eccles. disciplina", III., 1–30; and Lallemand, "Les hospices de Paris", 1–15.

In general, the Church now derives its support mainly from voluntary offerings, civil aid or subsidy, and pious foundations. Foundations for pious uses
may come under any one of the following heads: legacies for Masses; legacies to a particular diocese, church, school, etc.; to a charitable institution, e. g., an orphanage or a hospital; to any society established for an educational or charitable purpose, or in general for a religious end.

Foundations are contracts; therefore there must be a contract between the founder and the administrator of the institute receiving the gift. Moreover, there is the obligation of performing some work specified in the deed of foundation. The consent of the bishop, or, in the case of a regular community, the consent of the regular prelate, must be obtained, since it would not be just that ecclesiastical institutions should be left to do what they wish in the administration of their funds, or to oblige themselves to do a specific act without the wish of the bishop. The bishop, or the superior of a religious foundation, must at least receive the foundation into his diocese, and declare it to be a genuine foundation. Benedict XIV considers supervision of the execution of pious legacies one of the most solemn and important duties of a bishop (De Synodo, Bk. XIII).

The Council of Trent says (Sess. XXII, ch. ix): "The administrators, whether ecclesiastical or lay, of the fabric of any church whatsoever, even though it be a cathedral, as also of any hospital, confraternity, charitable institutions called 'montes pietatis', and of any place whatsoever, shall be bound to give in once a year an account of their administration to the ordinary, all revenues and expenses of the fabric, and all other things concerning the said place; unless it should happen that, in the institution and regulations of any church or fabric, it has been otherwise expressly provided. But if from custom, or privilege, or some regulation of the place, their account has to be rendered to others deputed thereto, in such case also the ordinary shall be employed jointly with them, and all acquaintances given otherwise shall be of no avail to the said administrators."

In the list of questions to be answered by bishops on their Roman visits ad limina the Congregation of Propaganda asks the following (nos. 49, 50): Are there foundations for Masses provided in the constitution of the Society of Jesus in the province of Flanders? Are there foundations for Masses in the diocese of Ghent for the use of the church of St. Peter in Ghent? Are there foundations for Masses bequeathed for pious purposes? Are the proceeds of such bequests properly administered and the canons relating to such matters attended to? (See also the Constitution of Leo XIII affecting congregations of simple vows and known as "Conditas a Christo", 8 Dec., 1900.) The bishop by a general statute may stipulate that foundations are only to be accepted under certain conditions. It is to be noted that acceptance without the consent of the bishop does not invalidate the legacy, but it is in the power of the bishop to rescind the contract if he judge it proper, although in this case the Masses in perpetuity enjoyed by the bishop, or Masses to be celebrated by the bishop, or Masses to be celebrated by others at the discretion of the bishop, are to be observed.

In the decree of Urban VIII, "Cum Sepe" (21 Jan., 1625), and Innocent XII, "Nuper a congregatione" (23 Dec., 1697), it is ordered that the stipulated Masses or other works must be fulfilled as a matter of justice; and, if not fulfilled, those responsible for the omission sin gravely and are bound to restitution. The Masses are to be said at least as a found in the place on which the Masses are to be found. A list of founded Masses is to be kept in a conspicuous place in the church; and when the Masses have been celebrated the fulfilment of the obligation is to be noted in a book kept for that purpose. The obligation of a foundation ceases absolutely when the income or principal is lost without fault on the part of anyone; but non-fulfilment, even for a lengthy period, does not prescribe against a foundation in perpetuity. The reduction of a foundation is a matter for the judgment and decision of the Holy See, although it is not uncommon for bishops to receive faculties to make such reduction. Condonation and abolution for past omissions in the fulfilment of foundation obligations belong also to the Holy See, through them they may rectify the decennial foundations that are to affect during the lifetime of the donor (Council of Trent, Sess. XXII, ch. viii). It may be noted that, with regard to foundations for Masses, if the founder has given no definite instruction as to intention, the Congregation of the Council has often decided that the Masses must be applied for the founder, the interpretation being that he intended them for himself.

The synods of Westminster (Eng. tr., Stratford-on-Avon, 1885) have the following decrees: "It is fitting that the bishop select from the body of the chapter or from the body of the clergy prudent men to help him in the temporary acts of the synod. He should often use their advice." "New obligations should not be accepted without the consent of the bishop. If those which he has already to fulfill appear to be too burdensome, or there does not exist a congruous endowment, let the priest apply to the bishop or lay the matter before him at the visitation." "If any of the faithful wish to found a daily or annual Mass the matter must be treated with the bishop, and the sum contributed for this object must be profitably invested so as to produce an annual interest for a perpetual endowment, as far as circumstances of time, place, etc., will admit, and the sanctions being observed." For similar legislation concerning Ireland see the "Acta et Decreta" of the plenary Synod of Maynooth, 1900 (Dublin, 1906), pp. 67-78. In the United States secular priests cannot accept foundations of Masses without the written permission of the bishop. Regulars must have the consent of their superiors general or provincials. No general rule has been laid down as to the requisite amount of the fund, each ordinary being free to fix the sum for his diocese. The councils of Baltimore urge that great circumspection should be used in accepting foundations, especially in the diocese of Baltimore. It is advisable to accept foundations only on the following conditions: That the obligation to celebrate shall cease, if the fund, no matter from what cause, be either entirely lost or yield no income; that the ordinary shall have power to reduce the number of Masses if the interest on the capital, no matter for what reasons, becomes insufficient to make up the stipend fixed by the founder; that if, for whatever cause, the church in which the Masses are to be said is destroyed or deprived of a priest, the Masses can be said in any church to be designated by the ordinary.

In order to prevent the annulment or failure of a foundation particular attention should be given to the civil law of the place in question. In England (but not in Ireland) bequests to what the civil law regards as superstitious uses are void, as, for example, to maintain a priest, or an anniversary or obit, or a lamp in a church, or to say Masses for the testator's soul, or to circulate must be invalidating the foundation. Legacies of money for charitable purposes, as for the use of schools, churches, etc., are valid; but if the money is to be laid out in the purchase of land for such purposes, the direction to purchase land shall be disregarded and the money shall be held for the charity. Land may be given by will for charitable purposes; but, by the Act 54 and 55 Vic. c. 73, the land must
(with certain exceptions) be sold within a year from the testator's death; gifts of land for charitable purposes, otherwise than by will, are valid if the requirements of the Act 51 and 22 Vic. 42, are observed. Of the several conditions one is: the conveyance must be by deed; (2) the gift must take effect twelve months before the death of the donor; and (3) the gift must be without any reservation or condition for the benefit of the donor. For the English legislation and court practice concerning trusts and charitable purposes see the English Digest, 4, 136, 437. See also Lilly and Wallis, "A Manual of the Law specially affecting Catholics" (London, 1893), 135-167. In the United States property cannot legally be devised to a corporation (e.g. to a church when incorporated) unless such property is authorized by its charter to receive bequests. At the time religious bodies for religious and charitable purposes are valid and binding in conscience, even though null according to law; however, D'Annibale does not agree (Summula Theol. Mor., II, 339).

For the administration of the important secretarial foundations in Hungary see Verin, "Kirchenrecht" (3rd ed., Freiburg, 1893), 149; in Baden: op. cit., 249-50.

DAVID Dunford.

**FOUNDLING.**—Under this title are comprised all institutions which take charge of infants whose parents or guardians are unable or unwilling to care for them. At the present time many foundling asylums give shelter to orphans, but originally their activity was confined almost entirely to the rescue and care of foundlings in the strict sense, that is, infants who had been deliberately abandoned by their natural protectors. The practice of exposing to the risk of death the children of paupers, of dishonorable parents, and of inhuman parents who were unwilling to rear was very common among parents in the ancient pagan nations. Very general, too, was the more direct method of infanticide. Both methods had the sanction of law and public opinion. Lycurgus and the Decemviri decreed that deformed and abandoned children should be killed in the interests of healthy citizenship. Aristotle advocated the enactment of laws which would prescribe the exposure of deformed infants and also of all infants in excess of a socially useful number, and which would make the practice of abortion compulsory whenever it was required by the public welfare. In his opinion these measures would find a place in the ideal state, and in every existing community where they were not already approved by the laws and customs (Politics, vii, 16). Even Pliny and Seneca thought it wise sometimes to allow deformed and superfluous infants to perish. In the city of Rome two places were formally set apart for the exposure of such children. The proportion of abandoned children that was rescued was very small, and the purposes for which they were rescued were cruelly selfish. Under Roman law they were slaves.

The prevalence of these inhuman practices in Greek and Roman society is undoubtedly explained to a great extent by the pagan theory that neither the fetus nor the newly born child was in the fullest sense a human being, as well as by the view that the individual existed for the sake of the State. Against both these beliefs Christianity laid down the doctrine that the human offspring is intrinsically sacred, and not a mere means to any end whatever. Hence we find that the first noteworthy condemnation of the practice of infant exposure, and the first attempt to rescue, came from Christian writers, priests, and bishops. Among the earliest of these were Lactantius, Tertullian, Justin Martyr, and Cyprian. Influenced by the Christian teaching and practice, the Emperors Gratian and Valentinian decreed that infanticide should be forbidden by death. The first attempt at the rescue of the disability of slavery and placed them under the patronage of the bishops and prefects. The work of rescue was at first performed by individuals—as, in France, by the deaconesses—and the rescued infants were adopted into Christian families. A marble basin was placed at the church door in which unfortunate or inhuman parents could place their infants, with the assurance that the latter would be cared for by the Church. Although mention is made of a foundling asylum at Trier in the seventh century, the first one of which there is authentic record was established in Dyrenburg in 798 by the archbishop Thietmarus. The first one was founded at Montpellier. Innocent III caused one to be erected in 1198 at Rome in connection with the hospital of the Holy Ghost. The thirteenth and fourteenth centuries witnessed a great increase of foundling asylums, especially in Italy. Prominent among these was the institution at Einbeck (1200) Florence (1316), Nuremberg (1331), Paris (1362), and Vienna (1380). During the Middle Ages most of the foundling asylums were provided with a revolving crib (tour, ruota, Drethladen) which was fitted into the wall in such a way that one half of it was always on the outside of the building. In this the infant could be placed, and then brought into the building by turning the crib. This device completely shielded the person who abandoned the child, but it also multiplied unnecessarily the number of children abandoned. Hence it has been almost universally abolished, even in Italy.

The founding asylums did not, however, become general throughout Europe. In many places infants were still deposited at the doors of the churches, and thence taken in charge by the church authorities with a view to their adoption by families. In France the means of caring for foundlings had become quite inadequate during the eighteenth and nineteenth centuries. The original foundling asylum of Paris seems to have been no longer in existence at this period; for the only institution of this nature that we hear of is the "Maison de la Couche", in charge of a widow and two servants. So badly was it managed that it had won the nickname of "Maison de la Mort". Through the all-embracing pity of Saint Vincent de Paul the place came under the direction of the Ladies of Charity, and through his influence the king and the nobles subscribed an annual sum of 40,000 francs to carry on the work of child saving. As a result there was a great increase in the number of foundling asylums in France during the seventeenth and eighteenth centuries.

At present the care of foundlings varies considerably in different countries. Methods in France have undergone many changes since the middle of the eighteenth century. Under the government of the Revolution all foundlings were treated as wards of the nation, and for a time subjected to the guardianship of illegitimate children. In 1811 this legislation was repealed, and the care of foundlings was transferred from the central authorities to the departments. At the same time it was decreed that every
foundling asylum should be provided with a revolving crib. The consequence was that the number of abandoned children greatly increased, and the crib had to be abolished. By the law of 1874 every child under two years of age which is taken care of for hire outside the home of its parents becomes an object of public guardianship. Nevertheless, the actual work and expenses of foundling asylums are to a large extent undertaken by religious communities and private associations, both in asylums and in families. In Germany the asylum method seems never to have been as common as in Italy and in France. To-day that country has no foundling asylum in the strict sense of the term. The prevailing practice is to place the infant temporarily in an institution, usually an orphan asylum, and then to give it into the charge of a family. Both the public authorities and the religious communities follow this system. Since the days of Joseph II, founding asylums have been rather general in Austria. When the mother engages herself to serve in the hospital for four months as a nurse, the child will be taken in and kept permanently, that is, until it reaches the age of ten or, in some asylums, of six years. In case the mother does not reclaim it at the end of this period, it is turned over to the magistracy of her local council. When the child has reached the age of four years and is not taken back, it is placed in a family as soon as a suitable one can be found. The asylum in Vienna is the largest in the world, having under its care either within or without its doors more than 30,000 children every year. Of the seventy odd thousand infants received in that asylum only 8,700 were legitimated. In proportion to its population, Italy exceeds all other countries in the number of institutions which are exclusively devoted to the care of foundlings. The number in 1898 was 113, and the number of children cared for 100,418. Most of these, however, were placed out in families, although the famous asylum of Florence (founded 1316) sheltered more than five thousand five hundred in the year 1899. The revolving crib has all but disappeared, owing to the conviction of competent authorities that it increased both illegitimacy and child-abandonment. In 1885 the province of Rovigo introduced a system according to which all mothers who acknowledge their infants are supported for one and one-half years. Experience has shown that this method is more favourable to the child and less expensive to the community. It has been extended to other provinces, was approved by the charity congress of Turin in 1899, and has been embodied in the present law. In Austria and in the United States there are two large foundling asylums, which were established by Catherine II. In 1899 the one at St. Petersburg cared for 33,366 children, while the Moscow Institution had charge of 39,933. The policy of the latter is to induce the mother, if possible, to nurse her child, and to pay her for this service. If she does not appear, the infant is kept only a few weeks; it is then placed in the family of some peasant. In England the care of foundlings is in the hands of the Poor Law Guardians, religious and private associations, and the managers of the London Foundling Hospital. Those who are under the care of the guardians are sometimes kept in the general workhouse, and sometimes boarded out in families. The Catholic authorities place foundlings both in the private family and in the orphan asylum. The London Foundling Hospital (established 1739) seems to be the only institution of any considerable size which is devoted exclusively to this class of unfortunate. Scotland has never had a foundling asylum, but utilizes the workhouse and the system of boarding-out. These methods and the care of foundlings in orphan asylums by religious communities are the prevailing ones in Ireland.

The only public institutions available for the care of foundlings in the United States are the county almshouses, or poorhouses. In most of the large cities there are foundling asylums under the management of individuals, private associations, or religious bodies and communities. In 1907 the Catholic infant asylum of Chicago had 767 inmates; that of Boston, 585; that of Milwaukee, 408; that of San Francisco, 480. In most places, however, foundlings are received in the Catholic orphan asylums, and are not particularly classified, although the United States office is to keep records of the number of infants placed. The same practice obtains in many orphan asylums under the control of private persons and non-Catholic societies. The volume of the United States census (1904) on benevolent institutions gives the number of orphans and children's homes, public, private, and religious, as 107,415. An estimate of the number in the United States is 92,887. The majority of these children are of course not foundlings but orphans. On the other hand, the foundlings in these institutions undoubtedly form only a minority of the whole number in the country; for there is a considerable number in poorhouses, and a still larger number in families. Thus, the State of Massachusetts places all the foundlings committed to it in families under public supervision. Hence it is impossible to give even approximately the total number of foundlings in the country.

The ideal method of caring for foundlings is still as much in dispute as that of the other social problems of practical charity. One phase of the general question has, however, received a fairly definite answer. Experience and a due regard for the respective interests of the infant, the parent, the community, and the religious community, and good morals have led to the conclusion that in every case a reasonable period of time should be given to the parents to discover the parents and to compel them to assist as far as possible in caring for the child. The other method, which had its most thorough exemplification in the revolving crib, tends, indeed, to diminish infanticide, but it also increases illegitimacy, and by striving to weaken the unity of its natural protector produces at least a high rate of recidivism and of the foundling system. Moreover, it throws upon public and private charity a burden that in many cases could be borne by the parents. Hence the present tendency is everywhere towards the method which aims to give the child the benefit of a mother's care and to keep alive in parents a proper sense of their responsibility.

A question more variously answered is, whether the maintenance of foundling asylums is wise. Those who take a stand for the negative point to the very high death-rate in these places (sometimes more than 50 per cent.), to the smaller expense of the family system, and to the fact that foundlings are a natural home for young children. Most of the Protestant countries and communities prefer the method of placing the foundling in a family. The positive arguments in its favour are unanswerable, but against them must be set the fact that it is not always possible to find suitable families who are willing to care for foundlings. Experience shows that sufficient homes of the right kind cannot now be found for all orphan children who have arrived at an age which renders them more attractive as well as more useful than utterly helpless infants. It would seem, therefore, that institutions are necessary which will shelter foundlings for a number of years. Nevertheless, the foundling asylum should endeavour to ascertain the identity of the parents, to induce the mothers to act as nurses to their infants in the institution, and to keep alive the natural bond between child and parent.

FOUNTAINS

FOUQUET

Fountains Abbey, a monastery of the Cistercian Order situated on the banks of the Skell about two and a half miles from Ripon in Yorkshire, was established by thirteen Benedictine monks of St. Mary's Abbey, York. Wishing to observe a more strict discipline, they obtained in 1132 from Thurstan, Archibishop of York, a grant of land near Ripon. Richard, the first abbot, was the party who started the work. Leaving St. Mary's on 9 October, they reached Fountains on 26 December, 1132, and immediately placed themselves under St. Bernard, who sent Geoffrey of Clairvaux to teach them the Cistercian Rule. After two years of privation and poverty they decided to leave England and seek a home among their brethren abroad. Hugh, Abbot of the party, was received at York; Hugh, Dean of York, joined them, bringing with him money and property. He was followed by two canons of York, Serlo and Tosti, who brought still more wealth by means of which the suffering community was relieved and enabled to carry on the new foundation. In 1135 all their possessions were confirmed to them by King Stephen. The earliest buildings erected were destroyed in 1146 by the followers of William, Archibishop of York, who thus wreaked their vengeance on Abbot Murchad, whom they considered the chief opponent of their master. The archbishop probably went there to paint to the order of the Jocelin of Adhamo, a monk of his adherents and expressed his deep sorrow for what had occurred. This loss did not check a rapid development; new buildings were immediately begun and that immense pile, the ruins of which still stand, was finished before the year 1250. In 1146 a colony of monks was sent to Bergen in Norway, and the monasteries of Sawley, Roche, Woburn, Meaux, Kirkstall, and Vandy were founded from Fountains. This period of prosperity was followed by one of want, caused by the constant inroads of the Scots. On account of this Edward II exempted the monks from all taxation (1319). Among the worthies of Fountains should be numbered Henry Murdac, its abbot, and afterwards Archbishop of York (1147–1153), John de Pherd (de Fontibus) another abbot, one of the greatest architects of his day, who became Bishop of Ely in 1220, and John de Cancia, another renowned builder, who ruled over the abbey from 1220 to 1247. The last abbot of which we write was William Thirk, executed at Tyburn for refusing the Oath of Supremacy (1536); the last abbot was Marmaduke Bradley who surrendered the abbey to the king in 1540. At the Dissolution there were thirty-one monks with the abbot, and the revenue amounts to £95, 12s. 10d. Glastonbury purchased the site for £1163; in 1596 Sir Stephen Proctor acquired it for £4500; the family of Messenger next held it; in 1786 Sir W. Aslambie bought it for £18,000; it is now owned by the Marquess of Ripon. The abbey with its offices stood in an enclosure of twelve acres, and the present ruins occupy two acres. The walls of the tower and the tower and the great range of buildings, and the great range of the chapter house, cloister, refectory, and calefactory. These ruins are most carefully preserved. Some idea of the abbey's greatness may be gained from the fact that the church was 351 feet in length with a nave 65 feet wide; the refectory was 108 feet by 43, and the cloister 300 feet by 42.

G. E. HIND.

FOUQUET, JEAN (OR JEAN), French painter and miniaturist, b. at Tours, c. 1415; d. about 1480. He was perhaps the son of Huguet Fouquet, who about 1400 worked for the Dukes of Orleans at Paris. At the end of the fourteenth century French painting had reached a period incomparable brilliancy. Every-thing heralded the Renaissance (see EVRY, HUBER AND JAN VAN), and little was wanting to make it a distinctly French movement, which, however, the disasters of the monarchy prevented. Paris ceased to be the centre of the new intellectual life. Art, driven from its centre, retreated to the outlying provinces in the North, the East, and the South-East, to the borders of Burgundy, which was the province of the princes and the town Bruges, while secondary centres were established at Dijon in Provence. Each of these had its masters and its school. The only remnant of truly French life found refuge in the valley of the Loire, in the neighbourhood of Tours, since the time of St. Martin the true heart of the nation in every crisis of French history. Here grew up a group of artists whose position presages not only a definite personality but a French physiognomy. Fouquet was the contemporary of Joan of Arc, and his character is as national as that of the heroine herself. For the basis of his style we must look to the School of Burgundy, itself simply a variant of that of Bruges. Tours is not far from Bourges and Dijon, and in Fouquet's work there is always something reminiscent of Clauz Sluter and of the van Eycks. To this must be added some Italian mannerisms. It is not known on what occasion Fouquet went to Italy, but it was certainly about 1445, for we may infer from a letter of 1447, written by him to himself between two secretaries. This famous work, long preserved at the Minerva gallery, is now known only from a sixteenth-century engraving. Filaret and Vasari speak admiringly of it, while Raphael paid it the honour of recalling it in his "Leo X" of the Pitti Palace. Fouquet remained under the charm of the early Italian Renaissance. The influence of the bas-reliefs of Ghiberti and Della Robbia, the paintings of Masaccio, Paolo Ucello, Filippo Lippi, and Gentile da Fabriano which he saw at Florence and at Rome may always be traced in his work. He appears to have been in France in 1450. Some critics are inclined to believe that he made a second journey, for they find it hard to believe that Fouquet never saw the "Lives of St. Lawrence and St. Stephen" by Fra Angelico in the chapel of Nicholas V. It is these Italian works which most closely resemble his own. The harmonizing of the two Renaissance movements (North and South), the conception of the person of the poet, the imagination of the creative soul of one French artist, without any effort or shadow of pedantry, narrowness, or system, constitutes Fouquet's charm and originality. If French character consists in a certain effacement of all racial characteristics, in the power of assimilation (as in the work of Jean Basset, the illuminator), no artist has ever been more "French" than Fouquet. Withal he does not lack the savour of his country. Without poetry or depth of thought, his style has at least two striking characteristics. In depicting the human countenance, he possessed to a rare degree the gift of taking life as it were, by surprise, and not even Benozzo could tell a story as he could.

We know through a contemporary that Fouquet painted pictures in the church of Notre-Dame la Riche at Tours, but it is not known whether they were mural or altar-pieces. He is known to have been charged with the preparations for Louis XI's entry into the city in 1461. Of all his works, however, there remain to-day a half-dozen portraits and about a hundred miniatures. The oldest of these portraits appears to be the "Charles VII" in the Louvre, a portrait striking for its sadness, its fretful expression, and the force of its ugliness and veracity. At the Louvre also is the portrait of "Guillaume de Foix," magnificently obese and bloated, radiant with gold. Another portrait has a curious history. It is that of Etienne Chevalier, the great patron of the painter, and was formerly to be seen in the church of Melun. The work is charming in breadth of style. The figure of St. Stephen presenting his client recalls Giorgione by its
vigour and delicacy. In 1896 this piece found its way to the Berlin Museum. It formed part of a diptych, the other wing of which shows the Virgin, surrounded by angels, nursing the Infant Jesus. The Virgin is also a portrait, that of the beautiful Agnes Sorel of whom she was a favourit. This second diptych, bought at Antwerp. The two parts, having been separated, were never reunited except for a short time at Paris during the Exposition of the French "Primitives" in 1904. Still another of Fouquet's portraits must be mentioned: the bust of a young man (Lichtenstein collection), dated 1496, which is admirable in the intensity which is due to the use of the colour scheme, to the greyish tone and delicate reserve. This would be the master's best portrait, it was not for the precious little enamal at the Louvre, in which he himself is depicted in golden lines on a black background.

His work as a miniaturist at present comprises three series: (1) the fragments of the "Livre d'heures d'Etienne Chevalier" (1450–60), forty of which are at Chantilly, two at the Louvre, one at the Bibliothèque Nationale, and one at the British Museum; (2) twenty "feuilles" of the "Jewish Antiquities" of Josephus at the Bibliothèque Nationale. The second volume, discovered in 1906 at the Library of Munich, 1478, has presented the French Republic by King Edward VII in 1906 (Durrieu, op. cit. in infra); (3) part of the illustrations of the "Chroniques de France" (Fr. 8465, Bibli. Nat.). To these must be added: (4) the frontispiece and miniatures for a French translation of the works of Boccaccio at the Royal Library of Munich (c. 1469); and the frontispiece of the statutes of the Order of St. Michael (c. 1462) at the Bibliothèque Nationale. The most important of these works, as well as the most famous and the most beautiful, is unquestionably Etienne Chevalier's "Book of Hours", the "Quarante Fouquet". Of the forty-four pages of the "Book of Hours" hitherto recovered, twenty-five (following the order of the Breviary) tell the story of the Gospel and of the life of the Blessed Virgin, fourteen are scenes from the lives of the saints; one, dealing with the story of Job, is an Old-Testament scene; and one, "The Last Judgment", is from the Apocalypse. The frontispiece, two pages reproducing the diptych of Melun, and the page of the Office for the Dead, are consecrated to the memory of Etienne Chevalier. We are impressed immediately with the exquisite clearness, animation and life. Italian mannerisms abound in the details; the draperies are treated with a more flowing line than in his portraits. This work is one of joy in which the imagination delights in lovely caprices. Here are chubby-faced little angels, flowing draperies and garments, Burgundian luxuriance with the large folds of its draperies; to one side are the playing children (pintos), modelling of Prato and Perugia, plastered niches, classic cornices, the Corinthian acanthus, and architectural foliage like the Florentine cypress and yew. His style is extremely composite. Nowhere else are its elements so deftly combined. There is gold everywhere, golden skies and golden hatching, an exuberance by turns delicately girt. Since his birth, the one has been able to master the process, which is in fact only the radiant atmosphere of the artist's ideas and the colour of his spirit.

The fundamental note is wonderfully sustained despite the appearance of playful improvisation. Although the artist delights in allowing free play to pleasant reminiscences, and has made use of his sketches of travel as adornments for his ideas, the basis of all is an ardent love of reality, and he glances at them only to refresh his memory. As a story-teller and dramatist he has the regard for the letter and the text which was the predominant trait of the great French historical painters, Poussin and St. Luc. But above all he feels the craving for truth, which underlines the embellishments of his style constitutes the real merit of his miniature and his portraits. Fouquet is a "naturalist" from conviction. This he is after his own fashion, but as truly as Van Eyck or Filippo Lippi. He resembles them in being of their time, but he differs from them inasmuch as the spirit which never prevails over his passionate worship of nature.

This naturalism was so strong that Fouquet lacked the power to conceive what he had not seen. He did not dispense with models and all his works were not only observed but posed. He fails completely in ideal scenes and those of intense expression (e. g., Calvary) for which he could have no model. If "Calvary" is a thrilling picture, it is because the memory of the glass-worker came to the aid of the painter, for the artist beheld heaven as the rose window of a cathedral (Dante, Parad., xxxi). In "The Martyrdom of St. Apollonia" he depicts quite clearly a scene from a popular mystery; it is, indeed, the most exact document we possess as to the scenic effects in the mysteries of the Middle Ages (Emil Mâle, "Le renouvellement de l'art par les mystères" in "Gazette des Beaux Arts", 1904, I, 89). This influence of the theatre is seen throughout the "Book of Hours", in the costumes and the settings. The exuberant, fantastic, and grotesque appearance of which proceeds directly from the store of dramatic accessories and the tinsel adornments of the actors. It was thus that the face of Fouquet conceived historical painting. Finally another custom of Fouquet was to give as background to the scenes taken in the Bible the setting of Palestine of which he knew nothing, France or Tournai which he knew so well. Thus the representation of "Job" has as a decorative background the castle keep of Vincennes. The "Paschal Supper" takes place in an inn, and through the open door is seen the roof of Notre-Dame de Paris. "Calvary" is placed on the hill of Montrouge. This excess of "saintet" must not lead us to think that Fouquet knew not what he did. The anchormanism of the "Primitives" is a conscious and voluntary system. Fouquet was not at all naive, as has been too frequently asserted, when in the scene of the Epiphany he substituted for one of the Magi of history the portrait of King Charles VII, in a mantle ornamented with fleurs-de-lis, surrounded by his guards and rendering homage to the Blessed Virgin. Perhaps this was a way of bringing home the teaching of the Gospel and of expressing its eternal truths and undying realities rather than the historian's superficial incidentalities of an age which, weary of abstractions and symbols, underwent a passionate reaction towards the youthful, and towards life. No contemporary expressed life better than Fouquet. He loved it in all its forms, in art, whether Italian, Flemish, Gothic, or Renaissance, in the theatre as well as in nature. He loved beautiful horses, beautiful arms, rich costumes, gay colours, beautiful music (his works are full of concert). He loved the elegance of the new architecture, and he loved also the tapering spires, the cathedral windows, and the pointed towers on the pepper-box roofs. A thousand details of his time have been lost except for him, e. g. a row of quays on the banks of the Seine at the extremity of the city, a view of Paris from Montmartre or the Prè aux Cleres, the performance of a mystery, a funeral scene, the interior of the ancient basilica of St. Peter. He is the best witness of his time; he is in turn good-natured, bantering, tender, and emotional. Neither a dreamer nor a mystic, he is full of faith and purity. Nothing could be more chaste than his work, which appeals at once to the learned and to the masses. The mind of this humble miniaturist was one of the best informed and most well-endowed of his time. Above all he had a private, critical side, for he knew of the faults of other painters of the world. No one has depicted as well as he the charming countrysides of France. Nothing
could be more sweetly rustic than his “Sainte Mar-
guerite.” In this Fouquet immediately foreshadows
Corot. His “Mount of Olives” and his “Nativity”
are two of the most beautiful nocturnal scenes ever
painted. The Alps in his “vendange Chroniques” are
perhaps the earliest example of mountain landscape.

Fouquet’s influence has been considerable. He had
numerous pupils, the best-known of whom are his two
sons (one of them has a “Calvary” in the church of
Loches) and Jean Colombe, the brother of the sculptor.
Another pupil was Jean Fouquet’s daughter, who in
1507 painted the famous “Hours” of Anne of Brit-
tany. But none of these artists comes near to the
master in merit. Fouquet remains the sole type of a
French Renaissance which died out with his pupils.
After 1500 Italy took a decided lead over the rest of
Europe, and France was unable to entertain her pre-
tige. For more than two centuries she lost even the
memory of her first original master. It is only in
modern times that he has been drawn from obscurity
and restored to his rank among the most charming
men of genius of the early Renaissance.

Four Crowned Martyrs.—The old guide-books to
the tombs of the Roman martyrs make mention, in
connexion with the catacomb of Sts. Peter and Marcel-
linus on the Via Labicana, of the Four Crowned Mar-
tyrs (Quatuor Coronati), at whose grave the pilgrims
were wont to worship (De Rossi, Roma sotterranea, I, 178–79). One of these itineraries, the “Epitome
libri de locis sanctorum martyrum”, adds the names
of the four martyrs—in reality five—: “IV Coronati,
id est Claudius, Nicostatus, Simplicianus, Castorius,
Simplicius”. These are the names of five martyrs,
sculptors in the quarries of Pannonia (now a part of
Austria-Hungary, south-west of the Danube), who
gave up their lives for their faith in the reign of Dio-
cletian. The Acts of these martyrs, written by a
revenue officer named Porphyrius probably in the fourth
century, relates of the five sculptors that, although they
raised no objections to executing such profane images
as Victoria, Cupid, and the Chariot of the Sun, they
refused to make a statue of Eucleius because they
were not allowed to. For this they were condemned to death as
Christians. They were put into leaden caskets and
drowned in the River Save. This happened towards
the end of 305. The foregoing account of the martyr-
dom of the five sculptors of Pannonia is substantially
authentic; but later on a legend sprang up at Rome
concerning the four Colomans. In 1099, four Christian soldiers (cornicularii) suffered martyrdom at Rome during the reign of Diocletian, two years
after the death of the five sculptors. Their offence
consisted in refusing to offer sacrifice to the image of
Eucleius. The bodies of the martyrs were interred by
St. Sebastian and Pope Melchiades at the third
Sunday on the Via Labicana, in a sandpit where
rested the remains of others who had perished for the
Faith. Since the names of the four martyred soldiers
could not be authentically established, Pope Melchi-
ades commanded that, the date of their death (8 No-
Vember) being the same as that of the Pannonian
sculptors, the memory of the last should be celebrated on
that day, under the names of Sts. Claudius, Nicostra-
tius, Symphorianus, Castor, and Simplicius. This re-
port has no historic foundation. It is merely a tenta-
tive explanation of the name Quatuor Coronati, a name
given to a group of really authenticated martyrs who
were buried and venerated in the catacomb of Sts.
Peter and Marcellinus, the real origin of which, how-
ever, is not known. The church and the monastery
are classified with the five martyrs of Pannonia in a purely external
relationship. Numerous manuscripts on the legend as well as
the Roman Martyrology give the names of the Four
Crowned Martyrs, supposed to have been revealed at a
later date, as Secundus, Severianus, Carophonus, and
Lucius. The church was built by Constantine, but it was
in Rome, but in the catacomb of Albano; their feast
was celebrated on 27 August, under which date it is
described in the Roman Calendar of Feasts of 534. These
martyrs of Albano have no connexion with the Roman
martyrs described above. Of the Four Crowned Mar-
tyrs we know only that they suffered death for the
Faith and the place where they were buried. They
evidently were held in great veneration at Rome, since
in the fourth or fifth century a basilica was erected and
dedicated to them on the Celian Hill, probably in the
neighbourhood of the spot where tradition located
their execution. This became one of the titular
churches of Rome, which was long a titular church
and still stands. It is first mentioned among the signa-
tures of a Roman council in 555. Pope Leo IV or-
erd the relics removed, about 850, from the Via
Labicana to the church dedicated to their memory,
together with the relics of the five Pannonian martyrs,
since it had been brought to Rome at some period and
was unknown. Both groups of martyrs are commemor-
ated on 8 November.

Four Masters, ANNALS OF THE, the most extensive of all the compilations of the ancient annals of Ireland.

They commence, nominally at least, at A.M. 2242 and
are continued down to A.D. 1616. The entries which
are bare and meagre during the earlier period grow
less so as the “Annals” progress, and towards the end
they become at parts almost like a history in their
differences. The principal compiler of these “An-

nals” was Michael O’Clery, a native of Downag, who
had been by profession a trained antiquary and poet,
but who afterwards joined the Franciscan Order, and
went to their Irish house in Louvain. Thence he was
sent back to Ireland by his famous compatriot, Father
Ussher, Governor of Ireland, and compiled the rest of
these lives which he copied upon that visit, out of the
old vellum books of Ireland, are now in the Bur-
gundian Library at Brussels. Afterwards, under the
patronage of Fergal O’Gara, Lord of Moy Gara and
Coolavin, in the County Sligo, he conceived the pious
idea of collecting and redacting all the other
vellum books of annals which he could find throughout
Ireland, and of combining them into one continuous
whole. “I thought”, says O’Clery, in his dedication
to O’Gara, “that I could get the assistance of the
chroniclers for whom I had most esteem, in writing a
work of annals in which these matters might be put on
record, for that should the writing be neglected at
present, they would not again be found to be put on
cord even to the end of the world. All the best and most copious books of annals that I could

J. P. KIRCH.
and throughout all Ireland were collected by — though it was difficult for me to collect them — into one place to write this book.’ It was to the secluded convent of Donegal that the learned friar retired while engaged upon this work which was commenced by himself and his fellow labourers on the 22nd of January, 1632, and concluded on the 10th of August, 1636. It is perhaps as to the labour and the labourers, as to the material and the manner of that labour, that they worked from were prophetic. Scarcely one of the ancient books which he brought together with such pains has survived to the present day — they probably perished in the cataclysm of the Cromwellian and Williamite wars.

It was Father Colgan, the celebrated author of the ‘Trias Thaumaturga’ and the ‘Acta sanctorum Hiberniae’, who, in the preface to this latter work, first conferred the title by which they are now always known, ‘The Annals of the Four Masters’, upon these annals of O’Clery. ‘As in the three works before mentioned’, writes Colgan, ‘so in this fourth one, three (helpers of the Annals) are eminently to be praised, namely Farfassa O’Mulconry, Peregrine O’Clery, and Peregrine O’Duignan, men of consummate learning in the antiquities of their country, and to these were subsequently added the co-operation of other distinguished classical scholars, as Matt MacRory of Connar, who published one months [sic], and Conary O’Clery who for many months laboured in its promotion. But since those “Annals” which we shall very frequently have occasion to quote, have been collected and compiled by the assistance and separate study of so many authors, neither the desire of brevity would permit us always to quote them individually, nor would justice permit us to attribute the labour of many to one, hence it sometimes seemed best to call them the “Annals of Donegal”, for in our convent of Donegal they were commenced and concluded. But afterwards, for other reasons, chiefly for the convenience of the compiler of the manuscript himself, and the four most learned masters in antiquarian lore, we have been led to call them the “Annals of the Four Masters”.’

These “Annals”, written in a very archaic language, difficult to be understood, even then, except by the learned, give us the reigns, deaths, genealogies, etc., not only of the high-kings of Ireland, but also of the provincial kings, chiefs, and heads of distinguished families, men of science, historians, poets, etc., with their respective dates given as accurately as the Masters are able to give them. They record the demise and succession of saints, abbots, bishops, and ecclesiastical events. They recount the past, the present, and occasionally the overthrow of countless churches, castles, abbeys, convents, and religious institutions. They give meagre details of battles, murders, tribal wars, wars with the foreigners, battles with Norsemen, Normans, and English, and political changes. Sometimes they quote ancient verses in corroboration of the facts they mention, but no such verses are quoted prior to the third century. We have here the condensed pith and substance of the old vellum books of Ireland which were then in existence, but most of which, as the Four Masters forewarned, have long since perished. Their facts and dates are not their own facts and dates. From confused masses of very ancient matter, they, with labour and much sitting, drew forth their dates, and as far as possible synchronized their facts. It is not too much to say that there is no event in the whole of Irish history from the birth of Christ down to the beginning of the seventeenth century that the first enquiry the student should put about must not be: “What do the Four Masters say of this?”

These “Annals” have been published, at least in part, three times, but are now always read in the edition of the great Irish scholar, John O’Donovan. In this splendid work the Irish text is given with a translation in English, and a preface of the most valuable notes, topographical, genealogical, and historical, the whole contained in seven great quarto volumes. So long as Irish history exists the “Annals of the Four Masters” will be read in O’Donovan’s translation, and the name of O’Donovan be inseparably connected with that of the O’Clerys.

O’DONOVAN, ed., Annales Righachta Eireann, Annales of the Kings of Ireland, by the Four Masters, from the Creation of the World to the year 1616 (Dublin, 1851); CONNELLAN, The Annals of Ireland translated into the original Irish of the Four Masters, with introductory and explanatory notes, by Philip MacMonagle (Dublin, 1854); O’CONOR, ed., Rerum Hibernicarum Scriptores Tom. III., complete annalas IV Magnorum ex quo O’Clirsi autographa in Bibliotheca Simoniensia (Buculac, 1861); DOUGLAS HYDE, O’Conor publishes the Annals only up to the year 1171. DOUGLAS HYDE.

Fowler, John, scholar and printer, b. at Bristol, England, 1537; d. at Namur, Flanders, 13 Feb., 1578. He studied at Winchester School from 1551 to 1553, when he proceeded to New College, Oxford, where he remained till 1559. He became B.A. 23 Feb., 1556-7 and M.A. 1560, though publish the Irish text. In his answering to Sander, called “Devissibili Romanarchit”, to the effect that Fowler took the oath to enable him to retain the living of Wonston in Hampshire. There is, indeed, no trace of any desire on his part to receive Holy orders and he subsequently married Alice Harris, a Lady of Devonshire. On leaving Oxford he withdrew to Louvain, where he like other scholars of his time he turned his attention to the craft of printing. His intellectual attainments were such to enable him to take high rank among the scholar-printers of that age. Thus Antony & Wood says of him: “He was well skilled in the Greek and Latin tongues, a tolerable poet and orator, and a theologian not to be condemned. So learned he was also in criticisms and other polite learning, that he might have passed for another Robert or Henry Stephens. He did diligently peruse the Theological Summa of St. Thomas of Aquin, and with a most expert method of reducing it, reduced it into them.”

To have a printing press abroad in the hands of a competent English printer was a great gain to the Catholic cause, and Fowler devoted the rest of his life to this work, winning from Cardinal Allen the praise of being catholicissimus et docissimus librorum impressor. The English Government kept an eye on his work, as we learn from the State papers (Domestic, Eliz., 1566-1579), where we read the evidence of one Henry Simpson at York, in 1571, to the effect that Fowler printed all the English books at Louvain and that Dr. Harding’s Welsh servant, William Smith, used to bring the works of the press. He signed his name to a press at Antwerp as well as at Louvain, for his Antwerp books range from 1565 to 1575, whereas his Louvain books are dated 1566, 1567 and 1568, while one of his publications, Gregory Martin’s “Treatise of Schism”, bears the impress, Douay, 1578. More thorough bibliographical research than has yet been made into the output of his presses would set the student more about, but it must not be: “What do the Four Masters say of this?”

These “Annals” have been published, at least in part, three times, but are now always read in the edition of the great Irish scholar, John O’Donovan. In this splendid work the Irish text is given with a translation in English, and a preface of the most valuable notes, topographical, genealogical, and historical, the whole contained in seven great quarto volumes. So long as Irish history exists the “Annals of the Four Masters” will be read in O’Donovan’s translation, and the name of O’Donovan be inseparably connected with that of the O’Clerys.
Thomee Aquinatis demuntea conclusiones" (Louvain, 1570); "M. Manuli dictorum factorumque memorabilium libri VI" (Antwerp, 1577); "Additiones in Chronica Genebrandi" (1578); "A Psalter for Catholics", a controversial work answered by Sampson; epigrams and verses. The translation of the "Epistle of Oratius" (Antwerp, 1655), ascribed to him by Wood and Pitts, was really made by Richard Shacklock. Pitts also states that he wrote in English a work "Ad Ducianno Ferie confessio forma," Fowler also edited Sir Thomas More's "Dialogue of Comfort against Turbulence" (Antwerp, 1577); F. J. Highlander's "Anglo Saxon Dictionary" (Paris, 1623); Wood's "Athenae Oxoni," ed. Bliss (London, 1813-1820); J. Dods, "Church History" (Brussels, 1737); L. P. III.; B. H. FRACTIO PANIS (BREAKING OF BREAD), the name given to a fresco in the so-called "Capella Greca" in the catacomb of St. Prisca situated on the Via Salaria Nova. The fresco, which with the whole of the decorations of the chapel dates from the first half of the second century, is of the highest liturgical and theological importance. The painting is found upon the face of the arch immediately over the altar tomb, upon which beyond all reasonable doubt the Holy Sacrifice was offered. By a providential accident this particular fresco, having been covered by a thick crust of stalactites, escaped the notice of the early explorers of the catacombs, who, by their over-eagerness and ignorance combined, often did much irreparable harm. In the year 1893, Mgr. Joseph Wilpert, the most distinguished of a band of young scholars who looked upon the great archaeologist De Rossi (q. v.) as their master, arrived at the conclusion that the roof and arches of this chapel were decorated with frescoes. Chemical reagents were used to remove the crust which covered the surface, and by the patient care of Mgr. Wilpert this delicate operation was attended with complete success. The most important fresco thus recovered was that already referred to over the altar tomb. The scene represented is a picture of seven persons at table, six men and a woman. It seems clear that six of these are reclining as the ancients reclined at their meals. But the seventh personage, a bearded and impressive figure, sits somewhat apart at the extremity of the table in an attitude which is highly significant. His head is thrown back, he has a small loaf or cake in his hands, and his arms stretched out in front of him show that he is breaking it. Upon the table immediately before him is a two-handled cup. Further along the table there are two large plates, one containing two fishes, the other five loaves. At each extremity of the picture upon either side we notice baskets filled with loaves—four baskets at one end, three at the other.

As a very little reflection will suffice to prove, no doubt can be felt as to the significance of the scene. It depicts beyond question that striking Eucharistic act, "the breaking of the bread" ("διακονέω τῷ ἐπιστρεφων — fractio panis"), which seems to have so much impressed the Lord's immediate disciples that the phrase itself at once transports us back to the very beginnings of Christianity. No wonder that De Rossi, whose last years were saddened by this find, described it as "the pearl of Catacomb discoveries." To point out briefly how constantly this phrase "fractio panis" recurs in early Christian literature, we may note that not only is the "blessing and breaking" of the bread mentioned in each of the four accounts of the Last Supper, but repeatedly also in the other Apostolic writings. For example, in I Cor., x, 16, "The chalice of benediction, which we bless, is it not the communion of the blood of Christ? And the bread, which we break, is it not the partaking of the body of the Lord?" So again in Acts, ii, 42, "And they were persevering in the doctrine of the apostles, and in the communication of the breaking of bread, and in prayers" (cf. Acts, ii, 40).

Capella Greca, Catacomb of St. Prisca

Salaries Nova. The fresco, which with the whole of the decorations of the chapel dates from the first half of the second century, is of the highest liturgical and theological importance. The painting is found upon the face of the arch immediately over the altar tomb, upon which beyond all reasonable doubt the Holy Sacrifice was offered. By a providential accident this particular fresco, having been covered by a thick crust of stalactites, escaped the notice of the early explorers of the catacombs, who, by their over-eagerness and ignorance combined, often did much irreparable harm. In the year 1893, Mgr. Joseph Wilpert, the most distinguished of a band of young scholars who looked upon the great archaeologist De Rossi (q. v.) as their master, arrived at the conclusion that the roof and arches of this chapel were decorated with frescoes. Chemical reagents were used to remove the crust which covered the surface, and by the patient care of Mgr. Wilpert this delicate operation was attended with complete success. The most important fresco thus recovered was that already referred to over the altar tomb. The scene represented is a picture of seven persons at table, six men and a woman. It seems clear that six of these are reclining as the ancients reclined at their meals. But the seventh personage, a bearded and impressive figure, sits somewhat apart at the extremity of the table in an attitude which is highly significant. His head is thrown back, he has a small loaf or cake in his hands, and his arms stretched out in front of him show that he is breaking it. Upon the table immediately before him is a two-handled cup. Further along the table there are two large plates, one containing two fishes, the other five loaves. At each extremity of the picture upon either side we notice baskets filled with loaves—four baskets at one end, three at the other.

As a very little reflection will suffice to prove, no doubt can be felt as to the significance of the scene. It depicts beyond question that striking Eucharistic act, "the breaking of the bread" ("διακονέω τῷ ἐπιστρεφων — fractio panis"), which seems to have so much impressed the Lord’s immediate disciples that the phrase itself at once transports us back to the very beginnings of Christianity. No wonder that De Rossi, whose last years were saddened by this find, described it as “the pearl of Catacomb discoveries.” To point out briefly how constantly this phrase “fractio panis” recurs in early Christian literature, we may note that not only is the "blessing and breaking" of the bread mentioned in each of the four accounts of the Last Supper, but repeatedly also in the other Apostolic writings. For example, in I Cor., x, 16, “The chalice of benediction, which we bless, is it not the communion of the blood of Christ? And the bread, which we break, is it not the partaking of the body of the Lord?" So again in Acts, ii, 42, “And they were persevering in the doctrine of the apostles, and in the communication of the breaking of bread, and in prayers” (cf. Acts, ii, 40).

Salaries Nova. The fresco, which with the whole of the decorations of the chapel dates from the first half of the second century, is of the highest liturgical and theological importance. The painting is found upon the face of the arch immediately over the altar tomb, upon which beyond all reasonable doubt the Holy Sacrifice was offered. So again in Acts, ii, 42, “And they were persevering in the doctrine of the apostles, and in the communication of the breaking of bread, and in prayers” (cf. Acts, ii, 40).
France, the fifth in size (usually reckoned the fourth) of the great divisions of Europe.

Descriptive Geography.—The area of France is 207,107 square miles; it has a coast line 5,600 miles and an interior diameter 1,535 miles. It resembles a hexagon of which the sides are: (1) From Dunkirk to Point St.-Matthieu (sands and dunes from Dunkirk to the mouth of the Somme; cliffs, called falaises, extending from the Somme to the Orne, except where their wall is broken by the estuary of the Seine; granite boulders intersected by deep inlets from the Orne to Point St.-Matthieu). (2) From Point St.-Matthieu to the mouth of the Bidassoa (alternate granite cliffs and inlets as far as the River Loire; sandy stretches and arid moors from the Loire to the Garonne; sands, lagoons, and dunes from the Garonne to the Pyrenees). (3) From the Bidassoa to Point Cerbère (rocks and formations known as the Pyrenees). (4) From Point Cerbère to the mouth of the Roya (a deep, rocky frontier from the Pyrenees to the Tech; sands and lagoons between the Tech and the Rhone, and an unbroken wall of pointed rocks stretching from the Rhone to the Roya). (5) From the Roya to Mount Donon (a formidable mountain range, the Cotian, and the Graian Alps, as well as the mountains of Jura and the Vosges). (6) From Mount Donon to Dunkirk (an artificial frontier differentiated by few marked physical peculiarieties).

France is the only country in Europe having a coast line both on the Atlantic and on the Mediterranean; moreover the passes of Belfort, Côte d'Or, and Naours open the second century and that of Autun a little later, as well as a large number of inlets in early Christian literature, make it clear that our Saviour Jesus Christ was indicated by this symbol (see e.g. the mosaic in the “Attus del Congresso Internas. d'Archeol. Crist.”, Rome, 1902, pp. 2-3). The Abricour inscription clearly states that this “great fish” was to be the permanent food of the soul. We may also note that the one female figure among the guests depicted in the Fractio Panis fresco veiled, which is not the case with the female figures represented in those other banqueting scenes found in the catacombs and usually interpreted as a row of banqueters, or the joy of banqueting. The fresco of which we speak is not, as will be readily understood, either entirely realistic or entirely symbolical. That the president (spectator) of the synaxis (assembly) should break the bread seated, is probably not to be understood as implying that the bishops in the primitive church were in fact seated when they offered the liturgy, any more than the attitude of the guests implies that the early Christians reclined on couches when they assisted at the Holy Sacrifice. On the other hand, the action of the breaking of the bread is clearly realistic. A further indication of the Eucharistic character of the fresco is under discussion here, is afforded by the fact that in the fresco next to it in the same chamber is depicted the sacrifice of Abraham. On the other side is a representation of Daniel in the lions’ den, to which Mgr. Wilpert also attaches a Eucharistic significance on account of the supernatural feeding of Daniel through the intervention of the prophet Habacuc (Dan. xiv, 36).

Wilpert, in 1895, published a monograph giving a full account of this discovery under the title Fractio Panis, die alteste Darstellung der Fractio Panis (Freiburg im Breisgau); translated into French the next year. It contains a collection of very carefully executed photogravures of the frescoes in the Catacombs, reproducing the dynamism of the figures in the original and making it impossible to distinguish the details clearly in any photographic copy. For this reason the coloured reproduction included by Mgr. Wilpert in his later work Die Materien der Katakommen (Rome, two folio volumes (Freiburg, 1903), also published at Rome in Italian, is much to be preferred. The Fractio Panis is shown upon plate 30, vol. i. Compare also Marocci, Il sistema e l'architettura (Paris, 1899-1903), i, pp. 254-259; Leclercq in D. d'Archéologie, i, 318-3162.

Herbert Thurston.

France, the fifth in size (usually reckoned the fourth) of the great divisions of Europe.
period 1901–1905 in France was 18, while in Italy it was 106, in Austria 113, in England 121, in Germany 149, in Belgium 155. In 1907 the deaths were more numerous than the births, the number of deaths being 70,455 while that of the births was only 59,080; there was an excess of 19,920 deaths—and this notwithstanding the fact that in 1907 there were nearly 45,000 more marriages than in 1890. Official investigators attribute this phenomenon to sterility of marriages. In 1907, in only 29 out of 80 departments, the number of births exceeded the number of deaths by 50 or more. It may likewise be inferred that the sterility of marriages coincides with the decay of religious belief. Again, it is important to note the increase in population of the larger cities between the years 1789 and 1901: Marseille, from 96,000 to 491,000; Lyons, from 139,000 to 459,000; Bordeaux, from 83,000 to 256,000; Lille, from 13,000 to 210,000; Toulouse, from 55,000 to 149,000; Saint-Etienne, from 9000 to 146,000. Paris, which in 1817 had 274,000 inhabitants, had 2,714,000 in 1901; Havre and Roubaix, which in 1821 had 17,000 and 9000 respectively, now have 130,000 and 142,000. In these great increases the multiplication of the physical heredity is not always due to the increase of the population, and this is one of the causes of the religious indifference into which so many of the working people have fallen. It should be remembered that in former days nine-tenths of the people of France lived in the country; that while 550 000 Frenchmen lived in Paris in 1801, the number had fallen to 419 in 1891. The emigrants from the country hurried into the industrial towns, many of which multiplied their population by fifteen, and there, accustomed as they had been to the village bell, they found no church in the neighbourhood, and after a few brief generations the once faithful family from the country developed the faithless dweller in the town.

History, to the Third Republic.—The Treaty of Verdun (843) definitely established the partition of Charlemagne's empire into three independent kingdoms, and one of these was France. A great churchman, Hincmar, Archbishop of Reims (806–82), was the deviser of the new arrangement. He strongly supported the kingship of Charles the Bald, under whose sceptre he would have placed Lorraine also. To Hincmar the dream of a united Christendom did not appear under the guise of an empire, however ideal, but rather as a federation of independent States, each being a member of one mighty body, the great Republic of Christendom. He would replace the empire by a Europe of which France was one member. Under Charles the Fat (880–88) it looked for a moment as if Charlemagne's empire was about to come to life again; but the illusion was temporary, and in its stead were quickly formed seven kingdoms: Francia, Navarre, Provence, Burgundy beyond the Jura, Lorraine, Germany, and Italy. Feudalism was in the seething-pot, and the imperial edifice was crumbling to dust. Towards the close of the tenth century, in the English kingdom and in the Carolingian, the strongholds of the feudal principle, the houses of counts, or viscounts, or war lords, constituted veritable sovereignties, and at the end of the eleventh century there were as many as fifty-five of these minor States, of greater or less importance. As early as the tenth century one of these feudal families had begun to take the crown of the Duke of France. The occupation of Robert the Strong, and lords of all the country between the Seine and the Loire. From 887 to 987 they successfully defended French soil against the invading Northmen, and Eudes, or Odo, Duke of Francia (898–988), Robert, his brother (922–923), and Raoul, or Rudolph, king of France (927–943), held the throne for a brief interval. The weakness of the later Carolingian kings was evident to all, and in 987, on the death of Louis V, Adalberon, Archbishop of Reims, at a meeting of the chief men held at Senlis, contrasted the incapacity of the Carolingian Charles of Lorraine, the heir to the throne, with the merits of Hugh, Duke of Franconia. Gerbert, who afterwards became Sylvester II, adviser of Hugh, together with an excess of 19,920 deaths—and this notwithstanding the fact that in 1907 there were nearly 45,000 more marriages than in 1890. Official investigators attribute this phenomenon to sterility of marriages. In 1907, in only 29 out of 80 departments, the number of births exceeded the number of deaths by 50 or more. It may likewise be inferred that the sterility of marriages coincides with the decay of religious belief. Again, it is important to note the increase in population of the larger cities between the years 1789 and 1901: Marseille, from 106,000 to 491,000; Lyons, from 139,000 to 459,000; Bordeaux, from 83,000 to 256,000; Lille, from 13,000 to 210,000; Toulouse, from 55,000 to 149,000; Saint-Etienne, from 9000 to 146,000. Paris, which in 1817 had 274,000 inhabitants, had 2,714,000 in 1901; Havre and Roubaix, which in 1821 had 17,000 and 9000 respectively, now have 130,000 and 142,000. In these great increases the multiplication of the physical heredity is not always due to the increase of the population, and this is one of the causes of the religious indifference into which so many of the working people have fallen. It should be remembered that in former days nine-tenths of the people of France lived in the country; that while 550 000 Frenchmen lived in Paris in 1801, the number had fallen to 419 in 1891. The emigrants from the country hurried into the industrial towns, many of which multiplied their population by fifteen, and there, accustomed as they had been to the village bell, they found no church in the neighbourhood, and after a few brief generations the once faithful family from the country developed the faithless dweller in the town.

History, to the Third Republic.—The Treaty of Verdun (843) definitely established the partition of Charlemagne's empire into three independent kingdoms, and one of these was France. A great churchman, Hincmar, Archbishop of Reims (806–82), was the deviser of the new arrangement. He strongly supported the kingship of Charles the Bald, under whose sceptre he would have placed Lorraine also. To Hincmar the dream of a united Christendom did not appear under the guise of an empire, however ideal, but rather as a federation of independent States, each being a member of one mighty body, the great Republic of Christendom. He would replace the empire by a Europe of which France was one member. Under Charles the Fat (880–88) it looked for a moment as if Charlemagne's empire was about to come to life again; but the illusion was temporary, and in its stead were quickly formed seven kingdoms: Francia, Navarre, Provence, Burgundy beyond the Jura, Lorraine, Germany, and Italy. Feudalism was in the seething-pot, and the imperial edifice was crumbling to dust. Towards the close of the tenth century, in the English kingdom and in the Carolingian, the strongholds of the feudal principle, the houses of counts, or viscounts, or war lords, constituted veritable sovereignties, and at the end of the eleventh century there were as many as fifty-five of these minor States, of greater or less importance. As early as the tenth century one of these feudal families had begun to take the crown of the Duke of France. The occupation of Robert the Strong, and lords of all the country between the Seine and the Loire. From 887 to 987 they successfully defended French soil against the invading Northmen, and Eudes, or Odo, Duke of Francia (898–988), Robert, his brother (922–923), and Raoul, or Rudolph, king of France (927–943), held the throne for a brief interval. The weakness of the later Carolingian kings was evident to all, and in 987, on the death of Louis V, Adalberon, Archbishop of Reims, at a meeting of the chief men held at Senlis, contrasted the incapacity of the Carolingian Charles of Lorraine, the heir to the throne, with the merits of Hugh, Duke of Francaia. Gerbert, who afterwards became Sylvester II, adviser of Hugh, together with
against the Albigenses under Louis VIII (1223–26) brought in its train the establishment of the influence and authority of the French monarchy in the south of France.

St. Louis IX (1226–1270), "ruisselant de piété, et enflammé de charité," as a contemporary describes him, made kings so beloved that from his time dates that royal cult, so to speak, which was one of the moral forces in olden France, and which existed in no other country. Rome, to Europe to the south of the Alps, had been for the kings of France, set on their thrones by the Church of God, as it were a duty belonging to their charge or office; but in the pieté of St. Louis there was a note all his own, the note of sanctity. With him ended the Crusades, but not their spirit. In the fourteenth and fifteenth centuries we see every project, attempt after attempt to set on foot a crusade was made, and we refer to them merely to point out that the spirit of a militant apostolate continued to ferment in the soul of France. The project of Charles of Valois (1308–09), the French expedition under Peter I of Cyprus against Alexandria and the Armenians (1336–1337), sung of by the French trouvère, Guillaume Machault, the crusade of John of Nevers, which ended in the bloody battle of Nicopolis (1396)—in all these enterprises the spirit of St. Louis lived, just as in the hearts of the Christians of the East, whom France was thus trying to protect, the spirit of St. Louis still lived. The Maronites of Lebanon, the Arameans of Syria, the Copts of Egypt, the Catabonians, and the Jews of Jerusalem were all in the service of France's king who, if he were in sin and schism, was yet the nation of St. Louis. If the feeble nation of the Maronites cries out to-day to France for help, it is because of a letter written by St. Louis to the nation of St. Maron in May, 1250. In the days of St. Louis the influence of French epic literature in Europe was supreme. Brunetto Latini, as early as the middle of the thirteenth century, wrote that "of all speech perles that of the French was the most charming, and the most in favour with every one." French held sway in England until the middle of the fourteenth century; it was fluently spoken at the Court of Constantimople from the time of the Fourth Crusade, and in Greece in the duchedoms, principalities and baronies founded there by the Houses of Burgundy and Champagne. And it was in French that Rusticiano of Pisa, about the year 1300, wrote down from Marco Polo's lips the story of his wonderful travels. The University of Paris, founded by the Church in 1208 and 1213, was saved from a spirit of exclusiveness by the happy intervention of Alexander IV, who obliged it to open its doors to the mendicant friars. Among its professors were Duns Scotus; the Italians, St. Thomas and St. Bonaventure; Albert the Great, a German; Alexander of Hales, an Englishman. Among its pupils it counted Roger Bacon, Dante, Raimundus Lullus, Popes Gregory IX, Urban IV, Clement IV, and Boniface VIII.

France was also the birthplace of Gothic art, which was carried by French architects into Germany. The method employed in the building of many Gothic cathedrals—in the fourteenth century—bears witness to the fact that at this period the lives of the French people were deeply penetrated with faith. An architectural wonder such as the cathedral of Chartres was in reality the work of a popular art born of the faith of the people who worshipped there. Under Philip IV, the Fair (1285–1314), the royal house of France became very powerful. By means of alliances he extended his prestige as far as the Orient. His brother Charles of Valois married Catherine de Courtenay, an heiress of the Latin Empire of Constantinople. The Kings of England and Minorca were his vassals, the King of Scotland his ally, the Kings of Naples and of Hungary connexions by marriage. He aimed at a sort of supremacy over the body politic of Europe. Pierre Dubois, his jurist, dreamed that the pope would hand over all his domains to Philip and receive in exchange an annual income, while Philip would thus have the spiritual head of Christendom under his influence. Philip IV laboured to increase the royal prerogative and thereby the personal unity of France. By founding magistratures into the feudal territories, by defining certain cases (cas royaux) as reserved to the king's competency, he dealt a heavy blow to the feudalism of the Middle Ages. But on the other hand under his rule many anti-Christian maxims began to creep into law and the personal unity of France. He decreed that the social organization, and gradually the idea of a united Christendom disappeared from the national policy. Philip the Fair, pretending to rule by Divine right, gave it to be understood that he rendered an account of his kingship to no one under heaven. He thought the popes right to present the papacy had always done in the past, the claims of morality and justice where kings were concerned. Hence arose in 1294–1303, his struggle with Pope Boniface VIII, but in that struggle he was cunning enough to secure the support of the States-General, which represented public opinion in France. In later times, after centuries of monarchical government, this national public opinion rose against the abuse of power committed by its kings in the name of their pretended Divine right, and thus made an implicit amende honorables to what the Church had taught concerning the origin, the limits, and the responsibility of all power. It was first asserted by the lawyers of Philip IV when they set up their pagan concept of the State as the absolute source of power. The election of Pope Clement V (1305) under Philip's influence, the removal of the papacy to Avignon, the nomination of seven French popes in succession, weakened the influence of the papacy in Christendom, though it has recently come to light that the Avignon popes did not always allow the independence of the Holy See to waver or disappear in the game of politics. Philip IV and his successors may have had the illusion that they were taking the place of the German emperors in European affairs. The papacy was imprisoned on their territory; the German Empire was passing through a crisis, was, in fact, decaying, and the kings of France might well imagine themselves temporal vicars of God, side by side with, or even in opposition to, the spiritual vicar who lived at Avignon.

But at this juncture the Hundred Years War broke out, and the French kingdom, which aspired to be the arbiter of Christendom, was menaced in its very existence by England. English kings aimed at the French crown, and the two nations fought for the possession of Guienne. Twice during the struggle, the independence of France imperilled. Defeated on the Ecluse (1340), at Crécy (1346), at Poitiers (1356), France was saved by Charles V (1364–80) and by Duguesclin, only to suffer fresh defeat under Charles VI at Agincourt (1415) and to be ceded by the Treaty of Troyes (1420) to Henry V, King of England. At this darkest hour of the nation itself was stirred. The revolutionary attempt by Etienne Marcel (1358) and the revolt which gave rise to the Ordonnance Cabochienne (1418) were the earliest signs of popular impatience at the absolutism of the French kings, but internal dissensions hindered an effective patriotic defence of the country. When Charles VII came to the throne, France had almost ceased to be French. The king and court lived beyond the Loire, and Paris was the seat of an English government. Blessed Joan of Arc was the savour of French nationality as well as French royalty, and at the end of Charles's reign (1422–61) Calais was the only spot in France in the hands of the English.

The ideal of a united Christendom continued to haunt the soul of France in spite of the predominating influence gradually assumed in French politics by purely national aspirations. From the reign of
Charles VI, or even the last years of Charles V, dates the custom of giving to the French kings the exclusive title of "Most Christian" by the popes of their day; Alexander III had conferred the same title on Louis VII; but from Charles VI onwards the title comes into constant use as the special prerogative of the kings of France. "Because of the vigour with which Charlemagne, St. Louis, and other French kings, more than the other kings of Christendom, had upheld the Catholic Faith, the kings of France are known among the kings of Christendom as 'Most Christian'." Thus wrote Philippe de Mézières, a contemporary of Charles VI. In later times the Emperor Frederick III, addressing Charles VII, wrote: "Your ancestors have won for your name the title Most Christian, as a heritage not to be separated from it." From the pontificate of Paul II (1464) the popes, in addressing Bulls to the kings of France, always use the style and title Rex Christianissimus. Furthermore, European public opinion always looked on Bl. Joan of Arc, who saved the French monarchy, as the heroine of Christendom, and believed that the Maid of Orléans meant to lead the king of France on another crusade when she had secured him in the peaceful possession of his own country. France's national heroine was thus heralded by the fancy of her contemporaries, by Christine de Pisan, and by that Venetian merchant whose letters have been preserved for us in the Morosini Chronicle, as a heroine whose aims were as wide as Christianity itself.

The fifteenth century, during which France was growing in national spirit, and while men's minds in France were still conscious of the claims of Christendom, was also the century during which, on the morrow of the Great Schism and of the Councils of Basle and of Constance, there began a movement among the powerful feudal bishops against pope and king, and which aimed at the emancipation of the Gallican Church. The propositions upheld by Gerson, and forced by him, as representing the University of Paris, on the Council of Constance, would have set up in the Church an aristocratic regime analogous to what the feudal lords, profiting by the weakness of King Charles VI, had dreamed of establishing in the State. A royal proclamation, in 1418, issued after the election of Pope Martin V, maintained in opposition to the pope "all the privileges and franchises of the kingdom", put an end to the custom of annates, limited the rights of the Roman court in collecting benefices, and forbade the sending to Rome of articles of gold or silver. This proclamation was assented to by the young King Charles VII in 1423, but at the same time he sent Pope Martin V an embassy asking to be absolved from the oath he had taken to uphold the principles of the Gallican Church and seeking to arrange a concordat which would give the French the State should govern the Church.

The Italian wars undertaken by Charles VIII (1493–98), and continued by Louis XII (1498–1513), aided by an excellent corps of artillery and all the resources of French arms, to assert certain French claims over Naples and Milan, did not quite fulfil the dreams of the French kings. They had, however, a threefold result in the worlds of politics, religion, and art. Politically, they led foreign powers to believe that France was a menace to the balance of power; and hence arose alliances to maintain that balance, such, for instance, as the League of Venice (1495) and the Holy League (1511–12). From the point of view of art they carried a breath of the Renaissance across the Alps. And in the religious world they furnished France an opportunity to assert its rights and assert for the first time the principles of royal Gallicanism. Louis XII and the Emperor Maximilian, supported by the opponents of Pope Julius II, convened in Pisa a council that threatened the rights of the Holy See. Matters looked very serious. The understanding between the pope and the French kings hung in the bal-
ance. Leo X understood the danger when the victory of Marignano opened to Francis I the road to Rome. The pope in alarm retired to Bologna, and the Concordat of 1516, negotiated between the cardinals and Duprat, the chancellor, and afterwards approved of by the Ecumenical Council of the Lateran, recognized the right of the King of France to nominate not only the archbishops, but all the cardinals of the Roman Catholic Church. The concordat between Leo X and Francis I was tantamount to a solemn repudiation of all the anti-Roman work of the great councils of the fifteenth century. The conclusion of this concordat was one of the reasons why France escaped the Reformation. From the moment that the disposal of church property, as laid down by the concordat, belonged to the civil power, royalty had nothing to gain from the Reformation. Whereas the kings of England and the German princedoms saw in the Reformation a chance to gain possession of ecclesiastical property, the kings of France, thanks to the concordat, saw in concordat the chance to retain in their possession of those privileges. When Charles V became King of Spain (1516) and emperor (1519), thus uniting in his person the hereditary possessions of the House of Austria and Germany, as well as the old domains of the House of Burgundy in the Low Countries—uniting, moreover, the Spanish Monarchy with Naples, Sicily, Sardinia, the Northern parts of Africa, and certain lands in America, Francis I inaugurated a struggle between France and the House of Austria. After forty-four years of war, from the victory of Marignano to the Treaty of Cateau-Cambrésis (1515-59), France relinquished hopes of retaining possession of Italy, but had wrested the Bishops of Metz, Toul, and Verdun from the empire and had won back possession of Calais. The Spaniards were left in possession of Naples and the country around Milan, and their influence predominated throughout the Italian Peninsula. But the dream which Charles V had for a brief moment entertained—of a new Europe—had been shattered.

During this struggle against the House of Austria, France, for motives of political and military exigency, had been obliged to lean on the Lutherans of Germany, and even on the sultan. The foreign policy of France since the time of Francis I has been to seek control over the northern part of the nation, and to be guided by the interests of Catholicism at large. The France of the Crusades even became the ally of the sultan. But, by a strange anomaly, this new political grouping allowed France to continue its protection to the Christians of the East. In the Middle Ages it protected them by force of arms; but since the sixteenth century, by treaties called capitulations, the first of which was drawn up in 1535. The spirit of French policy has changed, but it is always on France that the Christian communities of the East rely, and this protectorate continues to exist under the Third Republic, and has never failed them.

The early part of the sixteenth century was marked by the growth of Protestantism in France, under the forms of Lutheranism and of Calvinism. Lutheranism was the first to make its entry. The minds of some in France were already prepared to receive it. Six years before Luther’s time, the mathematician Lexaux de Rennes’s (Faber Bengelis), a protégé of Louis XII and of Francis I, had preached the necessity of reading the Scriptures and of “bringing back religion to its primitive purity”. A certain number of tradesmen, some of whom, for business reasons, had travelled in Germany, and a few priests, were infatuated with the Lutheranism idea. Until 1534, Francis

I was almost favourable to the Lutherans, and he even proposed to make Melanchthon President of the Collège de France. But on learning, in 1534, that violent placards against the Church of Rome had been posted on the same day in many of the large towns, and even near the king’s own room in the Château d’Amboise, he feared a Lutheran plot; an inquiry was ordered, and the leaders of the Lutherans were condemned to death and buried at the stake in Paris. Eminent ecclesiastics, such as de Bellay, Archbishop of Paris, and Sadolet, Bishop of Carpentras, deplored these executions and the Vaudois massacre ordered by d’Oppède, President of the Parliament of Aix, in 1548. Laymen, on the other hand, who ill understood the Christian gentleness of the Reformation, condemned them and remiss in putting down heresy; and when, under Henry II, Calvinism crept in from Geneva, a policy of persecution was inaugurated. From 1547 to 1550, in less than three years, the chambre ardente, a committee of the Parliament of Paris, condemned more than 500 persons to retract their beliefs, to imprisonment, or to death at the stake. Notwithstanding this, the Calvinists, in 1555, were able to organize themselves into Churches on the plan of that at Geneva; and, in order to bind these Churches more closely together, they held a synod at Paris in 1559. There were in France three main sects—the Reformers of the Reformé type. By 1568, the number had increased to 2000. The methods, too, of the Calvinist propaganda had changed. The earlier Calvinists, like the Lutherans, had been artisans and workmen, but in the course of time, in the South and in the West, a number of princes and noblemen joined their ranks. Among these were two princes of the blood, descendants of St. Louis: Anthony of Bourbon, who became King of Navarre through his marriage with Jeanne d’Albret, and his brother the Prince de Condé. Another name of note is that of Admiral de Coligny, nephew of that Duke of Montmorency who was the Premier Baron of Christendom. Thus it came to pass that in France Calvinism was no longer a religious force, but had become a political and military cabal; and the French kings in opposing it were but defending their own rights.

Such was the beginning of the Wars of Religion. They had for their starting-point the Conspiracy of Amboise (1560) by which the Protestant leaders aimed at seizing the person of Francis II, in order to remove him from the influence of Francis of Guise. During the reigns of Francis II, Charles IX, and Henry III, a powerful influence was exercised by the queen-mother, and a delicate balance had to be struck to guide the interests of Catholicism at large. The France of the Crusades even became the ally of the sultan. But, by a strange anomaly, this new political grouping allowed France to continue its protection to the Christians of the East. In the Middle Ages it protected them by force of arms; but since the sixteenth century, by treaties called capitulations, the first of which was drawn up in 1535. The spirit of French policy has changed, but it is always on France that the Christian communities of the East rely, and this protectorate continues to exist under the Third Republic, and has never failed them.

The early part of the sixteenth century was marked by the growth of Protestantism in France, under the forms of Lutheranism and of Calvinism. Lutheranism was the first to make its entry. The minds of some in France were already prepared to receive it. Six years before Luther’s time, the mathematician Lexaux de Rennes’s (Faber Bengelis), a protégé of Louis XII and of Francis I, had preached the necessity of reading the Scriptures and of “bringing back religion to its primitive purity”. A certain number of tradesmen, some of whom, for business reasons, had travelled in Germany, and a few priests, were infatuated with the Lutheranism idea. Until 1534, Francis
the banners of the Reformation party or under those of the League organized by the House of Guise to defend Catholicism, political opinions ranged themselves, and during these thirty years of civil disorder monarchical centralization was often in danger of overthrow. Had the Guises or any other faction been in power, the trend of policy adopted by the French monarchy towards Catholicism after the Concordat of Francis I would have assuredly been less Gallican. That concordat placed the Church in France and its episcopate in the hands of the king. The old episcopal Gallicanism which held that the authority of the pope was not above that of the Church assembled in council, and the royal Gallicanism, which held that the king had no superior on earth, not even the pope, were now allied against the papal monarchy strengthened by the Council of Trent. The consequence of all this was that the French kings refused to allow the decisions of that council to be published in France, and this refusal has never been withdrawn.

At the end of the sixteenth century it seemed for an instant as though the home policy of France was to shake off the yoke of Gallican opinions. Feudalism had been broken; the people were eager for liberty; the Church was dishonored by the corruption of the court, contemplated elevating to the throne, in succession to Henry III, who was childless, a member of the powerful House of Guise. In fact, the League had asked the Holy See to grant the wish of the people, and give France a Guise as king. Henry of Navarre, the heir presumptive to the throne, was a Protestant; Sixtus V had given him the choice of remaining a Protestant, and never reigning in France, or of abjuring his heresy, receiving absolution from the pope himself, and, together with it, the throne of France. But there was a third solution possible, and the French bishops, hesitating, they turned to the court. The abjuration should be made not to the pope, but to the French bishops. Gallican susceptibilities would thus be satisfied, dogmatic orthodoxy would be maintained on the French throne, and moreover it would do away with the danger to which the unity of France was exposed by the presence of a certain number of League to encourage the intervention of Spanish armies and the ambitions of the Spanish king, Philip II, who cherished the idea of setting his own daughter on the throne of France.

The abjuration of Henry IV made to the French bishops (25 July, 1593) was a victory of Catholicism over episcopate but not of absolutism over the spirit of the League. Canonically, the abjuration given by the bishops to Henry IV was unavailing, since the pope alone could lawfully give it; but politically that abjuration was bound to have a decisive effect. From the day that Henry IV had become a Catholic, the League was beaten. Two French prelates went to Rome to crave absolution for Henry. St. Philip Neri ordered Baroniussmiling, no doubt, as he did so—to tell the pope, whose confessor he, Baroniuss, was, that he himself could not have absolution until he had absolved of France. And on 18th September, 1595, the Holy See solemnly absolved Henry IV, thereby sealing the reconciliation between the French monarchy and the Church of Rome. The accession of the Bourbon royal family was a defeat for Protestantism, but at the same time half a victory for Gallicanism. Even if the year 1598 the dealings of the Bourbons with Protestantism were regulated by the Edict of Nantes. This instrument not only accorded to Protestants the liberty of practising their religion in their own homes, in those towns and villages where it had been established before 1597, and in two localities in each bailliage, but it established by the Peace of Vincennes and mixed tribunals in which the judges were chosen equally from among Catholics and Calvinists; it furthermore made them a political power by recognizing them for eight years as masters of about one hundred towns which were known as “places of surety” (places de sûreté). Under favour of the political clauses of the Edict the Protestants rapidly became masters of the empire in its spiritual and moral aspects. In 1597, they formed an alliance with England to defend, against the government of Louis XIII (1610-43), the privileges of which Cardinal Richelieu, the king’s minister, wished to deprive them. The taking of La Rochelle by the king’s troops (November, 1628), after a siege of fourteen months, paved the way for the establishment of Protestant rebels in the Cévennes, resulted in a royal decision which Richelieu called the Grâce d’Alais: the Protestants lost all their political privileges and all their “places of surety”, but on the other hand freedom of worship and absolute equality with the Catholics were guaranteed. Both Cardinal Richelieu and his successor, Cardinal Mazarin, scrupulously observed this guarantee, but under Louis XIV a new policy was inaugurated. For twenty-five years the king forbade the Protestants everything that the Edict of Nantes did not expressly guarantee them, and then, foolishly imagining that Protestantism was on the wane, and therefore that France could afford to be lenient towards obstinate heretics, he revoked the Edict of Nantes (1685) and began an oppressive policy against Protestants, which provoked the rising of the Camisards in 1703-05, and which lasted with alternations of severity and kindness until 1784, when Louis XVI and obliged to give Protestants their civil rights at last.

The very manner in which Louis XIV, who imagined himself the religious head of his kingdom, set about the Revocation, was only an application of the religious maxims of Gallicanism.

In the person of Louis XIV, indeed, Gallicanism was on the throne. At the States-General, in 1614, the tiers état had endeavoured to make the assembly commit itself to certain decidedly Gallican declarations, but the clergy, thanks to Cardinal Duperron, had succeeded in shelving the question; then Richelieu, careful not to embroil himself with the pope, had taken up the mitigated and very reserved form of Gallicanism represented by the theologian Duval. As for Louis XIV, he considers himself a God on earth—his religion is the State’s; every subject who does not hold that religion is outside of the State. Hence the persecutions of Protestants and of Jansenists. But at the same time he would never allow the French Catholics to say that the king was the supreme head of the Church. When the States-General had decided whether it interfered with the “liberties” of the French Church or the authority of the king. And in 1682 he invited the clergy of France to proclaim the independence of the Gallican Church in a manifesto of four articles, at least two of which—relating to the respective powers of pope and a council—brought questions which only an ecumenical council could decide.

In consequence of this crisis arose between the Holy See and Louis XIV which led to thirty-five sees being left vacant in 1689. The policy of Louis XIV in religious matters was adopted also by Louis XV. His policy of striking at all Jansenists in 1703 was in principle the same as that taken by Louis XIV to impose Gallicanism on the Church—the royal power pretending to mastery over the Church. The domestic policy of the seventeenth-century Bourbons, aided by Sully, Richelieu, Mazarin, and Louvois, completed the centralization of the kingly power. Abroad, their fundamental maxim was to make France the leader of the struggle against the House of Austria. The result of the diplomacy of Richelieu (1624-42) and of Mazarin (1643-1661) was a fresh defeat for the House of Austria; French arms were victorious at Rocroi, Fribourg, Nördlingen, Lens, Sommershausen (1643-48), Frutigen, and many others; while Louis XIV, by the Peace of Aix-la-Chapelle (1668) and that of the Pyrenees (1669), Alsace, Artois, and Roussillon were annexed to French territory. In the struggle
Richelieu and Masarin had the support of the Lutheran countries of Germany and of Protestant countries such as the Sweden of Gustavus Adolphus. In fact it may be laid down that during the Thirty Years War, France upheld Protestantism. Louis XIV, on the contrary, who for many years was arbiter of the destinies of Europe, was actuated by purely religious motives in some of his wars. Thus the war against Henry of Navarre was fought at the expense of Spain, and his intervention in the affairs of England were in some respects the result of a religious policy and of a desire to uphold Catholicism in Europe. The expeditions in the Mediterranean against the pirates of Barbary have all the halo of the old ideals of Christendom—ideals which the Wars of Louis XIV. had left behind. The mind of Father Joseph, the famous confidant of Richelieu, and had inspired him with the dream of crusades led by France, once the House of Austria should have been defeated.

The long and complex reign of Louis XIV, in spite of the disasters which mark its close, gained for France possession of Flanders and of Franche-Comté, and saw a Bourbon, Philip V, grandson of Louis XIV, seated on the throne of Spain. The seventh seat in France was par excellence a century of Catholic awakening. A number of bishop sets about reforming the clergy according to the canons of the Council of Trent, though its decrees did not run officially in France. The example of Italy bore fruit in the provinces of the old power. Cardinal de la Rochefoucauld, Bishop of Clermont and afterwards of Senlis, had the acquaintance of St. Charles Borromeo. Francis Taururgi, a companion of St. Philip Neri, was Archabpope of Avignon. St. Francis de Sales Christianized the clergy by his "Introduction to the Devout Life", which he wrote at the request of Henry IV. Cardinal de Bérulle and his disciple de Condren founded the Oratory. St. Vincent de Paul, in founding the friars of the Mission, and M. Olier, in founding the Sulpicians, prepared the unification of the secular clergy and the development of the grands séminaires. It was the period, too, when France began to build up her colonial empire, when Samuel de Champlain was founding prosperous settlements in Acadia and Canada. At the suggestion of Pére Groussier, confessor to the King, the Jesuits followed in the wake of the colonists; they made Quebec the capital of all that country, and gave it a Frenchman, Mgr. de Montmorency-Laval, as its first bishop. The first apostles of the Iroquois were the French Jesuits, Lallemand and de Brébeuf; and it was the French Revolution of 1789, that started the open postal communication over 500 leagues of country between the French colonies of Louisiana and in China. France the French Jesuits, by their scientific labours, gained a real influence at Court and converted at least one Chinese prince. Lastly, from the beginning of this same seventeenth century, under the protection of Omeret-Biron, Marquis de Salignac, Ambassador of France, dates the establishment of the Jesuits at Smyrna, in the Archipelago, in Syria, and at Cairo. A Capuchin, Pére Joseph du Tremblay, Richelieu's confessor, established many Capuchin foundations in the East. A pious Parisian lady, Madame Ricouard, gave a sum of money for the erection of a bishopric at Babylon, and its first bishop was a French Carmelite, Jean Duval. St. Vincent de Paul sent the Lazarists into the galleys and prisons of Barbary, and among the islands of Madagascar, Bourbon, Mauritius, and the Mascarenes, to take possession of them in the name of Christ. On the advice of the Jesuit Father de Rhodes, Propaganda and France decided to erect bishoprics in Annam, and in 1660 and in 1661 three French bishops, Francois Pallu, Pierre Lambert de Lamotte, and Cotolend, set out for the East. It was the activity of the French missionaries that paved the way for the visit of the Siamese envoy to the court of Louis XIV. In 1663 the Seminary for Foreign Missions was founded, and in 1700 the Société des Missions Etrangères received its approved constitution, which has never been altered.

To repeat a saying of Ferdinand Brunetti, the eighteenth century was the last Christian and the least French century in the history of France. Religious intolerance had been replaced by toleration. The influence of the philosophy of the Age of Reason and of the Protestantism of the Dutch and English, John Wesley, and his brother, the袜ire, had weakened the idea of the Church in a atmosphere already threatened by the philosophers, and although the monarchy continued to keep the style and title of "Most Christian", unbelief and libertinage were encouraged, and at times defended, at court. The War of the Austrian Succession (1740-1748) closed the last link of the ancien régime among the aristocracy. Politically, the traditional strife between France and the House of Austria ended, about the middle of the eighteenth century, with the famous Revirement des alliés (see CHOISEUL, ETIENNE-FRANÇOIS, DUC DE; FLEURY, ANDRÉ-HENRI-CÉCILE DE). This century is filled with that struggle between France and England which may be called the second Hundred Years War, during which England had for an ally Frederick II, King of Prussia, a country which was then rapidly rising in importance. The command of the sea was at stake. In spite of men like Grand-Admiral, Strada, and Montcalm, France lightly abandoned its colonies by successive treaties, the most important of which was the Treaty of Paris (1763). The acquisition of Lorraine (1766) and the purchase of Corsica from the Genoese (1768) were poor compensations for the losses; and, when, under Louis XVI, the French navy once more lifted its head, it helped in the revolt of the English colonies in America, and thus seconded the emancipation of the United States (1778-83).

The movement of thought of which Montesquieu, Voltaire, Rousseau, and Diderot, each in his own fashion, had been protagonists, an impatience provoked by the abuses incident to a too caste-ridden monarchy, and the yearning for equality which was deeply agitating the French people, all prepared the explosion of the French Revolution. That upheaval has too long been regarded as a break in the history of France. The researches of Albert Sorel have proved that the dictators of the sixteenth centuries of the old regime were perpetuated under the Revolution; the idea of the State's ascendency over the Church, which had actuated the ministers of Louis XIV and the adherents of the Parlement—the parlementaires—in the days of Louis XV, reappears with the authors of the "Civil Constitution of the clergy", as the tradition of the spirit of the old monarchy reappears with the administrative officials and the commissionaires of the Convention. It is easier to cut off a king's head than to change the mental constitution of a people.

The Constituent Assembly (5 May, 1789—30 September, 1791) rejected the motion of the Abbé d'Érme, declaring the Catholic religion to be the religion of the State, but it did not thereby mean to place the Catholic religion on the same level as other religions. Voulland, addressing the Assembly on the solemnity of having one dominant religion, declared that the Catholic religion was founded on too pure a moral basis not to be given the first place. Article 10 of the "Declaration of the Rights of Man" (August, 1789) proclaimed tolerance, stipulating "that no one ought to be interfered with because of his opinions, even religious, provided that their manifestation does not disturb public order" (pour que leur manifestation ne trouble pas 'ordre public de l'univers). It was in virtue of the suppression of feudal privileges, and in accordance with the ideas professed by the lawyers of the old regime where church property was in question that the Constituent Assembly abolished tithes and confiscated the possessions of the Church, replacing them by an annual grant from the treasury. The
"Civil Constitution of the Clergy" was a more serious interference with the life of French Catholicism, and it was drawn up at the instigation of Jansenist lawyers. Without referring to the pope, it set up a new division into dioceses, gave the voters, no matter who they might be, a right to nominate parish priests and bishops, ordered metropolitans to take charge of the canonical inspection of their suffragans, and forbade the bishops to seek a Bull of confirmation in office from Rome. The Constituent Assembly required all priests to swear to obey this constitution, which received the unwilling sanction of Louis XVI, 26 December, 1790, and was condemned by Pius VI. By Briefs dated 10 March and 13 April, Pope Pius VI forbade the priests to the oath, and the majority obeyed him. Against these "unsworn" (insertionnés) or "refractory" priests a period of persecution soon began. The Legislative Assembly (1 October, 1791–21 September, 1792), while it prepared the way for the republic which both the great parties (the Mountain and the Girondists) equally wished, only aggravated the religious difficulty. On 29 November, 1791, it decreed that those priests who had not accepted the "Civil Constitution" would be required within a week to swear allegiance to the nation, to the law, and to the king, under pain of having their allowances stopped and of being held as suspects. The king refused to approve this, and (26 August, 1792) it decreed that all refractory priests should leave France under pain of ten years' imprisonment or transportation to Guiana.

The Convention (21 September, 1792–26 October, 1795), which proclaimed the Republic and caused Louis XVI to be executed (21 January, 1793), followed a very tortuous policy towards religion. As early as 13 November, 1792, Cambon, in the name of the Financial Committee, announced to the Convention that he would speedily submit a scheme of general reform including the suppression of the appropriation for religious causes which he calculated, "cost the republic 100,000,000 livres annually". The Jacobins opposed this scheme as premature, and Robespierre declared it derogatory to public morality. During the first eight months of its existence the policy of the Convention was to maintain the "Civil Constitution" and to increase the penalties against "refractory" priests who were suspected of complicity in the Vendéan rising. A decree dated 18 March, 1793, punished with death all compromised priests. It no longer aimed at refractory priests only, but any ecclesiastic accused of disloyalty (incivisme) by any six citizens became liable to transportation. In the eyes of the Revolution there were no longer good priests and bad priests; for the sans-culottes every priest was a suspect.

Then, from the provinces, stirred up by the propaganda of André Dumont, Chaumette, and Fouche, there began the movement of dechristianization. The constitutional bishop, Gobel, abdicated in November, 1793, and together with his clergy and general. At the feast of Liberty which took place in Notre-Dame on 10 November an altar was set up to the Goddess of Reason, and the church of Our Lady became the temple of that goddess. Some days after this a deputation attired in priestly vestments, in mockery of Catholic worship, paraded before the Convention. The Commune of Paris, on 24 November, 1793, with Chaumette as its spokesman, demanded the closing of all churches. But the Committee of Public Safety was in favour of temporizing, to avoid frightening the populace and scandalizing Europe. On 21 November, 1793, Robespierre, speaking from the Jacobin tribune of the Convention, protested against the violence of the dechristianizing party, and on 29 December, the Committee of Public Safety induced the Convention to pass a decree assuring liberty of worship, and forbidding the closing of the Catholic churches. Everywhere throughout the provinces civil war was breaking out between the peasants, who clung to their faith and religion, and the Jacobins of the Revolution, who, in the name of patriotism, threatened, as they said, by this means to overturn the altars. According to the locality in which they happened to be, the propagandists either encouraged or hindered this violence against religion; but even in the very bitterest days of the Terror there was never a moment when Catholic worship was suppressed throughout France.

When Robespierre had sent the partisans of Hébert and of Danton to the scaffold, he attempted to set up in France what he called la religion de l'Etat Suprême. Love of conscience was suppressed, but atheism was also a crime. Quoting the words of Rousseau about the indispensable dogmas, Robespierre had himself acclaimed as a religious leader, a pontiff, and a dictator; and the worship of the Etat Suprême was held up by his supporters as the religious embodiment of patriotism. But after the 9th of Thermidor Cambon proposed once more the principle of separation between Church and State, and it was decided that henceforth the Republic would not pay the expenses of any form of worship (18 September, 1794). The Convention next voted the laicization of the primary schools, and the establishment, at intervals of ten days, of feasts called fêtes de l'Êternité. When Bishop Grégoire in a speech ventured to hope that Catholicism would spring up anew, the Convention protested. Nevertheless the people in the provinces were anxious that the clergy should resume their functions, and "constitutional" priests, less in danger than others, rebuilt the altars here and there throughout the country. In February, 1795, Boissy-d'Anglas carried a measure of religious liberty, and the very next day Mass was said in all the chapels of Paris. On Easter Sunday, 1795, in the same city which a few months before had applauded the worship of Reason, almost every shop closed its doors. In May, 1795, the Convention restored the churches for worship, on condition that the pastors should submit to the laws of the State; in September, 1795, less than a month before its dissolution, it regulated liberty of worship by a police law, and enacted severe penalties against priests liable to transportation or imprisonment who should venture back on French soil. The Directory (27 October, 1795–9 November, 1799), which succeeded the Convention, imposed on all religious ministers (프리블레) conditions of swearing hatred to royalty and anarchy. A certain number of "papist" priests took the oath and the "papist" religion was thus established here and there, though it continued to be disturbed by the incessant arbitrary acts of interference on the part of the
the Constitution—the "Charte" as it was called—and brought to the throne Louis Philippe, Duke of Orléans, during whose reign, as "King of the French," the stage of revolution was set. The rural provinces, parished for the first time in 1085, were for the most part left untouched by the Revolution, although the practice of the c Kyrie eleison, the peccavi, and the Agnus Dei, was abolished. The infinity of French soil was left to the Church, and the State was left to the Republic.

The Revolution of February 1848, against Louis Philippe and Guizot, his minister, who wished to maintain a property qualification for the suffrage, led to the establishment of the Second Republic and universal suffrage. By granting liberty of teaching (Loi Fould), and by sending an army to Rome to assist the Papacy, it earned the gratitude of Catholics. At this point in history, when so many social and democratic aspirations were being agitated, the social efficaciousness of Christian thought was demonstrated by the Vicomte de Melun, who developed the "Société Charitable" and the "Annales de la Charité" and carried a law on old-age pensions and widows' pensions. The Congregation of the Brothers of St. Vincent de Paul, who, leading a religious life in the garb of laymen, visited the working classes.

The Second Empire, the issue of Louis Napoléon Bonaparte's coup d'état (2 December, 1851), affirmed universal suffrage and thus secured the victory of French democracy; but it reduced parliamentarism to an insignificant rôle, the Plébiscite being employed as an ordinary means of ascertaining the will of the people. It was the Second Empire, too, that gave Nizza, Savoy, and Cochin-China to France.

The Third Republic, tumultuously proclaimed, 4 September, 1870, brought in its train the war against French armies. In this way the propaganda of the Revolution had in the end a disastrous reaction on the very country where its ideals originated. During the nineteenth century France was destined to undertake several wars for the emancipation of nationalities—the Greek War (1827-28) under the Restoration; the Italian War (1859) under the Second Empire—and it was in the name of the principle of nationality that the Second Empire allowed German unity to grow until, in 1870, it had reached its full growth at the expense of France.

Under the Restoration parliamentary government was restored. When, on 22 June, 1830, the "liberal" and "bourgeois" revolution, asserted against the absolutism of Charles X those rights which had been guaranteed to Frenchmen by
FRANCE

Through all these changes of government French foreign policy, either knowingly or by force of habit and precedent, has been of service to the Catholic Church, service amply repaid by the Church in perpetuating in some measure the Christian ideal of earlier times. The Crimean War, undertaken (1853) by Napoleon III, originated in the desire to protect Latin Christians in Palestine, the clients of France, against Russian encroachments. During the course of the nineteenth century French diplomacy at Rome and in the East has aimed at safeguarding the prerogatives of France as patron of the Orient, and of thus justifying the traditional trust of the Orientals in the "Franks" as the natural champions of Christianity in the Ottoman Empire. French influence in this field was threatened by Austria, Italy, and Germany in turn; the first of these powers alleged certain treaties with the sultan, dating from the eighteenth century, as giving it the right to defend Catholic interests at the Sublime Porte; the other two made repeated efforts to induce Italian and German missionaries to seek protection from their own consuls rather than those of France. But on 22 May, 1888, the circular "Aspera rerum conditi", signed by Car- dens of the Propaganda Fide, stopped all missionaries to respect the prerogatives of French diplomatic protection. Even at the present time, in spite of the separation of Church and State, the diplomacy of the Third Republic in the East enjoys the prestige acquired by the Church of St. Louis and St. Francis of Assisi. The Third Republic, in 1892, adopted a decree of "laïcization" this protectorate continues to exist as a relic and a right of Christian France.—"Anticlericalism is not an article of exportation", said Gambetta, and up to within recent years this has always been the motto of Republican France. In spite of the constant threats under which the congregations have labored, the Third Republic, in 1892, acted in harmony with the Propaganda Fide, and several important institutes have increased the number of their members; Peulh, a naturalized subject, 250,000 francs, the Anti-Slavery Society, 120,000 francs, and the Pray Society for the maintenance of the Holy Land amounted to 122,000 francs, making in all, for the year 1898, a total of 6,047,231 francs contributed by France to foreign missionaries without distinction of nationality. But France furnishes not money only but men and women to these missions. On the eve of the Law of 1882, the Abbé Kussner, after a careful study of approximate estimates of the religious, men and women, of French nationality engaged in mission work—

Taine has proved that vocations to the religious life increased remarkably in the France of the nineteenth century, when they were entirely spontaneous, as compared with the France of the eighteenth century, when many families, for worldly reasons, placed their daughters in convents.

MISSIONARIES IN THE NINETEENTH CENTURY.

The reawakening of English Catholicism at the beginning of the nineteenth century was in some measure due to the influence of the French refugee clergy whom the Revolution had driven into exile. And when, in 1789, in the United States of America, John Carroll was named Bishop of Baltimore, he was the successor of the Jesuits who had established a college at Maryland, and who had been expelled by the Revolution. The discussion between Monsignor Dubourg, Bishop of New Orleans, and Madame Petit, a widow of Lyons, on the spiritual needs of Louisiana (1815), and the letter written by the Abbé Jaricot to his sister Pauline, who also lived at Lyons, on the poverty of the foreign missions (1819), led these two ladies to organize, each independently of the other, societies for the collection of alms from the faithful for the propagation of Christianity, and from these first feeble beginnings was born, on 3 May, 1824, the "society of the Propagandists," of the "Propaganda Fide," and the "Propaganda of Lyons." In 1898 this society collected from one country or another, 6,700,021 francs (1,140,180.00 or £1,228,000) for missionary purposes. Of this sum no less than 4,077,085 francs was contributed by France alone, while, in 1900, owing to the great work known to French-speaking Catholics as the "Propaganda of Lyons," France's contribution fell from 6,402,586 francs to 3,082,131 francs. In 1898 the work of the Sainte-Enfance (The Holy Childhood), also of French origin, which aspires to save both the bodies and the souls of Chinese children, collected 3,615,943 francs (about £723,000 or £145,000), of which 1,094,092 francs came from France alone, while in 1900, for the reason referred to above, French generosity could only contribute 831,952 francs to this work, the general receipts of which amounted to 3,761,954 francs. That work in 1907-08 helped in 236 missions, 1,171 orphanages, 7,372 schools, and 2,480 manual-training establishments in China. In 1898 the "Société des Frères des Écoles d'Orient, an association for supplying schools in the East, collected in France 584,096 francs, in 1907 it collected in France 243,634 francs, and in other countries only 27,596 francs. In 1895 the Society of African Missions collected 50,000 francs, the Anti-Slavery Society, 120,000 francs, and the Pray Society for the maintenance of the Holy Land amounted to 122,000 francs, making in all, for the year 1898, a total of 6,047,231 francs contributed by France to foreign missionaries without distinction of nationality.

A similar list of the women engaged in religious
work on the missions, drawn up on the eve of the Law of 1901, gave a grand total of 7745 religious men and 9150 religious women supplied by France alone for the Missions Etrangères in 1895. Had in its missions 37 bishops, 1371 missionaries, 778 native priests, 3050 catechists, 45 seminaries, 2081 seminary students, 305 religious men, 4075 religious women, 2000 Chinese virgins, 5700 churches and chapels, 347 cœtés and orphanages, sheltering 20,409 children, 484 pharmacies and dispensaries, 108 in hospitals and lepers' asylums. Within the same year (1908) it brought about the baptism of 33,169 adults and 139,956 infants. At Jerusalem Cardinal Lavigerie founded in 1855 the seminary of St. Anne for Oriental rites; the French Dominicans, founded in 1890, at Jerusalem, a school for Biblical studies; and in 1885 the missions of Azn. Minor, near Constantinople, the French Assumptionists reorganized the Uniat Greek Church, and prepared the way for the success of the Eucharistic Congress of 1893, presided over by the French Cardinal Langenieux, as legate of Pope Leo XIII, at which Christians of the missions étrangères, to which the French and New Zealand, the Wallis Islands, New Caledonia, the New Hebrides, and Sydney Island. The Fathers of the Sacred Heart of Jesus are in the Gilbert Islands; the Fathers of Pius X, working in the Hawaiian Islands, Tahiti, and the Carolines; and the Fathers of Marou, son of Damien de Veuster), one of the Pious Fathers, the apostle of the lepers at Molokai, has spread throughout the world.

In Africa Father Libermann (a converted Alsatian Jew) and his Congregation of the Holy Ghost and the Annunciation of Mary opened a school in 1838, in 1940, the evangelization of the black race. It has made headway over the whole of that pagan continent; and the missions established by Mgr. Augourard in Ubangi are in the very heart of the cannibal districts. Jesuits, Holy Ghost Fathers, and Lazarists are working in Madagascar; Jesuits are established along the Zambezi River, and the African Missions of Lyons have set missions among the Gulf of Guinea, at the Cape of Good Hope, and at Dahomey, while the Oblates of Mary are in Natal. In Senegal Mother Anne-Marie Javouhey, foundress of the Sisters of St. Joseph of Cluny—she of whom Louis Philippe said: "Madame Javouhey c'est la France," and who died in the convent on May 18, 1820, and set on foot the first attempts at agriculture in that region. In Egypt French Jesuits have two colleges; the Lyons Missionaries, one; the Brothers of the Christian Schools teach more than 1000 pupils; and 60 parish schools, with more than 3000 children, are under the care of French sisters. French Lazarists minister to 13,000 souls in Abyssinia. The ecclesiastical province of Algeria, which in 1800 reckoned 4000 souls, had at the time of Cardinal Lavigerie's death 400,000, with 500 priests, 260 churches or chapels, and 230 schools, while Tunis, which in 1800 had contained but 3000 Catholics, numbered 27,000 and was ministered to by 153 religious in 22 parishes. The Brothers of the Christian Schools were the pioneers of the French language in Tunis, as they had been throughout the Ottoman Empire from Constantinople to Cairo, and the Congregation of the White Fathers, who sent out their first ten missionaries from Algeria on the 17th of April, 1878, towards equatorial Africa, founded, in Uganda and along Lake Tanganyika, Christian communities, one of which, in May, 1886, gave to the Faith 150 martyrs.

Side by side with this peaceful conquest of the African Continent by the initiative of a French car-
and at the request of the Government, undertook in Guiana the work of civilizing the unfortunate negroes taken by the men-of-war from the captured slave ships, and whom she eventually employed in free work. This resulted in the slaves of the island being reduced to a state that could smartly retort the slender assertion often repeated that the French are not a colonizing race.

Only in one part of the world—the East—is this vast missionary movement aided, however slightly, by the French Treasury. In the Levant a certain number of church schools receive state aid as a help to the spreading of the Faith of the Pape; but, in the latest years, these subventions have been opposed and diminished. On 12 December, 1906, M. Dubief, in moving the Budget of Foreign Affairs, proposed to suppress the sums voted in aid of schools conducted by religious congregations in the East. M. Pichon, Minister of Foreign Affairs, proposed to hasten the work of laicization, and by means of this promise he secured the continuation of the credit of 92,000 francs. It is a matter for regret that the aim of the Chambers for some years past has been to cut down the assistance given by France to these religious schools, and create in the East French educational institutions of a different character. M. Marcel Charlot, in 1906, and M. Audard, in 1907, the one in the name of the State, the other in the interest of la Mission Laïque, made a critical study of our religious schools in the East, and contributed to the laicization movement which, if successful, would mean the dissolution of France’s religious strategem in the East and a lessening of French political influence.

France at Rome.—Side by side with the part which France has played in the missionary field, the diplomatic activity at Rome of the Third Republic, in its character of a protector of pious institutions, is worth noting. It is to the depth, the reality, the force which underlay the old saying: Gallia Ecclesiae Primogenita Filia.

In 1890, on the occasion of the French workingmen’s pilgrimage, Count Lefeuvre de Béhaine, the French ambassador, formally renewed the claims of the French Republic over the chapel of St. Petronilla, founded by Pepin the Short in the basilica of St. Peter. The principal religious establishments over which certain prerogatives were exercised by the French Embassy at Rome, until its suppression in 1903, were: the church and community of chaplains of the French Nation, the French church in Rome, dating back to a confraternity instituted in 1454; the pious foundation of St. Yves of the Bretons, which dates from 1455; the church of St. Nicholas of the Lorrainers, which dates from 1622; the church of St. Claudius of the Burgundians, which dates from 1682; the convent of the Trinity on the Pincian Hill, which was founded by Charles VIII, in 1494, for the Friars Minor, and became, in 1828, a boarding school under the care of the French Ladies of the Sacred Heart. There has also been an ancient bond between France and the Lateran Chapter, by means of the donations made to the chapter by Louis XI and Henry IV, and the annual grant appertaining to it by Charles X, in 1825, and by Napoleon III, in 1863. Although this grant was discontinued by the Republic in 1871, the Lateran Chapter until the suppression of the Embassy to the Holy See (1904) always kept up official relations with the French ambassador whom, on the Ist of January each year, it charged with a special message of greeting to the President of the Republic. Lastly, since 1230 there has always been a French auditor of the Rota. In 1472 Sixtus IV formally recognized this to be the right of the French nation. The allowance made by France to the auditor was discontinued in 1822, but the office has survived, and the reorganization of the tribunal of the Rota made by Pope Pius X (September and October, 1906) was followed by the appointment of a French auditor.

VI.—12

Ecclesiastical Divisions.—In 1789 France, with the exception of the Venaissin, which belonged immediately to the pope, was divided into 135 dioceses: eighteen archbishoprics or ecclesiastical provinces with one hundred and six suffragan sees and eleven sees depending on foreign metropolitan. The latter eleven sees were: Strasbourg, suffragan of Mainz; St-Dié, Nancy, Metz, Toul, Verdun, suffragans of Trier; and five in Corsica, suffragans of Genoa or of Pisa. The eighteen archbishopal sees were: Aix, Arles, Auch, Besançon, Bordeaux, Clermont, Cambrai, Embrun, Lyons, Narbonne, Paris, Reims, Rouen, Sens, Toulouse, Tours, Vienne. In 1791 the Constituent Assembly suppressed the one hundred and thirty-five dioceses and created ten metropolitan sees with one suffragan diocese in each department. The Concordat of 1801 seeing fifty bishoprics or ecclesiastical provinces: the Concordat of 1817 made a fresh arrangement, which was realized in 1822 and 1823 by the creation of new bishoprics. France and its colonies are at present divided into ninety dioeceses, of which eighteen are metropolitan and seventy-two suffragan, as follows:

Metropolitan Suffragan sees:

Aix………Marseille, Fréjus, Digne, Gap, Nice, Ajaccio.
Albi………Rodez, Cahors, Mende, Perpignan.
Agen………Constantine, Oran.
Auch………Aire, Tarbes, Bayonne.
Avignon……Villeneuve, Vieux, Montpellier.
Besançon……Verdun, Bellev, St-Dié, Nancy.
Bordeaux………Agen, Angoulême, Poitiers, Périgueux, La Rochelle, Luçon, La Basse-Terre (Guadeloupe, W. I.), Réunion (Indian Ocean), Fort-de-France (Martinique, W. I.).
Bourges………Clermont, Limoges, Le Puy, Tulle, St-Flour.
Cambrai………Arras.
Chambéry……Annecy, Tarentaise, Maurienne.
Châlons-sur-Marne, Beaumetz, Amiens.
Rennes………Quimper, Vannes, St-Brieuc.
Bayeux………Bayeux, Évreux, Sées, Coutances.
Beauvais………Senlis, Soissons, Noyon, Chantilly, Toulouze………Montauban, Pamiers, Carcassonne.
Nantes………Le Mans, Angers, Nantes, Laval.

The Third Republic and the Church in France

—The policy known as anticiérelli, inaugurated by Gambetta in his speech at Romans, 18 September, 1875, containing the famous catchword “La calamite, c’est l’ennemi”, was due to the influence of the Masonic lodges, which ever since that date have shown their hatred even of the very idea of God. If one carefully follows up the series of aspirations uttered at the Masonic meetings, there will surely be found the first germ of the successive laws which have been framed against the Church. To justify its action before the people, the Government has asserted that the sympathies of a great number of Catholics, including many of the clergy, were for the monarchical parties. This policy also presented itself as a retaliation for the attempt of the 16th of May, 1877, by which the monarchists had tried to impede in France the progressive action of the Liberals (la Gauche) and of the democratic spirit. Its first emblems were, in 1879, the exclusion of the priests from the administrative committees of hospitals and of boards of charity; in 1880, certain measures directed against the religious congregations; from 1880 to 1882, the substitution of lay women for nuns in many hospitals; and, in 1882 and 1886, the “School Laws” (l’aths écoles) which will later on be discussed in detail.

The Concordat continued to govern the relations of
Church and State, but in 1881 the method of stoppage of salary (suppression de traitement) began to be employed against priests whose political attitude was unsatisfactory to the Government, and the Law of 1893, which subjected the financial administration of church property to the same rules as the civil establishments, occasioned livelier concern in the clergy. As early as March, 1888, Leo XIII had written to President Grévy complaining of the anti-religious bitterness, and expressing a hope that the eldest daughter of the Church would find it possible to abandon this struggle if she would not forfeit that unity and homogeneity among her citizens which had been the source of her over-partial greatness, and thus oblige history to proclaim that one inconsiderate day’s work had destroyed in France the magnificent achievement of the ages. Jules Grévy replied that the religious feeling complained of was the outcome mainly of the hostile attitude of a section of the clergy towards the Republic. Some years later (12 November, 1890), Cardinal Lavigerie, returning from Rome, and inspired by Leo XIII, delivered a speech in the presence of all the authorities, military and civil, of Algeria, in which he said: “When the will of a people as to the form of its government has been clearly affirmed, and when, after being declined, the people, despairing of abuses which they have unreservedly adhesion to this political form is necessary, then the moment has come to declare the test completed, and it only remains to make all those sacrifices which conscience and honour permit us, and command us, to make for the good of our country.” This speech, which is a great common reason, was followed by the letter of Cardinal Rambolla, Secretary of State to Leo XIII, addressed to the Bishop of St-Flour, in which the cardinal exhorted Catholics to come forward and take part in public affairs, thus entering upon the readiest and surest path to the attainment of that noble aim, the good of religion and the salvation of souls. And in a Brief of Leo XIII to Cardinal Lavigerie, in the early part of the year 1891, assured him that his zeal and activity answered perfectly to the needs of the age and the pope’s expectations.

From these utterances dates the policy known in France as the “Rallie ment”, and as “Leo’s Republican Policy”. At once the Archbishops of Tours, Rouen, Cambrai, the Bishops of Bayeux, Langres, Digne, Bayonne, and Grenoble declared their adhesion to the “Algiers Programme”, and the Monarchical press accused them of “kissing the Republican feet of their executioners”. On 16 January, 1892, a collection of speeches published by the “Universe”, the five French Catholics of the “Universe” and the “Croix”, “docile towards Leo XIII”, with the refractory Catholics of the “Vérité”. On 5 February, 1893, Félix Faure wrote as follows to Pope Leo: “The President of the Republic cannot forget the generous motives which prompted the advice given by Your Holiness to the Catholics of France, encouraging them to accept loyally the government of their country. Your Holiness regrets that these appeals for harmony and peace have not been everywhere listened to; and we join in these regrets. That enlightened advice given to the opponents of the Republic, for whose sakes the authority of the Head of the Church is ‘all-powerful’, ought to have been followed by all. Nevertheless, we note at the present time, with regret, that there are men who, under the cloak of religion, foment a policy of discord and of strife. It would, however, be unjust not to recognize that, while the salutary instructions of Your Holiness have produced all the effects that could have been expected of them, very many loyal Catholics have bowed before them. At the same time, this manifestation of goodwill produced among those Republicans who were most firmly attached to the rights of the civil power a spirit of conciliation which has largely contributed to mitigate the conflict of passions which saddened us.”
This letter, published for the first time at the end of the year 1905, in the "White Book," of the Holy See, places in clear relief the relations existing between the Church and the Republic four years after the Encyclical of 1899, and three months before the foundation of the Mélino Ministry, which was to lead the Republic towards even greater moderation. The Mélino Ministry (1896-98) secured for Catholics for two years a certain amelioration of their lot. But the division among Catholics persisted, and this division, which arose from their indolence to Leo XIX, was but another aspect of their defeat. On the elections of 1898, when the Mélino Ministry came to an end. The old Anticlerical Republican party came once more into power: the Dreyfus affair, a purely judicial matter around which political factions grew up, was made the pretext on the morrow of the death of President Faure (16 February, 1899) for beginning a formidable anti-militarist, and anticlerical agitation which led to the formation of the Waldeck-Rousseau and the Combes Ministries.

The Waldeck-Rousseau Ministry (1899-1902) passed fresh legislation against the congregations (it will be found on the end of this article) and excluded France to the verge of a breach with Rome over the question of the Nobis nominavi. These two words, which occurred in episcopal Bulls, signified that the priest chosen by the State to fill a bishopric had been designated and presented to the Holy See. On 13 June, 1899, when Bulls were issued, the bishops of Carcassonne and Annecy, the Waldeck-Rousseau Ministry proposed that the word Nobis should be omitted, in order to affirm more clearly the State's right of nomination. The Combes Ministry (1902-05) continued the dispute over this matter, and on 22 November, 1903, the Holy See, to avoid a breach with France, agreed to omit the obnoxious word, on condition that in future the President of the Republic should demand the canonical institution of bishops by letters patent containing the words, We name him, and present him to Your Holiness. In spite of this concession by the Holy See, M. Combes set himself the task of planning the separation of Church and State. He felt that public opinion was not yet quite ripe for this stroke, and all his efforts were directed to making separation inevitable. The laicization of the military and medical hospitals (1903-04), the order prohibiting soldiers to frequent Catholic clubs (9 February, 1904), the census law (14 Febrary, 1904), the discussion of the motion to repeal the Falloux Law were episodes less serious than the succession of calculated acts by which the breach with Rome was being approached.

Three quarrels succeeded one another. (1) In regard to vacant sees, Combes's policy was to demand canonical institutions for the candidate of his choice without previously consulting Rome. The Holy See refused its consent in the cases of the Bishops of Maurienne, Bayonne, Ajaccio, and Vannes, and accepted M. Combes's candidate for that of Nevers. "All or none," replied M. Combes, on the 19 March, 1904, to the news of the decision, and the State stepped in vacant. (2) On 25 March, 1904, the Chamber agreed, by 502 votes against 12, to allocate a sum of money to defray the expenses of a visit by M. Loubet, President of the Republic, to Rome. M. Loubet was thus the first head of a Catholic State to pay a visit to the King of Italy in Rome. A note from Cardinal Rampolla to M. Nisard, the French minister, dated 1 June, 1903, and a dispatch from the cardinal to the nuncio, Lorenzelli, dated 8 June, had explained the reasons why such a visit would be considered a grave affront to the Holy See. On 28 April, 1904, Cardinal Merry del Val sent a protest to M. Nisard and added M. Loubet's visit to it. On 6 May, M. Nisard handed to Cardinal Merry del Val a diplomatic note in which the French Government objected to the reasons given by the Holy See and to the manner in which they were presented. At the same time, to prevent the heads of other Catholic countries from following President Loubet's example, the Holy See sent a diplomatic note to all the powers in which it was explained that if, in spite of the visit, the nuncio to France had not been recalled, it was because of grave reasons of an order and nature altogether special. By an indiscretion, which has been attributed to the Government of the Principality of Monaco, "L'Humanité", a newspaper belonging to the Socialist deputy, Jaures, published this note on 17 May. On 20 May, M. Nisard, after the defeat of his project, was recalled by the Chamber, and the Holy See sent a invitation from Cardinal Merry del Val; on 21 May was granted leave of absence by his Government; and on 28 May, in the Chamber, the Government gave it to be understood that M. Nisard's departure from Rome had a significance much more serious than that of a simple leave of absence. (3) Having learned of a letter from Cardinal Serafinio Vannutelli (17 May, 1904) inviting Monsignor Geay, Bishop of Lavall, in the name of the Holy Office, to resign his see, and of a letter in which Monsignor Lorenzelli, the papal nuncio, requested Monignor Le Nordes, Bishop of Dijon, to resign his see, the Holy See demanded that the French Government should make the envoys charged d'affaires at Rome, M. Robert de Courcel, inquire into the matter. When, on 9 July, 1904, Cardinal Merry del Val cited Mgr Le Nordes to appear at Rome within fifteen days, under pain of suspension, M. Robert de Courcel announced to the cardinal that, until the Holy See had answered the letter to Mgr Le Nordes was withdrawn, diplomatic relations between France and the Holy See would cease; and, on 30 July, 1904, a note handed by M. Robert de Courcel to Cardinal Merry del Val announced that France had decided to put an end to these relations.

In this way the breach was effected without any formal denunciation of the Concordat. On 10 February, 1905, the Chamber declared that "the attitude of the Vatican" had rendered the separation of Church and State inevitable. The "Observatore Romano" replied that this was an "historical lie." The discussions in the Chamber lasted from 21 March to 3 July, and in the Senate from 9 November to 6 December, and on 11 December, 1905, the Separation Law was gazetted in the "Journal Officiel."
congregation of women, provided that such congregation adopted the statutes of a congregation previously authorized. Under the Third Republic, it was on the pretext of a strict enforcement of the law that, in 1880, the death of Jesus was decreed, and the religious congregations were ordered to apply for authorization within three months. The protests of Catholics, and the criticisms which became general on the archaic character of the laws upon which these decrees were based, had this much effect, that, after a brutal application of the laws to the religious congregations of men, the Government dared not apply them to the unauthorized congregations of women; they gradually became a dead letter, and little by little the congregations of men were re-formed in the name of individual liberty. But in this condition of affairs only the formally authorized congregations could be considered as "moral persons" before the law. Since 1849 the religious congregations had been paying into the treasury a "mortmain tax" (taxe des biens de mainmort) in lieu of the succession duties which the property of "moral persons" escapes. On the twofold consideration, that this tax did not touch personal estate and that property held in unacknowledged mortmain evaded it, the Third Republic passed the following enactments: (1) A law of increment (droit d'accroissement), so called because it was intended to reach that increase in the individual interest of each surviving member of a congregation in the common estate, imposed sales tax on the death of a fellow-member. This duty is represented by a composition tax (taxe d'abonnement) assessed at the rate of 3 per cent on the market value of the real and personal estate held by the association. On real estate held by associations not subject to the mortmain law, the rate is 3 per cent. (2) A tax of 4 per cent on the revenue of property owned or occupied by congregations, this revenue being assumed equal to one-twentieth of the gross value of the property.

On 1 January, 1901, France numbered 19,424 establishments of religious congregations, with 159,628 members. Of these establishments 3126 belonged to congregations of men; 16,298 to congregations of women (2870 of the latter being regularly authorized, and 13,428 unrecognised). The members of the male congregations numbered 30,136, of whom 23,327 belonged to teaching institutes, 552 served in hospitals, and 560 in the current apostolic work (missionaries). The value of real property taxed as being held by congregations amounted to 463,715,146 francs (about $22,000,000, or between £18,000,000 and £19,000,000), and in this estimate was included all the property devoted by the religious to benevolent and educational purposes. But the Congregations of Men, in drawing up its statistical report (which statistics were with justice questioned), explained that, in addition to the real property taxed as belonging to congregations, account should be taken of the real property occupied by them through the compliance of lay corporations or societies which, from the State declared to be mere intermediaries (personnes interposées) and the department placed the combined value of these two classes of real property at 1,071,775,260 francs. To this unfair estimate may be traced the popular notion—which was cleverly exploited by certain political parties—about le milliard des congréonistes.

The Law of Associations, of 1 July, 1901, provided that no congregation, whether of men or of women, could be formed without a legislative authorizing act, which act should determine the functions of such congregation. Thus ended the regime of tolerance to congregations of women which had been inaugurated by the Empire. Congregations previously authorized, and those which should subsequently obtain authorization had, according to this law, the status of "moral persons"; but this status held them to an obligation and kept them perpetually under a threat. On the one hand, it was enacted that they must each year draw up a list of their members, an inventory of their possessions, and a statement of their receipts and expenses, and must present these documents to the local council; and if found in default, the penalty was the deprivation of their authorization, nothing more was required than an ordinary decree of the Council of Ministers. And lastly, these authorized congregations could found "new establishments" only in virtue of a decree of the Council of State, and if the council of State, in interpreting the law, considers that there is a "new establishment" when laymen in co-operation with one or more members of a congregation set up a school or a hospital. If the master of an industrial enterprise rewards a sister for teaching or caring for the children of his workmen, the law considers that there is a new establishment, for which an authorization of the Council of State is necessary. As for the unauthorized congregations, the Law of 1901 declared them dissolved, allowing them three months to apply for authorization. Congregations which should re-form after dissolution, or which should in the future be formed without authorization, were, by the same law, made liable to fines and penalties (fines of from 16 to 5000 francs; terms of imprisonment of from 6 days to one year); double penalties were to be inflicted on founders and administrators, and the act of providing properties for, and thus doing business upon the decaying of houses of religious congregations, was, in 1902, declared and punished by the same penalties. Moreover, the law made every member of an unauthorized religious congregation incapable of directing any teaching establishment, or of teaching in one, under pain of fine or imprisonment, and this offence might entail the closing of the establishment. The Government found itself faced with 17,000 unauthorized congregations; it decided to dissolve all of them without exception—educational establishments, industrial establishments, contemplative establishments—though charitable establishments were tolerated provisionally.

From another point of view the law was singularly arbitrary and juridically defective: it struck at every member of a religious congregation who was not secularized, but it did not precisely state what constitutes secularization. Is it sufficient, for secularization to be effective and sincere, that the religious—or, to employ the Congregational term, the divinity students—should be absolved from his vows and should re-enter the diocese from which he originally came? The prevalent legal opinion does not admit this; it admits the right of the courts to ascertain whether other elements of fact do not result in a virtual persistence of the congregation. Thus the courts may consider as religious persons, in the eyes of the Church, are no longer such; and the fact of being a congréoniste, which fact constitutes an offence, is not a precise, material fact, defined and limited by the letter of the enactment; it is a point upon which the interpretation of the courts remains the sole authority.

The principles of liquidation were as follows: Property belonging to congréonistes before their entrance into the congregation, or acquired since that time, whether by succession independent of testamentary provision (ab intestat) or by legacy in direct line, was to be restored to them. Gifts and bequests made otherwise than in the direct line could not be legally claimed by such former congréonistes unless they established the point that they had not been intermediaries (personnes interposées). Benefactions to congregations could be reclaimed by the benefactors or their heirs within a term of six months. After these deductions made by the congréonistes and their benefactors, the residue of the estate of the congregation was to be subject to the disposition of the courts. The law refused to recognize that property created by the labour or thrift of the congréonistes necessarily ought
to be distributed among them, and it was held sufficient that, by an administrative ruling of 16 August, 1901, provision was made for allowances to former congregational estates that had no means of subsistence or who should establish the fact of having by their labour contributed to the acquisition of the property under liquidation.

The judicial liquidation of the congregational estates had some serious consequences. The Chamber soon perceived that too often the liquidators intentionally complicated the business with which they were charged (it being to their interest to multiply lawsuits the expenses of which could not in any case fall upon them) and that the personal profits derived by the liquidators from these operations were exorbitant. In confiding so delicate a business to irresponsible individuals who had no means of subsistence or who should be placed in any of the newly erected school buildings. This temporizing policy was continued by the ministerial order of 9 April, 1903, but in 1906 and 1907 the administration at last yielded for the definitive disappearance of the crucifix from all public schools.

The Law of 1882 is silent as to the teaching, in the public schools, of the pupils' duty towards God. The Senate, after a speech by Jules Ferry, refused to entertain the proposal of Jules Simon, that these duties should be mentioned in the law; but the Board of Education (Conseil Supérieur de l'Instruction Publique), acting on a recommendation of Paul Janet, the Spiritualist philosopher, inserted in the executive instructions, with which it supplemented the text of the law, a recommendation that the teacher should admonish pupils not to use the name of God lightly, to respect the idea of God, and to obey the laws of God as revealed by conscience and reason. However, in the public schools dependent on the municipality of Paris, the antispirtualist tendency became so predominant that, after 1882, the new editions of certain school books expunged, even where they occurred in selected specimens of literature, the terms Providence, Creator. These early manifestations led Catholics to declare that the laic and neutral school was in reality a Godless school. In the controversy which arose, some quotations from the public school textbooks became famous. For instance, La Fontaine's lines Petit poisson deviendra grand, Pourvu que Dieu lui prête vie were made to read, "que l'on lui prête vie". And while politicians were deprecated, the harm done to the religious instruction of the schools was Godless, the Masonic conventicles and the professional articles written by certain state pedagogs were experienced by the public. Those who were not truly Catholic saw in the Law of 1882, which made primary instruction obligatory, gratuitous, and secular (laïque), intentionally omitted religious instruction from the curriculum of the public school, and provided one free day every week, besides Sunday, to allow the children, if their parents saw fit, to receive religious instruction; but this instruction was to be given outside of the school buildings. Thus the priest no longer had any right to enter the school, even outside of class hours, to hold catechism. The school regulations of 18 January, 1857, laid it down that the children could be sent to church for catechism or religious exercises only outside of class hours, and that teachers were not bound either to take them to church or to watch over their behaviour while there. It was added that during the week preceding the First Communion teachers were to allow pupils to leave the school when their religious duties called them to the church. The spirit of the Law of 1882 implied that the Church should be excluded from the schools, but, out of regard for the religious feelings of the people in those neighbourhoods, the prefects allowed the crucifixes to remain in a certain number of schools; they took care, however, that no religious emblem of God must eventually disappear in the school. In practice, the chapter of duties towards God was one which very few teachers touched upon. In 1894, M. Devinat, afterwards director of the normal school of the department of the Seine, wrote: "To teach God, it is necessary to believe in God. Now, how are we to find in these days teachers whose souls are sincerely and profoundly religious? It may be affirmed without any exaggeration that, since 1882, the lay public school has been very nearly the Godless school."

This frank and unimpeachable testimony, justifying, as it does, all the sad predictions of the Catholics, has been corroborated by the experience of the last fifteen years. With the cry, Laïciser la laïque, a certain number of teachers have carried on an active campaign for the formal elimination of the idea of God, as a remnant of " Clericalism", from the school programme. The powerful organization known as the "Ligue de l'Enseignement", which has been indubitably indisputable, has supported this movement. For the exponents of the tendency, to be laïque one must be the enemy of all rational metaphysics—to be laïque one must be an atheist.
The very idea of neutrality in education, to which anti-religious teachers have not always consistently adhered, is altogether foreign to the members of the pedagogical profession. In 1904 the teachers of the department of the Seine advocated, almost unanimously, in place of "denominational neutrality" (neutralité confessionnelle), which they said was a lie (un mensonge), the establishment of a "critical teaching" (enseignement critique), which, in the name of modernism, abandons all denominational susceptibilities. But that neutrality was something very closely resembling a lie, is just what Catholic orators were saying in 1882; and thus the evolution of the primary school, and these fits of candour in which the very truth of the matter is confessed, justify, after a quarter of a century, the expression of Catholics at the very outset. It is to be feared, moreover, that this substitution of critical for neutral teaching will very soon issue in the introduction, even in the primary schools, of lessons on the history of religions which shall serve as weapons against Christian revelation; such a step is already being advocated by the Freemasons and by certain groups of unbelieving savants, and herein lies one of the gravest perils of to-morrow. Bills introduced by MM. Briand and Doumergue impose heavy penalties on fathers whose children refuse to make use of the irreverent books given them by their teachers, and renders impropriety liable to punishment. As yet, however, the legal immunity of Catholic instruction has gone unimpaired. The principle of religious instruction was preserved by the laws of 1881, which granted to the State a monopoly of religious education, to be equivalent to the diplomas given by the State, which legally qualified their recipients to be teachers. Between 1852 and 1860 the Empire issued 844 decrees recognizing congregations or local establishments of teaching sisters; from 1861 to 1869—the period of change which followed the Italian War—Duruy was Minister of Public Instruction, only 77 of these decrees were issued.

The Law of 23 March, 1882, deprived the "letters of obedience" of all their value, by providing that every teacher must hold a diploma (brevet) from one of the semi-public institutions (conseils universitaires), in which the private educational establishments were represented by elected delegates, and the council gave a decision. These councils could also take disciplinary action against private teachers, in the form of censure or suspension of teaching licence. The masters and mistresses of private schools might give religious instruction in their schools, and were left free in the choice of methods, programmes, and books, but the state authority, after consultation with the Council of Public Instruction (Conseil Supérieur de l'Instruction Publique), might prohibit the introduction of teaching contrary to the Constitution, or the law. An order of the Council of State, dated 29 July, 1888, declared that neither departments nor communes had a legal right to grant appropriations, on their respective local budgets, to private schools; thus the establishment and support of these schools had been "Catholic charity exclusively. The communes can only give assistance to poor pupils in private schools as individuals. A first, very serious, attack on the principle of freedom of teaching was made by the Law of 7 July, 1904, which formally declared that "teaching of every grade and every kind is forbidden in France to the congregations", the foundations of the "national congregations, equally with the rest, fell under the disability thus created. Every Brother, every religious woman, who wished to continue the work of teaching was forthwith compelled to be secularized, and the courts remained, and still remain, competent to contest the legal value of such secularizations. A clause, the effect of which was transitory, was introduced empowering the Government, according to the needs of particular localities, to authorize for one or more years the continuation of congreganiste schools; but M. Combes immediately closed 14,404 out of 10,904 such schools, and it is decreed that in 1910 the last of the congreganiste schools shall have disappeared.

From time to time the Ministry publishes lists of congreganiste schools which must be closed definitively by the end of the school year, and thus the Government in power is the sole arbiter to accord or to refuse
them a few last years of existence. The bishops are seeking to maintain primary Catholic education or to reorganize it with secularized or lay teachers. In some movement is foot for the acquisition of teaching diplomas by the seminarians. Already in twenty-four dioceses there are diocesan organizations for free teaching—diocesan committees, composed of ecclesiastics and laymen, which maintain a strict control of all the private schools of their dioceses. These measures have been so impressively demanded in order to repair the losses suffered by free primary education, the number of pupils having fallen, according to statistics compiled in 1907 by M. Keller, from 1,600,000 to 1,000,000.

Denominational Secondary Education.—Statistics published by the Commission (Commission d'Enseignement) show that, out of a total of 162,110 pupils in the secondary schools for the year 1898, 50,793 belonged to the lycées, 33,949 to the colleges, 9725 to private establishments taught by laymen, and 67,643 to private establishments taught by ecclesiastics. To these figures must be added 22,497 boys in the petit séminaires. Therefore, in the aggregate, the State was giving primary education to 84,742 pupils; the Church to 91,140.

The fundamental law on secondary education is still the Falloux Law of 15 March, 1850. Any Frenchman over twenty-five years of age, having the degree of licencié ès lettres (diplôme de capacité), may, after passing a term of five years in a teaching establishment, open a house of secondary education, subject to objections on moral or hygienic grounds, of which grounds the university councils are the judges. In contrast with the case of private primary education, Catholic establishments of secondary education may be subsidized by the communes or the departments. A first serious stroke at the liberty of secondary education was delivered by the Law of 7 July, 1904, depriving the congréganistes of the right of teaching. Other projects, which the Government has already induced the Senate to accept, are now pending, and these would exact much more rigorous conditions as to pedagogic qualifications on the part of Catholic secondary teachers of either sex; the Catholic establishments would be subject to a compulsory inspection, bearing, as in the case of primary education, upon the constitution of the State. This is the Congregation law; the Government would reserve the right to close the establishment by decree. It may be foreseen that in the course of the year 1909 all or a part of these proposals will become law, and the effect will be disastrous, first, to Catholic girls' schools, where many of the teachers, whether laywomen or secularized congréganistes, will not immediately be in possession of the requisite diplomas. Such schools will thus be placed at a further disadvantage in competition with the lycées, colleges, and courses for young women organized by the State under the Law of 21 December, 1880, numbering in 1883, and in 1906 numbering 171, with 32,500 pupils. Secondly, for the petits séminaires the results will be still more disastrous.

These institutions have hitherto existed under a particular statute, which it will be necessary here to consider. "Secondary ecclesiastical schools", as the petits séminaires are called, have, since the decrees of 9 April, 1809, and 15 November, 1811, dependent on the University. There was to be only one secondary ecclesiastical school in each department, and its course was to be that of the lycée or college of the State. A warrant of Louis XVIII, dated 5 October, 1814, substituted the secondary seminary for each department subject to the authorization of the head (grand maître) of the University of France; it also gave permission for these institutions to be established in country districts, that the pupils should be obliged to assume the ecclesiastical habit after two years of studies, and that the teachers should be directly dependent upon the State. The Government forbade the petits séminaires to receive externs, and this prohibition was confirmed by the ordinance of June, 1828, which limited the number of their pupils to 20,000. In this way the Government wished the petits séminaires to be reserved exclusively for the education of future priests, and to be kept from competing with the University in any sense. Whatever, and upon these conditions it exempted them from taxation and from the control of the University, and granted them the rights of legal personality. The Ordinance of 1828 was never formally abrogated, but in practice, since 1850, a certain number of petits séminaires, retaining certain privileges of instruction, and in preparation of their special mission, have received pupils in preparation not only for the priesthood, but also for a great variety of careers.

Legislative projects, the passage of which is now imminent, will be a source of at least temporary embarrassment to the petits séminaires, a certain number of which—those, namely, which were in the institutions—have disappeared in consequence of the Law of Separation. Statistics show that in 1906 Catholic secondary education possessed 104 fewer colleges and 22,223 fewer pupils than in 1898, and that the number of pupils in the petits séminaires had in eight years decreased by 87,111.

Denominational Higher Education.—Until 1882 the State supported five faculties of theology: at Paris, Bordeaux, Aix, Rouen, and Lyon. These faculties had no regular pupils, but only attendants at the lectures delivered by their professors; the Church attached no canonical value to their degrees; the State did not make those degrees a condition for any ecclesiastical appointment. The faculties themselves were suppressed by the Ferry Ministry.

The Protestants still had two faculties of theology maintained by the State: that of Paris, for Calvinists and Lutherans, and that of Montauban, for Calvinists exclusively. The Separation Law of 1905 left these two faculties to be supported by the Protestants, and once detached from the university organizations, they have become free theological schools.

The university monopoly, abolished as to primary education by the Law of 1833, and as to secondary education by the Law of 1850, was restored for higher education by the Law of 12 July, 1875, which permitted any Frenchman, subject to certain easy conditions, to create establishments of independent higher education. In the period between 1875 and 1907 the Institut Catholique de Paris admitted twenty-nine doctors of theology, thirteen of canon law, eight of scholastic philosophy, one hundred and ninety-two of law, thirty-two of literature, ten of science. The first three of these degrees have been gained by candidates under tests of the institute itself; the others, from state boards (jury). The institute is preparing to open, in 1893, courses and one in the history of religion. The Institut Catholique de Lille has connected with itself a school of higher industrial and commercial instruction (see BAUNARD, LOUIS); the Institut Catholique d'Angers, one of agriculture. The Institut Catholique de Toulouse has but one faculty, that of theology; it is organizing lectures for the students of mixed faculties who are following the courses of the State faculties.

Laws Affecting the Applications and Effects of Religion in Civil Life.—(a) The Sunday Rest.—The Revolution had abolished all institutions which formerly existed in connexion with the Sunday rest and had substituted the civil day of relaxation for the Sunday. Under the Restoration the Law of 18 November, 1814, forbade all "exterior" labour on Sunday: a tradesman might not open his shop; by the letter of the law, he might work and cause others to work in his closed
ship. What the Restoration really aimed at was a public token of obedience to the precepts of religion. The Law of 12 July, 1880, on the contrary, permitted what the chief advoes of the evils of which were soon perceived. Subtle discussions arose in the Chambers; should the weekly rest, which the labour organizations demanded, be a day fixed by legislation, or should it be Sunday? It was for some time feared that such a legislative prescription would look like a conclusion to denominationalism, but the decision of the Government (conseil supérieur du travail) and of many labour unions was explicit in favour of the Sunday. On 10 July, 1906, a law was passed finally establishing Sunday as the weekly day of rest, and providing, moreover, numerous restrictions and exceptions the details of which were to be arranged by administrative rules. The sense of homage to the Divine law rendered by an unbelieving parliamentary majority, this enactment, on account of a certain temporary disturbance which it occasioned in the country's industry and commerce, and in the supply of commodities, was the object of unfortunate animal invasions on the part of certain journals which were in other respects defenders of Catholic interests. The hostility manifested by a certain number of prominent Catholics towards the Sunday rest, and their co-operation with every attempt to restrict the application of the law, produced a regrettable effect on public opinion.

The form of administration in courts of justice is not peculiar to any creed. It supposes a belief in God. The images of Christ have disappeared from the court rooms. Proposals are being considered by the Chambers to suppress the words "devant Dieu et devant les hommes" (before God and man) in the legal form of oath, or to authorize a demand on the oath of any atheist to have the oath administered to him in a different form.

(c) Immunities.—Since the law made military service a universal obligation in France, three enactments have followed one another: that of 27 July, 1872, dispensing ecclesiastics from the obligation; that of 15 July, 1889, which fixed the term of active service for ordinary citizens at three years, and for priests at one; that of 21 March, 1905, fixing the term of active service at two years for priests as for others, and imposing upon them, up to the age of forty-five, all the series of obligations to which members of the religious community of the country are subject. A non-Catholic must, for public reasons, be liable to military service.

(d) Marriage.—Under the old regime parish priests officially registered births, deaths and marriages for the State. In 1787 Louis XVI accorded to the Protestants the same privilege, which, indeed, they had enjoyed under the Edict of Nantes, from 1591 to 1685. The Revolutionary laws and the Code Napoléon deprived the clergy of this status. Civil marriage was instituted, and the priest was forbidden to solemnize any marriage not previously contracted in the presence of a civil functionary. Immediately after the separation of Church and State (1790) the question was raised whether the prohibition was still to be maintained; the Supreme Court of Appeals (Cour de Cassation) replied in the affirmative, and punished a priest who had blessed a marriage not contracted before the mayor. Certain courts have admitted that if, after a civil marriage, one of the two parties, contrary to previous engagement, refuses to go to the church to constitute an injury to the other party so grave as to justify a suit for divorce; but this opinion is not unanimous. Catholics, for that matter, wish to abolish the law requiring the previous civil marriage.

Some of the impediments defined by the Church are not recognized by the State. Among these is impediment of spiritual relationship. One impediment recognized by the civil code (articles 148-150), but which the Council of Trent refused to make a canonical impediment, in spite of the solicitations of Charles IX's ambassadors, is that which results from the refusal of parents' consent. The Law of 21 June, 1907, on marriage, made the parental consent of the child (Legitimes) considerably lessened the obligations imposed on adults with regard to parental consent, and the discrepancies in this respect between the State law and the church law have, in consequence, become less serious.

The Law of 20 September, 1792, admitted divorces, even by mutual consent, and abolished that form of separation which, while terminating cohabitation and community of possessions, maintains the indissolubility of the civil bond. The Civil Code of 1804, though imposing conditions more rigorous than those of the Law of 1792, maintained divorce, and at the same time re-established legal separation (séparation de corps). The Law of 8 May, 1816, abolished divorce and maintained separation. The Law of 27 July, 1884, re-established divorce on the grounds of the condemnation of one party to an afflicting and infamous punishment, of violence, cruelty, and grave injuries, of adultery on the part of either husband or wife; it did not require the consent; it maintained separation and authorized the courts to transform into a divorce, upon the demand of either party and cause shown, at the end of three years, a separation which had been granted at the suit of either. This law has recently been aggrandized by two enactments providing that the husband may contract marriage with his accomplice and, instead of merely permitting the courts to convert separation into divorce at the end of three years, declare this conversion to be of right upon the demand of either party. The annual proportion of divorces to population has increased, from 3.88 per 10,000 inhabitants in 1900, to 5.57 per 10,000 inhabitants in 1907.

(e) Interments and Cemeteries.—The Decree of 23 Prairial, Year XII, ordered that there should be distinctions of religious beliefs in regard to cemeteries. This decree was abrogated by the Law of 14 November, 1881, and since then a Protestant or a Jew may be buried in that part of the cemetery which had until then been reserved for Catholics. The Law of 15 November, 1887, on free interments, forbids any proceedings which may contravene the wishes of a deceased person who has, by "an authentic act", expressed a desire to be buried without religious ceremonies. To be subject to the territorial conditions required as for the revocation of a will, and in consequence of this law certain death-bed conversions, when the deceased has had not had time to comply with the legal conditions of revocation, have been followed by non-religious burial.

The society founded in 1880 to promote cremation brought about, in 1886, the insertion of the word incineration in the law of free interments and, in 1889, the issue of an administrative order defining the conditions in which cremation might be practised. Between 1889 and 1904 the number of incinerations performed in the cemetery of Père Lachaise amounted to 3484.

The Decrees of 23 Prairial, Year XII, and of 18 May, 1806, assigned to the public establishments which had been constituted to administer the property and resources devoted to public worship (fabriques and consistoires) a monopoly of all undertaking, that is to say, all monarchical duty, including burials, religions, funerals, burials or exhumations, dowers, and other objects used to enhance the solemnity of funeral processions. Most of the fabriques, in the important towns, exploited this monopoly through middlemen. Some years ago, attention was called in the Chambers to the fact that, e.g., the proceeds from public interments, as well as from religious, were being taken by the fabriques, and upon this pretext the Law of 28 December, 1904, waived the business of funeral
management, assigning the monopoly of it to the communes. Only the furniture used for the exterior or interior decorations of religious edifices could thenceforward be provided by the fabriques. But the Separation Law of 1806 superseded, and all such decorative furniture became the property of the associations cultuelles (see below). As no association cultuelle was formed for the Catholic religion, the material fell into the hands of the sequestrators of the fabrique property.

The Law of Separation.—"The Law of Separation of the Churches and the State" (Loi de Séparation des Églises et de l'État) of 1806 proceeded from the principle that the State professes no religious belief. Regarded from the viewpoint of the life of the Church, it completely dissociated the State from the appointment of bishops and parish priests. Soon after the passage of the law all the vacant sees received titulars by direct nomination of Pius X. As to the annual revenue of the Church, the appropriation for public worship (budget des cultes), which in 1805 amounted to 42,324,933 francs, was suppressed. The departments and communes were forbidden to vote appropriations for church purposes on each association cultuelle, the number of equivalent in each case to three-fourths of the former salary to ministers of religion who were not less than sixty years of age when the law was promulgated and had spent thirty years in ecclesiastical services remunerated by the State. Secondly, it grants life pensions equivalent to that of former ministers of religion who were not less than forty-five years of age and had passed more than twenty years in ecclesiastical services remunerated by the State. It makes grants for periods of from four to eight years to ecclesiastics less than forty-five years of age who shall continue to discharge their functions. The law resulted, in the budget of 1807, in the elimination of the item of 37,411,800 francs ($7,488,360) for salaries to ministers of religion and the inclusion of 29,563,871 francs ($5,912,774) for the pensions and allowances of the first year, making a saving of about eight millions. As the allowances are to diminish progressively until the suppression is complete, at the end of eight years, and as the pensions are to cease with the lives of the pensioners, the appropriations on account of religious worship will decrease notably as year follows year.

With respect to the buildings which the Concordat had placed at the disposal of the Church, the law provided for several results for the case in which the parishes, presbyteries and seminaries (grands séminaires), for five years, the churches, for an indefinite period, should be left at the disposal of the associations cultuelles, which will be discussed later on in this article. In regard to church property, this consisted of (a) the menas episcopales and menas curiales (see Menas), which were composed of the possessions restored to the Church after the Concordat, together with the sum total of the donations made to bishoprics or parishes in the course of the intervening century; (b) the property of the parish fabriques, intended to meet all the expenses of public worship, and derived either from public contributions (subvention cultuelle and its conformity with "the general rules of public worship" as provided by Article 4). A general assembly of the episcopate, held 30 May, 1906, considered the question of the associations cultuelles, but the decisions reached were not divulged. Should such associations be formed according to the law, or must they refuse to form them? Among the twenty-three Catholic writers and members of the Chambers who had expressed, in a confidential letter to the bishops, a hope that the cultuelles might be given a trial. The publication of this letter had stirred up a bitter controversy, and for some months the Catholic press of France were seriously divided. Pius X, in the Encyclical "Gravissimo officii" (10 August, 1906), gave it as his judgment that this law, made without his assent, and which even purported to be made
against him, threatened to intrude lay authority into the natural operation of the ecclesiastical organization; the papal prohibition the formation not only of associations cultuelles, but of any form of association whatsoever "so long as it should not be certainly and legally evident that the Divine constitution of the Church, the immutables rights of the Roman pontiff and of the bishops, such as their authority over the property of the Church, particularly the sacred edifices, would, in the said associations, be irrevocably and fully secure".

The half-contradiction between Article 4 and Article 8 was not the only serious grievance which the Church could allege. The author of the law had furthermore restricted in a nullity a precaution for the real property rights of the future associations cultuelles. They were permitted to establish unlimited reserve funds, but they were to have the free disposal of only a portion equivalent to six times the mean annual expenditure, and the surplus was to be kept in the Caisse des Dépôts et Consignations, and employed exclusively in the acquisition or conservation of real and personal property for the use of religious worship. Moreover, the business transactions of all the cultuelles were to be under state inspection and control.

Thus the law on the one hand did not leave to the Church, legally represented by the associations cultuelles, without the ecclesiastical patrimony, of increasing it at will, of disposing of it at will; and on the other hand it left to the jurisdiction of the State the right, in any case of conflicting claims, to accept or to reject the legitimate claims of any cultuelle which might be in communion with the hierarchy.

The interdict laid upon the associations cultuelles has had several juridical consequences. First, the third of the classes of fabriques property described above was placed under sequestration, to be assigned by the State to communal beneficent institutions, of which every commune possesses at least one—the free hospital and dispensary. Secondly, the suppressed fabriques were under regular legal obligations, e.g., Masses to be said as consideration for pious foundations. In the intention of the author of the law, the obligation of causing these Masses to be said would have fallen upon the associations cultuelles; as these have not been founded, and, as far as the Church is concerned, the faithful tax themselves to pay for the repairs. The Church, tolerated in her own buildings, has no recourse against any mayor who might order the bells to be tolled for a non-religious funeral. At one time it was believed that the priests would be able to rent the churches on lease, but, owing to the demands of ministerial orders, that hope had to be abandoned. At last assemblages for religious worship were juridically classified as public meetings, and, as the Church refused to make the anticipatory declaration required by the Law of 1881, on public meetings, a law passed on 28 March, 1897, abolished this requirement in respect of all public meetings, those for religious worship included.

Such was the patchwork of expedients by which the Government, embattled by its own Law of 1905, and still refusing to negotiate with Rome, contrived what looked like a modus vivendi. The voter sees that the Church, under the cultuelles, has a positive still lingered, of which the foundations were established; that only the founders themselves or their heirs in direct line shall have the right to claim, within a period of six months, restitution of the capital of the said foundations, but that certain clerical benefit societies (the mutualités cordes, organized to receive the funds of the old diocesan caisses for the support of supernumerary priests) could receive incomes from these foundations and, in return, accept the obligation of the Masses. It appeared to the Holy See, however, that the constitution of these benefit societies did not adequately safeguard the rights of the bishops, and the French clergy were therefore forbidden to avail themselves of this law. As the right of recovery on account of non-fulfilment of the conditions has been allowed only to heirs in the direct line, the numberless pious foundations established by priests or other celibates are forever lost. And at the present writing no pious foundation is legally feasible in France, because the Church no personality legally qualified to receive such a bequest. Hence the absolute impossibility, for any French Catholic, of securing to himself in perpetuity the celebration in his own parish church of a Mass for the repose of his soul.

Thirdly, the use of the churches was to be assigned to the associations cultuelles, on condition that the latter should keep up the buildings, and the churches having not having been formed, would the State take possession of the churches? It dared not; or, rather, it did not wish to drive home upon the popular mind the effect of the separation. After a brief period of transition, during which ridiculous procès-verbaux were drawn up against priests who would the religious edifices at the disposal of clergy and people, officially placing assemblies for religious worship in the same official category as ordinary public gatherings; it was sufficient for the religious authority to make, at the beginning of each year, a declaration in advance of all the gatherings for public worship to be held during the year. But for fear of the Church's refusal to comply with this formality of an annual declaration, thus once more endeavouring to make the State understand that legislation regulating the life of the Catholic Church could not depend on the mere will of the State, and that ecclesiastical authority could not, even by a simple declaration, actively concur in any such legislation. Once more it was thought that the closing of the churches was imminent. Then came two new laws.

The Law of 2 January, 1907, permits the exercise of religious worship in the churches purely on sufferance for the benefit of the public, without the payment of any rent. Under this law, the clergy have only the actual use of the edifices, the maintenance of which is an obligation incumbent upon the proprietor—the State or the commune. But grave complications are to be expected. If the proprietor refuses the needful repairs, the church may be closed, for the sake of public safety, unless that is, the faithful tax themselves to pay for repairs. The Church, tolerated in her own buildings, has no recourse against any mayor who might order the bells to be tolled for a non-religious funeral. At one time it was believed that the priests would be able to rent the churches on lease, but, owing to the demands of ministerial orders, that hope had to be abandoned. At last assemblages for religious worship were juridically classified as public meetings, and, as the Church refused to make the anticipatory declaration required by the Law of 1881, on public meetings, a law passed on 28 March, 1897, abolished this requirement in respect of all public meetings, those for religious worship included.
without any previous authorization. A mayor can prohibit processions in his commune simply on the pretext of avoiding public disorder; as a matter of fact, in most of the great cities of France processions do not take place. Mayors can even forbid the presence at funerals of priests wearing their vestments, but very few mayors have ever issued such an order. Both the parish priest and the mayor have authority to cause the bells to be rung. A ministerial circular dated 27 January, 1907, withholds from the mayor the right to have the bells rung for "civil baptisms" or for non-religious marriages or burials, but there is no penal sanction for the transgression of this order. It is now forbidden to erect or to affix any religious sign or emblem in public places or upon public monuments; but the existing emblems remain private property may be decorated, even externally, with religious emblems.

(b) Repression of Interference with Religious Worship.—The law punishes with a fine of from 16 to 200 francs and imprisonment of from six days to two months anyone who by violence, threats, or any act which may be construed as pressure (pression) has attempted to influence an individual to exercise or to abstain from exercising any religious worship, or who, by disorderly conduct, interferes with the exercise of any such worship. It punishes, with a fine of from 500 to 3000 francs or imprisonment for from two months to one year, outrages or slanders against functionaries, if committed publicly in places of religious worship, and with from three months to two years imprisonment any teacher or chaplain who shall incite his hearers to resist the laws.

The Law of Separation and the Protestants and Jews.
—The Law of 1905 suppressed the special organic articles which regulated Protestant worship and the Decree of 1844, which had organized Jewish worship, recognized since 1806, and provided, since 1831, with state-paid rabbis. Before 1905 there had been a Reformed Church which was administered in each parish by a presbyteral council elected by the members of the denomination, and at the capital by a consistory to which all the presbyteral councils sent delegates, and which had the consent of the Government. This Church was very much divided in theology. It included: the Orthodox, who had carried, in the general synod of 1872, by 61 votes to 45, a declaration of faith involving as of necessity the acceptance of certain dogmas; the Liberals, who, in spite of their defeat in 1872, continued to claim for the pastor an unlimited freedom of teaching in his own church; a midway party (centre droit) who were nearer to the Liberals than to the Orthodox. The Law of 1905, in terminating the official existence of a Reformed Church, had this interesting result, that the theological divisions of the various groups openly expressed themselves in the formation of three distinct great organizations for the Reformed religion: (1) the Union Nationale des Églises Réformées Evangéliques, formed by the Orthodox at the Synod of Orléans (6 February, 1906), and requiring as a condition the acceptance of the Declaration of Faith of 1872; in this body the regional synods, in which the delegates of the presbyteral associations meet, and the national synod hold spiritual authority; (2) the Unions des Églises Réformées de France, formed by the centre droit at the Synod of Jarnac (June, 1907), with the like synodal organizations and with the hope, hardly justified so far, of receiving the adhesion of both the extreme parties; (3) the United Reformed Churches (Églises Réformées Unies), a very vague group of independent presbyteral associations, leaving to each Church its autonomy, restricting the functions of the synods, and representing, in place of dogma, the negative tendencies called "liberal". In this new threefold organization one feature, the consistory, disappeared.

The Lutheran Church has but sixty-seven parishes in France. It has grouped its cultuelles into one general association.

The Jewish denomination has formed the Union des Associations Cultuelles Israélites en France. The central consistory is composed of the grand rabbi, certain rabbis, and the graduates of the Rabbinical School of France who are employed in educational or religious functions, and lay members elected for a term of eight years by the associations cultuelles. The rabbis are elected, subject to the approval of the consistory.

Chaplaincies. The law authorizes the State, the departments, and the communes to pay salaries to chaplains in public institutions such as lycées, colleges, schools, hospitals, asylums, and in the Army the office of chaplain has not been abolished, but it remains unoccupied. Since 1 January, 1908, no minister of religion has been a member of the staff of any military hospital; the local ministers of religion may enter these hospitals at the request of sick soldiers. A decree dated 6 February, 1907, abolished the naval chaplaincies, but certain ecclesiastics who formerly filled these posts will continue to discharge the functions proper to them. The State does not allow appropriations for the maintenance of chaplaincies in schools where there are no boarders. It is a curious fact that, while the law forbids priests to enter primary schools, they have, up to the present, admitted to the secondary schools chaplains paid out of the public purse; the Government feared that if this guarantee of religious training were wanting parents would send their children to private schools. But a practice recently established in a certain number of lycées tends to relieve the State of the expense of chaplaincies by compelling parents who wish their children to receive religious instruction to pay an additional sum.

Political Groups, the Press, and Intellectual and Social Organizations.—Politically speaking, the Catholic group which receives the active support of the Catholic press is that known as the Action Libérale Populaire, founded by M. Jacques Piou, a Member of
the Chamber, on the basis indicated for Catholics by the instructions of Leo XIII. This association, which was legally incorporated 17 May, 1902, comprises 1,400 committees and more than 200,000 adherents. It acts by means of lectures, publications, and congresses. In the Chamber elected in 1906 there were 77 deputies belonging to this association.

Catholic daily journalism is represented chiefly by "L’Univers," "La Croix," and the "Peuple Français." The former of these papers, founded 3 November, 1833, by the Abbé Migne, had Eugène Veillot for its editor until 1839, and then the Abbé Feler, and that after him; and finally Abbé Veillot after 1844. Its adhesion to the political directions given by Leo XIII detached from the "Univers," in 1893, a group of editors who founded "La Vérité Française"; this split ended with the amalgamation of the "Univers" and the "Vérité," 19 January, 1907. In October, 1908, the "Univers," under the management of M. François Veillot, acquired greater importance with an enlarged form. "The Good Press" (Maison de la Bonne Presse), founded in 1873 by the Augustinians of the Assumption, immediately after issued the "Félibrins," a bulletin of pious enterprises and pilgrimages, and after 1875 the "La Croix," which maintains a certain number of provincial papers defending Catholic interests. Many independent papers, either Conservative or nominally Liberal, are reckoned as Catholic, although a certain number of them have mislaid Catholic opinion by their opposition to the programme of Leo XIII.

The leading Catholic review is "Le Correspondant," founded in 1829, formerly the organ of the Liberal Catholics, such as Montalembert and Falloux. Its policy is "to rally all defenders of the Catholic cause, whatever their origin, on the broad ground of liberty for all; to afford them a common centre where, laying aside differences that must be secondary in the view of Christians, each one can do his part, in letters, in science, in historical and philosophical studies, in social life, to win the victory for Christian ideals." Monarchist by its antecedents, with a public in which Monarchists form a large proportion, the "Correspondant" has had for its editor since May, 1884, M. Eugène Desidered, a Republican Member of the National Assembly of 1871, and who, in 1881, brought down upon himself the displeasure of the Republican electors by his sturdy opposition to the laws suppressing religious congregations.

The chief enterprises for the benefit of Catholic students in Paris are the Cercle Catholique du Luxembourg, which was founded in 1847, and in 1902 became the Association Générale des Étudiants Catholiques de Paris; the Olivant and the Laennec lectures, established in 1875, the former for students in law and letters, the latter for medical students, by F. de la Roche. The Cercle des Étudiants founded in 1895 by the Marist Fathers, and of which Ferdinand Brunetière was president of the board of directors until his death. Besides these, the Association Catholique de la Jeunesse Française, founded in 1886, now (June, 1909) unites in one group nearly 100,000 young men, students, peasants, numerous kinds of workers; it has many groups in the provinces and holds annual congresses in which, for some years past, social questions have been actively discussed. It was at the congress held by this association at Besançon in 1898 that the conversion of Ferdinand Brunetière was made known in the most remarkable fashion. Since 1905 it has been publishing its "Annales," and since 1907 a journal, "La Vie Nouvelle."

The extremely original association of the "Sillon" (furrow), attractive to some, disquieting to others, was founded in 1894 in the crypt of the Stasiolas college and became, in 1898, under the direction of M. Marc Sangnier, a focus of social, popular, and democratic action. M. Sangnier needs for its development, in their Cercles d'études, and propagate, in public meetings of the most enthusiastic character, the twofold idea that democracy is the type of social organization which tends to the highest development of conscience and of civic responsibility in the individual, and that of the organization in view for its realization. To be a sillonniste, according to the adherents of the Sillon, it is not enough merely to profess a doctrine, but one must live a life more fully Christian and fraternal. The Sillon has held a national congress every year since 1902; that of 1909 brought together more than three thousand members. The character of the organization has exposed it to lively criticism; its reception has not been the same in all dioceses. But in spite of obstacles, the sillonnistes continue their activity, often independently of, but never in opposition to, the hierarchy, carrying on their work of penetration in indifferent or hostile surroundings. They have issued a report, in 1905, a paper, "L'Éveil Démocratique," which in two years has gained 50,000.

Catholic undertakings for the benefit of the young people of the poorer classes have developed mightily of late years. In 1900 the "Commission des Patronages" drew up statistics according to which the Catholics had charge of 3,558 protectorates (patronages) and 32,574 institutions of various kinds giving Christian care to the young. In the city of Paris alone there were at that date 176 Catholic protectorates, with 26,000 young girls under their care. The Gymnastic Federation of the Protectorates of France, formed after the gymnastic festival which was held at the Vatican on 5 to 8 October, 1905, numbers to-day (June, 1909) 549 Catholic gymnastic societies and 60,000 young people.

The State carries on its fight against the Church on the field of post-academic education; in 1894 there were in France only 34 non-religious (latiques) protectorates; in 1907 there were 2,364 non-religious protectorates, 1,366 for boys and 998 for girls. To the political groups, the journalistic work, the good works for the benefit of the young, must be added the "Catholic social" undertakings; the earliest of which was the Gérant des Cercles Catholiques d’Ouvriers, founded in 1871 by C. de la Roche. Albert de Mun, the chief result of which was the introduction by Catholics in the Legislature of a certain number of legislative projects on social questions. The last five years have seen in France the birth and development, through the initiative of M. Henri Lorin and the Lyons journal, the "Chronique du Sud-Est," of the institution known as the semaines sociales, a series of social courses which bring together a great many priest and Catholic lay people. This idea has been imitated in Catholic Spain and Italy. Lastly a body of Jesuits have begun a valuable collection of brochures and tracts, under the title "L’Éveil Catholique," a veritable reference library for those who wish to study social Catholicism and an inestimable source of information for those who wish to join actively in the movement.

The Church in France during the First Three Years after the Law of Separation.—On 18 December, 1905, a large number of bishops issued a request to the parish priests and members of the fabric committees (fabriques—see above) not to be present at the taking of inventories of church furniture prescribed by the Law of Separation except as mere witnesses and after removing all reserves. A circular, dated 18 January, 1906, ordering the removal of Public Domains to open the tabernacles, intensified the feeling of indignation and, in consequence of an inter-
pellation, was implicitly disavowed, on 19 January, by M. Merrou, Minister of Finance. But the feeling lasted and, from the end of January to the end of March, expressed itself, in a certain number of churches, in violent outbreaks against the agents who came to take the inventories. The breaking open of local deposits, the burning of monarchical oaths, the refusal to lend the aid of their troops to these proceedings, the arrest and prosecution of persons taking part in Catholic demonstrations, and the mortal wounds inflicted on some of them in the departments of Nord and of Haute-Loire aggravated the public irritation. There were also hopes and misgivings among the generals, which were to take place in May, would result in defeat for the Government; but these hopes were not realized; the Opposition lost fifty seats in the balloting of 6-20 May.

The first general gathering of the bishops was held 30 May, 1806. The Eucalyd, "Gravissimo officii" (10 August, 1806), which rejected the cultuelles, received the absolute obedience of the Catholics. The attempt to form schismatical cultuelles, made by some priests and laymen in eighty localities, met with derision and contempt, and these isolated bodies of schismatics failed to obtain possession of the religious edifices. The fourth and third general gatherings of the bishops (4-7 September, 1806, and 15 January, 1807) thanked Pius X for the Eucalyd and discussed the organization of public worship, in accordance with a very definite programme for deliberation which the Holy See had sent to Cardinal Richard, Archbishop of Paris. On 12 December, 1806, Mgr. Montagnini, who had remained in Paris as guardian of the pontifical archives, was expelled from France after a minute domiciliary search and the seizure of his papers. The Vatican protested in a circular dated 19 December. Various incidents in the spring of 1807, expulsion of Cardinal Richard from his archiepiscopal residence (15 December, 1806), expulsions of seminarists from the seminaries, the employment of troops at Beaupréau and at Auxay to enforce such an expulsion—called forth lively protests from the Catholic press, which saw, in all these episodes, the realization of the settled policy thus expounded by M. Viviani, Minister of Labour, in the Chamber of Deputies, 8 November, 1806: "Through our fathers, through our elders, through ourselves—all of us together—we have bound ourselves to a work of anticlericalism, to a work of irreligion. . . . We have extinguished the remnants of lights which shall not be extinguished. We have shown the tollers that heaven contained only chimeras."

Successive meetings of the bishops have organized the work of the "Dien de Clergé." The organization is diocesan, not parochial. No individual is taxed; the subscriptions are entirely voluntary; but in many dioceses the diocesan budget fixes, however, imposing, the contribution which each parish ought to furnish. A commission of control, composed of priests and laymen, in many dioceses takes charge of the disbursement of the "Dien de Clergé." If a parish contributes insufficiently, and that not from lack of means but from lack of good will, the bishop may withdraw its parish priest. Two penalties can be inflicted upon Catholics who culpably refuse to contribute to the support of religious worship: a diminution of pomp in the administration of the sacraments, and an increase, as affecting such persons, of incidental burdens.

In all of the Dioceses of the French Republic, the various dioceses are not yet well ascertained; they seem to justify neither over-enthusiastic hopes nor over-pessimistic fears. An inter-diocesan fund (cesse) is beginning to do its work in aiding the poorer dioceses. In many communities the communal authorities, having taken possession of the presbytery, have rented it to the parish priest for a certain sum, but the law declares that the lease, to be valid, must have been ratified by the prefect. By this means the State has sought to prevent the communes from renting presbyteries too cheap. Of 32,093 presbyteries existing in France, 3643 were still occupied rent-free by the parish priests at the beginning of October, 1908. A circular of M. Briand, Minister of Justice, has animadverted on this aspect of the matter, and makes it clear that in the event of the dioceses a central committee, or diocesan bureau, composed of priests and laymen, is to be formed, with the episcopal authority for its centre, to combine the direction of all the organized work of the diocese. Subject to this committee there will be committees in the several archdioceses and parishes. These have been consulted in May, 1907. Pius X preferred small parochial committees under the curés to the formation of parochial associations (which might be interpreted as an acceptance of the Law of 1901 on associations), with an unlimited number of members. The ecclesiastical seminaries, which the Law of Separation drove out of the buildings they were occupying, have been reconstituted in other homes under the title of "Ecoles Supérieures de Théologie."

At present one of the most serious preoccupations of the Church in France is the supply of priests. In 1878, when Mgr. Bougaud wrote his book, "Le grand péri des églises de France," for the Ministry of Education, there were 3064 priests in the cathedral cities of France; in 1887, 2467 priests in France. Père Dudon, who has studied the question of the deficiency of priests very profoundly, computes that in 1906, at the breaking of the Concordat, there was a deficiency of 3109, and the very insecurity of the position of the Church before the law furnishes grounds for the fear that vocations will be on decreasing in frequency.

**FRENCH LITERATURE.**—**Origin and Formation of the French Language.**—When the Romans became masters of Gaul they imposed their language on that country together with their religion, their laws, their customs, and their culture. The Low Latin, which thus became universal throughout Gaul, was not slow in undergoing a change while passing through Celtic and Frankish throats, and in showing traces of climate and of racial genius. From the time the language makes its appearance, the Romance, which was destined to gradually evolve itself into the French. The glossaries of Reichenau and of Cassel contain many translations of Latin and Germanic words into Romance; they date from the eighth century. The earliest texts in our possession belong to the ninth century and are more valuable from an archaeological than from a literary standpoint. These are the formulas called "Les Sermonts de Dresbourg" (the oaths pronounced by the soldiers of the German Saint Charles, A d. 842); the song of "Froide de Sainte Eulalie", an imitation of a Latin hymn of the Church (about A. D. 880); a portion of a "Hymn to Sainte Eulalie" found at Valesius and written in a mixture of Latin and Romance, dating from the early part of the tenth century; "La Vie de Saint Léger", a bald narrative in verse, written in the latter part of the tenth century. The metaphor, under the action of influences now no longer traceable, of Low Latin into Romance did not proceed along the same lines everywhere in Gaul. From the Pyrenees to the Scheldt it varied within the varying localities, and gave rise to many dialects. These dialects may be grouped into two principal languages which are usually named from the word used as an affix in the south: the Romance language of the South; and the Romance language of oil in the North. The oil language comprised all the varieties of speech in use to the north of an imaginary line drawn from the estuary of the Gironde to the Alps, passing through Limousin, Auvergne, and Dauphiné. In the twelfth century, the speech of the Île-de-France began to take the lead over all the others, for the very good reason that it was the speech of the royal domain. Hereafter the French language possesses its form, and can give birth to a literature.

**In the Middle Ages.**—**Epic Poetry.**—In France, as everywhere else, literature began with poetry, and that epic. For many centuries this seems to have been the main nature of the French mind; and the abundance of the output is a striking proof of the breadth and power of the press. To comprehend more clearly the great mass of epic poetry of this period, we distinguish three subject-matters, or three cycles: the French, or national, cycle; the Breton cycle; the antique cycle.

The origins of the French cycle go back to the first ages of Frankish domination. The Frankish chiefs all kept their singers, who celebrated their exploits in poems of heroic inspiration. These compositions, called *conditlèves*, were sung to the harp, either at their festivals or at the head of the army before a battle. This spontaneous growth of epic poetry goes on until the tenth century; but after the tenth century the inventive power of the poets—the *tourelles*, as they are called—is exhausted; they no longer compose new

---

The text contains historical and literary analysis, discussing the evolution of the French language, the influence of Roman occupation, and the development of epic poetry in the Middle Ages. It emphasizes the role of the Île-de-France in shaping the modern French language and the importance of oral tradition in literature. The text touches on the works of notable authors and the historical context of French literature, highlighting the transition from regional dialects to a unified national language.
of France under the kingship and conflicts with external enemies, others are inspired by the struggles maintained by great feudal chiefs against the king ("Ogier le Danois", "Renaud de Montauban", "Gérard de Roussillon"), by the wars of vassals among themselves, and by historical memories belonging particularly to this or that province ("Rasoul de Cambrai", the "Geste des Lorrains", "Auberi le Bourgoing"). The

interesting element in all of them is, chiefly, their faithful portrayal of the feudal world, its virtues, and its asperities.

From the end of the twelfth century the success of the chansons de geste is counterbalanced by that of the romances of the Breton cycle. Here imagination roamis at large, above all that kind of imagination which we call fantasy. The marvellous plays an important part. Manners are less violent, more delicate. Love, almost absent from the chansons de geste, holds a great place and enters itself in a style at once respectful and exalted. We find everywhere the impress of a twofold mysticism, that of chivalry and of religion. In other words, if the chansons de geste bear the stamp of the Germanic spirit, the Breton romances are inspired by the Celtic. The central figure is that of King Arthur, a character borrowed from history, the incarnation of the independence of the Breton race. Around him are his companions, the knights of the Round Table and Merlin the wizard. The Breton romances were intended to be read, not to be sung; they were written, moreover, in prose. In course of time Chrestien de Troyes, a poet rather facile and prolific than truly talented, put them into rhymed verse; between 1160 and 1180 he wrote "Perceval le Gallois", "Le Chevalier au lion", "Lancelot et la charrette", "Chigiot", "Erec et Enide". In these romances Lancelot is the type of l'amour courtois—the "gentle" love which every knight must bear his lady.

As for the antique cycle, it is no more than a work of imitation. The clerics, observing the success of epic and narrative poetry, conceived the idea of throwing into the same form the traditions of antiquity. The "Roman d'Alexandre" and the "Roman de Troie", both written in the second half of the twelfth century, and amusing for their anachronisms and their baroque conceits, are, on the other hand, long, diffuse, and mediocre.

Lyric Poetry.—In these primitive periods of history the lines of division between various types of literature are not well defined. From the cantilène there sprang in turn the lyric poetry of the North. In these rough-hewn romances the poet relates in four or five couplets of varied rhythm, but all ending with the same refrain, an adventure of war or of love; they are called chansons de toile (spinning songs) or chansons de danse, because women sang them either as they spun and chatted or as they danced rondes. Love nearly always plays the chief part in them—the love, successful or crossed, of a young girl for a beau chevalier, or perhaps a love crushed by the death of the beloved—such are the themes of the principal chansons de toile that have come down to us, "Belle Brebencou", "Belle Brebencou", "Belle Aiglantine", "Belle Doette". But it was in Provence that lyric verse was to reach its fullest development. Subtle, learned, and somewhat artificial, Provençal poetry had for its only theme love—an idealized and quintessential love—l'amour courtois. On this common theme the troubadours varied the utmost richness; the form which they employed, a very complex one, had given rise to manifold combinations of rhythms. The men of the North were dazzled when they came to know the Provençal poetry. Strangely enough, it did not spread directly from province to province within the borders of France, but by way of the Orient, from the Holy Land, during the Crusades, where Southern and Northern lords met each other. Soon a whole group of poets of the old tongue in the North and East—Conon de Béthune, Gace Brulé, Blondel de Nesles, and especially Thiébaut, Count of Champagne—set to work to imitate the Provençal compositions.

Bourgeois and Satirical Literature.—The epic and the lyric were essentially aristocratic; they addressed themselves to an audience of barons and represented almost exclusively the manners and feelings of the upper classes in the feudal world. At the beginning of the thirteenth century, and after the emancipation of the communes, the bourgeoisie makes its appearance and from that moment dates the origin and rise of a bourgeois literature. It begins with the fabliaux, little tales told in lines of eight syllables, pleasant stories intended only to amuse. The characters they introduce are people of humble or middling station—tradesmen, artisans, and their women-folk—who are put through all sorts of ridiculous adventures; their vices and oddities are ridiculed smartly and with some degree of malice—too often, also, with coarseness and indecency. These fabliaux are animated by the Gallic spirit of irony and bawdy, in contrast to heroic, or "gentle" (courtois), spirit which inspires the chansons and lyric works. Bourgeois and villagers find here a realistic picture of their existence and their manners, but freely caricatured so as to provoke laughter.

Combine the spirit of the fabliaux with memories of the chanson de geste, and we have the "Roman de Renart", a vast collection, formed early in the thirteenth century, of stories in verse thrown together with-

out sequence or connexion. This work, which, it is believed, was preceded by another now lost, contains 30,000 lines. Enlarged by successive additions, the "Roman de Renart" is the work not only of several authors, but of a whole country and a whole epoch. What gives it unity, in spite of the diversity and incompleteness of the stories which is manifest in all its parts the same hero appears again and again—Renart, the fox. The action round about Renart is carried on by many other characters, such as Ysengrin,
the wolf, Noble, the lion, Chantecler, the cock, pseudo-
animals that mingle with their bearing and instinct as
animals traits and feelings borrowed from humanity.
Under pretext of relating an intrigue bristling with
complications, in which Ysengrin and Renart play
pivotal roles, he makes the humor, a kind of parody of the
chansons de geste, ridicules the nobles, feudal society, and feudal institutions.

Didactic Poetry.—Nobles and bourgeois, the two
classes which, in the literature of the Middle Ages,
speak with two accents so dissimilar, have one point of
resemblance: the one is as ignorant as the other. Only the clergies had any hold upon science—
the little science which those times possessed. It had
long remained shut up in Latin books composed in
imitation of ancient models, but, beginning from the
thirteenth century, the clergies conceived the idea of
bringing the intellectual contents of these works with-
inside the domain of the vulgar tongue. This was the
origin of didactic literature, in which the most import-
art work is the "Roman de la Rose", an immense
encyclopedia work produced by two authors with ten-
dencies and mentalities in absolute mutual opposition,
collaborating at an interval of forty years. The first
4000 lines, perhaps the "Roman de la Rose" were
about the year 1236 by Guillaume de Lorris, a charm-
ing versifier endowed with every attractive quality.
In the design of Guillaume de Lorris, the work is
another "Art of Love"; the author proposes to de-
scribe in it love and the effects of love, and to indicate the
varieties for a lover of love. He personifies the phasess and varieties of love and of the other sen-
timents which attend it, and makes of them so many
allegorical figures. Jealousy, Sadness, Reason, Fair
Response (Bel-Accueil)—such are the abstractions to
which Lorris lends a tenuous embodiment. With Jean
de Meung, who wrote the continuation of the "Roman
de la Rose", about 1275, the inspiration changes com-
pletely. Love is no longer the only subject. In
a number of prolix discourses, aggregating 22,000 lines
in length, the later author not only contrives to bring
in a multitude of notions on physics and philosophy,
but enters into a very severe criticism of contemporary
social organization.

Prose and the Chroniclers.—Prose separates itself
from poetry but slowly; when the epic outpouring has
been exhausted history appears to take its place. It is
the great movement of the Crusades that gives the
impulse. Villehardouin in his "Histoire de la Con-
quête d'Antioche" (1207), relates the history of
which he witnessed as a participant in the fourth crus-
sade; he knows how to see and how to tell, with
restraint and vigour, what he has seen and done. His
chronicle is not, strictly speaking, history, but rather
memoirs. Joinville attaches more importance to the
moral element; the charm of his "Histoire de Saint
Louis" (1309) is in the homely, at once frank and
deliberate, with which he sets forth the king's virtues
and recount his "chevaleries".

The great representative of history in the Middle
Ages is Froissart (1337-1410); in him we have to deal
with a master of the page. Just then the feverish
was entering upon its period of decadence, and the
chivalry of France had been decimated at Crécy and
Agincourt, feudalism and chivalry find in Froissart
their most martial portrayer. His work, "Chroni-
ques de France, d'Angleterre, d'Espagne, de Bretagne, 
Gascony, de Flandre, de autres lieux", is the story of
all the great and feats of arms in the Hundred Years'
War. Pitched battles, assaults, mere skirmishes, iso-
lated raids, deeds of chivalric daring, single combat—
decribes them with a picturesque effect and a dis-
tinction of style new in our literature. An epicritic
writer, he is above all attracted by the brilliant aspects
of history, gallicity, "bourgeois" and the common people, and considers it quite natural that they should pay the cost of war.

In his work is nothing to recall the gloominess of the
period; he has seen in it nothing but exploits and
heroic adventure.

Froissart knew how to depict the outward semblance
of an epoch. Philippe de Commynes, on the other
hand, has the heart of a poet and a psychologist of
souls; his viewpoint is from within. A minister of
Louis XI, and then of Charles VIII, he is versed
in affairs. He is much given, moreover, to analysis
of character and the unravelling of events which have
a political bearing. He goes back from effects to causes
and uses the method of the inquisition of the general
laws which govern history. One must appreciate either brilliancy or relief in his style; but he has clear-
ness, precision, solidity.

The Drama.—The fifteenth century would make
but a sorry figure in the history of French literature
had it not been that in this epoch there developed and
flourished a literary form which had already been
inchoate during the preceding centuries. Entirely
original in foundation and style, that drama owes nothing to antiquity. It was the Church, the great
power of those ages, which gave birth to it. For the
Middle Ages the Church was the home where, united in the Te Deum and the same con-
soling hopes, they spent that part of their lives which
was the best, and so the longest offices of the Church
were the most beloved by the people. Conformably
with this feeling, the clergy interpolated in the offices
representations of certain events in religious history,
but it was the drama. He personifies the phases and
varieties of love more especially at the feasts of Christmas ("Les Pas-
teurs", "L'Epoux", "Les Prophètes") and Easter
("La Passion", "La Résurrection", "Les Pélerins").
At first the liturgical drama was no more than a trans-
lation of the Bible into action and dialogue, but little
by little it changed as it developed. The text became
longer, verse took the place of prose, the vernacular
supplanted Latin. The drama at the same time was
of the Church was tending to make for itself an independent existence
and to come forth from the Church.

In the fourteenth century there appeared "Les
Miracles de Notre-Dame", a stage presentation of
a marvellous event brought about by the intervention
of the Blessed Virgin. Thus was the drama making its
way towards its completer form, that of the mysteries.
A mystery is the exposition in dialogue of an historical
incident taken from Holy Scripture or the lives of the
saints. Mysteries may be grouped, according to their
subjects, in three cycles: the Old Testament cycle
("Le Mystère du Viel Testament", in 50,000 lines),
the New Testament cycle ("La Passion", composed
by Arno Greban and presented in 1450), the cycle of
the saints ("Les Actes des Apôtres", by Arno and
Simon Greban). Metrically, the mystery is written in
lines of eight syllables; the lyric passages were sup-
posed to be sung. A prologue serves the purpose of
stating the theme and bespeaking silence of the audi-
ence. The piece itself is divided into days, each day
occupying as many lines as could be recited at one
adience, and the whole ends with an invitation to pray;
the last line being: "Chantons encore, c'est la veillée".

The dramatic system of the mysteries contains cer-
tain thoroughly characteristic elements. First of all,
the constant recourse to the marvellous: God, the
Blessed Virgin, and the Saints intervene in the action;

ly on abstract characters—Justice and Peace, Truth,

mercy—are added. Then the mingling of the tragic
and the comic: side by side with scenes intended to
excite deep emotion, the authors of mysteries present
other which are mere buffoonery, and sometimes of
the coarsest kind. This comic element is borrowed
from scenes of modern life; for anarchism is rampant
in the mysteries, contemporary questions are dis-
anted, Christ, the Virgin, and the apostles are
jured, and the Church of the five
teenth century. Lastly, not only does the action
wander without restraint from place to place, but

It occasionally goes on in several different places at the same time. If the conception was original and interesting, the execution of it, unfortunately, was very mediocre. The authors of mysteries were not artists; they knew nothing of character-drawing, their characters are all of a piece, without individual traits. Above all, the style is deplorable, and but seldom escapes puerility and triteness. The age, the great century of the mysteries; they were then in perfect harmony with the ideas and sentiments of the period. In the next century, with the change of those ideas and sentiments, they were to enter upon their decadence and to disappear.

In its turn, come forth from the Church? Can we connect it with the burlesque offices of the "Feast of Fools" and the "Feast of the Ass"?—Beyond doubt we cannot. But in the fourteenth century joyous bands of comedians organized themselves for their own common amusement—the "Baschoë", a society of lawyers, and the "Sots" or the "Enfants sans souci". It was by these societies that comic pieces were composed and played throughout the fifteenth century. Farces, moralities, and follies (sotties) were the kinds of compositions which they cultivated. The farce was a comic piece the only aim of which was to mock, although not complete from the fabliau, the farce bore a strong analogy to that form, and, as the themes were identical, the farce was often nothing more than a fabliau in action. The best specimen of the type is "La Farce de l'Avocat Patham" (1470), which presents a duel of wits between an advocate and a cloth-merchant, the one as thorough a rascal as the other. The morality, a comic piece with moral aims, is far inferior to the farce. Essentially pedantic, it constantly employs allegory, personifying the sentiments, defects, and good qualities of men, and sets them in opposition to each other on the stage. As for the folly (sotie), which still belonged to a dramatic parish, and belonged to the satirical drama, it was the special work of the "Enfants sans souci" and lasted but a short while.

The true literary distinction of the fifteenth century is to have given France a great poet—not the elegant, cold Charles d'Orleans, but that child of "poor and mean extraction" (de poore et petite extrago), that "mauvais garçon" who was François Villon. Insolent, his master, haunter of taverns, guilty of theft and even of assassination, the marvel is that he should have been able to evoke his grave and lofty mock-heroic chivalry of infant years, "Le Grand Testament" (1489), is dominated by that thought of death which, for the first time in France, finds its expression in the "Ballade des Dames du Temps jadis". Thus did the Christian Middle Ages utter through Villon what had been their essential preoccupation.

The Renaissance and the Reformation.—When the sixteenth century opens, literature in France may be regarded as exhausted and moribund. What had been lacking in the Middle Ages was the enthusiasm for form, the worship of art, combined with a language sufficient to fill the spirit and subject. The Renaissance was about to bestow these gifts; it was to communicate the sense of beauty to the writers of that age by setting before them as models the great masterpieces of antiquity. Reversion to antiquity—this is the characteristic which dominates all the literature of the sixteenth century. The movement did not attain its complete development till the time of the wars of Charles VIII. "The first contact with Italy", says Brunière, "was in truth a kind of revelation for us French. In the midst of the feudal barbarism of which the fifteenth century still bore the stamp, Italy presented the spectacle of an old civilization. She awoke the foreigner by the ancient authority of her religion and all the pomp of wealth and of the arts. Add to this the allurement of her climate and her manners. Italy of the Renaissance, invaded, devastated, trampled under foot by these men of the North, suddenly, like Greece of yore, took possession of the rude conquerors. They conceived the idea of another life, more free, more ornate—in one word, more human—than that which they had been led to believe by what was left of the old, and then the power of beauty twined itself into the soul of gendarmes and lanquenets, and it was then that the breath of the Renaissance, coming over the mountains with the armies of Charles VIII, of Louis XII, and of Francis I, completed in less than fifty years the renovation of what little still survived of the medieval tradition."

If the language very quickly undergoes the modifications brought about by this new spirit, it is only little by little that the various forms of literature allow themselves to be penetrated by it. Such is the case with poetry. The principal poet of the earlier half of the sixteenth century, Clément Marot (1497—1544), begot, by his inspiration, to both the Middle Ages and the Renaissance. Of the Middle Ages he has first of all all his scholastic education and also an uncontrolled passion for allegories and for bizarre and complicated versification. In the best of his "Epîtres" he sacrifices to the worst of the faults held in honour by the fifteenth century: the taste for alliteration, for playing upon words, and for childish tricks of rhyme. On another side the influence of the Renaissance reveals itself in his work in many imitations of the Latin, Virgil, Catullus, Ovid. The "Epîtres", his masterpiece, are, besides, in a style of composition borrowed from the Latin. A court poet, attached to the person of the chief of the Chateau de Marqueville de Valois, himself a humanist and a patroness of humanists, no man was more favourably situated for the effect of that influence. Marot is, in other respects, a very original poet; his "Epîtres" mark the appearance of a quality almost new in French literature—wit. The art of saying things prettily, of telling a story cleverly, of winning pardon for his mockeries by mocking at himself, was Marot's.

Greco-Latin imitation is really only an accidental feature in the work of Marot; with the poets who succeed him it becomes the very origin of their inspiration. For the poets who later formed the group called "La Pléiade" Joachim du Bellay furnished a programme in the "Deffence et Illustration de la langue française" (1549). To eschew the superannuated formula and the "condiments" (épiceris) of the Middle Ages, to imitate without reserve everything that has come down to us from antiquity, to enrich the language by every means practicable—by borrowing from Greek, from Latin, from the vocabulary of the handicrafts—these are the principles which this author lays down in his work. And these are the principles which the chief of the "Pléiade", Pierre de Ronsard (1524—85), applies. Ronsard's ambition is to exercise his wit in all the styles of composition in which the Greeks and Romans excelled. After their example he
composed odes, an epic work (the "Franciade"; in which he aspires to do for France what Virgil, with the Aeneid, did for Rome), and some eclogues. If he has utterly failed in his epic attempt, and if his abuse of erudition turns his own poetry to ridicule, it must nevertheless be said that these works sparkle with beauties of the first order. Ronsard is not only, as was long ago said of him, the marvellous workman of little pieces, of sonnets and tiny odes; in brilliancy of imagination, in the gift for inventing new rhythms, he is one of the greatest poets of his time and of all time. Side by side with him Du Bellay, in his Regrets, inaugurated la poésie intime, the lyricism of confidences, and Jodelle gave to the world "Cléopâtre" (1552), the first, in point of date, of the tragedies imitated from the antique, thus opening the way for Robbe, Gargarin, and Montchemin.

At the same time that the Renaissance was bringing us the feeling for art, the Reformation was giving currency to new ideas and tendencies. The two inspirations commingled rendered possible the work of the two masters of sixteenth-century prose, Rabelais and Montaigne. In that prodigious nursery tale which, under the influence of the author's own personality, it would be a mistake to think that the author of Gargantua" hides a thought and a symbol under very line of text. All the same, it is true that one must break the bone to find the "substantitive marrow". Rabelais has a hatred of the Middle Ages, of its usages and of human nature; he does not mistrust human nature: he believes it to be good and wants people to follow its law, which is instinct. His ideal is the abbey of Thelema, where the rule runs: Do as you please (Fais ce que tu voudras). "Nature is my gentle guide", says Montaigne on his part. This is one of the ideas which circulate in his essays, the first book of which appeared in 1580. In this sort of disjointed confession, Montaigne speaks above all of himself, his life, his tastes, his habits, his favourite reading. As he goes along he expounds his philosophy, which is a kind of scepticism, if you will, but applying exclusively to the things that belong to reason, for with Montaigne the Christian Faith remains intact. What makes Montaigne an original writer, and makes his part in French literature one of capital importance, is his having been the first to introduce into that literature, by his minute study of his own mind and of man, a psychological and moral observation of man which was to form the foundation of great works in the next century.

In a general way the Reformation produced a profound impression on the writers of the sixteenth century, giving them a freedom of movement and of thought not known to the learned men of the Middle Ages. On the other hand, multiplying theological discussions, controversies, and fierce polemics between Catholics and Protestants—dividing France into two parties—it gave birth to a whole literature of conflict. We will confine ourselves to the mention of Calvin and his "Institution de la religion chrétienne" (1541). As a theologian he need not concern us here; we need only say that, by the simplicity of his exposition, by the energy of his harsh and gloomy style, he effects an entrance into our literature for a whole range of subject-matters which had until then been reserved for Latin. Calvin was the teacher of the Reformation; Agrippa d'Aubigné was its soldier, but one who had taken the pen in hand. It was after long service in the field that he composed his "Tragiques", a versatile work unlike any other, a medley of satire and epic. Here the author presents a picture of France devastated by wars of religion, and paints his adversaries in odious colours. Now and then he draws a picture of life with fine utterances. After all these struggles and all this violence, the age could not but long for peace, could not but hold all these excesses in horror. Such a spirit inspires the "Satire Ménipée" (1594), a work, part prose, part verse, which, with its irony, gives evidence that an epoch has come to its end, fatigued with its own struggles and ready for a great renovation.

The Seventeenth Century; the Classical Age.—The seventeenth century is the most noted age in the history of French literature. The circumstances of the age, it is true, are peculiarly favourable for literary development. France is once more the strongest factor in European statecraft; her political influence is supreme, thanks to the wonderful achievements of the brilliancy of her French diplomacy. Conscious of her greatness, she ceases to be dependent on foreign literatures, and fashions new literary forms which she bids other countries copy. The internal peace which she enjoys favours disinterested study in the domains of art and literature, without the need of giving to literary creations a social or political tendency. Authors are patronized by society and the court. Intellectual conditions are especially favourable: the national mind, steeped in the learning and culture of the classes, has become sufficiently strengthened to emancipate itself from the yoke of servile imitation. The language, capable of expressing the ideas of a great race, the love of the great men, the sense of the greatness, the subtle shade of thought, has become clearly conscious of its power and is exclusively French in syntax and vocabulary. Such are the circumstances, such the elements, which combine to form the genesis of the classical literature of France. It does not, indeed, claim to be a determined theme, for the influence of literary activity in France may not range; progress will continue throughout the ages to come. But in the works of that period may be seen the most complete and perfect presentation of the distinguishing qualities of the French race; the ideal counterpart, in literature, of the most perfect form of French literature.

It is characterized, in the main, by a tendency which seeks the apotheosis of human reason in the realm of literary activity, and regards the expression of moral truth as the end of literary composition. Hence the fondness of the literature of the seventeenth century for general ideas and for the sentiments that are common to mankind, and its success in those kinds of literature which are based on the general study of the human heart. It reached perfection in dramatic literature, in sacred eloquence and in the poetry of the court. The canonization of the sixteenth-century literature for all that is relative, individual, and mutable; in lyric poetry, which appeals primarily to the individual sentiment, in the description of material phenomena, and in the external manifestations of nature, it falls short of success.

In summing up the story of the development of French literature in the seventeenth century, we must consider it in three periods: (1) from the year 1600 to 1659, the period of preparation; (2) 1659–1688, the Golden Age of classicism; (3) 1688–1715, the period of transition between the seventeenth and eighteenth centuries.

First Period (1600–1659).—With the followers of Ronsard and those poets who immediately succeeded him a kind of lassitude had seized upon poetry at the end of the sixteenth century; impoverished and spiritless, it handled only trifling subjects. Besides, having been long subject to the artistic domination of Italy, and having owed allegiance to Spain also since the intervention of the Spaniards in the days of the League, poetry had become infected with mannerisms, and suffered a considerable lowering of tone. A reformation was necessary, and Malherbe, whose "Odes" appear between the years 1600 and 1628, undertook it. From the first he repudiated the idea of servile imitation of ancient classical authors; discrimination should be shown in borrowing from their writings, and imitation should be restricted to features likely to strengthen the thought. On the other hand, if the language of
the sixteenth century was copious, many of its terms were not of the purest; these Malherbe severely interdicted. With regard to prosody, he lays down the strictest rules. Malherbe’s reform, therefore, aims at purifying the terminology of the language, and fixing set forms for prosody. Unluckily, it must be secured at a heavy price; subordinated unduly to inflexible rule, its freedom of movement impeded, lyric poetry is finally crushed out of life. Two centuries must elapse before it revives and shakes off the yoke of Malherbe. Nor was the rule of Malherbe established without resistance. Of the writers of that time, none were less disposed to submit to it than Mathurin Régnier (1579–1613), a poet who in many ways recalls the sixteenth century. His satires are one long protest against the theory so dear to Malherbe. An enemy to rule and restraint, Régnier again and again insists upon the absolute freedom of the poet; the poet must write as the spirit moves him; let every writer be what he is, is the only principle he accepts. A numerous group of poets shared Régnier’s views, those known by the name of les Grotesques. Such are Saint-Amant, Théophile de Viau, the direct heirs of the Pléiade; and Scarron, whose poetry is the very incarnation of the burlesque form imported from Italy.

Malherbe would perhaps have been unable to combat this opposition, had not two other forces come to his assistance in checking the flood of licence that was spreading with Régnier and his associates. The first of those was the culture of French society. The rise of a cultured class and of its life of refinement, which took place toward the end of the reign of Henry IV, is one of the striking facts of the first half of the seventeenth century. A new institution, the salon, presided over by women, now makes its appearance; here men of the world meet literary men to discuss serious questions with women. The salon will prove of service to writers, though sometimes a hindrance or a lure to false paths; and the next two centuries of literature will show evidence of its influence. The first salon was that of the Marquise de Rambouillet; for more than twenty years people of superior intellect and culture were wont to gather there. By exacting from its guests refinement and elegant manners it contributed to chaste the language and to strip it of all low and grotesque words. It is in the salon that the over-refinement called preciosity budded and bloomed. However, the influence of the Précieuses was perhaps more harmless than some would have us believe. They had enriched the language with many clever ex-

pressions; they have helped to develop the taste for precision and subtilty in psychological analysis. They favoured also, though in an indirect way, that study of the human heart which was the grand theme of seventeenth-century literature.

Authority also, as represented by Richelieu, enrolled itself in the crusade of reform and added its sanction to the new disciplinary laws. Under the patronage of the great minister, and by his inspiration, the French Academy was founded in the year 1635. In virtue of its origin and of its aims, the Academy exercised officially the same influence as the salon. It watched over the purity of the language and over its regular development. One of its members, Vaugelas, the great grammarian of that age, contributed in an especial way towards the achievement of this object. If the new ideal found its first expression in poetry, prose also was soon to share in the advantages of the reform. Balzac, in his “Lettres” (1624), created French prose. He is said to have furnished the rules of French prose composition; in fact it is his chief merit to have taught his own age, along with the art of composition, what the greatest minds of the sixteenth century—what Rabelais and Montaigne—had not known: the rhythm, the flow, and the harmony of the period. In this way, he has fashioned the magnificent form, which the great prose writers of the last half of the seventeenth century will find at their disposal when they seek to give outward shape to the sublime conceptions of their minds.

At the same time, Voiture, one of the habitués of the Hôtel de Rambouillet, gave to French prose its raciness, its vigour and its ease of movement. Balzac and Voiture, of the great writers of that time, are masters of styles in the seventeenth century, but Descartes, whose “Discours de la Méthode” appeared in 1673, has left his mark deeply stamped on French classical literature. This could not be otherwise; the principles which gained distinction for him were the same as those invoked for the literary reform. But reason, whose sovereign authority Descartes proclaimed, and whose power he demonstrated, was the same reason whose absolutism Malherbe sought to establish in literature. The abstract tone, the surety of inference proceeding directly to the solution of one or two questions clearly laid down, permitting no chance thoughts to lead it away from the straight line, the determination to take up only one subject, mastering it completely, to simplify everything, to see in man only an abstract soul, without a body, and in

EUSTACE DESCHAMPS PRESENTING CHARLES VI WITH HIS HISTORY
Miniature of 1383
this soul not the phenomena, but the substance—these are at the same time Cartesian principles and literary peculiarities of the seventeenth century.

The craving for order and uniformity which made itself felt in every branch of literature seised the theatrical world and achieved the masterpieces of the classic drama. In 1639, Jean Mairet produced his "Guise" in which theunities are for the time observed—unity of action, unity of time, unity of place. The plot turns upon one incident which is tragic without a trace of the comic element, the action does not extend beyond one day, and there is no change of scene. The framework of classical tragedy was created; what was needed was a writer of genius to introduce himself. Corneille was this man. In the *merveille* of "Le Cid", he gave to the French stage its first masterpiece. Lofty sentiments, strong dialogue, a brilliant style, and rapid action, not exceeding twenty-four hours, were all combined in this play. While its subject was taken from modern history, Corneille, after the famous controversy on "Le Cid", stirred up by his jealous rivals, returned to subjects taken from Roman history in his later pieces, which date from 1640 to 1643, namely "Horace", "Cinna", and "Polyeucte". In these the plot becomes more and more complicated; ten people plot; ten people are stopped and anomalous situations, and looks for variety and strangeness of incident to the neglect of the sentiments and the passions. The noble simplicity and serene beauty which characterized his great works are replaced by the riddles of "Héracle" and the extravagances of "Athalie".

Corneille's "Polyeucte" shows traces of the controversies on Divine Grace which at that time agitated the minds of the men. Jansenism profoundly influenced the entire literature of the seventeenth century, giving rise, first and foremost, to one of its prose masterpieces, the "Lettres provinciales" (1656-67) of Pascal. In these the author champions his "Andromaque", which achieved a success no less marked than that of the "Cid"; and after, scarcely a year passed without the production of a new work. After bringing out the "Phèdre" in 1677, Racine withdrew from the stage, partly from a desire for rest and partly on account of religious scruples. The only drama produced by him in this last period was "Esther" (1689) and "Athalie" (1691). His tragedies were a reaction against the heroic and romantic drama which had prevailed during the first part of the century. He places on the stage the representation of reality; his plays have their source in reason rather than in imagination. They are the dramatic expression of the conscience of the century, the one hand, but also, on the other hand, an increased moral range and a wider psychology. Again, instead of the complicated action of which Corneille is so fond, Racine substitutes "a simple action, burdened with little incident, which, as it gradually advances towards its end, is sustained only by the interests, the sentiments and the emotions of the characters" (preface to "Bérénice"). It is, accordingly, the study of character and emotion that we must look for in Racine. In "Britannicus" and in "Athalie" he has painted the passion of ambition; but it is love which dominates his tragedies. The centurial method of which Racine has analysed this passion shows what a degree of audacity may coexist with that classic genius of which he himself is the best example.

In some points of detail, La Fontaine, whose "Fables" began to appear in 1668, differs from the other great classics. He has a weakness for the old authors of the sixteenth century and even for those of the Middle Ages, for the words and phrases of a bygone time, and certain popular expressions. But he is an utter classic in his correctness and appropriateness of expression, in the nice attention to details of composition displayed in his "Fables" (a charming grace which he himself created), and in the added perfection of nature as he paints it. The winged grace with which he skims over every theme, his talent for giving life and interest to the actors in his fables, his consummate skill in handling verse—all these qualities make him one of the great writers of the seventeenth cen-
tury ideal.

In this second period of the seventeenth century, indeed, all forms of literature bear their fine flower. In his "Maxima" (1665), the Duke de La Rochefoucauld displays a profound knowledge of human nature, and an almost perfect literary style. The "Lettres" of Madame de Sévigné, the first of which bears the date 1617, are marvels of wit, vivacity, and sprightliness.
In his “Mémoires” (completed in 1675) Cardinal de Retz furnishes us a model for this class of writing. In the “Princesse de Clèves” (1678) Madame de La Fayette created the psychological romance. Finally, it would be a misconception of the classical genius not to allow to religious inspiration a marked place in this period. The whole course of the seventeenth century was marked by the success of those of its writers escaped that influence; and those who did, also remained outside the general current and the philosophic movement of the century. Pulpit oratory, too, reached a high degree of excellence. The first years of the century had been, so to say, a fragrant ferment that most of the Jesuits, like François de Sales (1567–1622). He had, in 1602, preached the Lenten sermons before Henry IV at the Louvre, and ravished his hearers by the unction of his discourse, overflowing with a wealth of pleasing imagery. The religious revival was then universal; orders were founded or reformed. Among them the Oratorians, like the Jesuits, produced more than one remarkable and vigorous preacher. The Jansenists, in their turn, introduced into pulpit eloquence a sober style without any great wealth of fancy, without vivacity or brilliancy, but simple, grave, uniform. Thus, sacred eloquence, already flourishing before 1660, gradually took from this period—the trivialities, the tawdry refinements, the waste of profane learning. It was especially during the brilliant period extending from 1659 to 1688 that Christian eloquence reached its greatest power and perfection, when its two most illustrious representatives were Bossuet and Bourdaloue.

In 1659 Bossuet preached in Paris, at the Minims, his first course of Lenten sermons; during the next ten years his mighty voice was heard pouring forth eloquent sermons, panegyrics, and funeral orations. Animated, earnest, and familiar in his sermons, sublime in his funeral orations, simple and lucid in his logical expositions, he always carried out the principle, embodied in a celebrated definition, “of employing the word only for the thought, and the thought for truth and virtue.” Not only is he a magnificent orator, the greatest that ever occupied the pulpit in France, but he is also, perhaps, the writer who has had the most delicate appreciation of the French language. Furthermore, it must not be forgotten that Bossuet, in his “Discourse on Universal History” (1681), did the work of a historian. He is, indeed, the only historian of the seventeenth century. In the art of investigating historical causes, he is a master of exceptional power: he has always, when it attended on his conclusions by the most recent discoveries of historical science. He founded the philosophy of history, and Montesquieu, in the following century, had but little to add to his work. Bourdaloue, who ascended the pulpit last vacant by Bossuet (1669), is a very different man. In Bourdaloue, we do not find the abruptness and familiarity of Bossuet, but an unbroken evenness, a style always regular and symmetrical, above all a logician; he appeals to the reason, rather than to the imagination and the sensibilities.

From 1688 to 1715.—In the short space of eighteen years classical literature was in its glory. It resulted from the equilibrium between all the forces of society and all the faculties of the mind, an equilibrium not destined to last long. If, during the last years of the century, the great writers still lived preserve their powers unimpaired to the end, we feel, nevertheless, that the era of formation, 1688, the king, aged and absorbed by the cares of his foreign policy, ceased to take his former interest in literature. Discipline becomes relaxed. The salon, which for a while had been eclipsed by the Court, gradually regained its ascendency. Under its influence, preciosity, which had disappeared during the great period of classicism, began to revive. This becomes evident in a department in which it would seem the précieux would have but little interest, that of sacred eloquence. Fléchier marks an inordinate propensity to wit and frivolities of language. Massillon, who is Fléchier’s heir, lacks the fine equilibrium between thought and form which was found in Bossuet. He is a wonderful rhetorician who sacrifices too much to the adornments of style. Elsewhere, the conception of religious eloquence underwent a change. In the writers of the golden age the period was, perhaps, somewhat too long, but it was broad and spacious, effectively reproducing the movements of the thought; it was now replaced by a shorter phrase, more rapid and more decisive. This was the style of Racine (1639–1715) and of La Bruyère (1688). The appearance of the “Caractères” marks, furthermore, a still more important change in taste. La Bruyère, unlike the great classicists, does not oblige himself up to the general and abstract study of man; what he paints is not the man of all time, but the man of his own day, his looks, his vices, and his ridiculous traits. Picturesque details and outward peculiarities constitute the great attraction in the style of the “Caractères”; these, too, distinguish it from the works of the preceding period. The same artistic qualities are also found in Saint-Simon, who did not write his “Mémoires” until after 1722, the materials for which he had been collecting since his youth. A real writer, however, who from many points of view is connected with the seventeenth century. Saint-Simon not only gives a moral portrait of the person dealt with in his “Mémoires,” but by dint of violent colours, of contrasting touches, daring figures combined into a brutal, incorrect, passionate, and feverish style, he reproduces the physical man to the life. In dramatic literature comedy follows the same tendencies. After Molière, and after Regnard, who imitated him, the comedy of character comes to an end, and with Dancourt (1661–1725), the comedy of manners, which has its inspiration in the actual, replaces it. Lastly, Racine introduces into literature a spirit utterly foreign to the pure classics, so reverent of tradition—the spirit of novelty. Télémantoque (1699), a romance imitated from antiquity, records the views of the author on government, foreshadows the eighteenth century, and its mains for reform.

The Eighteenth Century.—To do justice to the writers of the eighteenth century, we must change our point of view. In truth, the eighteenth century’s conception of literature differed profoundly from that of the great writers of the time of Louis XIV. The eighteenth century, moreover, never rises above mediocrity, as long as it follows in the steps of the seventeenth, but is always interesting when it breaks loose from it. To follow its literary development, we must divide it, like the preceding century, into three periods: (1) 1715–50; (2) 1750–90; (3) 1789–1800.

From 1715 to 1750.—After the death of Louis XIV, the tendencies which already manifested themselves in the last period of the seventeenth century become more marked. The classical ideal becomes more and more distorted and weakened. Consequently, all the great branches of literature which flourished by following this ideal either decay or are radically modified. The tragic vein in particular is completely exhausted. After Racine, there are no longer any great writers of tragedy, but only imitators, of whom the most brilliant is Voltaire, whose versatility fits him for every kind of literature. Comedy shows more vitality than tragedy. With Dancourt it had taken the direction of the praiseworthy, of manly character, and the tendency betrays itself in Lesage (1668–1747). "Tuceart!", which places on the stage not a character, but a condition in life—that of the financier, is a piece of direct, profound, and merciless observation. Applying the same methods to romantic literature, Lesage wrote "Gil Blas", which first appeared in 1715,
and in which, in spite of a peculiar method of narration, borrowed from Spain, the manners and the society of the time are drawn to the life. Thus "Gil Blas" inaugurates in French literature the romance of manners. The most original of the writers of comedy in this period, however, is Marivaux, who, between 1722 and 1763, wrote a charming series of "La surnaturel de l'amour", "Le jeu de l'amour et du hasard", "Le Legs", "Les fausses confidences", etc. The utmost refinement in the analysis of love—a love that is timid and serpulous—propriety in the settings of his works, a subtle wit bearing the stamp of good society, grace and delicacy of feeling—these are the distinguishing characteristics of Marivaux.

But if the great classical types are exhausted or fall to pieces in giving birth to new forms, literature is compensated by the enlargement of its domain in some directions, absorbing new sources of inspiration. Writers turn away from the consideration of man as a moral unit; on the other hand, they devote themselves to the study of man regarded as a product of the changing conditions of the State, political, social and religious. In this, new direction of literary activity is favoured by the birth of what has been called "le philosophic spirit". After the death of Louis XIV, freedom against every form of tyranny and every spirit was at an end. Respect for authority and for the social hierarchy, submission to the dictates of religion—these were things never questioned by any of the eighteenth-century writers. From the earliest years of the eighteenth century, on the contrary, an aggressively anti-clerical and anti-authoritarian spirit, in literature, as in social life, becomes perceptible. This twofold disposition—curiosity about human idiosyncrasies as they vary with times, places, environments, and governments, and a spirit of unfettered criticism—is met with in Montesquieu, chronologically the first of the great writers of the century.

Montesquieu indeed, does not manifest any destructive inclination in regard to government and religion; nevertheless, in the "Lettres persanes" (1721), there is a tone of satire previously unknown. Montesquieu shows himself the disciple of La Bruyère, but does not hesitate to discuss subjects from which his master would have been obliged to refrain: social problems, the royal power, the papacy. The "Lettres persanes" is a pamphlet rather than the work of a moralist. They make an epoch in the history of French literature, marking the first appearance of the political satire.

But the truly great works of Montesquieu are the "Considérations sur la grandeur et la décadence des Romains" (1734), and the "Esprit des Lois" (1748). In the "Considérations", Montesquieu, by undertaking to explain the succession of events by the power of ideas, the character of the people, the action and reaction of cause and effect, inaugurated a historical method unknown to his predecessors—but certainly not to Bossuet, who was the most illustrious of them. From the "Considérations" the whole movement of modern historical study was to draw its inspiration later on. In the "Esprit des Lois", he studies how laws are evolved under the influences of government, climate, religion, and manners. On all these subjects, upon the works of certain errors of detail, he threw a light that was altogether new.

With Montesquieu, jurisprudence, politics, and sociology made their entrance into literature. With Buffon, science has its turn. Already Fontenelle, in his "Entretiens sur la pluralité des Mondes", had popularized the most difficult astronomical theories. Buffon, in his "Histoire naturelle", the first volumes of which appeared in 1749, set forth the ideas of his time on geology and biological species in a style that is brilliant and highly coloured, but somewhat studied in its mannerisms. No doubt his descriptions are written in a pompous, ambitious style ill suited to the severity of a scientific subject, and they are too often interlarded with commonplace. It is none the less true that in introducing natural history into literature he exercised a considerable influence; from Buffon, who set forth nature in its various aspects, a number of writers were to issue. The consequence of this broadening of literature was the loss of the purely speculative and charming quality which had played in the seventeenth century, when the sole aim of the writer had been production of a beautiful work and the inculsion of certain moral truths. The writers of the eighteenth century, on the contrary, wish to spread in society the philosophical and scientific theories they have adopted, and this diffusion is effected in the salons.

From 1750 to 1789—Voltaire is one of the first to mark the character of this period. Of the writers who flourished about the middle of the eighteenth century, the greatest glory surrounds Voltaire (1694-1778). The kind of intellectual sovereignty which he enjoyed, and which was obtained only in France,Between 1750 and 1778, is attributable to his great talent as a writer of prose as well as to his great versatility. There is no literary form—tragedy, comedy, epic poetry, tales in prose, history, criticism, or philosophy—in which he did not practise with more or less success. It has been said of him that he was the "first of the philosophes", and it is the "first of mediocrities". Though paradoxically expressed, these verdicts are partial truths. In no branch of literature was Voltaire an originator in the full sense of the word. A man of varied gifts, living at a time when thought extended its domain in every direction and took hold of every novelty, he is the most accomplished and most brilliant of popularizers. In the early part of his career, from 1717 until 1750, he confines himself almost entirely to purely literary work; but after 1750, his writings assume the militant character which henceforth distinguishes French literature. Much of his historical work is in the "Quinconces" (1751) and the "Essai sur les Mœurs" (1756), he becomes a controversialist, assailing in his narrative the Church, her institutions, and her influence on the course of events. Finally, the "Dictionnaire philosophique" (1764) and a number of treaties dealing both with philosophy and exegesis, which Voltaire gave to the world between 1769 and 1776, are wholly devoted to religious polemics. But, while Voltaire shows his hostility to religion, he attacks neither political authority nor the social hierarchy; he is conservative, not revolutionary, in this respect.

With Diderot and the Encyclopedists, however, literature becomes for a time destructive of the established order of things. Like Voltaire, Diderot is one of the most prolific writers of the eighteenth century, producing in turn romances, philosophical treatises, tending towards atheism, essays in art-criticism, dramas. But it is only in productiveness that Diderot can be compared with Voltaire; for he has none of Voltaire's admirable literary gifts. He is above all an improvisatore, and, with the exception of some pages that are remarkable for movement and colour, his work is confused and uneven. His principal production is the "Encyclopédie", to which the author devoted the greatest part of his life; the first two volumes appeared in 1751. The aim of this bulky publication was to give a summary of science, art, literature,
philosophy and politics, up to the middle of the eighteenth century. To bring this enterprise to a successful issue, Diderot, who reserved to himself the greatest part of the work, called to his assistance numerous collaborators, amongst whom were Voltaire, Buffon, Montesquieu, D'Alambert and Condillac. Jean-Jacques Rousseau was entrusted with the department of music. Despite the assistance of talents so diverse, the same spirit breathes throughout the work. In philosophy, the Encyclopédistes seek to subvert the principles on which the existing institutions and the authority of dogmas in religion were based. The Encyclopédia, therefore, which embodies all the opinions of that age, is a work of destruction. However that may be, its influence was considerable; it served as a rallying-point for the philosophers, and by acting on public opinion, as Diderot had intended, came to "change the common way of thinking".

The Encyclopédie roused the ruin of society, but proposed nothing to take its place; Jean-Jacques Rousseau dreamed of effecting its re-constitution on a new plan. On certain points, Rousseau breaks with the philosophes and the Encyclopédistes. Both of these believed in the sovereignty of reason, not, as was the case with the seventeenth-century writers, in reason subject to faith and controlled by it, but in reason absolute, universal, and refusing to admit what eludes its deductions—that is to say, the truths revealed by religion. They also believed in the omnipotence of science, in human progress and in civilization guided by reason and science. Rousseau, on the contrary, in his first notable work, "Discours sur les sciences et les arts" (1751), asserts reason and science, and in a certain sense denies progress. On the other hand, in maintaining the natural goodness of man he approaches the philosophes. In his opinion, society has perverted man, who is by nature good and virtuous, has replaced primitive liberty with despotism, and brought inequality amongst men. Society, therefore, is evil; being so, it must be abolished, and man must return to the state of nature, that happiness may reign among them. This return to the natural state Rousseau preaches in his romance, "La nouvelle Héloïse" (1760), in his work on education, "Emile" (1762), lastly in the "Contrat social" (1762) which was to become the gospel of the Revolution.

From the publication of his first work, Rousseau won a success that was immediate and startling. This was because he brought qualities entirely novel or which had long been forgotten. With him eloquence returns to literature. Leaving aside his influence on the movement of politics, we must give him credit for all that the French literature of the nineteenth century owes to him. Rousseau, by causing a reaction against the philosophy of his time, prepared the revival of religious sentiment. It was he who, by signalizing in his most beautiful pages the emotions awakened in him by certain landscapes, aroused in the popular imagination the feeling for nature. Rousseau, too, by his thoroughly plebeian manner of parading his personality and displaying his egotism, helped to develop that sentiment of individualism whence sprang the lyric poetry of the nineteenth century. He is also responsible for some of the most regrettable characteristics of nineteenth-century literature—for that melancholy and unrest which has been termed "the distemper of the age", and which was originally the distemper of the hypochondriac Jean-Jacques; for the revolt against society; for the belief that passion has rights of its own and dominates the lives of mortals as a fatal compulsion.

The close of the eighteenth century is from some points of view a time of regeneration, and forebodes a still more radical and complete transformation of literature in the immediate future. Some branches of literature that had been neglected in the course of the century receive new life and energy. Since Lesage's "Turcaret" and after Marivaux, comedy had hardly produced anything above the commonplace; it revives in the amusing "Barbier de Séville" (1775) of Beaumarchais, full of life and rapid movement. Beaumarchais owes much to his predecessors, to Molére, Regnard, and many others. His originality as a playwright consists in the political and social satire with which his comedies are filled. In this respect they are the children of the eighteenth century, essentially com-

defends Christianity, towards which the intellects of the eighteenth century had been vaguely hostile—not only shows that Christianity is the greatest source of inspiration to letters and the arts—but also sets forth certain literary theories of his own. He asserts the necessity of breaking with classical tradition, which has had its day and is exhausted, and of opening a new way for art. This is one of the great ideas developed by this author, and henceforth all is over with Classicism. But Chateaubriand’s work and his influence were not limited to this; constantly calling attention to the interest offered by the study of the Middle Ages, he did in “Le Génie du Christianisme”, he engages both history and poetry in new directions. On another side, where he displays his own personal sufferings in “René” (1805), he develops the sentiment of the Epo, already affirmed by Rousseau, from which modern lyricism springs. Lastly, in the many beautiful pages of “Les Martyrs” or of his descriptions of travels, he furnishes models of a magnificent prose style, full of colour, rhythmical, well fitted to reproduce the most brilliant aspects of nature and to express the deepest emotions of the heart.

Side by side with Chateaubriand, another great figure dominates this first phase of the Romantic movement, and the one who most consciously imitated great writers who flourished during the century, are valueless; the sole author of note is Chénier (d. 1794). It is true that under the influence of events, a new literary genre arises, that of political eloquence. The isolated protestations of the States-General under the monarchy respecting the privilege of public speaking; it was in other modes, notably through the pulpit, that the eloquence for which a strictly appropriate platform was lacking must therefore manifest itself in that period. But the great Revolutionary assemblies favoured the development of remarkable oratorical gifts. The most famous among them and the one who expressed himself most was Mirabeau. The blemishes of his style—a congeries of violent contrasts—the incongruity of his figures and the discordance of his shades of meaning—all these defects vanished in the mighty onrush of his eloquence, swept away in an over-mastering current of oratorical inspiration.

The Nineteenth Century.—It is yet too early to attempt the task of determining the due place of the nineteenth century in the literary history of France; the men and the affairs of that century are still near to us, and in the study of literature a true perspective can only be obtained from a certain distance. A few general characteristics, however, may be taken as already fairly ascertained.

The nineteenth century was one of renaissance in literature: in it, following immediately upon great events, a great intellectual movement came into being, and at one definitely assignable moment there appeared a splendid efflorescence of genius; most of all, this movement was a renaissance because it riddled itself of those theories, adopted by the preceding century, which had been the death of that century’s impoverished literature. Imagination and feeling reappear in literature, and out of these qualities lyric poetry and the romance develop. At the same time the sciences, daily acquiring more importance, exercise a greater influence on thought, so that minds take a new mould.

We may distinguish three periods in the nineteenth century: the first, the period of preparation, is that of the First Empire; the second, that of intellectual effort, extends from 1820 to 1850; Lastly, the modern period, which seems to us in these days less brilliant because the works produced in it have not yet attained the prestige that comes with age.

From 1800 to 1820.—Chateaubriand is the great originator of nineteenth-century French literature, from his birth to the death of nearly the whole line of nineteenth-century writers. In 1802 appeared his “Génie du Christianisme”, in this work Chateaubriand not only
towards the period (1830-40) which we are now considering. There is no question of his having written such works as the "Au Théâtre" or the "H-zero"; but his influence is felt in them and his spirit governs them. It is true that he was not the only writer of that time who aimed at a new order for the stage, but he was the first and the most influential.

The plays of this period are characterized by their biting humor, their satirical spirit, and their social criticism. They are not mere novelties, but genuine contributions to the French stage. They are written in a style that is both vigorous and descriptive, and they are full of lively incidents and sharp contrasts. The characters are often sketched with great truth and precision, and the situations are vividly presented.

The influence of the "Au Théâtre" and the "H-zero" is evident in the works of many of the writers of this period. The "Au Théâtre" is a masterpiece, and its spirit is felt in the works of many of the writers of the period. The "H-zero" is a good example of this influence, and it is a work that has stood the test of time.

The plays of this period are not only entertaining, but they are also instructive. They are written in a spirit of truth and justice, and they are full of practical advice and good sense. The characters are often modeled on real life, and the situations are based on actual events.

France

authentic costuming. Lastly, Shakespeare, Goethe, and Schiller are the masters to imitate, not Corneille and Racine. This resounding preface was followed by a succession of lectures in which the authors endeavored to apply its theories. There is "Henri III et ses Cours" (1829), by Alexandre Dumas, père, full of animation, but infantile in its psychology and written in a bad, melodramatic style; Alfred de Vigny contributes "Le Moire de Venise" (1829) and "La Marchèche d'Ancre" (1830); last comes Victor Hugo's own series of dramas in verse and prose, "Fernand" (1830), "Marion de Lorme" (1831), "Le roi s'amuse" (1832), "Ruy Blas" (1838), "Les Burgraves" (1843). These pieces are characterized by a wealth of extraordinary incident—by dark intrigues, duels, assassinations, poisonings, ambushes, abductions, their historical setting, at least for the latter. Solid form is there none; historical truth and logical action are utterly lacking. The dramas of Victor Hugo survive and still bear staging-only because the author has lavished upon them all the resources of his astounding lyricism.

In the court comedy, it was neglected by the Romantics—for Musset's delicious, and often profound, little pieces were not made to be acted. From 1820 to 1850 the comic stage was dominated by an author who was altogether outside of the Romantique movement, Serbie, a prolific writer of vaudevilles with no power of vital or emotional effect; he remains in great company for the most part.

The romance, which had been neglected by the great writers of the seventeenth and eighteenth centuries, in this period takes a foremost place in literature. Here again we find the influence of Romanticism, though that influence clashes with other tendencies. In the history romance, imitated from Walter Scott, it is supreme. Alfred de Vigny's "Cinq Mards" (1826) and Victor Hugo's "Notre-Dame de Paris" (1831) are distinctly Romantique in the local colour which their authors employ and the violently dramatic character of their plots. The same characteristics appear in the innumerable romances of Alexandre Dumas, père, which, although by no means strong in literary quality, give pleasure by their fecundity of invention (Les Trois Mousquetaires, 1844). Again, the romances of George Sand, at least those written in her first manner, are of the Romantic school by virtue of their lyrical exaltation of the Ego, their effect of sentiment ("Lucile"), gerated to the degree of paroxysm ("Indiana", 1832). Her heroines are possessed by the restlessness, the unsatisfied longings, the anguish of soul which René suffered. George Sand, however, was to abandon Romanticism at a later period, in her romances of count, life ("Le Maire de Thèbes", "François le Champi", etc., from 1844 to 1850), idealized pictures of peasant life and true masterpieces of their class.

But if George Sand's career was half finished before she parted with Romanticism, other writers in this department altogether escaped its influence, abiding by the traditions of the eighteenth century. Benjamin Constant, in "Adolphe", carries on the line of romances of psychological analysis. Stendhal, too, who inherited his ideas and his precise, dry style from the philosophe of the eighteenth century, is a subtle psychologist, sometimes penetrating, often affected. Little appreciated in his own day, he will exert a great influence in the second half of the nineteenth century. Mérimée very much resembles Stendhal; he excels in the art of fitting into the frame of a short novel a finished picture of his scene of action with clean-cut, vigorous indications of his characters. And Balzac, the great master of the romance in this period, owes as much to Romanticism as to other romantic geniuses—the Shakespeares and Molieres—Balzac could set in motion, in his "Comédie Humaine", an imaginary world of beings as truly living as the flesh-and-blood beings who people the actual world. Certain of his characters, while animated with an intensely individual life, present, at the same time, so universal a portraiture as to constitute veritable types bearing witness to the great passions and sentiments of humanity.

Among the great branches of literature which were restored between 1820 and 1850 history and criticism must be reckoned. At the beginning of the nineteenth century history could hardly be said to exist. The philosophical tendencies which it had acquired from the eighteenth century were prejudicial to its exactitude, but what it lacked in a still more marked degree was the power of realizing the past—in other words, the power of imagination—combined with the critical spirit. Romanticism supplied it with the former of these requisites; the latter it borrowed from the sciences, which developed so rapidly in the first half of the nineteenth century and impressed the mind of that age with their vigorous methods. Of the historians of this period, some attach the greater importance to critical study and interpretation of facts, others devote themselves to reconstructing the features of the past, with all its colour and picturesque quality. To the former school belong Guizot, who traces the concatenation of facts, showing what causes—political, social, and religious—produced them, Thiers, who, in his "Le Consulat et l'Empire", lays bare Napoleon's policy and strategy with remarkable acuteness; Mignet, in "Histoire de l'invasion des armées de l'Empire en Europe" (1826) and "Histoire de Napoléon" (1835), produced the essential features of an epoch. Augustin Thierry and Michelet belong to the other school. Thierry possessed in a rare degree the sense of historical verity, and his "Récits des Temps Mérovingiens" (1838) is the first example in French literature of a picturesque history which is at the same time founded upon exact erudition. Lastly, with Michelet history becomes not only a great truth but a resurrection of the past. Powerfully imaginative, indeed a poet by instinct, Michelet rather conjures up history than relates it. His "Histoire de France" is a canvas upon which he has in marvellous fashion caused persons, feelings, and manners to live again.

Concurrently with history, and under the same influences, literary criticism puts on a new physiognomy. It is no longer theoretic; henceforth its principal concern is not to judge the merits of literary works, but to determine the conditions in which they have been produced. It passes from the literary (Nietzche, 1869), who traces a detailed biography and a careful portrait of each writer and, reconstructing his appearance and character in a thousand scrupulously verified particulars, seeks thus to explain his works.

Lastly, the religious renaissance which took place at the beginning of the century, after the literary frenzy, and which, in profane literature, gave Chateaubriand and Lamartine their inspiration, had the effect of giving back its force and its brilliance to sacred literature, so impoverished in the eighteenth century. Theological controversy reappeared with Lamennais, and a new and remarkable writer with a violent imagination emerged. Bérulle here is a style characterized by its strong reliefs ("Essai sur l'indifférence en matière de religion", 1817; "Paroles d'un croyant", 1834). At the same time Père Lacordaire lifted the multitude out of itself with his fierce discourses, and imported into pulpitude eloquence the burning lyricism of the Romantique ("La Légende Ecossaise", 1835), and from 1850 to the End of the Century. This period seems confused to our present view, which, with its necessarily short focus, can hardly distinguish all the dominant tendencies. Still, speaking very generally, it may be said that the period was marked by a reaction against the lyricism of the Romantique, a return to the study of reality. The latter school of Positivism, through the influence of Renan and Taine, two philosophers who acted powerfully upon most writers of their time.

In poetry these tendencies have expressed them-
selves in the theories and the works of the Parnassian poets, so called because the first collection of their verses appeared (in 1866) under the title "Parnasse contemporain". "The Parnassian poetry is characterised, in the first place, by great striving after impersonality, the Petrarch making it his object to avoid putting into his work anything of his own personal emotions; and next, anxious to be before all things an artist, the writer carries to an excess the effort to attain perfection of form. The chief of the Parnassian school was Leconte de l'îsa (1820-1894); he does not take himself as the theme of his "Poèmes antiques" (1853) or his "Poèmes barbares" (1862); his theme is the history of humanity. His work is at once learned, epical, and philosophical. Others belonging to the Parnassian school, though each with his own personality, are: J. M. de Hérédia (1842-1905), an immediate disciple of Leconte de l'îsa, who has managed to produce a complete picture of some epoch in each of the sonnets of his "Trophées" (1893); Sully-Prudhomme, both poet of the interior life and poet philosopher; François Coppée, whose true originality consists in being the poet of the common people and of their everyday life. In reaction against certain tendencies of the Parnassians there appeared in the last quarter of the nineteenth century the Symbolist poets, grouped around Paul Verlaine (1844-1896), who in some points of view recalls Villon, and Stéphane Mallarmé (1842-1898). It is as yet difficult to define the action and the degree of importance of these Symbolist poets, who, moreover, made a merit of being obscure. At present Parnassian and Symbolism seem to have been reconciled in the person of M. Henri de Régnier (b. 1864). We may mention, also, among the poets of to-day, M. Jean Richépin, a belated Romantic.

In the second half of the nineteenth century the romance developed to an extent more even considerable than in the first. It tends to engulf all the other literary forms and become itself the only department of literature. It is a convenient frame successively for historical pictures, studies of passion, pictures of manners, and moral theories. The same tendencies appear in it as we have already noted in the period from 1820 to 1850, with, however, this notable difference, that the realistic current becomes much stronger. This time the originator and master is Gustave Flaubert, author of one of the masterpieces of all romance, "Madame Bovary" (1857). The peculiar characteristic of Flaubert is his combination of the elements of Romanticism with those of Realism. For him the theme of Art—"le but de l'art"—firstly; his work is a special cult; on the other hand, by his conception of art, Flaubert is a Realist. In the first place he does not admit the propriety of a writer's putting himself into his work; the work must be objective, impersonal, impassive. In the second place he makes it his task to paint life as it is, or as he sees it, with whatever there may be in it of unloveliness and of vulgarity. This theory of the romance is in evidence in all his works, as much in a study of provincial bourgeois life, like "Madame Bovary", as in a picture of Paris life, like "L'Education sentimentale", or a reconstruction of a vanished civilization, like "Salammbo" (1862).

From Flaubert's example and from the misinterpretation of Positivist theories issued the Naturalistic school. This again was realist, but realism publishing far and wide its own scientific pretentions and seeking to assimilate the processes of literature to those of science. The leader, and the theorist, of Naturalism was Emile Zola (1840-1902), a writer whose gift was compounded of strength and triviality, and whose books ("Les Rougon-Macquart", a series of romances, from 1871 to 1893), are tainted with an unpardonable coarseness. To the Naturalistic school belong the Goncourt brothers, who have sought to express reality by the aid of a bizarre, tortured, and pedantic vocabulary, and Guy de Maupassant (1850-1893), whose powers of observation, his intensity of vision, and a robust style borrowed from the finest traditions place him among the best writers of this group. Alphonse Daudet (1840-97), another writer who aims to portray life as it is, nevertheless stands apart from Naturalism by virtue of his own peculiar qualities of sensibility, fancy, and irony. If he has painted Parisian life ("Le Nabab", 1879), he has none the less succeeded in describing the destiny of the lowly with a sympathetic tenderness.

In spite of the encroaching Realistic tendencies, the idealist and Romantic romance, in the manner of George Sand, survived with Octave Feuillet (1821-91), a dainty writer who embodies in a wonderful degree the type of the fashionable story-teller. However, after 1885, although Realism is still the inspiration of most French fiction, Naturalism, with its exaggerations, its deliberate determination to be coarse, its narrow and brutal esthetics, loses ground and soon falls into disrepute. The traditions of the romance of psychological analysis reappear with M. Paul Bourget, who, following the example of Octave Feuillet, chooses fashionable life as the setting of his stories. In recent years M. Bourget has broadened his manner and attacked the great moral and social problems of the hour ("L'Ete", 1902; "Un divorce", 1904; "L'Emigré", 1907). M. Edouard Rod, a Swiss by birth, has undertaken in his romances to deal with questions of conscience. On another side, by way of reaction against the coarse degradation of XIXth-century literature, certain number of writers, with a talent for playing upon fine shades of meaning and a very especial taste for crowding contrary ideas together, have taken a
delight in filling their romances with a subtle and penetrating irony. The master of this school is M. Anatole France. M. Maurice Barrès, who holds from Stendhal, was, in his earlier career, of the ironical school, but has more recently applied himself to denounce the distasteful events, new and native soil and tradition ("Les Déracinés", 1897). Another class of story writers has exerted itself to increase the field of romance, which, with the Naturalists, has well nigh been shut up within the limits of Parisian life. Some, like M. Pierre Loti, marvellous at evoking the impression of the distant lands, have made an exotic atmosphere; others have sought to reproduce with sympathetic fidelity the manners of their native provinces. This latter has been done for Anjou and the Vendée, with much elevation of thought and elegance of style, by M. Bazin (La Terre qui meurt).

The drama, which had produced nothing of any real value under the influence of Romanticism, passed through a period of great brilliancy after 1850. Most of the works produced since that date belong to the comedy of manners, often containing little of the comic, which derives its origin from the Romantic drama—to which it owes its ambition to reproduce "authentic" life and the atmosphere of the time. One essential characteristic of the work of Scribe is the care he brings to the contrivance of his scenes, the disposal of his action, and the preparation of his dénouement. This dexterity in managing a plot reappears in almost all the dramatic authors of the second half of the nineteenth century, and it is an important element of their art. Lastly, the influence of the drama makes itself felt; as the romance strives after exact portraiture of life and manners, so does the drama. To resume, the modern comedy of manners combines Scribe's theatrical technique with Balzac's observation.

The chief initiator of the dramatic movement of his time was Alexandre Dumas, fils (1824-96). An extremely penetrating observer, he had at the same time the mental idiosyncrasy of a quasi-mystical moralist. At first his gift of observation dominates; in "La Dame aux Camélias" (1853), "Question d'argent" (1857), and "Le père prodigue" (1859), he depicts Parisian society. Then, from 1867 on, the moralist runs away with him and he creates a new type, the "problem play" (pièce de thèse), in which, in an exuberantly spirited dialogue of dazzling wit, he studies life and social questions ("Les Trois Mousquetaires" and "Le comte de Monte Cristo", 1844 and 1845). One of the younger Dumas is often bizarre and irritating, that of Emile Augier (1820-90), who shares public favour with him, is more uniform. The dominant quality in Augier is good sense; he has devoted himself to painting bourgeois society, using methods almost identical with those of the Classics and, like them, creating general types. At the time when Naturalism was trying to obtain possession of the drama, as it had already taken possession of romance, Henri Beecque (1837-99), who produced little besides, was the principal dramatist of that school ("Les Corbeaux"), but the movement was short-lived; Naturalism in the drama soon ran to excesses which ruined its reputation. Dumas fils, however, is still the master from whom the contemporary dramatists hold, and Edouard Pailleron, Henri Lavedan, Maurice Donnay, and Paul Hervieu all owe him much. It is to be noted that in the last years of the nineteenth century the melodrama, with its romantic and the heroic comedy in M. Edmond Rostand's "Cyrano de Bergerac" (1897).

We have already spoken of Renan and Taine in connexion with the general tendencies of this period; these two names belong also to the literature of history. Renan (1823-92) has already opened the domain of literature to religious history, which before had belonged only to pure erudition. Apart from the wavering scepticism and dilettantism in his work, his influence has been felt by a great number of writers. Taine (1828-93) inaugurated in history the method of "little facts" borrowed from the sciences. He classifies and arranges a mass of unimpassioned facts, seeks for the natural laws, historical literature has risen to superb heights; among the most brilliant historians of our own day, it will suffice to mention MM. Albert Sorel, Albert Vandal, and Henry Houssaye.

Lastly, following Sainte-Beuve, some remarkable writers have raised criticism to the independent rank of a great department of literature. Here M. Bruneatère (1849-1906) introduced the idea of evolution, showing how literary forms are born, develop, flourish, and then become dissolved and resolved into other forms. No one has pleaded the cause of tradition with greater warmth, and even violence, than M. Guizot; and with as much justice and as much strength was the opposition defended by M. Jules Lemaitre, under the fluctuating forms of a clever and ingenious criticism, which has nothing of dilettantism but the appearance, and which has Naïve and Sentimental, in monographs remarkable for precise analysis and vigorous relief.

The question may be asked: What stage of its development has French literature now reached? and what character is it likely to assume in the course of the twentieth century? It would be vain to attempt a guess, but some of the influences which seem bound to affect it may be here indicated. First, science will increasingly impose on the writers of the future its vigorous discipline and methods. On the other hand, the fact of the study of Greek and Latin is losing ground in France cannot fail to have the most profound consequences in literature. Lastly, we seem, in these days, to be assisting at a social transformation, the shock of which will doubtless make itself felt in art and letters.

Belgian Literature in the French Language.—In the Middle Ages the literature in French which developed in the provinces of Hainault, Flanders, Brabant, and Liége had all the characteristics of the French literature of that time, except that it furnished neither the names nor names of the authors. Until the seventeenth century there was the same poverty of literary output. In the eighteenth century, under the universal influence of French literature, a grand seigneur, the Prince de Ligne (1738-1814), rivalled in easy grace of style the French writers of his time—"the only lepgenier" as Mme. de Stael says, "who has ever become a model in French literature, instead of being an imitator". But the true expansion of French Belgian literature—which, however, is never more than a reflection of French literature properly so called—dates from the formation of an independent Belgian kingdom. The reign of Charles de Coster (d. 1870), the earliest of the Belgian writers of the nineteenth century worthy of mention, brings out the true soul of Flanders in his legendary romance "Tiel Uylensingel", which in other respects reproduces the qualities and defects of the Romantics. From 1880, beginning with M. Camille Lamonier, Naturalist of the Romantic school, France is dethroned by Symbolism, about 1889. It may even be properly said that Symbolism developed in Belgium rather than in France; its principal representatives are M. Rodenbach, an exquisite poet who has depicted for us the fascination of Bruges (Le pêcheur du Silence, Bruges-la-Morte), M. Verhaeren ("Les Soirs", 1887), and M. Maeterlinck, who has essayed to create a Symbolistic drama.
Swiss Literature in the French Language.—Swiss-French literature has produced great writers, but has not kept them; they have deserted their original country to seek naturalization in France. This was the case with J. J. Rousseau, Mme de Staël, and Benjamin Constant. Though Swiss by origin, they are thoroughly French writers. In the nineteenth century Swiss-French literature, above all, boasts of critics like Alexandre Vinet (1797–1847) and Edmond Schérer (1815–89), both distinguished by their tendency to emphasize moral interests, both, moreover, treating chiefly of French literature. In romance, likewise, M. Victor de Dupont (1829–1900), who concealed in the knack of weaving into the plot of a story current questions of art, science, and philosophy, and M. Edouard Rod are very decidedly French writers. The only truly Swiss author is Topfer (1799–1816), who has left some little masterpieces of romance at once sentimental and humorous, such as his "Histoire de M. Pencil" and his "Voyages et aventures du docteur Fœsus" (1849).

RENE DOUMIC

FRANCESCHINI, MARC ANTONIO, Italian painter; b. at Bologna, 1648; d. there c. 1729; best known for the decorative works he carried out in Parma, Bologna, and Genoa, and for the designs executed for Clement XI’s mosaic in St. Peter’s. He is regarded as a member of the Eclectic School and a follower of the Carracci, and his chief works consist of the Ranuzzi ceiling in Bologna, two fine pictures in the Bologna Gallery (Annunciation and the Holy Family) and one in the Servite convent depicting the four sons of the order. Other less important chasubles in the same city are adorned with his works and there are five of his paintings at Vienna. He also decorated a church at Crema in 1716, and a few years later painted a fine picture of St. Thomas of Villanova giving alms to the poor, to be seen in the Augustinian church at that place. He is believed to have been led to adopt Catholicism by the example of Lorenzo de’ Pontiziani. Among her children we know of Battista, who married on the family name, Evangelista, a child of great gifts (d. 1411), and Agnes (d. 1413). Frances was remarkable for her charity to the poor, and for her zeal for souls. She won many Roman ladies from a life of frivolity, and united them in an association of oblates attached to the White Sacrament of St. Mary of Nova; later on they became the Benedictine Oblate Congregation of Tor di Specchi (25 March, 1433) which was approved by Eugene IV (4 July, 1433). Its members led the life of religious, but without strict cloister or formal vows, and gave themselves up to prayer and good works. With her husband's consent Frances practiced continence, and advanced the true Conception. Her visions often assumed the form of dramas enacted for her by heavenly personages. She had the gift of miracles and ecstasies, as well as the bodily vision of her guardian angel, had revelations concerning purgatory and hell, and foretold the ending of the Western Schism. She courageously exposed the sciences and detect plots of diabolical origin. She was remarkable for her humility and detachment, her
obedience and patience, exemplified on the occasion of her husband's banishment, the captivity of Battista, her son's death, and the loss of all her property; the last of her husband's suitors among her oblates at Tor di Specchi, seeking admission for charity's sake, and was made superior. On the occasion of a visit to her son, she fell ill and died on the day she had already foretold. Her canonization was preceded by three processes (1440, 1443, 1451) and Pius V declared her a saint on 9 May, 1568, assigning 9 March as the day of her festival. Before that, he revered the faithful were wont to venerate her body in the church of Santa Maria Nuova in the Roman Forum, now known as the church of Santa Francesca Romana.

Molinari, Vita di S. Francesca Romana, originally written in the Roman vernacular of the fifteenth century, with an appendix of three panegyrics in the same idiom, and edited by Ambrellini from a codex in the archives of the Holy See (Rome, 1882); Acta SS., March, II; Vita di S. Francesca Romana fondatrice (Rome, 1875); Pompeloni. FRANCESCO PAOLO.

Franchi, AUSONIO, the pseudonym of CRISTOFORO BONAVINO, philosopher; b. 24 February, 1821, at Pegli, province of Genoa; d. 12 September, 1895, at Genoa. He entered the ecclesiastical state, and some time after his ordination to the priesthood, was appointed director of an institution for secondary education at Genoa, but before long, he became imbued with the doctrines of French positivism and German criticism. Doubts arose in his mind, followed by an internal struggle which he describes in his work on the philosophy of the Italian schools. At the same time, important political events were taking place in Italy, culminating in the revolution of 1848. Misled, as he later says of himself, by a political passion, and also by a kind of philosophical passion, Franchi abandoned the priest's habit and office in 1849, and assumed the name of Ausonio Franchi (i.e. free Italian), indicating thereby his break with his own past and his new allegiance to the forces which were countering the cause of intellectual and political liberty. The dogmatic authority of the Church and the despotic authority of the State are the objects of his incessant attacks. Combining Kant's phenomenalism and Comte's positivism, he falls into a sort of relativism and scepticism, in which truth and reason, Catholicism and freedom, are irreconcilable, and Franchi does not hesitate in his choice.

In 1854 he founded the "Ragione", a religious, political, and social weekly which was a means of propagating these ideas. Terenzio Mamiani, then Minister of Education, appointed Franchi professor of philosophy in the University of Pavia (1890), and remained there until 1888. No work was published by him between 1872 and 1889. A change was again taking place in his mind, not now due to passion, but to the professor's more mature reflection. It led to the publication in 1889 of L'Umanita nell' Etta dei moderni, in which he announced his return to the Church, criticizes his former works and arguments, and denounces the opinions and principles of his earlier writings. His works are: "Elementi di Grammatica generale applicati alle due lingue Italiana e latina" (Genoa, 1849-49), under the name of Cristoforo Bonavino. Under the name of Ausonio Franchi he wrote "La Filosofia delle scuole italiane" (Caponago, 1852; "Appendix", Genoa, 1853); "La religione del secolo XIX" (Lausanne, 1853); "Studi filosofici e religiosi: Del Sentimento" (Turin, 1854); "Il Razionalismo del Popolo" (Geneva, 1856); "Letture sulla Storia della Filosofia moderna: Bacone, Descartes, Spinoza, Malebranche" (Milan, 1863); "Sulla Chiesa del Giudaismo" (Milan, 1870); La Faculta del Principato ecclesiastico e la Restaurazione dell' Impero Germanico" (Milan, 1871); "Saggi di critica e polemica" (Milan, 1871-72). He also edited "Appendice alle Memorie politiche di Felice Orini" (Turin, 1858); "Epistolario di Giuseppe La Farina" (Milan, 1869); and a series of publics di Giuseppe Le Farina" (Milan, 1870).

C. A. DUBRAY.

Francisco (Francisco Raiholini), a famous Bolognese goldsmith, engraver, and artist; b. about 1450; l. in 1517. His family was one of the best in Bologna, and owned land at Zola Predosa. His father was a wood-carver, but Francesco entered the guild of goldsmiths (1482), and was elected its head in the following year. His master was one Duc, surnamed Francia, doubtless because of his native land, and Francesco adopted this surname, and his art, as he grew in age and maturity, more or probably as a valuable trade-mark. Like Pisanello, Verrocchio, Pollaiulo, and Ghirlandajo, he is an example of what Italian art owes to close association with the minor arts. A gradation of the fine arts, the idea of greater or lesser dignity and rank, did not then exist and was to spring up only later, in the school of Michelangelo. Thus the art is to all the aesthetic manifestations of the classic period that unity and perfection of detail and life which imagination and taste impress on all things. The relations between the goldsmith's art and painting were then particularly close. In this way painting was enabled to rise above the vulgar demands of a pipius image of the Giotto-type, and the dry and pedantic learning of Vincello and Andrea del Castagno. Art, ornament, and beauty, which threatened to disappear, were thus restored to painting. This is why the "industrial" side of Francia's art, exemplified in his remarkable medals and enamels, which is that of the jeweller, an armourer, and a type-caster, cannot be too strongly insisted on. He is known to have designed the italic type for the edition of Virgil published by Aldus Manutius (Venice, 1501). We know also that the invention of engraving is partly due to the art of Franchino and the like. In this department of arts are ascribed to Francia; in the art of engraving he was the first master of Marenzio Raimondo.

Circumstances, however, impelled Francia to become a painter. Very probably he received his first lessons from Francesco Cossa (d. at Bologna, 1465), but it was from the humanists of the time that he received his principal instruction. This artist, slightly younger than Francia, had recently won renown at Ferrara and returned in 1483 to Bologna, where he set up his studio in the house occupied by the goldsmith. More than one work (church of the Misericordia, Bentivoglio palace) resulted from their friendly collaboration. Certain peculiarities of Francia, his familiar scenic arrangements, the beautiful architecture, the carved thrones of his Madonna, the little angelic musicians seated on steps, are touches of Ferrarese taste which proclaim the influence of Cozza. In landscape Francia felt later the influence of Perugino (1446-1524), who, in 1497, was residing in Francia's native city of Monte. These influences, however, should be acknowledged with all the reserve imposed in the case of an already mature man, who had long been an artist of repute when he began to paint. The earlier }
tant works of Francia, e. g. the “Calvary” of the Archiginnasio of Bologna, the “Madonna” of Berlin, above all the remarkable “St. Stephen” of the Casino Borghese, are remarkable for their minute character of a new “dilettantism” (Burkhardt), for something so intentionally unique and original that one does not know with what to connect them in all the history of painting. We feel ourselves in the presence of a master who grasps with firmness his own ideas and is extremely personal in his techniques, one who takes up a new craft only because it enables him to apply highly individual theories or express his intimate tastes. The early attempts were followed by a series of great works dated as follows: the Felicini reredos (Bologna, 1494), that of the Bentivoglio (San Giacomo Maggiore, 1500), and many others, and the “Annunciation” (Pinacoteca of Bologna, 1500), and various others now in the museums of Berlin and St. Petersburg. It is always the same subject, so beloved throughout the fifteenth century, the Virgin surrounded by various saints; even when styled an “Annunciation,” the treatment remains the same. The composition is necessarily uniform, in deference to the law of symmetry. There is naturally no action, the painter’s object being to produce with these motionless figures an effect of harmony and recollection. It is a calm and tranquil beauty that he seeks to reproduce. But within these limits no one, not even Perugino, can be compared to the “Maddalena delle Scrovegni in Padua”, or the “San Zaccaria” dates from 1505, achieved so much. The orderly disposition of his figures and his well-balanced lines, heightened often by an architectural background or by landscapes, produces an impression of profound peace. So much happiness could have but one legitimate expression, i. e. music. In other words the angels playing on the harp or the lute, whom Francia loved to introduce, interpret naturally the emotions awakened by the harmony of form. Let it be added, and in this he differs from Perugino, that with him lyricism never becomes mere formula. The inspiration of Francia seems inexhaustible; hence his ability to vary indefinitely, and always with success, the same theme. Francia was always too conscientious to reproduce in a commonplace way works which were the outcome, on his part, of a deep emotional life. In this artist the conventional never prevails, just as Perugino during the last twenty-five years of his life.

The types of Francia, though extremely general in significance, are none the less markedly individual; his Sebastian has not the same features, the same piety, the same ecstasy as Bernard, nor is his figure of Augustine the same as that of Francia. In execution he was extremely meticulous, even his most careless figures are not negligent. The figures are irreproachably constructed, while the elegant ornamentation, the sculptures, embroidery, tiaras, and dalmatics betray the sharp and critical eye of the goldsmith and engraver. Of this we are reminded still more forcibly by his fondness for, and careful selection of, the best stones for his palette, and his taste for compact, thick, enamelled painting, of itself a pleasure to the eye. Each picture of Francia has its own sonorous harmony; throughout his work we seem to hear, as it were, an orchestration of colour. We have here the principles of an entirely new art, altogether different from the ultra-Intellectual preoccupations of the Florentine School. Horace had said that poetry was a kind of painting, ut pictura poesis; one might imagine that in turn Francia wished to prove that painting was a kind of music. It was the idea likely to arise in an ancient mind devoid of the featureless immorality which for its singers and its lute-players. Only in his later figures, however, e. g. the “Baptism of Christ” (Dres- den, 1509), the “Deposition” (Turin, 1515), the “Sacra Conversazione” of Parma, above all in that of London (about 1516), does Francia display the full measure of his genius. Several of his frescoes are known, e. g. the “Madonna del Terremoto” (Bologna, 1506) and two charming pages from the life of St. Cecilia, her marriage and her burial, at San Giacomo Maggiore (1507). He is also the author of beautiful portraits (Pitti Palace, also the Uffizi, in Florence). No doubt his modesty, his quiet and retired life, spent entirely at Bologna, his avoidance of historical and mythological subjects, a temperamental man, inspired by a love for his native city, that won him the name of Malvasia. In 1508 he was named director of the mint of Bologna, and in 1514, master of all the artist corporations of the city. He was handsome, says his contemporary Boccaccini, very eloquent, well-informed, and distinguished. His influence, nevertheless, was confined to Bologna. He lived apart from the pagan and rationalistic movement of the fifteenth century, was an isolated man of great and noble gifts, original and pure in his use of them, in a word the most eminent personality in Northern Italian art previous to Titian and Correggio. He had two sons, Giacomo and Giulio, b. in 1485 and 1487.

LOUIS GILLET.

Francis I, King of France; b. at Cognac, 12 September, 1494; d. at Rambouillet, 31 March, 1547. He was the son of Charles of Orléans, Count of Angoulême, and Louise of Savoy, and the husband of Claude of France, daughter of Louis XII. He succeeded to the throne 1 January, 1515, not as son-in-law, since the Salic Law did not permit succession through women, but as cousin of Louis XII, who had no male heir. His victory at Marignano (1515) over the Swiss who were defending Maximilian II at the moment established the young king’s reputation in Italy. He took advantage of this to the interview of Bologna to bring to a successful terminus the long war that began with Charles V and Louis XI, to impose on the kingdom of France the Concordat which governed the organization of the French Church from that time till the end of the old regime (see FRANCE). This marked the beginning of a series of measures destined to establish in France the preponderance of the royal power. Francia I sought to bestow personal privileges and honors in great measure among the nobles, both bishops and seigneurs (lords), the spirit of independence. The formula of royal edicts “car tel est notre bon plaisir” (because it is our good pleasure) dates from his reign. The death of Emperor Maximilian I (1519) led Francia I to dispute the imperial crown with Charles of Austria, who had recently inherited the crown of Spain. The latter became emperor as Charles V. Surrounded on the south, north-east, and east by the states of Charles V, Francis I, immediately after his interview of the Field of the Cloth of Gold with Henry VIII of England (1520), began the struggle with the House of Austria, which was to be prolonged, with occasional truces, until 1576. Four successive wars against Charles V filled the reign of King Francis. The first, famous for the exploits and death of Bayard, the “chevalier sans peur et sans reproche”, the treason of the Constable of Bourbon, the defeat of Francis I at Pavia (1525), and the capture of Francis I by the troops of the Emperor, led to the Treaty of Madrid (1526), by which he ceded Burgundy to Charles V. The second war, rendered necessary by the refusal of the deputies of Burgundy to become the subjects of the emperor, and marked by the alliance between Francis I
and the Italian princes, among them Pope Clement VII (League of Cognac, 1526), brought about the sack of Rome by the imperial troops under the command of the Constable of Bourbon (1527), and ended with the Peace of Cambrai (1529), in reality no more than a truce. After its conclusion Francis I, who had lost his wife, Claude of France, in 1524, wedded Eleanor of Austria, sister of Charles V. The third war, entered upon after he had reorganized a permanent national army, and at the time when Charles V had undertaken an expedition against Tunis, was marked by the entrance of the French troops into Savoy and the entrance of the troops of Charles V into Provence (1536); it was brought to an end, thanks to the Pope’s Peace of VI, by the treaty of Aigues-Mortes. The fourth war, resulting from the ambitious designs of Francis I on Milan, was marked by the alliance of Charles V with Henry VIII, by the French victory of Ceresole (1544), and was ended by the Treaties of Crespy and Arders (1544 and 1546).

The history of no other reign has been so profoundly studied in modern times as that of Francis I. A series of recent works has brought out the originality and novelty of his political maxims. The struggle against the House of Austria made Francis I the ally of the Holy See during the pontificate of Clement VII, whose niece, Catherine, had married Henry II, the future King of France (see Catherine de’ Medici), but he could not prevail upon Clement VII to yield a divorce to Henry VIII of England. Impelled by the desire to menace Charles V not only on the frontiers but even in the interior of his territory, Francis I sent his agents into Germany, who fostered political and religious anarchy and favoured the political ascendancy of the Protestant princes. His policy in this respect was opposed to Catholic interests and even opposed to the principles of Christianity. In 1523 and 1524 sent Antonio Rizonym to the King of Poland and the Voivode of Transylvania to urge them to threaten Charles V on the eastern frontier of the empire, Francis I thought of utilizing the Turks against the emperor. Before he had even thought of this alliance rumours spread throughout Germany that he would be responsible for the victories of the Musulmans at Belgrade and Rhodes. Francis I played the part of a Maccabean in the spread of the Renaissance in France. He invited from Italy the great artists Leonardo da Vinci, Michelangelo, Pontormo, Primaticcio, Benvenuto Cellini, and Andrea del Sarto. He began the present Louvre, built or decorated the châteaux of Fontainebleau and Chambord, and was patron of the poets Marot and du Bellay. His most valuable service to Humanism was the foundation of the Collège de France, which he intended for the teaching of Hebrew, Greek, and Latin. He was also the founder of the Imprimerie Royale. While he permitted the development in intellectual circles of certain Protestant ideas simultaneously with Humanism, he was on the other hand, after 1534, quite hostile to the propagation of Protestantism among the common people, as is shown by the famous ordinance of the Vaudois of Chabrères and Méridol. The poems of Francis I, though interesting as historical documents, are mediocri in work. His tomb and that of his wife, Claude of France, in St. Denis, were decorated by Philibert Delorme, and executed by Pierre Bon temps.

FRANCIS, ORDO DEI. See ORDO, CONFRATERNITIES OF.

Francis, Rule of Saint. As known, St. Francis founded three orders and gave each of them a special rule (see Francis of Assisi, Saint). Here only the rule of the first order is to be considered, i.e. that of the Friars Minor, under the following headings: I. Origin and Contents of the Rule; II. Interpretation and Observance of the Rule.

I. Origin and Contents of the Rule. (1) Origin. There is, as in so many other points in the life of St. Francis, not a small amount of doubt and controversy about the Rule of St. Francis. For most of the time St. Francis wrote several rules or one rule only, with several versions, whether he received it directly from heaven through revelation, or whether it was the fruit of long experience, whether he gave it the last touch or whether its definite form is due to the influence of others, all these
are questions which find different answers. However, in some cases, it is more a question of words than of fact. We may speak of three successive rules or of three different rules. The first is the case of St. Francis, the second of St. Benedict, and the third of St. Ignatius. The difference is slight, but the spirit in the three cases is the same. For clearness, we shall speak simply of the three rules, the first of which is the year 1209, the second of 1221, the third of 1223; expounding more especially the one of 1223, as this is properly the Rule of Francis, the object of this article.

(a) The Rule of 1209.—This is the rule St. Francis presented to Innocent III for approval in the year 1209; its real text is not known. If, however, we regard the statements of Thomas of Celano (I Cel., i, 9 and 15, ed. d’Alençon, Rome, 1900) and St. Bonaventure (Legenda major, c. iii), we are forced to conclude that the primitive rule was not very much different, since the spirit in the three cases is the same. For clearness, we shall speak simply of the three rules, the first of which is the year 1209, the second of 1221, the third of 1223; expounding more especially the one of 1223, as this is properly the Rule of Francis, the object of this article.

(b) The Rule of 1221.—If we give credit to Jacques de Vitry, in a letter written to Genoa, 1216 (Böhmer, loc. cit., 98), and to the traditional "Legend of the Three Companions" (c. xiv), the rule of 1209 was successively improved at the annual general chapter at Portiuncula by new statutes, the fruit of ever-growing experience. Jacques de Vitry, as St. Bonaventure (loc. cit.) declares, "The men of this Religion with great fruit assemble every year at a determined place, that they may rejoice in the Lord and take their meals, and by the counsel of good men make and promulgate holy statutes, which are confirmed by the Pope." Indeed Thomas of Celano records one such statute (I Cel., ii, 91): "He [St. Francis], for a general commemoration in a certain Chapter, caused these words to be written: 'Let the Friars take care not to appear gloomy and sad like hypocrites, but let them be jovial and merry, showing that they rejoice in the Lord, and becomingly courteous.'" This passage is literally found in the rule of 1221, c. vii. The traditional "Legend of the Three Companions" says (c. xiv): "At Whitsundie [every year] all the brethren assembled unto St. Mary and consulted how best they might observe the Rule. Moreover St. Francis gave unto them admonition, rebukes, and precepts, according as seemed good unto him by the counsel of God. And for he [St. Francis] made divers Rules, and essayed them, before he made that which at the last he left unto the brethren" (translation of Salter, London, 1902, p. 88, 60). During the years 1219-1220 in the absence of the holy founder in the East, some events happened which determined Francis to recast his rule, in order to prevent similar troubles in the future. The only author who informs us well on this point is Jordanus of Giano in his Chronicle (Analeda Francisca, i, iv sq.; ed. Böhmer, Paris, 1908, 9 sq.). The vicars left in charge of the brethren by St. Francis having made some innovations against the spirit of the rule, and St. Francis having heard of this, he immediately returned to Italy and with the help of Cardinal Ugolino pressed the disorders. Jordanus (ed. Böhmer, p. 15) goes on: "And thus the disturbers with the help of the Lord being kept down, he [St. Francis] recast the Order according to its statutes [alia in institutions, Instituta]." And the blessed Francis, teaching that brother Cassarius [of Spires] was learned in holy letters, he charged him to emboss with texts of the Gospel the Rule which he himself had written with simple words." The narrative of Jordanus, precious though it be, is incomplete. "Speculum perfectionis" (ed. Sabatier, Paris, 1859, c. Iviii), Angelo Clarino (Felicie Tocico, "Le due prime Tribolazioni dell’Ordine Francescano", Rome, 1908, p. 36; Dollinger, "Sekten-geschichte", II, 440 sq.; and "Expositio in Regulam"), Bartholomeow of Pisa (Liber Conformitatum fruct., XIII, para II, ed. Milan, 1510, f. oxvxy, v, a, Anal. frut., IV (1906), 50 sq.; and in the proc. of the chapter the ministers and custodes, alias the learned brethren, asked Cardinal Ugolino to use his friendship with St. Francis that he might introduce some organization into the order according to the Rules of St. Augustine, St. Benedict, and St. Bernard, and that they might receive some influence. St. Francis being questioned, answered that he was called to walk by the way of simplicity, and that he would always follow the folly of the Cross. The chapter at which this occurred was most likely the one of 1220.

The authority of the aforesaid sources may be contested, for a comparison of the other sources may be seen (F. II Cel., i, 114). At any rate, in a Bull of Honorius III, Viterbo, 22 Sept., 1220 (Bull. Franc., i, 6), addressed "to the Priors or Custodes of the Friars Minor", one year of novitiate is introduced, in conformity with "VI.-140"
called, the rule which the Friars Minor still observe. It is named by Franciscan authors "Regula bullata" or "Regula secunda". The question has been put whether St. Francis was quite free in drawing up the definitive text of his rule. From what has been already said, it may be supposed that St. Francis successively developed his rule, adapting it to the circumstances; hence if all the particulars of the former rules are not found in the last one that is no reason to say St. Francis omitted them against his own will. Those who believe in an influence exercised on St. Francis in recasting the third rule appeal to the following cited words of St. Francis (ed: Fracchi, p. 45).: "Egregere non bullata", for it was never solemnly confirmed by a papal Bull. It has been preserved in many manuscripts and has been often printed, but there are some noteworthy discrepancies of text in chaps. x and xii. The following remarks may be added to characterize it. The rule of 1221 consists of twenty-three chapters, some of which are composed almost entirely of Scriptural texts; in others many admonitions are found and towards the end even prayers. The introductory words "Brother Francis", pronounced by the solemn imperative voice of our "Lord Peace Innocent" (d. 1216) show clearly that the second rule is only an enlarged version of the primitive one. In chaps. iv and xviii appears an organization, which at the time the first rule was written (1209) could not have existed, since St. Francis had then only twelve companions. Chap. vii, on the other side, contains a prayer to St. Francis and the consideration of the necessity of his rule, the beginning of the primitive rule, for its prohibition "not to be chamberlains, nor cellars, nor overseers in the houses of those whom they serve", found scarcely, or only exceptionally, any application in 1221. The Life of Brother Giles (Analecta Francisc., iii, 74 sq., and the introduction of Robinson's "The Golden Letters" of the Blessed Brother Giles", Philadelphia, 1907) may be read as an illustration of this chapter. It may appear strange that neither Thomas of Celano nor St. Bonaventure mentions this second rule, which certainly marked an important stage in the Franciscan Order. The reason thereof may be because it was composed in connexion with troubles arisen within the order, on which they preferred to keep silent.

(c) The Rule of 1223.—St. Bonaventure (Leg. maj., c. iv) relates that when the order had greatly increased, St. Francis had a vision which determined him to reduce the rule to a more comprehensive form. (Strom. I, c. 150.) From St. Bonaventure (loc. cit.), "Speculum perfectionis" (c. i), and other sources we know that St. Francis, with Brother Leo and Brother Bonizo of Bologna (see, however, on the latter, Carmichael, "The two Companions" in Franciscan Monthly, ix (1904), n. 86, p. 94-97), went in 1223 to Fonte Colombo, a beautiful wood-covered hill near Rieti, where, fasting on bread and water, he caused the rule, the fruit of his prayers, to be written by the hand of Brother Leo, as the Holy Spirit dictated. Elias, to whom this rule was entrusted, after a few days declared that he had lost it, hence St. Francis had it all rewritten. Spiritual sources give other rather dramatic circumstances, under which the new rule was communicated to the provincials, headed by Brother Elias. As the primary authorities on the life of St. Francis say nothing on the point, it may be supposed that those records served only to justify the Robinson's "The addition to the rest of the Rule", the Bull of St. Francis (Leg. maj., c. iv) and many other early Franciscan writers. The Bull of the Highest Priest Jesus Christ, through the impression of the Stigmata, 1223, 1225, 1232.

The rule of 1223 is the Franciscan Rule properly so
from the feast of All Saints until the Nativity of the Lord", during Lent, and every Friday. The forty days' fast (obligatory in the rule of 1221), which begins from Epiphany, is left free to the good will of the brothers. Beautiful exhortations follow on the brothers' labours and prayers wherever they go through the world. They are forbidden to ride on horseback, unless compelled by manifest necessity or infirmity (c. iii). The next chapter "strictly enjoins on all the brothers that in no wise they receive coins or money, either themselves or through an interposed person". However, the minister can bestow them to the poorest of his subjects through spiritual friends, according to places and times and other circumstances, saving always that, as has been said, they shall not "receive coins or money" (c. iv). To banish idleness and to provide for their support, St. Francis insists on the duty of working for "those brothers to whom the Lord has given the grace of working". But they must work in such a way that "they do not extinguish the spirit of prayer and devotion, to which all temporal things must be subservient". As a reward of their labour they may receive things needed, with the exception of coins or money (c. v). Of the highest importance is the chapter containing the definitions of the most ideal poverty: "The brothers shall appropriate nothing to themselves, neither a house nor place nor anything. And as pilgrims and strangers in this world... let them go confidently in quest of alms." (c. vii) "This, my dearest brothers, is the height of the most sublime poverty, which has made you heirs and kings of the kingdom of heaven: poor in goods, but exalted in virtue..." Then follows an appeal for fraternal love and mutual confidence, "for if a mother nourishes and loves her carnal son, how much more earnestly ought one to love and nourish his spiritual brother!" (c. vi). The following chapter treats of penance to be inflicted on brothers who have sinned. In some cases they must recur to their ministers, who "should beware lest they be angry or troubled on account of the sins of others, because anger and trouble impede charity in themselves and in others" (c. vii). Chapter viii charges all the brothers "always to have one of the brothers of this religion (order) as Minister General and servant of the whole brotherhood". At his death the provincial ministers and custodes must elect a successor in the Whitenau chapter. The general chapter, at which the provincial ministers are always bound to convene, is to be held every three years, and according to the order of the general so wishes. After the Whitenau chapter, provincial chapters may be convoked by the ministers (c. viii). A special chapter on preachers follows next. The brothers are forbidden to preach in any diocese against the will of the bishop, and unless they are appointed by the minister general. The brothers must preach "for the utility and edification of the people, announcing to them virtues and virtues, punishment and glory..." (c. ix). Of the admonition and correction of the brothers is the title of chapter x. The ministers "shall visit and admonish their brothers, and shall adjust the faults of canonists and popular clergy, commanding them anything against their souls and our Rule. The brothers however who are subject must remember that, for God, they have renounced their own will." If any brother cannot observe the rule spiritually, he must recur to his minister, who is bound to correct him kindly (c. x). In chapter xi the brothers are forbidden to have suspicious intimacy with women, nor are they allowed to "enter monasteries of nuns, except those to whom special permission has been granted by the Apostolic See". Nor may they "be godfathers of men or women". They may stay on friars rapidly increasing, for they are receiving into the order who has not the pure intentions and the great seal of Francis, the rule...
gave rise to many controversies, and, as a consequence, to many declarations and expositions. The first exposition of the rule was given by St. Francis himself in his Testament (1226). He puts there his own and his first disciples' life as an example to the brothers. Moreover he foresees the difficulties arising from the Roman Curia, either for a church or for any other place, whether under pretext of preaching, or on account of their bodily persecution'. He enjoin also on all brothers "not to put glosses on the Rule", but as he had written it purely and simply, so ought they "to understand it simply and purely and with holy operation in the Church and never the less have a great number of expositions of the rule, and it cannot be said that they are, in their greatest part, against the will of St. Francis. He himself had in his lifetime been humble enough to submit in everything to the decisions of the Church, and so he desired his sons to do. Even the Spirituals, who exalted to the letter of the rule, as Olivi and Clarino, were not against reasonable expounding of the rule, and have written expositions thereof themselves. Besides, the decisions of the popes are not dispensations, but authentic interpretations of a rule, that binds only inasmuch as it is approved by the Church. To proceed with order, we shall firstly speak of the authentic interpretations, secondly of the private expositions.

(1) Authentic Interpretations.—These are the papal Constitutions on the rule. Doubts about the meaning and the observance of the rule having risen at the general chapter of Assisi (1239), a deputation of prominent men was sent to Gregory IX, to obtain a papal decision. On 28 September, 1230, the pope edited the Bull "Quo elongati" (Bull. Franc., I, 68), a document of capital importance for the future of the order. In this Bull the pope, claiming to know the intention of the holy founder, said that he had made an exposition of the rule, declares that for the tranquillity of conscience of the friars, the Testament of St. Francis has no binding power over them, as Francis, when making it, had no legislative power. Nor are the brothers bound to all the counsels of the Gospel, but only to those that are expressly mentioned in the rule, by way of precept or of prohibition. Dispositions are made with regard to money and property. The brothers may appoint a messenger (vintius), who may receive money from benefactors and in the latter's name either spend it for the present needs of the friars, or confide it to a spiritual friend. The latter is the principal of all the others, whose poverty is maintained for the individual friar and for the whole community; still the use of the necessary movable objects is granted them. These are some of the most striking dispositions of Gregory IX, whose principles of wise interpretation have remained fundamental. The order, however, in two general chapters, at Mets, 1249, and at Narbonne, 1260, declined to receive this privilege, inasmuch as it goes farther than the concession of Gregory IX. In the same Bull Innocent IV declares that all things in the use of the friars belong to the Apostolic See, unless the donor has reserved the ownership to himself. A necessary consequence of this disposition was the institution of a procurator by the same pope through the Bull "Quanto studiosius", 19 Aug., 1247 (Bull. Franc., I, 487). This procurator was to act in the name of the Apostolic See as a civil party in the administration of the goods in use of the friars. The benefits of this syndic, were much enlarged by Martin IV through the Bull "Exultantes in Domino", 18 January, 1283 (Bull. Franc., III, 501), especially in regard to lawsuits. The order received the disposition of Martin IV at the chapter of Milan, 1285, but warned at the same time against the multiplication of legal actions (see Ehrle, Archiv für Litteratur- und Kirchengeschichte, VI, 55).

The two constitutions of Clement V (1310) and of Viterbo, 14 Aug., 1279, treat the whole rule both theoretically and practically. Nicholas III, against the enemies of the order, states that complete expropriation, in common as well as in particular, is licit, holy, and meritorious, it being taught by Christ Himself, although He, for the sake of the weak, sometimes took money. The brothers have the moderate use of things according to their rule. The proprietorship goes to the Holy See, unless the donor retains it. The question of the money is treated with special care. The employment of the messenger and spiritual friend is confirmed in the Constitutions of the same pontiff. The brothers are not to be paid except over the money, nor can they call to account an unfaithful messenger. Lost number of papal decisions should produce confusion, the pope declares that all former Bulls on the subject are abolished, if they are against the present one. However, this Constitution ends by adding an exposition of the rule, and the more zealous brothers, called Spirituals. It was through their agitation at the papal court at Avignon (1309-1312) that Clement V gave the Constitution "Exivi", 6 May, 1312 (c. 1, Clem., lib. V., tit. xi). Whilst Angelo Clarino, the head of the Spirituals, expressed in a private letter his confidence in the opinion of the Bull "Exivi", which is another name like a flying eagle, approaching nearest to the intention of the Founder, (Archiv für Litteratur- und Kirchengeschichte, II, 139). Clement V declares that the Friars Minor are bound to poverty (usu pauor) in those points on which the rule insists. Characteristic of this Bull is the casuistic manner in which the prescriptions of the rule are treated. It declares that St. Francis wished to oblige his brothers under mortal sin in all those cases in which he uses commanding words or equivalent expressions, some of which cases are specified. The Constitutions "Exivi" and "Exivi" has remained the most important rule of the order, although they were in the most important point practically suppressed by John XXII, who in his Bull "Ad conditorem canonum", 5 Dec., 1322 (Bull. Franc., V, 233), renounced on behalf of the Apostolic See the proprietorship of the goods of which the order had the use, declaring (accurately of the Roman law) that in many things the use could not be distinguished from the property. Consequently he forbade the appointment of an Apostolic syndic. Martin V in "Amabiles fructus", 1 Nov., 1425 (Bull. Franc., VII, 712), restored the former state of things for the Observants.

(2) Private Expositions.—Only two have had influence, which had influence on the development of the order, can be mentioned here. The most important that of the Four Masters, edited at least six times in old collections of Franciscan texts, under the names of Monumenta, Spesulum, Firmamentum (Brescia, 1562; Salamanca, 1506, 1511; Rouen, 1509; Paris, 1512; Veneti, 1513). The chapter of the Franciscan Order at Lateran, 1541, had ordered that the solution of some doubts about the rule should be asked for from each province. We know of two expositions of the rule drawn up on this occasion. Eccleston (c. xii, alias xiii, Analecta Francisc., I, 244) speaks of the short but severe exposition which the Franciscan Prior of St. Anthony in Valletta of the Island of Malta brought before the Bishop of Malta, seeking his blessing by the blood of Jesus Christ to let the rule stand as it was given by St. Francis.
fortunately, the text of this declaration has not been handed down. We have, however, that of the province of Paris, issued on the same occasion by four masters of theology, Alexander of Hales, Jean de la Rochelle, Robert of Bastia, and Richard of Cornwall. This interesting exposition of the rule, and the most ancient, for it was written in the spring of 1242, is short and treats only some dubious points, in conformity with the Bull "Quo elongati" and two later decisions of Gregory IX (1240, 1241). Their method is very defective. The Convention proposes demands, and sometimes leave the questions to the superiors, or invoke a decision of the pope, although they speak twice (c. ii, ix) of the possible danger for the pure observance of the rule, if too many papal privileges are obtained. The work of the Four Masters has had the same effect on subsequent private expositions as the Bull "Quo elongati" had on all following pontifical declarations. The most prolific writer on the Rule of St. Francis was St. Bonaventure, who was compelled to answer fierce adversaries, such as Guillaume de Saint-Amour and others. His treatises are found in the Quaeracieli edition of his works, VII, 1088 (see Bonaventure, St. Bonaventure, ed., Contra opposit, concerning the observance of the Rule as explained by the papal declarations and with wise accommodation to circumstances. He himself exercised great influence on the decreal "Exuit" of Nicholas III.

About the same time as St. Bonaventure, Hugo of Harewood (1235) wrote several treatises on the rule. His exposition is found in the above-mentioned collections, for instance in the "Firmamentum" (Paris, 1512), IV, f. xxxv, v. (Venice, 1513), III, f. xxxvi, v. John of Wales (Guillainis) wrote before 1279 an exposition, edited in "Firmamentum" (Venice, 1513), III, f. xxxvi, v. In his treatise "De monasticorum regularium..." John of Pechham has a special chapter (c. x) on the Franciscan rule, often quoted as an exposition, "Firmamentum," ed. 1512, IV, f. xxiv, v, 1513, III, f. lxxii, r. David of Augsburg's sober exposition, written before the Bull "Exuit," is edited in great part by Lempp in "Zeitschrift für Kirchengeschichte," vol. XIX (Gottinga, 1898–99), 15–46, 340–360. Another expositor of the Franciscan rule towards the end of the thirteenth century, was Pierre Johannis Olivi, who, besides a methodical exposition ("Firmamentum, 1513, III, f. cvi, r.), wrote a great number of tracts relating especially to Franciscan poverty. These treatises, containing one of the Vatican library, are not yet printed in their entirety [see Ehrle, "Archiv für Litteratur- und Kirchengeschichte," III, 497, and Oliger, "Archivium Franciscanum Historicum" (1905), i, 617]. The theories of poverty taught by Olivi exercised great fascination over the Spirituals, especially under Angelo Cimberio (1237), whose exposition of the rule will shortly be published by the present writer. Of others who directly or indirectly exposed the rule, or particular points of it, we can only name the best known, according to the centuries in which they lived. Fourteenth century: Ubertino di Casale, Gundisalvus of Vallebona, Petrus Aureoli, Bonaventura of Pavia, and Petrus Paracletus, O.Carm. (a lawyer). Fifteenth century: St. Bernardine of Siena, St. John Capistran, Cristoforo di Varese (not published), Alessandro Arioesto (Serena Consciencia), Jean Perrin, Jean Philippin. Sixteenth century: Brendolinus, Gilbert Nicolai, Antonio de Cordova, Jerome de Francisci, John of Pechham's side, the great reformer. Seventeenth century: Peter Marchant, Pedro de Navarre, Matteo da De Gubernatis. Eighteenth century: Kerkhove, Kasenberger (several times reedited in nineteenth century), Castellani, Vittore Cocciale (O. Cap.), Gabriello Angelo a Vincentia. Nineteenth century: Benedict, O. M. Corthals, O. de la Roca de Prati Minor, Rome, 1807; Fano, 1841) Alberto a Bulsano (Knoll, O. Cap.), Winkel, Mann, Hilarius Parisiensis (O. Cap.), whose learned but extravagant work has been put on the Index of forbidden books. Finally, Bonaventura Dernoye (Medulla S. Evangelii per Christum dictata S. Franciscio in sua seraphica Regula, Antwerp, 1657) and Lladislas de Paris (O. Cap.), Meditatio sur la Règle des Fréres Minors (Paris, 1898) have written voluminous works on the rule for purposes of preaching and pious meditation.

The Rule of St. Francis is observed to-day by the Friars Minor and the Capuchins without dispensations. Besides the rule, both have their own general constitutions and observance of the rule "Iuxta Constitutiones Urbanæ" (1528), in which all former papal declarations are declared not to be binding on the conventuals, and in which their departure from the rule, especially with regard to poverty, is again sanctioned.

Text:—The original of the Bull "Solet annueus" is preserved as a relic in the sanctuary of St. Francis at Assisi. The text is also found in the registers of Honorius III, in the Vatican Archives. Fac-similes of both and also of "Exuit" and "Exuit" are published in "Seraphica Legationis Textus Originalis" (Rome, 1901). The text alone: "Seraphica Legationis Textus Originalis" (Quaracchi, 1897). Critical editions of the rule, with introductions on their origin: Opuscula S. P. Francisci (Quaracchi, 1894); Böhmer, Analekten zur Geschicthe der Franziskanern vor Asis (Leipzig, 1929); French and English translations of the second and third rule: Works of St. Francis of Assisi (London, 1882), 23–63; critical edition: J. M. Robinson, The Writings of St. Francis of Assisi (London, 1906), 25–74; de la Mare, The Writings of St. Francis of Assisi (London, 1907), 1–96.

LIVARIUS OLIGER.

Francis Borgia (Span. Francisco de Borja y Aragon), Saint, b. 28 October, 1510, was the son of Juan Borgia, third Duke of Gandia, and of Juana of Aragon; d. 30 September, 1572. The future saint was unhappy in his ancestry. His grandfather, Juan Borgia, the second son of Alexander VI, sixteenth pope, was executed in Rome on 14 June, 1497, by an unknown hand, which his family always believed to be that of Cesar Borgia. Rodrigo Borgia, elected pope in 1492 under the name of Alexander VI, had eight children. The eldest, Pedro Luis, had acquired in 1485 the hereditary Duchy of Gandia in the Kingdom of Valencia, which, at his death, passed to his brother Juan, who married Maria Enriques de Luna. Having been left a widow by the murder of her husband, Maria Enriques withdrew to her duchy and devoted herself piously to the education of her two children, Juan and Isabel. After the marriage of her son in 1509, she followed the example of her daughter and had entered the Order of Poor Clares in Gandia, and it was through these two women that sanctity entered the Borgia family, and in the House of Gandia was begun the work of reparation which Francis Borgia was to crown. Great-grandson of Alexander VI, on the paternal side, he was, on the death of his cousin Ferdinand of Aragon, the fourth of that name, in 1516. His marriage to Aragon. In 1516. This marriage Juan had three sons and four daughters.
By a second, contracted in 1523, he had five sons and five daughters. The eldest of all and heir to the dukedom was Francis. Piously reared in a court which felt the influence of the two Poor Clares, the mother and sister of the reigning duke, Francis lost his own mother when he was but ten. In 1521, a false alarm, set in by the populace, imperilled the child’s life, and the position of the nobility. When the disturbance was suppressed, Francis was sent to Saragossa to continue his education at the court of his uncle, the archbishop, an ostentatious prelate who had never been consecrated nor even ordained priest. Although in this court the Spanish faith retained its fervour, it imposed intolerable to the inconsistencies permitted by the times, and Francis could not disguise from himself the relation in which his grandmother stood to the dead archbishop, although he was much indebted to her for his early religious training. While at Saragossa Charles V, Francis cultivated his mind and attracted the attention of his relatives by his fervour. They being anxious of assuring the fortune of the heir of Gandia, sent him at the age of twelve to Tordesillas as page to the Infanta Catarina, the youngest child and companion in solitude of the unfortunate queen, Juana the Mad.

In 1525 the Infanta married King Juan III of Portugal, and Francis returned to Saragossa to complete his education. At last, in 1528, the court of Charles V was opened to him, and the most brilliant future awaited him. On the way to Valladolid, while passing, brilliantly escorted, through Alcalá de Henares, Francis encountered a poor man whom the servants of the Inquisition were leading to prison. It was Ignatius of Loyola. The young nobleman exchanged a glance of emotion with the prisoner, little dreaming that one day they should be united by the triple bond of emperor and empress. The emperor and empress welcomed Borgia less as a subject than as a kinsman. He was seventeen, endowed with every charm, accompanied by a magnificent train of followers, and, after the emperor, his presence was the most gallant and knightly at court. In 1529, at the desire of the empress, Charles V gave him in marriage the hand of Eleanor de Castro, at the same time making him Marquess of Lombay, master of the hounds, and equerry to the emperor, and appointing Eleanor Cámara Mayor. The newly-created Marquess of Lombay enjoyed a privileged station. Whenever the emperor was travelling or conducting a campaign, he confined to the young equerry the care of the empress, and on his return to Spain treated him as a confidant and friend. In 1535, Charles V led the expedition against Tunis unaccompanied by Borgia, but in the following year the favourite followed his sovereign on the unfortunate campaign in Provence. Besides the virtues which made him the model of the court and the personal attractions which made him its ornament, the Marquess of Lombay possessed a cultivated musical taste. He delighted above all in ecclesiastical compositions, and these display a remarkable contrapuntal style and bear witness to the skill of the composer, justifying indeed the assertion that, in the sixteenth century and prior to Palestrina, Borgia was one of the chief restorers of sacred music.

In 1538, at Toledo, an eighth child was born to the Marquess of Lombay, and on 1 May of the next year the Empress Isabella died. The equrry was commissioned to convey her remains to Granada, where they were interred on 17 May. The death of the empress caused the first break in the brilliant career of the Marquess and Marchioness of Lombay. It deserted them from the court and taught the nobleman the vanity of life and of its grandeur. Blessed John of Avila preached the funeral sermon, and Francis, having made known to him his desire of reforming his life, returned to Toledo resolved to become a perfect Christian. On 26 June, 1539, Charles V named him Viceroy of Catalonia, and the importance of the charge tested the sterling qualities of the courtier. Precise instructions determined his course of action. He was to reform the administration of justice, put the finances in order, fortify the city of Barcelona, and repress outlawry. On his arrival at the viceregal city, on 23 August, he at once proceeded, with an energy which no opposition could daunt, to build the ramparts, rid the country of the brigands who terrorized it, reform the monasteries, and develop learning. During his vice-regency he showed himself an inflexible justiciary, and above all an exemplary judge. The long and grievous trials were destined to develop in him the work of sanctification begun at Granada. In 1543 he became, by the death of his father, Duke of Gandia, and was named by the emperor master of the household of Prince Philip of Spain, who was betrothed to the Princess of Portugal. His appointment was to indicate Francis as the chief minister of the future reign, but by God’s permission the sovereigns of Portugal opposed the appointment. Francis then retired to his Duchy of Gandia, and for three years awaited the termination of the displeasure which barred him from court. He profited by this leisure to reorganize his dukedom, to found a university, and gain the degree of Doctor of Theology, and to attain to a still higher degree of virtue. In 1546 his wife died. The duke had invited the Jesuits to Gandia and become their protector and disciple, and even at that time their model. But he desired still more, and on 1 February, 1548, became one of them by the pronouncement of the solemn vows of religion, although authorized by the pope to remain in the world, until he should have fulfilled his obligations towards his children and his estates—his obligations as father and as ruler.

On 31 August, 1550, the Duke of Gandia left his estates to see them no more. On 23 October he arrived at Rome, threw himself at the feet of St. Ignatius, and edified by his rare humility those especially who recalled the ancient power of the Borgias. Quick to conceive great projects, he even then urged St. Ignatius to found the Roman College. On 4 February, 1551, he left Rome, without making known his intention of departure. On 4 April, he reached Aspeitia in Guipuscoa, and chose as his abode the hermitage of Santa Magdalena near Oñate. Charles V having permitted him to relinquish his possessions, he abdicated in favour of his eldest son, was ordained priest 25 May, and at once began to deliver a series of sermons in Guipuscoa, which revived the faith of the country. Nothing was talked of throughout Spain but this change of life, and Oñate became the object of incessant pilgrimage. The neophyte was obliged to bear himself from prayer in order to preach in the cities which called him, and which, his burning zeal, he fought to win, and he was scarcely more appearance, stirred profoundly. In 1553 he was invited to visit Portugal. The court received him as a messenger from God and vowed to him, thenceforth, a veneration which it has always preserved. On his return from this journey, Francis learned that, at the request of the emperor, he was to be made a cardinal. St. Ignatius prevailed upon the pope to reconsider this decision, but two
years later the project was renewed and Borgia anxiously inquired whether he might in conscience oppose a desire of the pope. St. Ignatius again relieved his embarrassment by requesting him to pronounce the solemn vows of profession, by which he engaged not to accept any dignities save at the formal command of the pope. Thenceforth the saint was reassured. Pius IV and Pius V loved him too well to impose upon him such an imprudence. Although much weakened by austerities, worn by attacks of gout and an affection of the stomach, the new general still possessed much strength, which, added to his abundant store of initiative, his daring in the conception and execution of vast designs, and the influence which he exercised over the Christian princes and at Rome, made him the oracle of the order and the providential head. In Spain he had had other cares in addition to those of government. Henceforth he was to be only the general. The preacher was silent. The director of souls ceased to exercise his activity, except through his correspondence, which, it is true, was immense and which carried throughout the entire world light and strength to kings, bishops and apostles, to nearly all who in his day served the Catholic cause. His chief anxiety being to strengthen and develop his order, he sent visitors to all the provinces of Europe, to Brazil, India, and Japan. The instructions, with which he was wont to model the missions, were simplicity, kindness, and breadth of mind. For the missionaries as well as for the fathers delegated by the pope to the Diet of Augsburg, for the confessors of princes and the professors of colleges he mapped out wide and secure paths. While too much a man of duty to permit relaxation or abuse, he attracted chiefly by his kindness and won souls to good by his example. The edition of the rules, at which he laboured incessantly, was completed in 1567. He published them at Rome, dispatched them (throughout the Society), and strongly urged their observance. The text of those now in force was edited after his death, in 1590, but it differs little from that issued by Borgia, to whom the Society owes the chief edition of its rules as well as that of the Spiritual Exercises, of which he had borne the expense in 1548. In order to ensure the spiritual and intellectual formation of the young religious and the apostolic character of the whole order, it became necessary to carry out two other measures. The first was the publication of the spiritual exercises, in Spanish, first at Rome, then in all the provinces, wisely regulated novitiates and flourishing houses of study, and to develop the cultivation of the interior life by establishing in all of these the custom of a daily hour of prayer.

He completed at Rome the house and church of St. Andrea in Quirinale, in 1567. Illustrious novices flocked thither, among them Stanislaus Kostka (d. 1568), and the future martyr Rudolph Aequaviva. Since his first journey to Rome, Borgia had been preoccupied with the idea of founding a Roman college, and while in Spain he had generously supported the project. In 1567, he built the church of the college, assured it even then an income of six thousand ducats, and at the same time drew up the rules of studies, which, in 1583, inspired the compilers of the Ratio Studiorum of the Society. Being a man of prayer as well as of action, the saintly general, despite overwhelming occupations, did not permit his soul to be distracted from continual contemplation. Strengthened by so vigilant and holy administration the Society could not but develop. Spain and Portugal numbered many foundations; in Italy Borgia created the Roman province, and founded several colleges in Piedmont. France and the northern province, however, were the chief field of his triumphs. His relations with the Cardinal de Lorraine and his influence with the French Court made it possible for him to put an end to numerous misunderstandings, to secure the revocation of several hostile edicts, and to found eight colleges in France. In Flanders
and Bohemia, in the Tyrol and in Germany, he maintained and multiplied important foundations. The palace and church of St. Peter was built, and St. Peter's, Rome, every thing transformed under his hands. He had built S. Andrea and the church of the Roman college. He assisted generously in the building of the Gesù, and although the official founder of that church was Cardinal Farnese, and the Roman College has taken the name of one of its greatest benefactors, in the legate XIII, Borgia contributed more than anyone towards these foundations. During the seven years of his government, Borgia had introduced so many reforms into his order as to deserve to be called its second founder. Three saints of this epoch laboured incessantly to further the work of St. Charles Borromeo. They were Francis Borgia, St. Placid V, and St. Charles Borromeo.

The pontificate of Pius V and the generalship of Borgia began within an interval of a few months and ended at almost the same time. The saintly pope had entire confidence in the saintly general, who conformed with intelligent devotion to every desire of the pontiff. It was he who inspired the pope with the idea of demanding from the Universities of Perugia and Bologna, and eventually from all the Catholic universities, a profession of the Catholic faith. It was also he who, in 1568, desired the pope to appoint a commission of cardinals charged with promoting the conversion of heretics, and he ordered the Society of Jesus to return to Bologna, of the Congregation for the Propagation of the Faith, established later by Gregory XV, in 1622. A pestilential fever invaded Rome in 1566, and Borgia organized methods of relief, established ambulances, and distributed forty of his religious to such purpose that the same fever having broken out two years later it was to Borgia that the pope at once confided the task of safeguarding the city.

Francis Borgia had always greatly loved the foreign missions. He reformed those of India and the Far East and created those of America. Within a few years, he had the glory of numbering among his sons sixty-six martyrs, the most illustrious of whom were the fifty-three missionaries of Brazil who with their superior, Ignacio Azevedo, were massacred by Huguenot corsairs. It remained for Francis to terminate his beautiful life with a splendid act of obedience to the pope and devotion to the Church.

On 17 June, Pius V invited him to accompany his nephew, Cardinal Bonelli, on an embassy to Spain and Portugal. Francis was then recovering from a severe illness; it was feared that he had not the strength to bear fatigue, and he himself felt that such a journey would cost him his life, but he gave it generously, and we believe hereafter, that the old distrust of Philip II was forgotten. Barcelona and Valencia hastened to meet their former vicaroy and saintly duke. The crowds in the streets cried: “Where is the saint?” They found him emaciated by penance. Wherever he went, he reconciled differences and restored discord. At Madrid, Philip II received him with open arms, the Inquisition approved and recommended his genuine works. The repossession was complete, and it seemed as though God wished by this journey to give Spain to understand for the last time this living sermon, the sight of a saint. Gandia ardently desired to behold his holy duke, but he would never consent to return thither. The embassy to Lisbon was no less consoling to Borgia. Among other happy results he prevailed upon the king, Don Sebastian, to ask in marriage the hand of Marguerite of Valois, the sister of Charles IX.

This was the desire of St. Pius V, but this project, being frustrated too late, was frustrated by the Queen of Navarre, who had meanwhile secured the hand of Marguerite for her son. An order from the pope expressed his wish that the embassy should also reach the French court. The winter promised to be severe and was destined to prove fatal to Borgia. Still more grievous to him was to be the spectacle of the devastation which heresy had caused in that country, and the word of warning prophesied by the marvel of the saint. At Blois, Charles IX and Catherine de' Medici accorded Borgia the reception due to a Spanish grandee, but to the cardinal legate as well as to him they gave only fair words in which there was little sincerity. On 25 February they left Blois. By the time they reached Lyons, Borgia's last days were already depicted. For these conditions the passage of Mt. Cenis over snow-covered roads was extremely painful. By exerting all his strength the invalid reached Turin. On the way the people came out of the villages crying: “We wish to see the saint!” Advised of his cousin's condition, the Duke of Fermaux, from Alexandria and had brought him to his city, where he remained from 19 April until 3 September. His recovery was despaired of and it was said that he would not survive the autumn. Wishing to die either at Loretto or at Rome, he departed in a litter on 3 September, spent eight days at Loretto, and then, despite the sufferings caused by the slightest joint, ordered his bearers to push forward with the utmost speed for Rome. It was expected that any instant might see the end of this agony. They reached the “Porta del Popolo” on 28 September. The dying man hailed his litter and thanked God that he had been able to accomplish this great work. The next day he died of pneumonia and was soon invaded by cardinals and prelates. For two days Francis Borgia, fully conscious, awaited death, receiving those who visited him and blessing through his younger brother, Thomas Borgia, all his children and grandchildren. Shortly after midnight on 30 September, his beautiful life came to a peaceful and painless close.

In the Catholic Church he had been one of the most striking examples of the conversion of souls after the Renaissance, and for the Society of Jesus he had been the protector chosen by Providence to whom, after St. Ignatius, it owes most.

In 1607 the Duke of Lerma, minister of Philip III and grandson of the holy religious, having seen his granddaughter miraculously cured through the intercession of Francis, caused the process for his canonization to be begun. The ordinary process, begun at once in several cities, was followed, in 1617, by the Apostolic process. In 1615 Madrid received the last of the saint's torments, and the court announced that his beatification and canonization might be proceeded with. The beatification was celebrated at Madrid with incomparable splendour. Urban VIII having decreed, in 1631, that a Blessed might not be canonized without a new procedure, a new process was begun, which was resolved in 1661 to sign the Bull of canonization of St. Francis Borgia, on 20 June, 1670. Spared from the decree of Joseph Bonaparte who, in 1809, ordered the consecration of all shrines and precious objects, the silver shrine containing the remains of the saint, after various vicissitudes, was removed, in 1901, to the church of the Society at Madrid, where it is honoured at the present time.

It is with good reason that Spain and the Church venerate in St. Francis Borgia a great man and a great saint. The highest nobles of Spain are proud of their descent from, or their connexion with him. By his penitent and apostolic life he repaired the sins of his family and rendered glorious a name, which for him, would have remained a source of humiliation for the Church. His feast is celebrated 10 October.

THE VIRGIN WITH ST. FRANCIS BORGIA AND ST. STANISLAUS KOSTKA
L. DEFERRARI, S. LORENZO, GENOA
Franciscan Order, a term commonly used to designate the members of the various foundations of religious, whether men or women, professing to observe the Rule of St. Francis of Assisi in its general or specific forms. The aim of the present article is to indicate briefly the origin and relationship of these different foundations. It is customary to say that St. Francis founded three orders, as we read in the Office for 4 Oct.:

"Triae ordines hic ordinat: primunquam Fratrum nominat Minorum; pauperumque fit Dominarum medius: sed Penitentium tertius sexum caput utrumque" (Brev. Rom. Serap., in Solem. S. P. Fran. ant. 3, ad Laudae). These three orders, viz. the Friars Minor, the Poor Ladies or Claras, and the Brothers and Sisters of Penance, are generally referred to as the First, Second, and Third Orders of St. Francis.

The Friars Minor, the first order properly dates from 1209, in which year St. Francis obtained from Innocent III an unwritten approbation of the simple rule he had composed for the guidance of his first companions. This rule has not come down to us in its original form; it was subsequently rewritten by the spirituals and the laicals, approved by Honorius III, 29 Nov., 1223 (Litt. "Solet Annuerre"). This second rule, as it is usually called, of the Friars Minor is the one at present professed throughout the whole First Order of St. Francis (see Francis, Rule of Saint).

The foundation of the Poor Ladies or second order may be said to have been laid in 1212. In that year St. Clare (q. v.), who had besought St. Francis to be allowed to embrace the new manner of life he had instituted, was established by him at St. Damian's near Assisi, together with several other pious maidens who had joined her. It is erroneous to suppose that St. Francis ever drew up a formal rule for these Poor Ladies, and no mention of such a document is found in any of the early authorities. The rule imposed upon the Poor Ladies at St. Damian's about 1219 by Cardinal Ugolino, afterwards Gregory IX, was rescinded by St. Clare towards the end of her life, with the assistance of Cardinal Einaldo, afterwards Alexander IV, and this revised form was approved by Innocent IV, 9 Aug., 1258 (Litt. "Solet Annuerre"). (See Poor Claras.)

Tradition assigns the year 1221 as the date of the foundation of the Brothers and Sisters of Penance, now known as tertiaries. This third order was devised by St. Francis as a sort of middle state between the cloister and the world for those who, wishing to follow in the saint's footsteps, were debared by marriage or other ties from entering either the first or second order. There has been some degree of opinion as to how far the saint composed a rule for these foundations, and generally it is believed that the rule approved by Nicholas IV, 18 Aug., 1299 (Litt. "Supra Montem") does not represent the original rule of the third order.

Some recent writers have tried to show that the third order, as we now call it, was really the starting-point of the whole Franciscan Order. They maintain that the Second and Third Orders of St. Francis were not added to the First, but that the three branches, the Friars Minor, Poor Ladies, and Brothers and Sisters of Penance, grew out of the lay confraternity of penance which was St. Francis's first and original intention, and were separated from it into different groups by a special rule for monks. This rule was approved by Leo X, 20 Jan., 1521 (Bull "Inter"), although this rule is greatly modified out importance for the early history of all three orders, but it is not yet sufficiently proven to preclude the more usual account given above, according to which the Franciscan Order developed into three distinct branches, namely, the first, second, and third orders, the process of addition and not of division, and this is still the view generally received.

Coming next to the present organization of the Franciscan Order, the Friars Minor, or first order, now comprises three separate bodies, namely: the Friars Minor properly so called, or parent stem, founded, as has been said, by St. Francis Minor Conventuals, and the Friars Minor Capuchins, which grew out of the parent stem, and were constituted independent orders in 1517 and 1619 respectively. All three orders profess the rule of the Friars Minor approved by Honorius III in 1223, but each one has its particular constitutions and its own minister general (see Capuchin Friars Minor; Conventuals, Order of Friars Minor). The various lesser foundations of Franciscan friars following the rule of the first order, which once enjoyed a separate or quasi-separate existence, are now either extinct, like the Clareni, Coletani, and Celestines, or have become amalgamated with the Friars Minor, as in the case of the Observants Formati, Recollects, Alcantarines, etc. (On all these lesser foundations, now extinct, see Friars Minor).

As regards the Second Order, of Poor Ladies, now commonly called Poor Claras, this order includes all the different monasteries of cloistered nuns professing the Rule of St. Clare approved by Innocent IV in 1223, whether they observe the same in all its original strictness or according to the dispensations granted by Urban IV, 18 Oct., 1263 (Litt. "Beata Clarus") or the constitutions drawn up by St. Colette (d. 1447) and approved by Pius II, 18 March, 1458 (Litt. "Eul."). (See Poor Claras.) The Sisters of the Annunciation and the Conceptionists are in some sense offshoots of the second order, but they now follow different rules from that of the Poor Ladies (see Annunciation, The Orders of the; I. Annunciation; Conceptionists).

In connexion with the Brothers and Sisters of Penance or Third Order of St. Francis, it is necessary to distinguish between the third order secular and the third order regular. The third order secular was founded, as we have seen, by St. Francis about 1221 and embraces devout persons of both sexes living in the world and following a rule of life approved by Nicholas IV in 1229, and modified by Leo XIII, 30 May, 1883 (Constit. "Misericors"). It includes not only members who form part of local fraternities, but also isolated tertiaries, hermits, pilgrims, etc. (See Third Order Secular.) The early history of the third order regular is uncertain and is susceptible of controversy. Some attribute its foundation to St. Elizabeth of Hungary (q. v.) in 1228, others to Blessed Angelina of Marsciano in 1395. The latter is said to have established at Foligno the first Franciscan monastery of enclosed tertiaries in nuns in Italy. It is certain that early in the fifteenth century tertiary foundations in both men and women were established in parts of Europe and that the Italian friars of the third order regular were recognized as a mendicant order by the Holy See. Since about 1458 the latter body has been governed by its own minister general and its members take solemn vows. (See Third Order Regular.)

In addition to this third order regular, properly so called, and quite independently of it, a very large number of Franciscan tertiary congregations, both of men and women, have been founded, more especially since the beginning of the nineteenth century. These new foundations have taken as a basis of their institute the Rule of 1223, and have drawn their inspiration from the life, teaching, and example of St. Francis, and are subject to his authority. They have been formed for the cure of souls, the assistance of the sick, and the service of the Church. They are now numerous in many parts of the world, and have spread from Italy to all parts of Europe.
by their particular constitutions which, for the rest, differ widely according to the end of each foundation. The Congregations of regular tertiaries are either autonomous or under episcopal jurisdiction, and for the most part they are Franciscan in name only, not a few of them having abandoned the habit and even the traditional cord of the order.

For the vexed question of the origin and evolution of the different Orders of the Minorites, see *Der Aufstieg des Minoritenordens und der Bistumsbruderschaften* (Freiburg, 1855), 33 sqq.; *Ehrle in Lex. J. & Theol., XI*, 743 sqq.; Mandouet, *Les ordres du clergé de l'Université de Paris et de l'Université de France et siècle in Opuscula of critique historique*, vol. I, fasc. IV (Paris, 1834); *Zutphen in Rom*, Quarracini, in XVI, 93 sqq.; *Van Orley in Anales Hollendae*, XVIII, 294 sqq.; *Van Hove in the Ordensgeschiedenis*, XXII, 97–107. All three of these orders are given in *Holl. Apfell, Manuale Historiae O.F.M. (Freiburg, 1896); Himbucher, Die Orden und Kongregationen (Paderborn, 1607), 307–533; also Pathe, Tableau synoptique de tout l'Ordre Sar- Fachische (Paris, 1879); and *Curbach, St. Francis and the Francisceans* (New York, 1887).

Pascal Robinson.

Francis Caracciolo, Saint, co-founder with John Augustine Adorno of the Congregation of the Minor Clerks Regular; b. in Villa Santa Maria, in the Abruzzi (Italy), 13 October, 1563; d. at Agnone, 4 June, 1635. He belonged to the Piazzuolo family and was the Caracciolo and received in baptism the name of Ascanio. From his infancy he was remarkable for his gentleness and uprightness. Having been cured of leprosy at the age of twenty-two he vowed himself to an ecclesiastical life, and distributing his goods to the poor, went to Naples in 1585 to study theology. In 1587 he was ordained priest and joined the confraternity of the *Banchi della Giustizia* (The white robes of Justice), whose object was to assist condemned criminals to die holy deaths. A letter from Giovanni Agostino Adorno to another Ascanio Caracciolo, begging him also to join the confraternity of a new religious institute, having been delivered by mistake to our saint, he saw in the circumstance an evidence of the Divine Will towards him (1588). He assisted in framing up the rules for the new congregation, which was approved by Sixtus V, 1 July, 1588, and confirmed by Gregory XIV, 18 February, 1591, and by Clement VIII, 1 June, 1592. The congregation is both contemplative and active, and to the three usual vows a fourth is added, namely, that its members must not aspire to ecclesiastical dignities outside the order nor seek them within it. Adoration of the Blessed Sacrament is kept up by rotation, and mortifications are continually practised. The name of the order, “Ad Maiorem Dei Regni gloriam” was chosen from the fact that Francis and Adorno made their profession at Naples on Low Sunday, 9 April, 1589. In spite of his refusal he was chosen general, 9 March, 1593, in the first house of the congregation in Naples, called St. Mary Major’s or Pietrasanta, given to them by Sixtus V. He made three journeys into Spain to establish foundations under the protection of Philip II and Philip III. He opened the house of the Holy Ghost at Madrid on 20 January, 1599, that of Our Lady of the Annunciation at Valladolid on 9 September, 1601, and that of St. Joseph at Alcala sometime in the following year. Rome he obtained possession of St. Leonard’s church, which he afterwards exchanged for that of St. Agnes in the Piazza Navona (18 September, 1598), and later he secured for the institute the church of San Lorenzo in Lucina (11 June, 1600), which was made by bull of Paul V (1603) by the bull “Suscipsum” of Pope Pius X (9 November, 1906).

St. Francis Caracciolo was the author of a valuable work, “Le sette stazioni sopra la Passione di N. S. Gesù Cristo”, which was printed in Rome in 1710. He loved the poor. Like St. Thomas Aquinas, a relative on his mother’s side, his purity was angelic. Pope Paul V desired to confer an important bishopric on him, but he steadfastly refused it. His frequent motto was “Zelus domus tuæ et operum ejus”. Induced by the Oratorians at Agnone in the Abruzzi to convert their house into a college for his congregation, he fell ill during the negotiations and died there on the vigil of Corpus Christi. He was beatified by Pope Clement XIV on 4 June, 1709, and canonized by Pope Pius VII on 24 May, 1807. In 1938 he was chosen as patron of the city of Naples, where his body lies. At first he was buried in St. Mary Major’s, but his remains were afterwards translated to the church of Montevergine, which was given in exchange to the Minor Clerks Regular (1823) after their suppression at the beginning of the French rule. Francis is no longer venerated there with the old fervour and devotion.

Francesco Caracciolo (Naples, 1876); for the history of the congregation of Jesus the suc- cession (Naples, 1884); Pizzelli, Notitia historiae della religione di PP. Chierici Regardi Minoriti (Rome, 1710).

Francesco保罗.

Francisco de Geronimo (Gholoma, Hieronymo), Saint, b. 17 December, 1642; d. 11 May, 1716. His birthplace was Grottaglie, a small town in Apulia, situated about five or six leagues from Taranto. At the age of sixteen he entered the college of Taranto, which was under the care of the Society of Jesus. He studied humanities and philosophy there; and was so successful that his bishop sent him to Naples to attend lectures in theology and canon law at the celebrated college of Gesù Vecchio, which at that time rivalled the greatest universities in Europe. He was ordained there, 18 March, 1666. After spending four years in charge of the pupils at the college of nobles in Naples, where the students surnamed him the holy prefect, il santo prefetto, he entered the novitiate of the Society of Jesus, 1 July, 1670. At the end of his first year’s probation he was sent with an experienced missionary to the forlorn parish of the Mercogliano, at a distance of several league from the town of Otranto. A new term of four years spent labouring in the towns and villages at missionary work revealed so clearly to his superiors his wonderful gift of preaching that, after allowing him to complete his theological studies, they determined to devote him to the work of the church, and reside at the Gesù Nuovo, the residence of the pro- fessed fathers at Naples. Francis would fain have gone and laboured, perhaps even laid down his life, as he often said, amidst the barbarous and idolatrous nations of the Far East. He wrote frequently to his superiors, begging them to grant him that great favour. Finally they told him to abandon the idea altogether, and to concentrate all his zeal and energy on the city and Kingdom of Naples. Francis understood this to be the will of God, and insisted no more. Naples thus became for forty years, from 1676 till his death, the centre of his apostolic labours.

He first devoted himself to stirring up the religious enthusiasm of a congregation of workmen, called the “Oratorio della Missione”, established at the profession house in Naples. The main object of this association was to provide the missionary father with devoted helpers amidst the thousand difficulties that would suddenly arise for him in the course of his work. With the enthusiastic sermons of the director, these good people became zealous co-operators. One remark- able feature of their work was the multitude of sinners they brought to the feet of Francis. In the notes which he sent his superiors concerning his favourite missionary work, the saint takes great
pleasure in speaking of the fervour that animated the members of his dear "Oratory". Nor did they devot their devoted director to overlook the material needs of those who assisted him in the good work. In the Oratory he succeeded in establishing a mont de piété. The capital was increased by the gifts of the associate. Thanks to this institute, they could have each day, in consequence, food and also in the state of a dollar); should death visit any of the members a respectable funeral was accorded them, costing the institute eighteen ducats; and they had the further privilege, which was much sought after, of being interred in the church of the Gesù Nuovo (see Brevi notizie, 128). He was an indefatigable preacher, and often spoke forty times in one day, choosing those streets which he knew to be the centre of some secret scandal. His short, energetic, and eloquent sermons touched the guilty consciences of his hearers and worked miraculous conversions. The rest of the week, not given over to labour in the city, was spent visiting the environs of Naples; on some occasions preaching; but more than all in his church, preached in the streets, the public squares, and the churches. The following Sunday he would have the consolation of seeing at the Sacred Table crowds of 11,000, 12,000 or even 13,000 persons; according to his biographers there were ordinarily 15,000 men present at the monthly General Communion. But his work par excellence was to give missions in the open air and in the low quarters of the city of Naples. His tall figure, ample brow, large dark eyes and aquiline nose, sunken cheeks, pallid countenance, and looks that spoke of his ascetic austerities produced a wonderful impression. The people crushed forward to hear him, and cried to him to give them his garments. When he exhorted sinners to repentance he seemed to acquire a power that was more than natural, and his feeble voice became resonant and awe-inspiring. "He is a lamb, when he talks", the people said, "but a lion when he preaches". Like the ideal popular preacher he was, when in presence of an audience as fickle and impressionable as the Neapolitans, Francis left nothing undone that could strike their imaginations. At one time he would bring a skull into the pulpit, and showing it to his hearers would drive home the lesson he wished to impart; at another time he would say: "If you were only by chance to fall into the hands of the inexorable judge, judge, I beg you, to reflect for a moment on the pain of hell and to cast off your sins; for you will suffer, as we all might suffer, with Christ in the crown of thorns". The effect was irresistible; young men of evil lives would rush forward and follow the example of the preacher, confessing their sins aloud; and abandoned women would cast themselves before the crucifix, and cut off their long hair, giving expression to their bitter sorrow and repentance. This apostolic labour in union with the cruel penance and the ardent spirit of prayer of the saint worked wonderful results amidst the slaves of vice and crime. Thus the two refugees in Naples contained in a short time over 250 penitents each; and in the Asylum of the Holy Ghost he sheltered for a while 190 children of these unfortunates, preserving them thereby from the danger of afterwards following the shameful trade of their mothers. He had the consolation of seeing twenty-two of them embrace the religious life. So also he changed the royal convict advanced him and was made a member of the venerable Congregation of Christian peace and resignation; and he tells us further that he brought many Turkish and Moorish slaves to the true faith, and made use of the pompous ceremonies at their baptism to strike the hearts of the imaginations of the spectators (Brevi notizie, 121-6). Whatever time was unoccupied by his town missions he devoted to giving country or village missions of four, eight, or ten days, but never more; here and there he gave a retreat to a religious community, but in order to save his time he would not hear their confessions [cf. Recueil de lettres per le Nozze Malvesi Hercolani (1876), p. 28]. To consolidate the good work, he tried to establish everywhere an association of St. Francis Xavier, his patron and model; or else a "Società dei Novizi". For fifteen years he preached her praises every Tuesday in the Neapolitan church, known by the name of St. Mary of Constantiopolis. Although engaged in such active exterior work, St. Francis had a mystical soul. He was often seen walking through the streets of Naples in the night, with a look of ecstasy and tears streaming down his face. His companion had constantly to call his attention to the people who saluted him, so that Francis finally decided to walk bare-headed in public. He had the reputation at Naples of being a great miracle worker; and his biographers, as those who testified during the process of his canonization, did not hesitate to attribute to him a host of wonders and cures of all kinds. His obsequies were, for the Neapolitans, the occasion of a triumphal procession; and it had not been for the intervention of the Swiss guard, the seal of his followers might have exposed the remains of his body to the vandals who defiled the sacred squares of Naples, in every part of the suburbs, in the smallest neighbouring hamlets, every one spoke of the holiness, zeal, eloquence, and inexhaustible charity of the deceased missionary. The ecclesiastical authorities soon recognized that his cause of beatification should be begun. On 2 May, 1758, Benedict XIV declared that Francis de organo had practised the theological and cardinal virtues in an heroic degree. He would have been beatified soon afterwards for the storm that assailed the Society of Jesus about this time and ended in its suppression. Pius VII could not proceed with the beatification till 2 May, 1817; and Gregory XVI canonized the saint solemnly on 26 May, 1839. St. Francis de Geromino wrote little. Some of his letters have been collected by his biographers and inserted in their works; for his writings, cf. Sommervogel, "Bibl. de la Comp. de Jesus", new ed., III, col. 1359. We must mention by itself the account that he wrote to his superiors of the fifteen most laborious years of his ministry, which has furnished the materials for the most striking details of this sketch. The work dates from October, 1893. The saint modestly calls it "Brevi notizie delle cose di gloria di Dio accadute in e intorno a me di sua grazia e misericordia", and Boero published it in "S. Francesco di Girolamo e le sue Missioni dentro e fuori di Napoli", p. 67-181 (Florence, 1882). The archives of the Society of Jesus contain a voluminous collection of his sermons, or rather discourses on his sermons. It would be well to recall this proof of the care he took in preparing himself for the ministry of the pulpit, for his biographers are wont to dwell on the fact that his eloquent discourses were extemporaneous. Among his chief biographers the following are worthy of particular mention: STRAMMOTTI, who lived twenty years with the saint in the professed house at Naples and had been his superior; he wrote his life in 1719, just three years after death of Francis. Six years later, in 1725, a new life appeared, written by a very remarkable Jesuit, BAGNATI. He lived with St. Francis for the last fifteen years of his life and was his ordinary confessor. The most popular biography is that written by DONIS, who composed his work at the time the process of canonization was beginning. In the first place, once again it is, also, the Summarium de virtutibus ven. P. Francisci de organo (1755). It is a short work, very researchful in point of the saint's cause, MUSZELINSKI, extracted from it a great number of important facts relating to the labours and activities of the saint, Raccolta documenti autenticali relative a vita del B. Francesco di Geromino" (Rome, 1896). Lastly, the Histoire de S. Francois de Geromino. (Paris, 1863), by FABER, is not the most accurate on the subject, but strives too much after the edification of the reader. C. CARLONI, Bibliographie historique de la Compagnie de Jesus, t. 1891-98 (Paris, 1864). F. VAN ORTHOY.
FRANCIS

Francis de Sales, SAINT, Bishop of Geneva, Doctor of the Universal Church; b. at Thorens, in the Duchy of Savoy, 21 August, 1567; d. at Lyons, 28 December, 1622. His father, François de Sales de Boisy, and his mother, Françoise de Sionnaz, belonged to old Savoyard aristocratic families. The future saint was the eldest of six children. He intended for the magistracy and sent him at an early age to the colleges of La Roche and Annecy. From 1583 till 1588 he studied rhetoric and humanities at the college of Clermont, Paris, under the care of the Jesuits. While there he began a course of theology. After the terrible and prolonged temptation to despair, caused by the discussions of the theologians of the day on the question of predestination, from which he was suddenly freed as he knelt before a miraculous image of Our Lady at St. Etienne-des-Grès, he made a vow of chastity and consecrated himself to the Blessed Virgin Mary. In 1588 he studied law at Padua, where the Jesuit Father Possiel was his spiritual director. He received his diploma of doctorate from the famous Pancrocola in 1592.

Having been admitted as a lawyer before the senate of Chambéry, he was about to be appointed senator. His father, having been elevated to one of the most illustrious hierarchies of Savoy to be the partner of his future life, but Francis declared his intention of embracing the ecclesiastical life. A sharp struggle ensued. His father would not consent to see his expectations thwarted. Then Claude de Granier, Bishop of Geneva, obtained for him, his old preparatory school and the position of vicar of the Chapter of Geneva, a post in the patronage of the pope. It was the highest office in the diocese. M. de Boisy yielded and Francis received Holy orders (1593).

From the time of the Reformation the seat of the Bishop of Geneva had been fixed at Annecy. The apostolic seal, the new provost devoted himself to preaching, hearing confessions, and the other work of his ministry. In the following year (1594) he volunteered to evangelize Le Chablais, where the Genevans had imposed the Reformed Faith, and which had just been restored to the Duchy of Savoy. He made his headquarters in the fortress of Allinges. Risking his life, he journeyed through the entire district, preaching constantly; by dint of zeal, learning, kindness, and holiness he at last obtained a hearing. He then settled in Thonon, the chief town. He confuted the preachers sent by Geneva to oppose him; he received several prominent Calvinists. At the request of the pope, Clement VIII, he went to Geneva to interview Theodore Beza, who was called the Patriarch of the Reformation. The latter received him kindly and seemed for a while shaken, but had not the courage to take the final steps. A large part of the inhabitants of Le Chablais returned to the true fold (1597 and 1598). Claude de Granier then chose Francis as his coadjutor, in spite of his refusal, and sent him to Rome (1599).

Pope Clement VIII ratified the choice; but he wished to examine the candidate personally; in presence of the Sacred College, and urged him to examine. It was a triumph for Francis. "Drink, my son," said the Pope to him. "from your cistern, and from your living wellspring; may your waters issue forth, and may they become public fountains where the world may quench its thirst." The prophecy was to be realized. On his return from Rome the religious affairs of the Gex, a dependency of France, necessitated his going to Paris. There the coadjutor formed an intimate friendship with Cardinal de Bérulle, Antoine Dehassey, secretary of Henry IV, and Henry IV himself, who wished "to make a third in the bosom of the Church," (a bon homme et accompli). The king made him preach the Lent at Court, and wished to keep him in France. He urged him to continue, by his sermons and writings, to teach those souls that had to live in the world how to have confidence in God, and how to be genuinely and truly pious—graces of which he saw the great necessity.

On the death of Claude de Granier, Francis was consecrated Bishop of Geneva (1602). His first step was to institute catechetical instructions for the faithful, both civil and those who were of respectable family. His food was plain, his dress and his household simple. He completely dispensed with superfluities and lived with the greatest economy, in order to be able to provide more abundantly for the wants of the needy. He heard confessions, gave advice, and preached incessantly. He wrote innumerable letters (mainly letters of direction) and found time to publish the numerous works mentioned below. Together with St. Jane Frances de Chantal, he founded (1607) the Institute of the Visitation of the Blessed Virgin, for young girls and widows who, feeling themselves called to God but not having suitable religious societies. His works were characterized by their clearness, and lack of inclination, for the corporal austerities of the great orders. His zeal extended beyond the limits of his own diocese. He delivered the Lent and Advent discourses which are still famous—those at Dijon (1604), where he first met the Baronne de Montespan; at the positions in Paris (1606, 1617, 1618), where he converted the Marché de Lesdiguières. During his last stay in Paris (November, 1618, to September, 1619) he had to go into the pulpit each day to satisfy the pious wishes of those who thronged to hear him. "Never," said they, "have we heard such profound and sacred sermons." He came into contact here with all the distinguished ecclesiastics of the day, and in particular with St. Vincent de Paul. His friends tried energetically to induce him to remain in France, offering him first the wealthy Abbey of St. Geneviève and then the coadjutor-bishopric of Paris, but he refused all to return to Annecy.

In 1622 he had to accompany the Court of Savoy into France. At Lyons he insisted on occupying a small, poorly furnished room in a house belonging to the gardener of the Visitation Convent. There, on 22 December, he was united to the Sacraments. He received the last sacraments and made his profession of faith, repeating constantly the words: "God's will be done! Jesus, my God and my all!") He died next day, in the fifty-sixth year of his age. Immense crowds flocked to visit his remains, which the people of Lyons were anxious to keep in their city. With much difficulty his body was brought back to Annecy, but his heart was left at Lyons. A great number of wonderful favours have been obtained at his tomb in the Visitation Convent of Annecy. His heart, at the time of the French Revolution, was carried by the Visitation nuns from Lyons to Paris, where it is preserved by St. Francis de Sales, beatified in 1661, and canonized by Alexander VII in 1665; he was proclaimed Doctor of the Universal Church by Pope Pius IX, in 1877.

The following is a list of the principal works of the holy Doctor: (1) "Controversies", leaflets which the zealous missioner scat as among the inhabitants of Le Chablais in the beginning, when these people did not venture to come and hear him preach. They form a complete proof of the Catholic Faith. In the first part, the author defends the authority of the Church, and in the second and third parts, the rules of Faith, which are daily prosecuted by the Church ministers. The primacy of St. Peter is amply vindicated. (2) "Defense of the Standard of the Cross", a demonstration of the virtue (a) of the True Cross;
(b), of the Crucifix; (c) of the Sign of the Cross; (d), an explanation of the Veneration of the Cross. (3) "An Introduction to the Devout Life", a work intended to lead "Philosophy", the soul living in the world, into the paths of devotion, that is to say, of true and solid piety. Every one should strive to become pious, and the more pious, in the fourth place, he is, the more he should be capable of suffering. (4) "Treating on the Love of God", an authoritative work which reflects perfectly the mind and heart of Francis of Sales as a great genius and a great saint. It contains twelve books. The first four give us a history, or rather explain the theory, of Divine love, its birth in the soul, its growth, its perfection, and its union to God. The last three resume what has preceded and teach how to apply practically the lessons taught therein. (5) "Spiritual Conferences": familiar conversations on religious virtues addressed to the sisters of the Visitations and collected by them. We find in them practical common sense and inspiration (2) by Father Bernard of Mount St. Mary, which were characteristic of the kind-hearted and energetic Saint. (6) "Sermons"—These are divided into two classes: those composed previously to his consecration as bishop, and which he himself wrote out in full; and the discourses he delivered when a bishop, of which, as a rule, only outlines and synopses have been preserved. Some of the latter, however, were taken down in extenso by his hearers. Pius IX., in his Bull proclaiming him Doctor of the Church, calls the Saint "The Master and Restorer of Sacred Eloquence". He is one of those who at the beginning of the Church formed the basis of the beautiful French language; he foreshadows and prepares the way for the great sacred orators about to appear. He speaks simply, naturally, and from his heart. To speak well we need only love well, was his maxim. His mind was imbued with the Holy Writings, which he comments, and explains, and applies practically, with no less accuracy than grace. (7) "Letters", mostly letters of direction, in which the minister of God effaces himself and teaches the soul to listen to God, the only true director. The advice given is suited to all the circumstances and necessities of life and of the soul. In the trying and the trying of God, he effaces his own personality in these letters, the same manner makes himself known to us and unconsciously discovers to us the treasures of his soul. (8) A large number of very precious treatises or opuscules.

Francis of Assisi, Saint, founder of the Franciscan Order, b. at Assisi in Umbria, in 1181 or 1182—the exact year is uncertain; d. there, 3 October, 1226. His father, Pietro Bernardone, was a wealthy Assisi cloth merchant. Of his mother, Pica, little is known but she is said to have belonged to a noble family of Provence. Francis was one of several children. The legend that he was born in a stable dates from the fifteenth century only, and appears to have originated in the desire of certain writers to make his life resemble that of Christ. At baptism he received the name of Giovanni, which his father afterwards altered to Francesco, through fondness it would seem for France, whither business had led him at the time of his son's birth. In any case, since the child was renamed in infancy, the change can hardly have had the force of a name that the young Francis ever bore, as some have thought. Francis received some elementary instruction from the priests of St. George's at Assisi, though he learned more perhaps in the school of the Troubadours, who were just then making for refinement in Italy. However this may be, he was not very studious, and his literary attainments incomplete. Although associated with his father in trade, he showed little liking for a merchant's career,
and his parents seem to have indulged his every whim. Thomas of Celano, his first biographer, speaks in very severe terms of Francis, who declares that Complete is it that the saint’s early life gave no presage of the golden years that were to come. No one loved pleasure more than Francis; he had a ready wit, sang merrily, delighted in fine clothes and showy display. Handsome, gay, gallant, add courteous, he soon became the prime favourite among the young nobles of Assisi, the most in every feat of arms, the leader of the civil rebels, the very king of frolic. But even at this time Francis showed an instinctive sympathy with the poor, and though he spent money lavishly, it still flowed in such channels as to attest a princely magnanimity of spirit. When about twenty, Francis went out with the townsmen of Assisi to the north, to the territory of the Perugines in skirmishes so frequent at that time between the rival cities. The Assisians were defeated on this occasion, and Francis, being among those taken prisoners, was held captive for more than a year in Perugia. A low fever which he there contracted appears to have turned his thoughts to the things of eternity; at least the emptiness of the life he had been leading came to him during that long illness. With returning health, however, Francis’s eagerness after glory reawakened and his fancy wandered in search of victories; at length he resolved to embrace a military career, and circumstances seemed to favour his aspirations. He knew that Assisi was about to join “the gentle count”, Walter of Brienne, who was then in arms in the Neapolitan States against the emperor, and Francis arranged to accompany him. His biographers tell us that the night before Francis set forth he had a strange dream, in which he saw a vast hall hung with armour and marked with the Cross. “These”, said a voice, “are for you and your soldiers”. “I know I shall be a great prince”, exclaimed Francis exultingly, as he started for Apulia. But a second illness arrested his course at Spoletto. There, we are told, Francis had another dream in which the same voice bade him turn back to Assisi. He did so at once. This was in 1205.

Although Francis still joined at times in the noisy revels of his former comrades, his changed demeanour plainly showed that his heart was no longer with them; a yearning for the life of the spirit had already possessed it. His companions twitted Francis on his absent-mindedness and asked if he were minded to be married. “Yes”, he replied, “I am about to take a wife of surpassing fairness.” She was none other than that Lady Poverty whom Dante and Giotto have wedded to his name, and whom even now he had begun to love. After a short period of contemplation he began to pray and endeavor the answer to his call; he had already given up his gay attire and wasteful ways. One day, while crossing the Umbrian plain on horseback, Francis unexpectedly drew near a poor leper. The sudden appearance of this repulsive object filled him with disgust and he instinctively retreated, but presently controlling his natural aversion he dismounted, embraced the unfortunate man, and gave him all the money he had. About the same time Francis made a pilgrimage to Rome. Pained at the misery offerings he saw at the tomb of St. Peter, he emptied his purse thereon. Then, as if to put his fastidious nature to the test, he exchanged clothes with a tattered mendicant and stood for the rest of the day fasting among the hordes of beggars at the door of the basilica. Not long after his return to Assisi, whilst Francis was praying before an ancient crucifix in the forsaken wayside chapel of St. Damian’s below the town, a voice said: “Go, Francis! repair my house, which you see is falling into ruin.” Taking this benedict literally, as referring to the ruined church wherein he knelt, Francis went to his father’s shop, impulsively bundled together a load of coloured drapery, and mounting his horse hastened to Foligno, then a metropolis of some importance, and there sold both horse and stuff to procure the money needful for the restoration of St. Damian’s. When, however, the poor priest was delighted there refused to receive it, Francis drove it on and thus gotten, Francis flung it from him disdainfully. The elder Bernardone, a most niggardly man, was incensed beyond measure at his son’s conduct, and Francis, to avert his father’s wrath, hid himself in a cave near St. Damian’s for a whole month. When he emerged, he found the gate of the town opened to him, and the people without, and Francis was followed by a hooting rabble, pelting with mud and stones, and otherwise mocked as a madman. Finally, he was dragged home by his father, beaten, bound, and locked in a dark closet. Freed by his mother during Benedetto’s absence, Francis took shelter at one of the petrified assis of St. Damian’s, where he found a shelter with the officiating priest, but he was soon after cited before the city council by his father. The latter, not content with having recovered the scattered gold from St. Damian’s, sought also to force his son to forego his inheritance. This Francis was only too eager to do; he declared, however, that since he had entered the service of God he was no longer under civil jurisdiction. Having therefore been taken before the bishop, Francis stripped himself of the very clothes he wore, and gave them to his father, saying: “Hitherto I have called you my father on earth; henceforth I shall call you my Father of Heaven.” Then and there, as Dante sings, were solemnized Francis’s nuptials with his beloved spouse, the Lady Poverty, under which name, in the mystical language afterwards so familiar to him, he comprehended the total surrender of all worldly goods, honours, and privileges. And now Francis wandered forth into the hills behind Assisi, improvising hymns of praise as he went. “I am the herald of the great King”, he declared in answer to some robbers, who therupon despoiled him of all he had and threw him scornfully in a snow drift. Naked and half frozen, Francis endowed to save himself turned to him the people and worked for a time as a scullion. At Gubbio, whither he went next, Francis obtained from a friend the cloak, girdle, and staff of a pilgrim as an alms. Returning to Assisi, he traversed the city begging stones for the restoration of St. Damian’s. These he carried to the old chapel, set in place himself, and so at length rebuilt it. In the same way Francis afterwards restored two other deserted chapels, St. Peter’s, some distance from the city, and St. Mary of the Angels, in the plain below it, at a spot called the Porziuncola. Meantime he redoubled his zeal in works of charity, more especially in nursing the sick.

On a certain morning in 1208, probably 24 February, Francis was hearing Mass in the chapel of St. Mary of the Angels, near which he had then built himself a hut; the Gospel of the day told how the disciples of Christ were to possess neither gold nor silver, nor scrip for their journey, nor shoes, nor coat, nor a staff, and that they were to exhort sinners to repentance and announce the Kingdom of God. Francis took these words as if spoken directly to himself, and so soon as Mass was over threw away the poor fragment left him of the world’s goods, his shoes, cloak, pilgrim staff, and empty wallet. At last he had found his vocation. Having obtained a coarse woolen tunic of “beast colour”, the dress then worn by the poorest Umbrian peasants, and tied it round him with a knotted rope, Francis went forth at once exhorting the people of the country-side to penance, brotherly love, and peace. The Assisiens had already ceased to respect Francis; “Go, Francis!” they would exclaim, and this example even drew others to him. Bernard of Quintavalle, a magistrate of the town, was the first to join Francis, and he was soon followed by Peter of Cattaneo, a well-known canon of the cathedral. In the true spirit of religious enthusiasm, Francis repaired to the church of St. Nicholas and sought to
learn God’s will in their regard by thrice opening at random the book of the Gospels on the altar. Each time it opened at passages where Christ told His disciples to love all thing and follow Him. “This shall be our rule of life”, exclaimed Francis, and led his companions to the public square, where they forthwith gave away all their belongings to the poor. After this they procured rough habits like that of Francis, and built themselves small huts near his at the Porziuncola. A few days later Giles, afterwards the great ecstast, and another “good words”, became the third follower of Francis. The little band divided and went about, two and two, making such an impression by their words and behaviour that before long several other disciples grouped themselves round Francis eager to share his poverty, among them being Sabatinius, vir bonus et justus, Morieux, who had belonged to the Crucigeri, John of Capella, who afterwards fell away, Philip “the Long”, and four others of whom we know only the names. When the number of his companions had increased to eleven, Francis found it expedient to draw up a rule for them. This first rule, as it is called, of the Friars Minor has not come down to us in its original form, but it appears to have been very short and simple, a mere informal adaptation of the Gospel precepts already selected by Francis for the guidance of his first companions, and which he desired to practise in all their perfection. When this rule was ready the Penitents of Assisi, as Francis and his followers styled themselves, set out for Rome to seek the approval of the Holy See, although as yet no such approbation was obligatory. There are differing accounts of Francis’s reception by Innocent III. It seems, however, that Guido, Bishop of Assisi, who was then in Rome, commended Francis to Cardinal John of St. Paul, and that at the instance of the latter, the pope recalled the saint whose first overtures he had, as it appears, somewhat rudely rejected. Moreover, in spite of the sinister predictions of others in the Sacred College, who regarded the mode of life proposed by Francis as unsafe and impracticable, Innocent, moved it is said by a dream in which he beheld the Poor Man of Assisi upholding the tottering Lateran, gave a verbal sanction to the rule submitted by Francis and granted the saint and his companions leave to preach repentance everywhere. Before leaving Rome they all received the ecclesiastical tonsure, Francis himself being ordained deacon later on.

After their return to Assisi, the Friars Minor, for thus Francis had named his brethren—either out of the monasteries, or lower classes, as some think, or as others believe, with reference to the Gospel (Matt. xxv, 40-45) and as a perpetual reminder of their humility—found shelter in a deserted hut at Rivo Torto in the plain below the city, but were forced to abandon this poor abode by a rough peasant who drove in his ass upon following Palm Sunday, and with two companions went to the Porziuncola, where the friars met her in procession, carrying lighted torches. Then Francis, having cut off her hair, clothed her in the Minorite habit and thus received her to a life of poverty, penance, and seclusion. Clare stayed provisionally with some Benedictine nuns near Assisi, until Francis could provide a suitable retreat for her, and for St. Agnes, her sister, and the other pious maidens who had joined her. He eventually established them at St. Damiani’s, in a dwelling adjoining the chapel he had rebuilt with his own hands, which was now given to the saint by the Benedictines as a domicile for his spiritual daughters, and which thus became the first monastery of the Second Franciscan Order of Poor Ladies, now known as Poor Clares (see CLARE OF ASSISI, SAINT; POOR CLARES).

In the autumn of the same year (1212) Francis’s burning desire for the conversion of the Saracens led him to embark for Syria, but having been shipwrecked on the coast of Slavonia, he had to return to Ancona. The following spring he devoted to evangelizing Central Italy. About this time (1213) Francis
received from Count Orlando of Chiusi the mountain of La Verna, an isolated peak among the Tuscan Apennines, rising some 4000 feet above the valley of the Casentino, as a retreat, especially favourable for contemplation, to which he might retire from time to time for prayer and rest. For Francis never, altogether separated the contemplative from the active life, as the several little hermitages associated with his memory, and the quaint regulations he wrote for those living in them bear witness. At one time, indeed, a strong desire to give himself wholly to a life of prayer, and he seems to have withdrawn the saint. During the next year (1214) Francis set out for Morocco, in another attempt to reach the infidels and, if needs be, to shed his blood for the Gospel, while yet in Spain was overtaken by so severe an illness that he was compelled to turn back to Italy once more.

Authentic details are unfortunately lacking of Francis’s journey to Spain and sojourn there. It probably took place in the winter of 1214-1215. After his return to Umbria he received several noble and learned men into the order, including his future biographer, Thomas of Celano. The next eighteen months saw a great increase in the number of the saint’s life. That he took part in the Lateran Council of 1215 may well be, but it is not certain; we know from Eccleston, however, that Francis was present at the death of Innocent III, which took place at Perugia, in July, 1216. Shortly afterwards, i.e. very early in the year of Honorius III, he placed the consecration of the famous Porziuncola Indulgence. It is related that once, while Francis was praying at the Porziuncola, Christ appeared to him and offered him whatever favour he might desire. The salvation of souls was ever the burden of Francis’s prayers, and wishing, moreover, to make his beloved Porziuncola a sanctuary where many might be saved, he begged a plenary Indulgence for all who, having confessed their sins, should visit the little chapel. Our Lord acceded to this request on condition that the pope should ratify the Indulgence. Francis thereupon set out for Perugia, with Brother Masso, to find Honorius III. The latter, notwithstanding some opposition from the Curia at such an unheard-of favour, granted the Indulgence, restricting it, however, to one day yearly. He subsequently fixed 2 August in perpetuity, as the day for gaining this Porziuncola Indulgence, commonly known in Italy as the feast of St. Francis. Such is it to this day. The fact that there is no record of this Indulgence in either the papal or diocesan archives and no allusion to it in the earliest biographies of Francis or other contemporary documents has led some writers to reject the whole story. This argumentum ex silentio has, however, been met by M. Patu Sabatier, who in his critical edition of the “Tractatus de Indulgentia” of Fra Bartholi (see Bartholi, Francesco della Rossa) has adduced all the really credible evidence in its favour. But even those who regard the granting of this Indulgence as traditionally believed to be an established fact of history, admit that its early history is shrouded in obscurity.

The first general chapter of the Friars Minor was held in May, 1217, at Porziuncola, the order being divided into provinces, and an apportionment made of the Christian world into so many Franciscan missions. Tuscany, Lombardy, Provence, Spain, and Germany were the first to be on the map of Franciscanism, for himself the saint reserved France, and he actually set out for that kingdom, but on arriving at Florence, was dissuaded from going further by Cardinal Ugolino, who had been made protector of the order in 1216. He therefore sent in his stead Brother Pacificus, who in the world had been known as a poet, together with Brother Agnellus, who later on established the Friars Minor in England. Although success came indeed to Francis and his friars, with it came also opposition, and it was with a view to allaying any prejudices the Curia might have imbibed against their methods that Francis, at the instance of Cardinal Ugolino, went to Rome, and preached before the pope and cardinals in the Lateran. This visit to the Eternal City, which took place 1217-18, was apparently the only occasion of Francis’s memorable meeting with St. Dominic. The year 1218 Francis devoted to missionary tours in Italy, which were a continual triumph for him. He usually preached out of doors, in the market-places, from church steps, from the walls of castle courtyards. Enraptured by the spell of his presence, adoring crowds, unused for the rest to anything like popular preaching in the vernacular, followed Francis from place to place hanging on his lips; church bells rang at his approach; processions of clergy and people advanced to meet him with music and singing; they brought the sick to him to bless and heal, and kissed the very ground on which he trod, and even sought to cut away pieces of his tunic. The extraordinary enthusiasm with which the saint was everywhere welcomed was equalled only by the immediate and visible result of his preaching. His exhortations were short, homely, affectionate, and pathetic, touched even the hardest and most frivolous, and Francis became in sooth a very conqueror of souls. Thus it happened, on one occasion, while the saint was preaching at Camara, a small village near Assisi, that the whole congregation were so moved by his words and spirit and "life and art" that they presented themselves to him in a body and begged to be admitted into his order. It was to accede, so far as might be, to like requests that Francis devised his Third Order, as it is now called, of the Brothers and Sisters of Penance, which he intended as a sort of middle state between the world and the cloister for those who could not leave their home or desert their wanted avocations in order to enter either the First Order of Friars Minor or the Second Order of Poor Ladies. That Francis prescribed particular duties for these tertiaries is beyond question. They were not to carry arms, or take oaths, or engage in lawsuits, etc. It is also said that he drew up a formal rule for them, but it is clear that the rule, confirmed by Nicholas IV in 1289, does not, at least in the form in which it has come down to us, represent the original rule of the Brothers and Sisters of Penance. In any event, it is customary to assign the date of its formal foundation to this third order, but the date is not certain.

At the second general chapter (May, 1219) Francis, bent on realizing his project of evangelizing the infidels, assigned a separate mission to each of his foremost disciples, himself selecting the seat of war between the crusaders and the Saracens. With eleven companions, including Brother Illuminato and Peter of Cattaneo, Francis set sail from Ancona on 21 June, for Saint-Jean d’Acre, and he was present at the siege and taking of Damietta. After preaching there to the assembled Christian forces, Francis fearlessly passed over to the infidel camp, where he reigned supreme and led before the sultan. According to the testimony of Jacques de Vitry, who was with the crusaders at Damietta, the sultan received Francis with courtesy, but beyond obtaining a promise from this ruler of more indulgent treatment for the Christian captives, the saint’s preaching seems to have effected little. Before returning to the Iberian coast, Francis returned to Irala, where he had visited Palestine and there obtained for the friars the foothold they still retain as guards of the holy places. What is certain is that Francis was compelled to hasten back to Italy because of various troubles that had arisen there during his absence. News had reached him in the East that the Montefeltro of Gregory of Naples, the two vicars-general whom he had left in charge of the order, had summoned a chapter which, among other innovations, sought to impose
FRANCIS

new fasts upon the friars, more severe than the rule required. Moreover, Cardinal Ugolino had conferred on the Poor Ladies a written rule which was practically that of the Benedictines, and Brother Philip, whom Francis had charged with their interests, had accepted it. To make matters worse, John of Capella, one of the saint’s first companions, had assembled a large number of lepers, both men and women, with a view to forming them into a new religious order, and had set out for Rome to seek approval for the rule he had drawn up. Finally a rumour had been spread abroad that Francis was dead, so that when the saint returned to Italy with Brother Elias—he appears to have arrived at Venice in July, 1220—a general feeling of unrest prevailed among the friars. Apart from these difficulties, the order was being shaken by the departure of the three youths who had given up their life of studious retirement. It had become evident that the simple, familiar, and unceremonious ways which had characterized movement at its beginning were gradually disappearing, and that the heroic poverty practised by Francis and his companions at the outset became less easy as the friars with amazing rapidity increased in number. And this Francis could not help seeing, for on his return, Cardinal Ugolino had already undertaken the task “of reconciling inspirations so unsteady and so free with an order of things they had outgrown”. This remarkable man, who afterwards ascended the papal throne as Gregory IX, was deeply attached to Francis, whom he venerated as a saint and also, some writers tell us, managed as an enthusiast. That Cardinal Ugolino had no small share in bringing Francis’s lofty ideals “within range and compass” seems beyond dispute, and it is not difficult to recognize his hand in the reform which the friars, and in particular Brother Elias, made of the organization of the order in the so-called Chapter of Mats. At this famous assembly, held at Porziuncola at Whitsun-tide, 1220 or 1221 (there is seemingly much room for doubt as to the exact date) and number of the friars assembled, about 500 is said to have been present, besides some 5000 applicants for admission to the order. Huts of wattle and mud afforded shelter for this multitude. Francis had purposely made no provision for them, but the charity of the neighbouring towns supplied them with food, while knights and nobles waited upon them gladly. It was on this occasion that Francis, no doubt and disheartened at the tendency betrayed by a large number of the friars to relax the rigours of the rule, according to the promptings of human prudence, and feeling, perhaps, unfitted for a place which now called largely for organizing abilities, relinquished his position as general of the order in favour of Peter of Cathanea. But the latter died in less than a year, being succeeded as vicar-general by the unhappy Brother Elias (see Elias of Cortona), who continued in that office until the death of Francis. The saint, meanwhile, during the few years that remained to him, sought to impress on the friars by the silent teaching of personal example of what sort he would have them to be. Already, while passing through Bologna on his return from the East, Francis had refused to enter the convent there because he had heard it called the “House of the Friars” and because a studium had been instituted there. He moreover bade all the friars, even those who were ill, quit it at once, and it was only some time after, when Cardinal Ugolino had publicly declared the house to be his own property, that Francis suffered his brethren to re-enter it. Yet strong and definite as the saint’s convictions were, and determinedly as his line was taken, he was never a slave to a theory in regard to the observance of poverty or anything else; about him, indeed, there was nothing narrow or fanatical. As for his attitude towards study, Francis had deliberately for his friars only such theological knowledge as was conformable to the mission of the order, which was before all else a mission of example. Hence he regarded the accumulation of books as being at variance with the poverty his friars professed, and he resisted the eager desires of men put to a testing so prevalent in his time, in so far as it struck at the roots of that simplicity which entered so largely into the essence of his life and ideal and threatened to stifle the spirit of prayer, which he accounted preferable to all else.

In 1221, so some writers tell us, Francis drew up a new rule for the Friars Minor. Others regard this so-called Rule of 1221 not as a new rule, but as the first one which the Council of Trent III had orally approved; not, indeed, its original form, which we do not possess, but with such additions and modifications as it had suffered during the course of twelve years. However this may be, the composition called by some the Rule of 1221 is very unlike any conventional rule ever made. It was too lengthy and unprecise to become a formal rule, and two years later Francis retired to Fonte Colombo, a hermitage near Rieti, and rewrote the rule in more compendious form. This revised draft he entrusted to Brother Elias, who, after declaring he had lost it through negligence, Francis thereupon returned to the solitude of Fonte Colombo, and recast the rule on the same lines as before, its twenty-three chapters being reduced to twelve and some of its precepts being modified in certain details at the instance of Cardinal Ugolino. In this form the rule was solemnly approved by Honorius III, 29 November, 1223 (Litt. “Solet annuere”). This Second Rule, as it is usually called, or Regula Bulgata of the Friars Minor, is the one ever since professed throughout the First Order of St. Francis (see Francis, Rule of Saint). It is based on the three vows of poverty, obedience, and chastity, with special stress however being laid on poverty, which Francis sought to make the special characteristic of his order, and which became the sign to be contradicted. This vow of absolute poverty in the first and second orders and the reconciliation of the religious with the secular state in the Third Order of Penitency, are the chief novelties introduced by Francis in monastic regulation.

It was during Christmastide of this year (1223) that the saint conceived the idea of celebrating the Nativity “in a new manner”, by reproducing in a church at Grecio the presepio of Bethlehem, and he has thus come to be regarded as having inaugurated the popular devotion of the Crib. Christmas appears indeed to have been the favourite feast of Francis, and he wished to persuade the emperor to make a special law that
men should then provide well for the birds and the beasts, as well as for the poor, so that all might have occasion to rejoice in the Lord.

Early in August, 1224, Francis retired with three companions to "that rugged rock 'twixt Tiber and Arno", as Dante called La Verna, there to keep a forty days fast in preparation for Michaelmas. During this period the wings of Christ became more than ever the burden of his meditations; into few souls, perhaps, had the full meaning of the Passion so deeply entered. It was on or about the feast of the Exaltation of the Cross (14 September) while praying on the mountainside that he beheld the marvellous vision of the ciborium, the sequel of which there appeared on his body the visible marks of the five wounds of the Crucified which, says an early writer, had long since been impressed upon his heart. Brother Leo, who was with St. Francis when he received the stigmata, has left us in his note to the saint's autograph blessing preserved at Assisi, a clear and simple account of the miracle, which for the rest is better attested than many another historical fact. The saint's right side is described as bearing an open wound which looked as if made by a lance, while through his hands and feet were black nails of flesh, the points of which were bent backward. After the reception of the stigmata, Francis suffered increasing pains throughout his frail body, already broken by continual mortification. For, condescending as the saint always was to the weaknesses of others, he was ever so unsparing towards himself that at the last he felt constrained to ask pardon of "Brother Ass" as he called his body, for having treated it so harshly. Worn out, moreover, as Francis now was by eighteen years of unremitting toil, his strength gave way completely, and at times his eyesight so far failed him that he was almost wholly blind. During an access of anguish, Francis paid a last visit to St. Clare at St. Damian's, and it was in a little hut of reeds, made for him in the garden there, that the saint composed that "Canticle of the Sun", in which his poetic genius expands itself so gloriously. This was in September, 1225. Not long afterwards Francis, at the urgent instance of Brother Elias, underwent an unsuccessful operation for the eyes, at Rieti. He seemed to have passed the winter 1225-26 at Siena, whither he had been taken for further medical treatment. In April, 1226, during an interval of improvement, Francis was moved to Cortona, and it is believed to have been while resting at the hermitage of the Celle there, that the saint dictated his testament, which he describes as a reminder, a warning, and an exhortation. In this touching sheet of Francis, writing from the fulness of his heart, urges anew with the simple eloquence, the few, but clearly defined, principles that were to guide his followers, implicit obedience to superiors as holding the place of God, literal observance of the "without gloss" especially as regards poverty, and the duty of manual labour, being solemnly enjoined on all the friars. Meanwhile alarming dropsical symptoms had developed, and it was in a dying condition that Francis set out for Assisi. A roundabout route was taken by the little caravan that escorted him; for it was feared to follow the direct road leading Perugians should attempt to carry Francis off by force so that he might die in their city, which would thus enter into possession of his coveted relics. It was therefore under a strong guard that Francis, in July, 1226, was finally borne in safety to the bishop's palace in the town, and in his room of the enthusiastic rejoicings of the entire populace. In the early autumn Francis, feeling the hand of death upon him, was carried to his beloved Porziuncola, that he might breathe his last sigh where his vocation had been revealed to him and whence his hand had struggled into sight. On the way thither he asked to be set down, and with painful effort he invoked a beautiful blessing on Assisi, which, however, his own eyes could no longer discern. The saint's last days were passed at the Porziuncola in a tiny cell near the chapel, that served as an infirmary. The arrival there about this time of the Lady Jacobs of Setteoli, who had come with her two sons and a great retinue to bid Francis farewell, caused some consternation, since women were forbidden to enter the friary. But Francis, in his tender gratitude to this Roman noblewoman, who had been such a special benefactor of his order, made an exception in her favour, and "Brother Jacoba", as Francis had named her on account of her fortitude, remained to the last. On the eve of his death, the saint, in imitation of his Divine Master, had bread brought to him and broken. This he distributed among those present, blessing Bernard of Quintavalle, his first companion, Elias, his viceroy, and all the others in order. I have done my part," he said next "may Christ teach you to do yours." Then wishing to give a last token of detachment and to show he had no longer anything in common with the world, Francis removed his poor habit and lay down on the bare ground, covered with a borrowed cloth, rejoicing that he was able to keep faith with his Lady Poverty to the end. After a while he asked to have read to him the Passion according to St. John, and then in faltering tones he himself intoned Psalm cxii. At the concluding verse, "Bring my soul out of prison", Francis was led away from earth by "Sister Death", in whose praise he had shortly before said a prayer to his "Canticle of the Sun". It was Saturday evening, 3 October, 1226, Francis being then in the forty-fifth
year of his age, and the twentieth from his perfect conversion to Christ.

The saint had, in his humility, it is said, expressed a wish to be buried on the Colle d’Inferno, a desolated hill without Assist, where criminals were executed. He died on the 4th of July, 1224, born in triumphant procession to the city, a half being made at St. Damiam’s, that St. Clare and her companions might venerate the sacred stigmata now visible to all, and it was placed provisionally in the church of St. George (now within the enclosure of the monastery of St. Clare), where a sermon was preached to the people who had learned to read and had first preached. Many miracles are recorded to have taken place at his tomb. Francis was solemnly canonized at St. George’s by Gregory IX, 16 July, 1228. On the day following the pope laid the first stone of the great double church of St. Francis, erected in honour of the new saint, and thither on 25 May, 1230, Francis’s remains were secretly transferred by Brother Elias and buried far down under the high altar in the lower church. Here, after lying hidden for six centuries, like that of St. Clare’s, Francis’s coffin was found, 12 December, 1818, as the result of a toilsome search lasting fifty-two nights. This discovery of the saint’s body is commemorated in the order by a special office on 12 December, and that of his translation by another on 25 May. His feast is kept throughout the Church on 4 October, and the impression of the stigmata on his body is celebrated on 17 September. It has been said with pardonable warmth that Francis entered into glory in his lifetime, and that he is the one saint whom all succeeding generations have agreed in canonizing. Certain it is that those also who care little about the order he founded, and who love not Christian charity to be Divine, find themselves, instinctively as it were, looking across the ages for guidance to the wonderful Umbrian Poverello, and invoking his name in grateful remembrance. This unique position Francis doubtless owes in no small measure to his singularly lovable and winsome personality. Few saints ever exhaled “the good odour of Christ” to such a degree as he. There was about Francis, moreover, a chivalry and a poetry which gave to his other-worldliness a quite romantic charm and beauty. Other saints have seemed entirely dead to the world around them but Francis was ever thoroughly in touch with the spirit of the age. He delighted in the songs of Provence, rejoiced in the new-born freedom of his native city, and cherished what Dante calls the pleasant sound of his dear land. And this exquisite human element in Francis’s character was the key to that far-reaching, all-embracing sympathy, which may be almost called his characteristic gift. In his heart, as an old chronicler puts it, the whole world found refuge, the poor, the sick and the fallen being the objects of his solicitude in a more special manner. Heeded as Francis ever was of the world’s judgments in his own regard, it was always his constant care to remember the feelings of all and to sound forth the voice of none. Wherefore he admonishes the friars to use only low and mean tables, so that “if a beggar were to come to sit down near them he might believe that he was but with his equals and need not blush on account of his poverty”. One night, we are told, the friary was severely punished by the feeling of the friars “not to sound in you”, exclaimed Francis arising, “and why are you dying?” “I am dying of hunger”, answered the voice of one who had been too prone to fasting. Whereupon Francis had a table laid out and sat down beside the famished friar, and lest the latter might be ashamed to eat alone ordered all the brethren to join in the repast. Francis’s devotedness in consoling the afflicted made him so condescending that he shrank not from abiding with the lepers in their loathly lasar-houses and from eating with them out of the same platter. But above all it is his dealings with the erring that reveal the truly Christian spirit of his charity. “Sainterlier than any of the saints”, writes Celano, “among sinners he was as one of themselves”. Writing to a certain minister in the order, Francis says: “Should there be a brother anywhere in the world who has sinned, no matter how great soever his fault may be, let him not go away after he has once been rebuked without showing pity towards him; and if he seek not mercy, ask him if he does not desire it. And by this I will know if you love God and me.”

Again, to medieval notions of justice the evil-doer was beyond the law and there was no need to keep faith with him. But according to Francis, not only was justice due even to evil-doers, but justice must be preceded by courtesy as by a herald. Courtesy, indeed, in the saint’s quixotic concept, was the younger sister of charity and one of the qualities of God Himself, Who of His courtesy, He declares, “gives His sun and His rain to the just and the unjust”. This habit of courtesy Francis ever sought to enjoin on his disciples. “Whoever may come to us”, he writes, “whether a friend or a foe, a thief or a robber, let him be kindly received”, and the feast which he spread for the starving brigands in the forest at Monte Cassale sufficed to show that “as he taught so he wrought”. The very animals found in Francis a tender friend and protector; thus we find him pleading with the people of Gubbio to feed the fierce wolf that had ravished their flocks, because through hunger “Brother Wolf” had done this wrong. And the early legends have left us many an idyllic picture of how beasts and birds alike susceptible to the charm of Francis’s gentle ways, entered into loving companionship with him; how the hunted leveret sought to attract his notice; how the half-frozen bees crawled towards him in winter to be fed; how the wild falcon fluttered around him; how the nightingale sang with him in sweetest content in the ilex grove at the Carco, and how his “little brethren the birds” listened so devoutly to his sermon by the roadside near Bevagna that Francis chided himself for not having thought of preaching to them before. Francis’s love of nature also stands out in bold relief in the world he moved in. He delighted to commune with the wild flowers, the crystal spring, and the friendly fire, and to greet the sun as it rose upon the fair Umbrian vale. In this respect, indeed, St. Francis’s “gift of sympathy” seems to have been wider even than St. Paul’s, for we find no
evidence in the great Apostle of a love for nature or for animals.

Hardly less engaging than his boundless sense of fellow-feeling was Francis's downright sincerity and ardent humanity. "Dearly beloved," he once began a sermon following upon a severe illness, "I have to confess to God and you that during this Lent I have eaten cakes made with lard." And when the guardian insisted for the sake of warmth upon Francis having a fox skin sewn under his worn-out tunic, the saint consented only upon condition that another skin of like material be worn next. For it was his singular study never to hide from men that which was known to God. "What a man is in the sight of God," he was wont to repeat, "so much he is and no more." A saying which passed into the "Imitation," and has been often quoted.

Another winning trait of Francis which inspires the deepest affection was his unsparing directness of purpose and unfaltering following after an ideal. "His dearest desire so long as he lived," Celano tells us, "was ever to seek among wise and simple, perfect and imperfect, the means to walk in the way of truth." To Francis love was the truest of all things; hence his deep sense of personal responsibility towards his fellows. The love of Christ and Him Crucified permeated the whole life and character of Francis, and he placed the chief hope of redemption and redress for a suffering humanity in the literal imitation of his Divine Master. The saint imitated the exactness of Christ, literally as it was in him to see; barefoot, and in absolute poverty, he proclaimed the reign of love. This heroic imitation of Christ's poverty was perhaps the distinctive mark of Francis's vocation, and he was undoubtedly, as Bossuet expresses it, the most ardent, enthusiastic, and desperate lover of poverty the world has yet seen. After money Francis must detest discord and divisions. Peace, therefore, became his watchword, and the pathetic reconciliation he effected in his last days between the Bishop and Potestà of Assisi is but one instance out of many of his power to quell the storms of passion and restore tranquillity to hearts torn asunder by civil strife. The duty of a servant of God, Francis declared, was to lift up the hearts of men and move them to spiritual gladness. Hence it was not "from monastic stalls or with the careful irresponsibility of the enclosed student" that the saint and his followers addressed the people: "they dwelt among them and groaned with every anguish of the soul..." They worked in return for their fare, doing for the lowest the most menial labour, and speaking to the poorest words of hope such as the world had not heard for many a day. In this wise Francis bridged the chasm between an aristocratic clergy and the common people, and though he taught no new doctrine, he so far repopularized the old one given on the Mount that the Gospel took on a new life and called forth a new love.

Such in briefest outline are some of the salient features which render the figure of Francis one of such supreme attraction that all manner of men feel themself and their own wishes towards him to be an attachment. Few, however, of those who feel the charm of Francis's personality may follow the saint to his lonely height of rapt communion with God. For, however engaging a "minstrel of the Lord," Francis was none the less a profound mystic in the truest sense of the word. The whole world was to him one luminous ladder, mounting upon the rungs of which he approached and beheld God. It is very misleading, however, to portray Francis as living "at a height where dogma ceases to exist," and still further from the truth to represent the trend of his teaching as one in which orthodox dogmatics was made subservient to "humanitarianism." A very cursory inquiry into Francis's religious belief suffices to show that it embraced the entire Catholic dogma, nothing more or less. If then the saint's sermons were on the whole moral rather than doctrinal, it was because he preached to meet the wants of his day, and those whom he addressed had not strayed from dogmatic truth; they were still "hearers," not "doers," of the Word. Nor, for that reason Francis set aside all questions more theoretical than practical, and returned to the Gospel. Again, to see in Francis only the loving friend of all God's creatures, the joyous singer of nature, is to overlook altogether that aspect of his work which is the explanation of all the rest—its supernatural side. Few lives have been more profoundly spiritual, more imbued with the spirit of the supernatural, as even Renan admits. Nowhere, perhaps, can there be found a keener insight into the innermost world of spirit, yet so closely were the supernatural and the natural blended in Francis, that his very asceticism was often clothed in the guise of romance, as witness his wooing the Lady Poverty, in a sense that almost ceased to be figurative. For Francis's singularly vivid imagination was impregnate with the imagery of the chansons de geste, and owing to his markedly dramatic tendency, he delighted in suitting his action to his thought. So, too, the saint's native turn for the sublime and picturesque is revealed in the flowers he found in all created things, however trivial, some reflection of the Divine perfection, and he loved to admire in them the beauty, power, wisdom, and goodness of their Creator. And so it came to pass that he saw sermons even in stones, and good in everything. Francis was not so much on the thought, that if all are from one Father then all are real kin. Hence his custom of claiming brotherhood with all manner of animate and inanimate objects. The personification, therefore, of the elements in the "Canticle of the Sun" is something more than a mere literary figure. Francis's love of creatures was not simply the offspring of a soft or sentimental disposition; it arose rather from that deep and abiding sense of the presence of God, which underlay all he said and did. Even so, Francis's habitual cheerfulness was not that of a careless nature, or of one untouched by sorrow. None witnessed Francis's hidden struggles, his long agonies of tears, or his secret wrestlings in prayer. And if we meet him making dumb-show of music, by playing a couple of sticks like a violin to give vent to his glee, we also find him heart-sore with foreboding at the dire dissensions in the order, which threatened to make shipwreck of his enterprise. Meanwhile, there was the ever-present malady of the soul wanting to the saint at any time. Francis's lightsomeness had its source in that entire surrender of everything present and passing in which he had found the interior liberty of the children of God; it drew its strength from his intimate union with Jesus in the Holy Communion. The mystery of the Holy Eucharist, being an extension of the Passion, held a preponderant place in the life of Francis, and he had nothing more at heart than all that concerned the cultus of the Blessed Sacrament. Hence we not only hear of Francis conjuring the clergy to show Beispiel and respect for everything connected with the sacredness of the Mass, but we also see him sweeping out poor churches, questing sacred vessels for them, and providing them with altar-breads made by himself. So great, indeed, was Francis's reverence for the priesthood, because of its relation to the Adorable Sacrament, that in his humility he never dared to aspire to that dignity. Humility was, no doubt, the saint's ruling virtue. The idol of an enthusiastic popular devotion, he ever truly believed himself less than the least. Equally admirable was Francis's prompt and doleful obedience to the voice of grace within him, even in the early days of his ill-defined ambition, when the spirit of intercession failed him. Later on, the saint, with dignity, asked a sense of his message as any prophet ever had, yielded ungrudging submission to what constituted ecclesiastical authority. No reformer, moreover, was ever
ASSISI

CHURCH AND CONVENT OF SAN FRANCESCO
CATHEDRAL OF SAN RUFINO WITH VIEW OF TOWN
less aggressive than Francis. His apostolate embodied the very noblest spirit of reform; he strove to Congress Christ's truths, and he set up an ideal. He stretched out his arms in yearning towards those who longed for the "better gifts". The others he left alone.

And thus, without strife or schism, God's Poor Little Man of Assisi became the means of renewing the youth of the Church and of initiating the most potent and popular religious movement since the beginnings of Christianity. No doubt this movement had its social as well as its religious side. That the Third Order of St. Francis went far towards re-Christianising medieval society is a matter of history. However, Francis's foremost aim was a religious one. To rekindle the love of God in the world and reanimate the life of the spirit in the hearts of men such was his mission. But because St. Francis sought first the Kingdom of God and His justice, many other things were added unto him. And his own exquisite Franciscan spirit, as it is called, passing out into the wide world, became an abiding source of inspiration. Perhaps it savours of exaggeration to say, as has been said, that "all the threads of civilization in the subsequent centuries seem to hark back to Francis"; and that since his death, "the character of the whole Roman Church is visibly Umbrian". It would be difficult, none the less, to overestimate the effect produced by Francis upon the mind of his time, or the quickening power he wielded on the generations which have succeeded him. To mention two aspects only of his all-pervading influence, Francis must surely be reckoned among those to whom the world of art and letters is deeply indebted. Prose, as Arnold observes, could not satisfy the saint's ardent soul, so he gave himself over to painting, and he was, indeed, too little versed in the laws of composition to advance far in that direction. But his was the first cry of a nascent poetry which found its highest expression in the "Divine Comedy"; wherefore Francis has been styled the precursor of Dante. What the saint did was to teach people "accustomed to the artificial versification of courtly Latin and Provençal poets, the use of their native tongue in simple spontaneous hymns, which became even more popular with the Laudi and Cantici of his poet-follower Jacopone of Todi". In so far, moreover, as Francis's reprehensio, a co lorubimba calls it, of the stable at Bethlehem is the first mystery-play we hear of in Italy, he is said to have borne a part in the revival of the drama. However this may be, if Francis's love of song called forth the beginnings of Italian verse, his life no less brought about the birth of Italian Art. His story, says Ruskin, became a passion to his fellow countrymen; his writings are paintings everywhere, with delight. Full of colour, dramatic possibilities, and human interest, the early Franciscan legend afforded the most popular material for painters since the life of Christ. No sooner, indeed, did Francis's figure make an appearance in art than it became a favourite subject, especially with the mystical Umbran School. So true is this that it has been said we might by following his familiar figures in art and literature follow a history of Christian art, from the predecessors of Cimabue down to Guido Reni, Rubens, and Van Dyck.

Probably the oldest likeness of Francis that has come down to us is that preserved in the Sacro Speco at Subiaco. It is said that it was painted by a Benedictine monk during the saint's visit there, which may have been in 1218. The absence of the stigmata, halo, and title of saint in this fresco form its chief claim to be considered a contemporary picture; it is not, however, a real portrait in the modern sense of the word, and we are dependent for the traditional presentation of Francis rather on artists' ideals, like the Della Robbia statue at the Ponsianola, which surely the saint's vera effigies, as no Byzantine so-called portrait can ever be, and the graphic description of Francis given by Celano (Vita Prima, c. lxxiii). Of less than middle height, we are told, and frail in form, Francis had a long yet cheerful face and soft but strong voice, small brilliant black eyes, dark brown hair, and a sparse beard. His person was in no way imposing, yet there was about the saint a delicacy, grace, and distinction which made him most attractive.

The literary materials for the history of St. Francis are more than usually copious and authentic. There are indeed few if any medieval lives more thoroughly documented. We have in the first place the saint's own writings. These are not voluminous and were written with a view to setting forth his ideas systematically, yet they bear the stamp of his personality and are marked by the same unforced fervency of his preaching. A few leading thoughts taken "from the words of the Lord" seemed to him all sufficient, and these he repeats again and again, adapting them to the needs of the different persons whom he addresses. Short, simple, and informal, Francis's writings breathe the untried love of the Gospel and enforce the same practical morality, while they abound in allegories and personification and reveal an intimate interweaving of Biblical phraseology. Not all the saint's writings have come down to us, and not a few of these formerly attributed to him are now with greater likelihood ascribed to others. The extant and authentic opuscula of Francis comprise, besides the rule of the Friars Minor and some fragments of the other Seraphic legislation, several letters, including one addressed "to all the Christians who dwell in the whole world"., a series of spiritual counsels addressed to his disciples, the "Laudes Creaturarum" or "Canticle of the Sun", and some lesser praises, an Office of the Passion compiled for his own use, and a few other orisons which show us Francis even as Celano saw him, "not so much a man's praying as prayer itself". In addition to the saint's writings the sources of the history of Francis include a
number of early papal Bulls and some other diplo-
matic documents, as they are called, bearing upon his
life and work. Then come the biographies properly so
called. They include the verses written 1229–1247 by
Thomas de Celano, one of Francis' followers; a nar-
rative of his life compiled by Leo, Rufinus, and
Angelus, intimate companions of the saint, in 1246;
and the celebrated legend of St. Bonaventure, which
appeared about 1263. Besides a somewhat more po-
lemic legend called the "Speculum Perfectionis", at-
tributed to Brother Leo, the date of which is a matter
of controversy. There are several important thirteenth-century chronicles of the order, like those
of Jordan, Eccleslon, and Bernard of Besse, and not a
few later works, such as the "Chronicon XXV. Gen-
eralum" and the "Libre de Conformatite", which are
important sources of information on him. It is upon these
works that all the later biographies of Francis' life are
Based.

Recent years have witnessed a truly remarkable
upgrowth of interest in the life and work of St. Fran-
cis, more especially among non-Catholics, and Assisi
has become in consequence the goal of a new race of
pilgrims. This interest, for the most part literary and
academic, is centered mainly in the study of the primi-
tive documents relating to the saint's history and the
beginnings of the Franciscan Order. Although inaugu-
rated some years earlier, this movement received its
greatest impulse from the publication in 1894 of Paul
Schnell's "Unbekannte Lebensstutzte von St. Francis",
a work which was almost simultaneously crowned by the French Academy and placed upon the Index. In spite of the
author's entire lack of sympathy with the saint's re-
ligious standpoint, his biography of Francis bespeaks
crude erudition, deep research, and rare critical insight,
and it has opened up a new era in the study of Fran-
ciscan sources. To further this study an International
Society of Franciscan Studies was founded at Assisi in
1902, the aim of which is to collect a complete library
of works on Franciscan history and to compile a cata-
ologue of scattered Franciscan manuscripts; several
periodicals, devoted to Franciscan documents and dis-
cussions exclusively, have moreover been established
in different countries. Although a large literature has
grown up around the figure of the Poverello within a
short time, nothing new of essential value has been
added to what was already known of the saint. The
energetic research work of recent years has been in
large measure inspired by early texts, and has called forth many really fine critical studies dealing
with the sources, but the most welcome feature of the modern interest in Franciscan origins has been the
careful re-editing and translating of Francis' own writ-
ings and of nearly all the contemporary manuscript
authorities bearing on his life. Not a few of the con-
trived and controversial questions connected therewith are of consider-
able import, even to those not especially students
of the Franciscan legend, but which could not be made
intelligible within the limits of the present article. It
must suffice, moreover, to indicate only some of the
chief points of current interest.

The writings of St. Francis have been published in
"Opuscula S. P. Francisci Assisiensis" (Quaracchi, 1904); Böhmer, "Analekten zur Geschichte des Fran-
ciscus von Assisi" (Tubingen, 1904); U. d'Alengon,
"Les Opuscules de S. Francisci d' Assise" (Paris, 1905).
Robinson, "The Writings of St. Francis of Assisi"
(Philadelphia, 1906).

The text of the different rules is given in Serapio Legisla-
tiae Textus originales (Quaracchi, 1907); see also CAMBRAI
and F. B. B armies of St. Francis of Assisi; vita et mirac-
ula, etc., auctore Fr. Thoma de Celano, ed. E. d'ALENGON
(Paris, 1877); the Lives of St. Francis and the Rules of the

cisci Legenda, ed. FALCOL (Foligno, 1898); SALTER, The Legend
of St. Francis of Assisi According to the Three Compendia (London, 1897);
BONAVENTURE, Legenda Major de Vida S. Francisci (Quaracchi,
self to the study of theology, and devoted the remainder of his life to missionary labours in his native town and vicinity. As missionary Blessed Francis has become a shining example to the preachers of the Seraphic Order. He was a man of prayer and untiring study. In accordance with the words of the rule, "Ut per examinata et constata orum eloquia", he was deeply convinced that the friars must announce to the faithful only well-grounded and authentic doctrine, in unambiguous and carefully sifted language. Ever mindful of this principle, Francis logically took a further step which has signalised him as a far-sighted and truly progressive member of his order. As a consequence of the extensive proportions theological studies had assumed since the time of St. Francis, the humble collections of biblical and patristic works, which were found in the early Franciscan communities, no longer met the demands of the student and preacher. Hence, Francis, heedless of any disapproving voice, promptly purchased with his father's money a handsome library, the first on an extended scale established in the order. He loved to call it the "best workshop in the convent", and its catalogue, mentioned by Wadding, contains numerous works of the Fathers, the masters of theology, biblical commentators, philosophers, mathematicians, and preachers, which shows that Francis was indeed, in this respect, quite abreast of his time. No wonder, then, that all his biographers in accord with Mark of Lisbon, who styles him a "most learned man and renowned preacher". The writings of Francis Venimbeni little has published. His "Chronica Marchiae et Fabriani", his "De veritate et excellencia Illuminantis S. Mariae de Portiuncula", and the "Opusculum de serie et gestis Ministrorum Generalium", all three probably forming one extensive chronicle, have unfortunately disappeared, save a few precious fragments bearing on the most salient questions of early Franciscan history. Besides several treatises of a philosophic, ascetical, and didactic character, he wrote an "Ars Predicantium", numerous "Sermons", and a beautiful elegy on the death of St. Bonaventure. Despite his literary pursuits and manifold missionary occupations, he found ample time for ascetical practices and works of an all-embracing charity. God testified to the sanctity of His servant by many signs and miracles. His cult was approved by Pius VI in 1775.

The biography of Blessed Francis was written by his nephew, Dominico Passi, and other contemporary writers. Wadding has collected and utilised their accounts for his Annales. Fullgam, Miscell. Francisc., X, 59 sq., enumerates the more recent biographers of F., and recommends especially two books by Lutich Tasso: Discorso laudatorio del B. Francesco Venimbeni da Fabriano (Fabriano, 1851), and Vite del B. Francesco da Fabriano (Fabriano, 1853). The latter contains a brief treatise by Francis, and his elegy on St. Bonaventure. Extracts from his Chronicle have been edited by Pongali, 69-75. Cf. de Clare, L'Auodle Stragh., tr. Lives of the Saints and Blessed of the three Orders of St. Francis (Taunton, 1882—), II, 171-175; Wadding, Annales (Rome, 1731—), III, 244, 245, IV, 276-278, 406, VI, 377-395;
Francis founded several new monasteries in Calabria and Sicily. He also established convents of nuns, and was the founder of the premonstratensians, a religious order for people living in the world, after the example of St. Francis of Assisi.

He had an extraordinary gift of prophecy: thus he foretold the capture of Otranto by the Turks in 1480, and its subsequent recovery by the King of Naples. Also he was gifted with discernment of consciences. In 1420, at a meeting of the consistory of Carpentras, he exposed the wickedness of a certain prelate. He rebuked the King of Naples for his ill-doing and in consequence suffered much persecution. When Louis XI was in his last illness he sent an embassy to Calabria to beg the saint to visit him. Francis refused to come nor could he be prevailed upon until the pope ordered him to go. He then went to the king at Plessis-les-Tours, and was with him at his death. Charles VIII, Louis’ successor, much admired the saint and during his reign kept him near the court and frequently consulted him. This king built a monastery for Minims at Plessis and another at Rome on the Pincian Hill. The regard in which Charles VIII held the saint was shared by Louis XII, who succeeded to the throne in 1498. Francis was now anxious to return to Italy, but the king would not permit him, not wishing to lose his counsels and direction. The last three months of his life he spent in entire solitude, preparing for death. On Maundy Thursday he deposited his will in the hands of a trusted layman, exhorting them especially to have mutual charity amongst themselves and to maintain the rigour of their life and in particular perpetual abstinence. The next day, Good Friday, he again called them together and gave them his last instructions and appointed a very general. He then received the last sacraments and asked to have the Passion according to St. John read out to him, and whilst this was being read, his soul passed away. Leo X canonized him in 1519. In 1662 the Huguenots broke into his tomb and found his body incorrupt. They dragged it forth and burnt it, but some of the bones were preserved by the Catholics and enshrined in various churches of his order.

The Order of Minims does not seem at any time to have been very extensive, but they had houses in many countries. The definitive rule was approved in 1506 by Julius II, who also approved a rule for the nunneries. The feast of St. Francis of Paula is kept by the universal Church on 2 April, the day on which he died.

Acta SS., 2 April; Lives by ROLLAND (Paris, 1874); FERRANTE (Naples, 1881); FRANZEN (Paris, 1893); New Butler, Lives of the Saints, 4 April; GYNT, Vie des saints (Paris, 1885). v. c. 

FATHER CUTHBERT.

Francis of Vittoria, Spanish theologian; b. about 1490, at Vittoria, province of Avila, in Old Castile; d. 12 August, 1546. While still young, he moved with his parents from their native city to Burgos, at that time the ordinary sojourn of the sovereigns of Castile. He received his early education in the schools of that place, and, on the completion of his academic studies, entered the Order of St. Dominic. While he devoted his energies to the study of the sacred sciences, the manifold virtues which made him ornament of the Church, to his order, and to the universities of Spain, he was assiduous in the practice of piety. After his religious profession he was sent to the convent of St. James in Paris, then the chief house of studies of the order and affiliated with the University of Paris, where he made the best use of the advantages hence to him in the promotion of his philosophical and theological studies. In 1516, he was appointed to teach in this convent, and it was here, in all probability, that he had for his pupil Dominic de Soto. In 1522, he returned to Spain and taught theology in the Dominican College of St. Gregory at Valladolid till 1525. He obtained the professorial chair of theology in the University of Salamanca where he held till 1544. The influence which Francis exerted directly in the University of Salamanca and indirectly through the universities of Alcalá, Valladolid, and others, forms an interesting chapter in the history of the Church. Scholasticism had lost its former prestige, and was passing through the most critical period in its history. The times had changed and it required a master to adapt speculative thought to the new conditions. The revival of theological activity in the Catholic universities of this period, consequent upon the doctrines of the reformers, and the development of theological speculation inspired Francis to inaugurate for the first time an effort to systematise scholastic philosophy, and to give to theological science a purer diction and an improved literary form. With foresight and ability he devoted all his energies to the undertaking, and his success is attested by the many excellent theological works that were produced in Spain during the sixteenth century. Among his discipulæ were Melchor Cano, Bartholomew de Martin, Dominico de Soto, and Martin de Ledesma, by whose efforts and that of the great Carmelite teachers a new zest was given to the study of St. Thomas, and by whose aid Francis was able to extend his influence to the other universities of Spain. He is justly styled the father of the Spanish Scholasticism. The philosophy of the new Scholasticism, his style, simple and un rhetorical, is the more noteworthy for having attained its simplicity in the golden age of Humanism. He left a large number of valuable manuscripts, but his only published work is the "Relectiones XII Theologices," 1505. The most important of his unpublished works is his "Commentaria in universam Summam S. Thomae."

JOSEPH SCHROEDER.

Francis Regis Clet, Blessed a Lazarist missionary in China; b. 1748, martyred, 18 Feb., 1829. His father was a merchant of Grenoble, in France, his mother’s name was Claudine Bourguy. He was the tenth of fifteen children. The family was deeply religious, several members of it having consecrated themselves to God. Francis attended the Jesuit college at Grenoble and afterwards entered the diocesan seminary which was in charge of the famous letters in French and Latin show a cultivated mind. On 6 Mar., 1769, he entered the novitate of the Congregation of the Mission or Lazarists, at Lyons. There he made his vows in 1771 and was ordained priest in 1773. The same year he went as professor of moral theology to the diocesan seminary at Amneville. His zeal and learning produced excellent fruits. In the sixteenth year of his stay at Amneville he was sent to Paris for the election of a superior general of the congregation. He did not return, for the new superior general appointed him director of the internal seminary at the most famous house in Paris. Scurvyly he was taken when the sack of St. Lazare, on the eve of the taking of the Bastille, scattered his flock. Many of the young men returned to the dismantled house the next day and gathered around their director, but the fury of the revolution prevented their remaining. It was at this period that his asceticism, his advantages herein, his superiety yielded to his desires, and he was sent to China in 1791. The first post assigned him was in Kiang-Si, one of the most destitute Christian settlements in China. He had great difficulty in acquiring the language, which he never fully mastered. The next year he was sent to Kiang-Ning where he laboured for 27 years. Death soon deprived him of his two brother priests,
and for several years he ministered alone to a vast district. In spite of difficulties, he succeeded in keeping up the fervour of the Christians and bringing many pagans into the fold. In July, 1812, his church and school-house were destroyed, but he escaped. In 1818 the persecution broke out again with renewed fury. In the course of a year a great many of the clergy were arrested from the searching parties, he was betrayed by a Chinese Christian, for the 1500 dollars set on his head, and was taken, June 1819. He had to undergo the greatest cruelty for five weeks, but not a word of complaint escaped him. Being transferred to another prison, he was treated more severely, but for three weeks he remained at liberty. At the end of this time, he was sent by the Bishop Chen, a Chinese Lazaarist, from whom he could receive the sacraments. On 1 Jan., 1820, however, sentence of death was passed on him. The execution took place, Feb. 18, 1820. He was tied to a stake erected like a cross, and was strangled to death, the rope having been relaxed twice to give him a three-fold death agony. He was beheaded by Pope Leo XIII, 27 May, 1900, and his feast day is on 17 February. His remains rest in the chapel of the mother house of the Lazaarists, in Paris. His holy life and death were the inspiration of Blessed John Gabriel Perboyre, also a Lazaarist, who took part in this foundation in 1840, and who, with his companions, prepared the definitive foundation of the Society of Jesus. The order was approved verbally 3 September, and before the written approbation was secured, which was not until a year later, Xavier was appointed, at the earnest solicitation of John III, King of Portugal, to evangelize the people of the East Indies. He left Rome 16 March, 1540, and reached Lisbon about June. Here he remained nine months, giving many admirable examples of apostolic zeal.

On 7 April, 1541, he embarked in a sailing vessel for India, and after a tedious and dangerous voyage landed at Goa, 6 May, 1542. The first five months he spent in preaching and ministering to the sick in the hospitals. He would go through the streets ringing a little bell and inviting the children to hear the word of God. When he had gathered a number, he would take them to a certain church and would there explain the catechism to them. About October, 1542, he started for the pearl fisheries of the extreme southern coast of the peninsula, desirous of restoring Christianity which, although introduced years before, had almost disappeared on account of the lack of priests. He devoted almost three years to the work of preaching to the people of the Western India, converting whole villages in his journeys even the Island of Ceylon. Many were the difficulties and hardships which Xavier had to encounter at this time, sometimes on account of the cruel persecutions which some of the petty kings of the country carried on against the neophytes, and again because the Portuguese soldiers, who were responsible for the work of the saint, retarded it by their bad example and vicious habits.

In the spring of 1545 Xavier started for Malacca. He laboured there for the last three months of that year, and although he reaped an abundant spiritual harvest, he was not able to root out an important but pernicious evil and was conscious that many sinners had resisted his efforts to bring them back to God. About January, 1546, Xavier left Malacca and went to the Molucca Islands, where the Portuguese had some settlements, and for a year and a half he preached the Gospel to the inhabitants of Ambon, Ternate, Tidore, and other lesser islands which it was difficult to identify. It is claimed by some that during this expedition he landed on the Island of Mindanoa, and for this reason St. Francis Xavier has been called the first Apostle of the Philippines. But although this statement is made by some writers of the seventeenth century, and in the Bull of canonization issued in 1625, it is said that he preached the Gospel in Mindanoa, up to the present time it has not been proved absolutely
that St. Francis Xavier ever landed in the Philippines.

By July, 1547, he was again in Malacca. Here he met a Japanese called Anger (Han-Sir), from whom he obtained much information about Japan. His zeal was at once aroused by the idea of introducing Christ there, but for the time being the affairs of the Society demanded his presence at Goa, whither he went, taking Anger with him. During the six years that Xavier had been working among the infidels, other Jesuit missionaries had arrived at Goa, sent from Europe by St. Ignatius; moreover some who had been in that country had already been received by the Society. In 1548 Xavier sent these missionaries to the principal centres of India, where he had established missions, so that the work might be preserved and continued. He also established a novitiate and house of studies, and having received into the Society Father Cosme de Torres, a Spanish priest whom he had met in the Moluccas, he started with him and Brother Juan Fernández for Japan towards the end of June, 1549. The Japanese Anger, who had been baptized at Goa and given the name of Pablo de Santa Fé, accompanied them.

They landed at the city of Kagoshima in Japan, 15 Aug., 1549. The entire first year was devoted to learning the Japanese language and translating into Japanese, with the help of Pablo de Santa Fé, the principal articles of faith and short treatises which were to be employed in preaching and catechizing. When he was about to leave himself, Xavier began preaching, and made some converts, but these aroused the ill will of the bonzes, who had him banished from the city.

Leaving Kagoshima about August, 1550, he penetrated to the centre of Japan, and preached the Gospel in some of the cities of southern Japan. Towards the end of this year he reached Muso, then the principal city of Japan, but he was unable to make any headway here because of the dissensions then ruling the country. He retraced his steps to the centre of Japan, and during 1551 preached in some important cities, forming the nucleus of several Christian communities, which in time increased with extraordinary rapidity.

After working about two years and a half in Japan he left this mission in charge of Father Cosme de Torres and Brother Juan Fernández, and returned to Goa, arriving there at the beginning of 1552. Here domestic troubles awaited him. Certain disagreements between the superior, who had been in charge of the missions, and the rector of the college, had to be adjusted. This, however, being arranged, Xavier turned his thoughts to China, and began to plan an expedition there. During his stay in Japan he had heard much of the Celestial Empire, and though he probably had not formed a proper estimate of its extent, yet, he nevertheless understood how wide a field it afforded for the spread of the light of the Gospel.

With the help of friends he arranged a commission or embassy to the Sovereign of China, obtained from the Viceroy of India the appointment of ambassador, and in April, 1552, he left Goa. At Malacca the party encountered difficulties because the influential Portuguese disapproved of the expedition, but Xavier knew how to overcome this opposition, and in the autumn he arrived in a Portuguese vessel at the small island of Sancian near the coast of China. While planning the best means for reaching the mainland, he was taken ill, and as the movement of the vessel seemed to aggravate his condition, he was removed to the land, where a rude hut had been built to shelter him. In these wretched surroundings he breathed his last.

It is truly a matter of wonder that one man in the short space of ten years (6 May, 1542—2 Dec., 1552) could have visited so many countries, traversed so many seas, preached the Gospel to so many nations, and converted so many infidels. The incomparable apostolic zeal which animated him, and the stupendous miracles which God wrought through him, explain this marvel, which has no equal elsewhere. The list of the principal miracles may be found in the Bull of canonization. St. Francis Xavier is considered the greatest missionary since the time of the Apostles, and the zeal he displayed in his work, the success he achieved, the number of souls he brought to the light of the true Faith, entitle him to this distinction.

He was canonized with St. Ignatius in 1622, although on account of the death of Gregory XV, the Bull of canonization was not published until the following year.

The body of the saint is still enshrined at Goa in the church which formerly belonged to the Society. In 1614 by order of Claudius Acquaviva, General of the Society of Jesus, the right arm was severed at the elbow and conveyed to Rome, where the present altar was erected to receive it in the church of the Gesù.

Antonio Astúria.

Franck, Kaspar, theologian and controversialist; b. at Ortrand, Saxony, 2 Nov., 1543; d. at Ingolstadt, 25 Jan., 1598. He was educated in the monasteries of the Cistercian order, received early religious instruction filled him with enthusiasm for the new doctrine. His earnest desire for the conversion of his country led him to choose the ministry as his field of labour, and such was his zeal and success as a preacher that Count Ladislaus of Haag, who had but recently introduced the reformed faith into his province, invited him to his court. The premature death, however, of Ladislaus prevented Franck from carrying out the proposed plans of reform. Duke Albert, the successor of Ladislaus, resolved to restore the Catholic religion, and to that end called to his assistance the famous convert and preacher, Martin Eisengrein. His intercourse with Eisengrein soon led Franck to see the errors of the new creed. In 1566, he matriculated at the University of Ingolstadt, devoted himself to the study of the Fathers and the early Christian Church, and on 25 Jan., 1568, made a formal profession of the Catholic Faith. Albert, recognizing him as a man of great usefulness in reclaiming to the Faith many strayed souls, obtained from Pius V a dispensation to have him ordained a priest. Before beginning his missionary labours, he published a work setting forth the reasons and justification of his return to the ancient faith; "Clarif vnd Grintlichke vssel..." (Ingolstadt, 1568). His labours in Haag and Kralisburg were crowned with success. In 1572, he became a canon of Ingolstadt, pursuing his theological studies, and the following year he was appointed its rector, where he again held later for several consecutive terms. On the occasion of the General Jubilee in 1575, he set out for Rome, won at Siena the doctorate in theology, and shortly afterwards Gregory XIII confered upon him the title of Prothonotary. He died in the city of Constance, to which place he had retired, 5 Jan., 1598. His virtud, erudition, zeal, and power of penetration place him on the long list of learned men who directed the destiny of the University of Ingolstadt during the sixteenth century. His polemical writings manifest earnest and painstaking labour and an intimate familiarity with patristic literature. Most important works may be mentioned: "Brevis et Pia Institutio de puro verbo Dei et claris S. Evangelii luce" (Ingolstadt, 1571); "Tractatus de ordinaria..."
At the beginning of the nineteenth century, however, when Western Germany repeatedly became the scene of French invasions, Frank's business interests suffered severely. It was then that his attention was turned in a wholly new direction. At the shop of a business friend named Wirth he met an Englishman named James Hutton, who told him that he had bought a fragment of coloured glass for what seemed to Frank a large sum. On inquiry he found that the high price paid was due to the fact that the art of painting in glass which had been coloured while molten—an art which had produced so many of the magnificent church and palace windows during the Middle Ages and the Renaissance—had been entirely lost during the eighteenth century. Frank determined to recover the lost secret of this art. Unaided and untaught, he toiled for several years to accomplish his purpose; his savings fast disappeared, and his success seemed more and more doubtful. His friends expressed fears that he would become a financial and mental wreck, and urged him to give up his fruitless efforts. But Frank persevered, and in 1804 there came a turn in his fortunes. He had found at last the method of producing coloured glass which he had so long sought. His first commission was to paint the coat of arms of the Rhenish Count of his chapel at Frankfort, for his chapel at the Mainzer Dom. When this glass-painting was seen by the travelling agent of a London art house named Rauh, a Nuremberger like Frank himself, he recognized at once that Frank's work was practically the same as the ancient glass-painting, the secret of which had been lost. He hastened to Nuremberg, saw Frank, and made business arrangements with him. Frank now made several hundred pieces for the English market, some of which made their way to Philadelphia and Baltimore. But the disappearance of Rauh in 1807 put an end to Frank's prosperity and might have had serious consequences had not King Maximilian I of Bavaria become the artist's patron (1808). So favourable was the impression made on the king by Frank's execution of the royal Bavarian coat of arms that the monarch not only paid him generously, but turned over to him for factory purposes the building called the Zwinger, in Nuremberg. Henceforth Frank produced many things for King Maximilian, such as an Order of the Iron Cross, a Coronation, after Heinrich Goltzius; the "Nativity", after Bolswert; the "Passion", six parts after Lucas van Leyden; the "Magi", after Rubens; the "Judgment of Solomon", after Raphael; the "Magi", after Rubens. For King Louis I, also, Frank executed many things, especially the glass decorations of the cathedral of Ratibon.

In 1818 Maximilian appointed Frank painter in glass at the royal porcelain factory in Munich, with a salary of 800 florins annually. When, in 1827, Maximilian's successor established the royal institute for glass-painting, Frank was entrusted with all the arrangements and with the technical management, particularly with the preparation of the colours to be used and the manufacture of the coloured glass plates. He was also charged with instructing assistants in the secrets of his craft. Here he worked until 1840 when he retired with an annual pension of 1,200 florins.

He was the father of many children, of whom the most prominent is the well-known historical painter Julius Frank. Among his friends were the great physicist Fraunhofer and the Viennese glass-painter Mohn, who bore enthusiastic testimony to the excellence of Frank's colouring, especially his reds and his flesh colours immediate, and others.

Mitteilungen des Verbandes deutscher Glasmaler (Munich, 1907); von Schaden in his Skizzen (Munich, 1829).

FRANKENBURG, JOHANN HEINRICH, Graf von, Archbishop of Mechlin (Malines), Primate of Belgium, and cardinal; b. 18 September, 1726, at Gross-Cgogau,
Silesia; d. at Breda, 11 June, 1804. He belonged to an ancient family devotedly attached to the House of Hapsburg, and which remained so after the conquest of Silesia by Frederick II (1740). Although he was the sole male heir of his family and assured of the protection of the Empress Maria Theresa, he decided, when quite young, to become a priest. He attended the Jesuit college of his native city, went later to the University of Breslau, and thence to the German College at Rome, where he obtained the degrees of Doctor of Theology, and of Canon Law, and was ordained a priest 10 August, 1749. On his return to Austria, he was made coadjutor to the Bishop of Görz in Carnia (1754), dean of the collegiate church of All Saints at Prague (1754), later of that of Sts Cosmas and Damian at Alt-Bunzlau in Bohemia (1756), and finally Archbishop of Mechlin and primate of the Austrian Low Countries on 27 May, 1759. In this exalted post, as in those which he had previously occupied, his life was an example of every private and public virtue. It was not long before he was called on to defend the dignity and independence of his office against the Austrian Government, which, even under Maria Theresa, was foreshadowing the petty tyranny of Joseph II. Despite his great devotion to Maria Theresa, he could not tolerate the infamous exactions of her ministers, who wished him to grant Lenten dispensations according to their pleasure, and interfered in the most annoying manner in matters that pertained exclusively to ecclesiastical jurisdiction. He enjoyed, however, the personal favour of the Emperor, who sought to attach him also to the See of Vienna, and in 1778 exerted herself to the uttermost to obtain for him the cardinal’s hat. The situation changed with the accession of Joseph II, a disciple of the “philosophers” and imbued with the principles of an “enlightened despotism”. This emperor bore that politico-ecclesiastical system, known as Josephinism, which meant subordinating the absolute supremacy of the State. Each imperial encroachment on the inalienable rights of the Church was opposed by Frankenberg with commendable fortitude, and yet in a gentle manner and with such respect for the civil authority that the cardinal brought upon himself the bitter reproaches of such unflinching zealots as the ex-Jesuits, Feller and Deyoaray. His protests, however, were met by the Government in an ill-humoured and disingenuous way. It affected, indeed, to pay no attention to them. The most serious of the conflicts was that which broke out with the General Seminary in Vienna in 1786 by the emperor, and to which he ordered the bishops to send their students, closing at the same time their diocesan seminaries. The heretical teaching of the professors in this new institution, and the avowed purpose of using it as an instrument of ecclesiastical reform and a weapon against “ultramontanism”, soon provoked among the students an agitation that ended in a general dispersion. The irritated emperor, forthwith, summoned the cardinal to Vienna to intimidate him by means, as he wrote to Kaunitz, of those vigorous and unanswerable arguments of which you know so well how to make use”. Ill, bereft of his advisers, threatened with indefinite detention at a great distance from his diocese; reared, moreover, in those principles of respect for the sovereign power, which to us seem so exaggerated, the cardinal consented to sign a rather equivocal declamation, in which he stated that he was convinced of his obligation to conform to the imperial decrees “relative to the General Seminary”, but reserved to himself the right to appeal to the emperor in cases where the eternal salvation of souls appeared to him to be imperilled.

On his return to Belgium, Frankenberg regained his former energy. He felt himself upheld by the ardent Catholic spirit of the nation, and announced to the Government that his conscience would not permit him to concur in the establishment of the General Seminary. Despite all threats, he henceforth remained firm. The emperor called on him to express his opinion on the doctrines then taught at the General Seminary, whereupon the cardinal condemned them as denying the Dogma of the Immaculate Conception, which created a profound impression throughout Belgium. The country was already disturbed by insurrectionary movements, and the Government was obliged to close the General Seminary. It was too late, however, to repress the rebellious agitation. The Government sought, therefore, to make the cardinal personally responsible for the disorders that had taken place under his auspices. From his place of refuge, the cardinal protested against the accusation: “I take heaven and earth to witness”, said he, “that I have had no share or influence whatever in this insurrection. The entire Netherlands will bear witness to this fact and do me justice in this respect.” The Government, finding it necessary to abandon the criminal process it had begun against the cardinal, exhibited a conciliatory temper. In the meantime, however, the revolution broke out. The new administration found him friendly, and he was henceforth officially a member of that body, and of the Council of State; he was engaged in purely political discussions and confined himself to recommending political union. He received with submission and respect the re-establishment of the Austrian Government, to which he had always been attached. On the arrival of the French he had to do with a new regime. The Church, however, was not unprovided for, and the Government wished to grant him in compensation for the suppression of his revenue, declared his opposition to the oath exacted of the clergy, and was finally brutally expelled from Belgium (1797). He retired to Emmerich in Prussia, where, aged, sick, and poor, he lived on the charity of his flock, and continued to warm his countrymen against the “principle of separation”—the doctrine of the supremacy of the State. In deference to the pope’s request and to render possible the execution of the concordat, he resigned, 20 November, 1801, the Archbishopric of Mechlin. Driven from Emmerich by the invading Prussians at the instance of the French Government, which affected to regard him as a conspirator, he retired to Borken in the territory of Munster (1801), and, after the suppression of this principality, to Breda, where he died. His courage, self-abnegation, and saving of the patrimony of faith, founded on the inspiration of the apostle, made him one of the noblest figures of the Catholic episcopate during the eighteenth century.

Godfried Kurth.

Frankfort, Council of, convened in the summer of 794, "by the grace of God, authority of the pope, and command of Charlemagne" (can. 1), and attended by the bishops of the Frankish kingdom, Italy, and the province of Aquitania, and even by ecclesiastics from England. The council was summoned primarily for the condemnation of Adoptionism (c. 7). According to the testimony of contemporaries two papal legates were present, Theophylact and Stephen, representing Pope Adrian I. After an allocation by Charlemagne, the bishops drew up two memorials against the Adoptionists, one containing arguments from papal privilege, the other arguments from Scripture. The first was the "Libellus sacrorum disciplinarum", written by Paulinus, Patriarch of Aquileia, in the name of the Italian bishops; the second was the "Epistola Synodica", addressed to the bishops of Spain by those of Germany, Gaul, and Aquitania. In the first of its fifty-six canons the council condemned Adoptionism, and in the second repudiated the Sec-
Frankfort-on-the-Main, formerly the scene of the election and coronation of the German emperors, is situated in the administrative district of Wiesbaden, in the Prussian province of Hesse-Nassau; it lies on both sides of the Main, twenty-four miles above its confluence with the Rhine at Mainz. On 1 December, 1905, the city had a population of 334,979, of whom 105,814 were Catholics, and 23,475 Jews. Frankfort is partly under the ecclesiastical jurisdiction of the Diocese of Limburg, and partly under that of Fulda. For the care of souls, the city is divided into six parishes; of these the city-parish proper is subdivided into six independent ecclesiastical districts, and one curacy; the Catholic soldiers have a military church of their own. Of the twenty-five Catholic churches and chapels in Frankfort, the most important is the cathedral of St. Bartholomew, in which the elections and coronations of the German emperors were held; it stands on the site formerly occupied by the church of the Saviour (Salvatorkirche), which was built by Louis the German (850-75), and rebuilt in 1239, in Gothic style, and the name changed to St. Bartholomew. Between 1315 and 1338 the choir was remodelled, and the transept in 1346; the famous tower (Pfarrturm) was added between 1415 and 1512. After the conflagration of 1867, the whole church was restored by Denzinger, the architect of the Ratisbon cathedral (1869-80), and the tower completed. (See "Der Kaiserpalast zu Frankfurt a. M.", Frankfurt, 1907.) Noteworthy also are the church of St. Leonard, a Gothic hall church (i.e. with aisles, but without clerestories), with five naves, erected between the thirteenth and the sixteenth century; the church of the Teutonic Knights (Deutschordenskirche), dedicated in 1309, rebuilt 1748-50, and restored 1883; and the Gothic church of Our Lady (Liebfrauenkirche), built 1235-1509. The care of souls is in charge of 31 secular priests. The religious orders and congregations represented in the city are: Capuchins (5 fathers and 3 brothers), Brothers of Mercy, Ursulines, Handmaids of Christ, and Sisters of the Poor of St. Francis from the mother-house at Aachen. The Catholic schools include 1 high school for boys, 2 high schools for girls, 1 institute for teachers, 8 elementary schools, 3 homes for children, 5 knitting- and sewing-schools. Of the 10 Catholic benevolent institutions and foundations, mention may be made of the almshouse (founded 1593), the Catholic home for girls, the working-women's home, and the children's home; among the hospitals under Catholic direction are that of the Brothers of Mercy, the hospice of the Brothers of Mercy, and the hospital of St. Elizabeth, under the Sisters of Mercy.

LEO A. KELLY.

Frankfort-on-the-Main (1415-1512)

Cathedral of St. Bartholomew, Frankfort-on-the-Main

Pfarrturm (1415-1512)

Frankfort received a powerful impetus; the Frankfort fair became one of the most important of Germany; the city gradually acquired control of the territory round about, and played an important role in the political struggles, particularly as a member of the Confederation of the Rhine. Louis the Bavarian (1014-47), whom Frankfort supported in the Holy See, notwithstanding a papal interdict, granted the city important prerogatives. The Golden Bull of Charles IV (1346-78) constituted Frankfort the legal electoral city of the German emperors; the city had already been the scene of the election of ten monarchs, between 1147 and 1306. After 1336 thirty-seven German emperors were elected at Frankfort,

Saalhof, Frankfort-on-the-Main
where, after Maximilian II, the coronation ceremony also took place, instead of at Aachen. A celebrated description of this ceremony is to be found in Goethe’s “Wahlverwandtschaft” (14 July, 1831). The unfortunate difficulties between Frankfurt and the electoral princes of the Palatinate and the nobles of the vicinity, in 1389, reduced the city to great straits, but could not shatter its power. Internal dissensions, like the insurrection of the guilds (1358–60) and the uprisings between 1405 and 1408, were finally brought to an end by the victory of the ruling families.

The Reformation found speedy acceptance among the majority of the city council and the middle classes, chiefly owing to the strained relations which the unjust distribution of taxes brought about between the clergy and people. In 1525 the document known as the “Kaufbrief” was formally issued in Frankfurt for the first time; in 1533, by command of the council, Catholic services were entirely suspended for some time; finally, after 1548, of the three Catholic chapters only that of St. Bartholomew, with the cathedral, remained in possession of the Catholics. On the defeat of the Smalkaldic League (1546), which Frankfurt had joined in 1536, the city was forced to surrender to an imperial army and pay 80,000 gold gulden. During the revolt of Maurice of Saxony (1552) against Charles V, Frankfurt supported the emperor and withstood a siege by his enemies. During the succeeding decades the city gained in prosperity and lost in prestige. A serious danger, however, menaced it in the revolt of the middle classes against the misrule of the patricians (1612–16), headed by the pastry-cook and gingerbread-baker, Vincenz Fettmilch. This shook the city government to its very foundations, and only ended with the decapitation of seven of the leaders, and the victory of the ruling families who retained their supremacy until the dissolution of the German Empire. During the Thirty Years War the citizens were decimated by famine and plague, particularly in 1635, and the city suffered severely from Louis XIV’s wars of conquest. Frankfurt was invested by the French (1795–62) during the Seven Years War, and likewise during the Revolutionary period (1792 and 1795). By the Imperial Delegates Enactment (1803) Frankfurt was declared a free neutral city of the empire, and at the same time all monasteries, with the exception of the property of the Teutonic Knights, were secularized. The secularization of the German Empire, the city was granted to Karl Dalberg, previously Elector of Mainz, and in 1810 was made the capital of the Grand Duchy of Frankfurt. Under Dalberg’s mild rule, Christians of all denominations were granted equal recognition, and the city was marked by municipal emancipation. The Jews. The Vienna Congress made Frankfurt a free imperial city of the new German Confederation and the seat of the Federal Diet, which meant for the city great political prestige and brilliant possibilities from a social point of view. Beginning in 1818 various conceptions were held at Frankfurt to make some arrangement with the Holy See for the ecclesiastical reorganization of the states represented; these were Baden, Württemberg, Hesse-Cassel, Hesse-Darmstadt, Nassau, Frankfurt, Hohenzollern-Hechingen, Hohenzollern-Sigmaringen, and others. Negotiations covering several years finally resulted in the erection of the province of the Upper Rhine (Oberreinische Kirchenprovinz). The Frankfort Riot of 1833 presented some serious aspects for the city; the proceedings of the Federal Diet against the press and the whole system of unions and associations gave rise to a revolutionary movement, which the Diet undertook to suppress. As a result of the discussions in town, the city had to maintain, at its own expense, a Prusso-Austrian garrison from 1833 to 1842. In 1848–49 Frankfurt was the seat of the Vorparliament (a provisional assembly preparatory to the National Assembly) and the German National Assembly, and in 1863 of the German Fürstenblatt (Diet of Princes).

Frankfort having voted in the Federal Diet against the “Metternich Laws,” and the city was invested by the Prussians and condemned to pay a heavy fine, and on 8 October was annexed to the Prussian Monarchy. At Frankfort the peace between France and Germany was signed, 10 May, 1871. Under Prussian rule the city has attained a high commercial and industrial importance.

JOSEPH LINS.

**Franks.** The, were a confederation formed in Western Germany of a certain number of ancient barbarian tribes who occupied the right shore of the Rhine and formed their names, and from them, by Roman historians in connexion with a battle fought against this people about the year 241. In the third century some of them crossed the Rhine and settled in Belgic Gaul on the banks of the Meuse and the Scheldt, and the Romans had endeavoured to expel them from the territory. One such chief was Cherusus and his descendants continued the struggle, and, although Julian the Apostate inflicted a serious defeat on them in 359, he did not succeed in exterminating them, and eventually Rome was satisfied to make them her more or less faithful allies. After their overthrow by Julian the Apostate, the Franks of Belgium, becoming powerful settlers, appear to have given the empire no further trouble, satisfied with having found shelter and sustenance on Roman soil. They even espoused Rome’s cause during the great invasion of 466, but were overpowered by the ruthless hordes who devastated Belgium and overran Gaul and a part of Italy and Spain. They were not allowed to remain under the control of Rome and passed under the rule of the Franks.

When they first attracted attention in history the Franks were established in the northern part of Belgic Gaul, in the districts where their Germanic allies had been placed as a Christianization of the country, whose chief town was Disburgum, which is perhaps Tongres, and that they were under a family of kings distinguished by their long hair, which they allowed to flow over their shoulders, while the other Frankish warriors had the back of the head shaved. This family was known as the Merovingians, from the name of one of its members, to whom national tradition had ascribed a sea-god as ancestor. Clodion, the first king of this dynasty known to history, began his series of conquests in Northern Gaul about the year 430. He penetrated as far as Artois, but was driven back by Aetius, who seems to have succeeded in keeping Rome on friendly terms with Rome. In fact, it seems that his son Meroveus fought with the Romans against Attila on the Mauriac plains. Childeric, son of Meroveus, also served the empire under Count Agidius and subsequently under Count Paul, whom he assisted in repelling the Saxons from Angers. Childeric died at Tournai, his capital, and had been succeeded by his son Chlothar in 563 (Cochet, Le tombeau de Childéric, Paris, 1859). But Childeric did not transmit to his son Clovis, who succeeded him in 481, the entire inheritance left by Clodion. The latter seems to have reigned over all the
Ois-Rhenish Franks, and the monarchy was divided among his descendants, although the exact time of the division is not known. There were now two Frankish groups: the Ripuarians, who occupied the banks of the Rhine and whose kings resided at Cologne, and the Salians who had established themselves in the Low Countries. The Salians did not form a single kingdom; besides the Kingdom of Tournai there were kingdoms with centers at Cambrai and Tongres. Their sovereignty was challenged by the Ripuarian allies, who called themselves the Merovingian family and seem to have been descended from Clodion.

When Clovis began to reign in 481, he was, like his father, King of Tournai only, but at an early date he began his career of conquest. In 496 he overthrew the Visigoths, and in 501 he took possession of the Salian Kingdoms of Cambrai and Tongres. In 496 he triumphantly repelled an invasion of the Alamanni; in 500 he interposed in the war of the Burgundian king; in 506 he conquered Aquitaine; and at length he annexed the Ripaurian Kingdom of Cologne. Henceforth Gaul, from the Pyrenees to the Rhine, was subject to Clovis, with the exception of the territory in the south-east, i.e., the kingdom of the Burgundians and Provence. Established at Paris, Clovis governed this kingdom by virtue of an agreement concluded with the bishops of Gaul. The people of Gaul, whether natives or barbarians, were to be on terms of equality, and all cause of friction between the two races was removed when, in 496, the king was converted to Catholicism. The Frankish kingdom thenceforward took its place in history under more promising conditions than were to be found in any other state founded upon the ruins of the Roman Empire. All free men bore the title of Frank, had the same political status, and were eligible to the same offices. Besides, each individual observed the law of the people among whom he belonged; the Gallo-Roman lived according to the Roman code, the barbarian according to the Salian or Ripaurian law; in other words, the law was personal, not territorial. If there were any privileges they belonged to the Gallo-Romans, who, in the beginning were the only ones on whom the episcopal dignity was conferred. The king governed the provinces through his counts, and had a considerable voice in the selection of the emperor. The succession of the Salian Law (Les Saliques) which seems to date from the early part of the reign of Clovis, and the Council of Orleans, convoked by him and held in the last year of his reign, prove that the legislative activity of this king was not eclipsed by his military energy (see Clovis). Although founder of a kingdom destined to such a brilliant future, Clovis did not know how to shield it against a custom in vogue among the barbarians, i.e., the division of power among the sons of the king. This custom originated in the pagan idea that all kings were intended to reign because they were descended from the gods. Divine right to the throne means divine right to the land of the nation, therefore, being a king by birth, must have his share of the kingdom. This view, incompatible with the formation of a powerful, durable monarchy, had been vigorously rejected by Gereric the Vandal, who, to secure the indivisibility of his kingdom, had established in his family a certain order of succession. Either because he died suddenly or for some other reason, Clovis took no measures to abolish this custom, which continued among the Franks until the middle of the ninth century and, more than once, endangered their nationality.

After the death of Clovis, therefore, his four sons divided the kingdom, each reigning from a different centre: Thierry at Metz, Clodomir at Orleans, Childebert at Paris, and Childebert at Soissons. They continued the career of conquest inaugurated by their father and, in spite of the frequent discords that divided them, augmented the estates he had left them. The principal events of their reign were: (1) The destruction of the Kingdom of Thuringia by Thierry in 531, which extended Frankish power from the Rhine to the Elbe; the latter is now Germany; (2) the conquest of the Kingdom of the Burgundians by Childebert and Clotaire in 532, after their brother Clodomir had perished in a previous attempt to overthrow it in 524; (3) the cession of Provence to the Franks by the Ostrogoths in 536, on condition that they should be left alone; and (4) the war just declared against them by Emperor Justinian. But instead of helping the Ostrogoths, the Franks under Theudebert, son of Thierry, taking shameful advantage of this oppressed people, cruelly pillaged Italy until the bands under the command of Leuthar, led by Bouillardon, by Normandy, had repelled the Franks. The death of Theudebert, in 548, was soon followed by that of his son Theobald, in 555, and by the death of Childebert in 558, Clotaire I, the last of the four brothers, becoming sole heir to the estate of his father, Clovis. Clotaire reduced the Saxons and Bavarians to a state of vassalage, and died in 561 leaving four sons; once more the monarchy was divided, being partitioned in about the same way as on the death of Clovis in 511: Gontran reigned at Orleans, Charibert at Paris, Sigebert at Reims, and Chilpéric at Soissons. Charibert’s death in 567 and the division of his estate occasioned quarrels between Chilpéric and Sigebert, already at odds. Sigebert, in the account of things given by his bishop of Orleans, who had been satisfied to marry serving-women, Chilpéric had won the hand of the beautiful Brunehilde, daughter of Athanagild, King of the Visigoths. Chilpéric had followed Sigebert’s example by marrying Galewinda, Brunehilde’s sister, but at the instigation of his mistress, Fredegonda, he soon had Galewinda assassinated and placed Fredegonda upon the throne. Brunehilde’s determination to avenge the death of her sister involved in bitter strife not only the two women but their husbands. In 575 Sigebert, who was repeatedly provoked by Chilpéric, took the field, resolved to bring the quarrel to a conclusion. Chilpéric, already banished from his kingdom, had taken refuge behind the walls of Tournai, whence he had no hope of escape, when, just as Sigebert’s soldiers were about to raise him to the throne, he was felled by assassins sent by Fredegonda. Immediately the aspect of affairs changed: Brunehilde, humiliated and taken prisoner, was released only with the promise of the most thrilling adventures, while Fredegonda and Chilpéric exulted in their triumph. The rivalry between the two kingdoms, henceforth known respectively as Austrasia (Kingdom of the East) and Neustria (Kingdom of the West), only grew fiercer. Gontran’s kingdom continued to be called Burgundy. First the nobles of Austrasia and then Brunehilde, who had become regent, led the campaign against Chilpéric, who perished in 584 at the hand of an assassin. The murderer could not be ascertained. During this period of intestine strife, King Gontran was vainly endeavoring to wrest Sigebert’s son, Gontro, from his father, and as to defend himself against the pretender Gondowald, the natural son of Clotaire I, who, aided by the nobles, tried to seize part of the kingdom, but fell in the attempt. When Gontro died in 592, his inheritance passed to Childebert II, son of Sigebert and Brunehilde, and after this king’s death in 606 his states were divided between his sons: Childebert II taking Austrasia, and Thierry II Burgundy. In 600 and 604 the two brothers united their forces against Clotaire II, son of Chilpéric and Fredegonda, and reduced him to the condition of a petty king. Soon, however, jealousy sprang up between the two brothers, they waged war against each other, and each other, when defeated, was killed. The victorious Thierry was about to inflict a like fate on Clotaire II, but died in 613, being still young and undoubtedly the victim of the excesses that had shortened the careers of most of the
Merovingian princes. Brunehilde, who, throughout the reigns of her son and grandsons, had been very influential in affairs of the Frankish nobility, died in 613. Her grandson, Sigebert II, and the government of the two kingdoms. But the earlier struggle between monarchical absolutism and the independence of the Frankish nobility now broke out with tragic violence. It had long been latent, but the sight of a woman exercising actual power caused it to break forth with boundless fury. The Frankish nobles, eager to repeat the fate of the Thuringians, joined with Clotaire II, King of Neustria, who took possession of the kingdoms of Burgundy and Austrasia. The children of Thierry II were slain. Brunehilde, who fell into the hands of the victor, was tied to the tail of a wild horse and perished (613). She had succeeded in imposing a despotic government on a people who chafed under government of any kind. Her punishment was a frightful death and the cruel calumnies with which her conquerors blackened her memory.

The nobles had triumphed. They dictated to Clotaire II the terms of victory and he accepted them in the celebrated edict of 614, at least a partial capitulation of Frankish royalty to the nobility. The king promised to withdraw his counts from the provinces under his rule, i.e., he was virtually to abandon these parts to the nobles, who were also to have a voice in the selection of prime ministers and other officials, "major domiaces," as he was then called. He likewise promised to abolish the new taxes and to respect the immunity of the clergy, and not to interfere in the elections of bishops. He had also to continue Austrasia and Neustria as separate governments. Thus ended the conflict between the Frankish aristocracy and the monarchical power; with its close began a new period in the history of the Merovingian monarchy. As time went on royalty had to reckon more and more with the aristocracy. The Merovingian dynasty, traditionally accustomed to absolutism, and incapable of altering its point of view, was gradually deprived of all exercise of authority by the triumphant nobility. In the shadow of the throne the new power continued to grow rapidly, became the successful rival of the royal house, and finally supplanted it. The great power of the aristocracy was vested in the "major of the palace" (major domus), originally the chief of the royal household under the Merovingians, who in the ninth century acquired steadily greater importance until he came to share the royal prerogative, and eventually reached the exalted position of prime minister to the sovereign. The indifference of the latter, usually more absorbed in his pleasures than in public affairs, favoured the emergence of the "major," and this office finally became the hereditary right of one family, which was destined to replace the Merovingians and become the national dynasty of the Franks. Such then were the transformations which occurred in the political life of the Franks after the downfall of Brunehilde and during the reign of Clotaire II (614-29). While Brunehilde lived, Neustria was called in, as has been said, to give Austrasia a separate government; his son Dagobert becoming its king, with Arnulf of Muts as councillor and Pepin of Landen as mayor of the palace (623). These two men were the ancestors of the Carolingian family. Arnulf was Bishop of Muts, though resident at court, but in 627 he resigned his episcopal see and retired into monastic solitude at Remiremont, where he died in the odor of sanctity. Pepin, incorrectly called of Landen (since it was only in the twelfth century that the chronicles of Brabant began to associate him with that locality), was a great lord from Eastern Belgium. With Arnulf he had been at the head of the Austrasian opposition to Brunehilde.

On the death of Clotaire II, Dagobert I, his only heir, re-established the unity of the Frankish monarchy and took up his residence in Paris, as Clovis had done in the past. He too was soon forced to give Austrasia a separate government, which he confined to his cousin and successor, Sigebert, cousin of his predecessor. As Sigebert's councillor and Adalgis, son of Arnulf of Muts, was a son-in-law of Pepin, as mayor of the palace. Pepin, who had lost royal favour, was temporarily deprived of any voice in the government. The reign of Dagobert I was one of such great pomp and outward show, that contemporaries compared it to that of Solomon; however, it marked the end of the power of the Franks. They subdued, it is true, the small nations of the Bretons and Basques, but were themselves beaten by the Frankish merchant Samo, who had created a Slavonic kingdom on their eastern confines. Dagobert relieved the situation only by exterminating the Bulgars who had taken refuge in Bavaria. Like many of his race, Dagobert was subject to the females of his family. He died young and was buried in the celebrated Abbey of Saint-Denis which he had founded and which subsequently became the burial-place of the kings of France. After his death Austrasia and Neustria (the latter united with Burgundy) had the same destiny under their respective kings and mayors of the palace. In Neustria the young king, Clovis II, reigned under the guardianship of his mother, Nanthalde, with Aga, and later Erckinal, as mayor of the palace. Sigebert III reigned in Austrasia with Pepin of Landen and returned to Neustria, where he became mayor of the palace after the death of Dagobert. The history of Austrasia is better known to us as far as 657 because, at that time, it had a chronicler. On the death of Pepin of Landen in 639, Otto, mayor of the palace, took the reins of power, but was overthrown and replaced by Grimoald, son of Pepin. Grimoald went even further; when, in 658, Sigebert III died, he conceived the bold plan of seizing the crown for the benefit of his family. He banished young Dagobert II, son of Sigebert, to an Irish monastery. Not daring to ascend the throne himself, he followed the example of Odoacer and gave it to his son Childerich. But this attempt, as bold as it was premature, caused his downfall. He was delivered up to Clovis II by the Austrasian nobles and, so far as can be ascertained, seems to have perished in prison. Clovis II remained sole master of the entire Frankish monarchy, but died the following year, 657.

Clotaire II (617-70), son of Clovis, succeeded his father as head of the entire monarchy under the guardianship of his mother, Bathilde, with Erckinal as mayor of the palace. But like Clotaire II, in 614, Clovis was constrained in 660 to grant Austrasia a separate rule, and appointed his brother Childeric II as mayor with the title of "major of the palace." Austrasia was now overshadowed by Neustria owing to the strong personality of Ebroin, Erckinal's successor as mayor of the palace. Like Brunehilde, Ebroin sought to establish a strong government and, like her, drew upon himself the passionate opposition of the aristocracy. The latter, under the leadership of St. Louis (Ludgerius), began to threaten the crumbling of overthrown Ebroin. He and King Thierry III who, in 670, had succeeded his brother Clotaire III, were convinced of a convent, Childeric II, King of Austrasia, being summoned to replace him. Once again monarchical unity was re-established, but it was not destined to last long. Wulfald, mayor of Austrasia, was banished, also St. Léger. Childeric II was assassinated and for a short time general anarchy reigned. However, Wulfald, who managed to return, proclaimed King of Austrasia young Dagobert II, who had come back from exile in Ireland, while St. Léger, reinstated in Neustria, upheld King Thibald. But Ebroin, who meanwhile had been forgotten, escaped from prison. He invaded Neustria, defeated the mayor Ludecius, Erckinal's son, who, with the approval of St. Léger, was governing this kingdom, reasserted the power, and maltreated the Bishop of Autun, whom he
caused to be slain by hired assassins (678). He afterwards attacked Austrasia, banished Wulfoald, and had King Thierry III acknowledged. The opposition shown Ebroin by the Austrasian nobles under the leadership of Pepin II and Martin was broken at Laffaux (682), where Martin was slain, and Pepin disarmed for a while. Ebroin was then for some years real sovereign of the Frankish monarchy and exercised a degree of power that none save Clovis I and Clotaire I had possessed. There are few characters of whom it is as difficult to form a just estimate as of this powerful political genius; for, without any real authority, his power by dint of his indomitable will acquired supreme control of the Frankish monarchy and warded off for a time the reforms of the aristocracy. The friendship professed for Ebroin by Saint Ouen, the great Bishop of Rouen, seems to indicate that he was better than his reputation, which, like that of Brunehilde, was intentionally blackened by chronicles who sympathized with the Frankish nobles.

Ebroin’s disappearance afforded full scope to the power of the family which was now called on to give a new dynasty to the Franks. Forced to remain in obscurity for over twenty years, in consequence of Gisleram’s downfall, Pepin II at last appeared at the head of Austrasia under Pepin II, inappropriately called Pepin of Heristal. There flowed in the veins of Pepin II, son of Adalgisil and of St. Begga, daughter of Pepin I, the blood of the two illustrious men who, by the overthrow of Brunehilde, had established might and monarchy in Austrasia. Despite the defeat inflicted on him by Ebroin, Pepin retained the leader and the hope of the Austrasians, and, after the death of his dreaded adversary, vigorously resumed the struggle against Neustria, a kingdom which was then disturbed by the rivalry between Waratton, mayor of the palace, and his son Gislemar. From 681 to 686 the functions of the king were alternately discharged by Waratton and Gislemar, again by Waratton, and finally, at his death, by his son-in-law Berthar. Pepin, who seems to have had amicable relations with Waratton, would not acknowledge Berthar, whom he overthrew in the battle of Tlesti near Soissons (687); in this way Austrasia avenged the above-mentioned defeat at Laffaux. The death of Berthar, assassinated in 688, removed the last obstacle to the authority of Pepin in Neustria, who was then of such power that his name was the most respected in the three Frankish kingdoms. So vast was his power that from that date history mentions only the figure of the king whom he kept on the throne: Thierry III (d. 691), Clovis III (d. 695), Childebert III (d. 711), and Dagobert III (d. 715). Indeed, it is only through respect for a traditional fiction of history that Pepin II is not put down as the first sovereign of the Carolingian dynasty. The direction of the destinies of the Frankish monarchy was now passed from the hands of the Salian into those of the Ripuarian Franks. These constituted the Germanic element of the nation which took the place of the Roman party in the government. Their policy was better adapted to the spirit of the times inasmuch as it abolished the traditional Assyrian successor for him. It restored the Merovingian kingdom which the Carolingians had the merit and the satisfaction (for it was both of re-establishing unity in the Frankish monarchy which had been so frequently divided; from 697 to 843, that is, for over a century and a half, all the Franks were united under the same government. But Pepin II hid the confines of self-interest from Frankish imperialism; he extended the frontiers of the monarchy by subduing the Frisans, his neighbours on the north. These restless barbarians, who occupied a large portion of the present Kingdom of the Netherlands, were fanatical pagans; Ratabod, their duke, was a bitter enemy of Christianity. Pepin forced him to surrender Frisia, which nearly completely extended to the present provinces of South and North Hol-

land, and obliged him to keep the peace for the rest of his life.

Pepin could now consider the Kingdom of the Franks as an hereditary patrimony, and he conferred the mayoralty of Neustria on his son Grimoald. At the same time that he re-established the Carolingian dynasty, by making two sons Grimoald and Dagobert, he himself reigned as the entire monarchy, as a family heritage, to his grandson Theodoald, Grimoald’s son, still a minor. This act was a political blunder suggested to the clear-minded Pepin on his death-bed by his wife Plectrude. Pepin had a son Charles by a mistress named Alpaside, who was exposed at birth. The young boy, who was quite capable, as events showed, of vigorously defending the paternal inheritance. It cannot be said that the stigma of illegitimacy caused him to be put aside, for Theodoald was also a natural son, but the blood of the ambitious Plectrude coursed through the latter’s veins, and she reigned in his name. The people, however, would not now submit to the regency of a woman any more than in the time of Brunehilde. There was a universal uprising among the Neustrians, Aquitanians, and Frisians. Elsewhere may be found an account of these struggles. (See Charles Martel.) It suffices to say that after finally being banished and finally imprisoned, Charles Martel, whom she had thrown into prison, escaped and placed himself at the head of the national Austrasian party. Defeated at first, but soon victorious over all his enemies, Charles reduced nearly all the rebellious tribes to obedience, not only those in Neustria, but also the Bavarians and Alamanni. His greatest service to civilization was the complete victory over the Arabs between Tours and Poitiers (732), which earned him the name of Martel, the hammer. This conquest saved Christianity and preserved Europe from the power of the Musulmans. It was not, however, Charles’s last encounter with the Arabs; he banished them from Provence and in 739 defeated them again on the banks of the Bere near Narbonne. This sovereign, whose exclusively military career consisted in restoring, by dint of force, an empire that was crumbling away, could not escape the accusation of having abetted violence in others and resorted to it himself. He has especially been charged with secularizing many ecclesiastical estates, which he took from churches and abbey and gave in fief to his warriors as a recompense for their services. This land actually remained the property of the ecclesiastical establishments in question, but its hereditary usufruct was granted to the monarch. This was the task which Charles Martel took to collect an army and secure faithful followers. Another no less censurable practice was that of conferring the highest ecclesiastical dignities upon unworthy persons whom only right was that they were loyal soldiers of Charles Martel. However, it must be remembered that these measures enabled him to muster the forces with which he saved Christian civilization at Tours. He also aided efficaciously St. Boniface in his project of spreading the Christian Faith throughout Germany. Such were the popularity and prestige of Charles that when, in 737, King Thierry IV died, he saw no necessity of providing for his successor. The people of Neustria elected Charles of Quierzy-sur-Oise 21 October, 741, after having divested the provinces between his two sons: Carolingian received Austrasia with its Germanic dependencies at Pepin, Neustria, Burgundy, and Provence, v0; Grison, a natural son, was excluded from the suffrages as Charles himself had been.

Pepin and Charles were united together until 754, supporting each other in their various enterprises in combating the same enemies. During the first years of their administration they had to subdue the revolts of the Aquitanians, the Saxons, the Alamanni, as well as those of their brother Grison, and of Odilo, Duke of Nemours. They conquered all these rebels, but left Aquitaine and Bavaria their national dukes while they
abolished the Duchy of Alamannia. They also undertook the great work of reforming the Frankish Church, into which several generations of civil wars had introduced great disorders. National councils convoked, by Charlemagne in Austrasia (at Etzmunz, or Le Mans), and Neustria (at Soissons) the work of which was completed by a large council attended by the bishops of both countries, were largely instrumental in restoring order and discipline in the Church, in eliminating abuses and in rooting out superstition. St. Boniface, the soul of this great work, after having, to some extent, subdued the Church (at Esternburg and the monastery of Corpus Christi), died at Caen in 754, and Neustria, at age 63. The work of which he had been assured by this decision, Pepin hesitated no longer, and had himself proclaimed king at Soissons in 751. Childeric III was sent to end his days in a cloister. The nature of the authority with which Pepin was invested was emphasized for the first time among the Franks, by the action of the people. The king, however, had no idea of losing his religious nature to his power and impregnated upon him a sacred character. It has been said, but without proof, that St. Boniface attended the coronation. In this way, after having exercised the royal power almost uninterrupted for over a century, the descendants of Arnulf and Pepin finally assumed the title of sovereignty, and the Carolingian dynasty replaced that of the Merovingians on the Frankish throne.

**Gregory of Tours,** *Historia Francorum* (538–94); the seventh-century chronicle attributed to a certain Fredegarius, and its eighth-century continuation; these, with the *Liber Historiarum* and the lives of the Merovingian saints are included in the *Monumenta Germaniae Historica, Med. Hist.* Series 1. The text is often edited, e. g. H. R. and K. Korn, *Die Le Soissons* (London, 1878–91).

**Godfrey Kurth.**

**Franzlin, Johann Baptist, cardinal and theologian;** b. at Aldein, in the Tyrol, 15 April, 1816; d. at Rome, 11 Dec., 1886. Despite their poverty, his parents sent him to an early age to the neighbouring Franciscan college at Bolzano. In 1829 he joined the Society of Jesus at Graz, and after some years spent in higher studies and teaching in Austrian Poland, began in 1845 his course of theology in the Roman college of the Society, where he also acted as assistant in Hebrew, in which he was especially proficient. Driven from Rome by the Revolution of 1848, he went successively to England, Belgium, and France, where he was ordained in 1849. In 1850 he returned to the Roman college as assistant professor of dogma, and lecturer on Aramaic, Syriac, and Chaldean. In 1853 he became prefect of studies in the German college and in 1857 prefect of the college, a post he held until his death, where he remained for nineteen years, winning for himself by his lectures and publications a foremost place among the theologians of that time. During this period he acted as consultor to several Roman Congregations, and aided in the preliminaries of the Vatican Council, in which he afterwards served as chaplain of the theologian. In 1876, despite his sincere and strenuous protests, he was raised to the cardinalate by Pius IX. This dignity made almost no change in his scrupulously simple and laborious life. He continued his use of poor garments; occupied but two bare rooms in the Jesuit novitiate of Sant' Andrea; rose every morning at five and spent the remainder of the day in studious occupations, always hearing Mass after saying his own; fasted every Saturday, and toward the end of his days Fridays also, besides using other forms of corporal penance.

Though of delicate health, Franzelin had always been a constant and most laborious worker, never allowing himself any recreation during his long years of poor health, severe toil, and painful scruples, save the short recreation after dinner and supper. As a cardinal his sole departure from strict adherence to Jesuit rule was to omit this daily recreation. Moreover, though constantly engaged as the theologian and consultor of several other Congregations, he steadily refused the aid of a secretary. His entire income as a cardinal...
he distributed among the poor, the foreign missions, and convents whose property had been seized by the Italian Government. As a theologian Franzein takes high rank; his works were reprinted and a mine of rich material for the preacher no less than the professor; and for years he was accustomed to receive numerous letters from priests in all parts of the world, spontaneously acknowledging the great aid in preaching they had derived from his books. Of his works, which he gave through numerous editions of the time, "De Divina Traditione et Sacritura" (Rome, 1870) is considered classical. The others are "De SS. Eucharistia Sacramento et Sacrifício" (1868); "De Sacramentis in Generi" (1888); "De Deo Trino" (1869); "De Deo Uno" (1870); "De Verbo Incarnato" (1870); some smaller treatises, and the posthumous "De Ecclésia Christi" (1887).

BONAPARTE, Raccordo di Memoria Intorno alla vita dell'Em. Cardinale Giovanni Battista Franzein (Rome, 1887); WALSH, John Baptize Franzein, A Sketch and a Study (Dublin, 1886); Commentarius de Vita Emittentiumiis Aufodia in FRANZENIUS's posthumous work, De Ecclesia Christi (Rome, 1887); HUNTER, Nomenclator.

JOHN F. X. MURPHY.

**Frascati, Diocese of (Tusculana), one of the six suburbanian (i.e. neighbouring) dioceses from an immemorial date closely related to the Roman Church. The city of Frascati is about twelve miles from Rome on the northern slopes of the Alban Hills, pleasantly and healthfully situated. Its principal source of wealth is its vineyards, which yield an excellent wine. The history of the city (population, 10,000) is bound up with that of ancient Tusculum, which, according to the legend, was founded by Telegonus, the son of Ulysses and Circe. In the ingly period Tusculum was an ally of Rome, to which it later became subject. After the expulsion of Tarquinius Superbus, Octavius Manlius, the tyrant of Tusculum, and son-in-law of Tarquinius, roved the Latin communes against the Roman Republic (507 B.C.); they were routed, however, at the battle of Lake Regillus (496 B.C.). In 493 the Latin League with Rome was renewed. After the disastrous battles of Vesuvius and Trifanum (338 B.C.), Rome, in order to detach Tusculum and other towns from the Latin League, conferred on them the privilege of the highest citizenship (jus suffragii et honorum). While the other Latin towns waned steadily, Tusculum grew and became in the course of time the favourite pleasure resort of the rich Roman nobles, whose sumptuous villas were scattered over the slopes of the hill; many of them can even yet be identified among the mass of ruins. The Villa of Lucullus, now the Villa Torlonia, the most splendid of them all, was famous for its library. The Villa of Agrippina, the Villa of Claudius, and those of the Flavian emperors stood on the site of modern Frascati. That of Marcus Porcius Cato, the Censor, rose on the site now occupied by the village of Monte Porzio Catone, named therefrom. Tiberius, Julia, and Vespasian also had villas at Tusculum. The exact site of Cicero's villa, where he wrote the "Disputationes Tusculane" and other works, is a matter of dispute. In 1861 the first, his works were reprinted, and some occupied the present site of the monastery of Grottaferrata; others hold that it was near the modern Villa Rufinella. A more probable opinion is that it stood on the knoll above Grottaferrata. To adorn it Cicerone commissioned his friend Atticus to purchase statuary from the ruins of Athens, the cost of which was defrayed by two sums of money, one from Cicero and the other from the consul Gabinius, who habited his house on the hill. When he was imprisoned in 58 B.C., the villa was sacked, and the consul Gabinius carried off much booty to his own house. On the top of the hill near the western gate of the old town, there are to be seen even to-day the ruins of an immense villa, discovered by Canina, where the cost of a villa, it is certain, was carried out. It is known commonly as the Villa of Tiberius. The ancient town was built along the ridge of the hill, about 2000 feet above the sea-level. There remain the ruins of the Greek theatre, the fortress with megalithic walls, and an amphitheatre locally known as Scuola di Cicerone (Cicero's School); there are also rough roads paved with huge polygonal blocks of stone, and lined with tombs, grottoes, etc. Excavations were begun by the Jesuits in 1741, and were placed by Lucien Bonaparte under the direction of Biondi and Amati in 1819; later Maria Christina of Savoy had the work carried on by Canina, who wrote a description of the discoveries. Some of the most beautiful sculptures in the Vatican Museum and elsewhere at Rome were found at Tusculum.

Among the many inscriptions found at Frascati very few are Christian, and the excavations so far show no trace of early Christianity. The basilica of the monastery at Grottaferrata, and the chapel of San Cesario, close to the modern episcopal residence,

Cathedral of S. Pietro, Frascati
Designed by Girolamo Fontana

are the only Christian monuments that antedate the destruction of ancient Tusculum in 1191. Nevertheless from its very proximity to Rome, Tusculum must have received the Christian Faith at an early date. Perhaps the villa of the Aecili, a Christian family, on the site of which stands the monastery of Grottaferrata, was the cradle of Christianity for the people of Tusculum. The first known Bishop of Tusculum is Vitalianus in 680, whose subscription appears on Pope Agaudo's letter to the Sixth General Council. Being one of the suburbanian bishops, the Bishop of Tusculum from the seventh century was bound to take his turn in replacing the pope at the functions in the Lateran; but it is not till the time of Bishop Pietro (1050) that we find the title of cardinal given to the Bishop of Tusculum. From the tenth century onwards the Counts of Tusculum exercised a preponderant influence over the Government of Rome and the papacy itself. Theophylactus, Senator of the Romans and founder of the family, was the husband of Theodora, who under Sergius III was absolute mistress of Rome, and whose daughter Marozia married Alberic I, Margrave of Camerino and Duke of Spoleto, father of Alberic II, who from 932 to 954 ruled Rome under the
title of Patrician and Senator, and obtained from the Romans the assurance that after his death his son Octavian should be made pope (John XII). When John XII was deposed (963), the Counts of Tuscumul yielded the right to the Church, but the Romans, but the result was soon restored to them. From 1012 to 1044 three popes of the great Tusculan family succeeded one another: Benedict VIII, his brother John XIX, and their nephew Benedict IX. The Tusculan domination, it is well known, was far from creditable to the Romans. Benedict VIII alone has a claim to our respect (Kleinnmanns, "Papst Benedict VIII."); in "Der Katholik", 1887, II, 407, 480, 624). It was Count Gregory I, father of Benedict VIII, who gave to St. Nilus (1002) the monastery of Grottaferrata. In the conflict over Investitures between Paschal II and Henry V (1111), while Tolomeo, Count of Tuscumul, was on the emperor's side, Cardinal-Bishop Giovanni led the Roman opposition to Henry. Under Alexander III, however, Bishop Imao sided with Antipope Victor IV, though Tuscumul itself was in favour of Pope Alexander. The town also opposed the Roman Senate in its attempt to deprive the popes of their padel power. In 1182 the Romans made war on Tuscumul, whereupon Archbishop Christian of Mainz was called in by Pope Lucius III and defeated the Romans. In 1191, Henry VI recalled the German garrison from Tuscumul and, as a result, the town was soon destroyed by the Romans and never regained its former prosperity. Langari, L'origine di Frascati e la distruzione di Tivoli, Rome, 1891).

In time the people of Tuscumul gathered around the Castello di San Cesario, and the village thus begun was called Frascati, either because of the fresche (wattles) of which the first huts were built, or because the locality had already been known as Frascaria, which in Low Latin means a place covered with underbrush. From the fifteenth century Frascati once more became a favourite health resort of Roman cardinals and nobles. Foremost among the edifices that soon ornamented Frascati are the Villa Mondragone, built by Cardinal Marco Sittico d'Altemps, a nephew of Pius IV, a vast structure with a splendid portico, now used as a Jesuit college; Villa Taverna, now Borghesiana, founded in 1614; Villa Falconieri, the work of Borromini (1648), with paintings by Carlo Maratta (The Birth of Venus), Ciro Ferreri, and Pier Leone Ghezzi (earcaces and portraits of himself); in 1900 Bishop of Frascati was born by the Trappists and now belongs to the German Emperor; Villa Lancellotti with its glorious forest drives, where may be seen the little church of San Michele, over which is a small room in which Cardinal Baronius wrote his "Annales Ecclesiastici"; Villa Ruffinella, higher up the hill, a Jesuit college from 1740 to 1773, which later belonged to the House of Savoy, and is now united to the Villa Lancellotti; Villa Aldobrandini (or Belvedere), the most beautiful of the Frascati villas, built in 1603 by Pietro Cardinal Aldobrandini from designs by Giovanni Fontana, with paintings by Il Cavalieré d'Arpino and by Domenico Fetti of Apollo); and its numerous fountains; Villa Sora, built by Gregory XIII, now used as a Salesian boarding school. Among the important churches are: the cathedral, the work of Girolamo Fontana; the Gesù, with its imitation cupola painted by the Jesuit Oloate Foasso; San Rocco, formerly known as S. Maria in Vivario, the cathedral until 1700; Madonna di Capo Croce, and Madonna delle Scuole Pie.

Among the Tuscumul bishops of note are Egidius, sent by John XII to Poland in 964; the learned Jacques de Vitry (1228), who preached against the Albigenses; Pietro di Lisbona (1270), chief physician of Queen Constance; and the learned afterwards John XXI; Berengarius of Fréol (1300), who collaborated on the "Liber Sextus Decretalium" of Boniface VIII; Baldassare Cossa (1419), after his submission to Martin V; Giuliano Cesarini (1444); Bessarion (1449); Alessandro Farnese (1519), afterwards Paul III; Giovanni Pietro Caraffa (1550), afterwards Paul IV; Giovanni Antonio Serbelloni (1585); Lorenzo Corsini (1728), afterwards Cl. Henry Benedict, Duke of York (1761-1807), son of James III, the English Pretender (Cardinal York left his rare collection of books to the seminary library); Bartolomeo Paccia (1818); Francesco Xaverio Castiglione (1821), afterwards Pius VIII; Luigi Micara, the Capuchin (1837), Jean-Baptiste Pitra (1871) has a chair at the University of Rome (1904), for several years the first Apostolic Delegate at Washington, U. S. A. In the Diocese of Frascati is situated Monte Compatri, the ancient Labicum, whose cardinal-bishops are often mentioned in medieval history. The diocese has 8 parishes and 18,000 souls, 9 monasteries for men (among them the famous Abbey of Grottaferrata, and one Cannaloidoe monastery).

FRASCONI, CLAUDE, celebrated Scotist theologian and philosopher of the Order of Friars Minor: b. near Péronne, France, in 1620; d. at Paris, 26 February, 1711. He entered the Franciscan Order at Péronne in his seventeen years; and after the year of novitiate was sent to Paris, where he completed his studies and remained for thirty years as professor of philosophy and theology. In 1662 he was made doctor of the Sorbonne, and as definitor general, to which office he was elected in 1682, he took part in the general chapters of the order at Toledo and Rome. Outside of the order his counsel was sought not only by ecclesiastics but also by his secular charge. The spirit of Francis himself, in particular, holding him in high esteem. He died at the ripe old age of ninety-one years, seventy-four of which he had spent in religion. Of the writings of Frascati the best known is his "Scotus Academicus". This work is rightly considered one of the most important and scholarly presentations of the theology of Duns Scotus. Few, if any, of the numerous interpreters and commentators of Scotus have succeeded so well as Frascati in combining simplicity of style and clearness of method with that subtlety of thought which characterizes Scotistic theology as a whole. The value of the work is enhanced by frequent quotations from the Fathers, and by his treatment of controverted questions in scholastic theology. The first volume is prefaced with a chronological list and a brief historical and dogmatic account of the different heresies from the beginnings of Christianity to the fifteenth century. The latest edition of the "Scotus Academicus", published by the Friars Minor (Rome, 1900-02) in twelve volumes, was prepared from notes left by the author himself and preserved in the Bibliothèque Nationale of Paris. Earlier editions were those of Paris (1672-77), Rome (1721), and Venice (1744). Frascati is also the author of a "Cursus Philosophiae", published at Paris in 1695, and of "Disquisitiones in Sacrae Scripture", translated into Latin. In Paris (1682); vol. II: "Disquisitiones in Pentateuchum" (Rouen, 1705).

HURTER, Nomenclator. — STEPHEN M. DONOVAN.

Fraticelli (or Fraticellii), a name given to various heretical sects which appeared in the fourteenth and fifteenth centuries, principally in Italy. The word being frequently a misnomer, a definition is apposite. The Fraticelli were a group of pious theologians and theologians deriving from the Italian frate (plural frati). Frati was a designation of the members of the mendicant orders founded during the thirteenth century, principally the Franciscans or Friars Minor. The Latin Fraterculus
does not occur in the old records which concern the Fraticelli. Etymologically the name Friars Minor (Frati Minori) was adopted by the first branch of the Fraticelli. The ideal of the founder of the Friars Minor, St. Francis, was that his disciples by evangelical poverty, complete self-denial, and humility, should lead the world back to Christ. The Italian people designated as Fraticelli all the members of religious, particularly mendicant, orders, and especially solitary religious houses observed a definite rule or regulated their own lives.

In this article the name Fraticelli is confined to heretical sects which separated from the Franciscan Order on account of the disputes concerning poverty. The Apostolics (Pseudo-Apostles or Apostolic Brethren) are excluded from the category, because an order to the Order of St. Francis was expressly denied to their founder, Segarelli (see APOSTOLIC). They had no connexion with the Minorites, in fact desired rather to exterminate them. It is therefore necessary to differentiate the various groups of Fraticelli, although the one term may be applied to all.

The origin of the Fraticelli and the cause of their growth within and without the Franciscan Order must be sought in the history of the Spirituals. It must suffice here to note that in consequence of St. Francis's severe requirements concerning the practice of poverty (already divided, into the Zelanti, or Spirituals, and the Relazati, known later as the Conventuals. The popes of the thirteenth century intervened to bring about harmony between the two factions, and Gregory IX, Innocent IV, and Nicholas III gave in their Bulls authoritative explanations of the points at issue. But the differences were not fully adjusted nor was unity ever completely restored between the Spirituals and the main body of the order, the Community (Fratres de Communitate).

1. The group founded by Brother Angelo da Clarino (or da Cingoli) comes first in order of time. Angelo and several brethren from the March of Ancona had been condemned (c. 1278) to imprisonment for life, but were liberated by the general of the order, Raiento Gaufredi (1289-95) and sent to Armenia (1290), where they did good work as missionaries. Exiled from Armenia towards the end of 1293, they returned to Italy, where in 1294 Celestine V, who was now pope, entertained, but with scarcely six months, willingly permitted them to live as hermits in the strict observance of the Rule of St. Francis. After the abdication of Celestine V, his successor, Boniface VIII, revoked all Celestine's concessions, and they emigrated to Greece, where some of them retained their observance of the rule and the pope, through the Patriarch of Constantinople, caused active measures to be taken against them, they fled to Italy, where their leader, Fra Liberatus, attempted a vindication of their rights, first with Boniface VIII (d. 11 October, 1303), and then with Benedict XI, who also died prematurely (7 July, 1304). On his journey to Clement V (1305-14) at Lyons, Liberatus died (1307), and Angelo da Clarino succeeded to the leadership of the community. He remained in Central Italy until 1311, when he went to Avignon, where he was protected by his patrons Cardinals Giacomo Colonna and Napoléone Orsini. Early in 1317 John XXII, pursuant to a decree of Boniface VIII, declared Angelo excommunicated and placed him in custody. He defended himself ably in his "Epistola Excursoria", representing himself as a zealous Franciscan, but John XXII refused to admit his plea, Angelo being a Celestial hermit, and in the decree "Sancta Romanu et universi ecclesiae" (20 December, 1317) declared Angelo incompetent to authorize the congregation of which Angelo was head. Angelo submitted temporarily, but in 1318 fled to Central Italy, where, acting as general, he assumed charge of the congregation dissolved by the pope, appointed provincials, ministers, and custodians, established new monasteries, arrogated all authority, issued pastoral letters, and received novices; in a word, he created an independent Franciscan Church, the Fraticelli. His adherents professed themselves the original Friars Minor. They denied that John XXII was really pope, as he had abrogated the Rule of St. Francis, which, according to their doctrine, represented the Gospel pure and simple. They asserted that his decrees were invalid, all other religious and prelates were disregarded, and that the possession of mortal and sacramental dignity was inadmissable; as appears from the papal Bulls, the followers of Angelo established themselves in Central Italy, i.e., in the province of Rome, Umbria, and the March of Ancona, and also in Southern Italy (Camerina, Basilicata, and Naples). Fra Angelo enjoyed the protection of the Abbot of Subiaco, in spite of the fact that John XXII (21 Feb., 1334) commanded the guardian of the cloister at Ara Coeli to imprison Angelo, "the deformed heretic who styles himself general of the condemned sect of the Fraticelli". Equally unsuccessful had been a papal warrant issued for his arrest (12 November, 1333), and he fled to the mountains of Abruzzi, where he stayed until 1337. He died 15 July, 1337, and the congregation, deprived of its leader and hard pressed by the Inquisition, split into a number of groups each holding its own doctrines, though it is impossible to determine exactly their origin. It should be further noted that after the controversy regarding poverty broke out (1321-29), all the Fraticelli showed a stronger opposition to the papacy. It was only natural that men of their calibre and extreme tendencies should fall into excesses; but, schismatics and heretics as they were, the moral lapses of individuals are not to be imputed to the whole body, which after all was but loosely organized. Angelo da Clarino, despite the circumstances of his death, was venerated as a worker of miracles.

Keeping in view the earlier history of the sect, we shall have to seek traces of it in Central Italy, Umbria and the March of Ancona. Angelo was highly esteemed by the Augustinian Hermits, with whom he was on friendly terms, especially with Giacomo da Aprano and Simone da Cassia, an ascetic writer of great repute. He corresponded with both, and Simone bitterly laments in the death of Angelo the loss of a friend and spiritual adviser. We may, therefore, safely assume that the Fraticelli whom Simone addresses in his "De Imitatione Christi" were congregated in the civil courts at Florence (c. 1355), where he was then preaching, were adherents of Clarento. The same is probably true, also, of the Fraticelli in Tuscany who about the same time were attacked in the sensational, though neither learned nor skilful, letters of the hermit, Fra Giovanni dalle Celle. The letters were answered by the Fraticelli. Giovanni went even so far as to use Fra Angelo as a pawn against his adversaries. These, indeed, had separated themselves entirely from the Roman Church. They had attained such power in Florence that they invited the "theologians" to public debate. The "theologians", i.e. the official clergy, did not respond. On 13 October, 1378, the priors of Florence enacted a statute against the Fraticelli; on 8 July, 1381, the city council of Florence commanded them to leave the city in two days or face the tribunal of the Inquisition. They were respected so highly, however, that, when their expatriation was demanded by the city magistrates in the same year (13 December, 1381), one of the councillors took a bold stand against the proposal.

Nevertheless, Fra Michele Bertini, from Calci near Pisa, a member of the Ancona branch of Fraticelli, after preaching the Lenten course to his associates in
Florence, was arrested 20 April, 1389, as he was about to leave the city, and was condemned by the Franciscan Archbishop of Florence, Bartolomeo Oleari, to be burned at the stake. He died chanting the Te Deum, while his followers, unmolested by the authorities, exhorted him to remain steadfast (30 April, 1389). In his canonization proceedings, the Roman Spiritual, (23 May, 1457), became a heretic by his four decretals; that he and his successors had forfeited the papacy, and that no priest supporting them could absolve validly.

We have unmistakable evidence that several heretical followers of Clarenco were in the territory of Naples in those days. About Tuscanio, a nephew of the heretic, and a black jack of Naples, maintained a number of Fraticelli in a hospital adjoining his castle, Monte Sant' Angelo, and attended their services. These Fraticelli were divided into three sects: those acknowledging Tommaso da Bojano, former Bishop of Aquino; the followers of the pretended minister general, Bernard of Sicily; and those who claimed Angelo da Clarenco as their founder and acknowledged only his successor as their general. All three sects agreed in holding that the true papacy had ceased since the alleged heresy of John XXII, but the party of the minister general held it lawful to accept, in case of necessity, the ministrations of priests who might ordain to the clergy.

The "Poor Hermit" of Monte della Majella, near Sulmona, were also Fraticelli and adherents of Angelo da Clarenco, and at one time afforded protection to the famous tribune of the people, Cola di Rienzi (1349). Fanatical as they were on the subject of poverty, they were, in accordance with ancient custom, sheltered by the Celestine monks in the near-by abbey of Santo Spirito. The origin of the orthodox Clarenco, approved as true Franciscans by Sixtus IV in 1474, is unknown; nor is it clear whether they were followers of Angelo who kept aloof from heresy or, after falling into his error, were retracted.

II. The second main group of Fraticelli, chronologically considered, were the Spirituals who fled from Tuscan to Sicily, and were surnamed at first the Rebellious Brothers and Apostates, but later the Fraticelli de paupere via. It is an error to apply the name Beghards to them. When, in 1309, the differences between the Relaxati and the Spirituals had reached a critical point, Clement V cited representatives of both parties to appear before the Curia with a view to adjusting their disputes. The result of this conference was the Constitution "Exivi de Paradiso", enacted at the second Council of Vienne (6 May, 1312). This Constitution condemned an explanation of the Rule of St. Francis along stricter lines than those of the "Bull "Exiti qui seminat" of Nicholas III (14 August, 1279), and justified the Spirituals in various matters. This proceeding, however, only provoked the Relaxati to superior to take energetic measures against the Zelanti. Towards the end of 1312 a number of Tuscan Spirituals deserted their monasteries and took forcible possession of the monasteries of Carmignano (near Florence), Aresso, and Asciano, putting the Relaxati to flight. About fifty, fearing punishment, fled to Sicily. Clement V, hearing of the insurrection, commanded the Archbishop of Genoa and two other bishops to force them to return to obedience under penalty of excommunication. As nearly all disregarded this mandate, the prior of San Fidele at Siena, who had been commissioned to execute it, declared them excommunicated and placed them under interdict. When the Zelanti of Northern Italy and Southern France, King Frederick of Sicily, brother of King James II of Aragon, admitted them after they had submitted their statutes to his inspection. Fra Enrico da Ceo was now their leader. On 23 January, 1318, Pope John XXII excommunicated them in the Bull "Gloriosam ecclesiam", specifying five errors, to wit: (1) they designated the Roman Church as carnal and corrupt, and themselves as the only true Church; (2) they were the spiritual and temporal sovereigns; (3) they forgave penances; (4) they taught that priests in the state of sin could not confer the sacraments; and (5) they asserted that they alone were the true observers of the Gospel. At this time they had adopted a close fitting, short, and filthy dress, and a peculiar habit. John XXII (15 March, 1317) admonished King Frederick to take severe measures against them. In a letter of the same date addressed by the cardinals to Avignon to the entire hierarchy of Sicily, special stress was laid on the fact that the rebellious fugitives had elected a superior general, provincials, and guardians. Banished from Sicily, where, however, some remained till at least 1328, they established themselves securely in Naples. On 1 August, 1322, John XXII issued a general decree against them, and after sending King Robert (4 Feb., 1325) the Bulls specially directed against Ceo, on 10 May, 1325, demanded their imprisonment at the hands of King Robert and of the General of the Order. The pope had to repeat this admonition several times (1330, 1331); meanwhile he had ordered the Franciscan Provincial of Calabria (7 March, 1327) and the inquisitors there (1327, 1330, 1331) to proceed against the Fraticelli and had renewed (5 Dec., 1329) the injunctions laid down in the Bull "Gloriosam ecclesiam". From this time onward the adherents of Ceo are hardly to be distinguished from those of the following group; they joined the Michaelites and used the same methods of attack against the papacy. The statement that some professed Mohammedanism may be based on fact, considering their situation and the local circumstances.

III. The third group of the Fraticelli are called the Michaelites, deriving their name from Michael of Cesena, their chief representative and natural leader. It must be premised that this name was in vogue during the fifteenth century and that the party it designated exerted great influence in doctrinal matters on the other groups as early as 1329. It is to be noted also that shortly after this period it becomes difficult to differentiate these groups with anything like precision. The "theoretical" controversy about poverty carried on in the form of an Order, or rather, an "inquisition on against John XXII, was signalized by the formation of this group. It is called "theoretical" to distinguish it from the "practical" controversy waged by the Spirituals relative to the practice of Franciscan poverty which they wished to observe, whereas the leaders in the present conflict were former members of the Spirituals (1309–22).

In 1321 the Dominican Inquisitor at Narbonne, John of Belna, declared heretical the teaching of an imprisoned Beghard of that region, who asserted that Christ and the Apostles owned nothing either individually or in common. The Franciscan lector, Berenger Talon, defended the Beghard. As he refused to retract and was threatened with punishment by the inquisitor, Bérenger appealed to the pope. The matter soon developed into a general controversy between the Dominicans and Franciscans; among the latter, Relaxati and Zelanti alike. In 1332, King Charles III of Naples, in the Bull of Nicholas III, "Exiti qui seminat". In that Bull Nicholas III had defined the poverty of the Franciscans, both individually and collectively, as equivalent to that of the Apostles, and had therefore transferred to the Roman Church all their holdings in lands and houses Zelanti and Relaxati had already been excommunicated by Innocent IV (14 Nov., 1245). The prohibition of Nicholas III to discuss this point was revoked by John XXIII in
a new Bull, "Quia nonnullum quid" (26 March, 1322). On 6 March of the same year John XXII had submitted the matter to the pope. The order was vigorously defended by the Cardinals Vitalis of Four and Bertrand de Turre (de la Tour), Archbishop Arnaldo Royardi of Salerno, and various other bishops, all Franciscans; other cardinals opposed their views, and the pope leaned towards the opposition. He also rejected the claim of Urbanus as spiritual leader (1328), who, with a fine-spun distinction, declared (28 March, 1322) that Christ and the Apostles did possess property, inasmuch as they governed the Church, but not as individuals or as exemplars of Christian perfection. This distinction, more subtle than sound, satisfied the pope when the provocative measures taken by the chapter of the order destroyed all prospects of peace. Fra Michael of Cesena, General of the Franciscan Order (elected 1316), a Conventual, was attested by various measures enacted by him with the approval of John XXII, convened a general chapter for 1 June, 1322, at Perugia. Anticipating, on the advice of the Franciscan Cardinals Vitalis and Bertrand, the definitive decision of the pope, the chapter solemnly declared in favour of the "absolute poverty" of Christ (4 June, 1322). This pronunciamento was signed by the general, Michael of Cesena, the provincial ministers of Southern Germany, England, Normandy, Ocitanian, Northern France, and others, as well as by several noted scholars. On 11 June the chapter solemnly published its decrees to all Christendom. Indignant at these proceedings, John XXII, in the Bull "Ad conditorem canonum" (8 December, 1322), declared that the Roman Church renounced all its claims to the movable and immovable properties of the Franciscan Order and therewith returned them. Thus the pope revoked the Bull "Exit" of Nicholas III and did away with the poverty which formed the basis of the Franciscan Order. It is easy to understand the effect of this upon the Franciscans, particularly the Zelanti. In the name of the order Fra Boncortese (Bonagrazia) of Bergamo, a capable lawyer and up to that time a bitter enemy of the Zelanti, presented a daring protest against this Bull to the Consistory (14 January, 1323). Although the pope thereupon revised the Bull and reissued it in the original form, he incarcerated Bonagrazia and in the Bull "Cum inter nonnullus" (12 November, 1323) declared heretical the assertion that Christ and the Apostles possessed no property either separately or collectively.

The controversy between the pope and the order soon took on a political character. In the Minorities, including the Roman Curia, there appeared counsellors to Louis IV the Bavarian, King of Germany, who also was engaged in a conflict with the pope. After Louis IV (1314-1347) had defeated his rival Frederick, Duke of Austria, at the battle of Mühldorf (18 Sept., 1322), and had invaded Lombardy to further the cause of the Ghibelline Vitelli, he ordered the whole question of right to the German throne to be brought before the papal tribunal and, on 8 October, 1323, began canonical proceedings against Louis. In the Nuremberg Appeal (18 Dec., 1323) Louis, curiously enough, had accused the pope of unduly favouring the Minorities, though this document was never published. But the Sachsenhausen Appeal of the same King Louis (22 May, 1324) was full of invective against the "heretic who falsely designates himself Pope John XXII" for doing away with the poverty of Christ. This famous "Spiritualitatus excusatus" is closely connected with the Appeal of Bonagrazia, and with writings on the "Ascoli," and of Pietro di Giovanni Olivi. It is certain that it originated among the Franciscans who, under the protection of the king, aimed it at John XXII and his teaching, although Louis IV later denied all responsibility in the matter. The result was that Louis IV was excommunicated (11 July, 1324) and, in the decree "Quia quorundam" (10 Nov., 1324), John XXII forbade all contradiction and questioning of its constitution. "Cum inter nonnullus" and "Ad conditorem".

The general chapter of the order, assembled at Lyons (20 May, 1325) under the presidency of Michael of Cesena, forbade any disrespectful reference to the pope. On 8 June, 1327, Michael received instructions to present himself at Avignon, a command which he obeyed (2 Dec., 1327). As his act of submission, he released a secret prisoner, the Minorite Card. Bertrand de Turre (1322), who, in a secret protest (15 April and, fearing punishment, fled, despite the orders of the pope, to Aigues-Mortes (28 May) and thence to Pisa, together with Bonagrazia of Bergamo and William of Occitanian, to both of whom events of importance had occurred. Louis the Bavarian had entered Rome with a German army, to the great joy of the Ghibellines. Accompanying him were Ubertino di Casale, John of Jandun and Marsilius of Padus, the authors of the "Defensor paxis", which declared that the emperor and the Church at large were above the pope. Louis had himself solemnly crowned Emperor of Rome by Sciarra Colonna (17 Jan., 1328), and on 12 May he nominated and had consecrated as antipope Pietro Rainalducci of Corvara, a Franciscan, under the name of Nicholas V. The three fugitives from Avignon presented themselves to Louis and accompanied him to Brescia, where he died on the 27th of the month of their death. John XXII deposed Michael as general of the order (6 June, 1328) and (13 June) appointed the Minorite Cardinal Bertrand de Turre vicar-general of the order to preside at the chapter to be held in Paris (2 June, 1329), which Michael of Cesena vainly attempted to prevent, and brought about the election of Fra Gerardus Odonis of Châteauroux, of the province of Aquitaine. Obedient to John XXII, he induced the majority of the order to submit to the Apostolic See. Michael of Cesena and all his adherents, the Michaelites, were repudiated by the order. At the same time, by command of John XXII, papal proceedings were instituted against them everywhere. The Michaelites denied John's right to the papacy and denounced both him and his successors as heretics. This shows the dangerous character of the sect. In their numerous and passionate denunciations of the pope, especially of John XXII, they single out for refutation isolated statements of John in his Bulls. To the contention regarding poverty was added (1333) the question of the beatific vision of the saints, concerning which John XXII, contrary to general opinion, yet without intending to define the matter, had declared that it would begin only at the last judgment.

During this period the antipope, Nicholas V, had nominated six cardinals (15 May, 1328), among them an Augustinian and a Dominican, and between September, 1328, and December, 1329, three other cardinals; also among the bishops whom he consecrated were members of the two orders mentioned above. After Louis IV had returned to Bavaria, Nicholas V, deprived of all support, took refuge with the Count of Donoratico. Finally, in his distress, Nicholas appealed to John XXII, cast himself at his feet (Avignon, 4 Aug.), and submitted to honourable confinement at Avignon, where he remained till his death (10 October, 1333).

John, meanwhile, had taken steps against Michael and his followers. In accordance with his instructions (20 June, 1328) to Aycardo, Archbishop of Milan, the proceedings against Michael were published in various Bulle, 1328-1329. On 5 September, 1328, John ordered the imprisonment of Fra Ascolino, who was acting as Michael's vicar, and on 18 August, 1331, the arrest of another vicar, Fra Thedino, who represented Michael in the March of Ancona. Prominent among the followers of Michael were the more or less numerous Minorities in the monasteries of Todi and Amelia.
(against whom proceedings were instituted in 1329–30), of Ervin (1320), and of Pisa (1330), where, however, they appeared openly as late as 1364, and at Albignano, and Savona (1329–32).

On 21 Dec., 1328, John XXII; graciously pardoned Fra Minus, the Provincial of Tuscany, while on 2 Dec., he had ordered the trial of Fra Humilis, Custodian of Umbria. Papal decrees revealed the prevalence of Malvasia in Italy (1329), Genoa (1329), Portugal (1330), Sicily and Lombardy (1332), Sardinia, Armenia, and other places. John XXII and his immediate successors also issued numerous decrees against the Fraticelli in the March of Ancona, where the bishops and minor feuds, as the inquisitors had previously seen, were fully in spite of papal threats; also in Naples and Calabria, where King Robert and Queen Sansia exhibited special veneration for St. Francis and his humble followers. In the royal castle, where the chaplaincies were held by Franciscans, there resided Fra Philip of Majorca, a brother of the queen. This Philip had (1328) petitioned John XXII; for permission for himself and other Franciscans to observe literally the Rule of St. Francis, independently of the superiors of the order; the pope of course refused. In a letter dated 10 August, 1331, the pope was obliged to show some regard for the queen relating to the preservation of “holy poverty”, and the king had even composed a treatise favouring the views of the Chapter of Perugia (1322). The papal condemnation of the Fraticelli, therefore, had produced but slight results in the Kingdom of Naples. On 8 July, 1331, the pope admonished King Robert to withhold no longer the papal decrees against the Fraticelli, nor prevent their publication in his kingdom. Philip of Majorca, however, preached openly against the pope. It was due to the influence of the royal family that Fra Andrea of Galiano, a court chaplain at Naples, was acquitted in the process instituted against him at Avignon in 1338, as he still continued his intercourse with Michael of Cesena and with the fifty Michelleites who resided for some time under the king's protection in the castle of Lettere near Castellamare, but who later (1335) humbly submitted to their lawful superiors. In 1336 "short-robed" Fraticelli still occupied the monastery of Santa Chiara at Naples, founded by Queen Sansia, and were established in other parts of the kingdom; their expulsion was demanded (24 June, 1336) by Benedict XII (1334–42). In 1344 Clement VI (1342–52) found it necessary to reiterate the earlier decrees. Between 1363–1370 it at last became possible for Franciscan to travel and to take a active part in the Calabria and Sicily from which the Fraticelli had been expelled; but Gregory XI complained (12 Sept., 1372) that the "ashes and bones of Fraticelli were venerated as relics of saints in Sicily, and churches were even erected in their honour".

From the records of a process (1354) conducted in irregular form against the Fraticelli of the Francisca monastery at Tauris, who had been reported by Dominicans, we learn that they inveighed openly against John XXII; and upheld the views of Michael of Cesena, although in their apocalyptic manner they declared that the order of the Friars Minor was divided in three parts, and that only those would be saved who would journey to the East, i.e. themselves. It is uncertain whether these were identical with the Fraticelli in Armenia, Persia, and other oriental localities, where all bishops were commanded by Clement VI to prosecute them (25 May, 1344).

In the sect prevailed exceedingly in the Duchy of Spoleto on account of the continual political turmoil. In a process instituted against a particular Umbrian group of Fraticelli in 1360, we are informed that Fra Francesco Niccolò of Perugia was their founder. They pretended to observe the Rule of St. Augustine, but were fanatical on the question of poverty and regarded all prelates as guilty of simony. Salvation was in be found only in their own brotherhood, in perfect order. They imitated the Sicilian Fraticelli in their doctrines and methods of instruction. An interesting letter is still extant which the Fraticelli of the Campagna (1353–55) wrote to the magistrates of Narni when they heard that one of their number (Fra Stefano) had been cruelly imprisoned by the Inquisition. In this letter they petitioned the magistrates to liberate him according to the example of the cities of "Todi, Perugia, Assisi, and Pisa".

The Fraticelli enjoyed complete liberty in Perugia. They lived where it best suited them, principally in the country-house of the Conventuals at Spoleto. They seem to have been disposed to publicly insult the Minorites (Conventuals) in the monastery of San Francesco al Prato. It appears that these Fraticelli had elected their own pope, bishops and generals, and that they were split into various factions. The Conventuals, as their one means of defence, called in Fra Paoloucci of Trinci, the founder of the Observants, and ceded to him the small monastery on Monte Ripido near the city (1374). Fra Paoloucci was successful in his disputations with the Fraticelli, and when they had been clearly exposed as heretics, the people drove them from the city. This should be noted: the papal prelates and all the others of that period, were designated Fraticelli della opinione, perhaps on account of their opinion that the Roman papacy had ceased to exist with John XXII (1323) or Celestin V, and that they alone constituted the true Church. About this time Fra Vitale di Francia and Fra Pietro da Firenze exercised a sort of generalship over the entire group. They rendered protection and hospitality from rich and influential families in Apulia, around Rome, and in the March. One of their protectors was the knight Andreuccio de Palumbo, who sheltered them in his castle near Rieti, for which he was sharply called to account by Urban VI (4 May, 1352). On the same day the Benedictine Abbot of Farfa was reprimanded for a similar fault. On 14 November, 1394, Boniface IX empowered the Minorites of Terra di Lavoro to take possession of the monasteries deserted by the Fraticelli. Martin V conceded the same rights to the Franciscans of the Roman Province (14 November, 1418) and, on 7 April, 1426, transferred to them as a special grant the monastery of Palestrina, which had been a stronghold of the Fraticelli. In the same year Martin V nominated St. John Capistran (27 May) and St. James of the March (11 October) as inquisitors for the province of Rome. The other groups of promoters of order among the Franciscans fulfilled the duties of their office strictly and energetically and succeeded in striking at the very vitals of the sect. In 1415 the city of Florence had formally banished the Fraticelli of the poor life, the followers of Michelino of Cesena of infamous memory", and in Lucca five Fraticelli, on trial, had solemnly abjured their error (1411). Martin V also ordered the Bishops of Porto and Alba to take steps against all Fraticelli "in the Roman province, the March of Ancona, the Duchy of Spoleto and other localities" (7 June, 1427). On 27 January of the same year, Martin V had permitted the Observants of Ancona to occupy the monastery of the Fraticelli at Castro l'Eremita as a first step in the campaign against the Fraticelli of that neighbourhood. On 1 June, 1428, he commanded the Bishop of Ancona to enforce his rulings strictly in Maiolati, to put all suspects to the rack, destroy their village, separate the men from the women, and expel the entire population. A circular letter, which the Fraticelli addressed to all Christendom, proved ineffectual and their doom was sealed. John of Capistran and James of the March burned thirty-six of their establishments, or dispersed the members, and a number were burned at the stake at Florence and Fabriano, at the latter
place in the presence of the pope. St. James of March, commissioned by Nicholas V to proceed against them (1449), wrote the famous "Dialogus contra Fraticellios", which he first published in 1452, and which has added much to our information as to the character of the Fraticelli. In the main establishments of the Fraticelli were situated in the valley of Jesi, at Maiolati, Poggio Cupo, Massaccio, and Mergo. They had also constituted bishops in other districts where there was a sufficient number of adherents. They made frequent journeys for propagandistic purposes, especially in Tuscany. Some moved partly as Minorites, some as heretics, often disguising themselves for the sake of protection. Their doctrine was a résumé of their former sectarian errors: the whole Roman Church had deserted the true Faith since the time of John XXII (1323); they alone constituted the true Church and retained the sacra-
ments and the priesthood.

A form of Fraticelli was also represented by Philip of Berbegal, a fanatical and eccentric Observant of Spain (1433), who attempted to establish a strict society de Capuciola, but met vigorous opposition from John Cipistran, who issued a dissertation against him.

Only once again are measures known to have been taken against the Fraticelli, viz. in 1466, when a number of Fraticelli from Poli, near Palestrina, and Maiolati were captured at Assisi during the Portin-
ula celebration. They were imprisoned in the castle of Assisi, and the things instituted to them. Their protector at Poli, Count Stefano de' Conti, was imprisoned, but they also received the pro-
tection of the Colonna family of Palestrina. Tradition also mentions that the Fraticelli established many other colonies and that they had an important centre in Greece, whence they sent out emissaries and where they sought refuge from the aggressive measures of St. James of the March. They generally held their re-
unions at night in private houses and half of the in-
habittants of Poli are said to have been among their adherents. The allegation that their religious serv-
ices were defiled by immoral practices cannot be proved. According to their doctrine, as contained in the "Dialogus", immoral priests incurred the loss of the powers of order and jurisdiction. They had also their own bishop, Nicholas by name.

During this period numerous pamphlets were pub-
lished controverting the errors of the Fraticelli. While the document mentioned "Zurich" was directed against Rome in general, a pamphlet published at Munich in 1580 was concerned with a special event; the Fraticelli were proscribed and finally put to death in the course of the Thirty Years' War. The authority of the Church in the matter of contracts. It is of the essence of a contract that there should be an agreement of wills between the parties as to its subject-matter. Without such an agreement in all that is essential there can be no con-
tract. Hence, if by fraud one of the parties to a con-
tract has been led to mistake what belongs to its substance, the contract will be null and void. If a dealer in jewellery offers a piece of coloured glass to a customer as a valuable ruby, and induces him to pay a large sum of money for it, the contract is invalid for want of consent. The customer wished to buy a precious stone, and he was offered glass. If one of the parties to a contract is induced to agree to something which is merely accidental to the contract and which did not induce him to enter into it, the contract will be valid and there is no reason for setting it aside. If a higher price or more favourable terms were obtained by means of the fraud, there was, of course, wrong done thereby, and in the absence, more than the just value was given, there will be obligation to make restitution for the injustice. But there was no mistake about the substance of the contract, there was union of wills therein, and so, there is no reason why it should not stand. If, however, such a mistake, not indeed regarding the substance of the contract, but caused by it, had been made, the reason was why the contract was entered into; there are special reasons why such a contract should not be upheld.
Fraunhofer.

Fraunhofer, Joseph von, optician, b. at Straubing, Bavaria, 6 March, 1787; d. at Munich, 7 June, 1826. He was the tenth and last son of a poor glass-grinder who was unable to give his boy even the rudiments of knowledge. At the age of 13 he lost both parents and was apprenticed to a mirror-maker and lens-grinder for six years without pay. There he was not permitted to study or even to attend holiday school. The house where he worked collapsed in 1801, burying the boy under the ruins, but not injuring him fatally. This fortunate accident brought him to the notice of court-councillor von Utschneider, who gave him books on mathematics and optics, and also interested King Max Joseph in him, who made him a present of eighteen ducats. With this money Joseph acquired a grinding-machine and bought his release from his master, and then began the anxious and arduous work of digging at his trade and also as an engraver on metal. Finally, in 1806, he was called to the mathematical-technical institute of Reichenbach, Utschneider, and Liebher as an assistant. There he did such excellent work that he became a partner and manager of the optical institute of the firm at Benedictbeuren. In 1814 Utschneider gave him 10,000 florins and formed with him the new firm of Utschneider and Fraunhofer. The optical institute was moved to Munich in 1819 and Fraunhofer was appointed professor royal. The University of Erlangen gave him the degree of Ph.D., honoris causa, in 1822. The following year he was appointed conservator of the physical cabinet of the academy at Munich. Nobility, the order of merit, and the honorary citizenship of Munich were conferred upon him in 1824. The Imperial Leopoldina Academy, the Astronomical Society of London, and the Society for Natural Science and Medicine of the Adolphine Order of Bayern gave him the highest distinctions. Shortly before his death he was made a Knight of the Danish order of Dannebrog.

The work of this self-taught mathematical and practical optician was chiefly in developing improved methods of preparing optical glass, of grinding and polishing lenses, and of testing them. He improved England of its supremacy in the optical field. He invented the necessary machines, constructed a spherometer, and developed the moving and measuring devices used in astronomical telescopes, such as the screw micrometer and the heliometer. His fame, however, rests above all on his initiation of spectrum analysis. While studying the chromatic refraction of different glasses he discovered the bands of artificial lights and also the dark lines in the solar spectrum, called now the Fraunhofer lines. He also accomplished an important theoretical work on diffraction and established its laws; he placed the diffraction slit in front of the objective of a measuring telescope and later made and used diffraction gratings with up to 10,000 parallel lines to the inch, ruled by a specially constructed dividing engine. By means of these gratings he was able to measure the minute wave-lengths of the different colours of light. As a Christian, Fraunhofer met with no difficulties of conscience. The simple inscription on his tomb reads: *Approxi-

The important memoirs were first published in "Denkschriften" of the Royal Bavarian Academy of Sciences, the one on refraction, spectra, and lines in 1817, and that on diffraction and its laws...
in 1821. They were soon translated into English and French. His collected works have been published by Lomell (Munich, 1888), and translated in part and edited by Ams (New York and London, 1898).

William Fox.

Fraysinus, Denis de 1765–1841, Bishop of Bernopolis in partibus infidelium, is celebrated chiefly for his work, Notre-Dame de Paris. He was one of the first orators and apostles who accomplished so much towards the restoration of the Faith in France after the Revolution. He was born at Curières in Rouergue, France, and died at St-Genies in the department of Aveyron. His earliest sermons were delivered at Paris, first in the church of the Carmelites, and later at St-Sulpice, where he continued them for seven years. He was compelled to interrupt his preaching at the order of Napoleon in 1809, but resumed in 1814, and continued, with the brief intermission of the Hundred Days, until 1822. Despite his severity towards the brother of Napoleon, the Abbé Fraysinus had made him a councillor of the university, of which he later became grand master. He was elected to membership in the French Academy, and in 1817 pronounced there a panegyric of St. Louis which is still famous. In 1817 he was named almoner to the court of Louis XVIII, and later consecrated Bishop of Bernopolis. He had been raised to the French peerage when, in 1824, he pronounced the funeral oration of Louis XVIII. It was at this time that the Society of Jesus, which had been re-established by Pius VII, wished to return to France. A number of former Jesuits, reunited under the name of the Faith, addressed themselves, in 1824, to Mgr de Fraysinus, the minister of public worship, and obtained his protection of their project.

His political career came to an end with the revolution of 1830. After acting as tutor to the Duke de Bordeaux until 1835, he went to live at St-Genies in Provence, where he died three years later. His conferences had been published some years before, and, under the title "Défense du Christianisme" (4 vols.), the chief work by which he is known. He published also, in 1818, his slightly Gallican work "Les vrais droits de l'Église gallicane". His conferences lack the vibrant warmth and the brilliancy of style which marked those of Lacordaire and his successors in the pulpit of Notre-Dame. But Mgr de Fraysinus possesses the distinction of having inaugurated a great movement of restoration and of having made the word of God acceptable to both the indifferent and the incredulous, owing to the clearness with which he explained dogmatic truths, his judgment in the choice of his proofs and his loyalty in discussion. He was the first of the nineteenth century to sow, in this manner, the apostolic seed, and he assured an abundant harvest to those who followed him.

Louis Lalande.

Fréchette, Louis-Honoré, b. at Notre-Dame de Lévis, P.Q., Canada, 16 November, 1839; d. 30 May, 1908. He attended the schools of his native town, and continued his studies at the Ecole normale, after which he chose the profession of law, and in 1864 was admitted to the Bar at Quebec. As clients did not come as quickly as he desired he decided to go to Chicago, where for seven years he worked as a journalist, and became corresponding secretary of the land department of the Illinois Central Railroad. In 1871 Fréchette was elected to the U.S. Congress, and in 1877 became a deputy in the House of Commons by the Liberal party. Defeated in the general elections of 1878 and 1882, he abandoned public life and returned to journalism, the products of his pen appearing in the "Journal de Québec", the "Journal de Lévis", the "Patrie" of Montreal, the "Opinion Publique", "The Forum", "Harper's Monthly", and "The Arena". Meanwhile his poetry won him so much admiration at home. The list of his poetic works is something lengthy. The following are given in their chronological order: "Mes Loisirs", 1863; "La Voix d'un Exilé", 1886—first part published at Chicago. Another complete edition appeared at Montreal in 1874. "Medecin Mélé; Fantaisies et souvenirs poétiques", 1877; "Les Fleurs Bordales, et Les Oiseaux de Neige, Poésies Canadiennes", a work crowned by the French Academy, 1879; "La Légende d’un Peuple—Poésies Canadiennes", 1887—1890; "Les Feuilles Volantes", 1891. Fréchette wrote also much in prose, notably: "Fidèle Poutre" (an historical drama), 1871; "Lettres à Baisé à propos des Causeries du Dimanche", 1872; "Le retour de l’Exilé" (a drama in five acts and eight tableaux), 1880; "Le drapeau fantôme" (historical episode), 1884; "Pèlerinage à l’insurrection Canadienne de 1837", 1885; "Originaux et Détraits", 1892; "Mémoires à l’abbé Baisé sur l’histoire du Canada", 1896; "Christmas in French Canada" (in English), 1900. He translated into French, Howell’s "Chance Acquaintance" and George W. Cable’s "Old Creole Days". Fréchette became a member of the Royal Society of Canada at its foundation in 1882; he was named Companion of the Order of St. Michael and St. George in 1897, on the occasion of the Jubilee of Queen Victoria. The University of Laval, McGill University, and Queen’s University conferred on him the degree of Doctor of Letters. From 1889 Fréchette occupied the position of clerk of the Council in the legislature of Quebec. In 1876 he married Emma Beaudry, second daughter of J.-B. Beaudry, a banker of Montreal, by whom he had two children. He has been called the "Lamartine of Canada". He certainly elevated the poetry of Canada, and his work will rank with that of Crémazie.

N. E. Dionne.

Fredegarius, the name used since the sixteenth century (for what reason is not known) to designate the supposed author of an anonymous historical compilation (Chronicon Fredegarii) of the seventh century, in which is related the history of the Franks from the earliest times until 658. The name appeared for the first time in the "Antiquités gauloises" of (Paris, 1599) of Claude Fauchet, who states that it is used "through ignorance of the real author". Modern research has resulted in the discovery that the work is really made up of three texts each of which belongs to a different author. The first author is a Burgundian whose work is an epitome of six books of the "Ecclesiastical History of the Franks", by Gregory of Tours, from the earliest times to the death of Chilperic I in 584. He also wrote the "Liber generationis" and made extracts from Idatius and St. Jerome which form, in the critical edition of Krusch. the first and second books of the "Chronicon". Including the epitome, or nearly the whole book, for written the largest portion of the work. This portion, it must be said, is also the least important, for it contains no original matter, and confines itself to the use of previous sources, and not without blunders and inaccuracies. It is true that the part of the ninth book which goes to 615 (Krusch.), or even to 616 (Schröner), has been attributed to the author. The latter remarks that the writer was in touch with Warnacharius the "mayor of the palace" and believes that he may be identified with Agrestius, a monk of Luxeuil. The second author, also a Burgundian, belonged to the south of France and had apparently spent some time at Paris. His written original work extending to the year 642 and containing
information which is valuable because not to be found elsewhere. He is an impartial and veracious author whose testimony deserves to be received in general with respect. The third author, who brings the "Chronicon" to a conclusion, is a partisan of Grimoald, the "mayor of the palace" and a great admirer of the Carolingian family. Chapters lxxxiv to lxxxviii and several interpolations are his. These rather important conclusions have been reached in recent times by the critical acumen of B. Kreusch. Some of these are quite precisely defined by G. Schnürer, and their opinions taken together may be considered definitive, although the last word on the subject has not been said.

Interest in the "Chronicon" of Fredegarius consists for us in the fact that it is the sole document which informs us in a continuous way concerning that period in the history of the Franks which goes from 591 (the year in which the "Ecclesiastical History" of Gregory of Tours comes to a close) to 658. Apart from this work we have almost no knowledge of the period of Frankish history covered by it. All three writers exhibit, it is true, much barbarism in diction and in thought; we are all the more indebted to them for the serious effort they made to preserve some memory of the events of their times. The "Chronicon" of Fredegarius was edited by B. Kreusch in "Scriptores Rer. Merovingicarum", II (Hanover, 1858). KRAUSCH, Die Chronicon des sogenannten Fredegarius in Neues Archiv, VII (1882); IDEM, preface to his aforesaid edition; BECHER, Die Vorlage der sogenannten Fredegarius-Chronica (Fribourg, Switzerland, 1900) in Collectanea Friburgoensis, IX; KURTH, L'histoire de Clovis d'apres Fredegarius in Revue des questions historiques, 1900, XLVII; IDEM, La reine Brunehaut (Hildesheim, 1891); WITTEBACH, Deutschlands Geschichtsquellen (7th ed., Stuttgart, Berlin, 1894), I, 114–118; 141–142.

GODEFROID KURTH.

Fredegis of Tours (FRIDUGISUS OF FREDEGISUS), a ninth-century monk, teacher, and writer. Fredegis was an Anglo-Saxon, b. in England towards the end of the eighth century; d. at Tours in 834. He was a pupil of Alcuin, first at York and afterwards at the court of Charles the Great. The proximate date of his birth is determined by a reference to him as "a boy" (puer) in a letter of Alcuin dated 798. He was a favourite pupil of Alcuin and was one of the group of distinguished scholars who formed the Schola palatina, in which he was known by the name Nathaniel. At that time he was a deacon. When, in 796, Alcuin became Abbot of Tours Fredegis seems to have remained at the court. According to some authorities he was Alcuin's successor as Master of the Palace School. This is, however, improbable. In 804 he succeeded his teacher as Abbot of Tours, retaining at the same time his relations with the emperor. Among his contemporaries he enjoyed a reputation for great learning. He composed several poems and a short treatise in epitaphe form, which deals with the nature of nothing and darkness, "De nilo et tenebris". The epistle was written probably during the author's retirement. It is addressed "to all the faithful and to those who dwell in the sacred Palace of the most serene prince Charles".

The occasion of the discussion of a problem which to the modern mind seems childish, namely, Are nothing and darkness real things? was doubtless the Biblical use of the words in the first chapter of Genesis. If the Bible uses the words nothing and darkness, it seemed in that naïvely realistic age that there must be things corresponding to those words. Fredegis accepts the realistic answer and defends it both by arguments from authority and by arguments from reason. That his solution, however, was not generally accepted is clear from the open letter of the treatise in which he refers to the long prevailing divergence of opinion in the matter. The importance of the treatise lies in the way it makes of the dialectical method which was afterwards developed into the scholastic method by Abelard, Alexander of Hales, and St. Thomas. De nihilo et tenebris in P. L., CV, 781 and in Mon. Germ. Hist., Ep., V, 615; AHNER, Fredegis von Tours (Leipzig, 1878); 16. Die Sosele von Neisse, op. cit.; ENDE, Deutsche Philosophie (Berlin, 1896), XIX; G. MOLLINGER, Geschichte der Philosophie (Boston, 1905), 244.

WILLIAM TURNER.

Frederick I, surnamed Barbarossa, German King and Roman Emperor, son of Frederick of Swabia (d. 1147) and Judith, daughter of Henry the Black; born c. 1123; died 10 June, 1190. Connected maternally with the Guelphs, he seemed destined to effect a reconciliation between them and the Ghibellines. In 1146 he had already roused public attention by a
the various parts of his realm and manfully exerted himself to establish internal peace. There was no reason why the princes of his empire should oppose the newly chosen king; his naturally conservative mind knew how to deal with existing forces. Of the princes, whose power was already approaching sovereignty, he demanded only respect for the existing order. He sought also to unite the interests of the German princes, especially those of the House of Guelph with his own. One of the most important of the Gregorian, hierarchical party in Germany was in a state of complete dissolution. From the bishops Frederick had no reason to fear radical opposition to his policy towards the Church, dissatisfaction with the papal administration in Germany being then widespread. He succeeded in recovering the influence formerly exercised by the German king in the selection of bishops. Many powerful men were at that time to be found among the German clergy, prominent among them being the provost of Hildesheim, Rainald von Dassel, consecrated Archbishop of Cologne in May, 1156, and made chancellor of the empire. For eleven years he was the most faithful counsellor of Frederick. Rainald was a formidable opponent of the papacy; in him the bishop almost wholly disappears in the statesman. Similar to Frederick in character, he vigorously supported the antihierarchical policy of the emperor. Another prelate, also a staunch supporter of the king, was Wichmann, Archbishop of Magdeburg, more of a soldier than a bishop, and uncanonically promoted from the See of Zeitz to the Archbishops of Magdeburg. Thus assisted by the various estates of the empire, Frederick sought to make the power of the crown as independent as possible. This he did by vigorously furthering the interests of his administrative house. The administrators of his family property, the ministeriales, were not only managers of great estates, but at the same time a well-disciplined body of warriors. The negotiations between the king and the pope concerning the appointment to the See of Magdeburg revealed for the first time a radical difference between the policies of the Church and the State. During these stormy controversies, forerunners of the approaching tempest, Frederick was strengthened in his views regarding the supremacy of the empire over the papal power, chiefly through intercourse with the leading jurists of the University of Bologna. The conception of the dignity of the Roman emperor placed before him by these men confirmed him in his claims to the supremacy of the German kings over the Church, which he based upon the rights exercised by them during the Carolingian period. The whole internal and external policy of Frederick was controlled by the idea of restoring the ancient imperium mundi. In Northern Italy, where many prosperous communes had acquired independence, the former imperial suzerainty had passed away. Frederick failed to see that in these cities a new political factor was developing, and underrated the powers of resistance of these free municipal republics. Concerned only with immediate advantages, he sought to recover the regalia (income from vacant sees and benefices), which the cities had gradually usurped, and to utilize them in pursuing his imperial policy. The conduct of Frederick in Northern Italy and the mistaken concept of the relations between the papacy and the State could not fail to bring about a conflict with the papacy. In this conflict for supremacy in Northern Italy, the pope was forced to prove that he was able to defend the position of equality with the king, which the papal see had acquired, and in this way to gain a complete victory over the emperor. The king, a deeply religious man, was induced to concede that religious and ecclesiastical powers should co-operate with each other, but he made it clear that even the pope should respect him the imperial lord. If Frederick became master of Italy, the pope would have to acknowledge this supremacy. In the beginning, it seemed probable that Frederick would triumph without the need for German help. Threatened by the Normans from without, he was not even secure in his own city, which governed itself through a senate elected by popular vote and tolerated the revolutionary Arnold of Brescia within its walls. It was in these circumstances that the Treaty of Constance was signed between the pope and the emperor (March, 1153). This treaty was aimed against the enemies of the pope both in Rome and Southern Italy. In return the pope promised to crown Frederick emperor and to help him against his enemies.

In October, 1154, Frederick began his march Romewards. Owing to the weakness of his army, the king did not succeed at this time in subjugating to his power Northern Italy and the rebellious city of Milan. In 1155 he went on with his army to Rome, where he met the newly elected Pope Adrian IV, who maintained himself in Rome with difficulty as he anxiously awaiting the arrival of the German king. Frederick could not establish permanent order in Rome. The Treaty of Constance, promising the pope help against the Romans and Normans, was therefore not carried out. On 18 June, 1155, after having delivered Arnold of Brescia into the pope's hands, Frederick was crowned as Roman emperor in spite of the opposition of the rebellious Romans. In Southern, as in Northern Italy Frederick made little progress during this Italian expedition. During the years 1155-1158, Frederick reached the height of his power, and energetically safeguarded the tranquility of his realm. The difficult Bavarian question, replete with imminent danger of war, was successfully settled; Henry Jasomirgott surrendered Bavaria to Henry the Lion and in return received Austria as an independent duchy, a step that was pregnant with consequences for the future of Germany. Frederick's policy was also successful along the eastern and western boundaries of his empire. His suzerainty in Burgundy was, in the main, re-established, after Frederick, with the consent of the Curia, had separated from Adela von Vohburg, and married Beatrice, the heiress of Burgundy. On his eastern frontier, he succeeded more and more in Germanizing and Christianizing the local tribes. In this respect, Henry the Lion was the chief pioneer of the future imperial policy. Frederick maintained amicable relations with Denmark, Poland, and Hungary. Impelled by his proud consciousness
of authority, which found expression at the Diet of Würzburg (1157). Frederick undertook a second Italian campaign in 1158. In the meantime, conditions had changed in Italy; the pope, from being an opponent of the Normans, had become their ally. The friendly relations between the pope and emperor had suffered a shock after the Diet of Brescian (1157). On that occasion the papal legate had called the imperial dignity a beneficium (beneficium) of the popes. The expression was ambiguous, since the Latin word beneficium might mean either a personal benefit or a feudal concession. There is no doubt, however, that the indignant German princes were right in understanding it to be an assertion of the superiority of the popes over the emperors. In sharp denial of this claim, Frederick

mated with the spirit of Gregory VII, refused to acknowledge the imperial supremacy. Around the pope gathered all the enemies of Frederick. The universal papal power was destined to triumph over the idea of a universal imperial power. The Western rulers were determined to resist every attempt to re-establish the imperial hegemony in the West. Frederick was again left to his own resources and, after a short sojourn in Germany, undertook a new expedition to Italy (1163). For a time the death of the anti-pope, Victor IV, gave rise to hopes of a reconciliation between Frederick and Alexander III, but soon the emperor recognized another antipope, Paschal III. At the same time an anti-empire alliance, the Lombard League, was formed by the cities of Verona, Cremona, and Padua; it was joined by Venice, Constantinople, and Sicily. Internal troubles caused by the schism prevented the emperor from coping successfully with the famous League. Some of the German clergy, moreover, had espoused the cause of Alexander III, and Frederick was unable to overcome their opposition. Nevertheless, he again left Germany (1166), marched through the disaffected cities of Northern Italy, and, accompanied by the antipope, entered Rome. There a deadly fever destroyed his army, and behind him the Lombard insurrection assumed more dangerous proportions. Lengthy negotiations followed, and the emperor again attempted to overthrow the coalition of the League and Pope Alexander (1174). The great battle of Legnano (29 May, 1176) destroyed the imperial hopes, and left Frederick willing to enter on negotiations for peace. The most important result of the ensuing treaty of Venice (1177) was the failure of the emperor to establish his supremacy over the pope; and in acknowledging the complete equality of Alexander, whom he now recognized as pope, Frederick confessed the defeat of the imperial pretensions.

While Frederick was fighting in Northern Italy, the head of the Guelphs, Henry the Lion, had refused to give him armed assistance. Now he openly rebelled against Frederick. The emperor overthrew Henry, and henceforth aimed at impeding the growth of his powerful vassals by dividing the dukedoms as much as possible. Bavaria, without Styrria however, was at that time granted to the Guelph house of Welf, celebrated, which act naturally revived the feud between the Houses of Guelph and Hohenstaufen. The Treaty of Constance (25 June, 1183) between Frederick and the Lombards deprived the pope of his important ally, the combined cities of Northern Italy. Shortly afterwards, Frederick's son, Henry, married Constance, the Norman princess of Sicily. The island was now threatened both from the north and the south. Friendly relations between the pope and the emperor were also endangered by complaints about the exercise of the Jus spoli and the collection of the tithe by laymen. The coronation of Frederick's son Henry as King of Italy (27 Jan., 1186) led to an open rupture. The political weakness of the papacy was offset to some extent by the fact that Philipp von Heinsberg, Archbishop of Cologne and a powerful prince, became the champion of the pope. By skilful management and with the aid of a majority of the German bishops Frederick evaded the threatening peril.

The death of Urban III and the election of Gregory VIII brought about a change in the dealings of the Curia with the empire, owing chiefly to the gloomy reports from the Holy Land.

At the Diet of Mains in 1188, Frederick took the cross, and on 11 May, 1189, started for Palestine. On 10 June, 1190, he met with a sudden death while crossing the River Salphe in Asia Minor.

Frederick II, German King and Roman Emperor, son of Henry VI and Constance of Sicily; b. 26 Dec., 1194; d. at Florentina, in Apulia, 13 Dec., 1250. He adopted his father's policy of making Italy the centre of his power, and was interested in Germany only because he was guaranteed to him his title to Upper and Central Italy. On the other hand, he could not arrest the dissolution of the empire hastened by the failure of his predecessor Otto IV. The possessions of the empire and those of his own Hohenstaufen family, by means of which Frederick I had sought to build up his power, were plundered. Frederick's sole desire was for peace in Germany, even if to secure this he had to make the greatest sacrifices; and for this reason, he granted to the ecclesiastical and temporal lords a series of privileges, which subsequently developed into the independent sovereignty of these princes. This emperor's policy was entirely dominated by the idea that without Sicily the possession of Italy would always be insecure, and that a king of Italy could not maintain himself without being at the same time emperor. This policy was naturally antagonistic to the papacy. The popes, isolated as they were in Central Italy, felt themselves compelled to prevent the union of Southern Italy with the empire. Frederick recognized this fact, and for several years strove to maintain peace by extreme concessions. Innocent III had chosen Frederick to be his instrument for the destruction of the Guelph, Otto IV. In return for Innocent's support, Frederick had been obliged to make promises to the pope at Eger (12 July, 1215), which would put an end to the undue influence of the civil power over the German bishops. The emancipation of the Church from the royal power dates from this time. The cause of Frederick's concessions to the Church lay not in his religious convictions but in his political aims.

Frederick had also been obliged to acknowledge the pope as his lord in Sicily, thus abandoning his father's cherished hopes of uniting Sicily with the imperial crown of Germany, though the attempts of the pope to entirely nullify this "personal union" were far from successful. The affairs continued to hang in the balance, and the papacy succeeded in turning the popular policy towards the emperor, for the popes in their efforts to sustain their traditional supremacy could not allow the emperor a controlling influence in Italy. The conflict between the two powers strangely influenced the Crusade. Frederick had been persuaded to take part in a new crusade, for which inadequate preparations had been made by the pope, and the Council of Lateran (1215) fixed 1 June, 1216, as the time for beginning the crusade.

The condition of Germany, however, did not permit the presence of the emperor. At Frankfort in April, 1220, the German diet disavowed Frederick's measures concerning the Roman expedition and the crusade. After Frederick's young son Henry had been chosen king, and Engelbert, the powerful Archbishop of Cologne, named vice-regent, Frederick set out for Italy. He was crowned emperor at Rome (22 Nov., 1220), and renewed his vow to take the cross, promising to begin the campaign in the following year. By a severe edict against heretics, he placed the secular power at the service of the Church, and thus appeared to have arrived at a complete understanding with the pope. Even when he failed to keep his promise to start the crusade in the following year, the friendly relations of pope and emperor remained unaltered. For this the peace-loving pope deserved the chief credit, though Frederick also strove to avoid a breach by his loyal policy towards the Holy See. Both pope and emperor, however, saw that this peace was maintained only by skillful diplomacy, and that it was constantly imperiled by their conflicting interests.

Frederick at this time was chiefly solicitous about Sicily, towards which he was drawn by his Norman parentage on the mother's side, while the character of his own German people did not attract his sympathies. He had grown up in Sicily where Norman, Greek and Mohammedan civilization had intermingled, at once strengthening and repelling one another. The king, endowed with great natural ability, had acquired a wonderful fund of learning which made him appear a prodigy to his contemporaries, but, although he was intimately acquainted with the greatest productions of eastern and western genius, his soaring spirit never lost itself in romantic dreams. He eagerly studied both the more and the less important interests of the political and economical life of Southern Italy. The founding of the University of Naples sufficiently attests his interest in education. He was an intelligent admirer of the beauties of nature, his love for which was intensified by his natural powers of observation. The unlimited resources of the physical world and its constantly multiplying problems increased the inclination of this sceptical spirit towards a thorough empiricism. In none of his contemporaries does intellectual subjectivism show itself so strongly and at the same time so one-sidedly. This desire to penetrate into the secrets of the universe, as well as his scandalous sensual indulgence, brought on Frederick the reputation of an atheist. In spite, however, of his sceptical tendencies, he was not an atheist. An epigrammatic utterance about "the three impostors, Moses, Christ and Mohammed" has been unjustly ascribed to him in later times, and he remained true to the Church. Perhaps his rationalistic mind took pleasure in the strictly logical character of Catholic dogma. He was not, however, a champion of rationalism, nor had he any sympathy with the mystico-heretical movements of the time; in fact he joined in suppressing them. It was not the Church of the Middle Ages that he antagonised, but its representatives. It is in his conflict with the pope that his colossal character becomes manifest. At the same time, it becomes apparent how he combined force and ability with cunning and the spirit of revenge. His most prominent characteristic was his self-conceit. In Germany this megalomania was kept in check, but not so in Sicily. Here he could build up
a modern state, the foundations of which it is true had already been laid by the great Norman kings.

The organization of his Sicilian hereditary states was completed by the "Constitutiones imperiales", published at Amalfi, 1231. In these laws, Frederick appears as sole possessor of every right and privilege, an absolute monarch, or rather an enlightened despot standing at the head of a well-ordered civil hierarchy. His subjects in this system had duties only, but they were well defined. After practically completing the reorganization of Sicily (1235), the emperor attempted, like his powerful grandfather, to re-establish the imperial power in Upper Italy, but with insufficient resources. The result was a new hostile league of the Italian cities. Through the mediation of the pope, however, peace was maintained. During this time Archbishop Engelbert of Cologne, supported by several princes of the empire who had been efficiently assisted by the royal power in their struggle with the cities, preserved the peace in Germany. After the archbishop's death, however, a new order set in—a time of savage feuds and widespread disorder followed by the first open quarrel between the papacy and the emperor. Frederick had completed extensive preparations for a crusade in 1227. Four years previously, he had espoused Isabella (or Iolanthe), heiress of Jerusalem, and now styled himself "Romorum imperator semper Augustus; Jerusalem et Sicilia rex". It was his serious intention to carry out his promise to begin his crusade in August, 1227 (under pain of excommunication), but a malignant fever destroyed a great part of his army and prostrated the king himself. Nevertheless Gregory IX declared Frederick excommunicated (29 Sept., 1227), showing by this step that he considered the time had come to break the illusive peace and to clear up the situation.

Although the radical antagonism between empire and papacy did not appear on the surface, it was at the root of the ensuing conflict between Church and State. At the beginning of this struggle the excommunicated emperor started his crusade against the express wish of the pope, wishing no doubt to justify his attitude by success. On 17 March, 1229, he crowned himself King of Jerusalem. On 10 June, 1229, he landed at Brindisi on his return. During the emperor's absence the curia had taken vigorous measures against him. Frederick, on his return forced the pope to recognize the emperor's success in the East and to release him from excommunication. The treaty of San Germano (20 July, 1230), in spite of many concessions made by the Emperor, was in reality an evidence of papal defeat. The pope had been unable to break the dangerous adversary. Frederick forthwith resumed his North Italian policy. Again his attempts were frustrated, on this occasion by the threatening attitude of his son Henry, who now appeared as independent ruler of Germany, thereby becoming his father's enemy and unfurling the banner of rebellion (1234). After a long absence, Frederick returned to Germany, and after he took prisoner his rebel son (1235). Henry died in 1242.

About this time Frederick married Elizabeth of England (at Worms), and in 1235 held a brilliant diet at Mainz, where he promulgated the famous Laws of the Empire, a landmark in the development of the empire and its constitution. New measures for the maintenance of peace were enacted, the right of private feuds was greatly restricted, and an imperial court with its own seal was constituted, thereby establishing a basis for the future national law. As soon as the emperor had established order in Germany, he again marched against the Lombards, which conflict he brought on another with the pope. The latter had several times mediated between the Lombards and the emperor, and now reasserted his right to arbitrate between the contending parties. In the numerous manifestos of the pope and the emperor the antagonism of Church and State became daily more evident. The pope claimed for himself the "imperium animarum" and the "principatus rerum et corporum in universo mundo". The emperor on the other hand wished to restore the "imperium mundi"; Rome was again to be the capital of the world and Frederick was to become the real emperor of the Romans. He published an energetic manifesto protesting against the worldwide empire of the pope. The emperor's successes, especially his victory over the Lombards at the battle of Cortenuova (1237), only embittered the opposition between Church and State. The pope, who had allied himself with Venice, again excommunicated the "self-confessed heretic", the "blasphemous beast of the Apocalypse" (20 March, 1239). Frederick now attempted to conquer the rest of Italy, i.e. the papal states. His son Enrico captured in a sea-fight all the prelates who by the command of Gregory were coming from Genoa to Rome to assist at a general council. Gregory's position was now desperate, and after his death (22 Aug., 1241), the Holy See remained vacant for almost two years save for the short reign of Celestine IV.

During this interval the bitterness existing between the rival parties seemed to moderate somewhat, and about this time the emperor was threatened by a new and dangerous movement in Germany. The German episcopate could ill bear the prospect of being henceforth at the mercy of the reckless tyrant of Italy. Frederick sought to weaken the hostile bishops by favouring the secular princes and granting privileges to the cities. The energetic Innocent IV ascended the papal throne on 25 June, 1243. To secure peace with the newly elected pontiff, the emperor was inclined to make concessions. The main issue at stake however was not settled, i.e., the jurisdiction of the emperor in North Italy. In order to nullify Frederick's military superiority in the future phases of the struggle, Innocent left Rome secretly and went by way of Genoa to Lyons. Here he summoned a general council (21 June, 1245) by which Frederick was again excommunicated. Immediately there appeared several pretenders in Germany, i.e., Henry Raspe of Thuringia and...
William of Holland. It was only with the greatest difficulty that Frederick's son Conrad could hold his own in Germany, since the greater part of the clergy supported the pope. Most of the lay lords, however, remained faithful to the emperor and exhibited an attitude of hostility to the clergy. A contemporary writer describes the situation in 1242: "Injustice reigned supreme. The people were without leaders and Rome was troubled. Clerical dignity was lost sight of and the laity were split into various factions. Some were loyal to the Church and took the cross, others adhered to Frederick and became the enemies of the religion."

For some time fortune alternately smiled and frowned on Frederick in Italy, but, after completing all his preparations for a decisive battle, he died at Fiorentim in Apulia, and was buried at Palermo. In German legend he continued to live as the emperor destined to return and reform both Church and State. In more recent times, however, he has had to yield his place in popular legend to Frederick Barbarossa, a figure more in harmony with German sentiment.

Freddoli, BERENGER, Cardinal-Bishop of Frascati, b. at Vérone, France, c. 1250; d. at Avignon, 11 June, 1323. He was canon and precentor of Béziers, secular Abbot of Saint-Aphrodise in the same city, canon and archdeacon of Corbières, and canon of Aix. He later held the chair of canon law at Bologna, and was appointed chaplain to Celestine V, who in 1294 consecrated him Bishop of Béziers. Freddoli was one of those entrusted by Boniface VIII with the compilation of the text of the Decretals, and afterwards known as the "Liber Sextus". He took a prominent part in the negotiations then in progress between the pope and Philip the Fair, and attended the council held in Bologna in 1305 Clement V. In 1306 Clement V appointed him cardinal, with the title of St. Nereus and Achilleus, appointed him major penitentiary, and in 1309 raised him to the Cardinal-Bishopric of Frascati. The same pontiff employed him in investigating the charges made against the Knights Templars, and also in the enquiry into the peculiar tenets entertained at that time by a section of the Franciscan Order. On the death of Clement V, Freddoli was proposed by the French cardinals for the vacant chair, but without success. He continued in favour with the new pope, John XXII, by whose order he deposed the Abbots of Gérard and Hugo, Bishop of Cahors, for conspiring against the pope's life. The works of Freddoli are chiefly concerned with canon law, and include "Oculus", a commentary on the "Summa" of the Cardinal of Ostia (Basle, 1573), "Inventarium juris canonici", and "Inventarium speculum judiciale", abridged from a work of Durand, Bishop of Mendes. The nameake and nephew of the preceding was Bishop of Béziers in 1305, and Cardinal-Bishop of Porto in 1317. He died in 1323.

Freed Church of Scotland (known since 1900 as the United Freed Church), an ecclesiastical organization in Scotland which, in 1825 (1798) organized about 500,000 of the 1,200,000 inhabitants of that country professing adherence to Presbyterian principles. The existence of the Free Church as a separate ecclesiastical body dates from 1843, when a large number of members, both lay and clerical, of the Established Church of Scotland, severed their connexion with that body as a protest against the encroachment of the civil power on the independence of the Church, especially in the matter of taxation in the Free Church. According to the Free-Church view, the Church of Scotland, from the date of its inception in 1560, upon the overthrow of the old religion, had possessed the inherent right of exercising her spiritual jurisdiction through her elected assembly, absolutely free of any interference by the civil power. Such assertions had been asserted by her first leaders, Knox and Melville, and especially laid down and claimed in both her first and second books of discipline, issued in 1560 and 1581. The restoration of "prelacy" (the episcopal form of church government) in 1606 by James I, the revival of the self-governing powers of the Assembly in 1649, its subsequent suspension under Cromwell in 1653 and again after the Restoration, the Revolution settlement in 1690, and the Act of Queen Anne in 1712 re-establishing the system of private patronage in the Presbyterian Church, were the principal crises, now favourable, now the reverse, to the cherished principles of episcopacy. The Free Church was the one church into which the Church passed during the first century and a half of its existence. Throughout the eighteenth century a party within the Church continued to protest against civil interference with her rights, especially as regarded patronage; but at the same time there grew up the ecclesiastical party known as Moderates, who in this and other questions displayed an indifference towards state encroachments which more than neutralized the sentiments of the more fervent section. At the beginning of the nineteenth century, however, the latter was strengthened by the growing reputation of so-called "Evangelicalism", which was spreading over Scotland as well as England. The views of the two parties, the Evangelical and the Moderate, became more and more opposed, the final result being the "Ten Years' Conflict" between them, which ended in the triumph of the former, and in the passing by the General Assembly, in 1834, of the famous "Veto Act". This act asserted (or rather reasserted, for the principle had often been declared in previous Assemblies) that it was a fundamental law of the Church that no pastor should be intruded upon a congregation contrary to the popular will, and that any presbyter so elected should be rejected by the presbytery of the heads of families. This direct blow at the rights of private patrons was soon challenged in the civil courts, and was ultimately decided (in 1838), in the famous Auchterarder case, against the Church. The decision immediately elicited from the Assembly a still clearer and more outspoken declaration of the independence of the Church; and when it was finally confirmed by the House of Lords, in 1839, the Assembly resolved to transmit to the sovereign, through the Lord High Commissioner who presided over its proceedings, a "claim, declaration, and protest" complaining of the encroachment of the civil power, and praying for the abolition of patronage. An unfavourable answer was received, and in response to a petition submitted to the House of Commons, that body refused any redress of the grievances complained of. Accordingly, at the next meeting of the General Assembly, 396 members, afterwards increased to 474, withdrew in a body, and continued the faithful work in the new Free Church, under Dr. Thomas Chalmers as moderator. The ministers and professors adhering to the newly constituted body publicly renounced all claim to the benefits which they had held in the Established Church, thus surrendering an annual income of several thousands of £200,000.

A sustentation fund was at once inaugurated for the new organization, and nearly £400,000 was subscribed
for the erection of churches in the first year after the "Disruption", as it came to be called. Colleges for the training of the clergy were subsequently built at large cost in Edinburgh and Aberdeen; manses (residences for the ministers) were erected at a cost of a quarter of a million; and an annual or larger amount was expended on the building of congregational schools. After the passing of the Education Act of 1872 most of these schools were voluntarily transferred by the Free Church to the newly established school-boards.

The Church never professed to adopt any new article of faith, to inaugurate any new ritual, or originate any new principle of doctrine or discipline. She claimed to represent the Presbyterian Church of the country enjoying its full spiritual independence, and freed from the undue encroachment of the State; but it did not abandon the principle of establishment, or give up the view that Church and State ought to be in intimate alliance. This raised the difficulty in the way of its union with the United Presbyterians, the next most numerous and important body of seceders from the Establishment, and for many years rendered all negotiations for such union abortive. In 1876, however, the disaffected body, known as the Cameronsians, or Reformed Presbyterians, joined the Free Church, and, possibly under the stimulus of this achievement, negotiations were renewed for union with the U. P.'s, as they were familiarly called. These proved finally successful, and the union between the United and Free Church became an accomplished fact on 31 October, 1906. A small minority of Free Churchmen resisted the fusion of the two bodies, and these (the "Wes Free", as they were nicknamed) were successful in the Scottish Courts in claiming, as the original Free Church, nearly all the buildings erected by the body during the previous fifty-seven years. This anomaly, however, was rectified by a subsequent Act of Parliament (following on a Royal Commission) which permitted the "Wes Free" to retain only such churches and other edifices as were proportionate to the small number of their adherents.

The well-wishers of the new United Free Church are naturally looking forward to an enlarged field of influence and a wider scope of activity, both at home and in the mission-field. What must, however, fill with anxiety every friend of Scottish Christianity who studies the teaching of this body, both in its training colleges and in its pulpits, is the spirit of rationalism by which it is becoming pervaded. The generation has passed away since its most brilliant member, William Robertson Smith, was summarily removed from his professorial chair at Aberdeen on account of his latitudinarian views as expressed in his published articles. The "higher criticism" in the Free Church of to-day, largely based as it is on the rationalizing influence of German Protestant theology, goes far beyond the "heresies and errors" for which Smith was indicted thirty years ago. It is hardly too much to say that the modern Free Churchman is really not a Christian at all, in the Catholic sense of that word. The United Free Church, by the re-arrangements of its two constituent bodies (1906) twelve synods and twenty-four presbyteries. Its supreme court is the General Assembly, which meets every May in Edinburgh. According to the latest statistics, the total membership of the body is about 504,000, divided into 1623 congregations, 244,000 scarfs. The total by Sunday Schools, which number 2400. Some 300 agents from Scotland, and nearly 4000 native pastors and teachers, are employed in foreign mission work, and the whole income of the Church, at the close of the last financial year, was estimated at £1,029,000.

Freeman, William, Venerable, priest and martyr, b. at Manthorpe near York, c. 1558; d. at Warwick, 13 Avril, 1595; and an annual or larger amount was expended on the building of congregational schools. After the passing of the Education Act of 1872 most of these schools were voluntarily transferred by the Free Church to the newly established school-boards.

Although the words "Free-thinker" and "Free-thought" first appeared in connexion with the English Deists (Collins, "Discourse of Free-thinking occasioned by the Rise and Growth of a Sect called Freethinkers" (1713)), the deistical tendency this name, "the phenomenon of free-thought has existed, in specific form, long before it could express itself in propagandist writings, or find any generic name save those of Atheism or Infidelity" (Robertson). Taken in the broad sense in which Robertson here uses it, the term would seem to include the reactionary movement against any traditional form of doctrine to which men were expected to assent. In this sense it is possible to speak of free-thinkers of Greece or Rome, or, indeed, of any considerable body that can impress its teaching upon the masses of the people, whether it be with a certain extent at any rate, in classical times those who either publicly scoffed at the authoritative myths of their country's religion or philosophically explained their meaning away. So—but this in a truer sense—in the Middle Ages there were to be found rationalists, or free-thinkers, among the philosophers of the school. The Fathers of the Church had met paganism with its own weapons and argued against its falsehoods with
the help of the natural reason. The early heretics were free-thinkers in their rejection of the regulating authority of the Church upon points connected with their heresies, which they elaborated frequently upon rationalistic lines; and the pantheists and others of the schools criticised and synodified revelation away in true free-thought style. Both were in consequence condemned; but the spirit of enquiry, criticism and the rebellion against the sufficiency of human reason are as typical of the free-thought of medieval times as of that of the twentieth century.

From the Deists onwards, free-thought has undoubtedly gained ground among the masses. Originally the intellectual excess of the learned and the student, and rarely leaving amongst the masses in a form in which it could be expected to be at all popular, it began with Annet and Chubb (see Deism) to become vulgarised and to penetrate the lower strata of society. Its open professors have apparently always been less numerous than its adherents. Some stop short in a negative position, claiming no more than an autonomy for the science or philosophy they represent. Others carry on a bitter and unscrupulous warfare against religion. It is apparent in the various branches of science and criticism, as well as in philosophy; and though it generally pretends to a scientific plan it makes use of a priori methods more than a posteriori ones. Dangerous propositions, which naturally end in pure religious scepticism, can be traced to the Kantian distinction between the noumenal and the phenomenal. But its main positive positions are the denial of prophecy, miracle and inspiration, its rejection of all external revelation (including obviously ecclesiastical authority), and its assertion of the right of free speculation in all rational matters. On this latter frequently follows the negation of, or suspension of judgment with regard to, the existence of God (atheism and agnosticism), the denial of the immortality of the soul or of its truth being susceptible of proof, and the rejection of the freedom of the will. Among the principal free-thinkers may be mentioned Voltaire, Thomas Paine (The Rights of Man), Renan, Ingersoll, Strauss (Leben Jesu), Haeckel, Clough, and Holyoke.

Francis Aveling.

Free Will.—The question of free will, moral liberty, or the liberum arbitrium of the Schoolmen, ranks amongst the three or four most important philosophical problems of all time. It ramifies into ethics, theology, metaphysics, and psychology. The view adopted in this analysis is that of the free will, with regard to the most momentous issues that present themselves to the human mind. On the one hand, does man possess genuine moral freedom, power of real choice, true ability to determine the course of his thoughts and volitions, to decide which motives shall prevail within his mind, to modify and mould his own character? Or, on the other hand, are man's thoughts and volitions, his character and external actions, all merely the inevitable outcome of his circumstances? Are they all inexorably predetermined in every detail along rigid lines by events of the past, over which he himself has no control? This is the real import of the free-will problem.

Relation of the Question to Different Branches of Philosophy. (1) Ethically, the issue vitally affects the meaning of most of our fundamental moral terms and ideas. Responsibility, merit, duty, remorse, justice, and the like, will have a totally different significance for one who believes that all man's acts are in the last resort completely determined by agencies beyond his power, from that which these terms bear for the man who believes that each human being possessed of reason can by his own free will determine his deliberate volitions and so exercise a real command over his thoughts, his deeds, and the formation of his character. (2) The question studies the questions of the existence, nature, and attributes of the relations with man. The reconciliation of God's foreknowledge and universal providential government of the world with the contingency of human action, as well as the harmonising of the efficacy of supernatural grace with the free natural power of the creature, has been among the ablest labors of the philosophical student from the days of St. Augustine down to the present time. (3) Causality, change, movement, the beginning of existence, are notions which lie at the very heart of metaphysics. The conception of the human will as a free cause involves them all. (4) Again, the analysis of voluntary action and the investigation of its peculiar features are the special functions of psychology. Indeed, the nature of the process of volition and of all forms of appetitive or consensive activity is a topic that has absorbed a constantly increasing space in psychological literature during the last fifty years. (5) Finally, the rapid growth of some branches of modern science, which in their ultimate ends in pure religious scepticism, can be traced to the Kantian distinction between the noumenal and the phenomenal. But its main positive positions are the denial of prophecy, miracle and inspiration, its rejection of all external revelation (including obviously ecclesiastical authority), and its assertion of the right of free speculation in all rational matters. On this latter frequently follows the negation of, or suspension of judgment with regard to, the existence of God (atheism and agnosticism), the denial of the immortality of the soul or of its truth being susceptible of proof, and the rejection of the freedom of the will. Among the principal free-thinkers may be mentioned Voltaire, Thomas Paine (The Rights of Man), Renan, Ingersoll, Strauss (Leben Jesu), Haeckel, Clough, and Holyoke.

Francis Aveling.

Free Will.—The question of free will does not seem to have presented itself very clearly to the early Greek philosophers. Some historians have held that the Pythagoreans must have allotted a certain degree of moral freedom to man, from their recognition of man's responsibility for sin with consequent retribution experienced in the course of the transmigration of souls. The Eleatics adhered to a pantheistic monism, in which they emphasized the immutability of one eternal unchangeable principle so as to leave no room for freedom. Democritus also taught that all events occur by necessity, and the Greek atomists generally, like their modern scientific successors, excluded freedom from the universe, which excluded all contingency. With Socrates, the moral aspect of all philosophical problems became prominent, yet his identification of all virtue with knowledge and his intense personal conviction that it is impossible deliberately to do what one clearly knows to be wrong, kept him from being identical with the true, imposes itself irresolutely on the will as on the intellect, when distinctly apprehended. Every man necessarily willed his greatest good, and his actions are merely means to this end. He who commits evil does so out of ignorance as to the right means to the true good. Plato held in the main the same view. Virtue is the determination of the will by the knowledge of the good; it is true freedom. The wicked man is ignorant and a slave. Sometimes, however, Plato seems to suppose that the soul possessed genuine free choice in a previous life, which there decided its future destiny. Aristotle disagrees with both Plato and Socrates, at least in part. He appeals to experience. Men can act against the knowledge of the true good; vice is voluntary. Man is responsible for his actions as the parent of them. Moreover his particular actions, as means to his end, are contingent, a matter of deliberation and subject to choice. The future is not all predictable. Scientific determinism is not possible. Aristotle was not troubled by the difficulty of predestination on the part of God. Still his physical theory of the universe, the action he attributes to the prime mover, and the irresistible influence exerted by the Prime Mover make the conception of genuine moral freedom in his system very obscure and difficult. The
Stoics adopted a form of materialist Pantheism. God and the world are one. All the world's movements are caused by the necessity of design, fatalistic government, prophecy and foreknowledge—all these factors exclude chance and the possibility of free will. Epicurus, oddly in contrast here with his modern hedonistic followers, advocates free will and modifies the strict determinism of the atomists, whose physics he accepts, by ascribing to the atoms' motion a result of random deviation from their movements. His openly proselyted object, however, in this point as in the rest of his philosophy, is to release men from the fears caused by belief in irresistible fate.

_Free Will and the Christian Religion._—The problem of free will has assumed quite a new character with the advent of the Christian religion. The doctrine that God has created man, has commanded him to obey the moral law, and has promised to reward or punish him for observance or violation of this law, made the reality of moral liberty an issue of transcendent importance. Unless man is really free, he cannot be justly held responsible for his actions, any more than for the date of his birth or the colour of his eyes. All alike are inexorably predetermined for him. Again, the difficulty of the question was augmented still further by the Christian dogma of the fall of man and his redemption by grace. St. Paul, especially in his Epistle to the Romans, is the great source of the Catholic theology of grace.

_Catholic Doctrine._—Among the early Fathers of the Church, St. Augustine stands pre-eminent in his handling of this subject. He clearly teaches the freedom of the will against the Manicheans, but insists against the Semipelagians on the necessity of grace, as a foundation of merit. He also emphasizes very strongly the absolute rule of God over men's wills by His omnipotence and omniscience—through the infinite store, as it were, of motives which He has had at His disposal from all eternity, and by the foreknowledge of those to which the will of each human being would freely consent. St. Augustine's teaching formed the basis of much of the later theology of the Church on these questions, though other writers have sought to soften the more rigorous portions of his doctrine. This they did especially in opposition to heretical authors, who exaggerated these features in the doctrine of predestination and attempted to deduce from his principles a form of rigid determinism little differing from fatalism. The teaching of St. Augustine is developed by St. Thomas Aquinas both in theology and philosophy. Will is rational appetite. Man necessarily desires beatitude, but he can freely choose between different forms of it. Free will is simply this elective power. Infinite Good is not visible to the intellect in this life. There are always some drawbacks and deficiencies in every good presented to us. None of them exhausts our intellectual capacity of conceiving the good. Consequently, in deliberate volition, not one of these objects entirely satisfies or irresistible sets the will. In this capability of the intellect for conceiving the universal lies the root of our freedom. But God possesses an infallible knowledge of man's future actions. How is this prevision possible, if man's future acts are not necessary? God does not exist in time. The future and the past are alike ever present to the eternal mind. As a man gazing down from a lofty mountain takes in at one momentary glance all the objects which can be apprehended only through a lengthy series of successive experiences by travellers along the winding road beneath, in somewhat similar fashion the intuitive vision of God apprehends simultaneous perception of both past and future. Further, God's omnipotent providence exercises a complete and perfect control over all events that happen, or will happen, in the universe. How is this secured without infringement of man's freedom? Here is the problem which two distinguished schools in the Church—both claiming to represent the teaching, or at any rate the logical development, of St. Thomas—attempt to solve in different ways. The heresies of Luther and Calvin brought the issue to a finer point than it had reached in the time of Aquinas, consequently he had not formally dealt with it in its ultimate shape, and each of the two schools can cite texts from the works of the Angelic Doctor in which he appears to incline towards their particular view.

_Thomist and Molinist Theories._—The Dominican or Thomist solution, as it is called, teaches in brief that God preemoves each man in all his acts to the line of conduct which he subsequently adopts. It holds that God preemoves the lower animals in harmony with their natures to adopt particular courses by necessity. Further, this preemotive decree is inevitable, though adapted to suit the free nature of man, provides a medium in which God foresees with certainty the future free choice of the human being. The preemotive decree is thus prior in order of thought to the Divine cognition of man's future actions. The Thomists, philosophers of the Jesuit School, frequently styled Molinists, though they do not accept the whole of Molina's teaching and generally prefer Suarez's exposition of the doctrine, deem the above solution unsatisfactory. It would, they readily admit, provide sufficiently for the infallibility of the Divine foreknowledge and also for God's providential control of the world's history; but, in their view, it fails to give at the same time an adequately intelligible account of the freedom of the human will. According to them, the relation of the Divine action to man's will should be conceived rather as of a concurrent than of a preemotive character; and they maintain that God's knowledge of what a free being would choose, if the necessary conditions were supplied, must be deemed logically prior to any decree of concurrence or preemption in respect to that act of choice. Briefly, they make a threefold distinction in the Divine knowledge of the objects of the human will: the knowledge of the objects known—the Divine knowledge being in itself of course absolutely simple. Objects or events viewed merely as possible, God is said to apprehend by simple intelligence (simplex intelligens). Events which will happen He knows by vision (scientia visio). Intermediate between these are contingently future events—things which would occur if certain conditions were fulfilled. God's knowledge of this class of contingencies they term scientia media. For instance Christ affirmed that, if certain miracles had been wrought in Tyre and Sidon, the inhabitants would have been converted. The condition was not realised, and the state of things as it has been has been contained in the sciences. About all such conditional contingencies propositions may be framed which are either true or false—and Infinite Intelligence must know all truth. The conditions in many cases will not be realised, so God must know them apart from any decrees determining their realisation. He knows them therefore, this school holds, as asserta, in several respects as conditionally future events. This knowledge is the scientia media, "middle knowledge", intermediate between vision of the actual future and simple understanding of the merely possible. Acting now in the light of this scientia media with respect to human volitions, God freely decides according to His own wisdom to accept or refuse the requisite conditions, including His co-operation in the action, or abstain from so doing, and thus render possible or prevent the realization of the event. In other words, the infinite intelligence of God sees clearly what
would happen in any conceivable circumstances. He thus knows what the free will of any creature would choose, if supplied with the power of volition or choice and placed in any given circumstances. He now creates a creature to the needed dimensions, His *conatus*, or to abstain from so doing. He thus holds complete dominion and control over our future free actions, as well as over those of a necessary character. The Molinist then claims to safeguard better man's freedom by substituting for the decree of an inflexible predestination a consistent system dependent on God's prior knowledge of what the free being would choose, if given the power to exert the choice. He argues that He exempts God more clearly from all responsibility for man's sins. The claim seems to the present writer well founded; at the same time it is only fair to record on the other side that the Thomist urges with considerable force that God's presence is not so understand-able in this, as in his theory. He maintains, too, that God's exercise of His absolute dominion over all man's acts and man's entire dependence on God's goodwill are more impressively and more worthily ex-hibited in the predestination hypothesis. The reader will find an extensive discussion of the treatment of this question in any of the Scholastic textbooks on the subject.

**Free Will and the Protestant Reformers.**—A leading feature in the teaching of the Reformers of the sixteenth century, especially in the case of Luther and Calvin, was the denial of free will. Picking out from the vast number of Protestant Leibnisian texts which emphasized the importance and efficacy of grace, the all-ruling providence of God, His decrees of election or predestination, and the feebleness of man, they drew the conclusion that the human will, instead of being master of its own acts, is rigidly pre-determined in all its choices throughout life. As a consequence, man is predestined before his birth to eternal punishment or reward in such fashion that he never can have had any real free-power over his own fate. In his controversy with Erasmus, who defended free will, Luther frankly stated that free will is a fiction, a name which covers no reality, for it is not in man's power to think well or ill, since all events occur by necessity. In reply to Erasmus's "De Libero Arbitrio", he published his own work, "De Servo Arbitrio", glorifying in emphasizing man's helplessness and slavery. The predestination of all future human acts by God is so interpreted as to shut out any possibility of man's free acts. This, in short, makes the determinism of the will an absolute necessity. Thus the human will wheresoever God preordains. With Cal- vin, God's preordination is, if possible, even more fatal to free will. Man can perform no sort of good act unless necessitated to it by God's grace, which it is impossible for him to resist. It is absurd to speak of the human will "co-operating" with God's grace, for this would imply that man could resist the grace of God. The will of God is the very necessity of things. It is objected that in this case God sometimes imposes impossible commands. Both Calvin and Luther reply that the commands of God show us not what we can do, but what it is our duty to do. In these views, the Council of Trent declared that the free will of man, moved and excited by God, can by its consent co-operate with God, Who excites and invites its action; and that it can thereby dispose and prepare itself to obtain the grace of justification. The will can resist grace if it chooses. It is not like a lifeless thing, which is the only possibility of weakness. Weakened as it is, it is overcome by the grace bestowed by Adam's fall, free will is yet not destroyed in the race (Sess. VI, cap. i and v).

**Free Will in Modern Philosophy.**—Although from Descartes onward, philosophy became more and more separated from theology, still the theological signifi-cance of the question concerning the free will was to be of the highest moment. Descartes himself at times clearly maintains the freedom of the will ( Meditation, III and IV). At times, however, he attenuates this view and leans towards a species of providential determinism, which is, indeed, the logical con-sequence of the doctrines of occasionalism and the inefficacy of secondary causes latent in his system. Malebranche developed this fatalistic teaching. Soul and body cannot really act on each other. The changes in the one are directly caused by God on the occasion of the corresponding change in the other. So-called secondary causes are not really efficacious. Only the First Cause truly acts. If this view is right, then a determinism which pos sesses no genuine causality, cannot be justly said to be free in its volitions. Still, as a Catholic theologian, Malebranche could not accept this fatalistic determinism. Accordingly he defended freedom as essential to religion and morality. Human liberty being denied, God should be deemed cruel and unjust, whilst duty and responsibility for man cease to exist. We must therefore be free. Spinoza was more logical. Starting from certain principles of Descartes, he deduced in mathematical fashion an iron-bound pantheistic fatalism which left no room for contingency in the universe and still less for free will. In Leibniz, the prominence of the all-ruling providence is no less manifest than in the monistic geometrical necessitarianism of Spinoza.

In England, the mechanical materialism of Hobbes was incompatible with moral liberty, and he accepted with cynical frankness all the logical consequences of his theory. Our actions either follow the first appetite that arises in the mind, or there is a series of alternate appetites and fears, which we call deliberation. The last appetite or fear, that which triumphs, we call will. The only intelligible freedom is the power to do what one desires. Here Hobbes is practically at one with Locke. God is the author of all causes and effects, but is not the author of sin, because an action ceases to be sin if God wills it to happen. Still God is the cause of sin. Praise and blame, rewards and punishments cannot be called useless, because they strengthen motives, which are the causes of action. This, however, does not meet the objection to the justice of such blame or praise, if the person has not the power to abstain from the act. In the explanation of such apparent necessity Hume reinforced the determinist attack on free will by his suggested psychological analysis of the notion of the necessary. The controversy, according to him, has been due to misconception of the meaning of words and the error that the alternative to free will is necessity. This necessity, he says, is erroneously ascribed to some kind of internal nexus supposed to bind all causes to their effects, whereas there is really nothing more in causality than constant succession. The imagined necessity is merely a product of custom or association of ideas. Not feeling in our acts of will any such necessity as this, nor even conscious of material agents, we mistakenly imagine that our volitions have no causes and so are free, whereas they are as strictly determined by the feelings or motives which have gone before, as any material ef-fects are determined by their material antecedents. In all our reasonings respecting other persons, we infer the future conduct of a person under particular motives with the same sort of certainty as in the case of physical causation.

The same line of argument was adopted by the Associationist School down to Bain and J. S. Mill. For the necessity of Hobbes or Spinoza is substituted by the "soft determinism", affirming solely the invariable succession of volition upon motive. J. S. Mill merely developed with greater clearness and fuller detail the
principles of Hume. In particular, he attacked the notion of "constraint" suggested in the words necessity and necessitarianism, whereas only sequence is affirmed. Given a perfect knowledge of character and motives, we could infallibly predict action. The alleged conscious

The true is that for the Sensationalist School, who believe the mind to be merely a series of mental states, free will is an absurdity. On the other side, Reid, and Stewart, and Hamilton, of the Scotch School, and Mansel, Martineau, W. J. Ward, and other Spiritualist thinkers of Great Britain, energetically defended free will against the disciples of Hume. They maintained that a more careful analysis of volition justified the argument from consciousness, that the universal conviction of mankind on such a fact may not be set aside as an illusion, that morality cannot be founded on an act of self-deception, that all languages contain terms involving the notion of free will and all laws assume its existence, and that the attempt to render necessitarianism less objectionable by calling it determinism does not diminish the fatalism involved in it.

The other determinism logically involves determinism is strikingly illustrated in Kant's treatment of the question. His well-known division of all reality into phenomena and noumena is his key to this problem also. The world as it appears to us, the world of phenomena, including our own actions and mental states, can be conceived as independent and subject to the category of causality, and therefore everything in the world of experience happens altogether according to the laws of nature; that is, all our actions are rigidly determined. But, on the other hand, freedom is a necessary postulate of morality: "We cannot, because thou oughtest." The solution of the antinomy is that the determinism concerns only the empirical or phenomenal world. There is no ground for denying liberty to the Ding an sich. We may believe in transcendent freedom, that we are noumenally free. Since, moreover, the belief that I am free and that I am a free cause, is the foundation stone of religion and morality, I must believe in this postulate. Kant thus gets over the antinomy by confining freedom to the world of noumena, which lie outside the form of time and the category of causality, whilst he affirms necessity of the sensible world, bound by the chain of causality. Apart from the general object of the system, as he puts forth the fact that all man's conduct—his whole moral life as it is revealed in actual experience either to others or himself—pertain in this view to the phenomenal world and so is rigidly determined.

Though much acute philosophical and psychological analysis has been brought to bear on the problem during the last century, it cannot be said that any great additional light has been shed over it. In Germany, Schopenhauer made will the noumenal basis of the world and adopted a pessimistic theory of the universe, denying free will to be justified by either ethics or psychology, for the other hand, perhaps the acutest thinker in Germany since Kant, was an energetic defender of moral liberty. Among recent psychologists in America Professors James and Ladd are both advocates of freedom, though laying more stress for positive proof on the ethical than on the psychological evidence.

The evidence. As the main features of the doctrine of free will have been sketched in the history of the problem, a very brief account of the argument for moral freedom will now suffice. Will viewed as a free power is defined by defenders of free will as the capacity of self-determination. By self is here understood not a mental state of mental states (Hume and Mill), but an abiding "rational being which is the subject and cause of these states. We should distinguish between (1) spontaneous acts, those proceeding from an internal principle (e. g. the growth of plants and impulsive movements of animals); (2) voluntary acts in a wide sense, those proceeding from an internal principle with apprehension of the form, but the act is not free, as determined by morally free acts. They may still be the necessary outcome of the nature of the agent as, e.g. the actions of lower animals, of the insane, of young children, and many impulsive acts of mature life. The essential feature in free volition is the element of choice—the act elective, as St. Thomas calls it. There is a concomitant interrogative awareness in the form of the query, "shall I acquiesce or shall I resist? Shall I do it or something else?", and the consequent acceptance or refusal, ratification or rejection, though either may be of varying degrees of completeness. It is this act of consent or approval, which converts a mere impulse or desire into an act of free will, which makes me accountable for it. A train of thought or volition deliberately initiated or acquiesced in, but afterward continued merely spontaneously without reflective ad

Proof.—The evidence usually adduced at the present day is of two kinds, ethical and psychological—though even the ethical argument is itself psychological.

(1) Ethical. Here is the argument of the fact that all man's conduct—his whole moral life as it is revealed in actual experience either to others or himself—pertain in this view to the phenomenal world and so is rigidly determined.

Further, these notions, as universally understood, imply that man is really master of some of his acts, that he is, at least at times, capable of self-determination, that all his volitions are not the inevitable outcome of his circumstances. When I say that I ought to obey, I have peace, in each case, and I cannot bear it. When I say that my duty to obey the law, I imply that I could have done so. The judgment of all men is the same on this point. When we say that a person is justly held responsible for a crime, or that he deserves praise or reward for an heroic act of self-sacrifice, we mean that he was author and cause of that act in such fashion that he had in his power not to perform the act. We exempt the insane or the child, because we believe them devoid of moral freedom and determined inevitably by the motives which happened to act on them. So true is this, that determinists have had to admit that the meaning of these terms with, according to them, to be supposed, as accidental: But the point is that their theory is in direct conflict with universal psychological facts. It thereby stands disproved.
Again, it may be urged that, if logically followed out, the determinist doctrine would annihilate human morality, consequently that such a theory cannot be true. (See Fatalism.)

(2) Psychological Argument.—Consciousness testifies to our moral freedom. We feel ourselves to be free when exercising certain acts. We judge afterwards that we acted freely in those acts. We are led to the natural conclusion, from the fact experienced, that we believe we were not free or responsible. The conviction is not confined to the ignorant; even the determinist psychologist is governed in practical life by this belief. Henry Sidgwick states the fact in the most moderate terms, when he says: "Certainly in the case of actions in which I have a distinct consciousness of choosing between alternatives of conduct, one of which I conceive as right or reasonable, I find it impossible not to think that I can now choose to do what I so conceive, however strong may be my inclination to act unreasonably, and however uniformly I may have yielded to such inclinations in the past." (Methods of Ethics.) The force of the evidence is best realised by carefully studying the various mental activities in which freedom is exercised. Amongst the chief of these are: voluntary attention, deliberation, choice, sustained resistance to temptation. The reader will find elucidated at length the author's attitude towards them at the end of this article; or, better still, he can think them out with concrete examples in his own inner experience.

Objections.—The main objection to this argument is stated in the assertion that we can be conscious only of what we actually do, not of our ability to do something else. The reply is that we can be conscious not only of what we do, but of how we do it; not only of the act but of the mode of the act. Observation reveals to us that we are subjects of different kinds of processes of thought and volition. Sometimes the line of conscious activity follows the direction of spontaneous impulse, sometimes it is determined by free motives and desire; at other times we intervene and exert personal causality. Consciousness testifies that we freely and actively strengthen one set of motives, resist the stronger inclination, and not only drift to one side but actively choose it. In fact, we are sure that we sometimes exert free volition, because at other times we are the subject of conscious activities that are not free, and we know the difference. Again, it is urged that experience shows that men are determined by motives, and that we always act on this assumption. The reply is that experience proves that men are moved by motives, but not that they are always inexorably determined by the strongest motive. It is alleged that we always decide in favour of the strongest motive. This is either untrue, or the barren statement that we always choose what we choose. A free volition is "a causeless volition". The mind itself is the cause. (For objections see Fatalism; Energy, the Law of the Conservation of, and the works referred to at the end of this article.)

Nature and Range of Moral Liberty.—Free will does not mean capability of willing in the absence of all motive, or of arbitrarily choosing anything whatsoever. The rational being is always attracted by what is apprehended as good. Pure evil, misery as such, man could not desire. However, the good presents itself in many forms and under many aspects—the pleasant, the prudent, the right, the noble, the beautiful—and in reflective or deliberate action we can choose among these. The clear vision of God would necessitate a will whatever the object, but in this world we never apprehend Infinite Good. Nor does the doctrine of free will imply that man is constantly exerting this power at every waking moment, any more than the statement that he is a "rational" animal implies that he is always reasoning. Much the larger part of man's ordinary life is administered by the machinery of reflex action, the automatic working of the organism, and acquired habits. In the series of customary acts which fill up our day, such as rising, meals, study, work, etc., probably the large majority are merely "spontaneous" and are proximately determined by their antecedents, according to the combined force of character and motive. There is nothing to arouse special volition, or call for interference with the stream of thought. The process flows smoothly along the channel of least resistance. For such series of acts we are responsible, as was before indicated, not because we exert deliberate volition at each step, but because they are free in cause, because we have either freely initiated them, or approved them from time to time when we adverted to their ethical quality, or because we freely acquired the habits which now accomplish these acts. It is especially when some act of a specially moral complexion is recognised as good or evil that the exertion of our freedom is brought into play. With reflective adherence to the moral quality comes the apprehension that we are called on to decide between right and wrong; then the consciousness that we are choosing freely, which carries with it the subsequent conviction that the act was in the strictest sense our own, and that we are responsible for it.

Consequences.—Our moral freedom, like other mental powers, is strengthened by exercise. The practice of yielding to impulse results in enfeebling self-control. The faculty of inhibiting pressing desires, of concentrating attention on more remote goods, of reinforcing the higher but less urgent motives, undergoes a kind of strophey by disuse. In proportion as a man habitually yields to impulses or some lower motive, his freedom diminishes and he does in a true sense sink into slavery. He continues responsible in causa for his subsequent conduct, though his ability to resist temptation at the time is lessened. On the other hand, the more frequently a man restrains mere impulse, the more firmly is the inclination to the pleasant, and the more self-denial in the face of temptation, and steadily aims at a virtuous life, the more does he increase in self-command and therefore in freedom. The whole doctrine of Christian asceticism thus makes for developing and fostering moral liberty, the noblest attribute of man. William James's sound maxim, "Keep the faculty of effort alive in you by a little gratuitous exercise every day," so that your will may be strong to stand the pressure of violent temptation when it comes, is the verdict of the most modem psychology in favour of the discipline of the Catholic Church.

fourteenth century gave many doges to the republic. Federigo was the son of Agostino Fregosi, governor of Genoa in 1438 for Ludovic More, and of Gentilla de Montefeltre, niece of Guidobaldo, Duke of Urbino. His brother, Ottaviano, was Doge of Genoa. Having spent a good deal of time in France, and had allied himself with such humanists as Bembo and Baldasare Castiglione. Every day he withdrew himself from his occupations in order to devote several hours to the study of the ancients. Nevertheless, circumstances were to make him a man of action.

In 1510, after the troubles in Genoa and the victory of the Adorni, Federigo was exiled and compelled to seek refuge at Rome. Three years later, the Fregosi returned to Genoa, Ottaviano was elected Doge, and Federigo, having become his chief counsellor, was placed at the head of the army, and defended the republic against internal dangers (revolt of the Adorni and a mild incautious tax law followed by Barbary piracy). Cortogoli, a corsair from Tunis,blockaded the coast with a squadron, and within a few days had captured eighteen merchantmen. Being given the command of the Genoese fleet in which Andrea Doria was serving, Federigo surprised Candia, and after a 12 days' siege, and a naval engagement off Djerba, defeated the Barbary corsairs. The Fregosi had recognized Francis I, King of France, as Lord of Genoa. In 1522, Charles V besieged the city. Federigo directed the defence and was wounded. The Spaniards having taken the city by assault, he was compelled to seek safety on a French vessel. Francis I accorded him a warm reception and gave him the Abbey of St. Benignus at Dijon. Here he devoted himself to the study of Greek and Hebrew, but he had quarrels with the monks, who could not endure his severity, and he returned to Italy. In 1529 he resigned the See of Salerno and was named titular Bishop of Gubbio. In 1539 Paul III made him a cardinal-priest, with the title of St. John and St. Paul. He died at Gubbio, in 1541, mourned by the people of his diocese, who had named him, "the father of the poor". He wrote several edifying works, and some of his letters are in the collections of Bembo and Baldassare Castiglione.

Louis Bourgeois.

Freiburg, city, archbishopric, and university in the Archduchy of Baden, Germany.

The Crier—Freiburg im Breisgau, the third largest city in Baden, is beautifully situated at the foot of the Schwarzwald mountains on both banks of the Dreisam. The census of 1 December, 1905, gave the number of its inhabitants as 75,256, of whom 53,133 were Catholics. The city in 1120 by Count Berthold I, a member of the Swabian House of Zähringen, which rules in Baden even to this day. According to the original city charter, which is still in existence, the city was from the beginning a market or commercial centre, and all the privileges then enjoyed by the citizens of Cologne were granted to the merchants and craftsmen of Freiburg, and during the flourishing town even during the lifetime of its founder. In 1146 Bernard of Clairvaux preached the crusades there. It appears that under Berthold IV (1112-1186), Conrad's successor, the erection of a Romanesque cathedral was begun. After the death of Berthold V (a grandson of preceding), Freiburg was in the hands of his brother-in-law, Count Egon I of Urach. The consort of Egon II (1218-38) induced the Dominican Fathers to settle in Freiburg, and founded at Adelhausen the Dominican monastery, renowned in the history of German mysticism. Among the famous Dominicans connected in some degree with Freiburg were Albert the Great and John of Freiburg, while Berthold the Black (died 1312) and Berthold the Black, the supposed inventor of gunpowder, was a member of the local Franciscan convent. The city took advantage of the pecuniary embarrassment of its lords to purchase important rights and liberties. Ludwig of Bayern, whom the city assisted in his war against Frederic the Fair, confirmed (1336) the city's privileges, and all the concessions and privileges of Freiburg and granted it an independent municipal court. A serious quarrel arose between the city and Count Egon IV (1388-68), but in 1388 the count gave up all his rights to Freiburg, and the city placed itself voluntarily under the suzerainty of Austria, and for more than five centuries it shared the fortunes of the House of Hapsburg.

As early as 1247, the municipal council calculated the inhabitants to number 4000, and at the end of the fourteenth century the town contained 1778 buildings, twenty of which were monasteries. In 1383 the town was composed of 15 nobles, 70 guild-masters, and 6 specially elected members of guilds. In 1415, Freiburg, which had given refuge to Pope John XXIII (April 10-16) after his flight from Constance, was made a free imperial city (freie Reichsstadt), but was reconquered by the Austrians in 1425. In 1456, Archduke Albert gave the city rights of the Hanseatic League (see below). The city was afterwards made the seat of government for Hither Austria and attained to a high degree of prosperity, especially during the reign of Maximilian I. Many Renaissance edifices were built, some of which still adorn the city; the famous minster (cathedral) was decorated with fine paintings by Hans Baldung, its choir being consecrated in 1515. The diet of the empire met here in 1498.

The great social and religious disturbances of the sixteenth century exerted a most detrimental influence on the prosperity of the city. In 1524, the rebellious peasants surprised the castle on the Schlossberg, captured the city, and forced the inhabitants to pay tribute. The city council and citizens in general had little sympathy with the Reformation, and, although the new doctrine found some adherents in the beginning, its propagation was effectually hindered by the Austrian Government, the city council, and the university (see Zabits, U.). In 1552 Freiburg became the residence of the cathedral chapter of Basle, driven from that city by the Reformation (see Basle-Lugano). In spite of repeated epidemics, the sixteenth century was considered on the whole a prosperous period for the city. The Thirty Years War brought with it much suffering. Freiburg was besieged five times, captured four times and lost about two-thirds of its population by contagious diseases. Hardly had the city recovered from these disasters, when Louis XIV began his predatory wars on Germany. In 1677, Freiburg was taken by the French and converted into a formidable fortress by Vauban. In the course of this transformation, 14 churches and 4 monasteries were demolished. The French supremacy lasted only a short time, and Freiburg was restored to Austria by the Peace of Ryswick in 1697. On two later occasions it was held by the French for a short time, in 1719-14 during the War of the Spanish Succession and in 1734-35 during the War of the Austrian Succession (1744-48). These two wars destroyed the prosperity of the city so completely that in 1754 the number of its inhabitants sank to 3655, of whom at least one third were in a state of beggary.

Hardly had Freiburg begun to flourish again under Maria Theresa, whose reform measures were executed partly in the Breisgau, when the French Revolution broke out. By the treaty of Campo
Formio (1787), Freiburg and all Breisgau was ceded to the Duke of Modena, but a little later, by the Treaty of Lunéville (1801), it reverted to the house of Zähringen. The city swore allegiance to the new Archduke of Baden on 30 Jan., 1806. The new government immediately abolished most of the monasteries and convents, or converted them into educational institutions. It abolished also the ancient representative system of the city, and the three social orders (clergy, nobles, bourgeois). In 1821, Freiburg became the metropolitan see of the newly-founded province of the Upper Rhine (see Baden), and in 1827 the first archbishop took possession of the see. In the revolution of 1848-49, Freiburg played an important part, becoming at its close the seat of the provisional revolutionary government. Since then the city has flourished wonderfully; the number of its inhabitants has increased from 25,000 in 1872 to nearly 80,000 at the present time (1909), and its university is attended by 2900 students.

Freiburg is the residence of an archbishop, metropolitan of the ecclesiastical province of the Upper Rhine, and is the seat of his ecclesiastical administration, and of one of the dioceses of the church. Including the recently incorporated suburbs, the city has now 7 Catholic parishes, one parochial curacy (Pfarrikuratie), 22 churches and chapels; 68 priests; 17 institutions of the Vincentian Sisters of Charity (212 members); 4 houses of the Franciscan Sisters of Charity (39 members); 5 convents of the Sisters of Charity of the Holy Cross (61 members); a theological faculty at the university, an archiepiscopal theological seminary; an archiepiscopal residential gymnasiun; a Catholic high school for girls, etc. The most prominent among the numerous charitable institutions conducted by Catholic sisterhoods are: St. Joseph’s Hospital; St. Charles’ Home (for pensioners); St. Ann’s Home, for women engaged in business; St. Mary’s Home, for servant girls, with employment bureau; St. Francis’ Home for the aged; St. Elizabeth’s Home (house-keeping and boarding school); Home for apprentices and journeymen, etc. Catholic sisters are also in charge of a number of institutions belonging to the municipality, for example the Hospital of the Holy Ghost, the Home for Beneficed Clergymen, the Kurhaus (poor-house), the People’s Kitchen, the orphan asylum in Günterstal, and the large clinical hospital connected with the university. They also conduct two kindergartens, four industrial schools, two house-keeping schools, and five schools for small children.

The minister, one of the few existing Gothic cathedrals, completed in the Middle Ages, ranks first among the city churches. Its oldest parts, the transept and the intersection of nave and transept, were constructed during the thirteenth century in Romanesque style. The new part (Early Gothic) was begun in 1250, when the corner-stone of the tower (380 feet) was laid, and was completed in the fourteenth century. In 1364, the choir (Late Gothic) was begun, but operations were suspended in 1370, and resumed only after a lapse of one hundred years. In 1513, the cathedral was practically finished. The minster is rich in art treasures, of which the most notable are: the painting over the main altar by Hans Baldung (1511-17); the choir-chapel with paintings by the elder Lucas Cranach and Hans Holbein (the Elder and the Younger); the artistic windows in the side-aisles, dating in part from the fourteenth century; lastly the decorations in the vestibule with an aggregate of over 200 figures, one of the most elaborate examples of medieval theological symbolism and popularly attributed to the Great. Among the other churches are: St. Martin’s (Gothic), erected for the Franciscans during the thirteenth and fourteenth centuries, decorated and ornamented with a tower 1876-93 (Hansjakob, St. Martin zu Freiburg im Breisgau als Kloster und Pfarrrei, Freiburg, 1890); the University church (1630-40), erected by the Jesuits (Baroque) and used by the Old Catholics 1875-94; the church of the Sacred Heart, erected 1892-97 (Later Romanesque and Rhenish Transition style); St. John’s (1894-99); St. Michael’s Chapel in the old cemetery (1744), the vestibule of which is decorated with a remarkable “Dance of Death”.

For a complete bibliography of the city of Freiburg see KIENITZ and WAGNER, Litteratur der Landes- und Volkskunde des Großherzogtums Baden (Karlsruhe, 1901), III, 309-349 and, further, Die Geschichte der Stadt Freiburg im Breisgaus in alter und neuer Zeit (Freiburg, 1902). Important works are: SCHREIBER, Urkundenbuch der Stadt Freiburg (1829-66); IBRIM, Gesch. der Stadt Freiburg mit seinen Umgabungen (3rd ed., 1840); BADER, Gesch. der Stadt Freiburg (1882-93); KIEFFER, Freiburg in Wort und Bild (1889); FÖRSTER and FLAMM, Geschichte der Ortsbeschreibung der Stadt Freiburg (1891 and 1904); SCHÄFER, Das alte Freiburg (1903); Freiburg im Breisgaus, die Stadt und ihre Bauern, publ. by the SOCIETY OF ARCHITECTS AND ENGINEERS of Baden (1899); BAUMGARTEN, Freiburg im Br. und Umgebung (Stuttgart, 1902). Valuable contributions are made in the following periodicals: Zeitschrift der Gesellschaft, etc., for the history, antiquities, and popular customs of Freiburg and vicinity (since 1867); Schaustand (since 1903); Jahresbericht des Oberrheins (since 1850); Freiburger Adress-Kalender (since 1871). For the minister, see GEIGER, Unserer Lieben Frauen Minster zu Freiburg, illustrated with an extra plate, Der Feierabend des Freiburger Münsters (1902); KEMP and SCHUSTER, Das Freiburger Münster (1906); BAUMGARTEN, Das Freiburger Münster (Stuttgart, 1906): Freiburger Münsterblätter (Freiburg, since 1905, half-yearly).

The Archdiocese.—Statistics.—It includes the Grand Duche of Baden (q. v.), the Hohenzollern possessions of the Prussian Crown, bounded by Baden and Württemberg, together with some few places in Württemberg. The Catholic population is 1,263,290, according to the census of 1911. The suffragan Bishops of Freiburg are the Bishops of Fulda, Limburg, Mainz, and Rottenburg. The archbishop is elected by the cathedral chapter, but the names of the candidates must be submitted to the sovereign, who has the right to cancel the names of candidates not acceptable to
him, provided that a sufficient number remain on the list to allow a choice. The cathedral chapter consists of the dean (at present 1909) the auxiliary bishop Dr. Fr. Justus Knecht, titular Bishop of Neob, 6 canons and 6 prebendaries. The ordinarie consists of the archbishop, the members of the chapter, of 2 other priests and 2 laymen. The ordinarie is the archiepiscopal metropolitan court; the archiepiscopal diocesan court is termed the officialate (6 members). The church property is administered, partly by the ordinarie and partly by the civil body known as the Catholic "Oberstiftungsrat" at Karlsruhe (see Baden). The pastoral work of the archdiocese is carried on by two incorporated parishes (the cathedral parish of Freiburg and the parish of Sankt Peter), and by 43 deaneries (4 in Hohenzollern-Sigmaringen) with 911 parishes and parochial curacies (Pfarrkuraturen), 116 chaplaincies and 266 other pastoral charges.

In January, 1909, the secular clergy of the archdiocese consisted of 904 rectors and curates, 281 chaplains and vicars, 106 other active priests (professors, teachers, editors, etc.), 107 priests retired or on leave of absence: a total of 1398, besides 80 regular priests. The diocesan institutions for the education of the clergy are: the seminary in the former Benedictine monastery of Sankt Peter; the theological seminary in Freiburg, whose students frequent the university; and the 5 archiepiscopal gymnasium of Freiburg, Constance, Rastatt, Tauberbischofsheim and Sigmaringen. In the university, eleven priests are professors of Catholic theology and their lectures were attended in the summer-semester of 1909 by 224 students. Male religious orders are excluded from Baden proper by civil law. In the Hohenzollern section of the archdiocese, there are three monasteries for men: the Benedictines at Beuron (61 priests, 9 clerics, and 89 lay brothers), the Franciscans at Gorheim (12 priests, 12 clerics, and 10 lay brothers), and the mission house of the White Fathers at Haigerloch (47 fathers and 6 lay brothers). The religious institutions for women are: the Ladies of the Holy Sepulchre with an academy in Baden-Baden (40 sisters); the Benedictine Sisters in Habsthal, Hohenzollern (26 sisters); the Dominican Sisters with an academy in Constance (63 sisters); the Cistercianes with an academy in Lichtenhal (54 sisters); the Choir Sisters of St. Augustine with an academy in Offenburg and one branch (43 sisters); the Ursulines with an academy in Villingen and in Breisach (40 sisters); the Vincentian Sisters of Charity, including the mother-house in Freiburg, 151 convents (all in Baden), with 900 sisters; the Franciscan Sisters of Charity with mother-house at Gengenbach, 154 houses (all in Baden) and 727 sisters; the Sisters of Charity of the Holy Cross from Ingenbohl (Switzerland), mother-house in Hegne near Constance, 154 houses and 728 sisters (3 convents, 20 sisters in Hohenzollern); the Sisters of Charity of St. Vincent de Paul (from Strasburg), 11 convents, 72 sisters (7 houses with 50 sisters in Hohenzollern); the Sisters of Charity of Our Blessed Saviour from the mother-house in Oberbronn (Alsace), 57 convents (all in Baden) and 410 sisters; the Sisters of Charity of St. Francis from the mother-house in Mallersdorf (Bavaria), 2 houses in Baden, 18 sisters; the Sisters of Charity of St. Joseph from St. Marx (Alsace), 18 convents in Baden and 52 sisters; the Sisters of Charity of St. Francis from the mother-house in Limpertsberg (Luxembourg), 16 convents in Baden and 64 sisters; the Sisters of Charity of St. Francis (mother-house in Oberzell near Wurz- burg), 1 convent in Baden and 2 sisters; the Sisters of Christian Love (mother-house in Paderborn), 1 convent in Hohenzollern and 7 sisters. These sisters conduct numerous charitable works: 428 institutions for outdoor nursing, 98 hospitals, 17 endowed homes (Pfriidenhauter), 13 poor-houses, 7 creches or infant asylums, 236 kindergarten schools, 56 orphanages, 4 business-girls' homes, 12 servant-girls' homes, 13 homes for working-women, 10 high-schools for girls, 12 schools of domestic economy, 121 industrial schools, 6 evening schools, 1 institution for the manufacture of church vestments, 7 peoples' kitchens, 4 apprentices' and journeymen's homes, 6 homes for girls, 19 homes for the care of the sick and aged.

General statistics relative to the Catholic associations of the archdiocese are lacking. The most notable among these societies are: St. Boniface Society (Boni- fatioverein), which had an income of over $130,000 in 1907, and ranks first (financially) among all diocesan societies; the Volkswerke Verein; the Catholic Gesellervereine; or journeymen's unions with branches in 56 different localities; the Catholic Workmen's Society with 154 branches; the Catholic Workwomen's Society, 8 branches; the Catholic Ap- prentices' and Young Men's Society, 38 branches; the Vincentian Society; Society of St. Charles Borromeo; Congregation of Mary, for boys and girls; the Infant Jesus Society; Society of the Holy Family, etc. The archdiocese has 30 Catholic newspapers and periodicals. The most important churches of the Grand Duchy have been mentioned in the article Baden; the most important churches in Hohenzollern are those of Haigerloch, Höchningen and Sigmaringen.

History.—The foundation and history of the archdiocese have been treated exhaustively under Baden; also, the relations between the Church and the State (II, 195-200). It only remains to add a few remarks concerning the Hohenzollern section of the archdiocese. The two principalities of Hohenzollern and Hohenzollern-Sigmaringen, which formerly belonged to the Diocese of Constance, were joined to the Archdiocese of Freiburg, when the province of the Upper Rhine was created by the concordats of 18-27 Oct., and 14-21 Nov., 1821. Both princes had pledged themselves to carry out the Josephist principles which then prevailed in the other states of the Upper Rhine province, though they were the only Catholic sovereigns of the province and reigned over an almost exclusively Catholic population. Both governments consequently exercised all the rights which Febronianism and Josephinism claimed for the secular government as its inalienable jus cives sacrae, and restricted ecclesiastical authority as much as possible. The "Regium Placit", or civil control of papal and episcopal decrees, was rigorously enforced. Taxes and contributions for the pope and "foreign" ecclesiasti- cal superiors were prohibited; the archbishop's juris- dictory was held subordinate even to the civil authority: the cathedral chapter was placed in a position of administrative equality with the bishop, and even episcopal acts were subjected to the most scrutinizing supervision and arbitrary control of the civil power (just supreme inspections). The government, especially in Hohenzollern-Sigmaringen, sought to secure a predominating influence in matters concerning divine worship, marriages (by introducing
the Josephist matrimonial legislation), the education and pastoral duties of the clergy, appointments to ecclesiastical benefices, and the administration and endowment of churches. Furthermore, it compelled the clergy, monasteries, and confraternities to contribute to the support of higher and elementary education and charitable institutions. The Hohen- ssohn princes, however, were well disposed towards the Church, hence these pretensions of the civil power were only met with vigorous opposition to the principalities that in the Baden section of the archdiocece and other parts of the ecclesiastical province of the Upper Rhine.

The innovations of Wessenberg (Vicar-General of the Diocese of Constance, and, until 1827, acknowledged as such by both Hohensohn and Baden governments, despite the protests of the pope) affected the liturgy, processions, pilgrimages, confraternities, the number of holidays of obligation, and included the introduction of the German language into the Mass and also the so-called liturgical confession and communion. To the credit of the Hohensohn princes, it must be admitted, though no violence was used to enforce these innovations, which are so alien from the true spirit of the Church. In various other ways, also, these princes were helpful to the interests of the Church. They assisted the ecclesiastical authorities to bring up a moral and zealous clergy, regulated by the observance of the thirty-nine canons constituting the Church to suppress immorality, made a strong stand against the pietistic movement which originated in the Hagerloch deanery, and opposed the spread of the rationalistic book entitled "Stunden der Andacht" (Hours of Devotion). They also bound the clergy to give catechetical instruction regularly in the schools. In general, however, though no violence was used to enforce the principles of Josephinism, the activity of the Church was in many ways restricted and paralyzed; her property rights, above all, were greatly interfered with. The wrongs committed in this respect were so great that the clergy, most of whom had been brought up in the principles of Pelemanianism and Josephinism, and many of whom favoured the abolition of the breviary and of celibacy, presented an unavailing petition to the government in 1831 for gentler treatment.

The situation became more favourable, when in 1846, the two principalities were by treaty annexed to Prussia under King Frederick William IV. Thanks to the king's friendly disposition towards the Church and the untiring efforts of Archbishop Hermann von Virci, the Catholics of Hohensohn soon secured the same liberties as those then allowed to the Prussian Catholics. The Church was permitted to erect monasteries, and to re-establish fraternities. Missions were again held, pilgrimages became more popular and a general revival of religious life took place. Unfortunately the Kulturkampf (q. v.), though originating in Prussia, was also felt in Hohensohn, now part of the Prussian Kingdom, although the so-called Mainland discipline, the regulations of the Magistrats- und Bischöflichegesetz (also called the consistory or regency), which usually comprised the preceding rector and three counsellors, of the four faculties at the "Albertina", the faculty of arts was the most important. The course usually lasted three years, and included logic, dialectics, metaphysics, mathematics, philosophy, medicine, law, poetry and oratory being added in 1471 and Greek in 1521. The most important lectures of this faculty during the first century of the university's existence were: Gregorius Reisch, a Carthusian, the teacher of Johann Eck and author of the "Margarita Philosophica", which treated of the totality of knowledge at the time; Jacob Locher, called Philomusus, who translated Brant's "Narrschiff" (Ship of Fools) into Latin; Philip Engelbrecht of Engen (Engentius), a poet and a secret follower of Luther; Henricus Lorti,
called Glareanus, the renowned Latinist, musician, and geographer; John Hartung, professor of Greek and Hebrew. In the theological faculty, which usually employed three lecturers in the sixteenth century, taught (at least for a short period) the following eminent scholars: Geiler of Kaisersberg, one of the university’s earliest students; Johann Eck; Thomas Murner; Erasmus of Rotterdam, who had however never studied there, etc. The faculty of law, to which six regular professors were assigned in the sixteenth century, was long famous throughout Europe, thanks to Ulrich Zasius, the founder of modern political science. At this period three professors constituted the medical faculty, whose statutes had been sketched by Hummel himself. As a rule the students lived with their professors in residences or boarding-houses true to the ancient faith, and through its influence the town became a bulwark of Catholicism. The university refused henceforth to study in Wittenberg or Leipzig, and after 1567 only those who declared on oath their acceptance of the Tridentine Confession of Faith were admitted. To secure a still more Catholic atmosphere, Archduke Ferdinand invited the Jesuits in 1577 to found a college in Freiburg, and to incorporate it in the university. This scheme, however, aroused much enmity, especially from Jodocus Loricluis, professor of theology and founder of the Collegium Pacis (Burse zum Frieden) that it had to be laid aside. On 5 November, 1620, shortly after the outbreak of the Thirty Years War, the Jesuits were introduced at the university on flat terms. Archduke Leopold in spite of the opposition of the senate, and entrusted with the whole faculty of arts and temporarily with two of the theological chairs. From the rectorship and questorship, however, they were excluded, although the cathedral pulpit was soon resigned into their hands. The most renowned of the Jesuit professors at Freiburg was the astronomer, Christopher Scheiner (q.v.), who left Freiburg finally in 1630. The frequent change of the fathers was indeed injurious to the university, at which too many remained but a very short time; thus, in the faculty of arts alone, no fewer than 123 different Jesuits were employed as lecturers during the 193 years preceding the suppression of the order.

The seventeenth century, especially the Thirty Years War and the predatory wars of Louis XIV, brought the university to the brink of ruin. Almost all its funded property was lost, as well as a great portion of its income from the parishes, now severely impoverished by pillage and fire. The professors were frequently compelled to wait years for their stipend, and in 1648 the number of students had fallen to 46. Emperor Leopold was the first to take steps to remove the financial difficulties, but, when the town was ceded to the French by the Peace of Nimwegen (1679), the majority of the professors and students migrated to Constance. The Jesuit fathers remained and opened in 1684 a studium gallicanum under the patronage of Louis XIV, but it was not until some years later that the old personnel of the university could initiate academic courses in Constance. After the Peace of Ryswick (1697), the professorate returned from Constance to Freiburg, when the old contentions, which had so often broken out between the university and the Society of Jesus, were settled by the so-called “Viennese Transaction” of forty articles. According to this agreement, the Jesuits were still excluded from the rectorate, and were refused the precedence which they had claimed; on the other hand they received the building of the “Alte Burse”, which they had previously occupied, as their private property, and in addition an increased annual stipend, as well as all arrears of salary.

At the beginning of the eighteenth century the outlook of the university was far from hopeful, and in 1713 the members were compelled to secede once more to Constance, returning in 1715. Emperor Charles VI later increased the revenue of the university, whose staff again included many illustrious professors—the jurista Stapf, Egermayer, Waissenegger, and Reinhard; the physicians Blau, Strobel, and Baader; the Jesuits Niclaus Grammatici and Steinmayr—but the university never reached the educational level of the halcyon days of the sixteenth century. After the suppression of the Jesuits in 1773, their college buildings together with their church (built 1694-1740) and Collegium Academia were seized in 1777 by Empress Maria Theresa to the university. The importance of the Albertina waxed greater with the increasing prosperity of the country. The new curriculum of studies, which Maria Theresa caused to be
drawn up for the higher educational institutions of her dominions, was introduced into Freiburg, in 1767, and at first met with much opposition. Although this action of the university led to the withdrawal of many of its ancient privileges (e.g. its governmental independence), it paved the way for more intimate connection between the university and the government, and from this period dates the adoption of a more reasonable attitude by both parties.

The transference of Further Austrian Breisgau to the House of Zähringen by the Peace of Pressburg (1805) seemed to menace greatly the position of Freiburg, and the municipal corporation of Freiburg already in Heidelberg an older and more famous university. Thanks to the zealous efforts of the professors and town of Freiburg, however, their university was retained, and in 1807 the elector himself accepted the office of rector. Since then, the sovereign has always been the "rector magnificensimus" of the university, and confirms the annual election by the ordinary professors of the pro-rector to exercise the office of rectorship in his name. In 1816 the university was again threatened with dissolution, but the danger was obviated principally through the influence of the emperor. The new university, however, was, however, seriously curtailed, and the curriculum reformed after the model of Heidelberg, for which purpose the revenue, which had fallen very low, was increased by an annual State grant amounting at first to 15,000 guilden. The attendance varied between 270 and 320 students. In 1818 the university sent one representative to the newly-created diet, at which von Rotteck, the historian, was its deputy for many years. In consequence of the opposition between the professors and the town, the university was closed in 1832 for a short period, of which the government took advantage to recognize the previous reprobations and install a permanent board of education. Retention or relinquishment of the university was also the subject of debate; indeed, for thirty years the danger of dissolution lay ever threatening. The Revolution occasioned a brief closing of the university in May, 1849. In 1857 the solemn celebration of its 400th anniversary was held in the presence of the sovereign. The efforts of the Catholic party to restore to the university its initial purely Catholic character by securing for the archbishop, not alone a deciding voice in the appointment of theological professors, but also a certain right of supervision over the other faculties, were realized through the resolution of the Diet of Baden in 1859. Since then the Catholic characteristics of the university both in its professors and in its students, who are recruited mainly from North Germany, have become gradually impaired. When, after the establishment of the German Empire, a new university was founded in Strasburg, a serious decay of Freiburg was anticipated. Fortunately these forebodings proved to be groundless, since, while the number of students in 1872 was only 272—a figure which does not exceed the attendance during the first century of the university's existence—it exceeded 1,000 in 1865, 1,500 in 1876, 2,000 in 1904, and 2,600 in 1908, thus placing Freiburg fifth in the list of German universities as regards attendance.

Of the many scholars, who shed a lustre on the name of Freiburg at the close of the eighteenth and during the nineteenth centuries, the following (excluding those who were born in Freiburg) are noteworthy: Engelbert Klopstock, Johann Leonhard Hug, Heinrich Schreiber, historian of the town and University of Freiburg, Alban Stolz, the renowned popular author, and Franz Xavier Kraus, who wrote on the history of the Church and of fine arts; the jurists Jodocus Riegger, Johann Caspar Rief, the statesman Joseph, Gustav Kinkel, who for many years represented the university in the first diet; the philologists and philosophers, Johann Georg Jacobi and Anton Baumstark; the physicians and scientists, Alexander Ecker, Adolf Kussmaul, Alfred Hegar, Anton de Bary.

The University of Freiburg at present contains four faculties: that of Catholic theology, that of law and political science, that of medicine, and that of philosophy, the last-mentioned being subdivided into philosophical—historical and mathematico-physical. At the beginning of 1909, the teaching staff consisted of 140 lecturers: 11 theologians, 16 jurists and political economists, 50 physicians, 43 in the first division of the philosophical faculty and 30 in the second. In its summer term of 1908 there were registered over 2,000 students, and in the winter term (1908-09) by 1966 matriculated (including 67 women) and 153 private students. Of the sixty institutions connected with the university the most important are the large medical infirmaries (surgical, gynecological, psychiatric, optical) and general clinical hospitals: the physical, geological, botanical, and zoological institutes; the academical reading-rooms. The university library contains 300,000 volumes, a large number of which belonged to the old cloister-libraries, and 700 manuscripts. The majority of the institutes possess excellent collections of books and scientific instruments, and the university contains partly of invested capital to the value of 1,300,000 marks (about 300,000 dollars), and partly of unremunerative capital (e.g. the university buildings, etc.) to the value of 2,800,000 or, allowing for certain outstanding liabilities, 2,380,000 marks. According to the budget of 1908-09, its income was 1,076,000 marks, of which 958,500 was paid by the state. The expenditure, which equalled the income, was as follows: 475,600 marks for salaries of regular professors and officials; 132,200 for the ordinary staff; 335,900 for the different institutions, and the remainder for sundry expenses.

A complete list of the officers of the university is contained in FERRANDEZ, and HORN, Bibliographie der deutschen universitäten II (Leipzig, 1905-09). The chief works are: RIEGER, Análisis académica Freiburgensis (Friburgo, 1774 and 1779); IDB. Imagines, Sigilla atque monumia Academiae Academiae (Freiburg, 1776); SCHIEBER, Geschichte der Albert-Ludwigs-Universität (3 vols., Freiburg, 1887-90); Die Universität Freiburg seit dem Kommerzienrat Grossherzog Friedrichs (Freiburg, 1881); FRIBG. Die finanziellen Verhältnisse der Universität Freiburg, 1815; FREIBURG. Die Universität Freiburg in der Hälfte des 19. Jahrhunderts (3 parts, Bonn, 1892-94); KÖNIG, Die Geschichte der Diöcesen und des Bistums Freiburg im Breisgau (Stuttgart, 1856); MAYER, Die Statistik der Universität Freiburg im Breisgau (Freiburg, 1840); BAUMGARTEN, Geschichte der Universität Freiburg im Breisgau (Freiburg in the Breisgau, 1883). (Berlin, 1897).

Freiburg (Switzerland), University of. See Freiburg, University of.

Freising. See Munich.

Fréjus (Forum Julia). Diocese of. suffragan of Aix, comprises the whole department of Var (France). It was suppressed by the Concordat of 1801, re-established by that of 1817, and definitively established in 1823. The arondissement of Grasse, which until 1860 belonged to the department of Var, when it was annexed to that of the Alpes-Maritimes, was, in 1886, separated from the Diocese of Fréjus and attached to that of Nice. A Brief of 1852 authorized the bishop to assume the title of Bishop of Fréjus and Toulon. The present diocese comprises the territory of the ancient Diocese of Fréjus as well as that of the ancient Diocese of Toulon. I. Fréjus.—Christianity would seem to have been introduced into Fréjus in the time of Emperor Constantine. History relates that in 374 a certain Accep- tus falsely declared himself guilty of some crimes in order to rid himself of the episcopal dignity, and that the benefice of Valencia was bestowed on the Church to name another in his stead. The following are named among the bishops of this see: St. Leonieus (419-433);
brother of St. Castor and friend of John Cassian, who dedicated to him his first ten "Collationes", and of St. Honoratus, founder of the monastery of Lérins; Theodore (433-455), Abbot of the Iles d’Hyères, to whom Cassian dedicated the last seven "Collationes"; St. Auxilius (c. 475), formerly a monk of Lérins, and later a martyr under Aurelius, Arian King of the Visigoths; Rieulus (973-1000), who restored the ruins made by the Saracens, and built the cathedral and the episcopal palace; Bertrand (1044-91), who founded the collegiate church of Barjols; Raymond Berengarius (1235-1248), who arranged the marriage of Beatrice, daughter of the Count of Provence, with Charles of Anjou; Jacques d’Euse (1300-1310), preceptor of St. Louis of Toulouse, and later pope under the name of John XXII; Cardinal Niccolò Fieschi (1495-1524), who at the time of his death was dean of the Sacred College; André-Hercule de Fleury (1698-1715).

II. TOULON.—The legend which states that a certain Cleon, who accompanied St. Lazarus to Gaul was the founder of the Church of Toulon, is based on an apocryphal document composed in the fourteenth century and ascribed to a sixth-century bishop named Didier. Honoratus and Gratianus, according to the "Gallia Christiana", were the first bishops of Toulon whose names are known to history, but Duchesne gives Augustalis as the first historical bishop. He assisted at councils in 441 and 442 and signed in 449 and 450 the letters addressed to Pope Leo I from the province of Arles. St. Cyprian, disciple and biographer of St. Cassius of Arles, is also mentioned as a Bishop of Toulon. His episcopate, begun in 524, had not come to an end in 541; he converted to Catholicism the Visigoth chiefs, Mandrier and Flavian, who became anchors and martyrs on the peninsula of Mandrier.

The Island of Lérins, well known as the site of the celebrated monastery founded there in 410 (see Lérins) was sold in 1859 by the Bishop of Fréjus to an English purchaser. A number of the saints of Lérins are especially honoured in the diocese. Among them are Sts. Honoratus, Cassarius, Hilary, and Virgilius, all of whom became archbishops of Arles; Quintidius, Bishop of Vaison; Valerius, Bishop of Nice; Maximus, Bishop of Riez; Veranus and Lambertus, Bishops of Vence; Vincent of Lérins, author of the "Communitorium", and his brother Lupus, Bishop of Troyes; Agricola, Bishop of Avignon; Agripus and Porcius, martyrs. St. Tropesius, martyr during the persecution of Nero; St. Louis (1274-1297), a native of Brignoles, Maristes, Salesians, and Sulpicians. An American congregation founded in 1838, for teaching and hospital work, was that of Notre-Dame de la Miséricorde, the mother-house of which was at Draguignan. Before the law of 1901 the religious congregations possessed in the diocese 2 foundling asylums, 36 day nurseries, a seaside hospital for sick children, 2
orphanages for boys, situated in the country, 9 orphanages for girls, 6 workhouses, 2 houses of rescue, 3 houses of charity for the assistance of the poor, 30 hospitals or hospices, 2 houses of retreat, 7 religious houses for the care of the sick in the homes.

Gallica Christiana, Nova (1716), I, 418–447, 739–752; Instrumenta, 82–85, 129–131; Albignac, Gallica Christiana novissima (1850); Downs, Norton, Антиросефалия, 208, 269–276; Espitalier, Les Hospices de Périgueux (1891–1898); Lafont, Histoire de Toulouse (Toulouse, 1892); Dugé, Annuaire Archéologique du Pèlerinage de France, d’après les manuscrits du Vaticano et de l’Athétophile; Fouqueret, Saint-Symphorien et moderne de la Très-Sainte Vierge dans les duchés de Périgord et de Toulouse (Toulouse, 1861); Chevalier, Topo-bbl., 1240, 3125.

GEORGES GOTAY.

French Catholics in the United States.—The first Bishop of Burlington, the Right Reverend Louis de Goesbriand, in a letter dated 11 May, 1869, and which appeared in “Le Protecteur Canadien”, a French newspaper then published at St. Albans, Vermont, made the following statement: “I am convinced from positive information, that when we say that there are 500,000 French Canadians in the United States, the figures are far below the truth.” The sources from which the late prelate drew his information are unknown to the writers of this article, but it is a fact that to-day the Diocese of Burlington has a Catholic population of 76,000 souls, of which 50,000 at least are of French Canadian birth or origin. It is also a fact that the French Canadian element has increased, both naturally and by immigration, to such an extent that it now numbers nearly 1,200,000 souls in the United States, that it has made its influence felt throughout the Eastern States, in all walks of life, and furthermore that, in point of numbers, it is the predominant element in several dioceses, and an important part of the population in many others. However, except in their own newspapers, or a few little-known books, scarcely anything had been said of the part taken by these immigrants in the civil and religious life of their own country, and as little of the work they took into their own hands the task of reviewing their history, of gathering statistics of their numbers, and of recording their achievements and the progress they have made in fifty years. The task is still far from complete, but enough has been done to demonstrate the progress of the French Canadians and their devotion to their Church and to their adopted country.

The immigration of French Canadians to the United States began before the War of American Independence (1775–83). French Canadians had then already immigrated to New England, but in large numbers in the area of Philadelphia. After the war the American Congress, in recognition of their services and to prevent their being prosecuted
In Canada on the charge of high treason, gave them land on the shores of Lake Champlain, where their descendants are still to be found. That concession of land, situated in the State of New York, has long been known as "the Refugees' Tract." In 1837, after the rebellion of the Lower Provinces of the Canadas, a new settlement was made to the Eastern States, to the State of Vermont, more particularly, where the "Patriots", vanquished in battle, sought refuge with their families. But the chief influx from France to Canada took place after the Civil War. Notwithstanding the fact that they lived at that time, in remote settlements, the French Canadians were here in sufficient numbers during the war to furnish 40,000 soldiers to the Union. The immigration at the close of the war, in all the Provinces of Quebec, has since numbered many causes, the most considerable of which are the unprecedented industrial prosperity that followed the Civil War and the inborn love of the French Canadian for travelling, together with the desire to earn the high wages and to share in the vast opportunities which the Republic offered to its citizens.

Some writers—and many of these in earnest—have given as the principal cause of this French Canadian immigration, that the whole number of the inhabitants of the United States between 1855 and 1890, the necessity in which the farmers of the Province of Quebec found themselves of seeking a new home after leading a life of luxury and dissipation. Undoubtedly this was true of some, but the general moral character of the hundreds of thousands who had crossed the border is of the best, and the true cause of this movement must be sought elsewhere. The Jesuit, Father Hamon, writing on this subject, does not hesitate to say: "The rapidity with which this immigration was accomplished, and the ease with which these Canadians transplanted to a foreign land, have immediately reconstructed the Catholic mould of the parish that made their strength in Canada; the energy shown by them in erecting churches and convents, in grouping themselves together, and in organizing flourishing congregations, supported within by all that nourishes Christian piety, protected without against pernicious influences by the strength of association, and a press generally well inspired; all these elements of Catholic life, organized within a quarter of a century in the very citadel of old Puritanism, seem to indicate a Providential action as well as a Providential mission, the importance of whose future alone, can be fully comprehended." Those who do not look higher than material considerations in studying the causes of national movements will not give much credence to this opinion of Father Hamon. Nevertheless it is to-day a fact recognized by noted economists, that the French Canadians, now better known in the Republic under the name of French Americans, are the most solid and reliable pillar of industry in New England. And New England has received with its borders, more than two-thirds of their total immigration. As Catholics, it is obvious that they have played a role no less important, as may easily be seen by the statistics of CatholicListComponent}

many of them to follow in their footsteps. As to the fluctuating immigration, only a mere mention is necessary. Always on the move, from one country to the other, from city to city, from mill to mill, those who formed this class led that kind of life which was, as so aptly put, "the roving herd". This roving herd is still less numerous than the temporary group, and it is to be found not only in all classes of newcomers, but in settled populations as well. The permanent immigration has been the most numerous, and, naturally, the most substantial. It has been, in these permanent French Americas, that have organized parishes and parochial schools, erected churches and convents, and now constitute the labouring power par excellence in all the industrial centres of New England. Most of them, if not all, came from the rural districts of Canada, especially from the Eastern townships, from the Dioceses of Trois Rivières and Rimouski, and from the Counties of Beaupre, Bellechasse, and others on the borders. Their farms had become insufficient to support large families; in the Eastern townships their titles to the land they occupied were disputed, and they were forced to give up the fruit of many years of labour; they were the victims of incendiarism and rapine by their Governments, both Provincial and Federal, towards colonization and the opening up of new farming districts. The increasing population was thus compelled by circumstances, to look elsewhere, for more land and greater opportunities. At the same time, the reports sent home by the French of the United States to the early emigrants, who had widely advertised throughout the whole Province of Quebec, the material advantages of the United States. This migration was called at the time "the desertion of the Fatherland". But those who spoke thus were forgetful of the historical fact, that the French of America have from the very beginning felt perfectly at home in the whole northern part of the continent, on the soil of which their missionaries, their coureurs des bois, explorers, and warriors have left their footsteps broadcast. In spite of all opposing efforts, hundreds of thousands of French Canadians, most of them farmers, between 1870 and 1890, left their rural occupation to adopt the most arduous life of the New England factories and the various industries of the Western States. This movement took place quietly, slowly, without creating any disturbance, and almost unnoticed. It was, in a certain sense, a repetition of that which was advocated by Horace Greeley, sent toward the Golden Gate so many young men of the East.

Doubltless, this depopulation on a large scale was a great loss to Canada, where the emigrants might have founded families of colonists. But the nature of this emigration was such that it could not be checked by any special legislation. The movement had set in, and it was too late to forestall an event prepared by many years of economic conditions misunderstood or wilfully ignored. The stream had found its way across the borders, where new industries, phenomenal opportunities, and advantages unheard of before, were waiting to absorb F/_Canadians and utilize this new and valuable power of production.

In order to present a strictly accurate idea of the importance of the French American element, both numerically and from a Catholic standpoint, the following sources of information have been used for this article: (1) the Twelfth Census of the United States (1900); (2) local enumerations made in New England since 1900, and as late as the present year (1908); and (3) the Catholic Directory of the United States.
The figures given for Louisiana are, of course, exclusive of all other inhabitants of French extraction; those relating to California are exclusive of the large population of immigrants from France established in that State, more especially in the city of San Francisco. There were also, 115 persons of French Canadian parentage in Alaska, and 4 in Hawaii, besides 502 persons of the same parentage in the military and naval service of the United States, stationed abroad and not credited to any State or Territory. Combining with these small figures the totals for the five divisions given in the last column of the table, we get the grand total of 810,105 persons of French Canadian parentage living under the United States flag. But these figures only represent the first and second generations, i.e., original immigrants still living, and their immediate descendants. In this connexion the director of the census says: "A small number of the persons reported as of foreign birth, are the natives of native parentage, so that, to a very small extent, the number of persons of foreign birth reported at each census is not included in its entirety in the number of persons reported as of foreign parentage. The figures are sufficiently comparable, however, to show the large body of population which must be added to the foreign born element in order to get, even approximately, the number of persons of foreign extraction at any of the census periods considered. Moreover, this is the best figure that can be given as expressing the element of our population which is of foreign extraction, as the census inquiry does not go beyond the immediate parents of each person enumerated, and it is impracticable, at least under present conditions, to endeavor to determine the origin of the people beyond a single generation."

It is obvious, that an inquiry which does not go beyond the immediate ancestors of each person enumerated cannot convey an exact idea of the number of those who may still be distinctly classified as French Americans, even though both of their parents may have been born in the United States. And when it is remembered that the French Canadians were early settlers in the northern part of the State of New York, that they were, practically, the first settlers of the State of Maine, and had found their way into Vermont as early as 1830; that French Canadians were the pioneers of the Western States, where they founded, or assisted in founding, great cities like Chicago, St. Louis, St. Paul, Dubuque, Milwaukee, and Detroit, it is not difficult to understand that in certain parts of the country at least three generations of French Americans have been recorded by the census of 1900 as native whites of native parentage. How far short of the actual number of French Americans are the figures of the National Census, may be estimated by considering the local enumerations taken in the New England States since 1900, with the following results:

<table>

These figures, compared with the total (508,362) of those given in the Census of 1900 for the same six States, show an excess of the local over the national enumeration of 215,170 persons, or more than 42.3 per cent, for New England alone. This excess, explained in part by the fact that the census inquiry of 1900 was limited to only two generations, is also attributable to the continuous flow of immigration and in greater measure to the large birth-rate which is still maintained among the French Americans, it having been scientifically established that the French Canadians—at least in Canada—double their numbers by natural increase every twenty-six years. Taking into consideration the increase (42.3 per cent) shown by the enumerations in New England over the figures given by the National Census, and also bearing in mind the fact that the figures quoted above do not include the French from France (reported as being 265,441 by the census of 1900) and the French-speaking Belgians, scattered throughout other States than those of New England, we may conclude that the French Americans in the United States to-day number
more than 1,500,000, of whom nearly 1,200,000 can be classified as of French Canadian extraction. As this immigration of French Canadians was almost exclusively an immigration of Catholics, we are led to inquire what provisions were made for them in the different dioceses.

The French Canadians had left behind them in Canada a perfect Catholic organization, with parishes flourishing in all parts of the province, with episcopal sees in Quebec, Ontario, and the West—an organization comprising to-day many ecclesiastical provinces with archbishops, bishops, a numerous clergy, both secular and regular, as well as educational and charitarian institutions. All the provisions of the hierarchy of New England especially, to determine how these newcomers should be cared for spiritually. The question of language stood in the way from the very beginning. The French Canadians, though willing to become staunch Americans, did not know the English language, and even when they had learned it, they still preserved a strong attachment for their mother tongue. That this problem puzzled the bishops of New England, is shown by the time taken for its solution, and by the fact that in some instances they were reluctant, or often unable, to deal with the situation in the only proper way, which was, to give to these people priests of their own tongue and nationality. Even to-day this problem is not adequately solved. It was feared at the beginning, as it is feared now in some quarters, that to grant to the French Canadian immigrants priests of their own tongue and nationality would encourage them to form a sort of state within the state, thereby causing great harm to the nation as a whole. Time has shown the fallacy of that apprehension. The patriotism of the French American element is undisputed. They possess the sterling civic qualities desireable and necessary to promote the best interests of the republic. As a matter of fact, the French Canadian immigration has created no new state in the state; and the French Americans have willingly learned the English language while remaining as closely attached as ever to their mother tongue, in which they see the best safeguard of their faith.

The progress accomplished for God and country through the organization of French American parishes all over the United States is the concrete proof of their excellency from every standpoint. It proves at the same time, that further progress, religious and patriotic, can be accomplished by pursuing the same policy. At first, it was necessary to call priests from the Province of Quebec. That policy, inaugurated in the Diocese of Burlington in 1850, by the lamented Bishop de Goebrisand, has proved to be a blessing wherever it has been carried out. These early French Canadian missionaries, of whom many are still living, knew their people, understood their character and customs, had the same mentality as their flock, and easily succeeded in organizing flourishing parishes entirely devoted to the Church. As early as 1890 Father Hamon notes that these newcomers already possessed 120 churches and chapels, ministered to by Canadian priests, and 50 large schools, affording education to more than 30,000 children.

Let us recall a few dates which mark the beginning of this new impulse given to the Catholic Church in the United States.

The first French American parish in the United States, after the foundation of Detroit, Michigan, was that of St. Joseph, at Burlington, Vermont, founded 28th April, 1850, with the Rev. Joseph Quévillon as first pastor. In the same state, the parish of the Nativité de la Sainte-Vierge, at Swanton, was organized in 1856, and that of St-François-Xavier at Winookski, in 1868. In the Diocese of Springfield, Massachusetts, the parish of Notre-Dame du Bon Conseil, at Fitzfield, was organized in 1867. In all, 22 parishes were organized by French Americans from that date to 1890, besides 15 parishes of mixed population, wherein the French Catholics were associated with their English-speaking brethren. In the Diocese of Providence, R. I., the parish of St-Jacques, at Manville, was organized in 1872, that of the Precieux Sang, at Woonsocket, in 1873, and that of St-Charles, at Providence, in 1878. In the Diocese of Hartford, Conn., the parish of St-Laurent, at Meriden, was organized in 1880, and five other parishes between 1880 and 1889. In the Diocese of Boston, the parish of St-Joseph, at Lowell, was organized in 1869, and that of St-Anne, at Lawrence, in 1873. In the Diocese of Portland, Maine, the parish of St-François de Sales, at Waterville, was organized in 1869, that of St-Pierre, at Lewiston, in 1871, that of St-Joseph, at Biddeford, in 1872, and that of St-Augustin, at Augusta, in 1888. In the Diocese of Manchester, New Hampshire, the parishes of St-Augustin, at Manchester, and St-Louis, at Nashua, were organized in 1872. Similar results were accomplished in the Dioceses of Ogdensburg, Ticonderoga, and Syracuse, and in the Western States. The accompanying table shows the actual religious organization of the French-American Catholics in New England—their clergy, parishes, etc.

To complete these figures for the United States would necessitate a study of all the dioceses, as there are French Americans in every state and territory of the Union; a few statistics, however, of the priests of French extraction in the principal dioceses will help to give a more definite idea of the organization as a whole: Baltimore has 21; Chicago, 62; Albany, 19; St. Paul, 14; San Francisco, 3; New York, 25; Oregon, 5; Philadelphia, 3; Dubuque, 7; Milwaukee, 9; New Orleans, 96; Syracuse, 5; and Ogdensburg, 63.

Of the distinguished clergymen whose names are associated with the work already described, the following have already been called to their reward: Norbert Blanchette, first Bishop and first Archbishop of Oregon City; J. B. Lamy, Archbishop of Santa Fé, New Mexico; Monsignor Magloire Blanchette, Pro-Cathedral Cathedral of Walla Walla, Washington; the Rev. P. M. Mignan, of Chambly, Quebec, who in the fifties was vicar-general of the Diocese of Boston, with the special mission of caring for the spiritual needs of his compatriots in the United States; the Rev. Joseph Quévillon, of Burlington, Vermont; Monsignor Brochu, of Southbridge, the Rev. J. B. Primeau, of Worcester, the Rev. L. F. Dion, of Springfield, and the Rev. J. B. Bédard, of Fall River, Massachusetts; the Rev. J. Roch Magnan, of Muskogee, Michigan. Mention should also be made of the Right Rev. Bishop Michaud, lately deceased, whose father was a French Acadian, and who had been for many years at the head of the Diocese of Burlington,
proving himself a worthy successor to Bishop de Goesbriand. Among the living there are scores of others who have been true pioneers of the Faith, and to whom is due great credit for having so well organized a new and loyal membership of the Church in the United States. Recently one of their number has been consecrated to the See of Manchester, New Hampshire, in the person of the Right Rev. George Albert Guertin, consecrated 19 March, 1907.

The religious orders of men and women have been worthy co-labourers with the priests in the building-up of parishes. To them have been entrusted the education of children and the care of the sick and orphans. This work has been especially well fulfilled in the French American parishes, where the convent of the sisters and the school of the brothers are the necessary complements of the church itself. One does not go without the other, and as a rule the school is built before the church and is used for a church also. The number of members in the different religious communities of women is given in the accompanying table.

To these must be added the secondary (high-school and university academic courses) college established by the Pères de l'Assomption from France, at Worcester, Massachusetts, in 1804, and 14 small academies, commercial colleges, and boarding schools in which there are about 1000 pupils of both sexes. In connexion with the subject of higher education, it may be well to remark that about 3500 French American children attend annually the commercial and secondary colleges in different cities of Canada. Among the religious orders, both of women and men, also have charge of 2618 orphans in New England. French nuns have charge of 1865 sick and aged adults, wayward women, and working girls.

Besides their religious work, vast and praiseworthy as it is, the French Canadian immigrants have also displayed industry and activity in other walks of life, and in their closer relations with their fellow-citizens they have shown qualities and traits found only in the best of citizens. In other words they have stood well up to the standard in the body politic and in many ways have exercised over their surroundings an influence for the general good of the community such as to fully justify, at least so far as it refers to them, the statement made by Vice-President Fairbanks, that in the American Nation "flows the richest blood that courses in the veins of all the peoples in all quarters of the globe." In five years, they have built up a press that is not surpassed, from the Catholic point of view by that of any other group of immigrants in the United States. That press is composed to-day of seven dailies—"L'Indépendant", of Fall River, Mass.; "L'Opinion Publique", of Worcester, Mass.; "L'Étoile" of Lowell, Mass.; "La Tribune", of Woosocket, R. I.; "L'Avenir National", and "Le Reveil", of Manchester, N. H.; "L'Echo de la Presse", of New Bedford, Mass.; two papers issued every other day —"Le Messager", of Lewiston, Maine; "L'Impartial", of Nashua, N. H.; one semi-weekly—"Le Jean-Baptiste", of Pawtucket, R. I.; and the fifteen weeklies—"L'Union", of Woosocket, R. I., official organ of L'Union St-Jean-Baptiste d'Amérique; "Le Canado-Amerikan", of Manchester, N. H., official organ of L'Association Canado-Américaine; "La Justice", of Biddeford, Maine; "La Justice", of Central Falls, R. I.; "La Justice", of Holyoke, Mass.; "L'États-Civil", of Marlborough, Mass.; "Le Progrès", of Lawrence, Mass.; "Le Courrier", of Lawrence, Mass.; "Le Courrier de Salem", of Salem, Mass.; "L'Echo de l'Ouest", of Minneapolis, Minn.; "Le Courrier Franco-Américain", of Chicago, Ill.; "L'Indépendant" (weekly edition), of Fall River, Mass.; "L'Indépendant", of Fitchburg, Mass.; "Le Progrès", of Woosocket, R. I., and "Le Citoyen", of
Haverhill, Mass. These newspapers are thoroughly Catholic in spirit, as well as sincerely American. Their editors and publishers met in convention, at Woonsocket, R. I., on 25 September, 1906, and organized the Association des Journalistes Franco-Américains de la Nouvelle Angleterre. At that meeting the only those present abstained from taking their loyalty to the republic, and advising the French Americans to show themselves true and sincere American citizens, to promote naturalization, to preserve their mother tongue, to learn the English language, to maintain parochial schools, wherein both languages should be taught, to avoid bootlegging, and to ask for proof of their own nationality to be their pastors. The resolutions also requested the Holy See to appoint, when feasible and proper, bishops of their nationality, familiar with both the English and French languages, in all dioceses in which the French Americans constitute the majority of the Catholic population. The first French newspaper to appear in the United States was “Le Courier de Boston”, which was published weekly during a period of six months in 1789, the first number appearing on 23 April, and the last on 15 October. The editor and publisher was Paul Joseph Guérin de Montréal, later a bookseller and mayor of Boston, and instructor in French at Harvard University from 1787 to 1800. The next French American newspaper was published in 1825, at Detroit, under the title of “La Gazette Française”, which issued only four numbers. In 1817, the Detroit Gazette published during the summer of 1817, an issue of 100 copies and then abandoned the venture. The second French American newspaper in New England was “Le Patriote”, published at St. Albans, Vermont, in 1839. Since that time nearly 200 newspapers published in the French language have appeared and disappeared, but none is mentioned.

French American activity, while effectively applied to the enterprises of religion, education, and the press, has not neglected provident organizations. The first French institution of this kind was the Société de Jacques Cartier, founded in St. Albans, Vermont, in 1845, while the Société St-Jean-Baptiste of New York, organized in 1850, is still in existence. In 1868 they had 17 benevolent societies, and since then they have organized more than 400 others, of which about 142 are still in existence. Moreover, they have established federations, which have more than four hundred and fifty members. This organization aims first of all to form true sons of the Catholic Church and useful citizens of the American Republic. Piety, study, and action constitute its threefold motto. Its first congress, held at Worcester, Massachusetts, 23 and 24 August, 1908, was attended by delegates from circles formed in different New England localities.

Besides the admirable work they have accomplished by means of their parishes, press, and societies, and in order to render their efforts more effective, the French Americans have held at different times conventions called for various purposes. The first of these gatherings, destined to promote the interests of the mutual benefit of the French societies throughout the United States, the Union St-Jean-Baptiste d’Amérique was organized, with headquarters in Woonsocket, R. I., through the federation of a considerable number of the local societies. This move has proved to be a very wise one, as is shown by the rapid growth of the new society, which has enrolled over 19,500 members in eight years. The Association Canado-Américaine of Manchester, New Hampshire, established in 1896, has a membership of over 11,000 and is working along the same religious and patriotic lines. In 1906, a new society, the Ordre des Forestiers Franco-Américains, was organized by the secession of a few thousand of their loyal members from the Foresters of America, and it now comprises 40 courts. All the French American societies, with the exception of the Forestiers, give life insurance, and, without exception, they provide for sick benefits. Millions of dollars have been distributed by them to the widows and orphans of their members and to their sick fellow-members. The Société des Artistes Canadiens-Français, though a Canadian society, and the Société L’Artisanat, a society of French Canadians, are drawing the greatest part of its membership from the maritime provinces, also have members in the United States and are therefore included in the accompanying table, which shows the number of councils or courts and the membership of the four national societies in New England.

These societies are all Catholic, and in 1906 the Union St-Jean-Baptiste d’Amérique and L’Association Canado-Américaine were instrumental in organizing the Société Franco-Américaine du Denier de St-Pierre, whose sole object is to collect funds for the Holy See. The Société Historique Franco-Américaine, incorporated under the laws of the State of Massachusetts, was organized at Boston, in 1899, “for the purpose of encouraging the careful and systematic study of the history of the United States, and especially to bring forth in its true light the exact part taken by the French race in the evolution and formation of the American people”. With this end in view this society has met regularly twice a year since its organization. Noted American historians and writers, as well as several from France and Canada, have delivered before it addresses which have contributed in no slight measure to enrich the store of French American historical literature. Another organization which seems destined to play an important role, at least among the French Americans of to-morrow, is the Association Catholique de la Jeunesse Franco-Américaine, which was formed at Baltimore, Maryland, 4 January, 1908, by twenty-two young French Americans who were students in various universities of that city. This organization aims first of all to form true sons of the Catholic Church and useful citizens of the American Republic. Piety, study, and action constitute its threefold motto. Its first congress, held at Worcester, Massachusetts, 23 and 24 August, 1908, was attended by delegates from circles formed in different New England localities.
Rutland, Vermont; 1888, Nashua, N. H.; 1893, Chicago, Ill. In October, 1901, delegates (to the number of 742) of the various groups and societies of French Americans in New England and the State of New York met in a "Congress" at Springfield, Mass. The four great subjects of deliberation were naturalisation, benevolent societies, education, and the religious situation, and the spirit of the numerous and forcible addresses made on these heads is fittingly and admirably reflected in the resolutions. This congress, undoubtedly the most successful gathering of French Americans held up to that time, appointed a permanent commission consisting of the president of the congress and two delegates from each state represented, authorizing it to take all necessary measures for putting the resolutions of the congress into effect, and giving it the power to call another congress, local or general, according to its discretion.

Besides these general conventions, others have been held at different times and places for the purpose of considering a particular question or the interests of the French Americans of a particular state or diocese. For example, the French Americans of Connecticut have held eight such conventions in the last twenty-three years. Political organizations have also flourished among citizens of French Canadian origin, and naturalisation clubs can be found in every city, town, or village where they are sufficient in number to maintain such institutions. In June, 1906, there was organized in the State of Massachusetts the Club Républicain Franco-Américain, with headquarters at Boston, at the first banquet of which, in April, 1907, Hon. Charles J. Bonaparte, a member of the Roosevelt Cabinet, was the guest of honour. The French Americans, in 1890, had 13 representatives in the Legislatures of Vermont, Massachusetts, Rhode Island, Connecticut, and New Hampshire, besides numerous public servants in the city councils and the municipal administrations; in 1907 they elected senators in Maine, Massachusetts, and Rhode Island; their representatives in New England numbered, in 1907, as follows:

<table>
<thead>
<tr>
<th>State</th>
<th>Representatives</th>
<th>Senators</th>
</tr>
</thead>
<tbody>
<tr>
<td>Maine</td>
<td>5</td>
<td>2</td>

<tr>
<td>Massachusetts</td>
<td>6</td>
<td>1</td>
</tr>
<tr>
<td>New Hampshire</td>
<td>18</td>
<td></td>
</tr>
<tr>
<td>Connecticut</td>
<td>2</td>
<td></td>
</tr>
<tr>
<td>Rhode Island</td>
<td>4</td>
<td>2</td>
</tr>
</tbody>
</table>

—a total of 5 Senators and 35 Representatives.

In many instances their candidates for high political honours have been successful at the polls. Such has been the case with the Hon. Pierre Broussard, Congressman from Louisiana; the Hon. Aram J. Pothier, of Woonsocket, R. I., elected governor of his state in November, 1908, after having been its lieutenant-governor and mayor of the city; the Hon. Adélaïde Archambault, also of Woonsocket, and who has likewise filled the offices of lieutenant-governor and mayor; Judge Joseph A. Breaux, of Louisiana; Pierre Bonnivoulir, of Holyoke, Mass., whose service as a state senator covered a period of fifteen consecutive years; Hugo A. Dubuque, of Fall River, Mass., ex-member of the Massachusetts Legislature, and city solicitor; Alex. L. Granger, of Kankakee, Ill., district attorney; Aimé E. Boisvert, of Manchester, N. H., district attorney; and Arthur S. Hogue, of Plattsburg, N. Y., also district attorney. Studying an earlier period, we find some of the names of Pierre Denard, first Lieutenant-Governor of Illinois; the Rev. Gabriel Richard, second Congressman from Michigan (the only Catholic priest who ever sat in Congress), and Louis Vital Bouygé, United States Senator from Wisconsin. At the present time, prominent among those who are prominent in the literary and social life of the French Americans: Arthur M. Beaupré (Illinois), Envoy Extraordinary and Minister Plenipotentiary to the Netherlands; Alphonse Gaulin (Rhode Island), Consul-General at Marseilles, France; Eugène L. Belisle (Massachusetts), Consul at Limoges, France; Pierre P. Demers (New Hampshire), Consul at Bahia, Brazil; Joseph M. Authier (Rhode Island), Consul at Guadeloupe, West Indies.

In civil life, belonging to the generation departed for a better world, though their names are still present to the memory of their fellow-citizens and compatriots, were Ferdinand Gagnon, of Worcester, Mass., the father of French American journalism; Dr. L. J. Marotel, of Lewiston, Maine, his worthy associate in the advancement of the French American element in the New England States; Major Edmond Mallet, of Washington, D. C., recognized as an authority upon the history of the North-West, and whose library (preserved intact by L'Union St-Jean-Baptiste d'Amérique) is the largest and most complete collection of documents relating to the French Americans ever gathered; Frédéric Houde and Antoine Moutteau, pioneer journalists; Judge Joseph LeBoeuf, of Cohoes, N. Y.; Pierre F. Pelquin, of Fall River, Mass., and a score of others who for years had been foremost among their compatriots as champions of their rights, both civil and religious.

To sum up, the record of the French Americans in their new country has been such that prominent men of native origin, writers and politicians of note, have sung their praise on more than one occasion. In this respect, one will readily remember the homage paid to a Frenchman upon different occasions by Massachusetts the Hon. Isadore Hoar, of Massachusetts, as well as the marks of high esteem shown them by governors and members of Congress. As recently as 20 March, 1908, Senator Henry Cabot Lodge, of Massachusetts, speaking on "Immigration" before the Boston City Club, made the following statement: "Later than any of these (movements of immigration) was the immigration of French Canadians, but which has assumed large proportions, and has become a strong and most valuable element of our population. But the French of Canada scarcely come within the subject we are considering, because they are hardly to be classed as immigrants in the accepted sense. They represent one of the oldest settlements on this continent. They have been, in the broad sense, Americans for generations, and their coming to the United States, is merely a movement of Americans across an imaginary line, from one part of America to another. In truth, it is a movement of hostility and suspicion, which rebuked the French Americans at their arrival in the republic, has subsided before their splendid conduct and magnificent spirit, and is replaced to-day by that tribute of respect which mankind acknowledges as due, and never fails to grant, to men of talent, industry, generosity, and patriotism.

Froppel, CHARLES-ÉMILE, b. at Ober-Ehrnheim, Alsace, 1 June, 1827; d. at Paris, 22 Dec., 1891. He was Bishop of Angers, France; and deputy from Finistère. He began his studies at a school in this little town; and at seventeen he had received his baccalaureate degree, and entered the seminary of Rennes, where he remained a pupil for a year at the hands of Mgr Roers in 1848, and was at once appointed to the chair of history. Subsequent to his ordination to the priesthood in 1849, he took a noteworthy part in the discussions of Bonnetty and Maret on the subject of traditionalism. He passed a brilliant examination which enabled him to be named for some time a doctor at the Sorbonne, and after a competitive examination he was named chaplain of the church of Ste-Geneviève at Paris. Here he delivered a course of
sermons on the “Divinity of Jesus Christ” which have since been published in book form. He conducted the Advent and Lenten exercises at the Madeleine and afterwards at the churches of St-Roch, Ste-Clotilde, St-Louis d’Antin, St-Nicolas-de-Lorette, and St-Germain l’Auxerrois. His early discourses were published in 1869, in two volumes. Having been appointed to the chair of sacred eloquence at the Sorbonne, he conducted a series of scholarly studies on the Apostolic Fathers and the Christian apologists. They fill ten volumes (4th ed., Paris, 1863). Napoleon III invited him to preach the Lenten sermons at the Tuileries, and these discourses have been published in a volume entitled “La Vie Chrétienne”.

It was about this time that Renan’s “Vie de Jésus” provoked such a storm of controversy. Mgr. Freppel published a reply to the work, his “Examen critique de la Vie de Jésus de M. Renan” (Paris, 1863), which was perhaps the best refutation of the theories expounded by the French free-thinkers. Pius IX, who was then making preparations for the Council of the Vatican, summoned the Abbé Freppel to Rome to assist in the work of drawing up the schema (drafts of decrees). The pope thus showed his appreciation of Freppel’s learning and accomplishments, and appointed him to the Bishopric of Angers, rendered vacant by the death of Mgr. Angebault. He received the episcopal consecration at Rome, 18 April, 1870. Later there was shown a disposition to elevate him to the metropolitan See of Chambéry; but he declined with the same modesty which, in 1885, caused him to implore those, who, with M. Jules Ferry, desired his elevation to the dignity of the cardinals, to discontinue their efforts on his behalf. Upon his return from Rome he proved himself, by his defence of his country, as good a patriot as at the council he had shown himself an able theologian.

In 1871, he accepted the candidature for one of the electoral divisions of Paris. He was defeated because of the ill will which the liberals had borne him since the council, at which, according to them, he had shown himself too ultramontane. In 1880, the electors of Finistère asked him to act as their representative; he was elected by a large majority to this position of trust. His first speech in the French Chamber was a vigorous protest against the expulsions of the Jesuits. For eleven years the bishop-deputy (évêque député) was the most attentively-heard orator in the Chamber, treating with equal authority the most diverse subjects, and such as would seem farthest removed from his ordinary studies. While he did not bring about the triumph of justice to the extent he desired, he defended it nobly though running violently counter to the prejudices of that assembly. He won even the esteem of his enemies, and M. Floquet was one day able to re-echo the plaudits not only of the Chamber but of the whole of France. His “Œuvres polémiques” and his “Œuvres oratoires” have been collected in seventeen volumes (Paris, 1869–88). Almost all the religious, political, and social questions which engaged men’s minds at that time are here treated. Amongst his numerous other writings should be mentioned his work on the French Revolution (Paris, 1889), and “Boisquet et l’éloquence sacrée au XVIIème siècle” (Paris, 1894).

**Frequent Communion.**—Without specifying how often the faithful should communicate, Christ simply bids us “Come hither and drink.” His Body and Blood warns us, if we do not do so, we shall not have life in us (John, vi, etc.). The fact, however, that His Body and Blood were to be received under the appearances of bread and wine, the ordinary daily food and drink of His hearers, would point to the frequent and even daily reception of the Sacrament. The manner, too, with which He compared “the bread which He would give”, was daily partaken of by the Israelites. Moreover, though the petition “give us this day our daily bread” does not primarily refer to the Eucharist, nevertheless it could not fail to lead men to believe that their souls, as well as their bodies, stand in need of daily nourishment. In this view, we shall deal with (I) the history of the frequency of Holy Communion, (II) the present practice as en joined by Pius X.

I. HISTORY.—In the early Church at Jerusalem the faithful received daily every day (Acts, ii, 40). Later on, however, we read that St. Paul remained at Troas for seven days, and it was only “on the first day of the week” that the faithful “assembled to break bread” (Acts, xx, 6–11; cf. I Cor., xvi, 2). According to the Didache the breaking of bread took place on the “Lord’s day” (κατὰ τὸ σάββατον, c. xiv). Flinn says that the Christians assembled “on a fixed day” (Ep. x); and St. Justin, “on the day called Sunday” (S. τοῦ τοῦ ἱδρύματος ἡμέρας, Apol., I, lvii, 3, 7). It is in Tertullian that we first read of the Liturgy being celebrated on any other day besides Sunday (De Orat., c. xix; De Corona, c. iii). Daily reception is mentioned by St. Cyprian (De Orat. Domini, c. xvii in P. L., IV, 531); St. Jerome (Ep. ad Damasum); St. John Chrysostom (Hom., iii in Eph.); St. Ambrose (in Ps. cxxviii, viii, 26, 28 in P. L., XV, 1461, 1462); and the author of the “De Sacramentis” (V, iv, 25; P. L., XVI, 459). It should be noted that in the early Church and in the patristic ages, the faithful communicated, or at any rate were expected to communicate, as often as the Holy Eucharist was celebrated (St. John Chryso stom, loc. cit.; Apostolic Canons, X; St. Gregory the Great, Dial. II, 23). They received even oftener, since it was the custom to carry away the Sacred Elements and communicate at home (St. Justin, loc. cit.; Tertullian, “Ad Uxorem”, II, v; Euseb., “Hist. Eccl.”, VI, xlvii). This was done especially by hermits, by dwellers in monasteries without priests, and by those who lived at a distance from any church. On the other hand, we find that practice fell far short of precept, and that various offerers were foredoomed by the Church to receiving the Holy Communion (see especially St. John Chrysostom, loc. cit.; and St. Ambrose, loc. cit.). St. Augustine sums up the matter thus: “Some receive the Body and Blood of the Lord every day; others on certain days; in some places there is no day on which the Sacrifice is not offered; in others on Saturday and Sunday only; in others on Sunday alone (Ep. liv in P. L., XXXIII, 200 sqq.)”. Whether it was advisable for the faithful, especially those living in matrimony, to receive daily was a question on which the Fathers were not agreed. St. Jerome is aware of this custom at Rome, but he says: “Of this I neither approve nor disapprove; let each man judge for himself. (Cf. Ep. cxviii in P. L., XXII, 505–6; Ep. lxxvi in P. L., XXII, 672). St. Augustine discusses the question at length, and comes to the conclusion, that there is much to be
said on both sides (Ep. liv in P. L., XXXIII, 200 seq.). Good Christians still communicated once a week, during the time of Charlemagne, but a breach of this custom came to an end. St. Bede bears witness to the Roman practice of communicating on Sundays and on the feasts of the Apostles and Martyrs, and laments the rarity of reception in England (Ep. ad Egb. in P. L., XCIV, 665).

Strange to say, it was in the Middle Ages, the Age of Faith, that Church Caen's most frequent than at any other period of the Church's history. The Fourth Lateran Council compelled the faithful, under pain of excommunication, to receive at least once a year (c. Omnis utrorum sexus). The Poor Clares, by rule, communicated six times a year; the Dominican friars, fifteen times; the Third Order of St. Dominic, four times. Even saints received rarely: St. Louis six times a year, St. Elizabeth only three times. The teaching of the great theologians, however, was all on the side of frequent, and to some extent daily, Communion (Peter Lombard, IV Sent., dist. xii, n. 8; St. Thomas, Summa Theol., III, Q. lxxx, a. 10; St. Bonaventure, In IV Sent., dist. xii, punct. ii, a. 2, q. 2; see Dalgarn, "The Holy Communion" (Dublin) part III, chap. i). Various reformers, Tauler, St. Catherine of Siena, St. Vincent Ferrer, and Savonarola, advocated, and in many instances established, the frequent reception. The Council of Trent expressed a wish "that at each Mass the faithful who are present, should communicate" (Sess. XXII, chap. vi). And the Catechism of the Council says: "Let not the faithful deem it enough to receive the Body of the Lord once a year only; but let them judge that Communion ought to be more frequent; but whether it be more expedient that it should be monthly, weekly, or daily, can be decided by no fixed universal rule" (pt. II, c. iv., n. 58). As might be expected, the disciples of St. Ignatius and St. Philip carried on the work of advocating frequent Communion. With the revival of this practice came the renewal of the discussion as to the advisability of daily Communion. While all in theory admitted that daily reception was good, they differed as to the conditions required.

The Congregation of the Council (1587) forbade any general restriction, and ordered that no one should be refused the Sacred Sacrament if he approached daily. In 1643, Arnauld's "Frequent Communion" appeared, in which he required, for worthy reception, severe penance for past sins and most pure love of God. The Congregation of the Council was once more appealed to, and decided (1679) that though universal daily Communion was advisable, it should be repelled, even if he approached daily; parish priests and confessors should decide how often, but they should take care that all scandal and irreverence should be avoided (see Denzinger, "Enchiridion", 10th ed., n. 11458). In 1890, Arnauld's conditions were condemned. In spite of these decisions, the reception of Communion with frequency and less frequent, owing to the spread of rigid Jansenistic opinions, and this rigour lasted almost into our own day. The elder and better tradition was, however, preserved by some writers and preachers, notably Fénelon and St. Alphonsus, and, with the spread of devotion to the Sacred Heart, it gradually became once more the rule. Difficulty, however, was raised regarding daily Communion. This practice, too, was warmly recommended by Pius IX and Leo XIII, and finally received official approval from Pius X.

II. PRACTICE.—(a) The rules for frequent and daily Communion, as laid down by the decree of the Congregation of the Council "Sacramentum Sacerdoti" (20 Dec., 1905). (1) "Frequent and daily Communion should be offered to all the faithful, of whatever rank and condition of life; so that no one who is in the state of grace, and who approaches the holy table with a right and devout intention, can be lawfully hindered therefrom." (2) "A right intention consists in this: that the person who approaches the Sacred Table do so, not out of routine, or vainglory, or human respect, but for the purpose of pleasing God, or being more closely united with Him by charity, and of seeking this Divine remedy for his weaknesses and defects." Rule 3 declares that "it is sufficient that they (the daily communicants) be free from mortal sin, with the purpose of never sinning in future," and Rule 4 enjoins that "care is to be taken that Holy Communion be preceded by serious preparation and followed by a suitable thanksgiving, according to each one's strength, circumstances, and duties." "Parish priests, confessors, and preachers are frequently and in great zeal to exhort the faithful to this devout and salutary practice" (Rule 6); two rules (7 and 8) refer to the daily Communion in religious communities and Catholic institutions of all kinds; and the last rule (9) forbids any further controversy on the subject.

(b) Acts and Decrees of Pius X on frequent and daily Communion.—For two years these decrees or pronouncements follow one another in the order indicated here.

30 May, 1905.—On the eve of the Eucharistic Congress in Rome, Pius X indulgenced the "Prayer for the diffusion of the pious custom of daily Communion," which was published and distributed on the last day of the Congress.

4 June, 1905.—The Holy Father, presiding at the closing of the Congress in Rome, said: "I beg and implore of you all to urge the faithful to approach that Divine Sacrament. And I speak especially to you, my dear sons in the priesthood, in order that Jesus, the treasure of all the treasures of Paradise, the greatest and most precious of all the possessions of our poor desolate humanity, may not be abandoned in a manner so insulting and so ungrateful."

The decree of 20 December, 1905, has already been summarized.

25 Feb., 1906.—To gain the plenary indulgence, granted to those who communicate five times weekly, it is not necessary to go to confession every week, every fortnight, or every month; even less frequent recurrence will do. No definite interval is given.

11 August, 1906.—The papal Brief "Romanorum Pontificum" grants indulgences and unusual privileges to the Sacramental League of the Eucharist, which has for its object the induction of the faithful to adopt the practice of daily or frequent Communion. By a singular favour, all confessors inscribed in this League are urged to exhort their penitents to receive daily, or almost daily, to obtain a plenary indulgence once a week.

15 Sept., 1906.—It was explained, on this date, that the decree of 20 Dec., 1905, applies not merely to adults and the youth of both sexes, but also to children so soon as they have received their first Communion in accordance with the rules of the Roman Catechism, that is to say, as soon as they manifest sufficient discretion.

7 Dec., 1906.—Sick persons bed-ridden for one month, without some hope of prompt recovery, may receive Holy Eucharist, even though they may have broken their fast after midnight, by drinking something, as, for instance, chocolate, tapiocas, semolina, or bread soup, which are drink in the sense of the decree. This may be repeated once or twice a week, if the Blessed Sacrament is kept in the house; otherwise, once or twice a month.

25 March, 1907.—The hierarchy are urged to secure that there be held each year, in the cathedral church, a special Triduum for the purpose of exhorting the people to practise frequent Communion. In parish churches one day will suffice. Indulgences are granted for these exercises.
FRESNEL

8 May, 1907.—A general permission is granted to give communion in private oratories to all who attend Mass, except as to Easter Communion and Viaticum.

14 July, 1907.—Brief again delegating Cardinal V. Vannutelli to the Eucharistic Congress at Metz, which was exclusively devoted to the consideration of the question of Holy Communion. The following is an extract from the Brief: "This [frequent Communion] in truth is the shortest way to secure the salvation of every individual man as well as that of society."

T. B. SCANNELL.

Fresnel, Augustin-Jean, physicist; b. at Broglie near Bernay, Normandy, 10 May, 1788; d. at Ville d'Avray, near Paris, 14 July, 1827.

His early progress in letters was slow, although he showed while still young an aptitude for physical science. In his seventeenth year he entered the Ecole Polytechnique in Paris where he attracted the attention of Legendre. After spending some time at the École des Ponts et Chaussées he was assigned to the engineering corps and served successively in the departments of Vendée, Drome, and Ille-et-Vilaine. He lost his appointment through politics on the return of Napoleon from Elba. In 1819 he was made a member of the Lighthouse Commission, becoming its secretary in 1824, and was an examiner at the Ecole Polytechnique from 1821 to 1824. Shortly afterward his health, which had never been robust, became so weakened that he was obliged to give up nearly all active work. He was unanimously elected a member of the Académie des Sciences in 1825, and in 1826 was made an associate of the London Royal Society, receiving its Rumford Medal on his death-bed.

Fresnel occupies a prominent place among the French physicists of the nineteenth century. His chosen field of research was optics, and in a series of brilliant memoirs he did much to place the wave theory upon a firm basis. He introduced with conspicuous success the conjecture of Hooke (1672) that the light vibrations are transverse. His first paper was on aberration, but it was never published. In connexion with his study of the theory and phenomena of diffraction and interference he devised his double mirrors and biprism, both of which are dependent on the properties of light and the nature of opaque obstacles. His article on diffraction won the prize of the Académie des Sciences in 1819. He extended the work of Huyghens and others on double refraction and devel-

opied the well-known theory which bears his name. With Arago he investigated the phenomena and formulated the laws of the interference of polarized light. He showed how to obtain and detect circularly polarized light by means of a thin prism. Among his more important contributions to optics may be found in Preston’s "Theory of Light" (New York, 1901), or Wood’s "Physical Optics" (New York, 1905). Fresnel gave a course of physics for some months at the Athènes in 1819, but otherwise had no academic connections apart from his association as examiner at the Ecole Polytechnique. Most of his researches were carried on in the leisure he could obtain from his professional duties. In applied optics mention should be made of his system of lenses developed during his connection with the lighthouse commission which has revolutionized lighthouse illumination throughout the world. Fresnel was a deeply religious man and remarkable for his keen sense of duty. A three-volume edition of his complete works was published in 1866.

Arago, Œuvres Complètes (Paris, 1854), i, 107-185; Verdet, Oeuvres Complètes d'Aug. Fresnel, introduction in vol. i (Paris, 1866); Hellier, Geschichte der Physik (Stuttgart, 1884), ii.

H. M. Brock.

Priar [from Lat. frater, through O. Fr. frère, frere, M. E. frie; It. frate (as prefix fra); Sp. fraile (as prefix fra)]; Port. frei; unlike the other Romance languages, French has but the one word frier for friar and brother, a member of one of the orders of the Holy Church. In the early Church it was usual for all Christians to address each other as frères, or brothers, all being children of the one Heavenly Father, through Christ. Later, with the rise and growth of the monastic orders, the appellation began gradually to have a more restricted meaning; for obviously the bonds of brotherhood were closer between those who lived under the rule and guidance of one spiritual father, their abbot.

The word occurs at an early date in English literature with the signification of brother, and from the end of the thirteenth century it is in frequent use referring to the members of the mendicant orders, e. g. c. 1297, "fære precers" (R. Glouc. 10105); c. 1325, "ferys of the Carme of and of Saint Austin" (Pol. Sangs, 331); c. 1400, "fere menouery" (Maund, xxxi, 139); c. 1400, "Sakked freres" (Rom. Rose). Shakespeare speaks of the "Friars of orders gray" (Tsm. Shr., iv, i, 148), and the word was applied by the English to both monastic and military orders, and at times to the convent of a particular order, and hence to the part of a town in which such a convent had been located.

The word friar is to be carefully distinguished in its application from the word monk. For the monk retirement and solitude are undisturbed by the public ministry, unless under exceptional circumstances. His vow of poverty binds him strictly as an individual, but in no way affects the right of tenure of his order. In the life of the friar, on the contrary, the exercise of the sacred ministry is an essential feature, for which the life of the cloister is considered as but an immediate preparation. His vow of poverty, too, not only binds him as an individual to the exercise of that virtue, but, originally at least, precluded also the right of tenure in common with his brethren. Thus originally the various orders of friars could possess no fixed revenues and lived upon the voluntary offerings of the faithful. Hence the distinction of the second feature, by which the friar's life differs so essentially from that of the monk, has become considerably modified since the Council of Trent. In Session XXV, ch. iii, "De Regular," all the mendicant orders—the Friars Minor and Capuchins alone excepted—were granted the liberty of corporate possession. The Discalced Carmelites and the Jesuits have availed themselves of this privilege with restrictions (cf. Weins, Jus Decretal., III, pt. II, 292, note). It may, however, be pertinently remarked here that the
Friars Minor, Order of. This subject may be conveniently considered under the following heads: I. General History of the Order; A. First Period (1209-1517); B. Second Period (1517-1609); II. The Reform Parties; A. First Period (1226-1607); B. Second Period (1517-1897); (1) The Discalced; (2) The Reformati; (3) The Recollects, including a survey of the history of Franciscans in the North, especially in Great Britain and Ireland (this is treated in a separate article); III. Statistics of the Order (1260-1909); IV. The Various Names of the Friars Minor; V. The Habit; VI. The Constitution of the Order; VII. General Sphere of the Order's Activity; VIII. The Teaching Activity of the Order; IX. Influence of the Order on the Liturgy and Religious Devotions; X. Franciscan Missions; XI. Cultivation of the Sciences; XII. Saints and Beati of the Order.

I. General History of the Order.—A. First Period (1209-1517).—Having gathered about twelve disciples around him, St. Francis of Assisi appeared before Innocent III, who, after some hesitation, gave verbal sanction to the Franciscan Rule. Thus was legally founded the Order of Friars Minor (Ordo Fratrum Minorum), the precise date being, according to an ancient tradition in the order, 16 April, 1229. His friars having rapidly increased in number and spread over various districts of Italy, St. Francis appointed, in 1217, provincial ministers (ministri provinciales), and sent his disciples farther afield. At the general chapter of 1219 these missions were renewed and other friars dispatched to the East, Hungary, to France, and to Spain. Francis himself visited Egypt and the East, but the innovations introduced during his absence by some of the friars caused his speedy return in 1220. In the same year he resigned the office of general of the order, which he entrusted first to Peter of Castaneo, on whose early death (10 March, 1224), he selected Elias of Cortona. Francis, however, retained a certain supreme direction of the order until his death on 3 October, 1226.

Elias of Cortona, as the vicar of Francis, summoned the regular Pentecost chapter for the following year, and on 29 May, 1227, Giovanni Parenti, a jurist, was chosen as first successor of St. Francis. Elias then minis ter-general. He has often been regarded as a native of Florence, but probably came from the neighbourhood of Rome. Gregory IX employed the new general on political missions at Florence and Rome, authorized the Minorites to lay out their own cemeteries (26 July, 1227), and charged them with supervision and maintenance of Franciscan and Poor Clares (1 December, 1227). In 1228 and the succeeding years, Elias of Cortona laboured zealously at the construction of a church to be dedicated to Francis Assisi, who was canonized by Gregory IX on 16 July, 1228. On the day following the pope himself laid the foundation stone of this church at Assisi, designed to receive the body of St. Francis, and he shortly afterwards
entrusted to Thomas of Celano the task of writing the biography of the saint, which he confirmed on 25 February, 1229. The translation of the saint’s body from the church of San Giorgio to the new basilica took place on 22 May, 1230, three days before the appointed time, and Elias of Cortona, publicly fearing the dangers which threatened his possession of the body, with the assistance of the civic authorities, and buried it in the church, where it was discovered in 1818. Elias was censured and punished for this action in the Bull of 16 June, 1230. The usual general chapter was held about the same date, and on 28 September, 1230, the Bull “Gaudete” Elias renewed his connexion with the monasticism of St. Francis and certain points in the Rule of 1223. Elias meanwhile devoted all his energy to the completion of the magnificent church (or rather double church) of S. Francesco, which stands on the slope of a hill in the western portion of Assisi, and of the adjacent monastery with its massive pillars and arcades. His election as general in 1232 gave him freer scope, and enabled him to realize the successful issue of his plans. As a politician, Elias certainly possessed genius. His character, however, was too ostentatious and worldly, and, though under his rule the order developed externally and its missions and studies were promoted, still in consequence of his absolutism, exercised now with haughty bearing and again through reckless visitors, there arose in the order an antagonism to his government, in which the Papal masters of theology and the German and English provincials had a large share. He had always been opposed to the order, and so the opposition, and the hitherto undefined rights and almost absolute authority of the general in matters of income and legislation for the order were considerably restricted. Elias was, however, now in his II (Hohenstaufen), was excommunicated in consequence, and died on 22 April, 1253. Albert of Pisa, who had previously been provincial of Germany and Hungary, was chosen at the chapter of 1239 to succeed Elias, but died shortly afterwards (23 January, 1240). On All Saints’ Day, 1240, the chapter again met and elected Haymo of Faversham, a learned and zealous English Franciscan, who had been sent by Gregory IX (1234) to Constantinople to promote the reunion of the Schismatic Greeks with the Apostolic See. Haymo, who, with Alexander of Hales had taken part in the mission against Elias, was zealous in the multiplication of the various houses of the order. He held the provincial Chapter of Saxonia at Aldenburg on 29 September, 1242, and, at the request of Gregory IX, revised the rubrics to the Roman Breviary and the Missal.

After Haymo’s death in 1244 the General Chapter of Genoa elected Crescenzio Grizzi of Jesi (1245–47) to succeed him. Crescenzio instituted an investigation of the life and miracles of St. Francis and other Minorites, and authorized Thomas of Celano to write the “Legenda secunda S. Francisici”, based on the information (Legenda trium Sociorum) supplied to the general by three companions of the saint (Thomas, Leo, Angelus, and Rufinus). From this period also dates the “Dialogus de Vitis Sanctorum Fratrum Minorum”. This general also opposed vigorously the separationist and particularistic tendencies of some seventy-two of the brothers. The town of Assisi asked for him as its bishop, but the request was not granted by Innocent IV, who, on 29 April, 1252, appointed him Bishop of Jesi, in the March of Ancona, his native town. John of Parma, who succeeded to the generalship (1247–57), belonged to the more rigorous party in the order. He was most diligent in visiting the various houses of the order. It was during this period that Thomas of Celano wrote his “Tractatus de Miraculis”. On 11 August, 1253, Clare of Assisi died, and was canonized by Alexander IV on 26 September, 1255. On 25 May, 1253, a month after the death of the excommunicated Elias, Innocent consecrated the upper church of S. Francesco. John of Parma unfortunately shared the apocalyptic views and fancies of the Joachimites, or followers of Joachim of Floria, who had many vortices in the order, and was consequently not a little compromised when Alexander IV (4 November, 1255) solemnly condemned the “Liber introductorius”, a collection of the writings of Joachim of Floria with an extravagant introduction, which had been published at Paris. This work has often been falsely ascribed to the general himself, being joined with that of the hermit Gerardo di Floria at S. Donnino, who thus furnished a very dangerous weapon against the order to the professors of the secular clergy, jealous of the success of the Minorites at the University of Paris. The chapter convened in the Ara Coeli monastery at Rome forced John of Parma to abdicate his office (1257), and, on his recommendation, chose as his successor St. Bonaventure from Bagnorea. John was then summoned to answer for his Joachimism before a court presided over by the new general and the cardinal-protector, and would have been condemned but for the letter of Cardinal Ottoboni, afterwards St. Bonaventure as the protector of the hermitage of Greccio, left it (1258) at the command of the pope to proceed to Greece, but died an aged, broken man at Camerino on 20 March, 1259.

St. Bonaventure (q. v.), a learned and zealous religious, devoted all his energy to the government of the order—being convinced that such a direction of the activities of the members of the order was essential to the Church and the cause of Christianity. The Spirituals accused Bonaventure of laxity; yet he laboured earnestly to secure the exact observance of the rule, and energetically denounced the abuses which had crept into the order, condemning them repeatedly in his encyclical letters. In accordance with the rule, he held a general chapter every three years: at Narbonne in 1260, at Pisa in 1263, at Paris in 1266, at Assisi in 1269, and at Lyons in 1274, on the occasion of the general council. He made most of the visitations to the different convents in person, and was a zealous preacher. Bonaventure (1260) promulgated the statutes of the order known as the “Constitutiones Narbonenses”, the letter and spirit of which exercised a deep and enduring influence on the Franciscan Order. Although the entire code did not remain long in force, many of the provisions were retained and served as a model for the later constitutions.

Even before the death of Bonaventure, during one of the sessions of the council (15 July, 1274), the Chapter of Lyons had chosen as his successor Jerome of Ascoli, who was expected by the council with the approval of the Spirituals, to make the Greek Church. He arrived, and the reunion of the churches was effected. Jerome was sent back by Innocent V as nuncio to Constantinople in May, 1276, but had only reached Ancona when the pope died (21 July, 1276). John XXII (1276–77) employed Jerome (October, 1276) and John of Vercelli, General of the Dominicans, as mediators in the war between Padua and Alfonso X of Castile. This embassy occupied both generals till March, 1279, although Jerome was preferred to the cardinalate on 12 March, 1278. When Jerome departed on the embassy to the Greeks, he had appointed Bonagrata of S. Giovanni in Persiceto to represent him at the General Chapter held at Padua in 1276. On 20 May, 1279, he convened the General Chapter of Assisi, at which Bonagrata was elected
general. Jerome later occupied the Chair of Peter as Nicholas IV (15 February, 1288—4 April, 1292). Bonapagis conducted a deputation from the chapter before Nicholas VIII, who was then staying at Avignon, and petitioned for a cardinal protector. The pope, who had himself been protector, appointed his nephew Matteo Orsini. The general also asked for a definition of the rule, which the pope, after personal consultation with cardinals and the theologians of the Curia, pronounced on 17 December, 1279. In this the order's complete renunciation of property in communi was again confirmed, and all property given to the brothers was vested in the Holy See, unless the donor wished to retain his title. All moneys were to be held in trust by the nunzi, or spiritual friends, for the friars, who could however receive it. The pope and the spiritual friends could take place only through procurators appointed by the pope, or by the cardinal-protector in his name.

The Bull of Martin IV "Ad fructuos uberae" (13 December, 1281) defined the relations of the mendicants to the secular clergy. The mendicant orders had long been exempt from the jurisdiction of the bishop, and enjoyed (as distinguished from the secular clergy) unrestricted freedom to preach and hear confessions in the churches connected with their monasteries. This had led to endless friction and open quarrels between the two divisions of the clergy, and, as the mendicants were strong in their Lanci de Paradisiac and de Paradisiac, the strife now broke out with increased violence, chiefly in France and in a particular manner at Paris. Boniface VIII adjusted their relations in the Bull "Super cathedram" of 18 February, 1300, granting the mendicants freedom to preach in their own churches and in public places, but not at the time when the prelate of the district was preaching. For the hearing of confessions, the mendicants were to submit suitable candidates to the bishop in office, and obtain his sanction. The faithful were left free in regard to funerals, but, should they take place in the church of a cloister, the priest of the cloister was to be given to the parish priest. Benedict XI abrogated this Bull, but Clement V reintroduced it (1312). Especially conspicuous among the later contentions over the privileges of the mendicants were those caused by John of Poliaco, a master of theology of Padua and the General Chapter of 1304, who was consecrated Bishop of Armagh (1349). In 1516 the Fifth Council of Lateran dealt with this question, which was definitively settled by the Council of Trent.

In the Bull "Exultantes" of 18 January, 1283, Martin IV instituted the syndici Apostolici. This was the name given to the men appointed by the masters and named in the constitutions to receive the alms given to the Franciscans, and to pay it out again at their request. The syndici consequently replaced the nunzi and procurators. All these regulations were necessary in consequence of the rule of poverty, the literal and unconditional observance of which was rendered impossible by the great expansion of the order, by its pursuit of learning, and the accumulated property of the large cloisters in the towns. The appointment of these trustees, however, was neither subserviae nor of an evasion of the rule, but rather the proper observance of its precepts under the altered conditions of the time. Under Bonapagis (1279—83) and his immediate successors Arlotto da Prato (1285—86), and Matthew of Acquaparta (1287—89), a learned theologian and philosopher who became cardinal in 1288 and rendered notable service to the Church, the Spiritual movement broke out in the Provins of Ancona, under the leadership of Pietro Giovanni Olivi, who, after the General Chapter of Trastabrug (1282), caused the order considerable trouble. The general, Raimondo Gaufredi (Geoffroy) of Provence (1289—93), favoured the Spirituals and denounced the lax interpretations of the Community, i.e. the majority of the order who opposed the minority, termed Spirituals or Zelanti. Raimonzo even ventured to revise the general constitutions at the General Chapter of 1292, when upon refusing the Bishopric of Padua offered him by Boniface VIII, he was compelled by the pope to resign his office. Giovanni Minio of Muravalle, in the March of Ancona, a master of theology, was elected general by the Chapter of Anagni (1294), and although created Cardinal-Bishop of Porto (Farnese) in 1300, he continued to govern the order until Gonsalvus of Valladolid (1304—13), Provincial of Santiago, Spain, was elected to succeed him by the Chapter of Assisi.

In his encyclical of 1302, Giovanni Minio had inculcated the rule of poverty, and forbidden both the accumulation of property and vested incomes. Gonsalvus followed the example of the friars of Paris, and the Chapter of Padua (1310) made the precept still more rigorous by enjoining the "simple use" (usu pauper) and withdrawing the right of voting at the chapter from convents which did not adopt it. The usu pauper had indeed been a source of contention from 1290, especially in Provence, where some denied that it was binding on the order. These discussions led to the Magna Disputatio at Avignon (1310—12), to which Clement V summoned the leaders of the Spirituals and of the Community or Relaxati. Clement laid the strife by his Bull and Decretal and the question was referred at the next session of the Council of Vienne, 5 May, 1312. The prescriptions contained in the Franciscan Rule were divided into those which bound under pain of mortal, and those which bound under pain of venial, sin. Those enjoining the renunciation of property and the adoption of poverty were retained: the Franciscans were entitled only to the usu (use) of the goods given to them, and wherever the rule prescribed it, only to the usu pauper or arca (simple use). All matters concerning the Franciscan habit, and the storehouses and cells allowed in cases of necessity, were referred to the discretion of the superiors of the order.

The Spirituals of Provence and Tuscany, however, were not yet placated. At the General Chapter of Barcelona (1313), a Parisian master of theology, Alexander of Alessandria (Lombardy), was chosen to succeed Gonsalvus, but died in October, 1314. The General Chapter of 1315 elected Michael of Cesena, a moderate Conventual. The commission appointed by this chapter altered the general statutes on several points (called the third revision), and Michael in an encyclical insisted upon the observance of the rule of poverty. The Spirituals immediately afterwards relinquished the property strife, but John XXII intimated and subsequently forbade all non-propositional customs by the Constitution "Quorumdam exiguit" (7 October, 1317), thus completely restoring the official unity of the order. In 1321, however, the so-called theoretical discussion on poverty broke out, the inquisitor, John of Bela, a Dominican, having taken exception to the statement that the Church and the Apostles possessed property neither in commun nor in special (i.e. neither in common nor individually). The ensuing strife degenerated into a fierce scholastic disputation between the Franciscans and the Dominicans, and, as the pope favoured the views of the latter, a very dangerous crisis seemed to threaten the Minorites. By the Constitution "Ad conditionem canonum" (8 December, 1322) John XXII renounced the title of the Church to all the possessions of the Friars Minor, and restored the ownership to the order. This action, contrary to the practice and expressed sentiments of his predecessors, placed the Minorites on exactly the same footing as the other orders, and was a harsh provision for an order which had laboured so untiringly in the interests of the Church. In many other ways, however, John fostered the order. It will thus be readily understood why the members inclined
to laxity joined the disaffected party, leaving but few advocates of John's regulations. To the dissenting party belonged Geradus Odonis (1329–42), the general, whose election at Ariccia in 1329 John had secured in the place of his powerful opponent Michael of Cesena. Odonis, however, was supported only by the minority of the order in his efforts to effect the abolition of the rule of poverty. The deposed general and his followers, the Michaelites (cf. FRATICELLI), were supported by the Generals of Chapter of Paris, and on the election of Godard Odonis to the Patriarchate of Antioch, Fortunato Vassalli was chosen general (1343–47).

Under Guillaume Farinier (1348–57) the Chapter of Marseilles resolved to revive the old statutes, a purpose which was realized in the general constitutions promulgated by the General Chapter of Assisi in 1354 ("Constitutiones Farineriae" or "Guilelimi"). This code was based on the "Constitutiones Narbonenses" (1260), and the Bulls "Exilt" and "Exivii", but the edicts of John XXII, being promulgated by the pope over the heads of the chapter, remained in force. The great majority of the friars accommodated themselves to these regulations and undertook the care and proprietorship of their goods, which they entrusted to "fratres procuratores" elected from among themselves. The protracted strife of the deposed general (Michael of Cesena) went on. The new pope, in which the general was supported with conspicuous learning by some of the leading members of the order and encouraged by the German Emperor Louis IV (the Bavarian), for reasons of secular and ecclesiastical policy, gave great and irresistible impulse to laxity in the order, and prejudiced the founder's ideal. It was John XXII who had introduced Conventualism in the later sense of the word, that is, community of goods, income and property as in other religious orders, in contradiction to Observantism or the strict observance of the rule, a movement now strong within the order, according to which the members were to hold no property in common in remission and remuneration of goods. The Bull "Ad conditorem", so significant in the history of the order, was only withdrawn 1 November, 1428, by Martin V.

Meanwhile the development of Conventualism had been fostered in many ways. In 1348 the Black Death devastated the towns and cloisters. The wealth of the order increased rapidly, and thousands of new brothers were admitted without sufficiently close examination into their eligibility. The liberality of the faithful was also, if not a source of danger for the Minorites, at least a constant incentive to depart to some extent from the rule of poverty. This liberality showed itself mainly in gifts of real property, for example in endowments for prayers for the dead, which were then usually founded with real estate. In the fourteenth century also began the land wars and feuds (e.g., the Hundred Years War in France), which relaxed every bond of discipline and good order. The current feelings of anarchic irresponsibility were also encouraged by the Great Western Schism, during which men quarrelled not only concerning obedience to the papacy, to which there were three claimants since the Council of Pisa, also concerning obedience to the general and the order, whose number tallied with the number of the popes.

GUILLAUME FARINIÉR was named cardinal in 1356, but continued to govern the order until the election of Jean Bouchier (de Buc) in 1357. John having died in 1358, Mark of Viterbo was chosen to succeed him (1359–66), it being deemed desirable to elect an Italian, the preceding four generals having been French. Mark was succeeded by the Fraticelli, who was unproven by the general and supported Clement VI during the schism. This action gave untrammled to Urban VI, his deputy to the papal Curia. His third successor, Enrico Alfieri (1367–73), took the title of cardinal and was therefore supported by the majority of the order. Indignant at this conduct, Gregory XII named Antonio da Cascia general (1410–15), a man of no great importance. With the election of Martin V (1417–23) as successor, unity was restored in the order, which was then in a state of the greatest confusion.

The Observance ("Regulari Observantia") had meanwhile prepared the ground for a regeneration of the order. At first no uniform movement, but varying in different lands, it was given a definite character by St. Bernardino of Siena (q.v.) and St. John Capistran (q.v.). In Italy as early as 1334, Giovanni de' Ville had begun at San Bartolomeo de Brugliano, near Fosocco, to live in exact accordance with the rule but without that exemption from the order, which was later forbidden by Clement VI in 1343. It is worthy of notice that Clement, in 1350, granted this exemption to the lay brother Gentile da Spoledo, a companion of Giovanni, but Gentile gathered together such a disorderly rabble, including some of the heretical Fraticelli, that the privilege was withdrawn (1354), he was expelled from the order (1355), and cast into the Marturan prison. Among the faithful and justly supported was Giovanni Vagnosi of Trinci, who was allowed by the general to return to Brugliano in 1368. As a protection against the snakes so numerous in the districts, wooden alporns (calepodia, soccoli) were worn by the brothers, and, as their use continued in the order, the Calepodio, or Calze, is worn over Europe, especially in the Tyrol and in Flanders. In 1373 Paoluccio's followers occupied ten small houses in Umbria, to which was soon added San Damiano at Assisi. They were supported by Gregory XI, and also, after some hesitation, by the superiors of the order. In 1388, Enrico Alfieri, the general, appointed Paoluccio commissary general of his followers, whom he allowed to be sent into all the districts of Italy as an incentive to the rest of the order. Paoluccio died on 17 September, 1390, and was succeeded by John of Stroncone (d. 1418). In 1414, this reform possessed thirty-four houses, to which the Forsimucia was added in 1514.

In the fourteenth century there were three Spanish provinces: that of Portugal (also called Santiago), that of Castile, and that of Aragon. Although houses of the reformers in which the rule was rigidly observed existed in each of these provinces about 1400, there is not apparent to have been a specific promotion of the reforms of each province—much less between these reforms and the Italian Observance—and consequently the part played by Peter of Villareces in Silos and Aguilera has been greatly exaggerated.

Independent also was the Reform or Observance in
France, which had its inception in 1358 (or more accurately in 1388) in the cloister at Mirabeau in the province of Touraine, and thence spread through Burgundy, Touraine. In 1407 Benedict XIII exempted them from all jurisdiction of the provincials, and on 13 May, 1408, gave them a vicar-general in the person of Thomas de Curte. In 1414 about two hundred of their number addressed a petition to the Council of Constance, which thereupon granted the three of the three vicars of the province a special provincial vicar in every province, and a vicar-general over all, Nicolas Rodolphe being the first to fill the last-mentioned office. Angelo Salvetti, general of the order (1421-24), viewed these changes with marked disfavour, but Martin V's protection prevented him from taking any steps to defeat their aims. In 1427 his successor, Antonio de Massa (1424-30), the ranks of the Observants increased rapidly in France and Spain in consequence of the exemption. The Italian branch, however, refused to avail themselves of any exemption from the usual superiors, the provincial and the general.

In Germany the Observance appeared about 1420 in the province of Cologne at the monastery of Goeda (1418), in the province of Saxon (1428); in the upper German province first at the Heidelberg monastery (1420). Cloisters of the Observants were founded in Bohemia, Slovakia, Hungary, and even in Tartary. In 1430 Martin V (1417-31) summoned the whole order, Observants and Conventuals, to the General Chapter of Assisi (1430), "in order that our desire for a general reform of the order may be fulfilled." William of Casale (1430-42) was elected general, but the intellectual leader of Assisi was St. John Capistran. The statutes promulgated by this chapter are called the "Constitutiones Martinianae" from the name of the pope. They cancelled the offices of general and provincial vicars of the Observants and introduced a scheme for the general reform of the order. All present at the chapter had bound themselves on oath to carry out its decisions, but six weeks later (27 July, 1430) the general was released from his oath and obtained from Martin V the Brief "Ad statum" (23 August, 1430), which allowed the Conventuals to hold property like all other religious houses - the modified Charter of the Conventuals, and henceforth any reform of the order on the lines of the rule was out of the question.

The strife between the Observants and the Conventuals now broke out with such increased fury that even St. John Capistran laboured for a division of the order, which was opposed by St. Bernardine of Siena. Additional bitterness was lent to the strife when in many instances princes and towns forcibly withdrew the ancient Franciscan monasteries from the Conventuals and turned them over to the Observants. In 1438 the general of the order named St. Bernardine of Siena, first Vicar-General of the Italian Observants, an office in which Bernardine was succeeded by St. John Capistran in 1441. At the General Chapter of Padua (1443), Albert Berdini of Sarteano (q.v.), an Observant, would have been chosen general in accordance with the papal wish had not his election been opposed by St. Bernardine. Antonio de Rusconibus (1443-50) was accordingly elected, and, until the separation in 1517, no Observant held the office of general. In 1443 Antonio appointed two vicars-general to direct the Observants — for the cismontane family (i.e. for Italy, the East, Austria-Hungary, and Poland) St. John Capistran, and for the ultramontane (all other countries, including afterwards America) Jean Pericoche of Maubert. By the so-called Separation Bull of Eugene IV, "Ut sacra ordinis minorum" (11 January, 1446), outlined by St. John Capistran, the office of the vicar-general of the Observants was declared permanent, and made practically independent of the minister general of the order, but the Observants might not hold a general chapter of their own, and the canonization in 1450 of Bernardine of Siena (d. 1444), the first saint of the Observants, John Capistran with the assistance of the zealous cardinal, Nicholas of Cusa (d. 1464), extended the Observance so greatly in Germany, that he could henceforth dispense with the attendance of the minister general of the order. At the Chapter of Barcelona, in 1451, the so-called "Statuta Barchinonensis" were promulgated. Though somewhat modified these continued in force for centuries in the ultramontane family.

The compromise essayed by St. James of the March in 1455 was inherently hopeless, although it granted to the vicars of the Observants active voting power on the general chapters. On this compromise was based the "Bulla concordis" of Callistus III (2 February, 1456), which Pius II withdrew (11 October, 1458). The Chapter of Perugia (1464) elected as general Francesco della Rovere (1464-69), who was elevated to the cardinalate in 1468, and in 1465 elected the pope under the title of Sixtus IV (1471-84). Sixtus granted various privileges to the Franciscans in his Bull "Mare magnum" (1474) and his "Bulla aures" (1479), but was rather more kindly disposed towards the Conventuals, to whom he had belonged. The generals Francesco da Bosco Nazari (1469-77) and Silvestro Sienese gave the sobriquet of Samson to signalize his victory in a disputation on the Immaculate Conception, and Egidio Delfini (1500-06) displayed a strong bias in favour of the reform of the Conventuals, Egidio using as his plea the so-called "Constitutiones Alexandrinae" sanctioned by Alexander VI in 1501. His zeal was far surpassed in Spain by that of the powerful Minorite, Francisco Ximenes de los Cisneros, who expelled from the cloisters all Conventuals opposed to the reform. At Paris, Delfini won the large house of studies to the side of the reformers. The Capitulum generalissimum at Rome in 1506 was expected to bring about the union of the various branches, but the proposed plan did not find acceptance, and the statutes, drawn up by the chapter and published in 1508 under the title "Statuta Iulii II", could not bridge the chasm separating the parties. After long deliberations the chapter under general Ottaviano Grasiano (1506-09), Philip of Bagnacavallo (1509-11), and Bernardino Prato da Chieri (1513-17), the last general of the united order, Leo X summoned on 11 July, 1516, a capitulum generalissimum to meet at Rome on the feast of Pentecost (31 May, 1517). This chapter first suppressed the observant family, took all the reforming regulations and annexed them to the Observants; declared the Observants an independent order, the true Order of St. Francis, and separated them completely from the Conventuals. The General of the Observants received the title of Minister Generalis totius ordinis Fratrum Minorum, with or without the addition regulares Observantes and was entrusted with the ancient seal of the order. His period of office was limited to six years, and he was to be chosen alternately from the familia cismontana and the familia ultramontana—a regulation which has not been observed. For the other family a Constitution generalis is always elected. In processes, etc., the Observants take precedence of the Conventuals.

B. Second Period (1513-1909).—Christoforo Numai of Friuli was elected first General of the Reformed Order of Franciscans (Ordo Fratrum Minorum), but was raised a month later to the cardinalate. Francesco Piccolomini (1518-20) was chosen as his successor. The Chapter of Lyons (1518), where the deliberations centred around the necessary rearrangement of the order in provinces and the promulgation of new general constitutions, which were based on the statutes of Barcelona (1451, cf. supra). Lichetto and his
successors—Paul of Siena (1520–23), who died in 1523, and Francisco de Angelis Quinones (1523–28), a Spaniard, diligently devoted themselves to establishing the Observance on a firm basis. Quinones was named minister in 1528, and later to Ippolito Pisotti (1529–33), unfortunately disregarding the ideal of his predecessors and failing entirely to grasp the significance of the reforms afoot at the time (for example that of the Capuchins), was deposed in 1533. In 1547 the General Chapter of Barcelona (1545), Clemente Dolera of Monegagia, the general in office, promulgated new statutes for the cismontane family. On the preferment of Clemente to the cathedrals in 1557, France, supported now by the emperor and the Catholic princes, they advanced to regain their old position and to found new cloisters, from which they could minister to their flocks. To bring into subjection the four rather lax French provinces which were known as the Provincie confederate and were therefore inclined to shelter themselves behind the government, the general, Bernardine of Sena (Portugal, 1625–33), obtained from Urban VIII the Bull of 1 October, 1625. The French, indeed, justified the pontiff's confidence and assiduously the general of the order was always chosen from Italy or from Spain. The privilege usurped by the Spanish kings of exerting a certain influence in the election of the general, indeed securing that the general should be alternately a Spaniard and an Italian (but one from the Crown lands of Spain), was in contradiction to all Francisian statutes and laws. The Spanish generals, furthermore, residing usually at Madrid, instead of at Rome, and of the higher officers of the order—Spaniards—an anomalous situation which aroused great resentment amongst the friars of other nations, especially France and in Italy, and continued until 1834. This introduction of national politics into the government of the order proved as noxious to the interests of the Friar Minor as the established churches of the eighteenth century did to the cause of Christianity.

Generals Juan Merinero of Madrid (1655–45), Giovanni Mazza of Naples (1645–48), and Pedro Manero (1653–51) tried without success to give definite statutes to the cismontane family, while the "Constitutiones Sambrenses"; drawn up by General Michele Buongiorno of Sambucus (1586–94) at the order of the general, did not receive the approval of the Council of Trent. Ippolito Salizanes (1564–70) and Francesco Maria Rhiini (1670–74) were both raised to the episcopate. José Ximenes Samaniego (1676–82) zealously eradicated abuses which had crept into the order, especially in Spain and France, and died as Bishop of Seville in Spain (1680); Ippolito Basima (1717–16) and José García (1717–23) were appointed by papal Briefs. The next general was the famous Lorenzo Cozza (1723–27) who, as Custos of the Holy Land, had obviated a schism of the Maronites. He was created cardinal by Benedict XIII. At the Chapter of Milan in 1727, and subsequently at the council of Brussels (1729–36), and during his period of office had the statutes of the order collected, rearranged, and then published in 1734. Raffaele de Rossi (1744–50) gave the province (otherwise known as the custody) of the Holy Land its definitive constitution. From 1700 to 1722 no general chapter could be held in consequence of the continuous state of union of the French and the other provinces, and other dissensions. These disputes made their appearance even in the order itself, and were fanned to a flame by the rivalry between the nations and between the different reform branches, the most heated contention being between the Observants and the Reformati. The domestic discipline of the order thus became very slack in certain districts, although the personnel of the Friars Minor was at this time unusually high. Benedict XIII vainly endeavoured in 1727 to cement a union between the various branches (Observants, Reformati, Recollects, and Discalced). The general chapter of 1730, at which Benedict XIV presided and warmly praised the order, elected Pedro Joannelto of Molina (1750–56)—the only Discalced who has been general. Clemente Guignoni of Palermo followed (1756–62), and then Joannelto was elected general for the second time (1762–68), this occurrence proving that the absolute union of the Observants and the Discalced, Paschale Froconzi (1768–91) of Milan tried in vain on several occasions to hold a general chapter. During his long period of office, the Spaniards endeavoured to break away from the order (1774), and the evil effects of Gallicanism and Febronianism were being already universally felt. Kings supported now and then the many of the cloisters or forbidding intercourse with Rome. In 1766 Louis XV established in France the Commission des Réguliers, which, presided over by Cardinal de Brienne and conducted with the greatest perfidy, brought about in 1771 a union between the Conventuals and the French Observants. Forming three provinces with eighty monasteries, while the latter had seven provinces and 287 monasteries. The French Observants, however, were always somewhat inclined towards laxity, particularly in regard to the rule of poverty, and had obtained in 1673 and 1746 a papal Brief, which allowed them to retain real estate and vested incomes. The French Revolution brought about the annihilation of the order in France.

In Bavaria (1769) and many other German principalities, spiritual and secular, the order was suppressed, but nowhere more thoroughly than in the Austrian and Belgian states of Joseph II and the King of the Two Sicilies (1788) then ruled by Ferdinand IV. On the death of Paschale (1791) Pius VI appointed as general a Spaniard, Joachim Comparsa (1792–1806). In 1804, the Spanish Franciscans, effecting with the
assistance of the King of Spain, their complete separation from the order, although the semblance of unity was still retained by the provision of Pius VII, that the general should be chosen alternately from the Spanish and the Austrian branches of the General Chapter. In the term of office, the other division of the order should be governed by an autonomous vicar-general. During 1793 and 1794 the order was extinct in France and Belgium; and from 1803 in most districts in Germany; from 1775 on, it was sadly reduced in Austria, and also in Italy; hence the general presidency of Austria, and consequently the devastation of the order and the confusion consequent on it were deplorable. The generals appointed by the pope, Ilario Cervelli (1806–14), Gaudenzio Patrignani (1814–17), Cirillo Almeda y Bres (1817–24), and Giovanni Tecca of Capistrano (1824–30), ruled over the fraction of the order, even though prospects were somewhat brighter about this period. In 1827, Tecca published the statutes which had been drawn up in 1768. Under the Spanish general, Luis Iglesias (1830–34), the formal separation of Spanish Franciscans from the main body of the order was completed (1832), but in 1833 most of their monasteries were destroyed in the provinces of Fuerta (Thuringia) and Cassel, and in the United States since 1875, was elected general. He also devoted himself to the complete establishment of the union, and prepared the way for the general reunion of the Spanish Franciscans with the order. At the General Chapter (or more correctly speaking, the congregation media) of Assisi in 1845, the order celebrated the seventh centenary of its glorious foundation.

At present (1909) the Order of Friars Minor includes among its members: (1) two cardinals: José Sebastião Neto, Patriarch of Lisbon; created in 1883 (resigned in 1907); Gregorio Aguirre y Garita, Archbishop of Burgos, created in 1907; (2) six archbishops, including Monsignor Diomede Falconio, Apostolic Delegate to the United States since 1907; (3) thirty-two bishops and one prelate nullius (of Santarem in Brazil); (4) three prefects Apostolic.

II. THE REFORM PARTIES.—A. First Period (1226–1517).—All Franciscan reforms outside of the Observants were ordered to be suppressed by papal decree in 1506, and again in 1517, but not with complete success. The Clareni are dealt with under ANGELO CLARINO DA CINGOLI; the Fraticelli and Spirituals under their respective headings. The Spirituali and their followers of Caesar of Speyer (q.v.) (c. 1230–37), never existed as a separate congregation. The Amadeans were founded by Pedro João Mendes (also called Amadeus), a Portuguese nobleman, who laboured in Lombardy. When he died, in 1482, his congregation had twenty-eight houses but was afterwards suppressed by Pius V. The Caporolani, founded also in Lombardy by the renowned preacher Pietro Capero I (q.v.), returned in 1480 to the ranks of the Observants. The Spiritual followers of Anthony of Castelgiovanni and Matthias of Tivoli flourished during the period 1470–1490; some of their ideas resembled those of the Spirituals in the provinces of France and England, and were immediately repressed by the authorities. Among the reforms in Spain were that of Pedro de Villalrecos (1420) and the sect called della Capucciosa of Felipe Berbegal (1430), suppressed in 1434. More important was the reform of Juan de la Puebla (1480), whose pupil Juan de Guadalupe increased the severity of the reform. His adherents were known as Guadalupeenses, Discaled, Capuciani, or Fratres de S. Evangelio, and to them belonged Juan Zumarraga, the first Bishop of Mexico (1530–48), and St. Peter of Aleintara (d. 1562, cf. below). The Neutrales were wavering Conventuals in Italy who accepted the Observance only in appearance. Founded in 1463, they were suppressed in 1467. This middle position between the Observants and Conventuals was also taken by the Martinianists, or Martinians, and the

Franciscan scholars, and other learned works. On the retirement of Bernardino in 1889, Luigi Canali of Parma was elected general (1889–97) and prepared the way for the union of the four regular branches of the order.
Reformati (Observants) sub ministerio de Communitate. These took as their basis the decrees of the Chapter of Assist (1430), but wished to live under provincial management. They settled mostly in the Low Countries, France, and in the latter country were called Coletani, for what reason it is not quite clear (cf. Colette, Saint). To this party belonged Boniface of Ceva, a sturdy opponent of the separation of the Conventuals from the Observants.

B. Second Period (1517-1587).—Even within the pale of the Regular Observants, which constituted from 1517 the main body of the order, there existed plenty of room for various interpretations without prejudicing the rule itself, although the debatable area had been considerably restricted by the definition of its fundamental requirements and prescriptions. The Franciscan Order as such has never evaded the main principles of the rule, has never had them abrogated or been dispensed from them by the pope. The reforms since 1517, therefore, have neither been in any sense a return to the rule, since the Order of Friars Minor has never deviated from it, nor have they been a protest against a universal lax interpretation of the rule on the part of the order, as was that of the Observants against the Conventuals. The later reforms may be more truly described as repeated attempts to draw nearer to the exalted ideal of St. Francis. Frequently, it is true, these reforms dealt only with externals—oversights of piety and a virtue in the daily life, etc., and these were in many cases gradually recast, mitigated, had even entirely disappeared, and by 1597 nothing was left but the name. The Capuchins are treated in a separate article; the other leading reforms within the Observance are the Discalced, the Reformed Conventuals. The Observants are designated by the simple addition of regularis observantiae, while these reformed branches add to the general title strictioris observantiae, that is, "of the stricter Observance".

1. The Discalced.—Juan de la Puebla has been incorrectly regarded as the founder of the Discalced Friars Minor, since the province of the Holy Angels (de los Angeles), composed of his followers, has ever remained a province of the Observants. The Discalced owe their origin rather to Juan de Guadalupe (cf. above). He belonged indeed to the reform of Juan de Puebla, but not for long, as he failed to obtain permission from Alexander VI, in 1496, to found a hermitage with six brothers in the district of Granada, to wear the Franciscan habit in its original form, and to preach wherever he wished. These privileges were renewed in 1499, but the Spanish kings, influenced by the Observants of the province, obtained their withdrawal and prohibited them from beginning, and papal Brief in 1503, annulled in 1507, while in 1515 these friars were able to establish the custody of Estremadura. The union of 1517 again put an end to their separate existence, but in 1520 the province of St. Gabriel was formed from this custody, and as early as 1523 the houses of the Discalced friars in Portugal constituted the province de la Pietade. The dogged pertinacity of Juan Pasqual, who belonged now to the Observants and now to the Conventuals, according to the facilities afforded him to pursue the ideas of the old Egyptian hermits, withstood every attempt at repression. After much difficulty he obtained a papal Brief in 1541, authorizing him to collect companions, upon he founded the custody of Sts. Simon and Jude, or custody of the Paschalites (abolished in 1583), and a custody of St. Joseph. The Paschalites won a strong champion in St. Peter of Aleatnara, the minister of the province of St. Gabriel, who in 1557 joined the Conventuals. As successor of Juan Pasqual and Commissary General of the Reformed Conventual Friars in Spain, Peter founded the poor and diminutive hermitage of Pedrosino in Spain, and in 1559 raised the custody of St. Joseph to the dignity of a province. He forbade even sandals to be worn on the feet, prescribed complete abstinence from meat, prohibited libraries, in all of which measures he far exceeded the provisions of St. Francis. Of the province derived from him is derived the name Aleatnara, which is often given to the Discalced Friars Minor. Peter died in October, 1562, at a house of the Observants, with whom all the Spanish reforms had entered into union in the preceding spring. The province of St. Joseph, however, did not rest until it had redeveloped all its old peculiarities. In 1572 the members were first called in papal documents Discalceati or Excalceati, and in 1578 they were named Fratres Capucini de Observantia. Soon other provinces followed their example, and in 1604 the Discalced friars petitioned for a vicar-general, a definitor general, and a general chapter of the Order as such, which had never evaded the main principles of the rule, has never had them abrogated or been dispensed from them by the pope. The reforms since 1517, therefore, have neither been in any sense a return to the rule, since the Order of Friars Minor has never deviated from it, nor have they been a protest against a universal lax interpretation of the rule on the part of the order, as was that of the Observants against the Conventuals. The later reforms may be more truly described as repeated attempts to draw nearer to the exalted ideal of St. Francis. Frequently, it is true, these reforms dealt only with externals—oversights of piety and a virtue in the daily life, etc., and these were in many cases gradually recast, mitigated, had even entirely disappeared, and by 1597 nothing was left but the name. The Capuchins are treated in a separate article; the other leading reforms within the Observance are the Discalced, the Reformed Conventuals. The Observants are designated by the simple addition of regularis observantiae, while these reformed branches add to the general title strictioris observantiae, that is, "of the stricter Observance".

2. The Reformed.—The proceedings of the general Picotti against the houses of the Italian Recollects led some of the friars of the Stricter Observants under the leadership of Francis of Jesi and Bernardine of Asti to approach Clement VII, who by the Bull "In suprema" (1532) authorized them to go completely barefoot and granted them a separate custody under the title of Conventuals. In 1535 the members joined the Capuchins in 1535. The Reformed were ecclesiastically regular, but in the week, secured themselves frequently, and recited daily, in addition to the universally prescribed choir-service, the Office of the Dead, the Office of the Blessed Virgin, the Seven Penitential Psalms, etc., which far exceeded the Rule of St. Francis, and could only be maintained in some houses. By the Bull of Gregory XIII in 1678 they were united with the Observants. In the same year (1759), however, the general, Gonzaga, obtained the suppression of the Order, and the new Constitutions promulgated by Bonaventure of Castiglione, general in 1595, ensured their union and the observance of the order. Although Clement VIII approved these constitutions in 1595, it did not deter him, in 1596, from reissuing Gregory XIII's Brief of 1579, and granting the Reformed their own procurator. In 1621, Gregory XV not only confirmed this concession, but gave the Reformation their own vicar-general, general chapter, and definitors general. Fortunately for the order, these concessions were revoked in 1624 by Urban VII, who, however, by his Bull "Innumeris", 1625, restored all the privileges of the Reformation in Italy and Poland to the dignity of provinces. In 1642 the Reformed drew up their own constitutions; these were naturally composed in Italian, since Italy was always the home of this branch of the Friars Minor. In 1620 Antonio Arrigoni a
Gallicia was sent by the Reformati into Bavaria, and, despite the opposition of the local Observants, succeeded in 1625 in uniting into one province of the Reformati the monasteries of the Archduchy of Bavaria, which belonged to the Upper German (Strasbourg) province, and those of the Lower, which belonged to the ciamontane family. Arrigoni also introduced in 1628 the reform into the province of St. Leopold in the Tyrol, into Austria in 1632, and into Bohemia in 1600, and succeeded in winning these countries entirely over to his branch, Carinthia following in 1638. After many years of work, the two Polish custodys were raised to the status of provinces of the Reformati in 1639. In the course of time, the proximity of houses of the Reformati and the Observants gave rise to unedifying contentions and rivalry, especially in Italy. Among the heroic figures of the Reformati, St. Paschius of San Severino calls for special mention. St. Benedict of San Filidefo cannot be reckoned among the Reformati, as he died in a retreat of the Recollects; nor should St. Leonhard of Port Maurice, who belonged rather to the so-called Riformata, introduced into the Roman Province in 1617, and Bonaventure of Pessac in 1633, be forgotten. The principal house of the Riformata was that of St. Bonaventura on the Palatine. St. Leonhard founded two similar monasteries in Tuscany, one of which was that of Incontro near Florence. These were to serve as places of religious recollection and spiritual refreshment for priests engaged in mission-work among the people. The Descalced, or Remnant Reformati ceased to have a separate existence in 1897.

(3) The Recollects (Recollecti).—(a) The foundation of "recolletion-houses" in France, where they were badly needed even by the Observants, was perhaps due to Spanish influence. After the bloody religious wars, which exercised an devastating effect on the life of the cloister, one house of this description was founded at Cluys in 1570, but was soon discontinued. The general of the order, Gonzaga, undertook the establishment of such houses, but it was Franz Dosiek, a former Capuchin, who first set them on a firm basis. He was the first custos of these houses, among which that of Rabastein was the most conspicuous. Italian Reformati had meanwhile been invited to Nevers, but had to retire owing to the antipathy of the population. In 1595 Bonaventure of Caltagirone, as general of the order, published special statutes for such houses. However, the interference of the Government, which favoured the reforming party, the houses obtained in 1601 the appointment of a special commissary Apostolic. The members were called the Recollects—since Riformato was the name given by the French to the Calvinists—and also the Cordeliers, the ancient name for both the Observants and the Conventuals. As regards the interpretation of the rule, there were rather important differences between the Cordelier-Observants and the Recollects, the interpretation of the latter being much stricter. From 1606 the Recollects had their own provinces, amongst them being that of St. Denis (Dionysius) which had been in residence in France since 1635. The mission work was divided between both branches. In 1642 they were sent to Canada in the missions in Canada and Mozambique. They were also the chaplains in the French army and won renown as preachers. The French kings, beginning with Henry IV, honoured and esteemed them, but kept them in too close dependence from the throne. Thus the notorious Confraternité des Réguliers (1771) was formed in 1771, to make the Recollects to remain in France without amalgamating with the Conventuals. At this period the Recollects had 11 provinces with 2534 cloisters, but all were suppressed by the Revolution (1791).

(b) Recollection-houses are, strictly speaking, those monasteries to which friars desirous of devoting themselves to prayer and penance can withdraw to consecrate their lives to spiritual recollection. From the very inception of the order the so-called hermitages for which St. Francis made special provision served for this object. These always existed in the order and were naturally the first cloisters of which reformers sought to obtain possession. This policy was followed by the Spanish Descalced, for example in the province of St. Antonio in Portugal (1590). The Recollects endeavoured (1581) to make themselves masters of the recollection-houses of the province of Tarragona, where their purpose was defeated by Angelo de Pas (1581), and of the province of Catalonia (1622). As Bouchier had in 1522 prescribed the institution of these houses in every province of the Observants, they were found everywhere, and from them issued the Capuchins, the Reformati, and the Recollects. The specific nature of these convents was opposed to their inclusion in any province, since even the care of souls tended to defeat their main object of seclusion and sequestration from the world. The general chapter of 1670 ordained the foundation of three or four such convents in every province—a prescription which was repeated in 1758. The ritiri, or a house in which one lives in retirement, introduced into the Roman Province of the Observants towards the end of the 18th century, were also of this class, and even to-day such houses are to be found among Franciscan monasteries.

(c) The Recollects of the so-called German-Belgian nation have nothing in common with any of the above-mentioned reforms. The province of St. Joseph in the Flanders was only one of the many scattered recollection-houses (1629). In 1517 the old Saxon province (Saxonia), embracing over 100 monasteries, was divided into the Saxon province of the Observants (Saxonia S. Crucis) and the Saxon province of the Conventuals (Saxonia S. Johannis Baptiste). The province of Cologne (Colonia) and the Upper German or Strasbourg (Argentina) province were also similarly divided between the Observants and the Conventuals. The proposed erection of a Thuringian province (Thuringia) had to be relinquished in consequence of the outbreak of the Reformation. The Saxon province was subsequently reduced to the single monastery of Halberstadt, which contained in 1628 but one priest. The province of Cologne then took over the Saxon province, whereupon both took on a rapid and vigorous growth, and the foundation of the Thuringian Province (Pulsa) became possible in 1635. In 1782 the last-named province was divided into the Upper and Lower Thuringian provinces. In 1621 the Cologne province had adopted the statutes of the recollection-houses for all its monasteries, although it was not until 1646 that the friars adopted the name Recollects. This example was followed by the other provinces of this "nation," and in 1682 this evolution in Germany, Belgium, Holland, England, and Ireland, of which belonged to this nation, was completed without any essential changes in the Franciscan rule of life. The Recollects preserved in general very strict discipline. The charge is often unjustly brought against them that they have produced no saints, but this is true only of canonised saints. That there have been numbers amongst the friars of this branch of the Franciscan Order is certain, although they have never been distinguished by canonisation—a fact due partly to the sceptical and fervourless character of the population amongst which they lived and partly to the strict discipline of the order, which forbade and repressed all that singles out for attention the individual friar.

The German-Belgian nation had a special commissary general, and from 1705 a general procurator at Rome, who represented also the Descalced. They also frequently maintained a special agent at Rome. When Benedict XIII sanctioned their national statutes in 1729, he demanded the relinquishment of the name of Recollects and certain minor peculiarities in their habit, but in 1731 the Recollects obtained from
Clement XII the withdrawal of these injunctions. In consequence of the effects of the French Revolution on Germany and the Imperial Delegates' Enactment (1803), the province of Cologne was completely suppressed and the Thurings (Fulda) reduced to two monasteries. The Bavarian and Saxon provinces afterwards developed rapidly, and their cloisters, in spite of the Kulturkampf, which drove most of the Prussian Franciscans to America, where rich harvests awaited their labours, bore such fruit that the Saxon province (whose cloisters are, however, mostly situated in Saxony and Westphalia), although it had founded three new provinces in North America and Brazil, and the custody of Silesia was separated from it in 1902, is still numerically the strongest province of the order, with 615 members. In 1894 the custody of Fulda was elevated to the rank of a province. The Belgian province was re-erected in 1844, after the Dutch had been already some time in existence. The separate existence of the Recollects also ceased in 1897.

Great Britain and Ireland.—The Franciscans came to England for the first time in 1224 under Blessed Francis of Paola, but numbers of Englishmen had already entered the order. By their strict and cheerful devotion to their rule, the first Franciscans became conspicuous figures in the religious life of the country, developed rapidly their order, and enjoyed the highest prestige at court, among the nobility, and among the people. Without relaxing in any way the same order of their province, the Franciscans devoted themselves zealously to study, especially at Oxford, where the renowned Robert Grossteoste displayed towards them a fatherly interest, and where they attained the highest reputation as teachers of philosophy and theology. Their establishments in London and Oxford date from 1224. As early as 1230 the Franciscan houses of Ireland were united into a separate province. In 1272, the English province had 7 custodies, the Irish 5. In 1282, the former (Provincia Angliae) had 58 convents, the latter (Provincia Hiberniae) 57. In 1316 the 7 English custodies still contained 58 convents, while in Ireland the custodies were reduced to 4 and the convents to 30. In 1340, the number of custodies and houses in Ireland were 5 and 32 respectively; about 1385, 5 and 31. In 1340 and 1385, there were still 7 custodies in England; in 1340 the number of monasteries had fallen to 52, but rose to 60 by 1385. Under Elias of Ochrid (1369-1389) Scotland (Scotia), was separated from England and raised to the dignity of a province, but in 1239 it was again annexed to the English province. When again separated in 1329, Scotland received with its six cloisters only the title of vicaria. At the request of James I of Scotland, the first Observants from the province of Cologne came to the country about 1447, under the leadership of Cornelius von Zirksee, and founded seven houses. About 1482 the Observants settled in England and founded their first convent at Greenwich. It was the Observants who opposed most courageously the Reformation in England, where they suffered the loss of all their provinces. The great number of their houses were situated on the Continent at Louvain, Rome, Prague, etc., where fearless missionaries and eminent scholars were trained and the province was re-established in spite of the inhuman oppression of the government of England. By the decision of the general chapter of 1635, the division of the friars was carried on from Douai, where the English Franciscans had a convent, but in 1629 it was entrusted to the general of the order. The first chapter assembled at Brussels on 1 December, 1630. John Gennings was chosen first provincial, but the then bruit sent proposal to re-establish the Scottish convents could not be realized. The new province in England, which, like the Irish, belonged to the Recollects, gave many glorious and intrepid martyrs to the order and the Church. In 1838, the English province contained only 9 friars, and on its dissolution in 1840, the Belgian Recollects began the foundation of new houses in England and one at Killarney in Ireland. On 15 August, 1807, the English houses were declared an independent custody on the foundation of the newly created province of the order. At the present day (1900) the English province comprises in England and Scotland 11 convents, with 145 friars, their 11 parishes containing some 40,000 Catholics; the Irish province comprises 15 convents with 139 brothers. (Cfr. H. II. Statutum Ordinis Fratrum Minorum [1538-1900].)

The Order of St. Francis spread with a rapidity unexpected as it was unprecedented. At the general chapter of 1221, where for the last time all members without distinction could appear, 3000 friars were present. The order still continued its rapid development, and Elias of Cortona (1222-29) divided it into 72 provinces. On the removal of Elias the number was fixed at 32; by 1274 it had risen to 34, and it remained stable during the fourteenth and fifteenth centuries. To this period belongs the institution of the vicaria, which, with the exception of that of Scotland, has survived to this day. It has been often stated that about 1300 the Franciscans numbered 200,000, but this is certainly an exaggeration. Although it is not possible to arrive at the exact figure, there can scarcely have been more than 60,000 to 90,000 friars at this period. In 1282 the cloisters were about 210 in number. By 1317 the 84 fraticolli were reckoned at 197 communities, 1400 convents; in 1340, 211 custodies and 1422 convents; in 1384, 254 custodies and 1639 convents. The Observants completely altered the form of the order. In 1455 they alone numbered over 20,000; in 1493, over 22,400 with more than 1200 convents. At the division of the order, in 1337, they formed the great majority of the friars, numbering 30,000 with some 1300 houses. In 1520 the Conventuals were reckoned at 20,000 to 25,000. The division brought about a complete alteration in the strength and the territories of the various provinces. In 1517 the Conventuals still retained the 34 provinces as before, but many of them were enfeebled and attenuated. The Observants, on the other hand, founded 26 new provinces in 1517, retaining in some cases the old names, in other cases dividing the old territory into several provinces.

The Reformation and the missionary activity of the Missionaries of the Most Holy Francis in the New World soon necessitated wide changes in the distribution, number, and extent, of the provinces. The confusion was soon increased by the inauguration of the three great reformed branches, the Discalced, the Reformati, and the Recollects, and, as these, while remaining under the one general, formed separate provinces, the number of provinces increased enormously. They were often situated in the same geographical or political districts, and were, except in the Northern lands, telescoped into one another in a most bewildering manner—a condition aggravated in the South (especially in Italy and Spain) by an insatiable desire to be all the province. The French Revolution (1789-95), with its ensuing wars and other disturbances, made great changes in the conformity of the order by the suppression of a number of provinces, and further changes were due to the secularization and suppression of monasteries which went on during the nineteenth century. The union of 1897 still further reduced the number of provinces, by amalgamating all the convents of the same district into one province.

The whole order is now divided into twelve circumscriptions, each of which embraces several provinces, districts, or countries. (1) The first circumscription includes Rome, Umbria, the March of Ancona, and Bologna, and contains 4 provinces of the order, 112 convents, and 1443 friars. (2) The second embraces...
Tuscany and Northern Italy and contains 8 provinces, 138 convents, and 2038 religious. (3) The third comprises Southern Italy and Naples (except Calabria), with 6 provinces, 145 convents, and 1063 religious. (4) The fourth includes Sicily, Calabria, and Malta, and has 7 provinces, 85 convents, and 1045 religious. (5) The fifth embraces the Tyrol, Carinthia, Dalmatia, Boemia, Albania, and the Holy Land, with 9 provinces, 282 convents, and 1792 religious. (6) The sixth comprises Vienna, Hungary, Transylvania, and Moldavia, with 7 provinces, 100 convents, and 1458 friars. (7) The seventh, which is numerically the strongest, includes Germany, Holland, and Belgium, with 7 provinces, 129 convents, and 2553 members. (8) The eighth comprises France, Corsica, Great Britain, and Canada, with 7 provinces, 65 convents, and 9 provinces, and 180 religious. (9) To this is joined the Portuguese and Northern Spanish with 5 provinces, 39 convents, and 1124 religious. (10) The tenth embraces Southern Spain and the Philippines, with 4 provinces, 48 houses, and 910 religious. (11) The eleventh includes Central and South America, with 12 provinces, 97 convents, and 1298 members. (12) The twelfth comprises Mexico and the United States, with 7 provinces (including the Polish commissariate at Pulaski, Wisconsin), 167 convents, and 1195 religious.

The total figures for the Order are consequently (4 October, 1968), 81 provinces, 1413 convents and 16,893 friars. In 1905 the total number of friars was 16,842 and their convents 1373. For the second last decade of the nineteenth century the lowest figures are recorded, the figures announced at the general chapter of 1888 being: Observants 6228, Reformati 5735, Recollects 1621, Discalced 858—that is a total of 14,440 Franciscans. Only the Recollects had increased since 1862 may be seen from the figures for that year: Observants 10,200, Reformati 9889, Recollects and Discalced together 1813—a total of 21,902 Minorites. The year 1705 gives the highest figures—about 77,000 in 167 provinces. In 1762, the Observants had 57 provinces, 2330 convents, and 39,900 members; the Reformati 19,000 members with 37 provinces and 800 convents; the Recollects 11,000 members, 490 convents, 22 provinces; the Discalced 7000 members, 430 convents, 20 provinces. Total, 76,900 Minorites, 4590 cloisters, 106 provinces. In 1700 the total was: 25,440 provinces, 38200 convents, and 146200, representing 60,000 Minorites, 3420 convents, and 151 provinces.

IV. The Various Names of the Friars Minor.—The official name, Fratres Minores (Ordo Fratrum Minorum) (O.F.M.), or Friars Minor, was variously translated into the popular speech of the Middle Ages. In the northern provinces, Minores Minoris were commonly known as "the Grey Friars" from the colour of their habit. This name corresponded to the Gråbrødre of Denmark and Scandinavia. In Germany they were usually known as the Baarfuesser (Baarfuessen, Barrozun, Bareoten, Barfussen, etc.), that is, "Barefooted" (wearing only sandals). In France they were simply called the Cordeliers from their rope-girdle (corde, cordelle) but were also known as the Frires Menours (from Fratres Minores). After the fifteenth century the term Cordeliers was applied to both the Conventuals and the Observants, but more seldom to the Recollects (Recollects). Their popular name in Italy was the Frati Minori, or simply the Frati. The Observants were long known in that country as the Zoccolanti, from their foot-wear.

V. The Habit.—The habit has been gradually changed in colour and certain other details. Its colour, which was at first grey or a medium brown, is now a dark brown. In 1507, in France, a short and sleeveless gown, is confined about the loins by a white cord, from which is hung, since the fifteenth century, the Saraphic rosary with its seven decades (see CAWN, FRANCISCAN). A long or short under-habit of the same or a different colour and trousers are also worn. Shoes are forbidden by the rule, and may be worn only in case of necessity; for these sandals are subordinated, and the feet are washed in Holy water over the shoulders hangs the cowl, quite separate from the habit, and under it is the shoulder-cap or molesetta, which is round in front and terminates in a point at the back. The Franciscans wear no head-dress, and have the great tomsure, so that only about three fingers breadth of hair remains, that rest of the scalp being shaved. In winter they wear about their necks between the cowl and the habit the round mantle which almost reaches the knees.

VI. The Constitution of the Order (see Francis, Rule of St.).—During the lifetime of St. Francis of Assisi, everything was directed and inward by his transcriptions. The constitution of offices was not defined, and consequently the constitution was at first juridically speaking, absolute. From 1239, that is after the experiences of the order under Elias of Cortona, the order gradually developed a monarchical constitution. The chapter of definers for the whole order (thirteenth century), the chapter of custodies in each province, the discrètus sent by the subordinate convents to the provincial chapter, etc. are institutions which have long ceased to exist. To the past also belongs the custody in the sense of a union of several convents within a province. To-day provincials, whose privileges are determined by the constitution of the province which has not yet been canonically erected.

The present constitution is as follows: The whole order is directed by the minister general, elected by the provincial ministers at the general chapter, which meets every twelve years. At first his term of office was indefinite, that is, it was for life; in 1517 it was fixed at six years; in 1571, at eight; in 1587, again at six; and finally the twelve-year period of office was settled on by Pius IX in 1862. The general resides at the Collegio S. Antonio, Via Merulana, Rome. The order is divided into provinces (that is, associations of the convents in one country or district) which prescribe and define the sphere of activity of the various friars within their sphere of jurisdiction. Several provinces together form a circumscription, of which there are twelve in the order. Each circumscription sends one definitor general, taken in turn from each province, to Rome as one of the councilors to the minister general. These definitors form a chapter for six years at the general chapter and at the congregatio intermedia (also called frequently, by an abuse of the term, a general chapter), summoned by the general six years after his election. The general chapter and the congregatio intermedia may be con-vened by the general, if the same number of the order are governed by the provincials (ministri provinciales), who are elected every three years at the Provincial chapter and constitute the general chapter. Their term of office, like that of the general, was at first undefined; from 1517 to 1547 it was three years; from 1547 to 1571, six years; from 1571 to 1587, four years; since 1587, three years. While in office, the provincial holds every year (or every year and a half) the intermediate chapter (capitulum intermedium), at which the heads of all the convents of the province are chosen for a year or a year and a half. The local superiors of houses (conventus) which contain at least six religious, are called guardians (earliers gardiens); otherwise they receive the title praeses or superior. The provincial has to visit his own province and watch over the observance of the rule; the general has to visit the whole order, either personally or by means of visitors specially appointed by him (visitatores provinciales). The infirm, the cross-bearers, the fathers of the exempt community (Padres), i.e., the regular priests, the clerics studying for the priesthood (fratres clericis) and the lay brothers engaged in the regular service of the house (fratres laici). Newly received candidates must first
make a year's novitiate in a convent specially intended for this end. Convents, which serve certain definite purposes are called colleges (collegia). These must either be connected with the Seraphic colleges, which are to be found in modern times in most of the provinces, and are devoted to the instruction of youthful candidates in the humanities, as a preparation for the novitiate, where the students first receive the habit of the order. No friar, convent, or even the order itself can possess any real property. (Cf. Francis, Rule of St.)

The duties of the individual fathers vary, according as they hold offices in the order, or are engaged as lectors (professors) of the different sciences, as preachers, in giving missions, or in other occupations within or, with the permission of the superiors, without the order. The cardinal-proctor, introduced in the order by St. Francis himself, exercises the office and rights of a protector at the Roman Curia, but has no power over the order itself.

VII. General Sphere of the Order's Activity.

As a religious order in the service of the Catholic Church, and under her care and protection, the Franciscans were, according to the express wish of their founder, not only to devote themselves to their own personal sanctification, but also to make their apostolate fruitful of salvation to the people in the world.

That the former of these objects has been fulfilled is clearly shown by the work of the friars. Numerous friars have been canonized and beatified, and their names are known to the world. They have laid down their lives for the Faith in Europe and elsewhere under the heathen and heretic.

Like all human institutions, the order at times fell below its first perfection. Such a multitude of men, with their human infirmities and ever-changing duties, could not perfectly translate into action the exalted ideals of St. Francis, as the more supernatural and sublime the idea, the ruder is their collision with reality and the more allowance must be made for the fallible man. That is an inspiration of the most fundamental glorious idea of their founder has ever distinguished the order is patent from the reforms ever arising in its midst, and especially from the history of the Observance, inaugurated and established in the face of such seemingly overwhelming odds. The order, established to be the band of the Lord's men and the Franciscans have in every age discharged the spiritual offices of confessor and preacher in the palaces of sovereigns and in the huts of the poor. Under popes, emperors, and kings they have served as ambassadors and mediators. One hundred have already been nominated to the Sacred College of Cardinals by the number of seventy-two, appointed patriarchs, archbishops, and bishops, is at least 3,000. The popes elected from the Observants are: Nicholas IV (1288–92); Alexander V (1409–10). Sixtus IV (1471–84) was a Conventual of the period before the division of the order. Sixtus V (1585–90) and Clement XIV (1770–74) were chosen from the Conventuals after the division. The popes have often employed the Minorites as legates and nuncios, e.g. to pave the way for and carry through the reunion of the Greeks, Tatars, Armenians, Maronites, and other schismatics of the East. Many Minorites have been appointed grand penitentiaries, that is, directors of the papal penitentiaries, and still serve in Rome as Apostolic penitentiaries and as confessors to the pope himself or in the principal basilicas of the city. Thus the Observants are in charge of the Lateran Basilica in Rome. As inquisitors against heresy, the Franciscans were in the immediate service of the Apostolic See.

Observing a mutual rule of poverty and renunciation of the world than all other orders, the Franciscans exercised during the Middle Ages a most salutary social influence over the enslaved and unprivileged classes of the population. The constant model of a practical poverty was at once consoling and elevating. The friars directed their exertions towards the maintenance of the very poor cannot be indicated in rows of figures, nor can their similar contributions of to-day. They also exerted a wide social influence through their third order (see Third Order). They tended the lepers, especially in Germany; the constantly recurring pests and epidemics found them ever at the forefront. Millions of people sacrificed their lives in the service of the plague-stricken populace. They erected infirmaries and foundling-hospitals. The Observants performed most meritorious social work especially in Italy by the institution of *montes pietatis* (monit de Pieta), in the fifteenth century. A curious in this work being Bl. Bernardino of Feltre (q.v.) the renowned preacher. In England they fought with Simon de Montfort for the liberty of the people and the ideal of universal brotherhood, which St. Francis had inculcated in sermon and verse, and to their influence may be partly attributed the spread of popular government in Italy and elsewhere in Europe.

VIII. The Preaching Activity of the Order.

St. Francis exercised great influence through his preaching, and his example has been zealously followed by his order throughout the centuries with conspicuous success, evident not only in popular applause but in the profound effects produced on the lives of the people. At first all the friars were allowed to deliver simple exhortations and, with the permission of St. Francis, dogmatic and penitential sermons. This privilege was restricted in 1221, and still further in 1225, after which year only specially trained and tested friars were allowed to preach. The Franciscans have always been eminently popular preachers, e.g. Berthold of Ratisbon (q.v.), a German, who died in 1272; St. Anthony of Padua (d. 1231); Gilbert of Tournai (d. about 1280); Eudeis Rigaud, Archbishop of Rouen (d. 1275); Leo Valvassori of Perego, afterwards Bishop of Como (d. 1272); John of Jesi (d. about 1270); Conrad of Saxony (or of Brunswick) (d. 1279); Louis, the so-called Greccius (c. 1300); Haymo of Faversham (d. 1244); Ralph of Ross (c. 1250). The acme of Franciscan preaching was reached by the Observants in the fifteenth century, especially in Italy and Germany. Of the many illustrious preachers, it will be sufficient to mention Bl. Bernardino of Siena (d. 1444); St. John Capistran (d. 1456); St. James of the March (d. 1476); Bl. Albert Berdin of Sarteano (d. 1450); Anthony of Rimiini (d. 1450); Michael of Carceno (Milan) (d. 1485); Bl. Paci- ficus of Ceredano (d. 1482); Bl. Bernardino of Feltre (d. 1494); Benedict of Fiesole who has the title of Carletti di Chiavasso (d. 1495); Andrew of Faenza (d. 1507). In Germany we find: John of Minden (d. 1413); Henry of Werl (d. 1463); John of Werden (d. 1437), author of the renowned collection of sermons "Dormi secure"; John Brugman (d. 1473); Dietrich Coelde of Münster (d. 1513); Johann Kannemeyn (d. about 1470), a preacher on the Passion; Johann Kannegieser, "the trumpet of Truth" (d. about 1500); Johann Gritsch (d. about 1410); Johann Mader; Johann Paufl (d. about 1530), whose work "Schimpf und Ernst" was long a favourite among the German people; Heinrich Kastner; Stephan Fridolin (d. 1498). In Hungary: a Piarist, who is next in Europe. In Poland: Bl. Simon of Lipnica (d. 1482); Bl. John of Dukla (d. 1484); Bl. Ladislaus of Gielnow (d. 1505) In France: Olivier Maillard (d. 1502); Michel Minor
FRIARS

(d. about 1522); Thomas surnamed Illyricus (d. 1529); Jean Tisserand (d. 1494); Etienne Brulefer (d. about 1507). The following illustrious Spanish theologians and preachers of the sixteenth century were Friars Minor: Alphonse de Castro (d. 1585); Didacus de Estella (d. 1575); Luis de Carvajal (d. about 1560); Juan de la Visera (d. 1617); St. Peter of Alcantara (d. 1562). Renowned Italian Franciscans were: Francesco Panigarola (d. 1594); Bartholomew of Salutrich (d. about 1630); St. Leonard of Port Maurice (d. 1751); Bl. Leopold of Gaiches (d. 1815); Luigi Parmentieri of Casovia (d. 1885); Luigi Arrigoni (d. 1875), Archbishop of Lucca, etc. Other well-known Franciscans were: Gregorio Maria of Verona (seventeenth century), Zacharie Laselve etc.; and of the Germans mention may be made of Heinrich Sedulius (d. 1621), Fortunatus Hueber (d. 1706) and Franz Ampflerle (d. 1646). Even to-day the Friars Minor have amongst their number number many illustrious preachers, especially in Italy.

IX. INFLUENCE OF THE ORDER ON THE LITURGY AND RELIGIOUS DEVOTIONS.—St. Francis prescribed for his order the abridged Breviary then reserved for the Roman Curia. As this and the Missal were revised by the general, Haymo of Faveresham, at the command of Gregory IX, and these liturgical books have by degrees been altered, the influence of Nicholas III (1277-80), been universally prescribed or adopted, the order in this alone has exercised a great influence. The Breviary of General Quiniones (1523-28) enjoyed a much shorter vogue. To the Franciscan Order the Church is also indebted for the feasts of the Visitation of the B. V. M. (2 July), the Espousals of the B. V. M. (22 now 23 January), the Holy Name of Jesus, and to some extent for the feast of St. Joseph (19 March) and that of the Blessed Trinity. The activity of the Franciscans in promoting devotion to the Immaculate Conception, since Scotus (d. 1308) defended this doctrine, is well known. St. Francis himself laboured earnestly to promote the adoration of Our Lord in the Blessed Eucharist, and Cherubino of Spoleto founded a sodality to accompany the Blessed Sacrament to the houses of the sick. In 1697 Leo X111 declared Paschal Baylon (d. 1692) patron of Eucharistic Leagues. The Christmas crib was introduced and popularised by the order (see Crib) to which—especially to St. Leonadro of Port Maurice (d. 1751)—is also due the spreading of the devotion known as ‘the Stations of the Cross’. The ringing of the Angelus morning, noon, and evening, was also inaugurated by the Franciscans, especially by Bonaventure and Bl. Benedict of Assisi (d. about 1256).

X. FRANCISCAN MISSIONS.—St. Francis devoted himself to missionary labours from 1219 to 1221, and devoted in his rule a special chapter (xii) to missions. In every part of the world, the Franciscans have laboured with the greatest devotion, self-sacrifice, enthusiasm and success, even though, as the result of persecutions and wars, the result of their toil has not always been permanent. The four friars sent to Morocco in 1219 under Berard of Carbio (q. v.) were martyred in 1220. Electus soon shared their fate, and in 1227 Daniel with six companions was put to death at Ceuta. The bishops of Morocco were mostly Franciscans or Dominicans. In 1420 the Observants founded a convent at Ceuta, and here St. John of Prado died at the stake in 1632. This mission was entrusted to the province of S. Diego in 1641, and to the province of Santiago (Galicia, Spain) in 1890, after it had constituted a prefecture Apostolic in 1859. In Oman, Libya, Tunibar, and throughout Egypt, Franciscans have laboured since the thirteenth century, and signalised their exertions by a glorious array of martyrs in 1288, 1345, 1358, 1370, 1373, etc. This mission was under the jurisdiction of that in the Holy Land. In 1688 Upper Egypt was separated, and became in 1697 an independent prefecture Apostolic. Lower Egypt continued its connexion with the Holy Land until 1839, when both (with Aden, which was again separated in 1889) were formed into a vicariate Apostolic, in which state they still remain. In Lower Egypt there are now sixteen monasteries, controlling parishes and schools. In Upper Egypt, from which the Copts were separated in 1892, are eight monasteries with parishes connected.

In 1630 the Congregation of Propaganda sent Fathers Mark of Scalvo and Edward of Bergamo to Tripoli, and in 1643 appointed Paschal Canto, a Frenchman, Prefect Apostolic of Barbary—an office which still exists. The activity of this Order in these countries, is not so much directed to the conversion of Mohammedans as to the support and help of the Catholic settlers. Abyssinia (Ethiopia, Habech) was first visited by John of Montecorvino (c. 1280). Later, Bl. Thomas of Florence was sent thither by Albert of Sarteano, and Sixtus IV, after the other missions had failed, sent Girolamo Tornelli. Many missionaries were put to death, and in 1687 a special prefecture was instituted for the conversion of the Copts. This was re-established in 1815, and in 1835 a special hierarchy was erected for the same object. In 1700 Fathers Scarpaccia undertook the foundation of a new mission in Egypt, and in 1718 three missionaries were stoned to death.

The two Genoese ships which circumnavigated Africa in 1291 had two Minorites on board. Others accompanied Vaseo da Gama. In 1446 the Franciscans visited Cape Verde where Roget, a Frenchman, zealously preached the Gospel. In 1493 they reached Guinea, of which Alphonso of Bolano was named prefect Apostolic in 1472. They proceeded to the Congo, where they baptized a king. In 1500 they went to Mozambique under Alvarez of Coimbra. The French Recollects laboured here during the seventeenth century, but since 1808 the Portuguese Franciscans have had charge of the mission. At the beginning of the sixteenth century Friars Minor settled in Melinda and on the island of Socotra near Aden. In 1245 John of Plano Carpini (Plano di Carpino) was sent by Innocent IV to the Great Khan in Tatarsy, and penetrated thence into Mongolia. By order of Louis IX William of Rubruck (Rubruquis) proceeded thence through Armenia and Central Asia to Karakorum. The accounts of the travels of the last-mentioned two intrepid missionaries enjoy a well-earned historical and geographical renown. In 1279 Nicholas III sent five Franciscans to China, among them, the Venetian, Giovanni Marignola of Florence following them in 1342. In 1370 William of Prato was sent as archbishop to Peking with twenty minorite-friars. The appearance of the Ming dynasty in 1368 brought about the ruin of all the missions. On 21 June, 1579, Franciscans from the Philippines penetrated Japan moreover, but the founder of the new mission in China was Antonio de S. Maria (d. 1669), who was sent to China in 1633, and later laboured in Cochin-China and Korea. China was also visited in 1661 by Bonaventura Ibañez (d. 1691) with eight friars. Henceforward Franciscan missions to China were constant. In 1684 came the Italian fathers under the
A few words may here be devoted to those Friars Minor who stood forth as fearless defenders of the Faith in the Northern countries during the Reformation period. The Franciscans and Dominicans supplied the greatest number and the most illustrious champions of the Church, many of whom were martyred, persecuted to the utmost, or cast out into the deserts of God, and others so forcibly opposed to temptation or persecution and deserted their order and their Faith. As in the case of the scholars, artists, missionaries, and holy men of the order, only a few names can be mentioned here. Among the hundreds of names from Great Britain may be cited: John Huby, martyr at London, burned at the stake in 1538; Geoffrey Jones (d. 1508); Thomas Bullaker (d. 1642); Henry Heath (d. 1643); Arthur Bell (d. 1643); Walter Colman (d. 1645), whose heroism culminated in every case in death. Similarly in Ireland we find Patrick O'Hely (d. 1578); Cornelius O'Devany (d. 1612); Boetius Egan (d. 1650), etc. Among the most distinguished Danish defenders of the Faith is Nikolaus Herborn (Ferber), mockingly called "Stageyer" (d. 1536); in France, Christophe de Cheffontaines (d. 1595) and Francois Feuardent; in Germany Thomas Murner (d. 1537), Augustin von Alfeld (d. 1532), Johannes Ferus (Wild) (d. 1534), Konrad Kling (d. 1536), Johann von der Wolf von Hamma (d. 1549) founded d. 1540), Kaspar Schatzgery (d. 1527), Johann Las (d. 1590), etc. Between 1520 and 1650 more than 500 minorities laid down their lives for the Church.

On the Black and Caspian Seas the Franciscans instituted missions about 1270. The following Franciscans laboured in that part of the world: Marco Polo (d. 1310) of Venice; Peter Ofuriga in 1247; Thomas Ofentino in 1240. King Haiyo (Aoyo) II of Lesser Armenia, and Jean de Breienne, Emperor of Constantinople, both entered the Franciscan Order. Franciscans were in Persia about 1280, and again after 1469. About 60 Franciscans went through Asia and Russia to rouse popular sentiment against the Turks. The Franciscans were in Further India by 1500, and toiled among the natives, the St. Thomas Christians, and the Portuguese, who made over to them the mosque of Goa seized in 1510. The order had colleges and schools in India long before the arrival of the Jesuits, who first came under the Franciscan Archbishop of Goa, Joao Albuquerque (1537-53).

Since 1219 the Franciscans have maintained a mission in the Holy Land, where, after untold labours and turmoil and at the expense of hundreds of lives, we have, except for a short period, recovered the holy places dear to Christians. Here they built houses for the reception of pilgrims, to whom they gave protection and shelter. Friars from every country compose the so-called custody of the Holy Land, whose work in the past, interrupted by unceasing persecutions and massacres, constitutes a bloody but glorious page in the history of the order. In the territory of the Patriarchate of Jerusalem, re instituted in 1847, the Franciscans have 24 convents and 15 parishes; in Syria (the Prefecture Apostolic of Aleppo), to which also belong Phoenicia and Armonia, the Franciscans laboured most successfully in this district. In Prussia (now the Provinces of West and East Prussia), Livonia, and Courland (where the Minorite-Albert was Bishop of Marienwerder (1260-90) and founded the town of Reisenburg), as well as in Lapland, the inhabitants of which were still heathens, the Franciscans put an end to the labours of the Friars Minor. The special labours of the Friars in Denmark, Sweden, and Norway, which formed the province of Denmark (Dania, Dacia), and the provinces of England, Scotland, and to some extent those of Holland and Germany, were also overthrown. After the year 1530, the Franciscans could work in these lands only at the cost of many labours. In the same century they laboured there from the fifteenth to the eighteenth century and still continue to a certain extent.
tire the Franciscans worked earnestly to reconcile the schismatics with Rome. Nicholas IV, himself a Franciscan, sent missionaries of the order to Servia in 1298, and another mission (without Friar Bartholomew, Bishop of Trau (Tragori)) in 1389. Bajazet I destroyed almost all these missions, while those which were re-established in 1402 fell into the hands of the Turks, who definitely took possession of Servia in 1502. In 1464 the courageous Franciscan Angelus Zojedadovici, obtained from Mohammed II a charter of indulgence for all Catholics and also made by the Franciscan missions in Bulgaria, Wallachia, Moldavia, and Podolia. In Black Russia Nikolaus Melasz of Croana with twenty-five friars began a mission about 1370, Moldavia being visited about the same time by Anthony of Spatolo (and later by Fabian of Bachi and James of the March), but their work was interrupted in 1460 by the Turks, who in 1476 cast 40,000 Christians from these districts into prison. Boniface IX transferred the episcopal see to Baku, Benedict XIV to Smolny. At the beginning of the seventeenth century Bishop Bernardino Quirino of Amiata, the Prefect of Bohemia, and separated in 1897. The former now occupies seven convents, while the latter has seven churches and houses. In 1599, the convents of the Albanian mission were erected into a province, which, on 9 October, 1832, was divided into five prefectures Apostolicus (Epirus, Macedonia, Servia, Vlachia, and Kastoria), which are almost entirely worked by Franciscans, and were on 31 January, 1898, placed by the general, Aloisius Lauer, under a comissary general, with the authority of a provincial. In Bosnia and Herzegovina, which was separated from the Bosnian province in 1847 and elevated to the rank of a province in 1902, the Franciscans were the first missionaries and pastors, and these countries are still almost entirely under the spiritual guidance of the order, practically all the bishops having been Franciscans. When it was proposed in 1886 to erect a see at Antivari in Montenegro, Simon Milinković of the Franciscan Order was designated by the Archbishop of Antivari and Primate of Servia. In Montenegro the Friars Minor administer ten of the eleven parishes.

According to the statistics of 4 October, 1907, the present condition of the Franciscan missions, which are distributed over the five continents, is as follows: Total number of Friars Minor, 4,083, including 2,553 priests, 620 clerics, 1,306 lay brothers, and 138 novices. These are assisted in their work by 12,572 Franciscan sisters, chiefly members of the Third Order of St. Francis.

XI. CULTIVATION OF THE SCIENCES.—The order has always devoted itself diligently to the cultivation of sciences, and, although St. Francis is to be numbered rather amongst the divinely enlightened than among the academically trained, he was neither a declared enemy nor a despairer of learning. To qualify themselves for the tasks assigned in ever-increasing numbers to the rapidly spreading order—which was rapidly but rich and poor, was employed by popes and kings on missions of every description, and was to labour for the social betterment of every section of the community—the Franciscans were early compelled to take advantage of every possible source of scientific culture, and, within thirty or forty years after their establishment, had advanced in the sciences so far as the Dominicans the most prominent place in the revival of learning. This place has been retained for centuries with distinction and brilliancy, especially in the domain of theology and philosophy. A list of Franciscan scholars and their works would fill volumes, while many of their writings have exercised an abiding influence in the realm of modern thought on the religious life of the people, and on the whole human race. Mention may be made of only a few of the eminent dogmatic and moral theologians, philosophers, writers on ethics, historians, linguists, philologists, artists, poets, musicians, geographers, etc., whom the order has produced. Formerly Franciscans lectured in many universities, e.g. Paris, Salamanca, Bologna, Paris, Cologne, Toulouse, Alcalá, Salamanca, Erfurt, Vienna, Heidelberg, Fulda. We may here mention: Alexander of Hales (d. 1245); John of Rupeilla (La Rochelle) (d. 1245); Adam of Marsh (Marisco) (d. 1298); John Pecham, Archbishop of Canterbury (d. 1292); Cardinal Matthew of Aquasparta (d. 1302); Johannes Guallenus (John of Wales) (d. about 1300); Richard of Middleton (de Mediavilla) (d. about 1305); John Duns Scotus (d. 1308), the most subtle of all Scholastics; William of Occam (d. 1349); William Verrillon (Vorlongue) (d. 1464); Nicolas d’Orbellis (d. 1465); Benedictus (d. about 1418); Hugues de Montfort (d. about 140). The most influential exegete of the Middle Ages; David of Augsburg, mystic (d. 1272) Armanus of Asti (c. 1317), author of the famous “Summa Casuum”, called the “Artesana”; Nicholas of Osimo (d. about 1450); Franciscus of Cerezeno (d. 1492), author of the “Summa Pacis”; Benoît of Shiringen; author of the “Baptistiniani”, also called the “Rosella”; Angelo Carletti di Chivasso (d. 1485), author of the “Summa Angelica”; Dietrich (Theodore) Coelde (d. 1515), author of the “Christenspiegel”; Francesco Libetti (d. 1520); Francois Feuardent (d. 1612), controversialist and exegete; Lucas Wadding (d. 1658); Florence Conry (d. 1629); Anthony Hickey (Hyquesus) (d. 1641); Pierre Marchant (d. 1661); William Herinex (d. 1678); Friedrich Stummel (d. 1682); Patritius Sporer (d. 1683); Benjamin Ebelt (d. 1759); Anseletus Reiffenstuel (d. 1703); De Gubernatis (d. about 1689); Alva y Astorga (d. 1667); Jean Ponce (d. 1660); Bonaventure Dnoey (d. 1653); Jean de la Haye (d. 1661); Lorenzo Cozza (d. 1729); Amandus Hermann (d. 1700); Claude Fransen (d. 1711); Francois Assermet (d. 1730); Jerome of Montesortino (d. about 1740); Luca Ferrari (d. about 1750); Giovanni Antonio Biasi (d. 1752); Isidore del Pincherli (d. 1736); Benedetto Boccelli (d. 1772); Kiliyan Kaesinger (d. about 1729); Vigilius Greiderer (d. 1780); Polychronius Gasmann (d. about 1830); Herculus Oberrauch (d. 1808); Ireneo Affo (d. 1797); Sanctiano Cimaroreto (d. 1847); Adalbert Waelbel (d. 1852); Chiaro Vascott (d. 1860); Gabriele Tonini (d. about 1870); Antonio Maria di Vicenza (d. 1894); Melchior Stanislaus of Cerreta (d. 1871); Petrus von Holz (d. 1902 as Bishop of Augsburg); Bernard van Loo (d. 1885); Eidelis a Fanna (d. 1881); Ignatius Jelier (d. 1704); Marcello da Civessa (d. 1906).

The Franciscans did not, like other orders, confine themselves to any particular school system. They were more attached to the teachings of Duns Scotus, perhaps, than to the School of St. Bonaventure, but there was no official compulsion in the matter. Among the many naturalists, artists, and poets of the order may be mentioned: Thomas of Celano (d. about 1255), author of the “Dies Irae”; Giaocamino of Verona (c. 1300), a precursor of Dante; St. Bonaventure (d. 1274); Jacopone of Todi (d. 1306), author of the “Stabat Mater”; John Brugman (d. 1473); Gregor Marti (d. 1905), the Croatian poet. Among the musicians: Julian of Speyer (d. about 1255); Bonaventure of Bresegis (fifteenth century); Pietro Cavarz; Lucio Grosi of Venice (d. about 1275); Giovanni da Lodi (d. about 1791); David Moretti (d. 1842); Petrus Singer (d. 1882). Among the naturalists may be mentioned: Roger Bacon (d. 1294); the so-called
Schwarzer (Black) Berthold († 1300), the reputed discoverer of gunpowder; Luca Pacioli (d. about 1510); Eletkus Zwinger (d. 1690); Charles Plumier (d. 1704). For writers on the history of the order, the reader may be referred to the bibliography, since the vast majority of the books cited have been written by Franciscans. In recent times—to some extent since 1519, the year of the Bull of Martin V, which investigated the history of the Friars Minor, especially during the first centuries succeeding the foundation of the order, has aroused a keen and widespread interest in the leading civilizaded lands and among scholars of every religious denomination and belief.

2. OF THE ORDER. The number of Friars Minor who have been canonized or beatified, is—even if we exclude here as throughout this article, the members of the other orders of St. Francis (Conventuals, Poor Clares, Tertiaries, and Capuchins)—extraordinarily high. In this enumeration we further confine ourselves to those who are officially venerared throughout the Church, or at least throughout the whole order, with canonical sanction. These excessive one hundred in number, the names, dates of decease, and feasts of the best-known being as follows:

(1) Sainct. — Francis of Assisi, d. 3 Oct., 1226 (4 Oct.); Berard of Carjou and four companions, martyred 1220 (11 Dec.); Antoine of Piazzola, martyred at Nagaaki, Japan, 1597 (5 Feb.); John Joseph of the Cross, d. 1734 (5 March); Benedict of San Philidolpho, d. 1589 (3 April); Peter Regalada, d. 1446 (13 May); Paschal Baylon, d. 1592 (17 May); Bernardine of Siena, d. 1444 (20 May); Anthony of Padua, d. 1231 (13 June); Nicholas Pagan, d. 1721 (at Leyen); Daniel, and seven companions, martyred at Ceuta 1227 (13 Oct.); Peter of Alcantara, d. 1562 (19 Oct.); John Capistran, d. 1456 (23 Oct.); Didacus (Diego), d. 1463 (12 Nov.); Leonard of Port Maurice, d. 1751 (26 Nov.); James of the March (Monteprandone), d. 1476 (28 Nov.).

Beat. — Matthew of Gironiga, d. 1455 (28 Jan.); Andrea de' Conti di Signa, d. 1302 (1 Feb.); Odoeric of Pordenone, d. 1313 (3 Feb.); Anthony of Stroneca, d. 1481 (1 Feb.).

Egidius Maria of St. Joseph, d. 1812 (9 Feb.); Sebastian of Apparizio, d. 1600 (25 Feb.); John of Triors, martyred at Prino, d. 1676 (27 Feb.); Thomas of Coro, d. 1720 (28 Feb.); Peter de Treia, d. 1304 (14 March); Salvator of Orta, d. 1567 (18 March); John of Parma, d. 1280 (20 March); Benvenuto, Bishop of Osimo, d. 1282 (23 March); Rizzieri of Mucia, d. about 1240 (26 March); Peregrinus of Fallore, d. about 1245 (27 March); Marco Fantuzzi of Bessana, d. 1270 (31 March); Thomas Taliento, martyred in Further India, 1321 (6 April); Benivoglio de Bonis, d. about 1235 (2 April); Julian of San Augustino, d. 1606 (8 April); Archangelo of Calatalino, d. 1460 (9 April); Carlo de Sesce, d. 1670 (10 April); Angelo Carletti of Chivasso, d. 1465 (12 April); Andreas Hibernian, d. 1402 (18 April); Conrad of Acoel, d. 1290 (19 April); Leopold of Ghebe, d. 1815 (20 April);

Egidius of Assisi, d. 1262 (23 April); James of Bitetto, called Ilyricus, d. about 1490 (27 April); Agnellus of Perusa, d. 1236 (8 May); Francis of Fabriano, d. 1322 (14 May); Benvenuto of Recanati, d. 1289 (15 May); John of Montale, martyr at Caltagirone, d. 1538 (22 May); John of Prado, d. in Marissal, 1631 (29 May); Enrico de Plagiaro (Plagiale), d. 1451 (29 May); James Stopen, d. 1411 (1 June); Andrew of Spello, d. 1254 (3 June); Pacificus of Ceredano, d. 1482 (5 June); Stephen of Narbonne and Raymond of Carbones, murdered by the Albigensians, 1242 (7 June); Bartolomeo Fucei, d. 1530 (8 June); Guido of Cortona, d. about 1250 (12 June); Benvenuto of Gubbio, d. about 1232 (27 June); Simon of Liponica, d. 1482 (17 July); John of Dukla (like the preceding, a Pole), d. 1484 (19 July); John of Lavarna, d. about 1325 (9 Aug.); Peter of Molleano (Mogliano), d. 1490 (13 Aug.); Santec of Montesofarbi (Urbino), d. 1385 (14 Aug.); John of Perugia and Peter of Sassoferato, martyred at Bolonia, 1293 (19 Aug.); Francis of Calderola, d. 1407 (25 Oct.); Theophilius of Corte, d. 1740 (30 Oct.); Liberato de Lore (Lauro), d. about 1306 (30 Oct.); Thomas of Florence, d. 1447, Rainerius of Arezzo, d. 1304 (5 Nov.); Bernardine of Aquila (Fossa), d. 1503 (7 Nov.); Gabriele Ferretti, d. 1456 (14 Nov.); Humilius of Baisgiano, d. 1397 (6 Dec.); Conrad of Offida, d. 1308 (19 Dec.); Nicholas Factor, d. 1583 (23 Dec.). To these might be added long lists of Blessed, who enjoy a culto sanctioned by the Church, but whose cult is only local, i.e. limited to their native or burial-places or to the dioceses with which they were connected. If these be taken into consideration, the number of the blessed and beatified in all the orders of St. Francis exceeds 300.

At the present time (1909), the postulatura of the order at Rome, whose office is to collect evidence concerning the candidates for beatification and canonization, is urging the cause of about ninety members of the First, Second, and Third Orders of St. Francis. This list includes some names belonging to later and even recent times, and it will thus be seen that the Order of Friars Minor never ceases to produce members whose holiness entitles them to the highest ecclesiastical honour—that of the altar. That the spirit of Brother Francis lives in his followers, and is ever keenly to revive in the world and instilled into his institutions, still lives in his order to the glorification of the Divine Name, the great efficiency of the Friars Minor in our day is sufficient proof.

(1) GENERAL HISTORY OF THE ORDER (SOURCES, ETC.).

Note. — As elsewhere throughout this article, only relative completeness is here aimed at; all special monographs concerning a particular point, question, person, etc., are omitted, and notes but generally works, and of the following: — Chor. Fr. Jordani de Vano in Analea Franciscana (An. Fr. III (Quaracchi, 1885), 169-66; ed. by BOHMER (Paris, 1908) in Collection d'Etudes de Barbier: Dialogus de Vita Sanctorum Fratrum Minorum (Wars, 1826); C. LEMMING (Bonn, 1852); The Fama Fratrum Minorum in Anglia, ed. BURLE, Monumenta Franciscana I. (R. S. London, 1858); supplement in Monumenta Franciscana II. (London, 1859). For the modern abridgment in Mon. Germ. Hist. Script. (M. G. S.), XVIII, 590-6; BERNADE DE BEAVER, Le Liber de laudibus et Famae Sanctorum (Rome, 1828), ed. in An. Fr. III (Quaracchi, 1829), 690-92; ed. FELDER (Rome, 1897); Catalogus Generalium Ministeriorum O. M. Francisci, ed. in An. Fr. III (Quaracchi, 1840), 690-92. See also: HOLDER-EGERK in M. G. S., XXXII, 653-74; EHRLE in Zeitschrift für Katholische Theologie, VIII (Innsbruck, 1886), 322-25, 387-406; ADAM DE PARMA, ed. in Holder-Egerk in M. G. S., XXXII (1856-57): ANGELO COLLENZ, Chor. Franciscanorum Minor. (3, 1843), ed. EGBEL (Quaracchi, 1892); CHOR. XXIV Generalium Ministeriorum (Rome, 1875), ed. in An. Fr. III, 1 sqq.; BARTHOLOMEUS PRAETORIUS in De Conformitate Vitae S. Francii JESU (Rome, 1355), (Milan, 1510, 1512; Bologna, 1590, 1610), also in An. Fr. III (Quaracchi, 1834); CHOR. Franciscanorum Minorum Observatorum (c. 1480), ed. LEMMING (Rome, 1853); MARIAE DE FLORENTIA, Compendia Chronicon O. M. Francisci, ed. in Annua. et Histor. Franciscana (F. H. A. F.), I—III (Quaracchi, 1908—10); Speeulum V在上海 Franciscorum et Sociorum eius (Paris, d. Venice, 1564); Meta. 1560; Antwerp, 1520; Cologne, 1523; Paris, 1528, 1531; Venice, 1711; GLAUSER, CHOR. Minorum Ordinis Min. (Obsc. in An. Fr., II (Quaracchi, 1897), 1 sqq.; JOHN OF ROMERO (d. 1358), Tractatus Chronicae O. F. M., ed. GRAE-
FRIARS

(0) FARKAS, Scriptores Ord. Min. Pron., Hungariae Reformatorum, vol. 3, Maria (Pressburg, 1870); DA CIVIZZA, Saggio di Bibliografia, etc., in Seminario Franciscano (Prato, 1927); ANT. MAG. VINCITII, Scriptores Provinciae Rbf., S. Antoni in An. Fr., 1-534, etc.; AL. DE PEDRALA, Scriptores Ord. Reform., vol. 3, cit. 458, etc.; LITTLE, The Grey Friars (London, 1892); DERIHI, Historia literaria... of the Freres Mineurs de l'Observance in Belgique et dans les Pays Bas (Antwerp, 1918); MOUSSET, L'Ordre Franciscain des Brères Mineurs de Trente (Trent, 1890); FELDNER, Gesch. der wissenschaftlichen Studien im Frank. Orden (Munich, 1904); FR. I. (Paris, 1908); ARXAM, Franc. Hist., 1 sqq.

(6) Hagiography.—C. DIAZ DE LA CARRA, CANTPAROMO, ARQUITECTURA... DE LA REFORMA (Mexico, 1904); SAGISMO DE LA VENDE, Biografía erudita... del padre Antonio (12 vols. Barcelo, 1872); LÉON DE CLARY, L'Anorelo... (Paris, 1882); tr. Lives of the Saints and Blessed of the three orders of St. Francis (4 vols. Toulon, 1866-1870); 11 tr. L'Anorelo y la... (Quaracchi, 1895-1900); SCHOUTENS, Martyrologium Minoricum-Belgicum (Hoechstätten, 1902); OTOLEO, DE... (Quaracchi, 1905).
