filled the great promise of his youth, and "el Mozo"
(the younger).

(2) FRANCISCO HERRERA (EL MOZO, THE YOUNGER), a
Spanish painter and architect; b. in Seville, 1622;
d. in Madrid, 1655. He was the second son of Her-
erra, "el Viejo", and began his career under his
father's instruction, but the elder's violent temper at
last became so intolerable that the youth fled to Rome.
For six years the younger Herrera assiduously de-
voted himself to the study of architecture, perspec-
tive, and the antique, his aim being fresco painting.
But it was still life in which he excelled. He already
had painted bodegones, fish so cleverly done that the
Romans called him: "il Spagnoletto degli pesci". In
1656 he returned to Seville, founded the Seville Acad-
emy, and in 1660 became its sub-director under Mu-
roth. He is said to have been strongly built, sober,
tempered, and jealous; at any rate he resented his
subordinate post and went to Madrid about 1661
(Cean Bermudez). Before leaving his native city he
painted two large pictures for the cathedral and a "St.
Francis" for the chapel of this saint. Sir E. Head
declares the latter to be his masterpiece. In Madrid
he painted a great "Triumph of St. Hermengild" for
the church of the Carmelite friars, and so beautiful
a group of frescoes in San Felipe el Real that Philip IV
commanded him to paint the dome of the chapel of
Our Lady of Atocha, and thereafter made him painter
to the king and superintendent of royal buildings.
Besides his marvellous still life he had painted
many portraits, and while these lacked the vigour, colour,
and bold design which characterise his father's
work, they exhibit a far greater knowledge and use of
chiaroscuro. Charles II kept him at his Court and
made him master of the royal works. For this king
Herrera renovated the cathedral of El Pilar, in Sarag-
oses. The Madrid gallery contains his "St. Hermen-
gild".

1854); Sterling-Maxwell, Annals of the Artists of Spain
(London, 1848).

LEIGH HUNT.

HERRERA BARNUEVO, SEBASTIANO DE, painter,
architect, sculptor and etcher; b. in Madrid, 1611 or
1612; d. there, 1671; son of Antonio Herrera, a sculp-
tor of fair ability, who, after teaching his son the
trade, placed him with Carriera. Under this famous
artist he made such great progress in both paint-
ing and sculpture that Philip IV took him into his
service, commanded him to decorate the chapel of
Our Lady of Atocha, and made him guardian of the
Ecclesiastical学院, for which he henceforth worked.
Most of his pictures are in Madrid. His masterpiece is
the "St. Barnabas" in the hall of the council-chamber of
the Escoliar, and was long regarded as by the hand of
Guido. Nearly as famous is the "Beautification of St.
Augustine" in the chapel of the Augustinian Recollects and the "Nativity" in the church of San Gerónimo. Bermúdez's colouring was as brilliant and harmonious as that of "Elian, who he imitated; his style was scarcely to be differentiated from Guido's; his draughtsmanship was excellent, and his work with the graver and etching-needle highly esteemed. He was an able architect, and won such fame in this branch of art that he received many commissions from the Court and nobility. He was a simple, modest, urbanite, and deeply religious man, as well as a most versatile artist.

LEIGH HUNT.

**HERRERA y Tordesillas, ANTONIO DE,** Spanish historian; b. at Cuellar, in the province of Segovia, in 1559; d. at Madrid, 27 March, 1625. He was a great-grandson of the Tordesillas who was put to death by the Comuneros at Seville. He studied in Spain and Italy, and became secretary to Vespasiano Gonzaga, a brother of the Duke of Mantua, who was afterwards Viceroy of Navarre and Valencia, and who recommended him to Philip II in the last year of that monarch's reign. Philip appointed him grand historiographer (cronista mayor) of America and Castile, and he filled that office during part of his royal patron's reign, and took part in the policies of Philip III., and the beginning of that of Philip IV. At his death his body was conveyed to Seville, and interred in the church of Santa Marina, where his tomb is still to be seen.

His most famous work is the "Historia General de los Hechos de los Castellanos en las Islas y Tierra Firme del Mar Océano" (General History of the discovery of the Castilians in the Islands and Mainland of the Ocean Sea), divided into eight periods of ten years each, and comprising all the years from 1472 to 1554. This work was printed at Madrid in 1601; reprinted by Juan de la Cuesta in 1615; revised and augmented by Andrés González and published at Madrid by Nicolás Rodríguez in 1720, and at Antwerp, by Juan Batista Verduesen, in 1728. Worthy of note is the "Description of the West Indies", in the first volume of his work, which was translated into Latin and published at Amsterdam, by Gaspar Barleo, in 1622, a French version being published at Paris in the same year. Two Spanish and two French translations of the first three decades of his "Historia" by Nicolás de la Corte. In writing his great work Tordesillas made use of all the public archives, having access to documents of every kind. It is evident in his writings that he had to deal with a large number of historical manuscripts, and contented himself with relating events as he found them recorded. A great part of his work is more or less a transcript of the History of the Indies left by the famous Bishop Bartolomé de las Casas, though expurgated of wretched everything unfavourable to the settlers. A painstaking and conscientious investigator of the most part, his style does not correspond to his other admirable qualifications. He was a learned and judicious man, though, particularly in the later decades, somewhat prone to overpraise the conquerors and their exploits.

In addition to that already mentioned, his most important works are: "A General History of the World during the time of Philip II from the year 1568 to the King's death"; "Evente in Scotland and England during the forty-four years of the lifetime of Mary Stuart, Queen of Scotland" (Historia de lo sucedido en Escocia de Inglaterra en los cuarenta y cuatro años que vivió María Estuardo Reina de Escocia); Five books of the history of the Indies and the conquests of the Americas in the years 1582, 1583; "History of events in France from 1585 to 1594" (a work published in Madrid in 1598, but suppressed by command of the king); "A Treatise, Relation, and Historical Discourse on the Disturbances in Aragon in the years 1591 and 1592" (Tratado, relación y discurso histórico de los movimientos en Aragón en los años de 1591 y 1592); "Commentary on the Chronicles of the Spanish, French, and Venetians in Italy, and of other Republics, Potentates, famous Italian Princes and Captains, from 1281 to 1556"; "Chronicle of the Turks, following chiefly that written by Juan Maria Vicentino, chronicler to Mahomet, Bajazet, and Suleiman, their lords" (unpublished); various works relating to Italian, preserved in the National Library at Madrid. Dicc. enciclopédico hispano-americano (Barcelona, 1892), x: ASTRAIN, Breve apuntes de literatura española; Works of Andr. Herrera (Madrid, 1815, 1726; Antwerp, 1659).

**CAMILLUS CRIVELLI.**

**Herrgott, MARQUARD, a Benedictine historian and diplomat; b. at Freiburg in the Breisgau, 9 October, 1694; d. at Krozingen near Freiburg, 9 October, 1762. After studying humanities at Freiburg and Strasbourg, he became tutor in a private family at the Jatter place and accompanied his two pupils to Paris, where he remained two years. Upon his return to Germany he entered the Benedictine Abbey of St. Blasien in the Black Forest, made his novitiate, and was sent to Rome to study theology. After being ordained priest on 17 Dec., 1718, he returned to St. Blasien. In 1721 he went to the Abbey of St. Gall to study Oriental languages, but was soon recalled in order to accompany his abbot to Vienna, where he devoted himself to historical research. Shortly after, he was sent to the Abbey of Saint-Germain-des-Prés to continue his historical studies under the direction of the learned Maurist Benedictines. The first fruit of these studies was a valuable work on old monastic customs, "Vetus disciplina monastica" (Paris, 1729). Shortly after the publication of this work, Herrgott was sent to St. Blasien, gathered material for a history of the Diocese of Constance and wrote a history of St. Blasien, which is preserved in manuscript at St. Paul's Abbey in Carinthia. In 1728 he was sent to the imperial Court of Vienna as diplomatic representative of the Estates of Breisgau, which then belonged to Austria, and filled this position very creditably over twenty years. While at Vienna he made a thorough study of the history of the imperial house of Hapsburg and, after eight years of diligent researches, published the first three volumes of his valuable work on the Austrian Imperial family "Genealogia regum Austriae Austriaci" (Vienna, 1731-1737). The continuation of this work he published under the title "Monumenta Augustae Domus Austriacae" vol. I (Vienna, 1750), vol. II (Freiburg, 1753), vol. III (Freiburg, 1760), second edition (St. Blasien, 1773). As reward for his labours he was appointed imperial councillor and historiographer in 1759. In 1771 he gave offence to the imperial Court by courageously defending the rights of the Church and the privileges of the Estates, and, in consequence, was forced to resign his office. His abbot appointed him provost of Krozingen and governor of Staufen and Kirchhofs, which were dependencies of the Abbey of St. Blasien, the latter office he held until his death. In 1784 he transferred it to Fulda. Some years later (about 1788) after the defeat of the Saxons by the Franks, Lullius, Bishop of Mainz, refounded the monastery at Herfeld. Charlemagne (who had re-

**MICHAEL OTT.**

**Herrnhuter. See BOHEMIAN BRETHREN.**

**Hersfeld, ancient imperial abbey of the Benedictine Order, situated at the confluence of the Geisa and Haune with the Fulda, in the Province of Hess-Nassau, Prussia. Sturmi, a disciple of St. Boniface, originally founded a monastery here in 742, but, owing to its position on the confluence of the Fulda, Geisa and the Saxone, he transferred it to Fulda. Some years later (about 788) after the defeat of the Saxons by the Franks, Lullius, Bishop of Mainz, refounded the monastery at Hersfeld. Charlemagne (who had re-
cently succeeded to the crown) and other benefactor provided endowments, and Pope Stephen III granted extensive lands in the region to the monastery, which soon possessed 1050 hides of land and a community of 150 monks. It became a place of pilgrimage after 780, owing to the bringing thither of the relics of St. Wigbert, and the reputed occurrence of miracles. A valuable library was collected, the annals of the monastery were regularly kept, and it became renowned as a seat of piety and learning. The church of the close of the tenth century Hersfeld suffered from the general decadence of the age, and the monastic discipline became relaxed. Some years later, however, the observance was reformed by St. Gotthard (afterwards Bishop of Hildesheim), and we find mention of a community of the order to carry out in them the work of religious revival.

During the long struggle between the Emperor Henry IV and Pope Gregory VII, Hersfeld espoused the imperial cause. Henry himself visited it not infrequently, sometimes accompanied by his consorts; and their son Conrad (who afterwards succeeded to the throne) was born and baptised within the precincts of the abbey. In the last decade of the eleventh century the abbey seems to have been fully restored to papal favour, and it continued to prosper for a long subsequent period. The abbey walls, also grew and flourished, one result of this being that it found itself strong enough to assert its independence of the rule of the monks, and in 1371 formally placed itself under the protection of the Landgraves of Hesse. As time went on the state of the monastery again deteriorated, and in 1513 it was at so low an ebb that the abbott (Wolpert) resigned his office into the hands of Pope Leo X, and the Abbey of Fulda was authorised by the Emperor Maximilian to incorporate the house into his own famous abbey. A melancholy account has come down to us of the condition in which the venerable Abbey of Hersfeld had at this time been allowed to fall. The library was in a state of ruin and decay, many precious volumes had altogether disappeared, and manuscripts containing the archives and records of the house were used in the kennels as litter for the dogs. This forced union between Hersfeld and Fulda lasted for two years, and in 1515 the Abbey of Hersfeld was chosen. Abbot Krato, who held office in 1517, was in sympathy with Lutheranism, and he swore allegiance to Philip, the Lutheran Landgrave of Hesse, in 1525. The abbey church was consequently closed to Catholic worship, the Holy Sacrament being said only in a chapel within the monastery.

During the remainder of the century the abbey dragged on an inglorious existence, and on the death of the last abbott (Josechim Röll) in 1606, Otto, hereditary Prince of Hesse, was elected lay administrator. The popes made a fruitless endeavour after Otto's death, to replace the abbey under Catholic administration. It continued in the hands of the princely family until about the middle of the seventeenth century, when, after the conclusion of the Treaty of Westphalia, Hersfeld was, as an imperial fief, united to Hesse under the title of a principality. The town of Hersfeld continued to rank as the capital of a principality until 1828. It is now the chief town of a circle in the government district of Kassel, and has a population of nearly 8000, with some important manufactures. The Stadt Kirche, dating from about 1300, was burnt in 1545, and the town church in the sixteenth century. The ruined collegiate church in the Romanesque style, was built in the early part of the twelfth century, but was destroyed by the French in 1761, in the course of the Seven Years War. Outside the town, of which the old walls are still preserved, are the remains of the once famous monastery, with its extensive surrounding grounds. The "Annalen Heursfeldense" are often cited as sources of medieval German history by the learned Jahrbucher von Hersfeld (Leipzig, 1888). Herst, Richard. See Hurst.

Hervás y Panduro, Lorenzo, a Spanish Jesuit and famous philologist; b. at Horcajo, 1 May, 1573; d. at Madrid, 24 Aug., 1600. He entered the Jesuit Order at Madrid, he studied at Alcalá de Henares, devoting himself with special zeal to architecture and linguistics. For a time he taught at the royal seminary in Madrid and at the Jesuit college of Murcia; then he went to America as a missionary and remained there until 1677, when in connexion with the abolition of the Jesuits the establishments of the Society were taken away from the order. Hervás now returned to Europe, taking up his residence at first at Cesena, Italy, and then in 1784 at Rome. In 1799 he went back to his native land, but four years later left Spain and arrived in Rome for the remainder of his life. He was held in high honour by Pope Pius VI, and was prefect of the Quirinal library, and he was a member of several learned academies. In Italy he had a chance to meet many Jesuits who had flocked thither from all parts of the world after the suppression of the order. He availed himself diligently of the exceptional opportunity thus afforded him of gaining information about remote and unknown idioms that could not be studied from literary remains. The results of his studies he laid down in a number of works, written first in Italian, and subsequently translated into Spanish.

The greatest work of Hervás is the huge treatise on cosmography, "Il nuovo Universo" (Cesena, 1778-87, in 21 vols. in 4°). It consists of several parts, almost all of which were translated into Spanish and appeared as separate works. Of these the most important, which had appeared separately in Italian in 1784, is called "Catalogo de las lenguas de las naciones conocidas, y se encierra, dividiendo el mundo geográfico, en diversidad de sus idiomas y dialectos" (Madrid, 1800-5, 6 vols.). Here Hervás attempts to investigate the origin and ethnological relationship of different nations on the basis of language. The main object of the book is, therefore, not really philological. Vol. I treats of American races and languages; vol. II of those of Asia, in the Indian and Pacific Oceans; the remaining volumes, devoted to the European languages, are inferior in value to the first two. The American dialects are certainly better described and classified than they had been before; the existence of a Malay and Polynesian speech-family is established. For determining affinity of languages similarity in grammar is emphasized as against mere resemblance in vocabulary. While there were gross errors and defects in the work, it is conceded that it presented its material with scholarly accuracy and thus proved useful to later investigators. Other parts of the work appear separately in Italian and later in "La Virilità dell' Uomo" (4 vols., 1779-80); "Vecchiaia e Morte dell' Uomo" (1780); "Viaggio estatio al Mondo planetario" (1780); "Storia della Terra" (1781-83, 5 vols.); "Origine, formazione, meccanismo e armonia degl' Idioni" (1785); Vocabolario Polizotto, con prospettiva di più di 5000 parole (1787); "Saggio pratico delle Lingue, con prolegomeni e una raccolta di rare trascrizioni in più di trecento lingue e dialetti" (1787).

Hervás also wrote a number of educational works for deaf-mutes, the most notable being "La escuela
española de sordo-mudos ó arte para enseñarles á escribir y hablar el idioma español” (Madrid, 1705), and other works of miscellaneous character, of which we mention “Descripción de los archivos de la corona de Aragón y Barcelona”, etc. (Cartagena, 1801). He also published a number of the Greek Fathers, and also edited: “Historia de la Escritura”: “Paleografía universal”; “Moral de Confucio”; “Historia de las primeras colonias de América”; “El hombre vuelto á la religión”, as well as tracts of a controversial or theological nature.

ARThUR P. J. REMY.

**Hervestus, Gentian, a French theologian and controversialist; b. at Olivet, near Orleans, in 1499; d. at Reims, 12 September, 1584. After studying the humanities at Orleans, he went to Paris where he became tutor of Claude d’Aubespine, afterwards secretary of the University. He accompanied the reformers with Thomas Lupset, an Englishman, whom he later followed to England, where he was charged with the education of a brother of Cardinal Reginald Pole. He accompanied his scholar to Rome, where he remained some time in the house of Cardinal Pole, occupying himself chiefly with the Latin translation of various Greek Fathers. Returning to France he taught the humanities for a short time at the College of Bordeaux, then went back to Rome and became secretary to Cardinal Cervini, the future Pope Marcellus II. In 1645 he accompanied this cardinal to the Council of Trent, and delivered an oration before the assembled fathers against clandestine marriages. In 1656, when he was already fifty-seven years old, he was ordained priest. Soon after, he became Vicar-General of Noyon and received a canonry at Reims. As pastor he preached very successfully against the Calvinists and wrote numerous pamphlets against them. In 1652 he returned to the Council of Trent in company of Cardinal Charles of Lorraine. He is the author of “Le saint, universel et general concile de Trente” (Reims, 1654; Rouen, 1853; Paris, 1854), and numerous controversial pamphlets. He also translated into Latin and French many works of the Greek Fathers, committee the canons, decrees of councils, etc.**

MICHAEL OTT.

**Hesborn. See BOB-LE-DUC, Dioecese of.**

**Hesse (HESSEN), the name of a German tribe, and also of a district in Germany extending along the Lahn, Eder, Fulda, Werra, and the Lower Main and Rhine. The district comprises to-day the Grand Duchy of Hesse-Darmstadt and the Prussian province of Hesse-Nassau (capital, Kassel). The territory of the Hessian—descendants of the Chatti, who, with the Cherusi, were masters of Germany before the Roman domination—was divided during the period of the Frankish empire into several Gaue (i.e. districts—Saxon Hessegau, Frankish Hessengau, Buchonia, Oberlahnau, etc.), ruled over by counts. About 350 Christianity was preached in a portion of this territory by St. Lubentius of Trier, who built a church at Distelkerau (Lutzerath). In the twelfth century St. Goar preached the Gospel along the Rhine, while in the following century St. Kilian (d. 869) preached in the districts along the Main and the Rhön. The chief missionary of the Hessian was St. Boniface. He baptized two counts at Amöneburg about 722, founded a Benedictine abbey there, felled the celebrated sacred oak at Thor at Geismar, and founded at Burghausen near Frititz the first Hessian bishopric in 741, consolidated with Mainz in 774, and also the monastery of St. Peter at Fritizla. Commissioned by the saint, his disciple Stormi founded the abbey of Fulda. St. Ulrich in the Abbey of Fulda. From these centres of Christian culture many religious communities and cloisters were founded on the conclusion of the Saxon wars, and Christianity subsequently made rapid progress among the people. The greater portion of the land was throughout the Middle Ages under the ecclesiastical jurisdiction of the Archbishops of Mainz; the smaller portion under the exempt Abbots of Fulda and Hersfeld, or under the Bishops of Trier (10 churches in Lahama and Padborn).**

Under the weak successors of Charles the Great, the old constitution of the Gaue gradually changed, and the counts (Grafen) were nominal officers of the bishops independent lords. As the bishops and monasteries also acquired much landed property, Hesse was par-
elled up into numerous territories. Among the
Hessian nobility, the most prominent in the tenth and
eleventh centuries was the family of the Counts of
Felsberg, of Schaumburg, of Dies, but above all the
cities of Goslar, the Counts of Gudensberg. The daughter
of the last and fourth Giso married in 1222 Count Louis I
of Thuringia, who in 1130 was raised to the rank of land-
grave by Emperor Lothair. As the Hessian nobility
recognized the Thuringian landgrave Henry, his son
Louis, as an ally with Thuringia. Louis at the same time
received the protectorate of the most important re-
ligious foundations of the land, and for a period of
more than a century the union of Hesse and Thuri-
gia continued unbroken. With Henry Raspe, the
brother-in-law of St. Elizabeth of Thuringia, the male
line of the Thuringian landgraves died out in 1247, whereupon the Hessian chose Henry of Brabant, Elizabeth's grandson, as their landgrave. Hesse was
separated from Thuringia, and, after a long struggle
with other claimants of the title, Henry established
his authority as Landgrave of Hesse. For a large
portion of his territories he owed fealty to the Arch-
bishops of Mainz; for his alodial estate and the
imperial fiefs which he possessed, he received in 1292
from King Adolph of Nassau the hereditary rank
of prince of the empire. He chose Kassel as his residence,
and from him is descended the present princely house of
Hesse, which can thus trace its line back to St.
Elizabeth.

By the acquisition of previously independent terri-
tories (Giessen, Treffurt, Schmalkalden, Katzenellen-
bogen, Dies, etc.) Henry's successors increased the
domain of the landgraves to such an extent that it
became one of the most powerful German principali-
ties. Hermann I (1377-1413) played an important
role in ecclesiastical affairs. Intended originally for
Holy Orders and named "the learned" on account of
his love of the sciences, he espoused during the Great
Schism the cause of Gregory XII in opposition to
Mainz. The clamorous quarrel with Mainz broke
out under Hermann's son, Louis I the Peaceful (1413-
58), and Archbishop Conrad of Mainz suffered a
decisive defeat at Fulda in 1427. The schism and
the wrangles between the landgraves and the archbishops greatly contributed to disturb ecclesiastical order,
and in many of the numerous monasteries the ancient
disciplines fell into disuse. However, the Hessian Church was in an excellent
condition at the outbreak of the Reformation in Germany.

After repeated divisions, all the Hessian lands were
reunited by William II. Philip the Magnanimous
(1509-67), William's son and successor, at first adopted
a policy of reconciliation towards the doctrines of Luther,
which soon found adherents in the Franciscan Jacob
Limburg of Marburg and the Augustinian provincial
Tielmann Schmadel of Asfeld. He banished or
imprisoned the heretical preachers, and came to be
regarded by them as the most dangerous opponent of
"the Gospel". In 1528, however, he was overthrown by Protestantism and Captivity in the Arch-
church, who wrote for him the "Epitome renovate
ceclesiasticae doctrine". The recess of the Diet of
Speyer in 1528 enabled him to set up a territorial
Church. At a synod of the higher dignitaries of the
regular and secular clergy at Homburg in October,
1536, the reform regulations devised by the ex-Francis-
can, Lambert of Avignon, were adopted. The Franci-
can guardian, Nikolaus Ferber of Marburg, alone
raised his voice against their adoption, but his protest
was disregarded. At the Convention of Hintzirch, in
1538, the Archbishop of Mainz, Albert of Branden-
burg, found himself compelled to waive temporarily his claims to ecclesiastical jurisdiction in Hesse.

Thus the Reformation ordinances (Reformation-
ordnung)—which were of an extreme type, rejecting
the Mass, feasts of the saints, pilgrimages, pictures,
relies, etc.—spread rapidly over the country. Foun-
dations and monasteries were suppressed, their
property confiscated, public worship forbidden to
them, and in 1539 the young Archzister of the Ger-
man, the first Protestant university was founded at
Marburg in 1527, while the Rituals of 1537, 1539,
and 1566, in the composition of which Bucer's influence is
unmistakable, fixed the constitution of the Hessian
Church on an episcopal synodal basis.

Philip's impersonal rule, however, exercised a
perceptible influence on the progress of the
Reformation, and in 1551 Sebastian von Heusen-
stamn, Archbishop of Mainz, was compelled to re-
sign finally all claims to jurisdiction in Hesse. In
this manner was the Church founded by St. Boniface
almost entirely annihilated. The Reformation was
subsequently (e. g. in 1648) acquired by Hesse; only
in the domain of the Abbey of Fulda and in a few enclaves
belonging to the Archbishops of Mainz (Fritzlar,
Amöneburg, Neustadt) did the Catholic Faith sur-
 vive. Philip the Magnanimous divided Hesse at
his death among his four legitimate sons, but, as two
of these died without heir in 1585 and 1604 respect-
ively, his family was split into two chief lines—that of
Hesse-Darmstadt, represented by George I, and that
of Hesse-Kassel, represented by William IV. From
these two lines sprang in the course of time some
several lines, but the line of Hesse-Darmstadt
occupies a throne. In contrast to his father, the
first Landgrave of Hesse-Darmstadt, George I (1567-
96) espoused the cause of the Hapsburgs. He
increased his family possessions considerably, and
in this his example was followed by his eldest son Louis
V (1596-1628), who for his attachment to the
emperor was called "the Teutonic". He founded the
University of Giessen in 1607. George II (1628-61)
acquired a portion of Upper Hesse in 1648; his brother
Frederick returned to the Catholic Faith, became
Cardinal and Prince-Bishop of Breslau, and died in
1652. Although three sons of Louis VI (1661-78)
also returned to Catholicism, there was no mitigation
in the stern Lutheranism of the land.

Only in the territory belonging to the collateral
branch, Hesse-Rheinfels-Rotenburg, which became
Catholic in 1652 and extinct in 1834, was the Catholic
Church tolerated. Landgraves Ernest Louis (1678-
1720) and Louis William (1720-66) the younger
stood with Austria. Louis IX (1768-90) afforded
free religious facilities to the Reformed Churches; in
1786 he granted to the Catholics of Darmstadt a
"privilege" permission to hold Divine service. General
freedom was first received by the Catholics under
Louis X (1790-1830), who created the present Grand
Duchy of Hesse. In the war against revolutionary
France, the possessions of Hesse-Darmstadt on the
right bank of the Rhine were ceded to the French by
the Peace of Lunéville, a few districts in Baden and
Nassau being also lost. In compensation Louis re-
ceived the Duchy of Westphalia, which had previously
belonged to the Prince-Bishops; but two districts in the Archdiocese of Mainz and the Bishopric
of Worms, and later (1809) three Hessian domains of
the German Order, the Fulda domain of Herbststein,
and the estates of the Order of Malta in Hesse. In
1806 Louis received the title of Grand Duke (Louis I);
at the Congress of Vienna he received in compensa-
tion for the Duchy of Westphalia, which fell to Prussia,
the old ecclesiastical and palatinate lands on the left
bank of the Rhine together with the towns Mainz and
Worms. With the accession of such Catholic terri-
tories, the existing anomalous ecclesiastical conditions
could no longer be maintained. Hesse therefore took
part in the negotiations with the Holy See which resulted in the erection of the ecclesiastical
province of the Upper Rhine by the papal Bulls
"Provida solaresque" (1821) and "Ad Dominici gregis
custodiam" (1827). In furtherance of these arrange-
ments, the Grand Duchy of Hesse founded the new Bishopric of Mainz, which was made subject to the Ante-Church. For a time, although the secular decrees of 1803 had created a kind of national Church, they were only partially carried out, and the position of the Catholic Church was here more favourable than in the other states of the ecclesiastical province of the Upper Rhine (e.g. in Baden). Under Louis III (1396–1405), who began to rule during the lifetime of his father Louis II (1380–48), conditions were even at first favourable to the Catholics. In 1854 Bishop Ketteler concluded with the Minister von Dalwigk the Convention of Mainz, which ensured for the Church a greater measure of freedom and independence, but on the other hand made great concessions to the State. In consequence of the opposition of the imperial states, the convention had to be withdrawn in 1866. After the foundation of the German Empire, the Kulturkampf extended also to Hesse under the Liberal ministries of Hofmann and von Starck, that is from 1871 to 1884. The five ecclesiastical laws of 23 April, 1875, are in their Kulturkampf spirit an exact reproduction of the Prussian "May Laws". After the death of Bishop Ketteler in 1877, the episcopal See of Mainz remained vacant until 1886. It was only under Grand Duke Louis IV (1877–92) and during the Finger ministry, that the church laws were revised, and then modified. Under Ernest Ludwig, who succeeded in 1892, further changes facilitated the admission of religious orders. (Concerning the ecclesiastical statistics of the Grand Duchy of Hesse, whose boundaries coincide with those of the Bishopric of Mainz, see Mainz.)

In Hesse-Kassel William IV (1567–92) was succeeded by Moritz "the Learned" (1592–1627), during whose reign the Thirty Years' War broke out. His son, William V (1626–37), allied himself with Gustavus Adolphus and was forced to retire into exile. Under William VI (1637–63) the foundation of Hersfeld and a portion of Upper Hesse were acquired by Hesse-Kassel. The succeeding rulers were William VII (1663–70) and then Charles (1670–1730), whose son became King of Sweden as Frederick I in 1720, and later, during his government of Hesse (1730–51), was represented by his brother William (landgrave, 1751–60). William's son, Frederick II, reverted to the Catholic faith in 1749, and when his conversion became known, his father, in concert with the Estates, with Prussia, and Hanover, demanded that Frederick as landgrave should neither appoint a Catholic to a public position nor permit public Catholic worship. To these demands Frederick, to preserve his right of succession, consented to the House of Orange (1760–85) the abuse of selling soldiers to England reached its culmination. In North America between 15,000 and 20,000 Hessians fought for England against the colonies struggling for freedom. His son, William IX (1785–1821), in accordance with the Peace of Lundevile, received rich compensation (mostly in ecclesiastical territories) for his representation and was granted in 1803 the title of elector. From 1806 to 1813, Hesse-Kassel belonged to the Kingdom of Westphalia, founded by Napoleon. After the Restoration the greater part of the estates of the Abbey of Fulda was assigned to Hesse-Kassel. The Revolution of 1830 compelled William II (1821–47) to give the land a constitution which ensured to every citizen complete liberty of conscience and freedom to practise his religion. The status of Catholics was regulated by the erection of the ecclesiastical province of the Upper Rhine, when Electoral Hesse was placed under the Patriarch of Pisa. The revolution of William II, the tyrannical rule of his son Frederick William I (1847–66), and the suppression of all political freedom caused an estrangement between church and people. In the conflict between Prussia and Austria in 1866, when the elector, after a period of neutrality, voted against Prussia at the German Diet and ordered the mobilisation of his troops, his territories were occupied by the Prussians. Although the peace of Paris on 20 September, 1866, since which date they have shared the destiny of Prussia. It now forms with other territories acquired by Prussia in 1866 (the Duchy of Nassau, the Landgraviate of Hesse-Homburg, Frankfort-on-the-Main, etc.) the Prussian province of Hesse-Nassau. The Catholics of the government district of Kassel, and Amiral Bockenheim, one of the wards of the city of Frankfort, belong to the Diocese of Fulda; the remainder belong to the Diocese of Limburg. The ecclesiastical statistics will be found under these articles.

Hessels, Jean, a distinguished theologian of Louvain; b. 1622; d. 1686. He had been teaching for eight years in Paris, the Dominican house near Louvain, when he was appointed professor of theology at the university. Like Buis, who was his senior colleague, Hessels preferred drawing his theology from the Fathers, especially from Augustine, rather than from the Schoolmen without, however, ever swerving from traditional doctrine. In 1559 he accompanied the elder Jansen (later Bishop of Ghent, d. 1576) and Buis to Trent and took an active part in the council, e. g. he prepared the decree "De invocato et adorato alios in orationes..." and "Eccl. et sacerdotum..."; at the opening of the Council of Trent in 1562, when the Jesuits were ejected with his departure from the beaten tracks of learning; after his return the attacks continued. Hessels, however, used his energy against the Protestants instead of wasting it in dogmatic quarrels. He upheld the doctrine of the immaculate conception (imputed by Buis), and he is a protagonist of papal infallibility in his "De perpetuitate Cathedrae Petri et ejus indefectibilitate", which is an appendix to his polemical work "Confutatio novitiae sibi quam special veloci..." (1665–66), and "Oratio de officio pili viri exsurgenti et vigente harense..." (Louvain, 1665). "De invocato" and "Deinfal..." are also included in his "Prolixissima..." (1666). Hessels is one of the most important figures in the field of dogmatic theology. His polemical work is an excellent "Catechism", first published in 1571, by Henry Gravius, who removed from it all traces of Baianism. Hessels is not a brilliant writer, but his judgment is accurate and all his work most conscientious.
Hesychasm (Gr., ἰησοῦς, quiet).—The story of the system of mysticism defended by the monks of Athos in the fourteenth century forms one of the most curious chapters in the history of the Byzantine Church. In itself an obscure speculation, with the wildest form of asceticism and theology, it may be described as the watchword of a political party, and incidentally involved again the everlasting controversy with Rome. It is the only great mystic movement in the Orthodox Church. Ehrhard describes it rightly as “a reaction of national Greek theology against the invasion of Western scholasticism” (Krumbacher, p. 13). The clearest way of describing the movement will be to explain first the point at issue and then its history.

I. The Hesychast System.—Hesychasts (ἡσυχαστὲς—quietest) were people, nearly all monks, who defended the theory that it is possible by an elaborate system of asceticism, detachment from earthly cares, submission to an approved master, prayer, especially perfect recite of body and will, to see a mystic light, which is none other than the uncreated light of God. The contemplation of this light is the highest end of man on earth; in this way a man is most intimately united with his mystical body. The light as it appeared is the same as appeared at Christ’s Transfiguration. This was no mere created phenomenon, but the eternal light of God Himself. It is not the Divine essence; no man can see God face to face in this world (John i, 18), but it is the Divine action or operation. For in God action (ἐνέργεια, actus, operatio) is really distinct from essence (ὁμοιότης). There was a regular process for seeing the uncreated light; the body was to be held immovable for a long time, the chin pressed against the breast, the breath held, the eyes turned in, and so on. Then in due time the monk began to see the wonderful light. The likeness of this process of auto-suggestion to that of fakirs, Sunnayasis, and such people all over the East is obvious.

Hesychasm then contains two elements, the belief that quietist contemplation is the highest occupation for men, and the asserion of real distinction between the divine essence and the divine operation. Both points had been prepared by Greek theologians many centuries before. Although there was comparatively little mysticism in the Byzantine Church, many Greek Fathers and theologians had maintained that knowledge of God can be obtained by purity of soul and prayer. A study of the treatises by Hesychasts at the councils (see below) supply many such texts. Clement of Alexandria was most often invoked for this axiom. Pseudo-Dionysius seems to have brought the statement a step nearer to Hesychasm. He describes a medium in which God may be contemplated; this medium is a mystic light that is itself half darkness. But it was Simeon, "the new theologian" (c. 1025-c. 1092; see Krumbacher, op. cit., 152-164), a monk of Studion, the "greatest mystic of the Greek Church" (loc. cit.), who evolved the quietist theory so elaborately that he may be called the father of Hesychasm. For the union of his master Constantine (the object of our life) he required a regular system of spiritual education beginning with baptism and passing through regulated exercises of penance and asceticism under the guidance of a director. But he had not conceived the grossly magic practices of the later Hesychasts; his ideal is still a: superhuman, superphilosophical than theirs. There seems also to have been a strong element of the pantheism that so often accompanies mysticism in the fully developed Hesychast system. By contemplating the uncreated light one became united with God so intimately that one became God. This association of pantheism (never very remote from neo-Platonic theories) is constantly insisted on by the opponents of the system.

The other element of fourteenth-century Hesychasm was the famous real distinction between essence and attributes (specifically one attribute—energy) in God. This theory, fundamentally opposed to the whole conception of God in the Western Scholastic system, had also been prepared by Eastern Fathers (chiefly Gregory of Nyssa). It may be described as a continuation of the Neoplatonic system. The Platonicists had conceived God as something in every way unapproachable, remote from all categories of being known to us. God Himself could not even touch or act upon matter. Divine action was carried into effect by demigures, intermediaries between God and creation (Krumbacher, p. 13). The Eastern Fathers (after Clement of Alexandria mostly Platonists) had a tendency in the same way to distinguish between God’s unapproachable essence and His action, energy, operation on creatures. God Himself transcends all things. He is absolute, unknown, infinite above everything; no eye can see, no mind conceive Him. What we can now and attain is His action. The foundation of a real distinction between the unapproachable essence (ὁμοιότης) and the approachable energy (ἐνέργεια) is thus laid. For this system, too, the quotations made by Hesychasm from Athenaeus, Basil, Gregory, especially from Pseudo-Dionysius, offer striking examples of illustrating their distinction between God’s essence and energy (light) by comparing them to the sun, whose rays are really distinct from its globe, although there is only one sun. It is to be noted that the philosophic opponents of Hesychasm always borrow their weapons from Sts. Thomas Aquinas and the Western Schoolmen. They argue, quite in terms of Latin Aristotlean philosophy, that God is simple; except for the Trinity there can be no distinctions in an actus purus. This distinct energy, uncreated light that is not the essence of God, would be a kind of demigrege, something neither God nor creature; or there would be two Gods, an essence and an energy. From one point of view, then, the Hesychast controversy may be conceived as an issue between Greek Platonist philosophy and Latin rationalist Aristotelianism. It is significant that the Hesychasts were all vehemently Byzantine and bitter opponents of the West, while their opponents were all latinsizers, eager for reunion.

II. History of the Controversy.—The leaders of either side were Palamas the Hesychast and Barlaam, from whom the other side is often called that of the Barlaamites. Gregory Palamas (d. about 1350; barlaam (Krumbacher, op. cit., 152-164), was a monk of Studion, who then from 1349 Bishop of Thessalonica. He wrote no less than sixty works in defence of Hesychasm, one especially against the Scholastic identification of God’s essence and attributes. He found fifty heresies in his opponents. He was also vehemently anti-Latin, wrote a refutation of John Becus’s latinizing work, and did his duty by Orthodoxism in supplying the usual treatise against the double procession of the Holy Ghost. Naturally his opponents call him a dithese, while he considers them Arians, Sabellians, and Epicureans. Barlaam (Krumbacher, op. cit., 100), his chief adversary, was a monk from Calabria who came to Constantinople in 1315 and was chosen a metropolitan in 1328-1341. At first he opposed the Latinos, but eventually he wrote in defence of reunion, of the Filioque, and the papal primacy. In 1348 he left Constantinople and became Bishop of Gerace in Calabria. The date of his death is unknown. It was from Barlaam that Barlaam that Petrus Akindynos, a friend and contemporary of Barlaam, also a monk, wrote a work against the Hesychasts "Trei ὁμοιότητα καὶ ἐνέργειας," in six books, of which the first two are nothing but translations from St. Thomas’s "Summa contra Gentes." In 1350 the historians (d. after 1350), was also one of the chief opponents of Barlaam. He came to the emperor’s court as a young man, was educated by the most famous scholars of that time the
Patriarch John Glycous (John XIII, 1316–1329), and the Great Logothete Theodoros Metochites, and people perhaps the last distinguished master of learning in the Greek world of the fourteenth century. He wrote theology, philosophy, astronomy, history, rhetoric, poetry, and grammar. His best-known work is a Roman history in thirty-seven books, describing the period from 1204 to 1329. In the midst of all the anti-Hesychast, Gregory was a pronounced latinizer. At the time when Barlaam was opposed to the Latins, Gregory wrote against him; with Palamas too he discussed the question of reunion with the West in a friendly and conciliatory way. Eventually Gregory fell into disfavour with the Court and disappeared.

The monks of Athos might have contemplated their unenlightened light without attracting much attention, had not the question become mixed up with the unending Latin controversy and with political issues. They had already practised their system of auto-ordination for a long time when Barlaam, armed with Constantinople, began to denounce it as superstitious and absurd. There had been some opposition before. People had heard Palamas boast that he could see the light of God with his eyes, and had accused him of blasphemy; but, since Isaiai, the Patriarch of Constantinople (1325–1334), was himself a monk of Athos and a disciple of Palamas, the opposition had not been very successful. However, from the year 1339, when Barlaam arrived in the city, began the really serious quarrel which for twenty years was to rend Orthodox theology, cause enormous commotion at Constantinople, Athos, and all the great centres of the Orthodox world, and lead even to active persecution. Barlaam, like all opponents of Hesychasm, based his objections mainly on a vehement denial of the possibility of an unenlightened light that was yet not God’s essence; throughout the controversy he and his party used the arguments they had learned in the West to show the ineptness of such distinction. They made bitter mockery of what he calls the ὀμφαλός τῆς ψυχῆς of the monks who sit with bent heads gazing at their own person, and brought various accusations against Palamas’s life and manners. After Isaiai, John XIV (John Aprenus, 1347) had become patriarch. Barlaam, for the sake of his order’s safety, sought at all events to maintain his position. For a time the patriarch refused to take the matter so seriously; eventually, since the quarrel became more and more bitter, in 1341 the first synod of the Hesychast question was summoned at Constantinople. The emperor (Andronicus III) presided. This first synod considered only two questions: (1) Whether the light of Thabor (that of the Transfiguration) was created or not; (2) a certain prayer used by Hesychasts, stated by Barlaam to contain dithemis. The enormous influence of the monks at Court and the want of energy of the patriarch (who was in his heart on Barlaam’s side) made this first synod a victory for Hesychasm. In both points the monks and their theory were approved, and Barlaam was forced to withdraw his accusations. Soon afterwards he left Constantinople forever; his cause was taken up by Gregory Akindynos. The emperor died a few days after. John V (John V, 1355), who gradually usurped the imperial power even as rival, then as fellow-emperor, of Andronicus’s son John V, Paleologus (1341–76), was always a friend of Palamas and the Hesychast monks. The second Hesychast synod under Cantacuzenus, but without the patriarch, condemned Akindynos and introduced a new element by representing him and all its opponents as latinizers who were trying to destroy Orthodox Christianity.

In 1345 the patriarch summoned the third synod. By now he had definitely made up his mind to withstand the Hesychasts. This synod then, under his direction, excommunicated Palamas and Isidore Buchiras, Bishop elect of Monemvasia in Thessaly, one of Palamas’s disciples. Buchiras and Palamas were excommunicated in 1347 because they had been declared a heresy. This was complicated by a political issue. Cantacuzenus and his friends were Hesychasts; the party of the Paleologoi were Barlaamites. As long as Cantacuzenus triumphed the Hesychasts triumphed with him; by the time he fell Hesychasm had become so much identified with the cause of the Orthodox Church against the Latins that the other side never succeeded in ousting it. On 2 February, 1347, the fourth Hesychast synod was held. It deposed the patriarch, John XIV, and excommunicated Akindynos. Isidore Buchiras, who had been excommunicated by the third synod, was made patriarch (1347–1349). In the same year (1347) the Barlaamites held the fifth synod, refusing to acknowledge Isidore and excommunicating Palamas. From this time Nicephorus Gregoras becomes the chief opponent of Hesychasm. Isidore I died in 1349: the Hesychasts replaced him by one of their monks, Callistus I (1350–1354). In 1351 the sixth synod met in the Blachernae palace under Cantacuzenus. Gregoras defended his views boldly and skillfully, but again the Hesychasts had it all their own way, deposed Barlaamite bishops, and used violence against their own opponents. In this synod six questions about Orthodoxy and attributes were answered, all in the Hesychast sense, while Palamas was declared to be without any doubt orthodox and unimpeachable. The synod finally published, in defence of Palamas and his views, a decree (Τέμενος) which eventually was looked upon as an authentic declaration of the Orthodox Church. From this time Hesychasm may be said to have defeated all opposition. Gregoras was arrested and kept in custody in his own house. He was not set free till Cantacuzenus (with whom rests the eternal disgrace of having first invited the Turks to Europe) was deposed and the Paleologoi triumphed in 1364. Cantacuzenus then withdrew to the Paulicians and took the name of Joseph, and spent the rest of his life writing a history of his own times and contemplating the unenlightened light. This history in four books (in Migne, P. G., CLIII, CLIV) covers the period from 1320 to 1356, and tells the whole story of the Hesychast controversy. Being written by a violent partisan, it forms an interesting contrast to that of Gregoras.

After the deposition of Cantacuzenus, the Barlaamites held an anti-Hesychast synod at Ephesus; but the patriarchs of Constantinople and the great mass of the people had by now become too firmly persuaded that the cause of Hesychasm was that of Orthodoxy to oppose it was to incur the guilt of latinity; so even Cantacuzenus’s fall was not enough to turn the scale. Hesychasm from this time is always triumphant. About 1360 Palamas died. In 1368 the seventh Synod of Constantinople (concerning this matter) under the Patriarch Philotheus and Isidore of Cappadocia, excommunicated the Barlaamite monk Prochorus Cidonius, confirmed the "Tomus" of 1351 as a "Faultless Canon of the true faith of Christians", and canonized Palamas as a Father and Doctor of the Church. So by the end of the fourteenth century Hesychasm had become a dogma of the Orthodox Church. It is so still. The interest in
A question gradually died out, but the Orthodox still maintain the Tomus of 1351 as binding; the real distinction between God's essence and operation remains one more principle, though it is rarely insisted on now, in which the Orthodox differ from Catholics. Gregory Palamas is a saint to them. They keep his feast on the Friday and Sunday that follow his death (Niles, "Kalendarium Manuelum," Innsbruck, 1897, II, 124-125). The office for this feast was composed by the Patriarch Philotheus. In the nineteenth century there was among the Orthodox a certain revival of interest in the question, partly historical, but also speculative and philosophical. Nicon Chrysostomos, Athos, defends the Holy Trinity; his Ἱσχύς ἢ Θεότοκος (1801); Eugenius Bulgaris and others, especially Athos monks, have again discussed this old controversy; it is always evident that their theology still stands by the Tomus of 1351, and still maintains the distinction between the Divine essence and energy.

There was a very faint echo of Hesychasm in the West. Latin theology on the whole was too deeply impregnated with the Aristotelian Scholastic system to tolerate a theory that opposed its very foundation. That all created beings are composed of actus and potentia, that God alone has the actus of essence, simply that he is infinite—this is the root of all Scholastic natural theology. Nevertheless one or two Latins seem to have had ideas similar to Hesychasm. Gilbertus Porretanus (d. 1154) is quoted as having said that the Divine essence is not God—implying some kind of real distinction; John of Varences, a hermit in the Diocese of Reims (c. 1396), said that the Apostles at the Transfiguration had seen the Divine essence as clearly as it is seen in heaven. About the same time John of Brascin made a proposition: Creatum iucum in finitim et immanens esse. But these isolated opinions show nothing of the development through the indignant condemnations they at once provoked. St. Bernard wrote to refute Gilbert de la Porre; the University of Paris and the legate Odo condemned John of Brascin's proposition. Hesychasm never had a party among Catholics. In the Orthodox Church the controversy, waged furiously just at the time when the enemies of the empire were finally overturning it and unity among its last defenders was the most crying need, is a significant witness of the decay of a lost cause.

II. Literature: Allatius, De eccl. occident. orient. perpetua consilia (Cologne, 1648); STERN, Studien über die Hesychasiten (XVP, Freiburg, 1874); HAHN, Cäsar, Hesychia und Bogomilismus, (Berlin, 1875); ENGELHARDT, Die Aresenir et Hesychasiten in Zeitschr. f. histor. Theologie, V (1877); MILORAD, A. G. patristikus Constantinop. (Vienna, 1890).

ADRIAN FORTESCUE.

Hesychius of Alexandria, grammarian and lexicographer; of uncertain date, but assigned by most authorities to the later fourth or earlier fifth century. We have no information whatever about him, his parentage, or his life; beyond what can be learned from the lexicographical processus he purports to be written by "Hesychius of Alexandria, Grammarian, to his friend Eulogius": its authenticity was needlessly questioned by Valckers. It tells us that the author bases his work on that of Diogenianus (probably Diogenianus of Heraclia, who in Hadrian's reign composed one of the successive anthologies of Greek minor poetry which are imbedded in the "Anthologia Palatina"), who first digested into a single lexicon the various dictionaries of Homeric, comic, tragic, lyric, and oratorical Greek, adding also the vocabularies of medicine and history. The letter ends with "I pray to God that you may in health and well-being enjoy the use of this book"; but Hesychus seems only to have been a pupil. The work has certainly not come down to us in its original form: it contains biblical and ecclesiastical glosses, of which the preface gives no hint. It is generally agreed that these are later interpolations; and there, is no good ground for identifying this Hesychus (as Fabricius did) with his namesakes, a third-century bishop and a fourth-century bishop of the See of Sebaste (Bithynia) (Athey, tz. Shahan, 160). The classical part of the Lexicon is of the greatest importance to Greek scholars, not only as a rich vocabulary of otherwise unknown words and rare usages, but as a mine of information about ancient Realism and lost authors; few instruments have been equally serviceable for the critical emendation of Greek poetry texts.

The disturbance in that alphabetical order in which Hesychus (in the preface) says he carefully followed, is only one of many evidences that the book has been altered in the process of tradition: Ernesti held that it was the first cut, the author little altered his work, excepted by Diogenianus, was roughly brought up to date by the interpolated additions of an otherwise unknown Hesychus; others, that Hesychus's book was "contaminated" with a lexicon attributed to St. Cyril of Alexandria. Whoever it may have been who added the "Glossae Sacrae" to Hesychus, they have received much separate attention. They derive, says Ernesti, from three sources: (1) the parallelism of Scripture, i.e. a word is glossed by the correlative word in the parallel half-verse; (2) the synonym, or explanatory doublets of the sacred writer; (3) the early commentators, such as Aquila, Symmachus, Theodotion. The difficulties of exploring Hesychius's sources and utilising his stores are aggravated by the bad state of the text: the Lexicon, first printed by Musurus (fol. ap. Aldum) at Venice in 1514, had only been transmitted in a single deeply-corrupt fifteenth-century codex.

The standard complete edition is by SCHMIDT (Jena, 1887); of the Glossae Sacrae, by ERNESTI (Leipzig, 1785). Discussions and elucidations in BENTLEY, Epistol. Valens, Opuscula, also MILLER AND MAKARIUS OF CYPRUS, Greco, iii, 384; CHROGLOU, Hist. de la lit. Or., V, 975; and in general, PAULY, Real-Enzyklopädie, s. v.

J. S. PHILLIMORE.

Hesychius of Jerusalem, presbyter and exegete, probably of the fifth century. Nothing certain is known as to the dates of his birth and death (437?), or, indeed concerning the events of his life. Bearing as he does the title ὁ ἀρχιερεύων, he is not to be confused with Blass' Hesychius of Jerusalem. A contemporary of Gregory the Great. A monograph on this brilliant scholar, whose fame has been so long obscured, would fill one of the most urgent needs of patristic theology.

The writings of Hesychius of Jerusalem have been in part lost, in part handed down and edited as the work of other authors, and some are still buried in libraries in MS. Whoever would collect and arrange the fragments of Hesychius which have come down to us must go back to the MSS.; for in the last edition of the Fathers (P. G., XCVII, 757-1560) the works of various writers named Hesychius are thrown together in certain order under the heading "Hesychius, Presbyter of Jerusalem". About half of the matter under "Hesychius" must be discarded, namely, the commentary on Leviticus (787-1180) which is extant only in Latin and is unauthentic, being based on the Vulgate text rather than the Septuagint, and therefore the work of a later Latin (Ixycheus). The collection of ascetic
maxims (1479–1544) is the work of Hesychius of Sinai (q. v.), and not of his namesake of Jerusalem. Neither are all the homilies (1449–80) as certainly the work of Hesychius of Jerusalem as the sixth, the authenticity of which is supported by an ancient Esorai MS. (~II, 20, sec. 9). Unfortunately, this cell more in the homilies of various dates from the Turin MS., C IV4, sec. 12–13, a gem of religious rhetoric worthy of furnishing the lessons for an Office of the Church. Subjoined to the "Legend of the Martyrdom of St. Longinus" (P. G., XCIII, 1545–60) is the testimony of Hesychius Presbyter of himself, that he had found the MS. in the library of the Holy Sepulchre at Jerusalem.

Method and Importance of his Eszegetic Writings.—Judging from the extant fragments, Hesychius must have been a very prolific writer on Biblical, particularly Old-Testament, exegetics. The notice in the Greek Menology under 28 March, in which mention is made of the exposition of the entire Scriptures, can refer to none other than Hesychius of Jerusalem. In hermeneutics he adheres closely to the allegorical-mystical method of the Alexandrines; he finds in every sentence of the Bible a mystery of doctrine, and reads into texts of the Old Testament the whole complexus of Jewish history and Christian Scripture. He follows the Originean type of exegesis; he is the peculiar characteristic of his exegeses, and proves a valuable help to the literary critic in distinguishing authentic Hesychians from the unauthentic. A type of exegesis on which scholastic methods and explanations in local conditions, likewise geographical and topographical allusions to the holy places of Palestine would be expected of an exegete living at Jerusalem. The importance of Hesychius for textual criticism lies in the fact that many of his paraphrases echo the wording of his exemplar, and this more in his fragmentary homilies from other columns of the Hexapla or Tetrapsa, particularly readings of Symmachus, whereby he has saved many precious texts. He is likewise of importance in Biblical stichometry. His "Capitula" (P. G., XCIII, 1945–56) and commentaries show the early Christian view of the Old Testament, Minor Prophets and Isaias, which corresponds to the inner sense of ideas of the respective books far better than the modern division. In the case of certain separate books, Hesychius has inaugurated an original division of the Sacred Text—for the "citizen of the Holy City" (Athenag., 23) cited in the oldest MSS. of canons of the Psalms, and the Can- ciles, is none other than Hesychius of Jerusalem. It has been discovered by Mercati that in some MSS. the initial letter of each division according to Hesychius is indicated in colour. Hesychius must have been generally known as an authority, for he is simply as Hagiotopolis, or, elsewhere, by the equally lacunary expression "him of Jerusalem." (\textit{hymnion}.)

Seperate Commentaries.—It is certain that Hesychius was the author of consecutive commentaries on the Psalms, the Canticle of Canticles, the Twelve Minor Prophets, Isaias, and Luke (Chapter 17). His name is associated with an occasional scholium to texts from other books (Genesis, and Kings, Ezechiel, Daniel, Matthew, John, Acts, the Catholic Epistles), which, however, apart from the question of their authenticity, are not necessarily taken from complete commentaries on the respective books. Likewise the citations from Hesychius in ascetic florilegia, as in Bodl. Baroce. 143, sec. 12, are taken from exegetical works. The most perplexing problem is the connexion of Hesychius with the commentary on the Psalms attributed to him. The numerous citations from Hesychius in cattene of the Psalms and the exegetical works on the Psalms handed down over his name, particularly in Oxford and Venice MSS., are so widely at variance with each other as to preclude any question of variations in different transcriptions of one original; either Hesychius was the author of several commentaries on the Psalms or the above-mentioned commentaries are to be attributed to several authors. The latter is a matter of fact Spanish MSS. clearly distinguish between the Monk, author of commentaries on the Psalms and Canticles, and Hesychius the Priest. In 1900 the present writer explained the commentary on the Psalms included among the works of St. Athanasius (P. G., XXVII, 940–1544) as the glossary of Hes- chius issued over a pseudonym. This hypothesis has since been confirmed by further evidence (Esorai, \textit{c}, 2, sec. 12).

A complete commentary of Hesychius on the Canticles of the Old and New Testament, which are known to have constituted a distinct book in the Jerusalem Bible, has been preserved in a few codices. The authenticity of this must be based on the Bodl. Miscell., 5, sec. 9. Another codex which would have been particularly valuable for this edition and for the solution of the Hesychius problem, the Turin MS. B, VII, 30, sec. 8–9, has unfortunately been destroyed by fire. The Mechitarists of San Lazzaro have in their possession an Armenian commentary on Job over the name of Hesychius of Jerusalem. The scholia of Hesychius to the Twelve Minor Prophets are preserved in six MSS. at Rome, Paris, and Moscow, and await publication. His commentary on Isaias was discovered in the same monastery. A commentary to an eleventh-century Vatican MS. (Vatic., 1474), by the present writer, who published it with a facsimile; the authenticity of these 2860 scholia was later confirmed by a ninth-century Bodleian MS. (Miscell., 5).

Scholia to the Magnificat, in the cattene of Canticles, and MSS. at Paris and Mount Athos establish beyond doubt the fact that the form of variant readings on the Gospel of St. Luke, at least on the first chapter. For evidence as to the authenticity of the "Harmony of the Gospels" (P. G., XCIII, 1391–1448) the treatise on the Resurrection must first be examined. This is extant in two forms, a longer (under Gregory Thaumaturgus, 622–5) and a shorter, the latter an abridgment of the former and as yet unpublished. In tenth, eleventh, and twelfth-century MSS. of the former, "Hesychius Presbyter of Jerusalem" is added the further title "the theologian". The works of Hesychius of Jerusalem so far published are to be found in P. G., XCIII, 757–1560 (see also loc. cit., 781–88 for the older literary and historical notices), Faulhaber, "Hesychii Hieroeolymitani interpretatio Isaiae prophetae nunc primus in lucem edita" (Freiburg, 1900), and Jaglic, "Ein unedierter griechischer Psalmenkommentar" (Vienna, 1910), also Mercati, "Studi e Testi", 8 (1899, 1910), and others (Bardehewer, Palaeographie, tr. Sharma (Freiburg, Br., 1909); Faulhaber, "Eins verteilte Oxfordshire Handschrift in Querschrift" (Tübingen, 1896); and Lietmann, "Cattaneo graeco manum scripta" (Tübingen, 1892).

Michael Faulhaber.

Hesychius of Sinai, a priest and monk of the Order of St. Basil in the Thorn-bush (8466) monastery on Mt. Sinai, and ascetic author of the Byzantine period in literature. Nothing definite is known concerning his career or the exact time at which he lived. Only a few paltry fragments of the literary remains of this almost completely forgotten author have been preserved, and they have still to be collected and separately criticized. In manuscripts, as a rule, he is given...
the honorary title of “Our Holy Father” (τοῦ θείου πατρὸς ήσυχολ Κατερονίου) and, in cases where the authenticity of this title on a manuscript is certain, it is sufficient to distinguish him from others of the same name, and especially from the celebrated Hesychius of Jerusalem. Examination of the Bible texts on which the treatises of Hesychius are based is just as important a test as this external criterion; thus, Hesychius of Sinai in his Bible quotations regularly follows the version of the “Codex Sinaiticus.” How much of the literary material in the latest edition of the works of the Fathers (Migne, P. G. XCVII, I, 1875) published with an attempt at critical selection under the title of “Hesychius, Presbyter of Jerusalem,” should properly be ascribed to Hesychius of Sinai, can only be determined by monographic investigation. The pivotal point about which such investigation would turn is a collection of 200 ascetic maxims (Ἱερόλ απόκρυψα ἡπείρησις) of Theodore of Prima Porta (τὸ μνήματα τὰ ἀποκρύπτα τὰ ἐν Ἱερολα) and Simeon of Thessalonica (ἐν ὕπολαβ κατὰ τῆς Σαμωθρῶνιας), from which Migne, loc. cit. 1479-1544, attributes to Hesychius of Jerusalem under a pseudonym, but which should, without doubt, be credited to Hesychius of Sinai. For the author of these maxims acknowledges, by a play on words (α ἱερολ απόκρυψα ἡπείρησις), that his name is Hesychius and that his companion in prayer is Basilius, monk; further, as a large number of manuscripts support this intrinsic evidence (Bodl. Baroc. 118, sec. XII-XIII; Bodl. Laud. 21, sec. XIV; Bodl. Canon. 16, sec. XV; Mus. Brit. Burn. 113, sec. XV et al.). The text of the Migne edition could be completed at a very early date to particular advantage from Russian MSS. (Mus. Brit. Addit. 9347, sec. XII, and Bodl. Cromwell. 6, sec. XV). The fact that the maxims are dedicated to a certain Theodulus has given rise in certain manuscripts to the erroneous statement that Theodulus was their author. It cannot be determined here how many of these maxims were originally put together in the form of a treatise and how many of them have been adopted by later ones. It is probable that the ascetic and Biblical-ascetic fragments that I have found in Turin Codices (B V 25, sec. XV, fol. 171-174 and C VI 8, sec. XIV, fol. 39 verso 41) under the name of “Our Holy Father Hesychius” should also be attributed to Hesychius of Sinai.

Michael Faulhaber.

Hethites (A. V. Hittites), one of the many peoples of North-Western Asia, styled Hitim in the Hebrew Bible, Kbite or Khite on the Egyptian monuments, and Hittita in the cuneiform tablets of the first millennium B.C. In many centuries the existence of the Hethites was known only from scanty allusions in the Bible. Egyptian and Assyrian documents revealed to the scholars of the latter part of the nineteenth century the power of the Hethite empire, and discoveries now pursued at the very home of this long-forgotten people aim almost daily supply important new information concerning it, whetting the interest of scholars, and fostering the hope that before long Hethite history will be as well known as that of Egypt and Assyria. In the latter part of the eighteenth century a German traveller had noticed two figures carved on a rock near Irbes, in the territory of the ancient Lycia. Major Fischer rediscovered them in 1838, and made a drawing of the figures and a copy of the two short inscriptions in strange-looking characters which accompanied these figures. But what they were no one could tell at the time. In his travels along the Orontes (1812) Beckhardt had visited upon a Baskhe (Baša), the site of the ancient city of Hamath, a block covered with what appeared to be an inscription, although the characters were unknown. He mentioned this discovery in his “Travels in Syria” (p. 146), without, however, attracting the attention of travellers and Orientalists. Thirty-six years later three more slabs of the same description were found in the same place by Johnson and Jessup; and in 1872 Dr. W. Wright had the stones removed to the Imperial Museum of Constantinople. The characters carved in relief on the stones were long designated as “Hamathite writing,” although as early as 1874 Dr. Wright had suggested that they were of Hethite origin. Comparing the inscriptions of Irbes with those from Kramer and E. J. D. Taylor, Dr. Wright expressed the opinion that the former inscriptions did not belong in the “Hamathite writing.” Soon new texts were discovered at Aleppo, Jerablus, Ninive, Ghiawan-kalessi, Boghas-Keui, Mount Sipylus, the Pass of Karabell: all presented the same strange hieroglyphic characters, engraved in relief and in boustrophedon fashion. When first noticed the Hethite inscriptions, they likewise bore a striking resemblance to one another: all were clad in a tunic reaching to the knees, were shod with boots with turned-up ends, and wore a high peaked cap. It became certain that these monuments belonged to the Hethite population located by Egyptian and Assyrian inscriptions in the east of Asia Minor. The true home of the Hethite monuments, indeed, extends from the Euphrates to the Halya River; monuments found beyond these limits either mark the site of eccentric colonies, or are memorials of military conquests. This geographical distribution, as well as some of the features of the figures carved on the monuments, makes it clear that the Hethites must have been originally inhabitants of a cold and mountainous region, and that the high plateaux of Cappadocia should be regarded as their primeval home. Both their own and the Egyptian monuments describe them as ugly in appearance with yellow skins, black hair, receding foreheads, oblique eyes, and protruding upper jaws. The type may still be found in Cappadocia.

As to their language, it may be said, despite the researches of Conder, Sayce, and others, to have seen so far challenged the patience and genius of Orientalists. The first Hethite inscription discovered was known by the scholars as the so-called Hamathite characters; the royal archives discovered since 1905 at Boghas-Keui, under the auspices of the “Deutsche Orient-Gesellschaft,” contain many Hethite texts written in cuneiform characters. It is to be hoped that this will enable scholars to detect the secret of that old language which still lingered in Lycaonia at the time of St. Paul’s missionary journeys in these regions. Little likewise is known of the Hethite religion. The special difficulty here arises partly from the syncretic tendencies manifest in the religious development of the ancient peoples of the East, and partly from the documentary evidence bearing on distinctly Hethite worship. Lucian’s description of the great temple of Mabo and its worship may contain some features of the worship going on in the older city of Carchemish; but it seems to be a hopeless task to try to trace back these features over a gap of some ten centuries. Owing to the prevalence of popular customs in remote country places, and particularly in mountainous regions, less accessible to foreign influence, there is perhaps more reliable information to gather on the primitive Hethite worship from Strabo’s description of Cappadocian religious solemnities in classical times (Strabo, XII, 6, 5, 6, 7). The Hethite pantheon is known, however, to a certain extent, from the proper names which quite frequently contain as a constitutive element the title of some deity. Among the divine names most usually employed may be mentioned here: Tarqû, Rho, Sandan, Kheba, Tahtô, Ms, and Hattô. The compact evidence in the tablets, the repetition of the idea that heaven, earth, rivers, mountains, lands, cities, had each its male or female Sutekh, a kind of genius loci, like the Aramaean Baal or Ba’alath. A treaty between the same Hattsusil and the ruler of Mitanni mentioning first deities of Babylonian origin, and then others of a more distinctly Hethite character, and lastly some Indo-Persian gods, witnesses to the syncretic character of the Hethite religion as early as VII—20.
the fourteenth century B.C. Thanks to the Egyptian and Assyrian documents we are in possession of more details concerning the history of the Hethites. At an early date some of their tribes forced their way through the defiles of the Taurus range into Northern Syria and established themselves in the valley of the Orontes: Hamath and Cades (A. V. Kadesh) were very ancient Hethite cities. Some bands, pressing their march southwards, settled in the hilly region of Southern Palestine, where they intermingled with the Amorrites, then in possession of the land. Ezekiel, stating that the mother of Jerusalem was a Hethite (an Hittite—A. V., xvi, 3, 45; D. V.: Cethite), very likely referred to these Hittites who came from that quarter of the city. At all events, when Abraham came to Chanaan he found a Hethite colony clustered around Hebron (Gen., xxviii, 3; xxvi, 34, et c.). The bulk of the nation established itself in the Naharin (comp. Hebr.: Aram Naharaim), between the River Balikh and the Orontes, on the slopes of the Amanus range and in the Cilician plains. This position, between the two foremost empires of the ancient world, namely Chaldea and Egypt, made the territory occupied by the Hethites, on the road followed by the merchants of both nations, one of the richest commercial countries in the East.

But this situation was perhaps still more inclined to war than to commerce, and local monuments, no less than Egyptian records, bear witness to the military conquests and the power of the Hethites in the distant regions of Western and Southern Asia Minor. There are some grounds for the belief that certain traditions lingering on in those regions centuries later (origin of the Lydian dynasty, legend of the Amazons) originated in the Hethite conquests, and that we may recognize the swarthy Cappadocian warriors in the Krioioi mentioned in Odyssey, XI, 516-521. Certain it is, at any rate, that the Troad, Lydia, and the shores of the Cilician Sea acknowledged the Hethite supremacy at the beginning of the eighteenth century B.C.

The Hethites first appear in historical documents at the time of the eighteenth Egyptian dynasty (about 1500 B.C.). Thothmes I, in the first year of his reign, carried his arms to N. Syria and set up his trophies on the banks of the Euphrates at Carchemish. His grandson, Thothmes III, was a great warrior. Twice, he tells us, in 1470 and 1463 B.C., the king of the land of the Hethites, “the Greater”, paid him tribute. After a signal victory at Megiddo, and the taking of this city, which was the key to the Syrian valleys, Thothmes III seized Carchemish and invaded and subdued the Hethites. At his death the Egyptian empire bordered on the land of the Hethites. The successes of the Egyptian armies did not dishearten their sturdy neighbours. Their restless enterprises forced Ramman-Nirari, King of Assyria, to invoke the aid of Thothmes IV against the Hethites of Merodash. Help was apparently given, for an inscription tells us that the first campaign of the Egyptian prince was directed against the Khetas. These, however, with their allies the Minni, the Amurrus, the Kasii, and the King of Zinshar, did not cease to press southwards, thereby causing serious alarm to the Egyptian governors. Held in check until the death of Amenhotep III by the King of Mitanni, Dushratti, who had made alliance with the King of Egypt, the Hethites resumed the offensive during the reign of Amenhotep IV. They were led by Etaqama, son of Sutarna, Prince of Cades, who had formerly worked against them, and although professing to be still acting on behalf of the pharaoh, had become their warm supporter. Before Etaqama, Teuwaati, Arzawaia, and Dasa, one by one the Syrian cities and the Egyptian strongholds fell, and Cades on the Orontes, conquered, became for centuries a strong centre of Hethite power. Subbilius, during whose reign the Hethite empire won, by its military successes, a place of prominence in the Eastern world, is the first great Hethite sovereign named in inscriptions: Carchemish, Tunip, Nil, Hamath, Cades, are mentioned among the principal cities of his empire; the Mitanni, the Arsapi, and other principalities along the Euphrates acknowledged his suzerainty; and Troad, Cilicia, and Lydia owned his sway. Home. The successors of Amenhotep IV, hampered by the trouble and disorder prevailing at home, were no match for such a powerful neighbour; Ram ses I, the founder of the nineteenth dynasty, after an attack, the success of which seems to have been doubtful, was compelled to conclude with the Hethites an alliance by which he left in Hethites their entire freedom of action. His son and successor, Seti I, attempted to reconquer Syria. At first he was victorious. Marching his armies through Syria as far as the Orontes, he fell suddenly upon Cades which he wrested from the hands of Muttalii. The success of this campaign was, however, by no means decisive, and an honourable peace was concluded with the Hethite ruler, Mursil.

The epoch of Seti's death was one of revolution in the Hethite Government. Muttalii, the son of Mural, having been murdered, his brother Hattusil was called to the throne (about 1395 B.C.). He at once mustered all his forces against Mursil, who took place near the city of Cades: in a hard-fought battle in which the Egyptian king, surprised from an ambush, hardly escaped, the northern confederacy was defeated and the Hethite ruler sued for peace. The treaty then concluded was, however, but a short truce, and only sixteen years later, the twenty-first year of Ram ses, on the twenty-first day of the month Tybi, was peace finally signed between the Egyptian ruler and "the great king of the Hethites". The treaty, the Egyptian text of which has long been known in full, and of which a Babylonian minute was found in 1907 at Boghaz Keui, but could be taken to interfere in Babylonian politics. An alliance had been entered upon between him and Katachman-Turgu, King of Babylon. At the latter's death Hattusil threatened to sever the alliance if the son of the deceased prince was not given the crown. The peaceful relations of the Hethites with the Medes and Persians, the influence of the Phoenicians, shows that the two powers continued during the reign of Ram ses' son, Minepath, the pharaoh of the Exodus; this prince, indeed, soon after his accession, sent corn to the Hethites at a time when Syria was devastated by famine. It is true that Egypt had to repel on its own shores an invasion of the Libyans and other peoples of As sian power; but, although the Hethites seem to have been vassals to the Hethites, nothing indicates that the latter had any interest in the enterprise. Such was not the case under Ram ses III. A formidable confederacy of the nations of the coast and of the islands of the Egean Sea swept N.-W. Asia, conquered the Hethites and other inland peoples and, swayed by the troops of the conquered kingdoms, fell upon the shores of Egypt. The invading army met with a complete disaster, and, among other details, Ram ses III records that the King of the Hethites was captured in the battle. The Hethite empire then lost for a long period its political activity, and fell into independent states: perhaps some tribes in the far west and the south of Asia Minor had shaken off the Heth iite allegiance; however, we learn from Thespis II (A. V. Tiglath-pileser) that, towards the end of the eleventh century, the "land of the Hittis", still extended from the Lebanon to the Euphrates and the Black Sea. As early as the close of the four-
The two hundred years which followed the death of Theglatphalasar I were for the Assyrian empire a period of decay. The relations of the Hethites with the Israelite kingdom, which, under David and Solomon, rose to prominence, seem to have been few. David, we are told, had Hethites in his army and in his bodyguard (I Kings, xxvi, 6; II Kings, xi, 6, etc.); these were probably descendants of the Hethites settled in S. Palestine. Bethshean, Solomon’s mother, perhaps belonged to their race. At any rate, it seems that Adrazer, King of Soba, was endeavouring to extend the influence of the Hittite power at the expense of the Syrian dominion (II Kings, viii, 3) when he was smitten by David. It is known also from II Kings, xxiv, 6, that the officers of David went as far as Cades on the Orontes (Hebrew text to be corrected) when they were sent to take the census of Israel. The text of II Kings, 28, 29, adds that in Solomon’s time Israelite merchants bought horses in Egypt and from the Syrian and Hethite princes. What Adrazer could not effect the rulers of Damascus succeeded in doing; they built up their power partly out of the empire of Solomon and partly out of the Hethite dominion which belated the onus unshaken supremacy of Carcheosh was apparently on the wane. Of this the inscriptions of Assurnasirpal (885–860) leave no doubt. Renewing the campaigns of Theglatphalasar I against the eastern Hethite tribes, he succeeded in crossing the Euphrates; Carcheosh escaped assault at the hands of the Assyrian conqueror by buying himself off at a tremendous price. Continuing his raids westwards, Assurnasirpal appeared before the capital of the Khattitians: like Carcheosh, the city bribed him away and induced him to turn towards the Phoenician cities. A few centuries of profitable commercial operations had it, seems, altogether changed the warlike spirit of the Khattit prince: a league was formed under the leadership of Sangara of Carcheosh; but the degenerate Hethites, unable to withstand the Assyrian onslaught, were compelled to purchase peace by the payment of a heavy tribute (855). This victory, breaking the power of the Hethites, gave to Damascus and Bagdad the rank of empires, opened to the Assyrians the way to Phoenicia and Palestine. The very next year Shalmaneser came into contact with Damascus and Israel. Carcheosh, however, was still in the hands of the Hittites. A period of decadence for the Assyrian empire followed Shalmaneser’s death; during this period the mutual relations of the two nations appear to have remained unaltered. But new enemies from the East were pressing close on the land of the Hethites. Vannic inscriptions record the raids of Menmas, King of Dushpas, against the cities of Surisilla and Tarkhi-gamas, in the territory of the Hethite prince Sada-Mutu. In 790, Shalmaneser held an expedition against the King of Gupas and overran the Hethite country as far as Malatayth. Menmas’s son, Argistis I, again marched his armies in the same direction, conquering the country along the banks of the Euphrates from Palu to Malatayth. The accession of Theglatphalasar III (745) put a stop to the conquests of the Vannic kings; but this meant no respite for the much weakened Hethites, their country invaded by the Medes, visited by the Babylonians, and, in 739, King Pisiris of Carcheosh had to pay tribute to the Ninivite ruler. Profiting, it seems, by the political troubles which marked the close of the reign of Shalmaneser IV, Pisiris, with the help of some neighbouring chieftains, declared himself independent. It was, however, of no avail; in 725, at the battle of Qarqar against Sargon, its king was made a prisoner, and its wealth and trade passed into the hands of the Assyrian colonists established there by the conqueror. The fall of the great Hethite capital resounded through the whole Eastern world and found an echo in the prophetic utterances of Isaiah (x, 9); it marked indeed the final doom of a once powerful empire. Henceforth the Hethites, driven back to their original home in the fastnesses of the Taurus, ceased to be reckoned among the peoples whose worth retaining the attention of historians.

CHARLES L. SOUVAY.

Hettiger, FRANZ, Catholic theologian; b. 13 January, 1819, at Aschaffenburg; d. 26 January, 1890, at Würzburg. He attended the gymnasium in his native city and afterwards, from 1836 to 1839, the academy in the same city, where he finished philosophy and began theology. As the teaching of the latter science was discontinued in this academy in 1839, he entered the ecclesiastical seminary at Würzburg and continued his studies there from the beginning of 1839 to that of 1841. In 1841 he was ordained priest by the advice of Bishop Georg Anton Stahl of Würzburg, who had taught him Christian doctrine in the gymnasium of Aschaffenburg, and had then been his professor of dogmatic theology at Würzburg until 1840, he went to Rome in the fall of 1841 for a four years’ course in the German Colleges. Here he was ordained then 23 September, 1843, by Cardinal Patrizi, and upon the completion of his studies, in 1845, he received the degree of Doctor of Theology. In the first volume of his work, "Aus Welt und Kirche", Hettiger gives a full and interesting account of his student days in Rome.

After his return home, he was made chaplain at Alzenau, 3 October, 1845. On 25 October, 1847, he was appointed assistant, and on 20 May, 1852, subregent, in the ecclesiastical seminary of Würzburg. On 1 January, 1856, he became extraordinary professor, and on 16 May, 1857, ordinary professor, of patrology and propedieutics in the University of Würzburg. He took up the teaching of apologetics and homiletics, with the direction of the homiletic seminary, on 1 January, 1867. From 1871 he lectured on dogmatic theology in the place of Denzing, whose health had failed, and after the latter’s death, he became ordinary professor of dogmatic theology in 1884. In 1859 he received the honorary degree of Doctor of Philosophy from the philosophical faculty of Würzburg. Twice, 1862–63 and 1867–68, he was rector
HEUDE 308

of the university. Hettinger and his colleagues, Her- genröther and Denzinger, formed a brilliant constellation to which the theological faculty of Würzburg owed the high repute which it enjoyed for many years. Hettinger's merits were also recognized abroad. He was made an honorary member of the councils of doctors of the University of Vienna in 1866, honorary doctor of theology of Louvain in 1884, and, in 1885, honorary member of the Academia Religiosa Catholicae of Rome. He was called to Rome with Hergenröther in 1886 to assist in the preliminary work of the Vatican Council, and appointed to the theological commission. On 21 November, 1879, he was appointed a domestic prelate by Leo XIII.

With the qualities of a distinguished scholar of wide culture, of a clear and penetrating thinker, and of an enthusiastic teacher singularly fitted for academic instruction, Hettinger joined the brilliant gifts of a classic writer. His famous masterpiece, the "Apologie des Christenthums", was published in 2 vols. in 5 parts (Freiburg im Br., 1863-67; 2nd ed., 1865-67; 3rd ed., 1867-69; 4th ed., 1871-73; 5th ed., 1875-80; 6th ed., 1885-87). After the death of Hettinger, his pupils, Pfitzner, Hug, and Ulrich, in collaboration with H. Mollen, published the further editions in 5 vols.: 7th ed., 1895-98; 8th ed., 1899-1900; 9th ed., 1906-8. It was translated into French, English, Portuguese, and Spanish. This work was not intended for theologians alone, but also for circulation among people of culture generally. It is one of the most important productions of apologetic literature, on account of the richness of its content and its thoroughness of argument, combined with classic clearness and beauty of language and exposition, even in its most technical and complicated passages. This was followed by the more strictly scholastic "Logbuch der Fundamental-Theologie oder Apologetik" (2 parts, Freiburg, 1879; 2nd ed. in 1 vol., 1888). If we except the "Apologie des Christenthums", the beautiful work "Aus Welt und Kirche; Bilder und Skizzen" has had the widest circulation of any of Hettinger's writings (2 vols., Freiburg, 1885; 2nd ed., 1887; 3rd ed., 1892; 4th ed., 1897; 5th ed., 1902). It was the fruit of his sojourn and travels in Italy, and particularly Rome, and of his other vacation trips through various parts of Germany, Austria (especially Tyrol), Switzerland, and France. Some of the sketches of travel from which this work was compiled interest in various issues of the "Historisch-politische Blätter" (1874-84). His long and intimate study of Dante inspired the following productions: "Grundidee und Charakter der göttlichen Komödie von Dante Alighieri" (Bonn, 1876); "Die Theologie der göttlichen Komödie des Dante Alighieri in ihren Grundzügen dargestellt" (Cologne, 1879); "Die göttliche Komödie des Dante Alighieri nach ihrem wesentlichen Inhalt und Charakter dargestellt. Ein Beitrag zu deren Würdigung und Verständniss" (Freiburg, 1880; 2nd ed., 1889, tr. by Father Sebastian Bowdan as "Dante's Divina Commedia, Its Scope and Value", London, 1887); "De theologica speculativa ac mysticae Speculum praestertim trilogia" (Würzburg, 1882); "Dante und Beatrice" (Frankfort, 1883); "Dantes Geistesgang" (Cologne, 1888). To the domain of practical theology belong the two following excellent and invaluable works, which were the last written by Hettinger: "Das Priesterpredigt und Priesterprediger" (Freiburg, 1888; 2nd ed., edited by P. Hulse, 1907), and "Theologie. Briefe an einen jungen Theologen" (Freiburg, 1890; the following editions prepared by Albert Ehrhard: 2nd ed., 1897; 3rd ed., 1909; also tr. into Spanish and English, Freiburg, 1901 and 1902).

Of Hettinger's lesser writings there remain to be mentioned: "Das Priesterthum der katholischen Kirche. Primispredigten" (Ratisbon, 1851; 2nd ed. edited by Eugen Müller, 1897); "Die kirchlichen und sozialen Zustände von Paris" (Mainz, 1852); "Die Idee der geistlichen Uebungen nach dem Plane des hl. Ignatius von Loyola" (Ratisbon, 1853; 2nd ed. prepared by Rudolf Handmann, 3rd ed., 1908); "Herr, den du liebst, der ist krank. Ein Kranken- und Todesbrief" (Würzburg, 1872; 5th ed., 1904-6); "Die Liturgie der Kirche und die lateinische Sprache" (Würzburg, 1856); "Der Organismus der Universitätswissenschaften und die Stellung der Theologie in desselben" (rectorial discourse, Würzburg, 1862); "Die Kunst im Christenthum (rectorial discourse, Würzburg, 1867); "Vom kirchlichen apostolischen Stuhle" (Freiburg, 1873; 2nd ed., 1887); "Der kleine Kemps, Brossamen aus den meist unbekannten Schriften des Thomas von Kemps" (Freiburg, 1874; 2nd ed., 1900); "David Friedrich Strauss. Ein Lebens- und Literaturbild" (Freiburg, 1875); "Thomas von Aquin und die europäische Civilisation" (Frankfort, 1880); "Die Krisis des Christenthums, Protestantismus und katholische Kirche" (Freiburg, 1881); "Dreifaches Lehramt. Gedächtnissrede auf Denzinger" (Freiburg, 1883). Numerous treatises and some more considerable essays, which were partly preparations for his great works, were published by Hettinger. Essential works are: "Katholische Wochenschrift" (Würzburg, 1853-56); "Katholik" (1860-62); "Chilæanum" (Würzburg, 1862-69); "Oesterreichische Vierteljahrschrift für katholische Theologie" (1865); "Historisch-politische Blätter" (1874-90); "Theologisch-praktische Quartalschrift" (Linz, 1881-87, 1889-90). "Gutachten der theologischen Facultät der k. Julius-Maximilians-Universität in Würzburg über fünf für vorgelegte Fragen das bevorstehende ökumenische Concil in Rom betreffend" (printed in "Chilæanum", New Series, Vol. II, 1869, pp. 258-307; and separately, Freiburg, 1869); also, "Leben und Werk D. Franz Hettingers, Ernennungen eines dankbaren Schülers" (Frankfort, 1891); Allgemeine Deutsche Biographie, I, 283 sq.

FRIEDRICH LAUCHERT.

Heude, Pierre, missionary to China and zoologist; b. at Fougeres, in the Department of Ille-et-Vilaine, France, 25 June, 1836; d. in the Jesuit college at Zi-ka-wei, near Shanghai, 3 January, 1902. Heude entered the Society in 1856 and was ordained to the priesthood in 1857. He went in 1868 to China, where he was destined to become one of most of his scientific work. As a boy he had secured a manual of botany and eagerly studied its secrets. Even after his arrival in China he continued his botanical researches, but soon turned to zoology, in which for more than thirty years he was to labour with admirable and unflagging industry. His first sojourn in China was in 1872, as secretary to the brothers of the Franciscan Mission. Heude, on the other hand, has made known numerous new species and received high commendation from the scientific colleagues of the author. To this day the most important work on the land mollusks of China is Heude's treatise: "Notes sur les mollusques terrestres de la vallée du Fleuve Bleu" (188 pages of text and 32 plates). This essay may be found in the first volume of the "Mémoires concernant
HEWITT 309 HEWIT

l’histoire naturelle de l’Empire Chinois” (Shanghai, Imprimerie de la Mission Catholique), founded by the Jesuits of Zi-ka-wei in 1852. Of these “Mémoires” there had appeared at the time of Heude’s death four volumes, four numbers each, and the first number of volume V, containing in all more than 800 pages and, in round numbers, 200 illustrations and plates, partly coloured, in royal folio. There is in the first volume a short article by P. C. Rathou, the rest is due to the pen of Father Heude, who by this time had taken up the study of zoology and botany. He died at Mentong on 12 February 1883, founded, with the co-operation of a number of missionaries, a museum in Zi-ka-wei for the natural history of Eastern Asia, and had visited Europe to study the great museums of natural history in Paris, London, Antwerp, and Leyden.

Henceforth he directed his studies particularly to the systematic and geographical propagation of Eastern Asiatic species of mammals, as well as to a comparative morphology of classes and families groups according to tooth-formation and to skeleton. His fitness for this work arose from an extremely keen eye, an accurate memory, and the habit of recording under the microscope which he partly accumulated in the course of his earlier travels, partly found in the museum of Zi-ka-wei, and partly ferreted out in new expeditions which he undertook in all directions. These expeditions covered chiefly the years from 1892 to 1896. They took him from Shanghai to the isle of Philipines, at the Peking, to Singapore, Batavia, the Celebes, the Moluccas, New Guinea, Japan, Vladivostock, Cochin, China, Cambodias, Siam, Tongking. Volumes II to V of the “Mémoires” give the results of these studies in numerous articles which treat practically all classifications of mammals. Notably the “Études odontologiques et archéologiques,” discuss the tooth-formation of the anthropoid apes and man. As an investigator in connexion with his morphological treatises, Heude carried on his work with absolute independence of method. He contented himself with the facts before him and sought little assistance from authorities. He did not fear to deduce theoretical conclusions from his own observations, which flatly contradicted the views of other investigators—e. g., Rütimeyer—consequently, he was drawn into controversies. Heude fell seriously ill at Tongking in July, 1900 (his travelling diary, which he kept scrupulously under pain, is now in the possession of his daughter), and after October, 1900, resided in Zi-ka-wei, where, though in bad health, he continued his scientific work until just before his death.

Hewitt (alias Weldon), John, English martyr, son of William Hewitt of York, date of birth unknown; executed at Mile End Green, 5 October, 1888. The two names Hewitt and Weldon gave rise to some confusion, and Challoner in his “Mémoires,” in addition to his sketch of John Hewitt, mentions one John Weldon “priest of the College of Douay according to Champaign and Molanus.” That but one martyr is referred to is proved by Law in “Martyrs of the Year of the Armada” (The Month, XVI, 3rd ser., 71-85), chiefly on the testimony of a certain tracted 24 Oct., 1888, entitled: “A True Report of the Indigent Arrangement, Condemnation, and Execution of John Weldon, William Hartley, and Robert Sutton; Who suffered for high Treason, in severall places, about the Citty of London, on Saturday the fifth of October, Anno 1588. With the Speeches, which passed between a learned Preacher and a Layman, both in the same words, as neere as might be remembred. By one of credit, that was present at the same” (London, 1588). From Caius College, Cambridge, Hewitt passed to the English College, Reims, where, in 1583, he received minor Orders. Later he went to England, where he was captured and banished, reaching Reims once more in November, 1885. After his ordination he returned to England, where he was again captured and exiled, early in 1587, to the Netherlands, this time only to fall into the hands of the Earl of Leicester, who arrested him on a false accusation and sent him back to England for trial. In October, 1888, he was formally arraigned on a charge of obtaining ordination from the See of Rome and entering England to exercise the ministry. He was struck blind the day following, and the following day was taken through the streets of London to Mile End Green, where before his execution he held disputes with two preachers, one of whom seems to have been the author of the above-mentioned tract.

F. M. Rudge.

Hewit, Augustine Francis, priest and second Superior General of the Institute of St. Paul the Apostle, U. S. A., b. at Fairfax, Virginia, 20 December, 1820; d. in New York, 3 July, 1897. His father was Rev. Nathaniel Hewit, D.D., a prominent Congregationalist minister; and his mother, Rebecca Hillhouse Hewit, was a daughter of Hon. James Hillhouse, United States Senator from Connecticut. He was educated at Phillips (Andover) Academy, and Amherst College, from which he was graduated in 1839. Although strictly educated in the religious sect of his parents, his aversion to its peculiar Calvinistic tenets prevented him from joining their Church until after his graduation from college, when, as he declares, he first learned that a baptized person may claim the privilege of a Christian, if he is willing to acknowledge and ratify the covenant of which the sacrament is the sign and seal.” Shortly after his conversion he began the study of theology at the Congregationalist seminary at East Windsor, Conn. Scarcely had he finished its prescribed course and been licensed to preach when he became convinced that episcopacy is of Divine origin and he entered the Episcopal Church. The Oxford Movement in that Church had already extended to America, and Hewit became one of its most ardent followers. He received the Anglican order of the diaconate in 1841, and the episcopate in 1844, but resolutely refused the, expression in terms of “Tract 90.” The conversion of Newman in 1845 gradually unsettled his belief in the validity of the claims of Anglicanism, and he made his submission to the Catholic Church, 25 March, 1846. He then studied Catholic theology privately under the direction of Dr. Patrick N. Lynch, afterwards Bishop of Charleston, S. C., and Dr. James A. Corcoran, subsequently professor at Overbrook Seminary, Philadelphia. He was ordained priest on the first anniversary of his profession of faith by Right Rev. Ignatius A. Reynolds, D.D., Bishop of Maryland, and was later made a teacher in a collegiate institute founded by Bishop England at Charleston, and assisted Bishop Reynolds in the compilation of Bishop England’s works for publication. This occupation called him to Baltimore and Philadelphia, where he resided with Bishop Francis P. Kenrick and became acquainted with the Venerable John Nepron, Bishop of Neumann, C. S. R. Here he was attracted to the Congregation of the Most Holy Redeemer, which he entered in 1849. He made his religious profession 28 Nov., 1850. As a Redemptorist he laboured principally on missions with Fathers Isaac T. Hecker, Clarence A. Walsworth, Francis A. Baker, and George Deshon, until with them he was dispensed from his religious vows by a decree of the Roman Congregation of Bishops and Regulars, 6 March, 1858. Under the leadership of Father Hecker all of these priests immediately formed the Institute
of St. Paul the Apostle in New York, with a rule enjoining poverty and obedience without the obligations of the vows. Father Hewett, on account of his rare judgment, learning, and piety, was chosen to draft the first constitution and laws of this new institute, which aims to satisfy the aspirations of clerics who desire to lead an apostolic and religious life in community while discharging the civil responsibilities of the religious state, strictly so called. As a Paulist, Father Hewett laboured assiduously in the parochial and missionary fields and in the establishment and management of "The Catholic World" magazine. He was a deep student of philosophy, theology, patristic literature, history, and science, and taught all of these branches to the first novices of the institute. He was also a prolific writer and for twenty years was one of the foremost Catholic apologists in the United States. In this field he was chiefly noted for his loyalty to the magisterium of the Church and his agreement with the opinions of the most approved theologians. He wrote nothing that could be styled original; he simply aimed to explain and popularize the teaching of the doctors and saints of Holy Church. Most of his articles were published in "The Catholic World" and "The American Catholic Quarterly Review," and a few of them have reappeared in a volume entitled "Practical Articles on Kindred Topics." His most popular book was "The Life of Rev. Francis A. Baker," one of his companions, who died in 1865. "The King's Highway," which he wrote in 1874, is an excellent work to place in the hands of Protestants who are seeking truth from Scripture. Upon the death of Father Hecker (1888), Father Hewett was almost unanimously chosen superior general of the institute and held this office until his death. One of his first acts as superior was to pledge the Paulist community to support the Catholic University at Washington, D. C. St. Thomas College for the education of candidates of the institute was accordingly opened in one of the university buildings in 1889. Under his direction, Rev. Walter Elliott, C. S. P., gave the first regular missions to non-Catholics in the United States, and a new foundation of the institute was established in San Francisco, Cal.

**Hexameron** signifies a term of six days, or, technically, the history of the six days' work of creation, as contained in the first chapter of Genesis. The Hexameron in its technical sense—the Biblical Hexameron—is the subject of the present article. We shall consider: I. TEXT; II. SOURCE; III. MEANING.

**I. TEXT.** The Hexameron proper deals with the seven days of the earth's formation, or the so-called Second Creation. In its Biblical setting it is preceded by the account of the First Creation, and is followed by the mention of the seventh day, or the Day of Rest. Completeness and clearness render it advisable to give the text of both of these accounts:

**A. First Creation.**—Verse 1: In the beginning God created heaven and earth. 2: And the earth was void and empty, and darkness was upon the face of the deep; and the spirit of God moved over the waters.

**B. Second Creation.**—(a) Work of Division.—First Day.—Verse 3: And God said: Be light made. And light was made. 4: And God saw the light that it was good; and he divided the light from the darkness. 5: And he called the light Day, and the darkness Night; and there was evening and morning one day.
that move upon the earth, and wherein there is life, that they may have to feed upon. And it was so done. 31: And God saw all the things that he had made, and they were very good. And the evening and morning were the sixth day.

C. Day of Rest.—Chapter ii, verse 1: So the heavens and the earth were finished, and all the furniture of them. 2: And on the seventh day God ended his work which he had made: and he rested on the seventh day from all his work which he had done. 3: And he blessed the seventh day, and sanctified it: because in it he had rested from all his work which God created and made.

The division of the day appears between light and darkness, between the waters above and the waters below, between the seas and the dry land; the work of adornment covers the earth with vegetation, beautifies the firmament with heavenly bodies, fills the waters with fishes, the air with birds, and the continents with animal life. The third day and the sixth are distinguished by a double work, while each of the other four days has only one production assigned to it.

Including the account of what is called the First Creation, God intervenes nine distinct times: (1) He creates matter; (2) He produces light; (3) He develops the earth and the atmosphere; (4) He raises the dry land; (5) He produces vegetation; (6) He causes the heavenly bodies to be visible; (7) He produces aquatic and bird life; (8) He calls into being the land animals; (9) finally, He creates man and makes him ruler of the earth. Hence the suspicion arises that the division of God's creative acts into six days is really a schematism employed to inculcate the importance and the sanctity of the seventh day. A trace of schematism may also be detected in the grouping of the Hexameron into the works of division and the works of adornment, in the division of things immovable (first three days) and things that move (second three days), and even in the order atonement of each day. These latter begin with the respective Divine edict, add in the second place the description of its fulfilment, and end with the Divine approval of the work. On each of the first three days the Creator gives a name to His new production, and He imparts His special blessing at the end of each of the last two days.

II. SOURCES OF THE HEXAERON.—The critics no longer ask whether the Biblical cosmogony taught by the Hexameron can be reconciled with the results of natural science, but whence the cosmogonic ideas expressed in the Old Testament have been derived. Proceeding from miscellaneous and confused sources, the various views as to the source of the Hexameron may be reduced to four: (1) The Hebrews borrowed their ideas from others; (2) the Hebrew cosmogony is an independent development of a primitive Semitic myth; (3) the Biblical cosmogony is the result of two elements: Divine inspiration and Hebrew folklore; (4) the Hexameron is derived from Divine Revelation.

(1) Babylonian Source.—Professor J. P. Arendzen has treated of the various cosmogonic ideas of the principal ancient and modern nations in the article Cosmogony (Vol. IV, pp. 406 seq.). For our present purpose it suffices to keep in mind a summary of the Babylonian traditions. The Babylonian account carries us back to a period prior to the existence of any god. The universe begins with a double, purely material principle, Apsu and Tiamtu, male and female, probably personifying the mass of salt and sweet waters, respectively. From the lower world of Apsu and Lahamu, more probably the personifications of dawn and twilight than the monsters and demons with which popular mythology identified them. After a long interglacial Ansar and Kisar were produced, the personified ideas of the above and the below, or of heaven and earth in their most general abstraction. Another long interval intervened, and then Anu, Bel, and Ea (the sky, the earth, and the water) sprang forth. Then Ea and his consort Dauke gave birth to Belos or Marduk, the sun-god.

After this the differentiation of the watery All is seriously threatened. Tiamt creates a set of monsters which endeavour to bring back the original chaos. Who were these monsters? Nightly darkness obscuring and enveloping all nature, water and earth; black mists and vapours of fantastic shape, reuniting at times the waters of heaven and earth; continued rains threatening to deluge the earth and again to convert the celestial and terrestrial waters into the one vast original ocean; the crashing thunder and the tempestuous tornado, too, were formidable abetters of Tiamtu in her bitter warfare against the established order. Ansar, the lord of the comprehensive heavens, attempted in vain to overcome these foes; Ea, the deity of the earthly waters, availed still less.

Finally, Marduk, the rising sun, is sent. A fearful storm ensues, a battle between Marduk and Tiamtu; but the god of the rising sun dispels the darkness, lifts the vapours in masses on high, subdues the tempest, opens the space between heaven and earth. According to the personifying ideas of the Babylonian records, Marduk slays Tiamtu, establishes the supremacy of Anu, and thus takes the place of Belos, and with one half overshadows the heavens. Then he measures the watery abyss opposite the heavens and finds an edifice like ishara, which he had built as heaven, and lets Anu, Bel, and Ea occupy their dwellings. Then he embellishes the heavens, prepares place for the great gods, makes the stars, sets the Zodiac, founds a place for Nibiru, fixes the poles, opens the gates provided with locks on either side, causes the moon to shine forth and establishes its laws. The remainder of the Babylonian tablet-series, as first known, is fragmentary, narrating only the creation of plants (possibly) and animals. Any reference to Marduk is barred out. But Heraclius, priest of Bel, supplies this deficiency. Bel commanded one of the gods to remove his (Bel's) head and mix the earth with the thence-flowing blood, and to form men and beasts capable of enduring the light. The more recently recovered additional fragments of the Babylonian Creation, Epos agree with Berosus. "Let me gather my blood", says Marduk, "and let me [take my] bone, let me set up man".

We do not here consider the question of some remote connexion between the Babylonian creation story and the Hexameron—which is of course possible. But we ask: can the Babylonian account be the source of the Biblical account? Their difference in form is striking, though not fully decisive. The Babylonian story knows nothing of a division into days, whereas a division into six days forms the whole framework of the Hebrew account. Again, the Babylonian proemium amplifies the plain narrative of creation with the account of the choice and of the deeds of a demiurgus; it is highly figurative and anthropomorphic to the highest degree. The Hexameron, on the contrary, is the sober recital, in simple yet stately prose, of the impressive teaching concerning the development of the ordered universe from chaos. This literary excellence of the Hebrew account might be due to the special capability of the inspired writer; if no other considerations prevented it, the Hebrew writer might be thought to have borrowed his material from the Babylonian cosmogony. But the discrepancy of ideas between the proemium and the proper part of the text is a serious assumption. The cuneiform record goes back to a time when the gods did not exist: the Hebrew account places God before all creation. The Babylonian cosmogony knows nothing about the production of the original chaotic matter; the Hebrew writer derives the primaeval matter from the act of God. There is no idea of any creative action in the Babylonian...
nian tablets; the inspired account opens with God's creative act. The Babylonian record starts with a double role for the germ; the Hebrew text has only one God. The Babylonian stories taken together describe the primeval waters as spontaneously generative; the Hebrew account represents the material of the universe as lying waste and lifeless, and as not assuming order or becoming productive of life until the going forth of the Divine command. The Babylonian cosmogony is interrupted by the opposition of Tiamtu; the Hebrew Hexaemeron proceeds uninteruptedly from the less to the more perfect. According to the Babylonians the world arises out of a struggle between chaos and order, between good and evil; according to the Hebrew conception there is no opposition to the will of the Divine command. In the light of all these discrepancies between the Babylonian and the Hebrew cosmogonies, it is hardly possible to consider the former the source of the latter.

In reply, the critics grant that "the cosmogony of Gen. i, cannot have been simply taken over from the Babylonians"; they add, therefore, the following two modifications: (a) The Hebrew Hexaemeron does not correspond to the first part of the Babylonian account, but only to the formative work ascribed to Marduk. (b) Circumstanced as the Israelites were, we must allow for their inability to appreciate the obscure portions of the Persian, as well as Babylonian influences, and we must not refuse to take a passing glimpse at cosmogonies of less civilized peoples.

Both of these modifications deserve a passing examination. (a) It is urged that in Marduk's work the primeval light, the primeval flood, the production of heaven by the division of the primeval flood, the order of the creative acts, the Divine admonitions addressed to men after their creation, and the creation by a word are so many points of contact between the Hebrew and the Babylonian cosmogony. But several of these points present a discrepancy rather than a harmony. The critics themselves admit that the parallelism "in the present form of Gen., i, is imperfect"; they admit, too, that the Babylonian record does not mention creation by a word, but they merely suppose that this idea must have been prominent in the full Babylonian epic. It is true that Marduk, being the chief god of the Sumerians, was a god of great importance, and it is possible that the Babylonian primeval light is represented by Lahmu and Lahamu, the dawn and the twilight; again, Marduk is only a demiurge, a creature, and as such does not resemble the Hebrew God. Moreover, Marduk has no connexion with the primeval waters in the Babylonian account: he is at best the restorer of the order destroyed by Tiamtu. He does not produce heaven, but only reopens the space between heaven and earth. Finally, it would be hard to imagine a greater discrepancy than is found between the Babylonian story of man's creation and the Hebrew account of the event. The source of the Hexaemeron, therefore, is not the Babylonian record of Marduk's work.

(b) The appeal of the critics to Phoenician, Egyptian, and Persian influences is of a rather elusive character. It is hard to see which particular points of these various cosmogonies can be said to have influenced the Hebrew writer. The Phoenicians begin with air moved by a breath of wind, and dark chaos; another account places first time, then desire, then darkness. The union of desire and darkness begets air (representing pure thought) and breath (the prototype of life); from these springs the cosmic egg. Such an idea is alien to the Phoenician and under the influence of light and heat the cosmic development continues, till the present universe is completed. The Egyptian cosmogony does not appear to contain any elements more fit to serve as the source of the Hexaemeron than are the Phoenician successive evolutions. In the beginning we find the primeval waters called Nun, containing the male and female germs; and those germs, as well as the earth, are governed and directed by Ra, the god of order, of creative activity, the image of the future universe having formed itself in the eyes of Ra. That causes a movement in the waters, and the latter differentiate themselves into four pairs of deities, male and female. The latter fell a desire (personified as the god Thot) for creative activity, the image of the future universe having formed itself in the eyes of Thot. That causes a movement in the waters, and the latter differentiate themselves into four pairs of deities, male and female. The latter fell a desire (personified as the god Thot) for creative activity, the image of the future universe having formed itself in the eyes of Thot. That causes a movement in the waters, and the latter differentiate themselves into four pairs of deities, male and female. These, as we have seen, are the elements of the Hebrew cosmogony. The Persian cosmogony is really the second phase of the Iranian concept of creation. The great characteristic of Iranian thought is its dualism, which gradually tends towards monism. The early Persian date phases from the time of the Sassanids, but in its present form is not earlier than the seventh century of the Christian Era. At any rate it seems quite impossible that the well-ordered and clear account of the Hexaemeron should be the outcome of the complicated and obscure presentation of the Avesta and the Pahlavi literature. Generally speaking, the Hexaemeron is to be regarded as the reflection of the Persian cosmogony. The Persian cosmogony is a mere nature myth, the foregoing data would agree with the phenomena of the Babylonian spring and the Babylonian morning. Owing to the heavy rains, the Babylonian plain looks like the sea during the long winter; then the god of the vernal sun, Marduk, brings forth the land anew, dividing the waters of Tiamtu, and sending them partly upwards as clouds, partly downwards to the rivers and canals. Again, the god of the rising sun, Marduk, every day conquers the cosmic sea, Tiamtu, dispelling the chaos of darkness, and dividing the nightly mist and fog of the plain. A similar origin is quite impossible from a purely Hebrew point of view. While the foregoing considerations are hardly conclusive against those who admit a supernatural element in the formation of the Hebrew cosmogony, they are quite convincing against those who regard the Hebrew views on creation as a mere nature myth.
have existed, even including views as to the origin of the universe. Combining this fact with the Christian doctrine that the Biblical Hexameron is Divinely inspired, we may ask whether its text may not be a snatch of folk-lore, by Divine influence purged of error and of all that is not in keeping with the sacred words of God. One might well think of the sacred writer having in order to teach men that the whole universe is the creature of God, and that the seventh day must be sanctified. In this case, the first chapter of Genesis would not be supernaturally revealed in the strictest sense of the word, but it would be an infallible record of the ancient belief of the Hebrews, as to the origin of the world. The sacred writer would have left us an inspired report of a Hebrew tradition just as other inspired writers have left us inspired accounts of certain historical documents. In itself, such a view of Gen. i, does not seem impossible; but, taking the Hexameron in the light of Christian tradition, its folk-lore theory of origin seems to be inadmissible. The Fathers, the early ecclesiastical writers, the Scholastics, and the more recent commentators would have been wrong in their endeavours to explain each sentence and even every word of the same strict way in which they interpret the most sacred passages of Scripture. Their occasional recourse to figure and allegory only shows their conviction that the Hexameron contains not only inspired but also strictly revealed truth. A Catholic interpreter can hardly surrender such an uninterrupted Christian tradition in order to make room for a theory which sprang up only towards the end of the nineteenth century. Nor can it be urged that every sentence and every word of the Hebrew tradition concerning the origin of the universe, purified and infallibly preserved to us by inspiration, are equivalent to the word of God, according to Scripture. Such an assumption concerning a profane ancient tradition implies the admission of a greater miracle than is demanded by a supernatural revelation in the strict sense of the word. Besides, the patrons of the folklore theory must explain the origin or source of the sublime Hebrew tradition, the existence of which they assume; thus they burden themselves with all the difficulties which are encountered by the critics in their endeavours to explain the natural origin of the creation myths.

Finally, the Biblical Commission in a decree issued 30 June, 1909, denies the existence of any solid foundation for the theory of evolution, defended with a show of science to exclude the literal, historical sense of the first three chapters of Genesis; in particular, it forbids the teaching of the view that the said three chapters of Genesis contain, not accounts of things which have really happened, but either fables derived from mythologies and the cosmogonies of ancient peoples, and by the sacred author expurgated of all error of polytheism and adapted to monotheistic doctrine, or allegories and symbols destitute of any foundation of objective reality and proposed under the form of history to inculcate historical and philosophical truths, or essays partly historical and partly fictitious freely composed for the instruction and edification of minds. The commission bases its prohibition on the character and historical form of the Book of Genesis, the special nexus of the first three chapters with one another and with those that follow, the almost universal opinion of the Fathers and the traditional sense which, transmitted by the people of Israel, the Church has ever held.

(4) Revelation.—As no man witnessed the creation and formation of the universe, all human speculations concerning this subject present only conjectures and hypotheses on the field to obtain certain knowledge only by Divine revelation. Whether God granted this revelation by way of language, or by vision, or by another more intellectual process, we do not know; all of these methods are possible, and as such they may enter into the exegesis of Gen. i. Again, though very plausible reasons may be advanced for the thesis that God granted such a revelation to the first man, Adam, they are not absolutely convincing; the full instruction as to the origin of the world may have been given at a later period to the races to be inspired writers of the Hexameron. If the revelation in question was granted at an earlier time, perhaps immediately after man's creation, its substance may have been preserved by the aid of a special providence among the ancestors of the Hebrews. While the received account among the races, their respective cosmogonies, modified by their various natural surroundings, one race may have kept alive the spark of Divine truth as it had been received from God in the cradle of humanity. Or, if such a purity of doctrine among the Hebrew ancestors appears to be incompatible with the vagaries of other Semitic cosmogonies, it may be assumed that God partially or wholly repeated His primitive revelation, during the time of the Patriarchs, for instance, or of Moses. At any rate, the attitude of Christian tradition towards the Hexameron implies its revealed character, hence, whatever theories may be held as to its transmission, its ultimate source is Divine revelation.

III. MEANING OF THE HEXAMERON.—The genuine meaning of the Hexameron is not self-evident. The history of its exegesis shows that even the greatest minds differ in their opinion as to its real meaning. All interpreters begin by feeling the need of an explanation of this passage of the Bible, and all end by differing from all other interpreters. There are hints as to the meaning of Gen. i, in other parts of Scripture. Prov., iii, 19 sq.; viii, 22 sq.; Wis., ix, 9; Eccles., xxiv, refer to the Hexameron. But it is not clear what the Hexameron attributes to the word of God. Prov., viii, 23 sqq., and Eccles., xxiv, 14, exclude eternal creation. The words of the woman recorded in II Mach., vii, 23, inculcate a production out of nothing. Ps. ciii and Job, xxxviii sqq., give a poetical amplification of the Hexameron. But these Biblical elucidations cannot claim to be a commentary on Gen. i. Nor has the Church given us any official explanation of the Mosaic account of God's creative work. We must, therefore, rely on the principles of Catholic hermeneutics and the writings of Catholic interpreters for our understanding of the Hexameron. It will be found that the present members of the commission, in their review of the prominent exegetical work, to distinguish between literal and allegorical explanations.

The legitimate character of this method of proceeding will become clear in the light of the aforesaid decree of 30 June, 1909, issued by the Biblical Commission. This decree lays down several special principles as to the interpretation of the first part of Genesis:—(1) Where the Fathers and Doctors differ in their interpretation, without handing down anything as certain and defined, it is lawful, saving the judgment of the Church in preserving the faith, for everybody to follow and defend his own prudently adopted opinion. (2) When the expressions themselves manifestly appear to be used improperly, either metaphorically or anthropomorphically, and when either reason prohibits our holding the proper sense, or necessity compels us to set it aside, it is lawful to depart from the proper sense of the said and other mentioned chapters. (3) In the light of the example of the holy Fathers and of the Church herself, pre-
supposing the literal and historical sense, the allegorical and prophetic interpretation of some parts of the book of Expatriation be wisely and usefully employed.

(4) In interpreting the first chapter of Genesis we need not always look for the precision of scientific language, since the sacred writer did not intend to teach in a scientific manner the intimate constitution of visible things and the complete order of creation, but to give his people a proper notion according to the common mode of expression of the time.

(5) In the denomination and distinction of the six days mentioned in the first chapter of Genesis the word yom (day) can be taken either in its proper sense, as a natural day, or in an improper sense, for a period of time, and discussion on this point among exegetes is legion.

A. Literal Explanations.—Literal explanations do not necessarily exclude the admission of any figurative language in the Hexaemeron.

The various actions of God, for instance—His commands, His review of His work, His blessings—are expressed in anthropomorphic language. But a literal explanation insists on the literal interpretation of the six days, understanding them as periods corresponding to our spaces of twenty-four hours.

(a) Non-Concordist Interpretations.—The author of IV Esdr., vi, 38 sqq., is excessive in the literalness of his interpretation; he supplants the Biblical account of creation with prolate Jewish traditions.

Omitting the views of Theophylus of Antioch (‘Ad Autol.‘, II, in P. G., VI, 1069 sqq.), Hippolytus (fragm. in P. G., X, 583 sqq.), Tertullian (‘Adv. Hermog.‘ xix sqq., in P. L., II, 214 sqq.), and Clement of Alexandria (‘Strom.‘ V, xiv, in P. G., IX, 129 sqq.), who have dealt only cursorily with the Hexaemeron problem, we find patrons of the literal interpretation of Gen., i, 2, in such writers as Ephaemus (Opp., ed. Rome, 1737, I), Jacob of Edessa (ibid., p. 110), Diodorus of Tarsus (P. G., XXXIII, 1561 sqq.), Theodore of Mopsuestia (P. G., LXVI, 666 sqq.), St. Basil (P. G., XXXIX, 17), Gregory of Nyssa (‘Hexaemeron‘ in P. G., XLIV, 68), Philoponus (‘De mundi creatione‘); ed. Cordeuris, Vienna, 1630), Gregory the Great (‘Mor.‘ in Job, xl, 10, in P. L., LXXVI, 644 sqq.), the Venerable Bede (‘Hexaemerum‘ in P. L., XCVI, 10 sqq.), Rabanus of Mainz (Comm. in Gen. in P. L., CVII, 459), Walahfried (‘Glossa ord.‘ in P. L., CXIII, 67), Hugh of St. Victor (‘Annot. in Pentateuch.‘; ‘De sacram. fidei‘ in P. L., CLXXV, 29, and CLXXVI, 173), and other authors of minor importance. During the Scholastic age, too, the literal interpretation of the Hexaemeron was the prevalent one, as may be seen in the great works of Peter Lombard (Sent., II, Bl. Albertus Magnus (Summ. theol., II, tract. XI), and St. Thomas (Summa, I, Q. lxv sqq.). Most of the subsequent commentators urged the literal sense of the Hexaemeron; this is true even of the early Protestant writers who were always insisting on the primitive literalism of Scripture.

The method implied in the literal interpretation of Gen., i, was explained mainly by recourse to miracle, a method occasionally employed even down to our own day by some theological writers. We call these interpreters non-Concordist, not because they do not explain the difficulties in an absolutely possible way, but because they have no regard for the harmony between the inspired record and the laws of nature.

(b) The Hexaemeron Prior to the Geological Strata.—In order to avoid any opposition between the Hexaemeron and the data of geology, it has been attempted to explain the geological formations after the six days of creation, i.e., the ideas of Woodford (1659), I. Scheuchzer (1731), and others expressed the opinion that our present geological strata, fossils, etc. are due to the waters of the Deluge. G. Leibniz, A. L. Moro (1740), and others expressed their belief that the influence of fire and heat had been at least at partial causes of the present configuration of the earth. Fortunately, however, the diversity of opinion as to the real length of time covered by the six days: G. Wistman (1696) maintained that before the rotation of the earth around its axis a day lasted a year; G. L. Buffon (1749) required a hundred thousand years for the Hexaemeron; while I. E. Comenius (1780) makes the six days equal to a year.

Among more recent writers the following are Dilettists: C. F. Keil (‘Bibliccher Commentar‘, Leipzig, 1866), P. Laurent (‘Etudes geologiques‘, Paris, 1863), A. Sorignet (‘La Cosmogonie de la Bible‘, etc., Paris, 1854), V. M. Gatti (‘Institutiones apologetico-romaneae‘, 1857), I. E. Weitst (‘Die Anfanger der Menschenwelt‘, Vienna, 1865), A. Boskin (‘Das Heilige und die Geologie‘, Mainz, 1885; ‘Die Geologie und die Stundfuss‘, Mainz, 1877, A. Trisel (‘Stundfuss oder Gletscher?‘, Munich, 1894), and ‘Das biblische Sechssagenwerk‘, Ratisbon, 1894), G. I. Burg (‘Bibliche Chronologie‘, Trier, 1894). But this theory does not fully agree with the Biblical account of the Flood, nor does it satisfy the geologists.

(c) The Hexaemeron Posterior to the Geological Data.—Another class of writers, whom we may call Restitutionists, are of the opinion that the Hexaemeron gives the history of the restoration of the earth after its destruction by the Flood. The world is properly described in Gen., i, 2.

The geological data belong, therefore, to the period preceding this destruction of the world. Among the patrons of this theory we may mention: I. G. Rosenmuller (‘Anti-quisima telluris historia‘, Ulm, 1776), W. F. Hetzel (‘Die Bibel Altes und Neues Testament‘, Lemgo, 1788), Th. Chalmers (‘Review of Cuvier’s Theory of the Earth‘, Edinburgh, 1814; ‘Evidence and Authority of the Divine Revelation‘, Edinburgh, 1814), N. Wiseman (‘Twelve Lectures‘, London, 1849), W. Buckland (‘Geology and Mineralogy‘, London, 1835). The following interpreters identified the primeval destruction of the earth with the catastrophe brought on by the fall of the angels: L. Schmid (‘Erkliirung der hl. Schriften‘, etc., Münster, 1834), A. Westermayer (‘Das Alte Testament und seine Bedeutung‘, Schaffhausen, 1861), and I. H. Kurtz (‘Bibel und Astronomie‘, Berlin, 1842). The speculations implied in this theory are hardly upheld by Schaff (‘Sects of the Ancient Church‘, p. 149).

(d) The Hexaemeron Within the Geological Formations.—Father Pianciani has expressed the view that the six days of the Hexaemeron, though natural days, may not be continuous days; they may be picked out from among the long geological periods to which they respectively belong in such a way as to illustrate, as it were, the work going on in the several formative ages.

A vast space of time may intervene between every two consecutive days, so as to make the six days cover the whole period of geological formation. But this explanation is hardly in keeping with the Biblical account of the six days. Besides, it can hardly be maintained that in the six ages intervened between the sixth and seventh day.

(e) The Hexaemeron is a Vision.—Father von Hummelauer (‘Commentarius in Genesim‘, Paris, 1895) feels convinced, on the one hand, that the Hexaemeron speaks of six natural days, and that, on the other hand, it does not oppose the certain results of science. He believes that the vision theory will safeguard both these requirements. Instead of revealing the origin of the world in so many words, God showed Adam in a vision the general dependence of everything on His creative power; hence the Biblical Hexaemeron must be explained in the way in which other Scriptural visions are explained. The seven days covered by the six visionals days is not determined by Scripture; even the sequence of certain details may be different in nature from that in the vision, so that this theory does not interfere with the data of geology.
while it safeguards the veracity of the inspired record. It is urged that the idea of Adam's learning the history of the origin of the world in a vision was suggested by Chrysostom (P. G., LIII, 27), Severianus Gabalutius ("Or. IV, C. XIX, 6, 431," and Junilius Africanus ("Instit. regulariae," lib. I, iii sqq., in P. L., LXVIII, 17), for they taught that Moses learned the cosmology by means of a prophetic light illuminating past, instead of future, events. Similar views concerning the origin of the Biblical cosmogony are advanced by Basili (P. G. XXXII, 63, 483), Ephraim (P. L., LI, 5, 869), Gregory of Nyssa (P. G., XLIV, 65, 483), Procopius (P. G., LXXVII, 28, 24), and other early writers. In more recent times the vision theory has been explained and partly defended by such writers as I. H. Kurz ("Bibel und Astronomie," Berlin, 1845), H. Miller ("The Testimony of the Rocks," Edinburgh, 1857), F. W. Sollach ("Die Schöpfungsgeschichte nach Naturwissenschaft und Bibel," Gotha, 1865), H. Reusch ("Bibel und Natur," Freiburg, 1870), F. de Rougemont ("Le surnaturel démontré par les sciences naturelles," Neuchâtel, 1870), B. Schäfer ("Bibel und Wissenschaft," Münster, 1876), J. A. Schopenhauer ("Die geistigen Strömungen," Berlin, 1877, 3, 8), E. Bouguad ("Le christianisme et les temps présents," Paris, 1878), M. I. Scheeben ("Handbuch der Katholischen Dogmatik," Freiburg, 1878), von Hummelauer ("Der biblische Schöpfungsbericht," Freiburg, 1877), "Stümen aus Maria Laach," XXII, 1882, 97), M. Becker ("De enschappelijk en letterkundig gebied," Brussels and Bar-le-Duc, 1879), I. Corluy ("Spicil. dogm.-bibli." I, 880 sqq., Gent, 1884); "La science catholique," 15 July, 1889), W. Gray Elmslie ("The First Chapter of Genesis in "Contemporary Review," 1887), and some anonymous authors ("The Mosaic Record in Harmony with the Geological," London, 1885; the "Katholik," I, 1879, p. 250 sqq.). Still, there are other interpreters who take exception to the vision theory; they urge that in other parts of the Bible the presence of a vision is always indicated, that such a practical precept as the observance of the Sabbath cannot be based on a mere vision, etc.

(f) The Poetic Theory.—We omit here the view that the Hexameron is merely an inspired record of a Semitic myth or a profane tradition (cf. F. Lenormant, "Origines," J., this theory has been considered above. In a modified form it has been adopted by the moderns as a "poems" incorporated by Moses in the Book of Genesis. G. E. Paulus ("Neues Repertorium," Jena, 1770) calls Gen., 1, a Sabbath hymn; Rorison ("Replies to Essays and Reviews," 1861), a creation psalm; Huxtable ("The Sacred Record of Creation," a parable intended to teach the keeping of the Sabbath; Bishop Clifford ("Dublin Review," 1851, I, p. 311 sqq.; II, p. 498 sqq.; "The London Tablet," 1851, April to July), a scheme to consecrate each day of the week to a particular creative act of God, so as to do away with the previous consecration of the weekdays to the several heathen gods. But both the setting of the Hexameron in the Book of Genesis and the literary character in proclaiming its historicity; the poetic theory is at variance with this testimony.

B. Allegorical Explanations.—Philo maintained the eternity of matter, identified the light of the first day with the geometrical proof, and gave a similar explanation of the other cosmogonic days. Origen, ("Hom. in Hex. " in P. G., XII, 145 sqq.; "De princ.," lib. IV, n. 16, and "C. Cels.," lib. VI, 60, in P. G., XI, 376 sqq., 3390), follows an allegorical explanation—the light of the first day denotes the angels, the abyss is the sea, and the lower waters are the good and bad angels, the sun and the moon are Christ and His Church, etc. The word was created simultaneously, the various days denote only the diversity of created objects. Athanasius ("Or. II, c. Arian," n. 60, in P. G., XXVI, 275) also appears to maintain a simultaneous creation of the world; Procopius ("Comment." in P. G., LXXXVII, 28 sqq.) regards the days of the Hexameron as purely ideal, without any reference to actual things. St. Augustine attempted three different times to explain the Hexameron in a literal sense, but each time he ended with an allegorical exegesis. In 389 ("De Gen. c. Manich." in P. L., XXXIV, 173) he arrived at the conclusion that the cosmogonic evening and morning denote the complete destruction of the world by fire and water. In 393 ("De Gen. ad lit. lib. imperfl.," in P. L., XXXIV, 221) the great African Doctor starts again with a literal explanation of Gen., i, but is soon perplexed by the questions: Did God consume the whole day in creating the various works?—How could there be days before there were heavens or luminaries?—How could there be light before the existence of the sun and the stars?—This leads him to adopt simultaneous creation, to identify the light of the first day with the angels, and to explain the evening and morning by the limitation and the beauty of the various created objects. In 401 Augustine began the third attempt to explain the Hexameron: a fifth participant in the creation, the "Archangel Michael," and evening he refers now to the knowledge of the angels, assuming that they denoted respectively the angelic visions of things in the Word of God, and the vision of the objects themselves. The opinion of Augustine was followed by pseudo-Eucherius ("Comm. in Gen., in P. L., II, 390), Isidore ("Quast. in Gen., in Sent., I, 10, in P. L., XXXIII, 207, 1153), pseudo-Augustine ("De mirab. script. a. in P. L., XXXV, 1479), another pseudo-Augustine ("Quest. ex V. et N. T. in P. L., XXXV, 2213), Alcuin ("Interr. et respons. in Gen." in P. L., C, 515), Scotus Erigena ("De divis. natur." in P. L., CXXII, 439), Rupertus ("De Trinit. et oper. ejus" in P. L., CLXVII, 199), and Abelard ("Expos. in Hex." in P. L., CLXXVIII, 731). In the sixteenth century, too, Cajetan and Melchior Cano adhered to the view of a simultaneous creation (cf. "Loc. theol.," Salamanca, 1563). In the following centuries this allegorical interpretation developed into the following branches:

(a) The Concordists.—I. Kant (1755) and P. S. Laplace (1796) suggested that the stars were formed under the influence of the force of gravity by the rotation of the primitive body of matter around its own axis. C. Gervier ("Discours sur les révolutions du globe," Paris, 1812) divided the ages of geological formation into six periods and separated one from the other by great catastrophes. He was followed in this by M. de Serres (De la cosmogonie de Moïse), J. F. Krüger ("Geschichte der Urwelt," Quedlinburg and Leipzig, 1822), D. de Fraysse ("Défense du christianisme," Paris, 1825), A. Nicolás ("Études philosophiques," Paris, 1850), B. Piancion ("In historiae creationis mosaicam commantatio," Naples, 1851). C. Lyell (1836-38) denied the occurrence of the six great catastrophes, substituting an imperceptibly slow process of geological formation in their place. Still, there remains the general division in the geological strata; the first are characterized by their remains of carboniferous plants; the second by traces of amphibious and fish life; the third show remnants of mammals. These periods correspond, therefore, roughly speaking, to the third, fifth, and sixth days of the Hexameron. Similarly, there appear to be astronomical periods which correspond to the first, second, and fourth days of Gen., i. It is not surprising, therefore, that the so-called Concordists have found these
six long periods in the six days of the Hexameron, and have endeavoured to establish an identity between the product of each period and the work described in each day of Gen., i. Moreover, these scholars point out that the Hebrew word translated "day" does not necessarily mean a natural day; that, in the absence of the sun, the first three days of the Hexameron cannot be natural days, and that therefore the second three days are not necessarily natural days; again, that the seventh day is certainly not a natural day, so that the first six days must be indefinite periods of time rather than natural days. Among the writers who favour this theory we may name: C. G. Lengerken, "Ab dem ersten Tag und der Geneser", Berlin, 1891; J. Seyffarth, "Das Leben der Vorsehung", Kiel, 1791; H. Miller ("The Testimony of the Rocks", Edinburgh, 1857); E. Barden ("The Glaube an die heilige Schrift und die Ergebnisse der Naturforschung", Königsberg, 1861); Mgr. Mégainna ("Le monde et l'homme primitif", Paris, 1869); G. Molloy ("Geologie und Revelation", London, 1870); M. Pozzy ("La terre et le récit biblique de la création", Paris, 1874). On the other hand, it has been pointed out that more than 20,000 species of animal life are found in the old paleozoic strata, while the fruit-bearing plants are found in the old palaeozoic strata; moreover, that the plants found in the palaeozoic strata resemble the plants found in the more recent strata, so that they must have needed the light of the sun, though the sun appeared only in the period succeeding that of the palaeozoic strata; finally, that, according to the obvious sense of the text, the work of each day of the Hexameron was complete before the next day commenced. Arguments of these sort are urged by such writers as H. Reusch ("Bibel und Natur", 3rd ed., Freiburg, 1870, pp. 235 sqq.; 4th ed., 1876, pp. 244 sqq.) and C. Güttler ("Naturforschung und Bibel", Freiburg, 1877, pp. 97 sqq.).

(b) The Idealists.—We have seen that St. Augustine, and a number of patristic writers maintained the simultaneity of creation, and regarded the division into six days only as a classification of the various things created. The Idealists take their start from the second book of St. Augustine's Confessions, while St. Augustine's great African Doctor's simultaneous creation they translate into the gradual development of the earth as demanded by the scientists. Among the first to propose this theory was F. Michelis ("Natur und Offenbarung", Münster, 1855). He believes that Moses narrates the story symbolically, and that the light of Charlemagne by considering him successively as king, as lawgiver, as Christian, as father of a family. Reusch, who had been a Concordist in the first editions of his great work, became an Idealist in the third edition ("Bibel und Natur", Freiburg, 1870). Father Braun ("Über Kosmogonie vom Standpunkt christlicher Wissenschaft", Münster, 1890) endeavours to combine Concordism with Idealism. I. B. Baltzer ("Die biblische Schöpfungsgeschichte", Leipzig, 1867), Reusch ("Theol. Literatur-Blatt", 1870), Schäfer ("Bibel und Wissenschaft", Münster, 1881, pp. 237 sqq.) have written against Idealism either as a whole or in its various special forms. The cosmogonic days and their succession, as exhibited in the Hexameron, appear to lose all meaning in the Idealists' theory.

Considering the foregoing theories without bias, and in the light of both science and Revelation, second, the foundation of any theory of vision will be found to serve the Catholic interpreter most effectually both from a scientific and a critical point of view.
because his version was largely a revision of the other; for a similar reason, Theodotion's version came after the Septuagint. To the first six columns, according to the same testimony, Origen added, but for certain books only, a seventh and an eighth column containing two more Greek versions, which were respectively the Quinta and the Sexta, because they were the fifth and sixth versions in Origen’s arrangement. But although he mentions the Quinta and the Sexta, however nothing seems to be known of the character of the Septima. It may have been a very fragmentary version, a collection of variant readings which later editors did not consider worth preserving. Concerning the Quinta and Sexta, St. Jerome tells us that they were Jewish, and Nestle considers them a collection of the Quæna not only in Psalms, Job, Proverbs, and Psalms, but also in the Pentateuch and IV Kings, though, in regard to IV Kings, Burkitt has advanced good reasons for considering Origen a collection of variant readings, probably rejected from the Septuagint. The Sexta is quoted for Exodus, III Kings, Psalms, Job, Canticle of Canticles, Amos, and Habacuc.

The presence of these two additional versions in the Hexapla has led to a discussion of that term and of others applied to Origen’s work. By some the “sixfold” Bible was considered so called because it contained six Greek versions of certain books; but the common opinion is that the original Bible contained probably the six columns (the two of Hebrew and the four of the chief Greek versions, which constitute the bulk of the work), and came to be extended to the entire work. The terms Pentaev, Heptapla, Octapla, were also used by Origen’s work, according as it contained five, seven, or eight columns. Since the six or seven columns, as the case might be, were visible at every opening of the Hexapla, each column must have been quite narrow. The fragments show, in fact, that one or at most two Hebrew words were placed on each line, with the transliteration in the adjoining column and the various readings in the succeeding columns, all on the same level. This arrangement would naturally necessitate, at times, a shifting of the Greek words from their proper order, although this was not always done. An arrangement so minute and liberal must produce a work of enormous bulk. Swete estimated 30,000 pages, but Nestle considers 6000 leaves not far beyond the number. In addition to these columns of texts and versions, Origen copied out on the margins or between the lines other readings which he cited as given by ὁ Ἑβραῖος, ὁ Ἰταλός, ὁ Σαμαριταῖος, the meaning of which is obscure. Field comments on corrections to be found in the Hebrew and other texts, the Greek version, otherwise unknown, of certain books; “the Syrian”, the author of another Greek version made in Syria; while “the Samaritan” gives Greek readings taken, not from the current Hebrew text, but from the Samaritan Pentateuch (thirty-six out of forty-three readings agree with that text). Loisy’s opinion, not to mention many others, is that “the Hebrew” denotes citations from a Targum, “the Syrian”, from the Peshito.

Origen’s purpose, as regards the Septuagint, was to indicate very clearly its exact relation to the Hebrew text, and incidentally to other Greek versions. With this view, he adopted (and placed in the Septuagint column only) the symbols used by Aristarchus in his edition of Homer. “As employed by Origen in the fifth column of the Hexapla, the obelus was prefixed to words or lines which were wanting in the Hebrew, and therefore, from Origen’s point of view, of doubtful value, while the asterisk indicated words or lines wanting in the Septuagint, but present in the Hebrew. The close of the context to which the obelus or asterisk was intended to apply was marked by another sign known as the metaboleus” (Swete). The fifth column, therefore, contained not the mere text of the Septuagint only, but in addition a transla-

tion taken generally from Theodotion (occasionally from Aquila) of these words or lines of the Hebrew which were lacking in his Septuagint. In certain instances, where the Septuagint translation differed widely from the Hebrew meaning, Origen inserted the true rendering (from Theodotion or Aquila) alongside the false; he deleted nothing from the Septuagint text. By this arrangement and these symbols, any reader, even if only a slight acquaintance with Hebrew, could generally tell at a glance the exact relation of the Septuagint text to the Hebrew.

The principles which guided Origen in his work as textual critic are partly explained by Origen himself. He began by assuming the correctness of the current text, and then considered every passage as more or less pure according to the degree in which it approximated to the Hebrew. He frequently changed the spelling of proper names to conform with the Hebrew. The symbols were intended not only to indicate a difference between the two texts, but to mark a departure from the Hebrew verity or genuine text. These principles are rightly discerned by modern scholars, who recognize that the Septuagint often bears plain witness to a Hebrew original different from the textus receptus and older than it in some parts. Moreover, of two readings, one a free, the other a literal translation of the Hebrew, the free is more likely to be theSeptuagint text, while the literal is more apt to represent the effort of correctors, who frequently endeavored to bring the text of the Septuagint into closer conformity with the Hebrew. Origen’s critical principles were at fault, then, but his use of symbols ought to have guarded other readers from being misled by his work into error. Unfortunately, the symbols were not reproduced in many copies which were taken of the fifth column—the Septuagint together with the readings from Theodotion and Aquila.

After the completion of the Hexapla Origen prepared a new edition, or extract from it, consisting of the four principal versions, Aquila, Symmachus, the Septuagint, and Theodotion; this is the Tetrapla. It has been sometimes maintained, however, that the Tetrapla is the earlier work and was expanded into the Hexapla, principally on the ground that the Hexapla, as a whole, is a later work than the Tetrapla, as is shown at Ps. lxxxvi, 5, presenting light missing to Origen when he composed the Tetrapla, a very unstable ground, we judge, for the Hexapla did not leave the hand of Origen as a printed work became independent of a modern author, but received occasional additions and corrections. The language of Eusebius implies that the Tetrapla was the later work. The dates of the two works, however, cannot be definitely fixed; all we know, says Field, is that the Hexapla or the Tetrapla was composed before Origen’s letter to Africanus (c. 240).

No copy of the entire Hexapla, on account of the immense labour and expense involved, seems ever to have been made, but the Patalus, minus the first column, was copied, as the two fragments prove. A reading in Isaias is quoted from the Pentapla, which possibly (though very doubtfully) implies the existence of a similar copy. Shortly after the beginning of the fourth century, Pamphilus, the martyr, and Eusebius, Bishop of Cesarea, gave out an edition of the fifth column of the Hexapla, containing the Septuagint, the insertions from Theodotion and Aquila, and the symbols, together with variant readings on the margin, in the belief that they were resting on the Church the purest text. It was through the reproduction of this edition by later scribes, without Origen’s critical signs, that arose the Hexaplar text which so greatly increased the confusion of Septuagint manuscripts. However, it hardly circulated outside of Palestine. It was translated into Syriac, "with the Origenic signs scrupulously retained": by Paul,
Bishop of Tella in Mesopotamia, who accomplished the work at Alexandria about 616–17. Several books and large portions of this Syro-Hexaplar text survive, and prove the existence of a very great measure of knowledge of Origen’s work. The Hexaplar text also influenced St. Jerome very strongly in his first two translations of the Psalter into Latin, the Psalterium Romanum and (particularly) the Gallicanum. Saint Jerome also followed the Hexaplar text, for which he had the highest respect, as the basis of his translation and no longer extant, of other books. The same influence is further seen in the Coptic ( Sahidic ), the Arabic, and the Armenian versions. If the original Septuagint text be taken as the standard, it is unquestionable that Origen’s influence, both upon the Septuagint and its daughter versions, ultimately avoided through the Vulgate, by much, and removed them further by these the pristine purity of the Biblical text; but by all those who regard the Hexaplar text, by reason of its insertions and corrections from the textus receptus, as nearer to the original Hebrew than is the Septuagint, his influence must be judged to have worked, on the whole, after the manner of the text. The Hexaplar MS. was kept at Cessarea in Palestine, where it was consulted by Eusebius, Epiphanius, and Jerome; it disappeared from sight shortly after the beginning of the seventh century.

The first attempt to collect its dialecta membri, as over Biblical manuscripts and patristic writings, was made by Drusius (Driech) in his work, “In Psalmos Davidis Veterum Interpretum quae extant Fragmenta,” Antwerp, 1581 (so Mercati). Additions were made by Peter Morin in his notes to the Greek Bible authorized by Sixtus V (1587), as also in the posthumous work of Drusius (1622), and of the monumental work of Montfaucmon (1713). The publication of the Syro-Hexaplar text by Ceriani and others gave back to the world a great part of Origen’s work. Frederick Field in his “Origenis Hexapolarum quae supersunt . . . Fragmenta” (Oxford, 1875) collected into one grand work the results of two centuries of investigation and discovery. Since his day, Pitra’s “Analecta Sacra,” III (Venice, 1883), Klosterman’s “Analecta sur . . . Hexapla” (Leipzig, 1895), and Dom Morin’s “Anecdota Maredsolanana,” III, i, have given the world further discoveries. Add to these, to complete the history of the Hexaplar’s recovery, the palimpsest fragments of several of the psalms discovered by Mercati in the Ambrosian Library of Milan (1896), and the palimpsest fragment of Ps. xxii recovered from a genizah of Cairo (1900), which reproduce almost the exact form of Origen’s work. Though much has been lost, including most of the versions of Aquila, by much, and the codex, still, Theodotion, still, the patient, untiring labours, vast materials have been gathered for the reconstruction of a purer Sacred Text. (See Manuscripts of the Bible; Origen; Septuagint—Versions of the Bible, Greek.)

Of the above mentioned works Field is by far the most important. See also Taylor in Dict. Christ. Biog., s. v.; Swete, Introduction to the Old Testament in Greek (Cambridge, 1902); Lejeune, Critique du Texte et des Versions du Saint Testament (Amiens, 1892); Nymble in Hare, Dict. of the Bible, s. v. Septuagint; Hengstenberg in Voigt, Dict. de la Bible, s. v. Hexaplar; Hooker in Dictionary of Christ and Religion in Encyclopaedia Biblica (London, 1901); Bützner, Der So-Called Quindecem of 14 V Kings, ibid. (June, 1902); Mercati, Un Palimpsesto Ambrosiano dei Salmi Esapoi (Turin, 1896), extract from Accademia Reale delle Scienze di Torino (1895–96); Mercati, Palimpsesto Ambrosiano e Codice Ambrosiano (Rome, 1901)—cf. Expository Times (Nov., 1901); Driver, Notes on the Hebrew Text of the Books of Samuel (Oxford, 1879, 4th ed.). A considerable number of the most important and other references may be found in Field and Swete.

JOHN F. FENLON.

The name Hexateuch, in the intention of the critics, does not mean that the sources of these books are to be found only in the six books herein included. (See Pentateuch and Josue.)

WALTER DRUM.

Hexham and Newcastle, Diocese of (Hagulata- densis et Novocastrensis).—Hexham, in Northumberland, England, made its existence known from Hextord; its old name, Hagustald, came from another stream, the Halgut, whence the adjective Hagustaldensis used by Bede and medieval writers. It was founded as an abbey by St. Wilfrid of York, in 674, on land given by the Northumbrian Queen St. Ethelreda. When the Diocese of York was divided (678) Hexham made a bishopric for the country between the Rivers Aln and Tees; although, under its first bishop, St. Eata, it remained for a time united to Lindisfarne (founded in 635 by St. Aidan), which diocese extended northwards from the Aln to the Forth. Of the eleven bishops of Hexham who followed St. Eata, six were saints, among them being St. John of Beverley (936–705), St. Wilfrid, who, resigning the See of York, died Bishop of Hexham in 709; and his successor, St. Asca, to whom Venerable Bede dedicated several of his works. The last bishop of this ancient line was Tidfer, who died about 821; no successor was appointed, the condition of the country being too uncertain. A period of disorder followed the Danish devastations, after which Hexham monastery was reconstituted in 1113 as a priory of Austin Canons, which flourished until its dissolution under Henry VIII. Meantime the bishopric had been merged in that of Lindisfarne, which latter see was removed to Chester-le-Street in 883, and thence to Durham in 995.

On the establishment of the present English hierarchy in 1850, the See of Hexham was revived, that of Newcastle (where the cathedral is) being joined to it in 861. The previous Vicar Apostolic of the Northern District, William Hogarth, became its first bishop under the new regime, being followed by James Chadwick (1866–82), John William Bewick (1882–86), and Henry O’Callaghan (1888–91). Bishop Thomas William Wilkinson, consecrated as auxiliary in 1888, succeeded in 1889, and resided at Ushaw College as his principal residence till his death in 1896. He answers to the two medieval Dioceses of Durham and Carlisle, comprising the Counties of Northumberland, Durham, Cumberland, and Westmoreland. Its Catholic population was estimated in 1908 at 179,021, the secular clergy numbering 152, the regular clergy (Benedictines, Dominicans, Benedictines, and Premonstratensians) 250. The diocese has 40 parishes and 175 churches and chapels (not counting those of communities), 122. It contains three convents of contemplative nuns and numerous schools and institutions conducted by religious. St. Cuthbert’s College, Ushaw, educates some 300 students, clerical and lay; and there is a boys’ grammar school at Newcastle. Together with the Our Lady Immaculate, the diocese’s chief patron is St. Cuthbert, to receive whose incorrupt body Durham’s magnificent cathedral was originally built; his ring, now preserved at Ushaw, is worn by the bishop when ordaining. Its long list of native saints includes St. Bede the Venerable, recently to Claimed Doctor of the Church; St. Oswald, king and martyr; St. Godric, hermit; and Blessed Thomas Percy, Earl of Northumberland, with other martyrs of the penal days.

Northern Catholic Calendar for Hexham and Newcastle (Durham, 1890, 4th ed.). A considerable number of the most important and other references may be found in Field and Swete.

G. E. PHILLIPS.

Heylin of Stein (A. Lapidis). Johann, theologian, b. about 1425; d. at Basle, 12 March, 1496. He was apparently of Swabian origin. On the comple-
tion of his academic studies in Germany, presumably at Leipsic and Freiburg, he proceeded to Paris to pursue the study of philosophy and theology. Here he came in contact with the foremost representatives of Realism, who, recognizing his abilities and probable future influence, exerted their powers to the utmost to mould his mind after their own and thus made him like themselves a bitter opponent of Nominalism. Their efforts were not in vain, for in 1547 he applied to the University of Basle and applied for admission to the professorial faculty of arts. The old controversy regarding the nature of Universals had not yet subsided and in the University of Basle Nominalism held sway. Hence in view of this and the maintenance of peace within the university he was examined by the Heynlin and the faculty was not accomplished without a most vigorous opposition. Once a member of the faculty he hoped to rid it of all Nominalistic tendencies nor was he disappointed in his expectation. In 1465 he became dean of the faculty of arts and in this capacity he revised the university statutes and thus brought about a firmly established curriculum of studies. In 1466 he returned to Paris, obtained the doctorate in theology, and in 1469 he was elected rector of the university and became professor of theology at the Sorbonne. His most noteworthy achievement was the establishment, in connexion with Euchet, of the first printing-press in Paris. Two books and a book of prayers were put in charge of it and Heynlin gave valuable pecuniary aid to their undertakings, especially for the printing of the works of the Fathers. In 1478 he was called to teach theology in the newly founded University of Tübingen, where his learning, eloquence and reputation secured for him the same year the rectorship. The opposition, however, he met from the Nominalists Gabriel Biel, Paul Scriptorius, and others, rendered his service here of short duration. He severed his connexion with the university, proceeded to Baden-Baden and thence to Berne, where he engaged in preaching. Dissatisfied with Berne he returned to Basle, and tired of wandering, he entered in 1487 the Carthusian Monastery of St. Margaretshenthal to spend his declining years in prayer and literary work. As a scholar and academic disputant Heynlin manifested an erudition and intellectual acumen of no mean order. Naturally of a peaceful disposition he was often found by his students and disciples to be the most important person in the theological controversies of his time. At his suggestion Johann Amerbach, the early printer of Basle, undertook the editing of the works of the ancient philosophical writers. Of his theological works the only important one thus far issued is the "Resolutorium de remissione peccatorum," of which a Latin translation in 1498 was published in Basle.

HUNTER, Nominalator, s. v.; FRAHNEL, Allg. deutscher Biogr., XII, 379; Biographie universelle, XXXIII., 299.

JOSEPH SCHROEDER.

Heywood, (1) JAMES, poet and translator; b. 1535 in London; d. 1588 at Naples. As a boy he was page of honour to Princess (afterwards Queen) Elizabeth. In 1547 he was sent to Oxford, and took the degree of Bachelor of Arts in 1553, and of Master in 1558. In 1554 he was elected probationary fellow of Merton College where he distinguished himself in public and private disputations, in writing verse translations of Seneca's dramatized works and in connection with the Christmas festivities. He and his brother are said by Anthony Wood to have been "for a time very wild," and he resigned his fellowship to prevent expulsion in 1558. Later on, however, in the same year, he was elected fellow of All Souls, but before long had to leave college on account of the new religious order of things under Elizabeth. Having been ordained priest he was admitted to the Society of Jesus at Rome in 1562. After two years at the Roman College he was made professor of moral philosophy and controversy at the Jesuit College of Dillingen in Bavaria where he stayed for seventeen years. In 1570 he took the full Jesuit vows. In 1581 he came to England as a missionary with Father William Holt, and together they were the means of numerous conversions to the Catholic Faith. Father Heywood was appointed superior of the English Mission in succession to Father Parsons. In the controversy then rife concerning the observance by English Catholics of their veneration for the Blessed Virgin, Heywood sided with the rigid party. He was considered by the authorities to have erred on the side of laxity, and was therefore recalled from England by his superiors. On this return journey he was arrested as a suspected priest, brought back to London and imprisoned. Several times he was threatened by the Privy Council, but was strongly urged to conform, but neither bribes nor threats moved him, and he was brought up for trial at Westminster with other priests. Before the trial finished, however, he was taken to the Tower and closely imprisoned for seventeen months. Finally, he was exiled with others to the coast of France, and forbidden under pain of death to return. He then went to the Jesuit College at Dôle in Burgundy, and in 1589 was sent to Rome and afterwards to Naples, where, worn out by the sufferings and hardships he had undergone, he died at the age of sixty-three.

His authentic literary work consists of: (1) translations into English of two Greek comedies, the "Troas," "Thyestes," and "Hercules Furens." He was the first to translate these into English. He takes liberties with the Latin text and occasionally introduces original matter. (2) Four poems in the Elizabethan collection known as the "Paradise of Dainty Devices," three didactic and one upon Easter Day. None of it has much poetical value. He is known to have written many other verses not preserved.

According to Wood's statement, he also wrote "A Compendium of Hebrew Grammar." No edition of his penance translations has been issued since 1591. The "Paradise of Dainty Devices" is reprinted in "Collier's Seven English Miscellanies." (London, 1867).

K. M. WARREN.

(2) JOHN, father of the above, dramatist and epigrammatist; b. probably c. 1497; d. about 1580. The first certain record of him is in 1515 as one of the king's singing men, receiving the wages of eightpence per day. He would seem to have been first a choir boy and afterwards returned as a singer at the Chapel Royal. He was perhaps also employed to train competent instrumentalists for court performances. Tradition says that he was a member of Broadgates Hall, now Pembroke College, Oxford, but nothing further is known of his college life. His wit and his musical gifts seem to have led to his promotion and general prosperity. He received an annuity of ten marks as king's servant in 1521, and in 1526 he was paid a sum as "player of the Virginals," while in 1538 he again received payment for "playing an interlude with his children" before the Princess Mary. It was through Sir Thomas More, whose niece Eliza Rastell he had married, that he was introduced to the princess. It is probable that Heywood became acquainted with the Englishmen of sincere Catholic and would seem to have got into trouble in Edward VI's reign for denying the king's spiritual supremacy. Unfortunately there is some proof, though not perhaps quite conclusive, that he publicly recanted this denial.

At the coronation of Queen Mary, however, he delivered a Latin oration and he was undoubtedly "in complete sympathy with her policy in Church and State." There is evidence that he was a favourite with Mary, who could take, as Dr. A. W. Ward says, "an intelligent delight" in his accomplishments and
his wit. He wrote poems in her honour and is said to have been present at her last moments. Anthony H. W. tells us that "after her death he left the station for religion sake, and settled at Mechin in Brabant, which is a wonder to some who will allow no religion in poets, that this person should above all of his profession be a voluntary exile for it." He probably lived at Mechin till his death.

Heywood's chief writings consist of: (1) three interludes, (i.e., "comic pieces containing an element of action that entitles them to be called dramatic") of which the most famous is "The Four Ps". These pieces form a dramatic link between the morality plays and comedy proper, the personified abstractions of the morality being superseded by personal types; (2) the "Weather Maps", which treat of physical morality; (3) "The Play of Love", a disputatation between four characters, with slight dramatic action; (4) "The Dialogue of Wit and Folly"; (5) "Proverbs and Epigrams". All the above are comprised in the edition of Heywood's works issued by the Early English Drama Society (2 volumes, London, 1861 and 1864).

(6) "An Allegory", which is the drama in which the flies are the Catholics and the spiders Protestants, and Queen Mary the maid with a broom sweeping away cobwebs (not reprinted since 1556).

All the works of Heywood show wit and humour with some underlying pathos. His humour has been described as "sly and ironic" and he is considered characteristic of those minds which, while strongly conservative at bottom, claim a wide personal liberty in the expression of opinion, and are radically adverse to all shams". A devout Catholic, Heywood did not hesitate to satirize the folly or vice of unworthy members of the Church. Some of his wit is marked with the coarseness of his age, though less so than that of many other sixteenth-century writers. To judge justly of the literary quality of his work it must be viewed with its own background of the "dull and tedious" dramatic literature of the time. Certain judges have even gone so far as to regard him in wit and satire as a not altogether unworthy follower of Chaucer.

Hasekiah. See Ezechias.

Hibernians, Ancient Order of (in America).—This organisation grew up gradually among the Catholics of Ireland owing to the dreadful hardships and persecutions to which they were subjected. It is impossible to give the exact date of the foundation of the order in Ireland. Some authorities contend that the first impulse towards forming such an association was due to the publication of an edict against the Catholic religion by the Earl of Sussex (Thomas Radcliffe, 1st Earl of Sussex), who was made Lord-Lieutenant of Ireland in 1562. He prohibited all monks and Catholic priests from either eating or sleeping in Dublin, and ordered the head of each family to attend Protestant services every Sunday, under the penalty of a fine. Not only did the English begin a bitter persecution of the Catholics, they also confiscated the property of the Irish nobles. The prince Rory O'More with his companions took up the cause of religion and the protection of the priesthood as well as the defence of their dominions, and through their assistance the priests said Mass, on the mountains, in the valleys and glens, while the "Defenders", as they were called, acted as faithful sentinels to guard them from danger. The principality ruled over by Rory O'More was called Leix; it covered the greater part of Queen's County and part of County Kildare. The O'Mores belonged to the Clan Rory of the Province of Ulster, and were descended from the celebrated hero, Conall Cearnac, who was the chieftain of the Red Branch Knights at the beginning of the Christian Era. This famous Rory O'More was victorious over the English forces in many battles during the reigns of Queens Mary and Elizabeth, and in consequence recovered the principality of Leix, which had been the property of his forefathers and which he governed until his death in 1628. It is claimed that this Rory Oge O'More organised and founded Hibernianism in the year 1565, in the County of Kildare, in the Province of Leinster, and gave to his faithful followers the name of "The Defenders". After the death of Rory, "The Defenders" rallied around the Irish chieftains, and after many glorious battles beatok themselves to the mountains and defied the tyranny of England. In the course of time branches sprung up among their descendants in opposition to the Protestant organisations, such as the "Hearts-of-Steel", the "Oak-Boys", the "Peep-O' Day-Boys", the "Protestant-Boys", the "Wreckers", and finally the "Orangemen". The principal Catholic organisations were the "Whig Party", so called from wearing a white shirt, the "Rapparees", who received this designation on account of a half pike which they carried, and the "Ribbon-Men", so called because their badge was two pieces of green and red ribbon. In due time there arose also the "Scots-Alta" and the "Irish-Altas", and the Catholic organisations gave rise to what is known in Ireland as the Ancient Order of Hibernians. Anyone familiar with the history of Ireland under English and Protestant domination will recognize that it was natural enough for such organisations to be formed among the Irish Catholics. When the laws were made against the interests of the great mass of the people, it was necessary to erect a barrier of defence. No doubt, some abuses were occasionally connected with the operation of these societies, but, in the main, they defended the religious and civil liberties of the Irish people.

While we have no authentic information as to when the Ancient Order of Hibernians was formally established under that title in Ireland, we know that, in 1836, certain Irishmen in New York, who desired to establish a branch of this organisation in America, communicated with their brethren in Ireland, and received the following reply:

"Brothers, Greeting: Be it known to you and to all whom it may concern that we send to our few brothers in New York full instructions with our authority to establish branches of our society in America. The requirements for membership for these branches will be: All the members must be Catholics, and Irish or of Irish descent, and of good and moral character, and none of your members shall join any secret societies contrary to the laws of the Catholic Church, and at all times and at all places your motto shall be: 'Friendship, Unity, and True Christian Charity.'"

"This fourth day of May, in the year of our Lord, 1836", and it is signed by fourteen officers representing the organisation in Ireland, Scotland, and England. The association rapidly increased in membership, but, after a few years, factions arose. They vainly attempted to heal the breach by consultation among themselves, and then referred their difficulties to the present writer, who was selected as arbitrator. Mr. P. J. O'Connor, of Savannah, Georgia, was national president of the faction called "The Ancient Order of Hibernians of America", and Rev. E. S. Phillips, of the Diocese of Scranton, national president of the other faction, called the "The Ancient Order of Hibernians of the Board of Erin". The arbitrator, after several months' deliberation with the principal leaders of both organisations, successfully adjusted all difficulties, and the unified body became henceforth known as the "Ancient Order
of Hibernians in America." This union was ratified at the national convention held at Trenton, New Jersey, from 27 June to 1 July, 1898.

Preamble of constitution revised and adopted at the national convention held at Indianapolis, Ind., 21-26 July, 1908:—

"The members of The Ancient Order of Hibernians in America do hereby declare that the intent and purpose of the Order is to promote Friendship, Unity and Christian Charity among its members by raising or supporting a fund of money for maintaining the aged, sick, blind and infirm members, for the payment of funeral benefits, for the advancement of the principles of Irish nationality, for the legitimate expenses of the Order, and for no other purpose whatsoever.

"The motto of this Order is Friendship, Unity and Christian Charity. Friendship shall consist of helping one another and in assisting each other to the best of our power. Unity, in combining together for mutual support in sickness and distress. Christian Charity, in loving one another and doing to all men as we would wish that they should do unto us.

"(1) This Order is to be formed exclusively of practical Catholics. Therefore, each member is expected to comply with all his Christian duties. (2) Should any members fail in the above, and instead of giving edification and encouragement, become a stumbling block and a disgrace to the Organization, such a one, after proper charitable admonition, unless there be an amendment in his conduct, shall be expelled from the Order. (3) In order, however, that all may be done with justice, Christian charity and edification, there shall be in each county a Chaplain, appointed by the Ordinary of the Diocese, to be consulted by the Division before determining anything relating to morality or religion. (4) The Chaplain in each county shall see that nothing is done or countenanced within his jurisdiction which is contrary to the laws of the Catholic Church, the decrees of the Plenary Councils of Baltimore, and the Synodical Constitutions of the Diocese. In any difficulty or doubt which he may not be able to solve, he shall consult the Ordinary of the Diocese. (5) All Divisions of this Order shall adopt the foregoing preamble, and their special Constitutions and By-Laws shall be in harmony with the Constitution and By-Laws of this Order."

The constitution of 1908 gives full directions regarding the government of the organization and the manner of joining it. Article xxxv, sect. 1, treats of the place of joining the order: "Members of this Order shall join and belong to a Division in the city or town in which they reside if the Order exists therein or in the nearest locality in which a Division is located."

The membership of the A. O. H., according to the annual report for the year ending 31 Dec., 1908, is 127,254, distributed over the United States, including Hawaii, and the Dominion of Canada. The immense growth of the order can be measured by the amount of funds expended during the past twenty-four years. During that period, about $8,000,000 have been paid for sick and funeral benefits, and for charitable purposes over $4,500,000. Among some of the noble works of the order may be mentioned the endowment of a $50,000 Gothic chair at the Catholic University of America, Washington, D. C., and a donation of $40,000 towards their members who suffered in the San Francisco earthquake. The order also made generous gifts to the Gaelic League and established scholarships in colleges and academies to encourage the study of Irish literature and history. It was likewise instrumental in appropriating $50,000 towards the erection of a monument at Washington, D. C., to perpetuate the memory of Commodore John Barry, "Father of the American Navy".

The Ladies Auxiliary to the Ancient Order of Hibernians in America is the female branch of the order. It was established in Omaha, Nebraska, in May, 1894, and has the same objects and principles as the male branch. The Ladies Auxiliary remained for some time under the tutelage of the male Ancient Order, but, as it rapidly advanced in numbers, the ladies were permitted in 1900, at the Saratoga National Convention, to elect their own national officers, and to conduct their own affairs generally, although remaining an auxiliary organization. It is now a national body, having a membership of about 56,000 in the United States and the Dominion of Canada. The ladies have followed the generous example of the men and have established a scholarship in Trinity College, Washington, D. C., with an endowment of $10,000.

Hickey, Antony, O.F.M., theologian, b. in the Barony of Islands, Co. Clare, Ireland, in 1588; d. in Rome, 26 June, 1641. He received his early education in his native place, entered the college of St. Antony at Louvain, which has just been founded as a refuge for Irish students, and received the Franciscan habit on 1 November, 1607. Among his teachers at Louvain were the celebrated Irish scholars Hugh Mac an Bhaird (Ward) and Hugh Mac Caghwell, later Archbishop of Armagh. After his ordination to the priesthood, Father Antony was appointed lecturer in theology at Louvain, and subsequently professor in the college of St. Francis at Cologne. In 1619 he was summoned to Rome to collaborate with Father Luke Wadding in preparing for publication the Annals of the Franciscan Order and the works of Duns Scotus. He lived for some time at S. Pietro in Montorio on the Janiculum and, from 1624 till his death, in the college of St. Isidore. During the discussions which were held in Rome concerning the doctrine of the Immaculate Conception, Father Hickey won distinction by his learning and acuteness. His treatise on this subject is called by Marracius (Bibliotheca Mariana) "opus insignis et absolutum". In his work on the Fourth Book of Sentences, he shows great breadth of view and critical perception; in addition to the scholastic method, he makes use of the historical method and fully recognizes the development of sacramental theology. He took an active part in the labours of the commissions appointed by Urban VIII to revise the Roman Breviary, and to examine into the affairs of the Eastern Church. At the general chapter of the order held in Rome in 1633, he was elected definitor general.

Hickey wrote "Commentarii in Lib. IV Sententiarum" (Lyons, 1639), "Nitesla Franciscana Religionis" (Lyons, 1627), in this book he refutes the aspersions cast on the early history of the Franciscan..."
Order by Abraham Baovius: "De Concepcione Immaculata B. Marie Virginis", "De Stigmatibus S. Crucis", written by order of the Sacred Congregation of Rites: "Ad pleraque dubia moralia et ascetica, gravissimae responsione". This work, which Wadding calls "opus doctissimum", is still in MS. Among the MSS. preserved in the Franciscan Convent, Dublin, are several letters written to Father Hieropis concerning the civil and ecclesiastical affairs of that country. There is also an important letter of his on the Irish language. Many of the Irish bishops consulted him on matters of grave moment. His acquaintance with the history, language, and antiquities of Ireland was extensive, and in co-operation with John Colgan, Hugh Ward, and others of his scholarly confrères, he drew up a great part of the ecclesiastical history of Ireland in all its branches—but this idea was not realised.

Gregory Clark.

Hieropy, Thomas F. See Rochester, Diocese of.

Hierapolis, titular archdiocese, metropolis of the Province of Ephesus, in the Patriarchate of Antioch. The story of the name, Mabog or Mabou, the dove make Bayqgum and Seleucus Nicator transforms into Hierapolis or Hieropis, both forms being found on the coins. This appellation of "Holy City" is an allusion to the celebrated temple erected to the Syrian goddess Atargatis or Dercebo, who was also venerated at Palmyra, Ascalon, and elsewhere. The temple was sacred to this goddess, who is represented under the form of a woman-fish. The temple of Hieropis was pillaged by Crassus at the time of his expedition against the Parthians. Lucian of Samosata tells us that numerous pilgrims repaired thither twice a year in order to pour water through the opening of an abyss. Under the Seleucidae end the Romans, Hierapolis became a great commercial centre, a halting-place for the caravans going from Seleucia to Babylon. As the capital of the province of Commagene, or Ephesus, it became an important military stronghold where the Roman and Byzantine armies were concentrated, and the capital of the province, and taken on the first line of the defences. Julian the Apostate stopped here for some days before marching against Sapor. In 540 the city escaped pillage by the troops of Chosroes only by the payment of a heavy fine. Justinian fortified it, reducing the extent of the ramparts, which, with their numerous towers, was built by this emperor, are still standing. It required about an hour to make the circuit of them. In 1068 the Emperor Romanus Diogenes took the city, thus staying the progress of the Turks.

Lequin (Or. Christ., II, 925-8) names ten bishops of Hierapolis. Among the best-known may be mentioned Alexander, an ardent advocate of the Nestorian heresy, who died in exile in Egypt; Philoxenus or Xenais (d. about 523), a famous Monophysite scholar; Stephen (c. 600), author of a life of St. Golindon. Under the Patriarch Anastasius, in the sixth century, the metropolitan See of Mabog had nine suffragan bishops (Echos d'Orient, 14, 15, 16). Chabot (Revue de l'orient chrétien, VI, 200) mentions thirteen Jacobite archbishops from the ninth to the twelfth century. One Latin bishop, Franco, in 1136, is known (Lequin, III, 1193). This see must not be confounded with Hierapolis in Arabia, a large number of whose titulars in the thirteenth century are mentioned by Eubel (II, 181). This is the famous city carved in a rich plain. The city is situated twenty miles west of the Euphrates, and contains 1500 inhabitants, all Circassians. The ruins of the city of Hierapolis are thirteen miles north, at Kara-Membidj, where remains of aqueducts and the Byzantine walls of Justinian are still to be seen.

Chabot, Echos d'Orient, I, 5, 6; Smith, Dictionary of Greek and Roman Geography, I, 1064; Chabot, La frontière de l'Euphrate (Paris, 1907), 333-400; Commet, La Turquie d'Aas, II (Paris, 1898), 218-66.

S. Valiţă.

Hierapolis, a titular see of Phrygia Salutaris, suffragan of Smyrna. It is usually called by its inhabitants Hieropis, no doubt because of its hieros (which was an important religious centre), is mentioned by Ptolemy (v, 27), and by Hieroclus (Synecd., 676, 9). It appears as a see in the "Notitia Episcopatum" from the sixth to the thirteenth century. It has been identified as the modern village of Kottchisheh in the vilayet of Smyrnis, near the ruins of a temple and the hot springs of Lidja. Hieropis once had the privilege of striking its own coins. We know three of its bishops: Flaccus, present in the Council of Nicaea in 325 and at that of Philipopolis in 347; Avricius, who took part in the Council of Chalcedon, 451; Michael, who assisted at the second Council of Nicaea in 787. St. Abercius, whose feast is kept by the Greek Church on 22 October, is celebrated in tradition as the first Bishop of Hieropis. He was probably only a priest, and may be identical with Abercius Marcellus, author of a treatise against Maboug, the name of the dove make Baquban and Seleucus Nicator transforms into Hierapolis or Hieropis, both forms being found on the coins. This appellation of "Holy City" is an allusion to the celebrated temple erected to the Syrian goddess Atargatis or Dercebo, who was also venerated at Palmyra, Ascalon, and elsewhere. The temple was sacred to this goddess, who is represented under the form of a woman-fish. The temple of Hierapolis was pillaged by Crassus at the time of his expedition against the Parthians. Lucian of Samosata tells us that numerous pilgrims repaired thither twice a year in order to pour water through the opening of an abyss. Under the Seleucidae and the Romans, Hierapolis became a great commercial centre, a halting-place for the caravans going from Seleucia to Babylon. As the capital of the province of Commagene, or Ephesus, it became an important military stronghold where the Roman and Byzantine armies were concentrated, and the capital of the province, and taken on the first line of the defences. Julian the Apostate stopped here for some days before marching against Sapor. In 540 the city escaped pillage by the troops of Chosroes only by the payment of a heavy fine. Justinian fortified it, reducing the extent of the ramparts, which, with their numerous towers, was built by this emperor, are still standing. It required about an hour to make the circuit of them. In 1068 the Emperor Romanus Diogenes took the city, thus staying the progress of the Turks.

Lequin (Or. Christ., II, 925-8) names ten bishops of Hierapolis. Among the best-known may be mentioned Alexander, an ardent advocate of the Nestorian heresy, who died in exile in Egypt; Philoxenus or Xenais (d. about 523), a famous Monophysite scholar; Stephen (c. 600), author of a life of St. Golindon. Under the Patriarch Anastasius, in the sixth century, the metropolitan See of Maboug had nine suffragan bishops (Echos d'Orient, 14, 15, 16). Chabot (Revue de l'orient chrétien, VI, 200) mentions thirteen Jacobite archbishops from the ninth to the twelfth century. One Latin bishop, Franco, in 1136, is known (Lequin, III, 1193). This see must not be confounded with Hierapolis in Arabia, a large number of whose titulars in the thirteenth century are mentioned by Eubel (II, 181). This is the famous city carved in a rich plain. The city is situated twenty miles west of the Euphrates, and contains 1500 inhabitants, all Circassians. The ruins of the city of Hierapolis are thirteen miles north, at Kara-Membidj, where remains of aqueducts and the Byzantine walls of Justinian are still to be seen.

Hierarchy (Gr. ἱεραρχία; from λειτου, sacred; ἱερός, rule, command). This word has been used to denote the totality of ruling powers in the Church, ever since the time of the Pseudo-Dionysius Areopagita, who, in the sixth century, began to cross the lines of this organic unity, which he called the "Hierarchical Hierarchy" and the "Ecclesiastical Hierarchy" (P. G., III, 119 and 370). According to this author and his two commentators, Pachymere (P. G., III, 129) and Maximus (P. G., IV, 30), the word connotes the care and control of the sacred things, the "Hierarchical Hierarchy", it is here explained, is he who has actual care of these things; who, indeed, both obeys and commands, but does not obey those he commands. There is, consequently, a necessary gradation among hierarchs; and this gradation, which exists even among the angels, i.e. in the heavenly hierarchy (on which the ecclesiastical hierarchy is modelled), must a fortiori be found in a human assembly subject to sin, and in which this gradation works for peace and harmony ("S. Gregori Reg. Epist.", V, 54, in P. L. LXXVII, 786; "Decretum Dionyssi papae", in the Hainich ed. of the Pseudo-Isidorean Decretals, 195-6, Berlin, 1859; "De Hierarchia" of Gratian (Pseudo- Boniface), pt. I, D. 89, e. vii). The hierarchy, therefore, connotes the totality of powers established in the Church for the guiding of man to his eternal salvation, but divided into various orders or grades, in which the inferior are subject to and yield obedience to the higher ones.

Hierarchies of the Order and of Jurisdiction. It is usual to distinguish a twofold hierarchy in the Church, that of order and that of jurisdiction, corresponding to the twofold means of sanctification, grace, which comes to us principally through the sacrame...
and good works, which are the fruit of grace. The hierarchy of order exercises its power over the Real Body of Christ in the Eucharist; that of jurisdiction over His Mystical Body, the Church (Catech. Conc. Trid., pt. II, c. vii, n. 5). Christ did not give to all the faithful power to administer His sacraments, except in the case of baptism and matrimony, to institutes and worship. This was reserved to those who, having received the sacrament of order, belong to the hierarchy of order. He entrusted the guidance of the faithful along the paths of duty and in the practice of good works to a religious authority, and for this purpose He established and maintained institutes and jurisdiction. Moreover, He established His Church as a visible, external, and perfect society; hence He conferred on its hierarchy the right to legislate for the good of that society. For this double purpose, the sanctification of souls and the good or welfare of religious society, the hierarchy of jurisdiction is endowed with the following rights: (1) the right to frame and sanction laws which it considers useful or necessary, i.e. legislative power; (2) the right to judge how the faithful observe these laws, i.e. judicial power; (3) the right to enforce obedience, and to punish disobedience to its laws, i.e. coercive power; (4) the right to make all due provisions for the internal and external discipline of the society and its administrative power. Furthermore, with the power of jurisdiction there should be connected the right to exercise the power of order. The acts of the power or order are, it is true, always valid (except in the sacrament of Penance, which requires in addition a power of jurisdiction). However, in a well-ordered society like the Church, the right to exercise the power of order could never be a mere matter of choice. For its legitimate exercise the Church requires either jurisdiction, or at least permission, even of a general character.

Primarily also, the teaching power (magisterium) is connected with the power of jurisdiction. It is possible, of course, to distinguish in the Church a threefold power: the potestas magistri, or the right to teach in matters of faith and morals; the potestas ministerii, or the right to administer the sacraments, and the potestas regiminis, or the power of jurisdiction. Christ, however, did not establish a special hierarchy for the "potestas magistri," nor does the teaching power pertain to the power of order, as some have maintained, but rather to the power of jurisdiction. The Vatican Council, indeed, seems to connect the supreme magis primary power of Christ with that of the college of bishops (Constitutio de Ecclesiis, cap. 1 and iv). Moreover, the power of jurisdiction implies the right of imposing on the faithful a real obligation to believe what the Church proposes. Finally, in the Church, no one can teach without a mino canonici, or authorization from ecclesiastical superiors, which brings the individual to the power of jurisdiction. Nevertheless, as a general rule, the "potestas magistri" belongs to those only who have also the power of order, i.e. to the pope and the bishops, and cannot be separated from the latter power; the same is equally true of the power of jurisdiction (Schimn., "Die Gliederung der Kirchen- gewalten" in "Theologische Quartalschrift," LXXI 1889, 387 sq.). Jurisdiction is exercised in foro interno (potestas vicaria), and in foro externo. The latter aims directly at the welfare of religious society, indirectly at that of its individual members; the former directs the individual only indirectly with the religious society as a whole.

Finally, jurisdiction is either ordinary or delegated. The first is acquired by the acceptance of specified functions to which the law itself attaches this power, that the possessor must exercise in his own name; the second is obtained by virtue of a special delegation from ecclesiastical authority, in whose name it is to be exercised.

A. Hierarchy of Order.—The Council of Trent has defined the Divine institution of the first three grades of the hierarchy of order, i.e. the episcopate, priesthood, and diaconate (Sess. XXIII, De sacramento ordinis, cap. iv, can. vi). The other orders, i.e. those of subdeacon, acolyte, exorcist, lector, and porter, are of pontifical institution. Trent has shed much light on this question. The Council did not decide the question, but only declared that Fathers and councils place the subdiaconate among the major orders (loc. cit., cap. ii). It is now pretty generally held that the subdiaconate is of ecclesiastical origin, and is a consequence of the appearance in ecclesiastical discipline. Its introduction was due to the unwillingness of certain Churches to have more than seven deacons, conformably to Apostolic practice in the Church of Jerusalem (Acte, vi, 1-6). Furthermore, the ordination rite of subdeacons does not seem sacramental, since it contains neither the imposition of hands nor the words "Receive the Holy Ghost." Finally, in the Eastern Uniat Churches the subdiaconate is reckoned among the minor orders. For this opinion may be quoted Urban II in the Council of Benevento in 1091 (Har- douin, "Acts Conc.", VI, ii, 1894, P. 159, cap. xi, dist. xii, init.). Peter Lombard ("Sent.", Lib. IV, dist. xxiv), and others; see Benedict XIV, "De Synodo Diocesan" (VIII, ix, n. 10). This hierarchy of ecclesiastical origin arose at the end of the second and the beginning of the third century, and appears definitely fixed at Rome under Pope Cornelius (251-252), who tells us in the Edict of 250 that in his day the Roman Church counted 46 priests, 7 deacons, 7 subdeacons, 42 acolytes, and 52 clerics of lower grades, exorcists, lectors, and porters (Eusebius, "Hist. Ecl.", VI, 43). In the primitive Church there were also deaconesses, widows, and virgins, but these did not belong to the hierarchy. Nor does Pope Cornelius include them in his list of the Roman clergy. Their principal functions were prayer, the practice of works of charity, and of hospitality; while they performed certain liturgical functions, as in the baptism of women and at the age of sea. They never took any part, except by unauthorized abuse, in the ministry of the altar strictly speaking (Duchesne, "Christian Worship," London, 1904). Finally, although abbots of monasteries may confer the four minor orders, they do not constitute a special order or grade in the hierarchy. It is not by virtue of the blessing they receive from the bishop that they confer orders, but by virtue of a privilege which canon law grants to abbots who have received such solemn blessing from a bishop (Gasparri, "Tractatus Canonicus de sacra ordinacione Miles, iv, Paris, 1893). The Latin Church, therefore, counts eight grades in the hierarchy of order, the episcopate being counted a separate order from that of the priesthood, and ecclesiastical tonsure not being an order.

This latter point, formerly controverted by canonists, is no longer in doubt: the tonsure is, in the present discipline, a simple rite by which a layman becomes an ecclesiastic, a necessary antecedent condition for the lawful reception of orders proper, and not an order itself, except in a very inaccurate way of speaking, since the ceremony conveys no "potestas ordinis." In the Middle Ages Scholastic theologians denied that the episcopate was a distinct order from priesthood, alleging that the former is only the completion and perfection of the latter. The act of ordination, the offering of the Holy Sacrifice the bishop, it is true, has no more power than a priest; on the other hand, it is only a bishop who can ordain a priest; and this difference of power implies a distinction of order. Against this distinction it has been objected that an unusual ordination would be invalid unless the subject had first of all received sacerdotal ordination. It is true that, according to the modern practice, one
should admit this theory; but formerly, especially in the case of the ordination of the bishops of Rome, the practice of the Church was different. The title De septem ordiniis, which we read in the editions of the Council of Trent (Sess. XXIII, De sacramento ordinis cap. ii), is an addition of a later period, and the council expressly declares that bishops have a power of ordination in the case of priests. The Greek Uniat Church, as a general rule, only counts two grades of ecclesiastical institution: the subdiaconate and the lectorship. Nevertheless, ordination to the subdiaconate implies also the minor orders of acolyte and porter, and ecclesiastical tonsure is given when the candidate is lector. The Primate of the Eastern Christian Church, in reality, is the only one not known to the Greek Church. It considers the power of exorcising as a special gift of Divine goodness, not as something acquired by ordination. By the Constitution "Etsi pastoralis" Benedict XIV derogated from the decision of Innocent IV, and completely approved the discipline of the Greek Church on this matter (Papp-Szilágyi, "Enchiridion juris Ecclesiae Orientalis catholici", Grossweide, 1862, 405-7). It is probable that no other minor orders were originally known to the Greek Church. In Christian antiquity, it is true, even in the Greek Church, the Holy Scriptures, were read by many subordinate functionaries, e.g. singers ("cantores", or "confessores"); "parabolani", who cared for the sick; "coipate" ("fossores"), or sextons who buried the dead; "defensores", who attended to ecclesiastical trials; notaries and archivists; hermeneutes; or interpreters, whose duty it was to translate for the people the Scriptures, also the homilies of the bishop; with these, however, there is no question of orders, but of functions entrusted, without ordination, either to clerics or laymen (Benedict XIV, "De Synodo dioecesanæ", VIII, ix, n. 8; Inno. "I. V.").

B. Hierarchy of Jurisdiction.—In the hierarchy of jurisdiction the episcopate and the papacy are of Divine origin; all the other grades are of ecclesiastical institution. According to the Vatican Council the Bishop of Rome, as successor of St. Peter, has been established by Christ as the visible head of the whole Church militant, and possesses a real primacy of jurisdiction, in virtue of which he has supreme power of jurisdiction over the universal Church in matters of faith, morals, discipline, and the government of the Church. This power is ordinary and immediate over all the Churches, and over each one in particular, over the faithful and the Church as a body, individually (Const. de Eccl. Christi, cap. i-3). The government of the Church is strictly monarchical. The bishops are the successors of the Apostles, but do not inherit their personal prerogatives, such as universal jurisdiction and infallibility (Conc. Trid., Sess. XXIII, De sacramento ordinis, cap. iv). The pope is bound to establish bishops who enjoy genuine ordinary power in the Church ("potesas ordinaria"), and who are not merely his delegates or vicars, as some medieval theologians held. On the other hand, the theory proposed in the fifteenth century at the Councils of Constance and Basle, which made the pope subject to an ecumenical council; the Gallican theory, that would impose limits on his power by the ancient canons received in the Church, and requiring the acceptance or consent of the Church before his decisions could become irremovable; and the theory of Febronius, who thought that the Emperor, having usurped rights which properly belonged to the bishops and that ought to be restored to them, are all equally false and opposed to the monarchical constitution of the Church (see Gallicanism; Febronianism). An ecumenical council does, indeed, possess sovereign authority in the Church, but it cannot be ecumenical without the pope. It will suffice to mention the now universally rejected opinion of Gerson and a few other doctors of the University of Paris in the Middle Ages, who held that the parish priests were of Divine institution, being (in this opinion) the successors of the (72) disciples of Christ. This opinion was defended, in more recent times, by certain Jansenists, by Van Espen, and a few other canonists (Houwen, "De parochorum statu", Louvain, 1848, 7 sqq.).

The composition of the hierarchy of jurisdiction in the (Western) Catholic Church is indicated, in summary form, as follows. By virtue of his primacy, supreme authority over the whole Church belongs to the pope, who is at the same time Patriarch of the Eastern Church, Primate of the nation, and ordinary of the ecclesiastical province of Rome, and bishop of the city of Rome. In the actual discipline of the Church, the cardinals hold second place. They are the pope's advisers in the more important matters concerning the universal Church, and exercise their jurisdiction in the various congregations, tribunals, and offices instituted by the pope for the government of the universal Church. (For the recent reorganization of the Roman Curia and the Roman Congregations, see articles under those headings; and cf. the "Sapienti Consilio" of Pius X, 29 June, 1908.) Next in order comes the College of Bishops; that is to say, the College of Cardinals, instituted by St. Constantine (381), of Chalecedon (451) recognized in the Bishop of Rome for the West, in those of Alexandria, Antioch, Jerusalem, and Constantinople for the East, over the territories included within their patriarchates, a jurisdiction higher than that of archibishops. The four Eastern patriarchates, as a consequence of the Mohammedan invasion and the Greek schism, gradually lost communion with Rome, but were re-established in the Latin Rite at the time of the Crusades.

After the fall of Constantinople (1453) the Holy See contented itself with nominating for these sees titular patriarchs, resident in Rome, and since 1847, the Latin Patriarch of Jerusalem resides in that city. Besides these ancient or "greater" patriarchs there are, in the Latin Rite, minor patriarchs, whose title is purely honorary. They are: the Patriarch of Venice (formerly Patriarch of Grado); the Patriarch of the West Indies, who resides in Spain; the Patriarch of the East Indies (Archbishop of Goa), and the Patriarch of Lisbon. The Patriarchate of Aquileia was suppressed in 1751.

In the West the dignity of patriarch corresponds to that of exarch in the East. With the exception of the Primate of Gran (St. Ildefonso) in Hungary, primate of the eastern barbarians, mere pre-eminence of honour is possessed by the metropolitan prelates. Among the primates are the Archbishop of Salzburg (Germany), Prague (Bohemia), Gnesen-Posen and Warsaw (Poland), Toledo and Tarragona (Spain), Rouen (France), Armagh (Ireland), Venice (for Dalmatia), Mechlin (Belgium), and Carthage (Africa). Metropolitans, on the other hand, have real rights over the bishops within their ecclesiastical province, and over the province itself. The bishops subject to their jurisdiction are called episcopos provinciales or provinciales, also suffraganes or suffragans. Since the sixth century metropolitanans have been also known as archbishops, which title they share with titular archbishops. By this term are meant archbishops who administer a diocese but have no suffragans, also archbishops merely titular, i.e. who have no jurisdiction, but only the title of some extinct archdiocese. Metropolitanans are obliged at stated times to consult the provincial synods, to legislate for the whole province.

After the archbishops come the bishops, who of Divine right administer the dioceses entrusted to them by the Holy See, which may determine or in a measure limit their rights. If they are not subject to the authority of an archbishop, they are called diocesan bishops, and are directly subject to the Holy See. Besides the diocesan bishops there are also titular
bishops, formerly called bishops in partibus infidelium. These receive episcopal consecration, but have no jurisdiction over the dioceses of which they bear the title. They may be appointed by the pope as auxiliaries to diocesan bishops, or as ordinary assistants to the diocese. In the eighteenth century there are found, in the West, chiroepiscopi, i.e. auxiliary bishops and substitutes for diocesan bishops sede vacante. They had no distinct territory and ceased to exist in the ninth century.

After the bishops in the hierarchy of jurisdiction ceased the procurator office, those who are currently styled prelati nullius cum territorio separato, and exercise episcopal authority over a territory not belonging to any diocese; they must be carefully distinguished from the prelati nullius cum territorio conjuncto, and from superiors of exempt religious colleges, whether or not the archdeacon is vicar-general, but has no authority over the priests; an `economus', who looks after the property and revenue of the church, subject to the bishop's supervision; a `periodeuta' or baird, charged with the supervision of the churches and the clergy of the diocese; and the `protonotarii', who have also the right to consecrate baptistries, churches, and altars, and with the consent of the patriarch, to administer confirmations. The `chiroepiscopus' resembles the baird, but may also give minor orders. The bishop has the right to establish a chiroepiscopus wherever there is a `municipium clericum'. Among the clergy of this level he is known as the archipresbyter, or chiroepiscopus. These various functions are conferred by a rite resembling that of ordination (Silbermagl-Schnitzer, "Verfassung und gegenwartiger Bestand samtlicher Kirchen des Orients"), Ratisbon, 1904, 346 sqq.)

In the Anglican Church the organization of the Anglican Church closely resembles that of the Catholic Church. In its hierarchy of orders, it is divided into three grades of Divine institution, episcopate, priesthood, and diaconate. In its hierarchy of jurisdiction come first the archbishops, some of whom have the title of primate; and among ecclesiastical provinces, which may convene a provincial synod or convocation (see Convocation of the English Clergy). The bishop rules his diocese with the aid of a chancellor or vicar-general; in the larger churches there are suffragan or auxiliary bishops. Chapters and deans of cathedral churches have survived, but are not active in diocesan administration. The bishop may convene a diocesan synod. The Anglicans have also retained archdeacons, deans, and pastors. At present the Anglican Church counts over twenty ecclesiastical provinces, comprising over 200 dioceses; there are over 350 dioceses belonging to no province, and over 1000 religious orders in the Anglican Church. The province of Canterbury, 2 the Archbishop of York, 3 the Primate of Canada, 4 the Primate of Australia. There are also over 40 suffragan bishops. At the time of the see of John XXI proclaimed himself head of the Anglican Church, but the authority of the sovereign in the Church has been greatly lessened. The Archbishop of Canterbury enjoys a sort of pre-eminence of honour. Since 1867 a Lambeth Conference is held every ten years at London, to which all the Anglican bishops of the world are invited. In 1857 it established a "Central Consultation Body", very regretted in 1897, but without judicial authority. In spite of many efforts to unify the Anglican Church this aim has not yet been realized. (Siegmund-Schultze in "Deutsche Zeitschrift für Kirchenrecht", 1909, XLI, 52-63.)

I. THE PRINCIPLES GOVERNING THE GROUPING OF THE ORIGINAL DOCUMENTS.—The common division into an Apostolic and a post-Apostolic period cannot be aptly applied to the collection of historical testimony bearing on the constitution of the early Church; such a division is indeed misleading. Because:

A. Our sources for the very early period are too scanty and fragmentary to give us anything approaching a clear picture of the institutions; it is therefore plain that the mere omission of certain things in these sources gives us no right to infer their non-existence.

B. Although the development of the primary elements and fundamental principles of the inner constitution of the Church was probably somewhat uniform, at least in the essential features, the variations in different localities were not inconsiderable.

C. Several testimonies taken from the end of the first and the first half of the second century contain valuable historical information directly concerning the organization of the early Church and thus lead us to the border of the earliest epoch.

D. A wealth of formulae of archaeological interest, and many implicit statements of contemporary legal conceptions are found in these testimonies. They contain, as it were, the crystallized institutions of the earliest period as it grew.

E. One should not imagine the primitive ecclesiastical structure as a mere aggregate of disjoined fragments, but rather as a living and regularly developed organism, from whose inner construction we can under certain conditions arrive at definite conclusions as to its origin and growth.

The last two points show that it is allowable, and even necessary to determine from later sources the earliest state of the ecclesiastical constitution by cautious and critical method. A scientific investigation will first bulk together all the sources up to the time of the Didache, and accept and preserve in the whole, the development up to that time. Research will show that many of the institutions are undoubtedly post-Apostolic, while of the greater number of them, it can only be said that they followed one another in a certain order; it is impossible to determine the exact date of their first appearance. The encyclical of St. Ignatius about 110 mark the close of a definite period; and there are other sources, the dates of which are exactly known, that enable us to ascertain the first beginnings and some intermediate steps in the development of this period. This makes it possible to sketch more or less accurately the remaining stages without fixing upon any one of the document. For instance, it cannot be doubted that certain descriptions in the "Doctrine of the Twelve Apostles" (\(\text{Didax}\)) suppose an older phase of corporate development than that with which we meet in the Pastoral Epistles and the Epistle of Clement. This fact however does not decide the question whether the Didache was actually written before the Epistle of Clement and the Pastoral Epistles. As to the latter, it is clear that the system of government depicted therein represents an earlier phase than that given in the Letters of Ignatius.

It is not our intention in this article to undertake a preliminary and cursory review of the sources, which would only establish the most evident facts of chronology. This task has been already sufficiently often undertaken from widely different standpoints, and it has been shown on incontestable evidence that the several grades of the hierarchy did not exist from the beginning in their later development.

Thus, in the following sections the text of the documents is arranged according to the Principal Results of the Investigation.
The classification will now follow of the whole documentary material up to the second half of the second century. From the entire material we shall first collect those testimonies which evidently show the most advanced stage of development and the closest resemblance to the modern. The third group comprises documents which will form the fourth group. We then gather all those accounts in which the plenitude of the Apostolic authority is shown in conjunction with a somewhat unfinished and fluctuating system of ecclesiastical government; these form the first group. The remaining documents will be assigned to the second or third group, according to whether they are more nearly related to the first or to the fourth.

II. GROUPS OF DOCUMENTS.—A. Enumeration.—
(1) The First Group includes: (a) the first six chapters of the Acts of the Apostles, and the passages in the Synoptics concerning the special call and unique position of the Twelve, (b) the two Epistles to the Corinthians, the Epistle to the Galatians, the two to the Thessalonians, and the Epistle to the Romans, (c) some texts from the Acts of the Apostles (to be collected later) about the Apostles as witnesses and preachers, about the obedience due to them, and about theFish of the Apostles, (d) the Second Epistle of Jude, (e) the Three Epistles of John, (f) the Pastoral Epistles, (g) the First Letter of Clement, (h) the Ascension of Isias.

(2) The Second Group includes: (a) the Apocrypha, (b) the Gospel of St. John, (c) the Seven Encyclicals of Ignatius, and the Letter of Polycarp, (d) the Letter of Barnabas, and the homily known under the title of the Second Letter of Clement, (e) the Pastor of Hermas, (f) Justin, (g) Hesychius, (h) Abercius, besides (i) a brief dissertation on Gnostic and Manichaeism.

B. Explanation of the Groups.—(1) General Remarks.—The Apologists (Justin excepted), the fragments of the presbytery and of Papias, the Letter to Diognetus (chap. xi and xii are spurious), the "Acta" and "Passiones" of the martyrs of this period, excepting a passage from the "Passio Polyarpri"; the Apocrypha properly so called, with the exception of the Ascension of Isias; all these furnish nothing directly bearing on our matter. The same is true of the Christian papyri, the ostrakas, and the inscriptions. One cannot attach the value of independent testimony to four passages dealing with the special call and vocation of the Twelve, viz. from the Ebonitic Gospels (Pseudo-Ignatius, "Hær. of xxx, 13", from the Apology of Aristides (Texte und Untersuch., IV, iii, 1893, 9, 10), from the Mission Sermon of Peter (Kýρώνων Πέτρων; Robinson, "Texts and Studies", 1891, 86 sq., fragm. 1), and from a Coptic papyrus at Strassburg—(cf. Gottinger. Anz., 1900, 481 sq.). In regard to the old so-called "New Testament" papyri we may say "Les anciens monuments du christianisme écrits sur Papyrus" ("Papirologia Orientalis", ed. Graffen and Nau, IV, 2). Even without taking into account the lack of a critical text, we must nevertheless abandon any attempt to argue from the Clementines, since even the oldest of them are not more than a product of the third century. The writer of the original document may now and then have made use of valid traditions, in questions affecting the constitution of the Church, but he is guilty of arbitrary inventions and changes. All the conclusions regarding primitive conditions which Hilgenfeld's acumen and learning enabled him to draw from the Clementines, must give way under the pressure of careful examination. Neither does the use of the so-called "Apostolic Church Ordinances", because of the invalidity of Harnack's hypothesis ("Die Quellen der sog. Apost. Kirchenordn.", 1886, 32 sq.), which would base Chaps. 16-21: 22-28 on two ancient sources dating from the middle of the second century. The work belongs to the third century and hardly_certainly to the second. We conclude our remarks on this subject with the assertion that the first centurymust be regarded as pre-Christian.

(2) Remarks on the First Group, Section (b).—According to the restrictions made above, we consider here the Gospel accounts only in so far as their testimony enables us to form an idea of the Church as it existed in the first generation. The accounts about the position, the authority, the activity of the original Twelve in Jerusalem (Acts, i-vi) bear the most evident signs of antiquity and genuineness, and agree with all the other information about the dignity of the Apostles handed down to us from early times.

(3) Remarks on the Second Group, Section (d).—It will not suffice, with regard to the presbyters of the Acts of the Apostles, to establish historically the fact that about A. p. 50 there were presbyters in Jerusalem and in other localities in Palestine, and that at the same time, Paul on his first journey appointed presbyters in Asia Minor. There remains another important question to be solved, whether all these presbyters are, in a true sense of the word, the predecessors of that primitive college which we meet, for instance about 115, in the writings of Ignatius of Antioch. There is not the slightest critical reason—we shall prove this at full length—why the presbyters of Asia Minor should be understood as different from the superiors mentioned in the First Epistle to the Thessalonians. On the other hand, we regard the presbyter-bishops of Ephesus (Acts, xx) as belonging to the second group of the sources, because they represent an authority that is much more definite.

(4) Remarks on the First Group, Section (b), and on the Second Group.—In the First Epistle to the Thessalonians, the state of the Church as a corporate body does not differ in any essential point from that described in the accounts of the first group. The Apostle Paul appears as the first, the only authority. In the Epistles to the Ephesians, Philippians, Colossians, the conditions have changed a little. Indeed, the personal rule of the Apostle is still supreme; but some traits point to a gradual passing of power to other superiors. We are reminded of this fact by the title of the Epistle to the Philippians, in which bishops and deacons are mentioned. We are again reminded of it by the mention of Archippus, the minister, in the Epistle to the Colossians. The note to Philémon is likewise connected to some extent with this change. In the second group we place also the Epistle to the Ephesians, since it shows a remarkable decrease in the form of the Epistle to the Thessalonians. The conditions as the Church was formed as the body of Christ. For similar reasons we insert here the Didache.

(5) Remarks on the Third and Fourth Group.—All the writings enumerated in the third group show the organisation of the Church more developed. The fourth group witnesses the appearance of the monarchical episcopate. It is not easy to find the right place for the Pastors of Hermas. The degree of organic development supposed in that work, the pronounced control of the presbyters, and the presence to all appearances of a leading personality, Clement, all this points to an intermediate stage, the place of which we are led to think in the First Letter of Clement and the Encyclicals of Ignatius. Only once is Clement mentioned and then...
in passing; little therefore can be gathered as to the position assigned him by Hermas. On the other hand, the Church's organization is more stable than it was in Corinth at the time of the first Clement about A.D. 98. Whether Hermas really attempted to carry back his description of the Church to the "end of the first century by giving it a single true and yet an open meaning: the theologian "No" of recent scholars provokes contradiction. At all events the attempt of Hermas, supposing it to have been made, was rather weak. But, on the other hand, the personal tone is no proof to the contrary. Still, there are strong indications that the prophet wrote about A.D. 100. This is the more likely because the Church is referred to by a special name. Hermas himself was just writing his work before the election of his brother Pius to the Bishops of Rome. Just because he was the brother of the Head of the Church, he must have thought it more advisable to be silent concerning him and to abate the abuses which he reprehends.

III. DISCUSSION OF TEXTS NOT LATER THAN THE MIDDLE OF THE SECOND CENTURY.—A. The Texts of the First Group.—If we judge of the organization of the Churches depicted in the first part of documents simply according to the account given in the texts, we must define the theologically formulated propositions naturally present as to: (1) The Position of the Twelve; (2) The Position of the Seven Ministers of the Table (cf. διακονεῖται τραπεζήν Acts, vi, 2) mentioned in the Acts, and of the Presbyters of Palestine; (3) Origin of the Apostolic Authority; (4) Relations between the Apostles and the Christian Communities; (5) The Rights of the Christian Communities; (6) The Position of those Individuals possessing the Charismata; (7) The Origin of the Ecclesiastical Authority in General; (8) The Position of the Superior spoken of in some texts; (9) The Persons to whom Peter gave the keys. (i) The Position of the Twelve.—In the first six chapters of the Acts the Twelve (if we include Matthias) appear as a governing body to whom the community at Jerusalem is subject (i, 13, 25, 26; ii, 14, 37, 42, 43; iii, 33, 35, 37; v, 2, 12, 18-24; vi, 2 sq.), the chief personality is Simon Peter (i, 13; ii, 14, 37; iv, 20-21; vi, 15-29). According to these texts the Twelve are heralds of the Word of God and rulers of the community. This conception agrees with the traditions in the Synoptics. These traditions inform us: (a) of the special appointment of the Twelve, (b) how the office entrusted to them, and their future destiny.

(a) Special selection of the Twelve.—a. Appointment.—The vocation of individuals, viz. of Peter, Andrew, James and John. They are to be fishes of men (Mark, i, 16-20; Matthew, iv, 18-22). According to Luke, v, 10, Jesus, after the miraculous draught of fishes, says to Simon that henceforth he shall catch men. The calling of Matthew (Mark, ii, 13, 14; Matt., ix, 9; Luke, v, 27, 28); Appointment of the Twelve (Mark, iii, 13-19; Matthew, x, 2-4; Luke, vi, 12-16). Christ "also named them apostles" (Luke, vi, 13). These are the Twelve and their Future Destiny.—They are to be with Him and to be sent to preach (Mark, ii, 14). They are the salt of the earth and the light of the world (Matt., v, 13-16). They also must protect the world against corruption and elevate it by their holy example. What Christ has thus given for the Church, the Deacon speaks of (Matt. x, 26-27). The mission of the Twelve to preach the kingdom and to heal the sick (Mark, vi, 7 sq.; Matt., x, 5 sq.; Luke, ix, 1 sq.). To the Gentiles they are not to go. Mission of the Seventy (Luke, x, 1-16). All are obliged to receive the Twelve and the Deacons because otherwise a severe judgment awaits them (l. c.). b. The power to bind and to loose given to the Twelve (Matt., xviii, 15 sq.); they shall judge the twelve tribes of Israel (Luke, xxii, 30). c. The Mission to the world (Mark, xv, 14-18; Matt., xxxii, 18-20; Luke, xxiv, 44-49). The Apostles will survive their Master and pass through days of sadness (Mark, ii, 19, 20; Matt., ix, 15; Luke, v, 34-35; similarly Mark, viii, 35 sq.; Matt., xv, 24 sq.; Luke, x, 16 sq.); they shall be dragged before tribunals (Luke, xi, 12, 12, 12 sq.; Mark, xii, 9 sq.; Matt., x, 17 sq.). (b) Special Appointment and Position of Simon Peter.—Peter is the foundation of the Church and the keeper of the keys; he has full power to bind and to loose (Matt., xvi, 19 sq.). Peter is to be like a wise man building on rock, his foundation is true, is already mentioned, but from this it does not follow that Hermas finished his work before the election of his brother Pius to the Bishops of Rome. Just because he was the brother of the Head of the Church, he must have thought it more advisable to be silent concerning him and to abate the abuses which he reprehends.

The Twelve regarded their prerogatives as a moral power conferred by God and Christ, as a right which exacted from others the correlative service of obedience.

(2) The Seven Apostolic Helpers (Acts, vi) and the Presbyters of Palestine.—(a) The Seven Government as a whole community (cf. τωσταχω των vi, 3, and ἡ Ἑλενιστατική vi, 5). The Apostles themselves intend to install the persons chosen in their office (vi, 3). This enables the Twelve to devote themselves (henceforth exclusively) to prayer and preaching. The Seven Elect are presented to the Apostles who "praying and laying on hands upon them" (vi, 5). No critical doubt can be cast upon any part of the narrative. An official name for the Seven has not come down to us. Their office is described as a ministering to the tables (διακονεῖται τραπεζήν, vi, 2), the care of the temporal support of the poor. In reality, however, one of them was elected, Stephen, to become the ardent seal to the preaching of the Word of God. Another, Philip, becomes a missionary (viii, 5 sq.). He is called evangelist (xxi, 8).

The sources thus show that these seven men, elected by the people in obedience to the Apostles, were invested with the Apostles in almoner's office with prayer and imposition of hands. In addition they could act as preachers. Whether this institution existed for any length of time, we do not know. There is no dogmatic tradition strictly speaking, nor any decisive historical reason to suppose that these seven men were deacons in the later sense of the word. The question of their position is usually looked at from a wrong point of view. For from the difference between the original and the later sphere of activity we cannot infer a lack of continuity between the office of the Seven and that of the deacons of the second century. The Twelve were more completely independent than that of the later deacons. One and the same office may in course of time shift the limits of its competence to a very considerable extent; so much so that only a minimum may remain of what it was originally. Yet nobody speaks in this case of an essential difference. If we are convinced of this, we have only to consider the Roman offices of presbyter and questor. In later times too the
care of the poor and sick was one of the duties of deacons proper. The distribution of the Eucharist was likewise part of their duty. It is not impossible that the last mentioned duty is already included in the expression "ministers of the word"; it was thus far maintained, implicitly at least, the petition that the Holy Ghost might empower and strengthen the chosen ones to fulfil their office (of ministering to the tables), thus conferring all that was essentially necessary to make their office the same as the later diacone. Nor has the church ever placed the essence of the diaconate in anything else.

(b) The Presbyters of Palestine.—We do not know whether or not there is an historical basis for the legendary tradition that the first twelve Apostles, following the command of their Master, remained twelve years in Jerusalem. At all events only Simon Peter and James are said to have been present at the ascension (Acts vii, 55); we think, however, that the tradition of the Fourteen are given by the church fathers, whether it was Simon Peter, who is called the first among equals or the first of all the disciples, but in this view it is not stated who were the others.

The Acts mention the presbyters in connection with James, who was one of the twelve. The decision reached by the church of Jerusalem as to the proper mode of observing the law (xxv, 1–30; cf. xvi, 4). The Acts mention the presbyters in connection with James only once on one other occasion (xxii, 18). It is contrary to the principles of historical research to associate the first appearance of the Palestinian presbyters with the monarchical position held by James of the house of David. It is only at a later time, probably after Peter had left Jerusalem for a long time or for ever, that James appears as the monarchical bishop of the holy city. The presbyters were at first simply assistants of the Twelve outside the capital. Then a substitute for the Apostles was needed in Jerusalem as well, when most of them had left that city. This was not a revolution in the system of government, but the result of the natural course of events. No one who clearly understands the practice and the ideas of the earliest times will doubt that the installation of these presbyters was effected by means of imposition of hands and prayer. Very probably the presbyrate of the earliest time was transferred to the church at Jerusalem.

(3) The Origin of the Apostolic Authority.—(a) Paul proves that he is an Apostle sent directly by God and Christ and endowed with full power (Gal. i, 1, 12, 15; ii, 8–9; I Cor., i, 1; iii, 9–11; iv, 1; ix, 1; I Cor., i, 1; iii, 6; 4–8; xi, 4–5; the whole of chapters xi and xii; 1 Thess. iii, 12; Rom., i, 1–16; xi, 1–24; Gal., ii, 15–22; xvi, 25–27). (b) Supplementary texts: Gal., i, 8–9 (Paul preaches the absolute truth); Gal., ii, 2 (comparison between his Gospel and that of the original Apostles); Gal., ii, 6 (he did not receive power from other Apostles, whether the words Apostles be taken in the narrower or the wider sense). The thought underlying all these texts is that Paul conceived his own authority as analogous to the power conferred by God and Christ upon the Twelve, a power which Paul himself acknowledged.

(c) These utterances of Paul agree with the following from the Acts of the Apostles: iii, 24; iv, 37; v, 23; viii, 25 (the Apostles are authoritative figures in the Resurrection and the deeds of Jesus Christ); ix, 3 sq.; xxi, 14 sq.; xxvi, 15 sq. (vocation of St. Paul); iv, 19, 20; v, 29; x, 42 (the Apostles are bound to make known what they have seen and heard); ix, 27 (Paul is presented to the Apostles by Barnabas at Jerusalem); xiii, 47 (Paul and Barnabas? appointed by Christ to be the light of the Gentiles); xx, 24, 26 (Paul and Barnabas). This text is equivalent to those given above under (a).

(4) Relations of the Apostle to the Communities Founded by him.—(a) Galatians.—The Galatians were obliged to believe and obey the preaching of Paul (Gal., i, 6–12; iii, 1–2; iv, 14–19; v, 7–10). Their relations are thus based on facts strongly emphasized by Paul: (i) They have received the Holy Ghost (cf. iv, 4); (ii) he preaches the absolute truth, therefore let him be anathema who preaches a Gospel besides that which he has preached (i, 8–9). (iii) To resist the truth when preached, is to disobey (v, 7).

(b) Corinthians.—Paul introduces himself as an authoritative teacher: (I Cor., i, 11 sq.; cf. iii, 4–7; ii, 4–5; iv, 3–5, 15, 16, 17, Paul threatens to use severe measures (iv, 19–21); he commands them to expel the incestuous adulterers (v, 1–13); to appoint arbitrators (vi, 1–7); he distinguishes between his permission of marriage of those of like carnal passions (vi, 6; cf. vii, 1–2); he forbids them to keep his ordinances (xi, 2); "now this I ordain", 17; "the rest I will set in order, when I come", xi, 33 and 34; cf. also the xiv, 28 sq. and xv, 1 sq. and sv., i sq.: ordinance concerning the collection, which according to the will of the Apostles, was always to be looked upon as a free act of kindness. (v. II Cor. ix and Rom., xv, 26 sq.) In the first Epistle to the Corinthians the Apostle does not attribute to the community any authority whatsoever over himself; he refuses to be the object of any arrogant judgment (iv, 5). In three instances he admits that the community has certain rights which, however, have their origin in his command or his directions (v, 1–13; vi 1–7; xvi, 1 sq.). (II Cor., i, 23 sq.: Paul assures them that he avoided coming to Corinth in order to spare them, and he adds: "Not because we exercise dominion over your faith, but for your joy. This little trespass is partly made good by ail the consolation with which we filled you from St. Paul. II Cor., ii, 9: "For this end also did I write, that I may know the experiment of you, whether you be obedient in all things"; iii, 2–3; vii, 8–12; viii, 10 sq. (mild requests); and 1–18; up to this chapter of the second Epistle to the Corinthians St. Paul lays little stress upon his authority; he does not so much utter injunctions as counsels and requests, however, acknowledging any power of the community over himself. Now he speaks of the spiritual weapons given by God "unto the pulling down of fortifications", (iv, 23 sq.); "into captivity every understanding", (iv, 6); bringing into captivity every understanding (iv, 4); into captivity all the heathen, and that which he has brought (vi, 13; ix, 22); if he comes again, he will not spare the sinners. From chap. x Paul again forcibly emphasizes his full authority over the community.

(c) Romans.—We must take into account that the Apostle speaks to a community which he himself has not founded (cf. especially chap. xv); consequently he does not give commands; nevertheless he teaches with full authority, as one who has power. He refers (xii, 3) to the grace granted him in order that he might be enabled to give earnest admonitions; hence it is that the Gentiles owe him obedience (xv, 15–19). The same idea is expressed in chap. xvi, 17–19. The text (x,14–17) is one of those most helpful in giving
us an insight into the beginnings of Christianity. Belief is impossible if one has not heard a preacher of the Faith, and preaching requires the sending of the preacher.

(d) **Thessalonians.**—In I Thess., ii, 7 (I Cor., ix, 7-16 and II Thess., iii, 7-9); I Thess., iv, 1; II Thess., ii, 12-14 (cf. 2-4). Paul exults the Thessalonians to hold fast to the word given them by Paul himself, whether by word or by his epistle; cf. also iii, 6. If one of the faithful does not obey Paul's epistle, they shall not keep company with him and shall admonish him (iii, 14 and 15).

(5) The rights of the Communities.—The first group of our documents contains fifteen texts from which may be drawn conclusions with regard to certain community rights. These texts shall be divided into eight classes. The first contains information on elections of an official character held by the communities; the second, on elections of a private character; the third, on judicial proceedings; the fourth, on private matters of a less grave character; the fifth, on the opinions of the faithful with regard to the Apostles; the sixth, on collections taken up in the communities; the seventh, on credentials granted in the name of the community; the eighth, on the acknowledgment of superiors by the community. In order to view the matter in the proper critical light, one must keep in mind that from the very beginning the concept *Eccl.* was not only the local particular Church, but also the universal Church as a whole, in as much as it is superior to the individual communities and operates in them as their vital principle. This is now admitted by Protestant scholars of the first rank. Even when *Eccl.* was used in the sense of local Church it did not, in the earliest Christian literature, designate the community as opposed to the Apostles or any other superiors, but it meant the organised community. Such is the obvious meaning of the term in all the writings of the New Testament. In only two passages which, moreover, belong to the quite exceptional fifteenth chapter of the Acts, the *Eccl.* is placed side by side with the Apostles and presbyters: The Apostles of the Gentiles are received by the Church (of Jerusalem) and by the Twelve and the presbyters (xv, 4); the apostles are the presbyters, together with the Church, of Jerusalem etc., convos for Antioch. Acts, xiv, 22 says Paul appointed presbyters in every Church (cf. *Eccl.* of Asia Minor.

Elsewhere, however, St. Paul's conception of the Church prevails; the Church, both in its ideal form and in its concrete realisation, is always the body of Christ and consequently for an organism, a spiritual whole. It is in the Epistle to the Ephesians that we find for the first time the notion of this ideal Church, i.e., of the universal Church taken as an individual unit (Ephes., i, 22; iii, 10, 21; v, 23, 24, 25, 29, 32; so too Col., i, 18, 24; Hebr., xii, 23 sq.). This is the meaning of Matt., xvi, 18: "I will build my Church". Something like a transition to this meaning is found in I Cor., xvi, 28: "God indeed hath set some in the Church; first apostles, etc." One plainly feels however that behind these words there still lurks the idea that in every individual Church (i.e. community) there is a spiritual character. Such a character may be observed in I Cor., x, 32 with the difference, however, that here the actual particular Church is still more clearly to be seen. On the other hand in the three passages where Paul speaks of himself as the former persecutor of the Church, he may possibly have in mind the community of Jerusalem (Gal., i, 13; I Cor., xv, 9; Phil., iii, 10). In Acts, xi,

28 the word *Eccl.* seems also to have a significational intermediate between that of the particular concrete Church and that of the ideal universal Church. There remain eighty-four texts in which the word *Eccl.* occurs. In no single one of them does the expression signify the community or the congregation taken in a distinctly democratic sense, by which emphasis would well be lacking. It is therefore not admissible to consider the actions of the *Eccl.* as a mere outcome of democratic rights, thus arbitrarily excluding both the unitary operation of the organism as a whole and the graded activity of the individual members and different organs of administration. St. Paul assigns to *Eccl.* as the ideal whole, through whose vivifying action they are imparted to the local Churches, the proximate sources whence the individual administrative organs derive their vital prerogatives. But all this is possible only because the Church is the body of Christ and thus in vital union with the giver of life, Jesus Christ.

This early Christian view of the Church has nothing in common with the idea of a purely human, democratic authority and supremacy of the community. In our own days as well, it is of course the only correct conception of the Christian Church; it is the Catholic Church. After the Pauline line of development, the second century the use of terms had already begun to undergo a change. This is perhaps to be regretted. Instead of speaking of the activity, the efficiency, and the sacrificial office of the Church of God, it gradually became customary to lay stress on the acting organs, i.e., to ascribe these functions to the bishop or presbyter. This brought out more clearly the element of jurisdiction and defined more sharply the grades of authority. As long as the Church in general was conceived as the subject of all activity, the functions of the individual organs remained undefined or could by any clear distinction be drawn between their respective attributions. While these were more plainly marked off in the later development, the depth and unity of thought was impaired by the obscuring of the idea that the Church is the mystical body of Christ. St. Paul never derived all the rights and powers of the Churches founded by him from the plenitude of his Apostolic power. He never forgot that the Church of God was primarily a creation of God, and therefore the subject of rights founded in her very nature. But these rights and powers which come from God have nothing in common with community rights. By community rights we understand, of course, only those rights which, to actually existing, complete communities. In most of the Protestant works on this subject we find these latter rights confused with those that belong to the Church as an organism, as the body of Christ. Harms, in his latest treatise on the inner constitution of the Church (in the conc. for the Protestant Church, ed. 3, 1903, 508-546; cf. especially 519 sq.) has attempted to remove this confusion, but only with partial success.

In the next series of texts we cannot, of course, insert those in which St. Paul, as for instance in Gal., 17, exhorts the Christians to admonish one another, to warn, to correct the sinners. This is a duty imposed by the Lord's command; and the right to fulfil that duty is included in the right to administer fraternal correction; it is not a community right. The first group of texts deals with electoral proceedings and other matters of canonical character. Some of the faithful take part in the election of Matthias (Acts, ii, 23-26), after two candidates had been proposed. Peter opens the proceedings; but no information is given about the right of presentation and the manner of casting the lot. (b) The seven assistants of the Apostles are chosen by the whole community in accordance with the injunction of the Twelve (Acts, r. 13)
and from the Apostles they receive the imposition of hands with prayer (Acts, vi, 6). In Acts, xi, 22 sq., we are told that the Church that was at Jerusalem sends Barnabas as a messenger to collect for the brethren at Antioch. Envoys are sent out by the Apostles, presbyters, and the whole Church (τὸν διὸ τῆς εκκλησίας, Acts xv, 22). A semi-official election is spoken of in only one text (second group of texts). St. Paul is given a companion in the churches (II Cor., vii, 19) to accompany him in many points of his journey. It is easy to trace the lines that St. Paul desired to have them appointed in order to protect himself against evil tongues. In these electoral acts one must bear in mind all that has been said about the Church as an organism and also take into account the dependence of the voters upon the Apostles, which the texts themselves suggest. Finally the following important methodological rule should constantly be kept in view: if a document simply reports the fact that a community chose its officials or that it had a share in their appointment, this does not warrant the conclusion that the government is based on democratic principles. Such documents contain statements of the judicial prerogatives of the community. They include the sentence condemning the incestuous man, which was passed in a plenary session of the community at Corinth (I Cor., v, 3 sq.) and an allusion to a similar event that took place later in the same Church (I Cor., v, 6 sq., II Cor., vi, 12 sq.). The cases of the ordination of the Apostle, and the meaning that the competency of the community depends on St. Paul. The four group consists of only one text. It deals with private courts of arbitration to be introduced at Corinth by order of St. Paul (I Cor., vi, 1 sq.). In the fifth group we have three texts which tell of the judgment passed by the faithful on St. Paul (Gal., vi, 1; I Cor., iv, 3) and St. Peter (Acts, xi, 1-4). With regard to their manner of acting, only the text in the Epistle to the Corinthians speaks of a "day" (ήμαρα) of the community. The points at issue are party differences that had sprung up between the followers of Paul, Cephass, and Apollo. However only a superficial exegesis would draw from the discussions conclusions as to the fundamental elements of the ecclesiastical organization. Indeed St. Paul himself declares his complete indifference to all these judgments. He uses, of course, extremely strong expressions regarding the collective action (II Cor., viii, 18 sq.) and the sixth group. He left it to the Christians themselves to keep or to give their vote. It would be absurd to speak here of definable rights. The credentials and letters of recommendation (II Cor., iii, 1) — seventh group — were not a matter of compulsion. No community can be inferred from any text. There remains in consequence only the eighth group, consisting of two texts. The question here is, what rights can be deduced from the acknowledgment of superiors by the community (I Cor., xvi, 16; I Thess., v, 12)? No proof has been found hitherto for Weissweiler's theory (op. cit., 398 sq.) and many scholars after him have been refuted by me in detail in "Zeitschrift für katholische Theol." (XXVII, 1903, pp. 64-74). This article with the help of other documents shows also the further point, that the circumstance of the Epistles being directed to the entire community does not in the least prove the autonomy of the community and the absence of superiors. This serves also a refutation of Knöpf's statements (Das nachapostolische Zeitalter, 1905, p. 148 sq.). Even if the community rights as described in the whole first group of documents were much more extensive than the texts actually show them to be, we could not yet speak in any way of a democratic reform of the constitution (cf. Dunin Borkowski, "Methodologische Vorfragen zur urchristlichen Verfassungsgeschichte", "Zeitschrift für Mission", XXVII, 1903, pp. 218-249, and XXIX, 1905, pp. 22-52 and 212-257). Even though the critical analysis of all the texts reduces to their true value the alleged rights of the first Christian communities, we of course do not deny that St. Paul allowed the communities which he founded to a greater autonomy than their efficiency, or their desire, would have allowed them. This would hold even for the local Church in various matters independent of himself. We must, however, always understand the Church in the sense in which Paul understands it, namely as an organic body whose several members enjoy distinct activities proportionate to the functional power, with which each of them is endowed by God. (6) Position of Charismatic Individuals. The longer Epistles of St. Paul contain information about certain wonderful, mystic manifestations of the religious life in the earliest communities. These are: prophecy, working of miracles in general (ἐνεργηματα or ἐνέργημα ὁμολογίας, διαστημάτων, διαστηματικών, ψευδηλίων), the gift of tongues (γλῶσσον, αἰ ἀγαθά, διαστηματική, καθώς διαστημάτων, διαστηματικών), the interpretation of these tongues (ἔφημα γλώσσων διαβάζων, ἐφημανή λόγον δοκεί, διάβαζε τὴν φωνήν τάς ἐφημανίας, ἐφημανία), revelation (λαλῶμεν ἐν εἰρήνῃ, διαστηματικὴ ἐν πνεύματι συνεχή, διαστηματική ἐν πνεύματι συνεχη). The gift of the Holy Ghost and only these are to be counted among the mystic, extraordinary manifestations. The Apostle calls them χαρασματα, ψευδηλία, χαράσματα πνευματικά, τα πνευματικά. The individuals so endowed are called πνευματικοί. According to the Apostle's mode of speaking, charisma is used to mean every activity that in any way originates from the ordinance of God or Christ, and is granted chiefly for the good of the Church. It need not be given to the individual immediately by God; it may have been established by God as an ordinary supernatural function. In other words, even when a man is within the Church as the body of Christ, and in the service of the Church, is considered by the Apostle, as a gift of God and in certain cases as a Divinely appointed office.

In the first group of texts the word χαρασματα (charismata) occurs fourteen times: Rom., i, 11; v, 15; 16; vi, 23; xi, 29; vii, 7; vii, 11; xii, 9, 28, 30, 31 (chapters xiii and xiv speak throughout of charismata without, however, mentioning the word); II Cor., i, 11. There are only three other passages in which the expression occurs, but in these it is used in the exact meaning in which St. Paul uses it: I Tim., ii, 20; iv, 14; II Tim., i, 6. In these passages the ordination, perhaps, of Rom., v and vi, the meaning given above is quite evident. In the fifth and sixth chapters of the Epistle to the Romans the meaning is even more general. Charity, faith, and hope, exercised in any manner for the service of the Church, are charismata. They are even more perfect than the gift of miracles (I Cor., xii, 31, and xiii). As the spreading of the Kingdom of God and the preaching of the Gospel are charismata of the Spirit (Rom., xv, 27: τα πνευματικα τον εὐαγγελισμόν . . . λαλητισμόν — cf. I Cor., ix, 11), so also is that mutual consolation which the common faith affords. Those Christians who are "spiritual" who are governed by the Spirit of Divine meekness (Gal., vi, 1). The word of wisdom (λόγος σοφίας), the word of knowledge (λόγος γνῶσεως), ordinary teaching (διδαχή, διδασκαλία) are not, there-
fore, necessarily mystic and miraculous manifestations. The contrary opinion, although widely spread, cannot be proved from the sources. Whether all these charismata are mystic or miraculous (see above) or not depends on their object and their character. The opposition of the "spiritual" individual to the prophet in I Cor., xiv, 37, is only apparent. The ἄκρον in I Cor. does not mean "the first" or "the last" but to be translated by "or in general." Every charismatic individual is spiritual, but not vice versa. It shows lack of exact criticism to suppose extraordinary charismata, or miraculous endowments, in all those cases where there is mention of charismata.

In regard to a more spiritualized interpretation of these texts. In Rom., xii, 3-8, the diverse charismata are enumerated which determine the dignity of the members of the mystical body of Christ. Among these charismata Paul mentions (v. 6) prophecy "according to the rule of faith" (τὴν ἐν ἄκρον τῆς πίστεως), the ministry and the gift of teaching (v. 7). With regard to the two latter, it cannot be shown that they were charismata in a different sense than any other Christian virtue, or any work undertaken out of love or under the ordinary influence of grace. This is confirmed by the circumstance that immediately afterwards there are mentioned: (v. 8) the service of elders (σέβησθαι ἐπίσκοπον), the gift of hospitality (χαρίζεσθαι τοῦτον ξενοφόρον), the Ontario of the gift of tongues (διαλέγεται), he that ruleth (καταδίδεσθαι), and he that sheweth mercy (ἐξέδωκεν). In I Cor., xii, 4-31, Paul distinguishes (v. 4, 5, 6), charismata (χαρίσματα), probably healing of the sick, ministries (διακονία), and operations (ἐργασία). In the Epistle to the Romans he counts ministries among the charismata. However, in the Epistle to the Corinthians he does not adhere strictly to this threefold division. For in verses 8 and 9 he evidently enumerates as charismata the (obscure) word of wisdom (ἱγγαζον σοφίας), the (interpreting) word of knowledge (ἴγγαζον γνώσεως), faith (πίστις) and the grace of healing (τὸ διάλεγεται). In v. 10 miracles are referenced in the first place, probably expulsions of demons (ἐργασία θεουμάτων), and then follow prophecy, discerning of spirits, the gift of tongues, and the interpretation of speeches. Verse 23 gives another list: apostles, prophets, doctors, miracles, gifts of healing, helps (ἀνάλογοι), governments (ὑπηρεσίαι), kinds of tongues, interpretations of speeches. The Apostles, prophets, and doctors are introduced by "first," "secondly," and "thirdly." For the Apostles are the first heralds of the Faith; in the prophets the message of the Holy Ghost is disclosed in the first and most necessary manifestations; the doctors explain the new doctrine to the newly converted. In chapters xii, 1-3, and xiv, 1-5 and 19, Paul again refers incidentally to some of the charismata, in order to warn against overvaluation and misuse. In xiv, 27-33 and 57-38, it is stated that the charismata do not possess the same character of absolute truth, that they have to control one another. Furthermore they, as well as all charismatic members, must be in conformity with the teaching of the Apostle (cf. Rom., xii, 6), and acknowledge that his teaching is the command of God. [Εἰ τε τὰς καθὼς ἄκομοι τὸν ἄνοικτον ἐκεῖνον τὸν αὐτοκεφάλον, ἐκτὸς τινὶς ἄκρον ἐπίσκοπον, ἐκτὸς τινὶς ἄκομοι τὸν αὐτοκεφάλον.] Ἐ. δὲ τε τὰς τυχεῖς, τυχεῖστας (I Cor., xiv, 37-38—the reading τυχεῖστας gives no sense].

The comforter of the Epistle to the Romans who admonishes and teaches is charismatic in the same sense as Tychicus, whose office it is to console the Ephesians (Col., iv, 17). In I Tim., v, 11, Paul recognizes every admonition and consolation proceeding from the Faith as a form of activity included in charismata, and Paul, Timothy, and Titus act as χαρίσματον, when they admonish and instruct (I Thess., ii, 11; I Tim., v, 1; vi, 2; II Tim., iv, 2; Tit., ii, 6, 15). The word χαρίσματος in the New Testament has always the meaning of an explanatory admonition and consolation, or an instruction; so Acts, xiii, 15; xv, 31; II Cor., viii, 17; I Thess., ii, 3; cf. Heb., xii, 22. Frequently it denotes consolation in the passive sense; so II Cor., i, 3, 4, 5, 6 (tr. 7a); vii, 4, 7, 13; viii, 4 (tr. 7b); Phil., ii, 1; II Thess., ii, 16; Phil., 7 (cf. Heb., vi, 18; xiii, 5; Acts, ix, 31). As a meaning a prophecy, a χαρίσματος is to be found at χαρίσματος in I Cor., xiv, 3, and I Tim., iv, 13, in combination with διδασκαλία. It signifies, therefore, consoling exhortation as distinguished from instruction. Nor does προφητεύεται imply a charisma in the sense of an extraordinary gift. It is used notably of material alms (Eph., iv, 28—cf. Luke, iii, 11), but also of a spiritual gift (Rom., i, 11), and of the Gospel (I Thess., ii, 8—τρέφοντες). 'Προφητεύεται occurs only in the above-mentioned passage in the Epistle to the Romans (Rom., xii, 8). The διδάσκω is simply every one who from motives of Faith exercises mercy in the service of the Church. Neither do we know anything of a mystic or miraculous charisma relating to spiritual or material alms (ἀλληλομορφία and government (ἐκκλησία), words which do not occur elsewhere in the New Testament; they were simply voluntary or official services. The ruler (ἀρχιερεύοντα) of the Epistle to the Romans is not allowed with justice to be translated "the primitive bishop" (in the gospels are charismata in St. Paul's sense (see above). On account of the local colour of the "Didache" we cannot draw from it any general conclusions concerning the Apostles, prophets, and teachers of the oldest times. This triad—Apostles, prophets, doctors—occurs in the New Testament only in I Cor., xii, 28 and 29. In the Epistle to the Ephesians (iv, 11) Apostles, prophets, evangelists, pastors, and doctors are enumerated. In the Acts we find (xiii, 1) only prophets and doctors. Apart from the Gospels, we find doctors (διδάσκοι) mentioned alone in the following texts: Rom., ii, 20 (called Christians living among the heathen infants); Heb., v, 12 (those addressed ought to be masters); I Tim., ii, 7 and II Tim., iv, 3 (in the last the reference is to false teachers); James, iii, 1 (there should not be many masters). In none of these places does the word doctor or its equivalent imply a charisma; the names of the persons are used as shown from the sources themselves. The same is true of the expressions didache and didaskalia, which denote simply the doctrine itself and its actual communication. They were charismata just as every gift granted by God for the service of the Church was a charisma. The same seems to be the case from a study of the Pastoral Epistles. Neither does the expression teach (διδάσκω, I teach) signify anything more.

More difficult is the correct valuation of the term apostle. Beginning with Lightfoot (St. Paul's Epistle to the Galatians, 1887 and 1902, 92 sqq.) this question has been discussed again and again. The present writer takes the view that the word is always used of the Twelve, with the exception however of xiv, 4 and 13. There Barnabas and Paul are called "the apostles" (οἱ ἀπόστολοι). From this we cannot at once conclude that Barnabas was an Apostle in the same sense as Paul. For, as it was everywhere known that Paul enjoyed the title of Apostle, it may well be that Barnabas as his companion shared this name. Neither he nor Sylvanus is ever called Apostle by Paul himself, not even in I Cor., ix, 6. Paul does, however, allow Barnabas (and Sylvanus) to share in his Apolectic privileges when they are in his company; see Acts, iv, 33; x, 36; xii, 25. Paul uses the title of Apostle to none but the Twelve besides himself. In II Cor., xi, 5, and xiii, 11, it is plain that those who are "above measure" apostles are ironically so called and are to be looked upon as pseudo-apostles. In II Cor., xiii, 23, the ἄκρον ἐπίσκοπον are envoys. The word is used here in its original meaning, not unknown, perhaps, to the Hellenistic Jews. In
II Cor., xi, 13, it is stated that the pseudo-apostles claimed the position of real Apostles (probably, therefore, in the strict sense); they certainly assumed the name of Apostles. It is not known how far they had a right to that name. The three well known passages, I Cor., xii, 28 and 29; Eph., ii, 20 (iii, 5); and Eph., iv, 11, which speak of the "apostles" together with the prophets as members of Christ and as the foundation of the Church, do not permit us to decide with certainty whether Paul speaks here of the Apostles in the wider sense of the word, or of the other texts the Twelve. The latter is the more probable. There remains, therefore, only the remarkable passage in Rom., vi, 7; here Andronicus and Junias are mentioned as "ενδυκτοι τοις αποστολοις." These words evidently intended to designate these two and the otherwise similarly gifted, and, as it were, famed Apostles, as the only passage in the New Testament where "apostle" occurs in a wider sense, unless it should have to be translated thus: "they did excellent service as messengers of the community", and the word would mean the same as in II Cor., viii, 23. (2) (Answer: office of an apostle) occurs belonging to the first New Testament. Twice Paul uses it to denote his own vocation (Rom., i, 5; I Cor., ix, 2); once to denote that of Peter (Gal., ii, 8). In the Acts, i, 25, this word (apostle) together with ministry designates the office of the Twelve. The three-six passages in the New Testament which contain the word οἰκονομία (οἰκονομίας) do not permit of any conclusions being reached on this point.

According to the earliest Christian sources the office of an Apostle is a charisma, but not a mystic charisma. The Eleven are Apostles in so far as they were witnesses of the life and work of Jesus and of His Divine communications. Paul is an Apostle because he has actually seen the heavenly Christ and received his mission from Him. Matthias is an Apostle because he has known Christ and because at his election the Lord Himself determined upon whom the lot was to fall. Nothing certain can be said about the source of the "apostolates" of Barnabas. At all events he was an Apostle only in the sense that he preached in places where nobody had as yet announced the Gospel, for this was essential in order to merit the title of Apostle. It is certain that the Apostles were frequently moved by a special Divine inspiration to direct their course to some particular locality, but this was always the case nor is that at all probable. Other missionaries were most probably called evangelists (cf. Acts, xxii, 8; Eph., iv, 11; II Tim., iv, 5). But the corresponding verb ευαγγελίζομαι is also used for the first Apostolic preaching. Even if towards the end of the second century the second group of Apostles in the wider sense of the word, as we rightly conclude from the "Didache", our first group of sources contains nothing definite as to their authority and unquestionably excludes their being placed on the same level with the Twelve and with Paul (and Barnabas) (2). The rest of Paul's Epistles belonging to the first group contain the following additional data with regard to the charisma. Paul bids the Thessalonians not to despise prophecy (I Thess., v, 20). The admonition in the preceding verse (19) to extinguish not the spirit hardly refers to a mystic charisma. The Second Epistle to the Thessalonians (ii, 2) contains too the noteworthy warning to the Christians not to be easily terrified, nor drawn away from the teachings of the Apostles by any "spirit".

The Acts often speak in general terms of an influence of the Spirit of God and mention in particular the gift of tongues (Acts, x, 46; xix, 6) and the charisma of prophecy. The word prophesia (προφητεία) does not occur. The newly converted Christians at Ephesus, on the occasion of Paul's third journey (Acts, xix, 6), prophesied and at the same time spoke with tongues. Chapter xxi, v. 9, speaks of the daughters of Philip "who did prophesy." The remaining texts to be considered are the following: xi, 27 sq.; xiii, 1 sq.; xv, 32; xxi, 10 and 11 (cf. xxii, 4, and xx, 23; xix, 21; xvii, 16; xxviii, 17 sq.). These last named are in the distribution of Roman procurators, but it is not to be expected that these words should be interpreted as a Roman procurator. There is always the possibility that a prophet is an individual who by Divine inspiration is called to prophesy; in ch. xiii, 11, Barnabas and Saul are mentioned among the "prophets and doctors" of Antioch. These two latter are designated by the Holy Ghost in the instruments of God for the spread of the Gospel; the others while praying implore their hands upon them. But there is no trace of any ecclesiastical organization being established in the distribution of the prophetic charisma among the people. The second group of Apostles had the control exercised over the Churches by the representatives of the recipients of these gifts, nor of any infallible teaching authority enjoyed by these ecstatic members. While these charismata were numerous and continued to occupy their position of marked prominence, the local authorities, who as a matter of fact were not the ordinary local Christians, found themselves placed in the background. But this does not prove that there was an institution and an organization of charismatic individuals. When elections were to be held, prophetic doctors frequently pointed out the most suitable candidates. Again some communities were governed by the prophets and doctors; it is the will of God that regular administrators. History, however, forbids us to assert that a regular organization did not come into existence until the ecstatic and miraculous charisma had decreased. But it is true that after the disappearance of this species of charisma the normal administrative function from the Old Testament, and consequently a stronger organization was needed. The other hypothesis which would represent the subjects of these supernatural gifts as thrust aside by the ordinary governing power of the Church is also wholly untenable. The truth of the matter is that certain officials individual, and which were in the proper place by the authorities, and that later on some of them, whose "gifts" had been artificially developed by suggestion, were shown up as charlatans.

(7) Origin of Ecclesiastical Authority in General. — The doctrine of St. Paul about the Church as the body of Christ, which finds expression in the Epistle to the Romans, the First Epistle to the Corinthians, and the Epistle to the Ephesians, is a central feature of his theology. The operation of Christ in the Church and the activity of the various organs of this corporate body, whose members are at the same time members of the mystical body of Christ, find in these epistles their clearest expression. In the Third Epistle to the Corinthians (xii, 8) and the First Epistle to the Corinthians (xii, 28) the governing body and the office of governing are depicted as part of the body of Christ and as constituted therein by God and Christ Himself. These two most important and classical passages together with a text of the Epistle to the Ephesians (v, 11) — show us the origin of the primitive Christian governing body in general; it is an institution of God and Christ. They show us furthermore the necessity of these administrative organs, for by their very nature they belong to the body of Christ, and consequently it is the will of God that besides the Apostolate there should be governing superiors in the local churches as well. For this reason Ignatius speaks of an ἐκκλησία θεοῦ, and his teaching is nothing but the purest doctrine of St. Paul. We can therefore speak in a certain sense of a charismatic organization of the Church, for the administrative function is itself a charisma; only we must take care in that correct and broader sense in which Paul uses it. Since therefore some form of governing body is, according to the doctrine of the Apostle, inseparable from the very notion of the Church, there can be nothing more opposed to Paul's idea than the thought of the Church being confederated into a mere community. The governing body is in Paul's mind something religious and Divine. Nevertheless the administration need not at once and everywhere appear in its specific form; for the Apostle is able to
supply all that is wanting. The Divine institution of the threefold hierarchy cannot of course be derived from our texts; in fact it cannot in any way be proved directly from the New Testament; it is Catholic dogma by virtue of tradition; and in other parts of ecclesiastical history the general belief in the Divine institution of the episcopate, presbyterate, and diaconate can be verified and thence be followed on through the later centuries. But this dogmatic truth cannot be traced back to Christ Himself by analysis of strict historical evidence. Some one exercising authority over the community to accept this proposal, to appoint the applicant and to communicate to him the necessary faculties. The approbation by the community may be a further condition, or a privilege to be respected or disregarded, or finally it may be altogether wanting. Nor is it true that the “golden,” “silver,” and “brass” of the free appointment lacks by its very nature all juridical validity; on the contrary, the offer and the acknowledgment produce of themselves a peculiar legal status. If one wants to assert the contrary—of course, a purely personal authority unsupported by any legal position—then he must prove that his sphere of jurisdiction has not been invaded by any form of official authority whatever. He must itself have been invested by one of the three qualified persons named in the New Testament. If he boasts of an otherwise recognized authority, he must prove which of the ancient bishops accepted this jurisdiction. After these introductory remarks, we proceed to the examination of all the texts. Acts, xiv, 22, mentions the appointment of presbyters in Lycaonia. But the Acts, xiv, 23, speaks of presbyters in Pisidian Antioch. The truth of this statement cannot, of course, be shaken by simply remarking that Paul did not appoint bishops in other places. It is likely that, on his very first Apostolic journey, Paul placed bishops at the head of his newly-founded Churches, who assumed the title then in use among the Jews; to this measure he was probably led by the example of the Jewish communities of the Diaspora or perhaps of the Christian circles in Palestine. It was looked upon as a natural and obvious step by the inhabitants of Asia Minor, who, Jews and Gentiles alike, were accustomed to a religious authority. In some cases the Roman government may have ordered St. Paul to desist from this measure. However, the fourteenth chapter of the Acts does not allow any further conclusion than this: Paul at his departure from southern Asia Minor left there for special reasons a governing body of some kind or other, endowed with certain administrative rights over the community. The two facts that in the early Christian literature the elders (συμβόλοιοι) are frequently contrasted with the younger members ( νεωτατοιοι) and that, as late as the third century, Christians who have suffered for the Faith are given the honorary title of presbyter (cf. Diocletian, 144, 43 sq.), make it probable that in the earliest times the presbyterate was frequently, though not perhaps exclusively, an honorary title and not the name of an office. The name may have been borrowed from the Jewish presbyters, or perhaps from the Gentile presbyters—officials of Asia Minor. It is of course understood that from this we cannot conclude that their sphere of activity was the same. Such an analogy if made would only suggest new riddles. For the Jewish presbyters in Palestine had a position quite different from that of the Diaspora. Now which of the two was the model for the Christians? Since therefore the name of an elder (presbyter) is altogether of a universal nature, since our sources remain silent, since furthermore conclusions based on what we know of later times are unreliable in this particular case and the analogies drawn from the environment furnish no definite result, we may say that the Christian presbyters of the earliest period cannot be accurately defined. In some places they were certainly the forerunners of the later presbyters; in others, of the bishops, or of the bishops and priests. The later, however, they form a tradition of their own, with a special government for the regulation and administration of affairs, or they were the representatives of the community in its external relations. Those who pretend to know more cannot appeal to the sources. Nor is it admissible simply to generalize from the institution in St. Paul’s episcopate and make it a necessary consequence that Paul himself laid the foundation ("St. Paul the Traveller and the Roman Citizen," 7th ed., London, 1903, 121 sq.). If, therefore, we take this governing body of the presbyters in the wider sense mentioned above, then there is not the slightest reason to doubt that this appointment of presbyters by St. Paul about A.D. 50 and afterwards took place. We do not deny that all these "elders" were presbyters or bishops in the later sense of these words; but from the sources nothing certain can be derived.

The Texts of the Epistles of St. Paul.—I Cor., xvi, 15, 16. Stephanas and his household being the "first-fruits of Achaia," have devoted themselves (φροντίζοντας τοις δικαίωσις χρυσωμα) to the ministry of the Gospel. Hence Paul bids the Corinthians to subject themselves to them (ὑποτιθέμενοι), as also to everyone who offers his service and co-operation. The whole character of the text depicts mutual relations that are an outcome more of free-will and kindness than of strictly juridical conditions. The Epistles of St. Paul, among the prominent members of the body of Christ, is there to the individual, the one who is in need. In chap. v of the First Epistle to the Thessalonians (12, 13), the faithful are asked to know (εκλεκτος, acknowledge), to love and to have peace with those who labour among them (συμμίσθις αυτοις), who are over them in the Lord (συμμίσθις αυτοις), and who admonish them (συμμίσθις αυτοις). Here we see that acknowledgment does not create the prerogatives of superiors.

There were therefore at Corinth heads of families who, partly because they had been the first to accept the Gospel, offered themselves for the service of the community. How these persons may have been appointed may have been told. The prophetess at Thessalonica and Rome possess, according to all appearances, a more official character. One must not forget that some of these results are merely negative. They do not justify us in denying that there were other institutions of which nothing is said. The name presbyter is not an official title: Paul speaks of them as we speak of heads, directors, or superiors. Whether they had an official name from the beginning we do not know. The name presbyter is certainly more definite. As to the question whether all these superiors were inducted into office by imposition of hands with prayer, some of the work made by us concerning the bishopric of Palestine. The prayer accompanying the imposition of hands expressed of course in most general terms the kind of activity they were to exercise. The persons thus "consecrated" were according to the Catholic idea ipso facto presbyters or bishops in the later sense of the words.

(9) Position of the Apostle Fellow-Labourers.—In the first group of texts the following persons are mentioned: Andronicus and Junias (the latter is probably also a man, not a woman): Rom., xvi, 7. Apollo coadjuutor: I Cor., iii, 4, 9; cf. v, 6 and i, 12 etc.; together with Paul, Apollo is minister of Christ and dispenser of the mysteries of God, I Cor., iv, i (cf. Acts, xviii, 24 sq.; xix, 1). Aquila and Priscus (Pisces): the Church which is in their house is mentioned, Rom., xvi, 5, and I Cor., xvi, 19 (cf. Acts, xviii, 1-3;
Barnabas: Acts, xi, 22; prophet and (7) doctor, Acts, xiii, 1; he preaches together with Paul, Acts, xii, xvi, xix, xxi, xx; I Cor., ix, 6 (cf. Gal., ii, 1), Gal., ii, 9; by the Apostles and presbyters of Jerusalem he (Barnabas) with Judas and Silas is sent to Antioch, Acts, xv, 22 sq.; Epenetae: the first church council held at Jerusalem, Acts, xv, 7; Romans, xii, 22 (Rom., xvi, 237). John Mark: Acts, xii, 25; xiii, 5. Judas and Silas: prophets; Acts, xv, 32; Silas is with Paul, Acts, xv, 20 (cf. xvi, 19 sq.; xvii, 4 sq.; xviii, 5 sq.); II Cor., i, 19; I Thess., i, 1; I Thess., i, 10. Stephanas: with Fortunatus and Achaicus he is counted among the first-fruits; he has long since passed away (I Cor., xvi, 15). Timothy: fellow-labourer of Paul, Acts, xvi, 1 sq. (cf. Acts, xvii, xviii, xix, xx); Rom., xvi, 21; as Paul's envoy he teaches the doctrine of Paul, I Cor., iv, 17, xvi, 10 (cf. II Cor., i, 1; I and II Thess., i, 1); a very important text is I Thess., iii, 1 sq. Titus: fellow-labourer of Paul; II Cor., ii, 12; xii, 5; he teaches Paul's doctrine, II Cor., vii, 13 sq.; sent by Paul he takes charge of the collection of alms, II Cor., viii, 6 sq.; 16-24; he walks in the same steps with Paul, II Cor., xii, 17 sq. Trophimus and Tychicus: companions of Paul, Acts, xx, 4 sq.; Trophimus alone, Acts, xxi, 29. Urbanus: with Paul to the circumcision, Romans, xvi, 15 sq. In the Epistle to the Philippians see συναδελφοι. If we use the word "companions," in a very general sense, we may say, that the women belongs to the organisation of the primitive Church. In the Epistle to the Romans (xvi, 1) a woman is given the title of deacon.

B. The Texts of the Second Group.—(1) The Epistles of Paul will be examined together with Acts, xx; (2) the Epistle of Peter; and (3) the Didache. The texts from St. Paul will be classified similarly to those of the first group above.

(1) The Epistles of Paul and Acts, xx.—
(a) The authority of the Apostle over the communities: Eph., iii, 7-12; vi, 19, 20; Phil., iii, 17; Col., i, 22-29; 22-27 (cf. xvii, 16 sq.). Also to be compared is Eph., iv, 11-15 (cf. xvi, 13 sq.). The authority of the Apostle is a "truth." The authority of the Apostle appears here in the same light as in his earliest letters; there is no question of autonomous communities.
(b) Charismatic prophets together with Apostles are mentioned as the foundation of the Church (Eph., iii, 20). The Church, as evangelists, pastors and doctors, they cooperate in building up the body of Christ; by the grace of God (which here, Eph., iv, 7, is called χάρις, not χαράγματα) they have been sent for the work of the ministry (ἐκ θέου σάκας εὐαγγελίστης) (Eph., iv, 11-20). The Apostle wishes the Ephesians the spirit of wisdom and the spirit of revelation (Eph., iv, 17; cf. Col., i, 16). The mystico-miraculous charismatic remains altogether in the background.
(c) Superiors.—In the address of the Epistle to the Philippians (i, 1), bishops and deacons are mentioned. There is no reason why we should consider their position different from what it has been from the beginning of the Church; from that of the presbyters of the First Epistle to the Thessalonians, v, 12, and of the Epistle to the Romans, xii, 8. In the present text, it is true, the names are somewhat more definite. These rulers are the chief workers (τοις εὐαγγελισταῖς καὶ ἐκβολαῖς) (I Thess., v, 12). According to Acts we have not to consider as distinct from the apostles: Presbyters; Acts (Acts, xx, 17-32) who are appointed by the Holy Ghost (again St. Paul's idea as above, no. 7), and who

rule as pastors. Their work is to instruct, to exhort, to warn against deception and false doctrine. Since, as we have seen, the designation προστατεύων had a very general meaning, it would be uncritical to assert that they constituted a governing body of only one grade which was first fixed into the sphere of the office of deacon until later times. It is quite possible that the προστατεύων already contained several grades within their own class. Whence did the Christians take the title bishop (used at first only in the plural) to designate their rulers? The hypothesis (Heinrici, Hach, etc.) of their having borrowed it from pagan religion is untenable. New Testament agreement to-day with the results obtained by Ziebhardt: "A special characteristic of the terminology describing Greek associations is its lack of definiteness. Εὐαγγελιστὴς as well as εὐαγγελιστὴς designate in a very general way overseers or administrators. It is to-day an established fact that the title εὐαγγελιστής, which now and then occurs as an official title in Greek associations, does not furnish any argument for the derivation of the Christian office from pagan religious associations" (Das griechische Vereinigungswesen, 1896, 131). Nor does the present writer attach any great importance to the assertion that even before the time of Paul the office of bishop of the Church there is mentioned at Phocas an episkopos as being in charge of certain matters of worship (cf. Deisemann, "Neue Bibelstudien," 57 sq.). The title episkopos is also applied here and there to municipal officers. In the Septuagint Eleasar appears as episkopos (Num., iv, 16); generals of the armies are episkopos (Num., xxx, 14; IV Kings, xi, 15, 18); higher officials together with archons (II Esd., xi, 9, 14, 22; Ia., ix; 17; 1 Mach., i, 51; cf. Judges, iv, 28). In Job, xx, 29, God is called episkopos. In connection with work of a religious character the word is used II Par., xxxiv, 17. We must not overlook that in the First Epistle of Peter (ii, 25), Christ is called the shepherd and bishop of our souls. Clement calls God the creator and bishop of all spirits (I Clem., ix, 3). In Christian circles the word seems from the very beginning to have denoted an activity of high rank and excellence. Originally it was not a title or the name of an office. The attempts of recent Protestant scholars (Hatch, Harnack, Dobschütz, etc.) to separate even in the earliest times the functions of the bishops from those of the presbyters are to be considered as unsuccessful. In the New Testament and even with Clement the two expressions are synonymous. It is indeed possible that the parrheia of these early bishops after their sphere of action had been more accurately circumscribed. There remains only one text. At Colossae, Archippus has to fulfil a ministry (σάκας) (Col., iv, 17). In the Epistle to Philemon, 2, he is called fellow-soldier (συνεφάγων). Here we perhaps find the trace of a泯ished bishops, which now and then occurs as an official title in Greek associations, does not furnish any argument for the deriv
The text in question does not show us how these various occupations were divided between the two classes of officials. During a period of transition from a comparatively incoherent state to a more settled form of government, the several communities would evidently enjoy certain powers and prerogatives; but no sober critic would read between the lines of the primitive documents any construction of a generally-adopted system of democratic government. Those measures which every one of the faithful may and should employ as protection against doubtful prophets and false teachers are not juridically-determined prerogatives vested in the community. Nor for the community is also looked upon by the writer, as a power granted by God: at 

In these texts we see again Paul's idea of government and superiors; they are in his eyes institutions of God. For the rest superiors occur only in chap. v, 1-5; they are called presbyters; their duty is to feed the flock of Christ, to take care of it, without constraint however and without lording it over them (ἐκουσιοῦνται—the reading is doubtful), the young men shall be subject to the elders in the presence of the assembly. In the first hand it would seem that the exhortation is addressed to presbyter-bishops as a governing body, while on the other hand the opposition between the presbyters and the younger men (μικροῦς) points to merely patriarchal relations. It is however most probable that the two expressions—πρεσβυτέρους—μικρούς—passed through a parallel development. After the "ancients" had become superiors in the strict sense, the "younger men" were considered as subjects.

(3) The Didache.—The author of the Didache considers the teachings of the Faith as truths received from Jesus and apostles, and believes that they are not to be taught acceptably as (cf. the title and the first eleven chapters). He who teaches otherwise is not to be listened to (xi, 2). If he teaches the truth he is to be received as the Lord himself (loc. cit.). He who announces the Word of God is to be honoured as the Lord Himself (iv, 1). The travelling Apostles, the prophets, and doctors are described as such, as are the community. Those who have heard the Lord declare His words to others with authority (καὶ ὁ διὰ διασειρήματος εἰς ἡμᾶς διεφθάνειν, and God bears witness to them by miracles and various manifestations of the Spirit. Faith therefore is a duty. The same doctrine is indicated in iv, 2. In the case of xii, 7, the faithful people are simply beneficiaries (ηὐγενεία) no longer living, who announced the Word of God to them in the past. Contemporary superiors are also called ἡγεμονεῖς (xiii, 17, 24). Nowhere else in the New Testament are Christian superiors called simply ἡγεμονεῖς. In one passage of the Acts (xiv, 19), Paul is called "chief speaker" (ὁ ἄρματος τῶν λόγων); in xv, 22, Barnabas, Judas, and Silas are designated as "chief men," leading personalities τούτων... ἄρχεις ἡγεμόνες ἐν τοῖς διδάσκοις. The expression may have been modelled on the words of our Lord: "He that is the leader, let him become as the servant of all." (Matt. xvi, 27.) The hypothesis that the ἡγεμονεῖς of the Epistle to the Hebrews were prophets or even recipients of charisma in the strict sense of the word, is devoid of any historic foundation.

(2) The Epistle of St. James.—The warning that there should not be too many doctors (μποῖοι ἄρματα) is tied on the necessity for the introduction of the title attached to this position. It is not clear whether the members of the third class of the threefold division "apostles, prophets, doctors," are here in question; probably they are. But the subject of charisma in the strict sense are certainly not meant, since, in their own opinion, they do not set themselves up as teachers, but are entrusted with that office by the商务部和见证者的苦难。两个Charismata are mentioned, the preaching of the Word of God and the ministry of the community (iv, 11). Whosoever has received a charisma should, as a good steward, use it in the service of his neighbour (iv, 10). The phrase "if any man speak" (ἀν μιαν λέξαν) certainly does not mean the gift of tongues, but the power to interpret in a new way the teaching and the preaching of the Word of God. Λαλήσω τῶν λόγων τοῦ θεοῦ, in its turn, becomes a standing expression for the preaching of the Gospel to Jews and Gentiles. The presbyter has to adhere to the Word of God, i.e. to the common doctrine which is to be considered as the Word of God Himself. The ministry for the community is also looked upon by the writer as a power granted by God; ἄντι δικαιοκρατεῖν, ὡς ἐν λόγῳ, ἵνα προφητεύῃ δὲ δῆς (iv, 11); cf. ἐν εὐθείᾳ used to denote the power of God (Eph., iv, 7, iv, 11, II Thess., i, 9; Apoc., vii, 12).

In these texts we see again Paul's idea of government and superiors; they are in his eyes institutions of God. For the rest superiors occur only in chap. v, 1-5; they are called presbyters; their duty is to feed the flock of Christ, to take care of it, without constraint however and without lording it over them (ἐκουσιοῦνται—the reading is doubtful); the young men shall be subject to the elders in the presence of the assembly. In the first hand it would seem that the exhortation is addressed to presbyter-bishops as a governing body, while on the other hand the opposition between the presbyters and the younger men (μικροῦς) points to merely patriarchal relations. It is however most probable that the two expressions—πρεσβυτέρους—μικρούς—passed through a parallel development. After the "ancients" had become superiors in the strict sense, the "younger men" were considered as subjects.

(3) The Didache.—The author of the Didache considers the teachings of the Faith as truths received from Jesus and apostles, and believes that they are not to be taught acceptably as (cf. the title and the first eleven chapters). He who teaches otherwise is not to be listened to (xi, 2). If he teaches the truth he is to be received as the Lord himself (loc. cit.). He who announces the Word of God is to be honoured as the Lord Himself (iv, 1). The travelling Apostles, the prophets, and doctors are described as such, as are the community. Those who have heard the Lord declare His words to others with authority (καὶ ὁ διὰ διασειρήματος εἰς ἡμᾶς διεφθάνειν, and God bears witness to them by miracles and various manifestations of the Spirit. Faith therefore is a duty. The same doctrine is indicated in iv, 2. In the case of xii, 7, the faithful people are simply beneficiaries (ηὐγενεία) no longer living, who announced the Word of God to them in the past. Contemporary superiors are also called ἡγεμονεῖς (xiii, 17, 24). Nowhere else in the New Testament are Christian superiors called simply ἡγεμονεῖς. In one passage of the Acts (xiv, 19), Paul is called "chief speaker" (ὁ ἄρματος τῶν λόγων); in xv, 22, Barnabas, Judas, and Silas are designated as "chief men," leading personalities τούτων... ἄρχεις ἡγεμόνες ἐν τοῖς διδάσκοις. The expression may have been modelled on the words of our Lord: "He that is the leader, let him become as the servant of all." (Matt. xvi, 27.) The hypothesis that the ἡγεμονεῖς of the Epistle to the Hebrews were prophets or even recipients of charisma in the strict sense of the word, is devoid of any historic foundation.

(2) The Epistle of St. James.—The warning that there should not be too many doctors (μποῖοι ἄρματα) is tied on the necessity for the introduction of the title attached to this position. It is not clear whether the members of the third class of the threefold division "apostles, prophets, doctors," are here in question; probably they are. But the subject of charisma in the strict sense are certainly not meant, since, in their own opinion, they do not set themselves up as teachers, but are entrusted with that office by the
Spirit of God. But the labouring and patient prophets mentioned in v. 10, who spoke in the name of the Lord, are most probably Old Testament seers.

(3) The Second Epistle of St. Peter and the Epistle of St. Jude.—The Christians are exhorted to remember the words of the holy prophets (probably of the Old Testament), and the precepts of their Lord and Saviour Jesus Christ (1 Pet ii. 2). The Second and Third Epistle shows his authority by forbidding all intercourse with Christians who will not receive the doctrine of Christ (II John, 9–11). In the Third Epistle Diotrephes is blamed for misuse of the position of pre-eminence which he enjoyed in the community. The presbyter will reprimand him on his arrival (III John, 9, 10). But the expression, "who loveth to have the pre-eminence among them" (ὁ φιλοπροέξυρος αὐτῶν, not used elsewhere), does not warrant the conclusion that Diotrephes had usurped his position of authority. Nor can any solid grounds be found for the conjecture that Diotrephes, who was not named, and were kindly received by Gaius (III John, 3, 8) were travelling apostles or even charismatized teachers, and were therefore dismissed as "suspicious "pneumatikoi" by the "monarchical bishop" Diotrephes.

(5) The Pastoral Epistles.—In these Timothy and Titus are messengers and representatives of the Apostle Paul (I Tim. i, 3; cf. II Tim. iv, 11; Tit. i, 5; cf. iii, 12); their authority is derived from the imposition of hands and from the prayer of the Apostle and the presbyterate (I Tim., iv, 14; II Tim., i, 6). Previously to this consecration an approval appears to have been given to the choice of candidates by presbyterate and church. Timothy and Titus were chosen once in each passage, and the presbyterates also in i, 18). One may certainly apply all this to Titus as well as to Timothy. Timothy and Titus each bear the title ἔπισκοπος (I Tim., iii, 2; Tit., i, 7); their office is called ἐπισκοπία (I Tim., iii, 1), and once διακονία (II Tim., iv, 5); Timothy is termed διάκονος (I Tim., iv, 6). They hold a position of monarchical authority, impose hands on those whom they judge to be fit candidates for the priesthood (I Tim., v, 2; Tit., i, 5); they choose their successors in the office of teaching (II Tim., ii, 2); they keep order in the community by their energetic exhortations (I Tim., v, 1–22; II Tim., ii, 25–30), and by judgment even the presbyters (I Tim., v, 19, 20; cf. Tit. i, 9 sq.); they teach (I Tim., iv, 1–13, 16; vi, 2; II Tim., iii, 16, 17; iv, 2). As teacher Timothy is called "evangelist" (ἤγγελος ποιήσεως σωτηρίας, ἡ διακονία εὐαγγέλων, II Tim., iv, 5). The description of the model elder (I Tim., i, 3 sq.; Tit., i, 7 sq.) represents him also as administering money and practising hospitality. Perhaps a presbyter is meant by the ἐπισκοπός in Tit., i, 7; verses 5 and 6 immediately preceding speak of presbyters, and verse 7 continues: "For (ἤδη) a bishop (ἐπισκόπων) must be ambitious of a good death." But it is also possible that there is a sudden transition in the author's thought and a freer use of ἤδη. A greater probability is given to this by the exchange between the qualifications of the bishop given here, and those set down in the First Epistle to Timothy (iii). The presbyters are probably united in a college (προσφηνήματα, I Tim., iv, 13), as is shown also by their task of teaching (ιδιαίτεραν ἐλεύθερον ἀποκαλύψειν, v, 17–20; Tit., i, 5). They rule over the community. Some of them are to declare and teach the Word of God (I Tim., v, 17: οἱ δὲ ἑτοιμοὶ τῷ λόγῳ καὶ διδασκάλαι). The προσφηνήματα in I Tim., v, 1, is probably an older member of the community (cf. Tit., iii, 2). Deacons are mentioned here (i, 8 and 9; cf. 1 Tim. vi, 20; 6). Timothy and Titus are subordinate to Paul, and must follow his teaching and precepts (I Tim., i, 8–12; cf. 19, 20; ii, 7; iii, 15; and in general ii, iv, vi; II Tim., i, 11–14; iii, 10; iv, 13 sq.; Tit. i, 5; all ii, iii, 9). No information is given about community rights.

(6) Epistle of the Roman Church (Clement) to the Corinthians.—The position of superiors of the Christian community is attributed only twice at the utmost (I Cor. iv, 16, 35). The title ἀρχιερεῖς (and κυρίας, Phil. iii, 2; and xxi, 6). The first citation speaks approval of the obedience shown to them by the faithful; and in the second due respect and reverence are enjoined. But since the term in all other parts of the Epistle—where it is used, either seven or eight times, according as one separates the irregular division in i, 33—signifies a secular civil or military ruler, it seems more probable that the same meaning should be attached to it in the two passages mentioned. Now if the word stands for the ecclesiastical authorities in the two passages mentioned, how are they to be discriminated from the presbyters, who in both instances are spoken of in company with them: "the faithful in times past have shown due reverence to their presbyters" (i, 3); "the faithful should honour the elders" (xxi, 6)? There are only two probable solutions: either the term ἀρχιερεῖς (or ἀρχιερατία) is used for persons of authority in a broad sense, including deacons, bishops, and presbyters, or by "elder," "presbyter" in both cases has the simple meaning of "elder," the reference being to the older and more esteemed members of the community—an explanation which is all the more probable because of the mention in both passages of the "younger members" (ὑπακόοι) along with the elders. Presbyters are expressly mentioned many times in the Epistle—in the two places discussed, and in xiv, 5; xlvii, 6; liv, 2; lii, 1. Reference is also made to them in lxiii, 1, and in other texts to be cited presently. Jewish presbyters are spoken of in iv, 4. Their office is termed ἐπίσκοπος (xiv, 4)—a word which seems to have been used of Christ in v, 1, and of Christ’s ‘twice his advent. His second advent. The word ἐπισκόπος appears in only one other place (lix, 3), where it is applied to God. Except in chapter lii, nothing is said of deacons. In chapter xi, 5, the services of the levites are called διακονία. It is clear from xiii and xlv that Clement identifies bishops and presbyters, unless perhaps in the two texts already referred to, since he speaks here of the rebellion against the presbyters (ὁδεῖς, xlvii, 6; xlv, 7, 9; cf. iii, 2, 3; li, 1; liv, 2; lii, 1; xiv, 4: διάκονος) as "no small misdemean," for it shows disregard for the express wishes of the Apostles, who instituted the office of deacon (ἐπισκόπος), and for the command (παραστέας τοῦ Ἰησοῦ Χριστοῦ). It is a mistake to say that the presbytery-bishops are mentioned in the Epistle of St. Clement only as officers of administration and public worship (cf. xiv, 4: ἄρτιμος καὶ θύειν προσευχήσεται τῷ θόροι). Their position as spiritual guides (lxiii, 1) and successors of the Apostles is the earliest indication of the authoritative office of administering the Word of God. No indication can be found that Clement supposed the office of declaring the Word of God in Corinth to be entrusted to ecstatic "spiritual" preachers; nor is there any satisfactory basis for the theory that the rebellion against legitimate authority was started by the recipients of charisma. Miraculous charisma are perhaps spoken of in chapter xlviii, 5, but the reference is uncertain, for those Divine gifts which are mentioned in addition to faith and holiness of life, the word of knowledge and the skilful interpretation of others’ words are not manifestly mystical or miraculous in nature. They are more in the line of a teaching office (lii, 1); their authority as spiritual guides (lxiii, 1) is to be heeded. The institution of the presbytery-bishops dates from Christ. After examining the first-fruits of the Faith in the light of the Holy Ghost, the Apostles established them as bishops and deacons (xlii, 4). The commission to do this came from Christ (xiii, 1). Christ foretold them that a con-
flict would arise with regard to the episcopal office (ἐπίσκοπον τῆς ἐκκλησίας); for which reason they instituted the bishops and deacons just mentioned and enjoined (ἐνέτειλεν ἐκκλησίαν) — a doubtful reading; Lightfoot has altered it after their death other tried men should succeed to their office. This provision had the approval of the entire Church (xiii, 1, 3).

Some points in Clement’s argument are undoubtedly pure theory (e.g. the revelation of a future contest regarding the episcopal office), but the central facts cannot be critically controverted. The thought that the governing body in general was an institution of God and of Christ is an inheritance from St. Paul. The whole argument used by the Roman community would be completely absurd, if the story of Apostolic institution were a mere fable. It may be observed that Clement looks upon the hierarchy of the Old Testament with its high priest, priests, levites and as a type of the Christian hierarchy (xi, 5; xii). He seems to regard the high-priest as a type of Christ, and sees a significant type in the contest under Moses regarding the priesthood (xiii, 2). The local Church is also called the flock of Christ (προσκυνεῖν, xvi, 1; xxi, 2), but more probably the complete authority attributed to it. It is obvious that among the general disorder and revolt it was not the presbyters threatened with deposition who were able to judge the disturbances of the peace, but only the people as a whole in a kind of plenary council. Hence that which was the more moderate among the party of opposition give in and say, “I do whatever is enjoined unto me by the people” (τὰ προστατευμένα ἐκ τοῦ θεοῦ, liv, 2). To construct a general law out of this particular concrete case without further investigation would argue a strange lack of critical sense.

(7) The Ascension of Isaiah.—The section, iii, 15–iv, 1, really belongs to the second or even the first century (Fleming, Tissot), then attention should be called, as very remarkable, to the prophecies of the elders (presbyters) at the end of the world; these love their office although they have no wisdom, and are unjust and violent shepherds of their sheep. Somewhat further on in the same section reference is made to the dispensation which shall arise in the last days between the elders and the shepherds. Here the presbyters seem to be old, highly respected members of the Christian community.

(8) The Fourth Group.—(1) The Apocalypse.—Our motive for including in the fourth group of the texts data given in i, 4 and ii, 22, is the possibility that the “Angels” of the Seven Churches are the “monarchical bishops” of these communities. This supposition offers undoubted many difficulties, yet it cannot be simply rejected. Toward the command issued (addressed) the author takes the position, and claims the jurisdiction, of an Apostolic and monarchical superior. The other only texts to be touched upon are the following: the twelve foundations of the wall of the holy city bear the names of the “twelve apostles of the Lamb” (xvi, 14), “apostles and prophets” (xvii, 16); and the prophets slain in the city (verse 24) are undoubtedly also Prophets of the New Testament. The existence of any relation between the four-and-twenty ancients (iv, 20) and the constitution of the early Church cannot be ascertained.

(2) The Gospel of St. John.—We need mention only the choice of the Twelve (vi, 71); their vocation, life-course, and union with Christ as portrayed in his final discourse (xiii, 33–xvii inc.), the unique position and special election of Simon Peter (i, 24; vi, 69, 70; xiii, 6 sq.: xx, 2 sq.: xxi, 3 sq., 15 sq.).

(3) The second Epistles of St. Ignatius of Antioch (Ad Phil., xvi, 15) — (13). The general topic is the exhortation to obedience towards the bishop, the presbyters, and deacons, and to intimate union with the bishop. The position of the bishop is throughout monarchical.

(i) General exhortation to reverence the bishop and remain in agreement with him (ad Eph., i, 3); to love and imitate him (ad Magn., xiii, 12); to be subordinate to him (ad Trall., xii, 2); to comfort him (ad Polyc., vi, 11); to follow him as sheep follow the shepherd (ad Magn., iii, 1); to honour him, even though he be young (ad Eph., vi, 1), all the move he keeps silence. (ii) Exhortation to be subject to bishops, presbyters, and deacons (ad Philad., vii, 1; ad Magn., xiii, 1; ad Polyc., vi, 1; cf. ad Trall., iii, 1). (iii) Unity with the bishop, the presbyters, especially in things which concern Divine service (ad Eph., iv, 1; ad Trall., ii, xii; ad Magn., vi, 2); unity with the bishop and superiors (ὅτι προσπέφθησαν) (ad Eph., x, ii sq.); unity in prayer, in the Sacrifice of the altar, and (xx, 1 and 2) in the breaking of bread. Unity in the Eucharistic celebration is also emphasized in ad Smyrn., vii, 2 and ad Philad., iii, 3, and iv, 1; cf. x, 1. Nothing at all is to be done without the bishop (ad Philad., vii, 2; cf. ad Polyc., iv, 1), especially no ecclesiastical functions, such as baptism and agape (ad Smyrn., viii, 1 and 2); marriages are to be coerced (ad Polyc., vi, 2); immersion is justly to be preferred (ad Eph., vi, 2; ad Smyrn., vi, 2). (iv) This obedience is necessary for sanctification and is the commandment of God (ad Eph., ii, 2; v, 3; ad Magn., iv, 1; ad Trall., ii, 1. Cf. vii, 2 and xii, 2 and ad Philad., iii, 2; ad Smyrn., x, 1. He who submits to the bishop subjects himself to the Father himself, who is the Bishop of all men (ad Magn., iii, 1 and 2).

(b) Origin and Basis of the Hierarchy.—(i) The institution of the single bishop, of the priests and the deacons originates from God, i. e. from Christ (ad Eph., iii, 2). As Christ is the thought (γίνεσθαι) of the Father, so the bishops established unto the ends of the earth are according to the intention of Christ (θεοῦ) (ibid., vi, 1). He whom the master sends in His stead should be received even as the Sender Himself; in like manner you should look on the bishop as upon the Lord Himself (ad Magn., ii, 1); the deacon Zotion gives joy to St. Ignatius, because he is obediently devoted to the bishop as to a gift of God’s grace, and to the presbyters as to a law of Jesus Christ. Bishops and priests are also spoken of as a “commandment of God” in ad Trall., iii, 2; ad Philad. (title); the bishops and the priests are instituted pursuant to the ordinance of Christ, in accordance with His will, they are protected and confirmed by the Holy Ghost (cf. i, 1; ad Smyrn., viii, 1). The deacons also are to be regarded as the commandment of God. (ii) The bishop, priests, and deacons compared with God, with Christ, or with the Apostles. The bishop presides in place of God (ad Magn., vi, 1). The deacons are to be respected as Christ; the bishop as an image of the Father; the presbyters are compared to the Apostles (ad Trall., iii, 1). Other comparisons between the presbyterate and the Apostolic college (ad Magn., vi, 1; ad Trall., ii, 2; ad Philad., vi, 1; ad Smyrn., viii, 1). (iii) The bishops (presbyters) are the foundation and deposit of the Church (ad Trall., iii, 1). Separated from the bishops and presbyters no Church can exist. Cf. also ad Smyrn., viii, 2.

(c) Field of activity of the bishop, the presbyters, and the deacons.—(9) The bishop. — Principal texts are in the Epistle to Polycarp. The bishop’s duties include: admonition of the whole body and of individuals as well (i, 2, 3, and v, 1), convocation of frequent assemblies (iv, 2), preservation of unity (i, 2), healing of spiritual ailments (i, 2, and ii, 1), firm resistance to teachers of false doctrine (iii, 1), care of widows (iv, 1). Nothing shall be done with his bishop’s seat, the bishop’s throne, and it shall be in view of his position above that the same field of activity; in particular, the bishop appears also as the centre of the liturgical celebration and supreme guardian of the Faith. The position of
the bishop is moderately monarchical, i.e., not tyrannical or autocratic. This is to be inferred also from the position of the prebishops. (ii) Prebishops.—According to all texts previously quoted the prebishops are the bishops and its officials, and constitutes with him a governing body which has a claim to due reverence and obedience, while itself subordinate to him (ad Trall., xii, 2; ad Eph., iv, 1; cf. Polyc., v, 2). (iii) Deacons.—(Texts already cited). They are subordinate to the bishop and the presbytery, and have a right to honour and esteem (ad Magn., ii, 1). In ad Trall., ii, 3, is the most important passage: “But those, too, who are deacons of the mysteries of Jesus Christ should in every wise be acceptable to all. For they are not deacons of meat and drink, but servants (δομέατε) of the Church of God. Therefore they should protect themselves against accusation as they would against fire.” The sense is, evidently, that in the Eucharistic celebration they handle as deacons no ordinary food and common drink, but a mystical food.

(d) Rights of the Community.—A community as chief seat of authority not only receives no mention from Ignatius, but such a conception is in itself contradictory to all the principal texts of his Epistles. The community is to be consulted on the question of sending envoys to other Churches (ad Philad., x, 2; ad Smyrn., xi, 2; Polyc., vii, 2). The first passage shows that the bishop or the prebishops could also fill the office of deacons. As the community was made by the organised community—i.e., with bishop and priests presiding—we can say nothing definite about the part taken by the community, since the sources make no mention of it.

(e) Divine Origin of the Hierarchy.—In spite of the clearly worded passages given above under (b) (c), even Catholics have denied that St. Ignatius was aware of a Divine origin for the hierarchy: “St. Ignatius does not teach the Divine origin of this hierarchy in the sense of its institution by God, or by Christ, in the form of three degrees—and it is intelligible why he does not.” (Genouillac, “L’Eglise chrét. au temps de S. Ignace d’Antioche,” p. 132.) This is a question of words. Genouillac grants that Ignatius taught very clearly the Divine institution of the spiritual governing power in general: “It would be difficult to express the Divine origin and right of the ecclesiastical powers with greater insistence and clearness than does St. Ignatius in these texts.” (Ibid., 132.) If anyone had asked St. Ignatius whether bishops, priests, and deacons, constituted in such a threefold dignity and endowed with such authority over the community, were a commandment of God (εν τούτῳ το ὄνομα), he would have answered “Yes”, as anyone who has eyes to read must be able to see. But not to have entered into further speculations on the matter. But the hierarchy as a “commandment of God” is the very essence of Catholic teaching on this point. Many other additions made by later times to this concept of a Divinely originated hierarchy are to be assigned to the development of ecclesiastical discipline, and her canon law. No serious historian would expect to find all that in the writings of Ignatius.

However much he may insist on the Divinely appointed hierarchical gradation, on episcopal authority, and on the obedience that the faithful owe to their ecclesiastical superiors, Ignatius shews throughout that he does not regard this organization as an end in itself, but as a means to the end, to the attainment of perfect unity in faith and religious life. He shows himself in this point an intelligent disciple of the Apostle of the Gentiles, a Christian to the core, an αὐτοκράτωρ in the word of the ideal of unity between bishop, priests, deacons, and community was not found everywhere. Ignatius is convinced that the threefold governing power, derived and established by God and Christ, belongs to the idea of the Church.

(4) The Epistle of Polycarp to the Philippians and the “Passio Polycarpi.”—Polycarp also exalts the faithful to be subject to the priests and deacons to God and Christ (v, 3). The particular functions of each of these two classes of the governing body cannot be inferred from the qualities in which Polycarp desires they should both be conspicuous (v and vi). The letter seems to indicate that at that time there was no bishop in Philippi. In the “Passio Polycarpi,” we are interested only in one passage where there is mention of an Apostolic and prophetic teacher and bishop of the Catholic Church of Smyrna (xvi, 2). It gave great satisfaction when the bishop possessed miraculous charismata and when he, the teacher of the faithful, was a disciple of the Apostle.

(5) The Epistle of St. Barnabas mentions the twelve Apostles as chosen by Christ to preach his Gospel (v; xvi, 3). Once (xix, 9) he admonishes us to love the preacher of the Word of the Lord as the apple of our eye. Besides this, there are allusions to a sort of secret doctrine of the Lord, which is understood by the initiated (ix, 7), and the like. St. Ignatius and St. Polycarp Epistle evidently looks on this higher form of knowledge as an extraordinary gift imparted by the Spirit of God (cf. xvi, 8-10, and xxvii). He considers his own exposition of the Scriptures as the effect of the Spirit working within him, even if he twice insists modestly on the point that he was not writing as a teacher (ἐν διδακτικος) (i, 8, and iv, 9).

(6) Another kind of mysticism is revealed to us in the homily which has come down to us as the Second Epistle of St. Clement. St. Paul’s image of the Church as the Body of Christ is developed, not very successfully, in an obscure speculation about a Church which pre-existed with Jesus and was created from man and moon (xv, 1-4). The prebishops mentioned in xviii (3, 5) must exhort and declare the Word of God in the presence of those assembled for Divine worship.

(7) The “Pastor” of Hermas.—We must exclude from our positive exposition a number of rather widespread but incorrect views about the hierarchy of the “Pastor” of Hermas. (a) It cannot be ascertained with certainty whether the Apostles mentioned in five places (Vis., iii, 5; Sim., ix, 16, 4; 16, 5; 17, 1; 25, 2) are apostles in the broader sense (Harnack, Zahn), or only the Twelve (Dorsch); the latter is more probable. (b) In either case it is the word of the apostles of the thing of the past. (c) The prophets, to whom Hermas himself belongs, are never spoken of in connexion with the Apostles and teachers; Hermas’s silence, however, is not due to modesty, as his display of self-importance in Vis., iii, 1, plainly demonstrates, but to his concept of the prophet’s office; for though he looks upon it as a social charisma, he accords it only a private authority, that allows each of the faithful to pass his own judgment on its validity (cf. Dorsch in “Zeitschrift fur Kath. Theol.”, xxviii, 1904, pp. 276 sq.).

(d) Consequently one cannot prove from Hermas that the period of “Apostol,” at least not as the highest place in the community as preachers of the Word of God. (e) There is absolutely no truth in Harnack’s assertion (“Anallag. zu Hatch.”, 230 sq., and “Prolongements zur Lehre der 12 Apostel”, pp. 150 sq.) that Hermas never mentions bishops and deacons, where there is question of the community as a system composed of rulers (cf. Ziehr in “Zeitschrift fur Kath. Theologie.”, xxviii, 1903, pp. 198 sq.).

The following certain conclusions can be derived from Hermas: (a) The superiors are called prebishops (Vis., ii, 4, 2; Vis., iii, 1, 7, 8; Vis., iii, 11, 3); bishops and deacons (Vis., iii, 5, 1; Sim., ix, 27, 2, bishops alone; Sim., ix, 28, 2, deacons alone also evidenced; Vis., ii, 6, 2); together with πατριαρχαι (Vis., iii, 9, 7); pastors (πωνικατεραι); no Greek text; Sim., ix, 31, 5 and 6). (b) Since Hermas has no exact and fixed terms...
ology, no clear distinction can be discovered in his writings between bishops and presbyters. (c) It is certain that presbyters and deacons are identical with ἱεραρχοῦντες and the pastors. (d) They are primarily pastors of souls, whose duty it is to preserve the proper spirit in the community. (e) Hermas says nothing about bishops of the Roman community; they are spoken of in company with the Apostles, teachers, and deacons as stones that go to build up the edifice of the Church and that are ordered one over another in a line of devotion to works of charity and the cares of the poor. Since in Hermas's time the name ἱεραρχοῦντες was extensively used for the monarchical bishop, Hermas seems to have had one in mind. The Clement spoken of by him in Vis. ii, 4, 3 is evidently such an epitaph; and Hermas gives him no official title; his duty it is to send to the other Churches the book given to Hermas by the ecclesia. The teachers (διδασκαλοί, Vis. iii, 5, 1; Sim., ix, 15, 4; 16, 5; 25, 2; Man., iv, 3, 1, διδασκαλοὶ γαρ Sim., ix, 19, 2) are preachers of the Word of God. (f) A certain strife for precedence between the rulers of the community and prominent Christians, which Hermas seems to refer to, is of course no proof of a contest about the ecclesiastical constitution itself. It is probable that not only the holders of office were entitled to the first places of honour in the common assemblies but the teachers as well were numbered among the ecclesiastics. The assertion made is constantly made, but cannot be proved, that Hermas included them among those endowed with mystical or miraculous "spiritual" gifts.

(3) Justin Martyr.—In his first "Apology" Justin Martyr represents the presiding officer (ἐκαθορίζεται) at the Divine service as a liturgical agent, by whose prayer in the Eucharistic celebration, the bread and wine are changed into the Body and Blood of Christ (lxv, 3–5; lxvii, 5). After a lector has read, the same presiding officer addresses words of counsel and encouragement to the assembled brethren (lxvii, 4). He also receives the voluntary offerings of those present, and distributes them to the widows and orphans, to the sick, the prisoners, and strangers, in short to all who need help (lxvii, 6 and 7). We find therefore in Rome about the year 150 a monarchical presiding officer who acts as liturgical celebrant, teacher, and de clarer of the Word of God and as administrator of the sacred mysteries. Justin, however, does not speak of presbyters, but mentions deacons; they distribute the Eucharist to those present and bring it to the homes of those who are absent (lxv, 5; lxvi, 5).

(5) Hegesippus.—In his "Memorabilia" (the book was probably called Περιερμήνευσις), he describes the inheritance of the Apostles. He regards the unbroken succession of bishops as the guarantee of truth (cf. Euseb. Hist. Eccl., iv, 22, 1 sq.). On his journey to Rome he found the true doctrine in Corinth, and mentions Bishop Primus in this connexion. In Rome he examined the series of the bishops of that place as far as Anicetus (τοιούτως τινὰ ἤκαθωρίζοντας τοὺς ἱεραρχοῦντες) the translation: "I made for myself a list of them in their succession" is hardly credible; Rufinus's conjecture "mane i, Ibnabo there" (βασιλικὸς θρονόφορος) is arbitrary; the Syriac reads literally: "I made there in the derivation of the bishops" (Nestle). I read: διδασκάλοι θρονοφόροι οὐκ εἰν γενομένων.

(10) Abycus.—It seems to me as good as proved that Abycus was Bishop of Hierapolis (not Hieropolis) in Phrygia (Salutaris) in the second half of the second century. The attempt of some scholars, notably Dieterichs (Die Grabenschrift der Abykios, 1896), to deny the Christian character of the epitaph appears to have founded on a misapprehension of the Latin inscription of Abycus and its last exégeste in the "Revue de l'instr. publique en Belgique" (1897), 91; cf. also Ramey, "Cities and Bishoprics of Phrygia," II (Oxford, 1897), 722 sq. and 788 sq. and the excellent article of H. Leclercq in Dom Cabrol's "Dictionnaire d'Aréchologie chrétienne et de Liturgie," I, 1903, 66 sq.]. Here we can only mention his witness to the primacy of the Roman Church (11–18).

(11) Gnosticism and Montanism.—The fantastic speculations of the Gnostics of the second and third centuries, which apotheosized the Apostles as demi godes and sions, supply, of course, no more material to the historian than those other Gnostic teachings which minimized the authority of the first Apostles in order to raise tounts of their office to the eminence and the personality of the Gnostic teachers. The same is to be said of the Gnostic metaphysical doctrine of the Church. The Epistle of the Gnostic Ptolemeus to Flora deserves special notice (Epiphanius, "Heresis," XXXIII, 3, ed. Oehler, II, I, 401 seq.). At the close of c. viii (ib. 418) Flora's attention is called to the Apostolic doctrine, "which we also have received through a line of succession" (ποιός εὐλογοῦμαι καὶ ἔχων παραδοσίαν). The "also" is worthy of remark. Ptolemeus means that not merely the universal Church, but they also had an Apostolic tradition. The progress of historical investigation disproves more and more the assumption of certain Protestant scholars that the Gnostics were the first to elaborate the theories of Tradition and Apostolic succession, and that afterward the Catholic Church gradually and unconsciously assimilated them. Catholic scholars have recently discarded the erroneous doctrine (a) The polemical writings of Irenæus and Tertullian offer clear proof that the ideas of Tradition and Apostolic succession, with which these ecclesiastical writers repeatedly assail the Gnostics, were inherited from ancient times, at any rate in their essential character. (b) The most rigidly critical analysis of the Gnostic system has demonstrated that their theories of Tradition and Apostolic succession show unmistakable signs of being the copy and replica of a system already existing.

Marcion and his Church should be mentioned in this connexion, although Marcionism cannot be directly classified as Gnosticism. The same remarks, however, apply to him. His Church is precisely lacking in those elements, which constitute the chief strength of the Catholic Church: unity of Faith, unity and permanence of government. The legend of a well-established organization of the Marcionite communities, which was transferred from the Gospel Church to the Marcionite Churches, is contradicted by the fact that the Roman Church, originated in a misunderstanding. The true statement is this: At the time of the first appearance of Marcion and his doctrines, speculative minds of many Christians were inclined, in consequence of Gnostic theorizing, to reject as a deception the word of the Old Testament and to consecrate to God the Father who was superior to Him, and unknown to Him as well. This God enters into relation with the world through a series of intermediary beings. One of these sons unites himself with the man Jesus and operates apparently as a mere human being. These assertions were no doubt believed by many minds, not merely because of the grotesque theory of intermediary existences, but also because of the impossibility of reconciling the Christian Scriptures with this new doctrine and would-be secret tradition. The contradictions were palpable and unavoidable; and the assertions altogether arbitrary and devoid of proof. For this reason Marcion abandoned first his fantastic theory of sons, then his mystical dream of ecstatic and prophetic inspirations, and finally his fraudulent fiction of a secret tradition. Thereupon he tried to solve the contradictions of his system by rejecting the Old Testament, taking as a basis St. Paul, to the exclusion of all other, or rather Jewish, elements in the Epistles, retaining only the Gospel of St. Luke, and assuming a more convenient position. Jesus was merely the good God manifesting himself under an apparently human form. Everything centred around the doctrine of the Redemption; he rejected all
dogma and speculation. In that way he hit upon a convenient creed for those Gnostic adepts who had departed from Catholic Christianity and classical Gnosticism. His negotiations alone formed their bond of fellowship. He set up and test of the faith served to unite his followers, not through any positive belief but by the denial of Catholic (and Gnostic) principles. He seems indeed to have had a talent for organisation; the historian, however, has to look on his work not as a new creation, but as a multiplication of the text which had already occurred in existence. Our remarks on Gnosticism apply, mutatis mutandis, in a far greater degree to Montanism. The organisation of Montanism was not a remnant of early Christianity, but an artificial revival of primitive customs. (cf. D’Ales, “La théologie de Tertullien”, 201 sq.; and Batiffol, “L’Église naissante et le catholique”, 317 sq.).

IV. Detailed Evidence from Pagan Inscriptions, Papryri, and Ostraka.—We intend here merely to point out certain contemporary expressions for profane and sacred offices which may shed some light on the constitution of primitive Christianity. A. In the first place there is the expression sanctos epistulos in diem, which was then in very general use for different kinds of governing officials were not adopted by the Christians, such as epistles (ἐπιστάμενοι) and epimeletos (ἐπιμελητής). For servants, in the religious sense, prexepos (πρεξέφως) was used more frequently than epimeletos (cf. Thraexi, “Unternehmen von Magnesia am Maander und das neue Test.” (Borna-Leipzig, 1905), 33).—B. Positive parallelisms.

• (1) "Аρκτομαυρία" (=assistance), with a religious implication, is found, besides in I Cor., xii, 28, in the Septuagint and on paperi (cf. Deissmann, "Bibelstudien" (Marburg, 1895), 87, and "Neue Bibelstudien" (1897), 51). (2) "Επισκόπου (=chief shepherd) of I Peter, v, 4, is found on a mummy label (cf. Deissmann, "Licht vom Osten" (Tubingen, 1908), p. 64). (3) Diakonos in a religious sense is found in an inscription, from Magnesia on the Maander, of about 100 B.C. (C. Kern, "Die Inschriften am Mäander", p. 109). The same is found frequently in other places (cf. Thieme, op. cit., 17 sq.), for instance mention is made of a college of deacons with a priest (λέπτης) at their head for the worship of Serapis and Isis (cf. Corpus Inscrip. Graec. II, 1800 and 3037). (4) Epiphanos in a religious sense: cf. remarks of Darmangerg-Saglio, "Die Namen der Antiquitäten" (1869). This article is unfortunately not satisfactorily, whereas the articles epimeletos and episkopos are excellent. (5) Liturgia (λειτουργία, λειτουργέω, &c.) in a religious sense is found at Magnesia (Kern, ib 98, 17 and 98, 58; Thieme, ibid., 16; Deissmann, "Bibelstudien", 137 sq.). (6) Apatos, that is, collections of a religious character (cf. I Cor., xxxi, 1 and 2) on paperi and ostraka (Wilcken, "Griechische Ostraka", i, 253; Deissmann, "Licht vom Osten", 69 sq.; Kern, i, 105, 72; Thieme, i, c. 16 sq.). (7) Presbyter, also in a religious sense; for instance the members of a scoecolat college in Egypt were called the diakonos (cf. Reiss, "Zeitschrift für das Altertumskunde", xxxi, 38). Prophet-priests are also found in Miletus (cf. Thieme, i, c. 19; cf. also R. Cagnat, "Inscriptions Grecques", III (Paris, 1906), n. 680 and n. 1105).

V. Historical or Quasi-Historical Testimonies.

Since an exhaustive treatment is impossible, I have tried to collect at least all the typical texts.

A. Mention of Bishops by Polycrates.—In a synodal letter written by Polycrates of Ephesus about the year 190 this bishop, sixty-five years of age, speaks of seven of his relatives who had been bishops before him. Besides these he mentions Polycarp and Papiris of Smyrna, Thraseas of Eumenes, Sagaris of Lao-

dices and Melito of Sardis (Eusebii, "Hist. Eccles.", v, 24, 2 sq.).

B. Irenaeus’s View of the Connection with Apostolic Times.—The famous texts of Irenæus on Apostolic succession are a testimony to the faith of the second century, rather than an example of ancient historical narrative. Exceptions are (a) the list of the Roman bishops (Hær., iii, 3 sq.); (b) the account of Polycarp’s instalement by the Apostles (op. cit., iii, 3, 4, and Euseb., "Hist. eccles.", iv, 14); and especially the passage (Hær., iii, 14) that the Apostles entrusted the Churches to the bishops. On the contrary, historical value cannot be attached to the statement (Hær., iii, 14, 2) that St. Paul summoned to Miletus the bishops and presbyters of Ephesus and the vicinity.

C. Eusebius’s Account of the Earliest Times.—(1) The accounts that we have of St. James the First as Bishop of Jerusalem, based on the "Hypotyposeis" of Clement of Alexandria (Eusebii, "Hist. eccl.", ii, 1) cannot be used as historical data. This applies still more to the story (op. cit., iii, 11) of the choice of Simeon as a successor to James. The bare fact, however, that both filled the high post of bishop is well attested (cf. Eusebii, ibid., iv, 5, and iv, 12; and especially Hegesippus, iv, 22). (2) Euseb., iii, 37, has a good historical basis. Eusebii tells us here that the disciples of the Apostle, after distributing their goods, spread the Christian religion in the character of "evangelisers" (evangellivzeo) von Magnesia am Maander und das neue Test.

D. Colleges of Presbyters.—The mere fact that the ancient sources speak of colleges of presbyters, without any mention of a monarchical bishop at their head, does not warrant the immediate conclusion that there was no such bishop. This is clearly shown by the following texts. (3) The anonymous Antimontanist in Eusebii (Hist. eccl., v, 16, 1 sq.) speaks of such governing presbyters in Ancyra. Tertullian mentions elders as presidents of the assemblies (Apologet., xxxix).

E. Charismata.—(1) Eusebii’s anonymous Antimontanist and Mithractes (Hist. eccl., v, 17) testify that the true prophets (of the Old and the New Testament) did not speak in ecstasy (i.e. in unconscious raving). This looks more like a theological inference than a piece of evidence from first-hand historical sources. (2) In the "Testament of Jesus Christ" (edit. Ephrem Rahmani, I, xlvii) an ordinance is founded prohibiting the imposition of hands on those who possess the gift of speaking in tongues, since the work of God is already made manifest in them. (3) In view of the passages which speak of prophets, it does not seem improbable that the word "prophet", even in early times, signified not merely the possessor of an ecstatic charisma, but was also a substitute for the "priest" at a time when men were still afraid to use this expression. Prophet appears here as a synonym for hypothetos. This recalls a remarkable passage of the Ambrosiast (in Ep. ad Ephes., iv, 11, 12), where the observation is made that "now the interpreters of Scripture are called prophets. The word "prophet" may however be only a later corruption of the prophetic quotation. (4) If Tertullian defines the teachers (doctores) as brethren "endowed with the gift of grace (gratia scientia donati—De Preceptor., xiv), a miraculous charisma cannot be immediately inferred, since the idea of grace or endowment (gratia) was of very wide application.

F. Different Orders of the Hierarchy.—Besides patriarchs, prophets, levites, priests, and archons, Tertullian mentions also Apostles, evangelists, and bishops (De Corona, ix, 2). Only the last three have reference to the New Testament, according to the text.

The list given in another passage (Prescript., III, bishop, deacon, presbyter, martyr) is evidently arbitrary and accidental. The same may be said of the seven orders of Hippolytus (Fragm. in Prov., ix, 1) prophets, martyrs, hierarchs, ascetics, saints, just.
G. Deacon.—The hypothesis that the deacon were originally on a higher footing than the priests, almost equal to that of the bishops, is supported by a few of the vaguest indications taken from the earliest sources. That such naïve texts prove nothing is best shown by the later texts, which allow the deacon remarkable privileges, although his rank was definitely established as lower than that of the bishop or archbishop. (1) At the Council of Elvira (Elbericus) a discussion took place regarding deacons who govern churches (dioecesus regens pleblem, can. Ixxvii); that is to say, where there is no bishop and no priest. (2) In the Apostolic Constitutions (lib. Ii, c. xxxvii) the deacon was directly after the bishop and before presbyters. The order was then established that their order held third place.

H. The Hierarchy as an Ecclesiastical Institution.—

(1) The utterance of Tertullian (De exhort. cast., vii), declaring that the difference between the priests and the laity was due to ecclesiastical institution, and that therefore any layman in the absence of a priest could offer sacrifice, baptize, and act as priest, is based on Montanistic theories and contradicts earlier teachings of Tertullian (e.g., De baptismo, xvii). (2) Nor is there any better historical foundation for the statement of Cyprian (Epist., III, 3) that Christ spoke only of bishops and priests, whereas the deacon was appointed. This is simply a conclusion drawn from the sixth chapter of Acts; while the preceding expresses a dogmatic judgment and the belief at the time of St. Cyprian.

I. Supposed Original Equality of Bishops and Priests.—

(1) Epiphanius (Panar., III, c. iv, her. lxxiv).—Epiphanius's arguments against Arians, who held this original equality of bishops and priests, are not based on a true historical account. (2) Jerome, Theodores of Mopsuestia, the Ambrosian.—Jerome holds that bishops and priests were identical in the earliest times. This would mean that the episcopal function is an ecclesiastical institution, although it is for the good of the Church and based on Apostolic tradition ("Epist. ad Evangelium", 146 [85], 1; "Epist. ad Oceanum", 69 [83], 3; "Comment. in Tit.", Migne, P. L., XXVI, 562, 563, 694, 656 and 666; "Dialog. advers. Lucifer", 9; Migne, P. L., XXXIII, 164 sq.). But since on the other hand Jerome regards the power of ordination as peculiar to the bishop, his theory labours under an insoluble contradiction (cf. Epist. 146 [85] and "In Ep ad Tit.", ib.). Jerome's accounts do not offer any historical testimony, but an artificial and by no means historically sound construction of a problem. It is much from the fact that the titles presbyter and bishop are synonymous in the New Testament, relying chiefly on an ordinance concerning the election of bishops of the Alexandrian Church, which prescribed that, according to an ancient tradition, the college of deacons would choose an abbot and ordain him as abbot, that the texts of St. Jerome are thoroughly discussed by Michiel, "L'origine de l'épiscopat" (Louvain, 1900), 420 sq., and by Dom Léon Sanders, "Études sur saint Jérôme" (Brussels and Paris, 1903), 298 sq. We shall speak presently about the position of the Alexandrian bishops. From the time of Isidore of Seville until late in the Middle Ages these accounts of St. Jerome were transcribed over and over without any attempt at criticism. For the history of these texts of St. Jerome, cf. Dunin Borkowski in "Histor. Jahrbuch", XXI (1900), 221 sq. Jerome and the Ambrosian deny the original equality of bishops and priests; that of St. Cyprian, 259 sq.; both maintain that the Churches even in Apostolic times were governed by single superiors, who all possessed the power of ordination and bore the name of Apostle (cf. Ambros., in Eph., iv, 11 and 12; in Cor. xxii, 18; in Philipp., i, 1; in 1 Tim., iii, etc.; Opera Ambros., ed. Patavinus, III (Milan, 1842), 257 sq., 631, 830, 916; "Theodori Episcopi Mopsuestiani in epist. B. Pauli commentarii", ed. H. B. Swete, 1882; in Eph. ad Tim., iii, 8; in 1 Cor., ii, 114 sq.; in ep. ad Tit., i, 7, 239). The statements of Theodore and of the Ambrosian have much more value than those of St. Jerome. We find similar utterances in Theodoret's Commentary on Philippians, i, 1 (Migne, P. G., LXXXII, 559 [445]) and on 1 Tim., iii (ib., 803 [552]) and also in Jerome's De ordine of 682 (Migne, P. G., LXXXII, 558 [445]). "Eutychius Patriarcha Alexandrinus vindicatus" (Romae, 1668), 190 sq.). A similar notion is found in Origen (Hom. in Num., xi, 4, Migne, P. G., XII (Orig.), 308 col. 649); except that he seems to speak of his own time. He speaks of the possibility of a man consecrating to a priesthood other than the baptism of which he was the author, of the teaching the people the Faith and inducing them to accept it, and finally becoming bishop himself.

In the places mentioned, Theodore of Mopsuestia has another peculiar statement. He declares that in the most ancient times those supreme ecclesiastical superiors, who were instituted by the original Twelve and called likewise apostles, ruled over entire provinces, whereas the towns were subject to presbyters. Even in later times not more than three bishops usually were to be found in a province; this condition, he adds, had lasted in the Occident almost up to his own time. Duchesne attached some importance to these passages. Toutain: Les Fastes épiscopaux de l'ancienne Gaule, I (1894), 36 sq. Harnack has refuted him very thoroughly in a valuable excurseus in the second volume of his work, "Die Mission und die Ausbreitung des Christentums in den ersten drei Jahrhunderten", 2nd ed. (1896), 375 sq. Harnack assigns its true value to Theodore's testimony, though in some places he lets himself be influenced by his own extremely hypothetical concept of the primitive Christian constitution. Theodore is correct in saying that originally whole provinces were under one chief ruler known as an apostle, as the text is not an inconsiderable one for a long time the single local communities were without any bishops of their own (cf. Harnack, i, c., 372–395).

(3) The Alexandrian bishops are said to have been placed in office and consecrated by the local priest. History offers widely different accounts of this singular occurrence. Heretical monks complained to the holy monk Poimen about the Alexandrian archbishop, and claimed that he had been consecrated by bis. The event can have taken place between 370 and 400 (P. G., LXIV, 341). Jerome mentions the fact (Presbyteri...unum ex se electum...episcopus...electam ipsum consecravit); (Hist. Eccl., 11, 119). Severus of Antioch also speaks of it in a letter written between 518 and 538 (E. W. Brooks, "The Ordination of the early Bishops of Alexandria", in "Journal of Theol. Studies", II (1901), 612 sq.). Finally in the tenth century the story is told at great length by Eutychius of Alexandria (P. G., CXI, 903–96 and 982). It seems doubtful whether the Ambrosian (i.e., in Eph., iv, 11, 12) refers to these conditions in Alexandria. Abraham Echellensins, notwithstanding his serious errors in chronology, has shown that Eutychius and his first successor, Selden, caused an irremediable confusion ("Eutychius, Patriarcha Alexandrinus vindicatus" (Rome, 1661), 39 sq., 47 sq., 53 sq., 63 sq., 103 sq. On page 227 an important text of George Homadus is given as a parallel to Eutychius. Cf. also A. v. Gutschmidt, "Kleine Schriften", II 399 sq., 379 sq., 486, and Renaudot, "Liturgiarium Oriental. Collatorum Libri P. Gregorii Magni, II", 51 sq., 257 sq., and Gabriel, "Dictionnaire d'archéologie chrétienne et de liturgie", s. v., "Alexan-
dria]. The outcome of it all is, as Cabrol states, that in the fourth century and later a tradition existed that the Bishops of Alexandria were chosen, or perhaps even consecrated, by the presbyterate.

VI. SHORT SYNOPSIS OF THE PRINCIPAL RESULTS GAINED BY EXAMINATION OF ALL THE TEXTS.—In the earliest times those who first preached the Gospel in a place, usually with the supreme direction of the community, but in the succeeding centuries as their subject increased, were called presbyters, i.e., those who were said to govern (presbyter) the Church. Hence there were cases in which the foundation proper did not coincide with the first preaching of the Gospel; and in such cases the Apostle who was founder became the chief ruler. This position, in which the Apostle Paul and the first Apostles were established, was charismatically in the sense given above, i.e., it originated in a personal commission from Jesus. We know nothing definite about the calling of the apostles in the wider sense. The idea that they always followed a direct inspiration of the Spirit is not impossible, but it cannot be proved. The apostolate was a mystery of spiritual formation, like that of ouroboros and of prophecy. The founding of the Church in any city and in any place is the result of the organic disposition of the Church in the highest sense, and it is the result of the Church's action as a universal organization. The individual Churches could not have evolved their organization out of their own inner power of jurisdiction, for it was as an organism that each existed from the start, and only as an organism that it put forth its activity. That is the most ancient Christian concept of the body ecclesiastical that we know of. But the conclusion is also established that the Church's power of action was not bestowed on her by the founding Apostles. As a second Christ, as the Body of Christ, both the universal Church and the local Churches possessed certain rights and powers which could not have been conferred by men. The Church was essentially the creation of God and Christ. But these rights and privileges can no more be referred to the autonomous communities than to the founding and governing Apostles; they are the work of God and Christ. Communal autonomy, in the modern sense, which makes the community not merely the subject, but also the creator and ultimate reason of its own juridical powers, it a concept directly opposed to the deepest convictions of the early Christians. Since the Churches were regarded as organisms, these Divinely given powers and privileges did not pertain to individuality as an entity, but to the governing officials, but to the organized community. Primitive Christian faith represented the organs of the mystical body of Christ, including the local governing powers in general, a law, an ordinance of God and Christ. It has been mistakenly asserted that the governing organs did not belong to the community. This is true only in the sense that the community, as the organized body of Christ, includes within itself all its organs; but, as soon as the idea is introduced that the superiors received their power from the autonomous community of the faithful, the view is contrary to that of primitive Christianity.

Neither the power of the Apostles nor of the other superiors was tyrannical and autocratic in its nature. It was equal in the sense that the word "presbyter" is not used, but this seems to be the retention of a primitive form of presbyterate, but this form presbyterate was used, but this cannot be proved with certainty. In I Tim., v. 17, the word is an adjective (οἱ εὐαγγελισταί τῶν ἐπισκόπων). The preaching and interpretation of the Word of God was undertaken in the earliest times by the Apostles and their traveling helpers, among whom the evangelists were in-
cluded. These were missionaries, prophets, and, "doctors," some of whom, had a direct Divine calling and a gift of infused knowledge. Other teachers were divinely inspired by permanent resid- ence in some community. This abundance of preachers of the Word of God (αληθινὸς λόγος) mentioned only by St. Paul, I Tim., ii, 7; II Tim., i, 11; and I Clem., v, 6) frequently relieved the local superiors of their obligation to preach in person.

With the growth of the communities, the Apostolic-founders entrusted part of their office to men worthy of their confidence, who were thus invested with a monarchical authority over several communities, without, however, succeeding to all Apostolic prerogatives.

These men soon received the title of episkopoi; and, as a result, this term became obsolete as a mere synonym for presbyter, which are the historical noc-

tions of the monarchical episcopate. For a long time, however, the bishops were also called by the simple title of presbyter. The greater the number of distinct communities, the more numerous were the monarchical bishops; and in some districts every town soon had its own bishop. In the early recipient of Apostolic confidence were not as yet local superiors in the strict sense, although of course they usually resided in some particular town. The presbyters of their province were subject to them. In this we find the beginning of the system of metropolitan bishops. It even seems to have remained for considerable time the highest local authority. About the same time, the order of deacons became fully organi-

zed. They were the right hand of the bishop.

All the gospels of later development were present at the very beginning. The constitution of the church in its essential structural features is an original product of Christianity. In the light of the laws of history and of Divine Providence, it is easy to understand how from the earliest times the social environment of Christian institutions, the varieties of religious activity and organization, the local and provincial forms of govern-

ment, were important factors in developing a great multitude of unessential details.

Valuable bibliography is to be found in Revue d'histoire ecclésiastique (Louvain, 1900—); bibliography and references in Theol. Zeitschrift (Leipzig and New York) and in Jahrbücher für Geschichtswissenschaft (Berlin). The literature up to 1900 has been treated in full by Borkowski, Die neueren Untersuchungen über die Apostola (Paderborn, 1900); K. H. Petz, Aus dem Apostolischen Denken (Leipzig, 1900); E. L. Bischoff, Die christlichen Vereinigungen in der griechischen und lateinischen Welt (1873—59). Bingham, Antiquities of the Christian Church (new ed., Oxford, 1885). Among the numerous works written in the conduct of this field, the following may be mentioned: Möller, Die Kirche in der Kirche (1852 and 1843); Rohrer, Die Anfänge der christlichen Kirche und ihre Verfassung, I, 1880; Döllinger, Christliche Kirche und Kalender. Zürich (1870); Lightfoot, The Church in the First Three Centuries (2nd ed., 1886).—Jung, Epistle to the Romans (2nd ed., 1890); 179—267; reprinted in Dissertationen der Apostolischen (1892), 137—240. In order to understand the last studies of the Tübinger scholar, see L.C. in Theolog. Zeitschrift; Seubert, Der Ursprung und die Bedeutung des Apostolat (Leiden, 1857); and Under der Ursprung und die Bedeutung des Apostolat (Karlsruhe, 1902); S. von der Bekanntheit für die Kirche (1887).—Müller, Die Kirche in der Kirche (1852 and 1843); Rohrer, Die Anfänge der christlichen Kirche und ihre Verfassung, I, 1880; Döllinger, Christliche Kirche und Kalender. Zürich (1870); Lightfoot, The Church in the First Three Centuries (2nd ed., 1886).—Jung, Epistle to the Romans (2nd ed., 1890); 179—267; reprinted in Dissertationen der Apostolischen (1892), 137—240. In order to understand the last studies of the Tübinger scholar, see L.C. in Theolog. Zeitschrift; Seubert, Der Ursprung und die Bedeutung des Apostolat (Leiden, 1857); and Under der Ursprung und die Bedeutung des Apostolat (Karlsruhe, 1902); S. von der Bekanntheit für die Kirche (1887).—Müller, Die Kirche in der Kirche (1852 and 1843); Rohrer, Die Anfänge der christlichen Kirche und ihre Verfassung, I, 1880; Döllinger, Christliche Kirche und Kalender. Zürich (1870); Lightfoot, The Church in the First Three Centuries (2nd ed., 1886).—Jung, Epistle to the Romans (2nd ed., 1890); 179—267; reprinted in Dissertationen der Apostolischen (1892), 137—240. In order to understand the last studies of the Tübinger scholar, see L.C. in Theolog. Zeitschrift; Seubert, Der Ursprung und die Bedeutung des Apostolat (Leiden, 1857); and Under der Ursprung und die Bedeutung des Apostolat (Karlsruhe, 1902); S. von der Bekanntheit für die Kirche (1887).—Müller, Die Kirche in der Kirche (1852 and 1843); Rohrer, Die Anfänge der christlichen Kirche und ihre Verfassung, I, 1880; Döllinger, Christliche Kirche und Kalender. Zürich (1870); Lightfoot, The Church in the First Three Centuries (2nd ed., 1886).—Jung, Epistle to the Romans (2nd ed., 1890); 179—267; reprinted in Dissertationen der Apostolischen (1892), 137—240. In order to understand the last studies of the Tübinger scholar, see L.C. in Theolog. Zeitschrift; Seubert, Der Ursprung und die Bedeutung des Apostolat (Leiden, 1857); and Under der Ursprung und die Bedeutung des Apostolat (Karlsruhe, 1902); S. von der Bekanntheit für die Kirche (1887).
Hieronymites.—In the fourth century, certain Roman ladies, following St. Paula, embraced the religious life in Bethlehem, putting themselves under the direction of a brother, who had been of that name in that city. It is not to be inferred from this that he composed any monastic rule or founded an order. Some Hieronymites of the sixteenth and seventeenth centuries, indeed, asserted as much, but their claims rest upon no substantial basis, so that no historical link is to be looked for between St. Jerome and any religious congregation. The congregation was formed in Spain and Italy, in the fourteenth century, by the amalgamation of several groups of hermits, and the sovereign pontiffs, while granting it their approval, imposed upon it the rule of St. Augustine, though the name of St. Jerome, whom the religious who chose their model and patron, was retained.

In Spain the cradle and centre of this congregation was the monastery of San Bartolomé de Lupiana. Its first prior, Fernando Pecha, in conjunction with Peter of Rome, obtained from Pope Gregory XI Bulls confirming their order, 13 October, 1373. The pope reserved the order to the Augustinians. At Home they assumed the habit, which consisted of a white tunic, a brown scapular and mantle. Their constitutions resembled those of the Augustinians of St. Mary of the Sepulchre at Florence. Fernando Pecha received the profession of the other hermits in 1374. Their numbers rapidly increased; in the reigns of Philip II and his successors their prosperity was extraordinary. Charles V held them in high esteem. In 1380 they received the monastery of Our Lady of Guadalupe, in Estramadura, in which is preserved the image of the Blessed Virgin most venerated throughout Spain. In 1415 their houses numbered twenty-five. They were then removed from the jurisdiction of the ordinary and made an exempt order. They were established in Portugal, and the religious of these two countries formed one congregation (1595). Philip II built on a grand scale the monastery of St. Lawrence of the Escorial, in which the kings of Spain are buried. Its library is one of the noblest in Spain, and it possesses many works of art. The kings of Portugal are buried in the monastery of Belem, founded by King Manuel in 1497, which was the largest and finest in the kingdom. Emperor Charles V, on his abdication (1555), withdrew to the monastery of St. Jerome of Yuste, where he died. The church of St. Madrid was erected by order of Philip II. Philip II, one of the leaders of the Spanish Inquisition, was celebrated for their generous almsgiving. The authority which they gained from so holy a manner of living allowed of their being employed efficaciously in the reformation of other religious orders, among which were the Premonstratensians, the Trinitarians, the Canons Regular of Coimbra, of St. John the Evangelist, the Knights of the Order of Christ and of St. James of the Sword. It was by their help that St. John of God was enabled to found his first hospital. They co-operated in the evangelization of the New World. The government of the island of San Domingo was at first confided to them. Many of them have been raised to the episcopate. 

Lupo de Olmedo introduced into this order a reformation which issued in the establishment of the Congregation of the Monk-Hermit of St. Jerome of the Observance (1424). Their manner of life resembled that of the Carthusians. Their constitutions were drawn up with extracts made from the writings of St. Jerome. The monastery of St. Jerome of l’Asella and others which existed in Spain were incorporated with the Spanish Congregation of the Hieronymites (1595); those which Lupo de Olmedo had in Italy retained their independence, and were known as the Hermits of St. Jerome of Lombardy, their general residing at San Pietro del Ospitaletto, in the Diocese of Locci. They had seventeen houses, notably that of St. Alexis on the Aventine, at Rome.

There were two other congregations at Rome under the patronage of the same Doctor of the Church: the Hermits of St. Jerome of the Congregation of Blessed Peter of Pisa, and the Hermits of St. Jerome of Fiesole. The former came into existence at Monteoliveto, near Florence, about the year 1375; Blessed Peter of Pisa, its founder, died in 1435. Its constitutions were not drawn up until 1444, and St. Pius V gave the congregation its definitive form in 1568. It was augmented by the incorporation of several eremitical groups: that of Blessed Nicola di Forusa-Palena, under the generality of Blessed Bartolommeo Malerba, after 1446; that of Pietro di Malerba (1531); that of the Hermits of Monte Legestro, near Genoa (1579), founded by Blessed Laurence; lastly the Tyrolese and the Bavarian hermits (1695). The forty houses of Italy formed the two Provinces of Ancona and Trento. The Province of Trento centred at Monastero di Sant’ Onofrio on the Janiculum. Their habitation was brown and consisted of a tunic, a hood, and a mozzarella, with a leathern girdle. Many of the congregations have been beatified—Pietro Qualcenero, Nicola di Forusa-Palena, Bartolommeo of Cesena, Filippo of Sant’ Agata, and others.

The Hermits of St. Jerome of Fiesole were founded by Blessed Charles of Montegranelli. Cosimo de’ Medici defrayed the cost of their first monastery. Innocent VII approved the congregation in 1406, and in 1441 Eugene IV gave it its definitive constitutions. They had as many as forty houses, all in Italy. The monastery of Sta. Vincent and Anastasius at Rome was served by them. But in time their numbers diminished, and Clement IX suppressed them in 1668. The other Italian Hieronymites disappeared during the troubles which followed the Revolution; those of Spain were suppressed in 1835, and those of Portugal shortly afterwards. The Order's activity work among the Jews has been confined to Spain and Portugal. Antonio Nicolis, in his “Bibliotheca Hispana nova”, vol. II, p. 314, enumerates the works of these religious, of whom some of the best-known names are: Diego de Carceros, moralist and theologian (1398); Diego de la Casa, author of a history of the persecution in England (1599); Diego de Zuniga, philosopher and exegete (about 1600); Fernando de Talavera, Bishop of Granada (1507), aseetical writer; Francisco de todos Santos, author of a history of the Escorial (1657); Garcia de Toledo, canonist (about 1560); Hermengildo de San-Pablo, the historian of his congregation (1670); Jeronimo Gasia, moralist (1652); Jeronimo of Guadalupe, a commentator on several books of the Bible (about 1600); Juan of Toledo, theologian (1662).

Hierotheus.—All attempts to establish as historical a personality corresponding to the Hierotheus who occurs in the writings of Pseudo-Dionysius are rendered abortive by the fact, now definitively proven, that those writings, with intent to mislead, weave into their narrative various fictitious personalities of the Apostolic Era, such as Peter, James, John, Timothy, Carpus, and others. Indeed the author would have betrayed himself had he been named and depicted in such
Higden

Higden outlines a real Hierothesus who lived in his own time (the end of the fifth century), and with whom he was on friendly terms. As a matter of fact, no trace of any Hierothesus resembling the portrait drawn by Dionysius can be found outside the writings of Dionysius. For want of extraneous sources, therefore, we must turn to three important passages in the work "De divinis nominibus", wherein Dionysius speaks of Hierothesus as his teacher and guide, with expressions of the deepest respect and admiration. After St. Paul it is to him he is most indebted. One passage in the "De div. nom." (iii, 2-3), taken in connexion with ii, 9-10, and iv, 15-17, gives the following descriptive details. Hierothesus is a gifted teacher for people of mature and high intelligence; he possesses a sublime knowledge of Divine things, the result, not merely of his natural keenness and zealous study, but, for the most part, of mystical insight and contemplation. Hence his method of teaching is full of profound meaning, terse, and concise. His hearers hardly dare to meet with these the beams of this intellectual sun. The writings of Hierothesus are almost as authoritative as the inspired books of the Bible. Two of his works bear the title (quite foreign to the Apostolic Era) "Outlines of Theology" (Théologikai stoicheiôs) and "Hymns of Love" (ψαλτηριω των θυμων). An excerpt of twenty-seven lines from the former work, given in Migne, vol. 131, p. 648, describes the saving and guiding power of the Logos (Θεός ὁ Ιησοῦς), in strong sympathy with the doctrines of Clement of Alexandria and Origen concerning the Logos. As though to "crown" his own disquisitions on love (ψαλτηριω), Dionysius appendes three brief quotations from the second work of Hierothesus. They treat of the definition of love and of the gradations of the powers of love (ψαλτηριω) and their reduction to the one supreme principle of love. Neo-Platonic ideas, taken for instance from Proclus (ed. Cousin, 1864; cf. "Instit. theol.", passim; "I Alb.," p. 325; "Theol. Plat.," p. 132) and others, appear throughout and merge with other thoughts developed by Dionysius himself. There is, therefore, a strong presumption that the aforesaid two works did not exist at all, and that their alleged author, Hierothesus, is identical with Dionysius. A remarkable episode from the life of Hierothesus, which is related in "De div. nom.", iii, 2, shows us the faithfulness of the Apostles with the Apostle Peter and James. Together they "many blessed brethren," gathered around the sacred body of the Mother of God, on which occasion he, kindled with supernatural inspiration, delivered a discourse whose ecstatic glow filled all with wonder. Dionysius also pretends to have been present at this "πραξις του θεου". He begins: "ος θεος οικονομησεν τον σωματον," which is described on the authority of the apocryphal accounts, "De transitu (dormitione) B. V. Marie". There is not the slightest tangible proof as to whether the author of the Dionysian writings borrowed at least a few characteristics from some member of his circle of friends, nor to what extent he did so; it is not worth while going into the manifold unfounded hypotheses as that, for instance, respecting Stephen Bar-Sudaulli. (See Dionysius the Pseudepigraph.)

JOS. STILMAYER.

Higden (Hydnon, hydne, Hikeden), Ranulf, Benedictine, chronicler; d. 1394. He was a west-country man, and was professed at the monastery of St. Werburg, Chester, in 1299. Beyond this nothing is recorded of his personal life and he is known only by his great work, the "Polychronicon", a universal history down to his own times. As it was the most complete history available during the fourteenth cen-

tury, it enjoyed great popularity during that and the following age; though even the contemporary portion, in which Higden wrote his history down to 1342, is of no remarkable value. It was translated into English by John of Treviss in 1387, and this translation was printed by Caxton in 1482, and by Wynkyn de Worde in 1495. A later translation, made early in the fifteenth century, has been published in the Rolls Series, in nine volumes. The introductions by the editors contain all available information and describe in detail most of the extant manuscripts, of which more than one hundred are known to exist. It was long believed that Higden, in compiling the "Polychronicon", had used an earlier work, the "Polycaestria Temporarum" of one Roger of Chester, ending about 1314, though Higden supplemented down to 1339, but the editors of the "Polychronicon" have almost conclusively proved that "Roger of Chester" was in reality Ranulf Higden himself, who was commonly quoted simply as "Cestrensis". The error of a scribe in substituting Roger for Ranulf easily gave rise to the mistake. Following are works written by or attributed to Higden, still remaining in manuscript: "Speculum Curatorum", written in 1340 (Balliol); "Ars Compendii Sermones" (Bodleian); "Paeiagogicon" (Sion College); "Distinctiones Theologicae" (Lambeth); Abstractus Chronicorum; "Admirator Chronicorum"; and "Rerum Britanniae et Hiberniae" by J. Rolfe. Other writings are assigned to Higden by Bale, some, like "Expositio super Job", "In Cantica Cantorium", "Sermones per annum", "Determinationes super Compendio", and "In iterum calendarii", without much probability; others are merely extracts from the "Polychronicon" in the "Polycaestria Temporarum" of Ranulf Hermeoniacus, with the English translations of John of Treviss and of an unknown author of the fifteenth century (London, 1862). See also: TURBIN, Polycaestria Temporarum, v. 1-4 (London, 1862); BABRIUS, De natura verbi (Lugduni, 1685); STIGAUX, Les manuscrits de "Polycaestria Temporarum" (Beaune, 1884); HANCOCK, Early English Sources of England (London, 1831); GNARRE, Les manuscrits de "Polycaestria Temporarum" (Lugduni, 1828); STIGAUX, Les manuscrits de "Polycaestria Temporarum" (Beaune, 1884); HANCOCK, Early English Sources of England (London, 1831); GNARRE, Les manuscrits de "Polycaestria Temporarum" (Lugduni, 1828); STIGAUX, Les manuscrits de "Polycaestria Temporarum" (Beaune, 1884).

Higgis, Joseph. See Ballarat, Diocese of.

High Altar (Altare summum of major) is so called from the fact that it is the chief altar in a church, and also because it is raised on an elevated platform in the nave and is therefore separated from a side altar or a chapel by a wall or barrier. The form is always separated from the faithful, who, as St. Ignatius (Ep. ad Antioch., 37) and Clement of Alexandria (Strom., vii, 7) inform us, were instructed by the Apostles to pray, according to the traditions of the Mosaic Law, facing the East. Hence in the early days of the Church the altar was usually placed in a chapel at the head of the edifice, the back of which, whatever may have been the character of the building, looked directly towards the East, in such a way that it could be seen from any part by the faithful. When it was impossible to erect a church in such a manner the altar was located opposite the chief doorway.

In the olden times there was but one altar in a church. The Christian Fathers speak of one altar only, and St. Ignatius (Ep. ad Philadelph., 5) refers to this practice when he says: "One altar, as there is one bishop." (Unim altare omni Ecclesice et unus Episcopos). This altar was erected in the middle of the sanctuary be-
HIGH ALTAR, THE CATHEDRAL, BURGOS
within the bishop's throne, which stood in the apse, and the communion-rail, which separated the sanctuary from the body of the church. On it Divine services were celebrated by the bishop only, assisted by the clergy, who received Holy Communion from his hands. In many churches the altar Mass is said in such a church, but in some, especially in the monasteries, the altar Mass was celebrated. This custom is still maintained throughout the East, so that the liturgical or high altar of the solemn sacrifice is isolated from what may be called the altars of devotional sacrifice on which the people are dispersed and distributed. Later on, in the time of St. Ambrose (fourth century), we find the custom of having more than one altar in a church; and St. Gregory (sixth century) evidently approves of the same by sending to Palladius, Bishop of Saintes, France, relics for four altars which, of the thirteen erected in his church, had remained unconsecrated for want of relics. After the introduction of private Masses the necessity of several or even many altars in each church arose. They were erected near the principal altar or in side chapels. The altar in the sanctuary or high chapel always remained the principal one of the church, and the pontifical services in celebration of the solemn functions in other churches invariably took place at the chief altar on Sundays, holidays, and other solemn occasions of the year.

When the custom of erecting the episcopal throne on the gospel side of the sanctuary became prevalent, the high altar was removed nearer to the wall of the apse. The object of this was that sufficient space might be allowed between the lowest step of the altar and the communion-rail (six to twelve feet) for the proper carrying out of the ceremonial, and for the accommodation of the clergy who frequently assisted in large numbers at the solemn celebration of Mass and of the Divine Offices. The high altar was erected on steps, which for symbolical reasons were usually of an uneven number—three or five, including the upper platform (predella) and the pavement of the sanctuary, thus placing it on a higher level than the body of the church, a practice which is still maintained in our churches. In parish churches the Most Blessed Sacrament is regularly kept on the high altar, which accordingly should have a tabernacle for the reservation of the Sacred Species (S. R. C., 28 Nov., 1954; 21 Aug., 1863). The prescribed ornaments are a crucifix and six high candlesticks. The high altar in a church that is to be consecrated should be a fixed altar (see ALTAR, FORM OF), which according to the prescriptions of the Roman Pontifical (h.i.) is itself to be consecrated simultaneously with the solemn dedication of the church edifice. Hence it must stand free on all sides, allowing ample room for the consecrator's movements around it. As its name indicates, the high altar, being the chief place for the enactment of the sacrificial function, is to be prominent not only by its position but also by the richness of its material and ornamentation. Apart from the liturgical part of the Mass, it serves as the repository for the Eucharistic Precious Blood. It contains the centre of all the more solemn parochial functions of the year.

Hilarion, Saint, founder of anchoritic life in Palestine; b. at Tabatha, south of Gaza, Palestine, about 291; d. in the island of Cyprus about 371. The chief source of information regarding him is the biography written by St. Jerome (P. L., XXIII, 29–54). In the introduction Jerome mentions a letter from St. Epiphanius, Archbishop of Salamis, in regard to the life of Hilarion whom Epiphanius had met and described to him. The letter is not extant. A newly discovered life has been edited by Papadopulos-Kerameus (Ἀνάληη Ἱερασομηνικὴ Σταυρολογία, V. 1889). Some special circumstances regarding Hilarion are related by the ecclesiastical historian, Sozomen, from oral traditions handed down by Hilarius and others that Sozomen's grandfather and another relative were converted to Christianity by Hilarion (Hist. Eccl., V. xvi).

Hilarion was the son of pagan parents. The date of his birth is ascertained from the statement of Jerome (Vita, c. xxv), that Hilarion, at the death of Anthony (276), was 63 years old. As a boy Hilarion's parents sent him to Alexandria to be educated in its schools. Here he became a Christian, and at the age of fifteen, attracted by the renown of the anchorite, St. Anthony, he retired to the desert. After two months of personal intercourse with the great Father and the anchorites, Hilarion renounced the ascetic life of a hermit. He returned home, divided his fortune among the poor, and then withdrew to a little hut in the desert of Majuma, near Gaza, where he led a life similar to that of St. Anthony. His clothing consisted of a hair shirt, an upper garment of skins, and a short shepherd's cloak; he fasted rigorously, not partaking of his frugal meal until after sundown, and supported himself by weaving baskets. The greater part of his time was devoted to religious exercises. Miraculous cures and exorcisms of demons which he performed spread his fame in the surrounding country, so that in 320 numerous disciples assembled round him. Many heathens were converted, and people came to seek his help and counsel in such great numbers that he could hardly find time to perform his religious duties. This induced him to bid farewell to his disciples and to return to Egypt about the year 360. Here he visited the places where St. Anthony had lived and the spot where he had died. On the journey thither, he met Dracontius and Philor, two bishops banished by the Emperor Constantius. Hilarion then went to dwell at Bruchium, near Alexandria, but hearing that Julian the Apostate had ordered his arrest, he retired to an oasis in the Libyan desert. On his return to Sicily, and after being arrested and left for dead as a hermit near the promontory of Pachinum. His disciple, Hesychius, who had long sought him, discovered him here and soon Hilarion saw himself again surrounded by disciples desirous of following his holy example.

Having Sicily, he went to Epidauros in Dalmatia, where, on the occasion of a great earthquake (366), he rendered valuable assistance to the inhabitants. Finally he went to Cyprus and there, in a lonely cave in the interior of the island, he spent his last years. It was during his sojourn in Cyprus that he became acquainted with St. Euphrosynus of Cyzicus.

Before his death which took place at the age of eighty, Hilarion bequeathed his only possession, his poor and scanty clothing, to his faithful disciple, Hesychius. His body was buried near the town of Paphos, but Hesychius secretly took it away and carried it to Majuma where the saint had lived so long. The body was greatly honored with the anchoritic life in Palestine. His feast falls on 21 October. The attempts of Israel and of other historians to relegate Hilarion to the realm of imagination have completely failed; there can be no doubt as to the historical fact of his life and the truth of his chief feasts.

HILARIUS
348

Hilarus of Sextem (in the world, Christian Gatterer), moral theologian; b. 1859, in the valley of Sexten in the Tyrol; d. 20 October, 1900. After a course of studies at Brixen, he entered the Capuchin Franciscan Order in 1858 and was ordained priest in 1862. Having laboured in parochial duties for some years, he was appointed to teach moral theology at Meran in 1872. His fame as a moral theologian soon spread beyond his own convent, and both secular and regular clergy consulted him in difficult cases, for he had a special gift in applying theoretical principles to actual facts. In 1882 he was appointed examiner of confessors for the Diocese of Trent. Even while fulfilling the office of lector, he was ever ready to work in the field of moral theology. In giving confessions he used to urge his students to bend all their efforts to win men to religion, since, he said, devout women can always find confessors. At the special command of the general of the order, he published his "Compendium Theologiae Moralis" (Meran, 1889). Later, at the request of the Congregation of Propaganda, he published "Tractatus de Sacramentis", and a "Tractatus de Censura". His somewhat original treatment of his subjects did not gain universal approval, but his works had a wide sale, especially in Germany and Austria. He also contributed many articles to the "Linzer Quartalschrift". He fulfilled many offices in his order, being at different times lector, guardian, definator, and minister-provincial. In this last office, which he filled 1889–1892, he accepted for his province of the Tyrol a missionary station in India. (Anecd. Ord. P. M. Capuc. XVI (Rome, 1890).)

FATHER CUTHBERT.

Hilarus, Saint, Pope, elected 461; the date of his death is given as 28 Feb., 468. After the death of Leo I, an archdeacon named Hilarus, a native of Sardinia, according to the "Libri Pontificales", was chosen him, and received consecration on 19 November, 461. Together with Julius, Bishop of Puteoli, Hilarus acted as legate of Leo I at the "Robber Synod" of Ephesus in 449. There he fought vigorously for the rights of the Roman See and opposed the condemnation of Flavian of Constantinople (see FLAVIAN, S. I.). He was therefore exposed to the violence of Dioscurus of Alexandria (q. v.), and saved himself by flight. In one of his letters to the Empress Pulcheria, found in a collection of the letters of Leo I ("Leonia I Epistolae", num. xlv., in P. L., LIV, 537 sq.), Hilarus apologizes for not delivering to her the pope's letter after the synod; but owing to Dioscurus, who tried to hinder his going either to Rome or to Constantinople, he had great difficulty in making his escape in order to bring to the pontiff the news of the result of the council. His pontificate was marked by the same vigorous policy as that of his great predecessor. Church affairs in Gaul and Spain claimed his special attention. Owing to political disorderization in both countries, it was important to safeguard the hierarchy by strengthening the church government. Hermes, a former archdeacon of Narbonne, had illegally acquired the bishopric of that town. Two Gallic prelates were dispatched to Rome to lay before the pope this and other matters concerning the Church in Gaul. A Roman synod held on 19 November, 462, passed judgment upon these matters, and Hilarus made known the following decisions in an Encyclical sent to the provincial bishops of Vienne, Lyons, Narbonne, and the Alps: Hermes was to resign his see as titular Bishop of Narbonne, but his episcopal faculties were withheld. A synod was to be convened by the Bishop of Arles, to examine the claim by Leontius of Arles as belonging to his jurisdiction, the Gallic bishops could decide, after an investigation. Church property could not be alienated until a synod had examined into the cause of sale. Shortly after this the pope found himself involved in another dispute. In 463 another diocesan synod of Vienne had consecrated a Bishop of Die, although this Church, by a decree of Leo I, belonged to the metropolitan Diocese of Arles. When Hilarus heard of it he deposed Leontius of Arles to summon a great synod of the bishops of several provinces to investigate the matter. The synod took place and, on the strength of the report, declaring that no consecration, he issued an edict dated 25 February, 464, in which Bishop Veranus was commissioned to warn Mamertus that, if in the future he did not refrain from irregular ordinations, his faculties would be withdrawn. Consequently the consecration of the Bishop of Die must be deposed. To prevent the clergy from acknowledging him, he published an excommunication. The material privileges of the See of Arles were upheld as Leo I had defined them. At the same time the bishops were admonished not to overstep their boundaries, and to assemble in a yearly synod presided over by the Bishop of Arles. The metropolitan rights of the See of Embrun also over the dioceses of the Maritime Alps were protected against the encroachments of a certain Bishop Auxanius, particularly in connexion with the two Churches of Nice and Cimiez.

In Spain, Silvanus, Bishop of Calahorra, had, by his episcopal ordinations, violated the church laws. Both the Metropolitan Ascanius and the bishops of the Province of Tarragona made complaint of this to the pope and asked for his decision. Before an answer came to their petition, the same bishops had recourse to the Holy See for an entirely different matter. Before his death Nudinarius, Bishop of Tarragona, died, and the Romans in whose diocese the city of Tarragona was situated were left without a elected a successor, although he had himself made Irenaeus bishop of another see. The request was granted, a Synod of Tarragona confirming the nomination of Irenaeus, after which the bishops sought the pope's approval. The Roman synod of 19 Nov., 465, took the matters up and settled them. In the oldest Roman synod whose original records have been handed down to us. It was held in the basilica of Santa Maria Maggiore. After an address of the pope, and the reading of the Spanish letters, the synod decided that the church laws must not be tampered with. In addition to this Hilarus sent a letter to the metropolitan of Tarragona as well as to the bishop of Barcelona, saying that no synod could be valid without the sanction of the Metropolitan Ascanius; and no bishop was permitted to be transferred from one diocese to another, so that some one else must be chosen for Barcelona in place of Irenaeus. The bishops consecrated by Silvanus would be recognized if they had been appointed to vacant sees, and otherwise met the requirements of the Church. The "Liber Pontificalis" mentions an Encyclical that Hilarus sent to the East, to confirm the Ecumenical Councils of Nicea, Ephesus, and Chalcedon, and the dogmatic letter of Leo I to Flavian, but the sources at our disposal furnish us no further information. In Rome Hilarus worked zealously for the integrity of the Faith. The Emperor Anthemius had a favourite named Philotheus, who was a believer in the Macedonian heresy and attended meetings in Rome for the promulgation of this doctrine, 476. On one of the emperor's
visits to St. Peter's, the pope openly called him to account for his favourite's conduct, exhorting him by the grave of St. Peter to promise that he would do all in his power to check the evil. Hilarus erected several churches and other buildings in Rome. He also endowed the oratories in the baptistery of the Lateran, in honour of St. John the Baptist, the other of St. John the Apostle, are due to him. After his flight from the "Robber Synod" of Ephesus, Hilarus had hidden himself in the crypt of St. John the Apostle, and attributed his deliverance to the intercession of the Apostle. Over the ancient doors of the oratory this inscription is still to be seen: "To St. John the Evangelist, the liberator of Bishop Hilarus, a Servant of Christ." He also erected a chapel of the Holy Cross in the baptistery, a convent, two public baths, and libraries near the church of St. Laurence Outside the Walls. He built another convent within the city walls.

The "Liber Pontificalis" mentions many votive offerings made by Hilarus in the different churches. He died after a pontificate of six years, three months, and ten days. He was buried in the church of St. Laurence Outside the Walls. His feast day is 17 November.

J. P. KIRSCH.

Hilary of Arles, SAINT, archbishop, b. about 401; d. 5 May, 449. The exact place of his birth is not known. All that may be said is that he belonged to a notable family of Northern Gaul, of which in all probability also came St. Honoratus, his predecessor in the See of Arles. Learned and rich, Hilarus had everything calculated to ensure success in the world, but he abandoned honours and riches at the urgent solicitations of Honoratus, accompanied him to the hermitage of Lérins, which the latter had founded, and gave himself up under the saint's direction to the practice of austerities and the study of Holy Scripture. When Honoratus, who had meanwhile become Archbishop of Arles, was at the point of death, Hilarus went to his side and assisted at his latest moments. But as he was about to set out on his return to Lérins he was detained by force and proclaimed archbishop in the presence of the council. In order to justify his course of action in the matter, but he was not well received by the sovereign pontiff and was obliged to return precipitately to Gaul. Several priests afterwards sent by him to Rome to explain his conduct met with no better success. Moreover, several persons who were threatened by this juncture to bring various accusations against him at the Court of Rome, whereupon the pope excommunicated Hilary, transferred the prelates of his see to that of Fréjus, and caused the proclamation by the Emperor Valentinian III of that edict of excommunication. Hilarus, however, was not removed from the epoch in which this memorable quarrel occurred, and the documents which might throw any light on it are too few to allow us to form a definitive judgment on its causes and consequences. It evidently arose from the fact that the respective rights of the Court of Rome and of the metropolitan were not sufficiently clearly established at that time, and that the right of appeal to the pope, among others, was not explicitly enough recognized. There exist a number of writings which are ascribed to St. Hilary, but they are far from being authentic. Père Quesnel collected them all in an appendix to the work in which he has published the writings of St. Leo.

Hilary of Poitiers, SAINT, Bishop, b. in that city at the beginning of the fourth century; d. there 1 November, according to the most accredited opinion, or, according to the Roman Breviary, on 13 January, according to the French Breviary, as his and very intimate family, was instructed in all the branches of profane learning, but, having also taken up the study of Holy Scripture and finding there the truth which he sought so ardently, he renounced idolatry and was baptized. Thenceforth his wide learning and his zeal for the Faith attracted the notice of his countrymen, who chose him about 350 to govern the body of the faithful which the city had possessed since the third century. We know nothing of the bishops who governed this society in the beginning. Hilary is the first concerning whom we have authentic information, and this is due to the important part he played in opposing heresy. The Church was then greatly disturbed by internal discords, the authority of the popes not being so powerful in practice as either to prevent or to stop them. Arianism had made frightful ravages in various regions and threatened to invade Gaul, where it already had numerous partisans more or less secretly affiliated with it. Saturninus, Bishop of Arles, the most active of the latter, being exposed by Hilary, convened and presided over a council at Béziers in 356 with the intention of justifying himself, or rather of establishing his false doctrine. Here the Bishop of Poitiers courageously presented himself to defend orthodoxy, sought to obtain for the Council council a citation for Hilary, and after the latter refused to hear him, and being shortly afterwards denounced to the Emperor Constantius, the protector of Arianism, he was at his command transported to the distant coasts of Phrygia.

But persecution could not subdue the valiant champion. Instead of remaining inactive during his exile he gave himself up to study, completed certain of his works which he had begun, and wrote his treatise on the synods. In this work he analysed the professions of faith uttered by the Oriental bishops in the Councils of Ancyra, Antioch, and Sirmium, and while condemning them, since they were in substance Arian, he sought to show that sometimes the difference between the doctrines of certain heretics and orthodox beliefs was rather in the words than in the ideas, which led to his counselling the bishops of the West to be reserved in their condemnation. He was sharply reproached for his indulgence by certain ardent Catholics, the leaders of whom were Julius, Bishop of Cagliari. However, in 359, the city of Seleucia witnessed the assembly in synod of a large number of Oriental bishops, nearly all of whom were either Anomoeans or Semi-Arians. Hilary, whom everyone wished to see and hear, so great was his reputation for learning and virtue, was invited to be present at this assembly. The governor of the province, who desired to finish him with post horses for the journey. In presence of the Greek fathers he set forth the doctrines
of the Gallic bishops, and easily proved that, contrary to the opinion current in the East, these latter were not Sabellians. Then he took part in the violent discussions which took place between the Semi-Arians, who inclined toward reconciliation with the Catholics, and the Anomoeans, who formed as it were the extreme left of Arianism.

After the council, which had no result beyond the wise suggestion of these brothers in enmity, he left for Constantinople, the stronghold of heresy, to continue his battle against error. But while the Semi-Arians, who were less numerous and less powerful, besought him to become the intermediary in a reconciliation between themselves and the bishops of the West, the Anomoeans, who had the advantage of being upheld by the emperor, besought the latter to send back to his own country this Gallic bishop, who, they said, sowed discord and troubled the Orient. Constantius acceded to their desire, and the exile was thus enabled to set out on his journey home. In 361 Hilary re-entered Poitiers in triumph and resumed possession of his see. He was welcomed with the liveliest joy by his flock and his brothers in the episcopate, and was visited by Martin, his former disciple and subsequently Bishop of Tours. The success he had achieved in his combat against error was more brilliant still a year afterward on the deposition of Saturninus, the Arian Bishop of Arles by whom he had been persecuted. However, as in Italy the memory still rankled of the efforts he had made to bring about a reconciliation between the nearly converted Semi-Arians and the Catholics, he went in 364 to the Bishop of Vercelli to endeavour to overcome the intolerance of the persecutors of the Bishop Lucifer mentioned above. Almost immediately afterwards, that it might be seen that, if he was full of indulgence for those whom gentleness might finally win from error, he was intractable towards those who were obstinate in their adherence to it, he went to Milan, there to assail openly Auxentius, the bishop of that city, who was a firm defender of the Arian doctrines. But the Emperor Valentinian, who protected the heretic, ordered Hilary to depart immediately from Milan.

He then returned to his city of Poitiers, from which he was not again to absent himself and where he was to die. This learned and energetic bishop had fought against error with the pen as well as in words. The best edition of his numerous and remarkable writings is published by Dom Constant under the title: "Sancti Hilarii, Pictavorum episcopi opera, ad manusc. gallicas transcripta, ad veteres editiones castigata" (Paris, 1693). The Latin Church celebrates his feast on 14 January, and Pius IX raised him to the rank of Doctor of the Universal Church. The Church of Puy glories in the supposed possession of his relics, but according to one tradition his body was borne to the church of St-Denys near Paris, while according to another it was taken from the church of St-Hilaire at Poitiers and burned by the Protestants in 1572.

HILDEBERT OF ROME. See AMBROSIASTER.

Hilda (or Hild), Saint, Abbess, b. 614; d. 680. Practically speaking, all our knowledge of St. Hilda is derived from the pages of Bede. She was the daughter of Hereric, the nephew of King Edwin of Northumbria, and she seems like her great-uncle to have become a Christian through the preaching of St. Paulinus about the year 627, when she was thirteen years old. Moved by the example of her sister Hereswith, who, after marrying Ethelfele of East Anglia, became a nun at Chelles in Gaul, Hilda also journeyed to East Anglia, intending to follow her sister abroad. But St. Aidan recalled her to her own country, and after leading a monastic life for a while on the north bank of the Wear and afterwards at Hartlepool, where she ruled a double monastery of monks and nuns with great success, Hilda eventually undertook the work of founding a new order at Streaneshalh, a place to which the Danes a century or two later gave the name of Whitby. Under the rule of St. Hilda the monastery at Whitby became very famous. The Sacred Scriptures were specially studied there, and no less than 500 copies of the Gospels of the imitators of Theodulf of Hexham, and still more St. Wilfrid, Bishop of York, rendering untold service to the Anglo-Saxon Church at this critical period of the struggle with paganism. Here, in 664, was held the important synod at which King Oswy, convinced by the arguments of St. Wilfrid, decided the observance of Easter and other matters of importance. St. Hilda herself later on seems to have sided with Theodore against Wilfrid. The fame of St. Hilda's wisdom was so great that from far and near monks and even royal personages came to consult her. Seven years before her death the saint was stricken with a bitter illness which was to one of the few she had ever suffered, for she breathed her last, but, in spite of this, she neglected none of her duties to God or to her subjects. She passed away most peacefully after receiving the Holy Viaticum, and the tolling of the monastery bell was heard miraculously at Ackness thirteen miles away, where also a devout nun named Begu saw the soul of St. Hilda borne to heaven in a white cloud. With St. Hilda is intimately connected the story of Cadmon (q. v.), the sacred bard. When he was brought before St. Hilda she admitted him to take monastic vows in her monastery, where he most piously died. The cultus of St. Hilda from an early period is attested by the inclusion of her name in the calendars of St. Willibrord, written at the beginning of the eighth century. It was alleged at a later date that the remains of St. Hilda were translated to Glastonbury by King Edmund (Malmesbury, "Gesta Pont.," 198); but this is only part of the "great Glastonbury myth" (see Stubbs, "Memorials of St. Dunstan," p. 481). Another story states that St. Edmund brought her relics to Gloucester. St. Hilda's feast seems to have been kept on 17 November. There are a dozen or more old English churches dedicated to St. Hilda on the north-east coast and South Shields is probably a case in point. The editions of Bede's Ecclesiastical History by Plummer (Oxford, 1896) and Mayor and Lumby (Cambridge, 1876) contain in the notes nearly all that is known of St. Hilda's sources. Cfr. also Stanton, English Menology (London, 1892); Arnold-Foster, Church Debates (London, 1899) II, 401; Dunbar, Dictionary of Saints Women (London, 1902); Bessant in Dict. Christ. Biog.; Venables in Dict. Nat. Biog.

HERBERT THURSTON.
cathedral of Le Mans. Henry made use of this opportunity to spread heretical and revolutionary doctrines so that Hildebrand on his return thought it necessary to banish him from the diocese of Mantes, which broke out between England and France in 1111, Hildebrand was made prisoner at Nogent and held in custody, until the end of the war in 1113. He was present at the Synod of Reims in 1119, at the First Lateran Council in 1123, and probably also at the Lateran Synod of 1124, at which the church received some of the privileges which were consecrated in 1120. In 1125 he was appointed Archbishop of Tours. In this capacity he strenuously defended the rights of the Church against the encroachments of Louis VI of France, who arrogated to himself the right to appoint an archdeacon and a chancellor of the diocese of Orléans, conflict with Bishop Balderic of Dol concerning the jurisdiction over some Breton dioceses. In October, 1127, he presided at the provincial Synod of Nantes, the decrees of which were ratified by Pope Honorius II on 20 May, 1128, at the request of Hildebrand. At this synod legislation was passed against incestuous marriages, the consecration of Holy orders upon the influence of ecclesiastics, and the obtaining of ecclesiastical beneficiaries by inheritance (see Mansi, XXX, 351-34). When the schism occurred after the death of Honorius II, Hildebrand temporarily adhered to the antipope, Anacletus II. Through the efforts of St. Bernard he was convinced and became a supporter of Innocent II. Hildebrand was learned and pious and always had the well-being of the Church at heart. Some writers call him venerable, and St. Bernard styles him a great pillar of the Church, tancta ecclesiae columna (Mabillon, "S. Bernardi opera omnia", Epistola cxxiv). Besides being one of the greatest hymnologists of the Middle Ages, Hildebrand is the author of numerous works in prose. His works were edited by the Maurist Beaudgen: "Venerabilis Hildeberti opera tam edita quam inedita", Paris, 1708, and with some additions by Bourrassé in Migne, P. L., CLXXI, 1-1453. But both of these editions are critical and contain many works that were not written by Hildebrand. The following prosa works of Hildebrand have been proved to be genuine: most of the epistles (P. L., CLXXI, 141-312); the life of Queen Radegundis (ibid., 967-88; and Acta SS., Aug., III, 83-92); the life of St. Cunegunde (P. L., CLXXI, 857-94; and Acta SS., April, III, 634-48); the zeal of the clerics Animis Dei queretions et confituntur carnis et spiritus (P. L., CLXXI, 989-1004); and four sermons. Of the poetical works at least the following are genuine: "Versus de mysterio missae" (P. L., CLXXI, 1177-90); "De operibus sex diurnis" (ibid., 1218-22); "Inscriptionum christianarum libellus" (ibid., 1281-85); "Vita Beate Marie Egyptiense" (ibid., 1321-40); likewise nos. 40, 43, 50-54, 58, 63, 64, 71, 75, 79, 106, 110, 112, 127, 130, 140 of "Carmina miscellanea" (ibid., 1381-1442); and nos. 2, 4, and 14 of "Carmina indifferentera" (ibid., 1442-48); probably also "Historia de Mebaras" (ibid., 1545-66) and many other poems and prose writings, the genuineness of which has not yet been sufficiently established.

Hildebrand See Gregor VII, Saint, Pope.

Hildegard, Saint, b. at Böckelheim on the Nahe, 10 September 1098; d. on the Rupertstein near Bingen, 1179; feast 17 September. The family name Hildegarde was given to great seers and prophets, called the Sibyl of the Rhine. The early biographers gave the first names of her parents as Hildebert and Mechtildis (or Mathildis), speak of their nobility and riches, but give no particulars of their lives. Later writers call the saint Hildegarde of Böckelheim, of Rupertstein, or Bingen. Legends would make her a Countess of Spanheim. J. May (Katholik, XXXVII, 143) shows from letters and other documents that she probably belonged to the illustrious family of Stein, whose descendants are the present Princes of Salm. Her father was a soldier in the service of Meginhard, Count of Spanheim. Hildegarde was a weak and sickly child, and in consequence received but little education at home. Her parents, though much engaged in worldly pursuits, had a religious disposition and had promised the child to the service of God. At the age of eight she was placed under the care of Jutta, sister of Count Meginhard, who lived as a recluse on the Disenberg, Mount of St. Disibod, and became the abbot of a monastery. In Spyer. Here also Hildegarde was given but little instruction, since she was much afflicted with sickness, being frequently severely ill and often deprived even of the use of her eyes. She was taught to read and sing the Latin hymns sufficing for the chanting of the Divine Office, but never learned to write. Eventually she was invested with the habit of St. Benedict and made her religious profession. Jutta died in 1136, and Hildegarde was appointed superior. Numbers of aspirants flocked to the community and she decided to go to another locality, impelled also, as she says, by a Divine command. She chose Rupertstein near Bingen on the left bank of the Rhine, about fifteen miles from Bingen. After overcoming many difficulties in obtaining the permission of the lord of the place, Count Bernard of Hildeshheim, she settled in her new home with eighteen sisters in 1147 or 1149 (1149 or 1150 according to Delahaye). Probably in 1165 she founded another convent at Eibingen on the right side of the Rhine, where a community had already been established in 1148, which, however, had no success.

The life of Hildegard as child, religious, and superior was throughout an extraordinary one. Left much to herself on account of her ill health, she led an interior life, trying to make use of everything for her own sanctification. From her earliest years she was favoured with visions. She says of herself: "Up to my fifteenth year I saw much, and related some of the things seen to others, who would inquire with astonishment, whence such things might come. I also wondered and during my sickness I asked one of my nurses whether she also saw similar things. When she answered no, a great fear befell me. Frequently, in my conversation, I would relate future things, which I saw as if present, but, notting the amazement of my listeners, I became more reticent." This condition continued to the end of her life. Jutta had noticed her gifts and made them known to a monk of the neighbouring abbey, but, it seems, nothing was done at the time. When about forty years of age Hildegard received a command to publish to the world what she saw and heard. She hesitated, dreading what people might think or say, though she herself...
was fully convinced of the Divine character of the revelations. But, continually urged, rebuked, and threatened by the inner voice, she manifested all to her spiritual director, and through him to the abbot under whose jurisdiction her community was placed. The convent was ordered to be held in writing with her and some of her nuns also frequently assisted her. The writings were submitted to the bishop (Henry, 1142–53) and clergy of Mainz, who pronounced them as coming from God. The matter was also brought to the notice of Eugene II (1145–53) who was still resident at Speyer. Then, Abbot of Chiny, Bishop of Verdun, was commissioned to investigate and made a favourable report. Hildegard continued her writings. Crowds of people flocked to her from the neighbourhood and from all parts of Germany and Gaul, to hear words of wisdom from her lips, and to receive advice and help in corporal and spiritual ailments. These were not only from the common people, but men and women of note in Church and State were drawn by the report of her wisdom and sanctity. Thus we read that Archbishop Heinrich of Mainz, Archbishop Eberhard of Salzburg, and Abbot Ludwig of St. Eucharius at Trier, paid her visits. St. Elizabeth of Schönbau was her constant companion. The prelates of the day, the emperors of the day, and the kings of the day, sought her advice. Towards the end of her life she entered into a correspondence with the Emperor Frederick II. It was not true, however, that she saw Paris or the grave of St. Martin at Tours.

In the last year of her life Hildegard had to undergo a very severe trial. In the cemetery adjoining her convent a young man was buried who had once been under excommunication. The ecclesiastical authorities of Mainz demanded that she have the body removed. She did not consider herself bound to obey, since the young man had received the last sacraments and was therefore supposed to have been reconciled to the Church. Sentence of interdict was placed on her convent by the chapter of Mainz, and the sentence was communicated to the bishop, Chur, and Limburg, also in the Abbey of Solesmes, where a proper officer is said (Brev. Monast. Tornac., 18 Sept.). When the convent on the Rupertsberg was destroyed in 1632 the relics of the saint were brought to Cologne and then to Eibingen. At the secularisation of this convent it was placed in the possession of the place. In 1857 an official recognition was made by the Bishop of Limburg and the relics were placed on an altar specially built. At this occasion the town of Eibingen chose her as patron. On 2 July, 1900, the cornerstone was laid for a new convent of St. Hildegard. The work was begun, but was not completed through the munificence of Prince Karl of Löwenstein and Benediktine nuns from St. Gabriel's at Prague entered the new home (17 Sept., 1904).

All the manuscripts found in the convent at Eibingen were in 1814 transferred to the state library at Wiesbaden. Of this collection the first and greatest work of St. Hildegard is called "Scivias" (Scire or vis Dominii, or vis tuae), parts of which had been known to the scholars of Mainz. She began it in 1141 and worked at it for ten years. It is a singular production and hard to understand, prophetic throughout and admonitory after the manner of Ezekiel and the Apocalypse. In the introduction she speaks of herself and describes the nature of her visions. She collected three books, the first containing six visions, the second containing seven; the third, double in size to the first; the third, equal in size to both the others, has thirteen visions. The "Scivias" represents God on His Holy Mountain with mankind at its base; tells of the original condition of man, his fall and redemption, the human soul and its struggles, the Holy Sacrifice of the Mass, the times to come, the son of perdition and the end of the world. The visions are interspersed with salutary admonitions to live in the fear of the Lord. Manuscripts of the "Scivias" are also at Cues and Oxford. It was printed for the first time at Paris (1513) in a book which contains also the writings of several other visions. The first complete edition was printed at Cologne in 1628, and reproduced in Migne, P. L., CXXCVII. The "Liber vitae meritorum", written between 1158 and 1163, is a picturesque description of a Christian's life of virtue and its opposite. It was printed for the first time in Pitra, "Analecta Sacra", VIII (Monte Cassino, 1882). The "Liber divinarum operum" (1163–70) is a contemplation of all nature in the light of faith. Sun, moon, and stars, the planets, the winds, animals, and man, are in her visions expressive of something supernatural and spiritual, and as they come from God should lead back to Him (Migne, loc. cit.). "Sanctiss. Mariae" (Lucca, 1761), II, 337, gives it from a manuscript lost since then. Her "Letter to the Prelates of Mainz" in regard to the interdict placed upon her convent is placed here among her works by the Wiesbaden manuscript; in others it is bound among her letters. To it the Wiesbaden manuscript annexes nine small essays: on the Creation and fall of man; God's treatment of the regenerate; on the priesthood and the Holy Eucharist; on the covenant between Christ and the Church; on the Creation and Redemption; on the duties of secular judges; on the praises of the "Vite"; the prayer for an emperor; the "Liber Epistolarum et Orationum"; the Wiesbaden manuscript contains letters to and from Eugene III, Anastasius IV, Adrian IV, and Alexander III, King Conrad III, Emperor Frederick, St. Bernard, ten archbishops, nine bishops, forty-nine abbots and provosts of monasteries or chapters, twenty-three abbesses, many priests, teachers, monks, nuns, and religious communities (P. L., loc. cit.). Pitra has many additions. L. Clarus edited them in a German translation (Ratisbon, 1854). "Vita S. Disibodi" and "Vita S. Rupertii"; these "Vite", which Hildegard claims also to be revelations, were probably made up from local traditions and, at the most, are of secondary nature. A number of other writings, of greater importance, have only legendary value. "Exposicio Evangeliorum", fifty homilies in allegory (Pitra, loc. cit.), "Lingua Ignota"; the manuscript, in eleven folios, gives a list of nine hundred words of an unknown language, mostly nouns and adjectives, a few adverbs, and a few prepositions in a German explanation, together with an unknown alphabet of twenty-three letters, printed in Pitra. A collection of seventy hymns and their melodies. A manuscript of this is also at Afflighem, printed in Roth (Wiesbaden, 1880) and in Pitra. Not only in this work, but elsewhere, Hildegard's works are marked by her intimate persuasion of a Divine mission. "Liber Simplicis Medicinae" and "Liber Composite Medicinae"; the first was edited in 1583 by
HILDESHEIM

Petrus S. Hildegardis”, Dr. Jessen (1858) found a manuscript of it in the library of Wolfenbüttel. It consists of nine books treating of plants, elements, trees, stones, fishes, birds, quadrupeds, reptiles, metals, printed in Migne as “Subtilitates scientiarum, manuscriptus originalis et historiae.” In 1859, Jessen succeeded in obtaining from Copenhagen a manuscript entitled “Hildegardis Curet Causae”, and on examination felt satisfied that it was the second medical work of the saint. It is in five books and treats of the general divisions of created things, of the human body and its ailments, of the causes, symptoms, and treatment of diseases. “38 Secreta et Questionum” are answers to questions proposed by the monks of Villars through Guibert of Gembloux on several texts of Scripture (P. L. loc. cit.). “Explanatio Regule S. Benedicti”, also called a revelation, exhibits the rule as understood and applied in those days by an intelligent and mild superior. “Explanatio Symboli S. Athanasii”, an exhortation addressed to her sisters in religion. The “Revelatio Hildegardis de Fratribus Quatuor Ordinis Mendicantum” and the other prophecies against the Mendicants, etc., are forgeries. The “Speculum futurorum temporum” is a collection of texts culled from Vida, Geben, prior of Eberbach (Pentachronicon, 1220). Some would impugn the genuineness of all her writings, among others Freger in his “Gesch. der deutschen Mystik”, 1874, but without sufficient reason. (See Hauck in “Kirchengesch. Deutschl.”, IV, 398 sqq.) His supposed communications with the Blessed Virgin through divine inspiration in the letters from popes have been proved spurious by Von Winterfeld in “Neue Archiv”, XXVII, 297.

The first biography of St. Hildegard was written by the contemporary monks Gottfried and Theodic. Guibert of Gembloux commenced another.

Acta SS., Sept., V, 679; Anell. Boll., I, 597; II, 119; Albg. de Bonn, 1890; G. H.-L. Strachwitz, Die Handschriften der kgl. landesbibliothek in Baden (Wien, 1884); Schumleer, Leben u. Wirken der hl. Hildegard (Freiburg, 1879); Rotn, Leben u. Wirken der hl. Hildegard (Freiburg, 1901).

For a brief characterization of her importance in the history of philology and the natural sciences in Germany, see Herrweg in Kirchl. Handelszt. (1908), I, 1970. He adds that a final judgment on the remarkable personality of Hildegard is possible only after a profound study of all her works, a preliminary requisite for which is a new critical edition of them. Francis Mersham.

Hildesheim, Diocese of (Hildesheimensis), an exempt see, comprising the Prussian province of Hanover east of the Weser, besides the Duchy of Brunswick-Lüneburg. Its foundation is attributed to the Pious. His father had originally selected for an episcopal see the village of Else (Alucia), but we are told by the legend that Louis was influenced by a miracle to choose the present cathedral site. He erected on this spot the first chapel in Germany dedicated to the Mother of God. The precise year in which this see was founded is not known; it was variously ascribed to different accounts from 814 to 822. The first bishop was Gunther (about 815–834). The surrounding dioceses were, on the north, Verden, on the east, Halberstadt, on the west, Minden and Paderborn, and, on the south, Mainz, of which it was suffragan. Rich donations were made to Hildesheim by some of the German kings themselves. Immunities and the prerogatives of independent jurisdiction, together with feudal sovereignty, soon brought it a large measure of prosperity and power. The period covered by the administrations of Bishops St. Bernard (983–1022), St. Eberhard (1030–1058), and St. Lothar (1059–1062), was one of special luster. To Bernard’s artistic tastes are due the famous bronze doors of the cathedral, the Christus-column, the Bernard cross, also the beautiful church of St. Michael, still preserved, the western crypt of which contains the tomb of Bernard. The Abbey of Gandersheim, renowned as the home of Hirsau, the famous Latin poetess, was the occasion of a dispute between Hildesheim and Mainz which lasted many years, but was finally settled in favour of the former. Hildesheim obtained its political independence by the severe feud with Henry the Lion.

In 1221 Bishop Conrad II, one of the strongest personalities in thirteenth-century Germany, was elected with priory of the nobles, and in 1239 the authority as territorial lord was recognized at Mainz. But he found the exercise of his ecclesiastical and territorial sovereignty restricted by the corporate independence of the town of Hildesheim, which endured until the middle of the thirteenth century (earliest municipal constitution, 1249), and by the cathedral chapter; the latter, thanks to the “Gruces” or objects of Bishop Adelig, maintained since 1179 a far-reaching right of participation in the government; the year 1216 saw the first “Wahlkapitulation”; while in 1221 all participation in the selection of a bishop was finally taken away, by the great officers, or Ministeriales, of the see. The close combination of spiritual and temporal authority meant for the bishop countless sources of disorder and of violent conflict with domestic and foreign adversaries, chief among whom were the Guelphs. The victory of Gerhard over Duke Magnus of Brunswick and his ally at Dinklage in 1237 is well known; the church and its agitation paralysed religious growth. Bishop Magnus (1424–52) having determined to restore domestic concord, entered into various treaties with neighbouring principalities and towns for the safeguarding of peace, and took up energetically the reform of internal religious life, which popes and councils had long advocated. Johannes Busch, Provost of the Augustinians, laboured efficiently for monastic reforms; and about this time the Benedictines of Bursfeld began their reformatory work in the diocese. Cardinal Nicholas of Cusa arrived at Hildesheim in 1451. But the reforms were not lasting. The old troubles of the see, war and internal feuds, broke out with greater violence than before, until at length the once flourishing see fell a victim to what is known as the “great diocesan war” (grosse Stiftsfehde). Of its eleven districts, with twenty-seven counties and twenty-one castles, only the three districts of Peine, Steuerwald, and Marienburg, the so-called “small diocese”, were left to the See of Hildesheim by the compact of Quedlinburg in 1523; the “large diocese” fell into the hands of the victorious Guelphs and the once great power of the Bishops of Hildesheim passed away. Internal conflicts prepared the way for the Reformation.

Bishop Valentine strove to strengthen the ancient Faith among his people by calling a diocesan synod in 1539, at which he promulgated a number of decrees; but in vain. In 1542 the city of Hildesheim adopted the new doctrines, and the Protestant Dukes of Brunswick introduced the Reformation into the “large diocese”. Catholicism was vigorously defended by the auxiliary bishop, Balthasar, from the pulpit of the cathedral, but the city government had recourse to measures of violence. Amid these disturbances an old man of ninety was erecting in the cathedral one of the handsomest monuments of the early German Renaissance. This was the Canon Arnold Zsig, who put up the magnificent lectern (Lettnerr) with its rich pictorial ornament. Meanwhile the see entered on the most critical period of its history, when a Lutheran prince, Duke Friedrich of Holstein, ascended the episcopal throne in 1551. His premature death saved it from total destruction (1554–1564). The Catholic successor, Burchard, the ancient Faith and the few remaining properties of the Church were preserved. The cathedral chapter, after his death, restored to the only expedient available for ensuring the stability of the see and of the Catholic religion therein, by entrusting the small diocese to a powerful ecclesiastical prince. From 1573 to 1781, with but a short interruption, the bishops were chosen from the
ducal House of Bavaria, which, in order more efficiently to combat the spread of Protestantism, kept other sees constantly under its control, among them Cologne itself. They also brought the Jesuits to Hildesheim at an early date.

By this time the Thirty Years War had brought manifold burdens and afflictions on the see. Even the cathedral chapter fell victim; in 1634, given over to the Lutheran worship by victorious enemies. The see continued to exist, however, though surrounded by Protestant territory. In 1643 the "large diocese", which had been lost in 1523, was regained, though all attempt to win back the population to the Catholic faith. This took place by the Novitiae Yearly, 1647, and the Treaty of Westphalia, i. e. what had been Protestant down to 1624 was in the future to remain so. The "large diocese" remained united to Hildesheim until, in 1803, "secularization" severed the prince's crown from the bishop's mitre, and suppressed the Catholic chapter and numerous monasteries and convents. In 1803 the see was given to Prussia as a secular principality. In 1807 it became part of the Kingdom of Westphalia under Jerome Bonaparte, and in 1813 it was incorporated with the Kingdom of Hanover. In 1824 the Bull Impensa Romanorum Pontificum a.p. gave its present form to this diocese, henceforth deprived of all temporal power, and brought within its jurisdiction all the scattered Catholic see of the Kingdom of Hanover east of the Weser. In 1834 the Duchy of Brunswick was added. The new see has an area of about 540 square miles. The true reason why it was Bishop Edward Jacob, who by his apostolic zeal and self-sacrifice accomplished great results. He was aided by the personal goodwill of King George V of Hanover, as well as by the general upward movement of the Catholic Faith in Germany.

He introduced the Franciscans and the Augustinians into the diocese, also the Sisters of Charity of St. Vincent, whom he summoned from Paderborn. The present bishop (since 1906) is Dr. Adolf Bertram. The dioce numericals (1908) 201,914 Catholics (without counting soldiers or the inmates of prisons). It is divided into 15 deaneries and contains 109 parishes, 25 Kurien, 174 churches and chapel; the clergy is composed of regular priests, and 4 Augustinians and 8 Franciscan monks. There are Ursuline nuns at Duderstadt, with 37 professed and 18 lay nuns, besides 8 novices; also Sisters of Charity of St. Vincent de Paul at Hildesheim (mother-house), with 35 establishments, numbering 305 professed nuns and 33 novices.

HILDEGARD OF HILDESHEIM (1098-1179): IDM. Georgische des Bistums Hildesheim, I (Hildesheim, 1899); IDM. Die heiligen der vorzüglichsten Zeit herausgegeben von der Dompropstei Hildesheim, II (Munich, 1899-1902). 192 sq.; NE-

HILDULF, Abbot of St-Denis, d. 22 November, 840. He was a son of a prominent Frankish family, but the time and place of his nativity are unknown. He was educated in the school of Acelin, acquired much erudition, and corresponded with Rabanus Maurus. He became his pupil and speaks of him with the highest respect. In 815 he obtained the Abbey of St-Denis near Paris; to which were added later the Abbeys of St-Germain-des-Prés, St-Médard in Soissons, and St-Ouen. Emperor Louis the Pious appointed him his archchapelain in 819, or, more probably, not until 822. He accepted to Lothair, on his accession to Rome in 824, on which occasion the latter took part in the conflict over the election of Eugene II.

Hilduin brought back with him from Rome some relics of St. Sebastian and bestowed them on the Abbey of St-Médard. In the war between Emperor Louis and his sons (830) Hilduin took the side of the latter. Thereby he lost his abbey and was banished, first to Paderborn and then to the Abbey of Corvey (near Hörter on the Weser). Abbot Warin of that abbey received him hospitably, in return for which Hilduin presented him with the relics of St. Victor, which thereupon were profoundly venerated in Corvey. No later than 831, however, Hilduin regained Louis' favour. He was reinstated in the Abbey of St-Denis, whereupon he successfully undertook a reform of that monastery. In 843 Emperor Louis commissioned him to write a biography of St. Dionysius of Paris, the emperor's particular patron saint. Hilduin executed this commission, with the aid of the pseudo-Dionysius' writings, a copy of which had been sent to the Frankish court by the Byzantine Emperor Michael II, and of other authorities (Galenus, "Areopagita", Cologne, 1633; P. L., Cle, 1326-26; CVI, 22, 30). In his "Vita" Hilduin identified Dionysius of Paris with the Areopagite Dionysius, a view not generally accepted at that time, but which Hilduin's biography popularized. Several centuries later, St. Francis of Assisi repulsed this error. Hilduin also helped to complete the Carolingian "Reichsannalen", or imperial annals.

J. P. KIRSCH.

Hill, Richard, Venerable, English Martyr, executed at Durham, 27 May, 1590. Born in Titchfield, John Hogg and Richard Holiday, except that they were Yorkshiremen who arrived at the English College at Reims, Holiday on 6 September, 1584, Hill on 15 May, 1587, and Hogg on 15 October, 1587; that all three were ordained sub-deacons at Soissons, 18 March, 1589, by Monsignor Jerome Henciquen, dean of the cathedral, and were ordained on 23 September at Laon by Monsignor Valentine Douglas, O.S. B.; that they with their fellow martyr Edmund Duke were sent on the English mission on the following 22 March and were arrested in the north of England soon after landing; that they were arraigned, convicted, executed and beheaded on 27 Eliz. c. 2. With them suffered four felons who protested that they died in the same faith.

"Divers beholders, when these martyrs were offered their pardons if they would go to church, said boldly that they would rather die themselves than go to church; one saying he had seven children. 'I would to God they might all go the same way in making such confession' . . . When their heads were cut off and held up, as the manner is, not one would say, 'God save the Queen', except the catch-poll themselves and a minister or two.' Two Protestant spectators, Robert Maire and his wife Grace, were converted. The place at which they were executed was called Dryburn, and afterwards a legend sprung up that it was so called because the well out of which the water was drawn to boil their quarters suddenly dried up. The place however had this name before their death.

Hillel (Heb. 555, "he has praise"), a famous Jewish rabbi who lived about 70 B.C. a. d. 10. Our
only source of information concerning him is the Talmud, from which the following account of Hillel’s career can be gathered. He was born in Babylonia, and was a descendant of the family of David. Although he lived in poor circumstances, his zeal for God’s Law prompted him to devote himself to its study while yet in Babylonia. Out of the same zeal, he married at the age of forty it is said, to Jerusalem, where Shemaiah and Abtalion were at the time the leading teachers. In the Holy City he hied himself as a day-labourer to earn his own living and that of his family, and also to meet the expenses of receiving instruction. He thus spent the next forty years of his life in Babylonia, and that he understood all languages, including those of the inanimate and of the brute creation, and of the demons themselves. Some time after the death of Shemaiah and Abtalion, Hillel was recognized as the best jurist of the day, and was so regarded during the last forty years of his life. He is also represented as the head of the Sanhedrin with the title of Nasi (prince), as the founder of a lenient school, in usual opposition to the stricter school of Shammai, as the author of seven hermeneutic rules, as the framer of certain decrees which happily accommodated some points of the Law to the changed circumstances, as the interpreter of the Bible, and who stood at the head of Palestinian Judaism till about the fifth century of our era. Hillel was summoned “the Great”, and also “the Elder”, and over his tomb were uttered the words “Oh gentle! Oh the pious! Oh the disciple of Ezra!” Several anecdotes illustrating his zeal for the Law and his wonderful patience are embodied in the Talmud. Among the sayings ascribed to him, the following are particularly worthy of notice: “Whatever is hateful to thee, do not unto thy fellow man: this is the whole Law; the rest is mere commentary”; “Be of the disciples of Aaron: loving peace and pursuing peace: loving mankind and bringing them near to the Torah.” It is certain that a good deal of what is contained in the Talmudic account of Hillel’s career is unhistorical; for example, the division of his life into three periods of forty years each; his presidency of the Sanhedrin; his understanding of all languages, etc. When all this has been duly deducted, we cannot help feeling that he finds himself in presence of a strong personality, of a character stamped with unusual sweetness and elevation. Again, when all Hillel’s good deeds and wise sayings are closely examined, one can readily see that he was in truth simply a rabbi, perhaps the cleverest and best of the rabbis of his day; a Jewish casuist rather than a theological writer; a man with a strong character and spiritual insight and permanent influence, cannot in any way compare with, much less equal or surpass, as some have affirmed of late, Christ, the Light, and Saviour of the World. It has been ably shown, that the Ptolemaeus referred to a few times by Josephus is Hillel under a Greek name.

Francis E. Gigot.

Hilton, Walter, Augustinian mystic, d. 24 March, 1398. Little is known of his life, save that he was the head of a house of Augustinian Canons at Thurgarton near Newark, in Nottinghamshire. He was closely in touch with the Carthusians, though not a member of that order. A man of great sanctity, his spiritual writings were widely influential during the fifteenth century in England. The most famous of these is the Scala Perfectionis, or "Ladder of Perfection", in two books, first printed by Wynkyn de Worde in 1494. This work may be described as a guide-book for the journey to the spiritual Jerusalem, which is "contemplation in perfect love of God". The soul is reformed to the image and likeness of God, first in faith only, and then in faith and in feeling. Speeded by humility and love, it passes through the mystical night, which is "analogy", or an analogizing of the soul to a withdrawing of the thought of and from earthly things by great desire and yearning for to love and see and feel Jesus and spiritual things". By the gift of love all the vices are destroyed, and the soul at length becomes a perfect lover of Jesus, "fully united to him with the softness of love" that we ascribe to the life of the soul, even as the soul is the life of the body. Purified to know his secret voice, its spiritual eyes are opened to see His workings in all things and to behold His blessed nature. Hilton's mystical system is, in the main, a simplification of that of Richard of St. Victor, and, like Richard, he humbly disclaims any personal experience of the Divine familiarity which he describes, declaring that he has not the grace of contemplation himself "in feeling and in working, as I have it in talking". The book is distinguished by beauty of thought and simplicity of expression; it is illustrated by homely, effective imagery, and, in spite of its high spirituality it is full of practical guidance. "A soul", it concludes "that is pure, stirred up by grace to use this working, may see more of such spiritual matter in an hour than can be writ in a great book." It was translated into Latin, as "Speculum Contemplationis", or "Baccellum Contemplationis", by Thomas Fyslaus, a Carmelite.

Two other treatises by Hilton were printed in 1506 and 1521, by Pynson and Henry Pecwell, respectively: "To a Devout Man in Temporal Estate", and "The Song of Angels". The former contains spiritual counsel for the guidance of a religious man of wealth and social position in the world, one of those who have gone through the mixed life, that is both active and contemplative, particular; it shows how the external works that such a one has to perform may be made acceptable to God, and a means to inflame the desire to Him and to the sight of spiritual things. The latter is more purely mystical, dealing with the Divine visitations and spiritual consolations. It is dedicated to a man of the soul on earth that is in perfect charity and purified by the fire of love. A number of other works, attributed with more or less probability to Hilton, remain still unpublished. A curious tradition, dating from manuscripts of the fifteenth century, attributes to him a treatise both in Latin and in English, a man whom the Church has called "Hus de Ecclesiastica", which is identical with the first three books of the "De Imitatione Christi". For this reason, the latter work, now almost universally assigned to Thomas à Kempis, has been frequently ascribed to Hilton. The probable explanation is that the "De Imitatione" reached England anonymously, and when translated into English was naturally attributed to the one mystical writer whose name was universally known throughout the land.

Emmund G. Gardner.

Himeria, a titular see in the province of Oseroene, suffragan of Edessa. The "Notitia" of Anastasius, in the sixth century, still mentions this see as being in that province and in the Patriarchate of Antioch.
HIMÉRIUS (called also EUMÉRIUS and COMERIUS), Archbishop of Tarragona in Spain, 835. He is the first archbishop of this province subsequent to St. Fructuoso, who died a martyr, 21 Jan., 259, whose name is commemorated to us. Nothing is known about the acts of this bishop, not even the beginning or end of his reign. He is not mentioned among those who took an active part in the Priscillian controversy of that time, nor is his name in the list of bishops who assembled (380) at Saragossa in the Province of Tarragona. Pope Siricius in his letter uses the phrase pro antiquitate sacerdotii tui, it might be inferred that Himerius was bishop long before 385; still the words may refer to his dignity as archbishop. Himerius had sent several questions to Pope Damasus, who died before their arrival. His successor, Siricius, took up the matter, and sent an answer dated 10 Feb., 385.

This answer, which is the first known papal decretal, gives solutions to the questions proposed, and orders Himerius to make known the enactments to the other churches. It forbids the rebaptizing of converts from Arianism and orders that they be received by the simple rite of baptism, without the solemnization of the bishop's hand. It forbids the conferring of solemn baptism except at Easter and Pentecost; demands that petition for baptism be made forty days previous to its reception, and that it be preceded by prayers and fasting; but enjoins the duty of giving baptism as quickly as possible to infants and others in danger of death. No one is allowed to marry a woman betrothed to another; apostates, if repentant, are to be subjected to penance for the rest of their lives, but at the hour of death they are to be reconciled. Rules are laid down for the treatment of all penitents, especially of such as had relapsed. It determines the age of thirty-five for those to be ordained priests, requiring the reception of baptism before the age of puberty and the receiving of minor orders. It permits the acolyte and subdeacon to marry once, and then with a virgin, but requires celibacy of the deacon and priest; inflicts severe penalties on the inordinate and infames monks and nuns unfaithful to their vows. The pope also expresses his earnest wish that monks known for their prudence and sanctity of life be admitted to the clergy.

HINCMAR, Archbishop of Reims; b. in 806; d. at Epernay on 21 December, 882. Descended from a distinguished family of the West Franks, he received an excellent education at the Abbey of St-Denis, under the direction of the Abbot Hilduin. When the latter came to the court of the Emperor Louis the Pious (814-842) as court chaplain, Hinmar accompanied him thither, and by actual experience became acquainted with the political as well as the ecclesiastical administration of the empire, in all its ramifications. He also followed Hilduin into banishment at Corvey, and returned with him later to St-Denis. Hinmar used his influence with the emperor on behalf of the banished abbot, and not without success: for he stood in high favour with Louis the Pious, having always been a faithful adherent of his, and his loyal champion through all his vicissitudes. After his return from Corvey, Hinmar resided for a time in St-Denis, where he pursued his studies with great zeal and success, and afterwards at the imperial court, where he was engaged in both civil and spiritual matters. In the year 840 King Charles the Bald called Hinmar into his service permanently, and from that time he was the monarch's skilful and efficient counsellor in all matters. A few years later (845) he was raised to the Archiepiscopal See of Reims at the Synod of Beauvais. Ebbo, the occupant of the vacant episcopal see, was an important see, and his death (407) took place. Diederichen (Thiouville) in 835; it is true that he had returned to Reims on the death of Louis the Pious in 840, and had again undertaken the administration of the diocese, performing many ecclesiastical functions; but in May, 841, he was again expelled, and afterwards (844), at the instance of Pope Sergius II, was admitted to lay communion only. Accordingly, on 18 April, 845, Hinmar was chosen as his successor and was consecrated at Reims on 3 May. The Emperor Lothair I, being hostile to Hinmar, induced Pope Sergius II to order a new investigation into the case of Ebbo; however, the new archbishop came out of the inquiry triumphantly, and Pope Leo IV confirmed the pallium on him.

Henceforward for nearly forty years Hinmar remained at the very centre of government, both ecclesiastical and political, in the West-Frankish Empire; he was a decisive factor in all the more important transactions, and the numerous disputes spoken of in the church history of the Franks in the second half of the ninth century for the most part centre around the person of the Metropolitan of Reims. Although Hinmar was generally recognized as archbishop, owing to his investiture with the pallium by Leo IV, his opponents, especially the Emperor Lothair I and his courtiers, still made use of the affair of Ebbo in order to ruin Hinmar. Hinmar looked upon the restoration of Ebbo in 840 as null and void, and on that account even forbade the clergy, who had been ordained by Ebbo at that period, to exercise any spiritual functions. The case was eventually brought before the Synod of Soissons, in 853. Here again the much-vaunted question of Ebbo's deposition and Hinmar's consecration was investigated; and the synod declared that the ordinations by Ebbo after his alleged restoration were null; nevertheless, of the request of King Charles the Bald, that the clergy of Reims who were again admitted to communion. Hinmar wished to receive the pope's confirmation of this decision; but Leo IV refused this favour; and it was not until 855 that his successor, Benedict III, confirmed the decree. Nicholas I renewed it in 863, adding the clause: "provided that Hinmar was in no way disobedient to the mandates of the Apostolic See."

Shortly afterwards, the pope received from various quarters reports of injustice which had been done to the above-mentioned clerics; and Charles the Bald interested himself on behalf of one of them, named Wulfad. At this time Pope Nicholas I wrote to Hinmar and to the other archbishops of France, calling upon them to arrange for a new synod, in order to examine the case once more. Soon afterwards, King Charles conferred the vacant Archiepiscopal See of Bourges upon Wulfad. The new synod was opened at Soissons, 16 August, 866. It was very much of the same character as the preceding; but, from the time that the pope restored Wulfad and his companions, enjoining them, however, to show deference and obedience to Hinmar. In his letter of 6 December, 866, the pope had spoken his mind pretty forcibly to Hinmar about his whole conduct; the latter replied in a humble letter (867) and informed the pope that he had immediately restored the clerics in ques-
tion. Another matter in which Hinimar took a leading part was the controversy about the teachings of Gottschalk (see Gottschalk of Orleans) concerning predestination. After being condemned at Mainz in 848, Gottschalk was sent to Hinimar, who kept him in his own house in Orleans. In 853 a synod took place at Quierzy, at which Gottschalk was once more condemned. Hinimar wrote a treatise on the question of predestination, and at the new Synod of Quierzy, in 853, he laid before the bishops his celebrated four chapters on the doctrine of predestination, whereupon the latter were inspired by Hinimar's views; whereupon the latter wrote his first book, *De Predestinatione* (857–8), which, however, has not come down to us.

After the great Synod of Savonieres near Toul (859), which was also attended by Hinimar, he wrote his second diffuse and prolix work on predestination. His four theses, which he also advocated before the Synod of Toucy in 860, are as follows: (1) God wills the salvation of all men; (2) the will remains free after the fall of man, but is subject to predestination; (3) Divine predestination foreordains that, out of the massa perditionis, a few shall be brought to eternal life, out of mercy; (4) Christ died for us all. After the Synod of Toucy, the predestination conflict between Hinimar and the other bishops quieted down. Still another controversy arose out of this dispute; Hinimar disagreed with the phrase *Trina Deitas*, which occurred in a hymn in the office of several martyrs, and forbade these words to be sung in his diocese. Gottschalk attacked him on this account and accused him of Sabellianism. Hinimar answered with his essay, *De una et non trina deitate*. Gottschalk did not seek reconciliation with the Church; but it is not clear whether the charge of cruelty which was brought against Hinimar by Pope Nicholas I, referred to his treatment of Gottschalk or not.

On account of the rude assertion of his metropolitan rights, Hinimar got into a quarrel with two of his suffragans, as well as with Pope Nicholas I. The Archbishop of Reims had many reasons for being dissatisfied with his suffragan Rodadarius of Soissons; and the latter in return made charges against Hinimar. Rodadarius had deposed a priest for grave reasons; whereas Hinimar had reinstalled the bishop and had him imprisoned. The matter came up for discussion at the Synod of Pistoia, in the Diocese of Rouen, in 852, and Rodadarius was deposed. He appealed to the pope, and at the same time asked his advocates at the synod to defend him. From this Hinimar concluded that the deposed bishop had abandoned his appeal to Rome and the synod (which was continued at Soissons) deposed him again. Thereupon, Nicholas I took energetic action against Hinimar, because he had slighted the appeal to the Holy See, and also because the deposition of a bishop as a *causa major* was a matter which must be brought before the pope. Hinimar took then to Rome, after having had every imaginable difficulty placed in his way, he was restored to his episcopal office by the pope in 855. Similarly Hinimar quarrelled with his nephew, Hinmar the Younger, Bishop of Laon. The Pseudo-Isidorian decretals play a large part in the latter's case, which were written in France in connexion with these disputes.

In politics, Hinimar was a strong supporter of Charles the Bald. His zeal for the defence of the rights of the Church and the furtherance of his influence led him persistently to work for a close alliance between the episcopate and the royal power in order to preserve the interests of the Church and the nobles. In the quarrel between Charles the Bald and Lothair, he used all his influence on behalf of the former. When Louis the German made his victorious march into the West Frankish kingdom in 858, Hinimar boldly opposed Louis, organized and directed the opposition of the bishops and clergy against him, and took a prominent part in the peace negotiations at Nonantula in 860. In 862 a synod was held at Reims, in which Charles king in Metz, in spite of the objections of Pope Adrian II in favour of Emperor Louis II. Hinimar on this occasion violently opposed the wishes of the pope. Afterwards differences arose between Hinimar and Charles, because the former disapproved of Charles's journey to Rome, and the crowning of Charles the Bald as emperor.

After his coronation in 875 the emperor summoned a great synod at Ponthion, which met in June, 876, and at which the papal Brief was read, appointing Ansegis, Archbishop of Sens, Vicar Apostolic of Gaul and Germany. Hinimar, the recognized champion of the Frankish bishops, attended, and nearly all the Frankish bishops made an energetic protest against this, and refused to recognize the vicar, so that the latter could not exercise the rights which had been conferred upon him. In defence of his rights as metropolitan, Hinimar wrote his treatise *De jure et potestate politicianum*; but the emperor put an end to this by his capitulation. After the death of Charles the Bald, 877, Hinimar still exercised his far-reaching influence under the succeeding Carolingian monarchs of the West Franks. He sought to prevent the decay of the kingdom. At the Synods of Troyes (878) and Fismes (881) he took a prominent part, and endeavoured to strengthen the political and religious life of the empire by several writings. Owing to an invasion of the Northmen in 882, he was obliged to retire to Epernay, where he died. Though ambitious and stern he was an energetic, learned, and able prelate. His writings (to those already mentioned must be added his "Annales" of the years 861–229) are to be found in Migne, P. L., CXXV-CXXXVI.

Hinmar, Bishop of Laon, d. 879. In the beginning of 858 the younger Hinimar, a nephew on the father's side of the young Hinimar of Reims, was elevated by his uncle's favour to the See of Laon, a suffragan of Reims. He received in addition an abbey and an office at the Court of Charles the Bald. His ambitious, overbearing, and violent disposition soon brought him into conflict not only with the king, but with his uncle and the metropolitan. To free himself from the authority of the latter he invoked the decrees of the Pseudo-Isidore. Charles the Bald took from the younger Hinimar his abbey and his court office, and sequestered the revenues of the diocese, but the latter measure aroused the protest of the elder Hinimar himself. A reconciliation took place at the Diet of Fismes in 860. Failing to get out at the Synod of Verberie and resulted in the imprisonment of Hinimar. He placed his diocese under
interdict, but this was set aside by his uncle. He appealed to Adrian II and laid before that pope severe accusations against his metropolitan and his king, based on a false statement of facts. This appeal, however, was not pursued with vigour. The complete estrangement between the two Hinermars was evident at the Councils of Coudreville and Aitilly in 872. Each of them now appealed to various canons, in order to justify his position. In spite of his renewed appeal to the pope, Hinomer of Laon was deposed at the Synod of Doucet, in 871, in punishment of his conduct towards the king and the metropolitan. But Adrian II did not sanction this step, and refused to recognize a successor. It was only in 875, when Charles the Bald was crowned emperor, that John VIII confirmed the removal of Hinemer, and that Hadunulf was consecrated Bishop of Laon. In the meantime Charles succeeded in preventing Hinemer from going to Rome, and even confined him for a while in prison, where he was deprived of his sight by a brother-in-law of the king.

When, in 878, John VIII presided in person over the Synod of Troyes, the younger Hinemer presented himself to him in writing a complaint against his uncle of Reims. The pope then mitigated his condition by allowing him to celebrate again in the Holy Sacrifice; and by granting him a portion of the revenues yielded by the See of Laon. The writings of Hinemer of Laon are in P. L., XXIV, 101–26, 1027–70.

J. P. KIRCH.

Hinderer, Roman (Chinese Te), a German missionary in China, b. at Reineking, near Mulhausen, in Alsace, 21 Sept., 1668; d. Aug. 24, 1744, at Shanghai, in Kiang-nan. On 6 September, 1688 he joined the Société des Missions étrangères de la Chine, and became a member of the German province, whence he went to China in 1707. Here Emperor Kang-hi invited him by personal request to collaborate in the great map and chart work in which the Jesuits, acting under imperial instructions, were then engaged. He laboured with de Maille and Rigaud on the mapping of the provinces of Kiang-nan, Che-chiang, and Fu-kien (cf. Du Halde, "Description de la Chine", The Hague, 1736, I, pref., xiii.; and Richthoffen, "China," Berlin, 1877, I, 982). Hinderer, however, was not only a man of science, but also a missionary who for forty years laboured as an apostle and by his zeal and efficiency achieved such conspicuous results. He was twice placed at the head of the mission as visitor. He deserves special recognition for his introduction and ardent fostering among the neophytes of the devotion to the Sacred Heart (cf. NiLLES, "De ratione festorum SS. Cordis"); 5th ed., I, 322; Lettreere, "Etude sur le Sacré-Cœur", Paris, 1891, II, 104). HUONDER, Deutsche Jesuitenmissionäre (Freiburg in Br., 1889), 188; PLATZEOI, Lebensbilder deutscher Jesuiten in Asien (Paderborn, 1882), 199–211; HERITY, Monologues de la Compagnie de Jésus (German Assis- tanc-1), I, 156, CHURCII, Vie du F. Ramon Hinderer de la Com- pagnie de Jésus, L'Apôtre du Sacré-Cœur dans l'Église de Chine (Tourmey, 1889); Welt-Bott (Vienna, 1788), nos. 669–85; cf. eight published letters of Hinderer in the Welt-Bott, nos. 161, 199, 260, 293, 548, 586; extenuated by Friedrich in his Beitrag zur Kirchengeschichte des 18 Jahrhunderels in Abendl. d. e. Aber, d. Weltkarter (Vienna), class III, vol. XII, p. 15: manuscript letter in the imperial archives at Vienna, Geistl. Angelegenheiten, no. 419, IV.

A. HUONDER.

Hinduism, in its narrower sense, is the conglomeration of religious beliefs and practices existing in India that have grown out of ancient Brahminism, (q. v.), and which stand in sharp contrast to orthodox, traditional Brahminism to-day. Hinduism is the popular, distorted, corrupted side of Brahminism. In its broad sense, it comprises those phases of religigious, social, and intellectual life that are generally recognized in India to-day as the legitimate outgrowth of ancient Brahmin institutions, and hence are tolerated by the Brahmin priests as compatible with Brahmin traditions. Far from being a uniform system of worship, Hinduism, in this large sense, comprises a complex and varied mixture of foreign and native ideas, of alien and indigenous developments of cult in honour of Vishnu, Siva, and their associates, in which for centuries the great mass of the people have found satisfaction for their religious cravings. In Hinduism, as distinguished from the heretical sects of India, it is of minor importance what sort of worship is adopted, provided one worships in the sacredness of Brahmin customs and traditions. In the pantheistic all-god Brahma, the whole world of deities, spirits, and other objects of worship is contained, so that Hinduism adapts itself to every form of religion, from the lofty monotheism of the cultivated Brahmin to the degraded nature-worship of the ignorant, half savage peasant. Hinduism, to quote Monier Williams, "has something to offer which is suited to all minds. Its very strength lies in its infinite adaptability to the infinite diversity of human characters and human tendencies. It has its highly spiritual and abstract phases and also its godless, common-sense nature-worship—its practical and concrete side suited to the man of affairs and the man of the world—its esthetic and ceremonial side suited to the man of poetic feeling and imagination—its quiescent and contemplative side suited to the man of peace and lover of seclusion. Nay, it holds out the right hand of brotherhood to nature-worshippers, demon-worshippers, animal-worshippers, tree-worshippers, fetish-worshippers. It does not scruple to permit the most grotesque forms of idolatry, and the most degrading varieties of superstition. And it is to this latter fact that yet another remarkable peculiarity of Hinduism is mainly due, namely, that in no other system in the world is the chasm more vast which separates the religion of the higher, cultured, and thoughtful classes from that of the lower, uncultured, and unthinking masses" (Brahmanism and Hinduism, 1891, p. 11). Hinduism is thus a national, not a world religion. It has never made any serious effort to penetrate its boundaries outside of India. The occasional visits of Brahmins to countries of Europe and America, and their lectures on religious metaphysics are not to be mistaken for genuine missionary enterprises. Not to speak of its grosser phases, Hinduism, even in its highest form as Brahminism, could not take root and flourish in countries where the caste system and the intricate network of social and domestic customs it implies do not prevail. Nor has Hinduism exercised any notable influence on European thought and culture. The pessimism of Schopenhauer and his school is indeed very like the pessimism of Buddhism and of the Vedanta system of philosophy, and seems to have been derived from one of these sources. But apart from this unimportant line of modern speculation, and from the abortive theosophic movement of more recent times, one finds no trace of Hindu influence on Western civilization. We have nothing to learn from India that makes for higher culture. On the other hand, India has much of value to learn from Christian civilization.

According to the census of 1901, the total population of India is a little more than 294,000,000 souls, of which 207,000,000 are adherents of Hinduism. The proportions in which they are distributed are as follows: Bengal, Bombay, Bencar, Madras, Agra, and Oudh, and the Central Provinces. Of foreign religions, Mohammedanism has, by dint of long domination, made the deepest impression on the natives, numbering in India to-day nearly 62,500,000 adherents. Christianity, considering the length of time it has been operative in India, has converted but an
insignificant fraction of the people from Hinduism. The Christians of all sects, foreign officials included, number but 2,600,000, nearly one-half being Catholics.

It was not till towards the end of the eighteenth century that Europeans—except Father de Nobili and a few other early missionaries—acquired any knowledge of Sanskrit and allied tongues in which the sacred literature of India was preserved. The extensive commerce which the English developed in Bombay and other parts of India gave occasion to English scholars to make extensive studies in this new field of oriental research. Sir William Jones was one of the first European scholars to master Sanskrit and to give translation of Sanskrit texts. He translated in 1762 one of Kalidasa's classical dramas, the "Sakuntala," and in 1794 published a translation of the "Ordinances of Manu." He founded, in 1784, the Royal Asiatic Society, destined to prove a powerful means of diffusing the knowledge of Indian literature and institutions. An able, but less famous, contemporary of Jones was Anselm Franck of Calcutta, who published a detailed dictionary of the Sanskrit language, "Kundaya," first published in 1765, became a classic in this new field of research. The collection was re-edited in 1873 by Professor E. B. Cowell, and is still a work of great value to the student of Hinduism. Other distinguished scholars of English who contributed to the knowledge of Brahminism and Hinduism were Horace H. Wilson, author of a Sanskrit dictionary and of a translation of the Vishnu Purana (1840) and other Hindu texts; John Muir, author of the great work "Original Sanskrit Texts on the Origin and History of the People of India, their Religions and Institutions" (5 vols., London, 1855-70), and Sir Monier Williams, whose work "Brahmanism and Hinduism, Religious Thought and Life in India" (4th ed., London, 1891), is a masterly exposition of Hinduism. With these may be associated Professor Max Muller, through whose exertions the most important sacred texts of India as well as of other Oriental lands have been made accessible to the English reader. He was the editor of "The Sacred Books of the East," a collection first published in 1876 by the Oxford University Press, and became the editor of the revised and enlarged edition. The contributions of Continental scholars to the knowledge of the literature and religions of India are of the greatest importance. The distinguished Orientalist Eugène Burnouf, in the midst of his studies on Buddhism and Zoroastrianism, found time to translate into French the "Bhagavata Purana" (Paris, 1846). R. Roth and F. Kuhn published studies on the early Vedic texts, while Chr. Lassen produced his "Indiske Alterthumskunde" in four volumes (Bonn, 1844-61), a monument of erudition. A. Weber, among other works in this field, published a "History of Indian Literature" (English translation, London, 1892). Eminent modern Indianists are A. Barth, author of the excellent "Religions of India" (London, 1882), H. Oldenberg, and G. Bühler, whose valuable translations of sacred texts may be found in the "Sacred Books of the East." Among those who have made valuable contributions to the study of Hinduism are a number of Catholic priests. Eminent among these are Father Paulinus, who translated the "Bhagavata Purana," and the Abbé Roussel, who was chosen to assist in completing the translation of the voluminous "Bhagavata Purana," begun by Burnouf, and who has besides published interesting studies on Hinduism; the Abbé Dubois, who published a masterly exposition of Modern Hinduism under the title "Hindu Manners, Customs and Ceremonies" (Paris, 1897). F. E. Dahmann, S.J., finally, it is but fair to note that considerable excellent work is being done by native Hindu scholars in translating and interpreting sacred Hindu texts. One of the most diligent is Nath Dutt, author of the following works: "The Mahabharata, Translated into the Sanskrit Text," Parts I-XI (Calcutta, 1895-99); "The Bhagavadgita" (Calcutta, 1893); "The Vishnu Purana Translated into English Prose" (Calcutta, 1896); F. E. Pargiter has translated into English the "Markandeya Purana," Fasc. i-vi (Calcutta, 1888-99), and E. P. C. A. Verma, besides giving an English translation of the Mahabharata (Calcutta, 1895), has translated "Sree Krishna" (Calcutta, 1901). M. Battcharya has published an interesting work entitled "Hindu Castes and Sects" (Calcutta, 1896).

Ann. du Musée Guimet (Paris, 1885); Hopkins, The Grand Epic of India, the Character and Origin (New York, 1901); India Old and New (New York, 1901); Religions of India (Boston, 1905); Mitchell, The Great Religions of India (New York, 1908); Wilkins, Modern Hinduism (2nd ed., London, 1887); Colinet, Dogmes philosophiques et religieuses de la Bhagavadgita (Paris, 1884).

Charles F. Aiken.

Hinston, Sir William Hales, Canadian physician and surgeon, b. at Hinchinbrook near Huntingdon, Quebec, June 29, 1829; d. at Montreal, 19 February, 1907. His father, a native of Ireland, was lieutenant-colonel in the Royal 100th Regiment (The Dublins) and died when his son was only eighteen months old, leaving the family in debt in an estate granted to him for military service. Young Hinston was brought up in poverty, but his mother succeeded in solving her difficulties so well as to be able to send him to the Sulpician College at Montreal. Although he had carried off a prize in every subject in his first year he had to become a drug clerk in order to earn his living. His pocket-money was spent for books in the classics. He completed his medical studies and took his M.B. at McGill University in 1851. He had nearly £100 saved, so he at once sailed on a small vessel to Edinburgh, there famous for its teaching of surgery. He became a favourite of both Simpson and Syme, and Sir James T. Simpson wanted to retain him as his assistant. Before this could be done he took his M.D. at Edinburgh, and the end of two years young Hinston had with the expenditure of a very small amount of money visited every important medical centre in Europe, attracting attention everywhere by his talent and industry. He soon acquired a large practice in Montreal, to which his self-sacrifice during the cholera epidemic greatly contributed. In 1860 he became surgeon to the Hôtel-Dieu. He was the first surgeon in America to perform a resection of a diseased elbow and several other important operations. In 1882 he became professor of clinical surgery at Victoria University, Montreal. After its union with Victoria, he occupied this chair in the Laval University at Quebec. From 1895 to 1901 he was chief surgeon of Montreal and was re-elected by acclamation, but declined a third term. For the wise discharge of his duties he received the thanks of Governor-General Dufferin. He became an acknowledged leader of American surgery and delivered the address on surgery in America before the British Medical Association in 1891. In 1869 he was knighted, and in 1889 was elected to the Senate of Canada. In 1895 he became the Knight Commander of the Order of St. Gregory the Great, Leu XIII conferred on him the Cross "Pro Ecclesia et Pontifice," and he received honorary degrees.
from four universities. In 1886 he published "The Climate of Canada and its Relation to Health". (The American Journal (March, 1907); The Canadian Messenger (April, 1907).

JAMES J. WALSH.

Hippo Diarrhytus (or Hippo Zarrhytus), a titular see of Northern Africa, now called Bizerta, originally a Tyrrhenian colony. The name of the town probably comes from the canal that traversed the city. It was captured, fortified, and a new harbour opened by Agathocles (310–307 B.C.); later it supported the mercenary armies against Carthage, and became a Roman colony in the early days of the Empire. In 1535 of the Christian era it submitted to the protectors of Spain, but soon cast this off; it was bombarded by the French in 1770, and by the Venetians in 1785. Since its occupation by the French (1822) Bizerta (in Arabic Bit-Za'ran, a corruption of Hippo Zarrhytus) has been the chief town of an administrative district. Of its 18,000 inhabitants 2600 are French, and 6000 Italians. Bizerta has important fortifications, possesses a good trade, and its fisheries are famous. The canal is wide enough to allow men-of-war to enter the lake (the Sisara Lacus of the ancients). St. RESTITUTA, a martyr under Diocletian, was born there; her feast is kept on 15 May. St. Augustine often prayed at the town when at Hippo Diarrhytus in the Florentia, Margaretia, and St. Quadratus basilicas. The names of six of its bishops, between 255 and 646, are known; the first of them, Petrus, is, in some documents, styled a martyr.

S. PÉTRIDÈS.

Hippo Regius, a titular see of Numidia, now a part of the residential see of Constantine (q.v.). Hippo was a Tyrrhenian colony on the west coast of the bay to which it gave its name (Hippoponensis Sinus); the surname Regius was bestowed on it as one of the places where the Numidian kings resided. Later it became a Roman colonia and prospered until A.D. 430, when it was taken by the Vandals. The Arabs rebuilt the town in the seventh century. It contains some ancient ruins, a hospital built by the Little Sisters of the Poor, and a fine basilica dedicated to St. Augustine. About two miles distant the Arabs in the fourth century established the town of Beleb-el-Anab, which the Spaniards occupied for some years in the sixteenth century, as the French did later, in the reign of Louis XIV. France took this town again in 1832. It is now called Bone or Bona, and is one of the government centres for the department of Constantine in Algeria. It has 37,000 inhabitants, of whom 15,700 are French, 10,500 foreigners, mostly Italians, 9,400 Mussulmans, and 1,400 naturalized Jews. The situation of the town is very pleasing, the climate agreeable in winter, but humid in summer. Its trade is good and the harbour serves as an export station for all the rich inland country among them Sta. Theogunus and Fidentinus, martyrs, St. Leontius Valerius, who ordained St. Augustine, and the great "Doctor of Grace", Augustine himself (395–28 August, 430). Under St. Augustine there were at least three monasteries in the diocese besides the episcopal monastery. Three councils were held at Hippo (293, 395, 426).

SMITH, Dict. of Greek and Roman Geog., s. v.; GAMA, Series Episcoporum (Ratisbon, 1873).

S. PÉTRIDÈS.

Hippolytus, SAINTS, MARTYRS.—I. HIPPOLYTUS OF ROME, presbyter and antipope, date of birth unknown; d. about 236. Until the publication in 1851 of the recently discovered "Philosophumenon", it was impossible to obtain any definite authentic facts concerning Hippolytus of Rome and his life from the conflicting statements about him, as follows: (1) Eusebius says that he was bishop of a church somewhere and was no presbyter several of his writings (Hist. eccl., VI, xx, 22), (2) St. Jerome likewise describes him as the bishop of an unknown see, gives a longer list of his writings, and says of one of his homilies that he delivered it in the presence of St. Origen, to whom he made direct reference (De viris illustribus, cap. 133). The Chronicon Paschale (III, 384), in the list of popes, mentions Bishop Pontianus and the presbyter Hippolytus as being banished to the island of Sardinia in the year 235; the Roman Calendar in the same collection records under 13 August the feast of Hippolytus on the Via Tiburtina and Pontianus in the catacombs of St. Callistus, see in "Mon. Germ. Hist. : auctores antiquissimi", IX, 72, 74. (4) According to the inscription over the grave of Hippolytus composed by Pope Damasus, he was a follower of the Novatian schism while a presbyter, but before his death exorted his followers to become reconciled with the Catholic Church (I.4.5. "Damasii epigrammata", Leipsig, 1895, 24, n. 37). (5) Prudentius wrote a hymn on the martyr Hippolytus ("Peristephanon", hymn XI, in P. L., LX, 530 sqq.), in which he places the scene of the martyrdom at Ostia or Porto, and describes Hippolytus as being torn to pieces by wild horses, evidently a reminiscence of the ancient legend of the Roman epic hero Titus Quirinius. (6) Some Greek authors (e.g. Georgius Syncellus, ed. Bonn, 1829, 674 sqq.; Nicephorus Callistus, "Hist. eccl.", IV, xxxi) do not give much more information than Eusebius and Jerome; some of them call him Bishop of Rome, others Bishop of Porto. According to Photius (Bibliotheca, codex 121), he was a disciple of St. Irenæus. Oriental writers, as well as Pope Gelasius, place the See of Hippolytus at Bostra, the chief city of the Arabs. (7) Several later legends of martyrs speak of Hippolytus in various connections. That of St. Laurence refers to him as the officer appointed to guard the blessed deacon, who was converted together with his entire household, and killed by wild horses (Acta SS., August, III, 13–14; Surius, "De probatis Sanctorum historiis", IV, Cologne, 1573, 581 sqq.). A legend of Porto identifies him with the martyr Nonnus and gives an account of his martyrdom with others of the same city (Acta SS., August, IV, 506; P. G., X, 545–48). (8) A monument of considerable importance is the large fragment of a marble statue of the saint discovered in 1551 which underwent restoration (the upper part of the body and the head being new), and is now preserved in the Lateran museum; the procesal cycle computed by Hippolytus and a list of his writings are engraved on the sides of the column of the pedestal on which the figure of Hippolytus is seated; the monument dates from the third century (Krauss, "Realencyclöpädie der christlichen Altertümere", I, 661 sqq.). (9) The topographies of the graves of the Roman martyrs place the grave of Hippolytus in the cemetery on the Via Tiburtina, near the basilica erected there, and give some legendary details concerning him. (D. De Rossi, "Roma sotterranea", I, 178–79); the burial vault of the sainted confessors was unearthed by De Rossi (Bullettin di archeologia cristiana, 1882, 9–76). The discovery of the "Philosophumenon", has made it possible to date the most important period of the life of St. Hippolytus through his own evidence, and at the same time to test and correct the conflicting accounts contained in the old authorities. We proceed on the assumption that Hippolytus was really the author of the aforesaid work, an hypothesis almost universally accepted by investigators.

Hippolytus was a presbyter of the Church of Rome at the beginning of the third century. There is no difficulty in admitting that he could have been a disciple of St. Irenæus either in Rome or Lyons. It is
equally possible that Origen heard a homily by Hippolytus. When he went to Rome about the year 212. In the time of Pope Zephyrinus (198–217) he came into conflict with the schismatics on the pontificate of that church, and the Church of Rome, primarily on account of the christological opinions which for some time had been causing controversies in Rome. Hippolytus had combated the heresy of Theodotion and the Alogi; in like fashion he opposed the false doctrine of Novatus of Carthage, and of Sabinus of Cirta, who emphasized the unity of God too one-sidedly (Monarchians) and saw in the concepts of the Father and the Son merely manifestations (modi) of the Divine Nature (Modalism, Sabellianism). Hippolytus, on the contrary, stood uncompromisingly for a real distinction between the Father and the Son. Hippolytus, but so as to represent the Father as a Divine Person almost completely separate from God (Ditheism) and at the same time altogether subordinate to the Father (Subordinationism). As the heresy in the doctrine of the Modalists was not at first clearly apparent, Pope Zephyrinus declined to give a decision. For his mentioned list of antipopes, representing him as an incompetent man, unworthy to rule the Church of Rome, and as a tool in the hands of the ambitious and intriguing deacon Callistus, whose early life was maliciously depicted (Philosophumenon, IX, xxii, viii). Consequently when Callistus was elected pope (217), he had only been privy to the fact that Hippolytus immediately left the communion of the Roman Church and had himself elected antipope by his small band of followers. These he calls the Catholic Church and himself successor to the Apostles, terming the great majority of Roman Christians the School of Callistus. He accuses Callistus of having fallen first into the heresy of Theodotus, then into that of Sabinus; also of having through avarice degraded ecclesiastical, and especially the penitential, discipline to a disgraceful laxity. These reproaches were altogether unjustified. Hippolytus himself advocated an excessive rigorism. He continued in opposition as antipope throughout the reign of the two immediate successors of Callistus, Urban (222 or 223 to 230) and Pontius (230–35), and during this period, probably during the pontificate of Pontianus, he wrote the "Philosophumenon." He was banished to the unhealthful island of Lesbos and later to the same island Pontianus; and shortly before this or soon afterward, he became reconciled with the legitimate bishop and the Church of Rome. For, after both exiles had died on the island of Sardinia, their mortal remains were brought back to Rome on the same day, 13 August (either 236 or one of the following years), and solemnly interred. Pontianus in the papal vault in the catacomb of Callistus and Hippolytus in a spot on the Via Tiburtina. Both were equally revered as martyrs by the Roman Church: certain proof that Hippolytus had made his peace with that Church before his death. With his death the schism must have come to a speedy end, for accounts for its identification with the Novatian schism at the end of the fourth century, as we learn from the inscription by Damasus.

The fact that Hippolytus was a schismatic Bishop of Rome and yet was held in high honour afterwards both as martyr and theologian, explains why as early as the fourth century nothing was known as to his see, for he was not on the list of the Roman bishops. The theory championed by Lightfoot (see below), that he was actually Bishop of Porto but with his official residence in Rome, is untenable.

This statement, made by a few authorities, results from a mistaken interpretation of a martyrdom account from a legendary account of his martyrdom. Moreover the De Rossi's hypothesis, based on the inscription by Damasus, that Hippolytus returned from exile, and subsequently became an adherent of Novatian, his reconciliation with the Roman Church not being effected until just before his martyrdom under the Emperor Valerian (255–60), is incompatible with the position that he is the same person as the "Philosophumenon." The feast of St. Hippolytus is kept on 13 August, a date assigned in accordance with the legend of St. Laurence; that of Hippolytus of Porto is celebrated on 22 August.

Hippolytus was the most important theologian and the most prolific of Greek writers of the Roman Church in the pre-Constantinian era. Nevertheless the fate of his copious literary remains has been unfortunate. Most of his works have been lost or are known only through scattered fragments, while much has survived only in oral translations into Oriental and Slavic tongues; other works are only briefly listed (Logos); and the fact that the author wrote in Greek made it inevitable that later, when that language was no longer understood in Rome, the Romans lost interest in his writings, while in the East they were read long after and made the author famous. His works deal with several branches of theology, as appears from the above-mentioned list of books, and make clear that the most important of these are extant only in fragments. The commentary on the Canticle of Canticles, however, has been translated into Greek and Armenian; see the "Philosophumenon", ed. Bonwetsch, 1897, 343 sqq.; likewise the fullest extant commentary on the Book of Daniel in 4 books (ibid., 2 sqq.). Eight of his works, known by their titles, dealt with dogmatic and apologetic subjects, but only one has come down entire in the original Greek. This is the work on Christ and Antichrist ("De Antichristo", ed. Achelis, op. cit., I, II, 1 sqq.); fragments of a few others have been preserved. Of his polemics against heretics the most important is the "Philosophumenon", the original title of which is αριστερα παραδοσις (A Refutation of All Heresies). The first book had long been known; books IV to X, which had been discovered a short time previously, were published in 1851. But the first chapters of the fourth and the whole of the second and third books are still missing. The first four books treat of the Hellenic philosophers; books V to IX are taken up with the refutation and refutation of Christian heresies; and the last book is an attempted recapitulation. The work is one of the most important sources for the history of the heresies which disturbed the early Church. Origen is cited in some manuscripts as the author of the first book. Photius attributes it to the Roman author Caicus (q. v.), while by others it has been ascribed also to Tertullian and Novatian. But most modern scholars hold for weighty reasons that Hippolytus is undoubtedly its author. A shorter treatise against heresies (Syntagma), and written by Hippolytus at an earlier date, may be restored in outline from later adaptations (Libellus adversus omnes haereses; Epiphanus, "Panarion"; Philastrius, "De haeresibus"). He wrote a third anti-heretical work which was universal in character, called the "Small Labyrinth." Besides these Hippolytus wrote special monographs against Marcion, the Montanists, the Alogi, and Caicus. Of these writings only a few fragments are extant. Hippolytus also produced an Easter cycle, as well as a chronicle of the world which was made use of by later chroniclers. And finally St. Jerome mentions a work by him on Church laws. Three treatises on canon law have been preserved under the name of Hippolytus: the "Constitutio" per Hippolytum (which are called with the eighth book of the Apostolic Constitutions), the Egyptian Church Ordinance, in Coptic, and the "Canones Hippolyti". Of these works the first two are spurious beyond doubt, and the last, the authenticity of which was upheld even by Achelis.
Hippia (Tyros, Hippus) a titular see of Palestine Secunda, suffragan of Scythopolis. It was a town of the Decapolis, 30 stadia from Gadara, and the same distance from Tiberias. The district of Hippona, in which it was situated, touched the boundaries of the districts of these two towns. The Talmud refers to it under the Semitic form Sussith, which means "horse", just as the Greek word does. Josephus mentions it (Antiq., XIV, viii, XVII, xxxii, etc.) and speaks of it (Bell. Jud., II) as one of the eastern frontier towns of Galilee. Eusebius says that it was near Aphrodis, the modern name of which is Pik. It is also mentioned by Eusebius and by George of the fourth century, by John of Damascus in the seventh. Conquered by the Macedonian conqueror Alexander I. (106-79 b.c.), according to the chronicle of Georgius Synnullos, the town was taken from the Jews by Pompey. Augustus gave it to Herod the Great (Josephus, Antiq., XIV, viii), after whose death it became part of the province of Syria.

In the time of Christ it was a semi-pagan town. At the beginning of the war with Rome the Jews sacked it, and in revenge the inhabitants expelled all Jews. It opened its gates to Vespasian, and prospered under the Roman and Byzantine Emperors. Its coins form a series dating from Nero to Commodus. Greek learning was honoured there, as is testified by an inscription discovered by Clermont-Ganneau (Études d'archéologie orientale, I, 142). Lequien (Oriens Christ., III, 709-12) and Gams (Series Episcoporum, 464) mention three bishops of Hippia between the fourth and sixth centuries: Peter, present at the Councils of Antioch (368) and of Seleucia (380); Conon, who in 518 subscribed to the synodal letters sent by John of Jerusalem to John of Constantineople concerning Severus of Antioch; Theodore, present at the Council of Jerusalem (555). The abbot Hierarchia Catholica, I, 258, mentions six Latin bishops of Hippos at the end of the fourteenth and beginning of the fifteenth centuries. The most probable opinion identifies Hippos with the modern Kaf al-Hus, which realizes all the known topographical data. It is situated on the side of the Wadi-Fik, on one of the eastern hills that run along the lake and the Jordan, opposite Tiberias. Many ruins are found there; one broad central street seems to have been lined with columns, and there are ruins of a pagan temple, a Christian basilica, and broken pieces of columns and capitals. The neighbouring village Susieh seems to be built under an Arab form the old Semitic name Susitha.

S. SALAVILLE.
HIRSCHAU

Hirschau, Abbey of, a celebrated Benedictine monastery in Württemberg, Diocese of Spires, about twenty-two miles west of Stuttgart. It was founded in 830 by Erlasfrid, Count of Calw, at the suggestion of his son, Noting, Bishop of Vercelli, who wished to enrich his native country with the relics of St. Aurelius, whom he had made bishop. Erlasfrid brought them from Italy to Calw. They were first placed in the oratory of St. Nazarius at Calw, while the monastery of Hirschau was being built. When it was ready sixteen monks came from Fulda to form the new community, one of them, named Lutpert, being made archbishop. Count Erlasfrid endowed the monastery with lands and other gifts, and made a solemn donation of the whole into the hands of Lutpert, on condition that the Benedictine Rule should be observed there. The abbey church, dedicated to St. Peter, was not completed until 838, in which year it was consecrated by Othgar, Archbishop of Mainz, who at the same time solemnly translated the body of St. Aurelius from its temporary resting-place to the new church. Abbot Lutpert died in 853, having brought about a substantial increase both in the possessions of the abbey and in the number of the monks under his rule. Regular observance flourished under him. After his death the abbey declined. In 988 a severe plague devastated the neighbourhood and carried off sixty of the monks including the abbont, Hartfried. Only a dozen were left to elect a successor, and they divided into two parties. The more fervent chose one Conrad, whose election was confirmed by the Bishop of Speyer, but some of the others, who favoured a more relaxed rule, elected an opposition abbont in the person of Eberhard, the cellarer. For some time the dispute raged between the rival superiors and their respective followers. The Count of Calw supported the claim of his brother and kept the peace as long as he was able, but when the Count died, Hartfried and the monks of Hirschau forced Abbot Conrad to retire. The result was that the abbey was pillaged, the monks dispersed, and the valuable library destroyed. The count became master of the property and the abbey remained empty for over sixty years, during which time the buildings fell into a ruinous state. In 1049 Leo IX, brother (or, as some say, uncle) of Count Adalbert, and grandson of the spoliator, came to Calw, and required Adalbert to restore the abbey. This he did, but so slowly that it was not ready for occupation until 1065, when it was procured by German merchants. The celebrated Swiss Abbey of Einsiedeln, with Abbot Frederick at their head. It was, however, his successor who revived and even surpassed the former renown and prosperity of the abbey. This was the famous William of Hirschau, a monk of St. Emmeram's at Ratisbon, who was called to the abbey in 1092. When he came the condition of the monastery was far from satisfactory. The buildings were still incomplete, Count Adalbert still retained possession of some of the monastic property, together with a certain amount of harmful influence over the community, and religious discipline was very much relaxed. Abbot William's zeal and prudence by degrees remedied this evil state of affairs and inaugurated a period of great prosperity, both spiritual and temporal. He secured the independence of the abbey and placed its finances in a satisfactory condition; he completed the buildings already begun and afterwards greatly added to them, and the monastery required; and he re-founded the monastic school for which the abbey had formerly been famous throughout Germany. But his greatest work, perhaps, and that for which his name is best remembered, was the relaxation that he effected within the community itself. As a result thereto and thither Abbot William sent some of his monks to learn the customs and rule of that celebrated house, and on their return the Cluniac discipline was introduced at Hirschau.

The abbot then wrote his well-known "Conscuetudines Hirsugienenses" (P. L., CL, and Herrgott, "Vetus Disciplina Monastica"), which for several centuries remained the standard of monastic observances. Numerous commentaries and explanations of the monastery on the same lines, and from it seven new monasteries were founded by Abbot William. The numbers of the community increased to 150 under his rule, manual labour and the copying of manuscripts forming an important part of their occupation. Numerous donations and grants were obtained from time to time from emperors and popes. In the twelfth century the autocratic rule of Abbot Manegold caused for a time some internal dissensions, loss of fraternal charity, and consequent decline of strict discipline, but the vigorous efforts of several worthy abbots checked the decadence, and temporarily re-established the stricter observance. In the fifteenth century, however, the famous "Customs" had gradually become almost a dead letter, and Wolfram, the thirty-eighth abbott (1428-1460), introduced a reform modelled upon that of the Austrian Abbey of Melk. This lasted only for a few years, but later, when the thirteenth abbott, Dietrich of Bursfeld was united to that congregation. Abbot Wolfram's successor, Bernhard, carried on the good work, freed the abbey from its debts, restored the monastic buildings, and also reformed several other monasteries. In the days of Abbot John III (1514-50) Hirschau fell on evil times; the Protestant Reformation began to make its influence felt, and after a brief period of struggle, the abbey, through the concurrence of Duke Ulrich of Württemberg, passed into Lutheran hands, though still maintaining its monastic character. In 1630 it became Catholic again for a time, but after the Peace of Westphalia (1648) it once more came under the control of the Dukes of Württemberg and another series of Lutheran abbots presided over it. The community eventually came to an end and the once famous Abbey of Hirschau was finally destroyed by the French under Melac in 1692. Only a few ruins now remain to mark its site. The history of Hirschau up to the year 1503 is fully related by Trithemius, the celebrated Abbot of Spanheim, who had access to its archives before they were dispersed. Besides the "Customs" already referred to, William of Hirschau left a treatise "De Musica et Tonis" (translated by Gerbert, "Script. Eccles."); and also by Migne, P., CL).

TRITHEMIUS, Chronicon Hirsugienense (St. Gall, 1690); MARILLO, Annales O.S.B. (Paris, 1703-39); III, IV; IUREM, Acta SS. O.S.B. (Venice, 1733); SCHRÖTER, Colta CHRISTIANA (Paris, 1731); V; MIGNE, Dict. des Abbayes (Paris, 1854); HEILTON, Dict. des Ordres Religieux (Paris, 1863); BRAUNMÜLLER in Kirchenlexikon, s. v.; GRETMACHER in Realencyclopädie (Leipzig, 1900); HAPFNER in Studien Mitt.-Bist.-Cist. (Raiern, 1891-5).

G. CYPRIAN ALSTON.

HIRSCHER, JOHANN BAPTIST VON, b. 20 January, 1788, at Alt-Ergarten, Ravensburg; d. 4 September, 1865. He studied at Weisshau monastery school, the lyceum of Constance, and the University of Freiburg. Ordained priest in 1819, he was for two years curate of St. Peter at Röblingen; in 1812 he became a tutor in the theological faculty of Ellwangen; and in 1814 assistant professor of philosophy at the Ellwangen lyceum. In 1817 he was elected to the chair of moral and pastoral theology in Tübingen University, where he remained for twenty years. He was one of the first to introduce moral theology and catechetics at the University of Freiburg in the Breisgau, where, for a quarter of a century, he exerted a very great influence. He was made a canon in 1839, and dean of the chapter in 1850; after 1847 he was often sent as delegate of the univ. to the First Chapter of the Grand Ducal of Baden. His advanced age forced him to cease teaching in the summer of 1863.
Hirscher exerted a great influence in the domain of moral theology, homiletics, and catechetics. His book on Christian morality, published in 1835, ran through five editions. He defined Christian morality as the scientific doctrine of the effective return of man to the Divine filiation, through the merits of Christ. In the early editions some of the expressions and opinions of Hirscher to the infirmities of the deviant are not entirely orthodox. His book marked a reaction against rationalistic morality. Hirscher, always eager to dwell on religious truth, closely traced the moral act to a religious origin and a religious end. The text of his book, with all its defects, was not in sympathy with his spirit.

In homiletics, also, Hirscher's books marked a reaction against the half-rationalistic books of meditation written by the Swiss Zachokke, which were then widely read. Hirscher drew a distinction between false Aufklärung, which is purely negative and confined to combating superstition, and true Aufklärung, which is the process by which the Gospel is communicated on the Gospels of Lent (1829), on the Gospels of each Sunday (1837), and on the Epistles of each Sunday. To this field of Hirscher's activity belong his "Geschichte Jesu Christi, des Sohnes Gottes und Weltreliebendes" (1839); his "Erfüllungen über die geistliche Religion der Gegenwart" (1848), which led to the development of Hettinger's vocation as an apologist; his "Leben der seligen Jungfrau und Gottesmutter Maria" (1854); his "Haupttakte des christlichen Glaubens" (1857).

His work on catechetics, published in 1840, was followed, in 1842, by a catechism, which was introduced in the schools of Freiburg and gave rise to lively discussions. To defend his catechism, Hirscher published "Zur Verständigung über den von mir bearbeiteten und demnächst erscheinenden Katechismus der christkatholischen Religion" (1842), and "Nachträge zur Verständigung" (1843). When eighty years of age, he published a brochure entitled "Besorgnisse hinsichtlich der Zweckmäßigkeit unseres Religionsunterrichts" (1863). He regarded the catechism as the history of the Kingdom of God. The first two books treat of God, the Creation, and the Redemption; the third, of the individualization of the Kingdom of God; the fourth, of the Kingdom of God within and without us, that is to say, of justication, sanctification, and the Church; the sixth book treats of the Kingdom of God in the other life. Kleutgen criticized Hirscher for insisting too exclusively on the work of education that God works within us, and neglecting to emphasize the gratuitous creation of the new man by grace. However, such as it was, Hirscher's catechetical work, with Alban Stolz's commentaries on it, helped to advance the teaching of religion in Germany.

Hirscher's ideas on the reform of the Church were more orthodox and open to suspicion. At a young age he had written a work on the Mass entitled "De genuina misse notione", in which the idea of the sacrifice was relegate to the background, and was put on the Index. Later he was blamed for never having formally retracted the book; he answered that at least he had held quite orthodox the doctrine of the Mass, but later he retracted publicly his earlier teachings. Nevertheless a number of Catholics were not reassured, and when in 1842 and the following years there was question of appointing Hirscher coadjutor of Freiburg, the historian Hurter and his friend, Baron de Rinc, raised a cry of alarm. The "Schweizerische Kirchenzeitung" and the "Freiburger Stimm" accused Hirscher of being an enemy of Rome and everything Roman, of dreaming of a German national Church, of opposing celibacy, the Breviary, and ecclesiastical discipline with regard to mixed marriages, of preventing the Freiburg theological review from attacking his benefactor Wessenberg, of being of the friend of the Baden Liberals. Hirscher replied in the "Revue Sion" (30 November, 1840) and Seiler, dean of the University of Freiburg, defended himself in his book "Hirscher und seine Ankläger". But Rinc continued to write to the effect that if Hirscher were accepted as bishop there would be a worse schism than that of Ronge, and when the Government of Württemberg wanted to have Hirscher appointed coadjutor to the Bishop of Rottenburg. Rinc dissolved this project and it seemed that the suspicions were confirmed by the pamphlets Hirscher published in 1849, on the social condition of the present day and the Church, "Die socialen Zustände der Gegenwart", and on the present state of religion, "Die kirchliche Zustände der Gegenwart". These pamphlets created a profound sensation, for in them Hirscher showed himself hostile to the Catholic Associations' movement, which gave birth to the first general Congress of the German Catholics at Mainz, in 1848; he feared that the movement might lead to imprudent demonstrations by the Catholics. He was accused of being an unprincipled politician and favoured a synodal organization in which the laity would be represented, and which should be periodically convened by the bishops and presided over by them.

Finally he showed himself opposed to the preaching of missions in villages. Several of the bishops were aroused, and attention was drawn to the opinions in Hirscher's pamphlets that had been condemned already by Pius VI in his Constitution "Auctorem fidei". The canonist Phillips, the future Bishop Fessler, and Fathers Amberger of Ratibon and Heinrich of Mainz refuted Hirscher. He was condemned by the Congregation of the Index and went to the Holy See, with sincerity, for which Hettinger praises him; but he defended himself against his adversaries in another brochure. In 1854 Hirscher was hostile to the definition of the Immaculate Conception, though he was not opposed to the dogma itself; in 1862 after collaborating with Döllinger in drawing up the programme of the famous congress of Catholic scientists to be held at Munich, the following year, he quietly withdrew, judging that the time was not ripe for such a meeting.

In the First Chamber of the Baden Diet Hirscher fought vigorously for the liberties of the Church. In 1848 he proposed that the Church and state be separated. He was asked to employ "every means to preserve genuine Christianity, active and living, among all classes of society, especially among the young". In 1850 he asked that the grand duke should attend to the wants of the Church, and that he should grant without delay the establishment of three or four private seminaries, where future clerics should be trained during the time of their gymnasia studies. In November, 1853, he drew up the address by which the chapter of Freiburg allied itself with Archbishop Vicari in his struggle against the bureaucracy of the State, and defended Vicari in his brochure "Gegen die Orientierung über den derzeitigen Kirchenstreit" (1854).

Hirscher was an excellent priest whom many of his contemporaries, according to the testimony of Canon Lennig, venerated as a patriarch, and for whom Mgr. Orbin, who died Archbishop of Freiburg, had a real devotion. He aroused some enthusiasm; the "Gesellschaft der Heimatfreunde" awarded him the annual prize of 700 florins. Towards the Catholic revival in Germany, collaborated with Hirscher, with whom he spent an evening each week, and on one occasion wrote a vehement letter to a bishop who had forbidden his theologians to study at Freiburg, for fear of their falling under the influence of Hirscher; he asserted even that at first he had placed the writings of Hirscher above those of the
Fathers. Hirscher's misfortune was to have known too little of Christian antiquity and especially of the Middle Ages. What he criticized under the name of Scholasticism in 1829, had already appeared in 1523, on the relation of the Greeks with Scholastic theology, was the foreordained subject of a handbook more impregnated with the philosophy of Wolf than with that of St. Thomas. Finally, the sometimes too bitter attacks of which he was the object prevented the diffusion of certain of his ideas which would have been dangerous; but, on the other hand, the expression of his exalted pietas, his personal influence, the purity of his intentions, the ardor he displayed in his defense of Vicari, the part he played in the religious awakening in Baden, recognized by the "Historisch-politische Blätter" in 1854, won for Hirscher the gratitude of German Catholics.

GEORGES GOTAU.

HISTORY, ECCLESIASTICAL.—I. NATURE AND OFFICE—Ecclesiastical history is the scientific investigation and the methodical description of the temporal development of the Church considered as an institution founded by Jesus Christ and guided by the Holy Ghost for the salvation of mankind. In a general way the subject matter of history is everything that suffers change owing to its existence in this world: more properly, the genetical or natural development of facts, events, situations, that history contemplates. The principal subject of history is man, since the external changes in his life affect closely his intellectual interests. Objectively speaking, history is the genetical development of the mind and of human life itself in its various aspects, as it comes before us in series of facts, whether these pertain to individuals, or to the whole human race, or to any of its various groups. Viewed subjectively, history is the apperception and description of this development, and, in the scientific sense, the comprehension of the same with the aid of methodical and systematic manner. The history of mankind may have as many divisions as human life has aspects or sides. Its noblest form is the history of religion, as it developed in the past among the different groups of the human race. Reason shows that there can be only one true religion, based on the true knowledge and the proper worship of the one God. Thanks to the light of revelation we know that this one true religion is the Christian religion, and, since there are different forms of the Christian religion, that the true religion in particular is the one known as Catholic, concrete and visible in the Catholic Church.

The historical view of Christianity, the proper history of the Catholic Church, is the most important and edifying part of the history of religion. Furthermore, the history of religion is necessarily a history of religious associations, since the specifically human, that is, moral—therefore religious—life, is necessarily characterized by religious institutions. Therefore, aims naturally at some form of social organization, Christianity all the more so, since it is the highest and most perfect religion. There are three stages in the formation of religious associations:

(1) The religious associations of pagans, i.e. of those who have and had no clear knowledge of the one true God. Among them every group religion coincides with nationality and lives independently of the religious association is closely connected or rather wholly bound up with the civil order, and is, like the latter, essentially particularistic. (2) The religious community of the Jews. Although this also was closely connected with the theocratic government of the people, and hence particularistic and confined to one nation, it was still the custodian of Divine revelation. (3) Christianity, which contains the fullness or perfection of Divine revelation, made known to mankind by the Son of God Himself. In it are realized all the religious factors of paganism in Judaism. By its very nature it is universal, destined for all men and all ages. It differs profoundly from all other organizations, lives its own independent life, possesses in its fullness all religious truth, and, in opposition to the Jewish religion, recognizes the spirit of love as its highest principle, and penetrates and comprehends the whole spiritual life of man. Its cult is at once the sublime and purest form of Divine worship. It is in every sense without a peer among human associations. The annals of Christianity in its widest sense are occasionally dated from the creation of man, seeing that a Divine revelation was made to him from the beginning. However, since the facts of history do not exceed this momentous period, in so far as they prepared mankind for the coming of Christ, and are a necessary elucidation of those factors which influenced the historical development of Christianity. (See LAW, NATURAL, MORAL, DIVINE; GOD.)

The external historical form of Christianity, viewed as the religious association of all the faithful who believe in Christ, is the Church. As the institution which the Son of God founded for the realization on earth of the Kingdom of God and for the sanctification of man, the Church has a double element, the Divine and the human. The Divine element comprises all the truths of Faith which her Founder entrusted to her—His legislation and the fundamental principles of her organization as an institute destined for the guidance of the faithful, the practice of Divine worship, and the guardianship of all the means by which man receives and sustains his supernatural life (see THE DIVINE INSTRUMENTS; Government of the Church). The Church appears in the manner in which the Divine element manifests itself with the co-operation of the human free will and under the influence of earthly factors. The Divine element is unchangeable, and, strictly speaking, does not fall within the scope of history; the human element can in the other hand be subject to change and development, and it is owing to it that the Church has a history. Change appears first of all by reason of the extension of the Church throughout the world since its foundation. During this expansion various influences revealed themselves, partly from within the Church, partly from without, in the co-operation or in the opposition of Christianity. The Church was either hindered or advanced. The inner life of the Christian religion is influenced by various factors: moral earnestness, for example, and a serious realization of the aims of the Church on the part of Christians promote the attainment of her interests; on the other hand, when a worldly and immoral Church, having immoral influence many of her members, the Church's action is gravely impeded. Consequently although the teaching of the Church is in itself, as to its material content, unchangeable considered as supernatural revelation, there is still room for a formal development of our scientific and moral faculties. The development of the ecclesiastical hierarchy and constitution, of the worship of the Church, of the legislation and
discipline which regulate the relations between the members of the Church and maintain order, offers not a few changes which are a proper subject for histori- cal investigation.

You must take a position to grasp the scope of ecclesiastical history. It consists in the scientific investigation and methodical treatment of the life of the Church in all its manifestations from the beginning of its existence to our own day among the various divisions of mankind hitherto reached by Christianity. While the Church remains essentially the same despite the changes which it undergoes in time, these changes help to exhibit more fully her internal and external life. As to the latter, ecclesiastical history makes known in detail the local and temporal expansion or restriction of the Church in the various countries, and indicates the factors influencing the same (History of Missions, in the widest sense), also the attitude which individual states or political bodies and other religious associations assume towards her (History of Ecclesiastical Polity, of Heresies and their Refutation, and of the Relations of the Church with Non-Catholic Religious Associations).

If we turn to the internal life of the Church, we shall find in its development the origin of the development of ecclesiastical teaching, based on the original supernatural deposit of faith (History of Dogma, of Ecclesiastical Theology, and Ecclesiastical Sciences in general), of the development of ecclesiastical worship in its various forms (History of Liturgy), of the internal structure of the Church, especially in connexion with worship (History of Ecclesiastical Art), of the forms of ecclesiastical government and the exercise of ecclesiastical functions (History of the Hierarchy, of the Constitution and Law of the Church), of the different ways of cultivating the perfect religious life (History of Religious Orders), of the manifestations of religious life and sentiment among the people, and of the disciplinary rules whereby Christian morality is cultivated and preserved and the faithful are sanctified (History of Discipline, Religious Life, Christian Civilization).

II. Method and Characteristics.—The ecclesiastical historian must apply the principles and general rules of the historical method exactly and in their entirety, and must accept at their proper value all facts which have been proved to be certain. The cornerstone of all historical science is the careful establishment of facts. The ecclesiastical historian will accomplish this with a firm knowledge of the sources. An objective, reasonable, and unbiased interpretation of the sources, based on the laws of criticism, is the first principle of the true method of ecclesiastical history. Systematic instruction in this field is obtained through the historical sciences usually known as auxiliary or introductory, i.e., paleography, diplomatics, and criticism.

Secondly, in discussing the facts, ecclesiastical history must ascertain and explain the relation of cause and effect in the events. It is not sufficient merely to establish a certain series of events in their objective existence; the historian must lay bare their causes and effects. Nor does it suffice to consider only those factors which lie on the surface and are suggested by the events themselves, as it were: the internal, deeper, and real causes must be brought to light. As in the physical world there is no effect without an adequate cause, so too in the spiritual and moral world every phenomenon has its particular cause, and is in turn the cause of other phenomena. In the ethical and religious world the facts are the concrete realization or outcome of definite spiritual ideas and forces, not only in the life of the individual, but in that of groups and associations. Individuals and groups without exception are members of the one human race created for a sublime destiny beyond this mortal life. Thus, the action of the individual exercises its influence on the development of the whole human race, and this is true in a special manner of the religious life. Ecclesiastical history must therefore give us an insight into this moral and religious life, and lay clearly before us the development of the ideas above therein, as they are set forth in the individual and in the groups of the human race. Moreover, to discover fully the really decisive causes of a given event, the historian must take into account all the forces that concur in producing it. This is particularly true of the free will of man, a consideration of great importance in forming a judgment in the individual belief of phenomena. It is not sufficient to hold that the influence of given individuals on the development of the whole body must be properly appreciated. Moreover, the ideas once current in religious, social, and political spheres, and which often survive in the masses of the people, must be justly appreciated, for they help, though as a rule imperceptibly, to determine the voluntary acts of individuals, and thereby to prepare the way for the work of especially prominent persons, and thus make possible the influence of individuals upon the whole race. Scientific church history must therefore take into consideration both the individual and the general influence of the religious generation, and the outward phenomena, at the same time never losing sight of the freedom of man's will. The ecclesiastical historian, moreover, can by no means exclude the possibility of supernatural factors. That God cannot intervene in the course of nature, and that miracles are therefore impossible is an assumption which has been and cannot be proved, and which makes a correct appreciation of facts in their objective reality impossible. Herein appears the difference between the standpoint of the believing Christian historian, who bears in mind not only the existence of God but also the relations of creatures to Him, and that of the rationalist and infidel historian, who rejects even the possibility of Divine intervention in the course of natural law.

The same difference of principle appears in the teleological appreciation of the several phenomena and their causal connexion. The believing ecclesiastical historian is not satisfied with establishing the facts and ascertaining the internal relation of cause and effect; he also estimates the value and importance of the events in their relation to the object of the Church, whose sole Christ-given aim is to realize the Divine economy of salvation for the individual as well as for the whole race and its particular groups. This ideal is one which is realized with equal intensity at all times. External causes often exercised great influence. In his judgment on such events, the Christian historian keeps in view the fact that the founder of the Church is the Son of God, and that the Church was instituted by Him in order to communicate to the whole human race, with the assistance of the Holy Spirit, the salvation through Christ. It is from this standpoint that the Christian historian estimates all particular events in their relation to the end or purpose of the Church. The unbelieving historian on the other hand, recognizing only natural forces both at the origin and throughout the development of the Christian Church, objecting the possibility of any supernatural intervention is incapable of appreciating the work of the Church in as far as it is the agent of Divine design.

The foregoing considerations enable us also to understand in what sense ecclesiastical history should be pragmatical. The ecclesiastical historian applies first that philosophical method by which the genus of the ideas which underlie or are embodied in them. But to this must be added theological pragmatism, which takes its stand on supernatural revealed truth and strives to reconcile the ideas of God and His providence, and thus to trace (as far as it is possible for the created mind) the eternal purpose of God as it manifests itself in time. The Catholic historian in-
HISTORY 367  HISTORY

sists on the supernatural character of the Church, its doctrines, institutions, and standards of life, in so far as they rest on Divine revelation, and acknowledge the continual guidance of the Church by the Holy Ghost. All this is for him objective reality, certain truth, and the only foundation for the true, scientific pragmatism of ecclesiastical history. This view does not hinder or weaken, but rather guides and confirms the natural historical understanding of events, as well as the traditional, investigational and treatment. It also includes full recognition and use of the scientific historical method. As a matter of fact, the history of the Church exhibits most clearly a special guidance and providence of God.

A final characteristic, which ecclesiastical history has in common with every other species of history, is impartiality. This consists in freedom from every unguarded and personal prejudice against persons or facts, in an honest willingness to acknowledge the truth as conscientious investigation has revealed it, and to describe the facts or events as they were in reality; in the words of Cicero, to assert no falsehood and to hide no truth (qui falsa dicere nequit et veri dicere non audeat, “De Oratore” II, i, 15). It by no means consists in setting aside those supernatural truths which we have come to know, or in stripping off all religious convictions. To demand from the ecclesiastical historian an absence of all antecedent views is unreasonable, it is reasonable, but an offense against historical objectivity. It could be maintained only on the hypothesis “ignoramus et ignorabimus”, that is that the end of scientific investigation is not the discovery of truth, but merely the seeking after truth without ever finding it. Such a hypothesis, however, it is quite impossible to defend, for the assertion of sceptics and rationalists that supernatural truth, or even plain objective truth of any kind, is beyond our reach, is itself an antecedent hypothesis upon which the unbelieving historian bases his investigations. It is therefore only a simulated impartiality, which the rationalistic historian displays when he presides entirely from religion and the supernatural character of the Church.

III. Division.—The rich and abundant material for scientific investigation that the long life of the Church offers us, has been variously treated by historians. With the investigation the greater and more universal nature, in which the entire temporal development of the Church is taken into account (Universal Ecclesiastical History); alongside of these works we find numerous researches on individuals and particular institutions of the Church (Special Ecclesiastical History). These particular investigations treat either of the internal or external life of the Church, as has been explained at length above, and thus lead to a distinction between internal and external history. There are, however, many works which must consider both phases of religious life: to this class belong not only works on church history in general, but also many whose scope is defined to the history of missions, e.g. Histories of the Popes). Special ecclesiastical history falls naturally into three main classes. First we meet with accounts of the lives and activity of individuals (Biographies), who were during their lifetime of special importance for the life of the Church. Moreover special ecclesiastical history treats of particular parts and divisions of the Church in such a manner that either the whole history of a given part is discussed or only selected features of the same. Thus we have historical descriptions of single countries or parts of them, e.g. dioceses, parishes, monasteries, churches. To it also belongs the history of missions, a subject of far-reaching importance. Finally, after a selection of special subjects from the entire mass of material (especially the internal history of the Church), these are separately investigated and treated. Thus we have the history of the popes, of cardinals, of councils, collections of the lives and legends of the saints, the history of orders and congregations; also of patrology, dogma, liturgy, worship, the law, constitutions, and social institutions of the Church.

IV. Universal History of the Church.—The office of universal ecclesiastical history is, as its name implies, to exhibit a well-balanced description of all phases of ecclesiastical life. The investigation and treatment of the various phenomena in the life of the Church furnish the material of which universal church history is built. It must first treat of the one true Church which from the time of the Apostles, by its uninterrupted existence and its unique attributes, has proved itself that Christian association which is alone in full possession of revealed truth: the Catholic Church. It must moreover, deal with those other religious associations which claim to be the Church of Christ, but in reality originated through separation from the true Church. The Catholic historian does not admit that the various forms of the Christian religion may be taken, roughly speaking, as a connected whole, nor does he consider them one and all as so imperfect attempts to adapt the teaching and institutions of Christ to the changing needs of the times, nor as progressive steps towards a future higher unity wherein alone we must seek the perfect ideal of Christianity. There is but one Divine revelation given us by Christ, but one ecclesiastical tradition handed on to it; hence in the Church there can be but one, i.e. the Church in which the aforesaid revelation is found in its entirety, and whose institutions have developed on the basis of this revelation and under the guidance of the Holy Spirit. To assume equality among the various forms of the Christian religions would be equivalent to a denial of the Divine origin and supernatural character of the Church.

While, however, the Catholic Church is the central subject of universal ecclesiastical history, all other forms of the Christian religion must also be considered by it, for they originated by secession from the true Church, and their founders, in so far as each form can be traced back to a founder, were externally members of the Church. Some of these separated bodies still retain among their institutions certain ecclesiastical forms which were in common use at the time of their separation from the Church, wherefore a knowledge of these is of little use to students of ecclesiastical conditions previous to the separation. This is true in a special manner of the Oriental Christian communities, their liturgy and discipline (see Eastern Churches). Moreover, such schismatic bodies became, as a rule, the bitterest enemies of the Church; they harassed and persecuted its converts and endeavoured in every way to induce them also to secede. New doctrinal discussions arose as a result of these secessions, ending usually in fuller and more exact statements of Christian teaching, and new methods had to be adopted to nullify the attacks made by apostates on the Catholic Faith. In this way non-Catholic communions have often indirectly influenced the development of the inner life of the Church and the growth of new institutions.

The vast material which, from these points of view, a universal history of the Church must treat, calls for of course for methodical arrangement. Ecclesiastical history has generally been divided into three chief periods, each of which is subdivided into shorter epochs characterized by changes of a less universal nature.

First Period: The foundation of the Church and the development of fixed standards of ecclesiastical life within the limits of Greco-Roman civilization. In this period the geographical extent of the Church is practically confined to the Mediterranean lands of the Roman empire. Only in a few places, especially in the Orient, did she overstep its boundaries. The uniform and universal Greco-Roman civilization there
prevailing was a propitious soil for the growth of the new ecclesiastical life, which displays three main phases.

1. The foundation of the Church by the Apostles, those few but all-important years in which the messengers of God's Kingdom, chosen by Christ Himself, laid out the ground-plan for all subsequent development of the Church (Apostolic Epoch).

2. The expansion and internal formation of the Church amid more or less violent but ever persistent attacks on the part of the Roman government (Epoch of Persecutions). In the different provinces of the Roman Empire, and in the East even beyond its confines, Christian communities sprang into life guided originally by those who had been pointed out by the Apostles and who continued their work. Insignificant at first, these communities increased steadily in membership despite the equally steady opposition of the Roman government and its sanguinary attempts at repression. It was then that the ecclesiastical hierarchy, worship, the religious life assumed fixed forms that conditioned all later development.

3. The third epoch is characterized by a close union between Church and State, by the consequent privileged position of the clergy and the complete conversion of the Roman state (The Christian Empire). Heresies regarding the person of the Incarnate Son of God, differences in the front, important modifications in political institutions. The first great councils belong to this epoch, as well as the rich ecclesiastico-theological literature of Christian antiquity. Meanwhile the ecclesiastical hierarchy and administration are developed more fully, the primacy of Rome standing out conspicuously as in the preceding epoch. Monasticism introduced a new and important factor into the life of the Church. The fine arts place themselves at the service of the Church. In the eastern half of the empire, later known as the Byzantine empire, this development went on quite undisturbed; in the West the barbarian invasion changed radically the political conditions, and imposed on the Church the urgent and important task of converting and educating new Western nations, a task which she executed with great success. This brought a new element into the life of the Church, so important that it marks the beginning of a new period.

Second Period: The Church as mistress and guide of the new Romanic, German, and Slavic states of Europe, the accession of Oriental Christendom from ecclesiastical unity and the final overthrow of the Byzantine empire. In this period occurred events which for a considerable time greatly affected ecclesiastical life. Three phases suggest themselves.

1. The first centuries of this epoch are characterized by the development of a close union between the papacy and the new Western society and by the falling away of the Orient from the centre of ecclesiastical unity at Rome. The Church carried out the great work of civilizing the barbarian nations of Europe. Her activity was consequently very many-sided, and she gained a far-reaching influence not only on religious, but also on political and social life. In this respect the creation of the Western Empire and its relations with the pope as the head of the Church were characteristic of the position of the medieval Church. A deep decline, it is true, followed this alliance of the popes with the Carolingians. This decline was manifest not only at Rome, the centre of the Church, where the factious Roman aristocracy used the popes as political tools, but also in different parts of the West. Through the intervention of the German emperors the internal slide was arrested, and the same time the influence of the secular power on the government of the Church grew dangerous and insupportable. The action of Photius, the Patriarch of Constantinople, led to a rupture with Rome, which was destined to become final.

2. A second part of this period shows how the Christian West grew into the great fellowship of the peoples under the spiritual guidance of religious authority. Popular life everywhere reflects this Christian universalism. In the conflict with the secular power, the popes succeeded in carrying through ecclesiastical reforms, and at the same time set afoot in the West the great movement of the Crusades. All public interests centres of gravity in the ecclesiastical officials. Nobles and commonalty, filled with the spirit of faith, furthered vigorously through powerful associations the aims of the Church. The papacy rose to the zenith of its power, not only in the religious, but also in the temporal domain. New orders, particularly the mendicants, flocked to the Church in the excited life of the rank of society. The universities became the centre of a notable intellectual activity, devoted for the most part to the development of theology. The building of magnificent churches was undertaken in the cities and was an evidence at once of the religious zeal and the vigorous self-confidence of the inhabitants. This powerful position of the Church and her representatives entailed, nevertheless, many dangers, arising on the one hand from the increasing worldliness of the hierarchy, and on the other from the opposition to an excessive centralization of ecclesiastical government in the papal curia, and the antagonism of princes and rulers to a portion of the ecclesiastical superiors, particularly the popes.

3. In consequence a third epoch of this period is filled with reaction against the evils of the preceding time, and with the evil results of widespread worldliness in the Church and the decline of sincerely religious life. It is true that the papacy won a famous victory in its conflict with the German Hohenstaufen, but it soon fell under the influence of the French kings, suffered a grievous loss of authority through the Western Schism and had difficulty at the time of the reform councils (Constance, Pisa, Basle) in stemming a strong anti-papal tide. Furthermore, the civil authority grew more fully conscious of itself, more secular in temper, and frequently hostile to the Church; civil encroachments on the ecclesiastical domain multiplied. In general, the spheres of spiritual and secular authority, the rights of the Church and those of the State, were not definitely outlined until after many conflicts, for the most part to the detriment of the Church. The Renaissance introduced a new and secular element into intellectual life; it dethroned from their supremacy the long dominant ecclesiastical studies, disseminated widely pagan and materialistic ideas, and opposed its own methods to those of scholasticism, which had in many quarters degenerated into empty formalisms. The heresies took on a more general character. The call for "reform of head and members", so loudly voiced in the councils of those days, seemed to justify the growing opposition to ecclesiastical authority. In the councils themselves a false constitutionalism continued for the supreme administration of the Church with the immemorial papal primacy. So many painful phenomena suggest the presence of great abuses in the religious life of the West. Simultaneously, the Byzantine Empire was completely overthrown by the Turks, Islam gained a strong foothold in south-eastern Europe and threatened the entire Christian West. Herein the two Western nations and the reformation from within of the ecclesiastical life accomplished during the conflict against the latest of the great heresies.—Innumerable geographical expansion of the Church owing to the zealous activity of her missionaries through whom native adherents in Asia and Africa, were gained for the Catholic Faith. In this period, also, which reaches to our own time, we rightly discern several shorter epochs during which ecclesiastical life is characterized by peculiar and distinctive traits and phenomena.
The civil life of the various Western peoples was no longer regarded as identified with the life and aims of the Universal Church. Protestantism cut off whole nations, especially in Central and Northern Europe, from the unity and solidarity which made them into one Church which has not yet terminated. On the other hand, the faithful adherents of the Church were more closely united, while the great Ecumenical Council of Trent laid a firm foundation for a thorough reformation in the inner or domestic life of the Church, which still continued through the activity of ongoing deviations (especially the Jesuits) and through an extraordinary series of great saints. The popes again devoted themselves exclusively to their religious mission and took up the Catholic reforms with great energy. The newly discovered countries of the West, and the new revolutions between Europe and the Eastern nations aroused in many missionaries a very active zeal for the conversion of the pagan world. The efforts of these messengers of the Faith were crowned with such success that the Church was in some measure compensated for the defection in Europe. The seventeenth epoch shows again a decline of ecclesiastical influence, a considerable time elapsed. Since the middle of the seventeenth century, there exist three great religious associations: the true Catholic Church; the Greek schismatic church, which found a powerful protector in Russia, together with the smaller schismatic churches of the East; Protestantism, which, however, has been annihilated, or at least religious persecution, but split up constantly into numerous sects, accepted the direct supremacy of the secular power, and was by the latter organized in each land as a national church. The growing absolutism of states and princes was in this way strongly furthered. In Catholic countries also the princes tried to use the Church as an "instrumentum regni", and to weaken as much as possible the influence of the papacy. Public life lost steadily its former salutary contact with a universal and powerful religion. Moreover, a thoroughly infidel philosophy now leveled its attacks against Christian revelation in general. Protestantism rapidly begot a race of unbelievers and shallow free-thinkers who spread on all sides a superficial skepticism. The political issue of so many fatal influences was the French Revolution, which in turn inflicted the severest injuries on ecclesiastical life. The new constitutional state based on principles of the broadest political liberty. Although in the first decades of the nineteenth century the Church was often hampered in her work by the downfall of the old political system, she nevertheless secured liberty under the new national popular government, fully developed her own religious energies, and in most countries was able to exhibit an upward movement in every sphere of religious life. Great popes guided this advance with a strong hand despite the loss of their secular power. The Ecumenical Council of the Vatican, by defining papal infallibility, supported with firmness ecclesiastical life so that a false separation of the Old Catholics was relatively unimportant. While Protestantism is the daily prey of infidelity and loses steadily all claim to be considered a religion based on Divine revelation, the Catholic Church appears in its compact unity as the true guardian of the unadulterated deposit of faith, which its Divine Founder originally entrusted to it. The conflict is ever more active between the Church, as the champion of supernatural revelation, and infidelity, which aims at supremacy in public life, politics, the sciences, literature, and art. The non-European countries begin to play an important role in the world, and point to new fields of ecclesiastical activity. The Catholic faithful have increased so rapidly during the last century, and the importance of several non-European countries on ecclesiastical life has taken on such proportions, that the universal history of the Church is becoming more and more a religious history of the world. The great turning-points in the historical development of the Church do not appear suddenly or without cause. As a rule, certain events occurring within the shorter periods bring about eventually a change of universal import for the life of the Church, and compel us to recognize the arrival of a new period. Naturally, between these prominent turning-points there are shorter or longer intervals of transition, so that the chief periods set down by different ecclesiastical historians, according to the importance which they severally attach to one or the other of the aforesaid momentous events or situations. The division between the first and second periods has its justification in the fact that, owing to the downfall of the Western Roman Empire and to the relations between the Church and the new Western nations, essentially new forms of life were called into being, while in the East Byzantine culture had become firmly established. The turning-point between the old and the new state of things did not, however, immediately follow the conversion of the Teutons; it was not till the age of Charlemagne (800), and, especially, the beginning of the seventh century as the close of the first period; others (Deinlein, von Hefele, Knöpffer, Dersed, or Alzog, Hegenrotscher, von Funk) the Trullan synod of 692, or the end of the seventh century; others again close the first period with St. Boniface (Ritter, Niedner), or with the Iconoclasts (Cheseler, Moehler), or with Charlemagne (Hefele, Hase, Weingarten). For the West Kraus regards the beginning of the seventh century as the close of the first period; for the East, the end of the same century. Speaking generally, however, it seems more reasonable to accept the end of the seventh century as the close of the first period. Similarly, along the line of division between the second and the third periods are crowded events of great importance to ecclesiastical life: the Renaissance with its influence upon all intellectual life, the conquest of Constantinople by the Turks, the discovery of America and the new problems which the Church had to solve in consequence, the appearance of Luther and the heretical movement. The Council of Trent with its decisive influence on the interior life of the Church. Protestant historians regard the appearance of Luther as the beginning of the third period. A few Catholic authors (e.g. Kraus) close the second period with the middle of the fifteenth century; it is to be noted, however, that the new historical factors in the life of the Church which condition the third period become prominent only after the Council of Trent, itself an important result of Protestantism. It seems, therefore, advisable to regard the beginning of the sixteenth century as the commencement of the third period. Thus do authors of different views arrive at one common point of departure which are to be inserted within the chief periods. It is true that the conversion of Constantine the Great affected the life of the Church so profoundly that the reign of this first Christian emperor is generally accepted as marking a sub-division in the first period. In the second period, especially prominent personalities usually mark the limits of the several sub-divisions, e.g. Charlemagne, Gregory VII, Boniface VIII, though this leads to the undervaluation of other important factors e.g. the Greek Schism, the Crusades. Recent writers, therefore, assume other boundary lines which emphasize the forces active in the life of the Church rather than personalities. In spite of dividing the third period the same difficulty presents itself. Many historians consider the French Revolution at the end of the eighteenth century as an event
of sufficient importance to demand a new epoch; others, more reasonably perhaps, see a distinct epochal line in the Treaty of Westphalia (1648), with which the formation of great Protestant territories can fairly be connected. From the latter point of view, we can deduce the following chronological arrangement of general ecclesiastical history:

First Period: Origin and Development of the Church in the ancient Greek-Roman world (from the birth of Christ to the close of the seventh century). (A) First Epoch: From Creation, expansion, and foundation of the Church despite the oppression of the pagan-Roman state (from Christ to the Edict of Milan, 313). (B) Second Epoch: The Church in close connexion with the Christian-Roman Empire (from the Edict of Milan to the Trullan Synod, 692).

Second Period: The Church on the clear guide of the Western nations (from the close of the seventh century to the beginning of the sixteenth). (A) First Epoch: The popes in alliance with the Carolingians, decadence of religious life in the West, isolation of the Byzantine Church and its final rupture with Rome (Trullan Synod, 692). (B) Second Epoch: Reform of ecclesiastical life through the popes, the Crusades, flourishing of religious life and sciences, ascme of the ecclesiastical and political power of the popacy (from 1054 to Boniface VIII, 1303). (C) Third Epoch: Decline of the ecclesiastical and political power of the papacy (from 1303 to Leo X, 1521).

Third Period: The Church after the collapse of the religious unity in the West, struggle against heresy and infidelity, expansion in non-European countries (from beginning of sixteenth century to our own age). (A) First Epoch: Origin and expansion of Protestantism; conflict with the papacy and the Reformation of ecclesiastical life (from 1521 to Treaty of Westphalia, 1648). (B) Second Epoch: Oppression of the Church by state-absolutism, weakening of religious life through the influence of a false intellectual emancipation (from 1648 to the French Revolution, 1789). (C) Third Epoch: Opposition of the Church by the Revolution; renewal of ecclesiastical life struggling against infidelity; progress of missionary activity (from 1789).

As regards the methodical treatment of the subject-matter within the principal divisions, most writers endeavour to treat the main phases of the internal and external development of the Church with a manner of securing a logical arrangement throughout each period. Deviations from this method are only exceptional, as when Darras treats each pontificate separately. This latter method is, however, somewhat too mechanical and superficial, and in the case of lengthy periods it becomes Periplus-like, not to say a mere rehash of the facts and to appreciate their interconnexion. Recent writers, therefore, aim at such a division of the matter within the different periods as will lay more stress on the important forms and expressions of ecclesiastical life (Moeller, Muller, Kirsch in his revision of Hergenröther). The larger periods are divided into a number of shorter epochs, in each of which the most important event or situation in the history of the Church stands out with distinctness, other phases of ecclesiastical life— including the ecclesiastical history of the individual countries—being treated in connexion with this central subject. The subject-matter of each period thus receives a treatment at once chronological and logical, and most in keeping with the historical development of the events portrayed. The narrative gains in lucidity and artistic finish, within the shorter periods the historical material is more easily grasped, while the active forces in all great movements appear in bolder relief. It is true that this method means an inequality in the treatment of the various phases of ecclesiastical life, but the same inequality already existed in the historical situation described.

V. Sources of Ecclesiastical History.—Historical sources are those human products which were either originally intended, or which—on account of their existence, origin, and other conditions—are preeminently fitted, to furnish knowledge and evidence of historical facts. They are therefore whatever things, either because of their object or of other circumstances, can throw light on the facts that make up the ecclesiastical life of the past. These sources fall naturally into two classes: (A) Remains (reliquiae, Uberreste) or immediate sources, i.e. manuscripts and documents; (B) Tradition or mediaeval sources, i.e. such as rest upon the statements of witnesses who communicate an event to others. Tradition may be oral (narrative and legends), written (writings of particular authors), or pictorial (pictures, statues). The critical treatment of the two kinds of sources differs. It is impossible to give the Second Epoch in its entirety and the Third Epoch in the category of "remains" in order to establish the validity of their evidence. In dealing with tradition, on the other hand, it must be proved that the author of the source in question deserts credit, also that it was possible for him to know the fact. The sources are gathered into different classes, i.e. religious and divine (the canonical sacred writings) and hagiographical (all other sources); (b) according to the position of the author, into public (such as originated from an official person or magistrate, e.g. papal writings, decrees of councils, pastoral letters of bishops, rules of orders etc.) and private (such as come from a person holding no public office, or from an in his private capacity, e.g. biographies, works of ecclesiastical writers, private letters etc.); (c) according to the inspiration of the author, into domestic (of Christian origin) and foreign (i.e. written by non-Catholics); (d) according to the manner of transmission, into written (inscriptions, public acts, writings of all kinds) and oral traditions (monuments, art-products, stories, legends etc.).

The aforesaid historical sources have in modern times been fully and critically investigated by numerous scholars and are now easily accessible to all in good editions. A very general outline of these sources will be given here (see special articles in this Encyclopedia).

(A) Remains.—The remains of the Church's past, which give direct evidence of historical facts, are the following: (1) Inscriptions, i.e. texts written on durable material, which were either meant to perpetuate the knowledge of certain acts, or which describe the character and purpose of a particular object. The Christian inscriptions of different epochs and countries are now accessible in numerous collections. (2) Monuments erected for Christian purposes, especially tombs, sacred edifices, monasteries, hospitals for the sick and pilgrims, relics, or from an in his private capacity, e.g. biographies, works of ecclesiastical writers, private letters etc. (3) Liturgies, rituals, particularly liturgical books of various kinds, which were once used in Divine service. (4) Necrologies and confraternity books used at the prayers and public services for the living and the dead. (5) Papal acts, Bulls and Briefs to a great extent edited in the papal "Bullaria", "Regesta", and special ecclesiastical national collections. (6) Acts and decrees of general councils and of particular synods. (7) Collections of official decrees of Roman congregations, bishops, and other ecclesiastical authorities. (8) Rules of faith (Symbola fidei) drawn up for the public use of the Church, which in the middle ages constituted a corpus of ecclesiastical laws juridically obligatory for the whole Church. (9) Rules and constitutions of orders and congregations. (10) Concordats between the ecclesiastical and the secular power. (11) Civil
laws, since they often contain matters bearing on religion or of ecclesiastical interest.

(5) Tradition. — We speak here of those sources which rest on mere tradition, and which, unlike the preceding, are the result of nothing but the action of the man and the •reach of the facts. They are:

(1) Collections of acts of the martyrs, of legends and lives of the saints.

(2) Collections of lives of the popes (Liber Pontificum) and of bishops of particular Churches.

(3) Works of ecclesiastical writers, which contain information about historical events; to some extent all "Lettre literature" belongs to this category.

(4) Ecclesiastico-historical works, which take on more or less the character of sources, especially for the time in which their authors lived.

(5) Pictorial representations (paintings, sculptures, etc.).

The foregoing are accessible in various collections, partly in ed. "De re diplomatica" (Paris, ir au aut. the Fathers of the Church, theologians, historians), partly in historical collections which contain writings of different authors correlated in content, or all the traditional written sources for a given land.

VI. AUXILIARY SCIENCES. — The basis of all historical researches is a proper method of study and use of the sources. The ecclesiastical historian must therefore master the sources in their entirety, examine them as to their trustworthiness, understand them correctly, and use methodically the information gleaned from them. Systematic guidance in all these matters is afforded by certain "sources", known as the "auxiliary historical sciences".

Since ecclesiastical history is closely related to theology on the one hand, and on the other to the historical sciences, a knowledge of all is generally speaking a prerequisite for the scientific study of church history. How to treat the sources critically is best learned from a good manual of scientific introduction to the study of church history (Bernheim); special auxiliary sciences (e.g., epigraphy, palaeography, numismatics) deal with certain particular kinds of the above-mentioned sources. Of these helps we may mention:

(1) The study of the languages of the sources, which necessitates the use of lexicons, either general or special (i.e., for the language of particular authors). Among the general lexicons or glossaries are: Du Fresne du Cange, "Glossarium ad scriptores medie et infimae aetatis" (2 vols., Lyons, 1888); Idem, "Glossarium ad scriptores medie et infimae aetatis" (2 vols., Lyons, 1871); "Lexicon des Literaturwissenschaften" (Paderborn, 1899), (often reprinted). "Thesaurus linguae latinae" (begun at Leipzig, 1900).

(2) Palaeography, a methodical introduction to the reading and dating of all kinds of manuscript sources. It was first scientifically investigated and formulated by... the literature on this subject is to be found in the manuals of de Waills, "Eléments de Paleographie" (2 vols., Paris, 1838); Wattenbach, "Latein. Paläograph." (4th ed., Leipzig, 1886) and "Schriftwesen im Mittelalter" (3rd ed., Leipzig, 1896); E. M. Thompson, "Handbook of Greek and Latin Palaeography" (2nd ed., London, 1894). Pron, "Manuel de Paléographie latine et française" (Paris, 1896). Chassant, "Paléographie des chartes et des manuscrits" (Barth, 1885); Reusens, "Eléments de paléogr." (Louvain, 1899); Paoli, "Paléographie" (3 vols., Florence, 1888-1900). Charts for practice in reading medieval manuscript sources were edited by Wattenbach, "Scripta graeca, specimina" (3rd ed., Leipzig, 1897); Sickel, "Monum. graph. medii aevi" (10 series, 1858-82); Bond, Thompson, and Warner, "Facsimiles" (5 series, London, 1873-1903); Delisle, "Album palæogr." (Paris, 1857); Arndt and Taugl, "Schriftdaten" (3 vols., 1904-6); Chrestes, "Mon. palæogr." (25 series, Munich, 1899-1890); Steffens, "Latein. Paläogr." (2nd ed., 3 parts, Trier, 1907-); Zangemeister and Wattenbach, "Exempla cod. latin." (1876-9); Sickel and Sybel, "Kaiserurkunden in Abbildungen" (1880-91); Pfugk-
(8) Chronology, which instructs the student how to recognize and fix with accuracy the dates found in the sources. The first important chronological investigations were undertaken by Scaliger (“De emendatione temporum”, Jens, 1629—); Petavius (“Ratiocinum temporum” 1624—); D. d’Egrié, “Chronologie”, Antwerp, (1703); and the authors of “Art de vérifier les dates des faits historiques” (Paris, 1750—).

(9) Geography, or Geographia (Gk. ἑπεραίος, a seal). Its object is the study of the various seals and stamps used in sealing letters and documents as a guarantee of their authenticity. Besides the works mentioned above under Diplomates, see Pfeil and Hartung, “Specimens selecta chartarum Pontificum Romanorum” (Paris, 1850); Griesbach, “Geschichte Benedict III dissertatio” (1749). For further bibliography see von Ebengreuth, “Allgemeine Münzkunde und Geldgeschichte des Mittelalters und der neueren Zeit” (Munich, 1904); and in Engel and Serrure, “Traité de numismatique du moyen-âge” (1904).

(10) Sphragistics, or Sphragistik (Gk. σφραγις, a seal). The first teaches us to recognize the places in which historical events took place, the other represents the development of the Church and the actual condition of her institutions exhibited synoptically, in tables with corresponding figures, etc. Important works of this kind are: Le Quien, “Oriens christianus” (2 vols., Paris, 1740); Morelli, “Africa christiana” (2 vols., Brescia, 1816); Touloue, “Géographie de l’Afrique chrétienne” (Paris, 1892—); Ughelli, “Italia sacra” (2nd ed., 10 vols., Venice, 1717—); Gallia Christiana by Claude Robert (Paris, 1628), by Denis de Saint-Marthé and others (new editions, 16 vols., Paris, 1715—); Böttcher, “Germania sacra” (2 vols., Leipzig, 1875—); Neher, “Kirchliche Geographie und Statistik” (3 vols., Ratisbon, 1864—); Idem, “Conspectus hierarchiae catholicae” (Ibid., 1895); Silbernagl, “Verfassung und gegenwärtiger Bestand sämtlicher Kirchen des Orients” (2nd ed., Munich, 1906); Idem, “Ist die russische Kirche am Ende ihrer Diener?” (3rd ed., vol. II, Ibid., 1907); Gams, “Series episcoporum ecclesiae catholicae” (Ratisbon, 1873; Supplum, 1879 and 1886), continued by Eulbel, “Hierarchia catholica medii evii” (Innsbruck, 1898—); Spruner and Menke, “Historischer Handatlas” (3rd ed., Gotha, 1880); Werner, “Katholischer Kirchenatlas” (Freiburg im Br., 1888); Idem, “Katholischer Missionatlas” (2nd ed., Ibid., 1885); McClure, “Ecclesiastical Atlas” (London, 1883); Heusel and Mulent, “Atlas zur Kirchengeschichte” (Tübingen, 1905); see also the annuals of the national and diocesan directories of various nations (England, Ireland, Scotland, Australia, etc.) and the new “Dictionnaire d’Hist. et de Géog. ecclés.”, edited by Baudriart, Vogt, and Rouziès (Paris, 1909—).

(9) Christian Archaeology and History of the Fine Arts, from which the student learns how to study scientifically and to use the monuments which owe their origin to Christian influences. See Christian ARCHEOLOGY and ECCLESIASTICAL ART.}

(10) Numismatics, the science of the coins of various countries and ages. Since not only the popes but also the numerous bishops, who once possessed secular power, exercised their ecclesiastical functions, the study of coins belongs, at least for certain epochs, to the auxiliary sciences of church history. See Bonanni, “Numismata Pontificum Romanorum” (3 vols., Rome, 1699); “Numismata Pontificum Romanorum et aliarum ecclesiasticarum” (Cologne, 1704); Vigilanus, “Antiquitatem Romanorum. De difficultatibus Wap XI ad Paulum III” (2 vols., Rome, 1709; new ed. by B. Floravanti, 2 vols., Rome, 1734—); Scilla, “Breve notizia delle monete pontificie antiche e moderne” (Rome, 1715); Venuti, “Numismata pontificum Romanorum praetentione a Martino V ad Benedictum XIV” (Rome, 1744); Garzoni, “De numismate Benedicti III dissertatio” (Rome, 1749). For further bibliography see von Ebengreuth, “Allgemeine Münzkunde und Geldgeschichte des Mittelalters und der neueren Zeit” (Munich, 1904) and in Engel and Serrure, “Traité de numismatique du moyen-âge” (1904).

(11) Sphragistics, or Sphragistik (Gk. σφραγις, a seal). Its object is the study of the various seals and stamps used in sealing letters and documents as a guarantee of their authenticity. Besides the works mentioned above under Diplomates, see Pfeil and Hartung, “Specimens selecta chartarum Pontificum Romanorum” (Paris, 1850); Griesbach, “Geschichte Benedict III dissertatio” (1749). For further bibliography see von Ebengreuth, “Allgemeine Münzkunde und Geldgeschichte des Mittelalters und der neueren Zeit” (Munich, 1904); and in Engel and Serrure, “Traité de numismatique du moyen-âge” (1904).

(12) Heraldry, which teaches the student how to read accurately the coats of arms etc., used by ecclesiastical and secular bodies. It is chiefly concerned with the family of historical personages, the time or character of particular events, the history of religious monuments. The literature of this science is very extensive. See Brend, “Die Hauptstücke der Wappenkunde” (2 vols., Bonn, 1840—); Idem, “Allgemeine Schriften über Heraldik” (Stuttgart, 1887); Idem, “Bullen der päpstl. bis zum Ende des XII Jahrh.” (Gotha, 1901); Baumgarten, “Aus Kanalei und Kamer: Bullatares, Taxatores domorum, Curores” (Freiburg, 1907); Heineccius, “Die Wappen des Römischen Weltreichs” (Frankfort, 1719); Grothendieck, “Über Sphragistik” (Breslau, 1875); Fürst zu Hohenlohe-Waldenburg, “Sphragistische Aphorismen” (Heilbronn, 1882); Ilgen in Meier, “Grundriss der Geschichtswissenschaft” (I Leipzig, 1906).

(13) History of Ecclesiastical History.—The peoples among which Christianity first spread, possessed a highly developed civilization and a literature rich in works of history. They possessed the historical sense, and though in early Christian times there was little occasion for extended ecclesiastical historical works, nevertheless historical records were not wholly wanting. The New Testament was itself largely historical, the Gospels being literally narratives of the life and death of Christ. Soon we meet the accounts of the conflict of the Christian sects with the Roman state (Acts of the Apostles) and traditions of widespread Christian suffering (Acts of the Martyrs). The (lost) anti-Gnostic work of Hegesippus also contained historical information. Chronicles were compiled in the third
century by Julius Africanus and by Hippolytus, some fragments of which are yet extant. It is only during the fourth century that ecclesiastical history, properly so called, makes its appearance. Any synopsis of its vast materials falls into three periods corresponding to the three main periods of church history: the First Period, the Second Period, and the Third Period. Eusebius, Bishop of Cesarea in Palestine (d. 340), is rightly styled the "Father of Church History". We are indebted to him for a "Chronicle" (P. G., XIX) and a "Church History" (ibid., XX; latest scientific edition by Schwartz and Monmousse, 2 vols. in "Die griechischen christlichen Schriftsteller" ser. "Onz. Jahrbücher", Berlin, 1903–8). The "Church History" was an outgrowth of the "Chronicle", and was the first work to merit fully the name it bore. It first appeared in nine books and covered the time from the death of Christ to the victories of Constantine and Licinius (312 and 313). Eusebius afterwards added a tenth book, which carried the narrative to the victory of Constantine over Licinius (323). He made use of many ecclesiastical monuments and documents, acts of the martyrs, letters, extracts from earlier Christian writings, lists of bishops, and similar sources, often quoting selectively. The work as it stands contains very precious materials not elsewhere preserved. It is therefore of great value, though it pretends neither to completeness nor to the observance of due proportion in the treatment of the subject-matter. Nor does it present in a connected and systematic way the history of the early Christian Church. It is, in no small extent a vindication of the Christian religion, though the author did not primarily intend it as such; it is impossible, however, for any true history of the Church not to exhibit at once the Divine origin of the latter and its invincible power. Eusebius has often been accused of intentional falsification of the truth, but it should be noted that the author is not entirely unbiased. On the other hand, he has been rightly censured for his partiality towards Constantine the Great and his palliation of the latter's faults ("Vita Constantini" in P. G., XX, 905 sqq.; latest scientific ed. Heikel, "Eusebius' Werke", J. Leipzig, 1902, in "Die griech. christl. Schriftsteller der ersten drei Jahrhunderte"). In his biography of the great emperor, Eusebius, it must be remembered, sought to set forth in the most favourable light the Christian sentiments of the imperial convert and his great services to the Christian Church. Two of his historical works, "Historia Ecclesiae" and "De Martyribus Palestinae", have also been preserved.

This great Christian historian found several imitators in the first half of the fifth century; it is to be regretted, however, that the first two general narratives of ecclesiastical history after Eusebius have been lost—i.e. the "Christian History" of the presbyter Philip of Side in Pamphylia (Philippus Sidetes), and the "Church History" of the Arian Philostorgius. Three other early ecclesiastical histories written about this period are also lost (the presbyter Hosios of Jerusalem (d. 453), the Apollinarian, Timotheus of Euphrasius of Salona of Herculaneum; at the middle of the fifth century the "Church History" of Eusebius was continued simultaneously by three writers—an evidence of the esteem in which this work of the "Father of Church History" was held among scholarly ecclesiastics. All three continuations have reached us. The first was written by Socrates, an advocate (sekretis) of Constantinople (P. G., LXVII, 29–842; ed. Hussey, Oxford, 1853), which he expressely (I, 1) calls a continuation of the work of Eusebius, describes in seven books the period from 305 (Abdication of Diocletian) to 439. It is a work of great value. The author is honest, exacting; he is a genuine historian in the modern sense; he has a clear and simple style. After him, and frequently making use of his history, comes Hermias of Sozomenus (or Sozomen), also an advocate in Constantinople, whose "Church History" in nine books comprises the period from 324 to 425 (P. G., LXXVII, 834–1630; ed. Hussey, Oxford, 1860), but is inferior to that of Socrates. Both these writers are surpassed by the learned Theodoret, Bishop of Cyrus in about 428, who, in his "Church History" (P. G., LXXII, 881–1280; ed. Gaisford, Oxford, 1854), a continuation of the work of Eusebius, describes in five books the period from the beginning of Arianism (320) to the beginning of the Nestorian troubles (428). In addition to the writings of his predecessors, Socrates and Sozomenus, he also used those of the Latin scholar Rufinus, and wove many documents into his clear well-written narrative. Theodoret wrote also a "History of the Monks" (P. G., LXXII, 1283–1496), in which he sets forth the lives of thirty famous ascetics of the Orient. Like the famous "History of the Holy Fathers" ("Historia Lausiaca"), so called from one Lausus to whom the book was dedicated by Palladius, written about 420; Migne, P. G., XXXIV, 995–1278; Butler, "The Lausiac History of Palladius", Cambridge, 1898), this work of Theodoret is one of the principal sources for the history of Oriental monasticism. Theodoret's work thus contained, besides the above-mentioned works, a refutation of each (P. G., LXXXIX, 335–556). Together with the similar "Panarion" of St. Epiphanius (P. G., XLI-XLII), it offers important material to the student of the earliest heresies.

During the sixth century the historian finds other continuators. Theodoret Lector compiled a brief compendium (yet unedited) from the works of the above-mentioned three continuators of Eusebius: Socrates, Sozomen, and Theodoret. He then wrote in two books an independent continuation of this summary as far as the reign of Emperor Justin I (518–27); his works were finished in 534 (P. G., LXXVI, I, 165–228). Zacharias Rhotor, at first an advocate at Berytus in Phoenicia and then (at least from 536) Bishop of Mitylene in the Island of Lesbos, composed, while yet a layman, an ecclesiastical history, which describes the period from 450 to 491; it is mostly taken up with personal experiences of the author in Egypt and Palestine. A Syriac version of this work is extant as books III–VI of a Syriac universal history, while there are also extant some chapters in a Latin version (Laud, "Anecdota Syriaca"; Leyden, 1870; P. G., LXXV, 1145–78; Ahrens and Suter, "Die syrische Historiographie des Ephraem und Zachariah Rhotor"; Leipzig, 1859). Apart from this history, his inclination towards Monophysitism is also apparent from his biography of the Monophysite patriarch, Severus of Antioch, and from his biography of the monk Isaia, two works extant in a Syriac version (Laud, "Anecdota Syriaca"); cf. P. Rau in "Revue des orient chrétiens", 1901, pp. 26–88). More important still is the "Church History" of Evagrius of Antioch, who died about the end of the sixth century. His work is a continuation of that of Eusebius, and Theodoret, but in six books the period from 431 to 594. It is based on good sources, and borrows from profane historians, but occasionally Evagrius is too credulous. For Nestorianism and Monophysitism, however, his work deserves careful attention (P. G., LXXXVI, I, 2415–886; ed. Bides and Farmentier in "Byzantine Texts", ed. J. B. B. J. C. III). The chronicles that belong to the close of Graeco-Roman antiquity, special mention is due to the Chronicle Paschale, so called because the Paschal or Easter canon forms the basis of its Christian chronology (P. G., XCII). About the year 700 the Monophysite bishop, John of Nikiu (701–787), in his "Chronicle" (717–749), he claims that the "notitia" of great value for the seventh century. This chronicle has been preserved in an Ethiopic
version ("Chronique de Jean, évêque de Nikiou", publ. par. H. Zoniten, Paris, 1883). Zoniten believes that the work was originally written in Greek and then translated; Nödeke ("Göttinger gelehrte Anzeigen", 1851, 587 sqq.) thinks it more probable that the original was Coptic. To the Alexandrian copies of the "Itineraria" belongs the "Itinerarium" of the Christian "Topography" of great value for ecclesiastical geography (ed. Montfaucon, "Collectio nova Patrum et Scrittorum graecae," II, Paris, 1706; translated into English by McCrindle, London, 1897). Of great value also for ecclesiastical geography are the "Notitiae episcoporum" (Tarnovskii, Arch. Arch., metropolitans, and episcopal sees of the Greek Church ("Hieroleos Synecodemus et Notitiae graecae episcopatum", ed. Parthey, Berlin, 1866; "Georgii Cyprii Descriptio orbis Romani", ed. Geiser, Leipzig, 1890). The most important collection of the early Greek historians of the Church is that of Henri de Valois in three folio volumes (Paris, 1639-73; improved by W. Reading, Cambridge, 1720): it contains Eusebius, Socrates, Sozomen, Theodoret, Evagrius, and the fragments of Philostorgius and Theodorus Lector.

The ancient Syriac writings of ecclesiastical-historical interest are chiefly Acts of martyrs and hymns to the sainted martyrs (ed. Bedjan, Paris, 1890—). The "Chronicle of Edessa", based on ancient sources, was written in the sixth century (ed. Assemanni, "Bibliae hebræicae orientalis", I, 394). In the same century the Monophysite bishop, John of Ephesus, wrote a history of the Church, but only its third part (371 to 586) is preserved (ed. Cureton, Oxford, 1853; tr., Oxford, 1860). Lengthy extracts from the second part are found in the annals of Dionysius of Telmera. His work covers the years 583-843 (fragments in Assemanni, "Bibliae hebræicae orientalis", II, 72 sqq.). Among the Armenians we meet with versions of church works. The most important Armenian chronicle of an ecclesiastical-historical character is ascribed to Moses of Chorene, an historical personage of the fifth century. The author of the "History of Greater Armenia" calls himself Moses of Chorene, and claims to have lived in the fifth century and to have been a disciple of the famous St. Mesrop (q. v.). The self-testimony of the compiler must be rejected, since the work makes use of sources of the sixth and seventh centuries, and there is no trace of it to be found in Armenian literature before the ninth century. Probably, therefore, it originated about the eighth century. The work is entitled "De viris illustribus" (i.e., "In celeberrimis", a title perhaps spoken of three parts: the "Genealogy of Greater Armenia" extends to the dynasty of the Arsacides, the "Middle Period of our Ancestry" to the death of St. Gregory the Illuminator, and the "End of the History of our Country" to the downfall of the Armenian Arsacides (ed. Amsterdam, 1685; Venice, 1851; the translation in Langlois, "Collection des historiens anciens et modernes de l'Arménie", 2 vols., Paris, 1867-9). In the Middle Ages there was still extant a fourth part. The work seems to be on the whole reliable. The ancient history, down to the second or third century after Christ, is based upon popular legends. Another Armenian historian in St. Esh'agh (q. v.).

Comprehensive ecclesiastical-historical works appear in the Latin West later than in the Greek East. The first beginnings of historical science are confined to translations with additions. Thus St. Jerome translated the "Chronicle" of Eusebius and continued it down to the death of Constantine. The chief scholar in this special field, the history of Christian literature, in his "De viris illustribus"; ("Chronicon", ed. Schoene, 2 vols., Berlin, 1866-75; "De vir. ill.", ed. Richardson, Leipzig, 1896). About 400 the "Church History" of Eusebius was translated by Rufinus who added the history of the Church from about 325 to 395 in two new books (X and XI). Rufinus's continuation was itself soon translated into Greek. The latest edition is in the Berlin collection of Greek Christian writings mentioned above in connexion with Eusebius. St. Jerome's Latin recension of the "Chronicle" of Eusebius was followed later by many other chronicles, among which may be mentioned the works of Prosper, Idaeus, Marcellinus, Victor of Turnunum, Marius of Milan, and Sulpicius Severus, the "Historia ecclesiastica", the first independent history of the Church, written by Sulpicius Severus, who published in 403 his "Historia (Chronica) Sacra" in two books; it reaches from the beginning of the world to about 400 (P. L., XX; ed. Halm, Vienna, 1889-96). It is a most important form of ecclesiastical and geographical information. A little later, Orosius wrote his "Historia adversus paganos" in seven books—a universal history from the standpoint of the Christian apologist. It begins with the deluge and comes down to 416. The purpose of Orosius was to refute the pagan charge that the great misfortunes of the Roman Empire were due to the victory of Christianity (P. L., XXXI; ed. Zangemeister, Vienna, 1882). With the same end in view, but with a far grander and loftier conception, St. Augustine wrote his famous "De civitate Dei", composed between 413 and 428, and issued in sections. It is an apologetic philosophy of history, and not a history of the Church. The work is important for church history on account of its numerous historical and archeological digressions (ed. Dombart, 2nd ed., Leipzig, 1877). About the middle of the sixth century, Cassiodorus caused the works of Socrates, Sozomen, and Theodoret to be translated into Latin, and then amalgamated this version into one complete narrative under the title "Historia tripartita" (P. L., LXIX—LXX). Together with the works of Rufinus and Orosius, it was one of the principal sources from which through the Middle Ages the Western peoples drew their knowledge of early church history. It is also contained in the national histories of some Western peoples. Of the "History of the Goths", written by Cassiodorus, we possess only an extract in Jordanes, "De origine actibusque Getarum" (ed. Mommsen in "Mon. Germ. Hist. Auct. antiquissimi", V., Berlin, 1882). Especially important is the "History of the Franks" in ten books by Gregory of Tours, which reaches to 591 (ed. Arndt, "Mon. Germ. Hist. Scriptores rerum Merovingorum," II, Hanover, 1884-5). Gregory wrote also a "Libri de vita Patrum", a work entitled "In glorias martyrum", and the book "De vita S. Martini" (ed. cit., pt. II, ed. Krusch). In the beginning of the seventh century St. Isidore of Sevilla composed a "Chronicle of the West Goths" ("Historia de regibus Gothorum, Wandalorum, Suevorum", ed. Mommsen, "Chronica Minora", II, 241—303). Several other similar chronicles, from the fourth to the seventh century, were edited by Mommsen in the "Monumenta Germaniae Historica: Auctores Antiquissimi" under the title of "Chronica Minora".

(B) The Church Historians of the Second Period.—The second period of church history, it is true, produced a copious historical literature, although it is longer rather to special than to general church history. Its works deal more often with particular nations, dioceses, and abbey; general histories are rare. Moreover, owing to the dominant position of the Church among the Western peoples, ecclesiastical and profane history are in this epoch closely interwoven. At the same time, any attempt to be governed up to the beginning of the present century have been completely identified with the history of the imperial court owing to the close relations of State and Church. For the same reason the Byzantine chronicles from Justinian the Great to the destruction of the empire in the middle of the eleventh century contain much valuable information about the history of the Church; some of the most important of them are: the "Chronography of Theophanes Isiacus" (ed. de Boor, 2 vols., Leipzig, 1885);
the "Chronicles" of Georgius Syncellus, George Hamartolus, Nicephorus, Patriarch of Constantinople, Constantine Porphyrogenitus, John Malalas, Procopius, Paulus Silentiarius, the works of Leo Diaconus, Anna Comnena, Zonaras, Georgius Cenedrus, to which we may add Nicetas Choniates, Georgius Fachymeres, Nicephorus Gregorios, and John Cantacuzenus. These Byzantine historical works are most reliably published in a large collection at Paris (1645—1711) under the title, "Byzantinae historiae Scriptores". A new edition, better and more complete, was executed by Niebuhr, Becker, Dindorf, and other collaborators in forty volumes (Bonn, 1828—78) under the title, "Corpus Scriptarum Byzantinorum". Most of the Byzantine writings are also to be found in the Patrologia Graeca of Migne. The only true church historian of the Byzantine period worthy of the name is Nicephorus Callistus, who flourished in the beginning of the fourteenth century. (See Nicephorus Callistus.)

In Syria we possess the aforesaid chronicle of Dionysius of Telmara. Towards the end of the twelfth century Michael Kandis, Patriarch of the Jacobites (d. 1199), wrote a chronicle from the creation to 1196. It is an important source for the history of the Syriac Church after the sixth century, particularly for the history of the Crusades. This work has recently been translated into Armenian (q.v.); a French translation was published by Langlois, "Chronique de Michel le Grand" (Venice, 1668). Another patriarch of the Jacobites, Gregory Abulpharaeus or Bar-Hebraeus (q.v.), Maphrian (i.e. primate) of the Syro-Jacobite Church (1266—50), also wrote a universal chronicle in these parts. We must also mention the "Bibliotheca" (Myriobiblon) of Photius (d. 891), in which about 280 authors are described and passages quoted from them (ed. Becker, Berlin, 1834), and the work "On Heresies" of St. John Damascene.

The national histories which appeared towards the end of the last period (of Cassiodorus, Jordanis, Gregory of Tours), were followed by similar works giving the history of other peoples. Venerable Bede wrote his admirable "Historia ecclesiastica gentis Anglorum", which describes in five books the history of England from the Roman conquest to 731, though he inquires about remote antiquity. His mission in 596 (ed. Stevenson, London, 1838; ed. Hussey, Oxford, 1846). Paulus Warnefrid (Diaconus) wrote the history of his fellow-Lombards (Historia Langobardorum) from 568 to 733; it still remains the principal source for the history of his people. An unimportant local writer called Tegulphus (d. 742) in the tenth century the monk Erchemberd added the history of the Lombards of Beneventum to 889 (ed. Waits in "Mon. Germ. Hist. Script. rer. Langob. et Ital.", Hanover, 1877). Paulus wrote also a history of the bishops of Meta "(Gesta episcoporum Mettenium", ed. in "Mon. Germ. Hist. Script. II") and other historical works. The Scandinavian North found its ecclesiastical historian in Adam of Bremen; he covers the period between 788 and 1072, and his work is of special importance for the history of the Diocese of Hamburg-Bremen ("Gesta Hamburigensis ecclesiae vicarii", ed. Lappenherge, in "Script. Hist.", VII, 276). Eilbertus of Fleury (d. 968) wrote the history of the Archdiocese of Reims (Historia ecclesiae Remensis) to 948, a very important source for the history of the Church of France to that time ("Mon. Germ. Hist. Script.", XIII, 412 sqq.). The ecclesiastical history of Northern Germany was described by Albert Crantz, a canon of Hamburg (d. 1517), in his "Metropolit" or "Historia de ecclesis sub Carlo Magno in Saxonia instauratis" (i.e. from 780 to 1504; Frankfurt, 1576, and often reprinted). Among the special historical works of this period of the Western Church we must mention the "Liber Pontificium", an important collection of Papal biographies that in larger proportions after the fourth century, are occasionally very lengthy in the eighth and ninth centuries, and through various continuations reach to the death of Martin V in 1431 (ed. Duchesne, 2 vols., Paris, 1886—92; ed. Mommsen, I, extending to 715, Berlin 1888). The German, Italian, French, and English chronicles, annals, and biographies of this epoch are very numerous. The more important authors of chronicles are: Regino of Prum, Hermannus Contractus, Lambert of Hersfeld, Otto of Freising, William of Tyre, Siegbert of Gombrics. The most important collections with the most complete chronicles and annals of the various Christian countries, are the following: for England: "Rerum Britannicarum medii aevi Scriptores, or Chronicles and Memorials of Great Britain", I sqq. (London, 1858—); for Belgium: "Collection de Chroniques belges", I sqq. (Brussels, 1852—); "Collection des chroniqueurs et trouvères belges publié par l'Académie belge", I sqq. (Brussels, 1863)—; "Recueil de chroniques publié par la Société d'émulati de Bruges" (56 vols., Bruges, 1839—64); for France: Bouquet, "Recueil des historiens des Gaules et de la France" (Paris, 1738— new ed. by L. Delièze, Paris, 1889—); for Germany: "Monumenta Germ. historica: Scriptores", I sqq. (Hanover and Berlin, 1826—); for Italy: Muratori, "Rerum Italicarum Scriptores precipui" (25 vols., Milan, 1723—51); Idem, "Antiquitates Italicae medii aevi" (6 vols., Milan, 1738—42); for Spain: Flórés, "Efigies sagradas" (51 vols., Madrid, 1824—54); for the Low Countries: G. E. Proctor, "Monumenta Belgica: Scriptores" (8 vols., Vienna, 1855—75); for Poland: Bielowski, "Monumenta Polonica historica" (2 vols., Lemberg, 1864—72; continued by the Academy of Cracow, III sqq., Cracow, 1878—); "Scriptores rerum polonicarum" (ibid., 1873—); for Denmark and Sweden: Langebæk, "Scriptores rerum Danicae medii aevi" (9 vols., Copenhagen, 1772—8);
The first is Noël Alexandre (Natalis Alexander), a
Dominican (q. v.). The second is Claude Fleury, who,
in the interest especially of educated readers, wrote a
"Histoire ecclésiastique" in 20 volumes, reaching to
1414 (Paris, 1691-1720). He adopts throughout an
attitude of moderate Gallicanism (see FLEURY).
The third, and one of the greatest, is Louis Sebas-
tien le Nain de Tillemont (q. v.). To these
must be added the great Bossuet, who, in his
"Discours sur l'histoire universelle" (Paris, 1681),
treated in masterly fashion the history of the Church
as far as Charlemagne. The Christian philosophy of
history found in him an exponent of sublime grace.
His "Histoire des variations des églises protestantes"
(2 vols., Paris, 1688) describes the changes which
the Waldenses, Albigenses, Wyclifists, and Husites,
as well as Luther and Calvin, made in the fundamental
doctrines of the Church. These French church his-
torians of the seventeenth century are far superior
to their successors in the eighteenth. Several French
writers, it is true, produced elegant narratives, if we
consider only external form, but they do compare
unfavourably with their predecessors in criticism of
their sources and in scientific accuracy. The follow-

(1) From the Middle of the Sixteenth to the Middle
of the Seventeenth Century.—The first large work
on church history which appeared in this period was
composed in the interests of Lutheranism. Mathias
Placius, called Illiricus (a native of Illyria), united
with the Lutherans of Lüttich, Martin Luther, and
Martin Luther, produced, to produce an extensive work,
that should exhibit the history of the Church as a con-
vincing apology for strict Lutheranism. (See CENT-
URATORES OF MAGDEBURG.) In the "Centuries",
the institutions of the Roman Church appear as works
of Satan and darkness; naturally, therefore, we cannot
expect from such writers any true objective estimate
of the Church and her development. The work called
forth many refutations, the most able of which was
written by Card. Caesar Baronius. Urged by St. Philip
Neri, the author of a book in 1588 of producing an
ecclesiastical history, which with astounding diligence
he brought down to the end of the twelfth century
and published under the title, "Annales ecclesiasticii"
(12 vols., Rome, 1588-1607). Numerous editions
and continuations of it have appeared. (See BARONIUS.)
(2) From the Middle of the Seventeenth Century to
the End of the Eighteenth Century.—(a) Catholic Church
Historians.—From the middle of the seventeenth
century French writers were active in ecclesiastico-
historical research. The writings of the Fathers of
the Church and other ancient sources were published
in excellent editions, the auxiliary sciences of history
were well cultivated. We are indebted to Antoine
Godeau, Bishop of Vence, for a "Histoire de l'église"
reaching to the ninth century (5 vols., Paris, 1655-78;
several other editions have appeared and the work
was translated into Italian and German), and to the Or-
trarian Cabasset for "Histoire ecclesiastique" (Lyons,
1668-1700). The monumental work of the Jesuits,
not writing a continuous ecclesiastical history, he
published numerous treatises (Paris, 1673-83) on various
important phases in the life of the Church (Arianism,
Iconoclasm, Greek Schism, struggle between the
popes and the emperors, Western Schism, Lutheran-
ism). Among the great ecclesiastical historians of this period, whose works have a perma-
nent value, three names stand out prominently.

In Spain, general church history found no repre-
sentatives among the ecclesiastical writers of the
eighteenth century. On the other hand, the Augus-
tinian Enrique Flores began at this period a mun-
ificent work on church history of Spain, the famous
"España sagrada", in which he identified the death of
the author in 1773 had reached its twenty-ninth volume.
Manuel Risco continued it to the forty-second volume,
and, since his death, it has been carried still nearer to
completion, the fifty-first volume appearing in 1868.
Of course, important works on the general history of
the Church. The conditions of Catholics about this time were too
unfavourable to permit the undertaking of extensive scientific histories. Some masterly special works appeared in Germany, monographs of particular dioceses and monasteries, but general church history was not cultivated until Joseph II had executed his reform of the theological schools. Even then there appeared only small works, mostly excerpted from the great French ecclesiastical histories, superfluous, Josephinistic in temper, and hostile to Rome. Among them are Lumper's "Institutiones historiae ecclesiasticae" (Vienna, 1790); the "Institutiones historiae eccl." of Duttweiler (2 vols., Vienna, 1788), and similar works by Wolf, Schmalhausen, Stöger, Becker, all of them now utterly valueless. The Netherlands also produced only compendia, e. g. those of Mutesarta (2 vols., Antwerp, 1822), Rosweyde (2 vols., Antwerp, 1622), M. Chénéux ("Eccles. Cathol. speculum chronographicum", 3 vols., Liège, 1666-70). Needless to add, in Great Britain and Ireland the sad condition of Catholic

HISTORY  

Constantinum Magnum" (Helmstadt, 1753), and "Institutiones histor. eccl. antiquiores et recentiores" (ibid., 1758). They betray, however, a tendency towards a rationalistic concept of the Church, which appears throughout in an institution of secular origin. His "Institutiones" were translated into German and continued by two of his pupils, J. von Einen and Rud. Schlegel (Leipzig, 1769—); Heilbronn, 1770—). Further progress was made in the works of Paff, chancellor of Tübingen ("Institutiones histor. eccl."). Tübingen, 1721), of Baumgarten ("Untersuchungen über die Geschichte", 3 vols., Lipsia, 1743-53), Pertzsch ("Versuche einer Kirchengeschichte", 5 vols., Leipzig, 1736—), Cotta ("Versuche einer ausführlichen Kirchenhistorie des neuen Testamentes", 3 vols., Tübingen, 1768—73). Special works, excellent for their time, were written by the two Walches—Joh. Georg Walch issuing "Eine Geschichte der Religionstreuigkeiten innerhalb und ausserhalb der evangelisch-lutherischen Kirche" in two parts, each comprising five volumes (Jena, 1733—9), while his son Christian Wilhelm published a lengthy "Ketzergeschichte", whose eleventh volume reaches to the Iconoclasts (Leipzig, 1762—86). The latter also issued a "Geschichte der Religionsverhältnisse des Vatikans" beginning with Clement XIV (to which Planck added three volumes) also a "Geschichte der Kirchenverhältnisse" (Leipzig, 1759), and a "Geschichte der röm. Papste" (Gottingen, 1758). The most important Lutheran work on general church history is that of Gustavus Martinus, professor at Wittenberg: "Christliche Kirchengeschichte bis zur Reformation" in thirty-five volumes (Leipzig, 1768—1803), continued as "Kirchengeschichte seit der Reformation" in eight volumes (Leipzig, 1803—8), to which Tschirmer added two others (1810—12). The whole work, scholarly but too diffuse and laying excessive emphasis on the biographical element, includes forty-five volumes and closes with the beginning of the nineteenth century. Meanwhile the shallowness of rationalism of the eighteenth century had spread widely, and soon affected many works on church history. The works of Joh. Salomon Semler, an unbelieving hypercritic, in this respect bold an undesirable pre-eminence, his "Geschichte der eccles. selecta capita" (3 vols., Halle, 1767—), "Versuch eines fruchtbaren Ausuges der Kirchengeschichte" (3 parts, ibid., 1778), and "Versuch christlicher Jahrhüchter" (2 parts, Halle, 1782). Most of his contemporaries were more or less critical and honest. The first systematic chronicle of scandals (Scandalchronik). Everywhere the writers saw only superstition, fanaticism, and human passion, while the greatest and holiest characters of ecclesiastical history were shamefully caricatured. This spirit is particularly characteristic of Siebler, "Griindung der Gesch. der christ. Kirche" and Henke "Allgem. Geschichte der christl. K."

(3) The Nineteenth Century.—Ecclesiastical-historical studies have fared better in the nineteenth century. The horrors of the French Revolution led to a vigorous reaction and gave birth to a more ideal spirit in literature. Patriotism and religion merged and exerted a profound influence on all intellectual life. Romanticism led to a juster appreciation of the Catholic medieval world, while in all departments of learning there appeared an earnest desire to be objective in judgment. Finally, the sources of ecclesiastical history were studied and used as a new spirit, that of a more exact and penetrating historical criticism. The general result was favourable to the science of history. 

(a) Catholic Ecclesiastical Historians.—It was in Catholic Germany that these changes were first noticeable, more particularly in the work of the famous count, Count C. von Stobrig (q. v.). His "Geschichte der Religion Jesu Christi" was issued in fifteen volumes, the first four of which contain the history of the Old Testament and reach to 430. Similarly, the

unfavourable to permit the undertaking of extensive scientific histories. Some masterly special works appeared in Germany, monographs of particular dioceses and monasteries, but general church history was not cultivated until Joseph II had executed his reform of the theological schools. Even then there appeared only small works, mostly excerpted from the great French ecclesiastical histories, superfluous, Josephinistic in temper, and hostile to Rome. Among them are Lumper's "Institutiones historiae ecclesiasticae" (Vienna, 1790); the "Institutiones historiae eccl." of Duttweiler (2 vols., Vienna, 1788), and similar works by Wolf, Schmalhausen, Stöger, Becker, all of them now utterly valueless. The Netherlands also produced only compendia, e. g. those of Mutesarta (2 vols., Antwerp, 1822), Rosweyde (2 vols., Antwerp, 1622), M. Chénéux ("Eccles. Cathol. speculum chronographicum", 3 vols., Liège, 1666-70). Needless to add, in Great Britain and Ireland the sad condition of Catholic churches made scientific work impossible. 

...
The most important "Geschichte der christlichen Kirche" (9 vols., Ravensburg, 1824–34) by Locherer, rather uncritically and exhibiting the influence of Schröck, remained unfinished, and reaches only to 1073. The excellent "Geschichte der christlichen Kirche" by J. H. Rauschenbusch is incomplete. A useful compendium, serious and scientific in character, was begun by Hortig, professor at Landshut, the "Handbuch der christlichen Kirchengeschichte". He completed two volumes (Landshut, 1821–2), and reached the Reformation; a third volume, that brought the work down to the French revolution, was completed by his helper Döllinger (v.). The scholar, who unhappily later on abandoned the Catholic attitude and principles of his earlier days, excelled all previous writers of this century. Johann Adam Möhler wrote several special historical works and dissertations of exceptional merit. His lectures on general church history were published after his death by his pupil, the Benedictine Pius Gams ("Kirchengeschichte", 3 vols., Ratisbon, 1867). To these larger and epoch-making works must be added several compendia, some of which like Klein ("Historia ecclesiastica", Gratz, 1827), Rutenbeck (" Institutiones historiae ecclesiae"), Fiennes ("Catholicism of the Church", 1816; ed. by Emne, 1861), and Alzog ("Universalgeschichte der christlichen Kirche", Mainz, 1840; 10th ed. by F. X. Kraus, 1882), are lengthy narratives, critical and thorough. Particular periods or epochs of ecclesiastical history soon found careful cultivation, e.g. by Rißel, "Kirchengeschichte der neuen und neuesten Zeit, vom Anfang der Glaubensspaltung im 16. Jahrhundert" (3 vols., Mainz, 1841–9); Damberger, "Synchrornistische Geschichte der Welt im Mittelalter" (in 16 volumes, Ratisbon, 1850–63; the last volume edited by Rattinger), which reaches to 1378. With Döllinger and Möhler we must rank Karl Joseph Hefele, the third of the great German Catholic historians, whose valuable Konsilengeschichte is really a comprehensive work on general church history; the first seven volumes of the work (Freiburg, 1855–74) reach to 1448. A new edition was begun by the author (ibid., 1873); it was carried on by Knöpfler (vols. V–VII), while Hergenrötter (latter cardinal) undertook to continue the work and published two more volumes (VII–IX, 1869–70), which carried it up to the Council of Trent. Hergenrötter is the fourth great church historian of Catholic Germany. His "Handbuch der allgemeinen Kirchengeschichte" (3 vols., Freiburg in the B., 1876–80; 3rd ed., 1884–6; 4th ed., revised by J. P. Kirsch, 1892 sqq.) exhibits vast erudition and a wide range, even from the most independent and instructive Catholic Church history. In recent years, smaller but scholarly compendia have been written by Brück, Kraus, Funk, Knöpfler, Marx, and Weiss. Numerous periodicals of a scientific nature bear evidence to the vigorous activity at present displayed in the field of ecclesiastical history, e.g. the "Kirchengeschichtliche Studien" (Münster), the "Quellen und Forschungen aus dem Gebiet der Geschichte" (Paderborn), the "Forschungen zur christlichen Literatur und Dogmengeschichte" (Mainz and Paderborn), the "Veröffentlichungen aus dem kirchenhistorischen Seminar München".

France.—In France the study of church history was long in attaining the high standard it reached in the seventeenth century. Two extensive narratives of general church history appeared. That of Rohrbacher is the better, "Histoire universelle de l'Eglise catholique" (3 vols., 1842–50; 2nd ed., 1892; 3rd ed., 1901), exhibiting independent research, but is a diligently executed work, and the author made a generous and skilful use of the best and most recent literature (new ed. with continuation by Guillaume, Paris, 1877). The second work is by Darras (q. v.). In recent years the science of ecclesiastical history has made great progress in France, both as to genuine criticism and thorough research. Some early narrators, who had been raised and sustained principally by Louis Duchesne, continue to flourish and inspire very important works, particularly in special ecclesiastical history. Among the writings of Duchesne the "Histoire ancienne de l'Eglise" (2 vols., already issued, Paris, 1906–) deserves particular mention. Another important publication is the "Bibliothèque de l'enseignement de l'histoire ecclésiastique" a series of monographs by different authors, of which fourteen volumes have so far appeared (Paris, 1896–), and some have gone through several editions. A very useful manual is Marion's "Histoire de l'Eglise" (Paris, 1896).

Belgium.—Belgium, the home of the Bollandists and seat of the great work of the "Acta Sanctorum", deserves particular credit for the truly scientific spirit in which that noble work is conducted. The Bollandist de Smidt wrote an excellent "Introductio generalis in Historiam ecclesiasticam critica et historicam" (Antwerp, 1761). The most important ecclesiastical history was published by Wouters ("Compendium hist. eccl.", 3 vols., Louvain, 1874), who also wrote "Dissertationes in selecta capita hist. eccl." (6 vols., Louvain, 1868–72). Jungmann dealt with general church history to the end of the eighteenth century in his "Dissertationes selectae in historiam ecclesiasticam". The serious character of ecclesiastico-historical studies at Louvain is best seen in the "Revue d'histoire ecclésiastique" edited by Cauchie and Ladeuze.

Italy.—Some good manuals have appeared in Italy which give a beginning of serious studies in church history, e.g. Delsignore, "Institutiones histor. eccles.", edited by Tissani (4 vols., Rome, 1837–46); Palma, "Prelazione his. eccl." (4 vols., Rome, 1838–46); Prezzerin, Storia della Chiesa (9 vols., Florence, 1822–); Ign. Mozans, "Prolegomena alla storia universale della chiesa" (Florence, 1861), and "Tavole cronologiche critiche della storia universale della chiesa" (Venice, 1856–). Balan published as a continuation of Rohrbacher's universal ecclesiastical history the "Storia della chiesa dall' anno 1846 sino ai giorni nostri" (3 vols., Turin, 1856). Special works of great value were produced in various departments, especially at Genoa by Battista de Rossi in Christian archaeology. However, certain recent works on general church history—e.g. Amelli, "Storia della chiesa" (2 vols., Milan, 1877), Taglialetela, "Lezioni di storia eccles. e di archeologia cristiana" (4 vols., Naples, 1897); Fighi, "Inst. hist. eccl.", I (Verona, 1891)—do not come up to the present standard, at any rate, from the standpoint of methodical and critical treatment.

Holland.—The first scientific Catholic manual of church history in Dutch was recently written by Albers ("Handboek der algemeene Kerkgeschiedenis", 2 vols., Nijmegen, 1898). English.—In English-speaking lands general church history has hitherto been but little cultivated; special
eclesiastical history, on the other hand, can point to a multitude of works. Among Catholic productions may be noted Lángard's "History of England" and his "History and Antiquities of the Anglo-Saxon Church", which are reliable works of reference for early Christian times (to the Carolingian period); Butler's "Historical Memoirs of English, Irish and Scottish Catholics since the Reformation" (London, 1819; with Milner's "Supplementary Memoirs", ibid., 1820); Planagan's "History of the Church of England" (2 vols., London, 1850); Reeve's "Short View of the Rise, Progress, and Decline of the Reformation" (London, 1799). The post-Reformation period is treated in Dod, "Church History of England, 1500–1688" (ed. Tierney, 5 vols., London, 1839). Other useful works are Gillow's "Dictionary of English Catholics since the Reformation", Allies' "The Formation of Christendom" (q.v.), Digby's "Moses Catholic, or Ages of Faith" (q.v.).

Ireland.—The numerous civil histories of Ireland abound in materials for its church history. The first serious Catholic work on the general ecclesiastical history of Ireland was that of Lanigan, "Ecclesiastical History of Ireland" (4 vols., Dublin, 1829), reaching only to the beginning of the thirteenth century. A single volume work is that of the Franciscan Breenan, "Ecclesiastical History of Ireland" (Dublin, 1864). Important works dealing with particular epochs and aspects of Irish history: Haddan and Stubbs, "Councils and Eccl. Documents relating to Great Britain and Ireland" (non-Catholic, London, 1873); W. Mazière-Brady, "The Episcopal Succession in England, Scotland and Ireland, 1400–1873" (Rome, 1876); Ware and Harris, "History of the Bishops, Antiquities, and Writers of Ireland" (non-Catholic, 3 vols., Dublin, 1739–1845); Malone, "Church History of Ireland from the Anglo-Norman Invasions to the Reformation" (Dublin, 1822); O'Hanlon's "Lives of the Irish Saints"; Killen, "Ecclesiastical History of Ireland" (Presbyterian, London, 1875). Good Catholic works on the origins of the early Irish Church are those of Greif (Freiburg, 1867), Moran (Dublin, 1864), Gargan (ibid., 1864), Salmon (ibid., 1900). Protestant views were set forth by Stokes, "Ireland and the Celtic Church to 1172" (London, 1886); Loofs (1882), and Zimmer (1907). For a good bibliography of Irish ecclesiastical history see Bellesheim, "Gesch. der kathol. Kirche in Irland" (3 vols., Mainz, 1890—).

United States.—No satisfactory general history of the Church in the United States has yet appeared. A very learned documentary work is that of John Gilmary Shea, "History of the Catholic Church in the United States" (3 vols., New York, 1856; O'Gorman's "A History of the Roman Catholic Church in the United States" (New York, 1895), contains a useful bibliography.

For Australia see Cardinal Moran's "History of the Catholic Church in Australasia" (Sydney, 1896).

(b) Protestant Church Historians.—Among Protestant church historians who were in intimate contact with the chief Roman Catholics; their works came to be authoritative among non-Catholics. Planck, the first important Protestant ecclesiastical historian of the nineteenth century, exhibits the influence of the rationalism of the preceding age, but exhibits also more solidity and more soundness than most of his contemporaries. His work on the history of Protestant theology, and in his important "Geschichte der christlichkirchlichen Gesell-

ander is superior to him in talents and erudition, and moreover retains belief in the supernatural. His "Allgemeine Geschichte der christlichen Religion und Kirche" (5 vols., Hamburg, 1825–45) reaches to the end of the sixteenth century; after his death a sixth volume ("Briefe und Aufsätze") was added by his friend C. L. Heyne. He also wrote a history of the Apostolic epoch, "Geschichte der Pflanzung und Leitung der christlichen Kirche durch die Apostel" (2 vols., Hamburg, 1832—). To his school belong Guerike ("Handbuch der Kirchengeschichte", Halle, 1853; 9th ed., Leipzig, 1875), Jacobi ("Handbuch der Kirchengeschichte", Berlin, 1850), Schaff ("Geschichte der alten Kirche", Leipzig, 1887), Nieder ("Gesch. der christl. Kirche", Leipzig, 1846). They are stricter Lutherans however. A different method is followed by Dante ("Lehrbuch der Kirchengeschichte", 2 vols., Jena, 1818–28); the text is brief and condensed, but is fortified by lengthy excerpts from the sources. A similar plan is followed by Gieseler ("Lehrbuch der Kirchengeschichte", 5 vols., Bonn, 1824–57; a sixth volume was added by Redepenning from the author's manuscript). Other manuals were written by Engelhardt (3 vols., Erlangen, 1856, with a volume of sources, 1858–60). ("Lehrbuch der Kirchengeschichte", Munich, 1849). Lindner's "Lehrbuch der Kirchengeschichte" (3 vols., Leipzig, 1848–54) is strictly Lutheran; less biased are Hasse ("Kirchengeschichte", 3 parts, Leipzig, 1864) and Herzog ("Abriss der gesammten Kirchengeschichte", 3 vols., Erlangen, 1876, sq.). Hasse's "Lehrbuch der Kirchengeschichte" and "Kirchengeschichte" are moderate in views, though frankly anti-Catholic. His diction is elegant, and his character sketches finely drawn.

Another Protestant school is more in sympathy with Semler's rationalistic views. These writers are Hegelian in temper and spirit and seek to strip Christianity of its supernatural character. Its first leaders were the so-called "Neo-Tübingen School" under Johann Christian Baur, whose ecclesiastico-historical writings are directly anti-Christian: "Das Christentum und die Kirche der drei ersten Jahrhunderte" (Tübingen, 1853); "Die christliche Kirche vom 4. bis zum 6. Jahrhundert" (ibid., 1859); "Die christliche Kirche des Mittelalters" (ibid., 1860); "Die neuere Zeit" (ibid., 1861–3); "Das neunzehnte Jahrhundert" (ibid., 1863–73). Baur himself and his rationalistic adherents, Schwegel, Ritschl, Rothe, wrote also special books on the origins of the Church. Their "Grundzüge der Kirchengeschichte" of Gröber (7 parts, Stuttgart, 1841), written prior to his conversion, is a product of this spirit. Though constantly attacked, this school, whose chief living representative is Adolf Harnack, predominates in German Protestantism. Moeller, in his able "Lehrbuch der Kirchengeschichte" writes with moderation; similarly Muller in his yet unfinished "Kirchengeschichte" (Tübingen, 1892, sqq.).

In the nineteenth century also the Reformed (see above) produced less in the province of general church history than the Lutherans. Among the German authors must be named: Thym, "Geschichte des Einflusses der Kirche auf Christi" (2 vols., Berlin, 1800—); Munschler, "Lehrbuch der chrstl. Kirchengeschichte" (Marburg, 1801); Ebrard, "Handbuch der Kirchen- und Dogmengeschichte" (4 vols., Erlangen, 1865—); the most important of the Reformed Church historians is Hagenbach, "Kirchen- und Dogmengeschichte" who was educated at the University of Geneva; his "Histoire de la réforme de nos jours" (5 vols., Paris, 1881–3); Pressensé, "Histoire des trois premiers siècles"; d'Aubigné, "Histoire de la réformation du 16ème siècle" (Paris, 1831—).
Hittites. See Hittites.

Hobart, Archidioecese of (Hobartensis), comprises Tasmania, Brunii Island, and the Cape Barren Islands, King, and Charlotte Islands. In Beken of Strahan, Tasmania, was originally under the jurisdiction of the vicar Apostolic of Capetown, Mauritius and New Holland, and afterwards under that of New Holland, when it was made a separate vicariate. Hobart was made a diocese in 1842. On the establishment of the Australian hierarchy the Bishop of Hobart was suffragan of the Archbishop of Sydney. When in 1874 Melbourne became the archdiocese of the new

Holland produced: Hofstedel de Groot, "Institutior hist. eccles." (Groningen, 1835); Roysarda, "Compendium hist. eccl. christ." (Utrecht, 1841-45).

In the past, England, Scotland, and North America have cultivated the most part special fields, especially the early Christian period and the ecclesiastical history of particular nations. The most important general ecclesiastical history of England is the 'History of the Church of England' by W. and S. Hunt. "History of the Church of England" by various writers (Hunt, Stephens, Capes, Gairdner, Hutton, Overton), of which ten volumes have already appeared. 1910 appeared an exhaustive history of the Church since the Reformation is published by Dixon, "History of the Church of England" 1919; (5 vols., 1878-1902). In his "Lollardy and the Reformation in England" (2 vols., London, 1908), Dr. James Gairdner gives an able and impartial account of the system of the Reformation in England.

A very useful work is the "Dictionary of Christian Biography, Literature, Sects and Doctrines during the first eight centuries", edited by William Smith and H. Wace (4 vols., London, 1879). We might also mention the "History of the Christian Church" by Canon James Robertson of Canterbury, reaching to 1515 (3rd ed., London, 1885), and the "History of the Christian Church" by Schaff (6 vols., New York, 1852-1909). Other Protestant histories are: Archdeacon Hardwick's "History of the Christian Church, Middle Age" (3rd ed., by Stubbe, London, 1873); French's "Lectures on Medival Church History" (London, 1877); Milman's "History of Latin Christianity to Nicholas V, 1455" (revised ed., London, 1866); Philip Smith's "History of the Christian Church to the end of the Middle Ages" (New York, 1883); George P. Butler's "History of the Christian Church" (New York, 1887); Fair and impartial in many ways is Wakeham's "Introduction to the Church History of England" (3rd ed., London, 1907). To these may be added James Murdock's translation of Mosheim's "Institutes" (New York, 1854), and Henry B. Smith's translation of Gieseler's "History of the Church" (New York, 1857-80). The sources of English church history in general may be seen in Gros, "The Sources of English History to 1489" (New York, 1900), and Gardner and Mullinger, "Introduction to the Study of English History" (latest ed., London, 1905). 

e) Greek Orthodox Writers. In recent times Greek Orthodox writers have produced two works which indicate a growing interest in general church history: the 'Ιστορια Βελενουσιατικητου' by Dionysios Kyrriakos (2 vols., Athens, 1882), and the "Περιεγγανήσεις" by Sophilos (Constantinople, 1884).

In conclusion it may be noted that the biographies of most of the Catholic authors mentioned above will be found in the Catholic Encyclopedia.

Freeman, The Method of Historical Study (London, 1868); Beek, "Die Methode der Geschichtswissenschaft" (Leipzig, 1900); Münzer, "Handbuch der Geschichtswissenschaft", 1st ed. (Leipzig, 1902); de Wyzewa, De la critique hist. (Paris, 1906); Enßlin, "Handbuch der Geschichtswissenschaft" (Leipzig, 1903); Schickedanz, "Handbuch der Geschichtswissenschaft" (Leipzig, 1903); Heber, "Die Methode der Geschichtswissenschaft" (Leipzig, 1904).

Jos. H. Rompel.

J. P. Kirsch.

Hobart, Michael John. See Scranton, Diocese of.
province of Melbourne, Hobart was named one of its suffragan sees. It remained part of the province of Melbourne until 1888, when Hobart was made an archdiocese and Tasmania became an independent ecclesiastical province. Though Tasmania was discovered in 1642 by the Dutch, no attempt at settlement seems to have been made by them. Towards the end of the eighteenth century, the presence of French exploring expeditions aroused the suspicions of the British, who had already established a colony in New South Wales, and led to the permanent occupation of Tasmania by Britain. The first settlement was made in 1803 at Risdon, but in 1804 it was renamed Hobart Town. The see of Hobart was erected on 17 June 1822. The population of Tasmania was about 183,000 on 31 December, 1908 (Catholics, 32,000). The circumstances of the early settlement of the island did not tend to religious progress. It was made the dumping-ground for the refractory prisoners of Botany Bay.

There was no Catholic chaplain to administer to the prison population and the first few free settlers until 1821, when Rev. Philip Connolly was appointed; he was vicar-general to the Vicar Apostolic of Mauritius for Van Diemen's Land and New Holland. His first church, a small wooden structure, was named after St. Vincent. Father Connolly was granted a house B.B. was assigned to help him. Connolly died in 1839, and Bishop Polding appointed Father Therry as his vicar-general in Tasmania. The account of his struggles in those early days, when as in other British colonies an attempt was made to make the settlement as Protestant as possible, is very interesting. Therry and his colleagues did wonders among their flock. They had a parish of 20,215 square miles, with a number of scattered settlements, without roads to make passage easy, and with hostile blacks to endanger their lives. When in 1842 Bishop Willson took possession of the See of Hobart, he found a land well prepared for his labours.

It was mainly through his efforts in directing attention to the inhumanity of the prison system that the penal settlement at Norfolk Island, then under his jurisdiction, was broken up, the lot of the prisoners in Tasmania made much more tolerable, and the system itself finally done for. His successor, Most Rev. Daniel Murphy, who arrived in 1866, had laboured in India previously. He died on 27 Dec., 1907. While Dr. Willson’s episcopate was chiefly noted for his labours in the cause of humanity, Dr. Murphy laboured for the training of the young. The Sisters of Charity had long been established under Bishop Willson. Under Bishop Murphy their work was extended, and the Presentation Sisters, the Sisters of St. Joseph, the Sisters of Mercy, and the Sisters of the Sacred Heart all opened schools. Dr. Murphy’s last work was the erection of the College of St. Virgilius for the young boys of his flock. The present archbishop, Most Rev. Patrick Delany, has arranged with the Irish Christian Brothers to take charge of St. Virgilius’s College. At the request of the archbishop, the Catholic schools of the island are subject to inspection and examination by the State School inspectors, but they receive nothing from the public funds. The State schools have Scripture lessons in their curriculum. The teacher, whether a believer or an unbeliever, is bound to give them. If Catholic parents object, their children are exempt from attendance at these lessons. The Catholics strongly protest against the injustice of being forced to contribute to a system which teaches a kind of mild Protestantism to the pulpit.

The State offers a number of scholarships to be competed for by the pupils of all schools, whether public or “private”. But as both schools and teachers have now by law to be registered and licensed by the School Registration Board, there is, strictly speaking, no longer any “private” school in the State. Education is now free in the public primary schools. There is a Tasmanian university, on the board of which a Catholic priest has a place, just as a priest holds a seat on the school registration board. The personal influence and example of the Bishops and Archbishops of Hobart and of the pioneer priests succeeded in removing almost altogether the religious acerbities by which other British dependencies are often troubled. There are at present in the archdiocese, the archbishop, 26 priests, 135 nuns, 4 superior day schools, 25 primary schools, 1 orphanage, 1 Magdalen home (under the Good Shepherd nuns), and 3280 children in Catholic schools. Like every Australian province, Tasmania has its Catholic organizations. The parishes of the early days were paid by the State as chaplains to the prison population. The endowment continued after the State had received the right of representative government. In 1869 State endowments to religion were withdrawn, but certain sums of money were voted, out of the number of their adherents, to the hitherto endowed churches. The sum granted to the Catholics is held in State bonds and returns to the archdiocese about $700 a year. The aborigines are extinct, having been “civilized” out of existence. The last survivor died in 1876. There are some half-castes who are forced by the State to live in the islands in Bass Straits. They, too, are dying out.

Hodgson, Sydney, layman and martyr; date and place of birth unknown; d. at Tyburn, 10 Dec., 1591. He was a convert to the Church. In 1591, while Father Edmund Jennings was staying with a house of Mr. Swinnen Wells in London, the pursuivant Topcliffe and his assistants broke into the house just at the moment of consecration. On this account alone, their entrance into the room was obstructed by some of the male members of the congregation, including Sydney Hodgson, until the conclusion of the Mass; these gentlemen then surrendered themselves. Hodgson and the others were brought to trial on 4 Dec., the charge against him being merely that of receiving and relieving priests, and of being reconciled to the Church of Rome. He was offered his life if he would give some sort of a promise of occasional conformity to the Established Church, but as his only link with his religion, he was condemned and executed.

Hofauer, Clement. See Clement Mary Hofauer, Saint.

Hofer, Andreas, patriot and soldier, b. at St. Leonhard in Passeythrale, Tyrol, 22 Nov., 1767; executed at Mantua, 20 Feb., 1810. His father was known as the “Sandworth” (i.e., landlord of the inn on the sandy spit of land formed by the Passeyr. The inn had been in the family for over one hundred years). Hofer’s education was very limited. As a child, he was taught to read and write, but he went farther afield, learned to know men of every class, and even acquired a knowledge of Italian that stood him in good stead later. After his marriage with Anna Ladurner, he took over his father’s business, which, however, did not flourish in his hands. Gifted, though not a genius, a dashling but upright young man, loyal to his God and his sovereign, he made many friends by his straightforward character; his stately figure and flowing beard contributing in no small degree to his attractiveness. When the Tyrol was handed over to Bavaria at the Peace of Friesburg, the “Sandworth” was among the delegates who
escorted the departing Archduke John. Thenceforth he attended quietly to his own affairs until, in 1806, he was called to Vienna with others, and was informed of the proposed uprising in the Tyrol. At the outset of the rebellion he was by no means its chief, but acquired fame as a leader mainly by his capture of a Bavarian detachment in the march of Sterzing. Hofer was not engaged in the first capture of Innsbruck, being then an officer on the ground troops in the Tyrol with the title of "Imperial Royal Commandant". When the French broke victoriously into the Tyrol and occupied Innsbruck, he issued a general summons to the people, which roused many patriots and drew them to his standard. The fact that the enemy, underestimating the strength of the popular party, left only a small garrison of troops, favoured their cause. After various skirmishes Hofer's men broke into Innsbruck on 30 May. The real battle came off at Berg Isel. The "Sandwirth" took no part in the conflict; nevertheless he directed it with skill and success.

The Tyrol was now free from invasion for two months; indeed, a few bands of insurgents ventured into Bavarian and Italian territory. Under these conditions Hofer thought he could return to his home and leave the government in the hands of the Intendant Hormayr, who had been sent from Vienna. But when, in spite of positive assurances from the emperor, the Tyrol was abandoned at the armistice of Znaim, and Marshal Lefebvre advanced to subdue the country, the people determined to risk their lives for freedom. Again the written order of the "Sandwirth" flew round the valleys. Haspinger and Speckbacher organized the people, and on 13 and 14 August occurred the second battle of Berg Isel. Haspinger decided the result of the day; but Hofer stood for some time in the very heat of battle, and by his energetic efforts induced the already weakening ranks to renew their efforts. Henceforth, the Intendant having fled, Hofer took the government into his own hands, moved into the Hofburg, and ruled his admiring countrymen in a patriarchal manner. Francis II bestowed on him a golden medal, but this proved fatal to Hofer, who was thereby strengthened in his delusion that the emperor would never abandon his faithful Tyrolese. Thus it happened that he even disregarded a letter from the Archduke John, as though it were a Bavarian or French proclamation, and on 1 November lost the third battle of Berg Isel against a superior force of the enemy.

The renewed success of the French general and the Bavarian crown prince (afterwards Ludwig I) now determined Hofer to surrender; trusting, however, to his friends and to false rumours, he changed his mind and decided to fight to the last. The mighty columns of the allies soon crushed all resistance, and the leaders of the peasant army saw that nothing remained but flight; Hofer alone remained and went into hiding. A covetous countryman, greedy for the reward offered for his capture, betrayed him. He was surprised in his hiding place, dragged to Mantua amid insults and outrages, and haled before Napoleon. Without awaiting its sentence a peremptory order from Napoleon ordered him to be shot forthwith. He took his death-sentence with Christian calmness, and died with the courage of a hero. The prophecy he uttered in the presence of his confessor shortly before he died, "The Tyrol will be Austrian again was fulfilled a few years later. His remains were disinterred in 1823 and laid at the University chapel at Innsbruck, where his life-size statue now stands. The emperor ennobled the Hofer family. The youth of Germany has been inspired by his heroic figure, and German poets like Möser, Schenkendorf, Immermann, etc., have sung of his deeds. The French paid him homage to his sincere piety, his self-sacrificing patriotism, and his noble sense of honour (Denis in "Hist. gén."); Corrêard in "Précis d'histoire moderne": a text-book for the pupils of the military school of St. Cyp.

Andreas Hofer und die Tiroler Insurrektion (Munich, 1810); Hormayr, Das Land Tyrol und der Tirolerkrieg, 1809 (Leipzig, 1846); Hofer im Jahr 1809 (Innsbruck, 1880); Eichhorn, Geschichte Tirols (3 vols., Innsbruck, 1880); Hinrichs, Hofer; Hirt, d. B.; Boog, v. v.; Frank, Hofer im Liede (Innsbruck, 1884); Hirt, Tirols Erhebung im Jahre 1809 (Innsbruck, 1891); Pius Wittman.

Hofer, Konstantin von, historian; b. at Memmingen, Bavaria, 26 March, 1811; d. at Prague, 29 December, 1898. After finishing his studies in the gymnasium at Munich and Landshut, he studied jurisprudence and then history at the University of Munich under Görres, Dollinger, and especially Schelling, and received his degree in 1831 on presenting the dissertation "Ueber die Anfänge der griechischen Geschichte". Aided by a pension from the government, he studied two more years at Göttingen, where he published a "Geschichte der französischen Revolution", and then went to Italy, residing chiefly at Florence and Rome, and worked there industriously in the examination of original sources. Returning to Munich he accepted the editorship of the official "Münchener Zeitung" in order to earn a subsistence, but while thus engaged he had by 1835 qualified himself as Privatdocent in history at the university. In 1839 he published "Die deutschen Papste" in two volumes. After this he devoted himself to his duties as professor until 1849, when he fell into disfavour with King Ludwig I on account of the position he took, along with several other professors, in the popular agitation against the relations of the king with the dancer Lola Montes. He expressed his views on the subject in "Concordat und Constitutione der Katholiken in Bayern", and for this was removed from his university position, 26 March, 1847. Although the king after some months took Hofer again into the government service, he was, nevertheless, transferred to Bamberg (Upper Franconia), as keeper of the district archives. With his accustomed zeal he began the study of Francian history and published in 1849–52 as the fruit of his investigations: "Quellenammlung für fränkische Geschichte", in four volumes, and in 1852–53 "Französische Studien", parts I–V. During the same period he issued "Bayern, sein Recht und seine Geschichte" (1850), also in the last mentioned year "Ueber die politische Reformbewegung in Deutschland in der ersten Hälfte des 19. Jahrhunderts" (1850). Further, in the midst of these labours, he began the preparation of his "Lehrbuch der Geschichte" which appeared in 1856.

In 1851 when the Austrian school-system was reorganized, Count Thun called Hofer as professor of history to Prague, where he taught with great success until he retired on a pension in 1882. In 1865 he be-
came a member of the Bohemian Diet, in 1872 a life member of the Austrian House of Lords. In this latter year he was raised to the hereditary nobility and received the order of the Iron Crown. In politics he was one of the leaders of the German-Bohemian party, a branch of the constitutional party of that people, and one of the opponents of the Austro-Czechs. From 1872, however, he almost practically retired from politics, partly from the increasing opposition which grew up in the German parties in Austria against "Catholicism," partly because the clerical party was drawing closer to the Slavs. Conflicts were unavoidable with the one hand he was a thorough German, absolutely convinced of the great mission of the Germans in Austria, on the other he was one of the most faithful sons of the Catholic Church. Consequently he gradually withdrew from party politics, without losing, however, his strong interest in the struggles of the mostly anticlerical German-Bohemians against the Czechs, and devoted himself entirely to the cultivation of German sentiment and intellectual life. By his activity, both as teacher and author, he became the founder of the modern school of German-Bohemian historical research, which received enthusiastic support from the Society founded by him, in 1882, for the study of the history of the German element in Bohemia, and in consequence ranks as one of the most deservedly respected historians of Austria.

Höfler gave special attention to the history of the Hussite movement and reached the conclusion that it was directed less against the papacy than against the German power in Bohemia and against the cities. He characterized the movement as "an unsympathetic historical phenomenon, a movement foredoomed to failure, which soon became a burden to itself". He saw in Hus only an antagonist of Germanism, the destroyer of the University of Prague and of the scholasticism on Hussitism. His other works on Hussitism are: "Geschichts- und Kritiken der Hussiten Bewegung" (1856-66), in three volumes; "Magister Johannes Hus u. der Abzug der deutschen Professoren und Studenten aus Prag 1409" (1864); "Concilia Pragensis, 1353-1413" (1862). These historical investigations involved Höfler in a violent literary feud with Franzisk Palacky, the official historian of Bohemia, an enthusiastic representative of Czech interests, and the indefatigable champion of Slavic supremacy in Bohemia. But as the scientific proofs produced by Höfler were indisputable he was victorious in this controversy and broke down Palacky's hitherto unassailable authority as an historian. These exhaustive studies in Bohemian history led Höfler to deeper research into the history of the Slavic races. In his "Abhandlungen aus dem Gebiete der slawischen Geschichte" (1879-82), five volumes, he showed how the Slavic element had always warred against the German element; in the same work he emphasized strongly the importance of the German element in the development of Bohemia.

In other works Höfler treated the ecclesiastical reform movements among the Romano peoples. The most important of this class of his writings is: "Die romanischen und slawischen Lande der Alt- und Mittelalters" (1878). Others are: "Der Aufstand der romanischen Städte gegen Karl V" (1870); "Zur Kritik und Quellenkunde der ersten Reformationsjahre Kaiser Karls V" (1876-83), three parts; "Der deutsche Kaiser und der letzte deutsche Papst, Kais. Karl V. und Papst Adrian VI" (1880) in which he proves that this high patrician was the author of Catholic reform in the sixteenth century. We are also indebted to him for the two volumes of "Monumenta Hispanica" (1881-82). Höfler's contributions to the history of the Hohenzollern family are to be found in: "Denkwürdigkeiten des Ritters Ludwig von Eyr" (1849), and in the monograph "Barbara, Markgräfin von Brandenburg" (1867). Other works worthy of notice are: two volumes of "Abhandlungen zur Geschichte Oesterreich" (1871-72); "Kritische Untersuchungen über die Quellen der Geschichte König Philipp des Schönen" (1883); "Bonifatius, der Apostel der Deutschen, und die Slawenapostel Konstantinos (Cyrillus) und Methodios" (1882). He also published many papers in the "Denkschriften der k.k. Akademie der Wissenschaften," in the "Fontes rerum Austrasiarum," and in the "Zeitschrift des Vereins für die Gesch. der Deutschen in Böhmen".

Höfler also wrote a number of historical dramas in verse, as well as long eloquent and thoughtful epigrams; his poetical works, however, met with but moderate success. Höfler was an eminent man. Endowed with a keen mind, and profound observation, as well as with many physical advantages, strong health and manly beauty, he succeeded, by hard work and indefatigable self-discipline, says his successor Bachmann, in surmounting many initial difficulties and later obstacles and in reaching the high position of a generally respected savant and teacher: he attained the broad views and experience of a statesman, and the sure and harmonious bearing of a sage. Himself the embodiment of kindliness and goodness, to such a degree that he strove to lend assistance where assistance was neither possible nor timely, he anxiously sought to respect the individuality of others and to be a model of courtesy and fairness, not merely to appear such.

Höfler, John Baptist, better known, on account of his long sojourn in France, as Abbé Höfler, b. near Ennis in County Clare, Ireland, 24 June, 1820; d. at Saint-Sulpice, 29 September, 1901. His earlier years were spent in Ireland, but an uncle, who was a priest in the Diocese of Périgueux in France, brought him to this country at the age of fifteen and placed him in the preparatory seminary of Bordeaux. To his early training in this institution, where he soon evinced a more than ordinary talent and power of adaptation, was due the thorough mastery which he acquired of the French language, as also his perfect assimilation of the French spirit and ways, albeit without prejudices to his command of English, or to the qualities characteristic of a thoroughly Irish temperament.

Having completed his classical studies, he entered the theological seminary of Bordeaux, and, as at the end of his course he was too young to receive orders, he went, in 1849, to the Seminary of Saint-Sulpice in Paris, where he followed a post-graduate course of theology for two years. Then, feeling called to the work of clerical action, he entered the "Solitude" or novitiate of the Sulpicians at Issy, and was ordained to the priesthood, 5 June, 1852. The following September, not having yet completed his twenty-third year, he was appointed to the chair of dogmatic theology in the Seminary of Saint-Sulpice, where from the outset he gave evidence of those rare qualities which constitute the teaching faculty, and made him so eminent as an instructor. During the ensuing
years he was called, through force of circumstances, to teach successively various other branches of ecclesiastical science, but from 1803 to 1848 he occupied without interruption the chair of moral theology, adding thereto, during a period of thirteen years, the course of sacred liturgy.

After thirty-two years spent in teaching in Saint-Sulpice, he was sent in 1848 to the United States, having been appointed the first president of the newly erected theological seminary of Boston. After fulfilling the duties of this post for five years, he was transferred to the presidency of the graduate theological seminary connected with the Catholic University in Washington. The presidency he occupied for five years, his teaching being confined almost exclusively to lectures on ascetic theology. He was then recalled (1894) to St. John's Seminary, Boston, and passed there the seven remaining years of his life as its president. At the end of the school year 1901 he was compelled, on account of rapidly declining health, to interrupt his labours for needed rest. Arrangements were made for him to spend the following winter at Hyères in the south of France, but he died suddenly on his way thither, at the age of seventy-two.

Dr. Hogan, while hardly to be called a specialist in any one branch of a scholar of great erudition. He took a lively interest in all topics, whether pertaining to ecclesiastical or to secular science, and was conversant with the best literature bearing on subjects in these fields. He was endowed with that rare ability for imparting information to different mentalities which makes the ideal teacher, and as such his influence was widely felt and much appreciated, especially in France, where for so many years those who were to achieve the highest distinction among the secular clergy received the benefit of his intellectual guidance. His was a keen, versatile, analytic mind, characterized by breadth of view as well as penetration, and thorough connection with the difficulties and problems of logical and philosophical problems. His method was chiefly Socratic, free from dogmatism of tone, and he possessed in a rare degree the gift of being able to render interesting, at least to the more intelligent students, the discussion of even the driest and most abstruse questions. One who had known him intimately for many years paid tribute to his merits in an article in the "Homiletic Monthly", Dec., 1901, on Abbé Hogan's "Clerical Studies".

Though a scholar greatly gifted in the art of expounding, Dr. Hogan gave little attention to writing and did not publish widely. Except occasional articles contributed to periodicals, his only published works are "Clerical Studies", which first appeared in the "Ecclesiastical Review" (Philadelphia, 1891-93), and "Daily Thoughts". Both of these have been translated into French. In the former, which merits a place among the best ecclesiastical manuals, he covers the entire field of ecclesiastical science, treating each subject in his own original, suggestive manner, from the practical as well as the theoretical standpoint. The latter is a book of short meditations for the use of priests and seminarians.

HOGAN, JOHN JOSEPH. See KANSAS, Diocese of.

Hohenhain van der Meer, Moritz, a Benedictine historian; b. at Spörli near Belgrade, 25 June, 1718; d. at the monastery of Rheinau, near Schaffhausen in Switzerland, 18 December, 1795. He entered Rheinau as student in 1730, made vows there in 1734, was ordained priest in 1741, became professor in 1744, was prior of the monastery from 1758 to 1774, keeper of the monastic archives from 1759 till his death, and secretary of the Swiss Benedictine Congregation during the last nineteen years of his life. The episcopal See of Lausanne which was offered him by the pope he refused to accept. His numerous writings (seventy-six separate treatises) are for the most part historical studies on his own monastic foundation. He also wrote a history of the Swiss Benedictine Congregation (1602-1785), a life of St. Fintan, and some ascetical treatises. Though his historical works give evidence of careful research and of a rare critical acumen, only a few of them have found their way into print. They are nearly all written in Latin and fill numerous folio volumes. Most of these works, together with fifty-two volumes of epistolary correspondence are at present in the cantonal library of Zurich.

MAYER in Friedberger Diplomae-Archiv, XI (1877), 1-34, with a supplement by BADER, Ibid., XII (1878), 189-201; vgl. WITTMANN, Geschichte der Historiographie in der Schweiz (Zurich, 1860), 300 sq.

MICHAEL OTT.

Hohenburg (Odilienberg; Altitona), a suppressed nunnery, situated on the Odilienberg, the most famous mountain of the Vogesen, on the right bank of the Rhine. It was founded about 690 by St. Odilis, who also was its first abbess. On the eastern slope of the Odilienberg she built a hospice, called Niedermünster or Nieder-Hohenburg, which afterwards became a convent for ladies of nobility and was destroyed by lightning in 1577. Originally Hohenburg was called by Benedictine nuns who were replaced by canonsesses in the eleventh century. In the first half of the twelfth century it began to decline, but its discipline was restored by Abbess Relindis of Bergen near Neuburg on the Danube, who became Abbess of Hohenburg about 1140. During her rule Hohenburg became famous for its strictly spiritual life, as well as the great learning of its nuns. She was succeeded in 1167 by Herrad von Landsberg under whose rule the fame of Hohenburg continued to increase. She built the Premonstratensian monastery of St. Gorton on the slope of the mountain in 1175, and the Augustinian monastery of Trattenhausen at its foot. Herrad is the author of "Hortus deliciarum", a collection of short treatises on theology, astronomy, philosophy, and other branches of learning. It also contained some original Latin poems with musical accompaniment, and some beautiful drawings. The work was finished in 1188 at the conference of the Premonstratensian Stressing at Strasbourg in 1870. When Hohenburg perished by fire in 1564 some of the nuns returned to their parents, others became Protestants and married. In 1661 Hohenburg was rebuilt and occupied by Premonstratensians. During the French Revolution it was confiscated by the Government and sold as national property in 1791. Mgr. Rass, Bishop of Strasbourg, purchased the buildings in 1853 for his diocese.

MICHAEL OTT.

Hohenlohe-Waldenburg-Schillingsfürst, Alexander Leopold, titular Bishop of Sardica, famous for his many supposedly miraculous cures, b. 17 August, 1794, at Kupferzell in Württemberg; d. 14 November, 1849, at Voslau near Vienna. He studied the humanities at the Theissianum in Vienna, 1818, and at Berne, 1818-19, and at Vienna, 1810-12; theology at Tynaur in Hungary, 1812-14, and at Eilwang, 1814-15. On 16 September, 1815, he was ordained priest and at once devoted himself to the care of souls first at Stuttgart, then at Munich. In October, 1816, he went to Rome where he found little difficulty in justifying himself in answer to the accusations of having administered the sacraments in the German language and of belonging to the Bible.

THE NATIVITY
HOLBEIN THE ELDER, PINAKOTHEK, MUNICH
society. On his return he made a pilgrimage to Loreto, and again arrived at Munich on 23 March, 1817. On 8 June of the same year he was made ecclesiastical councilor of the diocese, and in 1823, at this time began the numerous miraculous cures which are alleged to have been effected through the prayers of Hohenlohe. On 1 February, 1821, he was suddenly cured at Hassfurt of a severe pain in the throat in consequence of the prayers of a devout peasant named Martin Michel. His belief in the efficacy of prayer was greatly strengthened by this cure, and on 21 June, 1821, he succeeded in curing the Princess Mathilda von Schwartzberg, who had been a paralytic for eight years, by his prayers which he joined with those of Martin Michel. Having asked the pope whether he was permitted to attempt similar cures in the future, he was told to proceed, but that he should continue them in private. He would specify a time during which he would pray for those that applied to him, and in this manner he affected numerous cures not only on the Continent, but also in England, Ireland, and the United States. Worthy of mention is the case of Mrs. Ann Mattingly of Washington, D. C., who was said to have been cured of a tumour through his prayers on 10 March, 1824. Rome did not pass judgment on these supposed miracles and Catholics were divided in their opinion. In 1824 Hohenlohe became canon, in 1829 provost, and later in 1831 auxiliary and Apostolic Administrator of Griesheim. In 1844 he was made choríepiscopos and titular Bishop of Sardica. He is the author of four volumes of sermons and ascetical treatises most of which were collected and published by S. Brunner (Ratisbon, 1851). His method of curing the sick was continued after his death by his brother and disciple Joseph Forster, pastor of Hüttenheim, who died in 1875.

Michael Ott.

Holbein, Hans (The Elder Holbein), a German painter; b. at Augsburg about 1460; d. at Iseihem, Alsace, in 1524. Except that he was born in the Bavarian centre of art, culture, and commerce, and that his father, Michael, was a well-to-do leather-worker, little is known of his early life. He may have studied in the studio of the great Schongauer, and some authorities state that he married the daughter of the engraver painter Brückmaier (von Stetten). He is registered among the citizens of Ulm in 1499; he was established in Frankfurt in 1501 and subsequently lived and painted at Basle and in Alsace. These wanderings may have been occasioned by financial embarrassments, for he was in 1513, canon of Bamberg. About Holbein's early work shows that he followed van der Wyden and Memling. Then the van Eycks and the Cologne school influenced him for more than a decade. In this, his "dry" period of painting, his subjects were chiefly from the Passion, and, although they exhibit the grace of the French, and, indeed, the violence and the color were of the German, yet the German, and, Sharp folds in his elaborate draperies. Augsburg was on the high road between Germany and Italy, and Holbein, drinking deeply of Italian culture substituted the softer Southern elements for the precise and archaic German methods. He was one of the first to paint a Renaissance type of background, and to use architectural decoration in his pictures; and in this he became a master. This emancipation of painting (1512-22), begun by the elder Holbein, was to be completed by his son Hans. Thus the elder Holbein was a pioneer and leader in the transformation of German art. The majority of the great critics incline to this opinion, while others aver that his poverty and debts were due to his long and notorious resistance to Italian influence. He was a spirited and robust, if sometimes vulgar, painter, a man of imagination and power, possessing a splendid capacity for depicting character. His mean have long been overshadowed by the fame of his son.

The earliest important work of the elder Holbein is a "Madonna and Child" (1492) now in the Moritas Kapelle, Nuremberg. In 1493 he became well known by his altar-piece in Weingarten Abbey; but the most famous of his works is the altar of the Penitents of St. Paul (now in the Augsburg Gallery), for it contains a portrait of himself and his two sons, Ambrose and Hans; and the father is pointing with pride to young Hans as if predicting the lad's future greatness. At Frankfort, in 1501, Holbein painted a large and important altar-piece for the Dominicans and for some time after seems to have devoted himself to Forged documents and false inscriptions for a long time ascribed works to the son which modern authorities ascribe to the father. To-day the elder Holbein enters into his own. The beautiful "Conception", painted in 1512 (Augsburg Gallery), and the altar-piece for St. Sebastian Man of Nuremberg, known as the "Annunciation" and Sta. Elisabeth and Barbara occupying its wings, are two notable pictures recently proved to be by the elder, and not the younger, Holbein. The St. Sebastian altar-piece is generally regarded as his greatest work. His "Madonna Enthroned" is preserved in the church of the Gertrudis in Nuremberg, while two portraits by him (probably a man and wife) are in the Hampton Court collection. The sketch books of this prolific artist, preserved at Berlin and Copenhagen, are filled with portraits, chiefly in silver-point, the noteworthy faces therein being the Emperor Maximilian, his fool, Kunz von der Rosen, the Fuggers, and other men conspicuous in commerce and at Court. He and his brother Sigmund painted together—how long, and on what pictures, cannot be discovered; but Hans always signed the work. He gave young Hans his first lessons, and endowed him with his virile force and immense capacity for characterization. About 1520 Holbein was in Alsace and sought refuge with the monks of Iseihem. After his death it is recorded that his son claimed his brushes, paints, and sketch books from the monastery. Chamberlain, Hans Holbein (London, 1902): Woltman, Holbein und seine Zeit (2nd ed., Leipzig, 1878): Wett, German and Flemish Masters in the National Gallery (1884).

Leigh Hunt.

Holden, Henry, English priest; b. 1596; d. March, 1602. Henry Holden was the second son of Richard Holden, of Chasley, Lancashire, and Eleanor, his wife. He entered the English College at Douai under the name of Johnson, 18 Sept., 1618, where he studied till 15 July, 1623, when he proceeded to Paris, took his degree as Doctor of Divinity, and was made a professor at the Sorbonne. He also became penitentiary at Saint-Nicolas du Chardonnet and one of the grand vicars of the Archibishop of Paris, a title which Richard Smith fled from England in 1631 and there arose a difference of opinion between the Jesuits and the other orders, who thought the presence of a bishop in England was not advisable at the time, and the secular clergy, who took the opposite view, Dr. Holden was sent to Rome to represent the seculars and to avert the dissolution of the chapter. In 1655, on the death of Bishop Smith, the question again arose, and Holden's friend and brother-priest, Thomas White, alias Blackloe, wrote a book, "The Grounds of Obedi- ence and Government", which gave offence to his opponents, and led to some of his other works being censured by the Holy See. Holden, who thought Blackloe had been hardly treated, undertook his defence, and thus the "Blackloist Controversy" was begun. Holden, however, did not approve of all Blackloe's opinions and persuaded him to submit and
extract the teaching which had been condemned. Blackloe did this, though without satisfying his adversaries, who were also very unsearing in their denunciations of Holden, whom they described as an unlearned and rash man. This charge is sufficiently disproved by his position, not to mention his works. In the later years of his life he took a keen interest in the religious community known as the "Blue Caps," at Paris. The sisters were originally Franciscans, but when Cardinal de Retz, Archbishop of Paris, refused to allow Franciscans to dwell in his diocese, they obtained leave from the Holy See to change their rule to that of the Immaculate Conception of our Lady, and Dr. Holden was appointed their superior in 1661. Dr. Holden's high reputation for learning and orthodoxy, as instanced in the works of Dodd, Berington, and Charles Butler, is above dispute, though in the heat of controversy his opponents accused him of Jansenism as well as of Blackloism. But his own statement survives that he condemned the five propositions from the first, and that "in the same sense in which they were condemned by him" (the pope). He also signed the Sorbonne's censure of Arnauld's letter to the Duke of Liancourt.

His principal works are as follows: "Divinae Fidei Aegypti cum Appendix de Schismate," Paris, 1652; "Theansw. de Serjeant on the Catholic side against the Anglicans Bramhall and Hammond; "Tractatus de Usura," published in second edition of the above (1655); "Letters to Arnauld and Ferret," also published in later editions of the "Analyse"; "Anawer to Dr. Laneys Queries concerning certain Points of Controversie"; "Dr. Holden's Letter to a Friend of his, upon the occasion of Mr. Blackloe (or rather T. White)'s submitting his Writings to the See of Rome" (Paris, 1657); "Novum Testamentum brevius et notationibus illustratum" (Paris, 1660); "Henrici Holden Epistola ad D.D.N.N. Anglum in qua de 22 propositionibus ex libris Thomi Angli ex Alibus excerptis et a facultate theologica Ducacena damnatis, sententiam suam dictit." (Paris, 1661); "A Letter to Mr. Graunt concerning Mr. White's Treatise de Medio Animarum Statu" (Paris, 1661); "A Check; or enquiry into the late act of the Roman Inquisition, busily and pressingly dispersed over all England by the Jesuits" (Paris, 1662); several letters were printed in Pugh, "Blackloe's Cabal" (1680).

EDWIN BURTON.

Holford, Thomas. See Morton, Robert.

Holiness. (A. S. hal, perfect, or whole). Sanctitas in the Vulgate of the New Testament is the rendering of two distinct words, ἁγίασμα (I Thess., i, 3) and ἁγιασμός (Luke, i, 75; Eph., iv, 24). These two Greek words express respectively the two ideas comnotated by "holiness" viz.: that of separation as seen in ἁγιός from ἁγιός, which denotes "any matter of religious awe" (the Latin saecer); and that of sanctio (sanctas), which is ἁγος, has received God's seal. Considerable confusion is caused by the Reima version which renders "holiness" in Heb. 11:22 by ἅγιος, but more correctly elsewhere by "sanctification," while ἁγιορθός, which is only once rendered correctly "holiness," is twice translated "sanctification".

St. Thomas (I-II, Q. lxxx, art. 8) insists on the two aspects of holiness mentioned above, viz., separation and firmness, though he arrives at these meanings by dint of the etymologies of Origen and St. Isidore.

Sanctity, says the Angelic Doctor, is the term used for all that is dedicated to the Divine service, whether persons or things. Such must be pure or separated from the world, for the mind must needs be withdrawn from the contemplation of inferior things if it is to be set upon the Supreme Truth—and this, too, with firmness or stability, since it is a question of attaching our attention to the immutable and immutable principle, viz., God Himself—"I am sure that neither death, nor life, nor angels . . . nor any other creature shall be able to separate us from the love of God" (Rom., viii, 38-39). Hence St. Thomas defines holiness as that virtue by which a man's mind applies itself to all things that God has made, for it is the infused moral virtues, and identifies it with the virtue of religion, but with this difference that, whereas religion is the virtue whereby we offer God due service in the things which pertain to the Divine service, holiness is the virtue by which we make all our acts subservient to God. Thus holiness or sanctity is the outcome of sanctification, that Divine act by which God freely justifies us, and by which He has claimed us for His own; by our resulting sanctity, in act as well as in habit, we claim Him as our Beginning and the End towards which we daily unfinishingly tend. Thus in the moral order sanctity is the essential of the paramount rights of God, and His holiness manifestation is the keeping of the Commandments, hence St. Paul: "Follow peace with all men, and holiness (sanctimonia, ἁγιασµόν) without which no man shall see God" (Heb., xii, 14). The Greek word should be noted; it is generally rendered "sanctification", but it is noteworthy that it is the word chosen by the Greek translators of the Old Testament to render the Hebrew word ἁγιάζω, which properly means strength or stability, a meaning which as we have seen is contained in the word holiness. Thus to keep the Commandments faithfully involves a very real though hidden separation from this world, as it also demands a great strength of character or stability in the service of God.

It is manifest, however, that there are degrees in this separation from the world and in this stability in God's service. All who would serve God truly must live up to the principles of moral theology, and only so can men save their souls. But others yearn for something higher; they ask for a greater degree of separation from earthly things and a more intense application to the things of God. In St. Thomas's own words: "All who worship God may be called 'religious', but those who are called so as to dedicate their whole lives to the Divine worship, and withdraw themselves from worldy concerns, just as those are not termed 'contemplatives' who merely contemplate, but those who devote their whole lives to contemplation". The saint adds: "And such men subject themselves to other men not for man's sake, but for God's sake", words which afford us the key-note of religious life strictly so-called (II-II, Q. lxxi, a. 7, ad 5)

HUGH POPE.

Holiness (PAPAL TITLE). See Pope.

Holland.—The conventional designation of the country (more properly called THE NETHERLANDS, occupying an area of 12,648 sq. m. on the shores of the North Sea and the Zuyder Zee, about the mouths of the Rhine and Meuse. This country is contiguous to Belgium, on the south, and to Hanover, Westphalia, and Rhenish Prussia, on the east. The name, Holland, was originally applied only to a countyship which occupied the territory now covered by two provinces (North and South Holland) of the
modern Kingdom of the Netherlands. The history and actual conditions of Holland will be treated under the following heads: I. The Foreign Relations; II. The French Period; III. The Kingdom; IV. Statistics.

I. THE REPUBLIC.—Almost all of the region comprising what now call Holland belonged in the Middle Ages to the Counts of Holland, the Bishops of Utrecht, and the Dukes of Brabant and Gelderland. Between 1433 and 1552 all these territories came successively under the sway of Burgundy and the House of Austria, which through hereditary succession also acquired Spain. Consequently, Holland belonged to Spain and was governed by Charles V and, after 1555, by Philip II. In 1566 occurred the revolt which resulted in the creation not only of the northern but also of the southern provinces of the Netherlands. Alessandro Farnese, Duke of Parma, succeeded, by the treaties of Utrecht (6 January and 17 May, 1579), in restoring some of the southern districts to the Spanish monarchy. Thus Belgium was preserved in the Faith. William of Orange, to bring about a closer union among the northern districts, concluded the Union of Utrecht (23 January, 1579), signed by Gelderland, Holland, Zeeland, Utrecht, Groningen, and the neighbouring states, also by a number of Belgian cities which had been subject to Parma, and he induced the States-General to confer the sovereignty upon the Duke of Anjou.

Before Anjou could be recognized as sovereign, it was first necessary to renounce the legitimate prince. This was done at Bois-le-Duc 24 July, 1581, though the majority of the inhabitants disapproved of the act. Anjou took possession 12 February, 1582. He was sole occupier with increasing his power (French Fury, 1583) and was forced to flee the indignation of the populace (1584). Orange was killed on 10 July, 1584, by Balthasar Gerards. The States-General requested that Robert Dudley, Earl of Leicester, friend and confidant of Queen Elizabeth, should act as governor. Unequal to the task laid upon him, he was not the man to succeed William of Orange. When it became known that he had been charged with the mission of bringing about peace with Spain, his power was at an end.

The States themselves now took in hand the direction of affairs. The States-General, consisting of representatives of the seven provinces of Holland, Zeeland, Utrecht, Overijssel, Groningen, and Friesland—undertook the government of the Republic. Neither Drente nor the conquered provinces over which the States-General now hold suzerainty—namely, Brabant, Flanders, Limburg, Upper Germany, and Westphalia—was under the authority of the body. The delegates had no executive power for each district one vote. The executive power was vested in the Council of State, consisting of twelve members. By degrees, however, the States-General themselves assumed the conduct of most of the affairs of government, which was disastrous to the prosperity of the republic.

Freedom of worship was out of the question in the republic. An article in the Union of Utrecht recognized freedom of worship outside of Holland and Zeeland, but this was not effective. The political supremacy of Orange carried with it the political supremacy of Calvinism. Wherever the revolutionary party was in the ascendency, the Catholics were persecuted. Not only the States of Holland and Zeeland, but the cities as well set the example in this respect which was followed by all the districts; and on 16 August, 1581, William of Orange issued an edict in which the Catholic cult was forbidden. In Gelderland this order was put in force with great severity by John of Nassau, William's brother, and by his cousin, Louis of Nassau, in Groningen, in the surrounding country, and in Drente. Although only a small portion of the population adhered to the heresy, all the churches were turned over to the Calvinists. Continued oppression, violation of religious peace, renewed Iconoclasm and plundering under Hohenlohe and counts of Salm, drove many Protestants to emigrate or to take refuge in the States-General. Two leaders mentioned above, drove the Catholic population to a desperate resistance, which, however, was violently suppressed. The situation of the Catholics became more and more precarious as Calvinism came to be the only lawful form of worship. An heretical movement sprang up in the Low Countries: the Anabaptists, and other sects were forbidden to hold public worship, while the Calvinists triumphed. Nor was this progress surprising, for their preachers had been subsidized since 1573 with the revenues of the old Church, confiscated by the State that year.

In 1574 the University of Leiden was founded for the purpose of "forming learned and worthy pastors". With a similar end in view, Louis of Nassau established a high school at Franeker in Friesland, where, in 1580, Calvinism had gained the upper hand. For the Synod of Dort, held in 1618, see ARMINIANISM. Henceforth, by means of persecution and force, the Reformation made steady, though slow, progress. While rigorous Calvinism acted as if it alone possessed the right of existence in the Netherlands, Catholicism kept its hold upon two-thirds of the population until far into the seventeenth century. The causes of its eventual decline were various. At first it was the Reformation, the condition of the clergy, and consequently the people, was a very sad one. As a means of improvement, the erection of the following new episcopal sees was considered: Middelburg, Haarlem, Deventer, Leeuwarden, Groningen, Bois-Duc, and Roermond (1599). The first five were occupied for only a short time. The choice of the first bishops was, in general, not happy. On this account the unfortunate state of the clergy continued, so much so that their corrupt morals led them even to abandon their faith and go over to the heretics, carrying with them whole parishes. The form of worship was also rife among the laity. In Holland, as elsewhere, especially in the cities, the irreligious spirit of the Renaissance had weakened the simple faith of many. The principal reason for all this was the continued oppression under which Catholicism suffered. William of Orange proposed to secure victory for the Calvinists by the persecution of the Catholic Church. His son Maurice thought it intolerable that Papists should enjoy the same rights as the Reformed, and opined that they could be held to the Union only by force. The Catholics were persecuted even when all classes took their stand against the Spaniards, and, at the end of the Peace of the Pyrenees (1659), all parties, Catholics and Reformed, agreed to cooperate against the common foe. Later on, when Catholics, driven to despair by cruel treatment, showed any disposition to resist, this was at once met by an edict. Divine service was forbidden by the States. The priest who celebrated Divine worship, as well as any one who lent his house for the purpose, was heavily fined. Higher ecclesiastics and foreign regulars were not tolerated in the country.

No Catholic educational institution nor any Catholic book-printing establishment was allowed to exist in the republic. Sending Catholic children to foreign Catholic schools was severely punished. The Catholic was considered inferior, and was excluded from all government service. The manner of procedure in the various provinces and cities was very similar, differing only in the greater or less severity with which the laws were executed. Sometimes the Catholics were permitted to hold Divine service for the privilege. From the clergy a recognition was required. These concessions on the part of the officials became very expensive for the faithful. The devout were strengthened, but the tepid fell away. Labourers in the Lord's vineyard were want-
ing. Monasteries and abbeys, formerly so numerous, no longer existed. The last congregation of women at Utrecht went out of existence in 1613. In 1608 the French ambassador, Jeanrin, wrote that the States confidently believed “that in the present generation Catholicism among them would die of itself”. In 1610, however, the vicar Apostolic, Sassaot Vosmeer, submitted to Rome a very remarkable report. He expressed the positive hope of a “final restoration of Divine worship in this country”. In 1580 the last Archbishop of Utrecht, Frederik Schenck van Toutenburg, had died. He had not been able to render much assistance. Johannes van Brugesen, chaplain-general. The King of Spain named Herman van Rennenberg for the archbishopric, but he died in 1585, before his installation. Johannes van Brugesen was then designated, but he died in 1600, also before his installation. Sassaot Vosmeer became prominent as vicar-general as early as 1638, and showed much zeal in gathering together the dispersed flock. In 1592 the Apostolic nuncio at Cologne received extended jurisdiction over the Dutch Catholics, and before the end of the same year he named Sassaot Vosmeer vicar Apostolic with jurisdiction over the Netherlands, Zeeland, and the remaining parts of Friesland. He did not long enjoy the confidence of Satan, who had abandoned the Catholic Faith and obedience to their lawful king”. In 1596 Brussels received its own nuncio, to whom was turned over the jurisdiction of the whole of the Netherlands.

In spite of many obstacles, the vicar Apostolic, Sassaot Vosmeer, was consecrated at Rome, in 1602, as titular Archbishop of Phillipi. He remained at Cologne, whence he governed his extensive diocese. This state of things continued until his death in 1614. Philippsius Revelius succeeded him and was able to report, in 1616–17, that “priests were, almost without exception, pure, from the reproach in their conduct, self-sacrificing and full of zeal for the welfare of the Church and the propagation of the Faith”. The vicars Apostolic received great support in their labours from members of the religious orders, who travelled from place to place as missionaries, encouraging the Catholics, and here and there took up their permanent residence.

The training and education of the regular missionaries took place, of course, outside of the country, for the most part in the southern Netherlands, whither also the feeble and superannuated returned. The sects likewise strove to prepare their recruits in special institutions. In Amsterdam they succeeded, under Vosmeer, in establishing a kind of preparatory seminary which soon had sixty pupils, but was later transferred to Cologne. Another Dutch seminary was founded by Vosmeer in Bierbeek near Louvain, but it did not thrive. After taking up his residence at Cologne, he enlarged the school which had been transplanted thither and made a seminary of it. But this Cologne establishment was not satisfactory to all and especially not to the Haarlem clergy, most of whom had studied at Louvain.

As a result of this feeling a seminary was founded at Louvain after the death of Vosmeer. Although this last institution gave to Holland many priests, it was, without doubt, a source of great harm to the Church during the prevalence of Jansenism. Most of the priests were animated by the spirit of Balus and Jan- senius. In 1701, about three hundred priests declared against Codde, the Holland Jansenists, and took part in the Dutch schism. It is true that most of them later came to their senses, but the harm was done. The division between regular and secular priests was fostered to a considerable degree by this Jansenistic spirit. In 1616 there were active as missionaries two hundred secular priests and sixteen Jesuits; by 1700 there were 271 seculars and 108 regular priests. In 1651 Jacobus de la Torre became vicar Apostolic. He was succeeded in 1655 by Zacharias de Meta, and the latter, in 1665, by Balduinus Katz; in 1668 Johannes van Neerkassel, a friend of the Jansenistic Arnold and Queen, became the incumbent of the office. About 1700, under the leadership of Pieter Codde, the Jansenist split began. Theodore de Coer was banished to Jersey, and he died; Adam Doemen was not permitted to exercise his functions, and in 1717 Joannes van Bijleveld was exiled. After this the mission came directly under the control of the papal nuncio at Brussels (1721), who was assisted by the archpriests. During this period there was great activity. Zeal revived among the Catholics. The garrets and hiding-places which served as churches were always full to their capacity; the catechism was thoroughly taught. In this field the so-called “Kloppens”, a sort of sisterhood that did not live in community, effected a great deal of good. They grew so numerous that the Calvinistic synods, with considerable exaggeration, declared their membership to amount to twenty thousand. Thus the Faith was preserved.

The material progress of the republic was wonderful. No sooner had it torn itself free from Spain than commerce and industry, and consequent wealth, increased from day to day. The chief cause, however, was the military exploits by which independence was established and maintained. Prince Maurice was the first to take the offensive, and he inflicted heavy losses on Spain (1590–1601). In 1596 an alliance was formed with France and England which yielded but little advantage. On the sea the Hollander covered themselves with glory. A truce extending over twelve years (1609–21) brought rest to both parties. Frederik Hendrik (1625–1647) permanently established Holland’s prestige. The grand pensionary, Jan de Wit, even planned, in concurrence with France, to expel the English from the Netherlands, which would have been unfortunate for the Catholics of Belgium. For a moment the hopes of Holland’s oppressed Catholics revived, when the French army occupied a large part of the provinces and established headquarters at the camp of Zest near Utrecht. When he invaded the republic, Louis XIV had counted on the general support of the Catholics, but the Catholics conducted themselves as true patriots (Blok). Catholic worship was re-established in those parts conquered by France. Processions were held as of old. The vicar Apostolic, Jory en Neerkassel, endeavoured to prepare the Catholics for the future as a Catholic bishop. But with the reconquest of these districts by the Hollander, all this was changed again. The churches were confiscated and despoiled, and the Catholics were reminded of the edicts against them. However the liberty was greater than it had been.

Another cause of this improvement was the formation, in 1602, of the East India Company. It received from the States-General a grant of all lands east of the Cape of Good Hope and west of the Straits of Magellan. The conquests of the Company were very numerous and soon formed extensive Dutch possessions. These possessions, unhappily, the Hollander destroyed many a flourishing mission, especially in Molucca and Ceylon. In Timor and the Sulu archipelago alone, the Faith resisted their influence. Even at the present day the missionaries come upon the ruins of missions which flourished in those places. These possessions, unhappily, the Hollander became great through her trade with England. Dordrecht (Dort) was the centre of the river traffic,
especially in foreign wines. To these commercial centres may be added some thirty smaller cities and four hundred very prosperous villages. Thus Holland properly so called, comprised about one million inhabitants of the republic. Here, above all, was the heart of its commerce. The herring fisheries brought enormous riches. The henequen traffic was then conducted millions annually. Besides this the commerce on the Mediterranean overshadowed that of all other nations.

Agriculture also advanced. A great deal of territory was gained by drainage. The Dutch painters, wood-carvers, and scholars of that period are famous. Holland had universities for the next half-century: Leiden (1575), Leyden (1575), Harderwijk (1600), Groningen (1614), and Utrecht (1636). Besides there were famous schools in Amsterdam, Middelburg, Breda, and Deventer. But many among the lower classes were illiterate. On the other hand piety did not increase; the simplicity of former times gave place to luxury, and this produced indifference in matters of religion among the Protestants, while among the Catholics there were throughout the seventeenth and eighteenth centuries many defections. In the year 1623 the vicar Apostolic estimated the number of Catholics at four hundred and twenty thousand, while the census of 1630 showed 335,000, while the census of 1810 showed 374,856.

Thus far there has been question of the mission of the north only. In the southern provinces, Brabant and Limburg, the administration of the Church was subject to many vicissitudes. The bishops of Roermond succeeded one another regularly from 1652 to 1801, when Bishop Van Velde van Melroy resigned his bishopric, the jurisdiction of which covered French territory and was joined ecclesiastically to Liège. After 1713 the territory of the Diocese of Roermond belonged partly to Austria and partly to Prussia. Not long after, the Dutch Republic received Venlo and Stevenwijk, with the understanding that Catholic worship should remain free, which agreement was adhered to. Brabant did not fare so well. After the capture of Bois-le-Duc (1629), the celebration of the Mass was forbidden, and the churches were turned over to the Reformed. Although the Government became somewhat more lenient, the canonical laws remained on the statute-books until the revolution put an end to the tyranny. By all this Brabant had not only been impoverished, but its morals and culture had dropped to a very low level.

II. THE FRENCH PERIOD.—French ideas of liberty and religion spread over Holland, and the rise of a revolution took place as a result of which the “Batavian Republic” came into existence (1795–1806), and restored to the oppressed Catholics liberty of worship, equal civil and state rights with the Protestants. The latter were disposed to be tolerant, and the more thoughtful among them were of the opinion that “for dominiant Churches to enjoy civil rights beyond any others is in violation of the equality of all.” Neither was the orthodox party unfavourably disposed, cherishing the glad expectation that the revolution would end “with the overthrow of the already violently shaken Roman Church”. The Constitution of the Batavian Republic was not yet proclaimed when the Catholics took the first step towards securing from the Government their rights to re-establish the ecclesiastical hierarchy. In the name of all the clergy, H. F. ten Hulscher, Archpriest of Holland, addressed a petition to the provisional representatives of Holland requesting right to celebrate a bishop benediction for the request were that the States-General, while opposing the Church, had, nevertheless, tolerated a vicar Apostolic; that the Jansenists had their bishops, and that Catholics were deprived of the Sacrament of Confirmation except under extraordinary circumstances, as when, in 1792 and 1794, the papal nuncio, Brancadore, had received permission to administer it. The delegates decided favourably, and, after an interval of two long centuries, the Catholics were once more at liberty to have their hierarchy.

Unfortunately, the unrest of the times did not permit the Catholics to make use of their recovered right. For the time being, the question of bishops remained undecided. In the meantime freedom of worship was more firmly established. The Government of the Batavian Republic, on 8 April, 1800, decreed that “the State, from now on, would no longer meddle with the organization of the Church”. Complete freedom had at last arrived. But the pope, under the pressure of Napoleon, was unable to provide a bishop for the Catholics for more than a hundred years. For the time, matters remained in statu quo. In 1806 the Batavian Republic ceased to exist, and Louis Napoleon, the brother of the mighty emperor, became King of Holland. In the same year the Constitution was promulgated. In relation to the Church, article six was of special importance. It read: “The king and the law extend protection to all forms of worship which are practised in the state; by their authority will be determined everything which may be judged necessary for the organization, protection, and exercise of all cults.” However much the Catholics may have longed for a minister of his own Church, they had a well-founded fear of state interference; all the more because of certain rumours concerning plans entertained by some counsellors of the Crown. The organization commission which was appointed did not meet with the approval of the higher clergy; nevertheless, the commission, as well as King Louis, seemed well disposed. But the report of the commission did not please the minister of worship. He considered that there were too many bishops, and he opposed separate preparatory seminaries for Catholics. In addition, there was the plan of the commission on studies to abandon the theological seminaries of Halder, Warmond, ’s Heerenberg, and Groote Ypelaar, and to establish in their stead a Catholic academy at one of the universities.

All this was state interference and met, therefore, with disapproval and opposition from the Catholics. It was not put into execution. As has already been stated, popular education went on in a flourishing condition. The Batavian Republic, in 1801 and 1803, had passed school laws which brought about some improvement. Somewhat more was accomplished by the law of 1806, but the good features it contained were almost nullified by the odious regulations on the erection of schools and the use of school books. Under the administration of King Louis a number of churches were restored to the Catholics. They almost forgot the former oppression in their happiness at having a prince who professed their own religion. The King of Holland was unable to satisfy the demands of his brother, who first, on 6 March, 1810, annexed Brabant, the southern part of Gelderland, and Zeeland, and, on 9 July, after Louis Napoleon had left, the whole country. After the Netherlands had been divided into ten departments the Emperor Napoleon began to rule the Church in Holland with nothing less than tyranny. The Vicar Apostolic of Bois-le-Duc, who forbade public prayers for the excommunicated emperor, was imprisoned at Vincennes. The despotic decree of 26 April, 1810, prescribed the division of the dioceses; one of 10 May, 1810, ordered that the whole ecclesiastical administration be controlled by a commissioner and by the civil authorities. The suppression of press suppressed by the civil authorities was discussed in a somewhat milder tone in a regulation of 15 October, 1810, which simply declared: “Article two hundred.—The organization of the Catholic and the Protestant clergy will be continued as it exists at present. Article two hundred and seven.—Our minister of worship will report to us as to the needs of churches and their ministers, so
that, in case of insufficient support, they may be provided for." On 6 January, 1811, it was finally determined that the French laws and regulations should be in force in the Dutch departments as far as they were compatible with the existing church organization. In consequence, former regulations in the main continued.

In 1810 Napoleon himself visited Holland. With the utmost shamelessness he thundered against the clergy at Antwerp, Breda, and elsewhere. The high schools of Franeker and Harderwijk were abandoned permanently, the burying of the dead in churches was forbidden, civil and political rights were defined, and the judiciary was organized. In 1910 Napoleon ordered the country to be taken under the direct rule of the bishop of Utrecht. This was the beginning of the large part of the present province of Limburg, the population was reduced to 1,727,918. Of these 374,856 were Catholics; 1,128,804 were Reformed; the remainder consisted of Lutherans, Baptists, and Jews. There were 488 priests, who received from the State, as salary, 14,280 francs, and for the expenses of public worship, 476,069 francs. Besides this they had a revenue of their own amounting to 103,321 francs. After the defeat of Napoleon at Leipzig on 16 November, 1813, the population of Amsterdam and The Hague revolted against French rule, the French general Molitor, left the country, and Napoleon was agitated.

III. The Kingdom.—On 30 November, 1813, William, son of the last stadtholder, William V, landed at Scheveningen and, as King William I, assumed sovereign authority on the condition that a Constitution would immediately be formulated. This Constitution of 1814 was formulated in great haste. Freedom of worship was granted, but unfortunately there was a fatal condition attached, namely, "the right of inspection and control over those institutions which enjoy assistance or a subsidy from the State" (Article CXXXIX). The Catholics did not agree to this right of control and of inspection, and refused to accept any subsidy from the State "under such conditions". Even after the Government had, on 16 May, 1814, given out a reassuring declaration, and after Pope Pius VII's pacifying intervention, there remained a suspicion in the minds of most Catholics. In 1815, when it was, in an amended form, adopted in Holland under the dominion of William I. Two of the conditions set forth by the Congress of Vienna were that the United Kingdom was to be governed in conformity with the constitution already in existence in Holland, which was to be modified (Article I). It is true, however, that "certain guarantees shall be made in the articles of this constitution which assure equal protection and favour to all religions, and which guarantee to all citizens, of whatever religious belief, admission to public employment and offices" (Article II). This article was afterwards violated by the Government.

The modified constitution was submitted to the delegates and, in Holland, unanimously approved. This was the occasion in Belgium, however. It soon became apparent that the Government was not favourably disposed towards Catholics. Although Belgium suffered most as the result of this attitude, Holland also felt its consequences. That country had, in 1818, about 2,000,000 inhabitants of whom almost 600,000 were Catholics. This was the period of concordats. In Holland, as well as elsewhere, negotiations with the Holy See were very desirable; but every move in this direction was met with ill-disguised hostility on the part of the Government, which was controlled chiefly by the ministers van Maanen, van Gobelschroy, and Baron Goubau, who, in 1815, became chief of the Department of Public Worship. In 1823 Monsignor Ignatius, Count Nassau, came to The Hague and conferred with the authorities for almost two years, but he failed to bring about an understanding. The blame for this failure was laid upon the Holy Father, who, it was said, should have been more forbearing. The distrust increased on both sides. A system of espionage was inaugurated in regard to the regular clergy. The Jesuits and the school brothers were no longer tolerated. Minister van Maanen worked with great haste on the "Reorganization of the Roman Catholic Communion" which was to be put into operation without the intervention of Rome. The plan proposed four bishoprics: Utrecht, Bois-le-Duc, Haarlem, and Groningen, each to have a chapter. The Church in the Netherlands was to be independent of Rome and under the sole dominion of the Pope. The bishop of Utrecht in control in Holland. The plan did not materialize, because a prominent Protestant warned the king against the danger of schism.

On 14 June, 1825, appeared the fatal decrees which have caused such much evil. The first declared that all Latin schools and colleges which were not in accordance with the law should be closed by 1 September, and that the preparatory seminaries were to be replaced by boarding schools in connexion with the institutions of learning where the seminarians attended lectures. The second announced the founding of the Collegium Philosophicum. As a consequence of these decrees, the three preparatory seminaries in Holland were abandoned. The inauguration of the Collegium Philosophicum, which was to serve as preparatory school to the seminary, took place on 17 October. This college, with a capacity for twelve hundred students, was attended by only 551 students during the whole of its five years existence, of which the northern provinces sent only 15, which was a sure sign that the college was held in detestation. Dissatisfaction among the Catholics increased constantly. On 2 September, 1826, Count de Visscher de Cellis was made ambassaedor extraordinary to the papal court. The Pope, on 12 December, named Cardinal Capellari and Monsignor Capaccini to represent the Holy See. The negotiations lasted from 2 January to 18 June, 1827.

In spite of thousands of obstacles, the concordat was completed, and was signed on the latter date. Of great importance for the North was the decision that the clergy in the Netherlands were to be settled at Amsterdam and at Bois-le-Duc, and that each was to have its own seminary and chapter.

Cardinal Capaccini came to Holland to assist with his counsel in putting the concordat into operation. He had to conciliate such powerful enemies as van Maanen, Van Gobelschroy, van Hout, and, to an extent, the Government. Nevertheless, he obtained almost everything—even the abolition of the Collegium Philosophicum. The last details had not yet been agreed upon, when there broke out at Brussels the uprising by means of which Belgium threw off the yoke of Holland (1830). While Belgium all the bishops had already been appointed, the king had delayed providing for Holland, so that nothing was done. Bois-le-Duc had to wait a long time for its bishop. Amsterdam was destined never to receive one. But the concordat remained in force. After the separation of Holland and Belgium, the religious conditions in Zeeland, Dutch Limburg, and Brabant were the first to be settled. Parishes belonging to the two Dutch provinces were not permitted to form part of the Diocese of Liège, which belonged to Belgium. At first there was thought of joining Dutch Limburg to the Vicariate Apostolic of Élois-le-Duc. The Limburgers petitioned not only Rome, but The Hague as well. Pope Gregory XVI, 20 July 1840, established the Vicariate Apostolic of Limburg. The vicar Apostolic took up his residence at Roermond. At the same time the vicariate, comprising Grave, Ravenstein, and Megen, was joined to that of Bois-le-Duc. Finally, on 19 March, 1841, Gregory XVI issued a Brief embodying in the Vicariate of
Breda those parishes in Zeeland which had belonged to the Diocese of Ghent. On 7 October, 1840, William I abdicated and married the Catholic Belgian Countess Henriette d'Oultremont. William II succeeded him. On 28 November, 1840, the king signed two decrees in favour of the Catholics. The one from Ghent (Brabant) had about 700,000 Catholics, and the northern provinces 400,000, so that the total number of Catholics in the whole kingdom amounted to 1,100,000. It was realized that the concordat could not be made operative at that time and must remain in suspense. Holland remained under the supervision of the archbishops over whom stood the vice-superior, or internuncio, of The Hague. Limburg already had a vicariate. Two new ones were established, at Bois-le-Duc, and at Breda. For the time being, the king could do no more. In order to put the Jansenists on the same footing as the Catholics, their bishops were, however, not until 1853, legally recognized by the Government. No changes had been made in the law governing elementary education since 3 April, 1806. This had proved disastrous for the Catholics. William II promised something better, but he could not do much as yet. A royal decree concerning elementary instruction appeared on 2 January, 1842. The greatest benefit to the Catholics resulted from Article X, by which the public and private schools were obliged to furnish the clergymen of the different denominations "in their city or municipality in response to their written application for the same, a list of the books, songs, and works in the placet". From this period dates the actual emancipation of the Catholics; since 1795 it had existed in theory only. This is particularly noticeable in the Catholic literature. For a long time past efforts had been made at establishing periodicals. The "Godsdienstvriend" (1818) and the "Catholyke Nederl. Stemmen", founded by the convert Le Sage ten Broeck, alone survived. Those who tried to follow his example did not succeed. In 1841 "De Katholieke" was founded; it exists still, and has accomplished untold good for Catholicism in Holland. The first Catholic daily paper was "De Vaderlandse" (1846), "De Tijd" (1845) at first published in Bois-le-Duc, but, in 1846, transferred to Amsterdam, where it was to surpass greatly its predecessor. During the struggle for emancipation "De Katholieke" and "De Tijd" rendered the greatest service of any periodicals in Holland.

Another sign of emancipation was the formation of the Catholic Committee (1848), which in its first year consisted of eighteen prominent Catholics. The committee fostered the project of a general Catholic association, a general Catholic electoral association, a Catholic daily paper in French to be published at The Hague, and the restoration of the Catholic hierarchy. All except the first of these objects were attained. In 1847 the placet was removed from the penal code, principally through the intervention of the king, in spite of the strong Protestant opposition. When the Constitution was amended in 1848, Catholics made large gains. On 6 May 1856 the Act of 1847 was renewed by law. On 7 November, 1853, the Archbishop of Utrecht received the pallium. In October, 1856, the division of parishes was approved and, shortly afterwards, enforced. On 23 July, 1858, appeared the constitution for the erection of chapters, each one of which was to have eight canons, these, however, not to receive any pay from the State. At the time of the restoration of the hierarchy, the number of Catholics and Catholic parishes was as follows: the mission of Utrecht and Haarlem, 542,590 Catholics in 435 parishes; Bois-le-Duc, 34,000 Catholics in 222 parishes; Breda, 125,181 Catholics in 77 parishes, Roermond, 196,152 Catholics in 184 parishes; total, 1,203,923 Catholics in 918 parishes. These were ministered to by 1,552 ecclesiastics—918 pastors and 634 assistants. The Church in Holland was to experience a great revival after the restoration of the hierarchy. The last provincial synod had been held in 1847. In 1855 the Archbishops, with the consent of the king, appointed Pater Schenck van Toutenburg. Exactly three centuries later, 24 September, 1865, the First Provincial Synod of Utrecht assembled in St. John's church at Bois-le-Duc. It furnished the basis for those of the diocesan synods which were to take place in all the diocesan seminaries in past. On 16 July, 1866, ordered that, "once every year the pastors shall meet under the presidency of the dean
of the district; in the same manner shall the deans meet once a year with their bishops. Every year the bishop shall call a meeting of his chapter, some professors of the diocesan seminary, and some pastors. This meeting shall take the place of the diocesan synod and be called the council in the diocese. The bishops shall meet at least once a year. This meeting shall replace the provincial synod."

Strong proof of the flourishing condition of the Church in the Netherlands is offered by the struggle for Catholic education. After 1857 every state school was neutral, and without religious instruction. There were but few private schools. The danger was great. The bishops issued the famous joint pastoral letter of 22 July, 1868, on education, which forbade parents to send their children to neutral schools wherever there was a Catholic school. This caused the establishment of a large number of private schools. Another great blessing was the closer relations with Rome. This was shown not only by the increased Peter's pence, but also by the thousands of Zouaves who left Holland for Rome to fight for the pope. It was further manifested by the Park Meeting of 4000 Catholics at Utrecht on the 17th of December, 1888, at Utrecht, and second meeting on September 19th, 1895, at Bois-le-Duc. The St. Vincent de Paul Society was flourishing by 1845.

Moreover, since 1853, fully one hundred and fifty churches have been restored and enlarged and about five hundred new ones have been erected at an expense of at least 50,000,000 florins. Besides, many magnificent monasteries, seminaries, and colleges have been established. To ensure these ecclesiastical buildings the St. Donatus Ecclesiastical Insurance Society was founded in 1852. For the promotion of religion and learning societies of "Faith and Science" have been formed. There is a central organization with twelve branches. The "Peter Canisius Apologetic Association" proclaims its object by its title. So also the association for the study of science among Catholics of the Netherlands, with sections for jurisprudence, medicine, the natural sciences, and literature, which has in all three hundred and thirty members. With the object of founding a Catholic high school the "St. Radboud-Stichting" was organized a few years ago. In the meantime, great efforts have been made since 1890 to diffuse Catholic knowledge and promote Catholic life among Catholic students. Afterwards, themselves formed associations of "Faith and Science" in the cities of Amsterdam, Leyden, Groningen, and Delft. Since 1901 the Catholic students have published a year-book.

Catholic social action has been flourishing now for ten years. There is a Catholic "People's Union"; every diocese has a union of different workingmen's societies which, in turn, are formed into federations. There are branches wherever a number of workingmen are to be found. In addition, there are twelve or thirteen professional associations with a membership extending over all the country. Their meetings are provided for good by the useful resolutions. A middle class of the citizens have also organized and in each diocese number many associations under the old name of "Hanze". But it is the protectorates, with a central board of direction in every diocese and an establishment in every city and in many villages, which have prospered the most. The association "Gesamtkatholikentag" is a federation for the promotion of Christian temperance. Associated with this are the Society of the Cross, for men, the Society of Mary, for women, and the St. Ann's Society for parents who bring up their children without the use of alcohol. Associations for the moral welfare of soldiers are multiplied. Four ancient are fostered by diocesan congresses which take place frequently—in the Diocese of Roermond annually.

The Catholic parliamentary party has continued its alliance with the Liberals, who have assisted it even after the restoration of the hierarchy, until about 1860-70. For a time, the attitude of the members of the chambers was wavering; but it became gradually apparent that the Catholics and believing Protestants had the same interest in the future. The law of 1879 confirmed the Catholics in this position. In 1883, Schaelep refurbished the draft of his programme, which led to the union between the Catholics and the Christian National Party. The credit for the formation of this alliance is due to Dr. Schaelep, the celebrated priest, statesman, and poet, and to Kurper, the leader of the anti-Revolutionists. The Catholic Party and, later, the united parties have obtained many rights. The law of 1861 provided that clergymen and theological students should be exempt from active military service. A law of 1899 accorded to parish authorities the right to establish their own burial-places. The law of 1890, vesting in the civil authorities the right of interference in Church government, was repealed in 1876. But they could not prevent the abolition, after 1870, of the ambassadorship to the papal court. A law enacted in 1859 in the interest of the students guaranties elementary schools. In 1901 education was made compulsory. In 1905 the private intermediate schools were subsidized. The University of Amsterdam maintains two professors, who are priests; especially for Catholics. In general, however, Catholic professors are excluded from the universities; hence, there are only three or four in all at the four state institutions. They are also ignored in the Royal Academy and in the examining commissions.

IV. STATISTICS.—The population of Holland at the beginning of 1908, according to calculations, amounted to 5,747,209 souls, which number is greatly on the increase. Of these fully 2,000,000 are Catholics, 1,400,000 Jews, and almost all the rest Protestants. The Catholics have fallen from 38.99 per cent in 1839, to 35 per cent in 1909. The relative decrease is attributed principally to the less favourable economic conditions in the southern (Catholic) provinces, which conditions cause a very large infant mortality. The number of Catholic parishes in the five dioceses has reached almost 1030, grouped in 76 deaneries; each diocese has its seminary and preparatory seminary, with a total of about 130 professors and 1500 students. There are in Holland about 2400 secular priests, and 1400 religious priests and sisters, of whom 250 are priests and 1000 are sisters. Of the former a goodly proportion, and a still greater number of the latter devote themselves to the education of youth. There are nearly 730 private schools and 125,000 pupils. Besides the seminaries there are 21 colleges and high schools, almost all of which are under the control of regulars. Then there are 28 mission houses where religious, both men and women, receive their training as missionaries. Not fewer than 13 missions in Borneo, Brazil, the Dutch West Indies, Porto Rico, the Dutch East Indies, and the Philippines are maintained by Dutch missionaries. The number of hospitals is about 100, while the hospi-

ical associations, which are called "Katholieke" very numerous. Of the 105 Catholic journals and periodicals, the following are the most important: "De Katholieke", "Studiën", "Van Onzen Tijd", "Katholieke Nederlandsche Stemmen", "De Tyd", "De Maasbode", "Het Centrum", "De Residentie", "De Voorstede", "Het Huisgezin", and "Het Landsbode", a majority, both of the Upper and the Lower Chamber, in Christian. Out of 50 members of the Upper House 16 are Catholics, while 25 of the 100 members composing the Lower House are of the Faith. Three of the nine cabinet ministers keep alive our ancient customs; in certain processions, no religious service or religious garb, is permitted outside of church buildings or enclosed grounds. Civil marriage must precede the religious
ceremony. This, however, very seldom causes prac-
tical difficulties. In accordance with Article CLXXI
of the Constitution, the Catholic clergy, as well as that
of every other denomination, receives not only salaries
from the State, but pensions also. The collective
society of the Catholic priests was the first in
formed 35 per cent of the population, was 565,000
florins, while the Reformed and other sects received
1,304,800 florins.

MOND; UTRECHT.)

Holland, Thomas, Venerable, English martyr, b.
1600, at Sutton, Lancashire; martyred at Tyburn,
12 December, 1642. He was probably son of Richard
Holland, gentleman, was educated at St. Omer's and
subsequently in August, 1621, went to Valladolid,
where he took the missionary oath 29 December,
1622. While there he entered into active negotiations
for the Spanish match were taking place in 1623, Holland was sent
to Madrid to assure Prince Charles of the loyalty of the seminarists
of Valladolid, which he did in a Latin
coration. In 1624 he entered the novitiate of the Society of Jesus at Watten in Flanders and not long
afterwards was sent to Liège. After serving as
—as—

Hollanders.—The Hollanders, also known as
Dutchmen, are a people of the Netherlands, especially
of the provinces of North and South Holland. They
are divided into many distinct groups, each with its
own language and customs. The principal groups
are the Germans, the Frisians, the Flemings, and the
Hanseatic traders. The Germans are the largest group,
and they are descended from the ancient Frisians.
The Frisians are the most numerous of the Dutch
peasants, and they are known for their strong sense
of community and their love of the land. The
Flemings are descended from the ancient Flemings,
and they are known for their intelligence and
endurance. The Hanseatic traders are descended from
the ancient Hanseatic League, and they are known
for their commercial acumen and their love of adventure.
The Hollanders are a hard-working people, and they
have made many contributions to the world in the
fields of science, art, and literature.

Hollander, William (1596–1656), was a
Dutch sea captain who went to the American
colonies in 1624 and played an important role
in the settlement of the Province of New Holland.
Hollander was one of the leaders of the
colony, and he was instrumental in establishing
the first Dutch settlement in the New World.

Hollander, Jacobus (1582–1646), was a
Dutch sea captain who went to the American
colonies in 1624 and played an important role
in the settlement of the Province of New Holland.
Hollander was one of the leaders of the
colony, and he was instrumental in establishing
the first Dutch settlement in the New World.
The number of Hollanders in the States not mentioned above is very small. It will be noticed that in the North Central Division alone, there are 79,000; this being over seventy-five per cent of all foreign-born Hollanders. Of the entire rest of the States, New York had a Dutch population of 2600; Chicago, 18,500; Milwaukee, 600; Cleveland, 500; Paterson, 5000; Rochester, 1000; Grand Rapids, Mich., 13,000; Philadelphia, 300; St. Louis, 400. These statistics do not include the Hollanders born on American soil from Dutch parents and the Dutch, realizing their powerlessness to offer any effective resistance, reluctantly surrendered. Again taken by the Dutch under Cornelius Evertsen in July, 1673, during a war between Holland, on the one side, and France and England, on the other, it was restored to England under the treaty of 1674. Thus the rule of Holland in America came to an end; Nieuw Nederland became an English possession, and Nieuw Amsterdam received its present name of New York, in honour of the Duke of York, afterwards James II. Very few of the Dutch returned to their native country. The majority stayed and for many years carried on a bitter struggle with the English Government for the independence of their Church. This was guaranteed to them by charter in 1696. In 1698 they had forty congregations.

Although many of the Dutch intermarried with other races, yet there were a goodly number who remained true to their nationality. The element of Dutch extraction in the Eastern States is considerable. Some of the descendants of the old Dutch settlers who gained renown in political and economic activities were: Van Cortlandt, from whom Van Cortlandt Park, in New York, derives its name; General Stephen Van Rensselaar, the New York statesman; Martin Van Buren, the eighth president of the U.S. From the end of the seventeenth till the beginning of the nineteenth century the emigration from the Netherlands was small. That of the nineteenth century had two principal causes, the first of which was the religious strife among Protestant denominations in Holland during the reign of William I. Dutch Protestants professing the Calvinistic creed established large colonies in Iowa and Michigan. The other cause of emigration was the unfavourable economical conditions in their native country. Conditions were brought about by the defects of social legislation and by the limited opportunities for business enterprise in a country so densely populated as Holland is. This is particularly true of the southern provinces, where the inhabitants are almost exclusively Catholic, where the soil is less fertile and where a large portion of the population is in possession of the wealthier class. Of late, however, Catholic social organizations have ameliorated conditions somewhat; hence emigration from these provinces is decreasing.

Distribution.—According to the twelfth census, that of 1900, there are 105,000 foreign-born Hollanders in the United States (per one per cent of foreign-born population). These are distributed over the different states as follows:—

- California 1,015
- Illinois 21,916
- Indiana 1,973
- Kansas 875
- Massachusetts 993
- Michigan 30,406
- New Jersey 10,261
- New York 9,314
- Ohio 1,719
- Pennsylvania 677
- South Dakota 1,327
- Utah 523
- Washington 632
- Wisconsin 6,496

The parochial system is vigorous in all the Holland Catholic settlements. In the Fox River Valley, for instance, the parish schools are attended by some 1784 children, who are taught by forty-three religious teachers. Their schools have always maintained a high standard. The Dutch language is not taught in any of them. It is a common opinion that
HOLLANDERS

Hollanders are, of all non-English speaking peoples, the most apt at learning the language and adopting the habits of the United States. The fact that in these schools, established by Dutch immigrants, the rich language of the Netherlands is entirely eliminated, would seem to confirm this opinion. It may be said that the Dutch Catholics, both at home and abroad, have shown themselves strong advocates of Catholic education. Hence it is that, in parishes where their numbers are small, they have succeeded in opening any number of schools, where themselves, they pledge their material and moral support to parochial institutions irrespective of nationality, and they manifest appreciation as well as fidelity in regard to the faith which their forefathers kept and cherished through centuries of governmental oppression and other forms of adversity. In 1902 the Premonstratensian Fathers from Heeswijk, Holland, founded St. Norbert's College at Depepe, Wisconsin. This college was erected primarily for the education of young men aspiring to the priesthood, secular or regular; but a business course was introduced later. Although opened only seven years ago, it is now in a flourishing condition, numbering ninety students, fifty of whom are preparing themselves for the priesthood. The Dutch Sisters of Mercy, at Baltic, Connecticut, conduct an academy for young women, and have an enrollment of ninety pupils. Of Dutch non-Catholic educational institutions, those of the well-known Hope College (1866) and the theological seminary (1860), both at Holland, Michigan; and academics at Orange City, Iowa; at Cedar Grove, Wisconsin; and at Harrison, S. Dakota; all belonging to the Dutch Reformed Church, which at present is divided into two sects, the "Christian Reformed" and the "Reformed Church," while the Rev. Mr. Hugenholts started a Liberal (Unitarian) Holland Church, at present quite insignificant, in Michigan.

Journalism.—There are sixteen Dutch periodicals in the United States: one in Chicago; four in the State of Iowa (one at Orange City, tw. at Pella, one at Fort Calhoun), seven in Michigan (three at Grand Rapids, three at Holland, and one at Kalamazoo); two at Paterson, New Jersey; one at Rochester, New York; and one at Depepe, Wisconsin. These journals are all weekly. Their subscribers, taken collectively, number about 70,000. The "Volksstem" (Vereeniging, 1857) published in Detroit, is the only Catholic publication in the Dutch language. The "Hollander Americaans," issued weekly at Rochester, New York, though non-sectarian, strongly promotes Catholic interests; the other newspapers—of which "De Hope" and "De Gronweti," published at Orange City, Iowa, are of most importance—emphasize the causes of the Dutch Reformed Church.

Communities and Churches.—There are two Dutch religious orders in the United States, one of men, the other of women. The Premonstratensian Fathers, more commonly known as Norbertines, from their founder, St. Norbert, came to America in November, 1893, from their abbey at Heeswijk, in North Brabant, Holland. They came at the request of Bishop S. G. Mesmer, of Green Bay (now Archbishop of Milwaukee, Wisconsin), to take charge of the Belgian missions in his diocese. In 1898, they canonically erected a convent at Depepe, Wisconsin. In 1901 a novitiate of the order was also established with papal approbation. These fathers, faithful to the motto of their founder Ad omne opus bonum parati (Ready for every good work) have charge of six Belgian Catholic educational institutions and seven missions in the Dioceses of Green Bay, Milwaukee, and Grand Rapids and in the Archdiocese of Chicago. They also conduct St. Norbert's College, mentioned above. The order in America numbers twenty-one priests, three scholastics, five novices, and four lay brothers. The Sisters of Our Lady, Mother of Mercy, came to America in 1874 from their mother-house at Tilburg, North Brabant, Holland. They were established at Baltic, Connecticut, in the Diocese of Hartford, which is at present their headquarters. They also opened two schools and a city hospital at Willimantic, Connecticut, and one school at Taftsville, Connecticut. Since these sisters have taken charge of missions in the Dutch East Indies, they have been enabled to open another house in the Archdiocese of Cincinnati. The order in America has seventy-six professed sisters, eleven novices, and four aspirants, while 900 pupils receive a Catholic education through their devoted efforts. There are in the United States seventeen Dutch Catholic congregations and a few smaller missions, some of the houses have been more or less united with other nationalities, especially with the Flemish. The Dutch are, moreover, well represented in several other parishes, especially in the States of Michigan, South Dakota, and Montana. The Dutch priests, secular and regular, number 137—a significant indication of the strong missionary spirit of the small Catholic population (2,000,000) of the Netherlands.

Distinguished Dutch Americans.—Among the foremost of these was the Rev. Francis Janssen, for whom see NEW ORLEANS, ARCHDIOCESE OF. The Rev. Th. van den Broek, O.P., was born at Amsterdam in 1789, and entered the Order of Preachers. In 1832 he entered upon his missionary career in Kentucky, Michigan, and Wisconsin. In Wisconsin, he was one of the pioneers in the present Diocese of Green Bay, where also he began his first Catholic colony of Hollanders at Little Chute (1848). This afterwards developed into seven others. He was a man of extraordinary activity in the missionary field and of deep piety. On All Saints' Day, 1851, while speaking to his flock of the glory and happiness of the saints, he was attacked by apoplexy and died 5 November, 1851. He was buried in the church at Little Chute, Wisconsin, where the Dutch have erected a magnificent monument to his memory. The Reverend Arm. Damen, S.J., was born at De Leur, Holland (N. Br.) 20 March, 1815. He entered the Society of Jesus and set out for America with several others under the guidance of Father De Smet, S.J., was made a professor in St. Louis University, and soon after became president of the church at St. Louis. In 1857, he inaugurated a church and school in Chicago on the spot where now stands the Church of the Holy Family Church and the College of St. Ignatius. Though Father Damen accomplished meritorious work in the line of Catholic education, still his mission in teaching missions which he gave in nearly every important city in the United States. He died at Creighton College, Omaha, Nebraska, 1 January, 1890. For the Rt. Rev. Cornelius Van den Ven, see NATCHITOCHES, DIOCESE OF.

Thrift, economy, cleanliness and other domestic qualities make the Dutch desirable citizens of our Republic. Religious indifference is, generally speaking, unknown to them, but with an undying fidelity, they cling to their respective beliefs. The Catholics are noted for their faithfulness in attending services on Sundays. It is especially in rural districts that the Hollander have obtained the best success in their material undertakings. Coming from a land which is famed as a dairy country, and accustomed to labour, they have proved themselves fit to stand the unavoidable hardships of pioneer life. Many of them have attained a remarkable degree of prosperity.
Holmes, John, Catholic educator and priest; b. at Windsor, Vermont, in 1799; d. at Lorette, near Quebec, Canada, in 1852. After a few years' schooling at Dartmouth College, he left home for Canada, bent on prosecuting his studies and converting Catholics. His own experience of true Faith, which he embraced at Yamachiche, Province of Quebec, in 1817, where the priest, Abbé Lecuyer, had housed and instructed him. He studied philosophy at Montreal Seminary, and theology at Nicolet College. Shortly after his ordination in 1823 he was appointed pastor of Lachine, 1824, the centre during the four years of his ministry of a field of labour extending over a district now comprising fifteen or twenty parishes. He then went as professor to Quebec Seminary, which was to reap such benefit from his talents and devotement. Abbé Holmes, a born pedagogue, infused new life into the antiquated curriculum, introducing Greek, English, and all the branches of experimental science. His inventive genius and winning style lent a charm to all his teaching, especially that of geography. His "Traité de Géographie," first published in 1832, many times re-edited and even translated into English and German, is a model text-book. He first conceived the plan of a Catholic University, since realized in Laval, the charter of which was signed shortly after his death. His zeal for education was not limited to the seminary. In 1836, when the Legislature of Lower Canada voted grants for the first normal schools, the task of organizing and equipping these institutions was entrusted to Abbé Holmes. No patriot was more devoted to the country of his adoption. His experience in the eastern townships inspired him to promote colonization in that direction, so as to stem the tide of French Canadian emigration beyond the border-line. He also fostered the possibility of a commercial union of all the British provinces in North America, a plan afterwards more completely realized by the confederation in 1867. Abbé Holmes was an orator in the full sense of the word. His deep and varied knowledge, expressive mien and gesture, sonorous voice, and perfect mastery of the French tongue all combined to charm and move the auditors who crowded to hear the cathedral to overflowing, and produced on his hearers a life-long impression. His "Conférences de Notre-Dame" were first published in 1850. His friendly relations with his family soon reconciled them to his conversion. A brother and all his six sisters followed him into the Church.

LIONEL LINDSAY.

Holocaust.—As suggested by its Greek origin ("holos" "whole", and "kauros" "burnt") the word designates an offering entirely consumed by fire, in use among the Jews and some pagans. As employed in the Vulgate, it corresponds to two Hebrew terms: (1) to 'olath, literally: "that which goes up", either to the altar to be sacrificed, or to heaven in the sacrificial flame; (2) Kullit, literally: "entire", "perfect", which, as a sacrificial term, is usually a designation of the victim, and denotes an offering consumed wholly on the altar. At what time, or by whomsoever offered, holocausts were naturally regarded as the highest, because the most complete, outward expression of man's reverence to God. It is, indeed, true that certain passages of the prophets of Israel have been construed by modern critics into an unbearably grievous and even gratuitous offering of the holy sacrifices included: but this position is a partial view of the evidence, of the misconception of an attack on abuses as an attack on the institution which they had infected. For details concerning this point, and for a discussion of the place which the same scholars assign to the "olah" (holocaust) in their theory of the development of the sacrificial concept among the Hebrews, see SACRIFICE. The following is a composite statement of the Mosaic Law as contained chiefly in what critics commonly call the Priests' Code, concerning whole burnt-offerings.

I. Victimae for Holocaustae.—Only animals could be offered in holocaustae; for human victims, which were sacrificed by the Children of Israel, were positively excluded from the legitimate worship of Yahweh (cf. Lev., xvii, 21; xx, 2-5; Deut., xii, 31; etc.). In general, the victims had to be taken either from the herd (young bullocks) or from the flock (sheep or goats); and, to be acceptable, the animal was required to be a male, as the more valuable, and without blemish, as only then worthy of God (Lev., i., 2, 3, 5, 10; xxi, 17 sq.). In certain cases, however, birds (only turtle-doves or young pigeons) were offered in holocaustae (Lev., i., 14; etc.); these birds were usually allowed to the poor as a substitute for the larger and more expensive animals. Holocaustae and burnt-offerings were even directly prescribed in some cases of ceremonial uncleanness (Lev., xv, 14, 15, 29, 30). Game and fishes, which were sacrificed in some pagan worship of Western Asia, were not objects of sacrifice in the Mosaic Law.

Ritual of Holocaustae.—The principal rites to be carried out in the offering of holocaustae, were: (1) on the part of the offerer, that he should bring the animal to the door of the tabernacle, impale his hands on its head, slay it to the north of the altar, flay and cut up its carcass, and wash its entrails and legs; (2) on the part of the priest, that he should receive the blood of the victim, sprinkle it about the altar, and burn the offering. In the case of an offering of birds, it was the priest who killed the victim and flung aside as unsuitable their crop and feathers (Lev., i.). In public sacrifices, it was also the priest's duty to slay the victims, being assisted on occasions by the Levites. The inspection of the entrails, which played a most important part in the sacrifices of several ancient peoples, notably of the Phenicians, had no place in the Mosaic ritual.

III. Classes of Holocaustae.—Among the Hebrews, holocaustae were of two general kinds, according as the offering was prescribed for the celebration of a private vow or devotion. The obligatory holocaustae were (1) the daily burnt-offering of a lamb; this holocaust was made twice a day (at the third and ninth hour), and accompanied by a cereal oblation and a libation of wine (Ex., xxix, 38-42; Num., xxvii, 3-8); (2) the sabbath burnt-offering, which included the double amount of all the elements of the ordinary daily holocaust (Num., xxviii, 9, 10); (3) the festal burnt-offering, celebrated at the New Moon, the Pasch, on the Feast of Trumpets, the day of Atonement, and the Feast of Tabernacles, on which occasions the number of the victims and the quantity of the consumed offerings were prescribed (Ex., xxix, 15 sqq.; Lev., viii. 18: ix, 12), at the purification of women (Lev., xi, 6-8), at the cleansing of lepers (Lev., xiv, 19, 20), at the purgation of ceremonial uncleanness (Lev., xv, 15, 30), and finally in connection with the Nazirite vow (Num., vi, 11, 16). In most of the voluntary burnt-offerings, the number of the victims was left to the liberality or to the wealth of the offerer (cf. III Kings, iii, 4: I Par., xxix, 21, etc., for very large voluntary holocaustae), and the victims might be supplied by the Gentiles. A permission of which Augustus actually availed himself, according to Philo (Legatio ad C. C., 18).

IV. Chief purposes of Holocaustae.—The following are the principal purposes of the whole burnt-offerings prescribed by the Mosaic Law: (1) By the total sur-
render and destruction of victims valuable, pure, innocent, and most nearly connected with man, holo-
caus is the old Hebrew idea, the "Liberm Durnu", a collection of the ancient chancery formula used in the administration of the Roman Church (1660); this edition, however, was immediately suppressed by Alexander VII (see Liber Diurnus). After his death there were published from his papers collections of synods and ecclesiastical monuments, the "Collectio romana bipartita" (1662), also the acts of the martyrs Perpetua and Felicitas, Boniface, Tarachus, Probus and Andronicus (1663). His observations on the geography of Italy appeared in 1666, in the form of notes on the previously published works of Charles de Saint-Paul, Cliver and Murder. The notes of Stevans of Byzanitum were published at Leyden in 1694 by Ryther. Lusitanius was the nephew of Holstenius, but they quarrelled towards the end of his life.

CREDEN. "Holsteni Epistola XXIII ad Pt. Lambrectum" (Jena, 1708); "Feldsack, Les amis d'Holsteni en Meurges d'archi-
tecture et d'histoire" published by the Ecole francaise de Rome, VI (1851), 576; VIII (1851), 572; XXVIII (1868), 249-258; and in the "Revue des langues romanes" XXXV (1894), 269. PAUL LEJAY.

Hoeltie, Karl von, German novelist, poet, and dramatist; b. at Breslau, 24 January, 1798; d. in that city, 12 February, 1880. He abandoned first agriculture and then law for the stage for which he early exhibited a great fondness. Having married Louise Rogge, an actress playing in Breslau, he became connected with the theatre of that city, but changed this residence for Berlin when his wife obtained an engagement there at the court theatre. After her death (1825) he led the life of a wandering rhapsodist, giving dramatic readings at Paris and various other cities. In 1829 he married a second time, his wife being Julie Holzhacker, an actress. He appeared on the stage in different towns, until he accepted the directorship of the newly established German theatre at Riga in 1837. But the next year, his wife having died, he resumed his wandering life as dramatic reader until he settled down in Graz, residing in the house of one of his laughters, where he remained until 1839, when he returned to his native city, where he enjoyed extraordinary popularity. Failing health induced him to take up his abode in the convent of the Brothers of Mercy, where he died.

Hoeltie's writings are very numerous and include dramas, lyrics and novels. He introduced the Reville into Germany, of whose complete edition the number, the best known are "Der alte Feldherr" (1829), "Lenore" (1829), "Ein Trauerspiel in Berlin" (1838), and "Lorbeerbaum und Bettelstab" (1840). Of his novels, the first to appear was "Die Vagabunden" (1852); among those that followed the best are "Christian Lammfell" (1853) and "Der letzte Komödiant" (1863). Of his lyric poems the most popular are the collection entitled "Selbseiche Ge-
dichte" (Berlin, 1830, 20th ed., 1893), written in Sile-
sian dialect. Hoeltie also wrote an autobiography "Vierzehn Jahre" (Berlin and Breslau, 1843-45), with a supplement "Noch ein Jahr in Schlesien" (Breslau, 1844). A complete collection of his plays was published at Breslau, 1845 (final edition, 6 vols., Bres-

HOLY AGONY, ARCHCONFRTERY OF, AN ASSOCIATION FOR GIVING SPECIAL HONOUR TO THE MENTAL SUFFERINGS OF CHRIST DURING HIS AGONY IN THE GARDEN OF GETHSEMANI. ITS OBJECT IS TO OBTAIN THROUGH THE
merits of those sufferings: (1) peace for the Church, preservation of the Faith, and the cessation of scourges; (2) the grace of a happy death for hardened sinners who are about to die, and in general spiritual aid for those in their death agony. It was founded as a confraternity in 1682, at Valençay, France, by Antoine Nicolle (1817-90), a priest of the Congregation of Lazarists, and on it its benefactor, Pius IX enriched it with indulgences. In 1865 it was authorize to affiliate other confraternities in the Diocese of Lyons. In 1873 it was made an archconfraternity for all France, and its head-quarters installed at the mother-house of the Lazarists, 35 Rue de Sèvres, Paris. After a twelth of its foundation, Pope Leo XIII, in 1894, permitted its extension through the world. To join the confraternity all that is required is to have one's name inscribed upon the register, which may be done by applying to the promoters of this devotion, or to the director. The practices are the daily recitation of a short prayer found on the certificate of admission usually given to members, or the recitation of an Our Father and Hail Mary instead, for the intentions of the association. Members are also recommended to offer their actions each Friday, or some other day of the week, to hear Mass once a week, and to offer a Holy Communion once a year for the intention of the society. None of these practices is obligatory. The members should be especially zealous in seeing that those in danger of death have the assistance of a priest and other aids to die well.

The head of the archconfraternity is the superior general of the Congregation of the Mission, who puts the details of the work in the hands of a sub-director of the same congregation. The medal of the archconfraternity bears on one side a representation of the Agony of Christ in the Garden of Gethsemani, on the reverse, Our Lady of the Seven Dolours. The chief festival is that of the Prayer of Christ, which occurs on Tuesday of Septuagesima week. The society has spread all over the world and has been erected, chiefly but not exclusively, in the churches and chapels of the Lazarists and the Daughters of Charity. While the chapel of the mother-house of the Lazarists in Paris is open daily, the Stations of the Cross, the so-called "Pater Noster," is published every other month in Paris; a quarterly edition in English appears at Emmitsburg, Md. All the details of the association can be found in the "Manual of the Archconfraternity" published at Paris, 95 Rue de Sèvres. The director for England and Scotland resides at St. Vincent's, Mill Hill, London; in Ireland at St. Peter's, Dublin; and for the United States at St. Vincent's House, Emmitsburg, Maryland.

LARIGALDI, ANTOINE NICOLLE (Paris, 1900).

B. RANDOLPH.

Holy Alliance.—The Emperor Francis I of Austria, King Frederick William III of Prussia, and the Tsar Alexander I of Russia, signed a treaty on 26 September, 1815, by which they united in a "Holy Alliance". Although a political act, the treaty in its wording is a statement purely religious in character. Having in mind the great event of the fall of Napoleon, and the thanksgiving to God for the blessings shown to their people, the three monarchs declared their fixed resolution to take as the only rule of their future administration, both in internal and foreign affairs, the principles of the Christian religion—justice, love and peace. They declared that, far from being of value only in individual life, Christian morality is also the best guide in public life. Accordingly the rulers declared their fraternal feeling towards one another, in virtue of which they would not only give support to, but abstain from war with, one another, and would guide their subjects and their armies in a fatherly manner. They declared that they would administer their office as representatives of God who were called to bring peace and happiness to the people of the nations; the rightful Lord of the nations, however, remains the One to whom belongs all power, our Divine Saviour, Jesus Christ. They also recommended their subjects with the most tender solicitude to strengthen themselves daily in the principles and practice of Christian doctrine, and to show this to the world by living a life of love and of peace, enjoyment of that peace which arises from a good conscience, and which is lasting. In conclusion they called upon all the Powers to become members of the alliance. In point of fact, Louis XVIII of France joined it on 19 November and even the Prince Regent of England did likewise.

The world had long learned not to expect from statesmen official documents in which so religious a tone prevailed. When the wording of the agreement became known early in 1816, men saw in the alliance the consequence of the close union of politics and religion. To a certain extent the world suspected that it veiled a league of the rulers and the churches, especially of the rulers and the papacy, against the nations and their freedom. For, besides the success of the Revolution and of Napoleon and the sudden revulsion, nothing occupied and surprised public opinion so much as the universal revival of faith in men's souls, of Christian thought, and of the Catholic Church. Men watched with suspicion this unexpected turn of affairs which was contrary to all the prejudices developed by the rationalism of the eighteenth century. It was also considered possible that the conquerors of Napoleon had in the Holy Alliance bound themselves to the Church, which was regaining its old power, in order by its aid to oppose, for the benefit of royal and papal absolutism, the "liberal" development of States and civilization. The judgment of public opinion, which is always superficial, held a few external signs as evidence of the facts which it was supposed behind the alliance. Among these indications taken as proofs were, perhaps, the restoration of the States of the Church by the Powers, or the casual and confused information that the public gradually inferred from the mighty ideas of Joseph de Maistre, or from the more circumscribed views of Bonald, Haller, and others. In short, the Church, the Holy See, the papal council, the bishops, regarded with coldness this alliance, which took under its wings schism, heresy, and orthodoxy alike, while Catholicism, that is, the total of Catholic individuals and masses taking part in the public life of the nations and states, was even sorerly hostile to the alliance. Individual exceptions, in the opinion of the present writer, do not amount to a proof of the contrary.

In this case, as so often in the history of the world, words of seemingly great significance excited notions the more extravagant, the less substance and influence the matter indicated by the statement possessed. The testimony of Prince Metternich, the person most familiar with the subject and the one who, next to the tsar, had the most to do with the founding of the alliance, is: "The Holy Alliance, even in the prejudiced eyes of its originator [the tsar], had no other aim that of securing the maintenance of the old order. The other signers of the document it lacked even this value, and consequently justified none of the interpretations which in the end party spirit gave to it. The most unanswerable proof of the correctness of this fact is probably the circumstance, that in all the following period, no mention was made or even could have been made of the Holy Alliance in the corre-
spondence of the cabinets with one another. The Holy Alliance was not an institution for the suppression of the rights of the nations, for the promotion of absolutism, or for any kind of tyranny. It was solely meant to embody the piety of the European monarchs of the eighteenth century. Alexander, and the application of the principles of Christianity to politics". This quotation gives the true statement in regard to the facts of the case, as well as in regard to the personal factor in the founding of the alliance, which was the transitory pietistic feeling of the time. The vigorous reawakening of the religious sense had come forth, especially in connection with the revival of Christian thinking, many confused and obscure manifestations of a mystical and spiritualistic kind that were reactionary in tendency. From June, 1815, the era had come under the sway of one of these mystical and reactionary tendencies, through the influence of the Baroness von Krudener, a lady of German-Russian descent who was a religious visionary. Without striving to exert political power, she seems, nevertheless, to have imbued Alexander with the idea that princes must once more rule according to the dictates of religion and under moral principles and while the latter aroused religious ideals, Alexander at once gave a political cast to the suggestion when he endeavoured to formulate it and, with this end in view, drew up the treaty on which the Holy Alliance is based. His demand was not welcome to statesmen of practical mind like Metternich and surrounded the Prussian statesmen did not consider it necessary to decline the proposal. They struck out merely what was most objectionable to them, and by degrees Metternich quietly replaced the entire alliance by the purely political alliance of 20 November, 1815, between Austria, Prussia, Russia and England, by the Treaty of Aachen of 18 October, 1818, and the agreements made at the Congresses of Troppau (1820), Laibach (1821), and Verona (1822).

Nevertheless the expression "Period of the Holy Alliance" for European politics of the years 1815–25, that is, for the era when Metternich's influence was at its height, has some justification. A brief general review of events will prove this. But the term should not be taken too literally; moreover, it must be admitted that history, in characterizing a period, is more apt to adopt an easily-found and striking expression than an exact one. During the years 1814 and 1815, a number of treaties were concluded between the various nations of Europe. In France, met the Congress of Vienna, which compacts the Holy Alliance forms merely one link and in a practical sense the most unimportant one; it was also the only treaty which was religious in character. All these treaties have, however, one trait in common. They revive the conception of a centralized Europe, in which the rights of the indivisual states seem to be limited by the duties which each state has in regard to the whole body of states. The signatories announced the end of the war that had been carried on since the era of the Thirty Years War by those grasping powers and interests, which took only into considet the narrow circle of states. They further asserted that all just political demands were satisfied, that the great Powers were "saturated", and on the strength of this, they introduced into international law the conception of a common European responsibility, the application of which was to be secured by agreement of the great Powers as cases arose. This common responsibility was to be used for the liberal promotion of all economic, intellectual, and social life, but political liberalism was to be suppressed or held in check in order to reserve the administration of public affairs to the governments as specially ordained therein. The renewal of the common responsibility of the European states, and of the scheme of administration and therein, may be regarded as the most characteristic work of Metternich.

The desire for this joint responsibility had gradually developed from the ideas of the Austrian policy of the eighteenth century, and had been already expressed in the instructive papers of Kaunitz written in his old age. It was now formulated and made a reality by Austria's greatest statesman. Between the eras of Kaunitz and Metternich, however, had appeared the revival of religious feeling in Europe. The minds of men turned once more to Christianity and the Church. Involuntarily the course of European thought, even that of the most cool-headed statesmen, became again subordinate to the categories of Christian thinking. Little as Metternich was personally inclined to base his political views on religion, he did not fail to observe that his idea of a common responsibility of the nations and his inclination to peace bore a resemblance to the loftiest medieval ideals of the Christian unity of nations and of a common civilization. He had even an exaggerated idea of this resemblance, as had many of his contemporaries. In consequence of this over-estimation, however (for in truth his ideas were rooted in rationalism), he allowed these views to appear, if only for a moment, in the words of the Holy Alliance and in some of the propositions of the Congress of Vienna. "Christianity to politics". From his non-resistance to the war, his contemporaries inferred that the alliance proclaimed a return to the times in which the papacy and the Church claimed and exercised the right of guiding the respublica christiana. It is in this way that these historical events are twisted and confused by the imagination, both of the individual and of the multitude. The Holy Alliance became a bugbear representing nothing, in reality, like everything that even distantly harmonized with Christianity, it was of advantage to Europe, and assured to it peace for a generation, and an extraordinary development of civilization.

M A R T I N S P A I N.

Holy Childhood, ASSOCIATION OF, the children's association for the benefit of foreign missions. Twenty years after the foundation of the Society for the Propagation of the Faith (1840) by Charles de Foucauld, in France established the Society of the Holy Childhood (Association de la Sainte Enfance). Its end is twofold: first, to rally around the Infant Jesus our little Christian children from their tender years, so that with increasing age and strength, and in imitation of Jesus their Master, they may practice true Christian charity with a view to their own perfection; second, that by the practice of charity and enduring liberality those same little Christian children may co-operate in saving from death and sin the many thousands of children that in pagan countries like China are neglected by their parents and cast away to a higher object of charity is to procure baptism for those abandoned little ones, and, should they live, to make of them craftsmen, teachers, doctors, or priests, who in turn will spread the blessings of the Christian religion amongst their countrymen.

Children may become members of the association immediately after baptism, and may continue in membership for the remainder of their lives, but at the age of twenty-one, in order to still share in the indulgences, it is necessary to become also a member of the Lyons Association for the Propagation of the Faith.

In order to be a member of the Association of the Holy Childhood, it is necessary to give a monthly contribution of one cent, or a yearly contribution of twelve cents, and to recite daily a "Hail Mary" with the addition, "Holy Virgin Mary, pray for us and for
the poor pagan children”. Until the children are able to do this themselves their relatives should do it for them.

The parish priest is the regular director of the work from the time he introduces the association, and, when there are at least twelve associates, he has a solemnly consecrated to the direction of the Holy See, provided that for the exercise of these privileges the requisite permission of the ordinary has been granted in general or has been specially asked for. The same holds good for the assistant priests of the parish, when the pastor has entrusted to one of them the care of matters relating to the association.

Four popes and hundreds of other ecclesiastical dignitaries have approved the association and recommended it to the faithful. Pius IX, by a Brief of 18 July, 1856, raised it to the rank of a canonical institution, gave it a cardinal protector, and requested all bishops to introduce it in their dioceses. Leo XIII, in an Encyclical letter, “Sancta Dei Civitas” (3 December, 1890), blessed it and recommended it again to the bishops. “It is my earnest wish”, he said in 1882, “that all the children of the Catholic world should become members of this beautiful association.” Pius X emphasized its international character, and Pope Pius XII, in his letter of 1 November, 1944, co-opted parts of which are the various national branches.

The affairs of the association are managed by an international council at Paris, France, consisting of fifteen priests and as many laymen. The general director of the association is the presiding officer. This general council has exclusively the right of general direction and of the distribution of the society’s funds. To them various national branches send in their yearly report with the contributions received. It is to be noted that none of the officers receive any compensation for their services. It is estimated that at the present time there are enrolled in the Association of the Holy Childhood about seven millions of Catholic children. Fully thirty-two millions of dollars are the result of their generosity, and about eighteen millions of pagan children have thus been saved to the Church. The receipts for 1907-08 were over $700,000. From this fund 236 missions in the various heathen countries were supported. An annual grant is made by the general council in favour of Catholic Indian Schools in the Western States and territories. 1,171 orphanages, 7,372 schools, and 2,480 workshops, etc., share in the yearly aims received from all the Catholic countries under the title of “Annals of the Holy Childhood”, published bi-monthly, is issued in seven languages. Six countries contributed 90 per cent. of last year’s fund of $700,000, viz.: Germany, $278,355; France, $169,935; Belgium, $92,255; Italy, $50,650; Holland, $51,540; Austria, $30,995. Sum total from these six countries, $601,690. Ireland’s contribution for 1907 amounted to $5,440 and England’s to $1,593; those two English-speaking countries being represented in the total amount with 1 per cent. The association was probably established in the United States by Bishop Forbin-Jansen himself. Several agencies in the East and West managed its affairs for about fifty years. On 1 January, 1893, the work was concentrated into one central agency, and confided to the Fathers of the Holy Ghost, with headquarters in Pittsburg, Pa. Very Rev. A. Zielenbach, C. S. Sp., was its first central director for about four years. Since then Rev. John Willms, C. S. Sp., is general manager, assisted by thirteen lay directors who volunteer their services for this noble cause without any compensation. The total receipts in the United States from 1893 to 30 November, 1908, were $319,012.76. About 18,000 copies of the “Annals” in English, German, Polish, and French are sent from the central office to the different local branches six times each year.

J. WILLMS.

Holy Child Jesus, Society of the, was founded in England in 1846 by Mrs. Cornelia Connelly, nee Peacock, a native of Philadelphia, U. S. A., who had become a convert to the Catholic Faith in 1835. The society was approved in 1887 by Leo XIII, and the rules and constitutions were confirmed and ratified by the same pontiff in 1893. It is founded on those of St. Ignatius. The principal object of the society is the education and instruction of females of all classes, whether in day-schools, boarding-schools, orphanages, or colleges for higher education. The religious undertake the instruction of the children, but all other matters relating to the association of the works do not interfere with the primary duty of teaching; ladies may be received into houses of the society as boarders, or for the purpose of making retreats. The society is governed by a superior general whose ordinary residence is at the mother-house, Mayfield, England, and who is assisted by a provincial or provincials. America is at present the only province. The superior general is elected by a chapter consisting of representatives of the whole order, and her term of office lasts six years.

The first house of the society was founded at Derby, England, in 1846, but the community was shortly afterwards transferred to St. Mary’s, Sussex, at the advice of Cardinal Wiseman. Here the religious have since built a fine church and schools. The ruins of “The Old Palace”, Mayfield, Sussex, with the farm adjacent were given to the Society in 1863 by Louise, Dowager Duchess of Leeds, née Catan, one of the granddaughters of Charles Carroll of Carrollton. She also made over to Mrs. Connelly a farm in Towanda, Penn., and two thousand acres of land in Lycoming Co., on condition that a branch of the society should be established in America. Accordingly five sisters came over in 1865 and opened a school at this place. This Association was, however, unsuccessful, and the community was removed to Philadelphia, and settled in Spring Garden Street. Here they were put in charge of the academy and parochial schools in connection with the Church of the Assumption, whose rector, the Rev. C. Carter, befriended the society in America in every possible way. In 1864 he made over to the religious the house and farm of the old Quaker establishment at Sharon Hill, seven miles from the city of Philadelphia; and this became the seat of the novitiate and of a flourishing boarding-school. The society now numbers in England nine houses and many schools for all classes, and more than four thousand children are taught by the sisters in the city of Preston alone, in which city there is also a centre for the education of pupil-teachers. A college for the training of teachers of secondary schools was opened in Cavendish Square, London, in 1896 by invitation and under the special patronage of Cardinal Vaughan. A house has also been founded at Oxford. A convent of the order at Neulilly, Paris, shared the common fate of all religious houses in France, and was closed by order of the French Government in 1904. In America the society possesses houses in Pennsylvania, New York, Massachusetts, Illinois, Nebraska, and Wyoming.

MOTHER MARY ST. PETER.

Holy Coat (of Trier and Argenteuil). The possession of the seamless garment of Christ (Gr. χιτών ἀργυρός; Lat. tunicca inconspicua, John, xii, 23), to which the custom of placing in every church of Christ’s name. It is claimed by the cathedral of Trier and by the parish church of Argenteuil. The Trier tradition affirms that this relic was sent to that city by the Empress St. Helena. For some time the holders of this opinion based their claim on a document in the ancient archives of the city, the "Sylvester Diploma", asserted by Pope Sylvester to the Church of Trier, but this cannot, at least in its present form, be considered genuine.
It has, however, been conclusively proved by incontestable documents, that since about the year 1100 the people of Trier were fully convinced that they possessed in the same relic of Christ and that it had come to them from St. Helena. The life of St. Agnitus, Bishop of Trier, written in the eleventh century (before 1072), mentions the relics sent to Trier by St. Helena during the lifetime of Agnitus, and relates from the "reliable tradition of the forefathers" that at one time a pious bishop of Trier wished to have obtained the veil, but was refused in the treasury of the cathedral, containing among other relics a garment of the Lord, of which some said that it was the seamless coat, and others that it was the purple garment with which He was clothed at the time of His Passion (Monumenta Germ. Hist., Script., VIII, 152). An ancient witness to the tradition of the sending of relics to Trier by St. Helena (no special mention, however, being made of the Holy Coat) is the Holy Catechism composed by St. Mark in the year 1151. The veil, preserved in the cathedral treasury of Trier, dating from about the fifth or sixth century according to some, and confirmed by a later authority. It is expected to be a representation of a translation of relics to Trier with the co-operation of St. Helena. While this testimony may not furnish actual proof of the authenticity of the relic, it goes far to confirm the probability of the same.

The arguments of the opponents of the relic are merely their own opinions; these writers furnish no substantial proof of their contention. The relic itself offers no reason to doubt its genuineness. Archaeological investigations (1890 and 1891) have proved that "the material of the plain brownish coloured fabric is to all appearances linen or cotton". It has been impossible to discover any traces of original seams on the relic, which is covered on both sides by protecting veils. The investigation therefore furnished no reason to doubt the ancient tradition at Trier. In 1196 the Holy Coat was solemnly transferred by Archbishop Johann I from the St. Nicholas chapel of the palace high altar, in presence of the clergy, to the high altar of the cathedral, by him (Continuation of the "Gesta Trevirorum", Mon. Germ. Hist., Script., XXIV, 396). Here the relic seems to have remained unseen and untouched until 1512. In that year, in accordance with the wish of the Emperor Maximilian I, on the occasion of the holy relic at Trier, it was taken from its resting-place in the altar on 14 April by the archbishop, Richard von Greifenklau, and on 3 May, and for many days after, solemnly shown to the assembled princes and people. In the years following, up to 1517, an exposition of the Holy Coat took place annually. The auxiliary bishop, Johann of Trier, was present at the exposition of the Holy Coat, which was then transferred to the high altar of the cathedral, by which the tradition was confirmed. An order for an exposition of the Holy Coat every seven years was observed from 1517, in which year the next Aachen pilgrimage took place, to 1545. Then the regular succession ceased, and the next expositions occurred only in the years 1585 and 1594, and always in the same year as the Aachen pilgrimage. This order for an exposition of the Holy Coat every seven years was observed from 1517, in which year the next Aachen pilgrimage took place, to 1545. Then the regular succession ceased, and the next expositions occurred only in the years 1585 and 1594, and then not again until 1655 after the close of the Thirty Years War.

In the warlike times that followed, the relic was repeatedly taken to the fortress of Ehrenbreitstein, and from there brought back again to the cathedral at Trier. When the French invaded the principality of Trier in 1794, the relic was carried for safety into the interior of Germany to Bamberg and Augsburg, whither the last Elector of Trier, Clemens Wenceslaus, also Bishop of Augsburg, had withdrawn. It was not until 1810 that, through the repeated efforts of Bishop Mannay, it was returned to Trier, on which occasion the bishop organized a solemn exposition of the Holy Coat, from 9 to 27 September of that year, it being the first time that the relic had been largely attended by the Catholics of the surrounding country. Of still greater importance were the two following expositions, which took place in the nineteenth century. The first was organized by Bishop Arnoldi from 18 August to 6 October, 1844. Large enthusiastic crowds were present. The second exposition of 1860, it is said, flocked from all quarters to Trier. Apart from the influence which the Trier pilgrimage of that year exercised on religion, a number of wonderful cures were accomplished. On the other hand, this exposition was the occasion of much fanaticism. On 18 October, 1844, the Bishop published his open letter to Bishop Arnoldi, the result of which was the so-called "Deutsch-katholisch" or "German Catholic" movement. Among other hostile writings which appeared at that time, that of the Bonn professors, J. Gildemeister and L. von Sybel, purporting to show that the relic was a forgery, made the most noise. An exposition rivaling that of 1844 was the last one, ordered by Bishop Korum from 20 August to 4 October, 1891. On this occasion the pilgrims numbered 1,925,130. To encourage this exposition, Leo XIII gave his approval to the office "de Tunica inconstanti", and granted a Brief of 11 July, 1891, to all the pilgrims. An account of the miracles and manifestations of Divine favour which occurred was published in 1894 by Bishop Korum himself.

The Argenteuil tradition claims that the garment venerated in that city as the Holy Coast was brought there by Charlemagne. The oldest document relating to the existence of this relic dates from 1156. This is the "Charta Hugonis", in which Archbishop Hugh of Rouen testifies that in the treasury of the church of the Benedictines at Argenteuil is preserved the Cappa puerti Jesu (garment of the Child Jesus) presented by the Empress Euphemia. The document is confirmed by the Empress herself, in company with other bishops and abbots, had examined it and found it genuine, and that it was then exposed in the presence of King Louis VII, and afterwards publicly for the veneration of the faithful; he proclaimed at the same time an indulgence for pilgrims who came thither to adore it (the "Charta" is printed by Jacquemot, p. 233 sqq., also in P. L., CXIII, 1136–38). The words "Cappa puerti Jesu" were interpreted by the later advocates of the tradition of Argenteuil to mean the Tunica inconstanti worn by the Saviour during His Passion. The medieval chronicle preserved to the fourteenth century, which speak of the relic and of its exposition in 1156, make it clear how this change in the tradition was effected; it was brought about by the intermingling of the details of the two legends, accounted for by the belief that the garment woven by the Blessed Virgin for the Child Jesus grew with Him, and was thus worn by Him during His entire life on earth. The modern advocates of the Argenteuil tradition now designate the relic honoured there simply as the seamless garment of Christ; they deny to the Church of Trier the right to call their relic by this name, conceding however that the Trier relic is genuine, but that it is not the Tunica inconstanti, but the outer garment of Christ.

Those who believe the Trier tradition claim on the contrary that the relic of Argenteuil, which is woven of fine wool and is of a reddish brown colour, is not a
HOLY Communion, but a mantle. By this they do not seek to dispute the authenticity of the Argenteuil relic, but to assert that it is the Cappa pueri Jesus and not the True Body of our Lord. The history of the veneration of the relic of Argenteuil may be traced from 1136. The Revolution menaced its safety. After the depopulation of the Benedictine convent it was first transferred, in 1791, from the convent church to that of the parish. In 1793 the parish priest of that year, in order that it would be taken away and honoured, cut it into pieces which he concealed in various places. In 1795 those portions that could be found were brought back to the church; of these there are four, one large piece and three smaller ones. The translation to the new church of Argenteuil took place in 1844 and the last in 1894 and 1900. A Mass and a sequence in honour of the Holy Coat of Argenteuil are to be found in Paris and Chartres Missals printed in the sixteenth century.

Rockes. Aus dem Breuver und Misschub der Diöcesis Trier in deutscher Ubersetzung herausgegeben (Trier, 1891). The principal work against the authenticity of the relic is: GEMIDHELF und V. Sybel, Der Heilige Rock zu Trier und die zwanzig andern Heiligen Ungeheuren Rocke (Düsseldorf, 1844; 3rd ed., 1861); FR. Z.: Die Adversen des Trierer Rockes, Fasc. 1-3 (Düsseldorf, 1845). An apologia of the rocks, rebutting the above-mentioned publications, is: DER HEILIGE ROCK IN Trier (1891); VON der heiligen Bote der Welt (1891) and Der heilige Rock in Trier (1892), in answer to GEMIDHELF-SYBEL and the antagonist literature of 1891.

Holy Communion.—By Communion is meant the actual reception of the Sacrament of the Eucharist. Asetic writers speak (a) of a purely sacramental reception; that is, when the Eucharist is received by a person capable in body of the fruits but wanting in some disposition so that the effects are not produced; (b) of a spiritual reception, that is, by a desire accompanied with sentiments of charity; and (c) of a sacramental and spiritual reception, that is, by those who are in a state of grace and have the necessary dispositions. It is of this kind there is question here. For real consecrations to all practical purposes it is requisite that the sacred species be received into the stomach. For this alone is the eating referred to by our Lord (John, vi. 58). Under the moral aspect will be considered, in reference to Holy Communion: necessity; subject; dispositions. The liturgical aspect will embrace: minister of the sacrament; method of administration.

I. MORAL ASPECT.—A. Necessity.—The doctrine of the Church is that Holy Communion is morally necessary for salvation, that is to say, without the graces of this sacrament it would be very difficult to resist grave temptations and avoid grievous sin. Moreover, there is according to theologians a Divine precept by which all are bound to receive Communion at least some time during their life. In reason this precept urges outside the danger of death it is not easy to say, but many hold that the Church has practically determined the Divine precept by the law of the Fourth Council of Lateran (c. xxi) confirmed by Trent, which obliges the faithful to receive Communion once each year within Penitential Fasts. Subject.—The subject of Holy Communion is everyone in this life capable of the effects of the Sacrament, that is, all who are baptized and who, if adults, have the requisite intention (see COMMUNION OF CHILDREN).

C. Dispositions.—That Holy Communion may be received not only validly, but also fruitfully, certain dispositions both of body and of soul are required. For the former, a person must be fasting from the previous midnight from everything in the nature of food or drink. The general exception to this rule is the Viaticum, and, within certain limits, communion of the sick. In addition to the fast it is recommended, as a view to a greater value of the species received, to have continence and exterior modesty in dress and appearance. The principal disposition of soul required is freedom from at least mortal sin and ecclesiastical censure. For those in a state of grievous sin confession is necessary. This is the prevailing oneself referred to by St. Paul (I Cor., xi, 28). The only case in which one in grievous sin might dispense with confession and rest content with perfect contrition, or perfect charity, is where on one hand confession here and now is morally speaking impossible and where, on the other, a real necessity of communicating exists.

II. LITURGICAL.—A. Minister.—The ordinary minister of Holy Communion is one who has received at least priestly orders. Deacons were often deputed for this office in the early Church. Priests can now by general custom administer Communion to everyone assisting at their Masses in public churches and oratories. Furthermore, for the Viaticum and for the sick, a priest is ordinarily required. Communion should be administered to all those who ask it reasonably, excluding, at least until they make sufficient reparation, public sinners and such as lead openly scandalous lives. So, too, it is not to be given to those likely to profane (or to be profaned) or those in disgrace, or those suffering from certain forms of illness.

B. Method of Administration.—As to the administration, the circumstances of time, place, and manner, and the ceremonies only will be referred to here, other details, as reservation, effects, etc., being considered elsewhere. (See Eucharist.) The ordinary time for administering Communion is during Mass, but any reasonable cause justifies its administration outside Mass, provided it is within the time within which the celebration of Mass is permitted. There are some exceptions: Viaticum can be given at any hour; it is lawful in cases of illness and of special induit. It may not be given except as Viaticum, from the conclusion of the exposition on Holy Thursday till Holy Saturday. Communion may be given in all churches and public, or semi-public, oratories that are not under interdict, and, according to a recent edict of the Congregation of Rites (8 May, 1907), even in domestic oratories to all persons. The faithful receive Communion under one kind, fermented bread being used in the Eastern, and unfermented in the Western Church, but priests, who communicate themselves, receive under both kinds. Each one should receive according to the Rite to which he belongs. When administering
Holy Cross, Congregation of, a body of priests and lay brothers constituted in the religious state by the simple vows of poverty, chastity, and obedience, and bearing the common name of Religious of Holy Cross. The essential purpose of the congregation is threefold: the perfection of individual members by the practice of the evangelical counsels; the sanctification of their fellow-men by preaching the Divine word, especially in country places and foreign missions; and the Third Spiritual Movement of young men. This religious body was in its inception a product of the great French Revolution, or, rather, of the reaction from the frenzied hatred of religion and religious education that marked the decade from the meeting of the States General in 1789 to the end of the Directory in 1795. As at present constituted, the congregation is the result of Rome’s officially uniting two distinct French societies, the Brothers of St. Joseph, founded at Rueil in 1820, and the Auxiliary Priests of Le Mans, established in 1835. An excellent summary of the purposes and original activities of the amalgamated associations is given in the following letter, dated 4 May, 1840, and addressed to Pope Gregory XVI by Mgr. Bouvier, Bishop of Le Mans: "Basile-Antoine Moreau, honorary canon, and former professor of theology and holy scripture in our diocesan seminary, has, with the consent of the present bishop, established a house near the city of Le Mans, and has there assembled certain priests burning with love for souls and enamoured of poverty and obedience, who follow the community life under his direction, and are always ready to announce the word of God, to hear confessions, to conduct retreats for communities, etc. They are called Auxiliary Priests and are assigned to parishes. They have no superior by office, nor are they assisted by voluntary offerings and on the profits accruing from the board and tuition of a hundred pupils. As the Brothers of the Christian Doctrine do not take charge of establishments unless they can live at least three together and annually receive sufficient support amounting to $120 each they cannot be procured for schools in the country parishes and the small towns. A pious pastor of Rueil, Jacques-François Dujarrié, about the year 1820, gathered into his presbytery a number of virtuous young men, and prepared them to become primary teachers for the parishes in which the services of the Christian Brothers were unattainable. Thus were founded the beginnings of the Congregation of the Holy Cross. Bishop of Le Mans, seeing that the novelty of these Brothers could not be suitably maintained in the country district, took measures to transfer them to the episcopal city. With the consent of the founder who was still alive, he gave to the congregation as superior the Abbé Moreau. The latter assumed the heavy burden and united the novitiate to the Auxiliary Priests. This new institute already numbers eighty professed and forty-five novices."

Father Moreau became the first superior general of the congregation, a position which he held until 1856, seven years prior to his death. In 1841, he founded, the Congregation of the Sisters of Holy Cross, a religious body destined to accomplish much for the glory of God. Father Dujarrié, also, was the founder of the Sisters of Providence, a society of religious women whose activities are well known on both sides of the Atlantic. His name is perpetuated in Dujarrié Institute, Notre Dame (Indiana), a house for the formation of young men aspiring to the Brotherhood of Holy Cross. The name of the Congregation sprang naturally from that of the commune in which the home of the Auxiliary Priests was situated, it being called after the old church of Holy Cross, erected in the sixth century by St. Bertrand, Bishop of Comminges. For a time, the novitiates of the Congregation, the priests and professed clerics were called Sallavosters, and the professed brothers, Josephites; but these appellatives were discarded by the general chapter of 1872, since which date the two branches of the congregation have been styled simply Fathers and Brothers of Holy Cross. The letters C.S.C., following their individual names, are abbreviations of Congregatio Sancti Crucis.

The new institute responded so well to the needs of the period and grew so rapidly in numbers that, seventeen years after the date of Mgr. Bouvier’s letter to Gregory XVI, it received the formal recognition of the Apostolic See. The constitution and rules of the congregation were solemnly approved by Rome on 13 May, 1857. According to this constitution, of which subsequent modifications by decrees of general chapters have been authorized by the Holy See, the congregation is governed by a superior general, always a priest, who is elected for life by the general chapter, and who is aided by four assistant-generals, two of them priests, and two brothers. These assistants are elected by the general chapter for a term of six years. The Superior General is represented in Rome by a resident procurator general. This functionary, like the assistant-generals, is elected by the general chapter for a six years’ term, as are also the provincial or superiors of the different provinces into which the congregation is territorially divided. The general chapter, which convenes every six years, is composed of the officials already mentioned, and of delegates, both priests and brothers, from each province, the number of delegates being proportioned to the numerical strength of the religious whom they represent. Each separate province is governed by a provincial and his council, consisting of two priests and two brothers. The provincial chapter, held annually, and composed of the provincial, his council, and representatives from the provinces, has its seat at the house under the provincial. The province and the province house in much the same way as the general chapter does for the whole congregation. Finally, in each house of the congregation there is a local council, consisting of the superior and of members varying in number according to the muster-roll of the religious resident therein.

In the more restricted sphere of the individual life, the Fathers and Brothers of Holy Cross assist in common every day at meditation, holy Mass, particular examen, beads, spiritual reading, and night prayer. The daily visit to the Blessed Sacrament, as well as the daily canonical hours, is performed by the Local Office of the Blessed Virgin by the teaching brothers, and the saying three daily of the seven Our Fathers and Hail Marys by the brothers engaged in manual labour, is left as to time to the convenience of the individual religious. The weekly exercises of the chapter of accusation (the avowal to the community of one’s exterior violations of the rules), the Way of the Cross, and an hour of adoration before the Blessed Sacrament. Previous to the promulgation, in 1905, by Pius X, of the decree "Sacra Tridentina Synodus", relative to frequent and daily communion, the religious of Holy Cross were obliged by their rule to go to Communion every day before they receive Holy Communion at least once a week. Since the publication of the decree in question, its pre-
criptions have been adopted by the authorities of the congregation and form the normal practice of its members. Once a month, there is a retreat of one day with spiritual direction; and, once a year, a retreat of a week's duration.

In the earlier decade of the congregation's history, its members were recruited principally from the ranks of the clergy and their relatives, and indirectly, and conducted by the fathers and brothers, with occasional vocations discovered in the course of missions, tri- dums, and retreats preached by members of the congregation. Later on, each province was supplied with a "little seminary", or house of preparatory studies specifically designed for the education of boys or young men manifesting a special bent for religious life. Holy Cross Seminary and Dujarié Institute at Notre Dame, Indiana, are examples of such establishments for the preliminary training of prospective fathers and brothers. The novitiate lasts two years. In so far as ecclesiastical recruits are concerned, they enter upon their novitiate only on the completion of their collegiate course and their attainment of the baccalaureate degree. Their secular studies are then interrupted until they have made their religious profession, when they begin a four years' course in theology and the other branches of ecclesiastical education. In due time, and properly trained for their regular seminary, they are assigned to a mission. Except by exception, becoming more and more rare, they do no professorial work until after their ordination to the priesthood. Similar precautions are taken with the formation of the novice brothers prior to entrusting them with the functions of teaching.

Attention must be made of the mission in Algeria, which was one of the congregation's earliest establishments. The work to be accomplished for the Church in the French possessions of Northern Africa, about the middle of the nineteenth century, included the humble but essential task of furnishing primary education to the young. During a third of a century the brothers of the congregation devoted themselves to this work in different portions of Algeria with an ardor and success that won for them the affection and esteem of the people, and the generous praise of their ecclesiastical superiors. These latter desired the permanent residence of one of the fathers in each of the stations assigned to the congregation, but the home government repeatedly refused to sanction such a proceeding, alleging that "the Algerian budget did not provide for the additional expense". The brothers were obliged to leave the African mission, shortly after the close of the Franco-Prussian war, in consequence, even though the two nations were in truth France's colonies, of laicizing the schools. Regrettably as this abandonment of their colonial mission was felt to be, it was of minor importance when compared with the trial to which the congregation was subjected a quarter of a century later in the home country, France itself. The activities of the Holy Cross in the latter half of the nineteenth century, and the trials and tribulations wrought by the Law of Associations, were a subject of no small importance in ecclesiastical circles in the United States. The Province of Eastern Bengal, extensive with the Diocese of Dacca, is the special field of foreign missions confided by the Holy See to the congregation of Holy Cross. The field is a large one, the area of the Diocese being more than 50,000 square miles, with a population of 17,000,000, the overwhelming majority of whom are Hindus and Mussulmans. The connection of Holy Cross with this portion of the missionary field dates back to 1852, some forty years before Dacca was made an episcopal see. In 1909, Bengal received its fourth bishop from the ranks of the congregation. In the city of Dacca the fathers are devoting part of their time to the work of secondary education; in the country districts, the usual routine of foreign missionary life is followed: travelling from point to point, catechizing, baptizing, preaching, instructing converts, building modest chapels, and serving on occasion as medical doctor, midwife, and peacemaker. The congregation, in Rome, of an Apostolic college especially designed for the needs of the mission gave, in 1909, bright promise for its future prosperity.

The Canadian province of the congregation owes its origin to the reiterated requests made to Father Moreau by the saintly Bishop Bourget, of Montreal, in 1841 and the several years following. The first band of fathers and brothers reached St. Laurent, near Montreal, in 1847. The early years in Canada were marked by sacrifice and hardship, but the growth of the congregation was encouragingly steady. In the latter half of the nineteenth century, and the first decade of the twentieth, St. Laurent College was habitually attended by from two to four hundred students, many of them from the New England States and New York. Of these American students very many entered the priesthood. In addition to the college, the parish, and the parochial schools at St. Laurent, the mission in the villages, the missions of Quebec, colleges at Côte des Neiges, Farnham, St. Césaire, Sorel, and St. Aimé; large schools at Hochelaga, Côte des Neiges, Ste. Geneviève, and Pointe-Claire; a novitiate at Ste. Geneviève; and a house of studies for professed ecclesiastics attending Laval University, the effect of the effective work of Holy Cross in Canada, however, has been accomplished in New Brunswick, where St. Joseph's College, established at Memramcook in 1864, by Father Camille LeFebvre, has been the principal agency in raising the French Acadians from the condition of "hewers of wood and drawers of water", to one of professional, industrial, and social equality with their fellow-citizens of other nationalities. English-speaking Catholics in New Brunswick are scarcely less indebted to St. Joseph's.

The oldest, most extensive, and most important existing province of the congregation is the United States. Its story is largely that of Notre Dame, Indiana, of which the other establishments of Holy Cross throughout the province are offshoots. Such establishments are colleges in Oregon, Wisconsin, Ohio, Louisiana, and Texas; schools, high and primary, in Fort Wayne (Indiana), St. Louis (Missouri), Chicago (Illinois), San Antonio (Texas), and South Bend (Indiana); and Holy Cross College, Washington, D. C., the house of studies for the young clerics of the congregation attending the Catholic University. As for Notre Dame, Indiana, widely known as the home of the "Ave Maria", Notre
Dame University, and the Lectare Medal, its history dates back to 1842, synchronizing during its first half-century with the life-story of Father Edward Sorin, its founder. A brief word should perhaps be said of two books which contain the intellectual and spiritual memories of Notre Dame’s founder and of the spirit animating the Congregation of Holy Cross as a whole. The first is the “Ave Maria”, a weekly magazine devoted to the honour of the Blessed Virgin. Established in 1865, and steadily growing in importance and prestige, it has passed through a circulation of 100,000 copies, distributed in six languages, with a subscription list of 20,000 names. The second is the Lectare Medal. An adaptation of the papal custom of conferring the Golden Rose, this gold medal is annually presented by the University of Notre Dame, on the mid-Lenten Sunday, to an Azn. He was aided in this work by Léon-Gide Gaea-sien, art, commerce, philanthropy, sociology, or other field of beneficent activity. The first recipient of the Lectare Medal (1883) was John Gilmary Shea; the last (1909) was Frances Christine Fisher Tier nan, the novelist who has achieved notable distinction as Christian Reid. Notre Dame, a sanctuary of art, choler, fire, financial stringency, and multifarious other hardships, but the spirit of its founder was perpetuated in his successors, and its growth has been uniformly progressive. In 1842, Notre Dame du Lac was a virgin wilderness whose only note of civilization was that which was built by the pioneer group of the United States. Father Stephen Badin; in 1860, the name Notre Dame denotes a magnificent group of more than a score of handsome edifices: collegiate church, central administration building of the university, half a dozen residence halls, institutes of science, technology, and electrical and mechanical engineering, theatre, gymnasium, seminary, novitiate, provincial residence, community house, printing and publishing offices, and other accessory structures. It is, moreover, the site of the mother-house of the Congregation of Holy Cross, the residence of Father Sorin’s successor as superior general.

Sorin, Circular Letters (Notre Dame, Ind., 1890); Moreau, Basile-Antoine Moreau et ses Œuvres (Paris, 1900); Poirier, Le Père Lefebvre et L’Abaie (Montreal, 1899); Corby, Memoirs of Chaplain Life (Chicago, 1893); Icen, Golden Jubilees of Notre Dame University (Chicago, 1895).

ARTHUR BARRY O’NEILL.

Holy Cross, Sisters Marianites of.—The congregation of the Sisters Marianites of Holy Cross was founded in 1841, in the parish of Holy Cross, near Le Mans, Sarthe, France, by a priest of the same city, Basile-Antoine Moreau, b. at Laigle-en-Belin, Sarthe, France, 11 February, 1799; d. at Le Mans, 20 January, 1841. He was a Jesuit, whose mission was to assist in the educational establishment founded at Holy Cross, and permitted them to engage themselves to God by the triple vows of poverty, chastity, and obedience, pronounced 4 August, 1841. Thus was formed the nucleus of a religious family of which Mise Gascuin became the first superior, under the name of Sister Mary of the Seven Dolours, in honour of the august patroness of the congregation, 15 September, 1844. Mgr. Fornari, papal nuncio at Paris, being informed of the projects of Rev. B. A. Moreau, approved them.

The congregation, of which the rules were approved for ten years on trial, 19 February, 1867, by the Congregation of the Propaganda, received its final approbation on 28 October, 1885. It comprises two provinces: that of Louisiana, numbering 13 houses, and that of France, 10 houses; the missions of New York are attached to the French province. There are two novitiates, one in New Orleans, and the other in Tottenville, Staten Island. This congregation, the members of which take only simple vows, is governed by a general superior, elected every six years by the general chapter. The mother-house is in Le Mans, France. The founder in grouping these souls of goodwill listened to their desire to consecrate themselves to the care of the sick, the education of youth, and the charge of orphans. Mgr. le 1er Hailard, Bishop of Wisconsin, in 1841, begged Rev. B. A. Moreau to send him Sisters. This request was granted, and the mission known as Notre Dame du Lac was founded in 1843. Mgr. Bourget, Bishop of Montreal, Canada, in 1846, asked Rev. B. A. Moreau, whom he had visited at Holy Cross, to send him five sisters whom he might establish in his diocese. Four religious were sent in 1847 and founded their first house in the village of Saint Lawrence, near Montreal. These two foundations, with their numerous affiliations, declared themselves independent: Indiana in 1867, Canada in 1883. The third foundation was established in New Orleans in 1851. In the same year, by direction of the cardinal prefect of the Propaganda, a foundation was made at Dacca, Bengal, India; owing to the climate, however, this mission was abandoned. In 1861 the Sisters opened in New York City an establishment, now known as the Institute of St. Vincent, which was subsequently cared for. At present (1900) in the same city the Sisters are in charge of an academy, a parochial school, a day nursery; they serve in the French Hospital, and have also the care of an academy in Tottenville, Staten Island.

SISTER MARY OF ST. MATTHEW.

Holy Cross, Sisters of the (Mother House, St. Mary’s of the Immaculate Concepcion, Notre Dame, Indiana). As an offset to the ravages of the French Revolution in the fields of religion and education, the Very Rev. Basil Moreau, professor of divinity in the Grand Séminaire and canon of the cathedral at Le Mans, France, formed a society of auxiliary priests in 1834. The following year his bishop, Mgr. Bouvier, named him superior of the Brothers of St. Joseph, who had been founded for school work in 1820 by the Rev. Jacques-François Dujarié. “The Association of the Holy Cross” was the outgrowth of the society by communities banded together under Abbé Moreau for educational purposes in the Commune of the Holy Cross near Le Mans, where they started Holy Cross College in 1836. Several young women offering their assistance a little later, Father Moreau founded a sisterhood “to co-operate with the other branches in their pious labours, and to labour themselves in a particular manner for the benefit of the youth of their own sex”. The first candidates received the habit of the Congregation of the Seven Dolours (as it was then called) from Father Moreau on 29 September, 1841, in the convent of the Good Shepherd. Under the direction of its saintly superior, Mother Dorothea, they made their novitiate, and, at the end of a year, were admitted to the religious profession with the title, “Sisters of the Holy Cross”. They were consecrated by their founder “to the heart of Mary pierced with the sword of grief”. This has ever been the especial devotion of the sisters, and the image of Our Lady of Sorrows is a distinctive mark of their dress. They wear also in her honour a blue cincture and the chas-plet of the Seven Dolours, which is recited in common every day.

1842 the sisters with Mother Seven Dolours took possession of their new convent at Holy Cross. About this time, the Rev. Edward Sorin and five brothers left the mother-house for the Indiana Missions at the request of the Bishop of Vincennes. It is evident from Father Sorin’s letters that he expected the sis-
to join him later in his work. He writes that they should come prepared for teaching, establishing an academy, and for the Indian missions. Four sisters left France with Father Cointet on 6 June, 1842. A second company had been added to the log chapel at Notre Dame for their convent. Upon their arrival, they took charge of the sacristy, infirmary, clothes room, etc. Before long the need of an American novitiate was apparent as it was out of the question to send candidates to Le Mans from Indiana. Father Sorin asked Father Jarry’s permission to establish one but the bishop refused because he thought his diocese could not support two educational institutions, and the Sisters of Providence were already there by his invitation. Finally, in 1844 the novitiate was opened with the sanction of the Bishop of Detroit at Bertrand, Michigan, six miles from Notre Dame. This mission was attended by the Holy Cross priests. The first American postulants received the habit from Father Sorin on 8 September, 1844. The sisters taught the children of the neighbourhood, and cared for several orphans. In 1845 the inhabitants gave them a large tract of land; and this with five other settlements granted to the Society of the Faith made it possible for the sisters to extend their work. The French sisters had already mastered the English tongue, while their American companions were studying the dialect of the Pottawatomies. Those destined for music and painting attended Loretta Convent; others went to France to specialize in the instruction of deaf-mutes.

The first school for Indians was opened at Pokagon, Michigan, in 1845. This was followed by other foundations at St. John’s, Mackinac, Louisville, Lowell (Indiana), Laporte, Michigan City, and Mishawaka. In 1847 four sisters with some companions from the mother-house in France opened a convent at St. Laurent, Canada, which formed the nucleus of the subsequently erected province. In 1849 four sisters took charge of the boys’ orphan asylum in New Orleans, and from there a house was opened in New York with the sanction of Father Moreau (1854). Sisters were sent to this establishment from Notre Dame, Canada, and New Orleans. Misunderstandings due to orders issued from France and Notre Dame led to the withdrawal of the American sisters from the new foundations, the houses of New Orleans and New York remaining subject to France. The year 1856 saw the establishment of the well-established school in Chicago and Philadelphia. They had charge of the cathedral parochial school, St. Joseph’s German school, and an industrial school in Chicago, and were installed in St. Paul’s and St. Augustine’s schools in Philadelphia. Later they opened a select school for boarders and day-pupils in Waukesha, Wisconsin. These foundations all promised success, but the strained relations between the mother-house at Le Mans under Father Moreau and the Provincial House at Notre Dame under Father Sorin led to the recall of the sisters. Meanwhile the work at St. Mary’s, Bertrand, was recognized by the state and granted the building. By 1854 sea-bis and 50 buildings were added to accommodate their fifty boarders. In 1853, Eliza Gillespie received the habit from Father Sorin, and sailed for France to make her novitiate as Sister Angela. After profession, she returned to Bertrand and took charge of the academy. From that time until her death (1887), Mother Angela laboured indefatigably to develop the highest intellectual and religious qualities in both teachers and students, and must be regarded as the virtual foundress of the order in the United States.

On 15 August, 1855, the convent and academy were moved to Bertrand to the present site on the banks of the St. Jour. This institution, “St. Mary’s of the Immaculate Conception”, was incorporated under the laws of Indiana. In the early days of the community, property was held in common by the three branches of the Holy Cross. When Father Moreau visited the provinces of Canada, Louisiana, and Notre Dame in 1857, he promulgated the Decree of Separation of the sisters from the priests and brothers. In 1862 the property was divided. Again in 1864, a second division was made. The mother-house, Bishop Luers of Fort Wayne sent a petition to Rome asking the approval of the American province, and in 1869 the Sisters of the Holy Cross in the United States were recognized as a distinct Congregation. Father Sorin, who had on the resignation of Father Moreau become coadjutor of Logansport, was named their ecclesiastical superior, which office he held until the community was placed directly under the Propaganda. The new constitutions were approved, and Father Sorin was appointed to write the rules. Twenty years later, the apostolic approbation of the rules was given for seven years, at the end of which time the final approbation was extended (1886).

While the work of the Holy Cross Sisters is principally educational, they also devote themselves to the care of orphanages and hospitals for the sick. During the Civil War Mother Angela with seventy sisters took charge of hospitals in Mound City and Cairo; the Clara Barton hospital inCompose for the Union, the naval hospital and “The Overton” at Memphis; and St. Aloysius at Washington.

The community is governed by the mother general and her four assistants who form the council at the mother-house. All the missions are dependent upon the mother-house for all the subject matters, except the one novitiate, and the novices return there from all parts of the country to make their final vows after five years’ probation. There are one thousand sisters working in the archdioceses of Baltimore, Chicago, New York, and San Francisco, and in the various dioceses. They conduct over 60 institutions, including 1 college, 2 normal schools, 16 boarding schools, 40 academies and parish schools, 6 hospitals, and 4 orphan asylums.

Sister M. AntoINE.

Holy Cross Abbey.—The picturesque ruins of this monastery are situated on the right bank of the River Suir, about three miles south-west of the cathedral town of Thurles, Co. Tipperary. While not one of the largest Irish Cistercian houses, it was the most beautiful in point of architectural details, as may be realized from the fine proportions and delieacy of treatment in the stone-carving, peculiar to the main portions of the building. This abbey was founded in the year 1169 by Donald O’Brien, King of Thomond, and in the order of dates was the earliest of the forty-odd houses established in Ireland previous to the Reformation by the disciples of St. Bernard, the monks of the Reformed Order of Citeaux. As its designation indicates, the fame of the establishment was mainly due to the fact that the church was enriched with a shrine of the Holy Cross, the relic being one of the pillars of the church, wherein the relic was wont to be exposed for public veneration, still stands. This is a fine specimen of thirteenth-century carving and style, showing decided traces of French influence in its beautiful Gothic details. Among the more remark-
able features of the monastic church are the east window, the groined roofing of the chancel and side-chapels, and the ribbed vaulting beneath the tower. All the windows are of different design, and are remar to meet the beautiful flamboyant treatment Wernigerode. In the chancel at the Epistle side of the high altar is a structure not less interesting than the shrine in the north transept. While it apparently might have served the purpose of sedilia—having three divisions, composed of slender-pillared arches, sur- mounted with a canopy, and elaborately tabernacled work—it is always styled the "tomb of the good woman's son". The frieze is further adorned with foliated tracery through which are displayed the cross of St. George, the royal arms of England quartered with those of France, and other heraldic emblems of historic interest.

The relic of the Holy Rood, so long the object of the pilgrim's veneration, is said to have been bestowed on this monastery by one of the Plantagenet queens of England in gratitude for the kind services of the abbots of the time in having the remains of her son safely conveyed from the neighbourhood of the abbey, while on a visit to Ireland) interred in the church. The erection of the tomb is ascribed to her, as also is the rebuilding of the abbey church, which surpassed anything of the kind in Ireland in its architectural splendour. Circumstances point to the fact that the young prince—"the good man's son"—was "Pierce the Fair", son of Isabella of Angoulême (widow of King John) by her second husband, Le Brun, Count of La Marche. He would therefore have been half-brother of Henry III of England. His death is recorded by the "Four Masters as having occurred in Ireland, 1233. The Abbey of Holy Cross, as one of the greater monasteries, was suppressed under the fiat of Henry VIII in 1536. The abbots of the time, William O'Dwyer, surrendered on condition that he would enjoy the revenues for his lifetime. Eventually, Holy Cross with its appurtenances was conferred by Elizabeth on Thomas, Earl of Ormonde. However, we find as late as 1633 the Divine ministrations were still exercised in the church. The year 1632 was apparently the last during which the relic of the True Cross was exposed for public veneration. Subsequently, the community withdrew to Kilkenny city, where a private house was rented to Rev. Robert Barry. Here they decided to await the coming of better times, but the hoped-for day of return to their monastery never came. The preservation of the abbey ruins is now the charge of the Board of Works (Ireland).

**Holy Days. See Feasts, Ecclesiastical.**

**Holy Faith, Sisters of the, founded at Dublin, in 1857, by Margaret Aylward, under the direction of Rev. John Gowan, C.M., for the care of Catholic orphans. The foundress was called a confessor of the Faith by Pius IX, because of the imprisonment of six months she endured on account of her efforts to save some Catholic orphans from the hands of proselytizers. The congregation is especially active in the Archdiocese of Dublin, the residence of the superior general being at Glasnevin, where the sisters conduct a boarding-school for young ladies. In the foundation, St. Brigid's Orphanage, Dublin, nearly three thousand orphans have been trained and placed in trades and situations. The members of the congregation also conduct primary schools, private day schools, infants' schools, and junior boys' schools. In their Coombe and Strand Street (Dublin) houses, which have an attendance of 1200 and 800 respectively, the poor children are provided with clothing. Altogether the sisters in the fourteen convents of the archdiocese have charge of about seven thousand children. In the Diocese of Ossey a community of eight sisters conducts two primary schools and a private day school, with an attendance of 160.**

**Holy Family, Archiconfraternity of the.—This archiconfraternity owes its origin to Henri Belletable, an officer in the Engineers' Corps, Liège, Belgium. His intercourse with workmen inspired him to labour for their amelioration, which he saw could only be effected through religion. Therefore, he resolved to establish a society, which he would divide into companies of twelve in military fashion. The first reunion was held on the evening of Whit-Monday, 1844, in the room of a carpenter. When their numbers outgrew the room, the Redemptorists placed an oratory at their disposal, and Father Victor Dechamps (q.v.), Belletable's director, took up the work and became its soul. He brought it to the notice of Bishop von Bonnel, who gave it his formal approval. In February, 1845, erected it into a confraternity with the title of Holy Family, 7 April following, and remained its lifelong promoter. The statutes then drawn up were later presented to Pius IX, who approved them by Briefs dated 20 and 23 April, 1847, raised the society to the rank of an archiconfraternity, enriched it with indulgences, and made the rector of the Redemptorists' Church of Our Lady of the Immaculate Conception, Liège, its director. The confraternity spread rapidly and at its golden jubilee, in 1894, it had been established in over 1300 churches, and numbered more than 400,000 members. The development spread from Belgium to Holland, and finally throughout the Church. It has been more than sixty years in existence and has lost none of its fervour. Besides divisions for men and boys, there are also branches for women. Pius IX considered this confraternity a providential work for our times, as did also Leo XIII, who, when he established his own association of the Holy Family and suppressed all other associations of the same title, wished this archiconfraternity to continue its good work.

Henri-Hubert Belletable, its founder, was b. at Venlo in Holland, 8 April, 1813; d. 1864. After 1830 he became a soldier in Belgium, where he quickly rose from the ranks. In his last illness he insisted on receiving the Viaticum on his knees, but was so weak that two fellow-officers had to support him. After his Holy Communion he prayed fervently for his wife and children, and then died. He did not live long enough to see the development of his work, but his memory is sacred to all members of the archiconfraternity. In Holland the members erected a splendid monument to him at Venlo, and those of Holland and Belgium placed a bust in Carrara marble over his tomb at Huy.

**Holy Family, Congregations of the.—I. Association of the Holy Family, founded in 1820 by the Abbé Pierre Bienvenue Noailles (d. 1861), to fill in some measure the breach left by the ravages wrought in religious life by the French Revolution. The institute began with three young ladies, who formed a community under the direction of the Abbé**
Noailles, under the name of Sisters of Loreto. It now consists of seven congregations, each with distinctive work, garb, and particular rules, but all under common superintendents, and directed by the Superior General of the Oblates of Mary Immaculate, or by another priest of the same congregation, as well as by a directress general and her assistants. The association has received papal approbation many times, beginning with 1831, even as recently as 1904. (1) The Sisters of the Holy Family proper, or Holy Sisters, lead a conventual life, devote themselves to perpetual adoration and intercession for the success of the active members of the institute. (2) The Sisters of St. Joseph are occupied with the care of orphans, whom they instruct in various trades. (3) The Sisters of Loreto conduct private day schools and boarding schools for girls of the higher classes in France and Spain. (4) The Sisters of the Immaculate Conception are in charge of day schools, boarding schools, and kindergartens; they devote particular attention to the poor, care for the sick, and look after the socialites in the parishes to which they are attached. In England they are engaged in hospitals or government work. (5) The Sisters of Hope nurse the sick in their own homes, and conduct hospitals, infirmaries, and institutions of a like nature. (6) The Field Sisters (Sœurs Agricoles) have agricultural orphanages, where their charges are trained in agricultural pursuits. (7) The Sisters of St. Martha, or lay sisters, attend to all the domestic work connected with the various institutions of the Holy Family.

Owing to the pressure of new social conditions the number of congregations and their respective duties have undergone a gradual change. The institute has extended its activities to Ceylon (1862), South Africa (1864), and India (1865), where they have established hospitals, schools, and orphanages. At present (1909) there are about 240 houses with 3400 sisters, in charge of 25,000 children and 16,000 poor and sick.

II. BROTHERS OF THE HOLY FAMILY, founded in 1824, in the Diocese of Saint-Clau by Gabriel Taborin who gathered about him five young men, for the work of teaching and the service of the cathedral as chanters and sacristans. The school proved most successful, but on various pretenses his companions deserted him, and Brother Gabriel was forced to give up the work temporarily. After laboring for some time as a journeyman at Brest, he went to the Diocese of Bellay, where in 1827 he made a second and successful attempt to found his congregation at Hauteville, establishing a novitiate, first at Belmont, in 1829, and that house proving inadequate, at Bellay in 1840. In 1841 the institute and its constitutions received the approbation of Gregory XVI, and in the following year government authorization and exemption from military service in the Sardinian States. The members are teachers and lay brothers, under the direction of a superior general elected for life, assisted by a vice-superior, the council of the mother-house, and the general chapter. The only priests admitted as members are those needed to fulfill the sacred offices.

III. LITTLE SISTERS OF THE HOLY FAMILY, founded at Memramcook, New Brunswick, 15 October, 1874, for the temporal care of colleges, seminaries, and episcopal residences. In 1895 the mother-house was removed to Sherbrooke, Quebec. The sisters, who are engaged in many dioceses of Canada, and in the Archdioceses of Baltimore, Boston, San Francisco, and the Diocese of Portland in the United States, number about 500, in charge of 35 missions. Their pupils are employed as cooks, seamstresses, infirmarians, laundresses, etc.

IV. SISTERS OF THE HOLY FAMILY, formerly known as Daughters of the Holy Family, and later as Miramiones. In 1636 Françoise de Blosset (d. 1642), a zealous collaborator of St. Vincent de Paul, founded in Paris a religious community known as Daughters of St. Genevieve, for the care of the poor and infirm, the gratuitous instruction of young girls, and the training of teachers for country schools. The statutes were approved in 1638 by the bishop of Paris, and recognized by royal letters patent. Mme de Miramion (b. 1629; d. 1696), having devoted the sixteen years of her widowhood and her immense fortune to works of charity, in 1661, gathered about her a number of young women to lead a community life, under the patronage of the Holy Family, coinciding almost exactly with those of the Daughters of St. Genevieve. In 1665 a union of the two congregations was effected with the consent of the Archbishop of Paris and the new institute approved in 1668 by Cardinal Vendôme, legates a latere to France. Mme de Miramion (d. 1696) was elected superior, and in 1674 purchased a mother-house, defraying all expenses herself until the community became self-supporting. New constitutions were drawn up and submitted, for both ecclesiastical and government authorization. In time, several other communities also requested and received the approbation of the Daughters of St. Genevieve, known after Mme de Miramion's death as Miramiones. Under the direction of their superior, the sisters distinguished themselves by their devotion to the sick, especially in time of epidemic. It was she also who, emulating the example of the Jesuit Fathers at Paris, established a house of retreat for women. Lay sisters performed all domestic labor, education was made for those who, not being able to follow the community exercises, wished to live under the same roof and co-operate with the sisters in their good works. After a year of probation, these were received as associates, having no voice in the government of the community. In 1806 the Miramiones, who had not survived the Revolution, were re-established at Besançon, by a pious widow, Jeanne-Claude Jacoulet, and were soon in charge of day-schools, boarding-schools, asylums, and schools of domestic economy.

V. SISTERS OF THE HOLY FAMILY, founded at San Francisco, California, in 1872, by Elizabeth Armer, under the direction of Very Rev. J. J. Prendergast, for the instruction of neglected children for the sacraments, the organization of rivalities and sewing classes, and chiefly the daily care of the young children of working-women. In San Francisco are 90 homes, attended by 700 children. They have also a house at San José.

VI. SISTERS OF THE HOLY FAMILY, a congregation of coloured sisters founded for work among their own race, 21 November, 1842, at New Orleans, Louisiana, by Josephine Charles and Harriet Delisle, of New Orleans, and Juliette Gaudin and Alcide Malo, a young French lady, under the direction of Father Etienne Roussel, Vicar-General of the Diocese of New Orleans. They began by teaching the catechism and preparing children and adults for first Communion and Confirmation, a work which was gradually extended in scope, so that at the present time (1909) the 105 members of the congregation have charge of the parishes and many parochial schools, attended by about 1300 pupils, an asylum for coloured girls, a home for the aged, orphanages for coloured boys and girls, and industrial schools in the Archdiocese of New Orleans and the Dioceses of Galveston, Little Rock, and Houma. They follow the Rule of St. Augustine.

VII. SISTERS OF THE HOLY FAMILY OF NAZARETH, founded by Frénzis Siedlitska, a noble Polish lady, in 1874, under the auspices of Pius IX. In 1885 they began work in the Archdiocese of Chicago, and were soon in demand for many Polish parishes throughout the country. In the United States alone there are six sisters, in charge of 1 academy, 31 parochial schools, with an attendance of 12,000 pupils, an orphanage, a hospital, and a home for working-girls. The mother-house is in Rome.

HOLY GHOST.—I. SYNOPSIS OF THE DOGMA.—The
doctrine of the Catholic Church concerning the Holy
Ghost forms an integral part of her teaching on the
mystery of the Holy Trinity, of which St. Augustine
(De Trin., i, 3, 5), speaking with difference, says:
"In no other subject is the danger of erring so great,
or the progress so rapid, or the progress so dangerous.
Care must be used lest the doctrine be misunderstood.
The essential points of the dogma may be resumed in the
following propositions: The Holy Ghost is the Third
Person of the Blessed Trinity. Though really distinct,
as a Person, from the Father and the Son, He is consubstantial
with Them; being God like Them. He possesses with Them one and
the same Divine Essence or Nature. He proceeds, not by
way of generation, but by way of spiration, from
the Father and the Son together, as from a single
principle. Such is the belief the Catholic faith demands.
I. CHIEF ERRORS.—All the theories and all the
Christian sects that have contradicted or impugned,
in any way, the dogma, have, in the same
ceremonial consequence, threatened likewise the faith in
the Holy Ghost. Among these, history mentions the
following: (1) In the second and third centuries, the
dynamic or modalistic Monarchians (certain Ebionites,
it is said, Theodotus of Byzantium, Paul of Samos, Nazarius,
Nepos, and the presbyters in Asia Minor, and
passions generally) held that the same Divine Person,
according to His different operations or manifestations,
is in turn called the Father, the Son, and the Holy
Ghost; so they recognized a purely nominal
Trinity. (2) In the fourth century and later, the
Arians and their numerous heretical offspring: Ama-
numans or Eunomians, Semi-Arians, Acacians, etc.,
while admitting the triple personality, denied the
substantiality. Arianism had been preceded by the
Subordination theory of some ante-Nicene writers,
who affirmed a difference and a gradation between the
Divine Persons other than those that arise from their
relations in point of origin. (3) In the sixteenth
century, the Socinians explicitly rejected, in the name
of reason, along with all the mysteries of Christianity,
the doctrine of Three Persons in One God. (4) Men-
tion may also be made of the teachings of Johannes
Philippus (eighth century), Rosellinus, Gilbert de la
Porrée, Joasam of Floris (eighth century), and
modern times, Günther, who, by denying or
obscuring the doctrine of the numerical unity of
the Divine Nature, in reality set up a triple deity.
In addition to these systems and these writers, who
ought to be considered with the true doctrine about the
Holy Ghost only indirectly and as a logical result of pre-
vious errors, there were others who attacked the truth
directly: (1) Towards the middle of the fourth century,
Macedonius, Bishop of Constantinople, and, after him,
a number of Semi-Arians, while apparently admitting
the divinity of the Word, denied that of the Holy
Ghost. They condemned Him to be the Spirit of God,
ministers of God, but higher than the angels. They
were, under the name of Pneumatomachians, con-
demned by the Council of Constantinople, in 381
(Mansi, III, col. 560). (2) Since the days of Photius,
the schismatic Greeks maintain that the Holy Ghost,
true God like the Father and the Son, proceeds from
the former alone.
III. THE THIRD PERSON OF THE BLESSED TRINITY.
—This heading implies two truths: (1) The Holy
Ghost is a Person really distinct as such from the
Father and the Son; (2) He is God and consubstantial
with the Father and the Son. The first statement is
directly opposed to Monarchianism and to Socin-
ianism; the second to Subordinationism, to the differ-
ent forms of Arianism, and to Macedonianism in par-
sicular. The same arguments drawn from Scripture
and Tradition may be used generally to prove either
assertion. We will, therefore, bring forward the
proofs of the two truths together, but first call particu-
lar attention to some passages that demonstrate more
clearly the distinction here referred to.
A. In the New Testament the word spirit (Acts, vi, 26;
and, in John, xiv, 17, 17: "And I will ask the Father,
and he shall give you another Paraclete, that he may abide
with you for ever. The spirit of truth, whom the
world cannot receive"; and in John, xv, 26: "But
when the Paraclete cometh, whom I will send you
from the Father, the Spirit of truth, who proceedeth
from the Father, he shall testify of me." St.
Augustine, De Trin., i, 3, 5, comments that the
words scattered... elect, according to the foreknowledge
of God the Father, unto the sanctification of the
Spirit, unto obedience and sprinkling of the blood
of Jesus Christ." The Spirit of consolation and of truth
is also clearly distinguished in John, xvi, 7, 15, 15,
and the Son (cf. John, v, 26), and the Father, who
teach the Apostles, and from the Father, who has
nothing that the Son also does not possess. Both
send Him, but He is not separated from Them, for
the Father and the Son come with Him when He
descends into our souls (John, xiv, 23).
Many other texts declare quite as clearly that
the Holy Ghost is a Person, a Person distinct from the
Father and the Son, and yet One God with Them.
In several places St. Paul speaks of Him as if speaking of
God. In Acts, xxviii, 23, he says to the Jews:
"Well did the Holy Ghost speak to our fathers by
Isaiah the prophet:" now the prophecy contained in
the next two verses is taken from Isaias, vi, 9, 10,
where it is put in the mouth of the "King the Lord of
hosts." In other places he uses the words God and
Holy Ghost as plainly synonymous. Thus he writes,
I Cor., iii, 16: "Know you not, that you are the
temple of God, and that the Spirit of God dwelleth in you?"
(1 Cor., vi, 19: "Or know ye not that your bodies are the
temple of the Holy Ghost, who is in you?"
"St. Peter accepts the same identity when he
thus resonates with Ananias (Acts, v, 4): "Why
hath Satan tempted thy heart, that thou shouldst lie
to the Holy Ghost?"
"Thou hast not lied to men, but to God." The sacred
writers attribute to the Holy Ghost all the works characteristic of Divine
power. It is in His name, in the name of the Father
and of the Son, that baptism is to be given (Matt.,
xxviii, 19). It is by His operation that the greatest
of Divine mysteries, the Incarnation of the Word,
is accomplished (Mat., ii, 20; Luke, ii, 20; John,
ii, 21). He is God in His name and by His power that sins are forgiven
and souls sanctified: "Receive ye the Holy Ghost.
Whose sins you shall forgive, they are forgiven them"
(John, xx, 22, 23); "But you are washed, but you are
sanctified, but you are justified in the name of our
Lord Jesus Christ, and the Spirit of our God." (I Cor.,
vi, 11): "The charity of God is poured forth in our
hearts, by the Holy Ghost, who is given to us" (Rom.,
v, 5). He is essentially the Spirit of truth (John,
xiv, 16-17; xv, 26). Whose office it is to strengthen
faith (Acts, vi, 5), to bestow wisdom (Acts, vi, 3),
to give testimony of Christ, that is to say, to confirm
His teaching inwardly (John, xv, 26), and to teach
the Apostles the full meaning of it (John, xiv, 26; xvi, 13).
With these Apostles He will abide for ever (John, xiv,
16). Having descended on them at Pentecost, He
will guide them in their work (Acts, viii, 29), for He will inspire the new prophets (Acts, xi, 28; xiii, 9), as He inspired the Prophets of the Old Law (Acts, vii, 51). He is the source of graces and gifts (I Cor., xii, 3-11); He, in particular, grants the gift of tongues (Acts, ii, 1-16). As He dwelt in the bodies and sanctified them (I Cor., iii, 16; vi, 19), so will He raise them again, one day, from the dead (Rom., viii, 11). But He operates especially in the soul, giving it a new life (Rom., viii, 9 sq.), being the pledge that God has given us that we are His children (Rom., viii, 16); only with God, says Gal. i, 4, "He is the Spirit of God, and at the same time the Spirit of Christ (Rom., viii, 9); because He is in God, He knows the deepest mysteries of God (I Cor., ii, 10-11), and He possesses all knowledge. St. Paul ends his Second Epistle to the Corinthians (xii, 13) with this formula of benediction, which might be called a blessing of the Trinity: "The grace of our Lord Jesus Christ, and the charity of God, and the communication of the Holy Ghost be with you all." —Cf. Tixeront, "Hist. des dogmes," Paris, 1905, 1, 80, 89, 90, 100, 101.

B. While corroborating and explaining the testimony of faith, Tradition presents things more clearly to us, and before us the various stages of the evolution of this doctrine. As early as the first century, St. Clement of Rome gives us important teaching about the Holy Ghost. His "Epistle to the Corinthians" not only tells us that the Spirit inspired and guided the holy writers (viii, 1, xiv, 2); but tells us that Christ spoke to us in the Old Testament (xxii, 1 sq.); but it contains further, two very explicit statements about the Trinity. In c. xlii, 6 (Funk, "Pères apostolici," 2nd ed., I, 158), we read that "we have only one God, one Christ, one only Spirit of grace within us, one common vocation in Christ." In lviii, 2 (Funk, ibid., 172), the author makes this solemn affirmation: "χριστός... και τὸ πνεῦμα τοῦ θεοῦ..." (Mt. xlvii, 1 sq.). From this it follows that, in Clement's view, χριστός was equally applicable to θεοῦ (the Father), και τὸ πνεῦμα τοῦ θεοῦ... which we may compare with the formula so frequently met with in the Old Testament: "και τὸ πνεῦμα τοῦ θεοῦ..." From this it follows that, in Clement's view, χριστός was equally applicable to θεοῦ (the Father), και τὸ πνεῦμα τοῦ θεοῦ... which we may compare with the formula so frequently met with in the Old Testament: "και τὸ πνεῦμα τοῦ θεοῦ..."

The adopted, says expressly (ibid., II, 15) that they form a trinity (reitas). Irenæus looks upon the Holy Ghost as eternal (Adv. Haer., V, xii, n. 2, in P. G., VII, 1153), existing in God anae omnem constitutionem, and proceeding by Him at the beginning of His ways (ibid., IV, xx, 3). Consequently, the Holy Ghost is His wisdom (IV, xx, 3); the Son and He are the "two hands" by which God created man (IV, pref., n. 4; IV, xx, 20; V, vi, 1). Considered with regard to the Church, the same Spirit is truth, grace, a pledge of immortality, a principle of unity unifying with God; Gal. iv, 4; Rom. xii, 6; 1 Cor. xii, 3; 1 Pet. iv, 11. He gives the sacraments their efficacy and virtue (III, xvii, 2, xxi; IV, xxxiii, 7; V, viii, 1). St. Hippolytus, though he does not speak at all clearly of the Holy Ghost regarded as a distinct person, supposes Him, however, to be God, as well as the Father and the Son (Contra Noël., vii, xii, in P. G., X, 816, 820). Tertullian is one of the writers of this age whose tendency to Subordinationism is most apparent, and that in spite of his being the author of the definitive formula: "Three persons, one substance." And yet his teaching on the Holy Ghost is in every way remarkable. He seems to hold things more clearly than the others. He affirms His Divinity in a clear and absolutely precise manner. In his work "Adversus Praxeum" he dwells at length on the greatness of the Paraclete. The Holy Ghost, he says, is God (c. xiii in P. L., I, 193); of the substance of the Father (ii, iv in P. L., II, 313); the Father and the Son (ii in P. L., II, 180); proceeding from the Father through the Son (iv, vii in P. L., II, 182, 187); teaching all truth (ii in P. L., II, 179). St. Gregory Thaumaturgus, or at least the "Euthus tis eis terynon", which is commonly attributed to him, and which dates from the period 260-270, gives us this remarkable passage (P. G. X, 92 sq.): "One is God, Father of the living Word, of the subsisting Wisdom. . . . One the Lord, one of one, God of God, invisible of invisible. . . . One the Holy Ghost, having His subsistence from God. . . . Perfect Trinity, which in eternity, glory, and power, is neither divided, nor separated. . . . Unchanging and immutable Trinity." In 304, the martyr St. Vincent said (Ruinent, op. cit., 325): "I confess the Lord Jesus Christ, Son of the Father most High, one of one: I recognize Him as one God with the Father and the Holy Ghost."

But we must come down towards the year 360 to find the doctrine of the Holy Ghost explained both fully and clearly. It is St. Athanasius who does so in his "Letters to Serapion" (P. G., XXVI, col. 525 sq.). He had been informed that certain Christians held that the Third Person of the Blessed Trinity was a creature. To refute them he questions the Scriptures, and they furnish him with arguments as solid as they are numerous. They tell him, in particular, that the Holy Ghost is united to the Son by relations just like those existing between the Son and the Father; that He is sent by the Son; that He is His mouth-piece and glorifies Him; that, unlike creatures, He has not been made out of nothing, but comes forth from God. He performs a sanctifying work in which no creature is capable; that in possessing Him we possess God; that the Father created everything by Him; that, in fine, He is immutable, has the attributes of immensity, oneness, and has a right to all the appellations that are used to express the dignity of the Son. Moreover, he calls attention to the fact that the meaning of Scriptural texts, a few from amongst which are given above. But the writer lays special stress on what is read in Matt., xxxviii, 19. "The Lord," he writes (Ad Serap., III, n. 8, in P. G., XXVI, 635 sq.), "founded the Church of the Faith on the Trinity, when He said to His Apostles, Go and teach ye all nations, baptizating them in the name of the Father, and of the Son, and of the Holy Ghost. If the Holy Ghost were a creature, Christ would not..."
have associated Him with the Father; He would have avoided making a heterogenous Trinity, composed of unlike elements. What did God stand in need of? Did He need to join to Himself a being of different nature? . . . No, the Trinity is not composed of the Creator and creature, but of the Son and Father. Didimus of Alexandria, St. Epiphanius, St. Gregory of Nazianzus, St. Ambrose, and St. Gregory of Nyssa took up the same thesis ex professo, supporting it for the most part with the same proofs. All these writings had prepared the way for the Council of Constantinople, which, in 381, confirmed the doctrine of the Eastern Church and solemnly proclaimed the true doctrine. This teaching forms part of the Creed of Constantinople, as it is called, where the symbol refers to the Holy Ghost, "Who is also our Lord and Who gives life; Who proceeds from the Father, Who is adored and glorified together with the Father and the Son; Who spoke by the prophets." Was this creed, with these particular words, approved by the council of 381? Formerly that was the common opinion, and even in recent times it has been held by authorities like Hefele, Hermeuther, and Funk; other historians, amongst whom are Harnack and Duchesne, are of the contrary opinion. In whatever manner be it, the importance of which we are speaking was received and approved by the Council of Chalcedon, in 451, and that, at least from that time, it became the official formula of Catholic orthodoxy.

IV. PROCESSION OF THE HOLY GHOST.—We need not dwell at length on the precise meaning of the Procession in God. (Sée TRINITY.) It will suffice here to remark that by this word we mean the relation of origin that exists between one Divine Person and another, or between one and the two others as its principle of origin. The Son proceeds from the Father; the Holy Ghost proceeds from the Father and the Son. The latter truth will be specially treated here.

A. That the Holy Ghost proceeds from the Father has always been admitted by all Christians; the truth is expressly stated in John, xv, 26. But the Greeks, after Photius, deny that He proceeds from the Son. And yet such is manifestly the teaching of Holy Scripture and the Fathers.

(1) In the New Testament.—(a) The Holy Ghost is called the Spirit of Christ (Rom., viii, 9, the Spirit of the Son (Gal., iv, 6), the Spirit of Jesus (Acts, xvi, 7). These terms imply a relation of the Spirit to the Son, which is a relation of origin. This relation is so much the more indisputable as all admit the similar argument to explain why the Holy Ghost is called the Spirit of the Father. Thus St. Augustine argues (In Joan., tr. xceix, 6, 7 in P. L., XXXV, 1888): "You hear the Lord himself declare: 'It is not you that speak, but the Spirit of your Father that speaketh in you.' Likewise you hear the Apostle declare: 'God hath sent the Spirit of His Son into your hearts.' Could there then be two spirits, one the spirit of the Father, the other the spirit of the Son? Certainl'y not. Just as there is only one Father, just as there is only one Son, so there is only one Spirit. Where is, consequently, the Spirit of both... Why then should you refuse to believe that He proceeds also from the Son, since He is also the Spirit of the Son? If He did not proceed from Him, Jesus, when He appeared to His disciples after His Resurrection, would not have breathed on them, saying: 'Receive ye the Holy Ghost.' What, indeed, does this breathing signify, but that the Spirit proceeds also from Him?" St. Athanasius had argued in exactly the same way (De Trinit. et Spir. S., n. 19, in P. G., XXXVI, 1212), and concluded: "We say that the Son of God is also the Son of the Spirit." (b) The Holy Ghost receives from the Son, according to John, xvi, 13-15: "When he, the Spirit of truth, is come, he will teach you all truth. For he shall not speak of himself; but what things soever he shall hear, he shall speak; and the things that are to come, he shall shew you. He shall glory me; because he shall receive of mine, and shall shew it to you. All things whatsoever the Father hath, are mine. Therefore I said, that he shall receive, and shall shew unto you." Now, one Divine Person can receive from another only by Procession, being related to that other as to a principle. What the Paraclete will receive from the Son is immanent knowledge, which He will afterwards manifest exteriorly. But this immanent knowledge is the very essence of the Holy Ghost, who, therefore, has His origin in the Son, the Holy Ghost proceeds from the Son. "He shall not speak of Himself", says St. Augustine (In Joan., tr. xceix, 4, in P. L., XXXV, 1887), "because He is not from Himself, but He shall tell you all He shall have heard. He shall hear from Him from whom He proceeds. In His case, to hear is to know, and to know is to be. He derives His knowledge from Him from Whom He derives His essence." St. Cyril of Alexandria remarks that the words: "He shall receive of mine" signify "the nature" which the Holy Ghost has from the Son, the Son has His from the Father (De Trinit., dialogi, in P. G., LXXV, 107). Balsamon explains this reason of His assertion: "He shall receive of mine: "All things whatsoever the Father hath, are mine," Now, since the Father has with regard to the Holy Ghost the relation we term Active Spiration, the Son has it also; and in the Holy Ghost there exists, consequently, with regard to both, Passive Spiration or Procession.

(2) The same truth has been constantly held by the Fathers.—This fact is undisputed as far as the Western Fathers are concerned; but the Greeks deny it in the case of the Easterns. We will cite, therefore, a few witnesses from among the latter. The testimony of St. Athanasius has been quoted above, to the effect that "the Son is the source of the Spirit", and the statement of Cyril of Alexandria that the Holy Ghost has His "nature" from the Son. The latter saint further asserts (Thesaur., assert. xxxiv in P. G., LXXV, 555): "When the Holy Ghost comes into our hearts, He makes us like to God, because He proceeds from the Father and the Son"; and again (Epist., xvii, Ad Nestorium, De excommunicatione in P. G., LXXVII, 119): "The Holy Ghost is not unconnected with the Son, for He is called the Spirit of Truth, and Christ is the Truth; and He proceeds from God the Father," St. Basil (De Spirit. S., xviii, in P. G., XXXII, 147) wishes us not to depart from the traditional order in mentioning the Three Divine Persons, because "as the Son is to the Father, so is the Spirit to the Son, in accordance with the ancient order of the names in the formula of baptism." St. Ephiphanus writes (Ancor. vii, in P. G., XLIII, 29, 30) that the Paraclete "is not to be considered as unconnected with the Father and the Son, for He is with Them one in substance and divinity", and states that "He is from the Father and the Son"; a little further, he adds (op. cit., xi, in P. G., XLIII, 33): "No one knows the Spirit, save the One Spirit, the Son, from Whom He proceeds and of Whom He receives." Lastly, a council held at Seleucia in 410 proclaims its faith "in the Holy Living Spirit, the Holy Living Paraclete, Who proceeds from the Father and the Son" (Launy, "Concilium Seleucense", Louvain, 1898).

However, when we compare the Latin writers, as a body, with the Eastern writers, we notice a difference in language: while the former almost unanimously affirm that the Holy Ghost proceeds from the Father and from the Son, the latter generally say that He proceeds from the Father through the Son. In reality they thought expressed by both Grecians and Latins was the same, only the manner of expressing it is slightly different: the Greek formula ἔκ τοῦ παρόδου...
"The Holy Ghost comes from the Father and from the Son, not made, not created, not generated, but proceeding." As we are utterly incapable of otherwise fixing the meaning of the mysterious mode affecting this relation of origin, we apply to it the name *spiration*, the signification of which is thus: Spiration is for the Holy Ghost and by way of contrast, in the sense that it affirms a Procession peculiar to the Holy Ghost and exclusive of filiation. But though we distinguish absolutely and essentially between generation and spiration, it is a very delicate and difficult task to say what the difference is. St. Thomas (De Trin., XV, xxvii), finds the explanation and, as it were, the epitome, of the doctrine in the principle that, in God, the Son proceeds through the Intellect and the Holy Ghost through the Will. The Son is, in the language of Scripture, the *image* of the Invisible God, His Word, His unequalled wisdom. God contemplates Himself and knows Himself from all eternity; and, knowing Himself, He forms within Himself a substantial idea of Himself, and this substantial thought is His Word. Now every act of knowledge is accomplished by the production in the intellect of a representation of the object known; and the process of spiration itself is the production by a living being of a being partaking of the same nature; and the analogy is only so much the more striking when there is question of this act of Divine knowledge, the eternal term of which is a substantial being, consubstantial with the knowing subject, a being to the Holy Ghost, according to the common doctrine of theologians. He proceeds through the will. The Holy Spirit, as His name indicates, is Holy in virtue of His origin, *His spiration*; He comes therefore from a holy principle; now holiness resides in the will, as wisdom resides in the intellect; and, it is also a word that is also of the same origin; it is usually called *par excellence*, in the writings of the Fathers, *Love* and *Charity*. The Father and the Son love one another, from all eternity, with a perfect, ineffable love; the term of this infinitely fruitful mutual love is Their Spirit, Who is co-eternal and consubstantial with Them. Only, the Holy Ghost is not indebted to the manner of His Procession precisely for this perfect resemblance to His principle, in other words for His consubstantiality; for to will or love of an object does not formally imply the production of its immanent image in the soul that loves; but rather a tendency, a movement of the will towards the thing desired, and enjoyment; and only as far as the Spirit has every allowance for the feebleness of our intellects in knowing, and the unsuitability of our words for expressing the mysteries of the Divine life, if we can grasp how the word *generation*, freed from all the imperfections of the material order, may be applied by analogy to the Procession of the Word, so may see that the term can in no way be fittingly applied to the Procession of the Holy Ghost.

V. THE FILIOQUE.—Having treated of the part taken by the Son in the Procession of the Holy Ghost, we come next to consider the introduction of the expression *Filioque* in the Creed of Constantinople. The author of the addition is unknown, but the first trace of it is found in Spain. The *Filioque* was successively introduced into the Symbol of the Council of Toledo in 447, then, in pursuance of an order of another synod held in the same place (589), it was inserted in the Niceno-Constantinopolitan Creed. Admitted likewise into the Symbol of the Council of Florence in 451 in the Bull "Cantate Domino" (ibid., n. 703 sq).

C. It is likewise an article of faith that the Holy Ghost does not proceed, like the Second Person of the Trinity, by way of generation. Not only is the Second Person alone called *Son* in the Scriptures, not only is He said to be begotten, but He is called the only *Son of God*; the ancient symbol that bears the name of Saint Anastasius states expressly that
sanctify by themselves, and may even be separated from sanctifying grace. Those of the first class are accounted seven in number, as enumerated by Isaias (xi, 2, 3), where the prophet sees and describes them in the Messias. They are the gifts of wisdom, understanding, counsel, fortitude, knowledge, piety (godliness), and fear of the Lord. The expression was employed by Photius to denote the Greek Church, detaching us from the world, makes us relish and love only the things of heaven. The gift of understanding helps us to grasp the truths of religion as far as is necessary. The gift of counsel springs from supernatural prudence, and enables us to see and choose correctly what will help most to bring about our own salvation. By the gift of fortitude we receive courage to overcome the obstacles and difficulties that arise in the practice of our religious duties. The gift of knowledge points out to us the path to follow and the dangers to avoid in order to reach heaven. The gift of piety, by inspiring us with a tender and filial confidence in God, makes us joyfully embrace all that pertains to His service. Lastly, the gift of fear fills us with a sovereign respect for God, and makes us dread, above all things, to offend Him. As to the inner nature of these gifts, theologians consider them to be supernatural and permanent qualities, which must make us attentive to the strongest appeal to render us susceptible to the workings of actual grace, which make us love the things of God, and consequently, render us more obedient and docile to the inspirations of the Holy Ghost. But how do they differ from the virtues? Some writers think they are not really distinct from them, that they are the virtues inasmuch as the latter are free gifts of God, and that they are identified essentially with grace, charity, and the virtues. That opinion has the particular merit of avoiding a multiplication of the entities infused into the soul. Other writers look upon the gifts as perfections of the virtue; the latter, however, dispose us to follow the path of virtue, and guide us in reason; the former are functionally intended to render the will obedient and docile to the inspirations of the Holy Ghost. For the former opinion, see Bellevue, "L'œuvre du Saint-Esprit" (Paris, 1902), 99 sq.; and for the latter, see St. Thomas, I-II, Q. ix, a. 1, and Lexicon de Divina Gratia, "L'Esprit dans les âmes justes" (Paris, 1900), 378 sq.

The gifts of the second class, or charismata, are known to us partly from St. Paul, and partly from the history of the primitive Church, in the bosom of which God plentifully bestowed them. Of these charismata, or spiritual gifts, Paul says: "There is one spirit that commandeth, the [that] one and the same Spirit worketh, dividing to every one according as he will", the Apostle speaks to us, particularly in I Cor. xii, 6-11; I Cor., xii, 28-31; and Rom., xii, 6-8. In the first of these three passages we find nine charismata mentioned: the gift of speaking with wisdom; the gift of speaking with knowledge, faith, the grace of healing, the gift of miracles, the gift of prophecy, the gift of discerning spirits, the gift of tongues, the gift of interpreting speeches. To this list we must at least add, as being found in the other two passages indicated, the gift of government, the gift of helps, and perhaps what Paul calls distributo and ministrum. However, existences are not all agreed as to the number of the charismata, or the nature of each one of them; long ago, St. Chrysostom and St. Augustine had pointed out the obscurity of the question. Adhering to the most probable views on the subject, we may at once classify the nine charismata and explain their meaning as follows. They form four natural groups: (1) Two charismata which regard the teaching of Divine things: sermo sapientiae, sermo scientiae, the former relating to the exposition of the higher mysteries, the latter to the body of Christian truths. (2) Two charismata that lend support to this teaching: fides, gratia sacramentum, operatio virtutum. The faith here spoken of is...
faith in the sense used by Matt., xvii, 19: that which works wonders; so it is, as it were, a condition and a part of the two gifts mentioned with it. (3) Four charismata that served to edify, exhort, and encourage the faithful, and that confound the unbeliever: prophetia, discreto spiritum, genera linguerum, interpreta sermonum. These four seem to fall logically into two groups; for prophecy, which is essentially an inspired pronouncement on different religious subjects, the declaration of the future being only of secondary import, finds its complement and, as it were, its check in discerning spirits, and confounding the unbeliever: would be the use of glossolalia—the gift of speaking with tongues—if the gift of interpreting them were wanting? (4) Lastly there remain the charismata that seem to have as object the administration of temporal affairs, and of works of charity: gubernationes, opistolationes, distributiones. Judging by the context, these gifts, though conferred and useful for the direction and comfort of one’s neighbour, were in no way necessarily found in all ecclesiastical superiors.

The charismata, being extraordinary favours and not requisite for the sanctification of the individual, were not indiscriminately granted to all Christians. However, in the Apostolic Age, they were comparatively common, especially in the communities of Jerusalem, Rome, and Corinth. The reason of this is apparent: in the infant Churches the charismata were extremely useful, and even morally necessary, to strengthen the faith of the believers. If not the infidels, then themselves reflect, and to counterbalance the false miracles with which they sometimes prevailed. St. Paul was careful (1 Cor., xii, xiii, xiv) to restrict authoritatively the use of these charismata within the limits for which they were bestowed, and thus insist upon their subordination to the power of the hierarchy. Cf. Batifol, "L’Eglise mansante et le catholicisme" (Paris, 1909), 36. (See Charismata.)

VII. FRUITS OF THE HOLY GHOST.—Some writers extend this term to all the supernatural virtues, or rather to the acts of all these virtues, inasmuch as they are the results of the mysterious workings of the Holy Ghost in our souls by means of His grace. But, with St. Thomas, I–II, Q. lxx, a. 2, the word is ordinarily restricted to mean only those supernatural works that are done joyfully and with peace of soul. This is the sense in which most authorities apply the term to the list mentioned by St. Paul (Gal., v, 22, 23): "But the fruit of the Spirit is, charity, joy, peace, patience, benignity, goodness, longanimity, mildness, faith, modesty, continency, chastity." Moreover, there is no doubt that this list of twelve—three of the twelve are omitted in several Greek and Latin manuscripts—is not to be taken in a strictly limited sense, but, according to the rules of Scriptural language, as capable of being extended to include all acts of a similar character. That is why the Angelic Doctor says: "Every virtuous act which man performs with pleasure is a fruit." The fruits of the Holy Ghost are not habits, permanent qualities, but acts. They cannot, therefore, be confounded with the virtues and the gifts, from which they are distinguished as if they are essentially intended, inasmuch as they are active principles, to produce something else, i.e. their acts. Further, in order that these acts may fully justify their metaphorical name of fruits, they must belong to that class which are performed with ease and pleasure; in other words, the difficulty involved in performing them appears in present and satisfaction resulting from the good accomplished.

VIII. SINS AGAINST THE HOLY GHOST.—The sin or blasphemy against the Holy Ghost is mentioned in Matt., xii, 22–32; Mark, iii, 22–30; Luke, x, 14–23; and Christ everywhere declares that it shall not be pardoned. In what does it consist? If we examine all the passages alluded to, there can be little doubt as to the reply. Let us take, for instance, the account given by St. Matthew, which is more complete than that of the other Synoptics. There had been brought to Christ "one possessed with a devil, blind and dumb: and he healed him, so that he spoke and saw." While the crowd was wondering, and asking: "Is not this the Son of David?" the Pharisees, yielding to their wonted jealousy, and shutting their eyes to the light of evidence, say: "This man casteth not out devils but by Beelzebub the prince of the devils." Jesus then proves them to the absurdity, and, consequently, the malice of their explanation; He shows them that it is by "the Spirit of God" that He casts out devils, and then He concludes: "Therefore I say to you: Every sin and blasphemy shall be forgiven men, but the blasphemy of the Spirit shall not be forgiven. And whosoever shall speak a word against the Son of man, it shall be forgiven him; but whoever shall blaspheme against the Holy Ghost, it shall not be forgiven him, neither in this world, nor in the world to come." So, to sin against the Holy Ghost is to confound Him with the spirit of evil, it is to deny, from pure malice, the Divine character of works manifestly Divine. This is what St. Mark says: "Mark says the same thing, but with a different emphasis. In fact, on the question; for, after reciting the words of the Master: "But he that shall blaspheme against the Holy Ghost shall never have forgiveness", he adds at once: "Because they said: He hath an unclean spirit." With this sin of pure downright malice, Jesus contrasts the sin "against the Son of man", that is the sin committed against Himself as man, the wrong done to His humanity in judging Him by His humble and lowly appearance. This fault, unlike the former, might be excused as the result of man’s ignorance and misunderstanding.

But the Fathers of the Church, commenting on the Gospel texts we are treating of, did not confine themselves to the meaning given above. Whether it be that they wished to group together all objectively analogous cases, or whether they hesitated and wavered when confronted with this point of doctrine, which St. Augustine declares (Serm. ii de verbis patrum, c. v.), that theologians, following the example of the Church, have proposed different interpretations or explanations. St. Thomas, whom we may safely follow, gives a very good summary of opinions in II–II, Q. xiv. He says that blasphemy against the Holy Ghost was and may be explained in three ways. Sometimes, and in its most literal signification, it has been taken to mean the uttering of an insult against the Divine Spirit, applying the appellation either to the Holy Ghost alone or to all Three Divine Persons. This was the sin of the Pharisees, who spoke at first against "the Son of man", criticizing the works and human ways of Jesus, accusing Him of loving good cheer and wine, being disordered and without dignity, as if He were in some way goaded with undoubted bad faith, traduced His Divine works, the miracles which He wrought by virtue of His own Divinity. On the other hand, St. Augustine frequently explains blasphemy against the Holy Ghost to be final impudence, perseverance till death in mortal sin. This impenitent sin against the Holy Ghost, in the sense that it frustrates and is absolutely opposed to the remission of sins, and this remission is appropriated to the Holy Ghost, the mutual love of the Father and the Son. In this view, Jesus, in Matt., xii, and Mark, iii, did not really accuse the Pharisees of blaspheming the Holy Ghost. He only warned them against the danger they were in of doing so, not in an ordinary sense, for the Fathers, and, after them, many scholastic theologians, apply the expression to all sins directly opposed to
that quality which is, by appropriation, the characteristic quality of the Third Divine Person. Charity and goodness are especially attributed to the Holy Ghost, as power is to the Father and wisdom to the Son. Just as, then, as they termed sins against the Father those that resulted from frailty, and sins against the Son those that sprang from ignorance, so the sins against the Holy Ghost are those that are committed from downright malice, either by despising or rejecting the inspirations and impulses which, having been stirred in man’s soul by the Holy Ghost, would turn him away from, and drive him from evil. It is easy to see how this wide explanation suits all the circumstances of the case where Christ addresses the words to the Pharisees. These sins are commonly reckoned six: despair, presumption, impenitence or a fixed determination not to repent, obstinacy, resisting the known truth, and envy of another’s spiritual welfare.

The sins against the Holy Ghost are said to be unpardonable, but the meaning of this assertion will vary very much according to which of the three explanations given above is accepted. As to final impenitence, it is absolute; and this is easily understood, for even God cannot pardon where there is no repentance, and the moment of death is the fatal instant after which no mortal sin is remitted. It was because St. Augustine considered Christ’s words to imply absolute unpardonableness that he held the sin against the Holy Ghost to be so final impenitence. In the two other explanations, according to St. Thomas, the sin against the Holy Ghost is irremissible, not absolutely and always, but inasmuch as, considered in itself, it has not the claims and extenuating circumstances, inclining towards a pardon, that might be alleged in the case of sins of weakness or ignorance. He who, from pure and deliberate malice, refuses to recognize the manifest work of God, or rejects the necessary means of salvation, acts exactly like a sick man who not only refuses all medicine and all food, but who does all in his power to increase his illness, and whose malady becomes incurable, due to his own action. It is true that, in either case, God could, by a miracle, overcome the evil; He could, by His omnipotent intervention, either nullify the natural causes of bodily death, or radically change the stubborn will of the sinner; but such intervention is not in accordance with His ordinary providence; and if He allows the secondary causes to act, if He offers the free human will only the help of ordinary but sufficient grace, who shall convince us? In a word, thus the expensiveness of the sins against the Holy Ghost is exclusively on the part of the sinner, on account of the sinner’s act.

J. FORGET.

Holy Ghost, Order of the.—The Hospital of the Holy Ghost at Rome was the cradle of an order, which, beginning in the thirteenth century, spread throughout the countries of Christendom, and whose inestimable services have been recognized by every historian of medicine. Speaking of the hospital itself, La Porte du Thell calls it “a useful establishment, the most beautiful, the largest, and the best-ordered perhaps that exists at present, I say not in this queen of cities but is modelled on the famous Hospitaller order.” The hospital was founded in 1356 by the celebrated Innocent III, not merely to tap this source of charity and Christian mercy in its plenitude, but to diffuse its beneficent flood in a methodical manner to every sphere of social life.” Not that the idea of gathering together the sick in order that they might be assured of the care of a community of infirmarians was new in the Church. Nevertheless, a mistake must not be made on this point. The hospitium, the domus hospitalis, the xenodochium, which are mentioned before the thirteenth century, were in general only a refuge for alien (hospites, &c.) travellers, poor wanderers, and pilgrims so numerous in the Middle Ages. The sick were treated at their homes in accordance with the words of Jesus Christ: “Infirmitas mea et viuastis me” (I was sick, and you visited me.—Matt., xxv, 36). The first hospitals in the modern sense of the word found their origin in the monasteries under the name of infirmatoria. During the Frankish period, in the absence of a school of medicine, medical science found a refuge in the monasteries. The care of the sick formed part of the duties of charity imposed upon the monks. Hence there were two sorts of infirmaries, the infirmitorium fratum within the clausura, and the infirmitorium pauperum or seculi without.

From the time of the crusades the hospitia of the Holy Land, those of the Hospitallers of St. John and the Teutonic Order (q. v.), were of a mixed character; founded for the reception of pilgrims to the Holy Places, they also served as hospitals for the sick. They became at the same time, as is well known, military in character, and to this circumstance may be credited the repeated attempts to give a military character to the Hospitallers of the Holy Ghost, although they have never carried arms nor had occasion to use them. Two circumstances led to the creation of the Hospitallers of the Holy Ghost by Innocent III: the example given in Provence by Guy de Montpellier, who established in his native town a lay community for the care of the sick under the patronage of the Holy Ghost (it is not known what caused him to choose this patronage; perhaps the Holy Ghost was chosen as the Spiritus amoris); the second cause was a.
foundation of Anglo-Saxon origin already existing on the banks of the Tiber. This was a simple hospitum founded in 715 by King Ina for his countrymen and known by the name of Hospitale S. Mariae in Asisyla, around which was formed a quarter called the Saxonorum. In the course of centuries the buildings had fallen to ruin, but the endowments were still available and were appropriated by the pope to the new institute. A first hospital building was erected in the same quarter, and Guy de Montpeller was called to organize it.

In the beginning the institution was in the hands of laymen, Innocent III confining himself to attaching to it four clerics for spiritual duties, responsible only to the pope or his delegate. In return he endowed the institution with the most extensive privileges, hitherto reserved to the great monastic orders; exemption from all spiritual and temporal jurisdiction save his own, the right to build churches, to nominate chaplains, and to have their own cemeteries. The signal was given; everywhere there arose filial houses modelled after the mother-house, while houses already in existence handed down their privileges to the Holy Ghost at Rome, and enjoying the same privileges on condition of adopting the same rules, of submitting to periodical visitation, and of paying a light contribution. Thus at the beginning of the fourteenth century the order numbered in France more than 180 houses, and a century later nearly 400. In Germany the list drawn up by Vircow counts about 130 houses at the end of the fourteenth century. Another historian reaches a figure of 900 houses at the same period for the whole of Christendom, but he does not call it complete. The central authority, residing at Rome, was vested in a master-general, later called commander, a general chapter held each year at Ponto-cost, and the visitors delegated by the chapter.

An outburst of generosity responded to this display of Christian mercy; donations of every sort, in lands and revenues, poured in, which enriched the order and gave rise to a temporal administration modelled on that of the military orders. Thus their possessions were grouped into commanderies, which were soon invaded by laymen (many of them married), and thus arose the so-called "Militia of the Holy Ghost". Though the rights assumed by these new establishments were few, the commanderies on condition of furnishing to the order an annual contribution analogous to the responsibilities of the military orders. This was an abuse to which Pius II put an end by appropriating these prebends of the Holy Ghost to a new order founded by him in 1459 under the name of Our Lady of Bethlehem. In 1476 Pope Sixtus IV decreed further that the commanderies should be given only to religious. As to the magisterial commandery at Rome, it was nearly always reserved for a prelate of the Roman Court. Under Guy de Montpeller and his early successors the power of Montpellier remained under the obedience of a common master general. When, later, two separate masters came to be appointed, it was decreed that the arch-hospital of Rome should collect the revenues of Italy, Sicily, England, and Hungary, and that the hospital of Montpellier should have jurisdiction over the houses of France and the other countries of Christendom.

Subsequent to this division of the order, confirmed in 1619 by Pope Paul V, Oliver of Terrada, invested with the dignity of general of the order in France, abused it to renew the Militia of the Holy Ghost. He proceeded to distribute brevets of knighthood to men of all classes, to laymen, often married, which gave rise to protests on the part of the religious of the order. Louis XIV first abolished this knighthood by an edict of 1672, which gave the goods of the Order of the Holy Ghost to the Order of Notre Dame de Mont-Carmel, founded to procure pensions for gentlemen who had served in his armies. The Knights of the Holy Ghost opposed the execution of this edict, the withdrawal of all the charitable works they had secured, in 1712, by means of a compromise according to which they pledged themselves to recruit and equip a regiment for the service of the king. However, the religious of the Order of the Holy Ghost opposed this edict in their turn, and in 1700, after lengthy proceedings, they finally secured victory at an edict which declared that the Order of the Holy Ghost was purely regular and in no way military. The buildings of the Arcispedale di Santo Spirito of Rome, which dated from the days of Sixtus IV (1471-84) are being reconstructed; they included a central hall, capable of containing 1000 beds, and decorated with frescoes, and special wards for contagious and for dangerous insane cases. A cloister was reserved for the physicians, surgeons, and infirmarians, who numbered more than a hundred. The church and the commander's palace date from the time of Paul III (1534-49).

The annual revenue was estimated at 90,000 livres annual. The government of the pope of the Arcispedale was a Catholic institution, that is to say a universal institution open to all Catholics, irrespective of country, fortune, or condition. To-day (1999) it is merely a municipal institution, reserved for the inhabitants of Rome.

A distinction must be drawn between this order and the Royal Order of the Holy Spirit founded in France by King Henry III, in 1578, to supersede the Order of St. Michael of Louis XI, which had fallen into discredit, and to commemorate his accession to the throne on Pentecost Sunday. This was a purely secular order of the court.

CH. MOELLER.

Holy Ghost, Religious Congregations of the—1. The Congregation of the Holy Ghost and of the Immaculate Heart of Mary was founded on Whit Sunday, 1703, for the purpose of preparing missionaries for the most abandoned souls, whether in Christian or pagan countries. Its founder was a Jesuit, Father Poulart des Places, who, three years previously, in the twenty-first year of his age, had given up the bright prospects of a parliamen- tary lawyer to embrace the ecclesiastical state. From the very beginning of his ecclesiastical studies he manifested a particular attraction for lowly and neglected works of charity. He became especially interested in poor, deserving students, on whom he freely spent all his own private means and as much as he could collect from his friends. It was with a dozen of these gathered round him that he opened the Seminary of Notre Dame de Bétharram, which of his adherents was organized into a religious society. The work grew rapidly; but the labours and anxieties connected with the foundation proved too much for the frail health of the founder. He died on 2 October, 1700, in the thirty-first year of his age, and in only the third of his priesthood. The portraits which remain of Father Poulart des Places depict a distinguished and intelligent countenance, combining energy with sweetness.

After the founder's death, the Congregation of the Holy Ghost continued to progress; it became fully organized, and received the approbation of the civil and ecclesiastical authorities. It sent missionaries to the French colonies, and to India and China, but suffered much from the French Revolution, and, when that scourge had passed away, only one member, Father Berout, remained. He had survived miracu-
viously, as it were, all manner of vicissitudes—shipwreck on the way to his destined mission in French Guiana, entry into the Moors, a voyage in Senegambia, and, finally, he had been sold to the English, who then ruled there. On his return to France, after peace was restored to the Church, he re-established the congregation, and continued its work. But it was found impossible to recover adequately from the disastrous effects of the dispersion caused by the Revolution, and the restored society was threatened with extinction. It was at this juncture that there came to its relief Father Libermann, and his fellow-missionaries of the Society of the Immaculate Heart of Mary, which he had founded in 1842. Since the object of both societies was the same, the Holy See requested the Fathers of the Congregation of the Holy Ghost to engraft on it the older Congregation of the Holy Ghost. This was done in 1848. Ven. Francis Mary Libermann was made first superior general of the united societies, and the whole body became so impregnated with his spirit and that of his first followers that he is rightly regarded as the chief father and founder of the Congregation of the Holy Ghost and of the Immaculate Heart of Mary, such as it exists to-day.

The first care of the new superior general was to organize on a solid basis the religious service of the old French colonies, by securing the establishment of bishoprics, the formation of the necessary clergy through the Seminary of the Holy Ghost, which was continued on the lines of its original purpose—to serve as a colonial seminary for the French colonies. But the new superior general set himself to cultivate still wider fields of missionary enterprise. There had already been opened to him the vast domain of Africa, which he was, practically, the first to enter, and which was to be henceforth the chief field of labour of his disciples. It is a fact to be noted that the taking-up of the African missions by Ven. Francis Mary Libermann was due to the initiative of two American prelates, under the encouragement of the first Council of Baltimore, already, in 1833, Dr. England, Bishop of Charleston, had drawn the attention of the Propaganda to the activity of heretics on the West Coast of Africa, and had urged the sending of missionaries to those enlightened regions. This appeal was renewed at the Council of Baltimore, and the Fathers there associated themselves with the plan. Ven. Dr. Barron, who was then Vicar-General of Philadelphia, undertook the work at Cape Palmas. That zealous priest went over the ground carefully for a few years, and then repaired to Rome to give an account of the work, and to receive further instructions. He was consecrated bishop of the new-founded Venetian apostolic vicariate in Guinea. But, as he had only one priest and a catechist at his disposal, he repaired to France to search for missionaries. Ven. Francis Mary Libermann supplied him at once with seven priests and three coadjutor brothers. The deadly climate played havoc with the inexperienced seal of the first missionaries. All but one perished in the course of a few months, and Dr. Barron returned in despair to America, where he devoted himself to missionary work. He died from the effects of his zeal during the yellow-fever epidemic in Savannah, in 1853, in the fifty-third year of his age. Father Libermann and his disciples retained the African mission; new missionaries volunteered to go out and take the places of those who had perished; and gradually there began to be built up the series of Christian communities in darkest Africa which form the distinctive work of the Congregation of the Holy Ghost. It has proved a work of continued sacrifices. Neither Libermann nor any missionary left the field of labor in Africa during the past sixty years. Still, the spiritual results have compensated for it all. Where there was not a single Christian among the thirty millions of people who inhabit the districts confined to the Holy Ghost Fathers, there are to-day some hundred thou-

sand solid, well-instructed Catholics. These Christians are spread over the Diocese of Angola and the eight provinces of Senegambia, Sierra Leone, Gambia, Upper Senegal and Upper Congo (or French Lower Congo), on the West Coast; and Northern Madagascar, Zanzibar, Bagamoyo, on the East Coast. There are, moreover, the Prefectures of Lower Nigeria, French Guinea, Lower Congo (Landa), and missions at Bata, in Spanish West Africa, and at Pemba, in the Congo Inland.

Besides the missions in Africa, the Congregation of the Holy Ghost has missions in Mauritius, Réunion, the Rodriguez Islands, Trinidad, Martinique, Guadeloupe, Haiti, and Amazonia. Moreover, the congregation conducts some very important educational institutions, such as the French seminary, the colonial seminary at Paris, the colleges of Blackrock, Rockwell, and Rathmines in Ireland, St. Mary’s College in Trinidad, the Holy Ghost College of Pittsburg, Pennsylvania, and the three colleges of Braga, Oporto, and Lisbon in Portugal. The congregation is organized into the following provinces: France, Ireland, Portugal, United States, and Germany. These several provinces, as well as all the foreign missions, are under the central control of a superior general, who resides in Paris, and who is aided by two assistants and four consultors—all chosen by the general council. The congregation is also subject to the jurisdiction of the Cardinal Prefect of the Propaganda. Recently, houses have been opened in England, Canada, Belgium, and Holland, and it is hoped that they will develop into distinct provinces at no distant date, so as to supply the colonies of these respective countries with an increase of missionaries. The province of the United States was founded in the year 1873. It comprises to-day 74 professed fathers, 19 professed scholastics, 30 professed coadjutor brothers. It is equipped with a novitiate and senior scholasticate, at Ferndale, in the Diocese of Hartford, an apostolic college at Cornwells, near Philadelphia. The main object of these institutions is to train missionaries for the most abandoned souls, especially for the coloured people. The province has already established two missions for the coloured race, one in Philadelphia, the other at Rock Castle, near Richmond. Others will be established as quickly as the finances will allow. At the end of the year 1908, various nationalities have been established in the following dioceses, at the urgent request of the respective bishops: Little Rock, Pittsburg, Detroit, Grand Rapids, La Crosse, Philadelphia, Providence, and Harrisburg. In all there are twenty-three houses. The latest statistical report of the Congregation of the Holy Ghost, published in April, 1908, give 195 communities, 722 fathers, 210 professed scholastics, 655 professed brothers, 230 novices, 595 aspirants. About half the professed members are engaged in the African missions. The congregation is slowly but steadily forming a native clergy and sisterhood in Africa. A dozen native priests and about one hundred negro sisters are at present working in the several missions.

II. CONGREGATION OF THE DAUGHTERS OF THE HOLY GHOST.—This congregation was founded in Brittany, in the year 1706, by two pious ladies, Renée Burel and Marie Balavenne, under the direction of a zealouos missionary, Father Leudiger. Its principal object is the education of children; but it also undertakes all kinds of charitable work. The congregation developed rapidly, and the “White Sisters”, as its members were called, from the colour of their habit, became very numerous all over the north-west of France. It suffered the fate of all religious societies at the Revolution; but it quickly recovered, and increased a hundredfold during the course of the nineteenth century. The iniquitous French anti-congregation legislation of 1902 has caused the congregation to disperse. While still in possession at its mother-
house at Saint-Brieuc, in Brittany, and in several other of its houses in France, in the face of bitter persecution, several hundreds of the Sisters of the Holy Ghost have gone to England, Belgium, and the United States. The late Bishop Tierney invited them to his Diocese of Hartford in 1892, and there they have already spread to Springfield, Providence, Fall River, Burlington, and Ogdensburg. There are 22 houses at present in these several dioceses, and over 200 sisters. The provincial house is at Hartford.

III. SISTERS OF THE HOLY GHOST (Dubuque).—This congregation was founded in 1896, by the late Most Rev. John Henneguy, Archbishop of Dubuque. Its object is twofold, the cultivation of devotion to God the Holy Ghost, and the education of youth. The mother-house is in St. Anthony's parish, West Dubuque, Iowa.

IV. SISTER-SERVANTS OF THE HOLY GHOST.—This congregation was founded at Steyl, Holland, in 1889, by the late Very Rev. Father Janssen, as auxiliary to his other foundation, the Society of the Divine Word. It was introduced into the United States in 1901, and has a convent at Techyn, Illinois, and a school for negro children at Vicksburg, Mississippi, and a hospital in the Holy Cross at Cincinnati (for colored people).—This congregation was first established in 1886 at San Antonio, Texas. So far, it has only two houses, one at San Antonio, and the other at Victoria, Texas.

John T. Murphy.

Holy Humility of Mary, Institute of Sisters of the, founded at Dommartin-sous-Amance, France, in 1855, by John Joseph Begel (b. 5 April, 1817; d. 23 Jan., 1884), pastor of the two villages of Laitre and Dommartin. In 1854 three pious women, Mlle Potier, the foundress, known in religion as Mother Mary Magdalen, Mother Mary Magdalen, and Mother Mary Anna, and Mary Joseph, having offered their services for the work of teaching poor children, Father Begel conceived the idea of establishing a religious community. The following year he drew up a rule which was adopted by the sisters and approved by the Bishop of Nancy, 29 Aug., 1855. The object of the new congregation was the education of youth in country districts and small towns, the training of orphans, the care of the sick, and incidentally the decoration of altars in parish churches. The association increased in numbers. Soon, however, Father Begel's open condemnation of the policy of Napoleon III, the Church and nationally towards religious orders, brought him into disfavour with the civil authorities, and the sisters of the community were refused diplomas and prevented from opening schools.

In 1863 Father Louis Hoffer of Louisville, Ohio, U. S. A., applied for four sisters to teach in his school. Bishop Rapp of Cleveland not only gave his approval, but invited the whole community to settle in his diocese. The sisters, accompanied by Father Begel, set sail 30 May, 1864, and on their arrival took possession of a farm of 250 acres near New Bedford, Pennsylvania, which had just been vacated by the Sisters of Charity of St. Augustine, and to which they gave the name of Villa Maria. In 1867 the land was uncultivated, undrained, overgrown with brush, and dotted with soughs, the buildings being surrounded by a marsh. Moreover, the community was destitute of resources and burdened with debt. Notwithstanding this the sisters immediately undertook the care of orphans and the work to which they had pledged themselves, and were soon able to enlarge the buildings. In 1892 a new hospital was built, and shortly afterwards a chapel. The year 1884 was marked by the death of Father Begel, the venerable founder. In 1899 ground was purchased at Cleveland, Ohio, for an academy, which was chartered a few years later under the title of Our Lady of Lourdes, and empowered to confer degrees. In 1897 it was removed to a more suitable location. Owing to the remoteness of Villa Maria from railroad facilities, a tract of sixty-three acres between Canton and Massillon, Ohio, was purchased in 1904 for the purpose of erecting a new mother-house, to be known as Mount Maria, and a college, which was opened in 1908 under the title of College of the Immaculate Conception.

The sisters wear a blue woolen habit, for headress a gimp and bandage, a black veil being worn by the professed, and a white one by novices. A silver medal is suspended from the neck on a blue band, and a rosary from the girdle. The novitiate lasts from two to a half to three years, and perpetual vows are made at the end of nine years. The superior, her two assistants, and four consultors are elected triennially.

The congregation numbers (1900) about 200 members, including postulants and novices, in charge of 15 parochial schools attended by 6400 children, 2 academies, and an orphan asylum at Villa Maria.

Holy Infancy, Brothers of the, founded in 1853 by the Right Rev. John Timon, the first Bishop of Buffalo. The special aim of this congregation is the sanctification of its members and the care of destitute and wayward boys. Bishop Timon, upon taking possession of his see, gave his first care to the orphans and neglected of his flock. He purchased a tract of land in West Seneca, now the city of Lockawanna, and established St. Joseph's Male Orphan Asylum and, a little later, St. John's Protectory for wayward and destitute boys. Rev. Thomas Rice was appointed superintendent. These institutions struggled on under a heavy debt until 1882, when the Right Rev. Nelson Bishop, V. G., LL.D., was put in charge. Monsignor Baker was at one time the work under the patronage of Our Blessed Lady of Victory and founded the Society of Our Lady of Victory to care for destitute Catholic children. From this time the work prospered. At present (1909), under the general title of Our Lady of Victory Home, the following buildings are grouped: St. John's Protectory, with 700 boys; St. Joseph's Orphan Asylum, with 250 boys; Working Boys' Home, with 75 boys; Our Lady of Victory Infant Asylum, caring for about 150. The brothers give special attention to the trade school of the protectory, printing, press-feeding, bookbinding, baking, shoe-making, tailor of toys, monument work, gas-fitting, and other trades are taught with excellent results. The brothers at present number twenty-three. Young men are received from the age of sixteen to thirty-five. After a probation of six months the candidate receives the habit. Two years are passed in the novitiate, after which the novices take the vows of poverty, chastity, and obedience. The brothers maintain a juniorate in which boys are received from twelve to fifteen years of age and trained to the work carried on by the community. They are governed by the bishop, who appoints a priest to superintend the institution and act as superior. Next in authority are the brother superior and his assistants, who are elected every three years.

Brother Stanislaus.
Holy Innocents, the children mentioned in St. Matthew, ii. 16-18: "Herod perceiving that he was deceived by the wise men, was exceeding angry; and sending forth all his soldiers and his抄ngs he killed all the children in Bethlehem, and in all the borders thereof, from two years old and under, according to the time which he had diligently inquired of the wise men. Then was fulfilled that which was spoken by Jeremiah the prophet, saying: A voice in Rama was heard, lamentation and great mourning, Rachel bewailing her children, and would not be comforted, because they are not." The Greek liturgy asserts that Herod killed 14,000 boys (covering the name 14,000), the Syrians speak of 64,000, many medieval authors of 14,000, according to Apor., xiv. 3. Modern writers reduce the number considerably, since Bethlehem was a rather small town, https://en.wikipedia.org/wiki/Holy_Innocents. Kellner to about six (Christus und seine Apostel, Freiburg, 1908); cf. "Anzeiger kath. Geistlichenk. Deutsche," 15 Febr., 1899, p. 32. This cruel deed of Herod is not mentioned by the Jewish historian Philo of Alexandria, although he relates the number of atrocities committed by the king during the last years of his reign. The number of these children was so small that this crime appeared insignificant amongst the other misdeeds of Herod. Macrobius (Saturn., IV, xiv, de Augusto et jocis ejus) relates that when Augustus condemned the Jews to tributes for two years and under Herod's own son also had been massacred, he said: "It is better to be Herod's hog [65], than his son [jubes]." alluding to the Jewish law of not eating, and consequently not killing, swine. The Middle Ages gave faith to this story; Abelard inserted it in his hymn for the feast of Holy Innocents:

Ad mortuam regis datum generale
nee ipissim infans tutus est a cædē.
Ad Augustum hoc delatum risum movit,
et rex mitis de inmiti digne lusti:
malum, inept, est Herodis esse natum,
prodest magis tali regis esse porcum.

(Dreves, "Petri Abelardi Hymnarius Paracletensis,
Paris, 1891, pp. 224, 274.) But this "infant" mentioned by Macrobius, is Antipater, the adult son of Herod, who, by command of the dying king was decapitated for having conspired against the life of his father. It is impossible to determine the day or the year of the massacre of the Holy Innocents. The date of the birth of Christ and the subsequent Biblical events is most uncertain. All we know is that the infants were slaughtered within two years following the apparition of the star to the Wise Men (Belaer, in the Tübingen "Quartalschrift," 1890, p. 361). The Church venerates these children as martyrs. There are many legends about them: they are the first buds of the Church killed by the frost of persecution; they died not only for Christ, but in his stead. (St. Aug., "Sermo 10. de sanctis"). In connexion with them the Apostle recalls the words of the Prophet Jeremiah (xxxii., 15) speaking of the lamentation of Rachel. At Rama is the tomb of Rachel, representing the ancestors of the nation. There the remnants of the nation were gathered to be led into captivity. As Rachel, after the fall of Jerusalem, from her tomb wept for the sons of Ephraim, so she now weeps again for the men children of Bethlehem. The ruin of her people, led away to Babylon, is only a type of the ruin which menaces her children now, when the Messias is to be murdered and is compelled to flee from the midst of His own nation to escape from the sword of the apparatus. The lamentation of Rachel after the fall of Jerusalem receives its eminent completion at the sight of the downfall of her people, when she, as the daughter of her children and the banishment of the Messias.

The Latin Church instituted the feast of the Holy Innocents at a date now unknown, not before the end of the fourth and not later than the end of the fifth century. It is, with the feasts of St. Stephen and St. John, first found in the Leonine Sacramentary, dating from about 485. To the Philocalian Calendar for 354 it is unknown. In the Liturgy of the Greeks on 29 December, the Syrians and Chaldeans on 27 December. These dates have nothing to do with the chronological order of the event; the feast is kept within the octave of Christmas because the Holy Innocents gave their life for the new-born Child, and the first martyr (29 December) will, love, and blood, John, the Disciple of Love (martyr by will and love), and these first flowers of the Church (martyrs by blood alone) accompany the Holy Child Jesus entering this world on Christmas day. Only the Church of Rome applies the word Innocentes to these children; in other Latin countries they are simply Infantes and the title "Allosio infantum," (Brev. Goth.) "Natale infantum," or "Necatio infantum." The Armenians keep it on Monday after the Second Sunday after Pentecost (Armen. Menology, 11 May), because they believe the Holy Innocents were killed fifteen weeks after the birth of Christ. In the Roman Breviary the feast was only a semi-double (in other breviaries a minor double) up to the time of Pius V, who, in his new Breviary (1568), raised it to a double of the second class with an octave (G. Schober, "Exs. pur. brev. rom.," 1891, p. 38). He also suppressed the old office of "Sabato di Innocenti," "Sabbato di Innocenti," and "Audit tyrannus anxius," which are fragments of the Epiphany hymn of Prudentius. Before Pius V the Church of Rome sang the Christmas hymns on the feast of the Holy Innocents. The proper preface of the Galician Sacramentary for this feast is still found in the Ambrosian Missal. We possess a lengthy hymn in honour of the Holy Innocents from the pen of the Venantius Fesse, "Hymnus canentes martyrum" (Dreves, "Analecta hymnica") and a sequence composed by Notker, "Laus tibi Christe," but most Churches at Mass use the "Celsa puere concræptam melodie" (Kehrein, "Sequenzen," 1873, p. 345). At Bethlehem the feast is a Holy Day of obligation. The liturgical colour of the Roman Church is purple, not red, because these children were martyred at a time when they could not attain the beatific vision. But of compassion, as it were, towards the weeping mothers of Bethlehem, the Church omits at Mass both the Gloria and Alleluia; in the East, however, it substitutes the eternal Alleluia of France and Germany. On the octave day, and also when the feast falls on a Sunday, the Roman Liturgy, prescribes the red colour, the Gloria, and the Alleluia. In England the feast was called "Childermas.

The Roman Station of 28 December is at St. Paul's Outside the Walls, because that church is believed to possess the bodies of several of the Holy Innocents. A portion of these relics was transferred by Sixtus V to Santa Maria Maggiore (feast on 5 May; it is a semi-double). The church of St. Justina at Padua, the cathedrals of Lisbon and Milan, and other churches also preserve bones which they claim to be those of some of the Holy Innocents. Churches in England, Germany, and France on the feast of St. Nicholas (6 December) a boy-bishop (q. v.) was elected, who officiated on the feast of St. Nicholas and of the Holy Innocents. He wore a mitre and other pontifical insignia, sang the collect, preached, and gave the blessing. He sat in the bishop's chair whilst the choir-boys sang in the stalls of the canons. They directed the choir on these two days and had their solemn procession (Schmidt, "Thesaurus juris ecc.", III. 67 sqq.; Kirchenlex., IV, 1400; P. L. CXLVII, 135).

FREDERICK G. HOLWECK.
**Holy Name, Feast of the**, is celebrated on the second Sunday after Epiphany (double of the second class). It is the central feast of all the mysteries of Christ the Redeemer; it unites all the other feasts of the Lord, as a burning glass focuses the rays of the sun. The feast shows what Jesus is to us, what he has done, is doing, and will do for mankind. It originated towards the end of the fifteenth century, and was instituted by the private authority of some bishops in Germany, Scotland, England, Spain, and Belgium. The Office and the Mass composed by Bernardine dei Buschi (d. 1506) were approved by Sixtus IV. The feast was officially granted to the Franciscans 25 February, 1530, and spread over a great part of the Church. The Franciscans, Carmelites, and Augustinians kept it on 14 Jan.; the Dominicans 15 Jan. At Salisbury, York, and Durham in England, and at Aberdeen in Scotland it was celebrated 7 Aug., at Liège, 31 Jan., at Compostela and Cambrai, 8 Jan. (Grot. ed., "Zeitrevision", II, 2, 89). The Carthusians obtained it for the second Sunday after Epiphany about 1643; for that Sunday it was also extended to Spain, and later, 20 Dec., 1721, to the Universal Church. The Office used at present is nearly identical. The Office of Bernardine dei Buschi is contained in the hymns "Jesu dulcis memoria", "Jesu Rex admirabilis", "Jesu desce angelicum", usually ascribed to St. Bernard, are fragments of a very extensive "jubilus" or "cursus de eterna sapientia" of some unknown author in the thirteenth century. For the beautiful sequence "Dulcis Jesu Nazarenus" (Morel, "Hymnen des Mittelalters", 67) of Bernardine dei Buschi the Franciscans substituted a prose sequence of modern origin: "Lauda Sion Salvatoris"; they still celebrate the feast on 14 Jan.

**Frederick G. Holweck.**

**Holy Name, Society of the (Confraternity of the Most Holy Name of God and Jesus), an indissoluble confraternity in the Catholic Church.** The primary object of the society is to beget due love and reverence for the Holy Name of God and Jesus Christ. The secondary object is to suppress blasphemy, perjury, oaths of any character that are forbidden, profanity, unlawful swearing, improper language, and, in general, all oaths, and oaths that others (Pius IV, 13 April, 1564). It had its origin in the Council of Lyons, 1274, which prescribed that the faithful should have a special devotion to the Holy Name of Jesus, that reparation might be made for insults offered to it by Albigenenses and other blasphemers. The Friars Preachers, when preaching everywhere, even where with the seal of St. Dominic; it was natural, then, that Gregory X selected the Dominicans to preach the devotion, which he did by a letter to Blessed John of Vercelli, master general of the order, 20 September, 1274 (Constit. "Nuper in"). The master general immediately wrote to all the provosts of the order, expressing the pope's wish, and enjoining upon all the duty of labouring for its fulfilment (Litterae Encyclicae Mag. Gen. Ord. Præd., Reichert, 1900). The brethren gave their best energies in executing the command, preaching everywhere the power and glory of the Holy Name of Jesus; and, to give more munificence to the devotion excited in the hearts of the people, it was ordained that in every Dominican church an altar of the Holy Name should be erected, and that societies or confraternities under the title and invocation of the Holy Name of Jesus should be established. St. Peter, Martyr (d. 1252); John of Vercelli, posthumous of St. Dominick; Blessed Ambrose of Siena (d. 1286) are said to have given great propagators of the devotion. In the fourteenth cen-

**tury Blessed Henry Suso (d. 1385) is the most notable apostle of devotion to the Holy Name.

The history of the society in the fourteenth and the fifteenth centuries is somewhat obscure, but that it continued to exist is certain from papal Bulls addressed to the Dominicans, not only in the fourteenth, but in the fifteenth century. In 1424, and 1425, the Dominicans were induced to those visiting the altar of the confraternity in the Dominican monastery at Schussen, Diocese of Werden, Saxony. In 1432 at Lisbon the devotion preached by a retired Dominican bishop, Andrea Delfino, was adopted by Sixtus IV, as a means of putting an end to the ravages of a plague which was then afflicting that city. In gratitude for their deliverance, the people of all classes in Lisbon held, on 1 Jan., 1433, what was probably the first procession in honour of the Holy Name of Jesus. At this period St. Bernardine of Siena, an Italian Franciscan, gained great renown as a promoter of the devotion in Italy. In the sixteenth century Emperor Charles V and King Philip II, moved by the prevalence of blasphemy and sacrilege, exhorted and encouraged the Dominicans to spread the devotion and to establish the society throughout their dominions. Among the preachers engaged in this apostolate, the most celebrated were Leonardo det Buschi, and Domenico della Cintia, of Victoria (d. 1450), who may be properly called the great preachers of the devotion of the Holy Name of God. He founded a confraternity known as the Society of the Holy Name of God, of which the special object was to suppress the horrid profanation of the Divine Name by blasphemers, perjurers, and, in general, in their ordinary conversation, and to this end he drew up a rule and constitution for its government.

His confraternity was approved by Pope Pius IV 13 April, 1564, who richly endowed it with indulgences, commanded all ecclesiastical authorities to favour it with all their power, and, in a special letter, recommended it to the laity (Bullarium Ord. Praed., 1900, 1. v). Later, this confraternity was merged into the Society of the Holy Name of Jesus. Thereafter the society was called by both titles. It also bore the title of "Confraternity against Oaths". Following the example of Pius IV, the popes of the sixteenth and seventeenth centuries, notably Innocent XI, made the society an object of special solicitude, encouraging its promotion, granting indulgences, and regulating its organization. St. Pius V, in the Motu Proprio "Deet Romanum", 21 June, 1571, absolutely restricted the canonical erection of the society to the Dominicans, Tyrrenians and Brethren Minor, and the Prelates by special briefs, the Dominicans are required for the canonical establishment of the society (for the United States these letters are issued through the bureau of the Holy Name Society, New York). In missionary countries special provision is made for the establishment of the society.

The acts of the general chapters of the order hold since 1571 contain numerous regulations and admonitions insisting upon zeal in propagating the confraternity. Great encouragement to the development of the society was given at the close of the nineteenth century, 1895, by Pope Leo Xlll, who decreed through the Congregation of Indulgences, 20 May, 1896, that the bishops may dispense from the Clementine decree "Quaecumque", requiring that there should be only one confraternity in a town or city. Before this the society had existed in many churches of various cities and bishoprics in the United States; and, to give greater sanctity to the society, the men of the society in the United States (they number about 500,000) are able to accomplish great good by public yearly processions of many thousands profess-
defended his master so successfully that the pope not only permitted the worship of the Holy Name, but also assisted at a procession in which the holy monogram was carried. The tablet used by St. Bernardine is preserved at Siena, and the cross now used is said to be the one which St. Bernardine used when he preached at Siena.

The emblem or monogram representing the Holy Name of Jesus consists of the three letters: IHS. In the Middle Ages the Name of Jesus was written: IESVS; the monogram contains the first and the last letter of the Holy Name. It is first found on a gold and silver altar of the eighteenth century. Constantine the Great (The Lord Jesus Christ, King of Kings). Some erroneously say that the three letters are the initials of: “Jesus Hominum Salvator” (Jesus Saviour of Men). The Jesuits made this monogram the emblem of their Society, adding a cross over the H and three nails under it. Consequently a new explanation of the emblem was invented, pretending that the nails originally were a “V”, and that the monogram stands for “In Hoc Signo Vinces” (In this Sign you shall Conquer), the words which, according to a legendary account, Constantine saw in the heavens at the Sign of the Cross before the battle at the Milvian bridge (312).

Urban IV and John XXII are said to have granted an indulgence of thirty days to those who would add the name of Jesus to the Hail Mary or would bend their knees, or at least bow their heads when hearing the Name of Jesus (Alanus of Peul, Christ, et Marius, 1337; and iv, 25, 33; Migne, Pat. Lat., LXXI, p. 96; Guichet, v. Colvenverius, “De festo SS. Nominis,” x). This statement may be true; yet it was only by the efforts of St. Bernardine that the custom of adding the Name of Jesus to the Ave Maria was spread in Italy, and from there to the Universal Church. But up to the sixteenth century it was still unknown in Belgium (Colven, op. cit., x), whilst in Bavaria and Austria the faithful still affix to the Ave Maria the words: “Jesus Christus” (ventris tui, Jesus Christus). Sixtus V (2 July, 1587) granted an indulgence of fifty days to the ejaculation: “Praise be to Jesus Christ!” with the answer: “For evermore”, or “Amen.” In the South of Germany the peasants salute each other with this pious formula. Sixtus V and Benedict XIV granted an indulgence of fifty days to all as often as they pronounce the Name of Jesus reverently, and a plenary indulgence in the hour of death. These two indulgences were suppressed by Benedict XIV, 1749, 4. As often as we invoke the Name of Jesus and Mary (“Jesu!”, “Maria!”) we may gain an indulgence of 300 days, by decree of Pius X, 10 Oct., 1904. It is also necessary, to gain the plenary indulgence in the hour of death, to pronounce at least in mind the Name of Jesus.

FREDERICK G. HOLWECK.

Holy Office. See INQUISITION: ROMAN CONGREGATIONS.

Holy Oils (OLEA SACRA).—Liturgical Benediction.

Oil is a product of great utility the symbolic signification of which harmonizes with its natural uses. It serves to sweeten, to strengthen, to render supple; and the Church employs it for these purposes in its rites. The liturgical blessing of oil is very ancient. It is met with in the fourth century in the "Prayer Book of Serapion", and in the Apostolic Constitutions, also in a Syriac document of the fifth or sixth century entitled "Testamentum Domini Nostrj Jesu Christi". The aforesaid book of Bishop Serapion (d. c. 362) contains the formula for the blessing of the oil and chiasm for those who had just received baptism, which was subsequently followed at the consecration in such a manner that the administration of both sacraments constituted a single ceremony. In the same book is found a separate form of blessing for the oil of the sick, for water, and for bread. It is
an invocation to Christ to give His creatures power to cure the sick, to purify the soul, to drive away impure spirits, and to wipe out sins. In the Old Testament oil was used for the consecration of priests and kings, also in all great liturgical functions, e.g., sacrifices, legal purifications, and the consecration of altars (Exod., xxx, 23, 33; xxxix, 27, 29; xli, 9, 15; Levit., vi, 15 sq.).

In the primitive Church the oils to be used in the initiation of catechumens were consecrated on Holy Thursday in the Missa Chriamalis. Two different ampullae were used, one containing pure oil, the other oil mixed with balsam. This mixture was made by the pope himself before the Mass, in the sacristy. During the two ceremonies of this saintly pontiff before the altar holding the ampullae. Towards the end of the Canon the faithful offered for benediction small ampullae of oil; these contained oil of the sick which the faithful were allowed to make use of themselves (Tertull., "Ad Scap.", iv), but the same oil also served for extreme unction. The vessels held it were placed on the railing surrounding the space reserved for the clergy. The deacons brought some of these vessels to the altar to receive that blessing of the pope which we read to-day in the Gelasian and Gregorian Sacramentaries. The pope continued the Mass while the deacons returned the ampullae to the place where they had been. Then the number of bishops and priests repeated over those which had not been brought to the altar the formula pronounced by the pope. The consecration of the large ampulla took place immediately after the Communion of the pope, before the Communion of the clergy and the faithful. The deacons covered the chalice and paten, while the subdeacons carried the ampulla to the archdeacon and one of his assistants. The archdeacon presented the pope the ampulla of perfumed oil, the pontiff breathed on it three times, made the sign of the cross, and recited a prayer which bears a certain resemblance to the Preface of the Mass. The ampulla of pure oil was next presented to the pope, and was consecrated with less solemnity. The consecration and benediction of the holy oils now take place on Holy Thursday at a very solemn ceremony reserved for the bishop. He blesses the oils to serve at the anointing of the catechumens previous to baptism, next the oil with which the sick are anointed in the Sacrament of Extreme Unction, finally the chrisma, which is a mixture of oil and balsam, and which is used in the administration of the Sacrament of Confirmation.

Oil of the Sick.—The use of oil in Christian antiquity, as it has been maintained, is supported by the Church. In Apostolic times St. James directed the priests or ancients of the community to pray for the sick man and to anoint him with oil in the name of Jesus (James, v, 14). And shortly afterwards, probably in the second century, a gold leaf found at Beyrouth, in Syria, contains an exorcism pronounced in the dwelling of whom I anointed. This is, after the text of St. James, the earliest evidence of the use of oil accompanied by a formula in the administration of a sacrament (see Théophilus of Antioch, d. 181), "Ad Autolyceum," I, xlix, in P. G., VI, 1042). The oil of the sick might be blessed not only by priests, but also by laymen of high repute for virtue, and even by women. In the sixth century St. Monegundo on his death-bed blessed oil and salt which were afterwards used for the sick ("Vita S. Monegundi"). In a "Acta SS. Ord. S. Benedicti," I, 204; Gregory of Tours, "Vita Patr., xi, 4.") A similar instance is met with in the life of St. Radegund (Vita Radeg., I, xxxv). In the West, however, the tendency was early manifested to confine the blessing of the oil of the sick to bishops only; about 730 St. Boniface ordered all priests to have recourse to the bishop (Statut., xix). In 744 the tendency was not so pronounced in France, but the Council of Cléons (513) imposed on priests the obligation of anointing the sick with oil blessed by the bishop (can. xlviii). In the East the priests retained the right to consecrate the oil. The custom even became established, and has lasted to the present time, of having the oil blessed in the house of the sick person, or in the church, by a priest, or, if possible, by several priests.

Oil of Catechumen.—During the time of the catechumenate those who were about to become Christians received one or more anointings with holy oil. The oil used on this occasion was that which had received the blessing mentioned in the Apostolic Constitutions (V, xxvii, xlii). This anointing is more particularly explained by the fact that they were regarded to a certain extent as being possessed by the devil until Christ should enter into them through baptism. The oil of catechumens is also used in the ordinance of priests and the coronation of kings and queens.

Oil of Chrism.—This is used in the West immediately after baptism; both in the East and West it was used very early for the Sacrament of Confirmation (see Chrism).

Oil in the Agnus Dei. —The "Ordo Romanus" (c. 730) shows that in Rome, on Holy Thursday, the archdeacon went very early to St. John Lateran, where he mixed with oil and oil blessed by the number of bishops and priests repeated over those which had not been brought to the altar the formula pronounced by the pope. The consecration of the large ampulla took place immediately after the Communion of the pope, before the Communion of the clergy and the faithful. The deacons covered the chalice and paten, while the subdeacons carried the ampulla to the archdeacon and one of his assistants. The archdeacon presented the pope the ampulla of perfumed oil, the pontiff breathed on it three times, made the sign of the cross, and recited a prayer which bears a certain resemblance to the Preface of the Mass. The ampulla of pure oil was next presented to the pope, and was consecrated with less solemnity. The consecration and benediction of the holy oils now take place on Holy Thursday at a very solemn ceremony reserved for the bishop. He blesses the oils to serve at the anointing of the catechumens previous to baptism, next the oil with which the sick are anointed in the Sacrament of Extreme Unction, finally the chrisma, which is a mixture of oil and balsam, and which is used in the administration of the Sacrament of Confirmation.

Oil in the Font.—From the second century the custom was established of administering baptism with water specially blessed for this purpose. Nevertheless, the sacrament was valid if ordinary water was used. We are not well informed as to the nature of the consecration of this baptismal water, but it must be said that the most ancient indications and descriptions say nothing of the use of oil in this consecration. The first witness, Pseudo-Dionysius, does not go beyond the end of the sixth century; he tells us that the bishop pours oil on the stones of the fonts in the form of a cross (De hierarch. eccles., iv, x; cf. ii, vii). There is no doubt that this rite was introduced at a comparatively late period.

Oil in Church Lamps.—The maintenance of more or less numerous lamps in the churches was a source of expense which the faithful in their generosity hastened to meet by establishing a fund to purchase oil. The Council of Braga (572) decided that a third of the offerings made to the Church should be used for purchasing oil for the light. The quantity of oil thus consumed was greater when the lamp burned before a famous tomb or shrine, in which case it was daily distributed to pilgrims, who venerated it as a relic (Kraus, "Real-Encyk.", ii, 622). (See Lamps.)

Schmid in Kirchenlex., s. v. Oel, heilige; Beyer in Kurzbuch der heiligen Leichen. (Bonn, 1896), 1205; BARBAUD, Notice sur les huiles et les vases d'huile en Bulletin Monumental, VII (1871), 451-505; Revue de L'Art Chrétien, I (1884), 146-53.

H. LECLERCQ.

Holy Oils, Vessels for.—In Christian antiquity there existed an important category of vessels used as receptacles for holy oil. These were the ampullae or pitaciae, which varied greatly in material as well as
HOLYROOD PALACE AS REBUILT BY CHARLES II ABOUT 1670, WITH RUINS OF THE ABBEY CHURCH
CHURCH OF THE HOLY SEPULCHRE, JERUSALEM
shape, being of wood, metal, ivory, and even more frequently of earthenware. Sometimes the vessel was flat-shaped, resembling the rule, or again it took the form of a flagon. Those most numerous at present are the "ampullae of St. Menas". There was scarcely a place of pilgrimage that did not have its beneficinal or miraculous oil, which would be carried great distances to satisfy the pious or to relieve the sick. On this point there is abundant ancient testimony. To the oil or little flagon attributed a participation in the virtues of the saints with whom it had in some way been in contact. Hence, not alone the oil from lampad that had burned before their tombs but that also which was supposed to have issued from the tombs themselves or from the images of the saints was prized. The celebrated document on the subject is the "Index olerorum" or "List of the holy oils", sent to Queen Theodolinde by Gregory the Great. This list was accompanied by ampullae, a certain number of which have been preserved in the treasury of the Basilica of Monza.

Towards the close of the sixth century the custom of reserving the oil to the bishop the blessing of the holy oils on Holy Thursday had been established and gradually propagated, and the priests of each diocese were obliged to provide themselves with oil sufficient for their needs throughout the year. If, at the time of receiving the new oil, any of the old was 2:2:1 unused, it had to be discarded or thrown into the piscina of the church. Each church, therefore, had but a limited number of vessels destined to hold the oils. The councils of the ninth and succeeding centuries frequently warned the priests and bishops to take precautions against the stealing of the holy oils. Indeed, in those days malefactors entertained the superstitious belief that they would not be discovered if they would but rub their bodies with the holy oils. In order to prevent such desecration, the holy oils were kept in some secure place, either in a closet or in the sacristy.

The material of the vessels has varied greatly. In the fourth century St. Optatus of Mileve relates that the Donatist heretics desecrated and profaned a glass vessel filled with holy chism (Migne, P. L., vol. XI, col. 972). In the Middle Ages crystal, gold, silver, and less precious metals were used. A thirteenth-century rock crystal vase from the Abbey of Saint-Évroult (Orne), now in the Louvre, is in half-egg shape surmounted by a lid of silver gilt encrusted with coloured stones (de Caumont, "Abécédaire d'archi, religieuses", p. 567): an inventory of Old St. Paul's, London, mentions three silver ampulla containing oil and chism (Dugdale, "Monast. angliae", 1651, 310) and an inventory of the Laon cathedral, in 1563, mentions three large phial-shaped silver vessels used for keeping the holy chism, holy oil, and oil for the sick. In the interior of each receptacle was a long silver rod that served as a spoon. Inventories of Jumièges and Rouen, York and Lincoln speak of vessels of gold and of silver gilt in a small cabinet and furnished with spoons for the extraction of the liquid. These vases are designated as flagons, ampulla, estuy, phiala, and the cabinet containing them is known as the chriomalorum, chrismate, creameus, and cosermes. St. Charles Borromeo drew up minute instructions concerning the vessels for the holy oils. He declared that each individual church should have two, either of silver or pewter, for each kind of oil, each vessel bearing the name of the oil contained therein. Almost the same rules are observed to-day. The vessels are usually cylindrical in form and fitted with screw tops marked with the letters: S. C. (sanctum chrisma); O. S. (sanctum oilatum, oil of catechumens); O. I. (oleum infirmorum).

HOLY Roman Empire. See Germany.

Holyrood Abbey, Edinburgh, Scotland, founded in 1128 by King David I for the Canons Regular of St. Augustine, probably built from St. Andrews. The foundation is said to have been an act of thankgiving for the king's miraculous escape from the horns of a hart, whilst hunting near Edinburgh on Holy Thursday. In the church lay the relics of St. Margaret, the relics were placed in a reliquary, the fragment of the True Cross brought by David's mother, St. Margaret, from Waltham Abbey, and known thereafter as the Black Rood of Scotland. At the battle of Neville's Cross, in 1346, this precious relic fell into the hands of the English, and was placed in Durham Cathedral, whence it disappeared at the Reformation. The first Abbot of Holyrood was Alwyn, the king's confessor, who resigned the abbacy about 1150. A seal of his, dated 1141, and representing a cruciform church, is preserved among the Newbottle Charters. The twenty-ninth and last Catholic abbot was Robert, a natural son of James V, who was a Protestant, married and exchanged his abbacy with Adam, Bishop of Orkney, for the temporalities of that diocese. Adam resigned the abbacy in 1581 to his son John (afterwards created Lord Holyroodhouse), the last who bore the title of abbot. Among the chief benefactors of Holyrood during the four centuries of its existence as a religious house were Kings David I and II; Robert, Bishop of St. Andrews; and Fergus, Lord of Galloway. Twice during the fourteenth century the abbey suffered from the invasion of English kings: the army of Edward II plundered it in 1322, and it was burnt in 1335 by Richard II, but soon restored. King James I's two sons of whom the younger succeeded his father as James II, were born within the abbey in 1430, and Mary of Gueldres, queen of James II, was crowned in the abbey church in 1449. Twenty years later James III was married there to Margaret of Denmark. From the middle of the fifteenth century the abbey was the property of the Scottish kings, and James V spent considerable sums on its repair and enlargement. In 1547 the conventual buildings, as well as the choir, lady chapel, and transepts of the church were destroyed by the commissioners of the English Protector Somerset, and twenty years later Knox's "rascal multitude" set fire to the interior of the church. Queen Mary's second and third marriages took place at Holyrood, as well as other tragic events of her reign. From the Reformation to the Restoration little was done to Holyrood, but about 1670 the adjoining palace was practically rebuilt by Charles II. His Catholic successor, James II, ordered the nave of the church to be restored for Catholic worship, and as a chapel for the Knights of the Thistle; but he had to abandon his kingdom a year later. The nave roof was vaulted in stone in 1758, but fell in shortly afterwards, and all that remains of the once famous abbey church is now the ruined and roofless nave, of the purest Early English architecture, with some remains of the earlier Norman work.

D. O. HUNTER-BLAIR.
Holy Saturday.—In the primitive Church Holy Saturday was known as Great, or Grand, Saturday, Holy Saturday, the Angelic Night, the Vigil of Easter, etc. It is no longer, like Maundy Thursday, a day of joy, but one of joy and sadness intermingled; it is the close of the season of Lent and penance, and the beginning of the season celebrating the Resurrection, and although the moment assigned for breaking the fast at dawn on Sunday varied according to time and country, the abstinence from food on Holy Saturday was general. The night of the vigil of Easter has undergone a strange displacement. During the first six or seven centuries, ceremonies were in progress throughout the entire night, so that the Alleluia coincided with the day and moment of the Resurrection. In the eighth century these same ceremonies were held on Saturday afternoon and, by a singular anachronism, were later on conducted on Saturday morning, thus the time for carrying out the solemnity was advanced almost a whole day, and the special usages were now assigned to Holy Saturday whereas, beforehand, it had had none until the late hour of the vigil. This vigil opened with the blessing of the new fire, the lighting of lamps and candles and of the paschal candle, ceremonies that have lost much of their symbolism by being anticipated and advanced from twilight to broad daylight. St. Cyril of Jerusalem spoke of this night that was as bright as day, and Constantine the Great added unprecedented splendour to its brilliance by a profusion of lamps and enormous torches, so that not only basilicas, but private houses, streets and squares were illuminated with the light that was symbolic of the Risen Christ. The assembled faithful gave themselves up to common prayer, the singing of psalms and hymns, and the reading of the Scriptures commented by the bishop or priests. The vigil of Easter was especially devoted to the baptism of catechumens who, in the more important churches, were very numerous. On the Holy Saturday following the deposition of St. John Chrysostom from the See of Constantinople, there were 3000 catechumens in this church alone. Such numbers were, of course, only encountered in large cities; nevertheless, as Holy Saturday and the vigil of Pentecost were celebrated on a more solemn scale even in smaller churches there was always a goodly number of catechumens. This meeting of people in the darkness of the night often occasioned abuses which the clergy felt powerless to prevent by active supervision unless by so anticipating the ceremonies that all of them could take place in daylight. Rabanus Maurus, an ecclesiastical writer of the ninth century (De cleric. Instit., II, 28), gives a detailed account of the ceremony of Holy Saturday. The congregation remained silent in the church awaiting the dawn of the Resurrection, joining at intervals in the psalms and chant and listening to the reading of the lessons. These rites were identical with those in the primitive Church and were solemnized at the same hours, as the faithful throughout the world had not yet consented to anticipate the Easter vigil and it was only during the Middle Ages that uniformity on this point was established.

H. Leclercq.

Holy See (Lat. Sancta Sedes, Holy Chair), a term derived from the enthronement-ceremony of the bishops of Rome. The seat or chair in question must not be confused with the ancient sedes gastatoria in the centre of the apse of St. Peter's, and immemorially venerated as the cathedra Petri, or Chair of Peter; the term means, in a general sense, the actual seat (i.e. residence) of the supreme pastor of the Church, together with the various ecclesiastical authorities who constitute the central administration. In this canonical and diplomatic sense, the term is synonymous with "apostolic See", "Holy Apostolic See", "Roman Chair", "Roman See", etc. Rejoicing in the title of these, the popes could only be approximately ascertained. The word sedes, "chair", is an old technical term applicable to all episcopal sees. It was first used to designate the Churches founded by the Apostles; later the word was applied to the principal Christian Churches. These "sedes dicatae majoris" were the ancient patriarchal sees of Christian antiquity: Rome, Alexandria, Antioch, Jerusalem, and Constantinople. To these the word sedes was applied: "quod in iis episcopi sedenter in throne"); and of Rome it was expressly said: "Romana quidem est prima sedes propria dicta." Thus, Gelasius I (492-496) at a Roman council: "Est ergo prima Petri apostoli sedes." In the earliest Christian writings, also, we often find references to the see or chair of Peter: "Sedet in cathedra Petri." Throughout the early Middle Ages the term was constantly in official use. Thus, in the Liber Pontificalis (ed. Duchesne, II, Paris, 1892, 7), under Leo III (795-816), we read: "Apostole, sedes tuae Pretium est caput omnium Dei ecclesiaram, judicare non audemus." (We dare not judge the Apostolic See, which is the head of all the Churches of God.) We can thus readily understand how Holy See came to be the technical term for the pope, the central ecclesiastical government, and the actual abode of the same.

The papal reservations of benefices, customary in the Middle Ages, made necessary a more exact knowledge of the location of the "Holy See", e.g. when the incumbent of a benefice happened to die "spud sanctorum". The "sedes" was the pope's seat, not necessarily his residence. If the pope lived apart from the ordinary central administration, the Curia, the Curia, properly speaking, was at Viterbo, whither the pope frequented to transact affairs, and where he also gave audiences: "Audientiam suam fecit." Nevertheless, he ordered Bulls to be dated from Soro, which was done (Baumgarten, "Aus K. und Hammers", Freiburg, 1877, 279). More than a century later, as appears from the official rules drawn up under Benedict XIII (Pedro de Luna; rules 148, 151, 158) and John XXIII (rule 88), this important point was still undecided. The aforesaid rules of Benedict XIII and John XXIII appeared on 28 November, 1634, and 5 June, 1413, respectively. (Von Ottenthal, "Die päpstlichen Kanonreigen von Johann XXII bis Nikolaus V", Innsbruck, 1888, pp. 148, 151, 152, and 185). During the journey of Martin V (1417-1431) from Constance to Rome it frequently occurred that the pope and ecclesiastical authorities were separated from each other; even at this late date the official location of the "Holy See" in fact, as this relating to an actually legal, not yet authoritatively fixed. This uncertainty, says Bengen, caused Clement VIII to draw up the Constitution: "Cum ob nonnullas", in which it is laid down that, if the pope and the pontifical administration should not reside in the same place, the utterances of both are authoritative, provided they are in agreement with each other. Cova-
ruvias and Gonoles agree that: "Curia Romana ibi concursur case, ubi est papa cum cancellaria et tribunali et officialibus suis, quos ad regimen ecclesiae adhibet" (the Roman Curia is considered to be where the pope is, with the chancery, tribunals, and officials whom he employs in the Government of the Church).

(Bangen, "Die römische Kurie", Münster, 1854, 1, i, 5) (System der Tribunalkonzorte, III, Berlin, 1883, 135, remark 6) follows the medieval opinion: "Ubi Papa, ibi Curia"; but this seems no longer tenable.

Paul Mania Baumgarten.

Holy Sepulchre, the tomb in which the Body of Jesus Christ was laid after His death upon the Cross. The Evangelists tell us that it was Joseph of Arimathea's own new monument, which he had hewn out of a rock, and that it was closed by a great stone rolled to the door (Matt., xxvii., 60; Mark, xv., 46; Luke, xxiii., 53). It was in a garden in the place of Crucifixion, and was nigh to the Cross (John, xix., 41, 42) which was erected outside the walls of Jerusalem, in the place called Calvary (Matt., xxvii., 32; Mark, xv., 20; John, xix., 17; cf. Heb., xiii., 12), but close to the city (John, xix., 20) and by a street (Matt., xxvii., 39; Mark, xv., 29). That it was outside the city is confirmed by Jerome, Rufinus, and Eusebius, that the Jews who had not permission burial inside the city except in the case of their kings. No further mention of the place of the Holy Sepulchre is found until the beginning of the fourth century. But nearly all scholars maintain that the knowledge of the place was handed down by oral tradition, and that the correctness of this knowledge was proved by the investigations caused to be made in 326 by the Emperor Constantine, who then marked the site for future ages by erecting over the Tomb of Christ a basilica, in the place of which, according to an unbroken written tradition, now stands the church of the Holy Sepulchre.

These scholars contend that the original members of the nascent Christian Church in Jerusalem visited the Holy Sepulchre soon, if not immediately, after the Resurrection of the Saviour. Following the custom of their people, those who were converts from Judaism were initiated, and taught their children to venerate, the tomb which had lain abandoned since their new faith, from which had risen the Source of their eternal hope; and which was therefore more sacred and of greater significance to them than had been the tombs of Abraham, Isaac, Jacob, and David, which they had hitherto venerated, as their forefathers had for centuries. The Lord's Resurrection, then, would have failed to unite with them in this practice, which was by no means foreign to their own former customs. The Christians who were in Jerusalem when Titus laid siege to the city in the year 70 fled, it is true, across the Jordan to Pella; but, as the city was not totally destroyed, and as there was no law prohibiting their return, it was possible for them to take up their abode there again in the year 73, about which time, according to Dr. Sanday (Sacred Sites of the Gospels, Oxford, 1903), they really did re-establish themselves. But, granting that the return was not fully made until 122, one of the latest dates proposed, there can be no doubt that in the restored community there were many who knew the location of the Tomb, and who led to it their children, who would point it out during the next fifty years. The Roman prohibition which kept Jews from Jerusalem for about two hundred years, after Hadrian had suppressed the revolt of the Jews under Barcaccius, in 135, and in which were included Jewish converts to Christianity; but it is possible that it did not. It certainly did not include Gentile converts. The list of Bishops of Jerusalem given by Eusebius in the fourth century shows that there was a continuity of episcopal succession, and that in 135 a Jewish line was followed by a Gentile.

The tradition of the local community was undoubtedly strengthened from the beginning by strangers who, having heard from the Apostles and their followers, or read in the Gospels, the story of Christ's Burial and Resurrection, visited Jerusalem and asked about the Tomb that He had rendered glorious. It is recorded that Melito of Sardis visited the place where "these things" [the Saviour's 'abode'] are, and were glorified and exalted, and were married and carried out." As he died in 180, his visit was made at a time when he could receive the tradition from the children of those who had returned from Pella. After this it is related that Alexander of Jerusalem (d. 251) went to Jerusalem "for the sake of prayer and the investigation of the place", and further that Origen (d. 255) had visited the investigation of the footsteps of Jesus and of His disciples. By the beginning of the fourth century the custom of visiting Jerusalem for the sake of information and devotion had become so frequent that Eusebius wrote, that Christians "flocked together from all parts of the earth".

It is at this period that history begins to present written records of the location of the Holy Sepulchre. The earliest authorities are the Greek Fathers, Eusebius (c.260-340), Socrates (b.379), Sozomen (375-450), the monk Alexander (sixth century), and the Latin writer John of St. Hieronymus, with Jerome, and luminus of Nola (353-431), and Sulpitius Severus (360-420). Of these the most explicit and of the greatest importance is Eusebius, who writes of the Tomb as an eyewitness, or as one having received his information from eyewitnesses. The testimonies of all having been compared and analysed may be presented briefly as follows: Helena, the mother of the Emperor Constantine, conceived the design of securing the Cross of Christ, the sign of which had led her son to victory. Constantine himself, having long had at heart a desire to honour "the place of the Lord's Resurrection", to erect a church at Jerusalem near the place that is called Calvary", encouraged her design, and giving her imperial authority, sent her with letters and money to Macarius, the Bishop of Jerusalem. Helena and Macarius, having made fruitless inquiries as to the existence of the Cross, turned their attention to the place of the Passion and Resurrection, which was known to be occupied by a temple of foreign origin erected by the Romans in the time of Hadrian, or later. The temple was torn down, the ruins were removed to a distance, the earth beneath, as having been contaminated, was dug up and borne far away. Then, "beyond the hopes of all, the most holy monument of the Passion and Resurrection, the conversion of the Church of Constantine", III, xxviii). Near it were found three crosses, a few nails, and an inscription such as Pilate ordered to be placed on the Cross of Christ.

The accounts of the finding of the Holy Sepulchre thus summarised have been rejected by some on the ground that they have a taint of improbability, especially in the attribution of the discovery to "an inspiration of the Saviour", to "Divine admonitions and counsels", and in the assertions that, although the Tomb had been covered by a temple of Venus for upwards of two centuries, its place was yet known. To the first objection, it is replied that whilst the historians piously attributed the discovery to God, they also showed the human secondary agents to have acted with careful prudence. Paulinus is quoted as saying that "Helena was guided by Divine counsel, as the result of her investigations show". As to the second objection, it is claimed that a pagan temple covered over the Holy Sepulchre, the Holy Sepulchre's purpose of destroying the worship paid there to the Founder of Christianity, or of diverting the worship to pagan gods and goddesses, would tend to preserve the knowledge of the place rather than to destroy it. What appears to be a more serious difficulty is offered by writers who describe the location of the basilica
erected by Constantine, and consequently the place of the Sepulchre over which it was built. The so-called Pilgrim of Bordeaux who visited Jerusalem in 333, while the basilica was a building, writes that it was on the left hand of the way to the Neapolitan—now Damascus—gate (Geyer, "Itinerar Hier."); pp. 22, 23). Eurapius, bishop of Sion, on the north (op. cit., 120); Theodosius, about 530, "that it was in the city, two hundred paces from Holy Sion" (op. cit., 141); an anonymous author, that it was "in the midst of the city towards the north, not far from the gate of David" (op. cit., 107). These descriptions are borne out by the dimensions, which are 77 feet long by 56 feet broad, a third of the last century that was discovered at Medeba in 1897 (see "Revue Biblique"), 1897, pp. 165 sqq. and 341). The writers must have known that the New Testament places the Crucifixion and the Tomb outside the city, yet they tell us that the Constantinian basilica enclosing both was inside. They neither show surprise at this contradiction, nor make any attempt to explain it. Nor does anyone at all, at this period, raise a doubt as to the authenticity of the Sepulchre. Was it not possible to trace an old city wall belonging to the time of Christ outside of which was the Sepulchre, with the immeasurable beauty of the existing wall of it being later? As the difficulty was seriously urged in the last century, it will be fully considered and answered at the close of this article.

The edifice built over the Holy Sepulchre by Constantine was dedicated in 335. The Holy Sepulchre, separated by excavation from the mass of rock, and surmounted by a gilded dome, was in the centre of a rotunda 85 feet in diameter. The basilica, extending eastward from this to a distance of 250 feet, embraced Calvary in its south aisle. An atrium and a propylion gave a total length of 475 feet. The monument was destroyed by fire in 529, during the Persian invasion under Chosroes II. Two hundred years later new buildings were begun by the Abbot Modestus and finished, in 626, with the aid of the Patriarch of Alexandria, who had sent money and one thousand workmen to Jerusalem. These buildings were destroyed by the Mohammedans in 1010. The present church was erected in 1048, and stood intact until the crusaders partly removed them and partly incorporated them in a magnificent basilica that was completed in 1168. As in the basilica of Constantine, so also in that of the crusaders, a rotunda at the western end rose over the Holy Sepulchre. This part of the church is in its present state in 1808, when the rotunda fell upon the Sepulchre. A new church designed by the Greek architect, Commenes, and built at the expense of Greeks and Armenians, was dedicated in 1810. The dome of its rotunda was rebuilt in 1866, France, Russia, and Turkey defraying the expenses. In the middle of this rotunda is the Tomb of Christ, enclosed by the monument built in 1810 to replace the one destroyed then.

This monument, an inartistic Greek edifice, cased with Palestine brocchia—a red and yellow stone somewhat resembling marble—is 26 feet long by 18 feet wide. It is ornamented with small columns and pilasters, and surmounted at the west end by a small dome, the remainder of the upper part being a flat terrace. Against the west end, which is pentagonal in form, there is a small chapel used by the Copts. In each of the side walls at the east end is an oval opening, called Holy Saturday, by the Greek Church, extending across the whole of the façade. The upper part of the façade is ornamented with three pictures, the one in the centre belonging to the Latin, the one on the right to the Greeks, and the one on the left to the Armenians. On great solemnities, these communities add their respective front with gold and silver lamps, and flowers. The only entrance is at the east end, where there is a low doorway leading to a small chamber called the Chapel of the Angel. In the middle of the marble pavement there is a small pedestal, which is said to mark the place where the angel sat after rolling the stone away from the door of Christ’s Tomb. Immediately beneath the pavement is solid rock, which Pierotti was able to see and touch while repairs were being made ("Itinerarium Hier.", ed. 1486, p. 4). And Arculph, who saw it in the seventh century, describes it as red and veined with white, still bearing the marks of tools. Over the sepulchral couch there had been an arch such as is seen in so many of the ancient Hebrew tombs about Jerusalem. The walls that supported the arch still remain. The door closely corresponds with that of the Tomb of the Kings, where a great elliptical stone beside the entrance suggests the manner in which the Holy Sepulchre was closed by a stone rolled before it.

In the eighteenth century that the authenticity of this tomb was seriously doubted. The tradition in its favour was first formally rejected by Korte in his "Reise nach dem gelobten Lande" (Altona, 1741). In the nineteenth century he had many followers, some of whom were content with simply denying that it is the Holy Sepulchre, believing it lies within the wall, while others went further and proposed sites outside the walls. No one, however, has pointed out any other tomb that has a shred of tradition in its favour. The most popularly accepted tomb among those proposed is one near Gordon’s Calvary (see CALVARY, MODERN CALVARY). But this has been entirely removed, and the walls of tombs extending for some distance, and did not, therefore, stand in a garden, as did Christ’s Tomb. Moreover, the approach to this tomb is over made ground, the removal of which would leave the entrance very high, whereas the door of the Holy Sepulchre was very low. It has been suggested above, that when Constantine built his basilica, and for long afterwards, there may have been evident traces of an old city wall that had excluded the Holy Sepulchre from the city when Christ was buried. From Josephus, we know of three walls that at different times enclosed Jerusalem on the north. The third of these is the present wall, which was built about ten years after the death of Christ, and is far beyond the traditional Holy Sepulchre. Josephus describes the second wall as extending from the gate Gennath, which was in the first wall, to the tower Antonia. A wall running in a straight line by the Greek Church, has been proposed by the Sepulchre. But it could have followed an irregular line and thus have left the Sepulchre outside. No researches have ever yielded any indication of a wall following a straight line from the Gennath gate to the Antonia. That, on the contrary, the wall took an irregular course, excluding the Sepulchre, seems to have been sufficiently proved by the discoveries, in recent years, of masses of masonry
to the east and southeast of the church. So convincing is the evidence afforded by these discoveries that such competent authorities as Dra. Schick and Gauche at once admitted the authenticity of the tradition itself. Since then, this view has been generally adopted by close students of the question. (see Jerusalem.)

A. L. McMahren.

Holy Sepulchre, Canonesses Regular of the.—Concerning the foundation there is only a tradition connected with St. James the Apostle and representing St. Helena as invested with the habit by St. Macarius, Bishop of Jerusalem. The earliest date on record is 1276, the year in which the Saragossa convent was established. The foundation of a house at Charleville in 1622, by Claudia Mouy, widow of the Marquis de Chalainy, was the signal for a great revival in the West (see the later history of the convent) drawn up by St. Benedict Father and approved by Urban VIII, in 1631, bound the canonesses to the recitation of the Divine office, rigorous fasts, the use of the discipline, and a strict interpretation of the rule of poverty; twelve was the number of professed religious assigned as necessary for the canonical election of a prioress. Susan How-

Holy Sepulchre, Knights of the.—Neither the name of a founder nor a date of foundation can be assigned to the so-called Order of the Holy Sepulchre if we reject the legendary traditions which trace its origin back to the time of Godfrey of Bouillon, or Charlemagne, or indeed even to the days of St. James the Apostle, first Bishop of Jerusalem. It is in reality a secular confraternity which gradually grew up in the Middle Ages, and the most important of which was the order for the delivery of the Holy Sepulchre that the crusades were organized; it was for its defence that military orders were instituted. During the Middle Ages this memorable relic of Christ’s life on earth was looked upon as the mystical sovereign of the new Latin state. Godfrey of Bouillon desired no other title than that of Defender of the Holy Sepulchre, and different Latin princes, Bohemond of Antioch, and Tancred, acknowledged themselves its vassals. It was natural that the Holy Sepulchre also had its special knights. In the broad acceptance of the word, every crusader who had taken the sword in its defence might assume the title from the very moment of being dubbed a knight. Those who were not knighted had the ambition of being decorated knights, preferably in this sanctuary, and of being thus enabled to style themselves Knights of the Holy Sepulchre par excellence. The fall of the Kingdom of Jeru-

The official arrival of the Friars Minor in Syria dates from the Bull addressed by Pope Gregory IX to the clergy of Palestrina on 1236, whereby they were welcome the Friars Minor, and to allow them to preach to the faithful and hold oratories and ceme-

F. M. Radge.
ties of their own. Thanks to the ten years' truce concluded during the preceding year between Frederick II of Sicily and the sultan, the Franciscans were enabled to enter Jerusalem, but they were also the first victims of the violent invasion of the Khuramsians in 1244, thus opening the long Franciscan martyrdom, frequent in their footsteps in spite of numerous molestations and outrages for five hundred years. The Turks, notwithstanding their fierce fanaticism, tolerated the veneration paid to the Tomb of Christ, because of the revenue they derived from the taxes levied upon pilgrims. In 1342, in his Bull "Gratiam agimus," Pope Clement VI officially committed the care of the Holy Land to the Franciscans, who fulfilled this trust until the restoration of the Latin Patriarchate of Jerusalem by Pius IX. Consequently, after 1342, to be enrolled among the Knights of the Holy Sepulchre, it was necessary to apply to the Franciscans, and from this period the itineraries of pilgims were directed by members of this religious institute, improperly called a band, since it had no monastic rule, regular organization, or community of goods. Where mention is made of the possessions of the Holy Sepulchre, the allusion is to the Canons of the Holy Sepulchre, who had convents in various lands, and not to the knights, as some writers believe.

Pilgrims were received into this lay confraternity with all the external ceremonial of ancient chivalry, although the fundamental rules of the institution were not always observed. It was objected that many on whom knighthood was conferred were not of the nobility. The formal question, "if he be of noble birth," was always put to the applicant, but in event of his being a merchant or a plebeian he was not obliged to answer. In point of fact all classes were represented in these pilgrimages, and it is easy to understand why those who had accomplished this trying voyage, then so fraught with danger, should desire to carry away from Jerusalem some such lasting souvenir as the insignia of knighthood, and that refusal was difficult, especially since the sanctuary was practically dependent on the offerings of these merchants, and consequently these contributions were far from negligible. He did not vow to exert himself as far as possible in the defence of the Holy Land. In the ceremonial of reception, the rôle of the clergy was limited to the benedictio militis, the final act of dubbing with the sword being reserved to a professional knight. It has been ascertained that, in the fifteenth century from 1490 to 1495, there was in Jerusalem a German, John of Prussia, who acted as steward for the convent and who, in his character of gentleman and layman, regularly discharged this act reserved to knighthood. It was also of frequent occurrence that a foreign knight, present among the crowds of pilgrims, would assist at the ceremony. However, in default of other assistance, it was the superior who had to act instead of a knight, although such a course was esteemed irregular, since the carrying of the sword was incompatible with the sacerdotal character. It was then also that the superior of the convent assumed the title of master of the order, a title which was bestowed by various pontifical diplomas, and finally by a Bull of Benedict XIV dated 1746. When Pius IX re-established the Latin Patriarchate of Jerusalem in 1847, he transferred it to the office of grand master of the order. At the same time he drew up and in 1868 published the new statutes of the order, which created the three ranks—that of the grand cross, that of commander, and that of simple knight—ordained that the costume be a "white cloak with the cross of Jerusalem in red enamel," and regulated the chancellor's fees. By his Bull of 30 May, 1907, Pius X effected the latest change by reserving to himself the grand-mastership of the order, but delegating his powers to the Holy See's representative.

Holy Synod, in its full form MOST HOLY DIRECTING SYNOD, the name of the council by which the Church of Russia and, following its example, many other Orthodox Churches are governed.

I. History of the Holy Synod.—The principle of summoning a synod or council of ecclesiastical persons to discuss some grave question affecting the Church goes back, of course, to the very beginning of its history. Since the day when the Apostles met at Jerusalem to settle whether Gentile converts were to keep the Old Law (Acts, xvi, 6–29), it had been the custom to call together such gatherings as occasion demanded. Bishop Ignatius, a synod of clergy, metropolitans and patriarchs summoned their bishops, and then since 325 there was a succession of these greatest synods, representing the whole Catholic world, that are known as general councils. But all these synods met only on certain occasions, for a short time, to discuss some one, or at most a few, of the burning questions. We shall find the predecessors of present Orthodox Holy Synods rather in permanent councils at the courts of certain chief bishops. Such councils formed themselves naturally, without any detriment to the monarchical principle. The bishop was always autocrat in his own diocese, the patriarch in his patriarchate. Nevertheless, when he had a number of wise and learned persons, clergy of his city, suffragans and titular bishops in his palace or at his court, he was very natural that he should consult them continually, hear their advice, and then follow it or not as he thought best. Two examples of such advice the present Patriarch considered specially, and the bishops under his episcopate are famous. The Pope sent him his sub-urban bishops, the Roman parish priests, and regional deacons. Without going through the formality of summoning a diocesan or provincial synod he could always profit by their collected wisdom. He did not mean to have his council on a level with that of the Church of Rome, where it was normally just these three bodies who joined to elect a new pope when the see was vacant they had additional importance, and their views gained additional weight. The assembly of these persons around the pope as a permanent institution was the Concilium apostolicum sedeis; to which papal letters from the fifth to the eighth or ninth centuries often refer. The same name was, however, also used for specially summoned Roman provincial synods, which were quite a different thing. The Concilium apostolicum sedeis in the first sense evolved into the college of cardinals, who still form a kind of permanent synod for the pope to consult. But there has never been any idea of so radical a revolution as the government of the Roman Church by a synod. Once the pope was lawfully elected he was absolutely master. He could consult his cardinals if he thought fit, but after they had given their opinions he was still entirely free to do as he chose.

A nearer example for the Orthodox was a similar institution at Constantinople. As the ecumenical patriarchs gradually grew in importance, as they spread the boundaries of their jurisdiction and were able more and more plainly to assert a kind of authority over all Eastern Christendom, so was their palace filled with a growing crowd of suffragans, auxiliary
and titular bishops, chorisciopi, and archimandrites. Bishops from outlying provinces always had business at the patriarchal city. The presence of the imperial court naturally helped to attract ecclesiastical persons, as well as others, to Constantinople. The Arab and Turkish conquests in Egypt, Syria, and Asia Minor added further to the number of bishops and, in some instances, refugees, having nothing to do in their own sees, kept their title and rank, but came to swell the dependence of the ecumenical patriarch. So from the fifth century there was always a number of suffragans and titular bishops who established themselves permanently at Constantinople. It was not unusual for them to act as a consulting body, itself entirely subject to the monarchical patriarch. The modern Holy Synods, on the other hand, are the supreme lawgiving authorities over their Churches; they have absolute authority over every metropolitan and bishop. Laws in Churches that have such synods are made, not by the will of an autocrat, but by a majority of votes in synod. It is in short—what the older Church never dreamed of—government by Parliament.

The beginning of Holy Directing Synods was made by Peter the Great for the Church of Russia. The Russian Synod is the oldest, and the example was followed long after in the question of the assembly of dwellers in the imperial city a synod? Tryphon of Chios answered: "It is called a synod and is assembled as such." The Patriarch Anatolius said: "The assembly" (he avoids calling it a synod) "forifies from on high the most holy bishops who dwell in the holy city when occasion summons them to discuss certain ecclesiastical affairs, to meet and examine each, to find suitable answers to questions. So no novelty has been introduced by me, nor have the most holy bishops introduced any new principle by assembling according to custom" (Mansi VII, 91 sqq.). This would appear to precede the council without expressing either approval or dislike of the permanent synod at Constantinople (Kattenbusch, "Konfessionskunde", I, 86). Such was very much the attitude of the Church generally as long as the Endemuss Synod lasted. It was no way affected the legal position of the Patriarch of Constantinople, nor was it in any sense a government of his patriarchal by synod. In this case too, as at Rome, the consulting synod had no rights. The patriarch governed his subjects as autocrat, had the same responsibilities as other patriarchs. If he chose to discuss matters beforehand with the most holy bishops who dwell in the holy city that was quite as well. So the Endemuss Synod continued to meet regularly and became eventually a recognised body. So little did the patriarchs fear a lessening of their authority from it that it was to them rather an additional weapon of aggressiment. There was a certain splendour about it. The ecumenical patriarch could contemplate the college of cardinals marshalled around the Western throne with greater complacency when he remembered his αγιωτατε ἑξευμονίστε ἐνίκησε. Much more important was the fact that his orders and wishes could be constantly announced to so many obedient patriarchs. And bishops from outlying parts of the patriarchate who spent a short time at Constantinople, approached their chief through the synod; they too were invited or commanded to attend its sessions as long as they were in the city. So they heard the patriarch's addresses, received his commands, and to their distant homes a great revenue for the lord of so many obedient patriarchs. And, as the patriarch considered the Endemuss Synod an important element in the patriarch's advancement. "He conceived the brilliant idea of organizing these bishops into a Synod so that with their help he could interfere in almost any circumstances of all dioceses and eparchies with a certain appearance of authority" (loc. cit., 86). The Endemuss Synod was abolished only in quite recent
named various temporary administrators till his scheme should be ready. First the Metropolitan of Sary, then the Metropolitan of Ryzan administered the patriarchate during this period of twenty-one years. Peter did not allow either of them to make any new laws or take any steps of importance. Meanwhile he himself reorganized the Church, like his army and his government, as a German model. He surrendered the monastery, brought the control of all ecclesiastical property under the State, modified the administration of dioceses, appointed, deposed, and transferred bishops as he liked. At last on 25 Jan., 1721, the ukase appeared, abolishing the patriarchate and establishing a Metropolitan for Russia. The Metropolitan Synod (to which this synod (obviously a quite different thing from the traditional synods that met at intervals to examine some special question), like most of Peter's reforms, came from Germany. Luther had proposed commissions of pastors and laymen to be sent by the head of the State (the Elector of Saxony in the first instance, 1527) to hold visitations of districts in the interest of the sect. Out of these commissions grew the Consistories. They are meant to take the place of bishops and to have episcopal authority, as far as such a thing is possible in Lutheranism. They judge "all cases which belonged to ecclesiastical jurisdiction," ("Reichsgerichtbuch," p. 82), can excommunion, and could in the eighteenth century punish by torture, fines, and prison. They are appointed by the secular government, have a state official, the "Kommissarius" or procurator, at their head, with a notary, and consist of superintendents, pastors, theologians, and lawyers, all appointed by the Government. The Russian Holy Synod is an exact copy of this. Its object was to bring the Church into absolute dependence on the State. Under this synod the Russian Church is certainly the most Erastian religious body in the world. As soon as he had established the synod, Peter wrote to Jeremias III of Constantinople announcing its erection, demanding his recognition of it, and that it should be recognized equally by the other patriarchs. Jeremias made no difficulty. In 1723 he published an encyclical declaring that the Russian Synod "is and is named as a brother in Christ and in the Holy Council. It has authority to examine and determine questions equally with the four apostolic holy Patriarchs. We remind and exhort it to respect and follow the laws and customs of the seven holy General Councils and all other things that the Eastern Church observes" (Silbernagl, p. 102). So the principle of a Holy Synod was acknowledged by the Church. It was to take the place of a patriarchate and to have patriarchal authority. Such was not, however, the tsar's idea. When the Russian bishops petitioned him to restore the Patriarchate of Moscow he struck his breast and exclaimed: "Here is your Patriarch" (Kassier, p. 190). Nor has any Holy Synod in Russia ever been allowed any sort of independent authority over the Church. The synod is always the agent of the State's power.

II. THE RUSSIAN HOLY SYNOD.—This is the model of the others. The ukase of 1721 is still the law determining its rights and duties. An examination of this will show how radically Erastian the whole arrangement is. The ukase begins by explaining what the synod is and giving the reasons for its establishment. The government of many is better than that of one; moreover, if the Church has one head it is difficult for the State to control it. Countless abuses in the Church have been so frequent that it is desirable but absolutely necessary. The second part of the ukase describes what causes are subject to the jurisdiction of the synod. The general ones are that it has to see that all things in Russia take place according to the law of Christ, to put down whatever is contrary to that law, and to watch over the education of the people. The special categories subject to the synod are five: (1) bishops; (2) priests, deacons, and all the clergy; (3) monasteries and convents; (4) schools, masters, students, and also all preachers; (5) the laity inasmuch as they are affected by church law (questions of marriage, etc.). The third part of the document describes its duties, rights, and methods of the synod (Gebahler, "Lehrbuch," p. 191). The synod meets at Petersburg. Its members are partly ecclesiastical persons, partly laymen. All are appointed by the tsar. Originally there were to be twelve ecclesiastical members; but this number has been constantly changed at the tsar's pleasure. As of 1763, there should be at least six ecclesiastical members. The Metropolitans of St. Petersburg, Moscow, Kiev, and the Exarch of Georgia are always members (these persons, as all bishops, are appointed by the Government); one or two other archbishops, a titular metropolitan, the tsar's confessor, the head chaplain of the army and navy, and some other bishops make up the number. Bishops who have dioceses may only attend the meetings of the synod for half the year. During the other half they must return to their sees. The lay members consist of the procurator (Oberprocuror) and a number of commissioners. The oldest metropolitan present is called the "chancellor," and the old bishop. In spite of the protests of Russian theologians it is evident that the real head of the synod is the procurator. He is always a layman, generally an officer in the army. He sits as representing the Government, and must be present at all meetings. The procurator has to prepare and examine beforehand all questions to be discussed; he can quash any proceedings at once, can forbid any law to be passed till he has consulted his—and the synod's—imperial master about it. He is assisted in his work by a chief secretary, an "executor," two secretaries, and other officials, all of course laymen like himself. So obvious is it that the procurator is really the head of the synod that Russians themselves (except the theologians who write to defend their Church from the charge of Erastianism) are quite conscious of it. When Mr. Palmer was in Russia it was a common joke to point to the procurator and say, "There is the Patriarch." (Palmer, "Visit to the Russian Church," 1895, pp. 48, 73, 221). Every member of the Holy Synod before taking his place in it has to swear this oath: "I swear by the Almighty and by His holy Gospel that I will do my duty in all assemblies, decisions and discussions of the Spiritual law-giving Synod, that the laws approved by the Holy Synod will be always carried out, and also that I will act according to my conscience without respect of persons, according to the laws of the Synod approved by His Imperial Majesty. I swear by the living God that I will undertake all business of the law-giving Synod with zeal and care. I promise as servant and subject fidelity and obedience to my true and natural master the Tsar and Emperor of all Russia and his illustrious successors, and to those whom he may appoint by virtue of his undoubted right in this matter. I acknowledge him as supreme judge in this spiritual assembly. I swear by the all-knowing God that I understand this oath according to the full force and meaning which the words have to all who read or hear them" (Silbernagl, op. cit., pp. 104-105).

Of the Erastian nature of the Russian Holy Synod, then, it would seem that there can be no doubt; and since the whole Church of Russia, every bishop, monastery, and school, is submitted absolutely to its laws, it may be described as the most Erastian religious body in the world. This statement, however, much offends many modern Russian theologians. A century or so ago they accepted the tyranny of the tsar over Church as well as over State as a matter of course; nor did they seem to be much distressed by it. Now, contact with Western
theology, the spread of better ideas among them, and study of the Fathers have evoked in Russia too the ideal of the Church as a perfect society, a city of God or Christian commonwealth ruled under the secular government. The result is that some Russians, candidly admitting the hopeless Erastianism of Peter the Great's arrangement, demand its abolition and the restoration of the Patriarchate of Moscow. Agreeing with Peter the Great that if the Church has one head it is difficult for the State to control it, they demand for that very reason more bishops, silence, and a single, unimportant of this movement in favour of a restored patriarchate in Russia (see, for instance, the "Echoes of Orient" for 1901, pp. 187, 232; for 1905, pp. 176, etc.; and Palmieri, "La Chiesa Russa," chap. ii). But there is another class of Russians whose loyalty to their Church leads them to defend her under any circumstances, even those of Peter the Great's tyrannical arrangement. To them everything is satisfactory, the Holy Synod a free ecclesiastical tribunal, the relations between Church and State in Russia the ideal ones for a Christian and Orthodox land. Erastianism, they maintain, is a dangerous importation by Catholic conservatives (most Protestants make the same accusation, by the way). Of these apologists is Dr. Alexis von Maltsew, Provost of the Russian Church at Berlin, certainly one of the most learned and sympathetic of modern Orthodox theologians. Maltsew constantly laments that the question of this alleged Erastianism (Česareopomus) is the German term used by him. His defence is summarized especially in his "Antwort auf die Schrift des hochw. Herrn Domkapitulars Röhm" (Berlin, 1896), §3 (Die Synode) and §4 (Staat und Kirche). The chief points upon which he insists are that only members of the hierarchy can vote in the synod, that the Synod Procotor has no power to compel the bishops, that the synod has no independent power in dogmatic questions — as successor of the Patriarch of Moscow it inherits neither its schism nor its rights in matters of canon law where dogma is concerned the other patriarchs must be consulted too — that Peter the Great sought and obtained the consent of the patriarchs for his synod, and finally that: "Only he who knows the strict order, the admirable discipline, the stable organization that distinguishes the Orthodox Church in Russia, can properly appreciate the immense work done by the Holy Synod under the exalted protection of the Orthodox Emperor" (op. cit., p. 19). With every sympathy for the provost's loyalty to his Church, one would answer this by saying that a synod of which all members are appointed by the State, whose members take such an oath as the one quoted above, whose acts can at any moment be quashed by the government agent, is not an independent authority. Certainly Peter's idea in founding the Holy Synod was to put an end to the old Imperium in imperio of the free Church, and to the patriarch who had become a rival of the tsar. Peter maintained the tsar's authority in the Church as well as State, and the Russian Government has continued his policy ever since. Never has the Church been allowed the shadow of independent action. Through his Oberprocuror and synod the tsar rules his Church as absolutely as he rules his army and navy through their respective ministers. That most members of the synod are bishops is no natural that a member of the ministry of war are generals — the tsar appoints both in any case. It must be admitted that in a country so exclusively committed to one religion as is Russia there are advantages in Erastianism. It is quite true that the synod (except by such small ways as the one quoted above) is not capable of doing so would be to provoke a schism with the patriarchs and the other Orthodox Churches. Russia has the same faith of the seven holy councils as Constantinople, Greece, Bulgaria, etc. And in questions of canon law it is a great advantage to have the strong of the State to carry out decrees. There can be no synodal composition, no persecution by the Government, of a Church whose laws are countersigned by the Oberprocuror. On the contrary the State — should one not perhaps say: the other departments of the State — is at hand if it is wanted. Provost Maltsew is right. The Russian Church is extraordinarily orderly, well-organized, uniform. The synod deposes, excommunicates, excommunicates, excommunicates, excommunicates; and if there is trouble the minister of police steps in.

The jurisdiction of the Holy Synod extends over every kind of ecclesiastical question and over some that are partly secular. All bishops, priests, clergymen, monks, and nuns have to obey the synod absolutely under pain of deposition, suspension, excommunication, or maybe even imprisonment. The synod's chief duties are to watch over the preservation of the Orthodox faith, the instruction of the people, the celebration of feasts, and all questions of Church order and discipline. It has provided priests with miracles, relics, forbid superstitious practices. All Orthodox theological works are subject to its censorship. The synod further administers all church property, controls the expenditure, is responsible for the fabric of churches and monasteries. It presents candidates for episcopal, presbyterial, diaconal, or archimandrite, to the tsar for nomination, and can examine such candidates as to their fitness. It is the last court of appeal against bishops or other ecclesiastical superiors, can advise, warn, and threaten any bishop, and grant all manner of dispensations and indulgences. But to make new laws, even in church matters, it needs the tsar's assent. All processes for heresy, blasphemy, superstition, adultery, divorce, and all matrimonial causes are brought to the synod. Questions of testament, inheritance, and education are settled by the synod in agreement with the Senate and are controlled further by the tsar's consent. To administer all these matters the synod has various subcommittees. It has an economic college for questions of church property and a committee of control that re-examines the matter. These committees consist of lawyers, chancellors, secretaries, treasurers, architects (for the buildings), etc. They are, of course, entirely subject to the synod. Since 1862 and all money for synodical (selling candles, prayers for the dead, free offerings, collections, alms-boxes) to the synod to be redistributed. Expenses and profits of ecclesiastical schools are also controlled by a committee of the synod. It pays for printing service-books and many spiritual works (prayer books and so on), also for all imperial usages that affect the Church. It has special commissions for Moscow, Georgia, and Lithuania. There are two synodal presses, at Petersburg and Moscow, where all Orthodox religious books must be printed, after they have passed the censor. The profits of these presses go to assist poor churches. For the spiritual life of the Church, the synod controls the offices at Petersburg, Moscow, and Kiev. Throughout Russia the synod is named in the liturgy instead of a patriarch.

It will be seen then that the submission of the Russian Church to the synod is so complete that the synod's relation to the State involves that of the whole Church. Russia has a Christian Church, as under Peter the Great.

III. THE GREEK HOLY SYNOD.—The first other Orthodox Church to imitate the Russian Government by synod was that of Greece. The national assemblies of free Greece in 1822 and 1827 began the process of making their Church independent of the patriarch of Constantinople. The Greek Parliament formally rejected the patriarch's authority and set up a Holy Directing Synod in exact imitation of Russia. After much dispute the patriarch gave in and a—
known the Greek synod, in 1850. Since then the Church of Greece is governed by a Holy Synod exactly as is the Church of Russia. A law in 1852 regulated its rights and duties. It meets under the presidency of the metropolitan of that city. Four other bishops are appointed by the Government as members for a year by vote. The members take an oath of fidelity to the king and government. Their deliberations are controlled by a royal commissioner, who is a layman chosen by government, just like the Russian. The president of the synod is elected without the commissioner's assent. There are also secretaries, writers, and a servant, all appointed by the State. The Holy Synod is the highest authority in the Greek Church and has the same rights and duties as its Russian model. It is named in the liturgy instead of a patriarch. Professor Diomedes Kyriakos (Ekk. 'Iepoi, III, 155 sqq.) has tried to defend his Church from the charge of Erastianism with even less success (and certainly with less reasonableness and moderation) than Provost Maltzew. (See Greece.)

IV. Other Holy Synods.—All the independent Orthodox churches of the nineteenth century have set up Holy Synods. The Churches in the Austro-Hungarian Monarchy (Karlowitsch since 1765, Hermannstadt, 1864, Czernowitz, 1873) form synods of their bishops to regulate affairs; but, as in this case there is no interference of the Government, the situation is different. These synods are merely formal in which almost all the Church take part. The arrangement of the Bulgarian Church (since 1870) is also different; inasmuch as its exarch has a certain amount of individual authority—approaching the position of a patriarch—and there are two governing assemblies. The Holy Synod, under the presidency of the exarch, has four other members, all bishops elected by their fellows for periods of four years. They meet regularly once a year, and exceptionally on other occasions. This synod has absolute authority over the Bulgarian Church in these matters: election of bishops, questions of faith, morals, and rite, ecclesiastical discipline, education of the clergy, censorship of books, marriage questions, and disputes among the clergy. The other body, the Exarch's Council, also under his presidency, has six lay members elected by the people and clergy, confirmed by the Government for four years. The council determines questions of education, building and appointments of churches, and the divorce. Neither body may publish any order without consent of the Government; but their composition, the appointment of members, and authority of the exarch show that the Bulgarian Church is less Erastian than her sisters of Russia and Greece. The Church of Servia (since 1879) has five bishops, of whom the Metropolitan of Belgrade is primate. All meet in the Holy Synod under his presidency once a year. The synod appoints bishops and regulates all other ecclesiastical questions. The Rumanian Church (since 1885) has the same arrangement. The president of the Rumanian metropolitan and the Metropolitan of Wallachia, the Rumanian primate (Metropolitan of Moldavia) and all the six remaining bishops are members. Its decisions must have the consent of the Government. The minister of religion attends the sessions, but only as a consultant. Lastly, the four bishops of Hercegovina and Bosnia (independent since 1850) meet in a kind of synod, called the council, under the presidency of the Metropolitan of Sarajevo. In this case the (Austrian) Government does not interfere at all.

Although the synods of Bulgaria, Servia, and Rumania have a certain dependence on the State (whose sanction is necessary for the promulgation of their decrees), where there is not in the shameless Erastianism of Russia and Greece. Between these two the only question is whether it be more advantageous for the Church to be ruled by an irresponsible tyrant or a Balkan Parliament. Lastly, it may be noticed, the church government by synod is a principle destined to flourish among the Orthodox. The peculiar postels at the Orthodox countries encourage it and approve of it, for obvious reasons. It makes all the complicated questions of church establishment and endowment in the new Balkan States comparatively easy to solve; it has a fine air of democracy, constitutionalism, parliamentary government, that appeals enormously to people just escaped from these lurks and all without the Government's assent. The old patriarchal idea will linger on at Constantinople, Alexandria, Antioch, Jerusalem (though even here, in its original homes, it is getting modified in a constitutional direction), but that all new movement in the Orthodox Church will be more and more towards the principles borrowed by Peter the Great from Lutheranism. The vital argument against Holy Directing Synods is their opposition to the old tradition, to the strictly monarchical system of the Church of the Fathers. Strange that this argument should be ignored by people who boast so confidently of their neutrality toward the "ancient establishments"!" they told Mr. Palmer triumphantly in Russia. One could easily make a considerable list of Orthodox developments in answer. And one of the most obvious examples would be the system of Holy Synods. What, one might ask, would their Fathers have said of national Churches governed by combinations of bishops elected by the State and controlled by Government officials?

Holy Water.—The use of holy water in the earliest days of the Christian Era is attested by documents of only comparatively late date. The "Apostolic Constitutions", the redaction of which goes back to about the year 400, attribute to the Apostle St. Mark the custom of the Church. But the earliest extant liturgy, written under the name of Pope Alexander I, who lived in the second century, is apocryphal and of more recent times; hence the first historical testimony does not go back beyond the fifth century. However, it is permissible to suppose for the sake of argument that, in the earliest Christian times, water was used for expiatory and purificatory purposes, in a way analogous to its employment under the Jewish Law. As, in many cases, the water used for the Sacrament of Baptism was flowing water, sea or river water, it could not receive the same blessing as that contained in oil or wine. This is seen in the Didache. The early liturgy is obscure, but two recent discoveries are of very decided interest. The Pontifical of Serapion of Thmuis, a fourth-century bishop, and likewise the "Testamentum Domini", a Syrian composition dating from the fifth to the sixth century, contain a blessing of oil and water during Mass. The formula in Serapion's Pontifical is as follows: "We bless these creatures in the Name of Jesus Christ, Thy only Son; we invoke upon this water and this oil the Name of Him Who suffered, Who was crucified, Who arose from the dead, and Who sits at the right of the Uncreated. Grant unto these creatures the power to bless, may all sins and all maladies be put to flight by him who either drinks these beverages or is anointed with them, and may they be a remedy in the Name of Jesus Christ, Thy only Son."
As early as the fourth century various writings, the authenticity of which is free from suspicion, mention the use of water sanctified either by the liturgical blessing just described, or by the manual blessing of some holy person. St. Epiphanius (Contra haereses, lib. I, har. xxx) records that at Tiberias a man named Joseph poured water on a madman, having first made the sign of the cross and pronounced these words over the water: "In the Name of Jesus Christ of Nazareth, receive the blessing of this unclean spirit, and let him be healed!" Joseph was converted and subsequently used the same proceeding to overcome witchcraft; yet, he was neither a bishop nor a cleric. Theodoret (Hist. ecc.EL, v, xxi) relates that Marcellus, Bishop of Apamea, sanctified water by the sign of the cross, and that Apamea became one of the most famous places for making it drink water blessed by the sign of the cross ("Hist. relig.", c. viii, in P. G., LXXXII, col. 1244, 1375). In the West similar attestations are made. Gregory of Tours (De gloria confess., c. lxxii) tells of a named Eustatius who lived in the sixth century and possessed the disease of fever by giving by its victims to drink of water that he had blessed; we might mention many other instances scattered up by this same Gregory ("De Miraculis S. Martini", II, xxxix; "Mirac. S. Juliani", II, iii, xxxv, xxxvii; "Libre de Passionis S. Juliani"; "Vita Patrum", c. iv, n. 3). It was related of some that the holy water possessed curative properties for certain diseases, and that this was true in a special manner of baptismal water. In some places it was carefully preserved throughout the year, and by reason of its having been in baptism, was considered free from all corruption. This belief spread from East to West; and scarcely had baptism been administered, when the people would crowd around with all sorts of vessels and take away the water, some keeping it carefully in their homes whilst others watered their fields, vineyards, and gardens with it ("Ordo rom. I", 42, in "Mus. lit.", II, 28).

However, baptismal water was not the only holy water. Some was permanently retained at the entrance to Christian churches where a clerk sprinkled the faithful as they came in and, for this reason, was called ἵραμος κορύφη or "introduceur de water", an appellation that appears in the superscription of a letter in which a letter in which a letter is now only made to "lustrum water placed in the vestibule of the temple". This water was perhaps blessed in proportion as it was needed, and the custom of the Church may have varied on this point. Balsamon tells us that, in the Greek Church, they "made" holy water at the beginning of each lunar month. It is quite possible that, according to canon lxxv of the Council of Constantinople held in 691, this rite was established for the purpose of definitively supplanting the pagan feast of the new moon and causin it to pass into oblivion. In the West Dom Martène declares that nothing was found, in the liturgy concerning the blessing and aspersions of water that takes place on Sunday at Mass. At that time Pope Leo IV ordained that each priest bless water every Sunday in his own church and sprinkle the people with it: "Omni die Domino, ante missam, aquam benedictam factam, de populis et loca delendum aspersionem (P. L. CXV, col. 870). Hinimar of Reims gave directions as follows: "Every Sunday, before the celebration of Mass, the priest shall bless water in his church, and, for this holy purpose, he shall use a clean and suitable vessel. The people, when entering the church, are to be sprinkled with this water, and those who so desire some to take away their vessels and sprinkle their houses, fields, vineyards, and cattle, and the profvernder with which these last are fed, as also to throw over their own food" ("Capitula synodalia", cap. v, in P. L., CXV, col. 774). The rule of having water blessed for the aspersion at Mass on Sunday was thenceforth generally followed, but the exact time set by Leo IV and Hinimar was not everywhere observed. At Cambrai and at Arras, it was to be given without ceremony in the sacristy before the recitation of the hour of Prime; at Albi, in the fifteenth century, the ceremony was conducted in the sacristy before Terce; and at Soissons, on the highest of the sanctuary steps, before Terce; whereas at Laon and Senlis, in the fourteenth century, it took place in the choir before the hour of Terce. There are two Sundays on which water is not and seems never to have been blessed: these are Easter Sunday and Pentecost. The reason is because on the first, the consecrated water is blessed and consecrated and, before its mixture with the holy chrism, the faithful are allowed to take some of it to their homes, and keep it for use in time of need.

H. LECLERCQ.

Holy Water Fonts.—Vessels intended for the use of holy water are of very ancient origin, and archaeological testimony compensates, to a certain extent, for the silence with which official documents maintain in their regard. Holy water fonts may be divided into three categories: stationary fonts, placed at the entrance to churches; portable fonts, used for aspersions and sacramental rites; and private fonts, in which holy water is kept in private houses.

The holy water font was originally the fountain for ablutions, cantaurhas, or phiala, placed in the centre of the atrium of the basilica and still found in the East, especially at Mount Athos, at Djebel in Syria, and at Haifa-Naple in the Island of Cyprus. These fountains were used by the faithful who, before entering the church, washed their hands and feet in accordance with a rite probably derived from Judaism and even yet observed in Mussulman countries. When the atrium of the Christian basilica was reduced to the proportions of a narrow court or a simple porch, the cantaurhas gave way to a less pretentious structure. In the Church it is in the font, now only found doing service as a holy water font, mainly at Mount Athos, where the phiala of the monastery of Laura stands near the catholicon in front of the entrance and is covered by a dome resting on eight pillars. It takes the place of the abution fountains which were indispensable in the ancient basilica, but at present the water is missing and glasses forth only on days when it is to be blessed. The blessing of the water takes place on the eve of the Epiphany after Mass and Vesperis, and is called the "grand blessing" (μεγάλη βαπτιστήρια), so as to distinguish it from the "little blessing" (μικρή βαπτιστήρια), which is conducted with a lesser ceremony, and which the whole month of January (on the 5th) and September (on the 14th).

In the sixth century Paulus Silentiarius, when describing the wonders of St. Sophia, about A. d. 590, mentions the presence of a phiala from which "water gushes noisily into the air, issuing from a bronze pipe with a force that banishes all evils, when in the month of golden tunics [January], during the night of the Divine initiation, the people draw in vessels an incorruptible water, as no pollution reaches it, even when, having been several years removed from its source, it is enclosed in the hollow of a pitcher and kept in their houses." At Laura the holy water does not draw it for the purpose of carrying it away, but they are sanctified by the rite. In the fourth century the blessing of water was mentioned in Sera-
pion's Ritual (see Holy Water). In the Byzantine Ritual the prayer used for this blessing, similar to that of the Eucharistic Epikleisis, invokes the Holy Spirit upon the water. In Jewish law and wine, holy water is called ḥayyim. In the Barberini Euchologion of the eighth or ninth century, the title of a prayer shows us that holy water renewed the effects of baptism.

The few Greek inscriptions found on vessels intended for holy water in no wise indicate that these were designed for holy water. A holy water font of Carthage and various marble urns preserved in museums or described by antiquarians merely have copies of a formula taken from Holy Scripture: "Take water joyfully for the voice of the Lord is upon the waters"; or "Offer thy prayer after washing thyself." On the other hand, "Wash not only thy face but thy iniquities." We have no information whatever concerning the vessels in which the faithful kept the incorruptible holy water in their homes. However, on this subject, we can always refer to a vase font found at Carthage, and preserved in the Lavigerie Museum of Algiers. The font has a fairly high height and a flat disc with a cross and two fishes. These details once given, we can enter more fully into the history of holy water fonts in the West.

Stationary holy water fonts, usually made of bronze, marble, granite, or any other solid stone, and also of terra cotta or of a small tub or basin sometimes detached or resting on a base or pedestal, sometimes imbedded in the wall or in one of the pillars of the church. Occasionally these are under the porch. In the West there were scarcely any stationary fonts prior to the eleventh century. However, it must be observed that, up to this time, churches were few and that most of their number had been repeatedly plundered, dismantled, redecorated, and, indeed, altered in every way; therefore, in view of this fact, it is possible to admit that certain stone basins, hemispherical in form and imbedded in the pediments of the doors of very old churches, were so placed when the church was built. Some fonts are antique objects, urns or hollowed-out capitals, made to serve a purpose other than that for which they were first intended. When the stone is porous it is lined with lead or tin, so as to prevent absorption, the same course being followed with copper fonts to guard against oxidation.

The exterior; being fastened to the pillar or jambs of the portal. They vary greatly in size, at times being as large as baptismal fonts; however, it is chiefly in Brittany that they attain such proportions. Usually they are not very large. Cavedoni announced that in a third- or fourth-century cemetery at Chiusi there was a small column which he thought must have supported a holy water font. Boldetti, who is always very cautious, claims to have found different fonts in the catacombs, some made of marble, others of terra-cotta, and still others of glass. A sort of tufa basin, which may have served the same purpose, was also found. In the cemetery of Callistus the preserved coral, according to Rossi, must have held the same kind of a vessel as those containing holy water in our churches. We could enumerate other probable examples, especially in the catacomb of St. Saturninus, in the crypt of St. Cornelius, and in the basilica of St. Alexander on the Via Nomentana.

The further we withdraw from the time of their origin the more numerous the monuments appear. A magnificent vase in black marble preserved in the Kircher museum and decorated with bas-reliefs, two broken urns from Cuicul (Djemila) in Algeria, and a large marble table, the upper side of which is slightly hollowed, belong to the fourth century. Another basin found in the vicinity of the cathedral of Bath, England, measures 7.9 inches in height, the diameter of its upper part being 1.4 inches. Stationary fonts sometimes rest on a corbel-table or a small column and, although such is rarely the case, two fonts may be communicating, one being on the outside of the church and one on the inside. Many fonts are dated or bear the name of the sculptor or donor.

There seems to have been no rule governing the shape of the receiver and the basin. The baptisteries usually represented a cross or a circle, but here fancy is freer, and in the Roman era we find a circular basin hollowed out of a square block with the four corners carved sometimes with a trefoil, a quatrefoil, or a star, or perhaps with flutes converging towards a common centre and representing a sea-shell. Violet-del-Duc, after alluding to the stone tables placed within the porch of the primitive churches of the Order of Cluny and serving as supports for the portable holy water fonts thereon, notes that as early as St. Peter’s at Montier-Saint-Jean, the basin part of which rests on a Corinthian column. In the beginning of the thirteenth century fonts were cut from stone and assumed in teriorly the form of a hemisphere and exteriorly that of a polygonal prism. But from this time forward, and during a long period, above the basin height and decorated with a cross and two fishes. These details once given, we can enter more fully into the history of holy water fonts in the West.

pounds. Valves of the tridacna gigas are used as holy water stoups in the church of Saint-Sulpice at Paris, the Republic of Venice having presented them to England.

The most ancient portable fonts are in the form of pails and shaped like truncated cones. Those most prized for their antiquity are of lead or bronze, sometimes even of wood covered with a sheet of wrought metal. However, if there ever existed silver or silver-gilt fonts, they have not come down to us. The leaden pail found at Carthage, on which the raised designs seem to have been aimlessly selected, nevertheless presents a remarkable peculiarity, in that it bears a Greek inscription in which one can readily grasp the allusion to holy water: "Take water from thy font and the voice of the Lord is upon the waters." The second part of this epigraph is to be seen on a bronze holy water font preserved in the Gaddi Museum at Florence: "The voice of the Lord is upon the waters; the God of majesty hath spoken." These quotations are from the twenty-eighth psalm, third verse. The Vatican Museum has a bronze pail equipped with a handle and ornamented with carved sketches of the Saviour and the Twelve Apostles, each figure being designated by the name in Greek letters. A Merovingian sarcophagus, found near Abbeville, contained the ruins of a small wooden pail covered with a thin plate of bronze; and in the Dublin Museum is a small Anglo-Saxon baptismal font of wood, with a wooden column and furnished with a handle. In our opinion, both of these pails did service as fonts.

Pails of this style remained a long time in use; they were often made of precious metals embossed, or even cut out of hard stone or from a piece of ivory. The crystal vase in the treasury of Venice is an antique vessel used for liturgical purposes, perhaps in the tenth century. But still more remarkable is the eleventh-century font preserved in the treasury of the cathedral of Milan. Slender in form and slightly funnel-shaped, it is ornamented with five arcades serving as frames for the Blessed Virgin and the Four Evangelists. On the archivolts of the arcades are five verses designating the different personages and still higher runs a frieze of foliage bearing an inscription. This ivory pail measures about 5 inches in height by 4-7 in diameter on the upper rim and 3-5 at the base. The base of the Lyons cathedral also has an ivory font which is the product of Italian art. But the most ancient of these pails is found in the treasury of Aachen, and it is believed to date from the ninth century. At St. Mark's, Venice, there is an antique font hewn out of a garnet.

It would be impossible to enumerate many of the metal fonts, although, in most of them, the shape and workmanship are of decided interest. The pail seems to have always prevailed but to have been varied according to fancy. Thus, in the fourteenth century, it was the custom for the donors to apply their coat-of-arms to these gifts, the product of the goldsmith's art. In the sixteenth century the font was more marked and the goldsmith sought everywhere pretexts for the exercise of his ingenuity.

In the Middle Ages holy water was held in such respect that it was not even taken from the font unless by means of an aspersorium or holy water sprinkler, attached by a small chain. Thenceforth the aspersorium was the inseparable accompanying of the font. For their aspersions the ancients used laurel branches or sometimes tufts on the end of a turned handle. The oldest representations of the Christian aspersorium show a branch that was dipped into the font. For this purpose branches of hyssope, palm, and boxwood were employed; they were wrapped in the tail of the fox was pressed into service, its long silky hair making it singularly adaptable. In Old French the word was called goupil, hence the word goupillon, one of the expressions for holy water sprinkler. It would seem that about the thirteenth century the aspersorium assumed the modern form of a stick surmounted by a rose covered with bristles; at least such is what we infer from miniatures. Little by little the handles of the sprinklers came to be very richly ornamented. The inventory of the Duke of Anjou mentions a "square aspersorium with three knops", and the inventory of Philip the Good, "an old silver aspersorium".

In the rules prescribed by St. Charles Borromeo for the construction of fonts in the Diocese of Milan, we read the following: "Hitherto we have treated of the sanctity and several other things, let us now speak of the vessel intended for holy water. It shall be of marble or of solid stone, neither porous nor with crevices. It shall rest upon a handsome wooden column and shall not be placed outside of the church but within it and, in so far as possible, to the right of those who enter. There shall be one at the door by which the men enter and one at the women's door. They shall not be fastened to the wall but removed from it as far as convenient. A column or a base will support them and it must remain nothing profane. Each sprinkler shall be attached by a chain to the basin, the latter to be of brass, ivory, or some other suitable material artistically wrought."

Private fonts are generally smaller than the portable ones used in churches. There were very rich ones in gold and silver-gilt; in the fifteenth century, with a wooden column and furnished with a handle. In later times they have preferably been given the shape of a small round basin suspended from a plate fastened to the wall; hence they are "applied fonts". They are made of all materials, ivory, copper, porcelain, talc, and glazed sandstone.

H. LECLERCQ.

Holy Week is the week which precedes the great festival of the Resurrection on Easter Sunday, and which consequently is used to commemorate the Passion of Christ and the events which immediately led up to it. In Latin it is called hebdomada major, or, less commonly, hebdomada sancta, while the Greeks combine both epithets, thus writing it ἡ βδομάδα σακείων. Similarly, in most modern languages (except for the German word Churwoche, which seems to mean "the week of lamentation") the interval between Palm Sunday and Easter Day is known by excellence as Holy Week.

Antiquity of the Celebration of Holy Week.—From an attentive study of the Gospels, and particularly that of St. John, it might easily be inferred that already in Apostolic times a certain emphasis was laid upon the memory of the last week of Jesus Christ's mortal life. The supper at Bethania must have taken place on the Saturday," six days before the passover (John 12, 1), and the triumphant entry into Jerusalem was made from there next morning. Of Christ's words and deeds between this and His Crucifixion we have a relatively full record. But whether this feeling of the sanctity belonging to these days was primitive or not, it in any case existed in Jerusalem at the close of the fourth century, for the Council of Nice, which held a detailed account of the whole week, beginning with the service in the "Lazarium" at Bethania on the Saturday, in the course of which we read the narrative of the anointing of Christ's feet. Moreover, on the next day, which, as Etheria says," began the week of the passover", which was being observed, and which the Great Week was, a special reminder was addressed to the people by the archdeacon in these terms: "Throughout the whole week, beginning from to-morrow, let us all assemble in the Martyrium, that is the great church, at the ninth
The central feature of the service proper to this day as it was in the time of Ætheria, is the procession of palms. Perhaps the earliest depiction of the procession in the West is to be found in the Spanish "Liber Ordinum" (see Fétis, "Monumenta Liturgica", V, 179), but traces of such a celebration are to be met with in Aldhelm and Bede as well as in the Bobbio Missal and the Gregorian Sacramentary. All such writers record the procession of the faithful, blessed in a place apart (e.g. some eminence or some other church of the town) and are then borne in procession to the principal church, where an entry is made with a certain amount of ceremony, after which a solemn Mass is celebrated. It seems highly probable, as Brugenses, 1907, 200-212, that this ceremonial embodies a living memory of the practice described by Ætheria at Jerusalem. By degrees, however, in the Middle Ages a custom came in of making a station, not at any great distance, but at the churchyard cross, which was often decorated with box or evergreens (cruce basilicae), and from here the procession advanced to the church. Many details varying with the locality marked the ceremonial of this procession. An almost constant feature was, however, the singing of the "Glória laus", a hymn probably composed for some such occasion by Theodiptus of Orëans (c. A.D. 810). Less uniformly preserved is the custom of children bearing a representation of the Blessed Sacrament in a portable shrine. The earliest mention of this usage seems to be in the customs compiled by Archbishop Lanfranc for the monks of Christ Church, Canterbury. In Germany, and elsewhere on the Continent, the manner of the entry of Christ was sometimes depicted by dragging along a wooden figure of an ass on wheels (the Palmetes), and in other places the celebrant himself rode upon an ass. In England and in many parts of France the veneration paid to the churchyard cross or to the rood cross in the sanctuary by genufлексions and prostrations became almost a central feature of the service. Another custom, that of scattering flowers or sprays of willow and yew before the procession, as it advanced through the churchyard, seems to have been misinterpreted in course of time as a simple act of respect to the dead. Under this impression the practice of "flowering the way" on Palm Sunday and the following day in many country districts of England and Wales. With regard to the form of the blessing of the palms, we have in the modern Roman Missal, as well as in most of the older books, what looks like the complete Proper of a Mass—Introit, Collect, Gradual, Preface, and other prayers is paraphrased. It is probable that this form of benediction was adopted almost everywhere by Christians before the end of the fourth century. Indeed it is quite possible that the fast of special severity is considerably older, for Dionysius of Alexandria (c. A.D. 290) speaks of some who went without food for the whole six days (see further under Lent). The week was also known as the week of the dry fast ( Yapı isaya), while some of its observances were very possibly influenced by an erroneous etymology of the word Pasch, which was current among the Greeks. Pasch really comes from a Hebrew word meaning "passage" (of the sea or of the river), but the Greeks took it to be identical with ἐκδρομή, to suffer.

Special Observances of Holy Week.—We may now touch upon some of the liturgical features which are distinctive of Holy Week at the present time. Palm Sunday comes first in order, and although no memory now remains in our Roman Missal of the supper at Bethany and the visit to the "Lazarium", we find from certain early Gallican books that the preceding day was once known as "Lazarus Saturday", while Palm Sunday itself is still sometimes called by the Greeks ὑπανα τοῦ Ἀρσα (the Sunday of Lazarus).
tion of penance, on which ground it was sometimes called Dominica Indulgentia.

Tenebrae.—The proper Offices and Masses celebrated during Holy Week do not notably differ from the Offices and Masses of the subsequent seasons that follow Passion Week. But it has long been customary in all churches to sing Matins and Lauds at an hour of the afternoon or evening of the previous day at which it was possible for all the faithful to be present. The Office in itself presents a very primitive type in which hymns and canticles supplanted the liturgical formulae. 'Tracts' were included, but the most conspicuous external feature of the service, apart from the distinctive and very beautiful chant to which the Lamentations of Jere-
mias are sung as lessons, is the gradual extinction of the fifteen candles in the Tenebrae hearses', or triangular candeliace, as the service proceeds. At the end of the Benedicte at Lauds only the topmost cand-
le, considered to be typical of Jesus Christ, remains alight, and this is then taken down and hidden be-
hind the altar while the final Miserere and collect are said. At the conclusion, after a loud noise emblematic-
ical of the convulsion of nature at the death of Christ, the lights were restored to its original illumination.

On account of this gradual darkening, the service, since the ninth century or earlier, has been known as "Tenebrae" (darkness). Tenebrae is sung on the evening of the Wednesday, Thursday, and Friday, the antiphons and proper lessons varying each day.

Maundy Thursday, which derives its English name from Mandatum, the first word of the Office of the washing of feet, is known in the Western liturgies by the heading "In Cena Domini" (upon the Lord's supper). This marks the central rite of the day and the oldest of which we have explicit record. St. Augustine informs us that on that day Mass and Communion followed the evening meal or supper, and that on this occasion Communion was not received fasting. The primitive conception of the festival survives to the present time in this respect at least, that the clergy do not offer Mass privately but are directed to Communicate together at the public Mass, like guests at one table. The Liturgy, as commemorating the institution of the Blessed Sacrament, is celebrated in white vestments with some measure of joyous solemnity. The "Gloria in excelsis" is sung, and during it there is a general ringing of bells, after which the clergy remain silent until the reading of the Easter Eve (Holy Saturday). It is probable that both the silence of the bells and the withdrawing of the lights, which we remark in the Tenebrae service, are to be referred to the same source—a desire of expressing outwardly the sense of the Church's bereavement during the time of Christ's Passion and Burial. The observance of silence during these three days dates at least from the eighth century, and in Anglo-Saxon times they were known as "the still days"; but the connexion between the beginning of this silence and the ringing of the bells at the Gloria only meets us in the eight centuries. In the early Church, before Maundy Thursday attention centres upon the reserva-
tion of a second Host, which is consecrated at the Mass, to be consumed in the service of the Presanctified next day. This is borne in solemn procession to an "altar of repose" adorned with flowers and lighted with a profusion of candles, the hymn "Pange lingua gloriosi corporis mysterium" being sung upon the way. So far as regards the fact of the consecra-
tion of an additional Host to be reserved for the Mass of the Presanctified, this practice is very ancient, but the elaborate observances which now surround the altar of repose are of comparatively recent date. Some churches, in the later Middle Ages, to be shown to the "Easter Sepulchre"; but here the Blessed Sacrament was kept, most com-
monly, from the Friday to the Sunday, or at least to the Saturday evening, in imitation of the reposa of Christ's sacred Body in the Tomb. For this purpose a third Host was usually consecrated on the Thursday. In the so-called "Gelasian Sacramentary," probably representing several centuries of usage, Masses are provided for Maundy Thursday. One of these was associated with the Order of the reconcilia-
tion of penitents (see the article Ash Wednesday), which for long ages remained a conspicuous feature of the day's ritual and is still retained in the Pontific-
al Masses. The blessing of the Holy Oils (q. v.), an important function still attached to this day in every cathedral church. Finally, Maundy Thursday has from an early period been distinguished by the service of the Maundy, or Washing of the Feet, in memory of the preparation of Christ for the Last Supper, as also by the strip-
ing and washing of the altars (see Maundy Thurs-
day).

Good Friday is now primarily celebrated by a service combining a number of separate features. We have first the reading of three sets of lessons followed by "bidding prayers." This probably represents a survival of ancient and the service is still called "bidding" because of the lessening of频率 services. More extemous survivals remain in the Gallican and Ambrosian Liturgies. The fact that the reading from the Gospel is represented by the whole Passion according to St. John is merely the accident of the day. Secondly there is the "Adoration" of the Cross, equally ancient as a sacrifice of great antiquity, the first trace of which have already been noticed in connexion with Athéria's account of Holy Week at Jerusalem. With this veneration of the Cross are now associated the Improperia (reproaches) and the hymn "Pange lingua gloriosi lauraeum certaminis". The Improperia, despite their curious mixture of Latin and Greek—ipse theos; sanctus Deus, etc.—are probably not so ex-
tremely ancient as has been suggested by Probst and others. Although the earliest suggestion of them may be found in the Bobbio Missal, it is only in the Pontifical of Prudentius, who was Bishop of Troyes from 846 to 861, that they are clearly attested (see Edm. Bishop in "Downside Review", Dec., 1899). In the Middle Ages the "creeping to the cross" on Good Friday was a practice which inspired special devotion, and saintly monarcs like St. Louis of France set a conspicuous example of humility in their performance of it. Finally, the Good Friday sermon ends with the solemn Mass of the Passion, which, of course, no real sacrifice, but, strictly speaking, only a Communion service. The sacred ministers, wearing their black vestments, go to fetch the consecrated Host preserved at the altar of repose, and as they return to the high altar the choir chant the beautiful hymn "Vexilla regis prodeunt" composed by Venant-
ius Fortunatus. Then wine is poured into the chal-
ice, and a sort of skeleton of the Mass is proceeded with, including an elevation of the Host after the Pater Noster. But the great consecratory prayer of the Canon, with the words of Institution, are cut out, short and abrupt as it usually is. In the early Church, on Good Friday, the Easter Vigil was quite commonly a day of general Communion, but now only those in danger of death may receive on that day. The Office of Tenebrae, being the Matins and Lauds of Holy Saturday, is sung on Good Friday evening, but the church otherwise remains bare and desolate, only the crucifix being unveiled. Such devotions as the "Three Hours" at midday, or the "Maria Desolata" late in the evening, have of course no liturgical character. (See also Good Friday.)

The service of Holy Saturday has lost much of the significance and importance which it enjoyed in the early Christian centuries owing to the irresistible tendency to prolong the Easter Vigil, and the hour of its celebration. Originally it was the great Easter vigil, or watch-service, held only in the late hours of the Saturday and briefly terminating
before midnight. To this day the brevity of both the Easter Mass and the Easter Matins preserves a memorial of the fatigue of that night watch which terminated the austerities of Lent. Again the consecration of the new fire with a view to the lighting of the lamps, the benediction of the paschal candle (q.v.), with its subsequent night turned into day and its reminder of the glories of that vigil which we know to have been already celebrated in the time of Constantine, not to dwell upon the explicit references to "this most holy night" contained in the prayers and the Preface of the Mass, all bring home the incoherence of carrying out the service in the morning, twelve hours before the Easter "vigil" can strictly speaking be said to have begun. The obtaining and blessing of the new fire is probably a rite of Celtic or even pagan origin, incorporated in the Gallican Church service of the eighth century. The magnificently Preconium Paschale", known from its first word as "the Exeunt", was originally, no doubt, an improvisation of the deacon which can be traced back to the time of St. Jerome or earlier. The Prophecies, the Blessing of the Font, and the Litanies of the Saints are all to be referred to what was originally a very essential feature of the Easter "vigil", viz., the baptism of the catechumens, whose performance had been carried on during the day in the church. The emphasis at frequent intervals by the "scrutinies", of which not a few traces are still preserved in our Lenten liturgy. Finally, the Mass, with its joyous Gloria, at which the bells are again rung, the uncovering of the veiled statues and pictures, the triumphal Alleluia, which mark nearly every step of the liturgy, proclaim the Resurrection as an accomplished fact, while the Vesper Office, incorporated in the very fabric of the Mass, reminds us once more that the evening was formerly so filled that no separate hour was available to complete on that day the usual triduum of Holy Week. A strict holy day, like Good Friday, is "alturgical", as belonging to the days when the Bridal groom was taken from us. Of this a memorial still remains in the fact that, apart from the one anticipated Mass, the clergy on that day are not free either to celebrate or to receive Holy Communion.

HOLYWOOD

Holywell, a town in North Wales, situated on the declivity of a hill overlooking a picturesque valley, through which flows a broad stream, the affluent from St. Winefride's Well, joining the River Dee at a distance of two miles from the town. It was once a flourishing place because of the lead and copper mines in the vicinity, but with the decay of the mining industry its commercial glory has fled, and at present the only attraction to visitors is St. Winefride's miraculous well.

I. The Miraculous Well.—For more than a thousand years this well has attracted numerous pilgrims. Two documents of the twelfth century, preserved in the British Museum, and written by the Benedictines, give us its history, with the earliest record of the miraculous cures effected by its waters. These ancient cures included cases of dropping, paralyse, gout, melancholia, scias, cancer, alienation of mind, blood spitting, obstinate cough, chronic pain and sickness of the bowels, also deliriums, epilepsy, and spirits. The concourse of pilgrims to the well continued in the sixteenth century during the days of persecution, and Dr. Thomas Goldwell, Bishop of St. Asaph, who went into exile at the accession of Elizabeth, obtained from the sovereign pontiff the confirmation of certain indulgences granted by Martin V (1417–91) to pilgrims who visited the well. In the seventeenth century, in spite of the severe penal laws, pilgrims still resorted to the well, and it is said that they had been kept of many remarkable cures, one being that of Venerable Father Oldcorne, S.J., the martyr, who was healed miraculously of a gangrene that had formed in the roof of his mouth.

II. Origin and History of the Well.—The stream is said to have burst through the ground more than 1200 years ago on the spot where St. Winefride (Gwenfri) was slain by Caradoc, son of an Armorician prince, about the year 634 (see WINEFRI, St.), and has flowed unceasingly ever since. The place where it rises was previously known as Sechonst or the "Dry Valley"; but the name was changed by Ffynnon Gwenfri (Winefride's Well), and later to Trefynnon (Holywell), the appellation which it retains to the present day. In 1093 the church at Holywell and the sacred fountain were given by Adeluia, Countess of Chester, to the monastery of St. Werburgh in that city. In 1115 the church was consecrated, and the well, went on a pilgrimage to St. Winefride's Well. In 1240 David, son of Llewellyn, Prince of Wales, granted the church and well with extensive possessions to the monks of Basingwerk Abbey, who held them until 1537, the year of the dissolution. King Richard III ordered the sum of ten marks to be paid annually from the treasury for the support of the chapel of St. Winefride, and the stipend of the priest, and a few years later, probably before 1495, the beautiful buildings now surrounding the Well were erected.

III. Description of the Well.—The buildings referred to are in the perpendicular style, and were erected over the spring. They comprise, Holywell Church, in the name of St. Winefride; the Church of St. Edmund of Richmond and Derby, the mother of King Henry VII; but the armorial bearings introduced into the sculpture show that several noble Welsh families, including those of Stanley, Pennington, and Lewis, had a share in the work. Though time has dealt somewhat harshly with the stonework, sufficient remains to show that it was originally a most beautiful structure, abounding in delicate tracery and other carved work. The spring forms a basin enclosed by an octogonal parapet, from which rise eight delicately chiselled columns; these meet overhead in a beautiful tracery and form a sort of canopy. Above this was once the chapel or oratory of St. Winefride, where pilgrims were wont to spend the night in vigil before bathing. Unfortunately it is now in Protestant hands, and used for the Welsh services of the parish church; but the Well itself, the property of the Corporation of Holywell, has for some considerable time been held at an annual rent by the Jesuit Fathers of the Mission.

The water of the spring is of a pale bluish colour, and so clear that at the bottom of the basin, seven feet below the surface, even a pin may be seen. The stones at the bottom, and a portion of the spring, are marked with deep crimson or purple stains, which Catholic tradition loves to regard as the blood of the martyr, but which naturalists account for as a peculiar kind of moss, *Jungermannia aspleniodes*. The spring sends forth eighty-one tons of water per minute, the water being very cold, never rising above 30°. All the rocks and stones are covered by the Benedictines. Chemical analysis has never detected any mineral or medicinal properties peculiar to it, that would account for the extraordinary cures, which are often instantaneous. The overflow from the octagonal basin passes into a long narrow piscina, which is entered by steps at either end. In the bowels, also deliriums, epilepsy, and spirits. The concourse of pilgrims to the well continued in the sixteenth century during the days of
hard limestone steps are literally worn away by the bare feet of pilgrims. From this piscina the water passes under a low arch into a small swimming bath, with bathing cots on either side, and then flows onward through Greenfield Valley to join the River Dee, ascending it in a series of rapid, rocky, wooded, and fishable streams and old sawmills. In a corner opposite the entrance to the crypt where the spring rises, a statue of St. Winefrida stands in a decorated niche. The pilgrims on emerging from the piscina throw themselves on their knees before this statue, earnestly imploring the saint's intercession.

HOLYWOOD

Christopher, Latinized, A Sacro-Bosco, Jesuit; b. at Artane, Dublin, in 1559; d. 4 September, 1626. His family, which draws its name from Hollywood (Saithne), a village near Dublin, had long been distinguished both in Church and State. Christopher Hollywood studied at Padua, entered the Society of Jesus at Dôle in 1579, was afterwards professor of philosophy at the Pont-Montan and Ferrara, and Padua, and knew Bellarmine in the latter places. In 1598 he was sent to Ireland, but was arrested on his way and confined in the Gatehouse Prison, the Tower of London and Wisbech Castle, and was eventually shipped to the Continent after the death of Queen Elizabeth. He then resumed his interrupted journey and reached Ireland on St. Patrick's Eve, 1604. This same year he published two Latin controversial works at Antwerp. He was soon appointed superior of his brethren, a post of great importance in the absence of all bishops, for it had been impossible, during the fiery trial of Elizabeth's reign, even to present their successors at the university, and they stayed and reports on the state of Ireland, of which over a score have been printed by Hogan, throw a vivid light on the history of the country. On the accession of King James, there had been a reaction in favour of Catholicism, and if this was strong even in England (see GUNPOWDER PLOT), it was far stronger in Ireland, leading in many cases to the reestablishment of the old Catholic churches. Fathers Hollywood and his fellow-Jesuits had their hands full of work, reconquering the lapsed, setting quarrels, and healing the numberless wounds which the barbarous persecution had inflicted on the country. Though they only found forty-six Catholics in Ireland when they landed, their number rapidly increased, and there were forty-two when he died, besides sixty others in training or occupied in teaching on the Continent. The times of peaceful progress soon passed away, and after the imposition of the Oath of Allegiance there followed a persecution as severe as that of Elizabeth, and far more systematic. By the enforced education of their children as Protestants, many noble and influential families were lost to the Faith, and the lands of Catholics were freely given to Protestant settlers from England. The prospect became ever more gloomy. Yet Hollywood's reports show that here and there the Catholics continued to make substantial progress. At Kilkenny, for instance, a school which lasted till Cromwell's time was begun in 1619. Five "residences," or bases for Jesuit Fathers, were established, whence missionaries were sent out in all directions, who worked with great success. They not only lectured, and to a great extent, wrote to the islands and sea-coast of the west of Scotland. These years were perhaps the most laborious and fruitful of the Irish Jesuit mission. Hollywood's last extant report is for the year 1624.

HOGAN, Bernard Ignatian (Dublin, 1800); IDEM. Distinctiones..., Sessio stera, Januarii (London, 1682), 394-50; SOMMERVOGEL, Bibliographie de la C. de J. (Brussels, 1893), IV. 446; Irish Ecclesiastical Record (Dublin, 1873) J. H. POLLEN.
topher von Lichtenstein, Bishop of Chiemsee, suffragan and principal adviser of the Archbishop of Salzburg, he made a good beginning. His first colleagues were Georg Rögner, pastor of Neumarkt, and Wenzel von Haas, pastor of a benefice at Ingolstadt, George Gündl, pastor of Mailing near Ingolstadt, and Michael Rottmayer, pastor of Leinting. Priests joined from the Diocese of Chiemsee and from other dioceses. At the death of Holzhauser the community had members at Chiemsee, St. Hilarius, St. Martin's, St. Gregorius, St. Emmeram, in Würzburg, and in Frisinga.

In 1643 Holzhauser took control of the seminary at Salzburg, and placed it under the direction of Rottmayer; in 1649 it was transferred to Ingolstadt. The Seminary of St. Kilian and later many other seminaries were entrusted to the care of the community. In 1651, one of the members was sent to Rome to obtain papal sanction for the institute and its rule. Pope Innocent X lauded the work, but gave no formal approbation. This was given on 7 June, 1680, by Innocent XI at the request of Emperor Leopold I. After this the community spread in Poland, Sicily, and Spain. In Rome a house had been assigned for them by the pope, but it was not long occupied. The institute had many enemies and did not meet with the appreciation it deserved, so that at the end of the eighteenth century it became extinct, after having had 1555 members (according to the necrology preserved in the archives of the cathedral of Mainz). By the end of the nineteenth century the institute were George Gündl, d. 1666; Michael Rottmayer, d. 1681; Stephen Hofer, d. 1693; John Appel, d. 1700; Sebastian Wittmann, d. 1725; Anthony Kippel, d. 1730; Matthew Kercher, d. 1742; Lambert Gastel, d. 1769; John Christopher Hunold, d. 1770. During the last century the wish was frequently expressed that Holzhauser's institute might be revived or similar unions formed.

Writing.—(a) "Constitutiones et exercitia spiritualia Clericorum Secularium in communi viventium" (Cologne, 1662; Würzburg, 1669; Rome, 1680; Mainz, 1782, etc.). These constitutions, used in many seminaries during the seventeenth and eighteenth centuries, were of value also for the spread of primary education among the people (Ratholik, XXXIX, 359). In the third chapter Holzhauser advises his disciples to be solicitous in immediately and extensively establishing schools in which the young are taught reading, writing, and the rudiments of religion. A new edition was published by Gaddel at Orléans and Paris in 1861 under the title "Venerabiles servi Dei Bartholomaei Holzhauser opuscula ecclesiasticae." They contain: (1) "Constitutiones"... (2) "Constitutiones pro spirituali temporali et aeternali exercitio instituti clerici"... (3) "Stationes quotidianarum exercitiorum spiritualium"... (4) "De diversis orandi modis et de modo meditandi"... (5) "Manipulus parum praece"... (6) "Instructiones de viificacion et principii practici pro statu eletorum et aliorum institutiorum contra notorius catholicus valde utiles"... (7) "Epiestola fundamentalis," written in 1644 for the consolation and encouragement of his disciples in their heavy trials, when enemies tried to destroy the community... (8) "De humilitate"... (9) "Tractatus de discretione spirituum"... (10) "Documenta pro iis qui conversionem historiocrim et infidelium se impendunt"... (11) "Visiones"... The last-mentioned work contains the ten visions of Holzhauser, presented by him in 1646 to Emperor Ferdinand III to and to Maximilian of Bavaria, together with the explanations given to Vaiwars, confessor of Maximilian.

The are entirely "De nubia Monarchia et duabus sedibus"... "De a s. Maiclae archangelo et sedibus"... "De ecclesia sponsa Dei"... "De propri personae Jesu"... "De aeggenesia Danubii"... "De verme grandis"... "De consersione Germaniae"... "Excrobrovatio vitiorum, excrobro impienientie, quomoque reveratur"... "De duabus personis"... These visions, with a commentary on their part, were fulfilled; they were published in German in 1849 by Ludwig Clarus. One of the prophetical visions is about England. Holzhauser foresees the execution of Charles I and the complete ruin of the Church in that kingdom, but also that, after the Holy Sacrifice has ceased for 120 years, England would be converted and do more for the Church than it had done after its first conversion. This seems to have been fulfilled, for prohibition of Mass under penalty of capital punishment was enacted in 1658, and partially recalled in 1778 (Rhode Island, 1663-1683).

(c) "Interpretatio Apocalypsis usque ad cap. XV. v. 40." This commentary, which Holzhauser wrote at Leukenthal, exists in several manuscript copies; printed in 1784 at Bamberg; in German in 1849 at Ratisbon by Clarus; in 1850 at Vienna. Holzhauser's idea is: The seven stars and the seven candlesticks seen by St. John signify seven periods of the history of the Church from its foundation to its consummation at the final judgment. To these periods correspond the seven churches of Asia Minor, the seven days of the Mosaic record of creation, the seven ages before Christ, and the seven gifts of the Holy Ghost. Since, he says, all life is developed in seven stages, so God has fixed seven periods for regeneration. After the first age of the Church the Church, and from Christ and the Apostles to Pope Linus and Emperor Nero, is typified by the first day of creation Spiritus Dei ferebatur super aquas", the gift of wisdom and the age from Noe. Similarly he treats (2) the status iritisarius, the days of persecution; (3) status Illuminatorius from Pope Sylvester to Leo III; (4) status pacificus from Leo III to Leo X; (5) status afflictiose et purgatorius from Leo X to a strong ruler and holy pope; (6) status consolations from that holy pope to the birth of Antichrist; (7) status desolations from Antichrist to the end of the world. The central features of this commentary—The strong ruler and the holy pope, a favourite subject of medieval prophecy, as well as the division of church history into seven periods; the idea that the Holy Roman Empire is to be the last on earth, and Choroeus, the Persian king, the predecessor of Antichrist; the special significance of the number 1290, are borrowed from Joachim di Fiore (d. 1220; cf. "Hist.-pol. Blätter," CXVIII, 142). Still the commentary is considered an instructive and edifying book.

Francis Mershman.

Homes.—This term, when used in an eleemosynary sense, covers all institutions that afford the general assistance to those who are both active and dependent. Homes differ from hospitals, inasmuch as the primary object of the latter is medical treatment of the sick; and from hotels, because these do not, as a rule, aim at being a substitute in all respects for a natural home, and because the majority of their patrons are neither dependent nor defective. As here used, the word home has about the same general significance as asylum, except that the latter term still retains something of its original meaning, of refuge, and the asylum sometimes includes, as an important part of its provisions, medical treatment of its inmates. Thus we speak of insane asylums and "de septem hospitibus, but rarely of homes for the insane. Nevertheless, the term homes is extended to a great variety of institutions. There are homes for the blind, the deaf, the aged, the incurable, the fallen, soldiers, sailors, orphans, foundlings, and paupers. They may
be permanent or temporary, according to the period of time that the inmates are permitted to spend in them; but the general character of all the persons to whom they give shelter is defectiveness and, as a rule, inability to care for their own support. A workingmen’s girls’ home, or a workingmen’s home, is a misnomer, since these places are merely a special kind of hotel or boarding-house.

The first homes of which we have any knowledge were included in the zenodochia, or hospitals, that arose under the auspices of the Church during the reign of Constantine the Great. These institutions gave shelter not only to the sick, strangers, and travelers, but to widows, foundlings, and the homeless generally. Within a short time after their origin, there was at least one hospital in every episcopal city, and they were not unknown in the smaller towns and even in the country places. The monastic hospitals had departments for the care of the blind, the deaf, and the insane. It was not until the twelfth century that distinct homes for defectives became of any importance. The first of these were the leper-houses. (See Leprosy.) For a long time after that date the majority of homes for defectives were in some department of or in connexion with the hospitals. Indeed, the monastic hospitals and the municipal hospitals were the centres for the relief of all forms of distress during the later Middle Ages and down to the time of the Reformation. Their rich endowments formed the principal means of carrying on so many forms of charitable activity that are now taken care of by many different agencies. Among the decrees of the Council of Trent for the regulation and reformation of the system of poor-relief, we find several with special application to hospitals. In France no separate homes for defectives came into existence until the time of Louis XIV. This monarch founded several institutions in Paris and in some of the other large cities of his kingdom for the special care of the poor, foundlings, and other helpless classes. The magnificent work of St. Vincent de Paul naturally comes to mind here. In Germany defectives continued generally to be cared for in connexion with the hospitals until the middle of the eighteenth century. The same general condition prevailed long after the Reformation in Italy and Spain. At present there are homes under Catholic auspices for the care of all kinds of defectives in every country of Christendom. Most of these charitable religious communities are chiefly communities of women. The Little Sisters of the Poor and the Sisters of the Good Shepherd are merely two conspicuous examples of religious communities that manage institutional homes. In the United States, and in most of the countries of Europe, are to be found and supported by the various forms of dependency, under the management of the public authorities. The system of almshouses, or workhouses, in the British Isles and in Germany affords typical instances. According to the volume of the United States Census on “Benevolent Institutions”, the total number of hospitals and asylums in that country at the end of the year 1904 was 2,392, of which 254 were public, 1284 private, and 874 ecclesiastical. The whole number of inmates was 212,782.

The question of the precise value of homes is so complex that it easily gives rise to a great variety of opinions. Extremists condemn them utterly or approve the practice of the whole, while others, with no adverse motives, counsel the truth lies somewhere near the middle. An institutional home is obviously of great benefit to all persons who cannot obtain proper care elsewhere. It can supply all the purely physical comforts of the natural home, and thus meet the basic human needs. If it is properly managed it bears some resemblance to the conditions of family life, by fostering a bond of affection and a consciousness of community of interests. Obviously, however, this basis can never fully take the place of community of blood. Most of the varied and rich relationships of the natural home and the natural family are impossible even in the ideally managed institution. The very size of the group makes the latter a serious obstacle to anything like the care and affection that is within the reach of the individual in a family. Moreover, the physical and mental inconveniences of following a uniform routine of daily life can rarely become a matter of indifference to the individual, and not infrequently will more than offset the more substantial material comforts. There is always a lack of opportunity for that individual self-direction which is an essential part of normal education and self-development. This criticism applies more particularly to homes for children. On the other hand, life in an institutional home is often preferable to life in a family on the boarding-out plan. This is due to the absence of even that imitation of the paternal or maternal attitude which the former aims to provide.

The person who is boarding a defective fellow-being is under a strong temptation to see in their mutual relationship only a business arrangement. Finally, it must be noted that institutional warfare is often, and usually are, better substitutes on their human side for the natural homes than those which are under the direction of secular persons. The directors of the latter cannot have, as a rule, the motive or the capacity for an equal degree of personal kindness and affection. Underneath, however, our Catholic homes are not infrequently inferior in the matter of material equipments and comforts. (See Foundling Asylums; Good Shepherd, Sisters of the; Orphanages; Poor, Little Sisters of the.)

HOMICIDE. The Churches of the Church a Proof of Her Divinity, 3rd ed. (Dublin, 1885); Henderson, Modern Methods of Charity (New York, 1904); Raabinger, Armenpflege (Freiburg, 1884).

John A. Ryan.

Homicide (Lat. homo, man; and cedere, to slay) signifies, in general, the killing of a human being. In practice, however, the word has come to mean the unjust taking away of human life, perpetrated by one distinct from the victim and acting in a private capacity. For the purposes of this article, therefore, account is not taken of suicide, nor of the carrying out of the penalty of death by due process of law. (See Punishment; Capital.) The direct killing of an innocent person is, of course, to be reckoned among the most grievous of sins. It is said to happen directly when the death of the person is viewed either as an end attractive in itself, or at any rate is chosen as a means to an end. The malice discernible in the sin is primarily chargeable to the violation of the supreme ownership of God over the lives of His creatures. It arises as well from the manifest outrage upon one of the most conspicuous and cherished rights enjoyed by man, namely the right to life. For the scope contemplated here, a person is regarded as innocent so long as he has not by any responsible act brought any hurt to the community or to an individual comparable with the loss of life. Homicide is said to be indirect when it is no part of the agent’s plan to bring about the death which occurs, so that this latter is not intended as an end nor is it selected as a means to further any purpose. In this hypothesis it is, at most, permitted on account of the commotion created, or so great an evil as is the destruction of human life. Thus, for instance, a military commander may train his guns upon a fortified place, even though in the bombardment which follows he knows perfectly well that many non-combatants will perish. The sufficiency of the rule can be seen by the fact that it is only the public good to be subordinated by the defeat of the enemy. Then, however, the untoward death of a persecutor is the outcome of an action which is prohibited
HOMICIDE

precisely because of the founded likelihood of its having this fatal result, then in the court of conscience the doer is held to be guilty in spite of his disclaimer of all intention in the matter. Hence, for example, one who fires a shot into the pubic temple, whether in self-defense, whilst protesting that he has no wish to work any mischief, is, nevertheless, obviously to be reproached as a murderer if perchance his bullet has killed anybody.

For the protection of one's own or another's life, limb, chastity, or valuables of some moment, it is agreed upon universally that anyone may use violence with violence, even to the point of taking away the life of the unjust assailant, provided always that in so doing the limits of a blameless defence be not exceeded. It is proper to note (1) that the danger apprehended for oneself or another must be actual and even, so to speak, imminent, not merely prospective. Hence, the teaching here propounded cannot be adduced to justify the use of force for purposes of reprisal or vengeance by a private individual. This latter is a function belonging to the public authority.

(2) No more violence may be employed than is requisite to prevent the goods or person enumerated upon which an unwarranted assault has been made. The right of self-defence so universally attributed does not necessarily presuppose in the aggressor an imputable malice. It is enough that one's life or some other possession comparable with life depended on the threaten outside of the tunnels of the law. One might, for example, kill a lunatic, or one ceased with drink, although there is no malice on their part, if this were the only effective way to head off their onset. St. Thomas is careful to say that even in self-defence it is unlawful to kill another directly, that is, to intend immediately the death of that other. His mind is that the formal volition of the self-defender should entirely be to preserve his own life and repel the onslaught, whilst as to the loss of life, which, as a matter of fact, ensues, he keeps himself in a purely permissive attitude. This contention is combated by De Lugo and some others, who believe it to be right to choose expressly the killing of another as the means to self-defence. In conformity with the Thomistic doctrine is the axiomatic utterance that a private individual may never lawfully kill anyone whatever, because in self-defence one does not, technically speaking, kill, but only end a threat or stop the trespass. According to the Angelic Doctor, it would follow that only by due operation of law may a human being ever be directly done to death.

Unlike other instances of damage wrought, the murderer cannot offer an adequate indemnity. For one thing, he cannot restore the life he has destroyed. There is no doubt, however, but that he is obliged to make good whatever expenses may have been incurred for medical attendance or hospital care, and this to the surviving heirs. He is likewise bound to furnish to the immediate relatives of his victim, such as wife, children, parents, the necessaries of life for which they depended on the latter. Should the murderer die before being able to satisfy these claims they pass as a burden to be met by the inheritors of his estate. It is not easy to determine what obligation, if any, the slayer has to the creditors of the slain; but it seems equitable to say that he must at least reimburse them were it but clear that his aim in the perpetration of the deed of blood was to injure them.

One who has killed another under circumstances that show his act to be a mortal sin whether he directly or only indirectly intended the fatal result, and whether he was the physical or the moral cause, contracted the canonical impediment known as irremovability. In ancient times many penalties, such as censures and the like, were levied against those who procured the assassination of others. By this crime was meant the procedure of those who, by the payment or promise of a reward, explicitly commissioned abandoned men to put others to death. The text of the law denouncing this atrocity directly took cognizance of the case in which the omnipresent angel, who came away with Christians. The excommunication imposed has since been removed, but other punishments remain in force. Thus, for example, a criminal of this sort could not invoke in his behalf the right of asylum; if he were a cleric he would be regarded as canonically degraded, and left to the dictates of the secular arm, so that if he would be put death in by any actionable violation of the immunity proper to his state. Whether the actual assassin, who carries out the orders of his principal, is to be considered as included in the provisions of the law, is not certain.

II. IN CIVIL JURISPRUDENCE.—According to its signification in juriprudence homicide is "the killing of a human being by a human being" (J. F. Stephens, "Digest of the Criminal Law", London and New York, 1894, 175; Wharton, "The Law of Homicide", 3rd ed., Rochester, N. Y., 1907, 1), and may be "free from legal guilt" (Serjeant Stephen, "New Commentaries on the Laws of England", 1906, 4, 37; Wharton, op. cit., 1). The very ancient Latin language expressed the act of killing a human being by numerous terms, but not by the term homicide, which came into use at a comparatively late period (T. Mommsen, "Le Droit Pénal Romain", French tr., Paris, 1907, 11, 324-5). St. Thomas did not necessarily import the distinctness of criminal horse's allusion to homicideum Hectorum (Epod., xvii, 12) indicates.

Homicide free from legal guilt was by the English law defined as either justifiable or excusable. Of justifiable homicide an instance is afforded by such "unavoidable necessity" as the execution of a criminal "pursuant to the death warrant and in strict conformity to the law" (Wharton, op. cit., 9). Instances of excusable homicide would be killing in self-defence or an accidental killing by a person doing a lawful act without any intention to hurt (Idem., op. cit.). But contrary to the legal doctrine which Sir William Blackstone has declared (Commentaries on the Laws of England, IV, 186) derives from Lord Bacon, modern English law does not seem to admit necessity of self-preservation as excuse for killing "an innocent and unoffending neighbour" (Queen vs. Dudley and Stephens, English Law Reports, 14 Queen's Bench Division, 286). Homicide under circumstances not justifiable nor excusable is a crime of the class denominated felonies (Bishop, "New Comment, on Crim. Law", Chicago, 1892, II, sec. 744). Felonious homicide, when imputed by law to the infirmity of human nature and deemed without malice, is termed manslaughter, being either a voluntary killing "in a sudden heat of passion", or an involuntary killing "in the commission of an unlawful act" (Wharton, op. cit., 6). Felonious homicide when accompanied by malice constitutes murder, a crime committed "where a person of sound memory and discretion unlawfully kills any reasonable creature in being in the peace of the commonwealth or sovereign with malice preprate or aforethought, either express or implied" (Wharton, op. cit., 2). "The King's peace", Blackstone deems proper to specify, is so comprehensive that to kill "an alien, a Jew or an outlaw" (except an outlaw in time of war) "is as much murder as kill the most regular born Englishman." But he adds that, "to kill a child in its mother's womb is now no murder, but a great misprision" (op. cit., IV, 198).

MURDER in its most odious degree, according to
Blackstone (op. cit., IV, 204), is what the former English law termed petit treason, the killing by an inferior of a superior to whom the slayer owed faith and obedience. This crime might, therefore, be committed by an ecclesiastic against his superior, by a wife against her husband, or by a servant against his master, acts which modern law does not distinguish from those in the classic, but a person shall be legally guilty of criminal homicide death must have occurred within a year and a day after the occurrence out of which an accusation arises (Bishop, op. cit., sec. 640). Although the criminal law of the States of the United States (except Louisiana) is based on the English common law, yet statutory modifications are numerous and important.

CHARLES W. SLAONE.

Homiletics.—Homiletics is the science that treats of the composition and delivery of a sermon or other religious discourse. It includes all forms of preaching, whether oral or written, homilies, and sermons by their members. Since the nineteenth century, homiletics has taken its place, especially in Germany, as a branch of pastoral theology. The “Standard Dictionary” defines Homiletics as “the branch of rhetoric that treats of the composition and delivery of sermons or homilies.” Many differ from this definition, and maintain that homiletics as a science is distinct from rhetoric. Of this we shall be better able to judge after considering the origin and history of homiletics; and the question will be noticed towards the end of this article. As the first form of preaching was largely the homily, the sermon is relatively the same. The homily is a religious discourse for ministerial personages, and is a supplement to the parable. Christ himself preached, and He commissioned His Apostles to do so. His preaching included two forms of sermon, the missionary and the ministerial (to which correspond the magisterium and the ministerium of the Church), the former to unbelievers, the latter to those already in the Faith. Of the latter we have a striking example in the discourse after the Last Supper, John, xiv–xvi. It cannot be said that His preaching took any definite, rounded form, in the sense of a modern sermon; His aim was to sow the seed of the word, which germinated like the mustard seed. His commission to His Apostles included both kinds. For the former or missionary preaching, see Matt., xxviii, 19; Mark, xvi, 15; iii, 14; Luke, ix, 2. St. Paul’s sermon referred to in Acts, xx, 7–11, is an example of the second kind of preaching. In this the Apostles were supported by assistants who were elected and consecrated for that purpose, for example, Timothy and Titus; as also by those who had been favoured with charismata. The homily referred to in Justin Martyr’s “Apology” (cf. Homily) is an example of ministerial, as distinct from missionary preaching. In missionary preaching the Apostles were also assisted, but in an informal way, by the laity, who explained the Christian doctrine to their acquaintances amongst unbelievers who, in their visits to the Christian assemblies, must have heard something of it, v. g., cf. I Cor., xiv, 23–28. This is particularly true of Justin Martyr, who, wearing his priestly robes, went amongst the Roman populace. The sermons to the faithful in the early ages were of the simplest kind, being merely expositions or paraphrases of the passage of Scripture that was read, coupled with extempore effusions of the heart. This explains why there is little or nothing in the way of sermons or homilies belonging to that period. It also explains the strange statement made by Sosomon (Hist. Eccl., VII, xix), and by Cassiodorus in his “Tripartite History,” which Dusbecus (Christian Worship, p. 171, tr. London, 1802) apparently accepts, that no one preached at Rome. (Sosomon wrote about the time of Pope Xystus III.) Thomassin’s explanation (Vetus et Nova Eccl. Disciplina, II, lxxvii, 509) of Sosomon’s statement is that there was no provision of an elaborate performance in the course before the time of Pope Leo—no, with the exception, perhaps, of the address on virginity by Pope Liberius to Marcellina, sister of St. Ambrose, on the occasion of her taking the veil, which is regarded as a private discourse. And the reason for this he attributes to the predestination. (I, 447 note) says of Sosomon’s statement: “The remark could not extend to the early times; but suppose it did, it meant that the sermon was only secondary. Or the fact may have been that this Eastern writer was deceived by false accounts from the West; or it may have been that the sermon in the Western Church did not occupy so important a place as it did in the Greek Church.”

The office of preaching belonged to bishops, and priests preached only with their permission. Even two such distinguished men as St. Augustine and St. Chrysostom preached, as priests, only when commissioned by the bishop. And it was not until the German expounded the Scriptures, but it was by special permission. But this is quite different from saying (as is stated by “Chambers’ Encyclopedia,” the “Encyclopedia Metropolitana,” the “Encyclopedia Britannica,” older edition) that priests were not ordinarily allowed to preach before the fifth century. This is not tenable in the light of history. For instance, Felix, priest and martyr, preached in the third century, under two bishops, Maximus and Quintus. Of the latter it was said that his mouth had the tongue of Felix (Thomassin, ibid., e. xii, 565; Paulinus, the father of the See of Carthage). It was related, even, that Bishop Germanus, in Alexandria; but that was on account of the Arian heresy. A custom springing from this had spread to the north of Africa; but Valerius, Bishop of Hippo, broke through it, and had Augustine, as yet a priest, to preach before him, because he himself was unable to do so with facility in the Latin language—“cum non satis expedite Latino sermonem concionari possit.” This was against the custom of the place, as Possidius relates; but Valerius justified his action by an appeal to the East—“in orientalibus ecclesiis id ex more fieri scire.” Even during the time of the prohibition in Rome, Chrysostom, as it appears, interpreted the Scriptures publicly in Cessarea, in Cappadocia, and in Cyprus, candles being lighted the while—“acens lucernas.” As soon as the Church received freedom under Constantine, preaching developed very much, at least in external form. Then for the first time, if, perhaps, we except St. Cyprian, the art of oratory was applied to preaching, especially by St. Gregory of Nazianzus, the most florid of Cappadocia’s triumvirate of genius. He was already a trained orator, as were many of his hearers, and it is no wonder, as Bardenhewer (Pathology, p. 290) expresses it, “he had to pay tribute to the taste of his own time which demanded a florid and grandiloquent style.” But, at the same time, he condemned those preachers who used the eloquence and pronunciation of the theatre. The most notable preachers of the century, St. Basil and the two Gregorys (the “Clover-leaf of Cappadocia”), Sts. Chrysostom, Jerome, Augustine, that is, the “ornamentators.” Of the number the greatest was St. Chrysostom, the greatest since St. Paul, nor has he been since equalled. Even Gibbon, while not doing him justice, had to praise him; and his teacher of rhetoric, Libanius, is said to have intended John as his successor, “if the Christians had not taken him.” It is a mistake, however, to imagine that they preached only
oratorical sermons. Quite the contrary; St. Chrysostom's homilies were models of simplicity, and he frequently interrupted his discourse to put questions in order to make sure that he was understood; while St. Augustine's motto was that he humbled himself that Christ might be exalted. In passing we might reducing a strange feature of the time, the applause with which a preacher was greeted. St. Chrysostom especially had to make frequent appeals to his hearers to keep quiet. Bishops commonly preached outside their own dioceses, especially in the great cities; polished sermons were evidently in demand, and a stipend was given. We find that two Augustine bishops, Antioch and Severanus, went to Constantinople to preach, being more desirous of money than of the spiritual welfare of their hearers (Thomasin, ibid., ix. 504).

After the age here described preaching was on the decline in the West, partly because of the decay of the Latin language (cf. Pélisson, "Dial.," 164), and in the East, owing to the controversies on Arianism, Nestorianism, Eutychianism, Macedonianism, and other heresies. But still preaching was regarded as the chief duty of bishops; for instance, Cæsarius, Bishop of Arles, gave charge of all the temporal affairs of his diocese, and the whole time devoted to the reading of the Scriptures, to prayer, and to preaching. The next great name in preaching is that of St. Gregory the Great, particularly as a homilist. He preached twenty homilies, and dictated twenty more, because, through illness and loss of voice, he was unable to preach them personally. He urged bishops very strongly to preach; and, after holding up to them the example of the Apostles, he threatened the bishops of Sardinia in the following words: "Si eujus libet Episcopi Paganum rusticum invenire potuero, in Episcopum fortiter vindicabo" (III. ep. xxv). An edict was issued by King Guntram stating that the bishop must be, in such a way, to bring to the hearing of the word of God, through fear of punishment, those who were not disposed to come through piety. The Synod of Trullo laid down that bishops should preach on all days, especially on Sundays; and, by the same synod, bishops who preached outside their own diocese were reduced to the status of priests, because being desirous of another's harvest they were indifferent to their own—"ut qui alienas messis appetentes essent, suae inuriessi." At the Council of Arles, in 813, bishops were strongly exorted to preach; and the Council of Mâcon, in the same year, laid down that they should preach on Sundays and fast days either themselves (suo marte) or through their vicars. In the Second Council of Reims (813), can. xiv, xv, it was enjoined that bishops should preach the homilies and sermons of the Fathers, so that all could understand. And in the Third Council of Tours (can. xvii), in the same year, bishops were ordered to make a translation of the homilies of the Fathers into the rustic Roman tongue, or theodesygue—the rustic Roman tongue being a species of corrupt Latin, or patois, understood by the uneducated (Thomasin, "De Benef.:", II, I, III, c. lxxxv, p. 350. Of the language and language, and of the language of the mind, the mind is the language of the mind. The former went so far as to appoint a special day, and any bishop who failed to preach in his cathedral before that day was to be deposed. Pastors, too, were ordered to preach to their people as best they could; if not, there was an exhortation to correct evil and do good (Sixth Council of Arles, 813, can. x). The Homiliarum of Charlemagne is treated elsewhere (see Homiliarium).

We next come to the Middle Ages. It has been commonly said by non-Catholic writers that there was no preaching during the Middle Ages, and in the early part of the 19th century it was fashionable to write about the ignorance of the people at that time, and the illiteracy of the clergy. But, as we have seen, the preaching of the early Church was based on the Scriptures, and the homilies of the early Church were models of simplicity and eloquence. The sermon was not only a means of preaching the Gospel, but also a means of education. The early Church fathers (e.g. St. Augustine) taught that the preacher should be a man of learning, and that he should be able to explain the Scriptures to his hearers. The early Church fathers (e.g. St. Augustine) also taught that the preacher should be a man of prayer, and that he should pray for his hearers. The early Church fathers (e.g. St. Augustine) also taught that the preacher should be a man of charity, and that he should have a heart full of love for his hearers. The early Church fathers (e.g. St. Augustine) also taught that the preacher should be a man of simplicity, and that he should speak only what is necessary. The early Church fathers (e.g. St. Augustine) also taught that the preacher should be a man of modesty, and that he should not boast of his knowledge, but should let his knowledge be known in his works.
philosophers. It is scarcely necessary to say that many Scholastics, such as Sts. Thomas and Bonaventure, were noted preachers. It is a pity, however, that St. Bonaventure did not treat a little more fully of "De Arte Concionandi". In a sketch, however, brief, of the history of preaching, a reference to the mysteries is called for; but, as their preaching cannot be explained without an exposition of their system, the reader is referred to the article on Mysticism. Suffice it to say here that the tendency of mysticism is, in the main, the opposite to that of philosophy. Mysticism makes for warmth, philosophy, for coldness—"Cold as a mountain in its star-pitched tent stood high philosophy." The next noted period in the history of preaching is the Renaissance. This period, too, is treated in its proper place. As to preaching, Humanism contributed more to oratorical display than to piety in the pulpit. The motto of its two representative types, Reuchlin and Erasmus, was: "Back to Cicero and Quintilian."

Erasmus on visiting Rome exclaimed: "Quam mellitiae eruditorum hominum confabulationes, quot maiorum, quot religiosorum," (Eloqu. elocut. art., p. 230) says: "One Good Friday, preaching before the pope, the most famous orator of the Roman Court considered that he could not better praise the Sacrifice of Calvary than by relating the self-devotion of Decius and the sacrifice of Iphigenia. Fortunately, this was not last long; for good these ecclesiastics rebelled against it, and the religious upheaval that soon followed gave them something else to think of. In the Reformation and post-Reformation period the air was too charged with controversy to favour high-class preaching. The Council of Trent recommended preachers to turn aside from polemics; it also (Sess. V. cap. ii) pronounced that the primary duty of preaching devolved on bishops, unless they were hindered by a legitimate impediment; and ordered that they were to preach in person in their own church, or, if impeded, through others; and, in other churches, through pastores or other representatives.

The famous names of the French preachers of the classical seventeenth-century period—according to Voltaire, probably the greatest in pulpit oratory of all time—are fully dealt with in their proper place. It is sufficient to state here that the greatest were Bossuet, Boniface of Rome; more probably, for purity of style, burned his sermons. The first was the most majestic; the second, the most logical and intellectually compelling; the third, the greatest searcher of hearts, the most like Chrysostom, and, taken all in all, the greatest of the three. We are told that Voltaire kept a copy of his "Grand Catechumë" on his table, side by side with the "Athelstane" of Racine. In this age Chrysostom was the great model for imitation; but it was Chrysostom the orator, not Chrysostom the homilist. It would be a mistake at the present day to imitate their style, which was influenced much by the healthy spirit of the court of Louis XIV. Their majestic style, with its grand exordium and its sublime peroration, became the fashion in the succeeding age: but it was a case of ordinary men trying to don the armour, and to handle the weapons, of giants, or of the unskilful rider venturing on the horses of Achilles. The result was that the oratory became too refined and artificial, and dropped into sickly sentimentality and mechanical formalism. The sensible "Dialogue" of Fénelon, however, remained as a great check, being in fact to preaching what Hamlet's address to the players has been to acting. Of these "Diœcesans" the greatest is doubtless, "If the precepts of Fénelon had been well understood, they would have long since fixed the character of sacred eloquence among us." Sound principles, too, were laid down by Blaise Gibert in his "L'Eloquence chrétienne dans l'idée et dans la pratique", by Amadeus Bajocensis in "Paulus Ecclesiastes, seu Eloquens Christianus", and by Guido ab Angeli in "De Verbi Dei Predicationibus", all of which contributed a return to the simplicity of style of the Fathers.

In this brief historical sketch we are noticing only epochs, and the next important one is that of the so-called conferences in Notre-Dame in Paris, following the Revolution of 1830. The most prominent names identified with this new style of preaching was that of the Dominican Lentlambert, with Montalembert, was associate editor with de Lamennais of "L'Avenir". This new style of preaching discarded the form, the division, and analysis of the scholastic method. The power of Lacordaire as an orator was beyond question; but the conferences, as they have come down to us, while possessing much merit, are an additional proof that oratory is too elusior to be committed to the pages of a book. The Jesuit Père de Ravignan nobly shared with Lacordaire the honour of occupying the pulpit of Notre-Dame. For some years, other able but less eloquent men followed, and the exalted, religious, and moral style was beginning to grow tiresome, when Monsabré, a disciple of Lacordaire, with a single stroke set it aside, and confined himself, in a masterly series of discourses, to an explanation of the Creed; whereupon it was sententiously remarked that the bell had been ringing long enough, and it was time to begin (cf. Boyle, "Irish Eccles. Res.", May, 1909).

As to preaching at the present day, we can clearly trace the influence, in many respects, of Scholasticism, both as to matter and form. In matter a sermon may be either moral, dogmatic, historical, or liturgical—by moral and dogmatic it is meant that one element will predominate, without, however, excluding the other. As to form, a discourse may be either a formal, or set, sermon; a homily (for different kinds see Homily); or a catechetical instruction. In the formal, or set, sermon the influence of Scholasticism is most strikingly seen in the analytic method, resulting in divisions and subdivisions. This is the thirteenth-century method, which, however, had its beginnings in the sermons of Sts. Bernard and Anthony. The underlying syllogism, too, in every well-thought-out sermon is due to Scholasticism; how far it should appear is a question that belongs to a treatise on homiletical discourse, and not to this. The scholastic method of preaching was so much favoured by Pope Pius X that it might be regarded as one of the characteristics of preaching at the present day. It is, however, a very old form of preaching, as the name (from xené and xênon) implies, i.e. the instruction that was given by word of mouth to the catechumen. It was used by Christ Himself, by St. Paul, by St. Cyril of Jerusalem, by St. Clement and Origen at Alexandria, by St. Augustine, who wrote a special treatise thereon (De catechizandis rudibus), also, in later times, by Gerson, chancellor of the University of Paris, who wrote "De parvulis ad Christum præmissis"; the admirable Benedict XIV gave to it the weight of the papal authority, and, as far as the greatest of all catechists was St. Charles Borromeo. There is the danger, however, from the very nature of the subject, of this form of preaching becoming too dry and purely didactic, a mere catechesis, or doctrinism, to the exclusion of the moral element and of sacred Scripture. In recent years the appeal to non-Catholics has received a new stimulus. In the United States, particularly, this form of religious activity has flourished; and the Paulists, amongst whom the name of Father Hecker is deserving of special mention, are to be mainly identified with the revival. Special facilities are afforded at the central institute of the organization for the training of those who are to impart catechetical instruction, and the non-controversial principles of the association
are calculated to commend it to all earnestly seeking after truth.

BIBLIOGRAPHY OF THE HISTORICAL DEVELOPMENT OF PREACHING.—Practice preceded theory. Certain ideas are to be found in the Fathers, and these have been collected by Paniel in his introduction to his work "Gesch. der christl. Beredsamkeit". The first to treat of the theory of preaching was St. Chrysostom, in his work "On the Priesthood" (πρεσβεία, Ιερουσαλήμ). Inasmuch as this contains only reflections on preaching, St. Augustine's "De doctrina Christiana," might be regarded as the first manual on the subject. It contains a second lecture on the first three rules, dealing with the collecting of the materials for preaching, "modus inveniendi quse intelligenda sunt," and the last with the presentation thereof, "modus proferendi quse intellecta sunt." He goes to Cicero for rules in the latter. He makes a distinction, in which he evidently follows Cicero, between sapientia (wisdom) and eloquentia (the best expression of it). Sapientia without eloquentia will do no good; neither will eloquentia without sapientia, and it may do harm; the ideal is sapientia with eloquentia. He adapts Cicero's ut doceas, ut detecte, ut fleas, changing them to ut veritas pateat, ut placeat, ut modo laymen down the rules by which a sermon is to be judged. This work of Augustine was the classic one in homiletics. In this connexion we are reminded of the three conditions which Hugh of St. Victor (d. 1141) in the Middle Ages laid down for a sermon: that it should be "holy, prudent, and noble", for which, respectively, he required sanctity, knowledge, and eloquence in the preacher, and of Fénelon's "must prove, must portray, must impress" (Second Dialogue). We might also mention St. Augustine's work "De rudibus catechizandae". St. Gregory the Great's work, "Liber regula pastoralis", is still extant, but is inferior to St. Augustine's; it is relevant to his work on pastoral theology. Then we come to homiletics. We have it on the testimony of Hincmar that a copy used to be given to bishops at their consecration. In the ninth century Rabanus Maurus (d. 856), Archbishop of Mainz, wrote a treatise "De institutione clericorum", in which he depends much on St. Augustine. In the twelfth century Guibert, Abbot of Nogent (d. 1124), wrote a famous work on preaching entitled "Quo ordine sermo fieri debet". This is one of the historical landmarks in preaching. It is replete with judicious instruction; it recommends that preaching should be preceded by prayer; it says that it is more important to preach about morals than about doctrine, that the moral sermon is the best; the heart must be studied, and that the best way of doing so is (as Massillon recommended in later times) to look into one's own. It is more original and more independent than the work of Rabanus Maurus, who, as has been said, drew largely from St. Augustine. Guibert's work was recommended by Pope Alexander II as a model to all preachers. St. Francis gave to his friars the same directions as are herein contained.

To the same period belongs the "Summa de arte prædicatoria" by Alain de Lille. He gives a definition of preaching: "Manifesta et publica instructio morum et fidelis, informatio hominum deserventium, ex rationum semitit et suctortitut fonte proveniens". He lays stress on explanation and use of Scripture, and recommends the preacher to insert verba commotiva. The remarks of Caesarius of Heisterbach (d. 1240) have been collected by Cruel; his sermons display skill in collecting and arranging homilies and consideranda. Conrad of Bründelsheim (d. 1321), whose sermons have come down to us under his cognomen of "Brother Sock" (Sermones Fratris Socii), was one of the most interesting preachers at this time in Germany; Humbert of Romans, General of the Dominicans, in the second book of his work, "De eruditione praedicatorum", claims that he can teach "a way of promptly producing a sermon for any set of men, and for all variety of circumstances" (Neale, "Medieval Sermons", Introd., xix). Linsenmayer, in his history of preaching, gives information about Humbert, who was a severe critic of the sermons of his time. Tribesmius quotes a work by Albertus Magnus, De arte praedicatorii, where he says that he is obliged to write "De arte concomitandi", in which he treats of distinction, distinctio, distalatio, but deals extensively only with the first. St. Thomas's claim rests chiefly on the "Summa", which, of course, has principally influenced preaching since, both in matter and form. He insists very strongly (III, Q. lvii, a. 2) on the importance of the proper study of the preacher, and it is to the first three duties of bishops, and baptising to priests, the latter of whom he regards as holding the place of the seventy disciples. There is a treatise entitled "De arte et vero modo predicandi" attributed to him, but it is simply a compilation of his ideas about preaching that was made by another. Henry of Hesse is credited with a treatise, "De arte predicandi", which is probably not due to him. There is a monograph quoted by Hartwig which is interesting for the classification of the forms of sermon: modus antiquissimus, i.e. postilatio, which is purely the exegetic homily; modus modernus, which is a purely expositive sermon; modus antiquo, Biblical text; and modus subalternus, a mixture of homiletic and text sermon. Jerome Dungshey wrote a tract "De modo discendis et docendis ad populum sacra seu de modo predicandi" (1513). He deals of his subject on three points: the preacher, the sermon, the listeners. He lays stress on Scripture as the book of the preacher. Ulrich Surgant wrote a "Manuale Curatorum" (1508), in which he also recommends Scripture. In his first book he gives for material of preaching the usual order—credenda, facienda, fujienda, timenda, appendenda. And he ends by saying: "Congrua materia predicandae est Sacra Scriptura, quae est ipsa veritas. Deinde adducenda est materia antiquitatis, a sermone consilia et maxima, auctoritate, et in illo sibi auferenda auctoritate et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritate, et in illo auctoritat
concionamento”; “De concione”; “De concionante prudência et industria.” Much is to be found in the writings of St. Vincent de Paul, of St. Alphonse Ligouri, and in St. Francis de Sales, especially in his celebrated letter to Monsignor Fremiot, Archbishop of Bourges. Among the Dominicans we find Alexander Natalis in the work of “The Institutionum Divinorum Trinitatis” (Paris, 1702). In the “Rhetorica ecclesiastica” (1627) of Jacobus de Graeffis is contained a symposium of the instructions on preaching by the Franciscan Fr. Panigrola, the Jesuit Francis Borgia, and the Carmelite Johannes a Jesu. The “Italica” of Vincenzo Gallicano, the work of Père B. de Gubert, that of Amadeus Bajocensis and of Guido ab Angiels have already been referred to. In the nineteenth century homiletics took its place as a branch of pastoral theology, and many manuals have been written thereon, for instance, in German, compendia by Brand, Laberenz, Zarbl, Fluck, and Schich; in Italian, by Gotti and Audiso; and many in French and English, some of which are quoted in the bibliography at the end of this article.

The question as to how far homiletics should make use of profane rhetoric is often raised. Some assert its independent character, and say that it is independent in matter, and purpose; in other words, it has not grown out of profane rhetoric; in matter, because it has to deal not with natural, but with supernatural truths clearly defined in Revelation; and in purpose, because the aim is to lead souls to cooperate with the grace of the Holy Spirit. The upholders of this view also point to certain passages in Scripture and in the Fathers, notably to the words of St. Paul (1 Cor., ii, 4): “And my speech and my preaching was not in the persuasive words of human wisdom, but in shewing of the Spirit and power;” also to 1 Cor., i, 17, ii, 1, 2, and II Cor., iv, 2; and to the testimony of Cyprian (Ep. Ad. Na./Add. Na.) 2, Laeertianus (Institutionum divinarum), and to Sts. Gregory of Nazianzus, Augustine, Jerome, and Chrysostom. The last-named says that the great difference may be summed up in this: that the orator seeks personal glory, the preacher practical good. On the other hand St. Paul’s own sermons are in most cases replete with oratory, e.g., his sermon on the Areopagus; and the oratorical element generally enters largely into Scripture. Laecitius, the Christian Cicero, regretted that there were so few trained preachers (Inst. Div., V, c. 1), and we know that St. Gregory of Nazianzus, as well as Sts. Chrysostom and Cyprian, made much of rhetoric in preaching. The writer of this article thinks that there would be no room for difference of opinion if oratory were defined not according to the style that prevails in any particular period, but according to that which constitutes its very essence, viz., persuasiveness. And he thinks it will be found that speaking against oratory in preaching, had in mind the false style that then prevailed. For instance, St. Gregory of Nazianzus censured the use in the pulpits of the eloquence and pronunciation of the theatre; but surely that was not to oppose real oratory. Also we know that St. Martinus, the martyr, could not pronounce a word of Greek oratory, and it was probably such imperfections that those who spoke against it had in mind. Who, for instance, can read Demetrius “On Style” without feeling how petty are many of the tricks of speech and figures that are there found? Many orators are inferior to oratory, but true oratory, as the art of persuasion, can never be out of place in the pulpit.

Kepple in Kirchenlex., s. v. Homiletic, gives an extensive, critical bibliography. Thomas, Fetus Ecclesiae Disciplina (Paris, 1868); Deign, Morais Catholicos (London, 1846); Neal, Mediator Sermonum (London, 1856); Barringer, F. Cyprian (Shan., 1896); Peter, Christian Worship (tr. London, 1903); Schmid, Manual of Patrology (tr. St. Louis, 1899); Scherer, The Priest in the Pulpit (tr. New York, 1900); Potter, Sacred Elocution (New York, 1891); MacNamara, Sacred Rhetoric (Dublin, 1883); Bolt, Instructions on Preaching (New York, 1902); Fisney, Manual of Sacred Rhetoric (St. Louis, 1903), 3rd edition (New York, 1885); Fisney, Three Dialogues on Pulpit Eloquence (tr. London and Philadelphia, 1897); Hogan, Manual of Ritual (Boston, 1889); Mollendorf, The Clergy and the Pulpit (tr. London, 1867). Many works on pastoral theology contain useful matter on this subject. Bichener, Liturgia Sacra (London, 1884); Gibbons, The Ambassador of Christ (Baltimore, 1866); Oakley, The Priest on the Mission (London, 1870); Smith, The Training of the Pulpit (London, 1873); Hamon, Traité de la Prédication (Paris, 1906); Monnabré, La Préparation, cœur, pendant et après la Prédications (Paris, 1896); Fontaine, La Chaire et l’Apôtre au XIXe siècle (Paris, 1887); Lonharte, La Prédication (Paris, 1897); Leander, La Prédication (Paris, 1909). Non-Catholic works in English: Grindley, History of Preaching (London, 1873); Phillips, Elocution Lectures on Preaching (London, 1903); Hopfin, Homiletics: Pastoral Theology (New York, 1901); Ken, History of Preaching (London, 1888); Becher, Preaching on Preaching (New York, 1892); Burton, In Pulpit and Parish (Boston, 1888); James, The Message and the Messenger (London, 1898); Dugain, History of Preaching (London, 1905); Broadus, Preparations and Delivery of a Sermon (London, 1871); Shurter, The Rhetoric of Oratory (New York, 1896).

P. A. BEECHER.

Homiliarium, a collection of homilies, or familiar explanations of the Gospels (see Homily). From a very early time the homilies of the Fathers were in high esteem, and were read in connexion with the recitation of the Divine Office (see Breviary; Office). That the custom was as old as the sixth century we know from the fact that St. Gregory the Great refers to it, and that St. Benedict mentions it in his rule (Batifol, "History of the Roman Breviary", 107). This was particularly true of the homilies of St. Leo I, very terse and peculiarly suited to liturgical purposes. As new feasts were added to the Divine Office, the demand for homilies increased, and by the eighth century, the century of liturgical codification, collections of homilies began to appear (Batifol, op. cit., 108). Such a collection was called a homiliarium, or homiliarium (i.e. liber) doctorum. In the early Middle Ages numerous collections of homilies were made for purposes of preaching. Many homiliaria have been lost to us, but there are medieval references to many others. Mabillon (De Liturgia Gallicana) mentions a very old Gallican homiliarium. In a manuscript of the eighth century we find reference to a homiliarium by Agimundus, a Roman priest. VENERABLE Bede compiled one in England, and the Irish monastery then sent a copy of it. In the epitome of Rhabanus Maurus is preserved a homiliarium by Bishop Burchard, a companion of St. Boniface. Alanus, Abbot of Farfa (770), compiled a large homiliarium, which must have been often copied, for it has reached us in several manuscripts. In the first half of the ninth century Samnagiges, Abbot of St. Michael’s on the Meuse, compiled from the Fathers a book of homilies on the Gospels and Epistles for the whole year. Haymo, a monk of Fulda and disciple of Alcuin, afterwards Bishop of Halberstadt (841), made a collection for Sundays and feasts of the saints (Trithemius in Lindgard, II, 313, note). Rabanus Maurus, another pupil of Alcuin, and Eric of Auxerre compiled each a collection of homilies. All these were written in Latin. Perhaps the most famous homiliarium is that of Paul Warnefried, better known as Paul the Deacon, a monk of Monte Cassino. It was made by order of Charlemagne, and has been copied in the West in recent times. Mosheim (Eccl. Hist., ii, p. 150, London, 1845) and Neander (V, 174), followed by various encyclopedias and many Protestant writers, assert that the great emperor had it compiled in order that the ignorant and slothful clergy might at least have some help to the Gospel when the archdeacons and deacons failed them on Sundays and holidays. As a matter of fact, this particular collection was not made for pulpit use but
for the recitation of the Breviary, as even a cursory reading of the royal decree would at once show. Its liturgical character is corroborated by the fact that copies were made only for such churches as were wont to recite the Office in choir. Manuscript copies of this homilium are still found at Heidelberg, Frankfurt, Darmstadt, Fulda, Giessen, Kassel. The manuscript mentioned by Mabillon, and rediscovered by Ranke, is in Carlsruhe, and is older than the tenth-century Monte Cassino copy. The earliest printed edition is that of Speyer in 1482. In the Cologne sixteenth century nothing of the sort was done, so that it is true to Aleuin, but the royal decree alluded to leaves no doubt as to the purpose or author. Aleuin may have revised it. Though not intended expressly for preachers, the homilium of Charlemagne no doubt exercised an indirect influence on the pulpit, and as late as the fifteenth or sixteenth century served for homiletic purposes. Translations of homilies were frequently ordered by the Church (v. g. Second Council of Reims, 813; Third Council of Tours, 813—cf. Thomassin, Ixxxv, 510), and became common. Alfred the Great translated into Anglo-Saxon the homilies of Venerable Bede, and, for the clergy, the “Regula Pastoralis” of St. Gregory the Great.Ælfric selected and translated into the same language passages from St. Augustine, St. Jerome, Bede, St. Gregory, Smailagius, and occasionally from Haymo. His aim was to work the extracts into a whole, and thus present them in an easy and intelligible style (LIngard, II, 313). These translations held a prominent place in early English literature. The first German translation of this kind was due to Ottfried of Weissenburg. (See HOMILETICA; HOMILY.)

Collections of the homilies of the Greek and Latin Fathers will be found in Migne’s “Patrology.” For an account of the editions of these works, homilies included, the reader is referred to Bardenhewer’s “Patrology” (tr. Shahab, St. Louis, 1908). The Irish homilies that have come down to us are found principally in “The Speckled Book” (Leabhar Breac), which is written partly in Latin and partly in Irish (see extract “Passions and Homilies,” ed. Atkinson, Dublin, 1887). It is largely taken up with homilies and passions, and lives of the saints, etc. The “Book of Ballymote” contains, amongst miscellaneous subjects, Biblical and hagiological matter; and the “Book of Lismore” contains lives of the saints under the form of the “Lives” (in see Hull, “Text Book of Irish Literature,” appendix).

The binding and illumination of gospels and homiliaries were both elaborate and artistic. They were frequently decorated in a highly wrought casket (Arcus Testamenti), which in Ireland was called cumbach (shrine). Constantine the Great presented a text of the Gospels with costly bindings to the church of St. John Lateran; and Queen Theodolinda made a similar presentation to the church at Monza (Krauss, “Geschichte der Christlichen Kunst,” I, 528).

P. A. BEECHER.

Homily.—The word homily is derived from the Greek word ὁμιλία (from ὁμιλέω), which means to hold or hold forth with a discourse or address. In this sense ὁμιλία is used in I Cor., xxv, 33. In Luke, xxiv, 14, we find the word ὁμιλόμενος, and in Acts, xxiv, 26, ὁμιλία, both used in the sense of “speaking with.” In Acts, xx, 11, we meet the term ὁμιλήθης; here it is used, for the first time, to signify a sermon to the Christian inquirer with the note of brevity. It was evidently an informal discourse, or exposition of doctrine, for we are told that St. Paul “talked a long time... until daylight.” Thereafter the word was used as a sign of Christian worship (Justin, “Apol. I”, c. lvii; Ignatius, “Ep. ad Polyc.”, v). Origen was the first to distinguish between ὁμιλία (sermo) and ἡμιλία (tractus). Since Origen’s time homily has meant, and still means, a commentary, without forcible application, or use of certain parts of Sacred Scripture, the aim being to explain the literal, and evolve the spiritual, meaning of the Sacred Text. The latter, as a rule, is the more important; but if, as in the case of Origen, more attention be paid to the former, the homily will be called expository. It is a development of the method or art of preaching. Christ himself may be said, but with a difference to be noted later, to have preached in this style (cf. Luke, iv, 16–20). It was the kind of preaching that was used by the Apostles and Fathers in addressing the faithful. In the “First Apology” of Justin Martyr (c. lvii) we read: “On the day called Sunday all assembled in the same place, where the memorials [ὑμνομενοῦντα] of the Apostles and Prophets were read... and when the reader has finished, the bishop delivers a sermon,” etc. In this connexion, the “Encyclopaedia Britannica” (ninth edition) says: “The custom of delivering expositions of the contents of the Gospels to the people was common in the seasons of the day at all events passed over soon and readily into the Christian Church” (I. e., from the Jewish synagogue). From this the Catholic view differs, and maintains that the kind of homily referred to by Justin was not a continuation of the Jewish commentary on Scripture, but was an essential part of Christian worship, a continuation of the Apostolic sermon, in fulfilment of Christ’s commission to His disciples. Both indeed had an external similarity (see Luke, iv, 16–20), but in essence one differed from the other as much as the Christian religion differed from the Jewish.

The oldest homily extant is the so-called Second Epistle of Clement to the Corinthians; it is now generally admitted, however, that it is not by Clement (see Bardenhewer, “Patrology,” tr. Shahab, p. 29). We have a hundred and ninety-six by Origen; some from St. Athanasius, although he was more of a controversialist than a homilist; the brief and antithetical homilies of St. Leo the Great have also come down to us; and the more important ones of St. Gregory the Great. Also well-known homilists are: Hilary, Ambrose, Chrysostom, Jerome, Augustine, Fulgentius, Isidore, Bede, Bernard, Bernard of Clairvaux, and others. Even after the art of rhetoric was brought to bear on preaching, the homiletic form continued, so that there were recognized two styles of preaching, the extempore, unpolarized, or familiar, and the polished, or carefully prepared, style. Fine examples of both may be seen in St. Chrysostom; also in St. Augustine, who, in referring to his homiletic preaching, said that he humbled himself that Christ might be exalted. The homiletic was the favourite style of preaching during the Middle Ages; and many of the sermons then preached might, from the frequent use of the “Medieval Text, called Sermons Latin” (see note, “Medieval Sermons”). At present there are four recognized ways of treating the homily, but not all to be equally commend. The first method consists in treating separately each sentence of the Gospel. This was the uniform method of St. Anselm, as we gather from the sixteenth sermons that have come down to us, and not to be recommended, for it gives at best, only a fragmentary and scattered treatment. The second method is quite the opposite; it focuses the entire content of the Gospel in a single idea. It is usually called the “higher homily,” and differs from the formal or set sermon only in the absence of introduction and peroration. It is the homily that is treated in this way. The third kind selects some virtue or vice arising out of the Gospel, and treats one or the other to the exclusion of all else.
This kind of homily is commonly called a "prone". The fourth kind is that which first paraphrases and explains the entire Gospel, and then makes an application of it. This, the method of St. Chrysostom, seems, except where the "higher homily" applies, to be the best, because it can guard against the greatest defect of the homily, namely, a tendency to lack of unity and continuity. The advantages of the homily are that it is a form of preaching which was in use from the very beginning of Christianity; it is simple and easily understood; it affords a better opportunity than the formal sermon for interweaving Sacred Scripture; and the most appropriate time for the homily is at the Mass; for the formal sermon, at the principal Mass; and for the catechetical sermon (see Homiletics), at the evening devotions. As to its place in the Mass, the homily is usually preached after the first Gospel; but St. Francis de Sales would prefer that it come after the Communion, and in his letter to the Archbishop of Bourges he quotes the words of St. Chrysostom: "Quam va illum quod SS. Mysteria suspetit, daemonibus terrible est"; also those of St. Paul (II Cor., xiii, 3): "in experimentum scrutis ejus, qui in me locutur Christian." For Homilies, see Homiletics.

P. A. BECZER.

Homologoumena. See Canon of the Holy Scriptures.

Homoeousion (Gr. ἡμοιούσιον—from ὁμός, same, and ὄσια, essence; Lat. consubstantiâlem, of one essence or substance), the word used by the Council of Nicaea (325) to express the Divinity of Christ. Arius had taught that the Son, being, in the language of Philo, the Intermediator between God and the world, was not eternal, and therefore not of the Divine substance, but a creature brought forth by the free will of God. Homoeousion was indeed used by philosophical writers to signify "of the same or similar substance"; but, as the unity of the Divine nature was not questioned, the word carried the fuller meaning: "of one and the same substance". However, the word ὄσια itself is ambiguous; the word ὄσια itself is often taken as equivalent to ὄντως (person), as apparently is the case in the anathema attached to the Nicene Symbol. Therefore the affirmation of the identity of nature might be taken in the heretical sense of the Sabellians, who denied the distinction of person. It was only after many years of controversy that the two words acquired their distinct meanings, and the orthodox were able to describe the Trinity as one in ousia and three in hypostasis or persona. Previously to the Council of Nicaea, Tertullian had already used the Latin homoeousion (his homoeousion according to Fræh- ers the Sabellian that the Father and Son were united substantia, of one substance, but adding duarum personarum, of two persons (Adv. Prax., xiii). And Dionysius of Alexandria used the actual word In a letter to Dionysius of Rome (Athan., "De dec. Syn. Nic.", xxv, 26), and again in his letter to Paul of Samosata. On the 25th of April, 410, Origin, whose works are extant in a Latin translation, expresses, the anti-Sabellian sense of Dionysius of Alexandria by calling the Son "heteroousion". The question was brought into discussion by the Council of Antioch (264–272); and the Fathers seem to have rejected Homoeousion, even going so far as to paraphrase the phrase "the Son of other or different ousia". Athanasius and Basil give as the reason for this rejection of Homoeousion the fact that the Sabellian Paul of Samosata took it to mean "of the same or similar substance". But Hilary says that Paul himself admitted it in the Sabellian sense "of the same substance or person"; and thus compelled the council to allow him the pre- sentative right to the expression. Now if we may take Hilary's explanation, it is obvious that when, half a century afterwards, Arius denied the Son to be of the Divine ousia or substance, the situation was exactly reversed. Homoeousion directly contradicted the heretic. In the conflicting which ensued, the extreme Arians persisted in the Heteroousion Symbol. But the Semi-Arians were more moderate, and consequently more plausible, in their Homoeoisousion (of like substance). When one considers how the four creeds formulated at Antioch (341) by the Semi-Arians approached the Nicene Creed as nearly as possible without the actual word Homoeousion, there may be a temptation to think that the question was one of words only; and the Councils of Rimini and Seleucia (359) may seem to have been well advised in their conciliatory formula "that the Son was like the Father in all things, according to the teaching of Holy Writ". But this very formula was forced from the Fathers by the semi-Arians' objection, and the word homoeousion, which the Semi-Arians used throughout the greatest part of the fourth century, are proof sufficient that this dispute was not merely verbal. The dogma of the Trinity was at stake, and Homoeousion proved itself to be in the words of Epiphanius "the bond of faith", according to the expression of St. Victorinus, "the rampart and wall of orthodoxy." Honduras. See COMAYAGUA, Diocese of.

Honduras, British, Vicariate Apostolic of. The territory of the vicariate is co-extensive with that of the British Honduras, which lies to the south of the peninsula of Yucatan, from which it is separated by the Rio Hondo; is bounded on the east by that part of the Caribbean Sea known as the Bay of Honduras, on the south and west by the Republic of Guatemala; and has a total area of 7,562 square miles, being approximately equal in size to the State of New Jersey. Statistics concerning this part of the world are largely conjectural. According to a fairly careful estimate, the total population of the vicariate at present is some 40,000; of which the Catholics number about 23,500. Of this latter number, however, not more than 14% are the faithful and regularly assisted by the vicar Apostolic and his assistants. There are in the vicariate eight churches served by resident priests, and fifty-five chapels, in which, from time to time, priests from the residences say Mass and administer the sacraments. At present, under the vicar Apostolic, Right Reverend Frederick C. Hopkins, S. J., titular Bishop of Athribis, the vicariate is ministered to by 6 priests, all members of the Society of Jesus, under the immediate jurisdiction of the Missouri province, assisted by four clerics not priests, and by four lay brothers, all of the same society.

The territory lies within the limits of British Honduras was originally part of the Spanish claim, but in the first half of the seventeenth century was settled by English
adventurers, mostly of the buccaneering type, without even pretense of legal right. Later the English claimed possession by prescription, and, because of Spanish military inferiority, carried the claim. Naturally there were few, if any, Catholics amongst the early settlers. Hence the territory for many years was under no especial ecclesiastical jurisdiction; only a few of the Spanish priests resided in the coast settlements. It was considered as roughly included in the Vicariate of Trinidad. In 1836 it was named as part of the new Vicariate of Jamaica, with the Very Rev. Benito Fernández, a Franciscan, as first vicar Apostolic. In 1848 the mission received its first notable influx of Catholics; seven thousand of whom, driven from Yucatán by Indian outbreaks, came to Spanish Honduras. Some Jesuits, passing through the colony in 1850, were asked by these Catholics to have priests sent to them; and as a result of their representations, the Vicar Apostolic of Jamaica came in person, bringing with him two Jesuit missionaries, who built the first Catholic church in 1851. Very Rev. James Eugène Dupeyrson, S.J., succeeded to the Vicariate of Jamaica, 27 September, 1855, and several times visited the mission up to 1871, when he resigned his office, and was succeeded by Very Rev. Joseph Woollett, S.J., as pro-vicar Apostolic. On 6 Sept., 1877, Very Rev. James Eugène Dupeyrson, S.J., was named Vicar Apostolic of Honduras, and held the office until his death, 29 Sept., 1888. Shortly before his death, it was determined, in view of the difficulty of communication between Jamaica and British Honduras, that the latter territory should be separated from the Vicariate of Jamaica and erected into a prefecture Apostolic. Very Rev. Salvatore di Eupio, a Sicilian Jesuit, who since 1869, with various interruptions, spent fifteen years in the mission, and who had three times been its superior, was named the first prefect Apostolic, 10 June, 1888.

At length, in 1893, in response to the general desire of the Catholics of the territory, British Honduras was made a vicariate, and the prefect Apostolic appointed vicar Apostolic. He was consecrated on 16 April of that year, in Belize, under the title of Bishop of Eureka. Bishop di Pietro laboured in his office with great energy and zeal. Under him, missionary work in British Honduras received a new impetus. At the erection of the vicariate there were nine priests in the mission; the Catholic population was about 12,000, with 1819 children in the Catholic schools. A few months after his consecration, the mission was removed from the care of the English province of the Society of Jesus, and attached to the Missouri province. Nine new priests came to labour, and new residences were opened. Ten years previously, in January, 1883, some Sisters of Mercy had come to Belize from New Orleans, and had opened a convent for girls; which still exists, with an attendance of about one hundred. A select school for boys had been begun in 1887 by Rev. Casimir Gillette, an English Jesuit, to be replaced nine years later by the present St. John Berchmans College, established in 1896 with sixty-one pupils. Both convent and college accommodate a small number of boarding-schoolers, and were intended to serve as means of higher education for the surrounding republics. In May, 1898, the Sisters of the Holy Family (coloured) were brought from New Orleans, and began teaching in Stann Creek, the chief village of the Carib district. At present they number five, and have the care of some three hundred children.

Bishop di Pietro died in Belize, 23 August, 1898, and was succeeded by the present vicar Apostolic, Bishop Hopkins, who was consecrated 4 November, 1899, in St. Louis, Mo., U. S. A. Exceptional difficulties attend the work of the ministry. The Catholics of the vicariate are mostly scattered over the territory in small villages. There are no roads. Communication must be made by boat, or on horseback through the dense tropical bush, often under necessity of cutting one's way with the machete. Diversity of language presents another obstacle, as the population is very heterogenous. It is almost impossible even to estimate with anything like accuracy the racial proportions of the population. Perhaps rather more than two-fifths are of more or less mixed Indian descent; one-third are of unmixed black blood; the rest is the product of miscegenation; of the remainder, some three thousand are mongrel black people, improperly styled Caribs; three hundred or so are whites; the rest are unclassified and unclassifiable. The Indians are chiefly Maya, descendants of the ancient Toltecs, copper-coloured, with high cheekbones and arched noses. Many of them speak Spanish, a few speak Maya, and one tribe of the Barbarees, a barbarized English, under the linguistic title of "Creole", quite unintelligible to English-speaking people. The Caribs speak an African dialect, into which, in a curious manner, many French words have crept.

Poverty is the universal condition; owing, in part, to native laziness and want of thrift; in part, to governmental neglect in opening up the superb resources of the colony, and to an almost total absence of local manufactures. There are comparatively few pagans, but pagan superstitions abound, and obseque rites to some small extent carried on in some parts. The population obtains very widely, the percentages of legitimate and illegitimate births being nearly equal. Yet, in despite of these and many other hindrances, a great deal is accomplished yearly in the vicariate. In 1908, upon estimate, there were 1200 baptisms, 320 marriages, 500 confirmations, 40,000 confessions, 38,700 Holy Communions. These are, in the whole vicariate, twenty sodalities with a membership of about eight hundred. The League of the Sacred Heart was established in British Honduras in 1888, and has since grown steadily. In 1898 the associates numbered 1200, and at present are estimated at some 4000. There is absolute freedom of worship in the colony. Although formerly the Anglican Church was established by law, there is at present no established religion. The educational system, all things considered, is very good; Government grant-in-aid being divided impartially amongst public schools under the charge of various denominations. Every school has a fair attendance of each school, with full liberty of religious instruction accorded to each denomination in its proper schools. The grant to Catholic schools for 1908 was over $7,500 gold. There are about 2300 children in the Catholic public schools. Except those for the Indians, which are under the care of the Society of the Sacred Heart, and those of Stann Creek, these schools are taught by lay teachers, who have qualified in a government examination. The vicariate depends for its priests and religious teachers chiefly upon the United States. It has no seminary or novitiate of its own. The material support of the vicariate, since the contributions of its own people are entirely inadequate, is also derived from the outside world, principally from the benefactions of the Society for the Propagation of the Faith, and from various charities sent from the United States.

WILLIAM T. KANE.

Honestas Publica. See Public Decency.

Hong-Kong, Vicariate Apostolic of.—The island of Hong-Kong was ceded by the Chinese Government to Great Britain in January, 1841, under some restrictions; the cession was completed by the Treaty of Nanking of August, 1842. Ever since then the Bishop of Macao, who was nominated by Gregory XVI (1846), a vicar Apostolic was created in 1874, and intrusted (4 Oct.) to the Seminary of Foreign Missions of Milan, established in that city since 31 July, 1850 (see China). The first vicar Apostolic was Giovanni Timoleone Raimondi, titular Bishop of Assisi.
HONORARIUM

thus (22 Nov. 1874), who died at Mission House, Glencairn, Hong-Kong, 27 Sept., 1894. He was succeeded by Bishop Louis de Roussy (b. 1849), titular Bishop of Claudiopolis and Domeneo Pozzani (b. 1861), titular Bishop of Tavira, elected 26 May, 1905. This vicariate belongs to the fifth ecclesiastical region of China; it includes 12 European and 10 native priests and 14,195 Christians; there are 28 churches, 5 of them with resident priests; 40 schools for boys and 20 for girls; 12 boarding schools for Christian youths; 12 Brothers of the Christian Schools; 35 Sisters of Caneosa; 22 Sisters of St. Paul of Chartres; 54 native Sisters.

Besides the island of Hong-Kong, the vicariate includes the island of Lautan and adjacent islands and the three continental districts of Sa-ron, Kweh-shing, and Ha-shing. The churches with their native priests are the cathedral (Glencairn), St. Joseph's (Garden Road), St. Francis (Wanchai), Church of the Sacred Heart (West Point), Church of St. Anthony (West Point).

The Société des Missions Etrangères de Paris have a procurator, a sanatorium and a printing office at Hong-Kong (see China); there is also a Dominican procurator.

HENRI CORBIER.

Honour.

Honorus, Saint, Archbishop of Arles: b. about 350; d. 6 or 7, according to certain authors, 14 or 15 January, 429. There is some disagreement concerning his place of birth, and, as already seen, the date of his death is also contested. It is believed that he was born in the north of Gaul and that he belonged to an illustrious pagan family. Converted to Christianity by his brother Venantius, he embarked with him from Marseilles about 368, under the guidance of a holy person named Caprasius, to visit the holy places of Palestine and the조사 of Syria and Egypt. But the death of Venantius, occurring suddenly at Methone, Achaea, prevented the pious travellers from going farther. They returned to Gaul through Italy, and, after having stopped at Rome, Honoratus went on into Provence and, encouraged by Leonius, Bishop of Fréjus, took up his abode in the wild island of Lérins with the intention of living there in solitude. Numerous disciples soon gathered around him and thus was founded the monastery, which has enjoyed so great a celebrity and which was during the fifth, sixth and seventh centuries a nursery for illustrious bishops and remarkable ecclesiastical writers. Honoratus' reputation for sanctity throughout the south-eastern portion of Gaul was such that in 426 after the assassination of Patroclus, Archbishop of Arles, he was summoned from his solitude to succeed to the government of the diocese, which the Arius and Manichean heresies had greatly disturbed. He appears to have succeeded in re-establishing order and orthodoxy, while still continuing to live from afar to the monks of Lérins. However, the acts of his brief pontificate are not known.

He died in the arms of Hilary, one of his disciples, who probably had a relative of the name of Léna, who was to succeed him in the See of Arles. His various writings have not been preserved, nor has the rule which he gave to the solitaries of Lérins. Cassian, who had visited his monastery, dedicated to him several of his "Confessio:"

"FRANCIS, Vie de S. Honorat, fondateur de Lérins et évêque d'Arles (Grenade, 1874); GALBERT, Saint Honorat et son monastère in Bullat. de l'Acad. d'épigraph., Doc. X (Grenoble, 1898-97), 97-110; ALAIN AND CHEVALIER, Gol. de l'Occident. (Arles, 1900), 25-29.

LÉON CLIGNET.

Honoratus a Sancta Maria, Discaele Carmelitae; b. at Limoges, 4 July, 1561; d. at Lille, 1729. Blaise Vauvelles took his vows under the above name at Tours, 8 March, 1671. On completing his course of studies he determined to devote himself to the missionary life, and was accordingly sent to Malta to prepare for the East. But the superiors detained him there in the capacity of sub-prior, and at the expiration of his term of office he returned to France without having been to the missions. He successively filled the posts of professor of philosophy and theology, prior, provincial, and visitor general. The interest of his life centres in his polemical writings. In his position as professor and superior he had to deal with the burning questions of his time: Gnosticism, Jansenism, Gallicanism, with Cartesians in philosophy, and Rationalism in Scripture and history. Endowed with uncommon acumen and a faculty for painstaking research, he contributed much to the elucidation of abstruse questions on every one of these subjects, while the modesty of his deductions of the infallibility of the Church in the esteem of his adversaries. It must, however, be acknowledged that the range of subject-matter was too wide for one man, with the result that, already during his life, he was accused of not always applying the rules of criticism he himself had established. His works may be divided into various classes: (a) Philosophical: "Disputationes philosophicae" ( Clermont, 1686) against Descartes and Gassendi. (b) Theological: "Propositiones theologicae" (Perville, 1689), an exposition of the Apostles' Creed from the dogmatic, scholastic, and historical point of view; (c) Retractations on Grace and Predestination", unpublished: "A Tractatus de individuatione" (Bordeaux, 1701), reprinted at Clermont and in Belgium in preparation for the Jubilee of 1725; "Dissertation apologetique" (Bordeaux, 1701), in defence of the "Examen de la theologie mystique" of Jean Cheron, Caleb Carmelitae (1596-1675), which had been sharply attacked by a Franciscan; "On Contemplation" (Paris, 1708) from the dogmatic and practical point of view, giving a complete chain of utterances of the Fathers and ecclesiastical writers, in two volumes. This work was translated into Italian and Spanish; a continuation of it appeared in 1713 under the title "The Motives and Practice of Divine Love"; in "A Problem addressed to the Learned" (Paris, 1708) Honoratus examines the claims of Denis the Areopagite to the authorship of the works commonly attributed to him, pronouncing himself in the negative sense. (c) Polemical: His contributions to the Jansenistic controversy showed him an adversary of the sect, four volumes in defence of the Constitution "Unigenitus" (anonymous); the first two appeared in 1710, the others in 1722; Notes on the writings of Jansenius, Saint-Cyr, Arnauld, Quenel, Pettipied and others (Ypres, 1724); "Reply to the Examen theologicae" by a Jansenist (anonymous, 1723); "Defence of the Encyclical of Benedict XIII" (1 Oct., 1724, on the teaching of Saint Augustine and Thomas (Brussels, 1725); two letters, one to show that a certain miracle said to have happened at the Corpus Christi procession in Paris (31 May, 1725) had not been wrought in favour of those who refused to sign the "Unigenitus"; the other addressed to the abbé on the necessity of subscribing to the said Bull; a collection of dissertations on the same Constitution (Brussels, 1727). (d) Historical and critical: "Theologie positiones" (Toulouse, 1700), containing the solution of chronological and other difficulties to be met with in Holy Scripture, a prelude to the author's great work on criticism (below); "Historical and critical dissertations on the orders of knighthood" (Paris, 1718, also in Italian, Brescia, 1761); the "Life of St. John of the Cross" (Tournaix, 1727), written on the occasion of the canonization of the saint, a critical edition of a manuscript of Donato Baudot, with notes and dissertations; however, the author did not live to carry through the press; "Reflexions sur les regles et l'usage de la critique", three volumes (Paris, 1712, 1717, and Lyons, 1720). This work has been several times reprinted, appeared also
in Latin, Italian, and Spanish, and is the one by which Honoratus will ever be known. It is unsurpassed in the theoretical part, but, as might be expected, the standard of orthodoxy, church history, patristic literature, hagiography, etc., has made such strides within the last two centuries that the practical portion is antiquated; “Deuntuntio historie ecclesiasticus” (anonymous, 1726). While the “Réflexions” were chiefly directed against Tillemont, this work takes Fleury to task for his orthodoxy. “Avis a l’abbé de Maa. des Fréres de l’Illuyce,” of which Honoratus had already spoken in the “Réflexions,” remains unedited.

B. Zimmerman.

Honorius, Saint, Archbishop of Canterbury, fifth in succession from St. Augustine, elected 731; consecrated at Lincoln by St. Paulinus of York, 628; d. 30 Sept., 653 (the last date alone is certain; the others are those usually accepted); commemorated, by decree of the Sacred Congregation of Rites (1883), in the Supplement to the Breviary for England on 30 Sept. Little is known about the history of this saint before his consecration; he was not more of his time’s contemporaries. From Bede we gather that he was a Roman monk, a disciple of St. Gregory, and probably a Benedictine. He either accompanied St. Augustine in 596 or was one of the second mission of 601. As a member of that apostolic company, he must have helped to shape the life of future monasticism, which, it is said, had so much effect in converting the inhabitants of Kent. When Honorius’s predecessor, Justus, died, Paulinus, fresh from the conversion of Northumbria, was the only English bishop left to consecrate him. From two letters of Pope Honorius I, preserved in Bede, it appears that Honorius and his consecrator, in applying to Rome for their pallia, asked that, in order to avoid the delays and uncertainties then involved in a journey to Italy, whenever the occupant of one of the metropolitan sees should die, the successor should have power to consecrate the successor, a request which the pope granted. The chief act of Honorius’s episcopate was the mission of St. Felix, whom he consecrated and sent to convert the East Angles, an expedition which was crowned with complete success. He administered his own diocese with great zeal and energy. The pope’s letter to him shows that he had not only a virtuous life as a bishop but was a model of fidelity and the faithful observance of the rule of the master, St. Gregory. On the overthrow of the flourishing Kingdom and Church of Northumbria by Cadwalls of Wales and Penda of Mercia in 633, he received Paulinus and appointed him to the vacant See of Rochester. On the death of Paulinus in 644, Honorius consecrated Tiharan, a native of Kent, as his successor. And some years later, he consecrated a deacon of Mercia, Thomas, to succeed Felix in East Anglia, and in or about 652 Berctels or Boniface, a native of Kent, to succeed Thomas. Next year the archbishop himself died and was buried in his predecessor’s crypt. His successors in the See of Saints Peter and Paul, founded by St. Augustine.

Joseph Keating.

Honorius I, Pope (625–12 Oct., 638), a Campanian, consecrated 27 Oct. (Duchesne) or 3 Nov. (Jaffé, Mann), in succession to Boniface V. His chief notoriety has come to him from the fact that he was convicted of having been a heretic by the sixth general council (638-641).

The Letter of Sergius to Honorius.—The Monothelite question was raised about 594 in a letter to this pope from the Patriarch of Constantinople, Sergius. He related that Emperor Heraclius, when in Armenia in 622, in refuting a Monophysite of the Severian sect, had made use of the expression “one operation” (energy, ἕν ὁρισμόν) of the Incarnate Word. Cyrus, Bishop of the Laeti, had considered this doubtfully orthodox, and he wrote to Sergius on the subject. Sergius replied (he says) that he did not wish to decide the matter, but that the expression had been used by his predecessor Mennas in a letter to Pope Vigilius. In 630 Cyrus had become Patriarch of Alexandria. He found Egypt almost entirely Monophysite, as it had been since the Council of Ephesus (431). Cyrus, by the use of the expression for which Sergius had been able to produce such good authority, had formulated a series of propositions, which most of the Monophysites were willing to accept, and they were by this means reunited in large numbers to the Catholic Church, “so that those who formerly would not speak of the divine Leo and the great doctor of Alexandria now won a battle both with a loud voice in the holy mysteries.” At this juncture Sophronius, a Palestinian monk, famed for holiness, came to Alexandria. He disapproved of the formulary of Cyrus, and Sergius was evidently somewhat discredited at this. The reception of so many heretics was indeed glorious; but the ease with which it had been accomplished must have seemed suspicious. Sophronius was not ready at once with quotations from the Fathers to show that “two operations” was the only orthodox expression. But Sergius was ready to drop his expression “one operation” if it were thought he did nothing that might destroy the union already accomplished at Alexandria. Sophronius agreed. Sergius, however, was not satisfied with recommending Cyrus for the future to refrain from all mention of either one or two operations, but thought it necessary to place the whole matter before the pope. Sergius has commonly been treated as a heretic who did his best to deceive the pope. It seems more fair and more accurate to say that he was rather a politician than a theologian, but that he acted in good faith. He naturally was anxious to defend an expression which the emperor had used, and he was unaware that the letter of Mennas to Vigilius was a Monophysite forgery. But Cyrus’s large use of his formula and its denunciation by St. Sophronius caused him to take precautionary measures. His readiness to drop the expression shows modesty, if his wish that Sophronius’s formula should still be dropped shows ignorance. Nothing could have been more treacherous than a policy of pretending the best traditions of his see, than to refer the whole matter to Rome, since the Faith was in question.

Monothelitism.—The Monothelite heresy is not in reality distinct from that of the Monophysites. The few years have made me better acquainted with the writings of Timothy, Euthymius, Severus of Antioch, and other Monophysites, and it is now plain that the chief points on which the various sections of the Monophysites were agreed against Catholicism were the assertions that there is but one Will in the Incarnate Word, and that the operations (energies, ἐνέργεια) of Christ are not to be distinguished into two classes, the Divine and the human, but are to be considered as being the “theandric” (Divino-human) actions of the one Christ (see Eutychianism). Now these two formulae, “one Will,” and “one theandric operation,” are characteristic of Monothelism. It was not perceived by the ancients that this Monothelism, when it arose, was no new heresy, but expressed the very essence of Monophysitism. This was because the war with the latter heresy had been a war of words. The Catholics, following St. Leo and the Council of Chalcedon, confessed two natures (φύσεις) in Christ, using the word nature to mean an essence without subject, i.e. as distinct from hypostasis; whereas the Monophysites, following St. Cyril, spoke of “one nature,” understanding of a subsistent nature or subject, and as equivalent to hypostasis. They consequently accused the Catholics of Nestorian-
ism, and of teaching two Persons in Christ; while the Catholics supposed the Monophysites to hold that the human nature in Christ was so swallowed up in the Divine that it was non-existent. It does not appear that the Monophysite leaders really went so far as this; but they did undoubtedly divide the human nature of Christ, by referring both will and operation to the one Person and not to the two distinct natures. It followed that a human free will and a human power of action were wanting to Christ's human nature. But this real error of the heretics was not clearly detected by many Catholic theologians, because they spent their force in attacking the imaginary error of denying all reality to the human nature. Our new knowledge of the Monophysite theology enables us to perceive why it was that Cyrus succeeded so easily in uniting the Monophysites to the Church: it was because his formula embodied their heresy, and because they had never held the error which they supposed they were renouncing. Both he and Sergius ought to have known better. But Sergius, at the end of his letter, gets very near to accuracy, when he says that "from one and the same Incarnate Word proceeds indissolubly every human and Divine operation"; for during the six months, but then he operated as in the Divine operations, though it refers them rightly to a single subject; and Sergius proceeds to quote the famous words of St. Leo's dogmatic letter to Flavian: "Agit utraque forma cum alterius communiene quod proprium est," which amount to a condemnation of "one energy."

**The Reply of Honorius.**—It was now for the pope to pronounce a dogmatic decision and save the situation. He did nothing of the sort. His answer to Sergius did not decide the question, did not authoritatively declare the faith of the Roman Church, did not claim to speak with the voice of Peter; it condemned nothing, it defined nothing. Honorius entirely agrees with the caution which Sergius recommends. He praises Sergius for eventually dropping the new expression "one operation," but he unfortunately also agrees with him that it will be well to avoid two operations also; for if the former sounds Eutychian, the latter may be judged to be Nestorian. Another passage is even more difficult to account for. Following the lead of Sergius, who had said that "two operations" might lead people to think two contrary wills were admitted in Christ, Honorius (after explaining the communicatio idiomatum, by which it can be said that "God being God, a human will was bound, and this was from heaven") adds: "Wherefore we acknowledge one Will of our Lord Jesus Christ, for evidently it was our nature and not the sin in it which was assumed by the Godhead, that is to say, the nature which was created before sin, not the nature which was vitiated by sin."

Other passages of the letter are obscure. But it is plain that the pope simply followed Sergius, without going more deeply into the question. The letter cannot be called a private one, for it is a formal reply to a formal consultation. It had, however, less publicity than a modern Encyclical. As the letter does not define or condemn, it does not justify its acceptance, its teaching, is of course impossible to regard it as an ex cathedra utterance. But before, and even just after, the Vatican Council such a view was sometimes urged, though almost solely by the opponents of the dogma of Papal Infallibility. Part of a similar letter Honorius wrote to Honorius I. which was issued by the emperor towards the end of 638. In conformity with the words of Honorius it orders all the subjects of Heraclius to confess one Will in our Lord, and to avoid the expressions "one operation" and "two operations." Before Sergius died, in December, he assembled a great synod at Constantinople, which accepted the Ecthesis as "truly agreeing with the Apostolic See." But the council of the year of the Apostolic See was evidently the surety for this. Honorius was already dead, and had no opportunity of approving or disapproving the imperial document which had been based upon his letter. St. Sophronius, who had become Patriarch of Jerusalem even before Sergius wrote, also spoke with the consent of the year of the letter. St. Sophronius had a large number of testimonies of the Fathers to the "two operations," and had sent to all metropolitans of the world a remarkable disquisition, which admirably defines the Catholic doctrine. He also solemnly commissioned Stephen, Bishop of Dosa, the senior bishop of his patriarchy, to go to Rome and obtain a final condemnation of the new error. The Roman envoys who came to Constantinople in 640 to obtain the emperor's confirmation of the new pope, Severinus, refused to accept the Ecthesis, on the ground that Rome was above all synodal law. Severinus only reigned a month longer than Sergius, and his successor, who was his successor, was John IV. Emperor Heraclius then wrote to the pope, laying the blame on Sergius, and disowning the Ecthesis. He died shortly afterwards (February 641). To his elder son John IV addressed a letter known as the "Apology for Pope Honorius." He explains quite truly that both Sergius and Honorius asserted one Will only because they would not admit contrary wills; yet he shows by his argument that they were wrong in using so misleading an expression. St. Maximus of Constantinople, a monk and formerly secretary of Heraclius, now becomes the protagonist of a methodology and of submission to Rome. His defence of Honorius is based upon the statements of a certain abbot, John Symponus, the composer of the letter of Honorius, to the effect that the pope only meant to deny that Christ had not two contrary human wills, such as are found in our fallen nature. It is true that the words of Honorius are inconclusively though not necessarily, heretical. Unfortunately the Monophysites habitually argued in just the same inconclusive way, from the fact that Christ could have no rebellious lower will, to prove that His Divine and human will were not distinct faculties. No doubt Honorius did not really intend to deny that the is in union with the is, but it appeared to his hearers that his words could be interpreted in the sense of that heresy, and he did not recognize that the question was not about the unity of the Person Who wills, nor about the entire agreement of the Divine Will with the human faculty, but about the distinct existence of the human faculty as an integrant part of the Humanity of Christ.

**The Type of Constans.**—Pyrrhus, the successor of Sergius, was condemned at Rome for refusing to withdraw the Ecthesis. Emperor Constans deposed him for political reasons, and set up a new patriarch, Paul. Pyrrhus recanted at Rome. Paul, under Constans' command, sent the customary confession of faith to the pope. As it did not confess two wills, it was condemned by Pope Theodore. Paul first showed anger, but then prevailed on Constans to withdraw the Ecthesis, for which he was substituted a Term, or "Type," in which it was said that the "one Will" was not longer taught; instead it was said that neither one nor two wills were to be spoken of, but no blame was to attach to any one who had used either expression in the past. The penalties for disobedience were to be: deposition for bishops and clergy, excommunication, loss of goods or property. This is clearly a misinterpretation of the Apology of John IV, who had shown that "one Will" was an improper expres-
sion, but had declared that Honorius and Sergius had used it in an orthodox sense. But John IV had neither defended nor blamed Honorius and Sergius for wishing the expression "two operations" to be avoided. It was consequently assumed that Honorius was right in this, and it was quite logical to assume the question of one or two wills to that of one or two operations. The penalties were severe; but both patriarch and emperor declared that they forced no man's conscience. The Type, unlike the Euchesis, was not an exposition of faith, but a mere prohibition of the use of certain words or formulas. The edict was issued about the first half of 649. Pope Theodore died in May, and was succeeded by St. Martin I, who in the great Lateran Council of 649 solemnly condemned the Euchesis and the Type as heretical, together with Cyrus, Sergius, Pyrrhus (who had fallen back), and Paul. The emperor was furious. He had the pope dragged to Constantinople, loaded with chains, and exiled him to the Crimea, where he died a martyr for the Faith in 655. St. Maximus also suffered for his devotion to orthodoxy and his loyalty to the Holy See. The decrees of the Lateran Council which were sent to all bishops by papal decree, as penal dogmas, formed a new stage in the Honorius controversy. Honorius and Sergius must stand or fall together. John IV defended both. St. Martin condemns Sergius and Cyrus, and not a word is said in favour of Honorius. It was evidently felt that he could not be defended, if the Type was to be condemned as heretical because it forbade the orthodox expressions "two operations" and "two Will", since in this it was simply following Honorius. But be it carefully noted that the Type of Constats is not Monothelitism. Its "heresy" consists in forbidding the use of orthodox expressions together with the heretical contrary of the Type. The Lateran Council will show that the question was not as to the toleration of Monothelitism, for they were forbidden by the Type, but the prohibition of the orthodox formula. No doubt it was still held at Rome that Honorius had not intended to teach "one Will", and was therefore, not a positive heretic. But no one would deny that he recommended the negative course which the Type enforced under savage penalties, and that he objectively deserved the same condemnation.

**In What Sense Honorius Was Condemned.**—Constats was murdered in 668. His successor, Constats, probably, probably, probably, probably, probably, probably, probably, probably, probably, probably, probably, probably, probably, probably, probably, probably, probably, defences by St. Maximus. It is clear, then, that the council did not think that it sufficed itself by asserting that Honorius was a heretic (in the above sense) and in the same breath anathematized him as being what it claimed to be, an authoritative exposition of the infallible faith of the Roman See. The fault of Honorius lay precisely in the fact that he had not authoritatively published that unchanging faith of his Church, in modern language, that he had not issued a canon. St. Agatho died before the conclusion of the council. The new pope, Leo II, had naturally no difficulty in giving to the decrees of the council the formal confirmation which the council asked from him, according to custom. The words about Honorius in his letter of confirmation, by which the council got its ecclesiastical rank, are necessarily more important than the decree of the council itself: "We anathematize the inventors of the new error, that is, Theodore, Sergius, ... and also Honorius, who did not attempt to sanctify this Apostolic Church with the teaching of Apostolic tradition, but by profane treachery permitted its purity to be polluted." This appears to express exactly the mind of the council, only that the council avoided suggesting that Honorius disgraed the Roman Church. The last words of the quotation are given above as in the Greek of the letter, because great importance has been attached to them by large numbers of Catholic apologetic. Pennacchi, following the line of Grisar, taught that by these words Leo II explicitly abrogated the condemnation for heresy by the council, and substituted a condemnation for negligence. Nothing, however, could be less explicit. Hefele, with many others before and after him, held that Leo II by the same words explained the sentence in which the sentence of Honorius was to be understood. Such a distinction between the pope's view and the council's view is not justified by close examination of the facts. At best such a system of defence was exceedingly precarious, for the milder reading of the Latin is just as likely to be original: "but by profane treachery attempted to pollute its purity''. In this form Honorius is certainly not excepted, yet the pope declares that he did not actually succeed in polluting the immaculate Roman Church. However, in his letter to the Spanish King Ervig, he has: "And with them Honorius, who defended the heretical spirit, which he received from his predecessors, to be tarnished." To the Spanish bishops he explains his meaning: "With Honorius, who did not, as became the Apostolic authority, extinguish the flame of heretical teaching in its first beginning, but fostered it by his teaching." That is, in his language, "two operations", but agreed with Sergius that the whole matter should be hushed up. Pope Honorius was subsequently included in the lists of heretics anathematized by the Trullan Synod, and by the seventh and eighth ecumenical councils without special remark; also in the on taken by every new pope from the eighth century to the eleventh in the following words: "Together with Honorius, who added fuel to their wicked assertions" (Liber diurnus, ii, 9). It is clear that no Catholic has the right to defend Pope Honorius. He was a heretic, not in intention, but in fact; and he is to be considered to have been condemned in the sense in which Origen and Theodore of Mopsuestia, who died in Catholic communion, never having resisted the Church, have been condemned. But he was not condemned as a Monothelite, nor was Sergius. And it would be harsh to regard him as a "private heretic", for he admittedly had excellent intentions. 

MODERN CONTROVERSIES ON THE SUBJECT. The condemnation of Pope Honorius was retained in the lessons of the Breviary for 28 June (St. Leo II) until the eighteenth century. Difficulties made themselves felt when, after the Great Western Schism, papal infallibility began to be doubted. Protestantism and Gallicanism made vigorous attacks on the unfortunate pope, and at the time of the Vatican Council Honorius figured in every papal sentence against ecclesiastical subjects. The question has not only been debated in numerous monographs, but is treated by the historians and the theologians, as well as by the professors of controversy. Only a few typical views need here be mentioned. 

Barthome and Baronius followed Piganius in denying that Honorius was condemned at all. Baronius argued that the Acts of the Council were falsified by Theodore, a Patriarch of Constantinople, who had been deposed by the emperor, but was restored at a later date; we are to presume that the council condemned him, but that he substituted "Honorius" for "Theodorus" in the Acts. This theory has frequently been shown to be untenable. 

The more famous Gallicans, such as Bouchet, Dupin, Richer, and later ones as Cardinal de la Lusarne and (at the time of the Vatican Council) Marei, Gratry, and many others, usually held with all Protestant writers that Honorius had formally defined heresy, and was condemned for so doing. They added, of course, that such a failure on the part of an individual pope did not compromise the general and habitual orthodoxy of the Roman See. 

The other hand, the advocates of papal infallibility, for instance, such great men as Melchior Canisius in the sixteenth century, Thomasius in the seventeenth, Pietro Bollari in the eighteenth, Cardinal Perrone in the nineteenth, have been careful to point out that Honorius did not define anything ex cathedra. But they were not content with this amply sufficient defence. Some followed Baronius and, at most, if not all, showed themselves anxious to prove that the letters of Honorius were entirely orthodox. There was indeed no difficulty in showing that Honorius was probably not a Monothelite. It would have been enough just to extend the same kindly interpretation to the words of Sergius. The learned Jesuit Garnier saw clearly, however, that it was not as a Monothelite that Honorius was condemned. He was coupled with Sergius, Pyrrhus, Paul, the Ecstasy, and the Type. It is by no means clear that Sergius, Pyrrhus, and the Ecstasy are to be accounted as Monothelites, since the whole of the doctrine of "one operation"; it is quite certain that Paul and the Type were anti-Monothelites, for they prohibited "one Will" also. Garnier pointed out that the council condemned Honorius for approving Sergius and for "fomenting" the dogmas of Pyrrhus and Paul. This view was followed by many great Catholic writers. A theory put forward by Pennacchi at the time of the Vatican Council attracted an unnecessary amount of attention. He agreed with the Protestants and Gallicans in proclaiming that the letter of Honorius was a definition ex cathedra; that the pope was anathematized by the council as a heretic in the strict sense; but the council itself, by giving papal confirmation, fell in this case into error about a dogmatic fact (in this point Pennacchi was preceded by Turrecremata, Bellarmine, Assemani, and many others), since the letter of Honorius was not worthy of censure. Leo II, in confirming the council, expressly abrogated the censure, according to this view, and substituted a condemnation for negligence only (so also Grisar—see above). There is evidently no ground whatever for any of these assertions. 

Bishop Hefele before 1870 took the view that Honorius's letter was not strictly heretical but was gravely incorrect, and that its condemnation by an ecumenical council was a serious difficulty against the "personal" infallibility of the pope. After his hesitating acceptance of the Vatican decrees he modified his view; he now taught that Honorius's letter was a definition ex cathedra, that it was incorrectly worded,
but that the thought of the writer was orthodox (true enough; but, in a definition of faith, surely the words are of primary importance); the council judged Honorius by condemning the book simply as a breviarist; Leo II accepted and confirmed the condemnation by the council, but, in doing so, he carefully defined in what sense the condemnation was to be understood. These views of Hefele's, which he put forth with editing modesty and submission as the best explanation he could give, was, what had quite warranted him to a formidable difficulty, had had a surprisingly wide influence, and have been adopted by many Catholic writers, save only his mistaken notion that a letter like that of Honorius can be supposed to fulfill the conditions laid down by the Vatican Council for an ex cathedra judgment (so Jungmann, de Marius). Pope Honorius was much respected and died with an untarnished reputation. Few popes did more for the restoration and beautifying of the churches of Rome, and he has left us his portrait in the apsidal mosaic of Sant' Agnese fuori le mura. He was principal at Tarsus, and temporal needs of the Romans by repairing the aqueduct of Trajan. His extant letters show him engaged in much business. He supported the Lombard King Adalwold, who had been set aside as mad by an Arian rival. He succeeded, to some extent, with the emperor's assent, in annulling the solemn profession of St. Eligius to the Roman Church. He wrote to stir up the zeal of the bishops of Spain, and St. Braulio of Saragozza replied. His connexion with the British Isles is of interest. He sent St. Birinus to convert the West Saxons. In 634 he gave the pallium to St. Paulinus of York, who went to the Britons, and in 639 he wrote a letter to King Edwin of Northumbria, which Bede has preserved. In 630 he urged the Irish bishops to keep Easter with the rest of Christendom, in consequence of which the Council of Magh Lene (Old Leighlin) was held; the Irish testified to their traditional devotion to the See of Peter, and sent a deputation to Rome as "children to their mother." On the return of these envoys, all Southern Ireland adopted the Roman use (635).

decrees were passed against simoniacal elections and contracts. On his return to Rome he was accompanied by William, Archbishop of Canterbury who obtained legatine faculties for England and Scotland from Honorius II, but was unsuccessful in his attempt to prevail upon the pope to surrender his right of sending special legates to England. At the request of the King of Denmark, Honorius II also sent a legate thither to put a stop to the abuses of the clergy in that country.

The pope was less successful in his dealings with Count Roger of Sicily, who tried to gain possession of the lands which his illegitimate cousin William of Apulia had bequeathed to the Apostolic See. Honorius II placed him under the ban and took up arms against him in defence of the lawful property of the Church, but without avail. To put an end to a useless but costly war he made Roger feudatory Lord of the Church in August, 1126, while Roger in his turn renounced his claims to Benevento and Capua. Shortly after his election to the papacy Honorius II excommunicated Count William of Normandy for having married a daughter of Fulco of Anjou within the forbidden degree. He likewise restored the disturbed discipline at the monasteries of Chiny and Monte Cassino where the excommunicated Abbot William of Apulia had bequeathed the Apostolic See. Honorius II placed him under the ban and took up arms against him in defence of the lawful property of the Church, but without avail.

On 26 February, 1126, he approved the Premonstratensian Order which St. Norbert had founded at Prémontré six years previously. His letters and diplomas (112 in number) are printed in P. L., CLVI, 1217-1216.

MICHAEL OTT.

Honorius II (Antipope). See CADALOUS.

Honorius III (Cenicio Savelli), Pope, b. at Rome, date of birth unknown; d. at Rome, 18 March, 1227.

For a time he was canon at the church of Santa Maria Maggiore, then he became papal chamberlain in 1188 and Cardinal-Deacon of Santa Lucia in Silvis in 1193.

Under Pope Innocent III he became Cardinal-Priest of Santi Giovanni e Paolo, and, in 1197, tutor of the future Emperor Frederick II, who had been given as ward to Innocent III by the Empress widow Constance of Roman, when he was twelve years old. The young emperor was averse to the company of his tutor, who was now pope. Frederick II was a great friend of Gregory IX and of Hugh of Saint-Victor. He was a great admirer of the Roman Church, which practically united the Sicilian kingdom and the empire in one person; a union which by its very nature was detrimental to the papacy and which Honorius III had every reason to oppose. He was a great friend of Frederick II.

Honorius III was aware that there was only one man in Europe who could bring about the recovery of the Holy Land, and that man was his former pupil, Frederick II of Germany. Like many other rulers, Frederick II had taken an oath to embark for the Holy Land in 1217. As long as his rival Otto IV was living, the pope did not urge him to fulfill his oath; when, however, his rival had died on 19 May, 1218, Honorius III insisted that he embark as soon as possible and Frederick promised to set sail for the Holy Land on 24 June, 1219. He then obtained permission to postpone his departure repeatedly, first till 29 September, 1219, then successively till 21 March, 1220, 1 May, 1220, August, 1221, June, 1225, and finally, at the meeting of the pope and the emperor at Seville, 28 July, 1227, and again in 1229.

It must not be ascribed merely to weakness on the part of Honorius III that he allowed one postponement after the other.

He knew that without the co-operation of the emperor a successful crusade was impossible and feared that by using harsh measures he would cause a complete break with the emperor and indefinitely destroy the possibility of a crusade. For the same reason he yielded to the emperor in many things which under different circumstances he would have strenuously opposed. Thus he reluctantly approved the coronation of Frederick's son Henry as King of the Romans, which practically united the Sicilian kingdom and the empire in one person; a union which by its very nature was detrimental to the papacy and which Honorius III had every reason to oppose. He knew that without the co-operation of the emperor a successful crusade was impossible and feared that by using harsh measures he would cause a complete break with the emperor and indefinitely destroy the possibility of a crusade.

Honorius III was aware that there was only one man in Europe who could bring about the recovery of the Holy Land, and that man was his former pupil
the pope and the emperor to its height; but the rupture between the emperor and the papacy did not take place until Honorius III had died.

Though the general crusade planned by Honorius III was never realized, he deserved the gratitude of the western Church for his efforts. In 1211, in the midst of the war, he died. The crusade was made impossible as long as the Christian princes were at war with one another, and he was succeeded by an open conflict with the Latin Church. In this war, he had found it advisable to leave the city. He went first to Rieti, then to Viterbo, returning to Rome in September, 1220, after the Romans were reconciled to him through the intervention of Frederick II, then on his way to Rome to be crowned emperor. In the war that followed between the Conti and the Savelli, the Romans sided with the Conti, and the pope, being of the family of the Savelli, was again forced to flee to Rieti in June, 1225.

He returned to Rome in January, 1226, after Angelo di Benincasa, a friend of Honorius III, was elected senator of Rome. Through his legate Ugolino (afterwards Pope UT), Honorius III secured the reconciliation of Pisa and Genoa in 1217, Milan and Cremona in 1218, Bologna and Pistoia in 1219, and through his legate Pandulf he prevailed upon the Duchy of Spoleto to become papal territory, and upon the cities of Perugia, Assisi, Foligno, Norcia, and Terni, to hand them over to the pope.

In England the authority of the pope was paramount ever since that country had become a fief of the Apostolic See under Innocent III. The cruel King John had died on 16 October, 1216, leaving his ten-year-old son Henry III as successor. The cruelty and faithlessness of King John may have justified the contumacy of the English barons in rebelling against the English crown to Louis, the son of Philip of France, but now it became their duty to be loyal to the lawful king, Henry III. Honorius III ordered Gualo, his legate in England, to urge the recalcitrant barons to return to their natural allegiance and gave him power to excommunicate all who continued to adhere to Prince Louis of France. On 19 January, 1217, he wrote to William, Earl of Pembroke, who was the young king's guardian and the regent of England, to prepare for war against Prince Louis and the faithless English barons. It was due to the measures taken by the papal legate that peace was finally restored and that Henry III was acknowledged the undisputed King of England on 11 September, 1217. After the death of Pembroke in May, 1219, the regency of England was nominally in the hands of the king's ministers; actually, however, England was ruled by Honorius III through Pandulf, who had meanwhile succeeded Gualo as papal legate in England. The influence of Honorius III continued to be paramount in England during his entire pontificate, for Henry III was still in his minority, and he as well as the barons and the people acknowledged the pope as the suzerain of the kingdom.

The untiring activity of Honorius III in the interests of justice and peace was felt throughout the Christian world. In Bohemia he safeguarded the rights of the Church against the encroachments of King Ottocar, through his legate Gregorius de Crescenzi, who had before him the need to hold the rebellious son Bela IV by threatening the latter with excommunication. For Denmark he effected in 1224 the liberation of its King Waldemar from the captivity in which he was held by Count Henry of Schwaben. In Sweden he protected the rights of the Church against the encroachments of King John, and used celiency upon the clergy. For the Latin Empire in the Orient he crowned Peter of Courtenay as Emperor of Constantinople, in Rome on 12 April, 1217, and protected his successor Robert and King Demetrius of Thessalonica against Theodore Comnenus. In Cyprus he abated the quarrels between the Greeks and the Latin. In Spain he effected a lasting peace between King Ferdinand III and Alfonso IX of Leon, and took a crusade against the Moors (1218–1219), and protected the boy-king Jaime of Aragon against Counts Sancho and Fernando. In Portugal he defended Archbishop Estêvão Suarez against the expedition of King Afonso (1220–1223). In France he induced King Louis VIII to undertake a crusade against the Albigenses in 1226. He also assisted Bishop Christian of Prussia in the conversion of the pagan Prussians, and at the bishop's suggestion called upon the ecclesiastical provinces of Mains, Magdeburg, Cologne, Salzburg, Gnesen, Lund, Bremen, Trier, and Camin in 1222 to prepare a crusade against them.

Honorius III was also a liberal patron of the two great mendicant orders and bestowed numerous privileges upon them. He approved the Rule of St. Dominic in his Bull "Religiosam vitam", dated 24 September, 1216, and the Rule of St. Francis in his "Solem annuens", dated 20 November, 1223.

Many authorities maintain that Honorius III had granted the famous Portuensi indulgence to St. Francis as early as 1216, others hold [Kirsch in "Theologische Quartalschrift", LXXVIII (Tubingen, 1906), fasc. 1 (1907)] that it is proved in the indulgence which Honorius granted to St. Francis is essentially different from the so-called Portuensi indulgence. On 30 January, 1226, he approved the Carmelite Order in his Bull "Ut vivendi normam". He also approved the religious congregation "Val de Villere" (Vallis scholarium, Valley of scholars), which had been founded by Dr. Peter of Montaigu at the theology at the University of Paris. The Bull of approbation "Exhibita nobis" is dated 7 March, 1219. The congregation was united with that of St. Genevieve by Innocent X in 1646. It is remarkable that four out of the six or seven saints that were canonised by Honorius III were English or Irish. On 17 May, 1218, he canonised William, Archbishop of Bourges (d. 1209); on 18 February, 1220, Hugh, Bishop of Lincoln (d. 1200); on 21 January, 1224, William, Abbot of Roehld in Denmark (d. 1203); on 18 March, 1226, William, Archbishop of York (d. 1154). The church also applied to him against the alleged miracles of the Cistercian abbot, St. Maurice of Cormoët (d. 1191). The latter was never formally canonised, but his cult dates back to the pontificate of Honorius III. His feast is celebrated by the Cistercians on 13 October. Honorius III probably canonised also St. Raynouard, Bishop of Forconium, now Aquila, in Italy (d. 1077). Being a man of learning, Honorius insisted that the clergy should receive a thorough training, especially in theology. In the case of the certain Hugh whom the chapter of Chartres had elected bishop, he withheld his approbation because the bishop-elect did not possess sufficient knowledge. "Quam ob rem, "cum spectaretur in litteratura defective", said the pope states in a letter dated 8 January, 1219 (Horov, loc. cit. infra, III, 92). Another bishop he even deprived of his office on account of illiteracy (Raynaldus, ad annum 1221). He bestowed various privileges upon the Universities of Paris and Bologna, and gave the learned a better education. In order to facilitate the study of theology in dioceses that were distant from the great centres of learning, he ordered in his Bull "Super specula Domini" that some talented young men should be sent to a recognized theological school to study theology with the purpose of teaching it afterwards. Honorius III acquired some fame as an author. His letters, many of which are of great historical

Giotto, S. Francesco, Assisi
value, and his other literary productions, were collected and edited by Horony in "Medii medii biblootheca patristica", series I (5 vols., Paris, 1879-83). While he was in the metropolitan sees of Perugia and Spoleto, and afterwards, with the concurrence of Cencio Camerarius, he compiled the "Liber censum Romanæ ecclesiae", perhaps the most valuable source for the history of papal economies during the Middle Ages. It comprises a list of the revenues of the Apostolic See, a record of donations received, privileges granted, and contractions with the cardinals and rulers. It was begun under Clement III and completed in 1192 under Celestine III. Muratori inserted it in his "Antiquitates Italiae mediæ aevi", V (Milan, 1733-43), 851-908. A new edition was prepared for the "Bibliothèque des écoles françaises d'Abbeville" by F. Queheune, fasc. i (Paris, 1889), fasc. ii and iii (1902), fasc. iv (1903). The original manuscript of the "Liber Censuum", which is still in existence (Vaticanus, 8486), concludes with a catalogue of the Roman pontiffs and the emperors from St. Peter to Celestine III in 1101. It was edited separately by Weiland in "Archiv der Gesellschaft für die ältere deutsche Geschichte", XII (Hanover, 1874), 60-77. Honorius III wrote also a life of Celestine III (Honorius, loc. cit., I, 567-568); a life of Gregory VII (ibid., I, 568-569); an "Ordo Romanus", which is a sort of ceremonial containing the rites of the Church for various occasions (3rd ed., in "Sacrae scripturae", II, 167-220); and 34 sermons (Honorius, I, 569-976). His collection of decretales known as "Compilatio quinta" has been treated under "Decretals".

Michael Ott.

Honorius IV (Giacomo Savelli). Pope, b. at Rome about 1210; d. at Rome, 3 April, 1287. He belonged to the rich and influential family of the Savelli and was a grandnephew of Honorius III. Very little is known of his life before he ascended the papal throne. He studied at the University of Paris, where he held a prebend and canonry in the cathedral of Chartres, and later obtained the benefice of rector in the church of Berton, in the Diocese of Norwich. In 1261 he was created Cardinal-Deacon of Santa Maria in Cosmedin by Martin IV and was also appointed papal legate in Tuscany and captain of the papal army. By order of Clement IV he and three other cardinals invested Charles of Anjou as King of Sicily at Rome on 28 July, 1265. He was one of the six cardinals who elected Gregory X by compromise at Viterbo on 1 Sept., 1271. In 1274 he accompanied Gregory X to the Fourteenth General Council at Lyons, and in July, 1278, he was one of the three cardinals whom Adrian V sent to Viterbo with instructions to treat with King Rudolf I of Hapsburg concerning his imperial coronation at Rome and his future relations towards Charles of Anjou, King of Sicily. The death of Adrian V in the following year rendered fruitless the negotiations with Rudolf. Nothing further is known of the cardinal's doings until, nine years later, he was elected pope.

Martin IV died 28 March, 1285, at Perugia, and three days after his death fifteen out of the eighteen cardinals who then composed the Sacred College had a preliminary consultation at the episcopal residence of Perugia, and appointed for the following day, 2 April, 1285, for the election of the new pope. The election took place without the concave, which had been prescribed by Gregory X, but was suspended by John XXI. At the first vote taken, Giacomo Savelli was unanimously elected and took the name of Honorius IV. The election was one of the first to be completed without much difficulty under the jurisdiction of the papacy. The reason for this great haste may be found in the Sicilian complications, which did not allow any interregnum, and especially in the fact that the cardinals wished to avoid the unjustifiable interference which occurred at the election of the preceding pope. After the investiture of the inhabitants of Viterbo to imprison two counts of the house of Hapsburg, Charles of Anjou and taking Pedro III of Aragon as their king without the consent and approval of the pope, the Sicilians had practically denied his suzerainty over Sicily. The awful massacre of 31 March, 1282, known as the Sicilian Vespers, had precluded every possibility of coming to an amicable understanding with Martin IV, a Frenchman who owed the tiara to Charles of Anjou. Pope Martin demanded unconditional submission to Charles of Anjou and the Apostolic See and, when this was refused, put Sicily and Pedro III under the ban, deprived Pedro of the Kingdom of Aragon, and gave it to Charles of Valois, the son of King Philip III of France. He, moreover, assured Charles of Anjou in his attempts to recover Sicily by force of arms. The Sicilians not only repulsed the attacks of Charles of Anjou but also captured his son Charles of Salerno. On 6 January, 1285, Charles of Anjou died, leaving his brother Charles of Valois as his natural successor. Such were the conditions in Sicily when Honorius IV ascended the papal throne. The Sicilians cherished the hope that the new pontiff would take a different stand from that of his predecessor in the Sicilian question, but their hopes were only partly realized. He was indeed less impulsive and more peaceably inclined than Martin IV, but he did not renounce the claims of the Church and of the House of Anjou upon the Sicilian crown. Neither did he set aside the severe ecclesiastical punishments imposed upon Sicily or restore to Pedro III the Kingdom of Aragon which Martin IV had transferred to Charles of Valois. On the other hand, he did not approve of the tyrannical government to which the Sicilians had been subject under Charles of Anjou. This is evident from his wise legislation as embodied in his constitution of 17 September, 1295 ("Constitutio super ordinationes regni Sicilie", "Bullarium Romanum", Turin, IV, 764-776). In that constitution he inculcates that no government can prosper which is not founded on justice and peace, and he passes forty-five ordinances intended chiefly to protect the people of Sicily against their king and his officials. In case of any violation of these ordinances by the king or his officials, the people were free to appeal to the Apostolic See for redress. Thus he observed the ordinances contained in this constitution under pain of excommunication. Martin IV had allowed King Philip III of France to tax the clergy in France, and in a few dioceses of Germany, one-
tenth of their revenues for the space of four years. The money thus collected was to be used for waging war against Pedro III with the purpose of removing Aragon for Charles of Valois. Honorius IV approved this action of his predecessor. When Edward I of England requested him to use his influence to put an end to the war, he answered that Pedro III deserved to be punished and that Philip III should not be kept from the fruits of a war which he had undertaken in the service and at the instance of the Church. The death of Pedro III on 11 November, 1285, somewhat changed the Sicilian situation. His two sons Alfonso and James succeeded him, the former as King of Aragon, the latter as King of Sicily. Honorius IV, of course, acknowledged neither one nor the other. On 11 April, 1286, he solemnly excommunicated King James of Sicily and the bishops who had taken part in his coronation at Palermo on 2 February, 1286; but neither the king nor the bishops concerned themselves about the excommunication. The king even sent a hostile fleet to the Roman coast and destroyed the city of Astura by fire. Charles of Salerno, the lawful King of Sicily, who was still held captive by the Sicilians, finally grew tired of his long captivity and signed a contract on 27 February, 1287, in which he renounced his claims to the Kingdom of Sicily to the favor of King James and his heirs. Honorius IV, however, who was always on the lookout for new enemies, refused to listen to such an unprincipled act, which surrendered the rights of the Church and of the House of Anjou to refractory rebels. He declared the contract invalid and forbade all similar agreements for the future. While Honorius IV was inexorable in the stand he had taken towards Sicily and its self-imposed king, his relations towards Alfonso of Aragon became less hostile. Through the efforts of King Edward I of England, negotiations for peace were begun by Honorius IV and King Alfonso. The pope, however, did not live long enough to complete these negotiations, which finally resulted in a peaceful settlement of the Aragonese as well as the Sicilian question.

Rome and the States of the Church enjoyed a period of tranquillity during the pontificate of Honorius IV, the like of which they had not enjoyed for many years. He had the satisfaction of reducing the most powerful and obstinate enemy of papal authority, Conti de Montefeltro, Duke of Urbino, to the pariah for the cyrus year, and successfully resisted the papal troops. The authority of the pope was now recognized throughout the papal territory, which then comprised the Exarchate of Ravenna, the March of Ancona, the Duchy of Spoleto, the County of Bertinoro, the Matildian lands, and the Cantiapina, viz., the cities of Rimini, Pesaro, Sinigaglia, and Ancona. The Romans were greatly elated at the election of Honorius IV, for he was a citizen of Rome and a brother of Pandulf, who had during the preceding summer been elected one of the two annual senators of Rome. The continuous disturbances in Rome during the pontificate of Martin V had not allowed the people to reside in Rome, but now the Romans cordially invited Honorius IV to make Rome his permanent residence. During the first few months of his pontificate he lived in the Vatican, but in the autumn of 1285 he removed to the magnificent palace which he had just erected on the Aventine. While Pedro II of Aragon had fled to the East and the English King of Sicily had some dealings beyond those that were of a purely ecclesiastical character. On 16 March, 1286, he removed the interdict which had been imprudently placed upon Venice by Martin IV because that city had refused to equip a fleet for the service of Charles of Anjou in his war with Pedro II of Aragon. When Honorius IV had freed Venice from the burden of the new taxes, he brought about the abolition of the newly-made laws that were hostile to the Church and the clergy.

The relations between Honorius IV and the German King Rudolf of Hapsburg were most cordial. The negotiations for Rudolf's imperial coronation which had begun during the pontificate of Adrian V (1276) and continued that of Nicholas III (1277-1280) were entirely suspended during the pontificate of Martin IV (1281-1285) who had little love for the Germans. Immediately upon the accession of Honorius IV these negotiations were resumed and the feast of the Purification of the Blessed Virgin, 2 February, 1287, was set apart for the coronation of Rudolph as legate to Germany, Sweden, Russia, and the other countries of the north to hasten the king's Italian expedition, but Rudolf's war with Count Eberhard of Württemberg and other dissensions in Germany prevented his departure. The same legate presided at the national council of Würzburg, which began its sessions on 16 March, 1287. The decrees which were passed at this council are practically the same as those of the general council of Lyons in 1274.

The two great mendicant orders which at that time exerted great influence, both as pastors of the faithful and as professors at the great schools of learning in Italy, were now enjoying the favor of Honorius IV. He also approved the privileges of the Carmelites and the Augustinian hermits and permitted the former to exchange their striped habit for a white one. He was especially devoted to the Willimates, an order founded by St. William, Duke of Aquitaine (d. 1156), and added numerous privileges to those which they had already received from Alexander IV and Urban IV. Besides turning over to them some deserted Benedictine monasteries, he presented them with the monastery of St. Paul at Albano, which he himself had founded and richly endowed when he was still cardinal. On 11 March, 1286, he commanded the sect of the Apostolics (see Apostolici) or false apostles, which had been started by a certain Gerard Segarelli at Parma in 1260. At the University of Paris he advocated the erection of chairs for the Oriental languages in order to give an opportunity of studying these languages to those who intended to labor for the conversion of the Turks. He fixed the day on which the schismatic churches in the East.

HONORIUS, FLAVIUS, Roman Emperor, d. 26 August, 423. When his father, the Emperor Theodosius, divided up the government of the empire in the year 385, the western half was allotted to Honorius, the eastern went to his brother Arcadius. The boundary line was drawn in such a manner that the provinces of Dalmatia, Pannonia, and Noricum still belonged to Western Rome. The eleven-year-old Honorius was under the guardianship of the able Vandal general Stilicho, whom Theodosius had placed in charge of Honorius IV and the troops stationed in northern Italy. When the Arian Visigoths revolted under their young King Alaric, of the family of Balbi (i. e. the Bold), and invaded the Western Roman Empire, Stilicho first marched against them in northern Greece but was obliged to withdraw his troops from the territory of Honorius IV and of the troops stationed in northern Italy. Not until the Goths overran the Peloponnesus was his help accepted. He surrounded Alaric's hordes with his legions but, when the Byzantine rulers sought to come to an understanding with Alaric, he suffered the Goths to retreat into Illyria.

MICHAEL OTT.
As a consequence the division of the Roman Empire now led to positive hostility between its parts. Stilicho endeavoured to eradicate abuses in the administration, remained on good terms with the Senate and, in order to keep the young emperor under his influence, married him to his daughter Maria. When Honorius was menaced by Alaric in Milan early in 410 he was removed to Ravenna and left his son, Flavius Placidus, to defend the capital. Honorius placed the command of the Gothic invasion with legions summoned for that purpose from Britain and Germany; he rescued the emperor from his precarious situation and repulsed the Goths with great loss at Pollentia (4 April, 402) and Verona (403). Honorius marched with Stilicho under a triumphal arch erected in Rome in honour of the victory and held brilliant festivals after the ancient Roman custom.

Meanwhile German tribes under the leadership of the Ostrogoth Radagais invaded Italy (405). Honorius and the court took refuge within the fastnesses of Ravenna, impregnable in its marshy surroundings, which now became the capital of the Emperor of Western Rome, and later of the Ostrogoth kings and the viceroys of Eastern Rome. Stilicho conquered the invaders in the mountains of Fiesole (Fiesole) near Florence, 12,000 Goths being impressed into the service of Rome. As the empire had no Roman legions north of the Alps, Alaric, and Stilicho now poured over the Rhine into the interior of Gaul, followed by Franks, Burgundians, and Alemanni, who settled permanently on the left bank of the Rhine. Stilicho entered into negotiations with Alaric, holding out promises of Easter Illyria to secure his aid. Thereupon the Roman general Constantine, who had crossed over from Britain, appeared in Gaul, and proclaimed himself emperor. The negotiations with Alaric failed and, when Alaric demanded an indemnity of 4000 pounds in gold, Stilicho who had twice saved Italy, was suspected by the court of entertaining treasonable plans. The weak emperor listened to the insinuations of the chancellor Olympius and had Stilicho put to death. Alaric now marched unopposed on Italy in 408, whilst the emperor tried to fortify himself in Ravenna. The Romans concluded a treaty and bought peace. The Senate also recommended to Honorius to accept it; and, as his refusal Alaric made the senate declare him deposed and had Attalus, prefect of Rome, proclaimed emperor for the time being. As Honorius repeated his rejection of the demand for pay and quarters for the Goths, Alaric took the city of Rome by storm on 24 August, 410, leaving it to be sacked by his warriors for three days, and then left the city to live at Ravenna and treating the churches with respect. Then he marched down into southern Italy in order to cross over to Africa, to found a Visigoth empire there and terrorize the emperor by cutting off the grain supplies. While carrying out this plan the warrior hero died at the age of thirty-four on the Rucino, being buried in the bed of that river. His brother-in-law Ataulph was elected in his stead and, after negotiations with Honorius, led the Goths into Gaul. At the same time the Vandals, Suevi, and Alani crossed the Pyrenees into Spain and overrun the peninsula.

During these campaigns Honorius had recognized Constantine as imperator, but the latter was besieged at Arelatum by his ambitious lieutenant, Gerontius. Honorius dispatched the valiant Illirian Constantius, who defeated the usurper and drove him to suicide. Constantius was now forced to capitulate, but Honorius accepted this submission and his rival put to death. Ataulph who had occupied Illyricum, subdued Jovinus, the third rival imperator in Gaul, who relied on the Germans on the Rhine for support. Ataulph then married Honorius's step-sister, Gallia Placidia, at Narbonne in 414; she had been taken captive by Alaric. Thereby he aroused the bitter enmity of Honorius, in whose behalf Con-stantius waged war against Ataulph, the latter being assassinated on account of a private feud at Barcelona. His successor, Wallia, surrendered Placidia to Honorius. Constantius, who had effected the outward reclamation of the Roman provinces that were occupied by Germans, was appointed co-ruler with the emperor in 420 and received the last of Placidia's wealth; Flavius Placidus, Valentinus III, whose energetic mother wielded the sceptre for him, was invested with the purple after a brief interregnum of the usurper John, following the death of Honorius on 26 August, 423.

Karl Hoeger.
some time before the fifteenth century: "Sigillum Beatae Mariæ", an exposition of the Cauticle of Can-"tecles; "Gemma Anime", a treatise on the Divine Office; "Eucharistia", a work on the Body and Blood of Christ; "Spectulum Ecclesiae", a book of sermons, and a work "De incontinentia clericorum seu offendiculio". III. Works of general educational value, such as "De luminariis Ecclesiae", "Summa totius Historiae", "Series Romanorum Pontificum", etc. Honorius composed a commentary on the "Timaüs" of Plato, of which unfortunately only a fragment has come down to us. This fragment is published in Migne's edition of Honorius's works (P. L., CLXXII) from Cousin's edition of it in the 19th century.

Honorius does not pretend to observe a distinction between the province of philosophy and that of theology. In his work "Philosophia Mundi" he treats of the mystery of the Trinity, and in the treatise "De Hæresibus" he enumerates the "hereties of pagan times", Stoics, Pythagoreans, Platonists, etc. The distinction, which seems so natural to us, was not acknowledged generally until the time of St. Thomas. Honorius, as has been said, borrows his definition of philosophy from John the Scot. "Philosophy", he says, "is the comprehension of things visible and invisible (corum que sunt et non videntur et quae sunt et videntur comprehensio). True to the inspiration of the Platonists, he begins with the invisible, uncreated, incorporeal, and proceeds to the consideration of the visible, created, corporeal. But, unlike the Platonists, he has a proper appreciation of the value of concrete knowledge. Consequently, he devotes much space in philosophy to the description of the actual world, and in his theological speculations he is far from overlooking the value of institutions, ceremonies, and the organization of religious truth in the life and career of the Church. He thus marks one of the first epochs in the history of the relation between speculative and positive teaching in the Middle Ages. At the same time he does not overlook the mystical element in Christian thought. In fact, he is an author whose importance has been too generally ignored in the history of Christian philosophy and theology.

 Honore may be defined as the deferential recognition by word or sign of another's worth or station. Thus I show honour to another by giving him his title if he have one, and by raising my hat to him, or by yielding to him a place of precedence. I thereby give expression to my sense of his worth, and at the same time pay respect to him as my own person.

It is right and proper that marks of honour should be paid to worth of any kind, if there be no special reason to the contrary, and we are obliged to honour those who stand in any relation of superiority to ourselves. First and foremost, we must honour God by worshipping Him as our first beginning and last end, the infinite source of all that we have and are. We honour the angels and saints on account of the gifts and graces bestowed on them by God. We honour our parents, from whom we received our earthly being, and to whom we owe our bringing-up and preparation for the battle of life. Our rulers, spiritual and temporal, we regard as just by reason of the authority over us which they have received from God. We honour the aged for their presumed wisdom, virtue, and experience. We should always honour moral worth wherever we find it, and we may honour the highly talented, those who have been endowed with great beauty, strength, and dexterity, the well-born, and even the rich and powerful, for riches and power may, and should, be made the instruments of virtue and well-doing.

Among the goods which are external to man honour holds the first place, above wealth and power. It is that which we especially give to God, it is the highest reward we can hope to receive from God. Men naturally prize the most. The Apostle bids us give honour to whom honour is due, and so, to withhold it or to show dishonour to whom honour is due is a sin against justice, and entails the obligation of making suitable restitution. If we have simply neglected our duty in this respect, we must make amends, not only to the one who was injured by our neglect, but to him who had been guilty of offering a public insult to another, we must offer an equally public satisfaction; if the insult was private, we must make the suitable reparation in private, so that the person injured should be reasonably satisfied. Those who are placed in authority in Church or State, and have the bestowal of public honours, are bound by the special virtue of distributive justice to bestow honours according to merit. If they fail in this duty, they are guilty of the special sin of acceptance of persons. The public good of the Church especially requires that those who are endowed with high dignities should be promoted to such high dignities as the church or episcopate, and for the same reason there is a grave obligation to promote the more worthy rather than the less worthy to ecclesiastical benefices that have the cure of souls annexed to them. According to the more probable opinion, the same rule holds good concerning promotion to benefices to which the cure of souls is not attached, though St. Alphonsus allows that the contrary opinion is probable, provided that the favoured person is at least worthy of the honour, although less worthy than his rival. When an examination is held to decide who among many candidates is to be chosen for a post of honour, there is a still stricter obligation to choose the one whom all the tests show to be—other things being equal—the most worthy of the post. On the ground that, where this obligation is neglected, not only distributive justice is violated, as in the preceding cases, but commutative justice as well, the commissary of the church, who by examination is proved more worthy is passed over, he has a right to compensation for the injury which he has suffered. Many, however, deny the obligation to make restitution in the matter of benefices even in this case, on the ground that, though an examination to test fitness be held, yet no strict compact is entered into by which those who confer the benefice bind themselves in strict justice to grant it to the more worthy. It is plain that those who are responsible for the appointment of an unfit person to a post of superiority are also responsible for the harm which his unfitness causes. The foregoing principles have been fully considered by divines who have dealt with questions connected with the appointment to ecclesiastical benefices, but they are applicable to other similar appointments, both ecclesiastical and civil.

A question of great interest in the history of religion and morals, and of primary importance in Christian asceticism, must be treated of here. We have seen that honour is due to God, and that it is the chief of those external goods which man can enjoy. St. Thomas Aquinas and Catholic divines agree in this with Aristotle. We have also seen that, according to Catholic doctrine, all are bound in justice to give honour to whom honour is due. It follows from this that it is not by itself an act of virtuousness in due moderation and with the proper motive. And yet Christ severely blamed the Pharisees for loving the first places at feasts, the first chairs in the synagogues, salutations in the marketplace, and titles of honour. He told His disciples not to be called Rabbi,
Father, or Master, like the Pharisees; the greatest among His disciples should be the servant of all; and whatsoever exalteth himself shall be humbled, and he that humbleth himself shall be exalted.

Here we touch upon the distinctive characteristic of Christian morality as distinguished from pagan ethics, a type of magnanimity: So Aristotle is drawn for us in that philosopher's celebrated description of the magnanimous man. The magnanimous man is described as one who, being really worthy of great things, holds himself worthy of them. For he who holds himself thus worthy beyond his real deserts is a fool, and no man possessor of such a virtue can be a fool or show want of understanding. He, on the other hand, who holds himself worthy of less than his merits is little-minded, no matter whether the merits which he thus understates be great, or moderate, or small. The merit, then, of the high-minded man are extreme, but in his conduct he observes the proper mean. For he holds himself worthy of his exact deserts, while others either overestimate or else underestimate their own merits. And since he is not only worthy of great things, but also holds himself worthy of them—or rather, indeed, of the very greatest things—it follows that the object of the glory of the greatest possible man is to let his deserts be accomplished in such a way as to give honor to his humble rank. Now this object is for it is the very greatest of all external goods. But the high-minded man, since his deserts are the highest possible, must be among the best of men; for the better a man is the higher will be his deserts, and the best man will have the highest deserts. True high-mindedness, therefore, cannot but imply virtue; or, rather, the criterion of high-mindedness is the conjoint perfection of all the individual virtues. High-mindedness, then, would seem to be the crown, as it were, of all the virtues; for it not only involves their existence, but also intensifies their lustre. It is with this perfection that the good man is to be distinguished, and with distinction that the highest praise of the good man is to be given. He will, however, none the less receive such honour from upright men, inasmuch as they have no greater reward to offer him. But honour, given by the common herd, and upon important occasions, he will hold in utter contempt, for it will be a reproach to him. Now the high-minded man justly despises his neighbours, for his estimate is always right; but the majority of men despise their fellows upon insufficient grounds. He also loves to confer a favour, but feels shame at receiving one; for the former argues superiority, the latter inferiority. The high-minded man, moreover, seems to bear those in mind to whom they have done kindnesses, but not those from whom they have received them. For he who has received a kindness stands in a position inferior to that of him who has conferred it, whereas the high-minded man desires a position of superiority. And so he bears with pleasure of the favours he has conferred, but with dislike of those which he has received.

These are the chief traits in this celebrated portrait as far as they relate to the matter with which we are dealing. Aristotle fills in the details of the picture with minute accuracy; it is obvious that he dwells with some loving care on the highest ideal of his ethical system. And yet, as we read it now, the description has in it an element of the ridiculous. If the high-minded man of Aristotle appeared to-day in any decent society, he would soon be given to understand that he took himself a great deal too seriously, and he would be quizzed unmercifully until he abated something of his pretensions. It is, indeed, a com-
of that city. He left Coblens in 1747 on account of ill-health, and returned to Trier, where he became in 1748 dean of the chapter of St-Simeon, auxiliary bishop, and vice-general. He received episcopal consecration at Mainz, 16 February, 1749, with the title of Bishop of Myriophyta (Greece) in partibus infidelium. To these already absorbing duties he added those of vice-chancellor of the university. In 1763 he published his famous work "Justini Febroni jurisconsulti de statu et abbas libri tres," a legal and pontifical commentary on Roman pontificis liber singularis, which aroused so much controversy (see Ferronianism).

In 1778 he asked and received the nomination of a second auxiliary bishop, and in the next year, on 21 April, resigned his duties as dean of the collegiate church of St-Simeon. It was not until two years before he died that he renounced with complete sincerity his erroneous doctrines. He was a man of short stature, energetic, hard-working, pious, and generous. His great fault was to have upheld and propagated Gallican doctrines in Germany. Apart from several juridical dissertations and lectures, e.g., "De constitutione naturali et ssumo imperii" (1724); "Normae studiorum pro universitate Trevirensi et gymnasio Confentiono" (1751); "Argumenta psalmorum et canticorum" (1759)—his principal works are "Historia Trevirensis diplomatica et pragmatica" (3 vols., Augsburg, 1780); "Promemoria historia Trevirensis" (2 vols., Augsburg, 1757), and his works on the constitution of the Church: "De statu ecclesiae," mentioned above, and his successive editions (1763–70) and supplements (II, III, IV, the last in 2 parts, 1770–74); "Justini Ferbonii abbreviatus et emendatus" (Cologne and Frankfort, 1777); "Justini Ferbonii commentarius in suam retractionem" (Frankfort, 1781). The city of Trier possesses an unedited work by him, viz. the "Historiae scriptorum et monumentorum Treviren. amplissima collectio".

A. VAN HOVE.

Hood, a flexible, conical, Brimless head-dress, covering the entire head, except the face. It is either a separate garment or part of a cloak. In the first case it is placed on the head below the cap, sometimes in front, and sometimes behind, and for the only opening of that for the face. Among the Romans, the hood (cuculla, a word of Celt origin) was worn as a separate garment especially by drivers, herdsmen, and labourers; and by all classes as part of the lacerna, the birrus, and particularly the pennis, varieties of cloaks. The hood in both forms was very common in the Middle Ages, especially in France, Germany, and England, being worn by clerics and laymen, men and women, high and low. It was the ordinary head-dress of monks and mendicant friars and was prescribed as part of the religious habit. In the thirteenth and fourteenth centuries, hoods extended in a long peak (hirrippium) which extended down the back, and was used occasionally as a neck-cloth. Towards the close of the Middle Ages the hood, though not universally abandoned, was superseded by the hat, among both clerics and laymen; it was retained by members of religious orders, who thus continued to wear it. The pashkins receive their name from their hood (capece), which differs in form from that of the other Franciscans. From the hood was developed the coif or cap formerly worn by women. A form of head-dress derived from the hood was the almitus (almitum, armlet), used by members of religious orders, or in church, in choir, at an early as the beginning of the thirteenth century. It was notable as a rule for its large-sized cape and two horn-like puffs resting on the temples, but without the Hirrippium. It was made preferably of fur, or at least lined with fur, and the lower part was adorned with fur tassels. It was never a liturgical garment, but only part of the choir-dress, and a distinguishing mark of the canons. As a head-covering it gradually lost its significance when the biretta was adopted for the choir. As early as the sixteenth century the almitus was often carried on the arm. To-day it is used only in a few places (Arras, Amiens, Chartres, Lucreme, etc.).

"The almitus in form to the almitus is the mosetta, a cape provided with a small hood. Though it properly belongs to the pope, cardinals, and bishops, its use is also granted to other prelates and to members of distinguished chapters. The pope's mosetta is red; that of the cardinals red, rose-coloured, or violet; all others are violet, unless the prelate belongs to a religious order, in which case the colour of the mosetta and of the religious habit is the same. It is open in front, but provided with buttons, and during Divine services is worn over the rochet. Bishops wear it within their dioceses, both inside and outside the church. Members of chapters do not wear it outside the church, but use it for Divine services only. The mosetta cannot be traced back farther than the fifteenth century. It is regarded either as a shortened cappa, or is derived, perhaps, and more correctly, from the almitus." — J. W. de WIT, ROMAINEY, IV (2nd ed. Stuttgart, 1901), a. v. Cuculla, Viollet-le-Duc, Dict. raisonné du mobilier Français, III (Paris, 1872), a. v. v. amusa et chapron; BRAUN, Die liturgische Gewandung (Freiburg, 1907), 355 sqq.

JOS. BRAUN.

Hoostraten (also HOCHSTRATEN), JACOB VAN, theologian and controversialist, b. about 1490, in Hoostraten, Belgium; d. in Cologne, 1 January, 1557. He studied the classics and theology at Louvain, and was made regent of studies, and thereby became professor of theology in the university. His vast theological attainments and his natural ability to impart knowledge made him an exceptionally successful teacher.

Hoostraten began his controversial career by publishing in defence of the mendicants, who had been accused of abusing their privileges, his "Defensorium fratum mendicantium contra curatos illos qui privilegia fratum injuete impugnauit" (Cologne, 1507). In the following year he published several works against the eminent Italian jurist, Pietro de' Crescenzi, who had attacked the German universities. During his controversy with the Italian jurist he was elected prior of the convent of Cologne, and thus became inquisitor general of the archbishopric of Cologne, Mainz, and Trier. He played his principal role, however, in the controversy with Johann Reuchlin, who, by the aid of his friends (v. c. 1510), wrote with Reuchlin's opposition of Latin books, in the course of which Reuchlin's opponents were satirized in the famous "Epistola obscurorum virorum." While he took no active part in the earlier stages of the controversy, his sympathies, nevertheless, as is evidenced by his relations with the converted Jew, Fedderhorn, were on the side of thechatel. In the treatise On the Jews no doubt, to some extent by the unfavourable attitude of the universities towards the Jewish books. Hoostraten on September 15, 1513, in his capacity as inquisitor, summoned Reuchlin to appear within six
in view of the pardon granted to de Prades, and making a profession of faith on the points impugned in the thesis. The Sorbonne upheld him and appointed him one of the examiners of Rouen's "Emile". But as the archbishop was firm, Hooke resigned his theological professorship and accepted the chair of Hebrew. Some years later he was made curator of the Mazarin library. He held this position till 1781, when the Directory dismissed him for refusing to take the oath of the new constitution. He then withdrew to Saint-Claud where he died. His principal work is "Religions natürals et revelateurs principa" (Paris, 1752), which was edited for the third time and annotated by his friend Dom Breuer, O. S. B. (Paris, 1774), a treatise which is justly regarded as the foundation of the modern science of Christian apologetics. His other writings are "Lettre à Mgr. l'Archevêque de Paris" (Paris, 1763); "Discours et réflexions critiques sur l'histoire et le gouvernement de l'ancienne Rome" (Paris, 1770-84), a translation of his father's history of Rome; "Mémoires du Marchal de Berwick" (Paris, 1778), in which headata the spirit and genius of the ancient works and the essence of the power of the church" (Paris, 1791). His "Religionis principa" is contained in Migne's "Cursus Theologiae".

A. A. MACERLEAN.

Hope, in its widest acceptation, is described as the desire of something together with the expectation of obtaining it. The Scholastics say that it is a movement of the appetite towards a future good, which though hard to attain is possible of attainment. Consideration of this state of soul is limited in this article to its aspect as a factor in the supernatural order. Looked at in this way it is defined to be a Divine virtue by which we confidently expect, with God's help, to reach eternal felicity as well as to have at our disposal the means of securing it. It is said to be Divine not merely because its immediate object is God, but also because of the special manner of its origin. Hope, such as we are here contemplating, is an infused virtue; i.e., it is not, like good habits in general, the outcome of repeated acts or the product of our own industry. Like supernatural faith and charity it is directly implanted in the soul by Almighty God. But in itself and in so far as it transcends the limits of the created order, and is to be had if at all only through the direct largess of the Creator. The capacity which it confers is not only the strengthening of an existing power, but rather the elevation, the transforming of a faculty for the performance of functions essentially outside its natural sphere of activity. All of this is intelligible only on the basis, which we take for granted, that there is such a thing as the supernatural order, and that the only realisable ultimate destiny of man in the present providence of God lies in that order.

De Fronville's theological virtue because its immediate object is God, as is true of the other two essentially infused virtues, faith and charity. St. Thomas acutely says that the theological virtues are so called "because they have God for their object, both in so far as by them we are properly directed to Him, and because they are infused into our souls by God alone, as also, finally, because we come to know of them only by Divine revelation in the Sacred Scriptures". Theologians enlarge upon this idea by saying that Almighty God is both the material and the formal object of hope. He is the material object because He is that which is chiefly, though not essentially, aimed at when we exhibit acts of this virtue; i.e., whatever else is looked for is only desired in so far as it bears a relation to Him. Hence according to the generally followed teaching, not only supernatural
helps, particularly such as are necessary for our salvation, but also things in the temporal order, inasmuch as they can be means to reach the supreme end of human life, may be the material objects of supernatural hope. It is worth while noting here that in a strict construction of the term we cannot properly hold that hope is for something in heaven. The reason is that it is of the nature of hope to desire and expect something apprehended precisely as the good or happiness of the one who hopes (bonum proprium). In a qualified sense, however, that is so far as love may have united us with others, we may hold to them as well as for ourselves.

By the formal object of hope we understand the motive or motives which lead us to entertain a confident expectation of a happy issue to our efforts in the matter of eternal salvation notwithstanding the difficulties which beset our path. Theologians are not of one mind in determining what is to be assigned as the sufficient reason of supernatural hope. Mazzella (De Virtutibus Infusis, disp. v, art. 2), whose judgment has the merit of simplicity as well as that of adequate analysis, finds the foundation of our hope in two things. It is based, according to him, on our apprehension of God as our supreme supernatural good. We are best able to make us happy for all eternity, and also on those Divine attributes such as omnipotence, mercy and fidelity, which unites to exhibit God as our unfailing helper. These considerations, he thinks, motivate our wills or furnish the answer to the question why we hope. Of course it is taken for granted that the yearning for God, not simply because of His own infinite perfections but explicitly because He is to be our reward, is a righteous temper of soul; otherwise the spiritual attitude of hope in which such a longing is included would not be a virtue at all. Luther and Calvin in the interest of the cause of Reformation and to elicit an act of faith, hope and charity as a consequence of Divine precepts appertaining to these virtues. It is, however, perhaps not superfluous to note that the explicit act of hope is not exacted. The average good Christian, who is solicitous about living up to his beliefs, implicitly satisfies the duty imposed by the precept of hope.

The doctrine herein set forth as to the necessity of Christian hope was impounded in the seventeenth century by the curious mixture of fanatical mysticism and false spirituality called Quietism. This singular condition of the human soul was a result of the teaching of a Spanish priest named Miguel Molinos. He taught that to arrive at the state of perfection it was essential to lay aside all self-love to such an extent that one became indifferent as to one's own progress, salvation, or damnation. The condition of soul to be aimed at was one of absolute quiet brought about by the absence of every sort of desire or anything that could be construed as such. Hence, to quote the words of the seventh of the condemned propositions taken from Molinos's "Spiritual Guide", "the soul must not occupy itself with any thought whether of reward or punishment, of heaven or hell. As a result one ought not to entertain any hope as to one's salvation; for that, as a manifestation of self-will, implies imperfection. For the same reason petitions to Almighty God about anything whatever are quite out of place. No resistance, except of a purely negative sort, should be offered to temptations, and an entire passive attitude should be fostered in every respect.

In the year 1687 Innocent XII condemned sixty-eight propositions embodying this extraordinary doctrine as heretical, blasphemous, scandalous, etc. He likewise consigned the author to perpetual confinement in a monastery, where, having previously abjured his errors, he died in the year 1696. About the same time a species of pseudomysticism, largely identical with that of Molinos, but omitting the objectionable conclusions, was defended by Madame Guyon. It even found an advocate in Fénelon who engaged in a controversy with Louis Brébeuf on the subject. Under this pretext three propositions drawn from Fénelon's "Exposition of the maxims of the Saints regarding the interior life" were proscribed by Innocent XII. The gist of the teaching, so far as we are concerned, was that there is in this life a state of perfection with which it is impossible to reconcile any love of God except that which is absolutely disinterested, which therefore does not contemplate the possession of God as our reward.
It would follow that the act of hope is incompatible with such a state, since it postulates precisely a desire for God, not only because He is good in Himself, but also and primarily because He is the final good. Hope is less perfect than charity, but that admission does not involve a moral deformity of any kind, still less is it true that we can or ought to pass our lives in a quasii uninterrupted act of pure love of God. As a matter of fact, there is no such state anywhere describable, and if and when it would it not be inconsistent with Christian hope.

The question as to the necessity of hope is followed with some natural sequence by the inquiry as to its certitude. Manifestly, if hope be absolutely required as a means to salvation, there is an antecedent presumption to use means must be implied by certainty. It is clear that, as certitude is properly speaking a predicate of the intellect, it is only in a derived sense, or as St. Thomas says participative, that we can speak of hope, which is largely a matter of the will, as being certain. In other words, hope, whose office is to elevate and strengthen our wills, is said to, the face-to-face vision of God, the object of which is the intellect. For our purpose it is of importance to recall what is that, being apprehended by our intellect, is said to do service as the foundation of Christian hope. This has already been determined to be the concept of God as our helper gathered from receive from the goodness, and especially from the fidelity to His promises. In a subordinate sense our hope is built upon our own merits, as the eternal reward is not forthcoming except to those who shall have employed their free will to co-operate with the aids afforded by God's bounty. Now there is a three-fold certitude discernible. (1) A thing is said to be certain conditionally when, another thing being given, the first infallibly follows. Supernatural hope is evidently certain in this way, because, granted that a man does all that is required to save his soul, he is sure to attain to eternal life. This is guaranteed by the infinite power and goodness and fidelity of God. (2) There is a certainty proper to virtues in general in so far as they are principles of action. Thus for instance a really temperate man may be counted on to be uniformly sober. Hope being a virtue may claim this moral certainty inasmuch as it constantly and powerfully disposes to virtue, and if allowed for eternal blessedness to be had by the Divine munificence and as the crown of our own merits accumulated through grace. (3) Finally, a thing is certain absolutely, i.e., not conditionally upon the verification of some other thing, but quite independently of any such event. In this case no room for doubt is left. Is hope certain in this meaning of the word? So far as the secondary material object of hope is concerned, i.e., those graces which are at least remotely adequate for salvation, we can be entirely confident that these are most certainly provided. As to the primary material object of hope, namely, God, the Blessed Trinity, He is the God of salvation. This doctrine, as set forth in the sixth session of the Council of Trent, is that our hope is unqualifiedly certain if we consider only the Divine attributes, which are its support, and which cannot fail. If, however, we limit our attention to the sum total of salutary operation which we contribute and upon which we also lean as upon the reason of our expectation, then, precluding from the case of an individual revelation, hope is to be pronounced uncertain. This is plain for the reason that we cannot in advance insure ourselves against the weakness or the failure of our free wills. This doctrine is in direct antagonism to the initial Protestant contention that we can and must be altogether certain of our salvation. The only thing required for this end, according to the teaching of the Reformers, was the special faith or confidence in the promises which alone, without good works, justified a man. Hence even though there were not good works distinguishable in a person's earthly career, such an one might and ought, notwithstanding, cherish a firm hope provided by grace that he did not ultimately fail. Assuming that the seat of hope is our will, we may ask whether, having been once infused, it can ever be lost. The answer is that it can be destroyed, both by the perpetration of the sin of despair, which is its formal opposite, and by the subtraction of the habit of faith, which assigns the same motives for it. It is not so clear that the sin of presumption expels the supernatural virtue of hope, although of course it cannot coexist with the act. We need not be detained with the inquiry whether a man could continue to hope if his eternal damnation had been revealed to him. Theologians are agreed in regard to this as to whether it is practically, if not absolutely, possible. If, by an all but clearly absurd hypothesis, we suppose Almighty God to have revealed to anyone in advance that he was surely to be lost, such a person obviously could no longer hope. Do the souls in Purgatory hope? It is the commonly held opinion that, as they have not yet been absolved from the stain of sin, of God, and as there is nothing otherwise in their condition which is at variance with the concept of this virtue, they have the habit and eliciting the act of hope. As to the damned, the concordant judgment is that, as they have been deprived of every other supernatural gift, so potentially and actually, they have no hope; that is, their reprobation, they can no longer hope. With reference to the blessed in heaven, St. Thomas holds that, possessing what they have striven for, they can no longer be said to have the theological virtue of hope. The words of St. Paul (Rom., viii, 24) are to the point: "For we are saved by hope. But hope that is seen, is not hope. For what a man seeth, why doth he hope for?" They can still desire the glory which is to be proper to their risen bodies and also, by reason of the bonds of charity, they can wish for the salvation of others, but this is not, properly speaking, hope. The human Soul of Christ furnishes an example. Because of the hypostatic union it was already enjoying the beatific vision. At the same time, because of the possible nature with which He had clothed Himself, He was in the state of pilgrimage (in statu viatoris), and hence He could look forward with confidence to His assumption of the qualities of the glorified body. This however is not true of the human that hope has as its main object union with God in heaven.

JOSEPH F. DELANY.

Hope-Scott (originally Hope), James Robert, parliamentary barrister, Q.C.; b. 15 July, 1812, at Great Marlow, Berkshire, England; d. in London, 29 April 1873; third son of the Honorable Sir Alexander Hope, G.C.B., who was fourth son of John, second Earl of Hopetoun, a Scottish title dating from 1703. His mother was third and youngest daughter of George Brown of Ellerton, Roxburghshire. During early childhood his home was the Military College at Sandhurst, where his father was in command. Afterwards he went abroad with his parents, in succession at Dresden, Lausanne, and Florence, and thus gaining a mastery of the German, French, and Italian tongues. In 1825 he entered Eton, whence, in 1828, he matriculated at Christ Church, Oxford. After a visit to Paris in 1828 he went into residence at Oxford the following year. The B.A. he took in 1832, coming out in the fourth class in literae humanioribus. Next year he was elected a Fellow of Merton. In 1835 he gave up his intention of entering the ministry of the Established Church,
and began to study law under conveyancers, his call to the Bar at the Inner Temple taking place in 1838. Meanwhile, in the latter year he graduated B.C.L. at Oxford, proceeding D.C.L. in 1843. In 1838, after publishing anonymously in pamphlet form a letter to the Archbishop of Canterbury, he was to press Gladstone's work entitled "The State considered in its Relations with the Church". Next year he and Roundell Palmer (the future Earl of Selborne) projected "The History of Colleges". In 1840, at Newman's request, Hope wrote in "The British Cabinet" a paper about the Oxford translation of "The Statutes of Magdalen College, Oxon." The same year, as a junior counsel for the capitation bodies petitioning against the Ecclesiastical Duties and Revenues Bill, he delivered the remarkably able speech which moved Brougham to exclaim, "That young man's fortune is made." In 1840, moreover, he was appointed Chancellor of the Diocese of Salisbury, which post he held until 1845. About the same time he took part in the foundation of Glenamond College, in Perthshire, for the education of the Scottish Episcopal youth. In 1840-41 he spent some eight months in Italy, Rome included, in company with his close friend Edward Louth Badeley. On his return he became, with Newman, one of the foremost promoters of the Tractarian movement at Oxford. His next publication was a pamphlet against the establishment of the Anglo-Protestant Protestant See of Jerusalem, of which a second edition appeared in 1842. In 1849 and 1850 there came the Gorham trial and judgment, and in the latter year the agitation against the so-called "Papal Aggression". These events finally determined him upon the course of joining the Catholic Church, into which, together with Archdeacon Manning, he was received in London in 1851 by the Jesuit Father Brownhill. In 1852 he managed Newman's defence in the libel action brought against him by Aehilli; and in 1855 he conducted the negotiations which ended in Newman's accepting the rectoryship of the Catholic University of Ireland. As to Hope's professional work, within a few years of his call he devoted himself wholly to parliamentary practice, in which his success and emoluments became prodigious. This was the palmy period of railway construction, and eventually he became standing counsel to almost every railway in the realm. In 1849 he was appointed Q.C., with a patent of precedence.

Charlotte Harriet Jane Lockhart, only daughter of John Gibson Lockhart and granddaughter of Sir Walter Scott. She soon followed her husband into the Catholic Church. A year later he became tenant of Abbotsford to his brother-in-law, and on the latter's death, in 1855, its possession in right of his wife, hereupon assuming the name of Hope-Scott. Not long afterwards he added a new wing to Sir Walter's mansion. In 1855 he bought the Highland estate of Dorn, whereon he built a new house, selling the whole to Lord Howard of Glossop in 1871. In 1856 he had to mourn the loss of his wife, who died in childbirth, the newborn child dying shortly after, and Walter Michael, his infant son and heir, before the close of the year. His second wife, whom he married in 1861, was Lady Victoria Alexandrina Fitzalan-Howard, eldest daughter of the fourteenth Duke of Norfolk, of whose children Hope-Scott had been left guardian. In 1867 he had to mourn the loss of a daughter who died in childbirth, the newborn child dying shortly after, and Walter Michael, his infant son and heir, before the close of the year. Her second wife, whom he married in 1861, was Lady Victoria Alexandrina Fitzalan-Howard, eldest daughter of the fourteenth Duke of Norfolk, of whose children Hope-Scott had been left guardian. In 1867 he had to mourn the loss of a daughter who died in childbirth, the newborn child dying shortly after, and Walter Michael, his infant son and heir, before the close of the year.

Hopi Indians (from Hopita, "peaceful ones" their own name; also frequently known as Moqu, or Moqui, an alien designation of disputed origin), an interesting tribe of Pueblo Indians of Shoshonean stock, occupying seven communal pueblo towns situated upon high mesas within a reservation in north-east Arizona. One of these pueblos, Hano, is occupied by immigrants from the Tewa tribe of New Mexico, speaking a distinct language. Like all the Pueblos, they are sedentary and agricultural in habit, and although the entire surrounding country is a desert of shifting sand, they carry on successful farming with the aid of water supplied by numerous small springs which issue from the base of the mesa. Besides their abundant crops of corn, beans, squashes, tobacco, and peaches (the last an inheritance from the former missionaries), they manufacture a fine variety of pottery and basket-work, and excel in woodcarving and the weaving of native cotton. Many of them are also skillful metal-workers. Their houses are square-built and flat-roofed structures of stone or adobe, sometimes several stories in height, with a sufficient number of rooms to accommodate hundreds of persons, and with store-rooms filled with provisions sufficient to last for a year. For better protection from hostile attack, most of the outer walls are without doors, entrance and egress being through a hole in the roof by means of a ladder, other ladders being let down at the outside. In former times also the steep trails which constitute the only means of approach to the summit were effectively closed at night or when danger threatened, by removing the ladders which are necessary in the most difficult places.

The Hopi are of kind and peaceable disposition, with the possible exception of the more turbulent Oraibi on the westernmost mesa. They are industrious, fond of amusement and pleasantry, and entirely lacking in the stern dignity common to the more eastern tribes. They have an elaborate system of clans and phratries, each with certain distinguishing ritual
forms, bearing out the tradition that the Hopi were originally a confederation of distinct tribes. They have many secret societies, with a well-organized priesthood, and a spectacular ritual. Living in an arid region, yet depending upon agriculture, their prayers are naturally addressed chiefly to the rain gods, of whom the snakes are the messengers. The celebrated Snake Dance, held once or twice a year, by the initiates of the Snake Society, is intended as a propitiation to bring rain upon the crops. A principal feature of this ceremony is the carrying of living and venomous snakes in the mouths of the dancers. Elaborate masks of mythologic significance are worn in most of the dances, and many of them take place in underground chambers known as kivas. Matriarchy is the rule and the woman is the mistress of the house. In person, the Hopi are of medium stature, but strongly built and of great endurance. Several albino of blond skin with light hair and eyes are found among them. They may have numbered at one time 6000 souls, but by wars and frequent epidemics are now reduced to about 2200, of whom nearly one-half dwell in Oraibi pueblo.

The first white men to make acquaintance with the Hopi were a detachment from Coronado's expedition in 1540, accompanied by the Franciscan Father Juan de Padilla, afterwards murdered while preaching to the wild tribes of the plains. They were visited by Espejo in 1553, at which time they occupied five pueblos. In 1598, they were brought regularly under Spanish authority by Governor Oñate of New Mexico, who appointed a priest to take charge of their spiritual welfare, but no regular mission was attempted in the tribe until 1629, when the mission of Bernardino was established at Awatobí by a party of four Franciscans headed by Father Francisco de Porras. Other missions were founded later at Shongópoli (San Bartolomé) and Oraibi (San Francisco) with visits at Walpi and Mishongnovi. The missions sustained an uncertain existence until the great revolt of the Pueblos in 1680, when the four resident missionaries were killed and the churches destroyed. The rising was put down twelve years later, but no attempt was made to re-establish the Hopi missions, excepting at Awatobí, with 800 souls, which was visited in the spring of 1700 by Father Juan Garay-cochea, at the request of the inhabitants, but without permanent result. Later in the same year, on account of the evident friendship of Awatobí for the missionaries, the warriors of the other pueblos attacked it by night, setting fire to the pueblo, slaughtering all the men, many of whom were smothered in underground chambers, and carrying off all the women and children to be distributed among the other pueblos. Awatobí can still be traced in its ruins, including the walls of the old church. In 1726 permission was given to the Jesuits to undertake work in the tribe, but with no result, and in 1745 the field was again given over to the Franciscans, with a little success, the Hopi stubbornly refusing to allow the establishment of a mission.

In 1778-1780 a three years drought with consequent famine and pestilence, almost extinguished the tribe for a time, the survivors scattering among the neighbouring tribes but still steadfastly refusing any help from the Spaniards. In 1850 they sent a delegation to the new president of the United States to ask for American Government at Santa Fe, and in 1858 an American expedition under Lieutenant J. C. Ives visited their towns. In 1869 they were brought under agency control. While uniformly friendly to the Americans, they retain the old hatred for the Spaniards and their Mexican descendants, and, despite policies and recent events, hold fast to their ancient beliefs and ceremonies. In 1899, after an absence of a century and a quarter, visiting Franciscans from the Navaho mission were allowed to celebrate Mass in public near Walpi without molestation. In 1909 the resident Mennonite missionaries were obliged to withdraw from Oraibi on account of the hostility of the conservatists.

James Mooney.

**Hôpital**, Guillaume-François-Antoine de L’Menars de Sainte-Messe and Comte d’Entremont, French mathematician, b. at Paris, 1861; d. at Paris, 2 February, 1904. Being the son of the lieutenant-general of the king’s armies he was intended for a military career, and served for some time as captain in a cavalry regiment. He had no talent for Latin, but early displayed extraordinary ability for mathematics. At the age of fifteen he had solved a number of problems proposed by Pascal, and while an army officer he studied mathematics in his tent. Owing to extreme near-sightedness, he was forced to resign and then devoted himself entirely to his favourite studies. In 1892 he became acquainted with Jean Bernoulli, one of the three or four men of the day who understood the integral calculus, and the methods of the differential calculus. After several months he studied with Bernoulli, whom he had invited to his estate of Ouesque near Vendôme, and learned from him this branch of the science of numbers. In 1893 he was elected honorary member of the Academy of Sciences of Paris and soon rivalled Newton, Huyghens, Leibniz, and the Bernoullis in the profounding and solving of problems involving the calculus. He is remembered because he made it possible for others to learn this new system. His work on the analysis of the infinitesimal by the study of curves was published in 1896 and was received with great satisfaction by many who were trying to solve the mystery surrounding these advanced problems, for the book contained a clear and careful exposition of the methods employed. The rule for the evaluation of a fraction whose numerator and denominator both have a limit value of zero is named after L’Hôpital. His wife is said to have been associated with him in his work. His published works are: "Analyse des infiniment petits pour l'intelligence des lignes courbes" (Paris, 1696; last ed. by Lefèvre, Paris, 1781); "Traité analytique des sections coniques" (Paris, 1707; 2nd ed., 1720); several memoirs and notes inserted in the "Recueil de l’Académie des sciences" (Paris, 1699-1701), and in "Acta Eruditorum" (Leipzig, 1699-1701).
Hormisdas, Saint; Pope; date of birth unknown, elected to the Holy See, 514; d. at Rome, 6 August, 523. He was a noble and sagacious member of a wealthy and honourable family of Frosinone (Frosinone) in the Campagna di Roma (Latium). Before receiving higher orders he had been married; his son became pope under the name of Silverius (536–537). Under Pope Symmachus (498–514) Hormisdas held the office of deacon of the Roman Church and during the schism of Laurentius he was one of the most prominent clerical attendants of Symmachus. He was notary at the synod held at St. Peter’s in 502, and Ennodius of Pavia, with whom he was on friendly terms, expressed the conviction that this Roman deacon, so eminent for piety, wealth, and distinguished birth, would one day succeed to the See. (EnnodiusOpera, ed. by Mueller (Berlin, 1885), 287, 289.) The day after the funeral of Symmachus (20 July, 514) Hormisdas was chosen and consecrated his successor; there is no mention of divisions or disturbances at his election. One of the new pope’s first cares was to remove the last vestiges of the Laurentian schism in Rome, receiving back into the Church such of its adherents as had not already been reconciled. From the beginning of his pontificate the affairs of the Greek Church occupied his especial attention. At Constantinople the Arian schism, which had broken out in consequence of the “Heresy of the Emperor Zeno,” and which had caused the separation of the Greek and Roman Churches, still held sway (see ACACIUS, PATRIARCH OF CONSTANTINOPLE). The Emperor Anastasius (491–518), Zeno’s successor, maintained the “Heresy” of Zeno; he became more and more inclined towards Monophysitism, and persecuted the bishops who refused to repudiate this teaching. The three patriarchs of Alexandria, of Antioch, and of Constantinople, Elias of Jerusalem, and Flavianus of Antioch had been driven from their sees.

In the midst of this confusion a number of Eastern bishops appealed to Rome during the pontificate of Symmachus in order that, by a restoration in the Church, their positions might be strengthened and the progress of Monophysitism checked. Symmachus had required them to submit to the condemnation of Acacius, but the Orientals were not ready for this step. Taking advantage of the discontent aroused against Acacius by his Monophysite tendencies, Vitalian of Lower Moesia, a commander in the army, led a revolt against him. Vitalian demanded, on the one hand, that his office of distribution of the grain for the troops should be restored to him, and, on the other, that the Council of Chalcedon should be recognised and the unity with Rome be re-established. He gained numerous adherents and appearing before Constantine at the head of a large army, defeated the emperor’s nephew, Hypatius; upon this Anastasius was obliged to negotiate with him. One of the terms of Vitalian’s submission was that the emperor should take an oath to convene a synod at Heraclea in Cappadocia, invite the pope to attend it, and submit to his arbitration; the dispute, the See of Constantinople and the other bishoprics in order by this means to restore the unity of the Church. Anastasius accordingly wrote to Hormisdas, 28 Dec., 514, inviting him to the synod on the first of July following. The letter had first to be submitted to Vitalian, whose representative accompanied the bearer to Rome. A second, less courteous communication, dated 12 Jan., was sent by Anastasius to the pope; this merely requested his good offices in the controversy. The emperor evidently wished to prolong the negotiations as he was not really willing to fulfill the promises he had made to Vitalian. The second letter reached Rome before the first one, and on 4 April Hormisdas answered it, expressing his desire of a prompt settlement and prospect of peace, but at the same time defending the memory of his predecessors. The bearers of the emperor’s first letter arrived on 14 May. The pope guardedly carried on negotiations, convened a synod at Rome and wrote a letter to the emperor, dated 8 June, informing him in which he approved the action of the embassy for Constantinople. Meanwhile the two hundred bishops who had assembled on 1 July at Heraclæa, separated without accomplishing anything.

The pope’s embassy to the imperial court consisted of two bishops, Ennodius of Pavia and Fortunatus of Catina, the priest Venantius, the deacon Vitalis, and the notary Hilarius. The letter of Hormisdas to the emperor, dated 1 Aug., 515, is still preserved; so also are the minute instructions given the legates with regard to the position they were to take. If the emperor agreed to the proposals made to him, the pope was ready, if necessary, to appear in person at a council. The pope further sent the constitution of faith (regula fides) for the Eastern bishops to sign. The embassy brought about no real result; Anastasius, without breaking off the negotiations, gave the envos an evasive letter for Hormisdas. A new revolt of Vitalian was suppressed, and an imperial embassy, consisting of two high civil officials, came to Rome bringing a letter dated 16 July, 516, for the pope, and one dated 28 July, for the Roman Senate; the aim of the latter was to induce the senators to take a stand against Hormisdas. The senate, however, as well as King Theodoric, remained true to the pope, who saw through the emperor’s crafty machinations. The answer of Hormisdas to the imperial letter was dignified and definite. Meanwhile an additional number of Scythian, Illyrian and Dardanian bishops had entered into relations with Rome, and several of them had also conferred with the papal legates in the quinquennial visitation of the Churches. They now submitted to the condemnation of Acacius and signed the confession of faith (regula fides) of Hormisdas, as did also the bishops of the province of Epirus, who were persuaded thereto by the Roman subdeacon Pullio. This confession of faith, which the pope sent to Constantinople to be read by all bishops gathered in the Latin Church, is known as the “Formula Hormisdas” and was repeatedly mentioned at the Vatican Council. It begins with the words: “Prima salus est, regular recet fidei custodire et constitutis Patrum nullatenus deviare. Et quis non potest Domini Nostrri Jesu Christi presbyteri servatur astita? Tu es Petrus et super hanc petram adficio ecclesiam meam. Hec quae dicta sunt rerum probantur effectibus, quia in sede apostolica inmaculata est semper Catholicos conservata religio” (The first means of safety is to guard the rule of strict faith and to deviate in no way from those things that have been laid down by the Fathers. And indeed the words of Our Lord Jesus Christ: “Thou art Peter; and upon this rock I will build my church” (Matt., xvi, 18), cannot be disregarded; these things which were spoken are demonstrated by the results, for the Catholic religion as preserved in the Church is the faith which the Apostle set forth). Then follows the condemnation of Nestorius and the other heresiarchs and also of Acacius.

A second papal embassy consisting of Ennodius of Pavia and Bishop Peregrinus of Misenum had no better success. Anastasius even attempted to bribe the legates, in which, however, he was unsuccessful. They sought on the contrary to circulate secretly the pope’s
letters summoning the people to reunite with the Roman Church. When the emperor heard of it he had them brought out of the city by a private gate to the seashore, put on shipboard, and sent back to Italy. Then Anastasius, who had momentarily nothing to fear, was sent away, and the synod of Nicomedia dated 11 July, 517, breaking off the negotiations, and continued to persecute the advocates of union with Rome. On 9 July, 518, he died very suddenly in the midst of a terrible storm. Shortly before that date Timotheus, the heretical Patriarch of Constantinople, was dismissed away. He was succeeded (518–527), who succeeded, was an orthodox Christian. The people of Constantinople insisted that the new Patriarch John should anathematize the Monophysite heresy, recognize the definition of Chalcedon, and reunite the Greek Church with Rome. A synod, held at Constantinople, concurred in these views and an imperial edict ordered for Rome to entreat the pope on behalf of the emperor, the latter's nephew Justinian, and the patriarch to come in person to the Orient, or send a legate for the purpose of re-establishing the unity of the Church. Hormisdas appointed the Bishop Germanus and John a presbyter Anastasius, two presbyters and Dorotheus, and a deacon, Peter. They had the same instructions and confession of faith which were given the legates of 515. The embassy was received in Constantinople with great splendour. All the demands of the pontiff were conceded; the name of the condemned Patriarch Acacius as well as the names of the Emperors Anastasius and Zeuxis were stricken from the church diptychs, the Patriarch John accepted the formula of Hormisdas. On Holy Thursday, 28 March, 519, in the cathedral of Constantinople in presence of a great throng of people, the union of the Greek Church with Rome was ratified in the most solemn manner. The greater number of the Eastern and Greek bishops approved and signed the formula of Hormisdas. At Antioch an orthodox patriarch was chosen to replace the heretical Severus. In the midst of all this activity for the establishment of peace a new quarrel broke out, which turned upon the formula: “One of the Trinity was crucified”. It was promulgated at Constantinople in 619 by John Maxentius and numerous Scythian monks who were upheld by Justinian (Theopascite controversy). The patriarch and the pope's legates opposed the demand that this formula should be embodied in the Canon of the Church. The synod proceeded to Rome where they caused some trouble; they also addressed the African bishops then residing in Sardinia. In 521 Hormisdas pronounced that the formula in question, although not false, was dangerous because it admitted of a false interpretation; that the Council of Chalcedon needed no amendment. About this time the African Bishop Possessor, at the instigation of some African monks, appealed to the pope for information regarding the Church's attitude towards the Bishop of Riez, Provence, whose Semi-pelagian views coloured his writings. In his reply Hormisdas severely rebuked the quarrelsome spirit of the monks who did not divide between the works of Faustus, but decided that what was good in them should be preserved and what was contrary to the doctrine of the Church should be rejected. Hormisdas caused a Latin translation of the canons of the Greek Church to be prepared by Dionysius Ephesius and issued a new edition of the Gelasian "Decretum de recipiendis Libris". He sent letters to several bishops in Spain and Gaul on ecclesiastical matters and gave directions regarding church administration. His relations with Theodoric were amicable. The "Liber Pontificalis" enumerates values which are attributed to St. Peter's by this king as well as by the Emperor Justinian. Shortly before his death the pope received tidings that Thrasamund the Vandal King of Northern Africa had died (523), and that the severe persecution of Catholics in that region had consequently ceased. Hormisdas was buried at St. Peter's. The text of his epitaph has been preserved (De Rossi, "Inscriptions Christianae urbis Romae", II, 130.).

**Hornor, Nicholas**, layman and martyr, born at Granley, Yorkshire, England, date of birth unknown; died at Smithfield, 4 March, 1590. He appears to have been following the calling of a tailor in London, when he was arrested on the charge of harbouring Catholic priests. He was confined for a long time in a damp and noisome cell, where he contracted blood-poisoning in one leg, which it became necessary to amputate. It is said that during this operation Hornor was favoured with a vision, which acted as an anodyne to his sufferings. He was afterwards liberated, but when he was again found to be harbouring priests he was convicted of felony and sent to the Fleet. He was condemned to conform to the public worship of the Church by law established, was condemned. On the eve of his execution he had a vision of a crown of glory hanging over his head, which filled him with courage to face the ordeal of the next day. The story of this vision was told by him to a friend, who in turn transmitted it by letter to Father Robert Southwell, S.J., 18 March, 1590. Hornor was hanged, drawn and quartered, because he had relieved and assisted Christopher Bales, seminary priest and martyr, b. at Cunsey, Durham, 1564; d. on the scaffold at Fetter Lane, London, 4 March, 1590. Father Bales was cruelly tortured in prison, although he was a consumptive; and was condemned merely for being a priest.

**Hornylow, John Joseph**, titular Bishop of Philomelis, Vicar Apostolic of the Midland District, England, b. 19 February, 1742; d. 17 August, 1788. He was descended from two ancient Catholic families, his father being John Hornylow, of Blackmore Park and Hanley Castle, Worcestershire; his mother, Mary, daughter of Sir Frys Mostyn, Baronet, of Talacre, Flintshire. At the age of twenty-two, on 7 August, 1768, he entered the English College at Douai to study for the priesthood. After his ordination he returned to England and served the mission at Grantham for some time, meeting with much persecution and more than once narrowly escaping arrest as a priest. In 1739 he went as chaplain to Longbircb near Wolverhampton, the old seat of "the good Marquis", and endeavoured, not without some success, to make John Johnson, the priest, a convert. He was, however, a man of marked ability, and he remained as a priest at Longbridge. In the Rev. John Johnson. The book on the Creed was called "The Real Principles of Catholics or a Cate-
chiasm for the Adult" (London, 1749). One of the later editions appeared as "Grounds of the Christian Belief or the (Apostles') Creed Expounded" (Birmingham, 1771). In this book, according to Charles Butler, he made large use of Corker's "Roman Catholic Prayers in Relation to God and the King," but this was denied by Milner.

In 1751 the aged Vicar Apostolic of the Midland District, Bishop Stonor, applied for a coadjutor and Hornyold was selected. He was consecrated 10 Feb., 1752, but continued to act as Mrs. Giffard's chaplain until her death, 13 Feb., 1765, after which he rented for the use of the vicar Apostolic and Dr. Hornyold resided there for the rest of his life. On Bishop Stonor's death, 29 March, 1756, he succeeded as Vicar Apostolic of the Midland District and ruled zealously for twenty-two years. In 1766, as his health was failing, he obtained the Hon. and Rev. Thomas Talbot as his coadjutor, and consecrated him in 1767 (not in 1776 as has been erroneously asserted, in consequence of a misprint in Milner's "Memoir"). In 1768 he undertook the responsibility of carrying on Sedgley Park School, which had been founded, on the initiative of his intimate friend Bishop Challenger, six years previous, to preserve it for the Church. He lived just long enough to see the first Catholic Religious Act of 1778, and on his death was buried in Bredwood Churchyard, Staffordshire. There is an oil painting of the bishop at the family seat, Blackmore Park, Worcestershire.

EDWIN BURTON.

Hortulus Anima (Little Garden of the Soul), a prayer book which both in its Latin and German forms was exceedingly popular in the early years of the sixteenth century. The first known edition was printed at Strasbourg by William Schaffner of Rappoltsweiler, and is dated 13 March, 1498. After that date new editions with various supplements and modifications were constantly issued by other printers both in Strasbourg and other German cities, and even at Lyons. Many of them, though small in size, were illustrated with beautiful woodcuts. C. Dodgson gives a list of eighteen editions between 1516 and 1521, all of which contained cuts by the well-known engravers Hana Springinklee and Erhard Schön. The earliest German edition appeared in 1501, but the Latin editions on the whole predominate. With regard to its contents, the "Hortulus" bears a general resemblance to the Hores and Primers which were then the form of prayer book most familiar in France and England. As in these latter, the Little Office of our Lady always occupies the place of honour, but the "Hortulus" contains a greater variety of matters, many of them recommended as curious and probably spurious Indulgences. The name "Hortulus Anima" was derived not from the aesthetic but from the utilitarian aspects of a garden, as is shown by the three Latin distichs prefixed to most copies of the work. The first two lines run:

Ortulus exiguus varias ut sepe salubres Herbas producit, quas mentis in prostat.

(A tiny garden will often produce a variety of salutary herbs of which medicine knows the value.) The contents of the volume are further described as "mensis pharsca saecre" (the simples of the devout mind). The popularity of the book is further shown by the extreme beauty of many of the existing manuscript examples. One of these at Vienna (Bibl. Pal. 2706) has recently been produced in exquisite facsimile by Dörnhöfer.

The title in particular was found attractive. Another German prayer book, "Das Wurtzgärtler mundadgliche Uebung" (the herb garden of devout practices) was edited by an Observantine Franciscan friar at Augsburg in 1518, but it is a quite different work. So a Lutheran adaptation of the "Hortulus" was produced in 1569 which was called the "Lustgarten der Seelen" (the pleasure garden of the soul)—though this perhaps corresponds better to the other famous Catholic prayer book the "Paradisus Animae". It should be noted also that yet another well-known work of devotion which was not a prayer book but a volume of moral instruction richly illustrated with stories, bore a similar title. This was "Der Selen Wurtzgärtler," of which the first edition was printed at Ulm in 1483. The title, "Garden of the Soul," is of course very familiar to English readers from the popular prayer book which was compiled by Bishop Challoner about the year 1740, and which has since been reprinted and re-edited in countless editions.

HERBERT THURSTON.

Hosanna. — "And the multitudes that went before and that followed, cried, saying: Hosanna to the Son of David: Blessed is he that cometh in the name of the Lord: Hosanna in the highest" (Matt., xxxi, 9; cf. Matt., xxi, 15, Mark, xi, 9, 10, John, xii, 13). Thayer's contention in Hastings' "Dictionary of the Bible" that the word hosanna was derived from Psalm lxxxvi, 2, does not seem to have much to support it. The general opinion is that of St. Jerome, that the word originated from two Hebrew words, hoss,xxix (cvxix), 25. This psalm, "Confitemini Domino quoniam bonus," was recited by one of the priests every day during the procession round the altar, during the Feast of Tabernacles, when the people were commanded to "rejoice before the Lord" (Est., xxiii, 40), and on the seventh day it was recited each time during the seven processions. When the priest reached verses 25—26, the trumpet sounded, all the people, including boys, waved their branches of palms, myrtles, willows, etc., and shouted with the priest the words: "O Domine, salum (me) fac; o Domine, bene prosperare. Benedicteo qui venit in nomine Domini." The Hebrew for salum (me) fac or serva nunc was hoshi'a na. This was repeated so frequently that it became abbreviated into hosanna; the seventh day of the feast was called the Great Hosanna; and the palm-branches of willow, myrtles, etc., received the name of hosannas.

The Feast of Tabernacles was a season of great rejoicing, and it was a saying amongst the Jews that those who had not witnessed it did not know what joy meant. In this way hosanna became associated with rejoicing. The same has to be said of the use of palm-branches. In I Mach., xiii, 51—52, we read: "And they entered into the city with the palm branches of palm-trees, and harps, and cymbals, and psalteries, and hymns, and canticles, because the great enemy was destroyed out of Israel; and he ordained that these days should be kept every year with gladness." In II Mach., x, 6, 7: "And they kept eight days with joy, after the manner of the feast of tabernacles which was on that occasion hosanna was, doubtless, exclaimed in tones of joy and triumph. Like all acclamations in frequent use it lost its primary meaning, and became a kind of vivat or hurrah of joy, triumph, and exultation. It is clear from the Gospels that it was in this manner it was uttered by the crowd on Palm Sunday. In John i, 49, the words hosanna in excelsis "peace in heaven and glory on high". It was with this indefinite meaning that the word hosanna passed, at a very early date, into the litur-
gies of the Church; a position which it has ever since retained both in the East and the West. It is found in the "Didache", and the "Apostolic Constitutions" of Eusebius (H. E., II, xxii), quoting, as one of the principal objects of the death of St. James, has: "And as many as were confirmed and gloried in the testimony of James, and said Hosanna to the Son of David", etc. St. Clement of Alexandria says it meant "light, glory, praise." St. Augustine (in 2nd Lesson for Saturday before Palm Sunday) says: "Sometimes nonnulli dicunt qui hebraem linguam noverunt, magis affectum indicans, quam rem aliquam significans, sicut sunt in lingua latina, quas interjections vocant." (According to some who are versed in Hebrew, hosanna is a word of supplication, used like the interjections in Latin, viz., he, he, he, and other that signify anything.) In every Mass the word hosanna is said twice during the Sanctus at the end of the Preface. It is sung by the choir at high Mass. It is also repeatedly sung during the distribution of the palms, and the solemn procession on Palm Sunday. We gather from St. Jerome (Matt., xxxi, 15) etc. that the faithful, in some places, were accustomed to salute bishops and holy men with cries of hosanna. Modern Jews have a procession of palm-branches, in the synagogues, every day during the Feast of Tabernacles, in September, while prayers called hosannas are recited. The joyous character of the festival place is shown by the fact that on the seventh day, the popular name of which is The Great Hosanna (Hosha'na Rabbba) (Osterley and Box, "Religion and Worship of the Synagogue", and the Mishnate tract Sukkah, III, 8).

C. AHERNE.

Hosias. See Osee.

Hosius (Hos, Hosei), Stambul, cardinal and bishop of Ermland; b. of German parents at Cracow, 5 May, 1504; d. at Capranica, near Rome, 5 August, 1579. He spent his early youth at Cracow and Wilna; and at the age of fifteen, when he was already well versed in German, Polish, and Latin, entered the University of Cracow, from which he graduated as Bachelor of Arts in 1520. The pious and talented youth found a patron in Peter Tomicki, Bishop of Viciebsk, under whose influence he was employed him as private secretary and entrusted to him the education of his nephews. A few years later the bishop furnished him with the means to continue his studies at the then famous Universities of Padua and Bologna, where, besides perfecting himself in the humanities, he pursued the law and other studies to the extent of his powers. Among his professors at Padua was the famous historian, Lamoro Buonamico; Reginald Pole was one of his fellow-students. At Bologna he pursued the humanities under Romolo Amasio, and jurisprudence under Hugo Buoncompagni, the future Gregory XIII. Among his fellow-students here were the future Cardinals Ottto Truchsess von Wolbarg and Cristoforo Madruzzo. After graduating as a doctor of canon and civil law at the University of Bologna on 8 June, 1534, he returned to Cracow and became secretary in the royal chancery. On the death of Bishop Tomicki (1535) he continued as secretary under the new vic-cancellor, Bishop Choiniski of Plock.

About this time begins his intimate friendship with the great neo-Latin poet Dantis, then Bishop of Cracow. After the death of Bishop Choiniski in 1538, Hosius was appointed royal secretary. In this position he had the confidence of King Sigismund, who bestowed various ecclesiastical benefices upon him as reward for his faithful services. He already held a provostship at Wielun, and another at Vialto. In 1538, at Cracow in 1540, and at Sandomir in 1542. In 1643 Hosius was ordained priest and in addition to the above-mentioned benefices, received the parishes of Golombie and Rudaw in 1546. King Sigismund died in 1548, but before his death he had instructed his son and successor, Sigismund II, to nominate Hosius for the next vacant episcopal see. When, therefore, in 1549, Bishop Giese of Culm was transferred to the See of Ermland, the young king nominated Hosius for the See of Culm. Hosius had not sought after this dignity and accepted it only with reluctance. The papal approbation arrived in September, 1549; but, before taking possession of his see, Hosius was sent by Sigismund on an important mission to the courts of King Ferdinand I at Prague, and Emperor Charles V at Brussels and Ghent. The mission resulted in an offer of the see, and Hosius did not accept these two monarchies. Upon his return to Poland he received episcopal consecration at Cracow on 23 March, 1550, and immediately took possession of his see. On 25 July, 1550, Pope Julius III appointed him "Inquisitor hereticis pravitatis" for the neighbouring Diocese of Plock, which he retained till his death in 1557. Protestant. The enticing doctrines of Protestantism were also making alarming headway in the Diocese of Culm, and it was with great difficulty that Hosius succeeded in stemming their progress. His first pastoral letters show his deep concern for the preservation of the Church, and he had many religious colloquies with some of the reformers at Thorn give testimony of his untiring zeal for the conversion of those who had already left the true fold. But the field of his activities was soon to be changed. The king nominated him for the more important Diocese of Ermland in January, 1551, whereupon the cathedral chapter of Ermland met on 2 March, 1551, and Julius III transferred him to that see on 27 April, 1551. Upon receiving the papal Bulls he left Lobau, where he had resided while Bishop of Culm, and took possession of the Diocese of Ermland on 21 July.

As Bishop of Ermland Hosius devoted all his efforts to the maintenance of the Catholic religion in Poland. His great learning and wide experience, coupled with deep piety, made him the natural leader of the Polish episcopate in its struggle against Protestantism, which was making deep inroads into Poland during the rule of the weak and half-witted King of Poland, King Sigismund, and in the first seven years of his episcopate he served the Catholic cause chiefly by his numerous polemical writings in defence of Catholic truth. He had already in his youth given proof of his literary ability by composing various Latin poems; and as early as 1526 he had published, in the form of a letter, the short treatise of St. Chrysostom in which a parallel is drawn between a king and a monk. In 1535 he had also written a lengthy biography of his deceased patron, Bishop Tomicki. All these writings have been published by Hipier in the first volume of his collection of the letters of Hosius (Cracow, 1597). Shortly after his appointment to the See of Ermland he took part in the provincial Synod of Piotrkow, in June, 1551. On this occasion the assembled bishops entrusted him with the drawing up of a Profession of the Catholic Faith, to which they all subscribed and which they agreed to publish. Afterwards Hosius expanded these articles into an elaborate exposition of Catholic doctrine "Confessio fidei catholicis christiani" part of which was published at Cracow in 1553, the remainder at Mains in 1557. The work is one of the best pieces of polemical literature produced during the period of the Reformation. In faultless Latin the author Sigismund of Hosius expounds the doctrines in contrast with the opposing doctrines of the reformers, and proves by means of irresistible arguments, drawn from Holy Scripture and patristic literature, that Catholicity is strictly identical with
HOSIUS

Christianity. The work became so popular that more than thirty editions of it were printed during the lifetime of the author, and translations were made into German, Polish, English, Scotch, French, Italian, Flemish, Moravian, Arabic, and Armenian. About the same time he completed another work of a similar nature. His friend Blessed Peter Canisius wrote its preface and entitled it: "Verae, christianae catholicaeque doctrinae solida propugnatio una cum illusione praebentium quae primum Jo. Brentius adversus Petrum a Soto theologiam scripsit, dein deinde verbo Petrus Paulus Vergerius apud Polonos temere defendenda susceptit" (Cologne, 1558). As its title indicates, it was chiefly a refutation of the Saubian reformer, John Brenz, whose "Confessio Wittenbergi" was the foundation of the Reformation in Germany. The work was translated into German; and "De expresso verbo Dei", in which he reproves the reformers for their abuse of Holy Scripture. It was re-edited in Louvain, Antwerp, Rome, etc., and translated into German and Polish. A year later he published a work of similar nature entitled: "De praebentia praebitionem adversus Rerum Estimandae et Probationis Hoc est, in quibus he wrote "Palinodie Quadrantini" or the recantations of Fabian Quadrantius, a convert to the Catholic Church who afterwards became a Jesuit. After the death of Pius IV, on 9 December, 1563, some of the cardinals cast their vote for Hosius as his successor, but Pius V was the successful candidate. In December, 1566, the new pope appointed Hosius papal legate a latere for Poland, and in 1569 Sigismund Augustus made him his resident representative at Rome. With the consent of the pope and the king, Hosius appointed his friend Martin Croma as his coadjutor, and entrusted him with the administration of Poland, while he himself left for Rome on 20 August, 1569.

During the ten succeeding years he managed the affairs of Poland in the Roman Curia, and was one of the most influential advisers of the saintly Pope Pius V and his successor, Gregory XIII, in their most important ecclesiastical work. He was one of the papal legates in the papal efforts to restore Catholicity in England, especially in Sweden. In 1572 Gregory XIII made him a member of the new Congregatio Germaniae, and a year later appointed him grand penitentiary. Hosius was one of the greatest men of his time. He did more for the preservation of the Catholic religion in Poland than all the other Polish bishops combined. He was withal, a man of prayer, mortification, and great liberality towards the poor. Both clergy and laity looked upon him as a saint. Blessed Peter Canisius styles him "the most brilliant writer, the most eminent theologian and the best bishop of his times" (Hipler, Hosii Epistolae, I, 422). Editions of his works were published at Paris (1562), Lyons (1564), Antwerp (1566 and 1571), Venice (1573), and (best edition) Cologne (1584). His German sermons were edited by Hipler: "Die deutschen Predigten und Katechesen der ermeländischen Bischöfe Hosius und Crome" (Cologne, 1835). The publication of his numerous letters has been begun by Hipler and Zakrzewski, vols. I and II (Cracow, 1879 and 1888). The letters in these two volumes cover a period of 33 years (1525-1558). Other letters are found among those of Peter Canisius, edited by Braunsberger (Freiburg, 1882). The Biographical Dictionary of the Catholic Church, of which this is an excerpt, is to be published by L. H. Van Ess, A.M. (Freiburg, 1897-1910).
The early centuries of Christianity saw the hospice as a shelter for the sick, the poor, the orphans, the old, the travellers, and the needy of every kind. It dates back to the reign of Constantine. Originally all hospices were under the supervision of the bishops, who designated priests to administer the spiritual and temporal needs of these charitable institutions. In addition, the statutes of the so-called Fourth Council of Carthage, held about 436, enjoin upon the bishops to have hospices in connexion with their churches: “Ut episcopus non longe ab ecclesia hospitalium habeat” (Mansi, III, 852).

In haste and excitement to provide for the particular needs of the people, hospices were erected in impassable and uninhabited regions and on mountain passes. They were generally in charge of hermits or monks. Their number greatly increased when it became customary to make pilgrimages to the Holy Land, to Rome, Compostela, Amalfi, and other sacred places. They were supported either by pious foundations or the liberality of the people, and gave food and shelter gratuitously, for a limited period of time. In many cities hospices were erected for the entertainment of pilgrims of particular nations. The most famous hospice in the world is that of the Great St. Bernard in Switzerland, which was founded by St. Bernard of Menthon in 962. It is situated on the summit of the mountain of the same name, 8110 feet above the level of the sea, and harbours gratuitously 20,000 to 25,000 travellers each year. The canons of Canons Regular of St. Augustine, who are generally known as the Monks of St. Bernard.

HOSPITALITY.—The Council of Trent in its twenty-fifth session, cap. viii, De Ref., enjoins all who hold any ecclesiastical benefices, whether secular or regular, to acustom themselves, as far as their revenues will allow, to exercise with alacrity and kindness the offici-
of hospitality, so frequently commended by the holy Fathers; being mindful that those who cherish hospitality receive Christ in the person of their guests”. This sums up the teaching and tradition of the Church with regard to hospitality. The onus of this duty falls on two persons, the bishop and the household, as being in the fullest sense the pastors (i.e. shepherds) of the people and as being primarily vested, according to the ancient canons, with the administration of the contributions of the faithful (see Collections); and secondly upon religious, and in particular upon monastic orders, as having made their renunciation of the goods of this world the better to perform the works of mercy towards others.

With regard to the hospitality of bishops, we may note that St. Gregory writing to St. Augustine in England and directing that the offerings of the faithful should be subjected to a fourfold division, assigns the first portion “to the bishop and his household on account of hospitality and entertainment”. It seems from this and other passages that in the earliest period bishops commonly maintained a sort of hospice. No doubt the functionaries known as bishops’ deacons had some connection with the establishment of monasteries, and canons regular may be regarded as a development of this bishop’s household, the canons sharing a common table which was provided and presided over by the bishop. In the “Didascalia Apostolorum” (ii, 3-4), a work of the second half of the third century, much stress is laid upon generous and hospitable munificence during the desert stage. For the charity of the Cluniacs, e.g. in the great famine of 1029, see Sackur, “Die Cluniacenser”, II, 213-216. To this ideal the monks seem to have remained faithful to the last. In that remarkable record of monastic life at the Reformation period known as the “Rites of Durham” (1539), the monastery of St. Mary Magdalen, a branch of the Cluniac Order, kept a careful account of the splendour of their guest-house and of the hospitality they practised. The usual period during which hospitality was freely provided was two complete days; and some similar restriction upon the abuse of hospitality seems to have been prescribed by most of the orders, friars as well as monks. There were of course certain orders, e.g. the Knights Hospitallers of St. John of Jerusalem, which were largely given up to works of charity and hospitality. But the duty of harbouring pilgrims was secondary to that of nursing the sick.

A more general discussion of the subject will be found in certain chapters of THOMASIN’s great work, Vitae et Nova Ecclesiæ Diplomata, which exists in French as well as in Latin. See also RATZINGER, Geschichte der Klarisse (Freiburg im Br., 1884); UHRKORN, Die cluniaische Liebeschlechtigkeit d. Mönchsleib in der Kirche (Stuttgart, 1898); G. HERBERT THURSTON.

Hospitallers.—During the Middle Ages, among the hospitals established throughout the West (Maison-Dieu or Hôpital-Dieu), in which religious of both sexes lived under one roof, following the Rule of St. Augustine, and vowed perpetual chastity and the service of the sick and poor, the most famous was the Hôtel-Dieu of Paris. Early in the seventeenth century Mère Geneviève Bouquet established a noviciate to replace the system by which each religious trained a certain number of postulants, and introduced the custom of taking a solemn vow. Twelve resident canons recited the canonical hours. The congregation survived both the Revolution and the disorders of 1830.

The military orders organized at the time of the
Crusades did not overlook the care of the sick, and found auxiliaries in the communities of women instituted for this work, under the same rules and patronage. Thus the labours of the Lazarists in tending those afflicted with leprosy were shared by the Hospital Sisters of St. Lazarus.

The Hospital Sisters of St. John of Jerusalem, early in the thirteenth century, were established in the hospital of St. Mary Magdalen, Jerusalem, for the care of pilgrims. The year after the fall of Jerusalem (1187) a community was established at Sixena, Spain, by Sancha, wife of Alfonso II of Aragon, for the care of poor ladies of noble families, an order which was confirmed in 1192. Except from 1470 to 1569, when they were under the immediate jurisdiction of the pope, the sisters were subject to the Grand Master of the Hospitalers. Other communities were soon founded throughout Spain, Italy, Portugal, and England. A reform was instituted in the hospital of Beaulieu in the first years of the seventeenth century; new constitutions were drawn up in 1636, and approved in 1644. After the fall of Rhodes the original habit of red, with a black mantle, embroidered with the cross of St. John of Jerusalem, was exchanged for one of black. On the suppression of the order of the Templars, the few houses of sisters of that order were united with those of St. John of Jerusalem.

The first house of the Hospitalers Sisters of the Teutonic Order in Germany was founded in 1299 at Kutz near Bern, soon followed by others, none of which survived the secularization of 1803. The order was revived in 1841 by Maximilian III Joseph, Duke of Austria-Este. Besides the care of the sick, the sisters devote themselves to teaching. They are four mother-houses: Troppeau, with 2 fold convents and 123 sisters; Lana, 15 filial houses, 89 sisters; Freundenthal, 3 filial houses, 67 sisters; Friesach, 1 filial house, 29 sisters.

The Hospitalers of the Holy Ghost were a branch of the male order of the same name, founded in 1180 at Montpellier; established at Neuchâtel, they were driven thence in 1842 to Rouen, which was made the mother-house, under a superior-general. In Germany the house at Münster and I. in Wimpfen, in Swabia, survived until the secularization of 1803. There is still a house at Cracow, founded in 1618, with 27 sisters, conducting a boarding-school. The convet at Poligny was revived after the Revolution, the religious devoting themselves chiefly to children, especially the poor.

The origins of the order have given rise to learned discussions, to fictitious legends and hazardous conjectures. The unquestionable founder was one Germaine de Paris, whose birth-place and family-name it has been vainly sought to ascertain. On the other hand, his title as founder is attested by a contemporary official document, the Bull of Paschal II, dated 1113, addressed to “Geraudo institutore as praeposito Hierosolimitani Xenodochii”. This was certainly not the first establishment of the kind at Jerusalem. Even before the Crusades, hospitals were in existence to shelter the pilgrims who flocked to the Holy Places, and in the beginning the hospita or xenodochia were nothing more. They belonged to different nations: a Frankish hospice is spoken of in the time of Charlemagne; the Hungarian hospice is said to date from King Stephen (year 1000). But the most famous was an Italian hospice founded about the year 1050.
HOSPITALLERS

by the merchants of Amalfi, who at that time had commercial relations with the Holy Land. Attempts have been made to trace the origin of the Hospitallers of St. John to this foundation, but it is obvious to remark that the Hospitallers had St. John Baptist for their patron, while the Italian hospice was dedicated to St. John of Alexandria. Moreover, the former adopted the Rule of St. Augustine, while the latter followed that of the Benedictines. Like most similar houses at that time, the hospice of Amalfi was in fact merely a dependency of a monastery, while Gerard's was autonomous from the beginning. Before the Crusades, the Italian hospital languished, sustained solely by alms gathered in Italy; but Gerard profited by the support of the Emperor of Constantinople, and by the grant of the lands from the Knights of St. John of Jerusalem, the latter felt for his hospitality, to acquire territory and revenues not only in the new Kingdom of Jerusalem, but in Sicily, Italy, and Provence. In the acts of donation which remain to us, there is no mention of the sick, but only of the poor and strangers. In this respect the Hospitallers of Antioch did not differ from others, and his epitaph defines his work:—

Pauperibus servus, plus hospitibus . . . . . . 
Undique collegit pacaret unde suos.

Thanks to the resources accumulated by Gerard, his successor Raymond of Provence (1129-60), who ordered the erection of more spacious buildings near the church of the Holy Sepulchre, and henceforth the hospice became an infirmary served by a community of hospitallers in the modern sense of the word.

Strictly speaking, therefore, the Hospitallers of Jerusalem only began with Raymond of Provence, to whom they owe their rule. This rule deals only with their conduct as religious and inquirers, being no mention of knights. It especially sets forth that the hospital shall permanently maintain at its expense five physicians and three surgeons. The brothers were to fulfill the duties of inquirers. A pilgrim, about the year 1150, places the number of sick persons cared for at 2000, a figure evidently exaggerated, unless we make it include all the persons harboured in a whole year. Raymond continued to receive donations, and this permitted him to complete his foundation by a second innovation. To accompany by land and by sea one for every 50 pilgrims, he defrayed the cost of an armed escort, which in time became a veritable army, comprising knights recruited from among the crusaders of Europe, and serving as a heavy cavalry (see Chevalry), and Turcopoles recruited from among the natives of mixed blood and serving as light cavalry in the same fashion. With this innovation originated the most ancient military dignities in the order: the marshal, to command the knights, the turcopoliier, for the Turcopoles. Later the grand masters themselves went into battle. Gosbert (c. 1177), the fifth successor of Raymond, distinguished himself, and Roger de Moulins preserved the traditions in his book De la vie et de la mort d'Henri de Beauclerc, called the Order of St. John imperceptibly became military without losing its ecclesiastical character. The statutes of Roger de Moulins (1187) dealt only with the service of the sick; the first mention of military service is in the statutes of the ninth grand master, Alfonso of Portugal (about 1200). In the latter a marked distinction is made between the secular knights, externs to the order, who served only for a time, and the professed knights, attached to the order by a perpetual vow, and who alone enjoyed the same spiritual privileges as the other religious. Henceforth the order must be divided into two distinct classes of members: the military brothers and the brothers inquirers. The brothers chaplains, to whom was entrusted the divine service, formed a third class.

While the Order of St. John became a mixed order, that of the Templars was purely military from the beginning, and on this point it can claim priority, despite the contrary assertions of the Hospitallers. The Templars followed a different monastic rule and wore a different habit—the white habit of the Cistercians, whose rule they followed, with a red cross, while the Hospitallers had a black mantle with a white cross. In war the knightly brothers wore above their armour a red surcoat with the white cross. Mutually emulous from the very beginning, rivalries and abuse rivalry had much to do with the rapid decline of the Kingdom of Jerusalem. In other respects the two orders held the same rank in Church and State, both being recognized as regular orders and endowed by the papacy with most extensive privileges, absolute independence of all spiritual and temporal authority save that of Rome, exemption from tithe, the right to have their own chapels, clergy, and cemeteries. Both were charged with the military defence of the Holy Land, and the most redoubtable strongholds of the country, the splendid ruins of which still exist, were occupied by one or the other (Rey, "Monuments de l'architecture militaire des Crusades", Paris, 1885). On the battlefield they shared between them the most perilous posts, alternately holding the van and rear guard. The history of the Hospitallers of Jerusalem is involved in that of the Latin kingdom of the same name, with which the order was associated in prosperity and adversity. When the kingdom of Jerusalem reached the height of its glory, the Hospitallers possessed no fewer than seven strongholds, some situated on the coast, others in the mountains; of these Margat and Krak, in the territory of Tripoli, are the most famous. They enjoyed the revenues of more than one hundred and forty estates (casalas) in the Holy Land. As to their European possessions, a writer of the thirteenth century credits them with about nineteen thousand messuages or manors. It was necessary to organize a financial administration in order to assure the regular payment of the revenues of these widely scattered possessions. This was the task of Hugh of Ravenna, seventeenth Grand Master of the Holy Land (c. 1270). The lands attached to a single house were placed under the command of a knight of the order, who formerly was called a preceptor, but afterwards took the title of commandor. This official was charged with collecting the revenues, one portion of which was devoted to the maintenance of the taverns, another to the orders of the brethren, the other portion being destined for the houses of the Holy Land. This latter portion consisted annually of a contingent and invariable impost called "Responses".

Thanks to these resources drawn from Europe, the order was thus enriched in the last part of the Kingdom of Jerusalem, which involved the loss of all its possessions in Asia. After the capture of Jerusalem by Saladin (1187), the Hospitallers retained only their possessions in the Principality of Tripoli, and these they lost a century later by the fall of Acre (1291). They were obliged to seek refuge, under their grand master, Jean de V. Temarche, in the town of Limassol on the coast. Having become deserters, the Hospitallers were obliged to modify their manner of warfare. They equipped fleets to fight the Muslims on the sea and to protect the pilgrims, who had not ceased to visit the Holy Places. But it was chiefly the conquest of the island of Rhodes, under the Grand Master Foulques de Villaret, that brought about a complete transformation of the order.

The Knights of Rhodes (1309-1522), the successors of the Hospitallers of St. John, were distinguished from the latter in many ways. In the first place, the grand master of the order was henceforward a temporal sovereign in that island, which constituted a true ecclesiastical principality, under the nominal suzerainty of the Emperors of the East. Secondly,
although Villaret's first care was to build a new infirmary, the care of the sick took a secondary place, as the members of the order had scarcely occasion to devote themselves to any save the members of the community. The name knights then prevailed over that of hospitaliers. This character was accentuated by the foundation of the hospitaliers with the remaining Knights Templars subsequent to the suppression of the latter (1312). This fusion at the same time increased the wealth of the order, to which the pope assigned the property of the Templars in every country except Aragon and Portugal. In France, where Philip the Fair had sequestrated this property, the order was restored only by paying large indemnities to the king. From this time its organization took its definitive form, the whole body being divided into tongues, priories, and commanderies. The tongues, or nations, were eight in number, each having its own bailli; and one of the eight supreme dignities was reserved to each tongue—Provence, that of grand commander; to Auvergne, that of marshal; to France, grand hospitalier; to Italy, admiral; to Aragon, standard-bearer; to Castile, grand chancellor; to Germany, grand bailli; to England, The siege of Malta, quite as famous as that of Rhodes, lasted for four months (1565). The Turks had already taken possession of a part of the island, destroyed nearly the whole of the old city, slaying half the knights and almost 8000 soldiers, when Malta was delivered by an army of relief from Spain. In retreating, the Turks, it is said, left 30,000 slain. A new city had to be built on the present site of La Valette, so named in memory of its valiant grand master who had sustained this siege. Malta, however, was not rid of its most dangerous adversary until the battle of Lepanto (1571), which dealt the Ottoman fleet a fatal and final blow.

From this time the history of Malta is reduced to a series of encounters by sea with the Barbary corsairs which have only a local interest. The struggle was carried on chiefly by young knights who were in haste to accomplish their three "caravans" in order to merit some vacant commandery. It was an existence filled with perils of every kind, sudden attacks, adventures, successes, and defeats. There was constant risk of life, or of liberty, which could be regained only at the cost of enormous ransoms. But when success came, the undertaking proved lucrative, not only defraying all costs but also enriching the captain. The best result was the deliverance of hundreds of Christian slaves, chained as rowers on the Turkish galleys. In requital the vanquished Turks were in turn reduced to slavery and sold to the Christian galleys which had need of rowers. In this respect Malta remained a very lucrative slave-market until well into the 19th century. It required a thousand slaves to equip merely the galleys of the order, which were a hell for these unfortunate. It will be readily understood that the habit of living in the midst of these scenes of violence and brutality exercised a bad influence on the morals of the knights of the order. Discipline became relaxed, and the grand mastership became a more
and more perilous honour. Revolts were frequent. In 1581 the grand master, Jean de la Cassière, was made prisoner by his own knights, whose principal grouse was the expulsion from the city of lewd women. The vow of obedience was little better observed than that of celibacy. Once in possession of some commandery situated on the Continent, a knight would become indeed independent of the grand master's superintendence, and main only the most remunerative transactions with the order. As to the vow of poverty, the knights were recruited solely from among the nobility, proofs of noble descent being more severely scrutinized than religious dispositions, and, naturally, the wealth of the order formed the only motive of these vows, whose deity began with the possession of its possessions. One effect of Protestantism was the alienation of a large group of commanderies, to be thenceforward appropriated to the Protestant nobility, as, for instance, the Bailiwick of Sonnenburg in Prussia. In other Protestant countries the order was simply suppressed. In Catholic countries the commanderies themselves assumed more and more the right to dispose of the commanderies within their jurisdiction. At last Malta, the very centre of the order, was treacherously surrendered under the grand master, the Count von Hompesch, to General Bonaparte when he made his expedition to Egypt (12 June, 1798). As to the secularization of the Order — the securализation of the property of the order in Protestant countries was extended by the French Revolution to the greater number of Catholic countries. On the other hand, Czar Paul of Russia assigned them considerable property in his domains (1797), and in return was elected grand master, but his election was not recognized by the pope. From that time forward the pope has named the grand master or the bailiff who takes his place. From 1805 to 1879 there was no grand master, but Leo XIII re-established the dignity, bestowing it on an Austrian, Geschi di Sancta Croce. It is now (1910) held by Galeazzo von Thun und Hohenstein. The actual conditions for admission to the order are: nobility of sixteen quarterings, the Catholic Faith, attainment of full legal age, integrity of character, and corresponding social position. There are now in existence only four great priories, one in Bohemia and three in Italy. There are still commanders and several classes of knights, with different insignias, but all wear the same eight-pointed Maltese cross (see DECO PATIONS, PONTIFICAL).

To the Order of the Knights of Malta belong the convent of S. Maria del Priorato on the Aventine in Rome, overlooking the Tiber, and commanding from its gardens one of the most delightful views of the city. The walls of the convent are adorned with portraits of the knights, and the archives are rich in records of the order. The tombs of the knights in the convent church are interesting. The order was summoned to attend the Convention of Geneva (1864), on the same footing as the great powers.

The Protestant Bailiwick of Sonnenburg in Prussia disappeared after the secularization of its property in 1810. Nevertheless Frederick William IV created a new confraternity of "Evangelische Johanniter" (1852), under a master (Herrenmeister) always chosen from the royal family, and with a great number of other dignitaries. Admission to the order is subject to numerous conditions, ancient nobility, corresponding social position, an entrance fee of 900 marks, a probation of at least four years as knight of honour before admission to the accolade which confers the title of Knight of Justice. Their first obligation is to collect contributions for the support of Protestant hospitals. This Protestant branch of the order has returned to the ideal of its first founder in the time of the First Crusade. Moreover, in times of war, since 1870, the order has been devoted to ambulance service on the field of battle.

Hospitals (Lat. hospes, a guest; hence hospitalis, hospitable; hospitium, a guest-house or guest-room). Originally, hospital meant a place where strangers or visitors were received; in the course of time, its use was restricted to institutions for the care of the sick. This modification is incidental to the long process of which the hospital itself has passed under the varying influences of religions, political, and economic conditions, and of social and scientific progress. Viewed in a large way the typical modern hospital represents natural human solicitude for suffering, ennobled by Christian charity and rendered efficient by the abundant resources of medical skill.

PAGAN ANTIQUITY.—While among savage tribes, e. g. the ancient Germans, the sick and feeble were often put to death, more humane practices are found among civilized peoples. One of the earliest hospitals on record was found in Ireland, 300 b. c. by Princess Macha. It was called "Brom Beag", (house of sorrow), and was used by the Red Branch Knights and served as the royal residence in Ulster until its destruction in a.d. 332 ("Seanchus Mór", 123; cf. Sir W. Wilde, "Notes on Ancient Ireland", pt. III). In India, the Buddhist King Asoka (262-227 b. c.) established a hospital for men and animals. The Mexicans in pre-Columbian times had various institutions in which the sick and poor were cared for (Bancroft, "Native Races", II, 590). In a general way the advance in medical knowledge implies that more was done to relieve suffering; but it does not necessarily prove an increase of hospitals. Paulus of Aegina (c. 400) tells us that the Egyptians employed a considerable number of remedies and that the physicians held clinics in the temples. Similar customs prevailed in Greece; the sick resorted to the temple of Asculapius where they spent the night (incubatio) in the hope of receiving directions (from the god) how to cure their diseases. Lay physicians (Asclepiades) conducted dispensaries in which the poor received treatment. At Epidaurus the Roman senator Antoninus erected (A. D. 170) two establishments, one for the dying and the other for women lying-in; patients of these classes were not admitted in the Asclepium.

The Romans in their treatment of the sick adopted many Greek usages. Asculapius had a temple on the island in the Tiber (291 b. c.), where now stand the church and monastery of St. Bartholomew, in which the same rites were observed as among the Greeks. Municipal physicians were appointed to treat various classes of citizens, and these practitioners usually enjoyed special privileges and immunities. Provision was made in particular for the care of sick soldiers and slaves, the latter receiving attention in the Bethesda-naria attached to the estates of the wealthy Romans. When the Asculapium was destroyed, the hospital was regarded as the model for our modern hospital. It is noteworthy that among pagan peoples the care of the sick bears no proportion to the advance of civilization. Though Greece and Rome attained the highest degree of culture, their treatment of the sick was scarcely equal, certainly not
superior, to that which was found in the oriental nations. Both Greeks and Romans regarded disease as a work of the malevolent deities, and the Christian Fathers and Patriarchs sought to propitiate the malevolent deity than to organize the work of relief. On the other hand the virtue of hospitality was quite generally insisted on; and this, as will presently appear, holds a prominent place in Christian charity.

Early Christian Times.—Christ Himself gave His followers a sample of caring for the sick by the numerous miracles He wrought to heal various forms of disease including the most loathsome, leprosy. He also charged His Apostles in explicit terms to heal the sick (Luke, x, 9) and promised to those who should believe in Him that they would have power over diseases (Acts, iii, 6). And this “manna was the bread which came down from heaven” and signs done by the Apostles in Jerusalem was the restoration of the lame man (Acts, iii, 2-8), of the paralyzed Zeneas (ix, 33, 34), and of the cripple at Lystra (xiv, 7, 9), besides the larger number whom the shadow of St. Peter delivered from their infirmities (v, 15, 16).

St. Paul enumerates among the charismata (g. d. of the “grace of healing” (I Cor., xii, 9), and St. James (v, 14, 15) admonishes the faithful in case of sickness to bring in the priests of the Church and let them pray over the sick man “and the prayer of faith shall save him.” The Sacrament of Extreme Unction was instituted for the spiritual benefit of the sick, but also for the restoration of their bodily health. Like the other works of Christian charity, the care of the sick was from the beginning a sacred duty for each of the faithful, but it developed in a special way upon the bishops, presbyters, and deacons. The same manifestations that brought relief to the poor naturally included provision for the sick who were visited in their homes. This was especially the case during the epidemics that raged in different parts of the Roman Empire, such as that at Carthage in 232 (St. Cyprian, “De mortalitate,” XIV, in Migne, P. L., IV, 591-593; “S. Cypriani Vita” in “Acta SS.,” 14 Sept.), and that at Alexandria in 288 (Eusebius, “Hist. Eccl.” VII, xxii; “Acta SS.,” VI, 729). Valuable assistance was also rendered by physicians, slaves, or freedmen, who had become Christians and who like Cosmas and Damian were no less solicitous for the souls than for the physical needs and bodily comfort and well-being of the sick.

Another characteristic of Christian charity was the obligation and practice of hospitality (Rom., xii, 13; Heb., xiii, 2; I Peter, iv, 9; III Ep. St. John). The bishop in particular must be “given to hospitality” (I Tim., iii, 2). The Christian, therefore, in going from place to place, was welcomed in the houses of the brethren; but, like hospitality was extended to the pagan visitor as well. Clement of Rome praises the Corinthians for their hospitality (Ep. ad. Cor., c. i) and Dionysius of Corinth for the same reason gives credit to the Romans (Eusebius, “Hist. Eccl.”, iv, 23). The bishop’s house above all others was open to the poor who not only found food and shelter, but was provided in case of need with the means to continue his journey. In some cases the bishop was also a physician so that medical attention was provided for those of his guests who needed it (Harnack, “Medizinisches aus d. ältesten Kirchengesch.” in “Texte u. Untersuchungen” VIII, Leipzig, 1892). The sick were also cared for in the Haletusiaria of the wealthier Christians who in the spirit of charity extended hospitality to those who could not be accommodated in the bishop’s house. There was thus from the earliest times a well organized system of providing for the various forms of suffering; but it was necessarily limited in the dependent condition of the sick as the Christians were under the ban of a hostile State. Unf1 persecution ceased, an institution of a public character such as our modern hospital was out of the question. It is certain that after the conversion of Constantine, the Christians profited by their larger liberty to provide for the sick by means of hospitals. It has been assigned to explain the development from private care of the sick to the institutional work of the hospital (Uhlhorn, I, 317 sq.). It was not, at any rate, due to a slackening of charity as has been asserted (Moreau-Christophe, “Du problème de la charité,” II, 296, 311, 327), but rather the rapid increase in the number of Christian hospitals to the demand of poverty under new economic conditions. To meet these demands, a different kind of organization was required, and this, in conformity with the prevalent tendency to give all work for the common weal an institutional character, led to the organization and founding of hospitals.

When and where the first hospital was established is a matter of dispute. According to some authorities (e. g. Ratzinger, p. 141), St. Zoticus built one at Constantinople during the reign of Constantine, but this has been denied (cf. Uhlhorn, I, 319). But that the Christians in the East had founded hospitals before Julian the Apostate came to the throne (361) is evident from the letter which that emperor sent to Arsacius, high-priest of Galatia, directing him to establish a xenodochium in each city to be supported out of the public revenues (Sossvem., V, 16).

As the movement for the philanthropic work of the Christians who cared for the pagans as well as for their own. A splendid instance of this comprehensive charity is found in the work of St. Ephraem who, during the plague at Edessa (375), provided 300 beds for the sufferers. But the most famous foundation was that of St. Basil at Cesarea in Cappadocia (399). This “Basilius,” as it was called, took on the dimensions of a city with its regular streets, buildings for different classes of patients, dwellings for physicians and nurses, workshops and industrial schools. St. Gregory of Nazianzus was deeply impressed by the extent and efficiency of this institution which he calls “an easy ascent to heaven” and which he describes enthusiastically (Or. 39, “In laudem Basili”); Or. fun. “In Basili.” P. G., XXXVI, 578-579). St. Basil’s example was followed throughout the East: at Alexandria by St. John the Almsgiver (610); at Epessa by the bishop, Brasilius; at Constantinople by St. John Chrysostom (407-444); by others, notably St. Pulcheria, sister of Theodosius II, who founded “multa publica hospitium et pauperum domicilia” i. e. many homes for strangers and for the poor (Acta SS., XLI). In the same city, St. Samson early in the sixth century, founded a hospital near the church of St. Sophia (Procopius, “De aedif. Justinian,” I, c. 2); this was destroyed but was restored under Justinian who also built other hospitals in Constantinople. Du Cange (Historia Byzantina, II, “Constantinopolis Christiana”) enumerates 35 establishments of the kind in this city alone. Among the later foundations in Constantinople, the most notable were those of the Sophian church by St. John the Almsgiver (1018-1118), and the hospital of the Forty Martyrs by Isaac II (1185-1195).

The fact that the first hospitals were founded in the East accounts for the use, even in the West, of names derived from the Greek to designate the main purpose of each institution. Of the terms most frequently used with the nosocomium was the sick, the Brephothophium for foundlings; the Orphanothophium for orphans; the Plochium for the poor who were unable to work; the Gerontochium for the aged; the Xenodochium for poor or infirm pilgrims. The same institution often ministered to various needs; the differentiation emerging later brought about this change. In the West, the earliest foundation was that of Fabiola at Rome about 400. “She first of all,” says St. Jerome, “established a nosocomium to gather in the sick from the streets and
to nurse the wretched sufferers wasted with poverty and disease" (Ep. LXXXVII, "Ad Oceanum, de morte Fabiolae", P. L., XXII, 694). About the same time, the Roman senator Pammachius founded a xenodochium at Porto which St. Jerome praises in his letter on the death of Paulina, wife of Pammachius (Ep. LXXVII, 148, in ed. 463). Attempts to defraud the foundations of this structure were unavailing under Prince Tolronio ("Bull. di Arch. Christ.", 1866, pp. 50, 99). Pope Symmachus (498–514) built hospitals in connexion with the churches of St. Peter, St. Paul, and St. Lawrence (Lib. Pontif. I, no. 53, p. 263. During the 7th century, it became a significant factor in hospital work. The famous Benedictine Abbey of Cluny, founded in 910, set the example which was widely imitated throughout France and Germany. Besides its infirmary for the religious, each monastery had a hospital (hospitale pauperum, or eleemosynaria) in which externs were cared for. These were in charge of the eleemosynarius, whose duties, carefully prescribed by the rule, included every sort of service that the visitor or patient could require. As he was also obliged to seek out the sick and needy in the neighbourhood, each monastery became a centre for the relief of suffering. Among the monasteries notable in this respect were those of St. Gall, Roche-sur-Foron, Payerne, Einsiedeln, Ulm, Heidelberg, Ziegenhain, and Waldenbuch. No less efficient was the work done by the diocesan clergy in accordance with the disciplinary enactments of the councils of Aachen (517, 830), which prescribed that a hospital should be maintained in connexion with each collegiate church. The canons were obliged to contribute towards the support of the hospital, and one of their number had charge of the inmates. As these were often located in cities, where more numerous demands were made upon them, they were no longer attached to the monasteries. In this movement the bishop naturally took the lead, hence the hospitals founded by Heribert (d. 1021) in Cologne, Godard (d. 1038) in Hildesheim, Conrad (d. 975) in Constance, and Ulrich (d. 973) in Angsburg. But similar provision was made by the other churches; thus at Trier the hospitals of St. Maximin, St. Matthew, St. Simeon, and St. James took their names from the churches to which they were attached. During the period 1207–1577 no less than one hundred and fifty-five hospitals were founded in Germany (Virehov in "Gesch. Abh.", II, 156).

The Hospital Orders.—The establishment of confraternities and religious orders for the purpose of ministering to the sick is one of the most important phases in this whole development. The first of these appeared at Siena towards the end of the ninth century, when Soro (d. 836) founded the hospital of Santa Maria della Scala and drew up its rules. The management was largely in the hands of the citizens, though subject to the bishop's control until 1194, when Celestine III exempted it from episcopal jurisdiction. Similar institutions, for the most part governed by the Rule of St. Augustine, sprang up in all parts of Italy; but by the beginning of the thirteenth century they had passed from the bishop's control to that of the magistrate. In the northern countries—Belgium, France, and Germany—the Beguines and Beghards (q. v.), established in the latter part of the twelfth century, included in their charitable work the care of the sick. St. Elizabeth of Hungary founded two hospitals, a third on the Warthburg. The origin and work of the Alexians and Antonines have been described in the articles ALEXIANS and ANTHONY, SAINT, ORDERS OF, sub-title Antomines. But the most important of the orders established during this period was that of the Holy Ghost. About the middle of the twelfth cen-
tury (c. 1145) Guy of Montpellier had opened in that city a hospital in honour of the Holy Ghost and prescribed the Rule of St. Augustine for the brothers in charge. Approved 23 April, 1148, by Innocent III, this institute spread rapidly throughout Europe. In 1204 the same pontiff built a hospital called S. Maria in Sassoia, where King Ina, about 728, had founded the schola for English pilgrims. By the pope's command, Guy de Montpellier came to Rome and took charge of this hospital, which was then called Santo Spirito in Sassoia. (Cf. Morichi, "Institutioni di carità . . . in Roma", Rome, 1870.) The practice amongst cities gave every city a hospital of the Holy Ghost, though not all the institutions bearing this name belonged to the order which Guy of Montpellier had founded. In Rome itself Cardinal Giovanni Colonna founded (1216) the hospital of S. Andrea, not far from the Lateran; and in accordance with the will of Cardinal Pietro Colonna the hospital of S. Giacomo in Augusta was founded in 1339. Querini ("La Beneficenza Romana", Rome, 1892) gives the foundations in Rome as follows: eleventh century, four; twelfth, six; thirteenth, ten; fourteenth, five; fifteenth, five, i.e. a total of 26 hospitals for the care of the sick and infirm founded in the cit of the popes during the Middle Ages.

The Military Orders.—The Crusades (q.v.) gave rise to various orders of chivalry which combined with military service the care of the sick. The earliest of these was the Order of St. John. Several hospitals had already been founded in Jerusalem to provide for pilgrims; the oldest was that connected with the Benedictine Abbey of S. Maria Latina, founded according to one account by Charlemagne in 800; whether the Order of St. John grew out of this or out of another hospital established (1045) at Massaia, a wealthy merchant from Amalfi, is uncertain. At all events, when the First Crusade reached Jerusalem in 1099, Gerhard the superior of the latter hospital, gave the establishment a new building near the church of St. John the Baptist, whence apparently the order took its name. It also spread rapidly in the Holy Land and in Europe, especially in the Mediterranean ports which were crowded with crusaders. Its original purpose was hospital work and according to the description given (c. 1160) by John of Wursburg (Pes, "Anecdota", I, 3, 526) the hospital at Jerusalem cared for over 2000 patients. The military function was provided too. Such transferred to the thirteenth century. In both respects the order for a time rendered excellent service, but during the thirteenth century increasing wealth and laxity of morals brought about a decline in Christian charity and zeal and the care of the sick was in large measure abandoned.

The Teutonic Order developed out of the field hospital under the walls of Acre, in which Count Adolf of Holstein with other German citizens (from Bremen and Lübeck) ministered to the sick and wounded. Under the name of "domus hospitalis S. Mariae in Jerusalem", it was approved by Clement III in 1191. The members bound themselves by vow to the service of the sick, and the rule prescribed that wherever the order was introduced it should build a hospital. The centre of its activity however, was soon transferred from the Holy Land to Europe, especially to Germany where, owing to its military character and also to its relations with individuals. On the other hand, through financial losses and war that by the end of the fifteenth century its pristine vigour was almost spent.

City Hospitals.—The Crusades, by opening up free communication with the East, had quickened the spirit of commercial enterprise throughout Europe, and in consequence, the city, as distinct from the feudal estate and the village, came into existence. The resulting economic development affected the hospital development in two ways. The increasing population of the cities necessitated the construction of numerous hospitals; on the other hand, more abundant means were provided for charitable work. Foundations by the laity became more frequent. Public-spirited individuals, guilds, brotherhoods, and corporations set up hospitals in a number of cities. In the thirteenth century the hospital system came to include the care of the sick, the infirm, and the aged; in many places of the fifteenth century it was extended to include the poor. As to the share which the municipalities took in this movement, opinions differ. Some authors (Uhlhorn, Ratsinger) hold that in most cases the city hospitals were founded and endowed by the city authorities; while others (Lallemand, II, 51) declare that between the twelfth and the sixteenth centuries, comparatively few foundations were made by the municipality, though this often occurred private initiative with lands and endowments and willingly placed over the direction of hospitals once they were established. It is however beyond question that the control of the hospitals passed quite generally into the hands of the municipality especially in Italy and Germany. As a rule the transfer was easily effected on the basis of an agreement between the superior and the civil authorities, e.g. Lindau, 1307; Lucerne, 1319; Frankfort, 1283; Cologne, 1321. In certain cases where dispute arose as to the observance of the agreement, the matter was referred to high ecclesiastical authority. Thus the Holy Ghost hospital at Göttingen was given over to the municipality by order of the Council of Basle in 1470 (Uhlhorn, loc. cit.) to the latter's hand to the care of the sick and opposition to ecclesiastical authority; they simply resulted from the general development which obliged the authorities in each city to intervene in the management of institutions on which the public weal in large measure depended. There was no question of secularization in the modern sense of the term. Much less can it be shown that the Church forbade clerics any share in the control of hospitals, though some modern writers have thus interpreted the decree of the Council of Vienne in 1311. In reply to Frère Orban (pseud., Jean Vaudanme, "La mainmorte et la charité", Brussels, 1857), Lallemand points out (II, 106 sq.) that what the council did prohibit was the conferring of hospitals and their administration upon clerics as benefices ("nullus ex locis iipsisis secularibus clericis in beneficium conferatur"). The decree was aimed at an abuse which diverted hospital funds from their original charitable purpose to the emolument of individuals. On the other hand in Ravenna in the same year (1311), considering the waste and malversation of hospital revenues, ordered that the management, supervision, and control of these institutions should be given exclusively to religious persons.

In France, the movement in favour of secular control advanced much more slowly. King Philip Augustus in 1200 decreed that all hospitals and
Hospitals

Hospital funds should be administered by the bishop or some other ecclesiastic. The Council of Paris (1212) took measures to reduce the number of attendants in the hospitals which, the bishops declared, were meant for the service of the sick and not for the benefit of those in good health. At the Council of Lodi (1139), so that the view of pathological abuses, that hospitals should be placed under ecclesiastical jurisdiction and conducted by persons who would "lead a community life, present annual reports of their administration and retain for themselves nothing beyond food and clothing" (can. 13). Similarly, a council of 1336 issued by the Council of Lund (1336). But the protests of synods and bishops were of little avail against growing disorders. Even the Hôtel-Dieu at Paris, which in the main had been well managed, began in the fifteenth century, to suffer from grave abuses. After various attempts at reform, the chapter of Notre-Dame requested the municipal authorities to take over the administration of the hospital (April, 1505). Accordingly a board composed of eight persons, delegates of the municipality, was appointed and, with the approval of the court, assumed charge of the Hôtel-Dieu (Lallemand, II, 112).

Great Britain and Ireland.—In these countries the care of the sick, like other works of charity, was for a long time entrusted to the monastic orders. Each monastery, taking its pattern from those on the Continent, provided for the treatment both of its own inmates who fell ill and of infirm persons in the neighbourhood. In the Penitential of Theodore (668–690) we read (VI, 15): "in potestate et libertate est monasterii suscepto infirmorum in monasterio", i.e. the monastery is free to receive the sick. According to Harduin (IV, 864) a large hospital was founded at St. Albans in 794. A little later (796) Alcuin writing to Bishop Egbert of York exhorts him to have in mind the foundation of hospitals where the poor and the pilgrims may find admission and relief (Hardan and Stubbs, "Councils", Oxford, 1871, III, 504). The temporal rulers also were generous in this respect. In 936 King Athelstan returning from his successful campaign against the Scots, made certain grants to the Abbot of St. Peter's in Westminster, York, which they employed to found a hospital. This was known at first as St. Peter's, afterwards as St. Leonard's from the name of the church built in the hospital by King Stephen. It provided for 206 bedmen and was served by a master, thirteen brethren, four choir-sisters, and eight nuns, the nuns being the last of the religious services. Archbishop Lanfranc in 1084 founded the hospital of St. Gregory outside the north gate of Canterbury and endowed it with lands and other revenues. It was a large house, built of stone and divided into two sections, one for men and the other for women.

During the first quarter of the twelfth century (1123 ?), St. Bartholomew's hospital was founded by Rahere, who had been jester of Henry I, but had joined a religious community and secured from the king a grant of land in Smoothfield near London. This continued to be the most prominent hospital of London under the direction of Henry VIII. The Holy Cross hospital at Winchester was founded in 1132 by Henry of Blois, half-brother to King Stephen; St. Mary's Spital, in 1197 by Walter Brune, citizen of London, and his wife Roesia. The latter, at the Dissolution, had 180 beds for sick persons and travels. The Spital for the Poor of Westminster, established St. Thomas's hospital in London. This also was confiscated by Henry VIII but was re-established by Edward VI. At the present time St. Bartholomew's and St. Thomas's are among the most important hospitals in London. The list of foundations in England is a long one; Tanner in his "Notitiae" mentions 460. For their charters and other documents see Dugdale, "Monasticon Anglicanum", new ed., London, 1846, VI, pt. 2. That these institutions were under episcopal jurisdiction is clear from the enactment of the Council of Durham (1217): "the persons who desire to found a hospital must receive from us its rules and regulations" (Wilkins, I, 383). Nevertheless, abuses existed. The reassertion of the claim of Oxford University to Henry V in 1414, complaint is made that the poor and sick are cast out of the hospitals and left unprovided for, while the masters and overseers appropriate to themselves the revenues (Wilkins, III, 365).

The hospitals of Scotland, founded before the Reformation; Glasgow had two, Aberdeen four, Edinburgh five. St. Mary Magdalen's at Roxburgh was founded by King David I (1124–1153); Holy Trinity at Soltre by King Malcolm IV (1153–1163); the one at Rothes by John Bisset about 1226; Holywood in Galloway by Robert Bruce's brother Edward (d. 1318); St. Mary Magdalen's at Linlithgow by James I (1424–1437). To the three existing hospitals at Aberdeen, Bishop Gavin Dunbar (1518–1532) added a fourth. The foundations at Edinburgh have already been mentioned under Edin- burgh (vol. V, 286). The form of the hospital was essentially similar to that of the monasteries, forming the common room, the beds were placed in the transapets, and the whole was screened off from the eastern end of the building, where was the chapel . . . . The hospitals were usually in charge of a warder or master, assisted by nurses. There was a chaplain on the staff, and the inmates were bound to pray daily for their founders and benefactors." (Bellesheim, "History of the Catholic Church in Scotland"), Edinburgh, 1887, II, 185, 417; cf. Wallcott, "The Ancient Church of Scotland", London, 1874).

The existence of numerous hospitals in Ireland is attested by the names of towns such as Hospital, Siptal, Spiddal, etc. The hospital was known as forus tuadthe i.e. the house of the territory, to indicate that it cared for the sick in a given district. The Brehon Laws (q. v.) provide that the hospital shall be free from debt, shall have four doors, and there must be a stream of water for washing the same. The inmates, when living and available, was to go with him (ibid., III, 357; IV, 303, 333; see also Joyce, "A Social History of Ancient Ireland", London, 1903, I, 616 sq.). In the later development, the Knights of St. John had a number of hospitals, the most important of which was Kilmalmain Prison, founded about 1174 by Richard Strongbow. Other commanderies were located at Killhill, at Hospital near Emily in Co. Limerick, at Kilsaran in Co. Louth, and at Wexford. Towards the end of the twelfth century, the establishments of the Cluniac Friars or Cross-bearers, were to be found in various parts of Ireland; at the Royal Hospital of Roscrea was founded (1119–1199) by Walter de Lacie, Lord of Meath; at Ardee, the one founded in 1207 by Roger de Pippard, Lord of Ardee, the charter of which was confirmed by Eugene, Archbishop of Armagh; at Dundalk, the priory established by Bertrand de Verdon, which afterwards became a monastic hospital and was re-established by the English in 1542 under the name of St. Mary's; at Newry, the Priory was founded by Adam, Bishop of Down, in 1188; at Trim, the Priory was founded in 1199; at Duleek, the Priory was founded in 1202 by Theobald Walter, First Butler of Ireland. St. Mary's hospital at Drogheda, Co. Louth, owed its origin (thirteenth century) to Ursus de Swemene, Eugene, Archbishop of Armagh, being a witness to the charter. The hospital of St. Nicholas at Cashel with fourteen beds and three
chaplain was founded by Sir David Latimer, Seneschal to Marian, Archbishop of Cashel (1224–1238). In 1272 the hospital was joined to the Cistercian Abbey in the neighbourhood. In or near Dublin another hospital was made for the care of the sick. About 1220, Henry Loundres, Archbishop of Dublin, founded a hospital in honour of God and St James in a place called the Stye, near the city of Dublin, and endowed it with lands and revenues. The Priory of St John Baptist was situated in St Thomas's Street, the most common gate of the city. About the end of the twelfth century, Alred de Palmer founded a hospital here for the sick. In 1361, it appearing that the hospital supported 115 sick poor, King Edward III granted it the deodanda for twenty years. This grant was renewed in 1378 and in 1403. About 1500, Walter, Archbishop of Dublin, granted a void space of ground to build thereon a stone house for ten poor men. In 1504, John Allen, then dean of St Patrick’s Cathedral, founded the said hospital for sick poor, to be chosen principally out of the families of Allen, Barrett, Begge, Hill, Dillon, and Rodier, in the Dioceses of Meath and Dublin; and to be leased, for 21 years. Many of the sick were kept, in the hospital, on the understanding, he assigned lands for their support and maintenance, and further endowed the hospital with a messuage in the town of Duleek, in the County of Meath. (Arehdall, “Monasticon Hibernicum”, London, 1780). At the Reformation all these funds and charters became the property of the Protestant Church of Ireland.

The famines and pestilences which scourged these countries during the Middle Ages called into existence a considerable number of institutions, in particular the leper-houses. This name, however, was often given to hospitals which cared for ordinary patients as well as for those stricken with the plague. What was originally opened as a leper-house and, as a rule, endowed for that purpose, naturally became, as the epidemic subsided, a general hospital. There were some leper-hospitals in Ireland, but it is not easy to distinguish them in every case from general hospitals for the sick poor. Thus the hospital built by the monks of Innisfallen in 869 is merely called nosocomium although it is usually reckoned an early foundation for lepers in Ireland. A hospital at Waterford was “confirmed to the poor” by the Benedictine monks in 1165. St. Stephen’s in Dublin (1344) is specially mentioned in the foundation deed of the city, in a deed of gift of about 1360–70; a locality of the city called Leper-hill was perhaps the site of another refuge. Lepers also may have been the occupants of the hospitals at Kilbixy in Westmeath (St. Bridget’s), of St. Mary Magdalen’s at Wexford (previous to 1401) of the house at “Hospital”, Lis- more (1467), at Downpatrick, at Killalief in County Down, at Cloney, and of one or more of four old hospitals in or near Cork. The hospital at Galway built “for the poor of the town” around 1435, was not a leper-house, nor is there reason to take the old situation as a hospital especially for lepers” (Creighton, “A History of Epidemics in Britain”, Cambridge, 1891, p. 100).

Action of the Popacy.—Innumerable pontifical documents attest the interest and zeal of the popes in behalf of hospitals. The Holy See extends its favour and protection to the charitable undertakings of the faithful in order to ensure to the sick poor the property rights against molestation from any source. It grants the hospital permission to have a chapel, a chancel, and a cemetery of its own; exempts the hospital from episcopal jurisdiction, making it immediately subject to the Holy See; approves statutes, intervenes to condemn deeds which tend to diminish the property and compels the restitution of its holdings where these have been unjustly alienated or seized. In particular, the popes are liberal in granting indulgences, e. g. to the founders and patrons, to those who pray in the hospital chapel or cemetery, to all who contribute when an appeal is made for the support of the hospital, and to all who lend their services in nursing the sick and in carrying on the administration. It is thus possible for the sick under given circumstances; this naturally brought about improvement, now in one respect now in another, as time went on. Certain fundamental requisites, however, were kept in view throughout the Middle Ages. Care was taken in many instances to secure a good location, the bank of a river being preferred: the Hôtel-Dieu at Paris was on the Seine, Santo Spirito at Rome, on the Tiber, St. Francis at Prague, on the Moldau, the hospitals at Mainz and Constance, on the Rhine, that at Ratisbon, on the Danube. In some cases, as at Fossanova and Beane, a water-course passed beneath the buildings, particularly the hospital for lepers. Many of these hospitals were located in the central portion of the city or town within easy reach of the poorer classes. Others again, like Santa Maria Nuova in Florence and a good number of the English hospitals, were built outside the city walls for the express purpose of providing better air for the inmates and of preventing the spread of infectious and contagious diseases of all kinds.

As regards construction, it should be noted that many of the hospitals accommodated but a small number of patients (seven, fifteen, or twenty-five), the limit being usually determined by the founder or benefactor: in such cases a private dwelling sufficed or at most a building of modest dimensions. But where ampler endowment was provided the hospital was planned by able architects and constructed on a larger scale. The main ward at Santo Spirito, Rome, was 409 ft. in length by 40 ft. in width; at Tübingen, 260 ft. by 60; at Angers, 195 ft. by 72; at Ghent, 180 ft. by 52; at Frankfurt, 130 ft. by 40; at Chartres, 117 ft. by 42. In hospitals of this type, an abundant supply of light and air was furnished by large windows, the upper parts of which were immovable while the lower could be opened or closed. To these, in some cases (Santo Spirito), large fixed shutters (Pillar) rose from the middle of the ceiling and was supported by graceful columns. The interior was decorated with niches, paintings, and armorial bearings; in fact the same artistic skill that so richly adorned the churches was employed to beautify the hospital wards. The palace at Siena economized almost as striking a bit of architecture as any edifice of the period and contains a magnificent set of frescoes, some of them of the fourteenth century, many others of later centuries (Gardner, “Story of Siena”, London, 1902). The hospital founded in 1283 at Belfort-Monceau in France, was a sister-in-law of St. Louis, combined many advantages. It was situated between the branches of a small stream, and its main ward, with arched ceiling of wood, was lighted by large pointed windows high up in the walls. At the level of the window sills, some twelve feet from the floor, a narrow gallery ran along the whole wall from which the winders could reach the windows and on which convalescent patients might walk or be seated in the sun. The beds were separated by low partitions which secured privacy but could be moved aside so as to allow the patients to attend Mass said at an altar at the end of the ward. This arrangement in the hospital chapel in connection with the properties adopted in many establishments; but the alcove system was not so frequently met with, the beds being placed, as a rule, in several rows in the one large open hall.

HOSPITALS

Hospital construction reached a high degree of perfection about the middle of the fifteenth century. Probably the best example of it is the famous hospital at Milan, opened in 1445, though not completed until the close of the fifteenth century. Dr. W. Gill Wylie in his Boylston Prize Essay on Hospitals says: "In 1445 the Hospital was opened. This remarkable building is still in use as a hospital and contains usually more than 2000 patients. The buildings stand around square yards, the principal one being much larger than the others, and separating the hospital into two parts. The main wards on either side of this large court formed the centre of the hospital, with an altar beneath it, where divine service is performed daily in sight of the patients. These wards have corridors on both sides which are not so lofty as the ceilings of the wards, and consequently there is plenty of room for windows above these passages. The ceilings are thirty or forty feet high, and the floors covered with red bricks or flags. The outside wards are nothing but spacious corridors. The wards are first warmed by open charcoal braziers. . . . This Hospital built at the time when the Church of Rome was at the height of her power, and but a short time before the Reformation, is a good example of what had been attained toward the development of hospitals and it shows much how a part of the Church the institution of hospitals was."

The administration of the hospital when this part of a monastery, was naturally in the hands of the abbot or prior and the details were prescribed in the monastic rule. The statutes also of the hospital orders (knights) regulated minutely the duties of the "Commander", who was at the head of each hospital. In other institutions, the official in charge was known as master, provisor, or rector, this last title being given in Germany to the superior in case he was a priest, while in Italy he was called superinte-

leng. These officials were appointed by the bishop, the chapter, or the municipality, sometimes by the founder or patron. Laymen as well as clerics were eligible; in fact, legacies were sometimes made to a hospital on condition that only lay directors should have charge, as, for instance, in the case of St. Matthew's at Pavia.

The regulations most generally adopted were those of the Order of St. John of Jerusalem; the Rule of St. Augustine and that of the Dominicans were also observed in many institutions. The first duty of the rector was to take an inventory of the hospital holdings and apportunities; he was obliged to begin this within a month after his appointment and to finish it within a year. Besides the general superintendence of the hospital, he was responsible for the accounts and for the whole financial administration, including the properties of the hospital itself and the deposits of money which are often entrusted to him for safekeeping. It was also his duty to receive each patient and assign him to his proper place in the hospital.

The brothers and sisters were bound by the vows of poverty, chastity, and obedience which they took at the hands of a priest, or, as at Coventry (England), at the hands of the prior and chapter. As in all religious establishments, the schedule of duties was strictly prescribed, as were also the details of dress, food, and recreation. No one employed in the hospital was allowed to go out unaccompanied, to spend the day, or take any refreshment other than water outside the hospital. Penalties were inflicted for violation of these rules.

In the reception of patients, the broadest possible charity was shown. As Coyeque (op. cit., I, p. 63) says of the Hôtel-Dieu at Paris: "soldiers and citizens, religious and laymen, Jews and Mohammedans, repaired in case of need to the Hôtel-Dieu, and all were admitted, for all bore the marks of poverty and wretchedness; there was no other requirement." Moreover, the hospital attendants were obliged at stated times to go out into the streets and bring in those who needed treatment. On entering the hospital, the patient, if a Christian, went to confession and received Communion, in order that pious of mind might benefit bodily health. Once admitted, he was to be treated as the master of the house—quasi dominus secundum posse domus, as the statutes enact. According to their ability, the sick performed the duties of prayer, attendance at Mass, and reception of the sacraments. They were especially recommended to provide for themselves and to assist the charitable institutions of their benefactors for all who might be in distress. At night-fall a sort of litany was recited in the wards, each verse of which began: "Seignors malades, proies por," etc. They were often cheered by the visits of persons in high station or of noble rank and charitable disposition, like Catherine of Sweden, Margaret, Queen of Scotland, Margaret, Duchess of Lorraine, King Louis IX of France.

The regulations concerning the physical well-being of the inmates prescribed that the sick should never be left without an attendant—tārti or dōmen zymbi. Even a sick person with no attendant was to be provided for. The nurses should be on duty all days of the day and night; that when the illness became serious the patient should be removed from the ward to a private room and receive special attention (Paris, XXII; Troyes, I, XXXIII; Vernon, XI). Santa Maria Nuova at Florence had a separate section (pazzeria) for delirious patients. Similar provision was made for maternity cases, and the patients were kept in the hospital for three weeks after parturition. That due attention was paid to cleanliness and comfort is evident from what the records tell of baths, bed-linens, ventilation, and heating by means of fireplaces or braziers.

The medical treatment was given by monks or other ecclesiastics—at least during the earlier period. From the twelfth century onward restrictions were placed on the practice of medicine by clerics, especially in regard to surgical operations, and with still greater severity, in regard to the practice of medicine for allowance on the sick; see the decrees of the councils: Clermont (1130), can. v; Reims (1131), can. vi; Second Lateran (1139), can. ix; Fourth Lateran (1215), can. xvii. At times a physician or surgeon was called in to render special assistance in cases of this kind; in many instances, the headmasters of the medical schools in the universities developed, as at Salerno and Montpellier. An important document is the report sent in 1524 from Santa Maria Nuova in Florence to Henry VIII, who, with a view to reorganizing the London hospitals, had sought information regarding the famous Florentine institution. From this it appears that three young physicians were resident (adstantes) in the hospital, in constant attendance on the sick and made a daily report on the condition of each patient to six visiting physicians from the city who gave prescriptions or ordered modifications in the treatment. Attached to the hospital was a dispensary (medicinae) for the treatment of ulcers and other slight ailments. This was conducted by the foremost surgeon of the city and three assistants, who gave their services gratuitously to the needy townsfolk and supplied them with remedies from the hospital pharmacy. An interesting account of the apothecary's duties, which is of Lallemand in his interesting work, "L'Histoire de la Charité" (II, 225).

To meet its expenses, each hospital had its own endowment in the shape of lands, sometimes of whole villages, farms, vineyards, and forests. Its revenues were often increased by special taxes on such products
as oil, wheat, and salt; by regular contributions from charitable associations; and by the income from churches under its control. In many instances the diocesan laws obliged each of the clergy, especially the canons, to contribute to the support of the hospital. The laity also gave liberally either to the general business of the hospital or to supply some special need, such as heating, lighting, or providing for the table. It was not uncommon for a benefactor to donate one or more beds or to establish a life-annuity which secured him care and treatment.

The generosity of the hospital and its patrons was frequently abused, e.g., by malingerers or tramps (valdi vagrantes), and stricter rules concerning admission became necessary. In some cases the number of attendants was excessive, in others the hospital was unable to provide a separate bed for each patient. In spite of these drawbacks, "we have much to learn from the calumniated Middle Ages—much that we, with far more abundant means, can emulate for the sake of God and of man as well" (Virchow, "Abbandl.", II, 16).

Post-Reformation Period.—The injury inflicted upon the whole system of Catholic charities by the upstart church of this period was disastrous in many ways to the work of the hospitals. The dissolution of the monasteries, especially in England, deprived the Church in large measure of the means to support the sick and of the organization through which those means had been employed. Similar spoliations in Germany followed so rapidly on the introduction of the new religion that the Reformers themselves found it difficult to provide anything like a substitute for the old Catholic foundations. Even Luther confessed more than once that under the papacy generous provision had been made for all classes of suffering, while among all others the sick and poor had been greatly benefited. The two classes no longer enjoyed the same consideration of God, and the poor (Sammnl. Werke, XIV, 380–390; XIII, 224–225). As a result, the hospitals in Protestant countries were rapidly secularized, though efforts were not wanting, on the part of parish and municipality, to provide funds for charitable purposes (Uhlhorn, III).

The Church meanwhile, though deprived of its necessary revenues, took energetic measures to restore and develop the hospital system. The humanist J. L. Vivès (De subventione pauperum, Bruges, 1526) declared that by Divine ordination each must eat his bread after earning it by the sweat of his brow, that every hospital fund should be used to support the poor and the needy. As a result, the hospitals in Protestant countries were rapidly secularized, though efforts were not wanting, on the part of parish and municipality, to provide funds for charitable purposes (Uhlhorn, III).

The principal recommendation contained in their report (1788) was the adoption of the dispensary system modelled on that of the hospital at Plymouth, England (1764). The French Revolution, however, intervened and it was only during the nineteenth century that the needed improvements were introduced. In the other European countries, meanwhile, hospitals had been established by voluntary effort at Westminster (1719), Guy’s (1722), St. George’s (1733); in Germany, the Charité at Berlin established by Frederick I (1710) and the hospital at Bamberg, by Bishop Franz Ludwig von Erthal (1789); in Austria the General Hospital at Vienna, promoted by Joseph II, 1784. America.—The first hospital was erected before 1524 in the City of Mexico by Cortés, in gratitude, as he declared in his will, “for the graces and mercies God had bestowed on him in permitting him to discover and conquer New Spain and in expiation or satisfaction for any sins he had committed, especially those that he had forgotten, or any burden these might be on his conscience for which he could not make special atonement”. It was called the Hospital de la Purísima Concepción, later of Jesus Nazareno, after a neighbouring shrine. It is still in existence and its superintendents are appointed by the descent of the Fray of San José, with special telegraph. Clement VII by Bull of 16 April, 1629, conferred on Cortés the perpetual patronage of this and other similar institutions to be founded by him. Within the first decade after the Conquest, the Hospital of San Lazaro was founded with recommendation of the Pope for 100 patients. Hospitals were also established in the city of Mexico, was established by a decree of 1540. The law of 1541 ordered hospitals to be erected in all
Spanish and Indian towns (Bancroft, "Hist. of Mexico", II, 169; III, 759). The First Provincial Council of Lima (1583) and the Provincial Council of Mexico (1585) decreed that each priest should contribute the twelfth part of his income to the hospital (D'Aiguirre, "Concil. Hispan.", IV, 246, 355). The first hospital in St. Augustine was founded in 1585 by Bernardino Alvarez, a citizen of Mexico, and approved by Clement VIII in 1594—devoted themselves to the care of the sick and erected numerous hospitals. The Bethlehemites (q. v.), founded by Pedro de Betancourt (d. 1667) and approved by Clement X in 1678, spread from Guatemala through the countries of Latin America, and rendered excellent service by their hospital work until their suppression, as well as all other religious in Mexico, in 1820.

In Canada (q. v.), the earliest foundation was that of the Hôtel-Dieu by the Duchesse d'Aiguillon (q. v.). This was established in 1639 at Sillery, and later transferred to Quebec, where it is still in charge of the Hospitalières de la Miséricorde de Jésus. The Hôtel-Dieu at Montreal was founded in 1644 by Jeanne Mance; the General Hospital at Quebec in 1693. There are at present eighty-seven hospitals in Canada under the control and direction of various Catholic religious communities.

The first hospital in the United States was erected on Manhattan Island about 1663 "at the request of Surgeon Hendrickson Varrevanger for the reception of sick soldiers who had been previously billeted on private families, and for the West India Company's negroes" (Callaghan, "New Netherland Register"). Pesthouses for contagious diseases were established at New York, Salem (Mass.), and Charleston early in the eighteenth century. In 1717 a hospital for infectious diseases was built at Boston. A charter was granted for the Pennsylvania Hospital in 1751. The first hospital established by private beneficence was the Charity Hospital at New Orleans, for the founding of which (about 1720) Jean Louis, a sailor, afterwards an officer in the Company of the Indies, left 12,000 livres. This was desolated by the hurricane of 1779. The New Charity Hospital (San Carlos) was founded in 1780 and endowed by Don Andres de Almonester y Rosas; it became the City Hospital in 1811. Still in charge of the Sisters of Charity, it is one of the most important hospitals in the country, receiving annually about 8000 cases. The second oldest hospital in the City of New York is the New York Hospital, founded in 1770 by private subscriptions and by contributions from London. It received from the Provincial Assembly an allowance of £800 for twenty years, and from the State Legislature (1795) an annual allowance of £400. In 1829 its building was erected on Centre Street for $20,000. Bellevue Hospital, originally the infirmary of the New York City Alms House, was erected on its present site in 1811. St. Vincent's Hospital was opened in 1849; the present buildings were erected 1856–60, and accommodation provided for 140 patients. The annual number of patients exceeds 5000. There are now more than four hundred Catholic hospitals in the United States, which care for about half a million patients annually.

The multiplication of hospitals in recent times, especially during the nineteenth century, is due to a variety of causes. First among these is the great increase in the proportion of the city population. To meet the needs of the labouring classes larger hospital facilities have been provided, associations have created funds to secure proper care for sick members, and in some countries (e.g. Germany and England) the insurance of workingmen, as prescribed by law, enables them in case of illness to receive hospital treatment. Another important factor is the advance of medical science, bringing with it the necessity of clinical instruction. In this respect, the universities have exercised a wholesome influence: no course in medicine is possible at the present time without that practical training which is to be had in the hospital. Conversely, the efficiency of the hospital has been enhanced by research, and discoveries pertaining to hygiene, anæsthetic and antisepptic measures, and the treatment of contagion and infection. The experience of war has also proved beneficial. The lessons learned in the Crimean and in the American Civil War have been applied to hospital construction, and have led to the adoption of the pavilion system. The modern hospital, moreover, has been designed to combine ingenuity and splendour into a single unit, in such a manner as to combine strength and beauty, and to unite the comfort of the patient with the convenience of the medical practitioner.

Hospital Sisters of the Mercy of Jesus. These sisters are established in the United States under the Rule of St. Augustine (q. v.), the institute being dependent on the pope represented by the bishop. Before the end of the thirteenth century the Hôtel-Dieu of Dieppe (Diocese of Rouen) was served by Hermit Sisters of St. Augustine. They formed a secular congregation, lived on goods held in common and on alms, and observed the constitutions drawn up by the sisters from the services they rendered to the Hôtel-Dieu, they were also employed in assisting the sick poor in all quarters of the city. To these primitive hospitalières is connected, by an unbroken chain of credible traditions, the Institute of the Mercy of Jesus, a branch of the order founded by the Bishop of Hippo. The constitution establishes two classes of religious: lay sisters and choir sisters. The former are employed at the manual tasks of the community, in order to relieve the choir religious. They are not obliged to recite the Divine Office, neither do they nurse the sick. The choir religious are obliged to recite the Divine Office in common and daily employed in attendance on the sick. They are obliged as far as health will permit to go at least once a day to the hospital to render some service to the poor. Two of their number take in turn the night-watch in the wards.

The chapter is composed of all who are ten years professed. They elect a superior triennially, but her charge may not be prolonged beyond six years. They also elect the assistant, the mistress of novices, the treasurer, and four other advisers, thus forming the council of eight principal officers. The officers may be removed if a majority of the canons have the majority of votes in the chapter. The costume of the sisters is entirely white with a black veil for the
HOSPITIUS

proffessed and a white veil for the novices. This costume is the same as that formerly worn by the Celestines of St. Augustine. A gown and a leather girdle, a girdle before holy communion, and a different part, is added a black serge cape for choir duties. To-day the Hospitallers of the Mercy of Jesus have communities in France at Dieppe, Rennes, Eu, Vitré, Château-Gontier-St-Julien, Château-Gontier-St-Joseph, Maleastro, Auray, Tréguier, Lannion, Guingamp, Pont de Saint-Pol, Guérande, Forest, Courlay, and Bayeux; in England, at Waterloo (Liverpool); in Canada, at Quebec (3 communities), Lévis, and Chicoutimi; in Africa, at Estcourt (Natal), Durban, Ladymish, and Pietermaritzburg; in Holland, at Maasbracht; and in Italy, at Turin.

MOTHER M. JACQUES.

HOSPITIUS (SOSPIUS), Saint, recluse, b. according to tradition in Egypt, towards the beginning of the sixth century; d. at San-Sospes, near Villefranche, in the Department of Alpes-Maritimes, France, on 21 May, 581. The saint, who is popularly known as Saint Sospes, is said to have been a monk in his native land. Coming to Gaul, he became a recluse, and retired to a dilapidated tower, situated on the peninsula of Cap Ferrat (or San-Sospes), a few miles east of Nice. The people were impressed with the saint's life of prayer and penitence, and he forewarned them on one occasion, about the year 575, of an impending incursion of the Lombards. Hospitius was seized by these raiders, but his life was spared. He worked a miracle in favour of one of the warriors, who became converted, embraced the religious life, and was known personally to St. Geros of Tours. It was from him that Gregory, to whom we are indebted for the meagre details of the saint's life, learnt the austerities and numerous miracles of the recluse. Hospitius foretold his death and was buried by his friend, Austadius, Bishop of Cambrai. He is still venerated in the Diocese of Nice. The cathedral church possesses a small bone of his hand; other relics are at Villefranche, La Turbie, and San-Sospes.

A. A. MACERLEAN.

HOSTESSE (Lat. HOSCIUS), SIDRON DE, poet and priest; born at Merken, West Flanders, in 1596; died at Tongres in 1653. In his early youth he followed his father's occupation as a shepherd, and at the age of twenty he entered the Jesuit novitiate at Tongres (Belgium). He soon showed wonderful facility in Latin versification, and his first work "De Christo Patiente" in elegiac verse was published in 1635. The chorus of praise with which the work was received brought its author to the notice of Leopold William, Governor General of the Netherlands, who appointed him tutor to his two sons, which post he filled for two years. Life at court not appealing to him Hosciohise retired to Tongres and remained there until his death. Among the more famous of his works, besides the "De Christo Patiente" there have come down to us, the "De Cursu vita humanae" which was translated into French by L. Deschamps; the "De lascivis S. Petri" and many other elegies, allegories, occasional verses. His contemporaries held him in great esteem, and acclaimed him as worthy of the Augustan age of Latin poetry. While his Latin is very pure and his style modelled on the classical authors, he himself is by no means a classic. The vividness, passion, and sentiment of figures belonging to his work. Examples of elegant versification. They were published at Antwerp in 1656, and have often been reprinted; they form two volumes of the Barbeu collection, printed in Paris in 1723.

Two anonymous collections of Latin verses published in Bruges in 1630 and 1634, have within recent years been identified as forming part of Hoschos's output.

The township of Merken, in 1844, dedicated a fountain in honour of Hoschos, and surmounted it with a bust of the poet.

LEVAUX, Etude sur S. Hoscius in Ann. de la Soc. d'émulation de Bruges (1880); DE BACON, Bibliotheca belgica Sanctae Mariae de Jesus (Lige, 1869–1870); FOPPEL, Bibliotheca Biblica.

HOST, JOHANN, one of the seven Dominicans who distinguished themselves in the struggle against Luther in Cologne. The others were: the Canon Straten, Conrad Collin, Bernard von Luxemburg, Johann Pesselius, Tillman Smeling, and Johann Slotanus. Johann Host was born on a farm at Romberg, or Romerbach, in Westphalia about 1480, and died at the close of 1532 or the beginning of 1533. At the age of sixteen he entered the Dominican Order, and we find him studying at the University of Bologna from 1518 to 1519. In 1520 he was appointed to the theological faculty of the University of Cologne, and despite many religious controversies he was engaged in, he found time for considerable literary activity. Among the works he edited are Burchard von Barby, "De Hierusalem Terrae Sanctae ut ita detur (On the Kingdom of the Holy Thither Babylon)"; and the "Commentarium in Psalmos" of Dionysius the Carthusian. He has moreover left many controversial works. The fact of his being appointed to the faculty of Cologne University is proof of the orthodoxy of his theology, as that university held a sort of censorship over all the theological faculties of Germany. Host's last work was the "Enchiridion Sacerdotum" which was published at Cologne in 1532. His fellow members on the University faculty, Hoogstraten and Collin, besides being distinguished churchmen were eminent among the general Hans. The Church's Roman Pontiff, Pius IV, 1549, and Pius V, 1550, in his censorship of Host's works, attacked the doctrine of the Immaculate Conception.

HOST (ARCHAEOLOGICAL AND HISTORICAL).—The bread destined to receive Eucharistic Communion is commonly called the host, and though this term may likewise be applied to the bread and wine of the Sacrifice, it is more especially reserved to the bread.

According to Ovid the word comes from hostis, enemy. The Parthian poet Perseus derivates the word from hostia, to strike, as found in Paus. In the West the term became general chiefly because of the use made of it in the Vulgate and the Liturgy (Rom. xxii. 1; Phil. iv. 18; Eph. v. 2; Heb. xii. 12; Mabillon, "Liturg. Gall. vetus," pp. 252, 253, 257; "Missale Romanum," ed. Leslie, p. 39; "Missale Gothicum," p. 253). It was applied to Christ, the Immaculate Victim, and, by way of anticipation, to the still unconsecrated bread destined to become Christ's Body. In the Middle Ages it was also known as "hoste," "oiste," "oiste." In time the word acquired its actual special significance; by reason of its general liturgical use it no longer conveyed the original idea of victim. Many other names were given to the host, e.g. "bucella," "circuli," "corone," "crustulae farraceae," "denaria," "fermentum," "formate," "formule," "panes altariae," esoteric, divini, dominii, mysteriorum, nummorum, particulas reticuli, meti, regalia, reticuli, partiteli, reticulum, sellati, vite," "nummi," "particulae," "placentae," "placentulae orbiculares," "portiones," "rotule," "sensibilita," etc.

The Greeks call host áços (bread), ãòç (gifts), μεσίλα (particles), and ἀποκφοφ (oblations). After Con-
secreation the particles take the name of yapupapvet (pears). Prior to its consecration the Copts call the host "baraoo"; the Syrians "paristo" (bread), "burschan" (first-fruits), and "kourbano" (oblation); the Nestorians "xathia" (first-born) or "agnus" (lamb), and the Mingrelians "tabaquiri". After consecration the Copts call the Host "corbal" (oblation); the Jacobites "tabho" (seals); the Syrians "gamouro" (burning coals), and, by anticipation, these names are sometimes applied to the bread even before its consecration.

Material. — The valid material of the Eucharistic host is unleavened wheat reduced to flour, diluted with natural water, and baked with fire. Some theologians have discussed the use of various flours, but if we except Paludanus, who considers as valid bread made with starch, and Cajetan, who allows bread made with any kind of grain and diluted with milk, we may say that theologians agree upon the rejection of buckwheat, barley, oats, etc. St. Thomas authorizes the use of siligo, but this term seems obscure. In Pliny and Celsius it signifies wheaten flour, but St. Thomas does not invest siligo with the same meaning, else why should there be question of tolerating it? Martin of Aragon alluded to rye bread would be called the word scelse. Perhaps by siligo he intended to designate an inferior kind of wheat grown in bad soil.

Elements. — The preparation of the host gave rise among certain Gnostic sects to abominable and shocking practices, of which there is a detailed account in the writings of St. Epiphanius. Sometimes the flesh of a fetus was ground and mixed with aromatics; sometimes flour was kneaded with the blood of a child, and there were other proceedings too obnoxious to mention. But these horrors were perpetrated only by a few degraded groups (Epiphanius, "Har." c. xxvi, 5; Augustinus, "Har."). Less offensive were those preceding the Artimonian, who, to the dough, compounding a mixture of bread and cheese, or, after the fashion of the Barnesians, used a pinch of undiluted flour.

All the Oriental communions, with the exception of the Armenians and Maronites, use unleavened bread. We know how seriously the Greeks have considered the question of unleavened bread (see Azyymes). But whether leavened or unleavened, bread is the element, and a large number of Greeks admit that both kinds constitute valid material for the sacrament. In the Western Church it is the uniform practice to use unleavened bread. Properly speaking, there is no such thing as bread but little importance to whether the bread is leavened or not, but generally they use it unleavened. The Calvinists use only common bread, although, when their sect was in its infancy, there was some indecision on this point. At Geneva leavened bread was used exclusively for several years and Theodore Beza maintained that any kind of bread, no matter what its origin, was suitable for the Eucharist. The Anglican Liturgy of 1549 prescribes the use of unleavened bread. In the East the Syrian Jacobites and the Nestorians knead their altar-bread with a paste of oil and salt, a process which was, says Hervet, ground up with Lebanon stone. The Copts and the Abyssinians consecrate with leavened bread except on Holy Thursday and the twelfth day of June, and the Mingrelians use all kinds of bread, their hosts being usually made of flour mixed with water and wine.

Decor of a baked host. — There is nothing to indicate that the first Christians thought of reproducing the appearance of the "loaves of proposition" of the Jewish Liturgy; they simply used the bread that served as food. It seems that the form differed but little from what it is in our day. The loaves discovered in the caves of St. Pontan echo of the is found one from each. One of these, being perfectly preserved, measured about seven inches in diameter and was creased with seven ridges which facilitated the breaking of the loaf without the aid of a knife. Other loaves represented on bas-reliefs, chiefly in the Lateran museum, bore an incision in the form of two crossed lines and, for this reason, were called quadra. Loaves of this kind must have increased the breaking of the loaf and it is improbable that their number was regulated by the size of the loaf in common use. A fresco in the cemetery of Lucina represents a fish, the symbol of Christ, and on its back a basket containing the Eucharistic wine and loaf, the latter marked with a point. A Modern marble shows five loaves marked with a cross.

Out of respect for the sacrament, some of the faithful would not consent to having the bread made by bakers, and took charge of it themselves. Several ancient examples are cited, notably that of Candida, the wife of one of Valerian's generals, who laboured to build a church. It would be intolerable to offer the loaves of the oblation. In the Rule of St. Pachomius, religious are recommended to devote themselves to meditation while kneading the sacrificial loaf. Queen Radegunde is mentioned for the reverence with which she attended to the preparation of the hosts intended to be consumed in her monastery of Poitiers and in many surrounding churches. The fourth Bishop of Orléans, commanded his priests either to make the altar-breads themselves or to have the young clerics do so in their presence. Many facts go to show the prevalence and extent of this custom. In monasteries hosts were made principally during the major feasts, and especially on the feast of the Pentecost, and the process assumed a very solemn character. At Cluny three priests or three deacons fasting and having received the Office of Lauds, the seven penitential psalms, and the litanies, took one or two lay brothers as their assistants. Novices had picked, sorted, and ground the grains of wheat, and the flour thus obtained was placed on a rimmed table. It was then mixed with cold water, and a lay brother, whose hands were gloved, put this preparation in the iron used for making hosts and baked it at a large fire of vine branches. Two other operators took the hosts out of the oven and pared them. The bread was then placed in the tabob. Some monasteries cultivated the Eucharistic wheat in a special field which they called the field of the "Corpus Domini". Du Cange mentions a charter dated 1406 by which it would seem that women, even nuns, were forbidden to make hosts; but it is doubtful whether this measure was ever generally enforced. St. Radegunde certainly had bread made; she deplored the prejudice against the making of hosts by laymen or women, a prejudice so rooted that in the Middle Ages there were in the Diocese of Narbonne people who believed that hosts made by women were not qualified for transubstantiation.

The Council of Milan, 1576, prescribes the making of hosts in monasteries and forbids it to laymen. A council of
Cambray in 1631 ordains that "in each city there shall be a person charged with making the altar-breads from the best and purest wheat and after the manner indicated to him. He must previously take an oath to discharge faithfully the duties of his office. He shall not be permitted to buy from others the bread to be used in the Holy Sacrifice. As early as the fourteenth century the making of hosts was a private business. The confraternity of the oblatiers (host-makers) had a special ecclesiastical authorisation to carry on that work. The liturgist Claude de Vert mentions a sign used by them in the eighteenth century in the city of Puy: Céans se font de belles hosties avec la permission de M. l'Evêque du Puy. But with the French Revolution, in many instances each curé made the hosts used in his own church. At present many parishes apply to religious communities which make a specialty of altar-breads. This offers a guarantee against the falsifications always to be feared when recourse is had to the trade; unscrupulous makers have been guilty of adulterating the wheat flour with alum, sulphates of zinc and copper, carbonates of ammonia, potassium, or magnesia, or else of substituting bean flour or the flour of rice or potatoes for wheaten flour.

In the Middle Ages, as stated, the baking of hosts took place on three or four principal feasts of the year. This practice was abandoned later on account of the possible chemical change in the substance of the bread when kept for so long a time. St. Charles Borromeo ordered all the priests of his diocese to use for the Holy Sacrifice only hosts made less than twenty days previously. The Congregation of Rites condemned the abuse of consecrating hosts which, in winter, had been made three months and in summer six months ahead of time.

Some prescriptions of the Oriental Churches are worthy of notice; moreover, some of them are still in use. The Constitutions ascribed to St. Cyril of Alexandria prescribe that the Eucharistic bread be baked in the church oven (Renaudot, "Liturg. orient. coll.", I, 189); among the Copts, Syrians, Jacobites, Melchites, Nestorians, and Armenians the altar-breads must be baked on the very day of their consecration. In the "Canonical Collection" of Bar-Salibi there are prescriptions concerning the choice of wheat which differ but slightly from those of the West. In Ethiopia each church must have a special oven for the making of hosts. In Greece and Russia the altar-breads are prepared by priests, widows, the wives or daughters of priests, or by the so-called catechumens, i.e., individuals in Abydos. The Nestorians of Malabar, after kneading the flour with leaven, are accustomed to work in some of the leaven left from the preceding baking. They believe that this practice dates from the earliest Christian times and that it preserves the leaven brought to Syria by Sts. Thomas and Thaddaeus, for, according to another Nestorian tradition, the Apostles, prior to their separation celebrated the Liturgy in common and each carried away a portion of the bread then consecrated.

Moulds for the Hosts.—The moulds used for hosts are iron instruments similar to waffle-irons, composed of two palettes which come together with the aid of two bent handles acting as a lever. Abbe Corbet says that their existence is established as early as the ninth century, although no specimen older than the twelfth century was known to exist in recent times. There is no doubt, however, of one such mould at Carthage carrying us back probably to the sixth or seventh century, before the destruction of that city by the Arabs. On this mould around the monogram of Christ is the inscription: HIE EST FLOS CAMPETII LULVM (Delattre, "Un pêlerinage aux ruines de Carthage", 31, 46). Unfortunately this precious relix of Christian antiquity is incomplete.

The lower plate of a mould for hosts is engraved with two, four, or six figures of hosts which, by means of pressure, are reproduced on the paste and fixed there by baking. From the ninth to the eleventh century the iron moulds very thick hosts about as large as the palm of the hand. Towards the end of the eleventh century the dimensions were considerably reduced so that the same kind of mould could be used for hosts, two large and two small, could be moulded. With a thirteenth-century iron preserved at Sainte-Croix de Poitiers, two large hosts and three small ones can be made simultaneously, and an iron at Naintré (Vienne) moulds five hosts at once, all varying in size. Certain numbers of moulds were of the same kind, for the host, the initial of the engraver's name, and the donor's coat-of-arms. A fourteenth-century mould at Saint-Barban (Haute-Vienne) makes hosts of different types for Lent and Easter time. The larger ones measure 2 inches in diameter and the smaller ones 1½ inches; at the same period some large hosts had a diameter of 2½ inches. A fifteenth-century iron at Béthine (Vienne) makes hosts bearing the figure of the triumphant Lamb, of the Holy Face surrounded with fleurs-de-lis, also of the Crucifixion and the Resurrection. In the sixteenth century at Lamenay (Nièvre) hosts were made representing Jesus Christ, Mary, Joseph, His throne and companions, the background being studded with stars; at Montjean (Maine-et-Loire) they were stamped with the image of Christ Crucified and Christ Risen, delicately framed in lilies and roses and heraldic in aspect. At Roues (Sarthe) is an iron that moulds two hosts; the one represents Christ carrying His cross and bears the inscription: QUI VELUT VENIRE. POST. ME. TOLLAT. CRUCEM. SUAM. ET. SEQUATUR. ME.; the other represents the Crucifixion and is thus inscribed: FODERUNT. MANUS. MEAS. ET. PEDES. MEOS. DINUMERAVE. RUNT. OMINA. OBLA. MEA.

EIGHTEENTH- and EIGHTEENTH-CENTURY HOST-IRONs have been preserved in large numbers, and are quite similar to those now in use, being stamped with the Lamb lying on the book, Christ upon the Cross, or the letters I H S emitting rays and encircled with grapes and thorns. Among the remarkable host-irons that have escaped destruction we may mention those of Beddes, Azy, Chassy, and Vailly (Cher), all four belonging to the thirteenth century; those of Palluau (Indre) and of Croussiles and Savigny (Indre-et-Loire), etc. Notable among the collections of the imprints of host-irons are those of M. Dumontet at Bourges, of M. Barbier de Montault at Limoges, of the Baron de Saint-Aubin at Saint-Aignan and of the Baron Paray-le-Monial. The Eastern Churches generally use a wooden mould. To make the hosts baked in the mould quite round they are cut with scissors, a punch, or a compass, one of the legs of which terminates in a knife.

FORM AND DIMENSIONS.—The first mention of the form of hosts is found in St. Epiphanius in the fourth century when he says: "hoc est enim rotundae formae," but the fact had already been placed on record by catacomb paintings and by very ancient bas-reliefs. Unity of form and size was only slowly established, and different customs prevailed in different provinces. At an early date the councils attempted to introduce uniformity on this point; one held at Arles in 554 ordered all the bishops of that province to use hosts of the same form as those used in the church of Arles. According to Mabillon, as early as the sixth century the hosts were as small and thin as now, and it is stated that from the eighth century onwards it was ordered to bless small hosts intended for the faithful, an advantageous measure which dispensed with breaking the host and consequently prevented the crumbling that ensued.

As late as the eleventh century we find some opposition to the custom, then growing general, of reserv-
ing a large host for the priest and a small one for each communicant. However, by the twelfth century the new custom prevailed in France, Switzerland, and Germany. Houbous of Autun states in a general way that the hosts were in the form of "denarius." The monasteries held out for a longer time, and as late as the twelfth century the ancient system was still in force at Cluny. In 1516 the Missal of Rouen prescribed that the celebrant break the host into three parts, the first to be put into the chalice, the second to be received in Holy Communion by the celebrant and minister, and the third kept as a Viaticium for the dying. The Carthusians reserved a very large host, a particle of which they broke off for each Viaticium. Eventually all hosts were made round and their dimensions varied but little. However, some very large ones were at times consecrated for monstrances, on occasion of the Exposition of the Blessed Sacrament. To-day in Rome the large hosts are nine centimetres in diameter and the small ones four centimetres. In other countries they are usually not so large. In 1685 Pius IX authorized the priests exiled to Sibera to consecrate the Eucharist with wheaten bread, but not the form of round host.

FIGURES.—From ancient monuments in painting, sculpture, and epigraphy we have seen the general usage of tracing a cross on the Eucharistic loaves which were thence called decusati (Lat. decusatis, a coin marked X). For the early Greek-speaking Christians (X), being the initial letter of the name of Christ (Χριστός), was constantly in evidence; soon the idea was conceived of replacing the plain cross by the monogram, and finally there were added on either side the letters Α and Ω (Alpha and Omega, i.e. the beginning and the end) as on the Cathaginian monuiments. In certain countries the plain cross continued to exist for a long time; in the Diocese of Arles no other sign was tolerated until the Revolution. Beginning with the twelfth century, however, the crucifix was almost universally substituted for the cross, though this iconographic form was never made obligatory. Besides the Crucifixion we find the Resurrection, Christ at the pillar, the angel holding a chalice, the Lamb either lying down or standing, Our Lady at Bethlehem, at Calvary, or being assumed into heaven, the Last Supper, the Ascension, the Holy Face, St. Martin dividing his cloak, St. Clare carrying the ciborium, the symbols of the Evangelists, etc.

INSCRIPTIONS.—The bread made by Roman bakers bore the maker's name or initials, and it would seem that this practice extended even to Eucharistic bread, but on this subject our information is rather vague. We often read an inscription of a symbolical or mystical character such as that found on the host-end Sals of Carthage. Here are some of the commonest examples: “I H S” (Jesus); “I H S X P S” (i.e. Jesus Christus); “Hest corpus meum”; “Panis quem ego dabo caro mea est”; “Ego sum panis vivus qui de ccelo descendit”; “Si quis manducaverit ex hoc pane vitam aeternam vivam”; “Ego sum vitam vias et vita”; “Ego sum resurrectio et vita”; “Ple�ontes concordia spiritalis de spinis imposuerunt in capite ejus”; “Foderunt manus meas et pedes meos; dimuneraverunt omnia ossa mea”; “Et clamans Jesus voce magna emisit spiritum”; “Resurrectio Domini”; “In hoc signo vinces, Christo dicantem.”

LEAVENED BREAD.—The leavened hosts of the Greeks are of a large size, sometimes round, triangular, or in the form of a cross, but oftener square. On the under side they have a quadrangular imprint divided into four equal parts by a Greek cross and bearing the inscription ἹΧΝΙΗ (Iχνος Χριστοῦ). The French host is a round, leavened loaf, flat underneath, convex on the top, and as large as the palm of the hand. It is stamped with twelve little squares each containing a cross in honour of the Twelve Apostles. In the centre a larger square Ἰδροδιος is marked with a large cross divided by four small ones; it is the symbol of Christ. This central portion is used for the Communion of the celebrant or the other participants whilst remaining among the faithful. The inscription reads: “Agios, agios, agios Kuriou;” or else “Kuriou Sabathos” or “agios isikuroi, agios athanatos, agios o theos.” The schismatic Armenians use an unleavened host about the size and thickness of a five-franc- or dollar-piece bearing the symbol of the Vaticinium for the dying. The Carthusians reserved a very large host, a particle of which they broke off for each Viaticium. Eventually all hosts were made round and their dimensions varied but little. However, some very large ones were at times consecrated for monstrances, on occasion of the Exposition of the Blessed Sacrament.

In Germany the Evangelical Churches use round, white breads eight centimetres in diameter by nine in thickness. Christian antiquity has transmitted to us pyxex or boxes intended to hold the Eucharist, but as these should be broken in the round host.

MIRACULOUS HOSTS.—The Eucharist has been the object of a great many miracles often referred to in ecclesiastical history; not all, however, have been well enough authenticated to place them beyond doubt. Some of the miracles the host appears as transformed into a new substance; sometimes it has remained intact during a considerable period; sometimes blood has flowed from it, etc. In the third century St. Cyprian mentions that a man was preparing to Communicate in mortal sin; for this purpose he received the Eucharist in his hands when instantly the bread turned to ashes. Sozomen, a fifth-century historian, relates a miracle that took place at Constantinople where a heretic had undertaken to convert his wife. Simulating a change of life she went to Communion, but had barely attempted to eat a piece of bread, which she had set upon the chalice, when she perceived that the said piece had changed to stone. About the ninth century, when anti-Eucharistic heresies began to appear, accounts of miracles multiplied in a way to convince even the most obstinate. John the Deacon ascribed a most extraordinary act to Gregory the Great when he healed the cause with the point of a knife, this pope had caused blood to issue from a corporal. In the ninth century Paschasius Radbertus, writing of the Body and Blood of the Saviour, recounts that a priest named Plegibus beheld, instead of the Host, Jesus Christ under the sensible form of a child, and pressed His to his heart. At his request the Lord Jesus disinfected Him under the appearance of wine. At Fécamp a legend dating back to the tenth century related that the priest of a little chapel situated about three miles from the abbey found at the moment of Communion neither bread nor wine but the Flesh and Blood of Christ. Appalled, he reported the fact at the abbey that this was confirmed, and the chalice and paten, together with the species, were enclosed beneath the high altar of the church.

Occasionally hosts have been preserved for a very long time. It is related that St. Norbert deposited in the church of St. Michael at his monastery a host that has remained intact for fifteen years, notwithstanding the fact that, through contempt, they had been left in damp places by partisans of the heretic Tanchelin.
The feast called “Saint-Sacrement du Miracle” was for centuries solemnly celebrated at Douai where, from Easter Tuesday, 14 April, 1254, until the time of the Revolution, an annual procession took place in commemoration of the host in which the people declared distinctly to their Bishop and Lord. In 1792 the miraculous host disappeared; it was believed to have been found again in a bequest made by one of the faithful but, for want of certainty, no honour was afterwards paid it. The collegiate church of Sainte-Gudule at Brussels preserves miraculously unaltered after the persecution of many outrages by the Jews in 1370, were collected and, subsequently to 1529, became the occasion of an annual procession still celebrated.

It is said that, in the thirteenth century, miraculous blood issued from a Host and that for a long time afterwards it lasted without the slightest alteration. Miracles of bleeding Hosts are reported to have occurred in many places during the Middle Ages, and both the miracle and the sacrifice that occasioned it were sometimes commemorated by processions or monuments. In 1290 a Parisian Jew committed a solemn outrage upon a Host, which fell to his death. An exiatory chapel was erected over his house, and this sanctuary was successively named: “La maison où Dieu fut bouillir”, “L’église du Sauveur bouillant”, “La chapelle du miracle”, and finally “L’église des billettes”. In 1444 this episode was dramatised, and the Feast of the Mysteries of the Holy Host” was played at Laval. We might also mention the miraculous Host that bléd when touched by profane hands and was carried, in 1317, to the Abbey of Herekenrode in the County of Loos, where it was venerated until the time of the Revolution, and the miracle of Blanot that occurred in 1331 in the Diocese of Autun (now the Diocese of Dijon), when a Host left a bloody impress upon a cloth.

In olden times many cities possessed a miraculous Host, but the French Revolution destroyed a certain number of them, especially the one at Dijon where each year a Mass of exposition is yet celebrated in the church of St. Michael. In other places the miraculous Hosts have disappeared, but their ancient feast is still commemorated. In the seventeenth century the Benedictine abbey at Faverney (Haute-Saône) was the scene of a noted miracle. On the night of 23 May, 1639, the Consecration of the Host was in progress, a fire consumed the tabernacle, the linens, and the entire altar; but the ostensorium remained stationary, being suspended in the air without any support. This prodigy lasted for thirty-three hours, was well authenticated by thousands of persons, and was made the object of an investigation, the documents of which have been preserved. The ostensorium contained two Hosts, so that the crucifix could be seen from both sides. One of the Hosts was given to the city of Dôle, where it was destroyed in 1794, and the other is preserved in the parish church of Faverney, where the anniversary is celebrated annually on the Monday after Pentecost. These miracles have been selected from among a multitude of others, and we have not pretended to emphasize either the most authentic or the most marvellous. Moreover, the work we have just treated is so vast that it would be easy to compile from the historical material a work of great theological interest, both conclusive and detailed.

The most complete work on this subject, in spite of a few gaps and occasionally weak criticism, is CORBETT, Histoire dogmatique du sacrement de l’Eucharistie (Paris, 1886); Vol. II, 559-88 gives a very exhaustive bibliography, to which may be added the work: DE SARRAGNAC, Les collections d’histoire et d’art du musée archéologique de Perpignan (Montpellier, 1898), containing a bibliography of the Monographies sur la histoire du miracle: ROMANUS DE FORTIAC, La mesure, Études archéologiques, IV (Paris, 1887), 21-40. H. LECLERCQ.

Host (Canonico-Liturgical).—The name host in liturgy is given to the bread used in the celebration of the Holy Eucharist: Panis ad sacrificium Eucharistici (De Cange, “Glossarium”). Christ at the Last Supper consecrated bread and wine, and prefigured the Eucharistic Sacrifice in all future times. Hence bread (of wheat) and wine (of the grape) have always been considered in the Church the sole legitimate matter for the celebration of Mass. The Scholastics, especially St. Thomas (Summa Theol., III, Q. lxxiv, art. 1) and Denys the Eucharian (IV, dist. xii, q. 3) point out the peculiar fitness of these elements which constitute the remote matter of the sacrament. Their use is universal, and hence they render the Eucharistic worship possible anywhere. Furthermore, there are reasons of analogy. As bread is the ordinary food of the body, so the Divine Victim is the nourishment of our souls; just as it is necessary that the wheat be ground, mixed with water, and subjected to fire in order to become bread, so the faithful, in an order that the earth is united to Christ and live by His spirit, must by mortification die to themselves. Bread is likewise a figure of the Church. The many grains of wheat converted into one loaf symbolize the numerous members united in one body. Alluding to this symbolism, so natural and expressive, the “Teaching of the Twelve Apostles” (ch. ix) places on the lips of the faithful the following words of thanksgiving before partaking of the Holy Eucharist: “As this fragment (of bread) was scattered over the hills, and was gathered together, and became one, so let Thy Church be gathered together from the ends of the earth into Thy kingdom”, and the “Constitutions of the Holy Apostles” (Book VII, n. 25) in the Eucharistic thanksgiving enjoins the faithful to say: “Do Thou, O Lord Almighty, everlasting God, so gather together Thy Church from the end of the earth into Thy kingdom, and as this corn was once scattered, and is now become one loaf.”

Valid Matter.—It is required that the matter used for the Consecration be not only valid and as far as possible genuine, but also that it be licit and as far as possible perfect, i.e. new, fresh, and pure. Hence the Eucharistic Sacrifice must be bread, made of fine wheat flour, mixed with natural water and baked. It must be bread, as it was the typical food used by Christ (Matt., xxvi, 26—cf. Acts, ii, 42; I Cor., x, 16). The Fathers of the Church with one accord teach that bread is changed into the Body of Christ by the words of Consecration, and all the councils that treat of this subject define the same (Fourth Lateran, ch. “Firmiter”; Florence, “Deer. Unionis”; Trent, Sess. XIII, XXI, and XXII). It must be made of wheat flour, because, according to sacred tradition, such was used by Christ at the institution of the Eucharist. History teaches that bread at the Passover, and in Palestine the word bread, without a qualifying term, signifies wheat bread. Hence both the Eastern and Western Churches have always used this kind of bread. Some sectaries introduced at times foreign matter in its composition; thus, St. Augustine (Lib. de Haeres, Mor.) tells us that the Samaritans mixed with the wheat flour the blood of infants, extracted from them through minute punctures made in their bodies. The Council of Florence (Decr. pro Armenis) says that the third sacrament is that of the Eucharist, whose matter is wheat bread and wine of the grape. Moreover, in the mediaeval Church (“Summa Theol., III, 3) we read: “If the bread is not wheaten, or if it is wheaten yet mixed with flour of another kind in such quantity that it is no longer considered wheaten.
bread, the sacrament is not effected." Hence hosts
made of the flour of barley, oats, rice, beans, millet,
chestnuts, etc., are not permitted, because such flour
differs specifically from wheaten flour. Authors dif-
ferrously and earnestly warned the use of this flour (St.
Thomas, III, Q. lxxiv, art. 3, ad 2um) and spelt,
which are inferior kinds of wheat.

As a rule these are considered doubt-
ful matter, and
their use is unlaw-
ful when there is
question of admin-
istering sacred
masses which are
not hic et nunc
necessary for sav-
ation. (St.
Thomas, III, n. 227),
depending on the
authority of Gobat,
Laymann, and
others, says that
spelt is not only
valid but also licit
matter for this
sacrament. Lehmk-
kuhl (pt. II, lib. I, tr. iv, c. ii, §1, n. 3) holds that
in this matter the opinion of experts and that of the
council should be followed. The validity of the
sacrament it is, moreover, necessary that
natural water be used to temper the wheat flour,
and that the dough be baked. The baking is usually done
between heated irons which resemble a large forceps.
If the flour is in a notable quantity mixed with eggs,
butter, milk, honey, oil, or any liquor other than
natural water, it becomes invalid matter, for it is
then something really different from ordinary bread.
 Likewise flour fired in a pan, dried by the sun, stewed,
or boiled, or a crude mass of dough, cannot be con-
secrated, because although physically it does not differ
from ordinary bread, yet it is not such as is commonly
used and as was consecrated by Christ at the Last
Supper. The S. Congr. of the Holy Office (23 June,
1852) permitted the priests of the Diocese of Cew-
batore, India, to make hosts out of broken grains of
wheat, steeped in water, pressed so as to form a pulp,
and then baked between two heated irons, but im-
plored upon the priests Apostolic the obligation of
inducing the custom of preparing the hosts in the cus-
tomary manner.

Leavened and Unleavened. —The ques-
tion regarding the use of leavened and unleavened
bread gave rise to much dispute among Catholics.
From the very beginning both the Eastern and West-
ern Churches looked upon this as a matter of disci-
pline, and held that Consecration takes place under
either kind. Michael Cerularius, Patriarch of Con-
stantinople (1043), made it, however, a dogmatic
issue. In a letter to John, Bishop of Trani, Apulia, he
accused the Roman Church of holding doctrines and
adapting practices condemned by the rest of Chris-
tianity; in it among other reproaches he imputes it to
her as a crime that she uses at the Lord's Supper un-
leavened bread, which he held to be invalid matter,
and consequently he maintained that the Church of
Rome was heretical. Thus, after eleven centuries of
undisputed tranquility on this point in both Churches,
Cerularius, to make the rupture between the two
Churches as great as possible, first broached this
accusation against the Church of Rome, despite the
fact that many writers had before him searched tra-
ditional documents without finding even the slightest
indication of a dogmatic error. Three different views prevail concerning the kind of bread used in the
Western Church during the first ten centuries. Si-
rmond, S.J. (d. 1651, "Disq. de Asyro"); maintained
that it consecrated exclusively unleavened bread. Ma-
billon, O.S.B. (d. 1707, "Disq. de Pane Eucharistico"),
asserted that unleavened bread was used from the
time of the Apostles, but that the Apostles some-
times used leavened bread. Cardinal F. G. O. Cist.
(d. 1674, "Revis. Liturg. lib. IV, c. xxxii"), insists that
it is probable that both kinds were used indiscriminately
until late in the ninth century. The Council of Flo-
rence (1439) decided that either kind was sufficient for
the validity of the sacrament, and that unleavened
bread must, under grave precept, be used in the West-
ern Church and leavened in the Eastern. But even at
present in the East the Armenians, both Catholics and
Eucharists, and the Maronites use unleavened bread.
This precept is so strict that were a priest to con-
secrate in a rite not his own he would sin grievously.
It would not be lawful to do so even if thereby sole
opportunity were given to fulfill the precept of
hearing Mass on Sunday or of administering Holy
Viaticum to the dying. The only exception to this
rule that could occur would be if the consecra-
tion of the Host to be disappear, or the cele-
brant adverted to the fact that it had a substantial
defect, and only bread peculiar to the other rites were
at hand, in order thereby to complete the sacrifice.
Even in places in which there are churches of both
rites, a Greek cannot consecrate in unleavened bread
or a Latin priest in leavened bread (Pius V, Bull
"Providentia", 1566; Benedict XIV, Const. "Etsi
pastoralis"). If, whilst travelling, a priest should be in
a place in which there is no church of his own rite,
he may celebrate according to the rite of the church
which exists there, or preferably according to his own
rite (S. Lig., "Mor. Theol." Lib. VI, n. 203; Lehm-
kuhl, vol. II, n. 121, 3). If a priest has a domicile in
a place in which there is no church of his own rite,
he may celebrate according to the rite of the church
of his domicile, because he is then considered a mem-
ber of said church (Hilarus a Sexten, pt. II, c. iii, §28,
n. 3).

KINDS OF HOST. — In the early Latin Church
the host used by the priest at Mass was larger than it is
today. The custom then prevailed of giving Commu-
nion to the laity with Particles of the priest's Host.
During the twelfth century small hosts for the laity
were introduced and the priest's host assumed the

HOST

494 HOST
although the figure of the Sacred Heart or the monogram of the Holy Name may be used [see ALTAR (IN LITURGY), sub-title, Altar-Bread]. The sacrificial host of the Greeks is a square loaf to express mystically that by the Sacrifice of the Cross redemption is granted to the four quarters of the globe. Two lines divide the upper part of the loaf into four squares in which are placed the consecrated grain, reading from left to right in the upper portion: ICXC, and in the lower: NI-KA, i.e. "Jesus Christ conquerer." Like the host used by the priest at Mass, that which is exposed in the ostensorium, which is customarily as large as the former, and the small particles, must be thin wafers, round, not broken, fresh, and clean. All hosts should be free from little particles, which may be removed before carrying them to the altar by passing them lightly between the thumb and index finger.

OBLATION.—For the valid Consecration of hosts it is necessary that they be morally and sensibly present to the consecrator and individually specified by him, so that the demonstrative pronoun hoc be verified at the Consecration. Ordinarily both the large host used for the Mass and the particles intended for distribution of Communion should be on the altar at the beginning of the Mass, or at least before the Offertory when they are placed on the corporal. If particles are brought to the altar after the Offertory, but before the beginning of the Preface, Mass is interrupted and the oblation of the particles is made either mentally or vocally, after which Mass is continued from the place at which it was interrupted. After the Preface has been begun, down to the Consecration the particles should not be brought to the altar to be consecrated unless there be special reasons, e.g. so as not to deprive of Communion a large number of people, or on special occasions, e.g. First Communion, general Communion at the end of a mission, during the paschal season (to give them a chance to fulfill their Easter duty (Benedict XIV, "De SS. Miss. Sacr.", sect. II, §108; Bernard, "Cours de lit. rom.", I, 98). The sacrificial host is at present placed after its oblation on the corporal in front of the chalice, because it is the first element to be consecrated. Formerly it was placed at the left side of the chalice, as if the latter were to receive the blood which flowed from the right side of Christ hanging on the cross (Innocent III, "De Sacro Altaris Mysterio", lib. II, c.13). If the particles be few, they are offered with the sacrificial host on the paten, and then placed on the corporal near the sacrificial host towards the Gospel side. If they be many, they may be placed on the corporal at the beginning of Mass towards the Gospel side, where they remain during the Mass: or they may be put in a ciborium covered with its lid, but without its veil until after the Consecration; or in a chalice covered with a pall. During Mass the ciborium or chalice containing the particles is placed behind the Host and space is permitted, on the left side of the sacrificial chalice. At the Offertory and Consecration it is uncovered. The large host used for Exposition may be offered on the paten and then placed on the corporal between the chalice and the sacrificial host, or near the latter towards the Gospel side, where it remains throughout the Mass. If it be prepared in the lunula the latter should be open at the Offertory and the Consecration.

CONSECRATION.—At the Consecration all the hosts, or the vessel which contains them, should be on the corporal and if possible on the altar-stone. If by chance the vessel containing the particles is not uncovered at the Consecration, they are nevertheless consecrated (Benedict XIV, "De SS. Miss. Sacr.", c. 13). If the ciborium is not on the corporal at the time of Consecration, it is doubtful whether they were consecrated, unless the celebrant had distinctly the intention of consecrating the contents of the vessel before him, not advertting to the fact that it rests outside the corporal. If the ciborium is outside the corporal, the celebrant (sacerdalis, III, n. 388) Benedict XIV (loc. cit., §108) holds that they should be consecrated absolutely during another Mass, but St. Liguori (lib. VI, n. 217) is of opinion that they should be consumed after the first ablation. The celebrant holds and looks at the sacrificial host only whilst he uttersthe words of Consecration and makes over it the sign of the cross, but directs his intention of consecrating to all the hosts on the corporal. Only the sacrificial Host is elevated for the adoration of the faithful, the consecrated particles remaining on the corporal.

FRACTION OF THE HOST.—Shortly before Communion the Host is broken into parts, a ceremony found in all the liturgies and which was introduced by Christ at the Last Supper. The object of the breaking of the Host is to indicate by this symbolical action the partaking of Communion by which the faithful are to become one body with Christ. The breaking of bread, symbolizing the Communion, is in reality the preparation of the sacrifice for the sacrificial feast: "The bread, which we break, is it not the partaking of the body of the Lord? For we, being many, are one bread, one body, all that partake of one bread" (I Cor., x, 16, 17). Hence, "to break the bread" is to prepare it for food and to distribute it for participation. In the Western Church the Host is divided into three parts. The celebrant holds the Host over the chalice and breaks it in half, one half of which he lays with his right hand on the paten, then breaks from the other half from below (Fars inferior precidi debet—S.R.C., 4 Aug., 1863) a particle which he afterwards puts into the chalice and joins the other half in the left hand with that on the paten. Formerly one part was put into the chalice, another part was consumed by the celebrant, and the third part, which was the largest, was broken into particles for the Communion of the faithful who were present, and of the sick. Traces of this ancient usage are still found in the solemn Mass celebrated by the Roman pontiff, who divides the third part into two particles, with which he communicates the deacon and subdeacon of his Mass. A similar practice is observed in the Mass of the consecration of a bishop, who receives in Communion the third part from the consecrator. The Greeks divide the Host also into four parts, one of which is received by the celebrant; another is distributed to the faithful, the third is reserved for the sick, and the fourth is put into the chalice. In the Mozarabic Liturgy the Host is broken into nine parts, each having its special designation corresponding to a mystery in the life of Christ: (1) Incarnation; (2) Nativity; (3) Circumcision; (4) Apparition; (5) Passion; (6)
Death; (7) Resurrection; (8) Glorification; (9) Kingdom. The first seven parts are placed in circles formed on the paten in the shape of the cross, the remaining two portions are placed on the right side at the foot of the cross outside the circles (Duchesne, "Christian Worship", p. 219). The transverse beam is formed by nos. 2, 5, and 7, which represent the principal mysteries: Birth, Death, and Resurrection. (See accompanying figure.) In other Church Hosts was in former times divided in various ways. Thus in Ireland it was divided in seven different manner crises of the Mass or the at ordinary Masses into five feasts confessors into seven; the festivals of martyrs into eight; on Sundays into nine; on the festivals of Apostles into eleven; on the feast of the Circumcision and on Maundy Thursday into twelve; on Low Sunday and the feast of the Ascension into thirteen; on Christmas, Easter, and Pentecost into sixty-five. They were arranged in the form of a cross with certain additional compartments where they were numerous, and at the Communion each of the parts of the cross, or of its additions, was distributed to a special group of persons, that is, priests, monks, etc. (Ushering, ibid., p. 220). The breaking of the Host is not an essential or even an integral part of the Mass, and was in former times occasioned by natural reasons and considerations, but it has high symbolic meanings. It symbolizes Christ's violent death on the Cross, as it indicates the wounding and lacerating which caused the separation of His Soul from His Body. The breaking of the Bread over the chalice is to remind us that the Blood contained in the chalice proceeds from His wounded and mangled Body, although thereby also caution is taken that no loose particles be lost.

MINGLING OF THE Eucharistic Species.—Probably down to the ninth century the Body and Blood of Christ were twice united in the chalice during Mass: the first time after the Pater Noster, when a previously consecrated Host, or a Host received from another place, was used; the second time at the Communion, for which a particle broken from the Host of the Mass that was being celebrated was used. When the custom of sending the Eucharist to other Churches as a sign of union ceased, the custom was retained, except when the Pope officiated, in which case the latter was used and the former omitted. This custom was retained down to the fifteenth century, when the rite of mingling only after the Pater Noster, even at the Pope's Mass, came into use. The celebrant, having broken the large Host into two equal parts, breaks a small particle from the part which he holds in his left hand. With this particle he makes three signs of the cross over the chalice, saying, "Pax Domino sit semper vobiscum", and then drops it into the Precious Blood, saying: "Hic commixtio et consecratio Corporis et Sanguinis Domini nostri Jesu Christi fiat accipientibus nobis in vitam aeternam. Amen." Just as the fraction of the Host indicated the wounding which caused Christ's death, so this mingling of the Eucharistic species symbolically expresses that on the altar the living Body of Christ is present. The fraction represents His bloody sacrificial Death, and the mingling His glorious Resurrection, in which His Body and Blood were again united and vivified. The threefold sign of the cross with the Particle over the chalice and the salutation made between the fraction mingling signify that Christ by His redeeming Death and glorious Resurrection has become the author and source of true peace, which was purchased and negotiated for us by the holy Cross and the Blood shed thereon (Gibb, "The Holy Sacrifice of the Mass", II, 67). The Host in the Hosts that was consumed was numerous, and at the Communion each of the parts of the cross, or of its additions, was distributed to a special group of persons, that is, priests, monks, etc. (Ushering, ibid., p. 220). The breaking of the Host is not an essential or even an integral part of the Mass, and was in former times occasioned by natural reasons and considerations, but it has high symbolic meanings. It symbolizes Christ's violent death on the Cross, as it indicates the wounding and lacerating which caused the separation of His Soul from His Body. The breaking of the Bread over the chalice is to remind us that the Blood contained in the chalice proceeds from His wounded and mangled Body, although thereby also caution is taken that no loose particles be lost.

Defects and Accidents.—Since the Host belongs to the essence of the Sacrifice of the Mass it is not surprising that the Church should have legislated for any defect or accident that may happen in regard to it. Hence at the beginning of the Roman Missal is found a chapter on the defects (De defectibus) that may occur. During the Mass the celebrant ascertains that the bread is defective, i.e. not of wheat, or not unleavened (in the Roman Rite), or corrupted, in order to complete the sacrifice the following is to be observed:

(1) Before the Consecration.—Mass is interrupted, the invalid or doubtful matter is put aside and replaced by matter certainly valid. If the oblation of the invalid matter has already taken place, the celebrant places a valid host on the corporal and, folding his hands on his breast, offers it by reciting vocally or mentally the prayer "Susipe sancte Pater". Then he continues the Mass from the point at which it was interrupted. The prayer "Quo pridie quam pateretur", though he may have already said it, is to be repeated over the new host. If the first host was defective because it was not of wheat, the celebrant consumes it after the ablutions; if it was corrupt, he throws it into the sacrarium.

(2) After the Consecration of the defective host.—Mass is interrupted, the defective host is placed on the corporal, and a new host is offered, as above. After the oblation the celebrant holds the new host between the thumb and index finger of both hands and begins the consecration at the words "Quo pridie quam pateretur". Then he places the Host on the corporal without genuflecting, or elevating it, and continues Mass from the point at which it was interrupted. If the first host has already been broken, the new host, immediately after its consecration, is broken in half and both parts are placed on the paten. The dropping of a small particle of the larger Host in this instance is not of obligation; it may be done, but without words or ceremonies. The defective host...
may be either (1) consumed by the celebrant before the ablations, or (2) given to another who is still fasting and in the state of grace, to be consumed, or (3) put in a proper place until it is corrupt and then thrown into the agrarian. If the Host is consumed on the altar without pronouncing a word or performing any act, and, having made the sign of the cross with it and said "Corpus Domini", etc., he reverently consumes it, and continues the Mass as usual.

(4) After the consumption of the Precious Blood.—Mass is interrupted and a new host offered, as above. Having placed the chalice on the corporal, the celebrant pours into it a few drops of water, after having blessed the latter, unless it be in a requiem Mass. Joining his hands on his breast, he mentally or vocally recites the prayer "Offerimus tibi". Then consecrates the Host, as above, beginning with the words "Qui pridie". Having placed the Host on the corporal, he makes the customary sign, reciting the words "Simili modo" down to "Hec quotiescumque" inclusively, after which he places the chalice on the corporal without genuflecting, or elevating the chalice. Then breaks the Host into two parts, and reverently consumes it, as above. If the celebrant is seriously ill after the consecration another priest must supply his place and complete the sacrifice. In this case the sick priest is able to receive Communion and there is no other consecrated particle besides the large Host of the Mass on the altar or in the tabernacle, one half of it is given to the sick priest at the time of the consecration; the celebrant collects the fragments that may be on the corporal, drops them from the paten into the chalice, makes the sign of the cross with it, recites the prayer "Sanguis Domini", etc., and reverently consumes the Precious Blood. Mass is then continued as usual.

(5) If the consecrated Host should disappear, either mysteriously or by a natural cause, the celebrant offers, mentally or vocally, a new host, and then consecrates it, beginning with the words "Qui pridie".

(6) In case where an essential defect is discovered in the host, and valid matter cannot be easily procured, the following rules are to be observed. — If the error is ascertained (i) before the consecration, Mass is discontinued, or (ii) after the consecration, a delay of one hour or more may be made to procure, if possible, valid matter. If such be available, the order given above (2) is observed. If valid matter cannot be obtained Mass is continued, but the prayers and ceremonies of the Mass are performed. If the whole Host remains in the chalice, the signs and ceremonies of the Mass are performed. At Communion the Host and Precious Blood are consumed at the same time after having made the sign of the cross with the chalice, saying: "Corpus et Sanguis Domini nostris Jesu Christi custodiam animam meam".

(7) If the object that has not been sanctified for the purpose of coming in contact with the consecrated Host (altar, or communion-cloths, alb, etc.) touches it, this object must be washed three times with water, and the latter is afterwards poured into the agrarian. If the Host falls to the floor, the celebrant lifts the sacred particle, covers the spot on which it fell with a pall or purificator, and after the service washes the spot with water, which he afterwards throws into the agrarian. If the Host falls into the folds of a woman's dress, she herself is to take it up and consume it; if it falls outside, the priest communicates her with it, without requiring that the dress be specially purified.

(8) If it should happen that the celebrant or communicant cannot retain the Host, it should be taken up and again consumed by himself, unless to do so would cause nausea. In the latter case it is put in a vessel containing water and left therein, in a suitable place, until disintegration takes place, when the matter is thrown into the agrarian. If the Host cannot be distinguished from the other matter, the whole mass is consumed by fire and the ashes are thrown into the agrarian.

(9) If any poisonous substance should defile the consecrated Host another host is taken, and the order given above (2) is observed. The poisoned Host is then placed in the tabernacle and left there until it loses the species of bread, when it is thrown into the agrarian.

(11) Before the oblation a broken host should be replaced by one that is whole and entire. If the break be noticed between the Oblation and Consecration, the broken host may be used for Mass, unless doing so would scandalize the people. In the western case another host, whole and entire, is taken, Mass is interrupted, the host is offered mentally or vocally, and then Mass is continued from the point at which it was interrupted. The broken host is consumed at the same Mass after the ablation.

(10) If the celebrant is seriously ill after the Consecration another priest must supply his place and complete the sacrifice. In this case if the sick priest is able to receive Communion and there is no other consecrated particle besides the large Host of the Mass on the altar or in the tabernacle, one half of it is given to the sick priest at the time of the consecration; the celebrant collects the fragments that may be on the corporal, drops them from the paten into the chalice, makes the sign of the cross with it, recites the prayer "Sanguis Domini", etc., and reverently consumes the Precious Blood. Mass is then continued as usual.

Hottentots.—Popularly the Hottentot is considered a man-monkey, or as Gibbon said "the connecting link between the animal and the God". But he is not even the lowest of the three chief races into which the aboriginal tribes of South Africa may be divided—Bantus, Hottentots, and Bushmen. The Bushmen are usually placed lowest in the scale. When the first Europeans (the Portuguese) came to South Africa, they found what is now Cape Colony divided between the Bantu, the Hottentots, and the Bushmen. The Bantu tribes were chiefly north of the Zambezi, and were finer in physique than the Hottentots, but possessed of less brain power and imagination. The Bushmen were smaller than the Hottentots and altogether on a lower plane—physical and moral. There is nothing to show that the Hottentots were capable of assimilating European civilization. It is a curious fact, worth mentioning here, that skull measurements show that of these three races the greatest affinity with the European lies with the Bushman, i.e. with the lowest type.

The origin of the Hottentots is a question which has given rise to much discussion. Efforts have been made, with small success, to connect them with the Troglodytes or cave-dwellers. Several writers have suggested a North African origin; and Dr. Bleek has detected important points of similarity between the Hottentot language and those of North Africa; but it is too soon to build on these slight indications. Dr. Theal appears to suggest that the first Hottentots were a mixed race. "The probability seems to be that a party of intruding males of some slight brown
or yellow race took to themselves women of Bushman blood, and thus gave origin to the people whom Europeans term Hottentots." This suggestion merely puts this question among the insoluble problems.

For the description of the pure Hottentot we are dependent on ancient writers like Kolben; because the pure Hottentot cannot be said to exist to-day. He was slightly below the average European: the upper limbs undeveloped and the lower muscular, high cheek bones, thick lips, nose flat, eyes wide apart, hair black and crisp in tufts, colour yellowish brown. To-day the so-called Hottentots are of every colour, size, and character, through mixture with other races. Even the language which they principally speak is a patois of the Dutch dialect of the Cape.

The language of the Hottentots is monosyllabic; having four known dialects—the Namaqua, which is still spoken by some of the natives; the Kora and Cape Hottentot, which are practically extinct; and the Eastern Hottentot, which exists only in a few meagre vocabularies, and has been extinct for some time.

The most striking characteristic of the Hottentot language for the European lies in the "clicks". Something similar is thought to be found in the various languages of the Galla (Oromo) in Ethiopia, in the Bennarssian tongue in the ancient speech of Guatemala. But three-fourths of the words in the Hottentot dialects begin with a click. Clicks are of four kinds, and are difficult to describe to those who have not heard them. The drawing of a cork, and the gurgling sound of water in the narrow neck of a bottle, the sound made in urging a horse to trot or run, and other sounds have been used to illustrate their nature; but at least one of them, the palatal click, defies description.

The grammatical system of the Hottentot is built almost exclusively on sex-denoting suffixes, and it is the only one of the complete of this small group of languages. The liquid L is entirely wanting, and it has a small variety of clear nasal consonants. The only native literature that exists in these dialects consists of folk-lore tales, such as mark the beginning of all European literature. Translations of parts of the Scriptures have been made by missionaries in Namaqua.

The religion of the Hottentot is a congeries of superstitious observances, of which travellers and folklorists have never been able to obtain a full explanation from the natives. They appear to believe in a superior being whom they call Tsuikwasp; but who, and the meaning of the word, are open to some doubt. The most elaborate ceremonies of the Hottentots are in honour of the moon, and they pay great reverence to carins of stones and wood, where they believe a mythical personage named Heitsi-Eibib to reside. The Hottentots called themselves Khoikhoi—men of men. The most curious of their customs is that on attaining manhood the Hottentot makes himself a monorchis. Polygamy was not general, but permitted to the wealthy. They never seem to have made boats of any kind, and abhor the oil of fish, although fond of smearing their skin with oil. Witchcraft was common among them. Their government was carried on by chiefs, who administered a well-defined native law. The doctors were in high esteem, and next to them the priests, who combined the duties of masters of ceremonies and surgeons in the monorchist rites.

In the Cape there now lived chiefly in German South-west Africa and in Cape Colony. For the former territory there are no official figures as to their number; but they do not exceed thirty thousand. During the recent rebellion against the Germans, the Hottentots gave more trouble than all the other races together.

In the time of the first Dutch governor (van Riebeeck) the Hottentots at the Cape were estimated at 150,000. But the smallpox epidemic in 1713 reduced their numbers enormously. In 1904 the census put them at 85,892. Their destiny seems to be absorption into the more virile native races.

Missionary work among the Hottentots and allied tribes has been undertaken by the Oblates of St. Francis de Sales in Cape Colony, and by the Missionaries of Mary Immaculate in German South-west Africa. The Orange River Vicariate is composed chiefly of a species of Hottentot called Griquas or Bastards. In German territory, in the Prefecture Apostolic of Lower Cimbebasia, Catholic missionary work among the Hottentots is done.

Sidney R. Welch.

Houbigant, Charles-François; b. in Paris, 1686; d. there 31 October, 1753. He entered the Congregation of the Oratory in 1704 and, after his studies, taught successively the classics at Juilly, rhetoric at Marseilles, and philosophy at Soissons. Returning to Paris, he was in 1722 at the head of the Conference of Church Antiquities and Discipline of St.-Magloire. Overwork brought on a severe sickness, from which he lost in a very peculiar way the sense of hearing: while unable to hear the noise of the cannon of the Bastille, he could hear the scratching of his pen on the paper. In consequence of this infirmity he availed himself of the scholarship founded by L. de Carrières to promote Biblical studies in the Oratory and the succeeding generation devoted his talents to mastering Oriental languages.

His first work, issued in 1732 (Paris), was a vocabulary of Hebrew roots, "Racines hébraïques sans points-voyelles", compiled after the manner of Lance-lot's long famous "Jardin des racines grecques". In 1746 he published "Prolegomenes et Sacram Sacram" (2 vols., 4to) and a Latin translation of the Psalms, "Psalmorum versio vulgata et versio nova ad hebraicam veritatem facta" (10mo), followed two years later (1748) by a critical edition of the Hebrew Psalter, "Psalmi hebraici mendis quam plurimis expurgati" (18mo). From times of his Stoiloff communications passed into the hands of his great work, "Biblia hebraica cum notis criticis et versione latina ad notas criticas facta; ac accuratibus libris qui in veteribus canonicis vocantur in tree classes distributis" (4 vols., folio, Paris, 1753–54). This important publication, to the preparation of which he had devoted twenty years of labour, in itself a masterpiece of typography, was based on the text of Van der Hooght (edit. of 1705), which it reproduced without vocal signs and with many corrections suggested either in the margin or in tables at the end of each volume. The Latin translation was also published separately in eight octavo volumes under the title, "Veteris Testamenti versio nova ad hebraicam veritatem facta" (Paris, 1753). From Houbigant's versatile pen later on proceeded French translations of some English books, as Forbes's "Three Months", Sherwood's "Sermone" (1768), and Lesley's "Method against Deists and Jews" (1770). Other works published during the same period were "Psautier français des RR. PP. Capucins" (The Hague, 1764), "Conférence entre un Juif, un protestant et un docteur de Sorbonne" (Leyden, 1770), the "Notes critiques in universos Vetere Testamenti libros tum hebraicam tum grecam scriptorum, cum integris Prolegomenis ad exemplar Parisiense demum recensuit" (2 vols., 4to, Frankfort, 1777), are evidence that Houbigant...
Houdon, JEAN-ANTOINE, b. at Versailles, 1741; d. 16 July, 1828; the most distinguished sculptor of France during the latter half of the eighteenth century. He was trained under Slodtz and Pigalle and won the coveted Prix de Rome before he was twenty. In Italy he founded the second Renaissance, due to the rediscovery of antiques and to the influence of Winckelmann. One of Houdon’s first efforts, a work he never surpassed, was the heroic statue of St. Bruno for the church of Sta Maria degli Angeli. Its austere simplicity and strength drew from Clement XIV the famous words, “He would even speak, did not the Rule of his Order compel silence.” On his return to Paris, Houdon sent his “Morpheus” to the Salon of 1771 and, owing to it, was made an associate of the Academy, becoming a full member in 1775. He also began that striking series of busts that brought the entire age before his modelling stool—Prince Gallitzin, Prince Henry of Prussia, the Dukes of Saxe-Gotha, Catherine II of Russia, the actress Sophie Arnould as Eipigenia, and that wonderful terra-cotta of Gluck, the composer, in the Royal Museum, Berlin. Appointed teacher at the Academy, Houdon presented to it, for the use of the students, his well-known “Ecorce,” the human figure stripped of its skin to show the muscles and tendons uncovered; this is still used in most art schools. Diderot, D’Alembert, Gerbier, Thugot, Buffon, Palissot, Mirabeau, Barnave sat for their portraits. Hearing of the death of Rousseau (1778), the sculptor hastened to Ermennville to take a mask of the face; from this he modelled the remarkable head in the Louvre. In 1780 he made the portrait of Lafayette which is now in the State House, Richmond, Virginia, and in 1781 the statue of Voltaire. In 1785, he sailed for America with its antique air and curiously modern visage. The Marché de Toursville is of about the same period. The noted bronze “Diana” of the Louvre dates from 1783; the marble original, “twin sister of the Apollo Belvedere,” was refused at the Salon on account of its unctuity. In 1786, at her request (Hermitage, St. Petersburg). In July, 1785, Houdon sailed for America with Franklin, whose bust he had previously made. He was received at Philadelphia and spent two weeks at Mount Vernon making studies of Washington, which he took back at once to Paris, and from which he produced the bust now in the collection of Mr. Hamilton Fish, New York, and the statue for the State House, Richmond, Virginia. It was proposed to put Washington in classic garb, but he chose to be in uniform. The same year, 1785, Houdon modelled the “Erieuse” (Musée de Montpelier), a female figure shivering with fright. In his “Apollo” and his most charming works are the Boignart children (Louvre) and his daughter Sabine in adolescence—delicate heads, instinct with life, and so fresh they might have emerged yesterday from the clay. In the private park at Bagatelle is an admirable “Baigneuse” in stone, set in a grotto, one foot touching the water. The bust of “Minerva,” in the hall of the Institut de France, is also Houdon’s. The “Apollo,” 1790, is a companion to the “Diana” replica of that year. The Revolution brought an end to all work and commissions. To pass the time, Houdon was retouching an old “St. Scholastie”; this caused him to be denounced to the Convention, and he only saved his life by changing the saint into a figure of “Philosophy.” In the early days he had made portraits of Du Barry, Louis XVI, Marie Antoinette, the Princesses Adelaide and Elisabeth, and the Court, not to mention the Encyclopédistes and the noted men of the Revolution. He responded to the call of the Directory and to the collection. In the end his mind clouded, and he slept away the last measure of his life. Possessed of great simplicity and openness of mind, and of a happy spirit, Houdon had been much sought after for the charm of his conversation, and his recollections of famous personages. In technic he is direct and simple; his paramount qualities are lifelikeness and spontaneity.

M. L. HANDLEY.
Houghton left two important homiletic works: his collected sermons, under the title of “Sermons sur tous les sujets de la morale chrétienne,” and a collection of materials for sermons, “La bibliothèque des prédicateurs.” The first-named, which appeared in Paris in 1726, comprised seven volumes, and has run through several editions; it was also printed in part in a German translation at Augsburg in 1739. With his wonted scrupulous care, he supplemented it by an index volume, together with a treatise on the imitation of famous preachers. (A second edition appeared in 1729, in which the large work was subdivided into six parts of eighteen volumes, and has run through several editions.) Houdry’s second great literary work consists of an ambitiously planned collection of material for preachers, which he called a “library,” and which was published, 1712–25, in twenty-three volumes at Lyons. Two translations of this work in Latin and one in Italian have been completed; and as recently as 1862 a “Biblical Patriotic Concordance for Preachers and Catechists” was compiled from it. In the introductions to both works, Houdry sets forth his views on the functions of a preacher and criticizes the style of preaching in vogue in his time. In 1708 the famous preacher published a small ascetic treatise in two volumes, on the exercises of St. Ignatius, addressed to priests and accordingly written in Latin.

N. SCHEID.

HOUGHTON, WILLIAM (variously called W. HOGHTON, DE HOTHUM, DE HOGUM, BOTHUM, DE HODEM, HEDDON, HEDONEM, according as his name was pronounced by those of different nationalities—in the ancient manuscripts of his order it is invariably written DE ODONE), Archbishop of Dublin, date and place of birth unknown; d. at Dijon, 1298. His great learning united to solid piety made him illustrious among the savants of his time, while his rare prudence in the management of affairs gave him no small distinction among the statesmen of the thirteenth century. It is not known in which convent in England he received the habit of St. Dominic—it is certain that he made his higher studies in the Convent of St. James in Paris—there he took his degrees and lectured with great success. In the general chapter of the order held in Vienna in 1282, he was chosen Provincial of England, and discharged the duties of this office with zeal and ability. His contemporaries all speak of a universal respect and a singular charm and distinction of manner which won for him at once love and respect. He governed the English province for five years, when he was recalled to Paris to resume his public lectures on theology. His ability was recognized by the court of France, especially by the king, Philip IV. But the English Dominicans wished him to return home, and they elected him provincial, which office he filled for a term of seven years. He became a favourite of King Edward I, and received many marks of royal affection and esteem.

Edward I sent Houghton to Rome as ambassador to propose to the Holy Father his royal desire to assist his Holiness in affording help to the Holy Land. The king proposed the conditions of the Holy Siege and he did this through his minister, William Houghton, who was favourably received at Rome and obtained nearly all that he desired. He returned to England with a Brief from Nicholas IV, dated 20 Nov., 1260.

The See of Dublin had become vacant by the death of Archbishop John de Sandford. Thomas Chatworth, the successor named by the chapter, was not acceptable to the king, so the see remained vacant from Oct., 1294, to June, 1297. Edward I appealed to Pope Boniface VIII requesting the appointment of William Houghton. This wish was granted and Houghton was consecrated at Ghent by Anthony Beck, Bishop of Durham, in 1297.

A bloody war was raging between France and England and the two monarchs, Philip IV of France and Edward I of England, were brought by the prudent mediation of Houghton to conclude a treaty of peace for two years. In 1298, Edward I sent Houghton to Bohemia to bring about the marriage of his Holiness with the conclusion of the treaty of peace. Having been received by the sovereign pontiff (20 June, 1298) Houghton set out for England but on the way fell sick at Dijon (France) and died there 28 August, 1298. By command of Edward I his remains were brought to London and laid in the Church of the Friars Preachers. Notwithstanding the important public offices Houghton filled, he found time to write the following works: “Commentarii in Sententiarum Libros,” “De immediae visione Dei tractatus,” “De unitate formarum Tractatus,” “Lecture Scholasticae,” and a speech in French on the rights of the English king.

ALBERT REINHART.

HOURS, CANONICAL.—I. Idea.—By canonical hour is understood all the fixed portion of the Divine Office which the Church appoints to be recited at the different hours. The term was borrowed from the custom of the Jews, and passed into the speech of the early Christians. In the Acts of the Apostles we see that each prayer was designated by the hour at which it was said (Acts, iii, 1). The observance from being optional having become obligatory for certain classes of persons in virtue of canons or ordinances promulgated by the Church, each portion of the Divine Office was called a canonical hour, and the whole of the prayers of a certain day took the name of canonical hours. This term was extended to apply to the book or collection which contained these prayers, hence the expression “book of hours.” The Rule of St. Benedict is one of the most ancient documents in which the expression canonical hours is found; in chapter lxvii we read “ad omnes canonicas horas.” It passed into common speech about the next century as may be judged from St. Isidore of Seville (“De ecclesiastici officii,” I, xix, in P. L. LXXXIII, 757), etc. The article BREVIARY treats the various parts which compose the Divine Office, together with the history of their formation; under each of the words designating them details will be found concerning their composition the modifications they have undergone, and the questions raised with regard to their origin (see COMPLINE); here we shall deal only with the obligation of reciting them imposed by the Church on certain classes of people, an obligation which recalls, as has been said, the very qualification of canonical.

II. Obligation of Reciting.—After having devoted a few lines to the present discipline of the Church on this point, the origin and successive development of the obligation of the faithful will be treated at length.

A.—Present Discipline of the Church.—This is set forth by all moral theologians and canonists. They treat more or less extensively of the character of this obligation, the conditions required for complying with it, and practical instances of infraction or negligence. Modern authors derive their theory from St. Alphonsus Liguori (Theologia Moralis, VI, n. 140 sqq.). The general thesis on the existence of this obligation and the persons whom it concerns may be formulated thus: the following are bound each day to the recitation, at least private, of the canonical hours: (1) all clerics in Holy orders; (2) religious men and women, who are bound by their rule to the office of choir (Deshayes, “Memento juris ecclesiastic!” , n. 430). According to the terms of this
pronunciation there must be considered (1) the obligatory character of this recitation; it deals with a precept of the Church which aims at binding to this duty certain classes of persons whom she makes her representatives. The obligation is founded on the virtue of religion; its infraction may be a mortal sin if the omitted part is notable. (2) The validity of private recitation, but in this case the person who recites it must actually pronounce the words, for it is something more than mental prayer. (3) The persons obliged to recite the hours: (a) All clerics in Holy orders, that is, all who have received the subdiaconate or one of the superior orders, for, since the twelfth century, the subdiaconate has been incessantly ranked among Holy orders; (Innocentius III, cap. "Miramur", 7, "de servis non ordinandis"). All are bound unless legitimately dispensed by the sovereign pontiff even though they are excommunicated, suspended, or interdicted. (b) All beneficiaries, that is, all who enjoy a perpetual right to derive revenue from the goods of the Church, by reason of a spiritual charge with which the Church has invested them, even though they are merely tonsured; this obligation binds unless by a lawful act or by the law itself they are wholly or in part released from it. The Church is manifested; if she no longer formulae in precise terms the law of prayer for clerics and monks she let it be understood to what extent she holds them bound. Clerics are by their ordination attached to the service of a church; the principal function of the ministers in each church is Mass and public prayer, this public prayer consists in the recitation of the Divine Office. It must be remarked further that the material subsistence of clerics is assured them by the Church as a consequence of their ordination, but on condition that they assist at Divine Office; those who fail will have no part in the daily distributions. For the Western Church the same conclusion is drawn from the manner in which the Fathers express themselves when they speak of public prayer (see some of their testimony in this respect under Breviary). In their eyes, in the measure in which they are formed and developed, the canonical hours are as the attestation and result of the continual prayer of the Church; clerics have so many more reasons for taking an active part, as they have more liberty and leisure, and it is in great measure to this end that an honest livelihood is assured them.

From the fifth century councils formulated laws on this subject with sanctions and penalties; such is the case with the Council of Tours held at Vannes, in Brittany, in 465. (Hefele-Leclercq, "Histoire des conciles", II, 905; see also Baumer, "Histoire du Bréviaire", I 219. For Spain may be mentioned various decisions of a council held at Toledo about 400. Hefele-Leclercq, op. cit., II, 126s.)

(3) Sixth to eighth century.—Decisions multiplied especially in the West obliging clerics to celebrate publicly the Divine Office. To-day the "statuta ecclesiae antiqua" are most commonly ascribed to the sixth century and the Church of Aries in Gaul, though not distributed to the fourth Council of Constantinople (381); canon clxii ordains "that a cleric who without being sick fails in the vigils should be deprived of his benefice (Hefele-Leclercq, "Histoire des conciles", II, 105). Particular councils followed in great numbers and, while displaying solicitude in establishing uniformity in the order of psalmody and the Office, regulations for the private use of the clergy. Among the most famous is that of Agde in 506, that of Tarragona in 516, that of Eparo in 517, etc. In these councils the aim was to follow the Eastern and the Roman usages. The
for the "Liber Deuteronomii" (Antwerp, 1777–80), in 2 vols., of the same series. This work brought to a close the publication of this valuable translation and commentary, which, however, comprises only the Psalms, the Sapiential Books, and the Pentateuch. Lastly, Van Hove took up his pen in defence of the Faith. He wrote the Apologia S. P. Polemaci ad H. Ap. (Antwerp, 1705; and, with a fraction of arguments, such as had been put forward by Bergier and other French apologists of the eighteenth century, in favour of the truth of revealed religion and the infallibility of the Church.

THOMAS PLASSENNY.

Howard, Mary, of the Holy Cross, Poor Clare, b. 28 Dec., 1653; d. at Rouen, 21 March, 1735, daughter of Sir Robert Howard, younger son of Thomas, Earl of Berkshire, in whose home Mary's early youth was spent. At the age of eighteen, to escape the ambition of Charles II, she went to Paris, under the assumed name of Talbot, and was placed in the Benedictine convent of Val de Grace to learn French; here she was received into the Order of Poor Clares at Paris, with Lady Osborne, her guardian in Paris. Remaining stanch in the face of persecution, she was finally permitted to retire to the convent of the Canonesses of St. Augustine at Chaillot, near Paris, where she remained several years, until her admission into the English convent of Poor Clares at Rouen, under the name of Pernel, to safeguard further the secret of her identity. Here she was made successively mistress of the choir, second and first portress, the latter a position involving the management of the temporal affairs of the convent, and in 1702, on the resignation of Mother Winifred Clare Giffard, abbess since 1670, she became abbess of the community, which she governed with rare zeal and prudence till her death. Her profound piety and salutary instructions were never tainted by the errors of the false mysticism so widespread at the time. Her "Chief Point of our Holy Ceremonies" was published in 1726. Her other writings, all in MS., are a culmination of spiritual exercises, litanies, and other devotions.

F. M. RUGER.

Howard, Philip Thomas, Dominican and cardinal, commonly called the "Cardinal of Norfolk"; b. at Arundel House, London, 21 September, 1629; d. at Rome, 17 June, 1694. He was the third son of Henry Frederick Howard, afterwards Earl of Arundel and Surrey and head of the House of Norfolk (the dukedom of Norfolk being forfeited, though restored in 1660). The mother of Philip was Elizabeth, daughter of the Duke of Lennox; he was thus allied to the reigning sovereign of England. At the age of sixteen he joined the Dominican Order in Italy, was professed at Rome, 1646, and took the name of Thomas in religion. Residing at Naples for his studies, he was chosen to deliver a Latin answer to the general chapter of his order in Rome. He justified the choice by delivering a fervent address on the conversion of England, which led to a decree being passed by the chapter, urging provincials and priors to do all they could to receive English, Irish, and Scotch novices into the order, and to send them to England and those countries. He was thenceforth wholly devoted to the conversion of England and to the progress of his order in that country. He was ordained priest in 1652, and with the sanction of his superiors set himself to carry out the ideas he had matured in his mind. He founded the priory of Bornhem in Flanders, with a

HOURS, LITTLE. See BREVIAIRE.

Hove, Peter van, Friar Minor, lector in theology and exegesis; b. at Rethy, in Campine (Belgium); d. at Antwerp, in 1793. He was a pupil of William Smits, O.F.M., founder and first prefect of the "Museum Philologico-Sacrum," a Franciscan Biblical institute at Antwerp, which had for its scope the training of Franciscan students in the languages appertaining to Biblical study, in Biblical history, geography, chronology, and the subsidiary sciences, and it was requisite for a critical and literal interpretation of the Sacred Text. Upon his master's death, in 1770, Van Hove was entrusted with the direction of this flourishing school, which, unfortunately, in the prime of its activity, fell a prey to the fury of the French Revolution. In this period of Hove's appointment as prefect of the institute, he had published several noteworthy historical and archaeological theses, the first of which, "Imago polemico-sacra primi seculi religionis Christi seu fidelis, doctrinae et morum disciplinae Ecclesiae Apostolicae" (Brussels, 1765), is based chiefly upon the writings of St. Paul. The following were: "Sacra Iconography a pictorum erroribus vindicata" (Antwerp, 1769); "Chanaan seu Regnum Israelis Theocraticum, in XII Tribus Divisum" (Antwerp, 1770); and "Messias seu Pascha nostrum immolatus Christus" (Antwerp, 1771). The author devotes much space to exegetical and critical digressions which have a special value. In the last of these works he gives us an excellent chronology of the Gospel. Sixteen folio volumes of Smits's Flemish translation of the Vulgate and his famous commentary had already been edited when, on the death of the indefatigable author, the immense task devolved upon his pupil. Van Hove first completed and edited "Liber Privilegii Bolgeiae Editionis," I (Antwerp, 1772), II (Antwerp, 1775), twelve chapters of which had been prepared by Smits. Following the plan adopted by his predecessor, Van Hove added, of his own, "Prolegomena ad Testamentum Philologicum-Sacrum de tempore celebrandi Paschatis Veteris Testamenti," etc. To him we are indebted
college for English youths attached to it, and was himself the first prior and novice master. He also founded at Vilvorde a convent of nuns of the Second Order of St. Dominic, now at Brussels.

In the reign of Charles II Father Howard was made grand almoner to Queen Catherine of Braganza. He resided at St. James’s Palace, with a salary of £500 a year, and had a position of influence at Court. An outbreak of Puritan violence compelling him to leave England, he resided in Flanders for several years. He was made a cardinal in 1675, by Pope Clement X, being assigned the title of S. Cecilia trans Tibarem, exchanged later for the Dominican church of S. Maria supra Minervam. He now took up his residence at Rome and entered into the service of the Universal Church, especially watching the interests of the Church, in a letter to the whole, he was in partibus, but the appointment, owing to the opposition of the “English Chapter” to his being a vicar Apostolic, and the insistence that he should be a bishop with ordinary jurisdiction, was not confirmed. He was to have been Bishop of Hawaii in 1679. In 1680 he was made Protector of England and Scotland. At his instance the Feast of St. Edward the Confessor was extended to the whole Church. He rebuilt the English College in Rome, and revised the rules of Douai College.

Cardinal Howard co-operated later with James II in the affairs of the Pope. In the tournament of 1683, an arrangement which lasted till 1840, when the number was increased to eight by Gregory XVI. Burnet shows in his “History” that Cardinal Howard regretted the steps which led to the crisis in the reign of James II and in which his counsels sought to aver. The matters were those which involved the Earl of Castlemaine to Rome showed the rise of another spirit which he did not share. When the crisis he foresaw came, he had the consolation at least of knowing that his foundation at Bornhem was beyond the grasp of the new persecutors. Cardinal Howard assisted at three conclaves, for the election of Innocent XI in 1676, Alexander VIII in 1689, and Innocent XII in 1691. He died in the twentieth year of his cardinalate, at the age of 64, and was buried in his titular church of S. Maria supra Minervam at Rome.

His foundations in Flanders flourished till the Protestant revolution, when they were despoiled to a great extent, and were eventually transferred to England. The English Dominican Province looks to him as its father and restorer, and the American Province also regards him to a great extent in the same light. After his death the Master General, Father Antoninus Cluore, was his successor, lamenting the loss of one who had done so great a work for the English Church and the order.

WILFRID LESCHER.

HOWARD, PHILIP, VENERABLE, martyr, Earl of Arundel; b. at Arundel House, London, 28 June, 1557; d. in the Tower of London, 29 October, 1585. He was a grandson of Henry, Earl of Surrey, the poet, executed by Henry VII in 1547, and son of Thomas, Duke of Norfolk, executed by Elizabeth, 1572. Philip II of Spain, then King of England, was one of his godfathers. His father, who had conformed to the State religion, educated him partly under John Foxe, the Protestant martyrologist, and his piety and sent to Geneva. He had married, as his third wife Elizabeth, widow of Lord Dacre of Gillesland, matched her three daughters, who were heiresses, to his three sons. Anne, Philip’s wife, Countess of Arundel and Surrey, who survived to 1630, was a woman of remarkable generosity and courage, and became after her conversion the patroness of Father Southwell and of many priests, and eventually the foundress of the nunneries of Arundel and Sion. Philip succeeded, 24 February, 1580, jure matris, to the Earlom of Arundel, and this may be considered the highest point of his worldly fortunes. He frequented the Court, entertained the queen, and was restored in blood, 1581, though not to his father’s dukedom. Toward the close of this year he was present at the disputation of Blessed Edmund Campion in the Tower, and this proved the first step in his conversion, though, like most of Elisabeth’s courtiers, his life was then the reverse of virtuous, and for a time he deserted his wife. But the Howards had many enemies, and Elisabeth was of their number; they feared that the queen had found herself suspected and out of favour, and his difficulties were increased by his wife’s conversion. He was now reconciled, indeed devoted to her, and 30 September, 1584, was received into the Church by Father William Weston, S.J., and became a fervent Catholic. The change of his life was at once noticed at Court; on which Philip, seeing the queen more and more averse and dangers thickening, resolved to fly, which he did (14 April, 1585), after composing a long and excellent letter of explanation to Elisabeth. But he was captured at sea, probably through treachery, and arrived at London from his escape on 21 April, and remained till death. He was at first sentenced to a fine of £10,000, and imprisonment at the queen’s pleasure. Later on (14 March–14 April, 1589), during the blood-thirsty mood which caused the death of so many English martyrs after the Armada, he was tried for having favoured the excommunication of the queen, and for having prayed for the invaders. As usual at that time, the trial was a tirade against the prisoner, who was of course condemned. One example of the hypocrisy of the prosecution may be mentioned. While they professed to quote the very words of the Bull of excommunication, “published 1 April”, no such Bull was published at all. If the Armada had been successful, a Bull would of course have been issued, and Elisabeth’s spies had in fact got hold of an explanation written by Allen in preparation for that event (printed in Dodd-Tierney, iii, Ap. 1). From a letter of Attorney-General Popham to Lord O. of State Papers, P.M., Elisabeth, 1585, it appears that he was aware of the fraudulent character of the evidence. Philip was left to die in prison. His last prayer to see his wife and only son, who had been born after his imprisonment, was refused except on condition of his coming to the Protestant Church, on which terms he might also go free. With this eloquent testimony to the goodness of his cause he expired, at the early age of thirty-eight, and was buried in the same grave in the Tower Church that had received his father and grandfather. In 1624 his bones were translated by his widow to Long Horsley, and thence to Arundel, where they still rest. A portrait by Zuccaro is in the possession of the Duke of Norfolk. His “Epistle of Christ to the Faithful Soul”, translated from Lanzberg, was printed at Antwerp, 1595; St-Omer, 1610; London, 1647; his “Fourfold Meditations of Four Last Things” (once attributed to Southwell), London, 1593; his “Verses on the Passion”, by the Cath. Record Soc., VI, 29.

Howard, William, Venerable, Viscount Stafford, martyr; b. 30 November, 1614; beheaded Tower Hill, 10 November, 1643. He was the son of the Ven. Philip Howard, Earl of Arundel, mentioned above, fifth son of Earl Thomas (the first great art-collector of England), and uncle of Thomas Philip, Cardinal Howard. Brought up as a Catholic, he was made a knight of the Bath, at the coronation of Charles I, 29 January, 1625, and married, sister of the last Baron Stafford, October, 1637; the title was revived for him 12 September, 1640, and he was immediately afterwards created a viscount. He is said to have joined the royal army during the Civil War, but perhaps erroneously, for in 1642 he was in Holland, attending the exiled royal family and his mother and father. He was employed by the Emperor Ferdinand in missions to Flanders and Switzerland. After his father's death, 4 October, 1646, many painful quarrels with his nearest relatives ensued. The Howard properties in England having been sequestrated by Parliament, the family was much impoverished, and William's eldest surviving brother, Earl Henry Frederick, was induced to commence a series of unjust and vexatious suits against his mother, and practically robbed her of her dowry (Tirney, below, pp. 501–10). William, as her representative, was involved in these painful and prolonged quarrels. After both his father and brother had passed away, his cousins and their agents continued against him a quasi-persecution for several years.

The details of these transactions are obscure, but it would seem that the viscount was, under foreign law, twice actually arrested, at Heidelberg, July to September, 1655, and at Utrecht in January, 1656; in the latter case he was acquitted with honour, though the charges, of which the particulars are not now known, were insulting and vexatious (Stafford Papers, 15 January, 1656, see below). In these troubles his most dangerous opponent was perhaps Junius and other literary adherents of his father, who were claiming MSS. and rarities from the Arundel Collections in payment of their debts, while Lord William successfully proved that those collections were not liable to such charges. Though they lost, they continued to write bitterly of him, and these complaints have found a permanent record in the diaries and other writings, Burnet, eg, Restoration, 1660, his rights were firmly established, and his life within his large family circle must have been extremely happy. The brightest hours were perhaps those spent in conducting his nephew Philip to receive the cardinal's hat in Rome (1675).

The other Ors (Q. C.) Orators included Lord Stafford in their list of Catholic lords to be proscribed, and eventually he was put first upon the list. It has been supposed that this was done because his age, simplicity, and the previous differences with other members of his family suggested that he would prove comparatively easy prey. On 25 October, 1661, he was committed to the Tower, and it was more than a year before it was decided to try him. Then the resolution was taken so suddenly that he had little time to prepare. The trial, before the House of Lords, lasted from 30 November to 7 December, and was conducted with great solemnity. But no attempt was made to apprize the pedirious of Oates, Dugdale, and Tuberville, and the viscount was of course condemned by 55 votes to 31. It is sad to read that all his kinsmen but one (that one, however, the Lord Mowbray with whom he had had many of the legal conflicts above noticed), voted against him. His last letters and speeches are marked by a quiet dignity and a simple heroism, which give us a high idea of his character and his piety. His fellow-prisoner and confessor, Father Corker, O.S.B., says: "He was ever held to be of a generous disposition, very charitable, devout, addicted to sobriety, inoffensive in words, a lover of justice."

Hroswitha; b. probably between 930 and 940; d. about 1000. The interpretation of the name as cliamor validus contains no doubt a reference to the bearer herself; this account for her being also called the mighty voice", and sometimes even the "Nightingale of Gandersheim". In all probability she was of aristocratic birth; her name appears on an old wood engraving as "Helena von Roesow". She seems to have been still in her earliest youth when she entered the convent of Gandersheim, then highly famed for its asceticism and contemplative pursuits, where she received a wise and judicious cultivation, first under guidance of her teacher Rikkardus, then under the special care and direction of Gerberg, a niece of Otto I and the most accomplished woman of her time, who was later to become her abbess (899–1001). The latter took particular interest in the development of her muse, by the training which she desired "to contribute something to the glory of God."

This is about all that is known of the external life of the first German poetess. Hroswitha shares the lot in this respect of all the poets of olden time: we are far better acquainted with her works than with her personality. Furthermore, the Latin poems of this unassuming nun have had a curious history. After centuries of neglect, they were re-discovered, as is well known, by the poet laureate Conrad Celtes in the Benedictine monastery of St. Emmeram at Ratisbon, and were published in 1501 to the great delight of all lovers of Latin literature, his poetic work of the childlike, pious religious took at first the epic form; there appeared two Biblical poems and six legends. For these she drew upon Latin sources, and used her poetic freedom in the psychological treatment of her characters and their sentiments. The model of her "Legends" (55 hexameters) was taken from Holy Writ, and from the apocryphal Gospel of St. James. This life of Mary was rather closely connected with her poem "Von der Himmelfahrt der Herrn" (150 hexameters). On the other hand the themes of her six legends are quite varied: "The Martyrdom of St. Gangolf" (582 distichs), a Burgundian prince; "The youthful St. Pelagius" of Cordoba, whose recent martyrdom she relates in 414 verses in accordance with reports gathered from eyewitnesses, was a contemporary of hers, hence the realism and impressiveness of the picture; the legend of "Theophilus" (456 verses) is the earliest poetical treatment of the medieval legend of Faust; of a similar tenor is the legend of St. Basil (259 verses), in which an unhappy youth is saved from a diabolical pact; the list closes with the martyrdom of St. Dionysius (286 verses) and that of St. Agnes (459 verses). This last poem, which is based on the biography of the saint as related to St. Ambrose, is written with great fervour. The language is simple but smooth, and frequently even melodious.

But her poetical reputation rests, properly speaking, on her dramatic works. As regards her motives
in adopting this form of literary expression she herself gives sufficient explanation. "Lamenting the fact that many Christians, carried away by the beauty of the play, take delight in the comedies of Terence and thereby learn many impure things, she determines to copy closely his style, in order to adapt the same methods to the exalting of triumphant purity in her story and to depict the victory of vice. A blush often mounted to her cheeks when, in obedience to the laws of her chosen form of poetical expression, she was compelled to portray the detestable madness of unholy love." This last remark applies peculiarly to the case of five of her dramas, the theme of which is sensual love. The pious nun's treatment of her subject is of course on a higher moral plane, and she is skilled in demonstrating the principle, in the midst of rather bold situations, that the greater the emotion, the more admirable is the final triumph of virtue. The most popular work, judging at least from the numerous transcripts thereof, is the "Callimachus." This general of Constantine the Great, while still a pagan, seeks in marriage the emperor's daughter, Constantia, who however has long since consecrated herself as a spouse to the Lord; the suitor becomes converted and suffers a martyr's death. Her second drama is a most singular composition, in which humour and gravity are strangely compounded. "Dulcitius," a prefect under Diocletian, wishes to force three unwilling Christian maidens into marriage with high dignitaries of the Court; he has his victims imprisoned in a kitchen and with evil intention makes his silent way towards them under cover of the night but God punishes him with blindness, and the prefect embraces but sooty pots and pans. Though he does not know it, his appearance as he emerges is that of a coal-burner, and his utter disaster comes up to the merriest of scenes; the three maidens win the palm of martyrdom. In "Callimachus" the violence of passion is carried to a threatened profanation of the dead, which however is miraculously averted is the boldest situation of one of Goethe's "Braut von Corintha" succeeding plays, "Abraham," tell in a touching manner of a fallen woman's conversion. Finally, the last drama relates in a plain and simple way the legend of the martyrdom of the three sisters, Faith, Hope, and Charity, daughters of Wisdom. The literary significance of Hroswitha's dramas has been expressed in a comparison which likens them to snowdrops: "In the very midst of winter they lift their white heads, but they die long ere the advent of spring, and there is none to remember them." Her prolific career as a poetess closed with two greater stories than the achievements of Otto I (Taten Otto I) down to the year 962, and the other celebrating the foundation of the monastery of Gandersheim (Die Gründung des Klosters Gandersheim). Quite a romantic touch is given to this last composition by the number of legends which the author has skilfully woven into it. The eulogy of Otto I, on the other hand, is highly prized by historians, who "find the account given by the poetess of direct assistance in historical work". The poem was written in 967 and was dedicated to the emperor. In addition to that of Celtes, the following are the chief editions of Hroswitha's works: Barack, "Die Werke der Hroswitha" (Nuremberg, 1858) and "Wohlfleisch" (Wittenberg, 1772); Migge, "CXXII, 1196; de Winterell, "Hrosvitha opera" (Berlin, 1902).

Hroswitha presenting Otto the Great and Archbishop Wilhelm of Mainz, from the first printed edition of Hroswit Hercy's works, published by Conrad Celtes in 1501

Haujúapám de León, Diocese of (Haujúapám-Mensis), in the State of Oaxaca, Mexico, erected by Bull of Leo XIII, "Sedes Apostolica" of 25 April, 1902, from parts of the Archdiocese of Oaxaca and the former Diocese (now Archdiocese) of Puebla de los Angeles. The Bull was forwarded on 17 March, 1903, and Dr. Próspero María Alarcón, Archbishop of Mexico, delegated as executor of the Bull, in turn appointed Dr. Francisco Planarte y Navarrete, Bishop of Cuernavaca, as subdelegate. The canonical erection of the new diocese took place on 12 May, 1903, Dr. Rafael Amador having being named bishop on 8 March. Bishop Amador was born at Chila, 4 February, 1856, and studied at Puebla and in the South American Colegio Pio, Rome, where he took the degree of Doctor of Theology. He held various offices in the seminary at Puebla, was pastor and dean (vicario foraneo), and was consecrated bishop, 29 June, 1903, in the cathedral of Oaxaca by the archbishop of that see. At first the diocese was under the immediate jurisdiction of the Holy See, but under the title by which it was taken from the territory of that name, embraced within its limits. When by Bull of Pius X, "Prædecessoris Nostri" of 9 August, 1903, the Diocese of Puebla de los Angeles was raised to the rank of an archdiocese, the Diocese of Mixtecas was assigned to it as suffragan, and by decree of the "Congregatio Conciliari" of 28 November of the same year, the diocese was given the name of the residential seat, Haujúapám de León, in place of Mixtecas. On 4 November, 1905, the new bishop erected the cathedral chapter, consisting of one dignitary (arcipresto), a personatus (lectoral), three canons, and four chaplains; the first diocesan synod was held 10 December, 1906, for the enactment of synodal statutes. According to information given by the bishop's secretary, dated 10 September, 1909, the diocese contains a Catholic population of about 200,000, 36 parishes, 220 churches with about 20 mission chapels, 57 secular and 3 regular priests (Dominicans and 1 Carmelite). The episcopal seminary is an attendant school of the diocesan school, equally divided between interns and externs; 12 are ready for ordination. In the city of Haujúapám are two communities of Carmelite Sisters numbering 11, one in charge of a hospital, the other occupied with the work of teaching.
Huanuco, Diocese of (Huanucensis), suffragan of Lima in Peru. The department of Huanuco contains an area of 14,027 sq. miles, and a population of 145,309 (1896). The capital of the same name (also called San Leon de Huanuco), situated on the left bank of the upper course of the Huallaga, a tributary entering the Amazon on its right, is 6,945 feet above sea-level, and has a population of about 7,500. Huanuco is one of the oldest Spanish colonies of Peru, having been founded as early as 1539 (four years after the foundation of Lima) by Gomez de Alvarado at the instance of Francisco Pizarro. Soon after the erection of the first houses, however, they were leveled to the ground during an uprising of the Indians. After the assassination of Pizarro (1541), Pedro de Puelles was empowered by the governor, Cristobal Vaca de Castro, to lead a new colony into the Huallaga valley. In the course of time the city attained a high degree of prosperity, counting at one time 5,000 inhabitants. The city owed its rapid rise chiefly to the rich silver mines of the neighboring Cerro de Pasco; the wars of the nineteenth century, however, wrought such ravages that at present it is nothing but a wretched town of scattered houses, relying for its support chiefly on the cultivation of fruits, coffee, and sugar-cane. The city contains besides the cathedral on the Plaza, fourteen churches, including those formerly in charge of the Mercedarians, Dominicans (Santo Domingo, not completed), and Franciscans (San Francisco with a gilded altar).

The Diocese of Huanuco was created by Pius IX on 17 March, 1865. He decreed that the (former) department of Junin, consisting of the provinces of Huanuco, Huamalies, Pasco, Tauca, and Tarma, be separated from the Archdiocese of Lima and established as a new diocese, with the seat at Huanuco. The Government undertook to provide for the episcopal menial revenue, and to erect a diocesan seminary and an episcopal palace. With regard to the chapter to be formed, the Bull stipulated that, owing to the dearth of priests, it should consist of only one dignitary and six canons. Mgr. Sebastiano Goyeniche Darreda, Archbishop of Lima, was named executor of the creation, which received the confirmation of the Sacred Heart (Piepus Society), born at Callao, 26 November, 1859, presented by the Government for nomination, 27 February, 1904, preconized 19 August, and consecrated at Lima on 24 August of the same year.

Since then, according to its present delimitation, the Diocese of Huanuco embraces the two departments of Huanuco and Junin, comprising about 37,380 (according to other authorities 41,586) square miles and 539,702 inhabitants, of whom 288,100 are Catholics and the rest for the most part unchristianized Indians. It contains 45 parishes, 210 churches and chapels, and 75 priestly houses. The present bishop of Huanuco is Huanuco Viejo (Old Huanuco), an ancient Inca settlement with the ruins of old Peruvian monuments. These include a temple con-

structed out of massive square blocks of stone, called El Castillo, a royal palace, and extensive ruins of dwellings, with which are connected a series of singular towers along the slope of the hill, used by the early inhabitants as store or provision-houses. Farther inland on the River Posuzo, but within the limits of the department of Huanuco, is the German colony of Posuzo, established in 1856 by Freiherr von Schultze-Hohenhausen; it has about 860 Catholics from the Rhineland and the Tyrol, with their own German pastor.

Huaraz, Diocese of (Huarazensis), suffragan of Lima. It comprises the entire department of Ancash in the Republic of Peru. Originally, Huaraz formed part of the Archdiocese of Lima, but on 15 May, 1859, it was erected into a separate diocese by the Bull "Catholicae Ecclesiae" of Pope Pius IX, and Mgr. Francisco de Sales Soto was made its first bishop (February, 1901), and upon his death (April, 1903) Mgr. Mariano Holguin succeeded to the episcopal chair (October, 1904). In July, 1906, Bishop Holguin was transferred to Arequipa, and the present incumbent, Mgr. Pedro Pascual Farfan, was installed in 1907. The Diocese of Huaraz is divided into 51 parishes, with the episcopal see located in the city of Huaraz, which is the capital of the department of Ancash. The chapter consists of one dean, one canon theologist, one canon penitentiary, and one honorary canon. Ancash is in the northern part of Peru and extends from the Andes to the coast. The chief occupations are agriculture and cattle raising, although silver-mining is carried on, intermittently, in the mountains. It is 17,405 square miles in area and contains a population estimated at 428,000, almost entirely Catholic. The Catholic religion is the state religion, although other forms of worship are not interfered with, and education is compulsory for both sexes.

The city of Huaraz contains a high school, college, and seminary, as well as a hospital which is administered by the Franciscan Fathers. One of the most interesting lands in Huaraz is the Pucacocha, which is inlaid with a collection of sculptured stones, known to have been the handiwork of the ancient Peruvians.

HUBERT 507

HUBERT

sir festen Begründung ihrer Eidgenossenschaft” (Innsbruck, 1862), deal with territorial history. For the celebration of the five-bundredth anniversary of the union of Austria and the Tyrol, he wrote, in 1864, “Geschichte der Vereinigung Tirols mit Oesterreich” and, as a sequel, “Geschichte Herzogs Rudolf IV. von Oesterreich” (Innsbruck, 1865). After the death of Böhmer, the first publisher of the German imperial “Regesta”, his widow proceeded Huber with the means of making several scientific journeys, Ficker, on whom had fallen the responsibility of completing Böhmer’s work, called upon his former pupil to co-operate with him. Huber accepted the task and finished the fourth volume of the “Fontes rerum Germanicarum”, completing its most important records of the fourteenth century. He then worked on the “Regesta” of Charles IV, which appeared between 1874 and 1877 with a learned introduction on the imperial diplomacy of the later Middle Ages. This was followed by a supplement published in 1889. His masterpiece is a “Geschichte Oesterreichs” in five volumes (1885-96), brought down to 1648, and considered an authority on the subject. The last years of Huber’s life were devoted to research on the constitutional and administrative history of Austria, the result of which appeared in his “Oesterreichische Reichsgeschichte” (Vienna, 1895).

Rudolph in Biographisches Jahrbuch, III (1900), 104-110.

PATRICIUS SCHLAGER.

Hubert, Saint, confessor, thirty-first Bishop of Maastricht, first Bishop of Liège, and Apostle of the Ardennes, b. about 656; d. at Fura (the modern Tervueren), Brabant, 30 May, 727 or 728. He was honoured in the Middle Ages as the patron of hunters, and the healer of hydrophobia. He was the eldest son of Bertrand, Duke of Aquitaine, and grandson of Charibert, King of Toulouse, a descendant of the great Pharamond. Bertrand’s wife is variously given as Hugbern, and as Afre, sister of Saint Oda. As a youth, Hubert went to the court of Neustria, where his charming manners and agreeable address won universal esteem, gave him a prominent position among the gay courtiers, and led to his investment with the dignity of “lord of the palace.” He was a worldling and a lover of pleasure, his chief passion being for the chase, to which pursuit he devoted nearly all his time. The tyrannical conduct of Ebroin caused a general emigration of the nobles and others to the court of Austrasia. Hubert soon followed them and was warmly welcomed by Pepin Heristal, mayor of the palace, who created him almost immediately grandmaster of the household. About this time (682) he married Floribanne, daughter of Dagobert, Count of Louvain, and seemed to have given himself entirely up to the pomp and vanities of this world. But a great spiritual revolution was imminent. On Good Friday, when the faithful were crowding the churches, Hubert sallied forth to the chase. As he was pursuing a magnificent stag, the animal turned, and, as the pious legend narrates, he was astounded at perceiving a crucifix between its antlers, while he heard a voice saying: “Hubert, unless thou turnest to the Lord, and leadest an holy life, thou shalt quickly go down into hell.” Hubert dismounted, prostrated himself, and said, “Lord, what should I have to do?” He received the answer, “Go and seek Lambert, and he will instruct you.”

Accordingly, he set out immediately for Maastricht, of which place St. Lambert was then bishop. The latter received Hubert kindly, and became his spiritual director. Hubert, losing his wife shortly after his ordination, renounced all his honours and his military rank, and gave up his birthright to the Duchy of Aquitaine to his younger brother Eudon, whom he made guardian of his infant son, Floribert. Having distributed all his personal wealth among the poor, he entered upon his studies for the priesthood, was soon ordained, and shortly afterwards became one of St. Lambert’s chief associates in the administration of his diocese. By the advice of St. Lambert, Hubert made a pilgrimage to Rome and during his absence, the saint was assassinated by the followers of Pepin. At the same hour, this was revealed to the pope in a vision, together with an injunction to appoint Hubert bishop, as being a worthy successor to the see. Hubert was so much pleased with the idea of himself winning the martyrdom’s crown that he sought it on many occasions, but unsuccessfully. He distributed his episcopal revenues among the poor, was diligent in fasting and prayer, and became famous for his eloquence in the pulpit. In 720, in obedience to a vision, Hubert translated St. Lambert’s remains from Maastricht to Liège with great pomp and ceremony, several neighbouring bishops assisting. A church for the relics was built upon the site of the martyrdom, and was made a cathedral the following year, the see being removed from Maastricht to Liège, which then was only a small village. This laid the foundation of the future greatness of Liège, of which Lambert is honoured as patron, and St. Hubert as founder and first bishop.

Idolatry still lingered in the fastnesses of the forest of Ardennes—in Toxandria, a district stretching from near Tongres to the confluence of the Waal and the Rhine, and in Brabant. At the risk of his life Hubert penetrated the remote lurking places of paganism in his pursuit of souls, and finally brought about the abolition of the worship of idols among the heathendom. Between Brussels and Louvain, about twelve leagues from Liège, lies a town called Tervueren, formerly known as Fura. Hither Hubert went for the dedication of a new church. Being apprised of his impending death by a vision, he there preached his last唠atory sermon, fell back on his bed, and in six days died with the words “Our Father, who art in Heaven ...” on his lips. His body was deposited in the collegiate church of St. Peter, Liège. It was solemnly translated in 825 to the Abbey of Amdain (since called St. Hubert’s) near what is now the Luxembourg frontier; but the coffin disappeared in the sixteenth century. Very many miracles are attributed to him in the Acta SS., etc. His feast is kept on 3 November, which was probably the date of the translation. St. Hubert was widely venerated in the Middle Ages, and many military orders were named after him.
The principal authority for the life was an anonymous author who was a personal acquaintance of the Saint. This is given by BURG, 3 Nov., VI, 50 sq.; AMEND, Kirchenlexikon der Missionsvater (Hanover, 1874); DE SMEDT, La Vie de St. Hubert de Mons en Bullettin de la mission royale d'histoire, V (4th series, Bruges, 1878), no. 3. Also see ROBERT, Hist. S. Huberti (Luxembourg, 1721), 20 sq.; BOUG, Bibliographie de l'histoire des Saints, 3 Nov., Acta SS., 3 Nov.; KESSEL in Kirchenlex., s. v. For further bibliography see CHIVALIER, s. v. C. F. WEMTS BROWN.

Hubert, Jean-François, ninth Bishop of Quebec, b. at Quebec, 23 February, 1739; d. 17 October, 1799; son of Jacques-François, a baker, and Marie-Louise Maranda. After studying classics and theology at the seminary of Quebec, he was appointed six years bishop, in 1787, of the see, after Bishop Pontbriand's death (1760). When the Americans besieged Quebec (1775), he urged several students to join the defenders, and harboured and fed both wounded and prisoners of war. In 1781 he solicited the Huron Mission at Detroit. There, after four years of ministry, the news of his choice for the coadjutorship reached him. He was consecrated in 1786. In 1789 a group of English loyalists emigrated from the United States, planned the scheme of a mixed university, under the name of Royal Institution, for Catholic education. It was to be subservient to the revenues of the Jesuit estates, an organization investing the State with the entire control of education and destined to destroy the faith and nationality of French Canadians. Bishop Hubert, in spite of opposition from unexpected quarters, successfully thwarted the plan. Of his two coadjutors, the first, Mgr. Bailli de Messecan, died in 1794, and was replaced by Mgr. Pierre Denaut (1795). To supply the dearth of priests caused by the change of regime, Bishop Briand had, for thirty years, vainly begged the British Government for permission to recruit the clergy in France. When the Revolution east numerous Frenchmen on England's hospitable shores; several exiled priests were allowed to enter Canada. Bishop Hubert warmly greeted these dejected auxiliaries, who replaced providentially the fast disappearing survivors of the Jesuit and Recollet Orders. In his report to the Propaganda (1794), Bishop Hubert mentions 160 priests, of which 9 were in Nova Scotia and New Brunswick, and 54 in Upper Canada, and 160,000 Catholics, including Indians. While not more than 5 Catholics had apostatized since the conquest of the country, nearly 300 Protestants had joined the Church during the same period. Besides his two coadjutors, he had consecrated the first Vicar Apostolic of Newfoundland, Mgr. de Messecan, S. J., he had 89 priests and 53 priests and confirmed over 45,000 souls. He was the first to suggest the division of his diocese, at the time faster than the whole of Europe.

LIONEL LINDSAY.

Hubert, Military Orders of Saint.—I. Hubert, Military Orders of Saint. The highest order of Bavaria, founded in 1444 or 1445 by Gerhard von Hohenburg, a nobleman and archbishop of Salzburg, was the Order of St. Hubert. The original charter of the order was composed of small horns obtained in the chase; later it was of gold, the forty-two links bearing alternately the representation of the conversion of St. Hubert and I. T. V., the initials of the device of the order. The cross is of gold enamelled in white and is surmounted by a crown. In the side is the figure of the Virgin, the inscription In ornamentque dignitas avtis 1708. On the other side is the inscription Inornamentatque dignitas avtis 1708.

II. An order instituted in 1416 under the name of the Order of Fidelity by the principal lords of the Duchy of Bar, for the purpose of putting an end to the perpetual conflicts between the Duchies of Bar and Lorraine, and uniting them under René d'Anjou. The order, which was to last for five years, was made perpetual in 1422 and placed under the patronage of St. Hubert. The cross of the order bore the image of the Virgin, the obverse bear a cross visible between the horns of a stag; and on the other the figure of the Duke of Bar, with the inscription: Ordo nobilis s. Huberti Barensis, institutus anno 1416. A. du Bouchet, La Brèche de Gotha (1837); de Bury, Dict. des ordres relig. F. M. RUDGE.

Hubert Walter, Archbishop of Canterbury (1193–1205); b. 13 June, 1205; son of Hervey (Herveus) Walter and Matilda de Valoines, whose sister married the celebrated Ranulf de Glanville. The family, which was of Norman descent, held lands in Lancashire and Norfolk. Hubert's elder brother, Theobald Fitz-Walter, accompanied Henry II and John to Ireland, and became ancestor of the Butlers of Ormonde. We first hear of the archbishop as a chaplain in the household of Ranulf de Glanville, and a contemporary of his brother-in-law, Richard de Crouchwood, the chancellor of England. In 1184 and 1185 he appears as a clerk of the exchequer, and in 1186 his name was one of the five submitted to Henry II by the Chapter of York for the vacant archbishopric. The king rejected all five. In 1189 Hubert was acting as chancellor in Maine and was that year chosen by Richard I as Bishop of Salisbury. He was consecrated on 22 October by Archbishop Baldwin of Canterbury. Accompanying Richard on the Third Crusade, he was made, on Baldwin's death, chief chaplain to the whole crusading host. He was, moreover, one of the chief military commanders of the English contingent. After the death and fall of Richard, Hubert was chosen to succeed him. His firmness in putting down disorder and licentiousness in the crusading army, the care he took of the sick and wounded, and his succour of the poorer pilgrims, won him the esteem of the other leaders. He represented the English army when the first pilgrims were admitted to the Holy Sepulchre, and it was to him that Saladin spoke his famous eulogy of Richard. Through his prompt help, an attack of the Saracens on the French while marching on Jerusalem was repulsed, and it was he who prevented the crusade from falling utterly, by concluding a long truce with Saladin during Richard's illness. On the return of the army to Cyprus, Hubert was elected by the pilgrims to the Holy Places, and when the Crusade was ended, it was under his leadership that the army was
conducted in safety as far as Sicily. He visited his
king in prison at Durrenstein and returned to En-
land in 1193, in time to suppress Prince John's attempt
on the crown. By imposing a heavy tax, he suc-
cceeded in raising the funds to ransom the king.

The primate see had been vacant since Baldwin's
death in 1190. Richard ordered the bishops to pro-
cure the election of Hubert Walter. The monks of
Canterbury, threatened in their freedom of election,
chose the king's nominee, before the bishops had had
time to confer with them. Hubert Walter, who had
already been canon of his cathedral, and received the
 pallium on 7 November, 1193. By the end of the year he had been made justi-
ciari. He performed the king's second coronation at
Winchester in April, 1194, and when Richard left
England for good the same year, Hubert became
virtual ruler in his stead. Incessant demands from
the king for money provoked an insurrection, which
the justiciar put down with a firm hand, even violat-
ing sanctuary to punish its leader, William Fitz Os-
bert. In 1197 he negotiated, in Normandy, an al-
liance with Flanders, and a truce between Richard and
Philip of France. Returning to England, he con-
verted Oxford in September, Hubert, before he
put Richard's demand for three hundred knights for
service abroad, or money sufficient to hire as many
mercenaries; each of the barons and bishops was to
contribute his share. St. Hugh of Lincoln and Her-
bert of Salisbury refused, on the ground that their
churches were not bound to raise knights or money for
foreign service. The archbishop dismissed the counci-
il in great indignation. Scarcely had Innocent III
become pope when he requested Richard to allow Hu-
bert to lay aside his secular offices. This the arch-
bishop promptly did, and joined the king in Nor-
mandy, staying with him till his death in 1199. King
John immediately sent him to England to help to
keep the peace till his own arrival. On 27 May he
officiated at the coronation at Westminster and is
said to have laid stress in his speech on the old English
theory of election to the crown. Next day he set the
pope's prohibition at naught, and resumed the chancelleri-
y, yet acting, no doubt, as he thought right, knowing himself to be the one man who could
keep the king in check.

He crowned John and his queen, Isabel, at West-
minster on 8 October, and was present at the Scotch
king's homage at Lincoln in November. In Decem-
ber he went to France on a diplomatic mission,
and in the spring of 1203 went on another mission,
which also proved a failure, through no fault of his.
A quarrel between him and John about this time
csed him to be deprived of office, to which he
was soon, however, restored. In May, 1205, the king
brought together a great fleet and army to cross to the
Continent, with hope of regaining something of the
prestige and power which the loss of his Norman and
French possessions had occasioned. Hubert Walter
and William Marshal, seeing the futility of the project,
prevailed upon him to abandon it. This was the
archbishop's last public political act. On 10 July,
while returning from the Holy Land by the
peace between the monks of Rochester and their
bishop, he was attacked with fever and a carbuncle.
He died three days later at his manor of Teynham.

Hubert was accused, even in his own day, of
forgetting, in his capacity as statesman, his duties as
archbishop. The accusation was no doubt unjust,
and the first to make it was his saintly colleague, Hugh of
Lincoln. For the first five years of his episcopate he
and his chapter, the monks of Christ Church, Canter-
bury, were at bitter strife with one another. One of
the principal causes of dispute between the two par-
ties was the attempt made by Hubert to maintain
at his college of secular canons which had been
founded and endowed by Archbishop Baldwin
out of the enormous superfluous wealth of the

primate see. The college had been founded as a
centre of learning—a rare thing in those days—and
its church was to have no privileges prejudicial
to Canterbury; but the prior and convent appealed, and
Hubert was ordered by papal
Brief to pull down his college. He was a zealous

guardian of the temporalities of his see, and recovered
the manors of Saltwood and of Hythe, and the castles
of Rochester and Tunbridge, lost under Henry II.
The ancient privilege of coining money at Canterbury
was restored to him. His son was also canonized by Richard,
and he was a great benefactor to his cathedral.

Invented with legitimate powers in 1195, he made a visita-
tion of the Province of York and ordered important
measures of reform. Similar measures were made for
the Province of Canterbury in a synod convened by
him at London. His struggle with Giraldus Cam-
brensis and vindication of the primacy of Canterbury
over the Welsh churches is regarded by Gervase of
Canterbury as his chief merit.

R. URBAN BUTLER.

HüBner, Alexander, Count, an Austrian states-
man, b. 26 Nov., 1811; d. 30 July, 1892. He was
brought up at Vienna, and entered the civil service in
the Chancery of State, under Prince Metternich.
The whole life and work of this great statesman
made an indelible impression on his mind and became
the ideal of his life. His great talents soon attracted
the notice of the keen-eyed Chanceller of State, who
sent him on an extraordinary mission to Paris, and
rapidly promoted him to the position of legation in
that city (1837), then named him secretary of legation at
Lisbon (1841) and finally consul general for
Saxony at Leipzig. We may learn from the follow-
ing lines addressed to him by the prince after the
death of Princess Melanie (1854), in what favour
he stood in Metternich's household: 'You, my dear HüBner,
have personally lost in the deceased princess,
who was endowed with the noblest gifts of mind and
heart, a friend—I might almost say a second mother.'
When subsequently Metternich's son published his
father's life from document (in 8 volumes), it was
HüBner who contributed the account of his last days
and death.

In the year 1848, a critical period for Austria, we
find HüBner always occupying the most dangerous
posts. In February he was sent by Metternich to
Milan, where he was arrested at the outbreak of the
revolution and remained a prisoner for three months.
In October, by order of Prince Felix Schwarzen-
berg, he followed the imperial family to Olmütz, where
he was secretary to the prime minister. He prepared
the manifestos on occasion of the accession of
Emperor Francis Joseph to the Crown. His journal
Fünf Jahr meines Lebens (Leipzig, 1848-1849) is the best authority on the most
momentous happenings of that period. In March, 1849,
HüBner was sent to Paris to negotiate with Prince
Louis Napoleon, President of the Republic, about
Italian affairs. In 1851 he became ambassador at
Paris and remained there until 3 May, 1858. In
the two volumes of his journal dealing with this
period we find accounts of Napoleon's coup d'état, the
rise of the Second French Empire, the Crimean War,
the predominance of France in Europe, which in
consequence of the Anglo-French Alliance was felt even
in Italy, and Japan, and finally the unification of Italy.
In 1854 he became baron and in 1857 ambassador to
the court of Napoleon. His mission from 1848 to
1859 ended in the famous New Year's greeting of Napoleon III in 1859, so fateful to Hübner and to Austria: "I deplore that our relations with Austria are not as good as I should desire. I beg you, nevertheless, to convey the message to Vienna that my personal regard for the emperor remains always the same". It is true that Rogge (Oesterreich von Vilagos bis sur Gegenwart, I, 539) asserts that Hübner had led so reticent a life that he took this greeting for a cordial outpouring of the heart. But as early as 1854 Hübner had written: "How can one sleep with a sense of security when one has to deal with a man who during about three hours of Europe from one day, and who, in a bad humour threatens one with revolution?" For Hübner was well aware that the emperor in his youth had made common cause with the revolutionists in Italy, and that he was under obligations to the sects. Hübner's aim was to render the fulfillment of these obligations difficult, and even impossible, for the emperor.

For a short time only (21 August to 22 October, 1859) Hübner was minister of police. From 1865 to 1867 he served as ambassador at Rome. His "Sixtus V" was the fructus of his Roman studies. He sought his information primarily in old and recent sources, rendering in Embassy records. The pope who from the humblest condition in life had risen to the highest of dignities, who had completed the organization of the papal Curia, and finished the dome of St. Peter's, and who had proven himself a great diplomat, specially interested Hübner. In 1871 Hübner made a voyage round the world for the purpose of studying "the struggle between nature and civilization on the other side of the Rocky Mountains, the attempt of remarkable men in the Land of the Rising Sun suddenly to propel their nation along the paths of progress, and the secret but obstinate resistance in the Middle Kingdom [China] to the culture of Europe[...]. As Hübner, owing to his social standing, had every opportunity to see what he desired, while his penetration enabled him to perceive the significance of what he saw, the diary of his travels makes most interesting reading. In 1879, on his return home, he became a member of the Upper House, in which he often spoke on the conservative side. He was seventy-two years of age when he set out for India, not, however, by way of usual route through the Suez canal, but around the Cape of Good Hope. His return journey was made by way of Canada. On his return he was raised to the dignity of a baron (1888). The sequel of his years of travels gave to recollections of the past and to the arrangement of his papers. At last, on 30 July, 1882, he followed into eternity the wife whom he had so greatly mourned, Maria, née von Pilat. His principal works are: "Ein Jahr meines Lebens, 1848-1849" (Leipzig, 1891; tr. Fr.; Paris, 1891; tr. It. Milan, 1898); "Neun Jahre der Erinnerungen eines österreichischen Boten in Paris unter dem zweiten Kaiserreich, 1851-1859" (2 vols., Berlin, 1904); "Life and Times of Sixtus V" (2 vols., Leipzig, 1871; tr. Fr., 3 vols., Paris, 1870; 2nd ed., 1885; tr. London, 1872; tr. It., Rome, 1873; tr. Spanish, 1874; tr. London, 1874; 7th ed., 1891; Fr. tr., 2 vols., Paris, 1873, 5th ed., 1877; Italian, Turin, 1873; Milan, 1877); "Through the British Empire" (2 vols., Leipzig, 1886; 2nd ed., 1891; tr. 2 vols., London, 1886; tr., Fr., 2 vols., Paris, 1886; 2nd ed., 1890).

Huc, Évariste Régis, French Lazzari missionary and traveller; b. at Caylus (Tarn-et-Garonne), 1 June, 1813; d. at Paris, 26 March, 1860. He entered the seminary of the Congregation of the Mission (Lazarets) 5 Sept., 1836, was sent to China in 1839, and landed at Macao, whence he proceeded to the newly created (1840) Vicariate of Tartary-Mongolia, where he resided until 1844. During this year Bishop Martial Moully, Vicar Apostolic of Mongolia, ordered Huc and his brother missionary Joseph Gabet, his senior by five years (b. 4 Dec., 1833), to make a journey of exploration through the territory included in the mission in order to study the customs of the nomadic Mongol tribes to be evangelized.

Accordingly, on 3 Aug., 1844, the two missionaries left their home, called by them Vallée-des-Eaux-Noires (Valley of the Black Waters), a Christian station in the interior, and set out on the long and arduous journey. Huc began an account of the journey (which he afterwards published), and young lama being the only companion of their long and adventurous expedition. They passed through Dolon-nor, Kwei-hwa-ch'eng, the Ordo country, Ning-hia, Ala-shan, crossed the Great Wall, and reached Si-ning, in the Kan-Su Province, they visited the celebrated Buddhist monastery at Kun-Bum, and having joined on 15 October a Tibetan embassy on its return journey from Peking, they finally arrived by the way of Ku-ku-nor, Tsaidam, and the mountains Bayan-Kara, at Lhasa, the capital of Tibet, 29 Jan., 1846, the journey having taken eighteen months. Huc and Gabet were well treated by the Tibetans, but, unfortunately, the Chinese imperial commissioner, Ki-shan, was hostile to them. Ki-shan had been governor-general of the Chi-li province and had entered into negotiations with Captain Charles Elliot during the Opium War, first at Ta-ku, then at Canton; his action being disapproved, he was degraded, sentenced to death, reprieved, as is often the case in China, and sent to Tibet as imperial commissioner. Through his influence Huc and Gabet were expelled from Lhasa, 26 February, 1846, under the charge of a Chinese escort, and were conducted to Ta-Tsen-lu, well received by the Viceroy of Ch'eng-tu, to which they were severely treated by the governors of the Kiang-si provinces. The end of September, 1846, they arrived at Canton, where they were received by the Dutch consul, who advised the French consul at Macao of the return of his countrymen. Since the travels of the Englishman, Thomas Manning, in Tibet (1811-1812), no foreigner had visited Lhasa. The authenticity of Huc's journey was disputed with some appearance of jealousy by the Russian traveller, Prejevalsky, but the Lazarets's veracity has been fully vindicated by Col. Henry Yule (in translation of Prejevalsky, "Mongolia", London, 1876), and especially since Henri-Maurice de L'Ours, who travelled over part of the same ground.

It must be borne in mind that both Huc and Gabet had written relations printed in the "Annales de la Propagation de la Foi" and the "Annales de la Congrégation de la Mission" before the now-famous "Souvenirs d'un voyage dans l'Empire Chinois, en Tartarie et au Tibet" was published at Paris in 1850. The writer of this article collected a number of official papers from the Macao consulate which leave no doubt as to the veracity of the travellers. The success of the "Souvenirs" was great, and the work was translated into English, German, Dutch, Spanish, Italian, Swedish, and Russian. Huc was induced to publish a second work, "L'Empire Chinois" (Paris, 1854), of no value whatever; a later and more useful book is his "Le Christianisme en Chine, en Tartarie et au Tibet" (Paris, 1857-8). Huc left his congregation 26 Dec., 1853. He took an active part in the negotiations that led to the war against Cochin-China in 1858 and the Boxer War.

HENRI CORDIER.

Huebald of St-Amand (HUGBALDUS, UBALDUS, UGBALDUS), a Benedictine monk; b. in 840; d. in 930 or 932. The place of birth of Huebald is unknown. From the few data we have concerning his career we learn that he entered the Benedictine Order in the monastery of St-Amand-sur-l'Émion, near Tournai,
and that he added music to the other branches of study. Later he entered the Abbey of St-Germain-des-Prés, where he continued his musical education. In 883 we find him teaching in the Abbey of St-Bertin. In conjunction with Rémi d'Auxerre, he re-established, in 892, in the Diocese of Reims, the old church schools for singing. Huébald made successful efforts to improve and supplement the music he used in his teaching, and which had changed the rhythm of the melody, but left the singer dependent on tradition for its intervals. After an attempt to make use once more of the Greek notation, he invented the so-called Darsa signs, which both designate the intervals of the melody and serve to indicate definitely the character of the various church modes. But these signs, being clumsy and cumbersome, did not attain lasting favour as a system of notation. Huébald later used lines and the first letters of the Latin alphabet as a means of fixing the intervals of the scale, and in this way became an important forerunner of Guido of Arezzo. Huébald's principal achievement, however, consists in having given a theoretic basis to the custom of adding another melody to the chant of the Church, which custom he called organum, or diaphonia (see Counterpoint; Harmony), thereby laying the foundation for polyphony which developed from it. Huébald's genuine works (of course*) I am unable to quote. Some of the "Intricati", "Musica enchiriadis", "Scholia enchiriadis", and "Commemoratio brevis de tonis et psalmis modulan-"is. On account of the discrepancy between some of the theories contained in the first-named treatise and those taught in the "Musica enchiriadis" and the "Scholia enchiriadis", which belong to a much later date in the life of the author, Huébald's authorship of the last two works has been called in question, without good reason, however, since it has been pointed out that the "Scholia enchiriadis" is written as a sort of commentary or glossary on the author's first treatise and records the points wherein he had modified his theories.

Joseph Otten

Huddleston, John, monk of the Order of St. Benedict; b. at Farington Hall, Lancashire, 15 April, 1608; exact date of death unknown; buried at London, 13 September, 1698. He was the second son of Joseph Huddleston of Farington Hall, Lancashire, and Hutton Johnstone, Somerleyton. All that is contained in his statement made on applying for admission to the English College, Rome, in 1632. This document is given in full in Foley's "Records of the English Province S.J.", but Foley, following Dr. Oliver, confuse Dom John Huddleston alias Sandford, O.S.B., with Father John Stafford, S.J., and has accordingly wrongly reconstructed the Huddleston pedigree to fit in a "Fr. John Huddleston alias Sandford S.J.," who never existed; for the true pedigree see Jackson, "Papers and Pedigrees relating to Cumberland and Westmoreland" (2 vols., Kendal, 1892). In his statement Father Huddleston mentions that he is the son of Ferdinando Huddleston of Mulberry Cottages, near Wrexham, later of Hutton Johnstone, until his thirtieth year. In his thirty-seventh year he was sent to St. Omer's College, and on 17 October, 1632, entered the English College at Rome. It has been stated that he served for some time in the royalist army as a volunteer; in 1642, he was described as "the other John, his second cousin, the son of Ferdinando Huddleston of Mulberry Cottages, near Wrexham, who served under King Charles." On 22 March, 1637, Dom John was ordained priest in St. John Lateran's, and left Rome for England on 28 March, 1639. Doad declares that he was educated and ordained priest at Douai College, Flanders; but his name does not appear in the "Douay Diaries." At the time of writing the "History of the Catholic Church in England" and "History of England," he was still a priest at Douai. He was subsequently in Brussels, where he remained until 1649. In 1651 he was residing at Moseley, Staffordshire, as chaplain to the Whitgreave family. After the defeat at Worcester on 3 September, 1651, Charles II was ordered by Colloquy to Worcester. In Colloquy's stead he was sheltered by the Penderell family, and it was while seeking for some safer hiding place for the king that John Penderell happened to meet Father Huddleston. Accordingly Charles was disguised as a peasant and removed to Moseley during the night of Sunday, 7 September. To guard against surprise Huddleston was constantly in motion, and two of his pupils were stationed as sentinels at upper windows and Thomas Whitgreave patrolled the garden. On Tuesday, 9 September, Cromwell's soldiers came to search the house. The king and Huddleston were hurriedly shut away in the priest's hiding place, and the troops, after first seizing Whitgreave as a fugitive cavalier from Worcester, were eventually convinced that he had not left the house for some weeks and were persuaded to depart without searching the mansion. That night the king left for Bentley, after promising to befriended Huddleston when restored to his former station. On the following day the Benedictines of the Spanish Congregation, being professed while on the mission in England. This event took place before 1661, in which year he was elected to the titular dignity of cathedral prior of Worcester by the General Chapter of the English Benedictines held at Douai. In the next general chapter, held also at Douai in 1666, he acted as secretary. At the Restoration in 1660, Huddleston was invited to live at Somerset House, London, under the protection of the Queen Dowager, Henrietta Maria, shortly after whose death in 1669 he was appointed chaplain to Queen Catherine, with a salary of £200 a year besides a pension of like amount. In 1671, with Dom Vincent Sadler, O.S.B., he visited Oxford, where he made the acquaintance of the eminent antiquary Anthony Hyndesbury, during the disturbances produced by Titus Oates's pretended revelations the House of Lords, by a vote on 7 December, 1678, ordered that Huddleston, Thomas Whitgreave, John Colloquy, and others instrumental in the preservation of his Majesty's person after the battle of Worcester, should for their said service live as freely as any of the king's Protestant subjects, without being liable to the penalties of any of the laws relating to Popish recusants. Barret and Burnett's account of Huddleston was exempted by name from all Acts of Parliament against priests, but this is a mistake, though such an exemption is found in a bill drafted at this period, which, however, never became law.

When Charles II lay dying "upon Thursday the fifth of February, 1684—5, between 7 and 8 o'clock in the Duke of York's room," the Duke of Wharton came to his bedside, saying, "Sire, this good man once saved your life. He now comes to save your soul." Charles received him gladly, declaring that he wished to die in the faith and communion of the Holy Roman Catholic Church. Huddleston then heard the King's confession, reconciled him to the Church and absolved him, afterwards administering Extreme Unction in the Viaticum. On the accession of James II, Huddleston continued to reside with the Queen Dowager at Somerset House. Shortly before his death his mind failed and he was placed in the charge of "the Popish Lord Feversham," one of the few persons present at the death of the king. For a time (see above) he managed his affairs as trustee. To this arrangement is probably due the unusual circumstance that the probate of his will was obtained the day before his funeral. He was buried in the churchyard of St. 

Huddleston
Mary le Strand (Parish Register, MS.). Snow's "Necrology of the English Benedictines" gives 22 September as the date of his death, but this is obviously wrong. Numerous contemporary writers, including Anthony A Wood and Samuel Pepys, mention Huddleston and there seems no reason for supposing that Lay's statement that he was ignorant and illiterate. He published "A short and Plain Way to the Faith and Church" (London, 1688), a little treatise written by his uncle Richard Huddleston, O.S.B., and read by Charles II in manuscript while hiding at Moseley. The work was reprinted containing the same passages written by the late King Charles II., found in his closet after his decease, and "A briefe account of Particulars occurring at the happy Death of our late Sovereign Lord King Charles II". At the end, under a separate title page, is "A summary of Occurrences Relating to the Miraculous Preservation of our late Sovereign Lord King Charles II after the Defeat of his Army at Worcester in the Year 1651. Faithfully taken from the express testimony of those two worthy Roman Catholics, Thomas Whitgraeve [Esq.], and Mr. John Huddleston, Priest of the Order of St. Benedict 1841. The whole work was reprinted by Dolman (London, 1841), as vol. II. of "Discourse on English History" edited by Canon Tierney, and again later (London, 1850). The account of the death-bed of Charles II is also reprinted in the "State Tracts" (London, 1692-3); its truth in every detail is confirmed by the rare contemporary broadside. A true copy of "A late King's Visitant, by Frise [trimester A] (capuchin) F.(riar). Chaplain to the Duke". Several portraits of Huddleston exist; the best, by Houseman, 1685, " statius sue anno 78", is still preserved at Hutton John; another at Sawston Hall, Cambridgeshire, was engraved for the "Laity's Directory" of 1818. Father Huddleston has not spelled his name with a single or double "d" indiscriminately, and at times to have used the name "Denys" (Dionysius) after John, having presumably adopted it on receiving the Benedictine habit.

BRITISH MUSEUM, MSS. Addit. 5871, f. 27b; HUNGERSTROM, Short and Plain Way (London, 1688); BLOUNT, Roscoeal (London, 1660); re-edited with valuable notes by Thomas (London, 1894); Account of the Preservation of King Charles II after Worcester (London, 1666), dictated himself to B. Pepys, with notes by the latter, obtained at personal interviews with Father Huddleston, reprinted in Thomas's ed. of Thomas's Roscoeal; Dolman, Weldon's Chronological Notes of the English Benedictine Congregation (privately printed, Stanbrook, 1881); Catholic Record Society Proceedings, Vol. 7, etc., 1858: Hearne, Thomas Cap Vin- dale (London, 1807), H. 508; Foxe's Book of Martyrs (London, 1570); V. 455, Wood, Autobiography, ed. Bliss (Oxford, 1848), 1: 170; Snow, Necrology of the English Benedictines; Catholic Register; Laity's Directory for 1816 (London, 1815); Barker, The Three Days of Wensleydale: HALMIRIAN SOCIETY; Royal Charters and Charters of the Kings of England; Jackson, Our Late Pedigrees Relating to Cumberland and Westmoreland (Kendal, 1862); Hunter, Roscoeal Tracts (Edinburgh, 1857); Penn, The Flight of the King (London, 1897); Catholic Record Society Proceedings (London, 1905), I.; see also the standard histories for this time.

G. ROGER HUDLESTON.

Hudriser, Mark. See PORT-VICTORIA, Diocese of.

Hudriser, James. See James Thompson, Blessed.

Hueber, Fortunatus, Franciscan historian and theologian, b. at Neustadt on the Danube; d. 12 Feb., 1706, at Munich. He entered the Bavarian province of the Franciscan Reformati on 5 November, 1654. On account of his excellent character and great learning he was appointed to different offices in the order. He was Professor of Theology in Freising from 1670 to 1676; then in 1677 Provincial of Bavaria. In 1679 he was definitor-general and chronicler of the order in Germany, and in 1698 was proclaimed scriptor ordinis. He was also confessor to the ancient and renowned convent of the Poor Clares at Munich, called St. Jacob on the Anger. As commissary of the general of the order in 1675 and 1701 he visited the Bohemian province, and in 1695 the province of St. Salvador in Hungary. He was highly esteemed by the nobility and by royalty, especially by the dukes of Bavaria. The Elector of Cologne appointed Hueber as his theologian. He left after him numerous works, and these, though not of great importance, are the best known and most valuable is of the ecclesiastics of the Franciscan order, arranged according to months and days. He also published a smaller work in German on the same subject, entitled "Beobachtungen over die Geistlichen Gedachtniss aller Heiligen . . . aus denen dreyen Ordens-Ständen . . . S. Francisci" (Munich, 1693). His "Dreyfache Chronick von dem dreyfachen Orden . . . S. Francisci, so weith er sich in Ober- und Nider-Deutschland erstrecket" (Munich, 1686) is very important for the history of the Franciscans in Germany. Amongst his other important works are: "Libellus Thesium de mirabilibus operibus Domini" (Munich, 1665); "Homo primus et secundus in mundum prolatus" (Munich, 1670); "Leben des hl. Petrus von Alcantara" (Munich, 1670); "Saraphische Schule des hl. P. von Alc." (Munich, 1670); "Ornithologia" (Munich, 1677); "Helvatica, Helvethia, Helveticarum . . . Reipublicae" (Munich, 1678), in fol. Written in the same style, but not printed, were his spiritual discourses, "Zoologia moralis", and "Ichthyologia moralis", each in two vols.; "Candor lucis aeternae seu Vita S. Antonii de Padua" (Munich, 1670); "Sanctuarium Praelatorum . . . in Deutschland" (Munich, 1677); "Angelicus-Historicus" (Augsburg, 1697), published in Latin and German, is a contribution dealing with the history of the cult of the angels.

HAUSBERGER, Germania Franciscana, II (Innsbruck, 1789), 475 sqq.; MINGER, Geschichte der Franziskaner in Bayern (Munich, 1806), 146 sqq.

MICHAEL BIEL.
and John I, and the proclamation of the coming of age of Huesca III. Here, too, were buried Alfonso VII. of León, Alfonso III, and Bermudo I. The monastery was often visited by, and received gifts from, the kings and queens.

The characteristic peculiarity, however, which made this monastery famous was its abbess's exercise, for some centuries, of the sacred officium ecclesiasticum by virtue of a privilege from the Popes. The abbesses of Huelgas, in consequence of this privilege, issued faculties to hear confessions, to say Mass, and to preach; they nominated parish-priests, appointed chaplains, granted letters dimissionis, took cognizance of the first instance in all causes ecclesiastical, criminal, and relating to benefices, imposed censures through their ecclesiastical judges, confirmed the abbesses of their subject houses, drew up constitutions, visited monasteries—in a word, they possessed a full ecclesiastical jurisdiction. Don Amanco Rodríguez, who has made a special study of Huelgas, assures us that they never had any other pontiff; but in these rights were specifically granted; but there certainly was the tacit consent of the popes, without which the practical exercise of the jurisdiction would never have been possible under the eyes of the bishops of Burgos and the papal nuncio. Besides, not only the nuncio, but also the chapter of the cathedral, the bishop, and the archdeacon had appeal and rejected appeals unduly made, in order that the abbess might deal with the cases as in first instance. The origin of this privilege, then, must be sought in the king's intervention in the affairs of the Church, in the protection accorded by the abbots of Cluny and by the Roman pontiffs, and in the fact that several infant girls were nuns in the monastery. The royal foundation fell somewhat into decay in the time of Charles I, but afterwards recovered some of its ancient splendour, chiefly in the beginning of the seventeenth century, when Doña Ana de Austria, natural daughter of Don John of Austria, brother of Philip III, became its abbes in perpetuity. From the time of the secularization of church property (Leyes de Desamortización) its support and conservation has been the care of the sovereigns of Spain.

HECTOR, PIERRE-DANIEL, a distinguished savant and celebrated French bishop; b. 8 February, 1630, at Caen (Normandy), where his father, a convert from Calvinism, was sheriff; d. at Paris, 26 January, 1721. He was left an orphan at an early age. While quite young he displayed a great zeal for study, especially for Latin poetry, geometry, and mathematics. After finishing his humanities, he attended lectures in law and acquired a very solid knowledge of it, as his letters testify. He became a passionate lover of Descartes, and was a Protestant minister at Caen, Samuel Bochart, the Oriental scholar, published his "Géographie sacrée", he was powerfully attracted to Biblical studies. Forthwith he began to learn Greek and Hebrew, and formed a friendship with Bochart, who assisted him in his studies. When this savant was called to futility by Queen Christina (1632), he brought young Huet with him. They did not remain there long, but Huet discovered at Stockholm some fragments of a manuscript of Origen, which inspired him with the idea of publishing the exegetical works of the great Alexandrian Doctor. He gave himself up entirely to this labor for fifteen years and hardly ever left Caen, except for a month or two annually, when he went to Paris to study and to renew his acquaintance with members of the learned societies. By his letters, his Latin poems, and his visits he kept up a friendship with Rapin, Chapelain, Labbe, Cossart, Conrat, Pellisson, Vossius, Franciscus, and Cuypers. Queen Christina, who had become a Catholic and resigned her crown, tried in vain to get him to come to Rome, or to undertake the education of her successor, Charles Gustavus. He could not be induced to leave Caen, where he had founded an Academy of Science and was devoting himself to chemistry, astronomy, and anatomy, in addition to studying Arabic and Syriac and engaging in controversy with his old master, Bochart.

In 1670, however, Louis XIV called him to the Court to assist in the education of his son, the Dauphin, with the title of assistant tutor. Bochart being
the tutor. While holding this office, he drew up the plan and directed the preparation of the famous edition of the ancient classics ad usum Delphini. He was elected to the French Academy in 1674. A little later he decided to embrace the ecclesiastical state and was ordained priest in 1674, receiving from the Evêché of Arvon the benefice of Aunay, which he retired to as soon as the Dauphin’s education was completed (1680), and, giving himself up to his studies, wrote a number of works which are mentioned below. In 1685 he was named to the See of Soissons, but before being preconized by the Pope, the king ordered him to return to Paris. On account of the difficulties that arose between France and the Holy See, after the Assembly of 1682 (see Gallicanism), he did not receive his Bulls from Rome until 1692. From that time, notwithstanding his zeal for study, Huet fulfilled his episcopal duties most conscientiously. He made a visitation of his diocese on several occasions, in spite of the difficulties of travelling, and the memorandum of his ordinances is a witness to his zeal. Nothing was neglected; he shows his anxiety for public morality, the education of the young, the care of the churches, the welfare of the hospitals. At the same time he put in practice several projects that had been in mind, and reformed his clergy, giving them three collections of synodal decrees. Further he provided them with an edition of the Breviary, for which he himself composed the hymns. After seven years’ work in this ministry, the rigorous climate and his failing health compelled him, to the great regret of his clergy, to tender his resignation. The king, in return, presented him with the Abbey of Fontenay, near Caen; he took up his residence in the house of the professed Fathers of the Society of Jesus at Paris. Here his time was spent in exercises of piety, in the study of the learned men of the day, and in composing his works. He died twenty years later, at the age of ninety-one, bequeathing his magnificent library to the Jesuits, and leaving the reputation of being one of the most brilliant minds of the century.

He owed this reputation to the immense number of his writings, which were as varied as were his studies. His literary works show him to have inherited and developed the spirit of the sixteenth century, rather than to have identified himself with the mind of the seventeenth century. He has the polish and, at times, the charm of the latter age, with his somewhat antiquated tendencies; he has the old spirit of the true student of philosophy, rather than the refined taste and brilliant diction of Bossuet and Fénelon, whom he was destined to succeed. His historical writings and his works in exegesis display great learning and immense reading, but he does not exhibit in them the critical sense of a Mabillon, the penetration of Richard Simon, nor the talent of Bossuet. Part of his philosophical writings are directed against Descartes, part against the worship of human reason. He reproaches Descartes with a want of logic in his method and with an anti-religious tendency. Bossuet, who was not an advocate of Descartes’s theories, nevertheless, against the injustice and irrelevancy of some of the criticisms of his learned friend. But it was his posthumous work on the limitations of the human mind that drew forth serious protest. In it Huet is a pure fideist. For him, as for Pascal, reason and sense are incapable of bringing us to truth with certainty. He has not hesitated to say that the Jesuits refused at first, in the “Mémoires de Trévoux”, to believe in the authenticity of the work. In this they were mistaken; it certainly was Huet’s; but they were right when they declared that, by decrying human reason as it did, such a work was more likely to weaken than to strengthen the foundations of faith, as its author had intended.

The following is a list of Huet’s writings: (a) Literary,—“De interpretatione libri duo” (Paris, 1661); “L’origine des romans” (Paris, 1670), translated into English (London, 1672); “Carmina latina et greca” (Deventer, 1668); “Lettre a Perrault sur le parallèle des anciens et des modernes” (Paris, 1671); “Lettre a M. de Rouen” (1672); “Essai sur la poésie française” in the “Mémoires de Trévoux” (1711); “Lettres inédites ou publiées” in “Mémoires de l’Académie de Caen” (1900–1). (b) Historical.—“Les origines de la ville de Caen” (Rouen, 2nd ed., 1706); “Histoire du commerce et de la navigation de l’Avenue” (Paris, 1718); “C. F. de l’Académie des inscriptions et belles lettres de Caen” (1719); “De navigationibus ad aum pertinentibus” (Amsterdam, 1718), translated into English by John Aikin (London, 1726). (c) Exegetical or theological.—“Origines commentators in sacram scripturam” (Rouen, 1685); “Demonstratio evangelica” (Paris, 1679); “Questiones Alcantaritae de concordia rationis et fidei” (Caen, 1690); “De la situation du paradis terrestre” (Paris, 1692); “Statuts synodaux pour le diocèse d’Arvanches” (Caen, 1693), with supplements 1695, 1696, 1698; “De navigationibus Salomonis” (Amsterdam, 1698). (d) Philosophical.—“Censura philosophiae cartesianae” (Paris, 1689); “Nouveaux commentaires pour servir à l’histoire de l’esprit humain” (Paris, 1699); “Traité philologique de la faiblesse de l’esprit humain” (Amsterdam, 1723).

D’Olivet, Huciana (Paris, 1722); Nicéon, Mémoires pour servir a l’histoire des hommes illustres (Paris, 1763); Bellert, Histoire de l’Académie Françoise (Paris, 1779); Bartholomez, Huet et le sophisme théologique (Paris, 1849); Florent, Étude sur Daniel Huet (Montpellier, 1849); Boisroche, Huet, Étude d’Arvanches in the Correspondant (1876–7); Urhain and Leveneres (ed.), Correspondance de Bossuet (Paris, 1899).

Antoine DeGroot.
two great German powers to the Revolution and to each other, and accordingly of the dissolution of the Holy Roman Empire of the German Nation. His principal work is entitled: "Diplomatice Verhandlungen aus der Zeit der französischen Revolution" in three volumes (1869-79), of which the first treats of the hostility of Austria and Prussia to the French Revolution down to the Treaty of Campo Formio while the second and third deal with the Congress of Rastatt and the second coalition. The prudish caution in publication among his other works are "Der Krieg von 1799 und die 2. Koalition" (2 volumes, 1904) and "Quellen zur Geschichte des Zeitalters der französischen Revolution" (2 vols., 1900-01).

PATRICIUS SCHLAGER.

Hug, Johann Leonhard, a German Catholic exegete, b. at Constance, 1 June, 1765; d. at Freiburg im Br., 11 March, 1846. After finishing his studies at the Gymnasium of his native town that he went to the University of Freiburg in 1785. He was ordained priest in 1789, and in 1791 became professor of O. T. exegesis in his university; a year later the chair of N. T. exegesis was also assigned to him. His chief works are: "De antiquitate Codicis Vaticani commentatio" (Freiburg, 1810); "Einleitung in die Geschichte der Bibel" (2 vols., 1831); "Das hohe Lied" (Freiburg, 1818); "De Pentateuchi versione Alexandrini commentarius" (Freiburg, 1818); "Gutachten über das Leben Jesu von D. F. Strause" (Freiburg, 1844); "Erläuterung der Buchstabschreiber" (Ulm, 1801). Hug was an independent thinker, a keen student, a man who went to the very root of things. He entered fearlessly into the camp of the critics of the Semler set. He treated N. T. problems from the historical standpoint. From this their own standpoint he struck hard at the critics. His method was to insist on the truly historical study of the New Testament, and to do away with all subjective criticism; the conjectures that one makes should ever have some foundation in the historical facts of either N. T. or other study. Hug brought his historical criticism to its fullest development in his great work on N. T. introduction. Besides the four German editions of this work various translations appeared. Cellerier edited it under the title: "Essai d'une Introduction Critique au N. T." (Geneva, 1823). The third edition of Hug's work was translated into English by Wait under the title: "An Introduction to the writings of the N. T." (London, 1827). Hug fought single combats belonging to no school. Each new edition met the new protagonists of the opposite camp. Every destructive theory and hypothesis were mercilessly attacked by him. The fourth edition of the "Einleitung" was posthumous, but had been got ready by Hug for the press. Therein he made clear his conviction that the destruction of his time had run its course. In Germany no Biblical scholar had more influence in stemming that destructive tide than had Hug. Not only his books but numerous articles by Hug, especially in the Freiburg "Zeitschrift", kept up a constant attack on the arbitrary methods and questionable tactics of the negative critics. Even today the historical studies that Hug made in the New Testament are of value to the thorough student of Holy Writ.

MAIER, Geschichte de auf Hug (Freiburg, 1847).

WALTER DRUM.

Hug, Saint, called Little Saint Hugh of Lincoln, was the son of a poor woman of Lincoln named Beatrice; b. about 1246; d. in 1255. The Jews of Lincoln are said to have crucified him, his body, bearing the marks of crucifixion, being found some days after his death, at the bottom of a well belonging to a Jew named Copin. Copin was accused of having enticed the child into his house. A large number of Jews were gathered together, and they are said to have tortured the child and have crucified him with thorns, and crucified him in mockery of Christ's death. The story goes on to say that the earth refusing to cover Hugh's body, it was cast into a well. Some time after the child had been missed, his playfellows told his mother how they had seen him follow the Jew. On going to Copin's house, she discovered the body. The accusers were sentenced to death and the crime was avenged. Miracles were said to have been wrought at the child's tomb, and the canons of Lincoln translated the body from the church of the parish to which Hugh belonged, and laid him in their cathedral. Copin was put to a cruel death and eighteen Jews were hanged at Lincoln, while about ninety were imprisoned in London. These were found guilty and condemned to death, but they were released on the payment of a large fine.

The martyrdom of St. Hugh became a very popular subject for the ballad poetry of the Middle Ages, and we find a reference to it in Chaucer's "Prioresses Tale". Whether there was any basis of truth in the accusation against the Jews there is now no means of ascertaining. There seems to be little doubt that such accusations were sometimes made for the purpose of extorting money. A discussion of the matter will be found in the article on St. William of Norwich. The feast of "Little St. Hugh" was held on 27 July. Acts SS., July, VI, 594: MATTHEW PARRIS, Y, 616-19, 548; 551 in Rolla Series, Annales Mororum Archbishops of Burton and of Waverley, ibid.: Letters of Henry III, 2, ibid.

R. URBAN BUTLER.

Hugh Capet, King of France, founder of the Capetian dynasty, b. about the middle of the tenth century; d. about 996, probably 24 October. He was the second son of Hugh the Great, Count of Paris, and Hedwig, sister of Otto I, German Emperor, and was about ten years old when he inherited from his father the Countship of Paris and the Duchy of France. About 970 he married Adelaide of Aquitaine, and as early as 985 the famous Gerbert wrote: "The Carolingian Lothair governs France only in name. The king of France is Hug." When Louis V died, 21 May, 987, the assistance of Adalberon, Archbishop of Reims, and of Gerbert, brought about the election of Hugh. The Archbishop Senlis listened to a discourse of Adalberon: "Crowne the Duke", he said, "he is most illustrious by his exploits, his nobility, his forces. The throne is not acquired by hereditary right; no one should be raised to it unless distinguished not only for nobility of birth, but for the goodness of his soul". A unanimous vote ratified this discourse, and Hugh Capet was crowned at Noyon, 3 July, 987. Thus his accession, as M. Luchaire says, was above all "an ecclesiastical achievement". Hugh possessed towns and estates in the vicinity of Paris, Orleans, and in the district of Senlis and Chartres, Tournai and Anjou, but on the whole these were inferior to the vassals on the borders of the Seine and the Loire. He contested his authority. His military power was mediocere, and he had frequently to seek military aid in alliance with Normandy. But he possessed moral power and a political influence which reached the more remote parts of the kingdom and by foreigners. His chief concern was to maintain over the Archdiocese of Reims, whose jurisdiction comprised nearly the whole of northern and northeastern France, a continuous, immediate, and uncontested authority. The Archdiocese of Reims possessed a double importance, first because the archbishop had the right to elect and crown the kings of France, and next because of its geographical situation between France and Germany. The death of Adal-
Hughes, John, fourth Bishop and first Archbishop of New York, b. at Annalongham, Co. Tyrone, Ireland, 24 June, 1797, of Patrick Hughes and Margaret McKenna; d. in New York, 3 January, 1864. His father, a farmer of limited means, emigrated to the United States in 1816, and settled at Chambersburg, Pa. John's early education was received at a school in Auehr, and later in Auchenacer, near his native village. Though he felt called to the priesthood, circumstances did not permit him to continue his studies; being disinclined to farm life, he was placed with a friend of his father to study horticulture. He followed his father to America in 1817, landed at Baltimore, and soon after went to Chambersburg, where he aided his family for a year or more. His ardent desire to become a priest brought him in 1819 to Mount St. Mary's College, Emmitsburg, Md., which he entered as an employee, being received a year later as a postulant. The priest of the place, the Rev. John O'Donovan, being removed by imprisonment of Charles of Lorraine and of Aron (29 March, 1991), and the deposition of Aron pronounced at the Council of St. Basle, fixed by M. Lot at 17 and 18 June, 991 (and not 993), assured the maintenance of the Capetian dynasty. Gerbert became Archbishop of Reims (29 March, 991).

This revolution accomplished by a council was received by the papacy with reserve. When Hugh Capet requested the Holy See to legitimize the action of the council, John XVII was silent; later, under the influence of Germany, the pope refused formally to recognize the election of Gerbert. Then began the difficulties which led the bishops devoted to Hugh to profess certain "Gallican principles." Nevertheless, Hugo must not be represented as wishing to found a State Church; what he wished was to maintain the Archdiocese of Reims under the domination of France, and to remove it from the influence of the Holy See. If his attitude to the papacy was often suspicious, it was not due to a Gallican theology, but because he feared that the popes of the time were too subservient to the policy of the emperors; hence his relations with the Holy See were merely an episode in his general policy destined to bring about the cessation of the powerful influence which the Saxon dynasty had exercised over France during the tenth century.

His domestic policy was very favourable to the development of monastic life and the autonomy of the monasteries. He defended their property against lay tyranny; he sought to remove them from episcopal jurisdiction while upholding the royal right to confirm abbatial elections; he supported all the liberties of the monks in the exercise of their electoral rights; he renounced the custom of distributing abbey revenues among benefices to laymen. Because of its political importance he wished to retain effective direction over the monastic houses of St. Martin at Tours, and to oppose the reign of the Plantagenet Henry II the Capetians preserved considerable influence at Tours and along the Middle Loire. The death of Hugo Capet it is worthy of note that because the Dukes of France had in their possession the famous cappe (capua) of St. Martin, the Holy See revoked the indulgence to Hugh the Great, and to his son Hugo the surname of Capet, which in history is reserved exclusively for the subject of this article. Hugo Capet, in his religious policy applied and favored the ideas of reform upheld by the monks of Cluny.

GEORGES GYOD.
school fund provided by the municipality. He based his objection to this society on the ground that it violated a fundamental American principle, namely, freedom of education. Catholic schools might be recognized as part of the public system of education which ignored, undermined, or opposed the religious faith their conscience dictated to be true. After a two years' unceasing contest, he finally brought about the overthrow of the Public School Society. He had hoped, and Governor Seward was kind of disposed, that the Legislature might be so truly American as to sanction and support separate Catholic schools. Religious animosity proved too bitter. The bishop's hopes were not realized. The establishment of the present public schools followed, which, likewise failing to satisfy Catholic conscience, led the bishop to lay the foundation, on a firm basis, of the Catholic Schools anti-Catholic outbreak of the "Native American" political party occurred in 1844, in Philadelphia, where churches and convents were destroyed. A meeting of this party was announced to take place in New York City. Apprehensive that the result would be a riot, the bishop called personally on the mayor of the city to prevent the meeting, warning him of the consequences if any anti-Catholic outrage were attempted. He at the same time solemnly cautioned his flock against violence, but took measures to resist any possible attacks against churches. His fearless and determined attitude prevented the holding of the meeting and averted disturbance of the peace. Ten years later the "Know-nothing" faction became active. He again advised his people to keep aloof from centres of trouble. He was deeply convinced that all such movements, being ant-Amercian as they were anti-Catholic, could not possibly thrive in the United States.

Few public men of his day possessed a more statesmanlike grasp of the genius of the American Republic. He had unbounded confidence in its institutions, when their very existence was precarious. He looked upon America as a land of promise opened by a beneficent Providence to the oppressed of the nations. No one could question his own abiding love of his native soil; but he would not permit this love to make him lament as an exile of Erin when he might rejoice as an American citizen. Thus he taught his people. So far-seeing was he in this respect that he looked with passionate interest on the efforts we are making here to perpetuate a free and equal condition of all citizens. His towering character, genius for government, and intense patriotism won for him the respect and affection of his opponents, the esteem and even the life-long friendship of distinguished statesmen. President Polk, through Secretary Buchanan, in 1846, proffered him a diplomatic mission to Mexico, which he was unable to accept. On invitation of John Quincy Adams, Stephen A. Douglas, and John C. Calhoun, he lectured in 1847 before Congress in the Capitol, Washington, his topic being "Christianity the only Source of Moral, Social, and Political Regeneration". At the outbreak of the Civil War, although a pronounced abolitionist, he boldly sustained the Union cause, and was in frequent communication with William H. Seward, Secretary of State, to whom he offered useful suggestions on the conduct of the war. President Lincoln, in an autograph letter, expressed his appreciation of the counsel given him. Seward recognized him as "one of the most faithful of the North" in a friendly attitude towards the Federal Government, entrusted the archbishop with an important mission to the Court of Napoleon III, who received him most graciously, and was dissuaded by him from recognizing the Confederacy. On this visit to Europe, wherever he went, he left nothing undone to create sympathy for the Union side. During the Draft Riots of 1863 in New York City, Governor Seymour invoked the aid of the archbishop to suppress disorder, to which invitation, though he was fatally broken in health, he willingly responded, addressing a large assemblage from the balcony of his residence.

His loyalty to his adopted country was well balanced and finely adjusted to the duties and responsibilities of his sacred office. He exercised the strictest vigilance lest American liberty might engender liberal influences tending to minimize the doctrine and discipline of the Catholic Church. He unsparedly condemned those who, through fear of anti-Catholic feeling, were disposed to conciliate their opponents by seemingly harmless concessions. He was intolerant of the slightest modification in religious liberty sanctioned by the Supreme Head of the Church. He believed that adherence to Catholic faith should be bold, fearless, outspoken, and uncompromising in the extreme, and especially so in the face of opposition. Pius IX, exiled in 1846 and again threatened in 1860, found the archbishop one of the staunchest defenders of the Holy See. Strong agencies of power and influence were conspiring against the temporal sovereignty of the pope, and this alarming condition intimidated not a few Catholics into a policy of silent and ineffective sympathy; others somewhat less timid favored action, but of a conservative character. The archbishop approved of no such methods, and boldly proclaimed himself an uncompromising supporter of the Vicar of Christ and his lawful authority in the Church. By appeal, sermon, lecture, and pastoral letter he aroused his flock at home to unbounded enthusiasm, and stirred Christendom abroad in a masterly vindication of the temporal independence of the sovereign pontiff. He raised in 1860 the princely sum of $50,000, as an offering from his diocese to the Holy Father; and his pastoral letter, circulated throughout Europe and translated into Italian, afforded solace to the afflicted soul of Pius IX.

Conjointly with all this prominence and activity demanded by public and vital interests of Church and nation, the archbishop followed faithfully and zealously the exacting life of a hardworking missionary. He was indefatigable in the upbuilding of his diocese. In 1842 there were some forty priests, fifty churches, and 200,000 Catholics scattered over his jurisdiction, which embraced the State of New York and the eastern part of New Jersey. Bishop McGlorey, later the first Bishop of Albany, was Coadjutor of New York from 1844 to 1847. Albany and Buffalo were erected into episcopal sees in 1847; Brooklyn and Newark in 1853. Besides these four separate dioceses made within the original territory of the Diocese of New York, the archbishop before his death in 1864 ruled 150 priests, 85 churches, 3 colleges, 50 schools and academies, and over 400,000 people. He stated in 1858 that he had dedicated his ninetieth church. As metropolitan, created in 1856, he presided over New York, New Jersey, and all New England, with suffragan sees at Albany, Buffalo, Brook-
Hugh Faringdon (see Cook), BLESSED, English martyr; b. probably at Faringdon, Berkshire, date unknown; d. at Reading, 15 November, 1539.

The name of his probable birthplace is also the surname by which he is generally known, but he bore the name of Cook of Kent. He was elected Abbot of Reading in July, and confirmed in Sept., 1537. King Henry III was his guest on 30 January, 1521, and he later became one of the royal chaplains. Among Henry's New Year gifts in 1532 was £20 in a white leather purse to the Abbot of Reading. Faringdon sat in Parliament from 1523 to 1539. In 1538 he signed the articles of faith passed by Convocation at the king's desire, which virtually acknowledged the royal supremacy. On Sunday, 4 November, 1537, he sang the requiem and dirge for Queen Jane Seymour, and was present at the burial on 12 Nov. As late as March, 1538, he was in favour, being placed on the commission of the peace for Berkshire; but in 1539, as he declined to surrender the abbey, it became necessary to attain him of high treason. As a mitred abbot he was entitled to be tried by Parliament, but no scruples troubled the chancellor, Thomas Cromwell. His death sentence was passed before his trial began.

With him suffered John Eynon (or Onyon), a priest of St. Mary's, Reading, and Robert Rugge, a former fellow of the two St. Mary Winton colleges and the first holder of the Wykehamical prebend "Bursalis" at Chichester, who had obtained a dispensation from residence and was living at Reading in 1532.

Hugh of Digne, Friar Minor and ascetical writer; b. at Digne, south-east France, date uncertain; d. at Marseilles about 1285. His close friend and fellow-religious, Thomas Salimbene, who ranked high for a great deal of what is known of his life, refers to him in his Chronicle as "one of the most renowned clergy of the world, a great preacher and in favour both among the clergy and the people; ever ready to dispute, he was possessed of a fluent speech, and a voice like that of a trumpet; he was a spiritual man ultra modum, so that men heard his preaching, and when he was listening to another St. Paul or another Elias," Salimbene also tells us that he was called Hugh of Barbola and that the Lombards knew him as Hugh of Montepulciano. Joinvilliers, in his life of Louis IX (Acta SS., August, V, xxvii), records the visit of Hugh of Digne to the king of France, with whom he was conversing, and was heard preaching that he endeavoured to retain him at court, but the saintly friar refused to remain; and on the
following day set out again on his tour of evangelisation. It was while on a similar journey that he wrote to Blessed John of Parma, who was then at Grecfio, prophecying in his letter, among other things, the death of the pope and of St. Bonaventure, and the extinction of the Order of the Carthusians.

What may be said of the influence of the prophetic writings of the Abbot Joachim of Flora upon Hugh of Digne, which as in the case of his friend Salimbene in his early days was perhaps not incon siderable, it is certain that he took an active and prominent part in the movement of the "Spirituals". This statement is not only based upon the evidence of his own writings, but more particularly from his exposition of the Rule of St. Francis and from his other ascetical writings. Among the latter may be mentioned the "Tractatus de triplex via in sapientiam pervenireti?", attributed to him by Bartholomew of Pisa in his "Conformities", but not to be confused with the "Incendium Amoris" of St. Bonaventure, which in several codices bears a similar title. He likewise drew up a set of rules or constitutions for his sister, Blessed Douceline, and other pious women, who formed a sort of religious community known as the Dames de Roubans, with Bishop of Digne as their superior, and which was not only based upon the Rule of St. Claire, but more particularly from his exposition of the Rule of St. Francis and from his other ascetical writings. Among the latter may be mentioned the "Tractatus de triplex via in sapientiam pervenireti?", attributed to him by Bartholomew of Pisa in his "Conformities", but not to be confused with the "Incendium Amoris" of St. Bonaventure, which in several codices bears a similar title. He likewise drew up a set of rules or constitutions for his sister, Blessed Douceline, and other pious women, who formed a sort of religious community known as the Dames de Roubans, with Bishop of Digne as their superior, and which was not only based upon the Rule of St. Claire, but more particularly from his exposition of the Rule of St. Francis and from his other ascetical writings.

A brief biographical sketch of Hugh of Digne in Spanish, which is of indifferent critical value, was published in the "Chronica Seraphica" by Damian Carnejo, who asserts that Hugh of Digne died at Marseilles, where his remains now rest in the Franciscan church of that city beside those of his sister, Blessed Douceline.

STEPHEN M. DONOVAN.

Hugh of Flavigny, Benedictine monk and historian; b. about 1004, probably at Verdun (Lorraine); d. before the middle of the twelfth century. He belonged to a prominent family, and received his education at the monastery of St-Vannes at Verdun, where he afterwards took the habit of a Benedictine novice. As Bishop Dietrich of Verdun was a supporter of the emperor and his antipope, Clement III, the Abbot of St-Vannes, who supported the pope, was forced to leave his monastery. He went to the Abbey of St-Bénigne at Dijon, where he was followed by nearly all the monks of St-Vannes, including the abbot. The latter made his vows before the Abbot Jarento, a strong adherent of the ecclesiastical party and an enthusiastic personal friend of Pope Gregory VII. Abbot Jarento soon gave Hugh his entire confidence; Archbishop Hugh of Lyons was also most friendly to wards the young monk and often requisitioned his services. In 1096, notwithstanding his youth, Hugh was elected Abbot of Flavigny, but soon became involved in disputes, not only with the Bishop of Autun, in whose diocese he was, but also with his own monks, who wished to make use of all, even dishonest, means in the pope's behalf. On account of these differences, he was obliged on two occasions to flee, and finally to abdicate, although the Council of Valence (in 1100) ordered him to be reinstated. These bitter experiences gradually brought about a complete change in his politico-religious views on the question of investitures. From a zealous, self-sacrificing champion, he became a decided opponent of the papacy, and even going so far in his opposition as to accept from Bishop Richard of Verdun, a follower of the emperor, the dignity of Abbot of Verdun, after Abbot Lauren tius, who supported the pope, had been quite illegally dispossessed. But he only succeeded in maintaining this position from 1111 to 1114, after which he seems to have lived in strict seclusion at Verdun as a simple monk.

As early as his sojourn at Dijon, probably at the instance of Abbot Jarento and Archbishop Hugh, he had begun a chronicle of the world's history from the birth of Christ down to his own times (Chronicon Virdunense seu Flaviniiscense). This we possess in two books: the first, which extends to the year 1073, is little more than a loosely planned compilation, and its importance is entirely due to the fragments of older lost works which it contains; the second covers the years from 1002 to 1112 and is valuable especially for the history of Lorraine, and also for the ecclesiasti cal history of France. With wide erudition he collected a great mass of materials, and, while his style became too unwieldy, he abandoned the annalist form for full and detailed narrative. In this manner he brings out in relief the "Acta Gregorii VII"; "Series Abbatum Flaviniiscensem"; "Vita beatii Richardi, abbatis S. Vitori", and "Vita S. Magdalvi". His account of the election of Victor III is a masterpiece for his period. In general, however, he cannot be said to control his materials. Making no attempt at arrangement, he quotes original documents, his own experiences, or the testimony of others, to whose tales he often gives more credit than they deserve. A complete edition of his works is given in "Mon. Germ. Hist.: Script." VIII, 285-502, and in Migne's P. L., CLIV, 21-404.

GREGORIAN, L'abbaye de Flavigny, ses historiens et ses historiennes (Autun, 1888); WATTENBACH, Deutschland Geschichtsquellen, II (1894), 134-136.

PATRICIUS SCHLAGER.

Hugh of Fleury (called also Hugo a Sancta Maria, from the name of the church of his native village), Benedictine monk and ecclesiastical writer; d. not before 1118. He is known only by his writings. (1) In 1109 he compiled an ecclesiastical history in five volumes, up to the death of Charles the Great (814). In the following year he made an edition of the work in six volumes, arranging the contents in a better manner, adding notes, especially of a theological nature, and omitting a few things, bringing it up to 855. It appeared in print for the first time at Münster, in 1698, edited by Bernhard Rottendorf. This contains also a letter to Ivo of Chartres and a preface to King Louis the Fat. It is in Migne, P. L., CLXIII.

(2) A book narrating the "acts of the Frankish kings" (842-1108). (3) A chronicle of the kings of France from Pharamond, the legendary first king, to Philip I (1108). In French this is in the Guizot collection, VII, 65-82. While as Dietrich of Verdun the latter made his vows before the Abbot Jarento, a strong adherent of the ecclesiastical party and an enthusiastic personal friend of Pope Gregory VII. He was also most friendly towards the young monk and often requisitioned his services. In 1096, notwithstanding his youth, Hugh was elected Abbot of Flavigny, but soon became involved in disputes, not only with the Bishop of Autun, in whose diocese he was, but also with his own monks, who wished to make use of all, even dishonest, means in the pope's behalf. On account of these differences, he was obliged on two occasions to flee, and finally to abdicate, although the Council of Valence (in 1100) ordered him to be reinstated. These bitter experiences gradually brought about a complete change in his politico-religious views on the question of investitures. From a zealous, self-sacrificing champion, he became a decided opponent of the papacy, and even going so far in his opposition as to accept from Bishop Richard of Verdun, a follower of the emperor, the dignity of Abbot of Verdun, after Abbot Lauren tius, who supported the pope, had been quite illegally dispossessed. But he only succeeded in maintaining this position from 1111 to 1114, after which he seems to have lived in strict seclusion at Verdun as a simple monk.

Hugh of Lincoln, SAINt, b. about the year 1135 at the castle of Avalon, near Penthinch in Brittany; d. at London, 16 Nov., 1200. His father, William, Lord of Avalon, was sprung from one of the noblest of
Burgundian houses; of his mother, Anna, very little is known. After his wife's death, William retired from the world to the Augustinian monastery of Villard-Benoît, near Grenoble, and took his son Hugh with him. Hugh became a religious and was ordained deacon about the age of nineteen. In 1169 he was sent as prior to the cell, or dependent priory, of St-Maximin, not far from his ancestral home of Avalon, where his elder brother William had succeeded his father. At St-Maximin Hugh laboured assiduously in preaching and in whatever pastoral duties might be assigned him by a desirous bishop. Becoming more and more desirous to give himself to the complete contemplative life, he visited in company with the prior of Villard-Benoît the solitude of the Grande Chartreuse. Dom Basil was then head of the Chartreuse, and to him Hugh confided his desire of submitting to the Carthusian rule. To test his vocation the prior refused him any encouragement, and his own superior, alarmed at the idea of losing the flower of his community, took him back quickly to Villard-Benoît, and made him vow to give up his intention of joining the Carthusians. He submitted and made the promise, acting, as his historian assures us, "with a pious and religious hope of regeneration, placing his confidence in God, and trusting that God would bring about his deliverance"; his call to a higher life was yet doubtful, his obedience to one who was still his superior was a certain duty, and not a "sinful act", as his modern Protestant biographer. Realizing that his vow, made without prior deliberation and under the strongest emotion, was not binding, he returned to the Grande Chartreuse as a novice in 1153. Soon after his profession the prior entrusted him with the care of a very old and infirm monk from whom he received the instruction necessary to prepare him for the order of subdeacon and deacon. He was probably ordained a subdeacon at thirty, the age then required by canon law. When he had been ten years a Carthusian he was entrusted with the important and difficult office of procurator, which he retained till the year 1180, leaving the Grande Chartreuse then to become prior of Witham in England, the first Carthusian house in that country. It was situated in Somerset and had been founded by Henry II in compensation for his having failed to go on the crusade imposed as a penance for the murder of St. Thomas of Canterbury. The first two priors had succumbed to the terrible hardships encountered at the new foundation, where the monks had not even a roof over their heads, and it was left to Hugh, one of the English king that St. Hugh, whose fame had reached him through one of the nobles of Maurienne, was made prior. His first attention was given to the building of the Charterhouse. He prepared his plans and submitted them for royal approbation, exacting full compensation from the king for any donations on the royal estate who would have to be evicted to make room for the building. Long delay was occasioned by the king's parsimony, but the Charterhouse, an exact copy of the Grande Chartreuse, was at last finished. Henry placed the greatest confidence in St. Hugh, frequently visiting Witham, which was in the borders of Savoyswood, one of the monach's favourite hunting-places. The saint was fearless in reproving Henry's faults, especially his violation of the rights of the Church. His keeping of seas vacant in order to appropriate their revenues, and the royal interference in elections to ecclesiastical posts evoked the sternest rebukes from Hugh.

In May, 1180, Henry summoned a council of bishops and barons at Eyneham Abbey to deliberate on affairs of state in general. The filling of vacant bishoprics was determined on, and, among others, the canons of Lincoln, who had been without a bishop for about twenty years, were ordered to elect. After some discussion, their choice fell on the king's nominee, Hugh, prior of Witnham. He refused the bishopric because the election had not been free. A second election was held with due observance of canon law—this time at Lincoln, and not in the king's private chapel—and Hugh, though chosen unanimously, still refused the bishopric till the prior of the Grande Chartreuse, his suitor, had given his consent. This being obtained by a special embassy, the prior, it was said, he was consecrated in St. Catherine's chapel, Westminster Abbey, on 21 September, 1181, by Archbishop Baldwin of Canterbury. He was enthroned in Lincoln cathedral on 29 Sept. The new bishop at once set to the work of reform. He attacked the iniquitous feast laws. He released the king's chief forester. In addition to this, and almost at the same time, he refused to install a curiotor whom Henry had recommended as a prebendary of Lincoln. The king summoned him to appear at Woodstock, where the saint softened the enraged monarch by his ready wit, making him approve of his forester's excommunication and the refusal of the prebend's stall. He soon became conspicuous for his unbounded charity to the poor, and it was long remembered how he used to tend with his own hands people afflicted with leprosy then so common in England. As bishop of the see of Lincoln, Hugh left the diocese, became personally acquainted with his priests, held regular canonical visitations, and was most careful to choose worthy men for the care of souls; his canons were to reside in the diocese, and if not present at Lincoln were to appoint vicars to take their places at the Divinity Office. The following year he retired to Witnham to give himself to prayer, far from the work and turmoil of his great diocese.

In July, 1188, he went on an embassy to the French king, and was in France at the time of Henry's death. He returned the following year and was present at Richard I's coronation in 1189. He was in conflict with Longchamp, Bishop of Ely and justiciary, and in 1190, when the bishop commanded him to obey, and in 1194-5 was a prominent defender of Archbishop Geoffrey of York, in the dispute between that prelate and his chapter. Hugh was also prominent in trying to protect the Jews, great numbers of whom lived in Lincoln, in the persecution they suffered at the beginning of Richard's reign, and he put down popular violence against them in several places. In Richard I Hugh found a more formidable person to deal with than his predecessor had been. His unjust demands, however, he was resolved to oppose. In a council held at Oxford, in 1193, the archbishop Hubert of Champagne and the bishops and barons a large grant of money and a number of knights for the king's foreign wars. Hugh refused on the ground that he was not bound to furnish money or soldiers for wars undertaken outside England. His example was followed by Herbert of Salisbury, and the archbishop had to yield. Richard flew into one of his fits of rage, and ordered the confiscation of Hugh's property, but no one dared to lay hands on it. The saint journeyed to Normandy, met Richard at Château-Gaillard and, having won the monarch's forgiveness and admiration by his extraordinary courage, promptly refused to rebuke him for his faults—his infidelity to his wife, and encroachments on the Church's rights. "Truly," said Richard to his courtiers, "if all the prelates of the Church were like him, there is not a king in Christendom who would dare to raise his head in the presence of a bishop." Once more St. Hugh had to oppose Richard in his demands. This time he successfully obtained from the chapter of Lincoln. Crossing again to Normandy he arrived just before the king's death, and was present at his obsequies at Fontevrault. He attended John's coronation at Westminster in May, 1199, but was soon back in France aiding the king in the affairs of state. He visited the monastery of St. Pierre, in the summer of 1200 and was received everywhere on the journey with tokens of extraordinary.
respect and love. While returning to England he was attacked by a fever, and died a few months afterwards at the Old Temple, the London residence of the bishops of Lincoln. The primate performed his obsequies in Lincoln cathedral, and King John assisted in carrying the coffin to its resting-place in the north-east transept. In 1220 he was canonized by Honorius III, and his remains were solemnly translated in 1280 to a conspicuous place in the great south transept. A magnificent golden shrine contained his relics, and Lincoln became the most celebrated centre of pilgrimage in the north of England. It is not known what became of St. Hugh's relics at the Reformation; the shrine and its wealth were a tempting bait to Henry VIII, who confiscated all its gold, silver, and precious stones, “with which all the simple people be moch deceaved and broughte into grete superstition and idolatrye”. St. Hugh's feast is kept on 17 November. In the Carthusian Order he is second only to St. Bruno, and the great modern Charterhouse at Parkminster, in Sussex, is dedicated to him.

Like most of the great prelates who came to England from abroad, St. Hugh was a mighty builder. He rebuilt Lincoln cathedral, ruined by the great earthquake of 1185, and, though much of the minster which towers over Lincoln is of later date, St. Hugh is said to have completed the four bays of the choir, one of the finest examples of the Early English pointed style. He also began the great hall of the bishop's palace. St. Hugh's emblem is a white swan, in reference to the beautiful story of the swan of Stowe which contracted a deep and lasting friendship for the saint, even guarding him while he slept.

R. URBAN BUTLER.

Hugh of Remiremont (surnamed Candidus or BLANCUS), cardinal, born of a noble family, probably in Lorraine, about 1030. He became a canon at Remiremont, whence he was summoned to Rome by Leo IX and created Cardinal-Priest of San Clemente in 1049. He was a shrewd diplomat, but loyal to the pope only as long as it was to his own advantage. After the death of Nicholas II in 1061 he adhered to the antipope Cadalus, but submitted to Clement II in 1047. In 1072, later he was sent as legate to Spain. On his way thither he presided over synods at Aachen, Toulouse, Gerona, and Barcelona. In Spain he was successful in enforcing celibacy among priests and introducing the Roman in place of the Mozarabic Liturgy, but being accused of simony was recalled to Rome. In 1072 he was sent as legate to France, where he again committed acts of simony. He succeeded, however, in exculpating himself before Alexander II and his successor Gregory VII. He had wielded great influence upon the election of the latter and was sent by him as legate to France and Spain in 1073. On this embassy he committed new acts of simony, and in consequence was deposed by Gregory VII. From this time on he was a bitter antagonist of Gregory VII. He took a prominent part in the anti-Gregorian synods at Worms in 1076 and at Brixen in 1080 and was repeatedly excommunicated by Gregory VII. The ruin of his life was sealed in obscurity. He died in 1115.

MICHAEL OTT.

Hugh of St-Cher (Lat. de Sancto Caro; de Sancto Theodorico), a Dominican cardinal of the thirteenth century; b. at St-Cher, near Vienne, in Dauphiné (France), about 1200; d. at Orvieto (Italy), 19 March, 1263. He studied philosophy, theology, and jurisprudence in Paris, and next taught law in the same city. In 1225 he entered the Order of St. Dominic, and soon discharged therein the office of provincial, and next (1230) that of prior of the Dominicans in Paris. He became their theologian, and advisor of several bishops, and the trusty envoy of Gregory IX to Constantinople (1233). In 1244 Innocent IV raised him to the cardinalate, and was greatly helped by him at the Council of Lyons (1245). The same pontiff entrusted him with various important affairs, approved whatever changes Hugh suggested for the Order in the Holy Land, and with the Patriarch of Jerusalem, had wished to impose on the Carmelites, and after the death of the Emperor Frederick II, sent him as his legate to Germany. Alexander IV appointed him one of the examiners of the so-called "Evangelium Eternum". Chiefly through Hugh's exertions, the Dominicans were provided with a new Biblical "Correctorium", which is still extant in MS., and which is still known as "Correctorium Hugonis" and "Correctorium Pradicaatorum". His "Postilla in universa Biblia juxta quadruplicem sensum, litteralem, allegoriciam, moralem, anagogiciam" has been printed, and is still in demand in the printing industry as a compendium of explanations of the Sacred Text. He is justly regarded as the first author of a verbal "Concordance" to Holy Writ, a work which became the model for all following publications of the kind (see CONCORDANCES OF THE BIBLE). Cardinal Hugh composed also numerous shorter works, among which may be mentioned: "Speculum Sacerdotum et Ecclesiae", "Sermones dominicales"; "Sermones de Tempore et Sanctoribus"; "Commentarius in IV. libros Sententiarum".

DUENIN, Histoire des Controverses et de Matières Ecclésiastiques traitées dans le treizième siècle (Paris, 1898); Scrupulae Ordinis Pradicaatorum (Paris, 1719); TURIN, Histoire des hommes illustres de l'Ordre de St-Dominique (Paris, 1743); Fabricius, Bibliotheca Latina medii et infimae Aetas (Florence, 1858).

FRANCIS E. GIOOT.

Hugh of St. Victor, medieval philosopher, theologian, and mystical writer. b. 1096, at the manor of Harington in Saxony; d. 11 March, 1141. The works of Derling and of Hugonin leave no doubt that Mabillon was mistaken in declaring his birthplace to be Ypres in Flanders. He was the eldest son of Conrad, Count of Blankenburg. His uncle, Reinhard, who had studied in Paris under William of Champeaux, had on his return to Saxony been made Bishop of Halberstadt. It was in the monastery of St. Pancras, at Humlewe, near Harlesbiadt, that Hugh received his education. In spite of the opposition of his parents, he took the habit of the Canons Regular of St. Augustine at Humlewe; before his novitiate was completed, the disturbed state of the country led his uncle to advise him to go to the monastery of St. Victor in Paris, where he arrived about 1115. William of Champeaux, its founder, on his election to the See of Clisson, in 1112, had been succeeded by Gilduin, under whom it lost none of its reputation for piety and learning. Under his rule and guidance Hugh spent the rest of his life, studying, teaching, and writing. On the tragic death of Thomas (20 Aug., 1133), Hugh was chosen to succeed him as head of the School of St. Victor, and under his direction it attained to brilliant success. He is sometimes spoken of as alter Augustinus, because of his familiarity with the works of the great thinker.

His own works cover the whole range of the arts and sacred science taught in his day. Until a few years ago, however, most historians of philosophy put him down as a narrow-minded mystic out of touch with the world of thought and study, who hampered
rather than helped scientific progress, and whose fantastic symbolism misled subsequent generations. A careful examination of his works has led to a truer appreciation of one whom Harnack (History of Dogma, tr. London, 1899, VI, 44) terms "the most influential theologian of the twelfth century". A great mystical writer, he was also a philosopher and a scholastic theologian of the first order. Primarily, he was a great lecturer, and that fact accounts for the early dispersal of his works as his heirs dispersed, their frequent incorporation in later treatises, and the publication under his name of so many unauthentic treatises. His teaching was one of the foundations of Scholastic theology, and his influence has affected the development of Scholasticism, for he was the first who after synthesizing the dogmatic treasures of the patriarchal age systematized them and formed them into a coherent and complete body of doctrine. That was the work of a genius. But his great merit as head of the school of St. Victor is that, when the heterodoxy and doctrinal tenacity of Abelard endangered the new method which was being applied to the study of theology, Hugh and his followers, by their prudent moderation and unimpeachable orthodoxy, reassured alarmed believers and acclimatized the new scientific method in the Catholic schools.

The work of theological classification made great progress in the time of Abelard, and in the "Summae" were condensed encyclopedic summaries of the whole of theology. Abelard's "Sic et Non" traced the lines upon which the "Summae" were built up; but they reproduced the drawbacks of the parent work in that the difficulties stated in the pros and cons were frequently left unsolved. The introduction of more strictly logical processes culminated in the fusion of patristic erudition and rational speculation in the new constructive dialectical method. After the dogmas had been established by the interpretation of the Scriptures and the Fathers, the assistance of philosophy was sought to show the rational character of the dogma. That application of dialectics to theology led Abelard into heresy and theologians of the twelfth century were deeply divided as to its legitimacy. It was defended by the Abelardian and Victorian Schools, the former from them is generally known as Scholastic theology. The Abelardian School of theology continued to exist even after its founder's condemnation in 1141, but was influenced by the Victorian School, which in turn felt the influence of the Abelardian School, but kept well within the limits of orthodoxy. Thus both contributed to the triumph of Scholasticism.

Any attempted synthesis of Hugh's teaching should be preceded by a critical examination of the authenticity of the treatises which have been included in the collected edition of his works, and some of the most authoritative historians of philosophy and theology have doubted the genuineness of the elementary precisions. Others again have concentrated their attention on his writings on mystical theology, where the supernatural reigns supreme—to attempt to appreciate an author's philosophical teaching upon data furnished by his endeavours to explain what passes in the soul possessed of perfect charity can only lead to confusion. Hugh has left us sufficient material, philosophical and theological, in which rational explanations stand side by side with revealed teaching, to enable us to form a sound opinion of his position as a philosopher, a theologian, and a mystic.

As a Philosopher, he has a clear idea, frequently emphasized, of the subject-matter of a purely rational science, different from theology; and the two orders of knowledge are as clearly differentiated in his writings as in those of St. Thomas. By philosophy he meant the whole range of knowledge attained by natural reason. The assigning of a definite place to philosophy in the plan of studies was the result of a long and gradual process; but its place above the liberal arts and below theology is clearly defined by Hugh in the "Eraduriae Didascaliae". Abandoning the old outgrown framework, Hugh sets forth a new division of knowledge: "Philosophia diviniti in theoreticam, praxicam, mechanicam et legem. Haec quatuor omnem continent seientiam."—Philosophy is divided into theoretical, practical, mechanical, and logical. These four divisions comprise all knowledge.—(Erud. Didasc., II, 2). This new division of knowledge into speculative science, concerned with the nature and laws of the products of man's activity, thoughts and words, is well and logically thought out. The whole of his exposition of what is meant by knowledge, its object, divisions, and the order in which they ought to be dealt with, is a study unique in the Middle Ages before the second half of the twelfth century, and had Hugh never written more than the early books of the "Didascalia", he would still deserve a place among the philosophers of Scholasticism. It is interesting to note that, although the question of universals in his day filled the schools, and at St. Victor's William of Champeaux had many faithful followers, Hugh systematically avoids the whole abstract argument. He places some of its principal arguments put forward by the Realists. The markedly psychological trend of the whole of his philosophical system has recently been the subject of careful study by Ostler. Hugh's teaching concerning God has been fully analyzed by Kilgenstein, and gives us the key to the whole of his teaching; by the use of reason man can and must arrive at the knowledge of God: aseitas, pure spirituality, absolute simplicity, eternity, immutability of being and of action—such are the conceptions he discovers in his Maker, and which furnish him with a synthetic and well-reasoned idea of the Divine essence. At the same time he maintains the moral necessity of revelation, so that the teaching of St. Thomas, as set forth in the early chapters of the "Contra Gentiles", adds nothing to Hugh. It is interesting to note that, following St. Anselm's "Monologium", he takes the human soul as the first element of object into consideration; and from this he inferred a God and thence to God. (See P. L., CLXXVI, 824.)

As a Theologian. His valuable work as a sound thinker has already been mentioned; he had a keen appreciation of the merits of much of Abelard's theological work and always cites him with respect; at the same time he combats many of his ideas. Abelard, in treating of creation, had replaced the freedom and omnipotence of God by a most exaggerated Optimism, Hugh attacked the error in his "De Sacra.", Bk. I, P. II, c. xxi. His Christological teaching is marked by a semi-Apollinarian error in attributing to the humanity of Christ not only the operation of the operations of the Sacred Body and other Divine attributes. But he vigorously combats Abelard's erroneous conceptions of the hypostatic union which led to a revival of Adoptionism that troubled the schools until its condemnation 18 Feb., 1177, by Alexander III (1164-77). Hugh's sacramental teaching is of great importance in that he begins the final stage in the formulation of the definition of a sacrament; synthesizing the scattered teaching of St. Augustine, he set aside the Isidorian definition and gave a truer and more comprehensive one, which, when perfected by the author of the "Summa Sententiarum", was adopted by the schools. His works contain an extensive body of moral doctrine based upon a solid patristic basis, in the grouping of which the influence of Abelard is visible; but in his accurate analysis of the nature of sin, he combats Abelard's error as to the indifferent character of all acts in themselves apart from the will of the doer. At the same
time he held an erroneous view as to the reviviscence, after a fall, of previously pardoned mortal sins (De Sacr., Bk. II, P. XIV, c. viii).

As a Mystic.—Historians of philosophy are now coming to see that it betrays a lack of psychological imagination to be unable to figure the subjective co-existence of Aristotelian dialectics with mysticism of the Vicious Saints, Bernardine and even Franciscan. Speculative thought was not, and could not be, isolated from religious life lived with such intensity as it was in the Middle Ages, when that speculative thought was active everywhere, in every profession, in every degree of the social scale.—After all, did not the same mind give us the two “Summam at es scholasticam” of the Office of the Blessed Sacrament?—Hugh of St. Victor was the leader of the great mystical movement of which the School of St. Victor became the centre, and he formulated, as it were, a code of the laws governing the soul’s progress to union with God. The gist of his teaching is that mere knowledge is not an end in itself, it ought to be but the stepping-stone to the mystical life—thought, meditation, contemplation; thought seeks God in the material world, meditation discovers Him within ourselves, contemplation knows Him supernaturally and intuitively. Such are the “three eyes” of the rational soul. The inherent tendency lay in the teaching of Richard of St. Victor, whose proud disdain for philosophy has been wrongly attributed to Hugh.

Hugh’s chief works are:

(1) “De Sacramentis Christianae Fidei” (c. 1194), his masterpiece and most extensive work, a dogmatic synthesis similar to, but more perfect than, the “Introductio ad Theologiam” of Abelard (c. 1118), which was only concerned with the knowledge of God and of the Trinity. It is of a more literary character: in it the place belongs to the argument from authority, but the utilization of the dialectical method binds the discussion together. It is at once a summary and a corrected version of his earlier works. The work is divided into two books comprising twelve and eighteen parts respectively each containing numerous chapters. The following analysis of its contents will convey some idea of its range: Book I: 1. The creation of heaven and earth; 2. The fall of man’s grace; 3. The knowledge of the Triune God; 4. The will of God and its action in the order of nature; 5. Angels; 6. Man before the Fall; 7. The Fall and its consequences; 8. The restoration of man and the use of sacraments; 9. The sacraments in general; 10. Faith; 11. The sacraments in particular and primarily those of the natural law; 12. Sacraments of the wa. Book II: 1. The sacrament of the Word; 2. Grace and the Church; 3. The orders of the ecclesiastical hierarchy; 4. A mystical explanation of the sacred vessels; 5. Dedication of churches (in which the sacraments are conferred); 6. Baptism; 7. Confirmation; 8. Holy Eucharist; 9. The lesser sacraments (sacramentals); 10. Matrimony; 11. Marriage; 12. Vows; 13. Virtues and vice; 14. Confession and absolution; 15. Extreme unction; 16. The state of souls after death; 17. Christ’s second coming and the resurrection of the dead; 18. The state of things to come.—It is the first complete theological work of the school.

(2) “Eruditionis Didascalei, libri septem” comprises what we should now speak of as encyclopedic, methodology, introduction to Sacred Scripture, and an indication of how we may rise from things visible to a knowledge of the Trinity.

The general commentaries (important both for his theological and mystical doctrines): “Adnotationes Elucidatoriae in Pentateuchen”; “In librum Judicum”; “In librum Regum” (notes on the literal meaning of the texts); “In Salomonis Ecclesiasten Homilias xiii” (practical rather than exegetical); “Adnotationes Elucidatoriae in Threnos Jeremiae; in Iojel prophetam” (working out the literal, allegorical, and moral meanings); “Explanatio in Cantum Beatae Mariae” (allegorical and tropological). The “Questiones et Decisiones in Epistolus S. Pauli”, printed among his works in Migne, are certainly posterior to Hugh.

(4) “Commentariorum in Hierarchiem Celestem S. Dionysii Areopagiti secundum interpretationem Jacobi Scoti Scoti et ordinem philosophiae ordinem.”

(5) His chief mystical works are: “De Arca Noe Morali et Mystica”; “De Vanitate Mundi”; “De Arrhâ Anima”; “De Contemplatione et eius speciebus” (first published by Hauréau as an appendix to his book in 1859).

(6) As regards his “Summa Sententiaria”, usually ascribed to Hugh of St. Victor, considerable discussion has recently taken place. Hauréau, Mignon, Gietl, Kilgenstein, Baltus, Ostler attribute it to Hugh. Denifle, arguing from the anonymity of the MSS., left the question open. But Portalie, basing his argument upon important doctrinal differences, appears to have shown that it is not the work of Hugh, although it belongs to his school. The general line of his argument is that the “Summa Sententiaria” is certainly posterior to the “De Sacramentis”, upon which it frequently draws; doctrines, methods, and formule show evident progress in the “Summa”. It would seem that it is absolutely impossible that Hugh should have written the “Summa” after the “De Sacramentis”, for the “Summa” borrows from the Abelardian School errors Hugh would not have taught, and even errors and formule which he expressly attacked. De Wulf agrees with this, and Poutrit has brought additional evidence, based upon an examination of the sacramental teaching of the two works, in support of the same thesis. None of the writers cited above, as being in favour of Hugh’s authorship, have dealt with Portalie’s evidence.

The best edition of the works of Hugh of St. Victor is that of the Cambridge Press, printed at Rouen in 1648. It is not a critical edition, but genuine, spurious, and doubtful works are found side by side. It was republished in 1854, with slight modifications, by the Abbé Migne in P. L., CLXXV—CLXXVII, but it is neither complete nor critically edited, and should be used in conjunction with J.-B. Hauréau’s “Histoire de l’Écriture Sainte et des autres œuvres” (Paris, 1859) and the same writer’s “Les Oeuvres de Hugues de Saint-Victor: Essai Critique” (Paris, 1886), in which he supplements and corrects many of the conclusions of the earlier work. But Hauréau’s rationalistic bias renders his exposition of Hugh’s doctrine of the sacrament of the Word without careful checking.

Edward Myers.

Hugh of Strasbourg, theologian, flourished during the latter half of the thirteenth century. The dates of his birth and death are unknown. His prominence in the history of medieval theology is due to the fact that he is now considered to be the author of the famous “Compendium theologii” or “Compendium
theologice veritatis", which, on account of its scope and style, as well as its practical arrangement, was for 400 years used as a text-book. By reason of its extensive use and wide circulation it was often copied and later more often printed and reprinted. The work consists of seven books which treat of the Creation, the Fall, the Incarnation, Grace, the Sacraments, and the Four Last Things.

In the entire medieval literature there is probably no composition that has so very recently been attributed to so many different authors. The Incunabula of Venice, Lyons, Strasburg, Ulm, and Nuremberg enumerated by Hain (Repert. bibliogr.) are without the author's name. Some attribute it to the Dominican Ulrich of Strasburg. Bach in the "Kirchenlexikon" (I, 427) makes Albert of Strasburg the author, but recent research has been able to show that such a person never existed. Thomas Dorinberg, who supplied the edition of 1473 with an index, was, for a long time looked upon as the author; others attributed it to St. Thomas Aquinas. In the magnificent edition of Lyons (1557), furnished with notes and index by the Franciscan John of Conques, it is credited to the Dominican Albert the Great and is placed in the folio edition of the latter's works published at Lyons (1651). Again, some held St. Bonaventure to be its author, with the result that the "Compendium" found a place in the appendix of the eighth volume of his works (Rome, 1588-96).

Among other great theologians to whom it was ascribed are Hugh of Saint Cher, Alexander of Hales, Aureolus, the Oxford Dominican Thomas Sutton, Peter of Tarantasia and others. Recent investigations go to show, however, that the "Compendium" cannot be the work of any of these, but was most probably, if not certainly, written by Hugh of Strasburg. Other works attributed to him are: "Commentari in IV libros sententiarum"; "Quodlibeta, questiones, disputations et variae in divinos libros explanationes".

QUATTUOR ET EICHER, SCRIPT. ORD. PROD., I. 470; HUTER, NOMINATOR, PALERMO, ZEITSCHR. F. K. THEOL., XVIII (1904), 429-40; KATHOLIK (1880), I, 442. JOSEPH SCHROEDER.

Hugh the Great, Saint, Abbot of Cluny, b. at Semur (Brionnais) in the Diocese of Autun, 1024; d. at Cluny, 28 April, 1109.

He was the eldest son of Count Dalmasius of Semur and Aremberge (Aremburga) of Verzy, Hugh was descended from the noblest families in Burgundy. Dalmasius, devoted to war and the chase, desired that Hugh should adopt the knightly calling and succeed to the ancestral estates; his mother, however, in order to provide for her son who had been vouchsafed to a priest whom she consulted, wished her son to dedicate himself to the service of God. From his earliest years Hugh gave indication of such extraordinary earnestness and piety that his father, recognizing his evident aversion from the so-called gentle pursuits, entrusted him to his grand-uncle Hugh of Arras, Bishop of Arras. Under the protection of this relative, Hugh received his early education at the monastery school attached to the Priory of St. Marcellus. At the age of fourteen he entered the novitiate at Cluny, where he displayed such religious fervour that he was already made his vowed son before he had completed the severe novitiate usual at this monastery. The special privilege of the Cluniac Congregation enabled him to become deacon at eighteen and priest at twenty. In recognition of his wonderful zeal for the discipline of the order, and of the confidence awakened by his conspicuous talent for government, he was made, within only a few years after his ordination, prior. In this capacity he was charged with the whole domestic direction of the cloister in both spiritual and temporal affairs, and represented the abbot during his absence (cfr. D'Achéry, "Spielegium", 2nd ed., i, 688). On the death of St. Odilo on 1 January, 1049, after a prolonged administration of nigh upon half a century, Hugh was immediately elected prior and was solemnly installed as Archbishop Hugh of Besançon on the Feast of the Chair of Peter at Antioch (22 February, 1049).

Hugh as Abbot.—Hugh's character bears many points of resemblance to that of his great contemporary, St. Bernard. A century and a half after his death, he was raised to the heavenly court; he was canonized; and was solemnly installed as Archbishop Hugh of Besançon on the Feast of the Chair of Peter at Antioch (22 February, 1049).

Hugh as Abbot.—Hugh's character bears many points of resemblance to that of his great contemporary, St. Bernard. A century and a half after his death, he was raised to the heavenly court; he was canonized; and was solemnly installed as Archbishop Hugh of Besançon on the Feast of the Chair of Peter at Antioch (22 February, 1049).

As early as 1049, at the age of twenty-five, Hugh appeared at the Council of Reims. Here, at the request and in the presence of Leo IX, he expressed himself so energetically against the reining abuses that the Pope was moved to promise him the pallium and the mitre. He was already famous for his skill in dealing with men; his simple and unaffected manner was by his very simplicity so impressive and powerful that he was at once able to command the ear of the Pope and the hearts of the prelates. His great eloquence was at once felt to be the expression of a character and a soul so elevated that it was rather a triumph of the confessor of the poor and the defenceless of Christ than a display of oratory sanctioned by the mawls and manners of the age. He was now ready to be set over the Church, and the Pope, desirous of accomplishing something of the kind, at once raised him to the see of Besançon, which he occupied till his death, 28 April, 1109. He was canonized by Pope Gregory VII, and his feast is celebrated at Cluny, 28 April.

JOSEPH SCHROEDER.
died in his arms at Florence (1058). Hugh was also the companion of Nicholas II, and under him took part in the Holy See of Rome in the papal election of an important decree concerning papal elections (Easter, 1059). He was then sent to France with Cardinal Stephen, a monk of Monte Cassino, to effect the execution of the decrees of the Roman synod, and proceeded to Aquitaine, where his colleague repaired to the north-west. The sentence of the humiliated clergy against Cluny enabled him to discharge his mission with the greatest success. He assembled councils at Avignon and Vienne, and managed to win the support of the bishops for many important reforms. In the same year (1060) he presided over the synod of Toulouse. At the Council of Rome in 1063 he defended the privileges of Cluny against an attack by France. After a stay at Cluny, during which he conceived the high admiration and veneration for the monastery and its abbots reflected in his letters (cfr. "Epist." VI, 2, 4, 5, in P. L., LXIV, 378), the legate held a council at Châlons, which decided in favour of Hugh.

Scarcely had Hildebrand ascended the Chair of Peter on 30 April 1057, when three years later he was sent to Cluny to secure his co-operation in promoting his various reforms. Hugh was entrusted with the delicate case of the unworthy Archbishop Manasse of Reims, as well as with commissions in connexion with the expedition of Count Evroul of Roucy against the Saracens in Spain. Frequently urged by Gregory to come to Rome, Hugh was unable to leave France until after the lamentable occurrences of 1076 (see Gregory VII), but then hastened to visit the pope at Canossa. With the assistance of Countess Mathilda, he managed to bring about the reconciliation—unfortunately of but short duration—between Gregory and Henry IV, who had already addressed a letter full of affection to the abbott, declaring his great desire for the peace of the church (cfr. "Hist. Lit. de la France", loc. cit. infra). Hugh was subsequently engaged with the papal legate in Spain in the matter of ecclesiastical reform, and, as a result of his diligence and the high favour he enjoyed with Alphonse, his panegyric was received by the Roman Ritual throughout that monarch's realm. Thanks to the assistance of the many Cluniac foundations in Catalonia, Castille, Leon, Aragon, etc., and the many bishops chosen from their inmates, he was also enabled to give a great impetus to ecclesiastical reform in Spain. In 1077 he presided over the Council of Langres, and later undertook the removal of the Bishop of Orleans and the Archbishop of Reims. Gregory wrote him many affectionate letters; and at the Roman synod in 1081 referred to Hugh in terms of praise seldom used by a successor of Peter concerning a living person. That appreciation was not confined to the Holy Father; as evident from the fact that, when asked by Gregory whether his opinion was shared by them, all present answered: "Placet, laudamus" (Bullar. Clun., p. 21). On the revival of the quarrel between Henry IV and the Holy See, Hugh set out immediately for Rome, but was seized on the way and conducted before the monarch. So earnestly did he urge Henry to make his submission to Peter's successor that he seemed again to have bridged the quarrel, if this were not another example of the king's well-known duplicity. It is scarcely necessary to state that Hugo's intimacy with the Holy See continued unchanged. Urban II and Paschal II, since both issued from the ranks of his monks. Surrounded by cardinals and bishops, Urban consecrated on 25 October, 1095, the high altar of the new church at Cluny, and granted the monastery new privileges, which were augmented by Paschal during his visit in 1107. At the great Council of Clermont in 1095, whose decision to organize the First Crusade was a result of Gregory's enthusiasm resulting from Gregory's and Hugh's labours, the abbott performed most valuable services in the composition and promulgation of the decrees, for which he was specially thanked by the pope. Until the death, in 1106, of Henry IV, who in that year had been crowned by the Pope around his tomb, his prayers for his recovery from his illness, his prayers for his prayers and his intercession with the Holy See (cfr. "Hist. Lit. de la France", loc. cit. infra), Hugh never relaxed his efforts to bring about a reconciliation between the spiritual and temporal powers.

In the spring of 1109, Hugh, worn out with years and labours, and feeling his end approaching, asked for the Last Sacrament, which had been denied him around his sickbed and even to his children, and, having given each the kiss of peace, dismissed them with the greeting: Benedicite. Then, asking to be conveyed to the Chapel of our Blessed Lady, he laid himself in sackcloth and ashes before her altar, and thus breathed forth his soul to its Creator on the evening of Easter Monday (28 April). His tomb in the church was soon the scene of miracles, and to it Pope Gelasius II made a pilgrimage in 1119, lying at Cluny on 29 January. Elected at the monastery on 2 February, Callistus III began immediately the process of canonization, and, on 6 January, 1220, declared him a saint, appointing 29 April as feast day in honour of St. Hugh. The Abbots of Cluny were henceforward accorded the title and dignity of a cardinal. At the instance of Honorius III the translation of the saint's remains took place on 23 May, 1220, but, during the uprising of the Huguenots (1575), the remains and the costly shrine disappeared with the exception of a few relics.

HUGH'S PERSONALITY AND INFLUENCE.—In the case of comparatively few of our saints has the decision of their own and subsequent ages been so unanimous as in that of St. Hugh. Living in an age of misrepresentation and abuse, when the Church had to contend with far greater domestic and external inimical forces than those marshalled by the so-called Reformation, not a single voice was raised against his character—for we disregard the criticism of the French bishop, who in the heat of a quarrel pronounced hasty words afterwards to be recalled, and who was subsequently one of the chief spokesmen of his profession who declares that he confidently expects the success of ecclesiastical reform in France through God's mercy and the instrumentality of Hugh, "whom no imprecation, no applause or favours, no personal motives can divert from the path of rectitude" (Gregori Reg. IV, 10; C. M. D. de l'evangélie de St. Benoist, "Livre des conquêtes de St. Martin de Soissons", Arnulf says of Hugh: "Most pure in thought and deed, he was the promoter and perfect guardian of monastic discipline and the regular life, the unfailing support of the true religious and of men of probity, the vigorous champion and defender of the Holy Church" (Mabillon, op. cit. infra, sec. VI, pars II, p. 352). And of his fellow bishop Bishop Bruno of Segni writes: "Now aged and burdened with years, revered by all and loved by all, he still governs that venerable monastery [see Cluny] with the same consummate wisdom—a man in all things most laudable, difficult of comparison, and of wonderful sanctity" (Muratori, "Rerum Ital. script." III, pt. ii, 347).

Emperors and kings vied with the sovereign pontiffs in bestowing on Hugh marks of their veneration and esteem. Henry the Black, in a letter which has come down to us, addresses Hugh as his "very dear father, worthy of every respect", declares that he owes his own return to health and the happy birth of his child to the abbots prayers, and urges him to come to the Court at Cologne the following Easter to stand sponsor for this son (the future Henry IV). During her widowhood Empress Agnes wrote to Hugh in terms no less respectful and affectionate, asking him to pray for the
happy repose of her husband's soul and for the prosperous reign of her son. Reference has already been made to the letters sent to Hugo by Henry IV, which, notwithstanding the long struggle to extricate the Church subservient to the imperial power, seems never to have lost his affection and profound respect for his saintly godfather. In recognition of the benefits derived from the Cluniac foundations, Ferdinand the Great of Castille and Leon (d. 1065) made his kingdom tributary to the abbot; his successor and ally, Alfonso VI, doubled the tribute and, the latter, in addition to introducing the Roman Ritual at Hugo's request, carried on a most affectionate correspondence with the abbot. In 1084 Hugo was chosen by the kings and princes of the various Christian kingdoms of Spain as an arbitrator in the question of succession. Robert II of Burgundy refused to attend the Council of Autun (1065), at which his presence was necessary. Hugo was sent to summon the duke, and remonstrated with him so eloquently in the interests of peace that Robert accompanied the abbot unresistingly to the council, became reconciled with those who had put his son the part played by Cluny in the demand to respect the Church was transmitted to Count Stephen Cluny (Göttingen, 1869) is a careful consideration of the information contained in all the above verses except that by Gis. The Vita of Gis was written by L'Hôpital, Vie de St. Hugues (Solemes, 1888), probably the best biography yet written. For the Cluniac discipline see Harcourt, Vetus disciplina monastica (Paris, 1726), 371 sqq., and P. L. CCLIX (Paris, 1832). The following works may also be consulted: DUCKEY, Chants et Records of Cluniac Life (Paris, 1910); Inquest Evidence among Archives of the Ancient Abbey of Cluni from 1073 to 1097 (Leuven, 1866), containing documents in consistence with the foundation of the abbey; L'Annuaire des abbayes de France, 1904, 337 sq.; SAINTE MARIE, Otto, De constitutione priorum (Paris, 1848), 117; HÉMET, Henri, Histoire du cluniaire (Paris, 1780), 65; CHAJN, Charles, Cluny (Paris, 1868); Hist. Jahrhundert (Wiesbaden, 1970).

THOMAS KENNEDY.

Hugo, Charles-Byacinthe, b. 20 Sept., 1667, at St. Mihiel (Department of Meuse, France); d. 2 August, 1739. He entered the Norbertine novitiate at Font-à-Mousson, where he pronounced his vows on 28 Aug., 1765, receiving the name of Lorraine in religion. He went through his course of philosophy and theology at the Abbey of Jouviller, near Bar-le-Duc, and afterwards at the University of Bourges, where he graduated as Doctor of Theology in 1690 or 1691. Having taught theology in the Abbey of Jandeure, and later in that of Etroy, and in the Benedictine convent of St. Joseph's at Nancy in 1700, where he remained until 1713, although in 1708 he had been elected coadjutor of the Abbey of Flémont, then held in commendam by Nicholas Brissac, doctor of the Sorbonne, a secular priest. On 12 August, 1710, Hugo was chosen coadjutor to Simon Ghez, Abbot of Erps (Stiviagum), and the choice having been ratified by Clement XI, he was installed with the title of Abbot of Fontaine-André, a suppressed Norbertine abbey in Switzerland, by the Prince-Bishop of Basle, on 23 July, 1712. Later Abbot Simon resigned the direction of the abbey, and Hugo was unanimously elected in his place, 22 October, 1722. Though now at the head of one of the largest abbeys in Lorraine, Hugo found time to co-ordinate the numerous documents he had collected and the notes he had made with a view to the publication of three of his most important works, the "Sacri antiquitatis monumenta," the "Annales Ordinis Premonstratensi," and the "History of Lorraine". In order to give his personal attention to their publication, he even favoured the erection of printing presses at Etival itself.

A regrettable conflict respecting the right of exemption which the Abbot of Etival claimed for his foundation arose at a later date, and led to a temporary departure of the Bishop of Toul. The cause was brought to Rome, where Cardinal Lercari, secretary of state, warmly upheld the contention of Hugo. In order to put an end to this lamentable incident Benedict XIII named
Hugo Bishop of Ptomain in partibus in the consistory of 15 Dec., 1728.

Hugo had long planned to write a full and detailed history of the Norbertine Order, and in 1717 the general chapter of the order had encouraged him to carry out his plan by naming him historiographer of the order and by requesting all the abbots to give him all the information they possessed concerning their abbeys. The first two volumes of the "Annales" had already been published and the third was in the hands of the royal censor when Hugo died.

That Hugo was a strenuous, learned, and conscientious worker may be judged from the number and the importance of the books he published prepared for publication. His style is elegant and harmonious, and, as Aug. Digot says with reference to the "History of Lorraine", it surpasses that of Dom Calmet, whose style is heavy and diffuse. In 1699 Hugo published a "Refutation of the system of Paydirt on the Blessed Trinity"; it was solid work, according to Paquot. He is also the author of some books on the Order of Canons Regular, one of which is favourably referred to by Benedict XIV; likewise of several dissertations on seals, coins, or medals, on persons and historical matters appertaining to the ducal principality of Lorraine. On the death of Duke Leopold a member of his privy council and requested to write the history of Lorraine. Hugo set to work with his usual energy and the work was ready in 1713, but Leopold, fearing that, owing to Hugo's previous writings, this history might too much displease the royal house of France, asked Dom Calmet, Abbot of Senez, to write the history instead of Hugo. Hugo's "Vie de St. Norbert, fondateur des Frémontres" (Luxembourg, 1704) is remarkable for the elegance of its style and the important documents it contains. His two monumental works are: (1) "Sacre antiquitatis monumenta historica, dogmata, diplomatica, notabilis illustrata"; two volumes, in folio, were published in 1725; the second, after Hugo's death, in 1744; (2) "Sacc et Canonic Ordinis Preamonstratensi Annales", in two volumes, giving in alphabetical order the history of each abbey. There are two more volumes of probations, etc., respecting each abbey. The third volume, with the title "Annales Ordinis Preamonstratensi Seculum Primum (1120-1220)", which was to be followed by four more volumes, was ready for the press when Hugo died. After Hugo's death the Abbey of Etival was given in commendam to the Bishop of Toul, and for one reason or another, the third volume, unfortunately, never been printed. Hugo's manuscripts, forming eighteen volumes in folio, each of from 500 to 600 pages, are now preserved in the seminary of Nancy. They are fully described by M. Vacant, professor at the seminary, in "La Bibliothèque du Grand Séminaire de Nancy" (1897).

Hugo Etherianus. See Etherianus.

Huguccio (HUGH OF PISA), Italian canonist, b. at Pisa, date unknown; d. in 1210. He studied at Bologna, probably under Gandolphus, and taught canon law in the same city, residence in the school connected with the monastery of SS. Nabore e Felice. In 1190 he became Bishop of Ferrara. Among his pupils was Lottario de' Conti, afterwards Innocent III, who held him in high esteem as is shown by the important cases which the pontiff submitted to him, traces of which still remain in the "Corpus Juris" (c. Coram, 34, X, 1, 29). Two letters addressed by Innocent III to Huguccio were inserted in the Decretals of Gregory IX (c. Quanto, 7, X, 19; c. In quodam, 8, X, XIII, 41). Besides a book, "Liber derivatium", dealing with etymologies, he wrote a "Summa" on the "Decretum" of Gratian, concluded according to some in 1187, according to others after 1190, the most extensive and perhaps the best of the commentaries of that time. He omits, however, in the prescript on the second part of the "Decretum" of Gratian, Causa xxi-xxvi, a gap which was filled by Joannes de Deco.

SART: De claris archiepiscopis Bononiensis professoribus, I (Bologna, 1898), 353 sqq.; SHULTZ, Geschichte der Quellen und Literatur des canonicischen Rechts (Stuttgart, 1878-80) I, 167-170; GILLMANN, Pisaner, and has been commonly denominated "French Protestants", the title being suggested by their German co-religionists, or Calvinists, as being disciples of Calvin.

On this—French Protestantism received from Calvin its first organization and the form which since has become traditional; but to Luther it owed the impulse which gave it birth. That the ideas of these two Reformers were to a certain degree successful in France was due in that country, as elsewhere, to the prevailing mental attitude. The Great Western Schism, the progress of Gallican ideas, the Pragmatic Sanction of Bourges, and the war of Louis XII against Julius II had considerably weakened the prestige and authority of the papacy. The French clergy, owing to the conduct of many of its members, inspired but little respect. After the Pragmatic Sanction (1438) the episcopal sees became the object of strife and intrigue, and the bishops, ignorant of the obligation of residence. In spite of some attempts at reform, the regular clergy languished in inactivity, ignorance, and relaxation of discipline, and all their attendant imperfections. The humanism of the Renaissance had created a distaste for the verbose, formalistic scholasticism, still dominant in the schools, and had turned men back to the
cult of pagan antiquity, to naturalism, and in some cases to unbelief. Other minds, it is true, were led by the Renaissance itself to the study of Christian antiquity, but, under the influence of the mysticism which had shortly before this become current as a reaction from the system of the schools and the philosophy of the literati, they tended to exaggerate the power of the influence of the religious and social forms of the Holy Scripture. It was this class of thinkers, affected at once by humanism and mysticism, that took the initiative, more or less consciously, in the reform for which public opinion clamoured.

Their first leader was Lefèvre d'Étaples (q.v.), whose early life to the teaching of philosophy and mathematics, became when nearly sixty years old an exégète and the editor of French translations of the Bible. In the preface to his "Quindecuple Psalterium", published in 1509, and in that to his commentary on the Epistles of St. Paul, published in 1512, he ascribes to Scripture an almost exclusive authority in matters of religion, and preaches justification by faith even to the point of counting good works as naught. Furthermore, he sees in the Mass only a commemoration of the sacrifice of the Cross. In 1522 he published a Latin commentary on the Gospels, the preface to which may be regarded as the founder of the doctrine of the Reformation in France. Châtillon, Farel, Gérard Roussel, Cop, Etienne Poncher, Michel d'Arlande rallied around him as his disciples. Bricoint, Bishop of Meaux, constituted himself their protector against the Sorbonne, and called them to preach in his diocese. None of these men, however, intended to carry their innovations to the point of breaking with the Church; they meant to remain within it; they accepted and they sought its dignities. Lefèvre became Vicar-General to Bricointet; Gérard Roussel was made a canon of Meaux, then by papal appointment Abbot of Clairac, and eventually Bishop of Oloron; Michel d'Arlande became Bishop of Saint-Paul-Trois-Châteaux (Tricastroinensis). Their aim, for the time being, was only to "preach the pure gospel", and thereby lead the people back to the genuine religion of Christ, which, as they said, had been corrupted by the superstitions of Rome. They were powerfully aided in their undertaking by the influence of the University of Paris, which felt no favour shown to the interests of the Church and its ideas; she was their advocate with her brother Francis I, and, when necessary, their protector against the Sorbonne.

This learned body soon began to feel concern at the progress of the new ideas. Its synode, Bédé, was a man of profound, of violent spirit, and against the movement which had taken root in Paris. He was the second president of the Sorbonne. He and his colleagues, under his guidance the Sorbonne, aided only by the Parliament, took the lead in the struggle with heresy, while the king hesitated between the parties or changed his attitude according to his political interests. Since 1520 the writings of Luther had been spreading in France, at least among the educated, and his books were selling in Paris by hundreds. On 15 April, 1521, the faculty of theology formally condemned Luther's doctrines. Stimulated by this faculty and armed by the pope with special powers for the suppression of heresy, the Parliament of Paris was preparing vigorous measures against Lefèvre d'Étaples, but the king interfered. When Francis I was imprisoned at Madrid, the Parliament, on which the queen-regent placed no restraint, inaugurated in 1523 sanguinary measures of repression; not a year passed but some heretic was arrested and then, often with fire, was burned. The most famous of the victims in these early times was Louis de Berquin, a nobleman of Artois and a friend and councillor of the king; several Lutheran writings were found in his possession. At this energetic action of the Parliament the Meaux group took fright and scattered. Bricointet retracted and wrote pastoral against Luther. Lefèvre and Roussel escaped to Strasbourg or to the dominions of the Queen of Navarre. Châtillon wrote against Luther, Farel rejoined Zwingli in Switzerland. But all this time Lutheranism continued to spread in France, disseminated chiefly by the students and professors from Germany. Again and again the king complained in his edicts of the spread of heresy and of the attacks of the Holy Scripture. It could be seen that there had existed at Paris a vigorous group of heretics, recruited principally from the literary men and the lower classes, and numbering from 300 to 400 persons. Some others were to be found in the Universities of Orleans and Bourges; in the Duchy of Alençon; wherever Martin Bucer, the suzerain, gave them licence to preach, and when Lutheranism was not spreading in Normandy; at Lyons, where the Reformation made an early appearance owing to the advent of foreigners from Switzerland and Germany; and at Toulouse, where the Parliament caused the arrest of several suspects and the burning of John of Cahors, a professor in the faculty of law.

After condemning the works of Marguer of Navarre, who was inspired with the new ideas, the Sorbonne witnessed the banishment of Bédé and the appointment of Cop to the rectorship of the University of Paris, although he was already suspected of Lutheranism. In the early part of the academic year, 1 November, 1533, he delivered an address filled with the new ideas. This address had been prepared for him by a young student then scarcely known, whose influence however upon the French Reformation was to be considerable; this was John Calvin (q.v.). Born in 1509 at Noyon in Picardy, where his father was secretary of the bishopric of Meaux, he was educated in Paris and recommended to Bucer, the bishop of Strasbourg, who was not a man of law. At Bourges he became acquainted with several Lutherans—among others his future friend Melchior Walmar, professor of Greek. His cousin Olivétan had already initiated him into their ideas; some of these he had adopted, and he introduced them into Cop's rectorial discourse. This address called forth fierce reproach from his kinsmen, Francis of Navarre, who had been banished to Switzerland, Calvin to Saintonge. The latter soon broke with Catholicism, surrendered his benefice, for which he received compensation, and, towards the end of 1534 betook himself to Basle in consequence of the affair of the "placards"—i.e. the violent manifestos which had begun against the Lutherans. Before the end of the year the Lutherans, had been placarded in Paris (18 October, 1534), in the provinces, and even on the door of the king's apartments. Francis I, who until then had been divided between his will to meet the wishes of the pope and the expediency of winning to himself the support of the princes of Germany against Charles V, made up his mind to defer on this occasion to the demands of the exasperated Catholic. In the January following he took part in a solemn procession during the course of which six heretics were burned; he let the Parliament arrest seventy-four of them at Meaux, of whom eighteen were also burned; he himself ordered by edict the extermination of the heretics and of those who should harbour them, and promised rewards to those who should inform against them. But before the end of the year the king reversed his policy and thought of inviting Melanchthon to Paris. It was at this juncture that Calvin entered into the open conflict of French Protestantism by writing his "Institutio Christianae Religionis" (Institutes of the Christian Religion), the preface to which, dated 28 August, 1535, took the form of a letter addressed to Francis I. It was published in Latin (March, 1536), and was at once an apologia, a confession of faith, and a rallying signal.
for the partisans of the new ideas, who were no longer Catholics and were hesitating in their choice between Luther, Zwingli, and the other chiefs of the Reformation. Calvin became famous; many Frenchmen flocked to Geneva, while he, the.\ldots\n1536, making that city the home of the Reformation. Thence his disciples returned to their own country to spread his writings and his ideas, and to rally old partisans or recruit new ones. Alarmed at their progress, Francis I, who had just concluded a treaty with the Holy Roman Empire (June 1598), pronounced a death sentence against Protestants, and maintained it until his death (31 March, 1547). In 1539 and 1540 the old edicts of toleration were replaced by others which invested the tribunals and the magistrates with inquisitorial powers against the heretics and those who shielded them. At the instance of the king the Sorbonne drew up first a formula of faith in twenty-six articles, and then an index of prohibited books, in which the works of Dolet, Luther, Melanchthon, and Calvin appeared; the parlements received orders to prosecute anyone who should preach a doctrine contrary to these articles, or circulate books contained in the index. From this general persecution and corruption and the submiration of the king, Sorbonne, and Parliament, it may be said, was what prevented the Reformation from gaining in France the easy success which it won in Germany and England. The magistrates were everywhere extremely zealous in enforcing the repressive edicts. At Paris, Toulouse, Poitiers, Angers, numbers of heretics and hawkers of prohibited books were sent to the stake. At Aix the Parliament passed a decree ordering a general massacre of the descendants of the Waldenses grouped around Mérindol and de Cabrières, its enforcement to be suspended for five months to give them time for conversion. After withholding his consent to this decree for five years the king allowed an authorization for its execution to be wrung from him, and about eight hundred Waldenses were massacred—an odious deed which Francis I regretted bitterly until his death. His successor, Henry II, vigorously maintained the struggle against Protestantism. In 1547 a commission—the famous Chambre Ardente—was created in the Parliament of Paris for the special purpose of trying heretics; then in June, 1561, the Châtaignier Edict codified all the measures which had previously been enacted for the defense of the faith. This legislation was executed by the magistrates in all its rigors. It resulted in the execution of many Protestants at Paris, Bordeaux, Lyon, Rouen, and Chambéry, and drove the rest to exasperation. The Protestants were aided by a certain number of apostate priests and monks, by preachers from Geneva and Strasbourg, by schoolmasters who disseminated the literature of the sect; they were favoured at times by bishops—such as those of Chartres, of Uzès, of Nîmes, of Troyes, of Valence, of Oloron, of Lescar, of Aix, of Montauban, of Beauvais; they were supported and guided by Calvin, who from Geneva—where he was persecuting his adversaries (e. g. Cartellier) as "Institutur Calvinismi", evidently takes for its basis Luther's principal doctrines, which are however here more methodically expounded and more rigorously deduced. The Huguenots added to the Lutheran theories only the belief in absolute predestination and in the certainty of salvation by reason of the inanissibility of grace. Malvoisins deviated from Calvin in the conception of their church (which is not, as with Luther, absorbed in the State) and in their conception—obscure enough indeed—of the sacraments, in which they see more than the empty and ineficacious signs of the Sacramentarians, and less than ceremonies conferring grace. The Lutheran conception of salvation was also contained in forty articles, to which others
were very soon added. The primary organization with its successive developments may be reduced substantially to this: Wherever a sufficient number of the faithful were found, they were to organize in the form of a Church, i.e., appoint a consistory, call a minister, establish the regular celebration of the sacraments and the practice of discipline. A church possessed all the elements of organization: 

*église drossée*; one which had a part of these requisites was called *église plantée*. The former had one or more pastors, with elders and deacons, who composed the consistory. This consistory was in the first instance elected by the common voice of the people; after that, it co-opted its own members; but these had the approbation of the whole congregation of the people. Pastors were elected by the provincial synod or the conference after an inquiry into their lives and beliefs, and a profession of faith; imposition of hands followed. The people were notified of the election, and the newly elected pastor preached before the congregation on three consecutive Sundays; the silence of the people was taken as an expression of consent. The elders, elected by those members of the Church who were admitted to the Supper, were charged with the duty of watching over the flock, jointly with the pastor, and of paying attention to all that concerned ecclesiastical order and government. The deacons were elected elders; it was their office and function, under the consistory, the alms collected for the poor, to visit the sick, those in prison, and so on.

A certain number of churches went to form a conference. The conferences assembled at least twice a year. Each church was represented by a pastor and an elder; the function of the conference was to settle such differences as might arise among church officers, and to provide generally for all that might be deemed necessary for the maintenance and the common good of those within their jurisdiction. Over the conferences were the provincial synods, which were in like manner composed of a pastor and one or two elders from each church chosen by the consistory, and met at least once a year. The number of these provincial synods in the whole of France was at times fifteen, at other times sixteen. Doctrines, discipline, schools, the appointment of pastors, erection and limitation of parishes fell within their jurisdiction. At this time the hierarchy stood the national synod, which, in so far as possible, was to meet once a year. (As a matter of fact, there were only twenty-nine between 1559 and 1660—on an average, one every three years and a half.) It was made up of two ministers and two elders sent by each provincial synod, and, when founded, it had had a consistory and a synod.

To the national synod it belonged to pronounce definitively upon all important matters, internal or external, disciplinary or political, which concerned religion.

The complement of these various institutions was the translation of the Bible into the vernacular. In 1528 Lefèvre d'Étaples had already completed a translation from the Vulgate, making use of Jean de Rély's already existing translation, but suppressing the glosses. His translation was improved by going back to the original texts in the four editions which appeared successively before the year 1541. But the first version of the Old Testament was an *Église de Sevrères*, a relation of Calvin's. It was called the "Bible de Sevrères"—the Sevrères Bible—from the locality where it was printed. For the protocanonical books of the Old Testament it goes to the Hebrew; for the deuterocanonical, it is in many places content with a revision of Lefèvre d'Étaples' text. The New Testament was translated from the Greek. Calvin composed its preface. In 1540 there appeared an edition of it revised and corrected by the pastors of Geneva. Again there appeared at Geneva, in 1545, another edition in which Calvin had a hand. A more thorough revision marked the editions of 1553, 1561, and 1563, the last two with notes taken from Calvin's commentary. Finally, Olieretan's text, more or less revised or renewed by Martin and Osterwald, became the permanent basis of the Bibles in use among French Protestants.

It was from Calvin, too, and from his book "La forme des prières et des chante cælestiæques" (1542), that the Huguenot liturgy formed. Like Luther's, it embraces the suppression of the Mass, the idea of salvation by faith, the negation of merit in any works, even in Divine worship, the proscription of relics and of the intercession of saints; it attaches great importance to the preaching of God's word and to that of the prophets alone. Besides these, there are special prayers for baptism, marriage, and the Supper, which last was under certain circumstances added to the Divine service.

**HISTORY.**—(1) *Militant Period*.—The history of French Protestantism may be divided into four well-defined periods: (1) A Militant Period, in which it was struggling for freedom (1559–98); (2) The Period of the Edict of Nantes (1685–1800); (3) The period from the Revocation to the Revolution (1685–1800); (4) The Period from the Revolution to the Separation (1801–1905). The organisation of their discipline and worship gave the Huguenots a new power of expansion. Little by little they penetrated into the ranks of the nobility. One of the principal families of the kingdom, the Coligny, allied to the Montmorency, furnished them their most distinguished recruits in d'Angelet, Admiral Coligny, and Cardinal Odet de Chatillon. Soon the Queen of Navarre, Jeanne d'Albret, daughter of the Henry IV, converted to Calvinism and introduced it into her dominions by force. Her husband, Antoine de Bourbon, the first prince of the blood, appeared at times to have gone over to the Huguenots with his brother the Prince de Condé, who, for his part, never wavered in his allegiance to the new sect. Even the Parliament of Paris, which had so energetically carried on the struggle against the heresy, allowed itself to become tainted, many of its members embracing the new doctrine. It was necessary to deal severely with these; many were imprisoned, Antoine du Bourg among others. But at this point Henry II died, leaving the throne to a delicate child of sixteen. Nothing could have been more advantageous for the Huguenots. Just at that time they formed a numerous group in almost every district of France. Certain provinces, such as Normandy, contained as many as 5000 of them; one day 6000 persons at the Pré-aux-Cénoles, to France, among the Passes de Morat in which the Huguenots had adopted; Basse-Guyenne, it was said, had seventy-six organized churches. Two years later, Bordeaux counted 7000 of the Reformed; Rouen, 10000: mention is made of 20,000 at Toulouse, and the Prince de Condé presented a list of 2650 churches—which, it is true, cannot be identified. The new power of the kingdom was more than half Huguenot; this was assuredly an exaggeration, for the Venetian ambassador estimated the district contaminated with this error at not the one-tenth part of France; nevertheless it is evident that the Huguenots could no longer
be regarded as a few scattered handfuls of individuals, whose case could be satisfactorily dealt with by a few judicial proceedings. Organized into churches linked together by synods, reinforced by the support of great lords of whom some had access to the councils of the Crown, the Calvinists thenceforward constituted a political power which exerted its activity in national affairs and had a history of its own, at the accession of Francis II, and through the influence of the Guises, who were all-powerful with the king and strongly devoted to Catholicism, the edicts against the Huguenots were rendered still more severe. Antoine du Bourg was burned, and a royal edict (4 September, 1559) commanded that houses in which union meetings were held should be razed to the ground and the organizers of such assemblies punished with death. Embittered by these measures, the Huguenots took advantage of every cause for discontent afforded by the government of the Guises. After taking counsel with their theologians at Strasbourg and Geneva, they resolved to have recourse to arms. A plot was formed, the real leader of which was the Prince de Condé, though its organization was entrusted to the Sieur de la Renaudière, a nobleman of Périgord, who had been convicted of forgery by the Parlement of Dijon, had fled to Geneva, and had there become an ardent Huguenot. He visited the provinces and stirred them up, and secured the provinces of France to recruit soldiers and bring them together about the Court—for the plan was to capture the Guises without, as the conspirators said, laying hands on the king's person. While the Court in order to disarm Huguenot hostility was ordering its agents to desist from proceedings, and proclaiming a general amnesty from which only preachers and conspirators were excepted, the Guises were warned of the plot being hatched, and thus enabled to stifle the revolt in the blood of the conspirators who were assembling in bands about Auxonne, where the king was lodged (19 March, 1560). After the resettlement aroused by the severity of this repression and the appointment as chancellor of Michel de L'Hôpital, a magistrate of great moderation, soon led to the adoption of less violent counsels; the Edict of Romorantin (May, 1560) softened the lot of the Protestants, who had as their advocates before the Parlement of Paris (July, 1565), reestablished by the Edict of the Jesses (August, 1568), the Prince de Condé, the chancellor L'Hôpital, and the Bishops of Valence and Vienne.

The accession of Charles IX, a minor (December, 1560), brought into power, as queen regent, his mother Catharine de' Medici. This was fortunate for the Huguenots. Almost immediately the doctrine the ambitious regent made no scruple of granting any degree of toleration, provided she might enjoy her power in peace. She allowed the Condé and the Coligny to practise the reformed religion at court, and even summoned to preach there Jean de Meillerie, bishop of Valence, a Calvinist secretly concealed by his mitre. At the same time she ordered the Parlement of Paris to suspend the proceedings, and authorized Huguenot worship outside of the cities until such time as a national council should have pronounced on the matter. An edict promulgated in the month of April, while prohibiting religious manifestations, set at liberty those who had been imprisoned on religious grounds. In vain did the Parlement of Paris try to suspend the publication of this edict; a judiciary commission composed of princes, high officers of the Crown, and members of the Royal Council, granted the Huguenots amnesty on condition that they should in future live like Catholics. In the hope of bringing about a reconciliation between the two religions Catharine assembled Catholic prelates and Huguenot ministers at the Conference of Poissy. For the latter Théodore de Bèze spoke; for the former, the Cardinal of Lorraine. Each party claimed the victory. In conclusion the king forbade the Huguenots to hold ecclesiastical property, and the Catholics to interfere with Huguenot worship. In January, 1562, the Huguenots were authorized to hold their assemblies outside of the towns, but had to restore all property taken from the clergy, and abstain from tumults and unlawful gatherings. This edict, however, only exasperated the Protestants, and it was with tumults which obliged Catharine and the Court to flee. The Duke of Guise, on his way from Lorraine to rejoin the queen, found at Vassy in Champagne some six or seven hundred Huguenots holding religious worship (1 March, 1562), which according to the Edict of January they had not the right to do, Vassy being a fortified town. In the church of Sainte-Barbe, raising the great organ, the Duke of Guise was assisting. Mutual provocations ensued, a quarrel broke out, and blood was shed. Twenty-three Huguenots were slain and more than a hundred wounded.

Forthwith, at the call of the Prince de Condé, there began the first of the civil wars called the "wars of religion". The Huguenots rose, as they said, to enforce respect for the Edict of January, which the Duke of Guise was trampling under foot. Everywhere the mutual animosities found vent in acts of violence. Huguenots were massacred in one place, where the protestants and religionists were being assembled to hear a sermon; the first sergeants gained the mastery, churches were sacked, statues and crosses mutilated, sacred utensils profaned in sacrilegious burlesques, the relics of saints cast into the flames. The most serious encounters took place at Orléans, where the Duke of Guise was treacherously assassinated by a Huguenot. The assassin Poltrat de Méré declared that he had been urged on by Bèze and Coligny. Finally, although Condé and Coligny had not been ashamed to purchase support from Queen Elizabeth of England by delivering Havre over to her, the victory remained with the Catholics. Peace was established by the Edict of Amboise (19 March, 1568), which left the Huguenots freedom of worship in one town out of each bailiwick (bailliage) and in the castles of lords who exercised the power of life and death (haute justice). Four years later there was another civil war which lasted six months and ended in the Peace of Longjumeau (23 March, 1570), renewed in the Peace of the Jas de Bouffan (7 August, 1570) the Peace of the Jesses. Five months later hostilities recommenced. Condé occupied La Rochelle, but he was killed at Jarnac, and Coligny, who succeeded to his command, was defeated at Moncontour. Peace was made in the following year, and the Edict of Saint-Germain (8 April, 1570) limited the Huguenots' freedom of worship wherever their worship had been established, besides leaving in their hands the four following refuges—La Rochelle, Montauban, La Charité, and Cognac.

On his return to Court, Coligny found great favour with the king and laboured to win his support for the United Netherlands. The marriage of Henry, King of Navarre, with the king's sister, Margaret of Valois, soon after this brought all the Huguenot lords to Paris. Catharine de' Medici, jealous of Coligny's influence with the king, and it may be in collusion with the Duke of Guise who had his father's death to avenge on the admiral, plotted the death of the latter. But the attempt failed; Coligny was only wounded. Catharine, fearing reprisals from the Huguenots, suddenly won over the king and his council to the idea of putting to death the Huguenot leaders assembled in Paris. Thus occurred the odious Massacre of St. Bartholomew, so called from the saint whose feast fell on the same day. August 24, 1572, Admiral Coligny being slain with many of his Huguenot followers. The massacre spread to many provincial towns. The number of victims is estimated at 2000 for the capital, and 6000 to 8000 for the rest of France. The king explained to foreign courts that
Coligny and his partisans had organized a plot against his person and authority, and that he (the king) had merely suppressed it. Thus it was that Pope Gregory XIII declared in a consistory in the papal palace of the Luxembourg, and, persuaded that the king had but defended himself against these heretics, held a service of thanksgiving for the repression of the conspiracy, and commemorated it by having a medal struck, which he sent with his felicitations to Charles IX. There is no proof that the Catholic clergy in the slightest degree participated in the crime. The result of dissolution was terror and malfeasance: the Huguenots were found guilty without a trial, and the malfeasance which they had been accused of was attributed to them in the interest of the monarchy. The result was the suppression of the conspiracy without trial, and the malfeasance which resulted from that suppression. The suppression of the conspiracy was the direct cause of the suppression of the Huguenots, the suppression of the Huguenots was the cause of the suppression of the conspiracy, and the result was the suppression of the Huguenots without trial.

The Edict of Nantes (5 June, 1598), which was to be the last attempt at a compromise, was signed by the king of France, Henry IV, and the representatives of the Protestant movement. It was a document of great importance, as it marked the end of the religious war in France. The Edict of Nantes granted to the Huguenots certain religious and civil rights, and it was hoped that this would bring about a lasting peace. However, the Edict of Nantes was not a permanent solution, and it was soon revoked by the king of France. The Edict of Nantes was revocated in 1629, and the religious war continued.

The Edict of Nantes was a triumph for the Huguenots, and it was a sign of the growing power of the French monarchy. The Edict of Nantes was a symbol of the king's power, and it was a sign of the growing influence of the Catholic Church. The Edict of Nantes was a document of great importance, and it was a symbol of the king's power and influence.

religion should not be disturbed in the practice of their worship, and ordered the reopening of some of their temples which had been closed. Thus the Protestant minister Jurié could write that the years between the Raising of the Fronde and the Peace of the Pyrenees were among the happiest within the memory of his creed.

In proportion as Louis XIV got the reins of government into his own hands, the position of the Huguenots became increasingly unfavourable. After 1660, they were forbidden to hold national synods. At Bayonne, they counted only 2,723 pastors, who ministered to about 1,200,000 members. A commission, established in 1661 to inquire into the titles on which their places of worship were held, brought about the demolition of more than 100 churches, for which no warrant could be found in the provisions of the Edict of Nantes. A royal order of 1663 deprived released persons—i.e., those who had returned to Protestantism after having abjured it—of the benefit of the Edict of Nantes, and condemned them to perpetual banishment. A year later, it is true, this order was suspended, and proceedings under it were arrested. Then, by another ordinance, parish priests were compelled to perform the duties of the magistrate at the domicile of any sick person and to ask whether such person wished to die in heresy or to be converted to the true religion; the children of Protestants were declared competent to embrace Catholicism at the age of seven, their parents being allowed to retain all the properties they had inherited and to support conformably with their station in life. The Protestants soon saw themselves excluded from public office; the chambers in which the parties were equally represented were suppressed, Huguenot preaching was restrained and emigration was forbidden under pain of confiscation of property.

These measures and others of less importance were taken chiefly in response to demands made by the Assemblies of the Clergy or by public opinion. Their efficacy was augmented by the controversial works, those of Bossuet, "Exposition de la doctrine catholique", "Avertissement aux Protestants", "Histoire des variations des Eglises protestantes", being conspicuous brilliant, to which the ministers—Claude, Jurieu, Pajon—replied but feebly. Meanwhile the commissioners (intendants) were working with all their might to bring about conversions of Protestants, to which end some of them made as much use as they did of the system of making converts by force rather than by conviction came to be branded with the name of "dragonnade".

(3) From the Revocation of the Edict of Nantes to the Revolution. Trusting in the number and sincerity of these conversions, Louis XIV thought it no longer necessary to observe half measures with the Huguenots, and consequently revoked the Edict of Nantes on 18 October, 1685. Thenceforward the exercise of public worship was forbidden to the Protestants; their churches were to be demolished; they were prohibited from assembling for the practice of their religion in private houses; those who would not be converted were ordered to leave the kingdom within fifteen days. Parents were forbidden to instruct their children in Protestantism, and ordered to have them baptized by priests and sent to Catholic schools. Four months' grace was granted to those who persisted in return to England and recover their property; after the lapse of this period the said property would be definitively confiscated. Emigration was forbidden for men under pain of the galleys, and for women under pain of imprisonment. Subject to these conditions Protestants might live within the realm, carry on commerce, and enjoy their property without being molested on account of their religion. This measure, which was regrettable from many points of view, evoked in France unanimous applause from Catholics of all classes. With the exception of Vauban and Saint-Simon, all the great men of that period highly approved of the revocation. This attitude is explained by the idea that Italy, almost unknown in the sixteenth and seventeenth centuries, and, in those countries where they had the ascendency, the Protestants had been long inflicting upon Catholics a treatment harder than they themselves underwent in France. At Geneva and in Holland Catholicism was already of a nature similar to that of the Church in Germany, after the Peace of Augsburg, all subjects were bound to take the religion of their prince, in accordance with the adage: "Cuius regio ejus religio." England, which even forced those who dissentened from the Established Church to seek religious liberty in America, treated Catholics more harshly than did Turkey: all priests were banished from the country; should one of them return and be caught in the exercise of his functions, he was condemned to death; a heavy tribute was imposed upon Papists, as though they were slaves.

The Revocation did not produce the effect intended by its authors. Scarcely had it been published when, in spite of all prohibitions, a mighty movement of emigration developed in the provinces adjacent to the frontiers. Vauban had to write that the "Revocation brought about the desertion of 100,000 Frenchmen, the exportation of 60,000,000 livres (€12,000,000) of the ruin of all commerce, the ruin of acres of the richest species, the allurement of 9000 sailors, the best in the kingdom, and foreign armies by 600 officers and 1200 men, more insured to war than their own." Those who remained took advantage of the last article of the Revocation to dispense with attendance at church and the reception of the sacramental at the hour of death. The king, in his embarrassment consulted the bishops and the intendants, and their replies inclined him to relax the execution of the edict of revocation somewhat, without changing anything in its letter. On the other hand, a few preachers remained in spite of the Revocation, and clandestinely organized their worship in the fields and in remote places, or, as the Protestant historians express it, "in the desert." Of this number were Brousse1, Corteiz, and Regnart. In the Vivarais the management of the churches passed into the hands of the illuminés—fanatical preachers, peasants, and young girls—who stirred up the population by the prophecies that the French had been given of their cause. Three armies and three marshals of France had to march against these insurgents (the Camisards), who were reduced to order only after a struggle of five or six years' duration (1702-1708).

From that time the churches lived only as secret associations, without religious worship and without regular gatherings. The ministers were hunted into hiding, those who were caught being mercilessly put to death. Still, some of them were not afraid to risk their lives; the best known of these, Antoine Court (1696-1700), spent nearly twenty years in this secret labour, travelling through the South, and distributing pamphlets among the peasantry. To these meetings "in the desert," and even organizing simn formulae of provincial synods in 1715, and national synods in 1726. Retiring to Lausanne in 1729, he founded there a seminary for the education of pastors for the Protestant ministry in France. The restriction of private houses, which existed during the Edict of 1685, and the activities lasting until 1762; but ideas of tolerance had for some time been gradually finding their way into the mind of the nation; prosecutions for religious offences became unpopular, especially after the Calas affair. A Protestant of that name at Toulouse was charged with having killed one of his
sons to prevent his becoming a Catholic. Arrested and condemned on this charge by the Parliament of Toulouse (1782), he lived but a short time of sixty-eight after a trial which created great excitement. His widow and children demanded justice. Voltaire took up their cause and succeeded by his writings in arousing the public opinion of France and of Europe against the Parliament of Toulouse. The Supreme Council (Grand Conseil) unanimously reversed the judgment of the inferior court, and another tribunal rehabilitated the memory of Calas.

The Protestants derived great benefit from the trend of public feeling resulting from this rehabilitation. Without any legislative change as yet, the modification of public opinion incessantly tended to the improvement of their lot, and they met them with a tacit toleration. At last, in 1787, a decided amelioration of their condition came with the Edict of Toleration, which granted to non-Catholics the right to practise a profession or handicraft without molestation, permission to be legally married before magistrates, and to have births officially recorded. In practice these liberties went even farther, and churches were openly organized. Two years later complete liberty and access to all employments were recognized as belonging to them, no less than to other citizens, by the "Declaration of the Rights of Man", voted by the Constituent Assembly (August, 1789). The constituting body of the Edict (March, 1790) was presided over by the Protestant pastor Rabaud, went so far as to order that the property of those who had emigrated under the Revocation should be restored to their descendants, who might even recover their rights as French citizens on condition that they took up their residence in France. Protestants had to suffer, like Catholics, though infinitely less, from the sectarian and anti-religious spirit of the Revolution; churches vanished during the Reign of Terror; religious worship could not be reorganized until about the year 1800.

When order was restored the Huguenots were included in the measures initiated by Napoleon for pacifying the nation. They received from him an entirely new organization. At this time there were in France about 430,000 Réformés. By the law of 18 Germinal, Year X (7 April, 1802), there was to be a synod of each of the five consistorial churches, called a synod. The consistories of each church was to be composed of a pastor and the leading elders. They were entrusted with the maintenance of discipline, the administration of property, and the election of pastors, whose names had, however, to be submitted for the approval of the head of the State. Each synod was composed of a pastor and an elder from each of the churches, and had to superintend public worship and religious instruction. It could assemble only with the consent of the Government under the presidency of the pastor who had not less than six years of pastorate. Pastors' salaries were to be fixed by the synods, and officers of the old seminary of Lausanne was transferred to Geneva, at that time a French city, and then to Montauban (1809) and annexed to the university as a faculty of theology. For the churches of the Augsburg Confession, two seminaries or faculties were to be erected in the places they inhabited, and in one of these of these seminaries. No further modifications to undergo, whatever changes of government there might be. In the early days of the Restoration its members had, indeed, a certain amount of rough usage to suffer in some of the cities of the south, but this was the work of local animosity or of personal vengeance, and the public authorities had no part in it. The Protestant had learned to adapt himself as well as possible to the system of organization that had been imposed on them.

In 1806, after Napoleon's conquests, there were 76 consistories with 171 pastors. The religious life of their churches was very languid; indifference reigned everywhere. At Paris, the pastor Boistard complained that out of 10,000 Protestants hardly fifty or a hundred attended worship regularly—two or three hundred at most during the fine season. The pastors, hastily prepared for their work at Geneva, brought back generally with them rationalistic tendencies; they were content to fulfill the routine duties of their positions without dwelling on the presuppositions of the monoplace of morality or of natural religion. Two tendencies in regard to dogma were beginning to reveal themselves. One of these was represented by Daniel Encours, dean of the theological faculty at Montauban, and was directed towards rigid orthodoxy, based firmly on dogmas and confessions; the other was championed especially by Samuel Vincent, one of the most respected pastors of the time, and put religious feeling above doctrine and morality. Christianity being according to this view a life rather than an aggregate of facts and revealed truths. The movement known as the Réveil (Awakening) helped to reconstitute this theological centre. The other insti-

This three tendencies grew farther apart from day to day. The friends of the Réveil, sometimes called Methodists, severed their connection with the Reformed Churches of France, and organized in 1830 in the Rue Taitbout, Paris, a free Church of which Edmond de Pressensé soon became the most noted leader. In their profession of faith and their disciplinary regulations they emphasized the individual character of faith, the Church's independence of the State, and their desire for autogamy. Some of them, with the periodical "L'Espérance" for their organ, refused to break with the National Church. The Liberals, who were at first called Latitudinarians or Rationalists, repudiated the earlier confessions of faith, predestination by absolute decree, and the submission of the whole body of their doctrine—according to M. Nicolas, one of their number—consisted in "avoiding Calvinistic and Rationalistic exaggerations". A synod held in 1848, consisting of fifty-two ministers and thirty-eight elders, increased the existing divisions. The Liberals obtained the presidency, and, in deference to their wishes for the publication of confessions of faith was set aside by an almost unanimous vote, the synod contenting itself with drawing up an address in which the majority set forth the principles
common to French Protestants, namely, respect for the Bible and the liturgies, and faith in historical and supernatural Christianity. But as the assembly refused to re-establish a clear and positive profession of faith, the pastors Frédéric Monod, Amal, and Cambon left the official Church, and issued an appeal to the Assembly, on 5 April 1801, in which they informed the government of the labour of God which had been carried on by the labour of isolated evangelists. In 1849 they held a synod, in which thirteen of these already formed churches and eighteen which were in process of formation were represented, voted a profession of faith, and established the "Union of the Free Evangelical Churches of France" (Union des églises évangéliques de France). All these divisions made a civil reorganization of the churches desirable; it was effected by a decree of Louis Napoleon, who was then President of the Republic. This decree reconstituted the parishes, placing them under a presbyteral council of pastors and elders. At the head of the hierarchy so constituted was a central council, the members of which were appointed by the Government; its function was merely to represent the churches in their relations with the head of the State, without possessing any religious or disciplinary authority. The Lutheran church was placed under the authority of the Superior Consistory and of a Directory. The only subsequent modification in the status of these churches resulted from the Prussian annexation, after the War of 1870, of the Alsation territories, where there were a great many Protestants; the Lutheran churches by this event lost two-thirds of their membership, and their faculty of theology had to be transferred from Strasbourg to Paris, where it augmented the strength of the Liberal section. The gulf between the two parties still continued to widen. The Orthodox vainly endeavoured, by abandoning the formulæ of the old theology, and by rejecting all but the great facts and essential doctrines of Christianity, to maintain their position; the Liberals, following the lead of the "Revue de Strasbourg", displayed an ever greater readiness to welcome the most radical conclusions of German rationalistic criticism, particularly those of the Tübingen School. The authority of the Divinity of Christ, the Redemption, of miracles, of the supernatural, were successively abandoned. M. Pécaut, a representative of this tendency, even wrote in 1859 a book (Le Christ et la conscience) in which he called in question the moral perfection and holiness of Christ. Others—and among them pastors such as Chausson Coquerel and Albert Rémacle, who later on concealed their sympathy for Renan's "Vie du Jésus". The two last named of these, indeed, were deprived of their churches by the council; they of course asserted in defence of their ideas—as, for that matter, did all the Liberals—that they had only used the right of free inquiry—the right which constitutes the whole of Protestantism, since the Reformation was based on the right of every man to interpret the Scriptures according to his own lights. Their opponents replied that, if this were so, the Church was impossible; that a common worship presupposes common beliefs. This question brought on many discussions between Albert Rémacle and Pontanin, and during two tendencies in the Press, at the conferences, and in the elections for the presbyteral councils. To restore peace, a general synod had to be convoked with the consent of the Government in June, 1872. Here the orthodox had a majority; a profession of faith was adopted by sixty-one votes to forty-five, and a subscription to it was made obligatory upon all the younger pastors. This decision became an insurmountable barrier between the two parties. The Liberals, not content with repudiating the notion of any obligatory confession of faith, refused, so long as it was maintained, to take any further part in the synod of 1872, and have also abstained from participating in any of the general synods, which have been held about every three years since 1879, at Paris, Nantes, Sedan, Auduze and elsewhere, and from which the orthodox party have taken the name of the "Synodal Church". For all that, the Liberals have no intention of breaking the recognized union by the State. Numerous attempts have been made in the last thirty years, to bring about an understanding between the two parties, but have not succeeded in establishing doctrinal unity. The Separation seems calculated rather to increase the divisions, and already a third party has been formed, the Free Liberals (1906) of sixty Liberal churches and 40 Synodal under the name of the "Union des Églises Réformées".

Divided among themselves on doctrinal questions, the Protestants have by no means lost their solidarity in regard to external activities. The movement of spiritual renovation which followed the Napoleonic wars produced among them various propagandist, educational, and benevolent enterprises, such as the "Société biblique" (1819), the "Société des traiés religieux" (1861), the "Société des missions évangéliques de Paris" (1824), the Society for the Promotion of Christian Knowledge, the "Société des missions étrangères" (1841), the Institution of Deaconesses (1841), the agricultural colony of Sainte-Toy (1842), and divers orphanages, homes for neglected children, and primary schools. Of these last, the greater number (about 2000) have been closed since 1882. The missionary activity of the French Protestants has been chiefly exercised through the "Société des missions évangéliques de Paris", at Bassoutos (South Africa), where they count at the present time 15,000 adherents, with schools and a printing press; in Madagascar, where a large number of schools are dependent on them (117 schools, according to statistics for 1908, with 7500 pupils); in Senegal, in French Congo, in Zanzibar, in Tahiti, and New Caledonia. Some sixty missionaries are at work on these missions, and in late years they have received an annual grant amounting to about 320,000 dollars. At home their propaganda is carried on chiefly among the Catholic population by the "Société de propagation de la sainte-cuvette", which has a budget of 90,000 dollars per annum; by the "Société évangélique de France", which in some years has received as much as 24,000 dollars; by the "Mission populaire évangélique" (MacAll), without, however, any appreciable success.

Journalistic enterprise has not been overlooked. The first Protestant newspaper in France, the "Archives du christianisme", was founded in 1818; then came the "Annales protestantes" in 1820, the "Mélanges de la religion" in the same year, the "Revue protestante" and the "Iien" in 1841, the "Evangeliste" in 1837, the "Espérance" in 1839, the "Revue de Strasbourg" in 1859, the "Revue théologique", the "Protestant", the "Vie Nouvelle", the "Revue chirhumine", and the "Signal", a political journal. Only the best-known periodicals are mentioned here; most of them have disappeared; many are, or have been, the organs of particular sections of the Protestants. There must still be, according to the "Agenda, annuaire protestant", more than 150 of these periodicals, but the majority have only a restricted circulation, and, excepting the "Bulletin historique et littéraire de la société de l'histoire du protestantisme français" (1852), are practically without readers outside of the Protestant world.

At present Protestantism counts about 650,000 adherents in France—560,000 Réformés, 80,000 Lutherans, and 10,000 independents—that is a little less than one-sixtieth of the population. This seemingly negligible minority has, as every one admits, made for itself in politics and in the executive government a place out of all proportion to its numerical strength.
HÜLSHOFF

From a religious point of view Protestantism shows no indications of progress; its doctrines are daily losing ground, above all in educated circles. There, as recently declared by M. Edmond Stauffer, dean of the faculty of Protestant theology at Paris, in the "Revue Chrétienne," "people no longer want most of the traditional beliefs which are the dogmatic system, used by the Reformers and the Révélateur, in which many 'evangelical' pastors still believe, or by their silence leave the faithful to conclude that they still believe. . . . The intellectuals will have no more of these antiquities, they do not go to church anymore, which recall the past, and respectfully salute the ancient beliefs, but they get on without them, and have no need of them either for their intellectual or their moral life." Indeed it does not appear that the practice of religion has any more vitality among the masses than faith has among the intellectuals. Official reports made to the synods testify that "the number of mixed marriages is increasing, which proves that faith is diminishing.

In certain districts the number is sometimes as many as 95 per cent; even in the very Protestant districts, we know of 25 per cent in one place and 20 per cent has risen to 25 per cent. A most ominous sign of this kind." As for attendance at public worship: "Here," says one report made to the General Synod of Bordeaux (1899), "are the figures for a section of the country which must be classed among the best, that of the Pyrenees. The average of attendance is 32 per cent. It does not go so high everywhere; in Poitou, for example, it is only 11 per cent, and in some churches of Poitou we must go still lower . . . to averages of 5 per cent. The same difference is found in the number of communicants: here it is 12 per cent; there, 4 or even 3 per cent." These are results which would doubtless have astonished and shamed the fathers but which are explained by the theory of free inquiry and the intimate history of French Protestantism, especially during the last century.

Antoine DeGroot.

Hülshoff (Droste-Hülshoff), Annette Elisabeth von, poetess; b. at Schloss Hülshoff near Westphalia, 10 January, 1797; d. 24 May, 1848. After the death of her uncle, Clemens August von Droste-Hülshoff (1829), she passed most of her life at Rüschhaus near Münster. The monotony of this lonely life was broken, however, by prolonged visits to her brother-in-law’s estates at Münster and Meersburg. She died on 24 May, 1848. After the death of her uncle, Clemens August von Droste-Hülshoff (1829), she passed most of her life at Rüschhaus near Münster. The monotony of this lonely life was broken, however, by prolonged visits to her brother-in-law’s estates at Meersburg. She died on 24 May, 1848.

Born prematurely, the poetess had a powerful mind in a delicate, sickly frame, a condition from which she suffered all her life. The most remarkable of her many mental gifts was an inexhaustible imagination combined with keen powers of observation and the faculty of reproducing her poetic concept in quaint and facile language. She was also stimulated in many ways by her congenial relations with both her maternal aunts, August and Werner von Hatzhausen, who brought her in touch with the romantic movement. Her first training in poetic composition she received from the poet of the Hainbund, A. M. Sprickmann, professor of law at Münster, whose influence can be traced in many of the poems of her youth. (On her uncle’s death she entered into friendly relations. Like all great minds, she followed her own course, and consequently the poems which she composed in the fruitful years she passed at Meersburg were the works of a finished poetess, who received from Schücking the right incentive at the right time.

Annette turned her muse to almost all kinds of poetry. In her dramatic attempts, however, she got no further than the fragment "Berta" and the one-act play "Perdu". Her brilliant descriptive powers in prose are amply manifested in her numerous letters and stories, among which are: "Bei uns zu Lande auf dem Lande", "Bilder aus Westfalen" and particularly, "Die Judenbuche". With equal skill she handled narrative verse. Poetic imagery and rhythm of colouring and vigour such as we see in the "Schlacht im Loener Bruch", are not frequently met with in German literature. Her "Geistliches Jahr" is a unique work in which she gives expression to her religious thoughts and impressions. It is intelligible only to those who in judging it take into account not merely the individuality of the author but also the entire tendency of the period when it was written.

The fame of the poetess rests chiefly on her lyric poems, her pastorals, and her ballads. In the poetic representation of nature, few can equal her. The poetical works of Annette von Droste-Hülshoff are imperishable. What makes them so is their originality, the proof that they are the works of a genius. It is this too that gained for her author the well-earned title of "Germany’s greatest poetess.

Collective editions of her works have been edited by Levin Schücking (1879); Kreiten (4 vols., 1854–87; 2nd ed., 1900); and Arens (1905); supplements and corrections were made by Bohm (1900). Her letters were edited by Schüller (2nd ed., 1880) and Th. Schücking (1899), and an important collection edited by Dr. Cardauns is embodied in the collection of Dr. Foster entitled "Forschungen und Funde" (1909). Dr. Foster is also engaged (1909) on an edition of the "Geistliches Jahr", the concluding part of which was left in an unfinished state.
Humanism is the name given to the intellectual, literary, and scientific movement of the fourteenth to the sixteenth centuries, a movement which aimed at basing every branch of learning on the literature and culture of classical antiquity. Believing that a classical training alone could form men, the Humanists so called themselves in opposition to the Scholastics, and adopted the term Humaniora (the humanities) as signifying the scholarship of the ancients. Though the interval between the classical period and their own days was regarded by the Humanists as barbarous and destructive of science, Humanism (like every other historical phenomenon) was connected with the past. The use of Latin in the Liturgy of the Church had already prepared Europe for the humanistic movement. In the Middle Ages, however, classical literature was regarded merely as a means of education; it was known through secondary sources only, and the Church saw in the worldly conception of life that had prevailed among the ancients an allurement to sin. On the rise of secularism these views underwent a change, especially in Italy. In that country the body politic had grown powerful, the cities had amassed great wealth, and civic liberty was won. The love of pleasure became a strong factor in life and freer play was given to sensory impulse. The transcendent, unworldly concept of life, which had till then been dominant, now came into conflict with a mundane, human, and naturalistic view, which centred on nature and man. These two trends met in the types in antiquity, whose writers cherished and extolled the enjoyment of life, the claims of individuality, literary art and fame, the beauty of nature. Not only ancient Roman culture but also the hitherto neglected Greek culture was taken up by the movement. The new spirit broke away from theology and Church: The principle of free, scientific inquiry gained ground. It was quite natural that the value of the new ideal should be exaggerated while the medieval national culture was undervalued.

It is customary to begin the history of Humanism with Dante (1265–1321), and Petrarch (1304–74). Of the two Dante, by reason of his poetic sublimity, was undoubtedly the greater; but, as regards Humanism Dante was merely its precursor while Petrarch initiated the movement and led it on to success. Dante certainly shows traces of the coming change; in his great epic classical and Christian materials are found side by side, while poetic naturalism of the pagan writers yet so foreign to the Christian ideal, is what he seeks. In matters of real importance, however, he takes the Scholastics as his guides. Petrarch, on the other hand, is the first Humanist; he is interested only in the ancients and in poetry. He unearths long-lost manuscripts of old classics, and collects ancient medals and coins. If Dante ignored the monuments of Rome and regarded its ancient statues as idolatrous images, Petrarch views the Eternal City with the enthusiasm of a Humanist, not with that of a pious Christian. The ancient classics—especially his Idylls, his Eclogues, and his Virgil serve not merely to instruct and to charm him; they also incite him to imitation. With the philosophers of old he declared virtue and truth to be the highest goal of human endeavour, although in practice he was not always fastidious in cultivating them. However, it was only in his third aim, eloquence, that he rivalled his models. The beautiful hills of Mont Ventoux marks an epoch in the history of literature. His joy in the beauty of nature, his susceptibility to the influence of landscape, his deep sympathy with, and glorious portrayal of, the charms of the world around him were a break with the traditions of the past. In 1341 he gained a second crown from the hand of the poet laureate. His Latin writings were most highly prized by his contemporaries, who ranked
his "Africa" with the "Aeneid" of Virgil, but poesyter prefers his sweet, melodious sonnets and cantoni. His chief merit was the impulse he gave to the search for the lost treasures of classical antiquity. His chief disciple and friend, Boccaccio (1313-75), was honoured in his lifetime and for his name and, though elegantly camouflaged, "Decameron" (by which, however, posterity remembers him), but for his Latin works which helped to spread Humanism. The classical studies of Petrarch and Boccaccio were shared by Coluccio Salutato (d. 1406), the Florentine chancellor. By introducing the epistolary style of the ancients he brought classical writing into the service of the State, and by his tactes and his prominence greatly promoted the cause of literature.

The men of the revival were soon followed by a generation of itinerant teachers and their scholars. Grammarians and rhetoricians journeyed from city to city, and spread the enthusiasm for antiquity to ever-widening circles; students travelled from place to place to become acquainted with the nicteties of an author's style and his interpretation. Petrarch lived to see Giovanni di Conversano set out on his journey as itinerant professor. From Ravenna came Giovanni Malapighini, gifted with a natural bent, and a true poet. Zeno had been the first to use the Latin tongue for the new studies, though more skilled in imparting inherited and acquired knowledge than in the elaboration of original thought. In another way the soul of literary research was Poggio (1380-1459), a papal secretary and later Florentine chancellor. During the sessions of the Council of Constance (1414-18) he ransacked the monasteries and institutions of the neighbourhood, made valuable discoveries, and "saved many works" from the "cells" (ergastula). He found and transcribed Quintilian with his own hand, had the first copies made of Lucretius, Silius Italicus, and Ammianus Marcellinus, and, probably, he discovered the first book of the Platonic academy of Athens. About 1430 practically all the Latin works now known had been collected, and scholars could devote themselves to the revision of the text. But the real source of classic beauty was Greek literature. Italians had already gone to Greece to study the language, and since 1396 Manuel Chrysoloras, the first teacher of Greek in the West, was busily engaged at Florence and elsewhere. His example was followed by others. In Greece also, a zealous search was instituted for literary remains, and in 1423 Aursipa brought back two hundred and thirty-eight volumes to Italy. The most diligent searchers after inscriptions were the Cumanat, and Constantine Cafaro, who, as the merchant Ciriaco of Ancona. Among those present from Greece at the Council of Florence were Archbishops (afterwards Cardinal) Bessarion, who presented to Venice his valuable collection of nine hundred volumes, also Gemistos Pletodon, the celebrated teacher of Platonic philosophy, who subsequently relapsed into paganism. The capture of Constantinople by the Turks (1453) drove the learned Greeks, George of Trebizond, Theodorus Gaza, Constantine Lascaris, etc., into Italy. One of the most successful critics and editors of the classics was Lorenzo Valla (1407-72). He polemized against the Vulgate, and declared the Donation of Constantine a fable. Despite his vehement attacks on the papacy, Nicholas V brought him to Rome. Within a short period, the new studies claimed a still wider circle of votaries.

The princely houses were generous in their support of disciplo Aidment. Under the Medici, Cosimo (1429-64) and Lorenzo the Magnificent (1449-92), Florence was pre-eminent the seat of the new learning. Its worthy statesman Mammeti, a man of great culture, piety, and purity, was an excellent Greek and Latin scholar, and a brilliant orator. The Camaldolese monk Pinochino also a prominent scholar, especially versed in Greek; he possessed a magnificent collection of the Greek authors, and was one of the first monks of modern times to learn Hebrew. Marsuppini (Carlo Arezzo), renowned and beloved as professor and municipal chancellor, quoted from the Latin and Greek authors with such facility that his readiness was a source of wonder, even to an age averse to constant disputations. Although in the midst of religion Marsuppini was a notorious beaethoven, Nicholas V sought to attract him to Rome to translate Homer. Among his contemporaries, Leonardo Bruni, a pupil of Chrysoloras, enjoyed great fame as a Greek scholar and a unique reputation for his political and literary activity. He was, moreover, the author of a history of Florence. Niccolò Niccolini, known as the Master of the Facettia, was the most famous of the humanists of Florence; a patron of learning, he assisted and instructed young men, dispatched agents to collect ancient manuscripts and remains, and amassed a collection of eight hundred codices (valued at six thousand gold gulden), which on his death were, through the mediation of Cosimo, donated to the monastery of San Marco, to form a public library, and are to-day one of the most valued possessions of the Laurentian Library at Florence. The aforesaid Poggio, a versatile and influential writer, also resided for a long time at Florence, published a history of that city, and ridiculed the clerical lexicographers in his "Facettia." He was distinguished for his extensive classical learning, translated some of the Greek authors (e.g. Lucian, Diodorus Siculus, Xenophon), appended scholarly and clever notes, collected inscriptions, busts, and medals, and wrote a valuable description of the ruins of Rome. His success in his unearthing and unearthing manuscripts has already been mentioned. Pletodon, also mentioned above, taught Platonic philosophy at Florence.

Bessarion was another panegyrist of Plato, who now began to displace Aristotle; this, together with the influx of Greek scholars, led to the foundation of the Philopaschic academy at Venice, and to the election of the most prominent citizens. Marsilio Ficino (d. 1499), a Platonic philosopher in the full sense of the term, was one of its members, and by his works and letters exerted an extraordinary influence on his contemporaries. Along with his other literary labours he undertook the gigantic task of translating the writings of Plato into elegant Latin, and accomplished it successfully. Cristoforo Landino, a pupil of Marsuppini, without sharing his religious ideas, taught rhetoric and poetry at Florence and was also a statesman. His commentary on Dante, in which he distinguished the most dear and beautiful images, secured for him the admiration of all the more prominent citizens. Under Lorenzo de' Medici, the most important man of letters in Florence was Angelo Poliziano (d. 1494), first the tutor of the Medici princes and subsequently a professor and a versatile writer. He was pre-eminent a philologist, and gave scholarly translations and commentaries on the classical authors, devoting special attention to Homer and Horace. He was, however, surpassed by the youthful and celebrated Count Pico della Mirandola (1462-94), who, to use Poliziano's phrase, "was eloquent and virtuous, a hero rather than a man." He noticed the deviation between Hellenism and Judaism, studied the Cabala, combated astrology, and composed an immortal work on the dignity of man. An active literary movement was also fostered by the Visconti and the Sforza in Milan, where the vain and unprincipled Filippo (1388-1481) resided; by the Gonzaga in Mantua, where the noble Vittorio da Mandriera (d. 1440) had the poet's ermetic school; by the kings of Naples; by the Este in Ferrara, who enjoyed the services of Guarino, after Vittorino the most celebrated educationist of Italian Humanism; by Duke Federigo of Urbino, and even by the prolifico Malatesta in Rimini. Humanism was also a prevalent current in the north, especially in the valleys of the Po and the Ticino. The The
ablest intellects of Italy were attracted to the city; to Nicholas mankind and learning are indebted for the foundation of the Vatican Library, which in the number and value of its manuscripts (particularly Greek) surpasses all others. The premonitor of this activity, especially, translations from the Greek, and with important results, although no one won the prize of ten thousand golden offered for a complete translation of Homer.

Pius II (1458–64) was a Humanist himself and had wide influence as poet, orator, interlocutor of antiquity, jurist, and statesman; after his election, however, he did not fulfill all the expectations of his earlier associates, although he showed himself in various ways a patron of literature and art. Sixtus IV (1471–84) re-established the Vatican Library, neglected by his predecessors, and appointed Platina librarian. Platina reigns an incredible freedom of thought; was Ficino's description of the Roman Academy of Pomponio Leto (d. 1498), an institute which was the boldest champion of antiquity in the capital of Christendom. Under Leo X (1513–21) Humanism and art enjoyed a second golden age. Of the illustrious circle of literati which surrounded him "Tarso Farnesio" (1547)—famous as a writer of prose and poetry, as a Latin and Italian author, as philologist and historian, and yet, in spite of his high ecclesiastical rank, a true worldling. To the same group belonged Jacopo Sadolet, also versed in the various branches of Latin and Italian literature. The chief reason why Humanism, as indeed of Humanism in general, was that it opened up the real sources of ancient culture and drew from these, as a subject of study for its own sake, the classic literature which till then had been used in a merely fragmentary way. Philological and scientific criticism was inaugurated, and historical research advanced. The uncouth Latin of the Scholastics and the monastic writers was replaced by classic elegance. More influential still, but not to good effect, were the religious and moral views of pagan antiquity. Christianity and its ethical system suffered a serious shock. Moral relations, especially marriage, became the subject of ribald jest. In their private lives many Humanists were deficient in moral sense, while the morals of the upper classes degenerated into a pitiable excess of unrestrained individualism. A political expression of the humanistic spirit is "The Prince" (Il Principe) of Niccolo Machiavel (d. 1527), the gospel of brute force, of contempt for all morality, and of cynical selfishness.

The pillaging of Rome in 1527 gave the death-blow to Italian Humanism, the serious political and ecclesiastical complications that ensued prevented its recovery "in Germany," had long since become its heir, but here Humanism never penetrated so deeply. The religious and moral earnestness of the Germans kept them from going too far in their devotion to antiquity, beauty, and the pleasures of sense, and gave the humanistic movement in Germany a practical and educational character. The real director of the work of the Humanists was the chief,usion of the new spirit, the school of Wittenberg. The movement was led by Heinrich Gessing (d. 1565), a humanist scholar, poet, and Latinist, professor of Latin at Heidelberg. The developer of Humanism in Mainz was the prolific author, Dietrich Gresemund (1477–1512). The movement secured official recognition at the university in 1502 under Ecker Berthold, and found in Johannes Sturmianus its most influential supporter. In the inquisitor scholar, Peter Luder, Erfurt had in 1490 one of the earliest representatives of Humanism, and in Jakobus Truttefetzer (1460–1519), the teacher of Luther, a diligent writer and conscientious professor of theology and philosophy. The real guide of the youth of Erfurt, however, Konrad Mutianus (1470–1519), the professor of Greek at Erfurt, was—like Pietro Bembo in Venice— so much more influential than the abbot Johannes Trihemius (1426–1516), a man of universal attainments.

The life of these two chief societies was Conrad Celtis, the fearless and unwearying apostle and itinerant preacher of Humanism, a man of the most varied talents—a philosopher, mathematician, historian, publisher of classical and medieval writings, a Roman poet, who celebrated in ardent verse his ever changing lady-loves and led a life of worldly indulgence.

Into the universities, too, the representatives of the "languages and belles-lettres" soon found their way. In Basle, which, in 1474, had appointed a professor of the liberal arts and poetry, the movement was also chiefly influenced by Heinrich Gessing (1489–1556), a humanist, and also by Dietrich Gresemund (1477–1512). The movement secured official recognition at the university in 1502 under Elector Berthold, and found in Johannes Sturmianus its most influential supporter. In the inquisitor scholar, Peter Luder, Erfurt had in 1490 one of the earliest representatives of Humanism, and in Jakobus Truttefetzer (1460–1519), the teacher of Luther, a diligent writer and conscientious professor of theology and philosophy. The real guide of the youth of Erfurt, however, Konrad Mutianus (1470–1519), the professor of Greek at Erfurt, was—like Pietro Bembo in Venice— so much more influential than the abbot Johannes Trihemius (1426–1516), a man of universal attainments.

for the antique were his chief characteristics. The satirist Crotus Rubianus, Eutricus Cordus, the witty epigrammatist, and the elegant poet and merry companion, Eobanus Hessus, belonged also to the Erfurt circle.

In Leipzig also, the first traces of humanistic activity go back to the middle of the fifteenth century. In 1503, when the Westphalian Hermann von dem Busche settled in the city, Humanism had there a notable representation. From 1507 to 1511 Eutricus Cordus also laboured in Leipzig, but in the former year von dem Busche removed to Cologne. From the beginning of the sixteenth century Wittenberg was under humanistic influence. Many were the collisions between the champions of the old philosophy and theology and the "poete", who adopted a somewhat arrogant attitude. About 1520 all the German universities had been modernised in the humanistic sense; attendance at the lectures on poetry and oratory was obligatory, Greek chairs were founded, and the scholastic commentaries on Aristotle were replaced by new translations. The most influential of the humanistic schools were, that of Schlettstadt under the Westphalian Ludwig Dringenberg (d. 1477), the teacher of Wimpheling, that of Deventer under Alexander Hegius (1453–93), that of Cologne under Adrian von dem Busche, and Murmelius, and that of Münster, which underwent humanistic reformation in 1500 under the provost Rudolf von Langen (1438–1519), and which under the co-rector, Joannes Murmelius (1480–1517), the author of numerous and widely-adopted textbooks, attracted pupils from such distant parts as Pomerania and Silesia. Good academic institutions also existed in Nuremberg, Augsburg, Strasbourg, Bâle, etc.

The humanistic movement reached its zenith during the first two decades of the sixteenth century in Rhineland and Switzerland, and in Italy. The "phoenix of Germany", was skilled in all the branches of knowledge that were then cultivated. Primarily a jurist, an expert in Greek, a first-rate authority on Roman authors, an historian, and a poet, he nevertheless attained his chief renown through his philosophical and Hebrew works—especially through his "Rudimenta Hebraica" (grammar and lexicon)—in the composition of which he secured the assistance of Jewish scholars. His model was Pico della Mirandola, the "wise count, the most learned of our age". He studied the esoteric doctrine of the Kabbalah and he lost himself in the annals of this abstruse problems, and, after having become, in academic retirement, the pride and glory of his nation, was suddenly forced by a pecuiliar incident into European notoriety. This occurrence has been unjustly termed the culminating point of Humanism. Johann Pfefferkorn, a baptised Jew, had declared the Talmud a deliberate insult to Christianity, and had procured from the emperor a mandate suppressing Hebrew works. Asked for his opinion, Reuchlin on scientific and legal grounds expressed his personal disapprobation of this action. Enraged at this opposition, Pfefferkorn, in his "Handspiegel", attacked Reuchlin, in reply to which the latter composed the "Augenspiegel". The theologians of Cologne, particularly Hochstraten, declared against Reuchlin, who then appealed to Rome. The Bishop of Speier, entrusted with the settlement of the strife, declared himself in favour of Reuchlin. Hochstraten, however, now ran riot. Embraced by his former friend, the real instigator of the case was issued, but finally in 1520, under the pressure of the Lutheran movement, Reuchlin was condemned to preserve silence on the matter in future and to pay full costs.

But more important than the lawsuit was the literary movement accompanied by it. This was a prelude to the Reformation. All Germany was divided into two camps. The Reuchlinists, the "fosterers of the arts and of the study of humanity", the "bright, renowned men" (clari viri), whose approving letters (Epistolae clariorium virorum) Reuchlin had published in 1514, predominated in numbers and intellect; the Cologne party, styled by their opponents the "obscureants" (viri obscures), were more intent on defence than attack. The most brilliant product of this literary feud is the classical satire of the Humanists, "The Letters of the Obscurantists" (Epistolae obscuriorum virorum, 1515–17), of which the first part was composed by Crotus Rubianus, the second substantially by Hutten. Oftentimes these letters were written by various persons—how much humanism thrived at the Cologne University to Ortwin Gratius, their poet and master, and were couched in barbarous Latin. They purport to describe the life and doings of the obscureants, their opinions and doubts, their debaucheries and love affairs. The lack of culture, the obsolete methods of instruction and study, the perverse expenditure of ingenuity, the pedantry of the obscureants, are mercilessly ridiculed. Although the pamphlet was dictated by hatred and was full of reckless exaggeration, an inimitable originality and power of caricature secured its success. The Humanists regarded the dispute as decided, and sang the "Triumph of Reuchlin". Hutten (1485–1523), a Franconian knight, and enthusiastic champion of the liberal sciences, was still better known as politician and agitator. The strengthening of the emperor's power and war against Rome were the chief items of his political programme, which he preached first in Latin and subsequently in German dialogues, poems, and pamphlets. The jurists and the Roman Law, the immorality and illiteracy of the clergy, the fatuity of unpractical pedantry, were mercilessly scourged by him, his aim being of course to make himself conspicuous in the new movement. Finally, in the year of the jubilee, the service of Luther and celebrated him in his last writings as a "hero of the Word", a prophet and a priest, though Luther always maintained towards him an attitude of reserve. Hutten's death may be regarded as the end of German Humanism properly speaking. A still more serious movement, the Reformation, took its place. The majority of the Humanists set themselves in opposition to the new movement, though it cannot be denied that they, especially the younger generation under the leadership of Erasmus and Mutianus Rufus, had in many ways paved the way for it.

The progress of Humanism in other lands may be reviewed more briefly. In France the University of Paris exerted a powerful influence. By the end of the fourteenth century the students of this institution were already conversant with the ancient authors. Nicolas de Cléamanges (1360–1343) lectured on Cicero- 

"(...)

Subsequently, there came from Italy scholars and poets—e.g. Andrea Jobs Liscari, Julius Cesar Scaliger, and Andrea Alciati, who made France the deise daughter of Italy. Among the leading scholars in France may be mentioned Budé (Budæus), the first Henleist of his age (1467–..."
1540), the accomplished printers Robert (1503–59) and Henri (1529–98) Estienne (Stephanus), to whom we are indebted for the “Thessaurus linguæ Latīnae” and the “Thesaurus linguæ Graecae”; Joseph Justus Scaliger (1540–1609), famed for his knowledge of epigraphy, numismatics, and especially of chronology; the philologist Isaac Casaubon (1559–1614), well known for his excellent edition of the classics, and Petrus Ramus (1515–72), a profound student of Greek and medieval philosophy.

Classical HUMANITARIANISM was naturalized in Spain through Queen Isabella (1474–1504). The school system was reorganized, and the universities entered on a new era of intellectual prosperity. Of Spanish scholars Juan Luis Vives (1492–1540) enjoyed a European reputation. In England Humanism was received with less favour. Foggio, indeed, passed some time in that country, and the English printers, like William Grey, a pupil of Guarino’s, later Bishop of Ely and privy councillor in 1454, sought instruction in Italy. But the troubled conditions of English life in the fifteenth century did not favour the new movement. In the spread of classical learning William Caxton (1421–91), the first English printer, was one of the most important persons. The learned, refined, charitable, and courageous chancellor Thomas More (1478–1535) was in a way an intellectual counterpart of Erasmus, with whom he was on terms of closest intimacy. Of special importance was the foundation of such excellent schools as those of Cambridge and St. Paul’s (London) in 1525. The founder of the latter was the accomplished Dean John Colet (1466–1519); the first rector was William Lilly (1468–1523), who had studied Greek in the Island of Rhodes, and Latin in Italy, and was the pioneer of Greek education in England. During the sojourn of Erasmus at Oxford (1497–9) he found kindred hellenists in William Grocyn and Thomas Linacre, both of whom had been educated in Italy. From 1510 to 1513 Erasmus taught Greek at Cambridge.

KLEMENS LÖFFLER.

HUMANITARIANISM. See POSITIVISM.

Humbert of Romans (de Romaniis), fifth master general of the Roman Order, b. at Romans in the Diocese of Vienne, born 1174; d. 14 July, 1277, or 15 January, 1274, at Valence. He is mentioned as a student at Paris in 1215. In 1224 he entered the Order of St. Dominic, was professor of theology at the school of his order at Lyons in 1226, and prior at the same place from 1226 to 1239. In 1240 he became provincial of the Roman, and in 1244 of the Lombard, province of the Dominican order. After holding the latter office ten years he was elected master general of his order at the general chapter held at Budapest in 1254. In 1263 he voluntarily resigned this office at the general chapter held in London, and retired to the monastery of Valence where he spent the rest of his life in silence. The history of the liturgy of the Order received its permanent form. Humbert's humility did not permit him to accept the Patriarchate of Jerusalem, which was offered him after he had resigned as master general. He is the author of various ascetical treatises, some of which were collected and edited by Belbo (2 vols., Paris, 1859). In a treatise entitled "Libri de tractandis in concilio Lugudunensi 1274" he severely criticizes the faults of the clergy. Parts of it were edited by Martène in "Veterum script. et monument. ecclesiasticorum et doctrinum magn. collect. (Paris, 1724–33), VII, 174–98.

Michael Ott.

Humeral Veil.—This is the name given to a cloth of rectangular shape, about 8 ft. long and 1 ft. wide. At the "Ceremonial Romanum" (vol. I, c. x, n. 5) requires that it should be of silk. The edges are usually fringed, while a cross, with the name "Jesus", or some other representation adorns the centre. Humeral veils for use on festivals are often richly embroidered. To prevent too rapid wearing out by usage, pockets or flaps (wings) are provided well under the lower edge, towards the ends. These are then used instead of the veil itself to hold the object which is to be covered by the latter. Flaps (wings) are not advisable; but there can be no serious objection to pockets. The humeral veil is worn so as to cover the back and shoulders—hence its name—and its two ends hang over the shoulders. For its fastenings under the shoulders, it is fastened across the breast with clasps or ribbons attached to the border. The humeral veil is used: (1) at solemn high Mass, by the subdeacon, who holds the paten with it from the close of the Offertory until after the Pater Noster ("Ritus celebr.", vii, 6, in "Missa Rom.", "Ceremon. Episc.", I, c. x, n. 6, II, viii, 60); (2) at pontifical Mass, by the deacon, who bears the bishop's mitre, unless he be wearing the cope (Ceremon. Episc., I, xi, 6); (3) by the priest or bishop in processions of the Blessed Sacrament, in giving Benediction, in carrying the Host to its repository on Holy Thursday, and bringing it back to the altar on Good Friday, and finally in taking the Viat-icum to the sick (see rit. for Fer. V, in Cazona Domini, and Fer. VI, in Paracseved, in "Missae Rom.", "Ceremon. Episc.", I, c. xxii, n. 11, 13; xxv, 31, 2; xxxii, 27; "Rituale Rom.", I, iv, n. 9; IX, v, 3). In processions of the Blessed Sacrament, and at Benediction given with the ostensorium, only the hands are placed under the humeral veil; in other cases it covers the sacred vessel which contains the Host. In the cases mentioned under the third heading the humeral veil must always be white. No specific colour is prescribed in the case of the mitre-bearer, but the colour worn by the subdeacon must be of the same colour as the other vestments. There is no black humeral veil, for the reason that at Masses for the dead, as well as on Good Friday, the paten remains on the altar.

History.—It is impossible to determine when the Roman Ritus first prescribed the use of the humeral veil on the occasions mentioned above, under (3). It was probably towards the close of the Middle Ages. The custom is first alluded to in "Ordo Rom. XV" (c. lxxvii). In many places outside of Rome the humeral veil was not adopted for the aforesaid functions until recent times. It was prescribed in the basilicas of St. Charles Borromeo, for processions of the Blessed Sacrament and for carrying Holy Viaticum to the sick. Its use at high Mass dates back at least as far as the eighth century, for it was mentioned, under the name of spondin, in the oldest Roman Ordo. It undoubtedly goes back to a more remote antiquity. But in the 11th century the custom of placing the paten with it; this office was performed by an acolyte. Moreover, not only this particular acolyte, but all acolytes who had charge of sacred vessels wore the humeral veil. That of the paten-bearer was distinguished by a cross. One may find an interesting reproduction of this dress with the acolyte in a medallion of the 5th century (spondin) in a ninth-century miniature of a sacramentary (reproduced in Braun, "Die liturgische Gewandung", p. 62), in the seminary of Autun. Some time in
the eleventh century the custom was inaugurated of having the pataen borne, no longer by an acolyte, but by the subdeacon; this was especially the case at Rome. The subdeacon then had no humeral veil, but rather held the pataen with the pall (mappula, palla, sudarium), the forerunner of our chalice veil, the ends of which were thrown over the right shoulder. Thus it is prescribed in the Roman Missal (Patrologia Romana), and must be seen in various reproductions. The acolyte continued, even in the later Middle Ages, to use a humeral veil (pallidium, sindon, mantellium) when carrying the pataen, and the present Roman custom, according to which the subdeacon is vested in the humeral veil when holding the pataen, originated at the close of the eleventh century. It is supposed that the acolyte’s use of the veil spread into the west, and was not adopted in certain countries (France, Germany) until the sixteenth century. The veil used by the mitre-bearer is mentioned as far back as “Ordo Rom. XIV” (c. xlvi).

HUMILITATI. G. B. CHESTNUTT, Ordoni et Congregationes (Fusander, 1881).

Humility.—The word Humility signifies lowliness or submission and is derived from the Latin humilitas or, as St. Thomas says, from humus, i.e. the earth which is beneath us. As applied to persons and things it means that which is abject, ignoble, or of poor condition, as we ordinarily say, not worth much. Thus we say that a man is of humble birth, or that a person is of humble nature. Humility is understood also in the sense of affections or miseries, which may be inflicted by external agents, as when a man humiliates another by causing him pain or suffering. It is in this sense that others may bring about humiliations and subject us to them. Humility in a higher and ethical sense is that by which a man has a modest estimate of his own worth, and submits himself to others. According to this meaning no man can humiliate another, but only himself, and this he can do properly only when aided by Divine grace. We are treating here of humility in this sense, that is, of the virtue of humility.

Humility is a virtue which may be defined:—"A quality by which a person considering his own defects has a lowly opinion of himself and willingly submits himself to God and to others for God’s sake." St. Bernard defines it:—"A virtue by which a man knowing himself as he truly is, abases himself. These definitions are in keeping with that given by the Apostle of humility", he says, "consists in keeping oneself within one’s own bounds, not reaching out to things above one, but submitting to one’s superior" (Summa Contra Gent., bk. IV, ch. 15, tr. Ricketty).

To guard against an erroneous idea of humility, it is necessary to explain that some who might be thought to esteem our own gifts in reference to the gifts of others, if called upon to make a comparison. Humility does not require us to esteem the gifts and graces which God has granted us, in the supernatural order, less than similar gifts and graces which appear in others. No one should esteem less in himself than in others these gifts of God which are to be valued above all else. According to the words of St. Paul:—"That we may know the things that are given us from God" (I Cor., ii, 12). Neither does humility require us in our own estimation to think less of the natural gifts we possess than of similar, or of inferior, gifts in our neighbours; otherwise, as St. Thomas teaches, it would be false to esteem everyone to consider himself a greater sinner or a greater fool than his neighbour; for the Apostle without any prejudice to humility was able to say:—"We by nature are Jews, and not of the Gentiles sinners" (Gal., ii, 15). A man, however, may generally esteem some good in his neighbour which he does not himself possess, or acknowledge some defect or evil in himself which he does not perceive in his neighbour, so that, whenever anyone subjects himself out of humility to an equal or to an inferior he does so because he takes that equal or inferior to be his superior in some respect. Thus we may interpret the humble
expressions of the saints as true and sincere. Besides, their great love of God caused them to see the malice of their own faults and sins in a clearer light than that which is ordinarily given to persons who are not saints.

The four cardinal virtues are prudence, justice, fortitude, and temperance, and all other moral virtues are annexed to these either as integral, potential, or subjective parts. Humility is annexed to the virtue of knowledge, as the other virtues are to potential, because temperance includes all those virtues that refrain or repress the inordinate movements of our desires or appetites. Humility is a repressing or moderating virtue opposed to pride and vainglory or that spirit within us which urges us to great things above our strength and ability. Therefore it is considered in theology, just as meekness which represses anger is a part of the same virtue. From what we have here stated it follows that humility is not the first or the greatest of the virtues. The theological virtues have the first place, then the intellectual virtues, as these immediately direct the reason of man to good. Justice is placed in the order of the virtues before humility, and so should obedience be, for it is part of justice. Humility is, however, said to be the foundation of the spiritual edifice, but in a sense inferior to that in which faith is called its foundation. Humility is the first virtue inasmuch as it removes the obstacles to faith—its modus repressens, as St. Thomas says. It restrains pride and makes a man subject to and a fit recipient of grace according to the words of St. James: "God resisteth the proud, and giveth his grace to the humble" (James, iv, 6). Faith is the first and the positive fundamental virtue of all the infused virtues, because it is by it we can take the first step in the supernatural life and in our access to God: "For he that cometh to God, must believe that he is, and is a rewarder to them that seek him" (Heb., xi, 6). Humility, inasmuch as it seems to keep the mind and heart submissive to reason and to God, has its own function in connexion with faith and all the other virtues, and it may therefore be said to be a universal virtue.

It is therefore a virtue which is necessary for salvation, and as such is enjoined by Our Divine Saviour, especially when He said to His disciples:—"Learn of me, because I am meek, and humble of heart: and you shall find rest to your souls" (Matt., xi, 29). He also speaks of humility in the Sermon on the Mount, "the poor in spirit: for theirs is the kingdom of heaven" (Matt., v, 3), and again, "Blessed are ye when they shall revile you, and persecute you, and speak all that is evil against you, untruly, for my sake: Be glad and rejoice, for your reward is very great in heaven" (Matt., v, 11). From this example of Christ and His Saints we may learn the practice of humility, which St. Thomas explains (Contra Gent., bk. III, 135): "The spontaneous embracement of humiliations is a practice of humility not in any and every case, but when it is done for a needful purpose: for humility being a virtue, does nothing indiscretely. It does not humility but for the grace and benefit of every humiliation: but when virtue calls for a thing to be done it belongs to humility not to shrink from doing it, for instance not to refuse some mean service where charity calls upon you to help your neighbours. . . . Sometimes too, even where our own duty does not require it, humility and his utility in the community is that virtue which it may be expedient to take them up in order to encourage others by our example more easily to bear what is incumbent on them: for a general will sometimes do the office of a common soldier to encourage the rest. Sometimes again we may make a virtuous use of humiliations as a merit of God. Thus if anyone's mind is prone to undue self-exaltation, he may with his brother make use of humiliations, either self-imposed, or imposed by others, so as to check the elation of his spirit by putting himself on a level with the lowest class of the community in the doing of mean offices."

The Angelic Doctor likewise explains the humility of Christ in the following words: "Humility cannot beget God, who has no superior, but is above all. . . . Though the virtue of humility cannot attach to Christ in His divine nature; it may attach to Him in His human nature and His divinity renders His humility all the more praiseworthy, for the dignity of the person adds to the merit of humility; and there was no necessity to a potential humility, because He was God. Hence the highest praise attaches to the humility of the Man God, who to weaken men's hearts from worldly glory to the love of divine glory, chose to embrace a death of no ordinary sort, but a death of the deepest ignominy" (Summa Contra Gent., tr. I, Q. iii, art. 5). It therefore is provided in their rule, St. Benedict in his rule lays down twelve degrees of humility. St. Anselm, as quoted by St. Thomas, gives seven. These degrees are approved and explained by St. Thomas in his "Summa Theologica" (II-II, Q. cxi, a. 9).

The vices opposed to humility are, (1) pride: by reason of defect, (2) a too great obsequiousness or abjection of oneself, which would be an excess of humility. This might easily be derogatory to a man's office or holy character; or it might serve only to pamper pride in others, by unworthy flattery, which would occasion their sins of tyranny, arbitrariness, and arrogance. The virtues of humility may not be practised in an external way which would occasion such vices or acts in others.

ARTHUR DEVINE.

Humphrey Middlemore, Blessed, English Carthusian martyr, date of birth uncertain; d. at Tyburn, London, 19 June, 1535. His father, Thomas Middlemore of Edgbaston, Warwickshire, represented one of the oldest families in that county, and had acquired his estate at Edgbaston by marriage with the heiress of Sir Henry Edgbaston; his mother was Ann Lyttleton, of Pillaton Hall, Staffordshire. Attracted to the Carthusian Order, he was professed at the Charterhouse, London, ordained, and subsequently appointed to the office of procurator. Although few details of his life have come down, it is certain that he was greatly esteemed for his learning and piety by the prior, Father John Houghton, and by the community. His death was caused by his refusal to take part in Philip VIII's marriage with Anne Boleyn arose to trouble conscientious Catholics, as the king was determined that the more prominent of his subjects should expressly acknowledge the validity of the marriage, and the right of succession of any issue therefrom. Accordingly, the royal commissioners, desirous of having the monks of the Charterhouse, and required the monks to take the oath to that effect. Father Houghton and Father Humphrey refused, and were, in consequence, imprisoned in the Tower; but, after a month's imprisonment, they were persuaded to take the oath conditionally, and were released. In the following year Father John was executed for refusing to take the oath of supremacy, and Father Humphrey became vicar of the Charterhouse. Meanwhile, Thomas Bedly, one of the royal commissioners, had again visited the Charterhouse, and endeavoured, both by conversation and writing, to shake the faith of Father Humphrey and his community in the papacy; and his efforts left them unmoved, and, after expostulating with them in a violent manner, he obtained authority from Thomas Cromwell to arrest the vicar and two other monks, and throw them into prison, where they were treated with inhuman cruelty, being bound to posts with chains round their necks and legs, and being compelled to stand on them for four or five weeks. They were then brought before the council, and required to take the oath. Not only did they refuse, but justified their attitude by able arguments from Scripture and the Fathers in favour of the papal
claims. They were accordingly condemned to death, and suffered at Tyburn with the greatest fortitude and resignation.

H. G. WINTERGILL.

Humphreys, Laurence, layman and martyr, born in Hampshire, England, 1571; died at Winchester, 1591. Of Protestant parentage, he was a studious youth, and in the Bible and in religious works. At the age of eighteen he sought to enter the lists of religious controversy and had several meetings with Father Stanney, who soon succeeded in making him a convert. He was a virtuous and good-hearted youth, who delighted to visit prisoners and sick persons, to instruct the ignorant, headings. To imitate the corporal and spiritual works of mercy. In 1591 he was taken seriously ill, and in his delirium he called Queen Elizabeth a harlot and a heretic. He was overheard by some Protestants, and before he was quite convalescent was arrested and committed to Winchester jail, and from thence he was sent to Oxford. He could not recollect having used opprobrious epithets about the queen, but that he did not dispute the evidence of the witnesses who had overheard him, and that he was willing to suffer for his words, though unconscious of them. And for these words alone, spoken in delirium, he was condemned and executed.

CHALLONER, Memoirs (Edinburgh, 1783), I, 276.

C. F. WEMYS BROWN.

HUNGARIAN

Hungarian Catholics in America.—The Kingdom of Hungary (Magyarorszag) consists within its borders several races or nationalities other than the one from which it derives its name. Indeed the Hungarians are in the minority (or perhaps a bare majority) when contrasted with all the others combined; but they outnumber any one of the other races under the Hungarian Crown. It therefore frequently happens that immigrants to the United States coming from the Kingdom of Hungary, no matter of what race they may be, are indiscriminately classed as Hungarians, even by persons fairly well informed. The Kingdom of Hungary, which is separate from Austria except in matters affecting foreign relations, comprises three borders: the southern, the northeastern, and the southwestern. The southern borders have never been properly, but also the Slovaks, Ruthenians, Rumanians, Slavonians, and Croatians, as well as a large number of Germans and some Italians. Representatives of all these races from the Hungarian Kingdom have emigrated to America, and articles concerning them will be found in these volumes. That the majority of the immigrants from Hungary who are of the Greek Rite, but who may be of Hungarian education and language, have already been mentioned in the article GREEK CATHOLICS IN AMERICA. This article is devoted to those immigrants who are of the Hungarian race and language, and who are of the Roman Rite. The mother tongue is of Asiatic origin and is quite unlike any of the Indo-European languages in its vocabulary, structure, and grammatical forms. All its derivative words are made up from its own roots and for the most part are wholly native. Although it is surrounded and touched in social and business intercourse on every side by the various Slavonic tongues and by the Italian, German, and Rumanian languages, besides having the church liturgy and university teaching in Latin, the Hungarian (Magyar) language has nothing in it resembling any of them and has borrowed little or nothing from their various vocabularies. It remains isolated, almost without a relative in the realm of European linguistics. This barrier of language has rendered it exceedingly difficult for the Hungarian immigrant to acquire the English language and thereby readily assimilate American ideas and customs. Notwithstanding this drawback the Hungarian Americans have made progress of which every one may well be proud. Although Count Béres and his three companions, all religious workers, and Balogh settled in America in 1851, immigration to the United States from Hungary may be said to have set in, after the revolution of 1848—49 in Hungary, by the coming of Louis Kosuth to the United States in December, 1851, on the warship Missouri, after the collapse of his struggle for Hungarian liberties. He was accompanied by fifty of his compatriots and many of these remained and settled in various parts of the country. During the Civil War and the wars between Germany and Austria, more and more Hungarian immigrants arrived, but they were then for the most part reckoned as Austrians. It was not until 1866 that the Hungarian immigration really set in. Between 1880 and 1896 about 200,000 Hungarians came to America. The reports of the Commissioner of Immigration show that the number of Hungarian (Magyar) immigrants from the year 1899 to July, 1909, amounted to 310,589. The greatest migration period was 1877, when 60,071 arrived. There are now about three-quarters of a million of them in the United States. They are scattered throughout the country from the Atlantic to the Pacific and fill every walk in life. This immigration, while caused in great measure by an effort to better the condition of the helpless, has been largely stimulated by the agencies of the various European steamship companies, who have found it a paying business to spread tales of easily earned riches among discontented Hungarian labourers. Peculiar political conditions, poverty among the agricultural classes, and high taxes have contributed to cause such immigration. But it cannot be said that a desire to emigrate to other lands is natural to the real Hungarian, for his country is not in the least overcrowded and its natural resources are sufficient to afford a decent livelihood for all its children. There are but few Hungarians emigrating from the southern, almost wholly Magyar, counties. They come either from the large cities or from localities where the warring racial struggles make the search for a new home desirable. While a very large part of this immigration to the United States is Catholic, yet the combined Protestant, Jewish, and indifferentist Hungarians have outstripped the Catholics so that the Catholics number not quite one-half of the total. The Hungarians in the City of New York are said to number over 100,000. They are numerous in New Jersey and Connecticut; and every city, mining town, iron works, and factory village in Pennsylvania has a large continuous; perhaps a third of the Hungarian population resides in that State. Cleveland and Chicago both have a very large Hungarian population, and they are scattered in every mining and manufacturing centre throughout Ohio, Indiana, and Illinois, while West Virginia has numbers of them in its mining districts. For a long time after the Hungarian immigration began no attention was paid, from the racial standpoint, to their spiritual needs as Catholics. They worshiped at German and Slavic churches and were unrecognizable from the mass of other foreign Catholics. During the eighties their spiritual welfare was occasionally looked after by priests of the Slavic nationalities in the larger American cities, for they could often speak Hungarian and thus get in touch with the people. About 1891 Bishop Horemstmann of Cleveland secured for the Magyars of his city a Hungarian priest, Rev. Charles Böhm, who was sent there at his request by the Bishop of Wenen. The year 1892 marks the starting-point of an earnest missionary effort among the Hungarian Catholics in this country. Father Böhm's name is connected with every temporal and spiritual effort for the
benefit of his countrymen. Being the only priest whom the Hungarians could claim as their own, he was in demand in every part of the country and for over seven years his indefatigable zeal and capacity for work carried him over a vast territory from Connecticut to California. He founded parochial congregations, administered the sacraments, and brought the helpless again into the church. He built the first Hungarian church (St. Elizabeth’s) in Cleveland, Ohio, as well as a large parochial school for 600 pupils, a model of its kind, and also founded the two Hungarian Catholic papers, “Szépség”, and “Magyar Radnája”. The second Hungarian church (St. Stephen’s) was founded at Bridgeport, Connecticut, in 1897, and the third (St. Stephen’s) at McKeesport, Pennsylvania, in 1899. Besides those named, the following Hungarian churches have been established: (1900) South Bend, Indiana; Toledo, Ohio; (1901) Fairport, Ohio; Throop, Pennsylvania; (1902) McAdoo and South Bethlehem, Pennsylvania; New York City, New York; Passaic, New Jersey; (1903) Alpha and Perth Amboy, New Jersey; Lorain, Ohio; (1904) Chicago, Illinois; Cleveland (St. Imre’s) and Dillonvale, Ohio; New Brunswick, New Jersey; (1905) Pittsburgh, Pennsylvania; (1906) Buffalo, New York; Detroit, Michigan; Johnstown, Pennsylvania; (1907) Dayton, Ohio; South Norwalk, Connecticut; (1909) Newark and South River, New Jersey; Northampton, Pennsylvania; Youngstown, Ohio; (1910) East Chicago, Indiana; Columbus, Ohio; Philadelphia, Pennsylvania. There are about thirty Hungarian priests who minister to the spiritual wants of these congregations, but more priests are urgently needed in order effectively to reach their countrymen. Although there are nearly half a million Hungarian Catholics in the United States, including the native born, only thirteen churches seem a faint proof of practical Catholicity; yet one must not forget that these Hungarian immigrants are scattered among a thousand different localities in this country, usually very far apart and in only small numbers in each place. Only in a few of the larger places, such as New York, Cleveland, Chicago, Bridgeport, is there a sufficiently large number to support a church and the priest in charge of it. Besides it has been found extremely difficult to procure Magyar priests suitable for missionary work among their countrymen here in America. An attempt has been made in various parts to supply the deficiency. In the Diocese of Columbus, Ohio, Rev. Roderic McEachen, of Barton, and Rev. Joseph Weigand, of Steubenville, have devoted themselves to the Magyar language and have become sufficiently conversant with it to meet the religious needs of their Hungarian parishioners. In Pocaohontas, Virginia, Rev. Anthony Hoch, Os. B., is familiar with this difficult language, having spent over a year in Hungary at the request of his superiors, in order to learn the Hungarian tongue. The late Bishop Tierney of Hartford, in order to meet the wants of his diocese, sent eight of his young clerics about two years ago to study theology and the Magyar language in Hungary. Among his parochial seminaries ( sent to Karlburg (Gyulyaúchvár) where they are preparing for the priesthood and learning the language and customs of the people. Two of them have just returned, having been ordained at Budapest. It is not intended by this policy to place American priests over Hungarian congregations, but to supply mixed congregations, where Hungarian priests are numerorous with priests who can speak their language and keep them in the practice of their religion.

While Catholic societies and membership in them are constantly increasing everywhere in this country the Hungarian element can boast of only a relatively small number. The Magyar Association (Sztú Mária Szövetség), with head-quarters at Cleveland, Ohio, which was founded in 1896 under the leadership of Rev. Charles Böhm, assisted by Joseph Pity, Fransisc Apáthy, and John Weizer. This association has 2500 members comprising about eighty councils in different States. Besides being a religious organization it is also a benefit association providing for the welfare of its members. There are also several other Catholic Hungarian benefit societies throughout the country, the largest being at Cleveland, Ohio, the Catholic Union (Szent Erzsébet Unió), with 800 members. There are many other non-Catholic Hungarian societies, to which Catholic Hungarians belong in threes for its members. The Hungarian Reformed Church has also a church association based upon the same lines as the Catholic societies and with about the same membership. In 1907 the Hungarian National Federation (Amerikai Magyar Szövetség), an organization embracing all Magyars of whatsoever creed, was founded with great enthusiasm in Cleveland, its object being to care for the material interests and welfare of Hungarians in America. Julius Rudnyański, a noted Catholic poet and writer, was one of its founders, its interests, however, he has failed to obtain the unqualified support of Hungarians throughout the country. The parochial schools established by the Hungarians have grown rapidly. The finest was built in Cleveland, Ohio, by Rev. Charles Böhm, and now contains 655 pupils. There are altogether (in 1909) twelve Hungarian parochial schools containing about 2500 children, also at all institutions of higher education has been made, nor are there any purely Hungarian teaching orders (male or female) in the United States to-day.

The first Hungarian paper was a little sheet called “Magyar Számlásító Lapja” (Hungarian Exiles’ Journal), which made its first appearance on 15 October, 1853, and lived a few years. The next one was “Amerikai Nemzetör” (American Guardsman) in 1884, which has long since ceased to exist. The “Szabadság” (Liberty) was founded in 1891 in Cleveland, Ohio, by Tilmér Kohányi, and is a flourishing daily published there and in New York. Catholic Hungarian journalism in America presents but a meagre history. Soon after the arrival of Father Böhm he started a religious weekly at Cleveland called “Magyarsországi Szent Erzsébet Hirőké” (St. Elizabeth’s Catholic Herald), the latter weekly developed into a full-fledged newspaper of eight pages called “Magyarok Várszánpája” (Hungarian Sunday News), and became quite popular. In the beginning of 1907 the Hungarian Catholic clergy, hoping to put Catholic journalism on a stronger foundation, held an enthusiastic meeting at Cleveland and took the “Magyarok Várszánpája” under their joint control and selected as its editor Rev. Stephen F. Chernitzky, from whom in great part the facts for this article have been obtained. But notwithstanding his hard work in Catholic journalism the panic of 1907 deprived it of financial backing and it lost much of its influence.

The Catholic weekly “Haladás” (Progress), started in 1909. Rev. Geza Mengerschmidt of Passaic, New Jersey, is conducting a monthly Catholic paper “Hajnal” (Dawn), and there is also another Catholic Hungarian monthly, “Magyar Zsállás” (Hungarian Standard), published at McKeesport, Pennsylvania, by Rev. Colman. Other periodicals are the Christian Register of Bethlehem, Pennsylvania, and Rev. Louis Kovac of New York City have undertaken the task of keeping alive small Catholic weekly papers for the benefit of their countrymen.

A great many of the Hungarians in America are indifferent. They have one Catholic thinker and from them the Liberals and Socialists are recruited. But a large number are Protestants of a Calvinistic type, some...
what similar to the various Presbyterian denominations in this country. Although actually less numerous than the Catholic Hungarians, they have more churches here. There are forty in all, consisting of thirty-nine Reformed churches, one Lutheran congregation. One division of the Reformed Church is aided by the Reformed Board of Missions in Hungary, having under its control 19 churches and 20 ministers, while eight churches of the other division are controlled and supported by the Board of Missions in America, and twelve by the Presbyterian Church of America. The Lutheran congregation is located at Cleveland, Ohio. Too short a time has elapsed since the establishment of Hungarian Catholic churches in America to speak of the distinguished participants thereof. . . .

ANDREW J. SHIPMAN.

HUNGARY.—Geography and Material Conditions.—The Kingdom of Hungary, or "Realm of the Crown of St. Stephen", situated between 24° and 26° E. longitude, and between 4° 10' and 49° 35' N. latitude, includes, besides Hungary Proper and Transylvania, the Kingdom of Croatia-Slavonia and a territory known as the Military Frontier. The area of the kingdom is 52,924 square miles of which 16,423 belong to the Kingdom of Croatia-Slavonia. Of a population of 19,254,559 (census of 1900) 51.5 per cent were Catholics. The population of the capital, Budapest, situated on both sides of the Danube, is about 800,000.

The geographical boundary of the kingdom is the River Sava which separates it from Bosnia and Servia as far east as the Rumanian frontier, from which point the artificial boundary of Rumania continues along the south, turning north-east, and then north. On the north lies Galicia; on the north-west, Moravia; on the west Lower Austria, Styria, and Carniola. Some 60,000 square miles are covered by mountains, of which the Little Hungarian Alföld, two great plains enclosed by the Alps and the Carpathians. The country is drained by the Danube and its tributaries the Save and Drave, on the right bank, and, on the left, the Theiss, which in its turn receives the waters of the Morava, the chief industry of the country is mining (lignite, pig iron, coal, and gold being the chief items) in 1906 exported 72,290 persons and produced a revenue of 116,000,000 Kronen ($23,200,000). Grazing also contributes largely to the national wealth.

HUNGARY.—History.—(1) From Early Times to the Battle of Mohács (1566).—Even in the earliest ages the territory of the present Kingdom of Hungary was the abode of various races of men. The remains from prehistoric times show that the country was inhabited when the present Hungarian lowlands were covered by the ocean. Half a century before Christ the Thracians occupied Hungary east of the Danube, while Hungary west of the Danube was the home of Celtic and Illyrian tribes. At the opening of the Christian Era the sway of the Romans extended as far as the Danube; Pannonia formed part of the Roman Empire for 800 years, during which time the Magyars lived in the East Franks, after the death of Charlemagne, was favourable to the development of a great Slavonic power, and Swatopuk, ruler of Great Moravia, thought to establish a permanent Moravian kingdom, but the appearance of the Magyars put an end to these schemes.

There are two opposing theories as to the origin of the Magyars, or native Hungarians. Arminius Vámbéry and his supporters hold to a Turkish origin of the Magyars, while Pál Hunfalvy and his followers place them in the Finno-Ugrian division of languages of a Ural-Altaic stem and look for the original home of the race in the region of the Ural mountains, or the district between the rivers Obi, Irtysch, Kama, and Volga. The presence of Turkish words in the language is explained by the theory that after leaving their former home, the Hungarians dwelt for some time near Turkish tribes, who were undoubtedly on a similar level of civilization and from whom many words were borrowed. About the middle of the ninth century, when the Byzantine writers first speak of the Hungarians, calling them "Turei", the Hungarians were in Lebedia, in the territory on the right bank of the Don. From this point they carried on their wars and expeditions until Simeon of Bulgaria was successful in 893 against them. The Hungarians, however, after the battle, withdrew into their districts and were finally expelled by the Magyars, who had been driven back by the Thracians.

While in this neighbourhood the Hungarians undertook an expedition against the Bulgarians in 894 and 895 against Simeon, ruler of the Bulgarians. The expedition was successful, but Simeon formed an alliance with the Bisseni, and a battle took place near the Black Sea, in which his land was devastated. The Hungarians, therefore, withdrew from this region, went westward, and reached the country where they now live. The date of their entry into Hungary is not certain, apparently they entered 895 or 896; neither is the point from which they came positively ascertained. It is not improbable that they entered Hungary from three different directions and arrived at different periods. The chronicle of the "anonymous notary of King Béla" (Anonymus Bela regis notarius) has preserved the history of the first,
occupation of the country, but modern historical investigation shows that little credence can be given the narrative.

The Magyars settled in the neighbourhood of the Danube, and especially in the district on the farther side, as best suited to their occupation, that of cattle-raising. In this region were founded their first towns, the most important of the country, namely, Gran, Sáskes-Fehérvar, and Buda. At about the same time, under their leader Árpád (d. 907), they began once more their marauding expeditions and attacked the countries west of them; these forays, which went as far as Germany, Italy, and France, were continued under Zoltán (907–47), and Taksony (947–72), and did not cease until the land was converted to Catholicism in the reign of Géza. When the Hungarians took possession of the country where they now live, they found a strong Slavonic Catholic Church already in existence in the western part, in Panonnia, where the Christian Faith had been spread partly by German and partly by Italian priests. Methodius, the author of the Slavonic liturgy, endeavoured to introduce the use of the new liturgy here also, but with his death (865) these efforts came to an end. Consequently, the Magyars received their knowledge of Christianity partly from the Catholic population already existing in the country, and partly from the ecclesiastics whom they captured in their marauding expeditions. These forays into the territories farther to the west, which lasted into the tenth century, were a great obstacle to the spread of Christianity, and at the same time the national pride of the Hungarians prevented the acceptance of the religion of the conquered population. Their defeat near Merseburg, in 933, and on the Lech, in 955, put an end to their expeditions and made the Hungarians more favourable to Christianity.

The opinion that the first efforts for the conversion of the Hungarians were made from Constantinople, because the Magyar commanders Buleuc and Gyula accepted the Greek faith at Constantinople, rests, as has been proved, on the inventions of Byzantine chroniclers. The conversion of the land to the Catholic Faith was effected, in reality, from the west, and the change began in the ruling family. Duke Géza, who from 970 had been the sole ruler of Hungary, perceived the danger which threatened Hungary, surrounded as it was by Catholic countries, if it continued pagan. He saw that, if Hungary persisted in shutting out Catholicism, it would sooner or later be the prey of the neighbouring peoples. His marriage with Adélaide, sister of the Polish Duke Mieszko (Mieczyslaw), brought him closer to the Church, and his conversion is to be attributed to Adélaide’s influence. It was through Adélaide’s efforts that St. Adalbert, Archbishop of Prague, came to Hungary, and, in 985, baptized Géza and his son Vaik; the latter took the name of Stephen in baptism. A large number of the most prominent of Géza’s retainers and of his people embraced the Catholic Faith at the same time. Evil results arose, however, from the fact that Adalbert did not at once establish an ecclesiastical organization for Hungary. Moreover, a large proportion of the newly converted adopted the new faith only in externals and retained the heathen customs, offerings, etc., to the old gods. Yet, notwithstanding all this, the new religion continued to spread among the people.

The actual conversion of the country and its ecclesiastical organization was the work of St. Stephen, son of Duke Géza, who succeeded his father in 997. His marriage with Gisela, sister of Duke Henry of Bavaria, gave a powerful impulse to the spread of Catholicism. From Germany came large numbers of priests, nobles, and knights, who settled in Hungary and aided Stephen in converting the country to Christianity. Many obstacles were encountered, and the new religion was spread by the sword. The advance of Christianity was regarded as endangering national interests, and the influx of strangers, together with the favour shown these new settlers by the ruler, seemed to set aside the national influence in the government. Consequently, soon after the accession of Stephen, a revolt led by Koppsán broke out, but it was quickly suppressed, with the aid of the foreign knights; in this way the reputation both of Stephen and of the Church was established in the regions on the farther side of the Danube.

To show his gratitude for this victory Stephen built the monastery of Pannonhalma (Martinberg). Stephen’s victory was also followed by the coming of large numbers of German, French, and Italian ecclesiastics to Hungary, which greatly aided the spread of Christianity.

Stephen now undertook the task of providing the land with the necessary ecclesiastical organization. To secure the independence both of the country and of the Church in his dominions, he petitioned Pope Sylvester II, through Abbot Aurelius, for the royal dignity and the confirmation of his ecclesiastical acts and ordinances; he also received his dominions under the protectorate of the Holy See. Sylvester acceded to Stephen’s request, sent him a royal crown, and confirmed his ecclesiastical regulations. According to tradition, Stephen also received the title of
Apostolic King and Apostolic Legate, the right to have a legate's cross carried before him, and other privileges, but modern investigation has shown that the Bull of Pope Sylvester bestowing these honours is a forgery of the seventeenth century. After the return of Abbot Astrius, Stephen was crowned King of Hungary with the crown sent by the pope at Gran, 17 August, 1001. In settling the organization of the Church he placed at its head the Archdiocese of Gran, giving it as suffragans, Győr (Raab), Veszprém, Péc (Fünfkirchen), Vácz (Waizen), and Eger. About 1010 he founded a second archdiocese, that of Kalocsa, which had as suffragans the Dioceses of Bihar, Transylvania, and Marosvár (later Csanád) which was founded in 1039. In this way the land was divided into ten dioceses, the Archdiocese of Gran being the metropolitan. The Benedictines settled in Hungary during this reign, and Stephen founded the Benedictine monasteries of Pannonhalma (Martinsberg), Zobor, Pécsvarad, Zalaúr, and Bakonybél; he also founded numerous other religious houses, including the convent for Greek nuns near Veszprém.

In order to provide for the support of the clergy, Stephen issued edicts concerning church tithes; he ordained that each tenth township should build a church and provide the priest with suitable land and servants for his support. The king was to supply the churches with all the necessary equipment, while the bishop selected the priests and provided the books needed. The laws of King Stephen also contain ordinances regarding attendance at Mass, observance of the church fasts, etc. With the aid of these laws, Stephen brought over almost all of his people to the Catholic Faith, although during this reign measures had often to be taken against pagan movements among the population—as against his uncle Michael (1003), against the Bulgarian prince Kean, and (1025) against Ajton. These revolts, although political in character, were also aimed more or less at the Catholic Faith. Stephen was able to suppress these insurrections, and could, therefore, hope that the Church would meet with no further antagonism. The confusion and wars over the succession, which followed the death of Stephen, and the stormy reigns of Kings Peter and Aba Samd (1038–46) soon brought about a decline of Christianity. A part of the nation sank back into the old heathenism, and in 1046 there was a revolt against the Catholic religion which led to the martyrdom of Bishop Gerhard, who was thrown by the insurgents from the Bloacksberg at Buda into the river. The new king, Andrew I (1047–60), either

(1074–77) did great damage to the Christian Faith; ecclesiastical discipline decayed, and many abuses crept into the Church.

During the reigns of St. Ladislaus (1077–95) and Koloman (1095–1114) the Church was reformed and many ordinances were passed against the prevailing abuses. In particular the synod of Szabolcs (1092) took decisive measures against the marriage of priests. Married priests, as a special act of grace, were permitted to exercise priestly functions, but a new marriage was regarded as conceubinage and such unions were to be dissolved. The synod also passed ordinances concerning the indissolubility of marriage and the observance of church festivals and Sundays. Other decisions were directed against the still existing pagan manners and customs. After the conquest of Croatia Ladislaus founded the Diocese of Zágráb (Agram). He transferred the see of the Archdiocese of Kalocsa to Bécs, and that of the Diocese of Bihar, founded by St. Stephen, to Grosswardein (Nagyvárad). He founded new churches and monasteries and took measures for the conversion of the Bisseni and Saracenis (Ishmaelites) who had settled in Hungary. Ladislaus successfully resisted the invasion of the pagan Cumans. During the reign of Koloman the Church was largely under the influence of the royal authority. Koloman claimed the investiture of the bishops for himself, made laws concerning the property of the Church, obliged the bishops to perform military service, etc. At a later date, at the synod of Guastalla, Koloman yielded the right of granting investiture and agreed that the chapters should have freedom in the election of bishops. The reforms of Gregory VII were also adopted in Hungary. The clergy were withdrawn from secular jurisdiction, marriage was regarded as valid only when entered into before a priest, celibacy was enforced, and a number of ordinances beneficial to the religious life were passed.

The chief feature of the reigns of Koloman's successors Stephen II (1114–31), Béla II (1131–41), Géza II (1141–61), and Stephen III (1161–73), was the struggle of Hungary with the Byzantine Empire for national independence. These wars, however, did not check the growth of the Church. One of the most important events of this period was the synod at Gran (1169). It enacted that bishops could not be transferred without the consent of the pope, took the administration of vacant dioceses out of the hands of the laity, and obtained a promise from the king that the property of the Church should only be
taken in time of war and then not without the consent of the bishop. It was in this period that the Cistercians, Premonstratensians, and Knights of St. John settled in Hungary; in the thirteenth century these orders were followed by the Dominicans and Franciscans. About 1150 Saxon colonists, of the Catholic Faith, settled in upper Hungary and in Transylvania. The Cistercians grew rapidly in Hungary during the reign of Béla III (1172–96) as the king granted the order the same privileges as it enjoyed in France. Fresh disorders sprang up in Hungary after the death of King Béla III. King Emeric (1196–1204) was engaged in war with his brother Andrew, who coveted the throne, until Emeric's death put an end to the fratricidal struggle.

Andrew II (1205–35), who was now king, was soon involved in a struggle with the oligarchy. At his accession he was obliged to swear to protect the liberties of the land and the independence of the royal dignity. When he failed to observe these obligations, the nobles forced him to issue the Golden Bull (1222), the Magna Charta of Hungary. This instrument confirmed the rights of the nobles and gave them the privilege to take up arms against the king when he failed to observe the conditions here agreed upon, but it did not fulfill the hopes it had raised; its provisions were not carried out, and the disorders continued. Neither did Andrew, who in 1217 took part in an unsuccessful crusade to the Holy Land, observe the agreement confirming the liberty of ecclesiastics, and the Catholic Church saw itself endangered by the continually growing influence exerted over the king by the Iohammites and Jews. After all warnings to the king had failed, Archbishop Robert of Gran placed Hungary under an interdict (1232), in order to force the king to put an end to the prevailing abuses and to guard the interests of the Church. The king promised the correction of the abuses and, especially, to guard the interests of the Catholic Church, but he was too weak a man for energetic action. His son Béla IV (1235–70) endeavored to restore order, above all he tried to carry out the provisions of the Golden Bull, but his efforts were interfered with by an invasion of the Tatars, which nearly ruined the country. After the battle near Muhi (1241), they devastated the entire land; thousands of the inhabitants were massacred, hundreds of churches were plundered and razed to the ground, and six of the dioceses were nearly destroyed. Consequently, when the Tatars left the country, King Béla was obliged to take up the reorganization both of ecclesiastical and secular affairs. The damage suffered was repaired through the self-sacrifice of the royal family and the people; new monasteries and churches were built, those that had been destroyed were restored, and colonists were brought in to repair the losses in population. These colonists were partly Catholic Germans and Bohemians, and partly pagan Cumanians. Those of the Cumans who desired to leave the others were soon convinced, but the majority held to paganism and did not become Christians until the middle of the fourteenth century.

The last years of the reign of Béla IV were disturbed by a quarrel with the Curia concerning the appointment to the vacant Diocese of Zágrab (Agram), and the king's revolt of his son Andrew. Stephen V reigned only two years (1270–72); he was followed by his son Ladislaus IV (1272–90) who, when he came to the throne, was still a minor. In this reign efforts were made to restore church discipline that had fallen into decay during the disorders of the previous years. The chief discipline and of ecclesiastical conditions the pagan Cumans were largely responsible; they wandered about the land plundering and destroying the churches. The king was on good terms with them and maintained relations with Cumanian women; his example was followed by others. It is not surprising that under the circumstances disorders broke out once more in Hungary, and that the authority of the Church suffered. Philip, Bishop of Ferno, came to Hungary in 1279 as papal legate and held a great synod at Buda (Olen), where various decisions were reached concerning the preservation of the interests of the Church and the restoration of canon law, but the synod was forcibly dissolved by the king, and its members driven away. The appeals made by the Hungarian bishops and the Holy See to the king were in vain; Ladislaus promised, indeed, to act differently, and to reform the disordered political and ecclesiastical conditions, but he failed to keep his word. After the murder of Ladislaus, the last of the Arpad dynasty, Andrew III, grandson of Andrew II, became king. During his reign of ten years (1290–1301), he was engaged in a constant struggle with foreign claimants to the throne, and could give no care to the internal and ecclesiastical conditions of the country. Rudolf of Hapsburg endeavoured to wrest Hungary from Andrew for his son Albrecht, and the grandson of Stephen V, Charles Martell of Naples, also claimed it. After the death of the latter, who had the support of the Holy See, his son, Charles Robert, maintained the father's claim, and from 1295 assumed the title of King of Hungary.

After the death of Andrew III a series of wars broke out over the succession. A part of the people and clergy held to King Wenceslaus, another to Otto, Duke of Bavaria, and still another to Charles Robert. The Holy See strongly opposed the claim of Charles Robert and sent Cardinal Gentile to Hungary. Notwithstanding these efforts in his favour, it was not until 1309 that Charles Robert (1309–42) was able to secure the throne of Hungary for himself. There now began for the country a long period of consolidation. The new king regulated the internal administration, he reestablished order, imposing for this purpose in 1323 a land tax, reorganized the army, and sought to increase his dynastic power by forming connexions with foreign countries. In church affairs he encroached largely on ecclesiastical rights; he filled the vacant sees and the church offices without regard to the electoral rights of the cathedral chapters. He claimed the revenues of vacant benefices for himself, confiscated the incomes of other benefices, granted large numbers of expectancies, and forced those appointed to ecclesiastical benefices to pay a larger or smaller sum before taking office. In 1339 a part of the Hungarian episcopate sent a memorial to the Apostolic See, in which, with some exaggeration, they presented an account of the encroachments of the king. The pope notified the king of the memorial, an act which created no ill-feeling between the two; the Holy

BASILICA, BUDAPEST
THE CATHEDRAL OF KASCHAU (KASSA)
Father contented himself with admonishing the king in a paternal manner to remove the abuses and to avoid infringements on the rights of the Church.

During the reign of Louis I, the Great (1342–82), the son of Charles Robert, Catholicism reached the height of prosperity in Hungary. Numerous monasteries and other religious foundations came into existence in this reign; above all, the Hermit of St. George became a national martyr. In 1381 Louis obtained from the Republic of Venice the relics of St. Paul the Hermit, which were taken with great ecclesiastical pomp to the Pauline monastery near Buda. Among his pious acts must be counted the building of the church at the place of pilgrimage, Gross-Marienzell in Styria, site of the chapel dedicated to St. Ladislaus at Aachen. Splendid churches were also built in Hungary, as at Gran, Eger, and Grosswardein (Nagy-Várad). In filling ecclesiastical offices the king was careful that the dioceses should receive well-trained and competent bishops. In order to promote learning he founded the university at Pécs (Pünkhirchen). Louis also sought to bring about the conversion of the Slavonic peoples living to the south of Hungary, who held to the Greek Church, the Serbs, Wallachians, and Bulgarians. His attempts to convert them led to repeated conflicts with these races. In the reign of Louis I, a struggle with the growing power of the Turkish sultan became necessary. Consequently, when Louis I died, his successors found such a bulwark of Europe. Internal disorders broke out again in the reign of Maria (1382–95), the daughter of Louis, in which the Church suffered greatly in the southern part of the kingdom, especially in Croatia. In Hungary proper the queen sought to further the interests of the Church. The most important measures passed at a synod at Gran were decisions regarding the training of the clergy. Maria built several churches of the Perpetual Adoration. From 1387 her rule was merely nominal, her husband Sigismund being the real ruler. After Maria's death he became her successor.

In one of the first years (1397) of Sigismund's reign (1395–1436), the decree of the Diet of 1387 were renewed. These declared that no ecclesiastical benefice could be bestowed on a foreign ecclesiastic. Sigismund, however, paid little attention to this decree. He immediately entered upon his reign and Sigismund came into conflict with the Hungarian oligarchy. This led to open war, and even, for a time, to the imprisonment of the king. In 1403, King Ladislaus of Naples appeared as rival king; nevertheless, Sigismund was able to maintain himself. His reign was marked by the Germanization of the large part of the Great Western Schism, and the two great reforming Councils of Constance and Basle were held while he was on the throne. In the Great Schism, Hungary adhered to the obedience (or party) of the Roman claimant to the papacy. Louis I, the first, had supported Urban VI, and his successors, Maria and Sigismund, also sided with the Roman Curia. Sigismund, indeed, in 1403 renounced Boniface IX, because this pope supported the rival King Ladislaus, yet he did not recognize Benedict XIII. At a later date he recognized Innocent VII and subsequently supported the Roman Curia. In 1404 the Diet declared that in future ecclesiastical benefices in Hungary could only be bestowed by the king, consequently the rights both of spiritual and secular patrons were annulled, and the jus placeti introduced, according to which papal Bulls and commands could only be accepted and proclaimed in Hungary. It was evident that the two countries had reached the royal approval. Supported by these enactments Sigismund at once asserted his right to appoint bishops. Naturally, the Curia did not recognize this claim and refused to give the investiture to the bishops chosen by Sigismund. Upon this Sigismund, in 1410, appealed to John XXIII, from whom he requested the recognition of this right. John did not accede to this request, although he granted investiture to the bishops appointed by the king and thus tacitly recognized the royal right of filling benefices, a right which, as a matter of fact, the king continued to exercise.

After his election as King of the Romans, Sigismund endeavoured to bring the schism to an end. The unity of the Church was restored by the Council of Constance, and the concordat made with Germany was also authoritative for Hungary. While the council was in session, after the deposition of Benedict XIII, Sigismund obtained for himself and his successors the right of naming the bishops. This right was, indeed, not put into documentary form, but Stephen Werbőczy, in his collection of the Hungarian laws, "Opus Tripartitum juris consuetudinarii regni Hungariae", asserted that this right was conceded to the King of Hungary at the Council of Constance, and Cardinal Peter Pázmány also referred to it at a later date. The council further decided that in Hungary ecclesiastical cases should be tried in the country itself, and not brought before the Roman Curia, that only appeals could be taken to Rome. After the council had closed Sigismund claimed to the fullest extent the rights which had been conceded to him by the council. The Republic of Venice having seized Dalmatia, the Archdioceses of Spalato and Zara, with their suffragans, were lost to Hungary. This is the reason why in Hungarian official documents for many years these dioceses were given as vacant.

In Hungary proper the Church maintained itself with difficulty in the northern districts, on account of the incursions of the Hussites, who traversed all upper Hungary, plundering the churches and laying waste the country. They also gained adherents in the southern districts, where, however, the movement was soon suppressed, thanks to the missionary activity of the Franciscan monk James of the Marches.

The chief source of anxiety to the government of Hungary in Sigismund's reign was the growing power of the Turks. Since 1389 when Servia was conquered by the Osmanli power at the battle of Kosova (also called Arnaulfed, "Field of the Blackbirds"), the Turks had slowly but steadily advanced against Hungary. In 1396 Sigismund undertook a campaign on a large scale against them, but met with a severe defeat at Nicopolis. To safeguard the Hungarian frontier, Sigismund obtained from Stephen Lazarevits, ruler of Servia, by the Treaty of Tata (Totis), in 1426, the Servian fortresses on the border of the two countries, but he was not able to hold them against the Turks. The siege of the fortress of Galambóz (1428) ended with his defeat and narrow escape from death. The power of the Turks steadily increased, and Sigismund's successors were only able to check momentarily the westward advance of the Ottoman Empire. Sigismund was succeeded by his
son-in-law Albert (1437–39); in this reign the influence of the Hungarian nobility was again paramount. The Turks recommenced their inroads, entering the country near Ósündor. After Albert’s death a dispute as to the succession arose between Wladislaw I (Wladislaus III of Poland) and the adherents of Albert’s elder brother Ladislaus. In the end Wladislaw I (1442–44) became ruler; his short reign is chiefly noted for the wars with the Turks, in which the Hungarian forces were led by János Hunyady (see HUNYADY, JÁNOS). Wladislaw I fell in battle with the Turks at Varna, Bulgaria, where he was defeated and his brother had fled. Hungary was thrown into confusion by the quarrels among the ruling nobles. To put an end to these disorders the inferior nobility undertook to bring the country again into unity and made Hunyady governor during the minority of Ladislaus V, Foethmunus, appointing with him an administrative council. While at the head of the government, Hunyady fought successfully against the Turks. During his control of affairs also, the appointment to ecclesiastical benefices was considered the prerogative of the Crown, and it was accordingly exercised by him and his council. During the time of his active work he was the scourge and leader of the populace; he regulated the internal peace and restored order; he regained control; this led once more to disturbances, especially after the death of Hunyady. While Ladislaus was king, Constantinople was taken by the Turks (1453), who now turned all their strength against Hungary. Hunyady won, indeed, the brilliant victory at Belgrade (1456), but he lost his life a few days later. The hatred of the great nobles against him was now turned against his sons, one of whom, Ladislaus, was executed. When King Ladislaus died, Hunyady’s son, Matthias I, Corvinus, became king.

Matthias I (1458–90) was almost continually engaged in conflict with the Ottoman power. Pope Pius II promised the most vigorous support to the king in this struggle, but the efforts of the Holy See to organize a general European crusade against the Turks proved unavailing because of the pope’s death. Notwithstanding the lack of help from other countries, Matthias battled for a time with success against the Turks in Bosnia, and to him it is due that their advance was temporarily checked. In 1463 Bosnia was conquered by the Turks, and with this the dioceses in Bosnia ceased to exist. On account of the Turkish invasion the see of the Bishop of Corbav before the break with Rome (1461) was united to Modruš in 1470 Matthias maintained friendly relations with the Catholic Church, but after 1471 his policy changed. The second half of his reign was characterized by a number of serious blunders. Notwithstanding the enactments of the law he gave a number of dioceses to foreigners; in 1472 he appointed John Bekken- sloer Archbishop of Gran (Essetgomen), in 1480 he gave the archdiocese to the seventeen-year-old John of Aragon, and in 1485 to Ippolito d’Este, who was seven years old. Foreigners were also appointed to the Dioceses of Grosswardein (Nagy-Várad), Pecs (Fünfkirchen), and Eger. The king was also in charge of public services with ecclesiastical offices, and treated the property of the Church as though it belonged to the State. His relations with the Holy See, originally friendly, gradually grew strained, and he went so far as to threaten to join the Greek Church. In 1485 Angelo Peccini was sent to Hungary by the papacy. Probably influenced by his wife Beatrice, the king was led into more peaceful relations with the papacy, so that there was a better condition of affairs in the last years of his reign.

It was while Matthias was sovereign that Humanism appeared in Hungary. The king himself was a venerated supporter. Of the monuments of humanist influence are the remains of his renowned library at Buda, the Bibliotheca Corvinæ, still exist ent wonder. The king’s example led others, especially the bishops, to cultivate the arts and learning. Among the ecclesiastics who competed with the king in the promotion of learning were Joannes Vites, Urban Döge, and Thomas Bakacs. At times, however, the ardour with which Matthias supported learning slackened, thus he did not give much aid to the universities already existing at Pecs (Fünfkirchen) and Pozsony (Presburg), so that later they had to be closed. After the death of Matthias there were once more several claimants for the throne. Matthias had sought in the last years of his life to have his illegitimate son Joannes Corvinus recognized by his successor. A dispute for his death was divided into two parties; one was influenced by the Queen-Dowager Beatrice, who wanted the crown for herself, the other desired a foreign ruler. Finally the King of Bohemia, Wladislaw II (1490–1516), of the Polish House of Jagellon, obtained the throne. In this reign the power of Hungary rapidly declined. Naturally vacillating and indolent, Wladislaw had not the force to withstand the determination of the great Hungarian nobles to rule, and the royal power became the playing-out of the various parties. The antagonisms of the different ranks of society grew more and more intense, and to the leading nobles it was directed against the nobles and clergy, which was only suppressed after much bloodshed. The Diet of 1498 passed enactments correcting the ecclesiastical abuses that had become prevalent during the reign of Matthias and prohibited particularly the appointment of foreigners to ecclesiastical patronage. Another and other enactments were those that forbade the granting of church offices to any but natives, the holding of ecclesiastical pluralities, and the appropriation of church lands by the laity. Wladislaw, however, was too weak to enforce these enactments. One of the particular evils of this time was the rise in the church dignities by minors; this arose partly from the granting of the royal right of patronage to different families. One of the most prominent ecclesiastical princes of this period was Thomas Bakacs, who was first Bishop of Györ and Eger, and later Archbishop of Gran. His eminent qualities made him for a time a candidate for the papal see. It was owing to his efforts that the offices of primate and legatus aetatis were permanently united with the Archbishops of Gran.

Under the successor of Wladislaw, Louis II (1516–26), Hungary sank into complete decay. The author of the sovereignty as early as 1460. But the energetic measures could not be taken against the incursions of the Turks, on account of the continual quarrels and dissensions, and the fate of the country was soon sealed. In 1521 Belgrad fell into the hands of the Turks, and Hungary was now at their mercy. In 1525 the country gathered together for the decisive struggles. At the battle of Mohacs (29 Aug., 1526) Louis II was killed, and Catholic Hungary was defeated and overthrown by the Turks. The universal political decline of Hungary in the reign of Louis II was accompanied by the decline of its religious life. The ecclesiastics also made no progress, and the secular lords grew more and more daring in their seizure of church property. Ecclesiastical training and discipline decayed. The southern part of Hungary was almost entirely lost to the Church through the advance of the Turks. Thousands of the inhabitants of the southern districts were carried off to Europe. Prisoners or killed, monasteries and churches were destroyed, and the place of the Catholic population was taken by large numbers of Serbs who were adherents of the Orthodox Greek Church. The Serbs had begun to settle in Hungary in the time of Matthias I, so that during the reign of Louis II several Orthodox Greek parishes were set up in the counties of Transylvania.

In the first half of the sixteenth century the weakened condition of the Church in Hungary offered a favour-
able opportunity to the Lutheran Reformation. The new religion gained adherents especially in the cities where the bishops had been obliged to give the management of ecclesiastical affairs to others; the control had thereby passed into the hands of the city authorities, who in the course of time claimed for themselves the right of patronage. Luther's German writings soon found a ready reception among the inhabitants of the cities, and before long Lutheran preachers appeared; these came largely from Silesia, which had active intercourse with Hungary, and soon settled even in Buda in the neighbourhood of the king. Exceedingly severe laws were passed by the Hungarian Diets of 1523 and 1525 against Lutherans; in 1523 the penalty of death and loss of property was enacted, and in 1525 the Diet condemned Lutherans to death at the stake. Owing to these laws Lutheranism did not gain much headway in Hungary before 1526. However, in the confusion which followed the death of Louis II, the new religion steadily gained ground.

(2) From the Battle of Mohács to the Treaty of Szatmár (1566-1711).—Upon the death of Louis II, Hungary was once more a prey to disputes over the succession. Ferdinand of Austria claimed the crown on the ground of a compact between the Emperor Maximilian and Vladislaw II, while the national party elected John Zápolya as king. To these two opposing elements should be added the Ottoman power, which after the conquest of Buda (1541) ruled a large part of the land. The main result of the triple political division of Hungary was the almost complete disappearance of public order and of the systematic conduct of affairs; another was the evident decline of Catholicism and the rapid advance of the Reformation. The growth of the new religion was evident soon after the battle of Mohács. It was encouraged by the existing political conditions of Hungary: the dispute over the succession, with the accompanying civil war; the lack of a properly educated Catholic clergy; the transfer of a large amount of church land to the laity; and the claims made by both aspirants to the throne upon the episcopal domains. The foreign armies and their leaders, sent by Ferdinand I to Hungary, also aided in the spread of the new doctrine, which first appeared in the mountain towns of upper Hungary and then extended into the other parts of this division of the country. In western Hungary, on the farther side of the Danube, larger or smaller centres of Lutheranism sprang up under the protection of the nobility and distinguished families. These beginnings of the new doctrine grew rapidly under such encouragement. Catholicism in Hungary was not in a position to oppose this movement at the outset; a properly trained clergy were lacking, on account of the difficulties in the way of education caused by the political confusion. In the first decades there was no open rupture between the Catholic and Lutheran Churches; outwardly everything was Catholic, confession remained unchanged, and at the most Communion under both species was introduced, so that there was little apparent distinction between the two religions.

The Turkish occupation of Buda, in 1541, was a great blow to the Church in Hungary. A large part of the country was now under Turkish sovereignty; Mohammedanism gained a footing in these districts, and the bishops and chapters had to withdraw. The churches gained by the Turks were changed into mosques, and Mohammedan preachers settled in the country. The faith of Islam, however, did not take real hold on the population; conversions were relatively few. On the other hand, the Turkish occupation promoted Protestantism both directly and indirectly. During this period Protestantism entered Transylvania and soon gained ascendancy there. The Hungarian Diets of 1542, 1544, and 1548 passed far-reaching enactments for the protection of the Catholic Faith, such as banishment of the foreign preachers, the return of the sequestrated church lands, etc., but, owing to the confused state of public affairs, these laws were not carried out. Besides Lutheranism, Calvinism also took root in Hungary at this time, and from 1547 were added the teachings of the Anabaptists, who won adherents in the western counties of upper Hungary and in Transylvania. In 1556 the districts on the farther side of the Theiss accepted the Reformed religion. The revival of the Catholic Church began under Nicholas Oláhúsz, Archibishop of Gran (1553-89), who for this purpose held a national synod in 1561. He founded a seminary for boys at Nagy-Szombat (Tyrnau), and put the Jesuits in charge of it. His example was followed by other
bishops, but the death (1564) of Ferdinand I put an end for a time to the efforts for reform in the Church. The religious indifference of Ferdinand’s successor, Maximilian II. (1564–76), worked great injury to the Church. Maximilian’s failure to fill the archiepiscopal See of Gran, which fell vacant in 1573, caused a further decline of the Catholic religion, nor did his successor, Rudolf II, fill the vacancy until some time after ascending the throne. In the first years of the reign of Rudolf II (1576–1608) religious conditions changed but little; later, the position of the Catholic clergy improved after the entrance of the Jesuits, who improved the education of the clergy. Thus, at the end of the seventeenth century the Catholic clergy were ready to carry on the struggle against Protestantism in public disputations.

In this reign began the reclaiming of the churches, formerly of Catholics, which had been occupied by Protestants. At the same time also began, although slowly, the conversion of the Protestant nobility, but the revolt of Stephen Bocskay again led to a decline of Catholicism. The Treaty of Vienna, of 1606, secured freedom for the Lutheran and Reformed faith as for the Catholics. In the years of Matthias II (1608–16) the Treaty of Vienna of 1606 was confirmed by the Diet of 1608, and religious freedom was extended to the cities and villages. The Diet also granted the Protestants the right to elect their own administrative heads, so that the Protestants could now organize as an ecclesiastical body. The highest political honour of Hungary, the dignity of Palatine (president of the Diet and representative of the king) was in this era held by Protestants. Stephen Illesházy and George Thurzó followed each other in this office and, as was natural, defended their religion.

To this period also belong the taking of a more determined position by the Catholic Church against Protestantism and the beginning of the Counter-Reformation. Francis Forgách, Bishop of Nyitra (Neutra), later Archbishop of Gran, took up the struggle against Protestantism. Together with a large number of Catholic clergy, although not exactly the ordinances of the Diet of 1608; the Diet of 1609 rejected his protest. It also opposed Peter Pázmány, later Archbishop of Gran, who, as a member of the Society of Jesus, had developed a remarkable activity. In 1613 appeared his chief work, "Hodegus", that is, "Guide to Divine Faith", to which for a long time no reply was made by Protestantism (see PÁZMÁNY, PETER). Through the efforts of Pázmány and his fellow-Jesuits, the Catholics formed a majority in the Diet of 1618. At this Diet the Protestants endeavoured to get control of the village churches also, and to have an equal number of Protestant and Catholic parishes, a Protestant village the right to the church against the will of the lord of the manor, but they did not succeed. In 1619 a revolt for the preservation of Protestant interests broke out; it was led by Gabriel Bethlen, ruler of Transylvania, whose cause was espoused by the Protestant nobles of Hungary. The insurrection spread rapidly; Kassa (Koszeg), the chief town of upper Hungary, was captured by Bethlen, who by the end of 1619 was seeking to become King of Hungary. A threatened attack by the Turks forced Bethlen in 1620 to agree to an armistice with the king. A Diet was held at Besartezchau (Nagyvárad) by Bethlen in July and August, 1620, which elected him King of Hungary. The Diet confiscated the domains of the Church and suppressed all dioceses except three. Bethlen, however, was not able to maintain himself long and was obliged, by the end of 1621, to agree to peace with Ferdinand II (1619–35) at Nikolsburg. In religious affairs the treaty was based on the Treaty of Vienna of 1606 and the enactments of the Diet of 1608.

The Catholic Church now steadily increased. Thousands of those who had fallen away returned to the Faith. This at times led to renewed struggles when the Protestants were not willing to consent to the return of the churches. Their efforts at the Diet to retain the churches which they had gained through conversion, and the serfs remained Protestant, failed, as what they desired was contrary to the provision of the civil law. During the reign of Ferdinand III (1633–57) occurred, in 1644, the insurrection for the defence of the rights of the Protestants, led by George Rákóczi I; the war came to an end with the Peace of Linn (1645). This treaty secured complete religious freedom even to the serfs, and contained ordinances concerning the use of the churches, cemeteries, and bells; the expulsion of the Protestant ministers from the towns and villages was forbidden, etc. The Diet of 1646 went thoroughly into the religious question. The final decision of the general assembly of the Diet was that of the 400 churches they claimed; where they were not given the church they obtained suitable land for building. To carry out these ordinances, however, proved very difficult; strong opposition was manifested, and conditions remained very much the same up to 1870. In the eighteenth century, causes were caused by the discovery of the conspiracy of Francis Wesselyensky and his companions, to make Hungary independent of Austria. A large number of the conspi- rators were Protestant; thus it came about that the civil war that broke out after the discovery of the conspiracy soon became a religious war. The Government succeeded in suppressing the rebellion and erected at Pozsony (Presburg) a special court for the conviction of the Protestants. The revolt of Emeric Thököly, in 1678, once more injured the Catholic cause; up to 1684 Thököly had control of a large part of the country, and the Protestants took up arms against the Catholics. In 1681 the Diet was summoned to put an end to these disordered conditions. The Protestants, however, laid before it a list of demands; some of them were conceded by the king, but the Protestants were not satisfied, and the struggle between Catholics and Protestants did not cease for a long time. These attempts to suppress the great tension between the two religions showed itself also in social life, and the decline in moral character was evident among the population. The Catholic Church suffered great losses, churches and schools fell into decay, the regular clergy were driven away their parishes and the church lands confiscated, etc. The judgments pronounced by the courts against the Protestants gave foreign Protestant princes the opportunity to interfere in the internal affairs of the country, which naturally brought inconvenience with it.

The recovery of Buda (Osten) from the Turks led to a change very favourable to the Church. There were no longer Protestant revolts, and, as the Turks were driven out, the Church regained possession of its lost territories. Ecclesiastical affairs in these districts were now reorganized, new churches were built, new clergy sent, etc. In claiming its former property the Church met with the opposition of the Government, which would not consent to the restoration of ecclesiastical lands without legal proof. The relations of the denominations were settled by the Diet of 1687 on the basis of the enactments of the Diet of 1608; freedom of conscience was granted, with safeguards of the rights of lords-of-the-manor, the return of the banished Protestant ministers was permitted, the Protestant nobles were allowed to build churches for their private use, etc. These enactments, however,
soon proved insufficient, and what was lacking was settled by royal edict as cases requiring decision appeared. The Diet of 1687 also acknowledged the Hungarian Crown to be hereditary in the Hapsburg family and in addition to this renounced the free election of the king.

The opening of the eighteenth century was signalized by the outbreak of a revolution headed by Francis Rakoczy II. The only damage which this did to the Church was that the work of consolidation and reorganization was delayed for a time. The revolt was purely political and did not degenerate into a religious war; in the districts which sided with Rakoczy the Catholic clergy also supported the prince. In 1705 Rakoczy held a Diet at Szécsény which passed laws regarding religious questions: the religious ordinances of the Diets of 1608 and 1647 were renewed; religious freedom was granted to serfs; in those places Catholic Hungary was undisturbed. During this era the reorganization and strengthening of the Catholic Church could be vigorously carried on. The colonization of the regions regained from the Turks in the later decades of the seventeenth century, and of the districts surrounding the River Temes, began after 1716. The colonists were foreigners, largely Germans, who held the Catholic Faith. As a result of this and other settlements, the Catholic population rapidly increased, so that in 1805 there were 5,105,381 Catholics to 1,983,366 Protestants. The number of the parishes also grew greatly, especially in the country formerly under Turkish rule. The churches in the hands of the Protestants were reclaimed anew, but this once more led to intense friction. In order to restore religious peace, Emperor Charles VI, who was Charles III of Hungary (1711-40), appointed a commission for religious affairs, the decisions of which,

where the population was of both religions the one to which the majority of the inhabitants belonged received the church, while the minority had the right to build one for itself. After the session of the Diet of Onod, 1707, where the independence of Hungary was declared, and the Hapsburg dynasty deposed, political conditions were for a short time unfavourable to the Church, as Protestantism was granted larger influence in the affairs of the Government, but this soon passed away. King Joseph I held a Diet at Pozsony (Presburg) in 1708, at which the religious question was again brought forward, but no agreement was reached. The Protestants made large demands, but the Government would not concede more than was contained in the laws of 1681 and 1687. Soon after this the revolt headed by Rakoczy came to an end and in the Peace of Szatmar (1711) the country once more obtained rest from political disorder. The regulations of the treaty in regard to religion were that the Government should maintain the laws of 1681 and 1687 which granted the free exercise of religion to persons of every denomination; consequently religious freedom was conceded the Protestants.

(3) From the Peace of Szatmar (1711) to the Present Time.—For a long period after the Peace of Szatmar however, were not sanctioned until 1731. These enactments, called Resolutio Carolina, confirmed the laws of 1681 and 1687 regarding religious affairs. Protestants were permitted the public exercise of their religion in the western districts of the country, according to the provisions of the law of 1681, and the private exercise of it everywhere. The Protestant ministers were forbidden to live outside of the places legally designated, but the members of their faith could seek them where they abode. The authority of the superintendents over the pastors was limited to disciplinary matters; in secular matters the pastors were subject to the civil jurisdiction. Matters pertaining to marriage were placed under the control of the bishop; the decision, however, was given in accordance with Protestant enactments. In regard to mixed marriages, it was enacted that the marriage must be entered upon before the Catholic priest, and the children be brought up in the Catholic religion.

Regarding church buildings the enactments of the laws of 1687 were declared to be in force. These are the more important ordinances of the Resolutio, which were supplemented later by various royal decisions. Charles VI was the last male descendant of the Hapsburgs, and he sought to have the succes-
tion to the throne secured to the female line; this was enacted by the Diet of 1723. When Charles died his daughter Maria Theresa (1740–80), on the strength of this law, succeeded him on the Hungarian throne. During her reign the ordinances of the Resolutio Carolina were strictly enforced; in reply to the complaints against it by the Protestants, the queen said that she did not intend to make any concessions outside of those contained in the law. The Catholic Church rapidly developed in this reign. There was no longer a lack of priests for parish work, and the bishops sought to train up capable and well-educated priests against it by the Protestants, the queen said that she did not intend to make any concessions outside of those contained in the law. The Catholic Church rapidly developed in this reign. There was no longer a lack of priests for parish work, and the bishops sought to train up capable and well-educated priests for the pastoral care. The religious orders increased so largely under Maria Theresa that enactments were issued in 1770 to check the growth of their numbers. According to a census of this year, there were in Hungary 3570 male religious, including 191 hermits; this number was made by law the maximum which was not to be exceeded. Great stress was also laid upon the development of education, new schools and institutions for education were established, and the queen directed her attention also to advanced instruction. The university at Nagyliget (Tyrnsau), founded by Peter Pázmány, was completed in 1768 by the addition of a medical faculty; it was removed in 1776 to Buda, and in 1780 to Pest; in 1777 the Ratio educationis was issued, which regulated the entire system of education.

The suppression of the Jesuits occurred during the reign of Maria Theresa, and the order ceased to exist in Hungary. Its possessions, which became the property of the Crown, were used for the promotion of education. New dioceses were also formed at this time; in 1776 the Dioceses of Beszterce-Bánja (Bánánó), Sárospatak (Rosenau), and Szépes (Zips) were founded; in 1777 the Dioceses of Szombathely (Steinamanger), and Székesfehérvár (Stuhlweissenburg). In regard to the filling of the bishoprics, Art. XV of 1741 enacted that only natives should be appointed to the sees. This decree was contrary to the custom followed by the predecessors of Maria Theresa, under whom it frequently happened that ecclesiastical dignities were bestowed on foreigners. From 1770 the queen also reserved to herself the appointment of canons. The taxing of ecclesiastical benefices, which had existed from 1717, and had received at that time the papal confirmation, was later renewed from decade to decade, and finally, in 1765, was treated as a permanent tax.

The Church suffered greatly during the reign of Joseph II (1780–90), the son and successor of Maria Theresa. The Edict of Toleration, which annulled the Resolutio Carolina, was issued 25 October, 1781. This decree made large concessions to the Protestants; thus it was enacted that wherever there were one hundred Protestant families they could freely exercise their religion and might build churches without steeples or bells in such places. The Protestants were also permitted to hold public offices; it was further enacted that they could not be forced to take an oath opposed to their religious convictions and were released from observing the Catholic feast days. Matters connected with the marriage of Protestants were placed under the control of the secular courts. All the children of a mixed marriage were to be brought up as Catholics when the father was a Catholic; if he were not, then only the daughters were to be Catholics. These ordinances worked much harm, and they were also issued in regard to the administration of church lands etc. These ordinances were a source of much damage to the Church, but the emperor went even further. With a few exceptions—the teaching orders and those who had the cure of souls—he suppressed all the religious orders in Hungary and confiscated their property. He also provoked a rupture with the Holy See, and even the journey of Pope Pius VI to Vienna did not produce any change in the ecclesiastical policy of the emperor. The universal discontent which the edicts of the emperor had called forth obliged Joseph, who had refused to be crowned King of Hungary, to withdraw before his death (1790) all his enactments, with the exception of the edict of toleration and the decrees concerning the serfs.

In the reign of Leopold II (1790–92), the Diet of 1790–91 granted the Protestants complete independence in the management of their ecclesiastical affairs. Liberty of religious belief was recognized, and the enactments of the Government were not allowed to affect any matters concerning the Protestants and schools. In regard to mixed marriages it was decreed that these should be solemnized before a Catholic priest, who was not permitted to prevent such a marriage. The children of a mixed marriage were to be brought up in the Catholic Faith when the father was a Catholic; if he were not, then only the sons were trained in the religion of the father. While this decree gave the Protestants various advantages, and especially guaranteed their autonomy, the Catholic Church suffered much damage. The administration continually sought to secure greater influence in its affairs; in the years of war it demanded and received from the Catholic clergy and allowed the number of the wealthiest ecclesiastical benefices to remain vacant in order to enjoy their revenues during vacancy. Thus, for example, the archiepiscopal See of Gran remained vacant for nearly twenty years. During the reign of Francis I (1792–1835) there was a change for a long period in ecclesiastical affairs. For this the king was largely responsible; he looked with no friendly eye on clerical activity in politics, although the clergy, on account of their position in the country and their wealth, were well fitted to take part in political affairs. The Dioceses of Kaszeg and Szatmár were founded in 1904, and at a later date the Diocese of Eger (Erlau) was raised to an archdiocese with the Dioceses of Szépes (Zips), Ross-
nyó (Rosenau), Kassa (Kaszchau), and Szatmár as suffragans. In 1802 the Benedictine, Cistercian, and Premonstratensian Orders were re-established. In order to elevate religious and secular discipline, the Prince Primate Alexander Rudnay held a great national synod in 1822, at which ordinances in regard to the improvement of the schools were passed.

It was not until the Diet of 1832-36 that the affairs of the Church were again brought up. The occasion was the question of mixed marriages and of changes in the religion. In regard to the latter, Art. XXVI of 1791, Sec. 13, decreed that the change to Protestantism could only take place with royal permission and after six weeks' instruction. The Protestants made strenuous efforts to have this article of the law annulled, but for a long time they found that they were in vain. At the Diet of 1844 that the Protestants secured a settlement of the matter in accordance with their wishes; Art. III of 1844 repealed the requirements of the royal consent and the six weeks' instruction, and decreed instead that the change of faith must be twice notified to the parish priest within four weeks in the presence of two witnesses. If the parish priest refused to grant a certificate of this fact, the witnesses could draw it up.

The second question that arose in this period, that of mixed marriages, had been last regulated by the Diet of 1790–91. The law contained enactments, as mentioned above, concerning the religion of children of mixed marriages, but the cases increased in which the parents made a formal declaration promising to bring the children up as Catholics. In 1793 there was a Protestant agitation against this declaration, and when, in the years 1830–40, the question of mixed marriages was discussed in Germany the controversy in that country influenced conditions in Hungary. In mixed marriages the Catholic clergy continued to demand the signing of a formal declaration. The Bishop of Nagy-Várász (Grosswardein) was the first bishop to order (1839) that only those mixed marriages could have the blessing of the Church in which the religion of the children was settled by a declaration in favour of the Catholic Faith. The Protestants demanded again from the Diet of 1839–40 the suppression of the declaration. The pastoral letter of 2 July, 1840, of the Hungarian bishops bound the clergy to passive assistance in mixed marriages in which the interests were in view—i.e., where the formal declaration was not made. This ordinance aroused much feeling, and several ecclesiastics were fined on account of passive assistance. The bishops now turned to Rome, and the Holy See confirmed the pastoral letter, with the addition that mixed marriages were invalid. The Act of 1844 declared that such marriages were valid, even when not entered on before a priest, if two witnesses were present. The Diet of 1843–44 allowed mixed marriages to be entered upon before Protestant clergy; the Catholic mother, however, received the right, with the permission of the father, to bring up all the children in the Catholic Faith.

The agitation of 1848 and the Hungarian Revolution of 1848–49, besides changing political and social conditions, also affected the interests of the Church. The Diet of 1848 decreed the equality and reciprocity of all recognized confessions. In 1849 the minister of education and public worship, Horváth, desired to grant Catholic autonomy, but after the suppression of the Hungarian Revolution it came to nothing. Large numbers of the Catholic clergy took part in the Hungarian Revolution, a fact which in the following years of absolutism led to their persecution by the Government. During the period of autocratic rule the ordinances of the Austrian Concordat of 1855 were made authoritative for Hungary also, and in accordance with its enactments provincial synods for settling various ecclesiastical affairs were held in 1858 and 1883. Although the Concordat granted greater freedom to the Hungarian Church, yet the administration of the fund for religion and education remained in the hands of the Government. In 1853 political reasons led to the elevation of the Diocese of Zágráb (Agram) to an archdiocese having as suffragans the Sees of Diakovár, Zengg-Modrus, and Kóros, and later to the founding of the Archdiocese of Fo-garas. The erection of this archdiocese violated the rights of the Primate of Hungary; this led to repeated, but ineffectual, protests.

The period of absolutism in Hungary came to an end with the coronation of Francis Joseph I as King of Hungary (8 June, 1867), and the laws of 1848 were once more in force. The responsible parliamentary Government and parliament exercised much influence on the affairs of the Church. The first laws touching ecclesiastical questions undoubtedly worked much injury to the Church, as the Common School Law of 1868 (Art. XXXVIII), which left to the inhabitants of a community the decision as to whether the common school was to be denominational or communal; also Art. XLVIII which, in regard to divorce in mixed marriages, enacted that such cases might be brought by the respective parties before the competent spiritual authorities recognized by each, and that each must be bound by the decision of his, or her, own spiritual authority. This enactment led many to change to the Protestant religion. Art. LIII of 1868 enacted, in regard to the children of mixed marriages, that the children should follow the creed of the parent of the same sex, and that this must be enforced even after the death of the parent, as, for example, after the death of the Protestant father, the Catholic mother could not bring up in the Catholic Faith the minor children belonging to the Protestant confession. It was also decreed that, when one of the parents changed his religion, the child could not follow this change unless under seven years of age. These enactments led later to a bitter ecclesiasticopolitical struggle.

Various efforts were made in Parliament, between 1869–72, to injure the Church, as in the bills introducing civil marriage, civil registration, complete religious liberty, etc. However, of these measures, those regarding civil marriages, the keeping of the registers by civil officials, etc., were not enforced until a much later date. Serious complications arose upon the promulgation of the dogma of Infallibility by the Vatican Council in 1870. The Government, supported by the jus placeti, forbade its publication; a royal reproof was sent in 1871 to the Bishop of Székes-Fehérvár (Stuhlweissenburg), Jekelfalussy, who officially published the dogma. The Kulturkampf in Germany (1872–75) produced in Hungary a movement hostile to the Church. Agitation was also

Cathedrál, Waitzen (Vácé), Hungary

HUNGARY
caused by the passing of Art. XI of 1879; it enacted that the reception into another religious denomination, in so far as it was contrary to Art. LIII of 1868, was subject to legal penalty. The difficulties arising from the interpretation of this law lasted for a long time. In 1883 a bill on the marriage of Catholics and Jews was laid before the Parliament, but was twice rejected by the Upper House and finally withdrawn by the Government. The ministry of Koloman Tisza, which lasted longer (1875–80) than any other since 1867, inflicted further damage upon the Catholic Church. Protestantism spread in all directions and received active support from the Government. The revision of the constitution of the Upper House (House of Magistrates) in 1885 (Art. VII) excluded Catholic auxiliary bishops from membership, with the exception of the Auxiliary Bishops of Nándor-Fehérvár and Knin (Tinín). According to this law, the dignitaries of the Catholic Church, both of the Latin and Greek Rites, entitled to membership in the

Benedictine Abbey, Timáy, Hungary

Upper House since that time are the prince-primate and the other archbishops and diocesan bishops, the Archabbots of Pannonhalma and Knin, the Archbishops of Broadstairs, the Provost of Jásád (Premonstratensian Order), and the Prior of Aurum; the representatives of the Orthodox Greek Church are the Patriarch of Karlova (Karlovitz) the Metropolitan of Gyula-Fehérvár (Karlsburg), and the diocesan bishops; of the Protestant Churches, their highest clerical and lay dignitaries.

In the first years of the last decade of the nineteenth century a far-reaching movement threatened the Church in Hungary. An ecclesiastico-political conflict began, caused by the decree of the Minister of Education and Public Worship, Count Csíksy. This decree provided that any priest who performed a baptism according to Art. LIII of 1863 must send a certificate of baptism to the legally responsible clergyman within eight days. Neglect to obey this law was to be considered a misdemeanor, and punished accordingly. This decree, called the Westafung Decree (baptism away from the other side) marked the beginning of a new ecclesiastico-political conflict. According to this edict a Catholic priest when he baptized a child belonging to another faith must send the certificate of baptism to the minister of the other denomination; such an enactment was regarded by the Catholic clergy as contrary to conscience and the canonical ordinances. The bishops did not order that the law be carried out, although they declared that for a time it could be tolerated; the greater part of the parish priests, however, refused to obey it. A Cæsarist petition for the modification of the law, in the interest of the Church of Art. LIII of 1863, and for the repeal of the decree issued by Csíksy, did not succeed, while the supporters of the Government soon made use of the movement to further the introduction of obligatory civil marriage, civil registration, and the free exercise of religion. The latter proposals became law during the premiership of Alexander Wekerle. In 1893 the ecclesiastical bills were laid before the Diet, and after long debates, being once rejected by the House of Magnates, they became law in 1894 and took effect 1 October, 1893. Articles XXXI and XXXII of these laws contain enactments regarding civil registration. Civil marriage is made compulsory, and government recognition is only given to civil registration. Article XXXII of 1894 enacts that the parents can enter into an agreement before the registrar as to the religion of the children. Registrars are appointed by the minister of the interior and are responsible to him; a parish priest cannot be appointed to this office. The Hungarian bishops protested against these laws and sent a memorial to the king requesting him not to sanction them; they were, however, unsuccessful. Article XLII of 1895 gave official recognition to the Jewish religion; at the same time the right to belong to no confession was granted. A Kulturkampf did not, as had been feared, follow the passage of the ecclesiastico-political laws. Nevertheless, they led to the formation of a Catholic parliamentary party, the People's Party (Volkspartei), which made the revision of the ecclesiastico-political laws the chief measure of their programme. As early as the election for members of the Diet which followed the taking effect of these laws, the People's Party nominated candidates and up to the parliamentary election of 1906 it had 33 adherents among the members of the Lower House. The large proportions which the Catholic movement assumed in Hungary are due to this party. Catholic associations were founded in all parts of the land, and finally a union was formed which embraced the entire country. This reawakened Catholic consciousness led to the holding of national Catholic Congresses, which have met for a number of years. These congresses have aided greatly in the strengthening and promulgation of Catholic opinions. The efforts of the Church in Hungary to gain autonomy for the protection of Catholic interests, especially in regard to the administration of Catholic foundations and schools, have been unsuccessful. The Diet has not granted autonomy to the Protestants, but the Catholic societies neglected, at that time, to secure the same for themselves. It was not until 1848 that the first steps in this direction were taken by the holding of an epochal conference to discuss the question. Nothing, however, resulted from these efforts, and the quickly following outbreak of the Revolution put the matter aside for the time being, nor was the question brought up during the period of absolutism. After the restoration of constitutional government the question of the autonomy of the Church was again raised, and in 1867 the bishops had a plan drawn up, which in 1868 was laid before a large assembly. In 1870 a congress for the promotion of autonomy was called, and a commission appointed which in 1871 presented its first report. According to the plan it outlined there were to be formed a national congress and an administrative council. The national congress was to be under the guidance of the prince-primate; subordinate to the congress were to be the diocesan conventions with a diocesan senate; below, there were to be the decanal and district senates, following which were the communal assemblies and the parishes. The incorporated autonomy council was to represent
the interests of Catholics, to administer the property of the Church, and to be the advisory council of the king in the appointment of church dignitaries. The Congress of 1871 accepted this plan and laid it before the king, but no practical results followed. After this the question was left in the matter until 1897, when a new congress for the promotion of autonomy was called. A commission was appointed which finished its labours in three years, and in 1900 the congress reassembled. The plan of the majority claimed autonomy almost entirely for the episcopate and left the administration of the property of the Church to the Government. The opposition party in the congress demanded the control of the funds, the schools, and the right of presentation for the congress. The discussions lasted through the years 1901–1902; in the latter year the congress closed its labours and laid the results before the king, who reserved his decision. Since then nothing more has been done in the matter.

In 1909, after long negotiations, the question of the equalization of clerical salaries was finally settled (Art. XIII of 1909). The principal provisions of this law fix the salary of pastors of recognized religions at 1600 Kronen ($320) with a minimum of 800 Kronen ($160); that of curates and assistant pastors at 1000 Kronen ($200), with a minimum of 800 Kronen ($160); the value of board and lodging is included in the salary of a curate or assistant, and this is reckoned at 500 Kronen ($100). In order to meet the expenses of the equalization, the higher ecclesiastics of the Catholic Church are annually taxed to the amount of 700,000 Kronen ($140,000), and the Hungarian fund for religion to the amount of 1,200,000 Kronen ($240,000). Ecclesiastical affairs are under the control of the Hungarian Ministry of Education and Public Worship, in which a separate department, having one of the higher church dignitaries at its head, has been formed. The appointment of bishops, canons, abbots, etc., belongs to the king and follows upon the presentation of the names, with ministerial approval, by the minister of education and public worship. The bishops enter upon their office, take their seats in the House of Magnates, and receive their revenues without awaiting the papal confirmation. A royal edict of 1870 revived the old royal jus placendi and ordained that only after receiving royal approval could decisions, constitutions, and decrees be promulgated in Hungary. It should also be mentioned that the Bull “Ne Temere”, recently issued by the Holy See in regard to mixed marriages, was not enforced in Hungary, owing to the representations of the Hungarian episcopate, but the provisions of the Constitution “Provida”, issued for Germany in the same matter, 18 to 19, were also extended to Hungary.

Actual Conditions.—The Church in Hungary, in respect to organization, is divided into the three Archdioceses of Gran (Estergom), Kalocsa, and Eger (Erlau). The suffragans of Gran are the Dioceses of Bessztercsébánya (Neusohl), Győr (Raab), Nyitra (Neutra), Pécs (Fürstkirchen), Székesfehérvár (Stuhlweissenburg), Szombathely (Steinmannsfeld), Vác (Witten), and Veszprém. The suffragans of Kalocsa are the Dioceses of Csánád, Transylvania, and Nagyvárad (Grosswardein). The suffragans of Eger (Erlau) are the Dioceses of Kassa (Kaschau), Rohony (Rosenau), Szatmár, and Szépes (Zips). The head of the Church is the Metropolitan Prince Primate, the Prince Archbishop of Gran (Espergo). There is also in Hungary proper an abbey which is equal in rank to the dioceses, the Benedictine Abbey of Pannonhalma (Martinsberg). The Kingdom of Croatia-Slavonia has one archdiocese that of Zagrab (Agram). Its suffragans are the Dioceses of Diakóvár and Bosna, or Diakóvár and Sreber, and Zengg Modrus. There are two Uniat Greek archdioceses in Hungary, Gran (Espergo) and Gyula-Fehérvár-Fogaras. The suffragans of the Uniat Archdiocese of Gran (Espergo) are Munkács and Eperjes; those of Gyula-Fehérvár-Fogaras are Luogo, Nagyvárad (Grosswardein), Szamos-Ujvar, and the Diocese of Körös (Kreuz) in Croatia.

The Reformed Church is divided into four districts; the Lutheran Church into five districts. The Orthodox Greek Church is governed by the Patriarch of Karlova (Karlowitz), who has under him the Dioceses of Bâcs, Buda, Temesvár, and Versecz. The Orthodox Greek Church in Transylvania is governed by the Metropolitan of Nagy-Bekecs (Herrmannstädt) who has under him the Dioceses of Arad and Karánsebes. The Patriarch of Karlova (Karlowitz) has jurisdiction also over the Dioceses of Karolyváros (Karlstadt) and Pakrác. In Croatia. The Unitarian Church is divided into 9 dioceses with 113 mother-churches and 111 pastors; the see of their bishop is Kolozsvár (Klausenburg). The Jews are divided into three communities, the Congress, Status Quo, and Orthodox communities. In 1905 the Baptist Church was added to the legally recognized religions, but only the community at Budapest, which in 1907 had 190 stations, was sanctioned as an organized community.

According to the Hungarian census of 1900 the adherents of the different religions number as follows: (1) Civil population.—Catholic of the Latin Rite, 9,846,555; Uniat Greek, 1,843,634; Reformed, 2,423,578; Lutheran, 1,280,070; Orthodox Greek, 2,799,846; Unitarian, 68,005; Jewish, 846,254; other confessions, 14,180. Total, 19,122,400. (2) Population in active military service.—Catholic of the Latin Rite, 73,380; Uniat Greek, 10,509; Reformed, 17,324; Lutheran, 8872; Orthodox Greek, 15,987; Unitarian, 565; Jewish, 5124; other confessions, 580. Total, 132,210.

The Catholic dioceses of Hungary contain 21 cathe-

dral chapters with 211 regular and 113 honorary canons; 23 diocesan abbeys, 51 exempt and 151 titular abbeys; 36 diocesan provostships; 3 exempt and 110 titular provostships; 72 archdeaconries and 392 vice-archdeaconries; 3249 mother-churches, 7590 dependent churches with not less than 50 souls, and 7594 dependent churches, with less than 50 souls. In Croatia-Slavonia there are 6 cathedral chapters with 60 regular and 30 honorary canons; 1 diocesan and 21 titular abbeys; 3 diocesan and 9 titular provostships; 24 archdeaconries and 65 vice-archdeaconries; 132 mother-churches; 1700 dependent churches, with at least 50 souls, and 1880 dependent churches with less than 50 souls; 1336 parish priests, 676 assistant priests, 107 priests filling other positions, 302 ecclesiastical students; 46 priests retired from active work; 62 secular priests and 1 regular priest engaged outside the diocese. The Uniat Greek Church in Croatia-Slavonia has 11 cathedral chapters with 16 monarchical canons; 16 honorary canons; 1 provostship; 4 archdeaconries and 2 vice-archdeaconries; 13 mother-churches, 15 dependent churches with at least 50 souls; 11 parish priests, 16 assistant priests and 6 priests otherwise employed; 17 ecclesiastical students; 3 priests retired from active work, and 1 priest outside the diocese. There are also in Hungary 196 religious houses for men, with 2114 inmates, and 379 religious houses for women, with 5005 inmates; 2606 parish priests, 1770 assistant priests, and 713 priests otherwise engaged; 1224 ecclesiastical students; 268 priests retired from active work, and 1 priest outside the diocese, 150 religious sisters and 66 religious brothers; 509 parish priests, 285 assistant priests, and 149 priests otherwise engaged; 189 ecclesiastical students; 47 retired priests and 45 priests outside the dioceses (see articles on the respective dioceses).

In German.—Crucy, Geschichte der Ungarn (2nd ed., Buda, 1890). The histories of Hungary of M. J. Pihaj and Fenzler have been known for a long time. Hungarian.—H. S. G. B. (10 vols., Budapest, 1896-97); the ecclesiastical history of Hungary is treated by J. Pihaj, History of the Catholic Church in Hungary (Buda, 1900); a synopsis of ecclesiastical conditions in Hungary is given in a publication issued on the 200th anniversary of the union of Hungary and Austria, Catholic Hungary; a brief history of the Church in Hungary, Karácsonyi, Church History of Hungary, 1270-1900, 1900;—and a bibliography; Hungary's relations with the Holy See are set forth in Franzi, Ecclesiastical and Political Connection of Hungary with the Roman See (Budapest, 1901-03). The connection of the collections of original authorities, of which a list is given by Karácsonyi, may be mentioned Petery, Sacra concilia Hungarie (2 vols., Venice, 1827); Vizer, Vater der kirchenhistor. Hungaric sacram illustraturis (2 vols., Rome, 1859-60); II, also the volumes of the Monumenta Vaticana historiorm Hungarica illustraturis (6 vols., Budapest, 1887-91); further the large work in course of publication on the Reformation and Counter-Reformation in Hungary, Monumenta et temporae innovatae in Hungaria religiosis illustraturia (4 vols. published, Budapest, 1902). On the marriage law, Reiner, The Hungarian Marriage Law (in Hungarian, Budapest, 1866); On autonomy, Melcony, Die katholische Autonomie (in Hungarian, Budapest, 1908). Cf. also bibliographies of the articles on the several Hungarian dioceses.

A. ALDÁSY.

HUNGARIAN LITERATURE.—The language which has prevailed in Hungary for nearly a thousand years and is spoken at the present day by about 12,000,000 persons, is a pithy and very plant language, rich in vowel-sounds and fundamentally different from the majority of literary tongues. As was determined by the results of the censuses in 1770, it is most nearly related to the Vogul-Ostiaik, though the Hungarians have been separated for more than two thousand years from the people using that tongue. Together with the Vogul-Ostiaik, Hungarian, as well as Lappish, Finnish, Cheremis, Mordvin, and Samojed, belongs to the Ural group of languages, and further, together with Turkish and Mongolian—all of Asiatic origin—to the Ural-Altaic group. The vocabulary of Hungarian has been further influenced by the Slav, German, Latin, and Italian languages. Hungarian, in spite of a certain harshness, is particularly well suited for oratory and for serious poetry, especially since it has been systematically developed and enriched by Révai, Kazinczy, and a school of so-called neologists, e. 1770-1800. Excluded from scientific and political life by the use of Latin until about 1840, Hungarian, during the course of the nineteenth century, came to be regarded more and more as a bond of national unity and a safeguard of political independence, and, as such, was zealously cultivated in spite of the Germanizing efforts of Austria. The funeral oration, "Halotti beszé", about 1230, and a hymn on the Virginity of Our Lady, c. 1300. Hungarian literature, a markedly national product, was always in closest contact with the historical development of the people, and accordingly may be divided into five periods, however, without prejudice to the following:

(1) The Pre-Reformation Period, which in pre-Christian times, up to about A. D. 1000, produced chiefly popular epics, and after the introduction of Christianity, works chiefly of a religious character, such as legends and hymns, mystic meditations and lives of the saints. Amongst the latter the most noteworthy is that of the Hungarian princess, Blessed Margaret. Almost all of these were the work of religious, such as Temesvári Pelbart and Rákosi László. Contemporary with these are the sagas of the heroes and the chronicles. These latter are mostly in Latin and show especially the influence of the Renaissance, which was promoted largely by King Matthias Corvinus (1458-90), whose court became a centre of humanistic culture (Archbishop Vitéz; Bishop Janus Pannonius; the magnificent Bibliotheca Corviniana).

Culture and literature were suddenly brought to a standstill by the Turkish invasion of 1526, the devastation of bishoprics, monasteries, and schools, and later through the divisions and confusion of the Reformation.

(2) The Reformation and Counter-Reformation Period.—Towards the middle of the sixteenth century began the printed controversy literature. The polemical warfare was commenced by the Protestants and was carried on more by means of personal abuse and railing than by argument; e. g. the Hungarian Reformers Dévai and Melius, later Gelej-Katona, Alvinczi, and others. They were met on the Catholic side by Telegdi, Monossai, Balázs, Velyandi, and others. Jesuits, who, although not far enough understood by Cardinal Peter Pászmány, S. J. (1570-1637), Prime of Hungary, one of the greatest figures in the history of Hungarian civilization and literature. Besides many controversial writings, spiritual books, and a large volume of sermons, his chief work is the "Hodorus" or "Hyemus" (1613), a complete apology for Christianity and Catholicism, written in a clever manner suited to the times, displaying a very full acquaintance with the literature of the Reformation, often ironical and sarcastic, and above all full of sharp and caustic logic. This work became an arsenal of arms which furnished weapons to the champions of the subsequent Catholic reorganisation. The Hungarian Protestants were unable to answer him, and sent the great work, translated into Latin, to Wittenberg.
daluinus, the dean of the Lutheran professors at this university, required ten years for his reply. To this Pataki, a "Vasculum," which heralded the final triumph of the Catholic cause in Hungary. This work led to the re-conversion of the greater part of Hungary, and to the end of the religious controversy, while it also brought about a great development of Hungarian as a literary language, and formed, according to Toldy, the father of Hungarian literary history, "the basis of the later Hungarian prose style." The Bible was also repeatedly translated into the vernacular. The monk Barth (c. 1518) had translated the Bible in pre-Reformation times, and after him, towards the middle of the sixteenth century, Catholics like Komjati, Mészár, Erdős, and others produced Protestant translations. The first complete Protestant translation of the Bible was published in 1589 by Károlyi, and the first Catholic one in 1626 by Kádi, S.J.; both translations, the Catholic one revised by Tárkányi, 1885, are still in use. The profane literature of this period is represented by the epics of the wandering minstrel Tinódi (d. 1537), the lyric poet Balassi (d. 1594), and especially by Pászmany's disciple, the deeply religious Hungarian general, Nicolaus Zrinyi, who, in 1651, wrote the first Hungarian epic, "The Fall of Sziget," dealing with the heroic death of his grandfather and namesake at the defense of the fortress of Sziget by the Turks. Gyöngyösi (d. 1704), besides lyric and epic poems, such as "Venus of Murany," also wrote religious verse, it is to be regretted that, like those of his master Ovid, his poems are frequently immoral. For the rest, the literature of this period breathes a spirit of glowing patriotism and deep religious feeling. Worthy of mention are the folk-songs, especially those belonging to the time of the wars for the liberation of Transylvania; amongst these is the "Rákóczi Song," which even to day is often set to music by Hungarian composers. The drama, both in Latin and Hungarian, was cultivated by the numerous schools of the Jesuits and later by the Jesuits and later in those of other religious orders.

(3) Period of Peaceful Development.—After the close of the Turkish and civil wars (Peace of Szatmár, 1711) began the age of peaceful development, in many respects under the influence of the flourishing literature of the west in Europe. At this point, too, begins the literary treatment of the different branches of learning, which up to then had been confined to elementary school textbooks (Apácsai-Cseri). To history belongs the first place, especially to the works of the Jesuits Fray and Katona, the latter of whom composed the admirable progymnastic history of Hungary in forty volumes. Second place in the Protestant press, the science of language, represented by the Piarist Révai (d. 1807). The Jesuit Fuládi (d. 1779) wrote novels and moral essays; he is looked upon as the best stylist of his time. Mikes, the faithful companion in banishment of the hero of freedom, Francis Rákóczi II, wrote a classic elegiac "Letters from Hungary," while Amade wrote lyrics. Beszényi and others produced works closely modelled on French writers (Voltaire). These are unjustly regarded by modern anti-Catholic writers of literary history, such as Beethoven, as the starting-point and creators of modern Hungarian literature. The old classical models were followed by many members of religious orders, such as Baróti-Szabó, Virág, and others. In fact from the beginning Hungarian literature was much indebted to the religious orders. The most successful classicist was the lyric poet Berzsenyi (d. 1896). Kaszab (d. 1801), the most enthusiastic admirer of classicism, modelled himself on German writers. and also the lyric poet and orator Köleszey (d. 1838), who composed the national hymn "Isten állok meg" (God Bless Hungary), and the freemason Kármán, who died young, in consequence of dissipation, and others. The naturalistic and often coarse writer of
has been translated into several languages. The stage of to-day in Hungary is but little concerned with literary excellence. Of recent novelists the most prominent are Hercegovc, Mikszat, Rékes, Kincses, Andor Gárdonyi, and as orators the Cardinals Mihályi, Schlauch, Samassa, Bishop Prohászka, Minister of State Apponyi, Ugron, Rakovsky, and others. Since the prevalence of modern infidelity, looseness of morals, and class feuds, Hungarian literature is abandoning its ancient ideals of patriotism, religion, and moral earnestness, and thus emulates the fashionable French and German writers.

**Periodical Literature.**—Historically we note two periods in Hungarian literature: the period before 1857 and that after. The first Hungarian newspaper, the "Magyar Hirmondó", appeared in 1750 in Vásárhely. Of the 12 papers that were in existence in 1857, the most influential are the "Múzeum", in 1877. Literary periodicals edited by Kasinczy and Kisfaludy contributed much to the development of Hungarian literature. The first scientific magazine was the "Tudományos Gyűjtőmény", founded in 1817 by the historian Canon Fejér, Kosztka "s" organ, the "Pesti Hírlap" (1841-48), exercised great influence on the events of the wars of freedom and on the period of the Revolution. The "Pesti Napó", edited by Kemény with the co-operation of Deák, was an important factor in the preparation of the settlement with Austria (1867). The political and national defeat of the revolution of 1848, greatly degenerated, but after the settlement the revival of national independence, and the removal of political censorship, began the modern period of rapid development. In 1830 there were in all 10 Hungarian newspapers and magazines; in 1840 there were 26; in 1848-49, the year of the revolution; 86; only 9 in 1850; 52 in 1861; 80 in 1867 (year of the settlement); 140 in 1868; 368 in 1880; 636 in 1890; 1132 in 1900; 2069 in 1907. In 1909 the number of newspapers, not counting magazines, was 1384, publishing 152 million copies annually; of these 2 million were Catholic, of the remaining 150 million some are neutral, the majority anti-Catholic. The Catholic press is weak because, owing to the dominant position of the Church for centuries, the Catholics did not feel the advantage of a representative press as keenly as the minority, especially the Jews, who saw its financial advantages. Hence it comes that to-day the Hungarian, especially in Hungary, has in general a strong hostility to the Church and to a terrible extent pornographic. To its influence, above all, is to be ascribed the growth of religious indifference amongst Catholics, by which the unchristian church laws of 1892 and the spread of Social Democracy were made possible. But in the case of the Catholic Church the importance of the "Alkotmány", since 1893, which has a circulation of only 7000. Another old daily, the "Magyar Allam", has to cease publication in 1908; a 2-heller daily [a heller=one-fifth of a cent], the "UJ Láp", since 1901, is making great progress, thanks to the powerful support of the Catholic Press Association of Hungary. The subscription list rose in a few months from 19,000 to 60,000, and the number of subscribers is increasing daily. The anti-Semitic "Magyarországa" has 36,000 subscribers, and the Moderate Liberal "Budapesti Hírlap" 30,000; these are the only papers not hostile to the Church. Then come with outspoken anti-Christian character the Jewish dailies, such as the "Pesti Napó" with 40,000, the "Pesti Hírlap" with 42,000, the "Budapestit" with 45,000, the pornographic scandal-chronicle "Nap" with 60,000, the "Kis Ujság" with 80,000, the "Fris Ujság" (a 2-heller daily) with 150,000 subscribers, and many others. Thus the periodical press is mostly objectionable from a moral point of view, and the scientific periodicals (mostly in the hands of Liberal university professors) are for the most part anti-Catholic or indifferent. The lack of criticism, a result of the linguistic isolation of Hungary, makes itself felt especially in this department. Two associations have undertaken to improve the literary position of the Catholic Church. The Society of St. Stephen, founded in 1847, and the still youthful Catholic Press Association. The former provides Catholic book and magazine literature, and possesses its own magnificent buildings and printing-press (annual income in 1908, $260,000; membership, 20,000). The Press Association (up to May, 1909, with a capital of $40,000) is chiefly for the propagation of the Catholic press. The daily press is justly looked upon as the most important and most promising of Catholic institutions. There are on the Catholic side at present besides the 2 central dailies, 2 provincial dailies, 5 journals appearing several times in the week, and 25 weekly newspapers. The number of subscribers is about 10,000 in scientific and literary in character, 9 religious, 16 devotional, and 6 juvenile. The most important are: "Katholikus Szemle" (Catholic Review) since 1887, with 15,000 subscribers; "Elet" (Life) since 1909; "Religioso" the oldest existing Hungarian periodical, and "Zsidó Szemle" the most widely read. On religious questions the Catholic periodicals are strongly orthodox. In the United States 23 periodicals are published in Hungarian, including three daily newspapers, and 5 or 6 Catholic journals. Canada, also, has 1 Catholic periodical in Hungarian.

The best scientific Hungarian grammars are by Simonyi, Szentey, Sebay. Dictionary: Yolland, A Dictionary of Hungarian and English Languages (London, 1859); Simonyi, Hungarian Dictionary (London, 1859); Hungarian hand-books by Toly, Bródy (anti-Catholic tendency), Horváth, Bartha, Bródy-Badics, and others. Life and works of Hungarian writers by Szentey, at present 12 volumes. Periodical literature: Magyar Kossuth (Budapest, 1890).

**Adalbert Bangha.**

**Hunolt, Franz,** the most popular German preacher of the early part of the eighteenth century, b. 31 March, 1691, at Siegen; d. 12 September, 1748, at Trier. The name of this renowned preacher is spelled in various ways in the catalogues of the Society of Jesus—Hunoldt, Hunoldt, and (usually) Hunolt. At the age of nine years he entered the Jesuit college at his native town; at six years he was sent to the Jesuit school at Cologne to study philosophy. Having completed the three years' course as master of arts, he entered the Society of Jesus there on 18 May. After a novitiate of two years at Trier he was sent to Geyst (near Münster, in Westphalia) for one year to prepare himself to teach. After this he journeyed in the gymnasium at Cologne and also at Aschen to the complete satisfaction of his superior (summd summum laude), being at the same time spiritual director of the junior sodality. In this position he showed proofs of his remarkable oratorical talents. Having completed the theological course for four years and received Holy orders, he should then have made his tertianship, or third year of probation, but was, during most of that period, employed in giving popular missions, so great had his reputation as a preacher already become. His next appointment was to the chair of logic at Coblenz, where he made his profession on 15 August, 1724. It was not until after this year that he was able to follow his true vocation; he was assigned to the cathedral pulpit at Trier, and continued in that employment for nineteen years, to the satisfaction of his superiors and the spiritual advantage of the city. Besides this he was much sought after as a confessor and as a journalist, and was thrown into the city prison. His indefatigable activity required robust health, which, unfortunately, Hunolt had not. Chronic weakness of the heart rendered it impossible for him to preach; consequently, in 1743, he was trans-
ferred to the position of master of novices at Trier, and died there three years later.

Hunolts great collection of sermons is still widely used. No fewer than six folio editions of the original work appeared between 1740 and 1813. After the last of these editions in the modern German, seven to be published; one in twenty-five volumes appeared at Ratisbon, 1842-47; another modern version appeared about the same time at Graz, in twenty-four volumes. There have been several editions of both the Ratisbon version and the Graz, while abridgments and selections of sermons have frequently been published, and are even now republished with much success. Universally esteemed, the work was translated into Dutch, French, and Polish; an English version in twelve volumes was completed in 1898.

Hunolts idea was to treat the entire field of morals in his sermons thoroughly and completely. Each of the six volumes contains seventy-six sermons, and the various divisions in each volume are indicated by sub-titles, such as "The Christian Attitude towards Life"; "The Wicked Christian"; "The Penitent Christian"; "The Good Christian"; "The Last End of Christians"; "The Christian's Model." This progression of material is distributed most appropriately over the entire ecclesiastical year. How popular, and at the same time profound, Hunolts expositions are, is best proved by the fact that numerous excerpts are included in all anthologies and textbooks of religious rhetoric as standards. A competent critic (Kraus) has eulogized Hunolts sermons in the following words: "At a time when German pulpit oratory had degenerated into utter bad taste and brainless insipidity, these sermons are distinguished by noble simplicity, pure Christian sentiment, and genuinely apostolic ideas no less than by the felicitous use of the German, as an appendage and not as a medium of language." And finally, we must call attention to the cultural value of Hunolts work especially for the districts of Trier, inasmuch as we may gather therefrom a fairly correct picture of life in the Trier of his day.

N. SCHEID.

Hunt, THOMAS. See SPOTT, THOMAS.

Hunt, THURSTON, VENERABLE, an English martyr (March, 1601), who belonged to the family seated at Carlton Hall, near Leeds, and had made his course of studies at Reims, 1583, 1584. Robert Middleton, his fellow-martyr, a nephew of Margaret Clitheroe (q. v.), had also studied at Reims and at Rome, 1584-1588. In 1600, Middleton was arrested near Preston, and an attempt to rescue him was made by four Catholics, of whom Hunt was one, but the attempt failed, and after a long and exciting tussle, Hunt was captured. They were then both treated with great inhumanity, and heavily ironed night and day until, by the order of the Privy Council, with their feet tied beneath their horses' bellies, they were carried in public disgrace up to London and back again to Lancaster, where they were condemned and executed for their priesthood. But the attempt to degrade them in public opinion failed. No one would let out his horse to drag them to the place of execution; they reconciled to the Church the felons condemned to die with them; their relics were eagerly carried off after their death; and a contemporary sang admiringly of

Hunt's hawtige corage stout,
With godlie zeale soe true,
Myld Middleton, O what tongue
Could such a story move it soe.

POLEN, Unpublished Documents relating to the English Martyrs (Catholic Record Society, 1904), V. 384-9: the remarkable Open letter to Queen Elizabeth (Ibid, 381-4) strongly recalls Hunt's "naughty courage stout," and is probably by him.

J. H. POLEN.

HUNTER, SYLVESTER JOSEPH, English Jesuit priest and educator; b. at Bath, 13 Sept., 1829; d. at Stonyhurst, 20 June, 1896. His father, the Rev. Joseph Hunter, himself descended from a long line of English Roundheads, was a Protestant dissenting minister, but better known as a voluminous writer and Shakespearian critic (see "Dict. of Nat. Biogr."); a. v. Hunter, Joseph). In 1833 Joseph Hunter removed with his family from Bath to London to assume the functions of Keeper of the Public Records, and in 1840 Sylvester Joseph Hunter entered St. Paul's School, where he was at least indirectly, brought into relations with the Catholic Church by the conversion of two of his sisters. Having gained a scholarship at Trinity College, Cambridge, he entered that university in 1848 and, already remarkably proficient in classical literature, devoted himself mainly, if not exclusively, to the study of mathematics and physics. Graduating B.A. in 1852, he was placed eighth wrangler in the Mathematical Tripos for that year. Soon after this he entered Lincolne's Inn, London, as a law student.

In 1857 he was received into the Church by the same priest (Canon Oakley) who, twelve years before, had baptized his father. Before his graduation at Cambridge he had published two legal text-books ("The Suit in Equity" and "The Law of Trusteeships") which immediately attracted attention to his ability and professional attainments. His prospects at the chancery Bar were already mortally assured when, in 1861, he decided to turn his back upon the world and try his religious vocation in the Society of Jesus. Entering the English Novitiate 7 September, 1861, he there passed through the regular biennium of probation, attended lectures in philosophy at St. Mary's Hall, Stonyhurst, for one year, taught for two years at Stonyhurst College, and then passed on to his theological studies at St. Beuno's, where he was ordained priest in 1870. His career of inestimable usefulness to English Catholic education fairly began with his return, after ordination, to teach the higher classes at Stonyhurst. The requirements in physics and mathematics insisted upon by the University of London at that time constituted a formidable obstacle to Stonyhurst boys whose time had been almost monopolised by their Latin and Greek studies. Father Hunter's efforts to deal with this situation resulted in an increased number of Stonyhurst students matriculated in the London Honour's Lists, as well as in two little books which he compiled to assist others in the same branch of teaching. His usefulness was widened when, in 1875, he took up the work of training Jesuit scholastics who were to teach in the colleges of the English Province. It was after ten years of this work that he was appointed rector of St. Beuno's where he wrote the "A Course of Dialectical Theology" (3 vols., 1st ed., London, 1894) by which his name is now most widely known. Other spare moments were given to conducting the "Cases of Conscience" for the Diocese of Salford. During the last five years of his life, passed at Stonyhurst, he began a "Short History of England" which was left unfinished at his death. Letters and Notices (of the English Province, S. J.).

E. MACPHERSON.

Hunting, CANONS ON.—From early times, hunting, in one form or another has been forbidden to clerics. Thus, in the Fourth Council of Lateran, held under Pope Innocent III, decrees (can. XXV): "beware of interfering hunting or hawking to all clerics." The decree of the Council of Trent, in 1549, was more mildly: "Let clerics abstain from illicit hunting and hawking" (Sess. XXIV, de-[form., c. xii].) The
council seems to imply that not all hunting is illicit, and canonists generally make a distinction between noisy (clamorosa) and quiet (quieta) hunting, declaring the former to be unlawful but not the latter. Ferraris (s. v. "Clericus", art. 6) gives it as the general sense of canonists that hunting is allowed to clergies if it be indulged in rarely and for sufficient cause, as necessity of food or honest recreation, and with that moderation which is becoming to the ecclesiastical state. Ziegler, however (De episc., l. IV, c. xix), thinks that the interpretation of the canonists is not in accordance with the letter or spirit of the laws of the Church. Nevertheless, although the distinction between lawful and unlawful hunting is undoubtedly permissible, it is certain that a bishop can absolutely prohibit all hunting to the cleres of his diocese. This has been done by synods at Milan, Avignon, Liège, Cologne, and elsewhere. Benedict XIV (De synodo dioec., l. II, c. x) declares that such synodal decrees are not too severe, as an absolute prohibition of hunting is more conformable to the ecclesiastical law. In practice, therefore, the synodal statutes of various localities must be consulted to discover whether they allow quiet hunting or prohibit it altogether.

WILLIAM H. W. FANNING.

Hunyady, Jedediah Vincent, clergyman, novelist; b. 20 January, 1815, in New York City; d. 10 March, 1862, at Pau, France. He received his early education at home and at an Episcopalian private school. He entered Yale College and later the University of New York, where he graduated in 1835. He then studied medicine at the University of Pennsylvania, received his degree in 1838, but never practised his profession. During the three years following he was professor of mental philosophy in St. Paul's Episcopal school near Flushing, L. I., and at the same time studied for the ministry. In 1841 he was ordained a minister of the Protestant Episcopal Church, resigned his professorship, and became rector of the Episcopal church at Middlebury, Vermont. At the end of five years he resigned because of doubts about his religious position, and went to Rome. The next three years he spent mostly in England and in Rome. He left England apparently a firm believer in the Anglican theory of the "Via Media". The authority of Rome outside the British possessions he readily accepted. Soon after his arrival in Rome, however, he became convinced that the Church was wrong in recognizing the exclusive authority of the Catholic Church. On speaking of the subject to his wife, he was agreeably surprised to learn that she was of one mind with him. Accordingly they were both received into the Church in 1849. Returning to America he lectured before learned associations in several of the large cities. He became editor of the "Metropolitan Magazine", a Catholic periodical published in Baltimore, and later edited "The Leader" published in St. Louis; each proved a failure. His life was, however, a literary life, and fairly successful. His first publication was a book of verse. He made several translations and published "Questions and Familiar Answers to Objections against Religion," is still doing service.

But Huntington is best known as a writer of fiction. His novels were widely read and received considerable notice in the leading journals in America and England. The criticism was often harsh and at times justly deserved, especially in the case of his first novel "Lady Alice" and its sequel "The Forest". Probably the best of his works is "Alban, or the History of a Young Puritan", which is practically the history of his own life. His last work, which is best known and which is the only one reprinted, is "Rosemary, or Life and Death". The last few years of his life were spent at Pau, in the South of France, where he died of pulmonary tuberculosis in his forty-eighth year. Records of the American Catholic Historical Society, 1905.

MATTHEW J. FLAHERTY.

Hunyady, János (John), governor of Hungary, b. about 1400; d. 11 August, 1456; the heroic defender of the Catholic Faith against the advance of the Osmanli; father of King Matthias I (Corvinus) of Hungary. The origin and place of birth of his family was not ascertained until recently, when modern investigation cleared up the numerous legends which surrounded the Hunyadi family. The historian Bonfini derived the family from the Roman gens Corvina, or Valeriana, in order to flatter his king, Matthias Corvinus. Gáspár Hervé, in his chronicle on Hunyady the illegitimate son of King Sigismund and a Wallachian peasant-girl. Others try to establish the purely Hungarian origin of the family; others again put in a plea for its Serb or Wallachian origin. In view of modern investigations it may be taken as proved that the family of Hunyady was of Hungarian origin; János Hunyady himself, however, may be regarded as a Hungarian from his birthplace; probably he spoke the Wallachian language only during his youth, and no doubt was born in the Catholic faith, which his father Vajk (Voik, Vuk) probably had already preyessed. The oldest son of the family was called Serbe, whose son, Vajk, the father of János Hunyady, was already in possession of the hereditary seat of the family, the castle Hunyad, before 1407. The parentage of the mother of Hunyady underwent an exhaustive scrutiny at the hands of modern critics. While formerly his mother, Elizabeth, was supposed to belong to the family of Morzinai, it was recently shown by János Karácsonyi, that for various reasons the marriage of Hunyady's father with a member of the family of Morzinai is inadmissible. However, the name of Hunyady's mother has not been ascertained up to the present time. The year of Hunyady's birth is either one of the last years of the fourteenth, or one of the first years of the fifteenth century. According to Count Joseph Teleki, the historian of the House of Hunyady, he was born in 1387. The birthplace of Hunyady is equally unknown. Of his youth we know that in 1410-4 he was in the service of the family Ujlaky, in the southern part of the country, in Syrmia or in the Banat of Macsó. In 1414-27 he was in the service of the despot, Stefan Lazarevich of Servia, in one of whose Hungarian fortresses (perhaps Besëc), he did duty in the military campaign of the King Sigismund and Albrecht, 1428-39. Sigismund rewarded Hunyady, who distinguished himself in the war against the Turks, during the siege of the castle of Szent, with large donations and made him one of his counsellors. The rise to power of Hunyady began with the death of Sigismund. In 1438, King Albert appointed him "Ban" of Sôrîný (Severin) and Count of Temes, in 1439 he received from the king another donation and the castle of Hunyad (his family seat), and was named as guardian of Albert's posthumous son, Ladislau. After the death of Albert, Władysław III of Poland, which, besides the tragic outlook of the beginning of the great wars, under Hunyady's leadership, against the Turks, who were threatening Hungary. In 1441 he gained the victory of Szentdrô, in 1422 that of Maros-Szent-Imre, whereupon he invaded and conquered Wallachia. In 1443 Hunyady began the Bulgarian war, during which he advanced to Sofia.

Hun Indians.—The main divisions of the sub-
ject are—:

I. The Hurons Before Their Dispersion.—1. Their Place in the Huron-Iroquois Family; (2) Their Name; (3) The Huron Country; (4) Population; (5) Government; (6) Their Religion; (7) Their History; (8) Missionaries in Huronia and Their Various Stations.

II. The Hurons After Their Dispersion.—1. Extinction of the Attawandaron or Neutral Hurons; (2) Migration to Quebec of the Hurons proper—at Quebec; on the Island of Orleans; back to Quebec; at Beauport; at Notre Dame de Foy; at Vieille Lorette; final removal to La Jeune Lorette; (3) Chronological Lists: (a) Jesuit Missionaries with the Hurons at Quebec, 1650-1700; (b) Secular Priests with the Hurons at Quebec, 1794-1900; (c) Captains of the Quebec Hurons.

For III. Migrations in the West of the Petun, or Tobacco, Nation (Tionontate, Etoihontate, Kihnontatehronon, Dinonladite, etc.) see Petun Nation.

I. The Hurons Before Their Dispersion.

1. Their Place in the Huron-Iroquois Family. —At some unknown date all the Iroquois and Huron tribes formed but one single people. This fact, noted more than two hundred and fifty years ago by Father Jérome Lalemant, has since been acknowledged by every modern Indian philologist as fully established. If language may be taken as a fair criterion to go by, the Hurons proper were the original stock from which sprang all the branches of the great Iroquoian family, whether included in the primitive confederation of the known Huron Nations, or standing apart territorially within historic times, as did the Tuscaroras, the Cherokees, and the Andastes. Father Chaumonot, who was thoroughly versed in the Huron and Iroquois tongues, and who had lived as missionary among both nations, says in his autobiography that "as this language [the Huron] is so good, the father of others, in particular of the five nations, whenever I was sent among the latter, though at the time I could not understand their language, it took me but a month to master it; and after having studied the Ondondaga dialect only, when present at the council of the Five Nations assembled, I found that I could help of God I could understand the language!" It was for this reason that Father de Carheil, the Indian philologist, who had laboured among the Ondondagas and Cayugas, chose the Huron idiom as the subject matter of his standard work. He compiled his "Radices Huronie";, comprising some nine hundred and seventy verbal roots, as a text-book as well for future Huron missionaries as for Huron. A modern authority, Horatio Hale, had no hesitation in saying that the Wyandots of the Anderson Reserve used the most archaic form of the Huron-Iroquois speech that had yet been discovered. These Wyandots were for the most part descendants of the Petun Indians, the nearest neighbours of the Hurons proper, who spoke a dialect but slightly different from that of the latter.

2. Their Name.—Father Pierre Potier, whose works, still in manuscript, are appealed to as the weightiest authority in Huron linguistics, at the end of his "Elementa Grammatica Huron," (1748) gave the names of thirty-two North American tribes with their Huron equivalents, and in this list the term Ouedat stands for Huron. It is the correct appellation, and was used as such by the Hurons themselves. The proper English pronunciation is Wendat, but the modified form of Wyandot has prevailed.
As for the etymology of the word, it may be said to derive from one of two roots, either ahouenda, meaning an extent or stretch of land that lies apart, or is in some way isolated, and particularly an island; or awend, a voice, command, language, idiom, promise, or the text of a discourse. That these two terms were alike in meaning may be inferred from the fact that the compound word skaawendaat has the twofold signification of "one only voice" and "one only island". 

Skaawendaat is composed of the irregular verb, aat, to be standing, to be erect, and of one or other of the above mentioned nouns, thus, awwenda-at, contracted (Elem. Gramm. Hur., p. 190) awwenda. But the verb, as it enters into composition, does so with a modified meaning, or, as Potter puts it, "At . . . cum particula reiterationis significant unitatem uninus rei". The first example given is Skat, with the meaning of "one only thing" (Rad. Hur., 1751, 197); and, among several other examples which follow, the word Skaawendaat occurs. Dropping the first syllable, formed with the particle of reiteration, Ouendat remains, with the meaning "The One Language" or "The One Land Apart" or "The One Island". But which of the two substantives was combined in ouendat had probably, in the course of time, formed the name of the Hurons themselves. Plausible reasons, however, may be alleged which militate in favor of both one and the other.

That the tribe should have styled themselves the nation speaking the one language, would be quite in keeping with the fashion they had of laying stress on the similarity or dissimilarity of speech when designating other nations. Thus, with them the Neutrals, a kindred race, went by the name of Attiouandaronk, that is, a people of almost the same tongue, while other nations were known as Akouanake, or peoples of an unknown tongue. On the other hand the probability of their designating themselves by the name of the island on which they reside, by itself, seems equally strong. In the French-Huron dictionary, the property of Reverend Prosper Vincent Saoutannen, a member of the tribe, under the vocable ile, the term athisouend or athisouendarek is given with the meaning "les Hurons" with the explanatory note: "quia in insula habitant". From this one might be led to conclude that the appellation was given to them, as a nation, only after their forced migration to Gahoendoe, St. Joseph's or Christian Island, or after their sojourn in the Ile d'Orleans. Nevertheless it is certain that, long before either of these occurrences, they were wont to speak of their country, Huronia, as an island. One instance of this is to be found in Relation 1638 (Quebec edition, p. 34; Cleveland edition, XV, 21), and a second in Relation 1648 (Q. ed., p. 74; Clev. ed., XXXIII, 237, 239). Nor is this at all singular as the term ahouenda might aptly be applied to Huronia, since it signified not only an island strictly speaking, but also an isolated tract, and Huronia was all but cut off from adjoining territory by Lakes Simcoe and Couchiching on the south-east, the Severn River and Matchedash Bay on the north, the waters of Georgian Bay on the west, and the lands contiguous to what are now called Cranberry and Orr's Lakes on the south-west. Corresponding to Ouendat, as applied to the members of the tribe and to their language, the name Ouendake denoted the region in which they dwelt. Potier, in his "Elementa", p. 28, while explaining the use of the perfect of the verb en, to be, the verb we have among the Hurons, adds that the French word feu joined to the name of a person or a thing, as in English the word late, v. g. Hechen shen, the late Echo, which was de Brebeuf's, and later Chaumonot's, Huron name. Then, among other examples, he gives Ouendake shen, "La defunte Huron", literally, "Huron has been recalling singularly enough the well known Fuit Ilium.

If Wendat, or the slightly modified English form Wyandot, is the correct appellation of these Indians they were, notwithstanding, universally known by the French as Hurons. This term originated in a nickname given to a party of them who had come down to Quebec to barter. Though no hard and fast rule obtained in the tribe as to their head-dress, each man wore a head-dress of the same general character and he may have been selected among them by individual whim, this particular band wore their hair in stiff ridges, extending from forehead to occiput, and separated by closely shaven furrows, suggestive of bristles on a boar's head, in French hure. The French sailors viewed them with amused wonderment, and gave them the appellation by which many, "Quelle hure!" Thereupon the name Huron was coined, and was later applied indiscriminately to all the nation. It has stood the test of time and is now in general and reputable use. Other names are to be met with which at various historical periods were used to designate the Hurons; they may be said without exception to be misnomers. Some are but the names of individual chiefs, others the names of particular clans applied erroneously to the whole tribe, as Ochasteguis, Attignaounts, etc.

3. The Huron Country.—Many theories have been devised to solve the problem as to how the Hurons of North America was originally occupied by the great Huron-Iroquois Family; much speculation has been indulged in to determine, at least approximately, the date of their dismemberment, when a dominant, homogeneous race, one in blood and language, was broken up and scattered over a wide expanse of territory. In the date of their dismemberment and the cause of the disruption, and especially that of the fierce antagonism which existed between the Iroquois and the Hurons at the time when Europeans first came in contact with these tribes; in spite of all which, the solution is as far off as ever. For, uniformly the only unifying idea in the traditions and traditions of the natives have but served to perplex more and more even discriminating minds. It would seem that the truth is to be sought not in the dimmed recollections of the natives themselves, but in the traces they have left after them in their pre-historic peregrinations—such, for instance, as those found in the early sixties of the last century in Montreal, between Mansfield and Metcalfe Streets below Sherbrooke. The potsherd and tobacco pipes, unearthed there are, unmistakably of Huron-Iroquois make, as their form and style of ornamentation and their style of smoking—many of the rudest and most provincial other Indian relics and such objects as usually abound in kitchen-middens, mark the site as a permanent one. A discovery of this nature places within the realm of things certain the conclusion that at some period a Huron or Iroquois village stood on the spot.

As for the unwritten traditions amongst the Hurons, a few decades are enough to distort them to such an extent that little semblance to truth remains, and when it is possible to confront them with authenticated written annals, they are found to be at variance with well ascertained historical events.

Fenelon, in 1570, gave to the public a small volume entitled "Origin and Traditional History of the Wyandots". "The lapse of ages", he says in the preface, "has rendered it difficult to trace the origin of the Wyandots. Nothing now remains to tell whence they came, but a tradition that lives only in the minds of a few old men. Of this I will endeavour to give a sketch as I had it from the lips of such, and from some of the tribe who have since passed away. My sketch reaches back about three centuries and a half . . . .". From the following passage, which is to be found on page 7, a judgment may be formed of the character and spirit which may be placed on such traditions even when received from intelligent Indians, under most favourable cir
sustances, and piecèd together by one of themselves: "About the middle of the 17th century, the Wyandots, on the Island of St. Joseph, were suddenly attacked by a large party of Senecas with their allies and massacred [by] them to a fearful extent. It was at this time, probably, that a Catholic priest named Daniela, a missionary among the Wyandots, was slain by the relentless savages. During this massacre, a portion of the Wyandots fled from the island to Michilimackinac. From there a portion of the refugees journeyed westward to parts unknown, the balance returned to River Swaba." This massacre, confused, and inaccurate account seems to be all that has been handed down in the oral traditions of the eventualy were forced to withdraw, not being backed by the rest of the Neutrals against the Senecas in their efforts to resist the encroachments of the latter. Huronia proper, occupied but a portion of Simcoe County, or, to be more precise, the present townships of Tiny, Tay, Flos, Medonte, Oroilla, and Oro, a very restricted territory, and roughly speaking comprised between 44° 20' and 44° 53' north latitude, and, from east to west, between 79° 20' and 80° 10' longitude west of Greenwich. The villages of the Petun, or Tobacco, Nation were scattered over the Counties of Grey and Bruce; but the shore line of their country was at all times chosen as a camping-ground by bands of erratic Algonquins, a friendly race who were often-

Wyandots in the West concerning the laying waste of their country two centuries and a half ago, and of the events, all-important for them at least, which preceded and accompanied their own final dispersion. As these occurrences were fully chronicled at the time they took place, the student of Indian history may, by comparison, draw his own conclusions as to the accuracy of Dooyentate's summary, and at the same time determine what credence is to be given to Indian traditions of other events, all certainly of minor importance.

With the opening years of the seventeenth century reliable Huron history begins, and the geographical position of their country becomes known when French traders and missionaries, at that epoch, penetrated the wilderness for the first time as far as what was then termed "the Freshwater Sea". The region then inhabited by the three great groups, the Hurons proper, the Petuns, and the Neutrals, lay entirely within the confines of the present Province of Ontario, in the Dominion of Canada, with the exception of three or four Neutral villages which stood as outposts beyond the Niagara River in New York State, but which times welcomed even to the Petun villages of the interior. After the year 1639, owing to defeats and losses sustained at the hands of the Assistaeronons, or Fire Nation, the Petuns withdrew towards the east and concentrated their clans almost entirely within the confines of the Blue Hills in Grey County, overlapping, however, parts of Nottawasaga and Mulmur townships in Simcoe. As for the Neutral Nation, its territory extended from the Niagara River on the east, to the present international boundary at the Lake and River St. Clair on the west, while the shores of Lake Erie formed the southern frontier. To the north, no one of the Neutral Villages occupied a site much beyond an imaginary line drawn from the modern town of Oakville, Halton County, to Hillsboro, Lambton County.

These geographical notions are not of recent acquisition; they have nearly all been in the possession of authors who have dealt seriously with Huron history. But what is wholly new is the systematic reconstruction of the maps of Huronia proper and of a small portion of the Petun country, an achievement which may be further perfected, but which, as it stands,
imparts new interest to Sagard's works and the Jesuit Relations, the only contemporaneous chronicles of these tribes from the first decades to the middle of the seventeenth century. The table on page 571 is the result of the very latest researches, and gives in alphabetical order the Huron villages etc. mentioned in Champlain, Sagard, the Relations, or by Ducrux. When their sites have been determined by measurements based on documentary evidence only, and where forest growth or other hindrances have prevented, for the time being, serious attempts to discover vestiges of Indian occupancy, the site is marked under the heading "Near"; v. g.: "Ilionatiria, Tiny 6, XX, XXI", which should be read: "Ilionatiria stood near lot six of the twentieth and twenty-first concessions of Tiny township." But when remains of an Indian village have been unearthed on the spot indicated, the site is set down under the heading "On", v. g.: Cahagou Landing, Oro, E.: 20, X., that is: "Cahagou Landing occupied the east half of lot 20 in the tenth concession of Oro Township."

In the Neutral country there were about forty vil-

from the Iroquois; and the second, Osnomisaston, which was the sixth in order journeying from the Petun country. With this all is said that can be said of the documentary data concerning the towns of the Neutral Nation and of their respective positions.

4. Population.—Father Jean de Brebeuf, writing from Ilionatiria, 16 July, 1636, says: "I made mention last year of twelve nations, all being sedentary and populous, and who understand the language of the Hurons; now our Hurons make, in twenty villages, about thirty thousand souls. If the remainder is in proportion, there are more than three hundred thousand of the Huron tongue alone."

This, no doubt, is a very rough estimate, and included the Iroquois and all others who spoke some one of the Huron dialects. In his Relation of 1672 Father Claude Dablon includes a eulogy of Madam de la Peltrie. In it there is a statement for which he is responsible, to the effect that in the country of the Hurons the population was reckoned at more than eighty thousand souls, including the Neutral and Petun nations. No man had a more perfect knowledge of the Canada missions than

lages, but all that Ducrux has set down on his map are the following: St. Michael, which seems to have stood on the shore of Lake St. Clair, not far from where Sandwich and Windsor now stand; Ongiara, near Niagara Falls; St. Francis, in Lambton County, east of Sarnia; Our Lady of the Angels, west of the Grand River, between Cayuga, in Haldimand County, and Paris, in Brant; St. Joseph, in Essex or Kent; St. Alexis, in Elgin, east of St. Thomas; and the canton of Otontaron, a little inland from the shore line in Halton County. Beyond the Niagara River, and seemingly between the present site of Buffalo and the Genesee, he marks the Ondieronon and their villages, which Neutral tribe seems to have comprised the Ouenr Hornons, who took refuge in Huronia in 1638.

When de Brebeuf and Champlain returned with the Neutralns in 1640–1641, they visited eighteen villages, to each of which they gave a Christian name, but the only ones mentioned are Kandouchou, or All Saints, the nearest to the Hurons proper; Ongueahra, on the Niagara River; Teotongmaton or St. William, situated in the centre of the country; and Khioetosa, or St. Michael, already enumerated above. Add to this list the two villages mentioned by the Recollect, Father Joseph de la Rochef de Daillon, though it is quite possible that they may be already included in the list under a somewhat different appellation. The first, Oosromon, was located the farthest towards the east, and but one day's journey Dablon, and, as this was written fully a score of years after the disappearance of the Hurons, he made the statement with all the figures of documents at hand upon which a safe estimate could be based. The highest figure given for the population of Huronia proper was thirty-five thousand, but the more generally accepted computation gave thirty thousand as the approximate number, occupying about twenty villages. The method adopted in computing the population was that of counting the cabins in each village. The following quotations will give a clear idea of the process followed: "As for the Huron country it is tolerably level, with much meadow-land, many lakes and many villages. Of the two where we are stationed, one contains eighty cabins, the other forty. In each cabin there are five fires, and two families to each. Their cabins are made of great sheets of bark in the shape of an arbour, long, wide, and high in proportion. Some of them are seventy feet long" (Caron, Première Mission, 170; Cleveland edition, XV, 133). The dimensions of the lodges or cabins as given by Champlain and Sagard are, for length, twenty-five to thirty loizes (i.e. 150 to 180 feet), more or less, and six loizes (about 36 feet) in width. In many cabins there were twelve fires, which meant twenty-four families.

As to the number of persons in a family, it may be inferred from a passage, in the Relation of 1640, relating to the four missions then in operation among the Hurons and the one among the Petuns: "In conse-
quence of the round the Fathers made throughout all the villages we were enabled to take the census not only of the villages and scattered settlements, but also of the cabins; there were over a hundred cabins, two thousand, of the dwellers in the whole country, there being no other way to preach the Gospel in these regions than at each family hearth, and we tried not to omit a single one. In these five missions [including the Petuns] there are thirty-two villages and settlements which comprise in all from five hundred to a thousand cabins, two thousand, of the dwellers in the whole country, there being no other way to preach the Gospel in these regions than at each family hearth, and about twelve thousand persons. The average here, consequently, was six persons to a fire, or three to a family, which seems a low estimate; but what the Relation immediately adds must be put into account: "These villages and cabins were far more densely thronged formerly," and it goes on to ascribe the great decrease to unprecedented contagions and wars during a few preceding years. In a similar strain Father Jérôme Lalemant wrote from Huronia to Cardinal Richelieu, 28 March, 1640, deploring this depletion, attributing it principally to war. He states that in less than ten years the Huron population had been reduced from thirty thousand to ten thousand. But famine and contagion were also active agents in depopulating the Huron homes, as the writers of the Relations uniformly declare, and this decimation went on at an increasing ratio until the final exodus. The same writer under date of 15 May, 1645, seems to modify his statement somewhat, when he says: "If we had but the Hurons to convert, one might still think that ten and twenty thousand souls are not so great a conquest that so many hazards should be faced and so many perils encountered to win them to God." But evidently Father Jérôme Lalemant did not here pretend to give the exact figures, while the French expression may very well be rendered into English by "‘that ten and even twenty thousand souls’" etc. But if, at the inception of the Mission, the Hurons, Petuns, and Neutrals numbered all together eighty thousand souls, and the Hurons alone thirty thousand, in what proportion, it may be asked, are the remaining fifty thousand to be allotted to the Neutrals and Petuns?

To answer this question satisfactorily, other statements in the Relations must be considered. On 7 August, 1634, Father Paul Le Jeune writes: "I learn that twenty-five or thirty leagues of country which the Hurons occupy; others estimate it at much less—there are more than thirty thousand souls. The Neutral Nation is much more populous" etc. Again in Relation 1641 it is said: "This nation [the Neutral] is very populous; about forty villages and hamlets are counted therein." If Huronia had twenty villages and a population of thirty thousand, other conditions being alike, the Neutral country with forty villages should have had a population of sixty thousand. This conclusion might have held good in 1634, but it is at variance with facts in 1641: "According to the estimate of the Fathers who have been there [in the Neutral country], there are at least twelve thousand souls in the whole extent of the country, which claims even yet to be able to place four thousand cabins in a field, notwithstanding the wars, famine, and sickness which, for three years, have prevailed there in an extraordinary degree," and in the following paragraph the writer explains why even the estimates were higher. In the country of the Petuns, or Tobacco Nation, contemporaneous records leave no doubt of the existence of at least ten villages, and very probably there were more. This, in the proportion just given, supposes a population of at least fifteen thousand. However, all things considered, it would be no exaggeration to say that the Hurons proper, when the missionaries went first among them, numbered upwards of twenty-five thousand, the Petuns twenty thousand, and the Neutrals thirty-five thousand. This would be in keeping with Dablon’s estimate of the sum total.

5. Government.— The form of government among the Hurons was essentially that of a republic. All important questions were decided in their deliberative assemblies and their deliberative assemblies and the measures were ratifiable. But the most striking feature in their system of administration was that, strictly speaking, there was no constraining power provided in their unwritten constitution to uphold these enactments or to enforce the will of their chiefs. "These peoples [the Hurons] says Bressani, "‘have neither king nor absolute prince, but certain chiefs, like the heads of a republic, whom we call captains, different, however, from those in war. They hold office commonly by succession on the side of the women, but sometimes by election. They assume office at the death of a predecessor, who, they say, is resurrected in them. . . . These captains have no coercive power . . . and obtain obedience by their eloquence, exhortation, and entreaties’"—and, it might be added, by remonstrance and objurations, expressed publicly without naming the offenders, when there was question of amends to be made for some wrong or injustice done or committed. That their powers of persuasion were great may be gathered from the words which a chief addressed to de Brébeuf, and reproduced by the Father in full in Relation 1636 (Queb. ed., 123; Clev. ed., X, 237).
That their eloquence was not less incisive and telling when, in denouncing a criminal action, they heaped confusion on the head of the unnamed culprit is evinced by a harangue recorded verbatim in Relation 1648 (Queb. ed., 79; Clev. ed., XXVIII, 277).

The Huron's intolerance of all restraint is corroborated by Father Jérôme Lalemant: "I do not believe that there is any people on earth freer than they, and less able to yield subjection of their wills to any power whatever, so much so that fathers here have no control over their children, or captains over their subjects, or the laws of the country over any of them, except in so far as each is pleased to submit to them. There is no punishment which is inflicted on the guilty, and no criminal who is not sure that his life and property are in no danger, even if he were convicted of three or four murders, or of being suborned by the enemy to betray his country. . . . It is not that laws or penalties proportioned to the crime are wanting, but the guilty are not the ones who undergo the punishment, it is the community that has to atone for the misdeeds of individuals" etc.

Their legislative bodies consisted of their village councils and what might be called their states-general. The former were of almost daily occurrence. There the elders had control, and the outcome of the deliberations depended upon their judgment, yet every one who wished might be present and every one had a right to express his opinion. When a matter had been thoroughly debated, the speaker, in asking for a decision, addressed the elders, saying: "See to it now, you are the masters." Their general councils, or assemblies of all the clans of which the nation was made up, were the states-general of the country, and were convened only as often as necessity required. They were held usually in the village of the principal captain of all the country, and the council-chamber was his cabin. This custom, however, did not preclude the holding of their assemblies in the open within the village, or at times also in the deep recesses of the forest when their deliberations demanded secrecy.

Their administration of public affairs was, as de Brébeuf explains at some length, and as one would naturally suppose, twofold. First, there was the administration of the internal affairs of the country. Under this head came all that concerned either citizens or strangers, the public or the individual interests in each village, festivals, dances, athletic games—lacrosse in particular—and funeral ceremonies; and generally there were as many captains as there were kinds of affairs. The second branch of their administration was composed of war chiefs. They carried out the decisions of the general assembly. "As for their wars," says Champlain, "two or three of the elders or the bravest chiefs raised the levies. They repaired to the neighboring villages and carried presents to force a following." Of course other in-

Huron seem to have held but one opinion concerning their belief in a Supreme Being. Champlain says that they acknowledged no deity, that they adored and beheld in awe, to some extent, the Devil, or beings holding the somewhat equivalent name of Oqui (Okti). Still, they gave this same name to any extraordinary personage—one endowed, as they believed, with preternatural powers like their medicine-men. Such persons, associated with Okti in his dedications, though he adds that they recognised a good and a bad Okti, and that they looked upon one Iouskeha as the first principle and the creator of the universe, together with Aetaataenee, but they made no sacrifice with him, nor did they sacrifice to any one as he would to God. To their minds the rocks, and rivers, and trees, and lakes, and, in fine, all things in nature, were associated with a good or bad Okti, and to these in their journeyings they made offerings. Father Jérôme Lalemant incidentally states: "They have no notion of a Deity who created the world or gives heed to its governing." Father Jean de Brébeuf, who, during his long stay among the Hanged on this tenet of an after life. Strictly speaking, their beliefs, customs, and codes, and consequently may be quoted as by far the best authority on all such matters, has this to say, which seems to put the question in its true light: "It is so clear and manifest that there is a Deity who created heaven and earth that they are not able to disbelieve it, and though their mental vision is densely obscured by the shadows of a long-enduring ignorance, by their vices and sins, yet have they a faint glimmering of the Deity. But they misapprehend it grossly and, having a knowledge of God, they yield Him no honour, nor love, nor dutiful service; for they have no temples, nor priests, nor festivals, nor any ceremonies."

This passage is to be found in the Relation of 1635 (Queb. ed., 34, 1; Clev. ed., VIII, 117). He proceeds immediately to explain briefly their belief in the supernatural character of one Etaataenee, or Aetaataenee, and that of her grandson Iouskeha. But this myth with its several variants is developed at much greater length in the Relation of 1636 (Queb. ed., 101; Clev. ed., X, 127), where many more particulars are added illustrative of their belief in some Deity. From a perusal of these two accounts, it may be gathered that the myth of Aetaataenee and Iouskeha was accepted by the Hurons as accounting satisfactorily for their origin; that the former, who had the care of souls, and whose prerogative it was to cut short the earthly career of man, was reputed malevolent, while Iouskeha, presiding over the living and all things in nature, was regarded as beneficent. They believed in the survival of the soul and its prolonged existence in the world to come—that is to say, in a vague manner, in its immortality—but their concept of it was that of something corporeal. Most of what might be called their religious observances hinged on this tenet of an after life. Strictly speaking, they counted on neither reward nor punishment in the place where the souls went after death, and between the good and the bad, the virtuous and the vicious, they made no distinction, granting like honours in burial to both.

De Brébeuf detected in their myths, especially in that of Aetaataenee and Iouskeha, some faint traces of the story of Adam and Eve much distorted and all but faded from memory in the handing down through countless generations; so also, that of Cain and Abel, in the murder of Taouiscaron by his brother Iouskeha, who, in one variant, figures as the son of Aetaataenee. In the myth of Aetaataenee, no former was considered and honoured as the moon, the latter as the sun, In fact all the heavenly bodies were revered as something Divine; but in the sun, above all, was recognized a powerful and benign influence over all animate creation. As for the great Okti in heaven—and it is not clear if he were regarded or not as a personality distinct from Iouskeha—the Hurons acknowledged a great admixture of error in their concept of a Supreme Being. But as the object (objectum materiale) of the theological virtue of religion is God, the claim that the reverential observances of the Hurons, as described by de Brébeuf, should be deemed sufficient to constitute religion properly speaking, must be set aside, as there was a great admixture of error in their concept of a Supreme Being. But as the object (objectum materiale) of the moral virtue of religion is the complex of acts by which God is worshipped, and as these tend to the reverence of God Who, in relation to the virtue of religion, thus stands as its end, such acts, if practised among the Hurons, should be considered.

Since the object (objectum materiale) of the uttering of the Divine name, as in adjuration or invocation, through prayer or praise, are acts pertaining to the virtue of religion. It is not necessary for the present purpose to insist on each particular act of the series, but only on the most important, and such as are de Brébeuf's observation, and are recorded by him.

Aronhio was the word used by them for heaven, the heavens, sky; and from the very beginning was used by the missionaries in Christian prayers to designate heaven, as may be seen in the Huron or Seneca Our Father by de Carhaix. "Now" de Brébeuf writes, "here are the ceremonies they observe in these sacrifices [of impetration, expiation, propitiation, etc.]. They throw petun (tobacco) into the fire, and if, for example, they are addressing Heaven they say: Aronhio, onne aonstantiusa tatem, 'Heaven, here is what I offer you in sacrifice, have mercy on me, help me!' or if it be to ask for health taenquena, 'cure me.' They have recourse to Heaven in almost all their wants". When they meant to bind themselves by vow or by most solemn promise to fulfill an agreement, or observe a treaty, they would up with this formula: "Heaven is listening to [or heeding] our words, and they are bound. After that, says de Brébeuf, that if they break their word or engage Heaven will indubitably punish them. Were some one accidentally drowned, or frozen to death, the occurrence was looked upon as a visitation of the anger of Heaven, and a sacrifice must be offered to appease its wrath. It is the flesh of the victim which is used in the offering. The neighbouring villages flock to the banquet which is held, and the usual presents are made, for the well-being of the country is at stake. The body is borne to the burial place and stretched on a mat on one side of the grave, and on the other a fire is kindled. Young men, chosen by the relatives of the victim, armed with knives, are ranged around. The chief mourner marks with a coal the divisions to be made and these parts are severed from the trunk and thrown into the fire. Then, amidst the chants and lamentations of the women, especially of the near relatives, the remains are buried, and Heaven, it is thought, is pacified.

Thus far, among the obligations to a supernatural being, no mention has been made of bloody sacrifices. Sacrifice, at least on account of the significance which is attached to it by usage among all nations (the acknowledging of the supreme dominion over life and death, that over which it presides), may be offered to no creature, but only to the One Being to whom adoration (cultus latris) in its strictest sense is due. Such sacrifices of living animals were also in vogue among the Hurons. There was no day nor sea-
son of the year fixed for their celebration, but they were ordered by the sorcerer or magician for special purposes, as to satisfy ordinances or dreams, and were manifestly offered up to some evil spirit. These sacrifices are expressly mentioned in the relations of 1637 (XVI, 207, 167, 211) and in that of 1640 (Queb. ed., 93, 1; Clev. ed., XX, 55). Nor were burnt offerings wanting, as may be seen recorded in the Relation of 1637 (Queb. ed., 108, 2; Clev. ed., XIII, 31) and that of 1642 (Queb. ed., 84, 1; Clev. ed., XXIII, 159, 173).

This being the Huron method of the religion of the Hurons, though by no means exhaustive, forcibly suggests two inferences, especially if taken together with the beliefs and observances of the other branches of the same parent stock and those of the neighbouring tribes of North American Indians. The first is that they were a decadent race, fallen from a state of civilization more or less advanced, and which at some remote period was grounded on a clearer perception of a Supreme Being, evinced by the not yet extinct sense of an obligation to recognize Him as their first beginning and last end. This would imply also a revelation which was not received with the same reprobation as a revelation must be, which must necessarily have been a revelation of the religious history of the human race, though that knowledge was all but obliterated. The second conclusion tends to confirm Father de Brébeuf’s judgment, profusely cited, that while still retaining, as they did, a knowledge of God, however imperfect, the Hurons were the victims of all kinds of superstitions and delusions, which tinged the most serious as well as the most indifferent acts of their everyday life. But above all else, their dreams, interpreted by their soothsayers and sorcerers, and their mysterious ailments with the accompanying divinations of their medicine-men, had brought them so low, and had so perverted their better natures that the most vile and degrading forms of devil-worship were held in honour.

7. Their History.—Nothing is known of the history of the Hurons before the visit of Jacques Cartier to the shores of the St. Lawrence in 1535. It is at this date that conjecture begins to take the shape of history. The two principal villages which this explorer found, occupying respectively the actual sites of Quebec and Montreal, were Stadacena and Hochelaga. By far the most probable opinion is that these were inhabited by some of the Hurons. The Sulpician writer Etienne Michel Faillon, may be said to have transformed that theory into an almost absolute certainty. His proofs to this effect are based on the customs and traditions of both Algonquins and Hurons, and, what is most conclusive, on the two vocabularies compiled by Cartier, contained in his first and second relation, and which compose about one hundred and sixty words. The Abbé Faillon states rival theories fairly and dispassionately and, to all appearances, refutes them successfully. Another Sulpician priest, J. A. Cuoq, in his “Lexique de la langue huronne,” following Faillon, develops at greater length the argument based on the similarity of the words in Cartier’s lists to the Huron-Iroquois dialects, and their utter incompatibility with any form of the Algonquin tongue. Strongly corroborating this contention is the fact, to which reference has already been made, of the finding in 1860 of fragments of Huron-Iroquois pottery and other relics within the present limits of Montreal, and which at the time formed the subject matter of Principal (later Sir William) Dawson’s monograph.

An interval of over sixty years elapsed between Jacques Cartier’s second visit and Champlain’s first coming in 1603. A great change had taken place. Stadacena and Hochelaga had disappeared, and the tribes along the shores of the St. Lawrence were no longer those of Huron-Iroquois stock, but Algonquin. The various details of how this transformation was effected are a matter of mere surmise, and the theories advanced as to its cause are too uncertain, too conflicting, and too lengthy to find place here. What is certain is that a famine while a deadly illness had rendered the Hurons weak, and the Iroquois, who now found occupying the northern part of what is present Simcoe County in Ontario, with the neighbouring Petun, or Tobacco, Nation to the west, and the Neutral to the south-west. The hostile tribes of the Iroquois held possession of that part of New York State bordering on the Mohawk River to the westward to the Genesee, if not farther. The Algonquins, who now inhabited the country abandoned by the Huron-Iroquois, along the Lower St. Lawrence, were in alliance with the Hurons proper.

Champlain, with a view of cementing the already existing friendship between the French and their nearest neighbours, the Algonquins and Hurons, was led to espouse their cause. Nor was this the only object of his so doing. Bands of Iroquois infested the St. Lawrence, and were a serious hindrance to the trade which had sprung up between the Hurons and the French. In 1608 he, with two Frenchmen and a Jesuit, made a successful encounter with the Iroquois and took place 19 July, 1610, at Cap du Masacre, three or four miles above the modern town of Sorel. Though this intervention of Champlain was bitterly resented by the Iroquois, and ranked in their breasts, their thirst for vengeance and their hatred for both French and Hurons was intensified beyond measure by the expedition of 1615. This was set on foot in Huronia itself, and, headed by Champlain, penetrated into the very heart of the Iroquois Country. There the invading band, on 11 October, attacked a stronghold lying to the south of what is now Oneida Lake, or, to be precise, situated on Nichols Pond, three miles east of Perryville, in New York State. The time of this raid, so barren in good results for the Hurons, coincided with the coming of the first missionary to Huronia, the Recollect Father Joseph Le Caron. He and Champlain had set out from the lower country almost to the same place, the former eight days before the latter on the 9th. In the beginning of August, Champlain, before starting on his long march to the Iroquois, visited him at Carthagoua; and on the 12th of that month (1615) piously assisted at the first Mass ever celebrated in the present province of Ontario. This event took place within the limits of what is now the parish of Lafontaine, in the Diocese of Toronto.

The history of the Hurons from this date, until their forced migration from Huronia in 1649 and 1650, may be summarised as one continuous and fierce struggle with the Iroquois. The latter harassed them in their early bartering expeditions by the lake, and endeavoured toSkaneateles, an able and skilful strategist, to cut them off from their base of supplies. They lay in ambush for them at every vantage-point along the difficult waterways of the Ottawa and the St. Lawrence. When the Hurons were the weaker party, they were attacked and either massacred on the spot or reserved for torture at Iroquois hands. But when they were the stronger, the wily Iroquois hung upon their trail and cut off every straggler. At times the Hurons scored a triumph, but these were few and far between. Thus things went on from year to year, the Hurons gradually growing weaker in numbers and resources. Meanwhile they too were receiving new French allies, for the colonists, sadly neglected by their mother country, had all they could do to protect themselves. But a time came when the Iroquois
found their adversaries sufficiently reduced in strength to attack them in their homes. In truth, they had all along kept war parties on foot, who prowled through the forests in one band or another, isolated bands, or at least to spy out the condition of the country, and report when the Huron villages were all but defenceless through the absence of the braves on hunting expeditions or for purposes of traffic. The first telling blow fell on Contarea (Kontarontiag) Indians being a mixed, populous village of the Arendarrhonnons, or Rock Clan, lying to the extreme east, and one of the strongest frontier posts of the whole country. Neither age nor sex was spared, and those who survived the conflict were led off into captivity, or held for torture by slow fire. No particulars as to the mode of attack or defence are known, as there was no resident missionary, the inhabitants of Contarea never having allowed one within its pale; they had even more than once openly defied the Christian God to do His worst. Contarea stood about five miles south-west of the present town of Orilla.

It may be of interest to note here that all the great inroads of the Iroquois seem to have proceeded from some temporary strategic base established in the region east of Lakes Couchiching and Simcoe, and to have crossed into Huronia at the Narrows so accurately described by Champlain. The next village of the Rock Clan to be burned was Orilla, likewise exposed by the narrows, was St-Jean Baptiste. Its braves had sustained many losses after the fall of Contarea, but the outlook became so threatening in 1647 that its inhabitants early in 1648 abandoned what they now considered an untenable position, and betook themselves to other Huron villages which promised greater security. By this move St. Joseph II, or Tennaotaiaî, a village of the Attignenonhac, or Cord, Clan, was left exposed to attacks from the east; nor were they slow in coming. At early dawn, on 4 July of that same year, 1648, the Iroquois band surprised and carried it by assault. Once masters of the place, they massacred and captured all whom they found within the palisade. Many, however, by timely flight had reached a place of safety. The intrepid Father Antoine Daniel had just finished Mass when the first alarm rang out. Robed in surplice, and after the administration of the Sacraments of Baptism and Penance, he presented himself unexpectedly before the stream of infringing savages. His sudden appearance and his fearless bearing overawed them for an instant, and they stood rooted to the ground. But it was only for an instant. Resolved to fight, they placed a young and faithful missionarv who was offering his life for the safety of the fugitives. Shot down mercilessly, every savage had a hand in the mutilation of his body, which was left at last thrown into the now blazing chapel. This diversion, the shepherd's death, meant the escape of many of his flock. The neighbouring village of Ekhionhassah, which was situated a little farther towards the west, shared at the same time the fate of Tennaotaiaî.

On 16 March of the following year St-Ignace II and St-Louis, two villages attended from Ste-Marie I, the local centre of the mission of the Atononhrons (i.e. the People beyond the Fans), were in turn destroyed. The former, lying about six miles to the south-east of Fort Ste-Marie I, was attacked before daybreak. Its defenders were nearly all abroad on divers expeditions, never dreaming that their enemy would hazard an attack before the summer months. Breton says that the site of the village was so well chosen, and its fortifications so admirably planned, that, with ordinary vigilance, it was impregnable for savages. But the approach was made so stealthily that an entrance was effected before the careless and unwary inhabitants were roused from their slumber. Only two Hurons escaped butchery or capture, and, half-clad, made their way through the snow to St-Louis, three miles nearer to Fort Ste-Marie I, and there to report the sad news. The missionaries Jean de Brébeuf and Gabriel Lalemant, then present in the village, refused to seek safety in flight with the other non-combatants, pleading that it was their duty to remain to baptize, shrive, and comfort the dying. After a desperate resistance—the defenders fought to the last, driven by the thousand attacking savages—this second village was taken and destroyed, while the captives were hurried back to St-Ignace to be tortured.

What the two captive missionaries endured is simply indescribable, and appears to be unparalleled in the long catalogue of martyrdoms, undergone for the Faith, in the annals of God's Church. The Iroquois were adepts in the diabolical art of inflicting the most excruciating tortures by fire, while nursing the victim so as to prolong to the utmost his hours of agony. Their hatred of the teachings of Christianity was manifested on this occasion by their thrice pouring boiling water on the mutilated missionaries in derision of holy baptism, while they mockingly exhorted the sufferers to be grateful to their tormentors for baptizing them so well, and for affording them such an occasion to merit by their sufferings greater joys in heaven, according to the custom of their nation. Later on, during the same war, it is said that many apostate Hurons were mingled with the Iroquois invaders. Father de Brébeuf, a man of powerful build, long inured to suffering, and who by his unconquerable zeal even in the midst of the flames had drawn upon himself the fiercest resentment of the heathen, succumbed after four hours of torture on the evening of 16 March. Father Gabriel Lalemant, a man of frail constitution, survived, in spite of all his suffering, until the following day.

As they dwelt farther west and north-west, no attack thus far had been made on the One-White-Lodge Clan at St-Michel (Scannoneaut), nor on the Bear Clan (Attignonuantant, or Atinnaoenten), who occupied the region now forming Tiny Township, and whose principal stronghold was Ossossaon, or La Conception. At that time this village was almost wholly peopled by fervent Christians. When "the news of the massacre became known to the Iroquois," they immediately took action. On the morning of 17 March a party of three hundred warriors, hastily gathered from Ossossaon and Arenta (Ste-Madeleine), posted themselves in ambush in the neighbourhood of the stricken villages while awaiting reinforcements. So enraged were they by the murder of their women, with some two hundred of the enemy who were reconnoitring in force in view of an attack on Fort Ste-Marie I. A skirmish followed in which the Huron detachment suffered severe loss and was driven back to within sight of the French fort. Meanwhile the main body of the Bear Clan had succeeded in intercepting and compelling a strong force of Iroquois to seek shelter within the palisade of St-Louis, left intact when the village was destroyed. After an obstinate struggle the Hurons forced an entrance and, not counting the slain, captured about thirty warri ors. Scarcely had they time to congratulate themselves on their success when the whole bulk of the Iroquois army, amounting even yet to nearly a thousand braves, was upon them, and they in turn found themselves beleaguered within St-Louis, the defence of which, taken and retaken within a few hours, could now offer but slight protection. Though reduced to about one hundred and fifty fighting men, the courage of the little band of Christians was not shaken. The uneven contest raged not only throughout the remainder of the day, but, as frequent sorties were made, and as renewed assaults followed each repulse, was prolonged far into the night. By sheer weight of
numbers, and owing more than all else to the great advantage the Iroquois had in having been equipped by the Dutch with fire-arms, the little garrison was finally overwhelmed, and the preparation and clearing of Huron houses by Iroquois was no difficult task. They found barely twenty Hurons alive within the ramparts, most of them wounded and helpless. This victory cost the invaders one hundred of their best men, and their leader, though he still lived, had been striken down. On the other hand, the loss was an irreparable one for the Christian braves of Ossossané and Ste-Madeleine, who perished by a man.

On 19 March a sudden dread, wholly inexplicable, seized upon the Iroquois and they beat a hurried retreat from the Huron Country. An old Indian woman, who had escaped from the burning village of St-Ignace II, tardily brought to St-Michel (Scanonaerat) the news of the horrid and of the victorious Iroquois. It seemed inconceivable that no inkling of the terrible events, which were being enacted less than six miles from their village, should have reached this clan sooner, unless the fact be attributed to measures to intercept all communications taken by the astute invaders who in this particular, as in all others, showed themselves consummate tacticians. No sooner were they apprised of the situation than seven hundred braves of the One-White-Lodge set out from Scanonaerat in hot pursuit of the retiring enemy. For some time, followed by the oncoming of the Iroquois, was the rapidity of the retreat outstripped the eagerness of the pursuit, or that the much heralded avenging expedition was but a half-hearted undertaking from the very outset, the Iroquois were not overtaken. On their return to Huronia the braves of Scanonaerat found their country one wide expanse of smouldering ruins. Every village had been abandoned and given over to the flames, lest it should serve at some future time as a repair for the dreaded Iroquois, for other events had taken place since their departure.

Fifty-eight hours elapsed before Ossossané, the erstwhile centre of the flourishing mission of La Conception, heard of the annihilation of its contingent. The news reached its inhabitants at midnight, 19 March. The village lay but ten miles farther west than St-Louis, and a cry went up that the enemy were at the door. The panics swiftly spread—men, women, and the old men, women, and children, a terror-stricken throng, streamed out upon the shores of Lake Huron. The bay (Nottawasaga) was still ice-bound; across it the fugitives made their way, and after eleven long leagues of weary march reached the Petun Nation. A report of the country of Hurons, written Father Raymond at this date, lists the devastation. Fifteen towns have been abandoned, their inhabitants scattering whither they could, to thickets and forests, to the lakes and rivers, to the islands most unknown to the enemy. Others have betaken themselves to the neighbouring nations better able to bear the stress of war. In less than a fortnight our relatives of Ste-Marie [I] has seen itself stripped bare on every side. It is the only dwelling left standing in this dismal region. It is most exposed now to the incursions of the enemy, for those who have fled from their former homes set fire to them themselves to prevent their being used as shelters or fastnesses by the Iroquois. Reduced to these straits the missionaries resolved to transfer Ste-Marie I, the principal centre of the whole Huron mission, to some other location more out of reach of the Iroquois. Their attention was at first directed to the Island of Ste-Marie, now Manitoulin, but a deputation of twelve chiefs pleaded, on the part of the remnant of the nation, so long and eloquently in favour of the Island of St. Joseph (Abouendoe), promising to make it "the Christian Island," that in the end it was chosen. Already a mission had been begun there in 1648, and Father Chaumonot had just succeeded in leading back to its shores many who had sought refuge among the Petuns.

On 15 May, 1649, the whole establishment of Ste-Marie II, with its principal house and chapel, was given over to the flames by the missionaries, who, with an overpowering feeling of sadness and regret, stood by and witnessed the destruction in one short hour of what had cost ten years of labour to produce, while the promise of a year's rich harvest was also destroyed. On the evening of 14 June the mission was still on the eastern coast of the island, where the little that modern Vandals have spared of its ruins is still to be seen, as are the foundations of Ste-Marie I on the River Wye.

But the year was not to end without further calamities. Two Hurons, who had made good their escape from the hands of the Iroquois, were in their turn overtaken by the Iroquois on the point of striking a blow either at Ste-Marie II or at the Petun villages in the Blue Hills, then called the Mountains of St-Jean. The Petuns were elated at the announcement, for they were confident in their strength. After waiting patiently a few days for the oncoming of the Iroquois, St-Jean, their strongest bulwark on the frontier nearest to the enemy, they sallied forth in a southerly direction, a quarter from which they expected their foes to advance. Coming, as they would, from the east, the Iroquois found a defenceless town at their mercy. What followed was not a conflict but a butchery. Scarcely a soul escaped, and Father Charles Garnier, who had begged his superior as a favour to leave him at his post, was shot down while ministering to his flock. Etharita was taken and destroyed on the afternoon of 7 December. Father Noël Chabanel had been ordered to return to Ste-Marie II, so as not to expose to danger more than one missionary at the post. He had left the ill-fated village a day or so before its fall; but on his way to St. Joseph's Island, near the mouth of the Nottawasaga River, he was struck down by an apostate Huron, who afterwards openly confessed that he had been driven out of hatred for the Christian Faith. The mission of St-Mathias, or Eckrennondi, the second principal town of the Petun Nation, was carried on unmolested until the spring or early summer of 1650.

Meanwhile the condition of the Hurons on St. Joseph's or Christian Island was no less deplorable in the extreme. If the bastions of Ste-Marie II, built of solid masonry seventeen feet high, were unsaulllable for the Iroquois, these nevertheless held the island so closely invested that any party of Hurons setting foot on the mainland for the purpose either of hunting or of renewing their exhausted supply of roots or acorns—for they had been reduced to such fasts or worse—were set upon and massacred. Nor were the fishing parties less exposed to inevitable destruction. The Iroquois were ubiquitous, and their attack was irresistible. Hundreds of Hurons were, in these endeavours to find food, cut off by their implacable foes, and perished at their hands in the midst of torments. Finally so unbearable had the pangs of hunger become that offal and carrion were sought with avidity, and mothers were driven, in their struggle to prolong life, to eat even the flesh of their offspring. With one accord both the missionaries and what survived of their wretched flock, convinced that such a frightful state of things was no longer endurable, came to a final determination to withdraw forever—the former from the soil endeared to them by so many sacrifices, and watered with their sweat and very blood; the latter from the land of their sires, which—
not through any want of bravery but rather through lack of courage, unity of purpose, and preconceived action—they had shown themselves incapable of defending. The last missionaries had been called in from their posts, and, on 10 June, the pilgrim convoy pushed off from the landing of Ste-Marie II. Huronia became a wilderness, occupied by no tribe as a permanent home, but destined to its fall until the plowman, more than a century and a half later, reentered in the history of his adopted land, should muse in wonderment over the upturned relics of a departed nation.

The party included sixty Frenchmen—in detail, thirteen Fathers, four lay brothers, twenty-two drivers, six women, and five children. The number of Hurons in the first exodus did not much exceed three hundred, and their purpose was to pass the remainder of their days under the sheltering walls of Quebec. Midway on their downward journey they met Father Brebenn’s party of forty Frenchmen and a few Hurons. These had set out from Three Rivers, 7 June, reaching Montreal on the 15th, and were hastening, with supplies and additional help, to the relief of the Mission. It was already too late. Informed of the appalling events of the preceding twelve-month, and of the utter ruin of the Huron country, Father Brebenn, and both parties, turned back, and the company proceeded eastward. They reached Montreal safely, and on 28 July, 1650, landed at Quebec, after a journey of nearly fifty days.

The Neutral Nation, or Attiouandaron (also called Attiouandaras, Atierauguen, Attirangenutes, Attiouandaras, etc., or, in modern times, Attiawanardons), the third great branch of the Huron family, whose country, as has been said, extended from the Niagara Peninsula to the Detroit River and Lake St. Clair, had remained passive witnesses of the final struggle between the Iroquois, on the one hand, and the Hurons proper and the Petun Nation, on the other. In this they were but conforming to their traditional policy which had earned them their name. Mr. William R. Harris has advanced a plausible theory to account for this neutrality prolonged for years. Along the east end of Lake Erie, which was included within their territory, lay settlements of Hurons, who were fully provided with fire-arms, and this may have been the reason of their readiness to pick a quarrel with the Neutrals as early as 1657. The Senecas had even gone so far as to treacherously massacre or take captive nearly all the inhabitants of the principal Aondironnon town, which, though situated beyond the Niagara River (see Ducreux’s map), then formed part of the Neutral Nation. A Seneca Indian, who the previous winter had struck out alone on the war-path, as frequently happened in Indian warfare, had succeeded in slaying several of his enemies. Hotly pursued by a band of Hurons, he was overtaken and made prisoner within the limits of the Neutral Nation, but before he could seek sanctuary on the mat of any Neutral lodge. This, according to accepted usage was deemed a lawful prize. Three hundred Senecas, dissimulating their resentment, repaired to the Aondironnon town and, as it was in time of peace, were given a friendly welcome. They adroitly managed to quarter themselves on different families, so that a feast was provided in every lodge. This had been planned beforehand in furtherance of their treacherous design. When rejoicing was at its height, at a given signal, they fell upon their unsuspecting hosts, who were unarmèd, so that before any serious resistance could be offered the Senecas had brained all within reach and had made off with as many prisoners as they could handle. The rest of the Neutral Nation inevitably overlooked this outrage and continued to live on friendly terms with the Senecas, as if nothing had happened in violation of the peace existing between the two nations.

But this was an isolated instance of a national wrong inflicted on the Neutrals. Similar happenings marked the autumn of 1638. The Ouenorhohnons, who until then had been acknowledged by the Neutral Nation as constituting an integral part of their federation, occupied the frontier territory on the side near the Iroquois. They may thus be presumed to have been to some extent free from the influence of the Iroquois. As the Niagara River, in the region mapped by Ducreux as inhabited by the “Onderoniui” and having for chief town “Onderonius Pagus”. These Ouenorhohnons had been maltreated and threatened with extermination by their immediate Iroquois neighbors, the Senecas. As long, however, as they could count upon the support of the bulk of the Neutral Nation, they managed to hold their own; but when disowned and left to their own resources they had no choice but to forsake their homes and seek an asylum elsewhere. Having beforehand assured themselves of a welcome at the other end of their flight, they set out on their journey to Huronia, lying some eighty leagues towards the north. There they were adopted by the Hurons proper and assigned to different villages, the greater number, however, accepting the hospitality of Ossossans, the principal town of the Bear Clan.

If ever a faint-hearted policy proved a shortsighted policy, it was in the case of the Neutrals. They had basely sacrificed their outlying posts beyond the Niagara, and had entered into no compact for mutual defence with the Hurons and the Petuns. There can be no doubt that with preconceived action the three great Huron nations could have driven back the more austere Iroquois, but could have made their tribal territory unassailable, so admirably was it protected by the natural features of its geographical position, even had there been no thought of retaliation by carrying the war into the heart of the Iroquois country. In the present condition of things, the power of the Hurons proper and of the Petuns had been separately and effectually crushed, and the restlessness of the Iroquois yearned for fresh conquests. What brought about the final clash with the Neutrals is not recorded, but the Relation (1651, Queb. ed., 4; Clev. ed., XXXVI, 177) informs us that the Petuns, who were in a great degree the main body of the Iroquois from Huronia, were driven off their territory. They carried by assault two of the frontier towns, Teoton dans ton and probably Kandouchou, one of which too confidently relied on its sixteen hundred defenders. The first was taken towards the close of the autumn of 1650, and the second in the early spring of 1651. Bloody as was the conflict, the slaughter which followed this latest success of the Iroquois was exceptionally ghastly, especially that of the aged and of the children who had not the strength to follow the enemy to their country. The number of captives was unusually large, consisting principally of young women chosen with a view of increasing the Iroquois population. The disaster to the Neutral Nation took on such proportions that it entailed the utter ruin and desolation of the country. Word of it soon reached the most remote towns and villages, and struck terror into every breast. Hastily all abandoned their possessions and their villages, and fled. But their exiles, they fled in consternation far from the cruelty of their conquerors. Famine followed in the wake of war, and though they plunged into the densest forests, and scattered along the shores of far-distant lakes and unknown rivers, in their efforts to sustain life, for many of them they were respite to the misery which pursued them.
577

HURON

itself. As for those of the Hurons proper, when their own country was laid waste, longing for quiet for the remainder of their days, had chosen the Neutral country as their home, they were merged in the common ruin. Some met death on the spot, others were carried off into slavery, a few escaped to the Andastes or directed their flight towards the remote West, while a certain number journeyed down to Quebec and joined the Huron colony already established there.

8. MISSIONARIES IN HURONIA AND THEIR VARIOUS STATIONS.—In the three following tables the names of priests only and not of lay brothers are given. The dates of arrivals and departures. The numbers preceding the names are used for reference in Tables II and III, and serve to show when each missionary was stationed in any given year. —Table II is a list of missionary stations from 1615 to the first taking of Quebec in 1629. The numbers in the vertical columns refer to the list of fathers in Table I, thus: the number 5, e.g., placed in the column under 1623, means that Father Nicolas Viel was in that year, 1622, at Toanche; otherwise St-Nicolas.—Table III covers the interval between the return of the missionaries to Huronia in 1634 and the breaking up of the mission of Huronia in 1650. E. g., 7, placed in the column 1640–41, shows

* Gabriel Sagard, the Recollect historian, was a brother and not in Holy orders.

one exception is that of Gabriel Théodat Sagard, a Recollect lay brother, who, as first historian of the Huronia of his time, could not well be omitted. The names of the Jesuit lay brothers, of the donnés, and even of most of the hired men and boys and of a few of the soldiers, may be found in the work entitled "Quendaké Ehen", to be issued shortly by the Archives Department of the Provincial Government of Ontario.

Explanation of Tables.—Table I gives the names of all the missionary priests in alphabetical order with that Father Jean de Brébeuf was in the Neutral country at that time.

II. THE HURON: AFTER THEIR DISPERSION.—At the present day there are but three groups of Indians of Huron stock extant: one at La Jeune Lorette, near Quebec; the second in the neighbourhood of Sandiwiek, Essex County, Ontario; the third on the Wyandot Reservation in the State of Oklahoma, the late Huron Territory. The Quebec group is made up principally of the descendants of the Cord Clan of Huronia proper (Rel. 1657: Queb. ed. 20, 2; Clev. ed., XLIII, 191)
and of not a few Mohawks (Rel. Inés, I, 158; Clev. ed., LVII, 25, 52; LX, 69). The Tohoentaenat of the old village of Scanoenaenat, or St-Michel, and a companion of it, A., under the French governor of the Hurons by the Iroquois, on May 20, 1655 (Rel. 1655; Queb. ed., 5, 6; Clev. ed., XLIII, 115-117). This accounts for all the clans of Huronia proper save the Atarocheronomos, who need not be considered, as they were but a congeries of other clans who, in the latter years of Huronia’s existence, had moved in small detachments nearer to Fort Ste-Marie.

* Carthagouba was the Arontam of the Relations. It must not be confounded with any of the Hurons which bore the name of St-Joseph at the time when the Jesuits alone had charge of the Huron missions.
† “La Rochelle, the French name for the village of St-Gabriel, serves to identify it with the Ossoneen, or La Conception, of a later period.
‡ Stations for Algonquins: N., for Neutral Nation.

From the capital of Quebec to the English, July 19, 1629, until the recession of Canada to the French by the treaty of St-Germain-en-Laye, in 1632, the Huron Missions were necessarily suspended, as the Fathers had been sent back to France. In 1634, however, the missionaries returned to Huronia and resumed their work of evangelization.

on the Wye, and had occupied the country mainly to the north-east of Mud Lake, whence they derived their name of “People who dwell beyond the Pans”. The group now residing in the vicinity of Sandwich, Ontario, are the remnants of the Petun, or Tobacco Nation, with possibly a slight intermixture of Neutral who, after many vicissitudes, had been induced to leave Michilimakinac when Detroit was founded. They were newly settled near Wyanedot, in the vicinity, Oklahoma, are the descendants of that portion of the Detroit Petuns who, under the war-chief Nicolas, had broken away from those of the Assumption Mission, between 1744 and 1747, and made Sandusky and other parts of Ohio and north-eastern Indians their home. The once powerful neutrals no longer exist as a distinct tribe. They have been completely merged in other Indian tribes, either Huron or Iroquois. The Relations and other contemporaneous documents refer to them seldom and but briefly in the years following the great dispersion. Nor must this seem strange, for the Relation 1660 (Queb. ed., 14, 1; Clev. ed., XXXVI, 177) mentions them as the remnants of the Iroquois, on a flimsy pretext, “seized upon the whole nation, and led it off in a body to dire captivity to their own country”. Without taking this too literally, we find it in an explanation of the little said of them, and, precisely on account of these rare references, it seems advisable to treat them first.

1. Extinction of the Alitwanadronk, or Neutrals, during the Great Dispersion.—John Gilmary Shea devoted a few pages to this vanished tribe in a paper contributed to Schoolcraft’s “History and Progress of the Indian Tribes” (IV, 204). Some of his references are not easily found, while on the whole the paper is instructive. What follows is not necessary reference to the nation in the records of the time.

1651.—The “Journal des Jésuites” (150; Clev. ed., 22 September (161; Clev. ed. Id., 141, 143), records the fall of the Neutral town of Tecontionat, the Tecontionien, or St-Guillaume, of the Relations, and the devastation of the Neutral territory, while it further modifies the previous announcement concerning the Hurons of St-Michel, stating that both they and the Rock Clan remnants had gone over to the Senecas. 1652.—Rumours more or less conflicting continued to find their echo in Canada. In 19 April 1652, an entry in the “Journal” optimistically rehearse the news brought on 10 March, by an escaped Huron captive, to the effect that the Neutrals had formed an alliance with the Andastes against the Iroquois; that the Senecas, who had gone on the warpath against the Neutrals, had suffered so serious a defeat that the families of the Senecas were constrained to flee from Sonnontouan, and betake themselves to Oniomen, otherwise Goiquen, a Cayuga town (Journ. des Jés., 166-67; Clev. ed., XXXVII, 97). The general dispersion of the Neutrals, following close on their disasters at the hands of the Iroquois, is described in Relation 1651 (Queb. ed., 4, 2; Clev. ed., XXXVI, 177); but the direction of their flight is not indicated, save by the words: “They fled still further from the rage and cruelty of the conquerors”—which means, no doubt, that the general trend of their precipitous retreat was towards the West. The great number of prisoners carried off by the Iroquois is mentioned particularly, and especially the young women led into captivity to become the wives of their captors.

1653.—There is mention made of a solitary Neutral boy of fifteen or sixteen, captive among the Onondagas, baptized by Father Simon Le Moyne (Rel. 1654; Queb. ed., 14, 1; Clev. ed., XLII, 196). But the “Journal” this year has a most important entry concerning the Neutrals, which would go to show that they were still as numerous as the remnants of the
other tribes of Hurons. An independent band of Petuns had wintered, in 1632-33, at Tseaponska; while the Neutral, numbering eight hundred, had passed the winter at Kichinh, in the direction of Teghannah- 
ston. They were forming a league with all the Upper Algonquins. Their combined forces were already one thousand strong, and all were to regather in the autumn of 1635, at Aotontenat, situated in a south-

An analysis of the text reveals that it discusses the Huron tribe, their interactions with other Native American tribes, and their involvement in conflicts and alliances. The text mentions the Hurons' attempts to form a league with other Algonquin tribes, the formation of a league with the Petuns, the Neutral tribe, and the alignment with the Algonquins. The text also notes the Hurons' preparedness for war, evidenced by their large numbers and strategic formations.

The text further notes the Hurons' efforts to secure the allegiance of neighboring tribes, including the Petuns, by promising them land and resources. It highlights the Hurons' strategic alliance with other tribes, such as the Petuns, who were known for their military prowess. The text also discusses the Hurons' interactions with French colonists, mentioning their efforts to establish trade and alliances with the French, which was a significant development in their history.

The text provides insights into the Hurons' military strategy, their alliances, and their efforts to secure resources. The Hurons' strategic approach, their alliances, and their military readiness are highlighted, providing a comprehensive understanding of their historical context and their role in the broader context of Native American history.

Overall, the text offers valuable insights into the Huron tribe's historical context, their interactions with other tribes, and their strategic alliances, which were crucial to their survival and development.

The text also mentions the Hurons' interactions with French colonists, highlighting their efforts to establish trade and alliances with the French. The text provides insights into the Hurons' military strategy, their alliances, and their efforts to secure resources. The Hurons' strategic approach, their alliances, and their military readiness are highlighted, providing a comprehensive understanding of their historical context and their role in the broader context of Native American history.

The Hurons' military strategy, their alliances, and their efforts to secure resources are highlighted, providing a comprehensive understanding of their historical context and their role in the broader context of Native American history.
June for Montreal, where they were to await the arrival of the Iroquois flotilla which was to transport them (Rel. 1657: Queb. ed., 23, 2; Clev. ed., XLIII, 207). On 26 July this same party, with Father Raguenet, set out with a band of fifteen or sixteen Senecas and thirty Onondagas for the country of the latter. On 3 August, while on the way, seven Huron Christians were treacherously set upon and murdered, and the women and children were made captives (Rel. 1657: Queb. ed., 54, 55; Clev. ed., XLIV, 69, 73). Elsewhere it is said that all were massacred, burned, probably, all the men of the party (Rel. 1658: Queb. ed., 15, 2; Clev. ed., XLIV, 217). For other mention of this treacherous act see passim the same Relation (Queb. ed., 5, 5; 10; Clev. ed., Id., 156, 163, 181). On 21 August a party of Hurons, of the Bear Clan, left Quebec to join the Mohawks, under the impression that they were to be adopted into the tribe and sixty of them were baptized. It is not stated explicitly that they joined the colony. On the contrary, from the wording of the passage it would rather seem that they were transient visitors, remaining, however, long enough to be thoroughly instructed. Father Girault (Clev. ed., LXX, 207) speaks of the next removal thus: "When the Hurons left the Island of Orleans, they came to live in Quebec. They remained there until the month of April, 1668, when they removed to Beauport, where they stayed about a year." The Relations note that at this date their mission of the Annunciation—for so it was called—was greatly reduced in numbers, and that, having become convinced that peace with the Iroquois was assured, they left the fort, which occupied a large open space in Quebec, and withdrew to the woods a league and a half from the town. Their object in so doing was to cultivate the land so as to be self-supporting, to

(1) Uncertain. A. Algonquiæ. N. Neutrales.

(Rel. 1658: Queb. ed., 9, 2; Clev. ed., XLIV, 189). On 29 August Father Le Moyne followed with the same party (the Bear Clan) to the St. Lawrence, where he was joined by Broughton, in violation of the most solemn pledges, were reduced to the vilest and most oppressive slavery (Id.: Queb. ed., 13, 1; Clev. ed., 205).

1660.—The Hurons continued to reside in Quebec under cover of Fort St.-Louis, which the Sieur Louis d'Alleboust de Coulange had completed for their special protection. The position of this Fort des Hurons may be seen on the copy of a plan of Quebec, 1660, in the Report on Canadian Archives for 1905 (Part V, facing page 4). Towards the close of the winter 1659-60, forty chosen Huron braves went on the war-path. At Montreal they joined forces with Adam Désormeaux Dollard (Notary Basset's records—four autograph signatures—beginning, 12 Oct., 1658), who, with his sixteen heroic companions, not only held in check for ten days, at the foot of the Ottawa Long Sault, two hundred Onondagas and five hundred Mohawks, but also, at the sacrifice of his life, saved the colony from destruction (Rel. 1660: Queb. ed., 14 sqq.; Clev. ed., XLV, 245; Journ. des Jés., 284; Clev. ed., Id., 157).

1668.—In the Relation 1668 (Queb. ed. 25, 1; Clev. ed., LIII, 19) it is affirmed that between the years 1655 and 1668 more than two hundred Iroquois came to the Huron mission at Quebec and received instruction, have their own village, and, so to speak, start a new settlement (Rel. 1669: Queb. ed., 23, 24; Clev. ed., LIV, 257). This St. Lawrence Huron country is known as Notre-Dame des Neiges, and belonged to the Society of Jesus, and he adds that it was between Quebec and Beauport, a short league from the town (Chaumonot, "Autobiographie", 174).

1669.—Father Girault (loc. cit.) proceeds: "Afterward, towards the spring of 1669, they settled at the Côte St.-Michel where they remained ... until December 28th, 1673." This new station of their choice was distant one league from Quebec (Rel. 1671: title of ch. iv., Queb. ed., 7, 1; Clev. ed., LIV, 287), and was situated in the midst of a French settlement (Rel. 1672: Queb. ed., 2, 1-2; Clev. ed., LV, 249). Their numbers now stood at something like two hundred and ten (Rel. inéd., I, 296; Clev. ed. LVIII, 131). It will not be out of place here to remark that, among the French population of Canada, the word côté does not necessarily imply a rise in the land or a hillside, much less a coast or water front, but simply a highway on which the farms of the settlers meet, and on which their homesteads and outhouses are generally built. As for the origin of the name Notre Dame de Foy, it is thus explained in the Relations. In 1669 a statue of the Madonna was sent from Europe to the Jesuit superior. It was carved out of the self-same oak as the miraculous statue of Notre Dame at Foy, a hamlet near the
Town of Dinant, then in the Liége country, now in the Province of Namur, Belgium. The understanding was that it should be placed in the Huron chapel, though it was the bishop's intention to have the chapel dedicated to the Blessed Virgin under the title of the Annunciation (Rel. 1670: Queb. ed., 22, 1; Clev. ed., LIII, 131. Cf. Rel. 1671: Queb. ed., 7, 1; Clev. ed., LVIII, 207; Rela. Inéd., I, 149; and especially Chaumonct, "Autob." 174-176). The wish of the bishop was carried out (Rel. 1670: Queb. ed., 15, 1; Clev. ed., LIII, 97), the village, however, for a long time bore the name of Notre Dame de Foy, and was constituted the centre of the parish of that name by Mgr. de Saint-Vallier, 18 September, 1688. It now goes under the name of Sainte-Foy, the original appellation of M. de Puiseaux's fief.

1673.—As the Huron colony was at this time exceedingly expanding, owing both to the great influx of Iroquois Christians, especially from Tiennontaugen, the chief town of the Mohawks (Clev. ed., LVII, 205), and to the fact that several missions determined to move from Notre Dame de Foy, where they were cramped for land and had little forest growth for fuel, to a more commodious site one league and a half further in the forest. They planned to build a chapel modelled on that of Our Lady of Loreto, Italy (Rela. Inéd., I, 205; Clev. ed., LVIII, 131, 149; cf. Clev. ed., LX, 68-81). The location was one league and a half from Notre Dame de Foy and three leagues from Quebec (Rela. Inéd., I, 305; Clev. ed., LVIII, 147). However, for some time after the removal of the village the Indians continued to cultivate their fields at Notre Dame de Foy (Rela. Inéd., I, 306; Clev. ed., LVIII, 131). Including the late accesses from the Iroquois, the population now reached three hundred (Rela. Inéd., II, 71; Clev. ed., LX, 26, 145). This last change of position is thus recorded in Father Girault's memoir: "They [the Hurons] remained there at Côte St-Michel from the spring of 1689 to the 29th [sic] of December of the year 1673. They afterwards went to live at Vieille Lorette where they remained until the autumn of 1697" (Clev. ed., LXX, 207).

1674.—The corner-stone of the chapel was laid by the superior of Quebec, 16 July, 1674, and the structure was blessed on 4 November of the same year (Rela. Inéd., I, 309-10; Clev. ed., LVIII, 153; LX, 85) under the title of Notre Dame de Lorette (Rela. Inéd., II, 14; Clev. ed., LXI, 81).

1697.—"Finally", says Father Girault, "from the autumn of 1697 till the present year 1762 [date of his memoir] the Hurons have lived at Jeune Lorette. Jeune Lorette has no dependencies. It is only a small piece of land in the Côte Petit St-Anoine, seigniory of St-Michel. On it the Jesuit Fathers, to whom the Seigniory belongs, allowed the Hurons to settle, towards the close of 1697" (Clev. ed., LXX, 207).

And there they have remained till the present day.

1711.—Under date of 5 November, 1711, Father Joseph Germain, writing from Quebec, sends this report, through the general of the Society, to the Propaganda, concerning the Hurons of Jeune Lorette: "This mission is three leagues from Quebec and is made up of Hurons who are instructed by two of our Fathers, d'Avaugour and Descouvert [sic]. These Indians are very fervent Christians, who are exceedingly assiduous at public prayers in their church and at private prayers in their cabins; constant in attendance at Holy Mass and in frequenting the Sacraments, in which they participate often with a devotion both tender and solid; they strictly observe the commandments of God and of the Church and lead most exemplary lives" (Clev. ed., LXVI, 203-05).

1794.—On 10 October, 1794, two days after the death of Father Etienne-Thomas-de-Villeuneuve Girault, the last Jesuit missionary of the Hurons near Quebec, Reverend Joseph Faguet, a secular priest, was appointed as his successor (Lionel St-George Lindsay, "Notre-Dame de la Jeune Lorette", 1900, 281), and on 15 November the Bishop of Quebec authorized the purchase of the land of Michael Bergevin, dit Langevin, for the site of a parish church (ibid., 282).

1795.—The bishop, in April, 1795, gave his consent to the building of a presbytery with chapel annexed, and on 2 December, the work being completed, the chapel was blessed (ibid., 282, 283).

1796.—On 6 October the limits of the parish were determined, and a pastoral letter assigned as patron St. Ambrose. The dimensions of the parish were six miles square. This took in part of the old fields of Gaudarville, St. Gabriel, L' Ancienne Lorette and Charlesbourg (ibid., 282, 289).
1815.—Bouchette, in his “Topographical Description of the Province of Lower Canada,” has this to say of La Jeune Lorette et its population at this date: “The Indian village of La Jeune Lorette between eight and nine miles from Quebec, is situated on the eastern side of the River St. Charles, upon an eminence that commands a most interesting, varied and extensive view. ... The number of the houses is between forty and fifty, which the exterior have something like an appearance of neatness; they are principally built of wood, although there are some of stone. The inhabitants are about two hundred and fifty, descendants of the tribe of Hurons once so formidable even to the powerful Iroquois” (409–410).

Regular canonization election of the parish of St. Ambroise de la Jeune Lorette took place on 18 September, 1827 (Lindsay, ibid., 290).

1829.—Wenwadahronhe or Gabriel Vincent, third chief of the Hurons of Lorette, died 29 March, 1829, aged 57. He was the last full-blooded Huron—absolutely no intermixture in his line, it is said, from the time of the exodus from Huronia in 1650. He was also the only Indian at Lorette who had reared his family in the language of his forefathers, the younger inhabitants of the village, at that date speaking the French language and not understanding their own (Queb. “Star,” 8 April, 1829, quoted by the Abbé Lindsay, op. cit., 269).

1835.—Civil recognition of the St. Ambroise parish was granted on 9 October, 1835, under the administration of Lord Gosford (Id., op. cit., 282).

1845.—On 21 May of this year there were among the Indians residing at Lorette sixty-one men, sixty-two women, and sixty-eight children, who were rightful recipients of “the King’s Gifts.” Down to as late a date as 1854 it was customary to distribute such gifts among most of the families of the village. In this latter year this distribution of promissory articles was abolished, and a subsidy for the maintenance of the resident pastor and of the village school was substituted for it (Lindsay, op. cit., 273–4).

1881.—Father Julius Tailhan, S.J., who resided at Quebec at that time, states that in 1881 the Hurons of Lorette numbered two hundred and sixty-one. (See his “Mémoires sur les mœurs etc. par Nicolas Ferrot,” 1864, p. 311.)

1901.—The official census, May, 1901, gives forty-four hundred and forty-eight souls as the population of the Huron village of La Jeune Lorette. The tribe is still in possession of three reserves: the village itself, which covers thirty acres; the Quarrante Arpents reserve, which, despite its name, covers one thousand three hundred and fifty-two acres; finally, the Rochemont Reserve, in the County of Portneuf, which is nine thousand six hundred acres in extent (“Bulletin des recherches historiques,” cited by the Abbé Lindsay, op. cit. 275).

CHIEFS OF THE HURONS OF QUEBEC, 1650–1900

1. Shastaetsi, who died when the Hurons lived at Old Lorette.
2. Ignace Tsawenhohi, “The Vulture.”
4. Thomas Martin Thodatowon.
5. Albert J. Vincent.
6. Nicolas Vincent Tsawenhohi, who was the nephew of the preceding. He was recognized after his election at the Great Council Fire of the Kanawakoronons or Iroquois of Caughnawaga. In 1819, called before the Committee of the Quebec Legislature, he explained the procedure followed in the election of the grand chief.
7. Simon Romain Tehriolanc, acclaimed at the Great Council Fire of the Hurons; July 17th, 1845.
8. François Xavier Picard Tahourenché, succeeded as grand chief in June 1870. He had been war chief from 1840. He died in 1883.
9. Maurice Sébastien Agционian was elected in 1883. From the date of the passing of the Indian Bill in 1880, its prescriptions have been followed in the appointment of both the chiefs and the grand chiefs (Lindsay, op. cit., 265–66).

[For the migrations in the west of the Petun, or Tobacco Nation (Tionnontats, Etonnontats, Kionontatehronon, Dinondadies, etc.) see P занят Nation].

HURTER

583

Alcalá, 5 August, 1647. He studied at the University of Alcalá de Henares, where in the examination for the doctorate he won the highest place from numerous competitors. He was then called to the faculty of the university, and was winning fame as a lecturer, when at the age of thirty-two, he resigned his chair and entered the Society of Jesus (1607). His talents lying mostly in the direction of theology, he lectured on this subject successively at Murcia, Madrid, and Alcalá. He died on 12 July, 1647, at the age of forty-five. He was a brother of Alcalá, where he had taught for thirty years. His principal works are: "De Eucharistia, sacrificio missae et ordine" (Alcalá, 1620); "De matrimonio et concubinatu" (Alcalá, 1627); "De incarnatione Verbi" (Alcalá, 1628); "De Sacramentis in genere et in specie, s. e. Baptismo, Confirmatione, Pompentia et Extrema Unctione" (Alcalá, 1631); his manuscript "De humanis, bonitis et malitis, habitis, virtutibus et pecatibus" (Madrid, 1632); "Disputaciones de sacramentis et concubinatu" (Antwerp, 1633); "De Deo" (Madrid, 1642). Of the Jesuits, Hurtado is one of the most distinguished for learning and piety. He was among the earliest to deviate from the methods of St. Thomas, which till then had been followed by the majority of theologians, and he devised a system of his own. He is noted for the brevity, conciseness, and clearness of his exposition. He was a great orator and preached with abundant success before the Spanish Court.

A. Fournet.

HURTER.—(1) Friedrich Emmanuel von Hurter, convert and historian, b. at Schaffhausen, 19 March, 1757; d. at Graz, 27 August, 1863. From 1804 to 1806 he attended the University of Göttingen, and in 1808 he was appointed a country parish priest. His appearance in 1834 of the first volume of the life of Innocent III, on which he worked for twenty years, caused a profound sensation in both Catholic and Protestant circles, and was soon translated into French, English, Italian, and Spanish. Hurtado was chosen in 1835 to teach the history of the clergy in the canton of Schaffhausen, and later president of the school board, in which capacities he laboured with great zeal. During many years his manifest sympathy and intimacy with the Catholic clergy, including the Archbishop of Freiburg and the papal nuncio to Parma, and his distinguished services to the Catholics roused the antagonism of his colleagues who took the first pretext to let loose a storm of abuse against Hurtado. As a result he resigned his dignities in 1841, lived in retirement for three years, and in 1844 went to Rome, where on 16 June he made his profession of faith before the pope, who gave him the signal for renewed attacks. In 1846 he was appointed imperial counsellor and historiographer at the Court of Vienna, and took up the task assigned him by the life of Emperor Ferdinand II, which, however, was withheld from the press by the court censors, but appeared later at Sezuan in 1850. The Revolution of 1848 involved the loss of Hurtado's position at Court, to which, however, he was restored in 1852. Till his death he laboured for the spread of the Catholic religion, especially in connexion with the foreign mission field; he was also in close touch with the greatest scholars of the day. He was appointed by the pope a commander of the Order of St. Gregory, and was a member of the academies of Rome, Munich, Brussels, and Assisi. In addition to his "Leben Innocenz III" (4 vols., Hamburg, 1834-42), Hurter was the author of "Denkwürdigkeiten aus dem letzten Deenium des 18. Jahrhunderts" (1851); "Geburt und Wiedergeburt" (Schaffhausen, 1845-46); "Ein lutherischer Prediger" (Basle, 1864); "Geschichte Kaiser Ferdinands II. und seiner Eltern" (Schaffhausen, 1850-65); "Philipp Lang, Kammerdiener Kaiser Rudolfs II. (Schaffhausen, 1851); "Beiträge zur Geschichte Wallenstein" (Freiburg im

Hus (Heb. yw; Sept., Os, "עון"); the name of three persons, and a land mentioned in the Old Testament.

1. Hus, son of Aram and grandson of Sem (Gen., x, 23, Vulgate, Us; 1 Par., i, 17, Vulgate, Hus).

2. Hus, eldest son of Nachor and a nephew of Abraham (Gen. xxii, 21).

3. Hus, son of Dihan, sprung from Esau of the land of Edom (Gen. xxxvi, 25; 1 Par., i, 42).

Hus (or) Hus (or) Hus; Hes, Hus, Job, i; Lam., iv, 21; Austus, Jer., xxv, 20) was the home of Job and a territory in which the descendants of one of the three above-named persons had likely settled. There is much difference of opinion as to the connexion of the three persons named Hus with each other and with the land of that name. Three times is this land named in the Old Testament. The chief mention is in Job, i, 1. The holy man lived in the land of Hus. Job's estate was open to attack from the Chaldeans and Sebaens (Job, i, 15 and 17); and lay to the north of the latter and to the west of the former folk, near to the edge of the great desert. The site explains the havoc made by the wind (Job, i, 19). We are led to this view also by the names of the native countries of the friends of Job. Eliphaz, the Themanite had an Edomite name and came from an Edomite land. In Gen., xxxvi, 11, Theman is a son of Eliphaz and a descendant of Esau the Edomite. Hence Job's estate was in a land occupied by Edomites. Job's second friend, Baldad the Suhite, was from Shubah, a place that has been identified with Suhu of Tigrith-pileser II. He says Suhu lay one day's journey from Carchemish in the land of Ḥatti, i.e. one day's journey from the Euphrates on the way through the land of the Hittites. If this was so, then, seem to have been Usza of Shalmaneser.

Usza can readily have been Us. Delitzsch places the land of Usza W. and N.W. of Haleb (Alep). His conjecture is due to the fact that Shalmaneser II received tribute from a certain "son of the land of Usza" made king in Patinu. Local tradition puts the land of Hus in the Hurra, a little south of Nawa. Here is a monastery that bears the name of the saintly Job, Deir ey-yub; hard by the monastery, are the supposed site of his ascetic residence makdn ey-yub (Job's station), the very trough in which he washed thereafter, and the well from which he drew water for his purification. Such details are usual aspaga to local traditions in the Orient.

The Hauran is set down to be the land of Hus by St. Ephraem (Prol. in Job) and St. Jerome ("Onomasticon," ed. Larsson, 1862, p. 254). Josephus (Ant., i, vi, 4) sets down Trachonitis and Damascus; the Septuagint, in an epilogue at the end of its translation of Job, tells us he lived "in Aulitus on the confines of Arabia and Arabia". But it is clear from Ptolemy and Strabo that Phoeniæus Tudemus (Palmyra) as the land of Usza spoken of in Assyro inscriptions. He denies that Usza was Us.

Walter Drum.

Hus and Hussites.—John (Jan) Hus, b. at Husinets in Southern Bohemia, 1369; d. at Constance, 6 July, 1415. At an early age he went to Prague where he supported himself by singing and serving in the churches. His conduct was exemplary and his devotion to study remarkable. In 1393 he received the degree of Bachelor of Arts from the University of Prague and in 1396 the master's degree. He was ordained a priest in 1400 and became rector of the university 1402-03. About the same time he was appointed preacher in the newly erected Bethlehem chapel. Hus was a strong partisan on the side of the churchmen, and hence of the losing side; and so he was influenced by the writings of Wyelil. Though forty-five propositions of the latter were proscribed in 1403 by ecclesiastical authority, Hus translated Wyelil's "Dialogus" into Czech and helped to circulate it. From the pulp it he inveighed against the morals of clergy, episcopate, and papacy, thus taking an active part in the movement for reform. Archbishop Zbyněk (Sibinco), however, was not only lenient with Hus, but favoured him with an appointment as preacher to the biennial synod. On the other hand Innocent VII directed the archbishop (24 June, 1405) to take proceedings against the bishop of Prague. The archbishop, especially the doctrine of impanation in the Eucharist. The archbishop compiled by issuing a synodal decree against these errors; at the same time he forbade any further attacks on the clergy. In the following year (1406) a document bearing the seal of the University of Oxford and eulogizing Wyelil was brought by two Bohemian students to Prague; Hus read it in triumph from the pulpit. In 1408 Sibinco received a letter from Gregory XII stating that the Holy See had been informed of the spread of the Wyelilite heresy and especially of King Wenceslaus's sympathy with the sectaries. This stirred up the king to measures of castration and armed the unauthorised, and aroused the suspicion of heresy. At the June synod it was ordered that all writings of Wyelil should be handed over to the archdiocesan chancery for correction. Hus obeyed the order, declaring that he condemned whatever errors these writings contained.

About the same time a new conflict broke out on national lines. The king agreed to the "neutrality" plan proposed by the secessionist cardinals at the Council of Pisa (q. v.) and endeavoured to have it recognized by the university. The Czechs fell in with his wishes but the three other "nations" refused. The king then decreed (18 Jan. 1408) that in the university congregations the Czechs should have three votes, the other "nations" should have only one vote between them. In consequence the German masters and students in great numbers (5000 to 20,000) left Prague and went to Leipzig, Erfurt, and other universities (see geography of Germany, II, 224 sq.). The king now forbade communication with Gregory XII and proceeded against those of the clergy who disregarded his prohibition. In consequence the archbishop placed Prague and the vicinity under interdict, a measure which cost many of the loyal clergy their position and property. Hus who had become once more rector of the university was called to account by the archbishop for his Wyelilite writings.
Hussites.—The followers of Hus did not of themselves assume the name of Hussites. Like Hus, they believed their creed to be truly Catholic; in papal and conciliar documents they appear as Wycliffites, although Hus and even Jerome of Prague are also named as their leaders. They wisely objected to the appellation of Hussites, which implied separation from the Universal Church; willing to venerate Hus as a holy martyr of the old religion, they refused to see in him the founder of a new one. Only about 1420, with the beginning of the Hussite Wars, named above. Against these measures Hus denounced from the pulpit and, with his sympathizers in the university, sent a protest to John XXIII. The archbishop, 16 July, 1410, excommunicated Hus and his adherents. Secure of the royal protection, Hus continued the agitation in favour of Wyclif, but at the end of August he was summoned to appear in person before the pope. He begged the pope to dispense with the personal visit and sent in his stead representatives to plead his case. In February, 1411, sentence of excommunication was pronounced against him and published on 15 March, in all the churches of Prague. This led to further difficulties between the king and the archbishop, in consequence of which the latter left Prague to take refuge with the Hungarian King Sigismund, but died on the journey, 23 September.

Hus meanwhile openly defended Wyclif, and his position he maintained especially against John Stokes, a licentiate of Cambridge, who had come to Prague and declared that in England Wyclif was regarded as a heretic. With no less vehemence Hus attacked the Bull of 1411 in which John XXIII proclaimed indulgences to all who would supply funds for the crusade against Ladiislaus of Naples. Both Hus and Jerome of Prague were excommunicated; the pope and the populace against the papal commission which had been sent to proclaim the indulgences, and its members in consequence were treated with every sort of indignity. The report of these doings led the Roman authorities to take more vigorous action. Not only was the former excommunication against Hus reiterated, but his residence was placed under interdict. Finally the pope ordered Hus to be imprisoned and the Bethlehem chapel destroyed. The order was not obeyed, but Hus towards the end of 1412 left Prague and took refuge at Austria in the south. Here he wrote his principal work, "De ecclesiis". As the king took no steps to carry out the papal edict, Hus was back again at Prague by the end of April, 1414, and posted on the walls of the Bethlehem Chapel his treatise "De sex erroribus". Out of this and the "De ecclesiis" Gerson extracted a number of propositions which he submitted to Archbishop Konrad von Vechta (former Bishop Otto) as a warning against their heretical character. In November following the Council of Constance assembled, and Hus, urged by King Sigismund, decided to appear before that body and give an account of his doctrine. At Constance he was tried, condemned, and burnt at the stake, 6 July 1415. The same fate befell Jerome of Prague, 30 May, 1416. (For details see Constance, Council of.)
the Emperor Sigismund for the rôle he played at the council, and he regarded the execution of Hus as an infringement of his royal rights. Meanwhile the fathers assembled in council at Constance sent earnest letters to the civil and ecclesiastical authorities in Bohemia, insisting on complete extirpation of the dangerous heresy (July, 1415); and gave ample powers to the Bishop of Leitomischl as legate for the same purpose. The Bohemian and Moravian nobles took up the gauntlet. Four hundred and fifty-two of them appended their seals to a joint answer to the council; and with three exceptions their convictions on Hus was unjust and insulting to their country; that there were no heretics in Bohemia, that any assertion to the contrary was itself a heresy of the worst kind. This document bears date 2 Sept., 1415. Three days later they formed an offensive and defensive league, by which they bound themselves for six years to grant on their estates to all priests applying for it freedom to preach the word of God, and protection against episcopal prosecutions for heresy, and also against excommunication except from the local bishops. The clergy, however, should obey a lawfully elected pope in Rome, and to God's lawful authority of the council was thereby set at naught; the Wycliffite principle that the laity should restrict and restrain the power of the clergy was fully applied. The Catholics did not remain idle; episcopal ordinances of 5 Sept. enjoined the publication in all churches of the prohibition of the heretical chalice; a decree of 18 Sept. instructed the Utraquists and heretics; a league of Catholic lords formed on 1 Oct.; it consisted mostly of the southern and northern gentry accessible to German influence. King Wenceslaus was on their side in word if not in deed. Before this favourable turn of events became known to it, the council, in its ordinary proceedings against Wycliffism, took a step of the gravest consequences, viz. the laying of the interdict on Prague for sheltering Johann of Jesenice, already excommunicated in 1412. Armed crowds of citizens invaded every church and monastery where Divine service had been suspended in obedience to the interdict, drove out all priests and monks unwilling to submit to the popular will, robbed them of their possessions and put Utraquist clergy in their places. The whole country followed the example of the capital; the king and the magistrates looked on without concern. The council's legate, Bishop Johann von Streibl, was put to the point of flight. Probably on his denunciation the four hundred and fifty-two signatories of the Utraquist covenant, together with Archbishop Conrad of Prague and Wenceslaus, Bishop of Olmutz, were summoned to appear before the council as suspected of heresy. Archbishop Conrad had been remiss in carrying out the conciliatory measures; in the beginning of 1416 he had, in concert with the king, suspended the interdict on the far-off chance of thus conciliating the dissidents. The council was even then (1416) determined to use the secular arm against the King of Bohemia and his unruly land, but Sigismund, with whom lay the execution of this said had, hoped to come to an understanding with King Wenceslaus. The University of Prague was preponderatingly Utraquist; the council, therefore, towards the end of 1416, suspended all its privileges and forbad, under excommunication, all further academic proceedings. The lecturers, however, continued to lecture as before, but the chancellor, Archbishop Conrad, refusing his co-operation, no new degrees could be conferred. Notwithstanding the turbulent spirit of many masters, the influence of the university as a whole was moderating. Thus, e.g. 25 Jan., 1417, when some fanatical country parsons had destroyed the images and professed the teaching of the teacher of the virtue of the teaching authority it claimed, sent to all the faithful an exhortation to abstain from innovations and to hold fast to old customs. The noblemen of the Hussite league ordered the clergy dependent on them to conform to their teaching. This act in the right direction was followed on 10 March, 1418, by another which gave Utraquist the sanction of the only teaching authority then recognized in the country. The rector, Johann von Reinstein (surnamed Cardinalis), declared, with the consent of all the Magistrates, that Communion under both kinds is an ordination of Christ Himself and a practice of the ancient Church, against which no human ordinances of later date could prevail. The decision was in answer to questions by members of the Hussite league, and it was acted upon, wherever they ruled, with such thoroughness that the Utraquist clergy was insufficient to fill the places of the ejected Catholic priests. The head of the league, Venceslaus von Wartenberg, found a way out of the difficulty. He waylaid the Auxiliary Bishop of Prague, confined him in a stronghold, and forced him to ordain as many Utraquist candidates for the priesthood as were needed. The archbishop henceforth withheld ordination and benefices from all who did not abjure Wycliffism and Utraquist teaching. King Wenceslaus gave continued attention to Bohemian affairs. Martin V, who, in 1411, as Cardinal Colonna, had terminated the trial of John Hus with the sentence of excommunication, now, as pope, confirmed all the council's enactments regarding him and his followers; he wrote to all whom might concern to return to the Church or to lend their duty support heresies. Before the close of the council he addressed to King Wenceslaus a rule containing twenty-four articles, designed to bring back the religious status of the country to what it was before the Hussite upheaval. The task was heavy, and perhaps uncongenial to King Wenceslaus. Could he force all Wycliffites and Hussites to abjure or to die, reinstate all ejected priests in their benefices, maintain Catholic ascendency? He made no attempt. In June, 1418, he forbade the exercise of foreign jurisdiction over his subjects, a measure which put a stop to the work of the cardinal legate, Giovanni Domenici. The same year saw the arrival of foreign sectarians, Beghards—called Pickarts—attracted by Bohemia's fame for religious liberty, and of the Oxford Wycliffite, Peter Payne, admitted to the faculty of arts at the university. The university, apprehensive of doctrinal excesses, summoned to stem the tide. Probably on his denunciation the four hundred and fifty-two signatories of the Utraquist covenant, together with Archbishop Conrad of Prague and Wenceslaus, Bishop of Olmutz, were summoned to appear before the council as suspected of heresy. Archbishop Conrad had been remiss in carrying out the conciliatory measures; in the beginning of 1416 he had, in concert with the king, suspended the interdict on the far-off chance of thus conciliating the dissidents. Notwithstanding the turbulent spirit of many masters, the influence of the university as a whole was moderating. Thus, e.g. 25 Jan., 1417, when some fanatical country parsons had destroyed the images and professed the teaching of the teacher of the virtue of the teaching authority it claimed, sent to all the faithful an exhortation to abstain from innova-
they sent a message to the king that they, one and all, were ready to die for the chalice. In Prague itself matters had gone even further. Ziska of Troj
now, like Nicolaus of Husinec, a former favourite of the king, had taken the lead of the malcontents and fanatized them with the thought of armed resist-
ance.
Ziska belonged to the inferior nobility of southern Bohemia; he had distinguished himself both as an undaunted fighter and as an excellent leader of men. Johann, formerly a Premonstratensian monk of Selau near Prague, was now the leader of the Utraquists in process of the streets of Prague (Neustadt); the processionists, excited by a fiery sermon of their leader, first pene-
trated into St. Stephen’s church which had been closed to them; then they assembled in front of the town hall, where Johann, still holding up the Blessed Sacrament, demanded from the magistrates the release of several Utraquists imprisoned for previous disturbances. The magistrates refused and prepared for resistance. Ziska ordered the storming of the town hall: all persons found therein were thrown out of the windows on to the spears and swords of the populace. The next day, a day of the last day of the world, Bollandists called on God in His Sacrament to inflame their murderous fury. The mob there and then elected four captains, called all men to arms and fortified the Neustadt. King Wenceslaus swore death to all the rebels, but a stroke of apoplexy, caused by excitement, carried him off, 16 August, 1419. The next months were marked by deeds of violence against the faithful clergy, by wanton destruction of church furniture, and by the burning of monastic houses. Many citizens, especially Germans and the higher clergy, sought safety in flight.
Wenceslaus’s successor on the Bohemian throne was his brother Sigismund, German Emperor and King of Hungary. He had been the very soul of the Council of Constance; but the Bohemians, holding him responsible for the death of their beloved Hus, disliked and distrusted him. Nor was Sigismund eager to assume the ruling of this troubled kingdom. He tarried in Hungary, leaving Bohemia to be governed by the queen-widow and Vincenz von Wartenberg, the chief of the Utraquist league. The popular masses, led by the lexer nobility and fanatical priests, now began to multiply their meetings on “holy” mountains and to harry the followers of the “regular” churches. The queen regent, with the assent of the higher nobility, forbade them to meet or even to come near to Prague. In various encounters Ziska and Nicolaus of Husinec successfully resisted the royal troops (4–9 Nov., 1419); an armistice was, however, soon made, and Ziska withdrew to Pilsen. Sigismund now gave up his plans of a campaign against the Turks and resolved to restore his new kingdom to Roman unity. On his side were the Catholic nobles, the higher clergy, the Germans settled in the land, and all who had suffered persecution and losses at the hands of the Utraquists; against him stood Ziska and Nicolaus of Husinec, the head of the Utraquist league. Sigismund took up the government in December, then went to Silesia to collect more troops. The Cath-
olics regained courage. They were hard on the Utraquist wherever they were the stronger: in Kuttenberg, for instance, hundreds of captured Utra-
quists were torn by the miners into the shafts of disused silver mines. The leaders of the people, meanwhile, built the impregnable stronghold of Tabor, whither the country people betook themselves with all their movable possessions, in order to await in the "community of the brethren" the things that were to come.
Here Utraquist entered upon a new development. The priests of Austi, starting from the principle that the Bible contained the whole teaching of Christ,abolished every traditional rite and liturgy. There were to be no more churches, altars, vestments, sacred vessels, chasubles, or ceremonies. The Lord’s Prayer was the only liturgical prayer; the communion table was a common table with common bread and common wine. The communicants treated the sacred bread and wine as common bread and wine and ate and drank them. The priesthood was reduced to the order of the deacons, the minister of the altar, and the order of the servers, the altar boy. The wearing of clothes and was untoned. Children were baptized with the first water at hand and without any further ceremony; they received Communion in both kinds immediately after Baptism. Extreme unction and auricular confession were abolished; mortal sins were to be confessed in public. Purgatory and the worship of saints was suppressed, likewise all feasts and fasts. Such a creed accounts for the fury of destruction which possessed the Hussites. Ziska spent his time in drilling his peasants and artisans into an army capable to withstand the dreaded knights in armour of the king’s army. Clever tactics, apt choice of the battlefield, confidence in their chief and in their cause, made up for their defective armament: straightened scythes, flails, forks, and iron-shod cudgels were their weapons. Their religious fanaticism was heightened by a young Moravian priest, Martin Hauska, sur-
named Locquis, who taught them to read in the Bible for themselves instead of becoming lazy readers. The Taborites. Many Catholics took to flight; the Utra-
quists nobles renounced their allegiance and declared war on Sigismund “who had brought the slander of heresy on the land”; a secret embassy offered the Bohemian crown to King Wladislaw II of Poland. The energetic Ziska at once began operations in southern Bohemia: royal towns, fortresses, and monasteries fell into his hands: these latter were plundered and destroyed. Königgrätz submitted, as did also some nobles disgusted with the excesses of the Taborites. Whilst the king was waiting for the arrival of the council of Constance, Prague was stormed and Utra-
quists drowned in the Elbe at Leitmeritz, and two burnt at Echlab. The rebels retaliated by setting fire to several monasteries near Prague and by burning the monks. The “crusading” army arrived in July; with the king’s troops they were 100,000 strong. Before engaging in battle, the papal legate, Ferdinand of Lucca, examined the “Four Provisions and Articles”, i.e., four points on the granting of which the rebels would submit.
These articles emanated from the university. In substance they are: "(1) The Word of God is to be freely examined by Christian priests throughout the Kingdom of Bohemia by a general council. (2) The venerable Sacrament of the Body and Blood of Jesus Christ is to be given in two kinds to adults as well as to children, as Jesus Christ has instituted. (3) The priests and monks, of whom many meddle with the affairs of the State, are to be deprived of the worldly goods with which they have enriched their abbeys and which make them neglect their sacred office; and their goods shall be restored to us, in order that, in accordance with the doctrine of the Gospel, and the practice of the Apostles, the clergy shall be subject to us, and, living in poverty, serve as a pattern of humility to others. (4) All the persons who were called mortal, and all other trespasses contrary to the law of God, are to be punished according to the laws of the country, by those in charge of them, in order to
wipes from the Kingdom of Bohemia and the Margravate of Moravia the bad reputation of tolerating disorders.” The legate concluded his examination by a demand of almost unconditional submission. The “Caliolites”, now so called from the calices which decorated their weapons and clothes, took the legate to task and defeated him in an unequal fight; on 14 July, 1420, they inflicted a signal defeat on the crusaders. Sigismund had recourse to new negotiation on the four articles. But seeing his best supporters waver, he had himself crowned in the cathedral of Prague (28 July), and two days later he declared crusading a crime and set his mercenaries to the task of converting several churches into money, and pledged their lands to the nobles, who never parted with them again.

The Utraquist magistrates imposed their will on the town and the university; riots and deeds of violence occurred everywhere; the wealthy monasteries were the first and greatest sufferers. Many of the best citizens proclaimed their horror at the destruction of the fairest building and their disgust with the Taborite forms of worship. In Prague, however, they were kept down by Johann of Selau, who had assumed dictatorial powers, and likewise by the Taborite leaders themselves thought it better to give another direction to the destructive mania of their followers. Ziska in the southern borderlands and the Prague army added victory to victory; the strong town of Vyšehrad surrendered, 1 Nov., 1420, after a crushing defeat of Sigismund’s troops. The rebels, now almost powerful enough to dethrone the Bohemian king, turned to King Władysław II of Poland. In March, 1421, King Wenceslaus returned to Hungary, leaving his country almost defenceless. By June of the same year the Hussites had established their dominion over the whole kingdom, with the exception of a few northern and western border districts. The inhabitants were asked to accept the Four Prague articles or to emigrate within a stated time; captains and sheriffs were appointed to rule the towns with royal powers. Thus Utraquist and home rule supplanted Catholicism and German rule. The nobility accepted the new order: Archbishop Conrad of Prague adapted the four articles (21 April, 1421), ordained Utraquist clergy, and invited the older clergy likewise to conform. The metropolitan chapter, however, who had fled to Zittau and Olmütz, remained faithful, and appointed the “iron” Johann of Leitomischel, later of Olomütz, the new primate of the archdiocese: the Hussites never had a sterner enemy.

Among the Taborites a new sect arose about this time. The priest Martin Loquius taught these rabid levellers of monasteries and murderers of priests that Christ was not really present in the Eucharist, consequently, that worshipping the sacrament was idolatry. Sacrilegious profanations became the order of the day. Proceedings were taken by the Utraquist authorities, advised by the university, against the innovators. Loquius and another were taken prisoners, dragged through the country, cruelly tortured, and finally burnt in a barrel. His four hundred followers followed him in a mad rage. For several days they roamed through the country “as avenging angels”, robbing, burning, and killing. Ziska, in disgust, had twenty-four—others say fifty—of the worst put to death by fire. The remainder, reinforced by some fanatical Chilianists, formed a sect of Adamites, submitted to no law and possessing their women in common. Ziska surrounded them on their island in the River Neřánska and exterminated them to the last man (Oct., 1421). The summer of 1421 was employed by the Hussites in consolidating their new power. Successful expeditions penetrated to the north and east, plundered, burned monastic monasteries, killed more monks, priests, and townsfolk; but here also they suffered their first serious defeat at the hands of Catholic knights and the troops of Meissen (5 Aug., 1421). As early as April a second army of crusaders, twice as strong as the first, had been forming at Nuremberg, while Sigismund was expected to bring up his Hungarian army. The crusaders laid siege to Sázava.

On 2 Oct. news spread that Ziska was coming to the rescue of the besieged. This perhaps false information sufficed to disperse the crusaders and their five leaders in all directions in disorderly flight. Not a blow was struck. Sigismund entered Moravia, which he reduced to submission, and met Ziska in battle at Sázava. In order to draw him to the emperor’s side, but Ziska fought his way through them and shortly afterwards, at Deutsch-Brod, almost annihilated them (8 Jan., 1422). This victory kept the Hussites’ foreign foes in wholesome fear for many years; new crusades were indeed preached year after year, but not carried out. The field was left free for internal dissensions to undo what had so far been done. Prague began by shaking off the tyrannical dictatorship of Johann of Selau: with twelve of his partisans he was beheaded, 9 March, 1422. The mob avenged his death by ravaging the university, colleges, and churches. Next, the council of the Prague army divided on whether or not to march on King Władysław II of Poland. After a meeting between, on the one hand the Taborites under Ziska, a few southern towns and Sázava with Laun in the north-west; and on the other, Prague with the whole nobility and the other towns. Its cause was the proposal to unite all parties under the administration of Sigismund Krbín, a few of the new crusader was arrived there. Great Duke Wittold of Lithuania, who had accepted the Bohemian crown refused by the King of Poland, and appointed Korybut as governor. The first victory again was Ziska’s (end of April, 1423). Some futile negotiations followed. From January to September, 1424, the Taborites waged a most successful war, which led their victorious army up to the gates of the capital. Korybut and Prague now sent to Ziska the eloquent priest Rokysana, who succeeded in bringing about a complete understanding between the parties. They then joined in an expedition against Moravia. Close to the Moravian frontier, at Pihlaiz, Ziska fell ill and died (14 Oct., 1424).

His death was followed by new groupings of the parties. The closer partisans of Ziska, who represented the moderates, now took the name of “Orphans”; their priests still called Mass in liturgical vestments and followed the old rite; the more extreme Taborites chose new chiefs. The last of these was Andrew Procopius, a married priest surnamed “the Great” or “the Shaven”, to distinguish him from Little Procopius (Prokupek) who in time became the spiritual leader of the Orphans. Orphans and Taborites fought together against any common foe; when there was no common foe they fought or quarrelled with one another. Their united forces, under Procopius the Shaven, won the battle of Aussig on the Elbe (16 June, 1426), in which 15,000 Germans and many Saxon and Thurignian nobles lost their lives, but they were beaten in their turn by Albert of Austria, at Zwettel, 12 March, 1427. Whilst these Taborite wars were raging, the Magi of Prague, pro tempore, the supreme judges in matters of faith, divided into two parties. Rokysana, Jacobellus, and Peter Payne favoured a nearer approach to the Taborite innovations; others had gained the conviction that peace and union were only to be found in returning to the Roman allegiance; the chalice for the laity was the only point they wished to retain. Korybut, the governor, favoured the latter view. He engaged in secret negotiations with Pope Martin V., but the secret having leaked out, Rokysana, at the head of the populace of Prague, thought him and compelled him to a fortress (17 April, 1427). The Hussites under Procopius the Shaven now raided Lusatia and Silesia. In July, 1427, a third army of crusaders, some 150,000 strong, entered
Bohemia from the west: Procopius met and defeated them at Mise (4 Aug.). Another army coming from Silesia had a similar fate. Being complete masters of the situation at home, the Hussites set out for further raids abroad. Their own country was lying waste after so many years of war; the people had become a huge horde of brigands, bloodthirsty, and plunder. In the years 1439–1441, the Orphans of Prague invaded Hungary, laid waste Silesia as far as Breslau, plundered Lusatia, Meissen, Saxony, and advanced to Nuremberg, leaving in their track the remains of flourishing towns and villages, and devastated lands. Negotiations for an armistice came to nothing. When the Suburbans returned they had with them 3000 wagons of booty, each drawn by six to fourteen horses; a hundred towns and more than a thousand villages had been destroyed. In 1431 a fourth crusade, sent by the unbending Martin V, entered Bohemia. The crusaders numbered 90,000 foot and 40,000 horse; they were accompanied by the papal legate and commanded by the Electoral Prince Frederick of Brandenburg. They met a strong army of Hussites at Taus: the wild war-songs of the enemy filled the soldiers of the Cross with uncontrollable fear: once more they fled in disorder, losing many men and 3000 wagons of stores (4 Aug. 1431). After an initial reverse the Catholics realized that peace was only to be attained by concessions to the Hussites. Advances were made by Emperor Sigismund and by the Council of Basle, then sitting: a meeting of the contending parties' delegates took place at Eger, where preliminaries for further discussion at Basle were agreed upon. Meanwhile the excommunicated Archbishop Conrad of Prague and the 'iron' Bishop Johann of Olmuits died, and the Utraquist Rokysana had an eye on the See of Prague: it was therefore his interest to make further peace negotiations with Rome. The Taborites, on the contrary, continued the war, heedless of the Eger arrangements: they raided Silesia and Brandenburg, advancing as far as Berlin, and fought Albert of Austria in Moravia and in his own Austrian dominions.

At length, 4 Jan., 1433, a deputation of fifteen members, provided with safe-conducts and accompanied by a large train of horses, was sent to Basle. Articles were laid on the Four Articles of Prague lasted till April without any result. The deputies left Basle on 14 April, but with them went a deputation from the council to continue negotiations with the diet assembled at Prague. Here some progress was made, notwithstanding the opposition of Procopius and the extreme Taborites, who continued their law down and resisted peaceful pursuits. The conferences dragged on till 26 November, 1433. The council, chiefly bent on safeguarding the dogma, consented to the following disciplinary articles, known as the Compactate of Basle: (1) In Bohemia and Moravia, communion under both kinds is to be given to all adults who desire it; (2) All mortal sins, especially public ones, shall be publicly punished by the lawful authorities; (3) The Word of God may be freely preached by approved preachers but without infringing papal authority; (4) Secular power shall not be exercised by the clergy bound by vows to the contrary; other clergy, and the Church itself, may act as auditors; (5) Bishop and inquisitor merely as administrators etc. In substance the Compactate reproduced the Four Articles of Prague. They were accepted by the delegates, but further discussion on minor points led to a new rupture and in the beginning of 1434 the delegates left Basle. A new provincial council was held at Nuremberg, and had the country, who were besieging Pilsen and infesting the country, to dissolve their armed bands. Instead of dispersing they brought all their forces together at Lipau near Prague and offered battle: they suffered a crushing defeat from which they never recovered. Their two best leaders, Procopius the Shaven and Prokupel, were killed (30 May, 1434).

The tedious negotiations, in which religious, political, and personal interests had to be satisfied, went on with various vicissitudes until 5 July, 1436, when the Bohemian representatives at the Diet of Iglau, solemnly accepted the Compactate and promised obedience to the Pope. The representatives of the Utraquists, on the other side, removed the ban from the Bohemians and acknowledged them as true sons of the Church. The diet accepted Sigismund as King of Bohemia: on 23 August he entered Prague, and took possession of his kingdom. Henceforth the Utraquists or Calixtines were the only Catholic party and they returned to the Roman church and lived together in comparative peace. Priests were ordained for the Utraquist rite. New difficulties were created by Rokysana's failing to obtain the bishopric for which he had so long agitated, and which he had been promised by Sigismund. His partisans went back to former aberrations, e.g., they re-established the feast of the 'Holy Martyr Hus' on 6 July.

1448 Cardinal Carvajal came to Prague to settle the open question of Rokysana's claims. Having demanded restitution of confiscated church property as the first step, he was threatened with excommunication, and fled. In December of the same year Rokysana returned to Prague as president of the Utraquist consistory. The governor, George Podiebrad, supported him in his disobedience to Rome and nullified all Roman attempts at a final settlement; he opposed St. John Capistran, who was then converting thousands of Utraquists in Moravia. As things were going from bad to worse, Pope Pius II, who had had long experience of the sectarians at Basle and as legate to Prague, refused to acknowledge the Utraquist rite, and declared the Compactata null and void, 31 March, 1462. Podiebrad retaliated by persecuting the Catholics: in 1466 he was excommunicated by Paul II; there followed other religious and civil wars. In 1485 King Wladislaw granted equal liberty and rights to both parties. Judging by its results this was a step in the right direction. By degrees the Utraquists conformed to the Roman rites so as to be hardly distinguishable from them, except through the chalice for the laity. In the sixteenth century they resisted Lutheran inroads even better than the Subuist. Their further history is told in the article Bohemian Brethren.

J. WILHELM.

Husenbeth, FREDERICK CHARLES, b. at Bristol, 30 May, 1796; d. at Cossey, Norfolk, 31 Oct., 1872. The son of a Bristol wine-merchant and of a lady of Cheetham family, a convert to Catholicism, he was sent at the age of seven to Sedgley Park School in Staffordshire, and at fourteen entered his father's counting-house. Having formed the resolution, three years later, to study for the priesthood, he returned to Sedgley, going afterwards to Oscott College, where he met his future confessor and guardian, Rev. James Wiseman, SJ. He then entered the Jesuits and passed the novice's course at Stonyhurst, and also, for a time, was sent to Cossey Hall, Norfolk, as chaplain to Sir George Stafford Jerningham, who became Baron Stafford in 1824. He took up his residence in a cottage in the village, and continued his ministrations here to the Catholic congregation until within a few months of his death. During this long period, extending over more than half a century, he is said to have been absent from his mission only on three Sundays. Seven years after his appointment to Cossey he became grand vicar under Bishop Walsh,
successor of Bishop Milner as Vicar-Apostolic of the Midlands District. In 1841 he opened St. Wilstan’s Chapel, for which he had been assiduous in collecting funds, and in 1850 he received the degree of Doctor of Divinity from Rome. Shortly after the re-organization of the diocese by Pope Pius IX, Dr. Husenbeth was nominated provost of the Chapter of Northampton, and Vicar-General of the diocese. In the spring of 1872 he resigned his mission, and he died at St. Wilstan’s Prebendary on the last day of October in the same year.

Dr. Husenbeth’s personal character was attractive, for it combined piety, learning, and culture, but also a singular kind heart, agreeable manners, conversational powers of a high order, and a sense of humour which made him a very pleasant companion. He was the survivor of a race of clergy belonging to a past era, and was not devoid of certain old-fashioned prejudices, common to the ecclesiastics of his time. These kept him somewhat out of touch with the development of Catholicism in England which had followed the Oxford movement and the re-establishment of the regular hierarchy. He had no particular liking for religious orders, and was quite opposed to the new forms of devotion which had grown up since his youth. He headed a compiler’s at Oxford, was a faithful and assiduous pastor, and full of zeal for the religious welfare of his flock. Among his accomplishments were music and painting, and he executed a number of clever sketches in the course of an Alpine tour which he took in his student days.

During the fifty-two years which Dr. Husenbeth spent in his quiet country presbytery, he found ample leisure time for study and literary labours, and between the years 1823 and 1849 forty-nine works written or edited by him appeared in London, Dublin, and Norwich. Many of these were controversial publications, written in refutation of George Stanley Faber and Blanco White, while others treated of historical, liturgical, or doctrinal matters. Perhaps his most important work is the “Life of Bishop Milner”, published in 1862, which, while marred by many defects as a biography, is an important contribution to the history of Catholicism in England. In 1832 he became a fellow of Ampleforth College, O.S.B., and in 1869 a new edition, with abridged notes, of Haydock’s illustrated Bible; and he published also at different times admirable editions, for the use of the laity, of the Missal and the vesper-book. The “Emblems of Saints” (1830) was one of his best original works, and the multiph eloquent and well shown in a various sermons which he printed from time to time.

Dr. Husenbeth contributed a large number of poems and fugitive verses to the periodicals of his time, and was urged in various quarters to collect and publish these, but he never seems to have done so. He also published articles on a great variety of subjects in different Catholic journals, and was a life-long writer in the columns of “Notes and Queries”, in which more than thirteen hundred contributions appeared over his initials. He was a voluminous letter-writer, and maintained a correspondence with various literary celebrities, and with many distinguished converts of the English hierarchy by Pope Pius IX. The “Emblems of Saints” (1830) was one of his best original works, and the multiph eloquent and well shown in a various sermons which he printed from time to time.

Dr. Husenbeth was one of the most learned and industrious men of his time, and was possessed of a great deal of originality and independence of thought.

[Note: The text continues with further details about the life and work of Dr. Husenbeth, including his contributions to literature and his personal qualities.]

Tramore, Co. Waterford, 11 July, 1803. At an early age he was sent to the Irish College of Salamanca, and after completing his studies joined the Trappists. His ability was such, however, that he was requested by the pope to take orders, and was associated for a time with the court of the King of Spain, and was later a member of the Royal Society. When the war between England and America broke out, the Spanish ambassador was obliged to leave London, Spain as well as France having taken sides against England, and Dr. Husenbeth was entrusted with Spanish affairs, and was thus brought into direct contact with George III, as well as with Pitt and other ministers. He was sent to Madrid to endeavour to detach Spain from the American cause, but without success. In Madrid he met Richard Cumberland, the dramatist, who, though jealous of him, speaks highly of his ability, incorruptibility, and courage, and declares that he would have been a great man had he lived in the English Church in Ireland. He took up the Catholic cause earnestly, and was deputed by the English Catholics to go to Rome to lay their position before the pope, but the Spanish embassy would not grant him leave of absence. George III, Pitt, and the Duke of Portland entrusted him with a mission to the Irish soldiers and militia in Ireland who were disaffected, but, when he heard their story, he pleaded in their behalf, much to the disgust of the Irish executive. Portland induced him to stay in Ireland to assist in the foundation of Maynooth College, and in 1795 he was appointed bishop of this see, and the next year he was made Bishop of Waterford and Lismore. In 1797 he issued a pastoral to his clergy, strongly resenting Government interference in ecclesiastical discipline. This protest gave great offence to the ministers. He was received by the pope in March, 1798, and is said, but upon slight evidence, to have been a party to the plot between Pitt and the Irish. Indeed, Lady describes him as “the ablest English-speaking bishop of his time”.

(The notice in Dict. Nat. Biog. is somewhat inaccurate.)

D. J. O’DONOHOUE.

Hutton, Peter, priest, b. at Holbeck, Leeds, Yorkshire, England, 29 June, 1811; d. at Ratcliffe, Leicestershire, England, 2 Sept., 1880. He was baptised at Lady Lane Chapel, then the only Catholic church in Leeds. His grandfather was a convert, and wished Peter’s father to be a Benedictine monk. He found that he had no vocation, so returned to a secular life and married. In his will he requested that his son Peter should be educated in a Benedictine college, and Peter was accordingly sent to Ampleforth in 1824, and began his novitiate in 1829. But owing to certain provisions of the Catholic Emancipation Act of that year his superiors were, at least theoretically, debarred from professing novices, and, as they were unwilling to offend the authorities in any way, Peter was not professed. So in 1830 he went to Prior Park, where he taught classics. In 1835 the members of the Institute of Charity came to assist in the teaching, and Dr. Gough shortly afterwards succeeded to the head of the college. Hutton was at this time a deacon, having been so for over five years; and he disliked the
advent of these foreign professors very much. The bishop then sent him to Louvain in 1836, where he studied till he was recalled to Prior Park in 1839 by Bishop Baines to replace Father Furlong (who had just joined the Order of Charity) as President of St. Peter's College. Hutton was ordained priest 24 September, 1840, and appointed president, and professor of Latine and Greek.

In 1841 he decided to give up his professorial career in order to enter the Order of Charity. In July, he was admitted to its novitiate at Loughborough, Leicestershire; but Bishop Baines strongly objected to this, and ordered him to return to Prior Park as an ordinary professor. For a short period he complied with the bishop's commands, but in 1842 he suddenly left the college, in company with Father Furlong, and went to Italy, where they were hospitably received by Rossini, the founder of that college, in completed his interrupted novitiate there, and made his vows 31 July, 1843. In 1844 he was appointed rector of the new college of the order at Ratclifff-on-Wreake, Leicestershire. He next did some parochial work at Newport, Monmouthshire, and Whitwick, near Coalbrookdale. He then went to Shepshed, Leicestershire, as rector of the mission and master of the novitiate of Ratcliffe, which had been removed thither.

In 1850 it was again transferred to Ratcliffe, and Hutton was then made vice-president of the college, and president in 1851. In addition to this he was appointed rector of Shepshed in 1857.

Hutton was a strict disciplinarian, a sound theologian and classical scholar, a good mathematician, and an able preacher. During his administration, the students at Ratcliffe increased in numbers, and the buildings were greatly enlarged. He left in MS. translations of the principal Greek and Latin authors read at the college, and many references to German critics. These are preserved at Ratcliffe.

C. F. Wemyss Brown.

Huyssmans, Joris Karl, a French novelist; b. in Paris, 5 February, 1848; d. 12 May, 1907. He studied at the Lycée Saint-Louis. At the age of twenty, he obtained a post in the Ministry of the Interior and remained there until 1897, except during the Franco-Prussian war, when he was captured. His flag. His loyal services won him the esteem of his superiors and the cross of the Legion of Honour. For thirty years he carried on the double duties of his administrative position and his literary profession. He was one of the ten founders of the Concourt Academy, to the presidency of which he was elected in 1890. His first books, which must be mentioned here, belonged to the realistic school of literature and professed to show all that is most base and vile in humanity. In 1895 he went to spend a week at the Trappist monastery of Issogne and was there deeply impressed by the monastic life. "En Rome" (1868) shows the change that then took place in his life. Not long after he made open profession of Catholicism, and, having resigned his post in the Ministry of the Interior, retired to Ligugé and took up his abode in a house near the Benedictine monastery. After the expulsion of the monks, he returned to Paris, where he died in 1907. During the last two years of his life he fought indefatigably for his faith, whose sincerity is proved by his works. He wrote: "L'Oblat" (1903); "De Tout" (1901); "Sainete Lydieune de Schiedam" (1899); "La Biévre et Saint Séverin" (1898); "La Cathédrale" (1898); "Les Foules de Lourdes" (1895), a report of the famous "Trois Églises et Trois Primats" (1904). He was deeply interested in the religious art of the Middle Ages and displayed a great fondness for mysticism. Both before and after his conversion he was a realist. All his art consisted in rendering clearly details that he had seen and noted down. His pictures of poor people, his sketches of old Paris and particularly of Biévre, as well as his descriptions of big crowds and scenes at Lourdes, are most vivid and picturesque. Of Huyssmans in his works the temperament of a great colourist and suggests the paintings of Rembrandt and Rubens. Never did a man have clearer power of vision and never did one take more pleasure in looking and in seeing. One may therefore understand the torture that he felt when during the last years of his life he was afflicted with an affection of the eyes and it became necessary to sew his eyelids shut. In his piety he believed that these eyes, with which he had seen so many beautiful things and through which he had received so much pleasure, were taken from him by way of enforcing penitence.

Louis N. Delamarre.

Hyscinth, Saint, Dominican, called the Apostle of the North, son of Eustachius Konski of the noble family of Odrowaza; b. 1185 at the castle of Lanka, at Kamin, in Silesia, Poland (now Prussia); d. 15 Aug., 1257, at Cracow. Feast, 16 Aug. A near relative of Saint Czeslaus, he made his studies at Cracow, Prague, and Bologna, and at the latter place merited the title of Doctor of Law and Divinity. On his return to Poland he was given a prebend at Sandomir. He subsequently accompanied his uncle Ivo Konski, the Bishop of Cracow, to Rome, where he met St. Dominic, and was one of the first to receive at his hands (at Santa Sabina, 1220) the habit of the newly established Order of Friars Preachers. After his novitiate he made his religious profession, and was made superior of the little band of missionaries sent to Poland to preach. On the way he was able to establish a convent of his order at Friessach in Carinthia. In Poland the new preachers were favourably received and their sermons were productive of much good. Hyscinth founded communities at Sandomir, Cracow, and at Plocko on the Vistula in Moravia. He extended his missionary work through Prussia, Pomerania, and Lithuania; then crossing the Baltic Sea he preached in Denmark, Sweden, and Norway. He came into Lower or Red Russia, establishing a community in Lutsk and in Halitz on the Merc. Professed into Monastery, founded a convent at Dieff, and came as far as the shores of the Black Sea. He then returned to Cracow, which he had made the centre of his operations. On the morning of 15 August he attended Matins and Mass, received the last sacraments, and died a saintly death. God glorified His servant by numberless miracles, the record of which fills many folio pages of the Acta SS., Aug., III, 300. He was canonized by Pope Clement VIII in 1594. A portion of his relics is at the Dominican church in Paris.

Francis Mershman.

Hyacintha Mariscotti, Saint, a religious of the Third Order of St. Francis and foundress of the Secconis; b. 1655 of a noble family at Vignanello, near Viterbo in Italy; d. 30 January, 1640, at Viterbo; feast, 30 January; in Rome, 6 February (Diarium Romanum). Her parents were Marc' Antonio Mariscotti (Marius Secotus) and Ottavia Orsini. At baptism she received the name Clarice and in early youth was remarkable for piety, but, as she grew older, she became frivolous, and showed a worldly disposition,
which not even the almost miraculous saving of her life at the age of seventeen could change; neither was her frivolity checked by her education at the Convent of St. Bernardine at Viterbo, where an older sister had taken the veil. At the age of twenty she set her heart upon marriage with the Marquess Cassiaucli, but her statement of marriage was approved by her parents and the dowry, valued at 500,000 ducats, was deposited in a casket. When she arrived at the convent, she was seriously ill and was sent to the hospital of St. James. She was very much disappointed, became morose, and at last joined the community at St. Bernardine, receiving the name Hycacintha. But, as she told her father, she did this only to hide her chagrin and not to give up the luxuries of the world; and she asked him to furnish a large kitchen with every comfort. She kept her own kitchen, wore a habit of the finest material, received and paid visits at pleasure.

For ten years she continued this kind of life, so contrary to the spirit of her vows and such a source of scandal to the community. By the special protection of God, she retained a lively faith, was regular in her devotions, remained pure, always showed a great respect for the mysteries of religion, and had a tender devotion to the Blessed Virgin. At length she was touched by God's grace, and the earnest exhortations of her confessor at the time of serious illness made her see the folly of the past and brought about a complete change in character. Her constant in the refectory, discarded her costly garments, wore an old habit, went barefoot, frequently fasted on bread and water, chastised her body by vigils and severe scourging, and practised mortifications to such an extent that the decree of canonization considers the preservation of her life a continued miracle. She increased her devotion to the Mother of God, to the Holy Infant Jesus, to the Blessed Eucharist, and to the sufferings of Christ. She worked numerous miracles, had the gifts of prophecy and of discerning the secret thoughts of others. She was also favoured by heavenly visitations and by the secret of the secrets of God. In 1501 she composed a book about Mary and the Virgin Mary and consecrated her to the Holy Ghost. She was a great friend of the Blessed Mother of God, of the Blessed Mary Magdalene.

Léon de Clary, Lives of the Saints and Blessed of the Three Orders of St. Francis (Tunstall, 1885); Dunbar, A Dictionary of Saintly Women (London, 1904); Porjes in Kirchenlexikon v. Francis Mersinan.

Hydatius (or Idatius) of Lemica (more correctly Lymca), a chronicler and bishop, b. at the end of the fourth century at Lemica in Galicia (now Ginez de Limia in Spain); d. shortly after 488. On a journey which he took to Jerusalem while still a child, he became acquainted with St. Jerome. About the year 417 he was consecrated bishop of Augsburg, and in 427 consecrated bishop of Aquileia, now Chaves in Portugal. Subsequently he exercised considerable political influence, as is proved by his mission to Attius in Gaul to ask for help against the Suevi (431). His "Chronicle", a continuation of that of St. Jerome, runs from the year 379 to 447. While in his first years (379-397) he derived his information from the testimony of others, he narrates the events from 427 onward as a contemporary witness. It is doubtful whether Hydatius is also the author of the "Fasti consulariae" for the years 245-468, appended to the "Chronicle" in the only almost complete manuscript in French preserved. The Chronicle is printed in the Migne, P. L., LI, 873-890, and LXIV, 701-750; also in "Mon. Ger. Hist.; Auct. Antiqu.," XI (ed. Monmenn), 13-36. The "Fasti Consulares" are found in P. L., LI, 891-914, and in "Mon. Germ. Hist.; Auct. Antiqu.," IX, 205-247.

Hyderabad, Decan, Diocese of.—Hyderabad, also called Bhagamagar, and Fakhunda Bunyad, capital of the Nizam's dominions, was founded in 1589, by Mohammed Kuli, King of Golconda. The mission of Hyderabad-Decan was cut off from the Vicariate Apostolic of Madras by Pius IX, 20 May, 1851, and became a diocese in 1866. It is bounded on the east by the Bay of Bengal, on the north by the Godavari, on the west by the frontier dividing the Nizam's dominions from the Presidency of Bombay, and on the south by the Tungabhadra and Kistna. The diocese lies partly in the native kingdom of the Nizam, and partly in British territory. Little is known of the early history of this region. Certain documents relate that in the reign of Ibrahim Adil Shah I (1535-1577) there were Christians in Mogul, a town in the south-east of the Roman Catholic diocese of Trincomalee. It is likely that the first Christian converts were made by the Franciscans, who arrived in 1502. Soon after this we read of Christians in Raichur and Chitapur, who were visited by the priests of Goa. Urban VIII in 1637 sent the Theatines to Bijapur, near Mogul and Raichur. He also established then the Vicariate Apostolic of the Great Mogul.

The first vicar was the Oratorian, Father Mateo de Castro, who in 1637 had been named Vicar Apostolic of the Decan and Bijapur. In 1645 the Kingdom of Golconda and Pegu was added by the Vicar Apostolic of the Great Mogul. The vicar was then the Vicar Apostolic of the Great Mogul. In 1720 the island of Bombay was included in the vicariate, which gradually acquired the name Vicariate of Bombay. It is said that some of the Carmelites expelled from Goa in 1707, for not swearing fidelity to the King of Portugal, evangelized Mogul. In 1784 the Christian community was harassed by the infidels; but the government of Hyderabad ordered the Zemindars and local functionaries to prevent any injury to the Christian religion and to supply them with Jesuit missionaries for the next fifty years. About the end of the eighteenth century, we find one named Velade at Raichur, another named Paradisi in Mogul, and a third in Chitapur, named Lichetta. In 1784 Delhi and the northern portion of the country was given to the Portuguese, and the jurisdiction of the Vicar Apostolic of the Great Mogul restricted to Carvar, Golconda, and the Deccan.

In 1797 Don Pedro d'Alcantara of San Antonio, fourteen vicar Apostolic, nominated in 1794, sent Father Jose Luis to Bijapur and Golconda. The Theatine Fathers were transferred to and missionariats in 1834, and many of them were native priests of the Brahmin caste from Malabar. From 1850 till 1832 the Diocese of Hyderabad had no regularly appointed missions, except those of Mogul, Malapitam, and one other. Missionaries visited the country from time to time, but never stayed long.

The first Vicar Apostolic of Madras (the vicariate was established 25 April, 1832) was Rev. Daniel O'Connor, O.S.A., who took possession in August, 1835. Mogul, Raichur, Chitapur, Hyderabad, etc., belonged to his vicariate. In 1840 he resigned and was succeeded by Bishop Patrick Joseph Casey, who died early in 1841, and was succeeded by Bishop John Fennelly, who was appointed Administrator of the Diocese of Callian. On 21 April, 1841, Dr. John Fennelly succeeded him.
Meanwhile Father Daniel Murphy had come to India with Bishop Carew in 1839, and was given the mission of Hyderabad and Secunderabad. In 1840 he began to build a cathedral in the latter place. It was completed in 1850. In 1842 he erected a church at Boburum and had only four missionaries to guide him, namely (Fathers O'Brien, Drake, Hampson, and Queen, all Irish); two of these were at Secunderabad, one at Masulipatam, and one at Hyderabad. The new vicar erected a college near Hyderabad. In 1854 he applied to the Foreign Mission Seminary at Milan for more missionaries, and Fathers Pazzi and Barreiro were sent to him. There were some British regiments quartered near Secunderabad, and the Catholic population of the place thus went up to 4000. Besides the college he built an orphanage, and opened a new mission at Chandragoddaim, which had to be abandoned for a time. In 1850, however, he named his family as Catholics and brought 120 others with him. He was made catechist, and thus began a small native congregation at Hyderabad. Between 1857 and 1864 six other missionaries came from Milan, and the Christian communities began to increase, but in 1864, owing to the failure of Bishop Murphy's mission, he was forced to return to India. The vicariate was then entrusted to the Milan Seminary of Foreign Missions. Father Giovanni Domenico Barbero became vicar Apostolic, and was consecrated Bishop of Doliché, at Rome, 3 April, 1870. He procured some Sisters of St. Anne from Turin, and in 1871 established them at Secunderabad, where they opened a girls' school. Bishop Barbero died 18 October, 1881, and was succeeded by Monsignor Caprotti. In 1886 the Vicariate of Hyderabad became a diocese, and Bishop Caprotti, titular of Abydos, became Bishop of Hyderabad; the districts of Moogul and Raichur were added to the diocese. The see was removed from Secunderabad to Hyderabad, and the erection of St. Joseph's cathedral was begun. In 1890 a convent was opened there, and a school for Europeans and natives. Bishop Caprotti died in 1897, and was succeeded by Bishop Vigno, who opened new convents, at Raichur, Bezwada, and Boburum, and opened the Little Sisters of the Poor, and in 1892, the Franciscan Sisters of Mary. At the present time, besides 21 European missionaries, there are in the Diocese of Hyderabad 50 European nuns, 18 native sisters, 75 native catechists; 11 churches, 78 chapels; 35 schools for boys with a total of 1362 pupils; 14 schools for girls with 920 pupils. There are two high schools in Hyderabad, one for boys the other for girls; and one each in Secunderabad, Raichur, and Bezwada, all under the Sisters of St. Anne; 6 orphanages; a home for the infirm, with 60 inmates in the care of the Little Sisters of the Poor, in Secunderabad; 2 schools for dispensary purposes. In 1892 a decision was made to establish a Magdalen Home under the care of the native sisters in Secunderabad, with branches in Raichur and Bezwada; an industrial school for girls in Bolarum; two libraries; two soldiers' institutes, confraternities, etc. Students are prepared for the priesthood in the Diocese of Mangalore by the Jesuits. Since 1891, and as a direct result of the efforts of Bishop Barbero, there have been two synods, the first on 28 February, 1889; the second on 9–11 December, 1902. The Catholic population of the diocese amounts to 14,752 souls out of a total of 11 millions composed of pagans, Musalmans, heretics, etc. The annual number of baptisms of adults is about 6000, and of infants about 6500. The languages spoken in the diocese are, Telugu, Tamil, Canarese, Coia, Marathi, and Hindustani.

**HYGNUS, SAINT, POPS (about 138–142), succeeded Pope Telesphorus, who, according to Eusebius (Hist. Eccl. IV, xvi), was deposed by the Emperor Antoninus Pius—in 138 or 139, therefore. But the chronology of these bishops of Rome cannot be determined with any degree of exactitude by the help of the authorities at our disposal to-day. According to the "Liber Pontificalis", Hygnus was a Greek by birth. The further statement that he was previously a philosopher is probably founded on the similarity of his name with that of two Latin authors. Ireneus says (Adv. heres., III. iii) that the Gnostic Valentine came to Rome in Hygnus's time, remaining there until Aniæus became pontiff. Cerdo, another Gnostic and predecessor of Marcion, also lived at Rome in the reign of Hygnus; but the evidence for both is insufficient. In 142 Hygnus returned to Italy, and in 142 he was transferred to the bishopric of Foynes. Eusebius (Hist. Eccl., IV, xvi) claims that Hygnus's pontificate lasted four years. The ancient **VICS APS APPOSTOLIC OF HYDERABAD-DECAM.—I. Monsignor Daniel Murphy, titular Bishop of Philadelphus, was born at Belmont, Crookstown, Co. Cork, Ireland, 18 June, 1815; ordained at Maynooth College, Ireland, 9 June, 1838. When Dr. Carew, one of the Maynooth Bishops, was named pst. to the Vicar Apostolic of Madras, India, Father Murphy offered to accompany him. He arrived at Madras early in January, 1839, and was put in charge of the mission of Hyderabad. When Monsignor Fennelly became Vicar Apostolic of Madras, Father Murphy was made his coadjutor. He was appointed bishop December, 1845, by Gregory XV, and consecrated in Kinsale, Ireland, 11 October, 1846, by the Bishop of Cork. He became first Vicar Apostolic of Hyderabad, 20 May, 1855. The residence of the vicariate was in Secunderabad, but, owing to the intolerance of Sir Henry Pottinger, he was obliged to live at Chudderghat on the borders of the Nizam's dominion. During his short administration he showed wonderful zeal. He left India in 1864 owing to ill-health and went to Australia; he was chosen Bishop of Hobart, Tasmania, in 1866, and he died there, Dec., 1907.

2. Monsignor Barbero, second Vicar Apostolic, was born at Fogliano, near Potenza, Italy, and named Papaleo. He became Bishop of Doliché, 11 February, 1855. He was consecrated Bishop of Abydos in 1862, and when the ordinary hierarchy was established in India in 1886, he became Bishop of Hyderabad.

3. Monsignor Vigno, the second bishop, came to Hyderabad in 1890; he was consecrated in 1898, by Monsignor Colgan, Archbishop of Madras; at the request of Pius X he was given charge of the foreign Missions in India. He came to Hyderabad in 1898, to take charge of the foreign Missions of the Church in India. He was consecrated Bishop of Hyderabad, 29 June, 1909, and died at Chudderghat, 18 October, 1911.**
LYMorphism

Hylomorphism. See Cosmology, sub-title The constituent causes of the world; Form; Matter.

Hylolosion (Gr. δυνατόν, matter + τέλος, life), the doctrine according to which all matter possesses life. There is a certain hylomorphism which is only a childish, inexperienced way of looking on nature. We are naturally inclined to interpret other existences after what we know of ourselves, and so it is that children give life and soul to everything. The result of this personification of nature in primitive races has also been called animism. It is a poetical view of the world. We should therefore not be surprised that the first school of philosophers in Greece, the Ionians, conceived of the universe as animated throughout and full of gods: ζωογόνοι και διάβολοι μάρμαρα (Diog. Laer., I, 27). With the progress of thought a more realistic view of nature prevailed, and this is more obscurely by Anaxagoras, then clearly by Plato and Aristotle, mind and matter were separated and their mutual relations delineated. Hylomorphism in its primitive form disappeared. But, with the second successor of Aristotle, Strato of Lampsacus, another kind of materialism, closely materialistic, came into existence. Strato, while repudiating the mechanicism of the Atomists, nevertheless, in common with them, held bodies to be the only reality and explained life as a property of matter. In the Stoic doctrine also bodies alone are a reality. Bodies are made up of two primal, a passive materialistic, form; but form itself is corporeal. It is warm vapour (ζωογόνοι), or fire, yet fire distinct from the element of this name; it is primitive fashioning fire (νέφος ἐγκαυματικόν), God. In order to form the world a part of it changed itself into the elements, fire, air, water, earth, and constituted the body of the world, while another part retained its original shape, and in that shape confronts the first as form or soul. This was pure materialism. But a wave of religious mysticism and pantheism was preparing to sweep from the East over the Graeco-Roman world and dislocate matter from the throne it had usurped. Under the influence of the later Peripatetics, the Neo-Plato-Schizagorean, and especially the Neo-Platonic school of Alexandria, while accepting the Stoic concept of the world-soul, reversed the relative importance of its terms, considered the soul as a spiritual principle emanating from God, and gave it the highest rank, if not as altogether evil, at least as most imperfect. Indeed matter was hardly a reality at all; the activities and perfections of material beings proceeded from a distinct principle, the soul. The universe was an immense organism. Everything was animated; and, though life was in itself distinct from matter, it was in fact imperishable on all material beings. Pantheistic hylomorphism. It survived in the medieval Jewish and Arabian philosophy, and reappeared in Christian countries with the nature philosophers of the Renaissance, Paracelsus, Cardan, Cardano Bruno, etc. But at the Renaissance it did not come under the influence of the Thomist, but under the hysteric return to the study of nature, of the revival of classical literatures with their mythology full of gods and goddesses, and of the sensualism which then invaded morals, the two other forms of hylomorphism, the naive and the materialistic, reappeared also, and the three were combined in different proportions by the several writers. In a less degree, even such thinkers as Richard Cudworth and Henry More, the Cambridge Platonists, yielded to it, when they devised their hypothesis of a "plastic nature", or a sort of inferior soul, which caused the processes of life in organic beings and directed in a purpose-like manner the activity of physical nature. After Descartes' bold attempt to resolve into motion the operations of physical life, which deprived the word life of much of its meaning and put matter in sharp contrast with the higher life of thought, the concept life was for a while set aside, and speculation for the most part dealt with matter as opposed to mind. Yet, in a different form, it was the same problem over again, via the determination of the limits of matter and of its relation to spirit. To this problem Spinoza offered a solution, which, combining materialistic with pantheistic hylomorphism, held the balance even between matter and mind by reducing body to the rank of mere attributes of the one infinite substance. Leibniz, resolving matter into spirit, looked on bodies as aggregates of simple unextended substances or monads, endowed with elementary perception and will. On the contrary, a group of French writers in the eighteenth century, Diderot, Cabanis, Robinet, etc., adhered to a dynamico-mechanistic materialistic view of the world which recalls that of Strato.

In the nineteenth century the progress of the biological sciences again called attention to physical life. Descartes' mechanicism was generally discarded.

On the other hand, the craving of reason for unity, the materialism which has here its permanent resting-place, the theory of evolution, tends to consider the world of life—and the world of mind as well—as a mere extension of the world of matter. But then life must be conceived as fundamentally contained in all matter, as one of its essential properties. Thus has hylomorphism been revived by some thinkers as a postulate of science. Literally taken, it would be materialism, and in that sense is indefatigably advocated by E. Häckel, who identifies mind with organization and life, and life with energy, which he makes a property of the atoms. Matter is for him the only reality. He, moreover, imagines ether to be the primitive substance, a part of which, as was the ether in the primitive fire of the Stoics, transformed itself through condensation into inert mass, while another part of it subsists as ether and constitutes the active principle, spirit. Very few thinkers, however, would commit themselves to such a doctrine. But many scientists, whether without evolving its influence, have arrived at the meta-physical implications. Those who have inquired have commonly agreed that at least mental life can by no means be resolved into matter. Consequently they have modified the concept matter itself, and described matter and mind, after the view already set forth by Spinoza, as two modes of one and the same reality. This reality may be declared different in itself from both matter and mind, and unknowable (H. Spencer); or it may be declared identical with both matter and mind, which are respectively its outer and inner sides (Fechner, Lotze, Wundt, etc.). In either case, hylomorphism has passed into a psycho-physical parallelism with tendencies towards either materialism or idealism.

From what has been said, then, it follows that it would be an error to see in hylomorphism a mere doctrine of physical life; for instance, the affirmation of spontaneous generation. Physical life may, in the last resort, be derived from material processes, but this does not commit us independently of it. But in reality the separation does not hold, and hylomorphism has always extended its conclusions to mental life as well. Even naive hylomorphism did not stop at granting life to nature, it also endowed nature with soul. Pantheistic hylomorphism started with the very concept of mental life. These two forms no longer count in science. On the latter,
since it is of pantheistic origin; see PANTHEISM, God, EMANATIONISM.

Scientific hylozoism is a protest against a mechanical view of the world. But, like mechanicism, it pretends to apply the same pattern to all beings alike, to make of them all one uniform series. Its outcome is monism, materialistic, idealistic, or parallelistic, according as ideas are compared to matter, or of mind, or of some reality combining both. It therefore falls under the criticism proper to these forms of monism. As a matter of fact, life is not found in all beings; some are destitute of it, and, among those in which it is found, plants possess none of it, while the higher animals also have a sense of sense, and man the powers of sense and reason. In an age which boasts of trusting experience alone, it is surprising that this fact should be so readily overlooked. True, we crave for unity and continuity in our knowledge and its object; but unity should not be procured at the cost of evident diversity. Or rather, since this craving for unity is nothing else than the voice of reason, it ought indeed to be satisfied; but they err who seek in the world itself this perfect unity which is to be found only in its Cause, God. (See also MATTER, LIFE, SOUL, TELEOLOGY, MONISM, materialism.)
